IDENTIFICATION OF ITEM(S) TO CHANGE

Add a Life Experience Data Contact to the Electronic Jurat page for Life/Fraternal companies only. Health, Property and Title are included in the proposal due to the Jurat instructions being uniform for all statement types.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Under the Standard Valuation Law (SVL) and supporting Valuation Manual (VM) included in each state’s laws, NAIC serves as the data collection agent for various studies of data (e.g., mortality experience data). NAIC staff need a contact person from each legal entity life insurance company to facilitate communication regarding these data studies and submission of the data to the NAIC.

JURAT PAGE

Detail Eliminated to Conserve Space

To be filed in electronic format only:

Detail Eliminated to Conserve Space

Life Insurance Policy Locator Contact (Not applicable to Property and Title companies)

Name
List person able to respond to calls regarding locating policies on lost or forgotten life insurance policies.

Address
May be a P.O. Box and the associated ZIP code.

Telephone Number
Telephone number should include area code and extension.

Email Address
Email address of the policy locator contact person as described above.

Life Experience Data Contact (Life/Fraternal companies only)

Name
List the name of the person able to facilitate communication regarding submission of company experience data to the NAIC (e.g., mortality experience data) as required by the Standard Valuation Law (SVL) and its supporting Valuation Manual (VM) included in each state’s laws.

Address
May be a P.O. Box and the associated ZIP code.

Telephone Number
Telephone number should include area code and extension.

Email Address
Email address of the life experience data contact person as described above.

NAIC Proceedings – Fall 2019
Accounting Practices and Procedures (F) Task Force
Attachment Two-G
10-477
12/8/19
The Accounting Practices and Procedures (E) Task Force met via conference call, Aug. 22, 2019. The following Task Force members participated: Kent Sullivan, Chair, represented by Jamie Walker (TX); Jeff Rude, Vice Chair, represented by Linda Johnson (WY); Jim L. Ridling represented by Richard Ford and Sheila Travis (AL); Allen W. Kerr represented by Mel Anderson (AR); Ricardo Lara represented by Kim Hudson and Susan Bernard (CA); Andrew N. Mais represented by William Arfanis and Wanchin Chou (CT); Trinidad Navarro represented by Tom Hudson and Rylynn Brown (DE); David Altmaier represented by Robert Ridenour (FL); Dafne M. Shimizu represented by Alice Cruz (GU); Doug Ommen represented by Daniel Mathis and Jim Armstrong (IA); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Nancy G. Atkins represented by Sandy Batts (KY); James J. Donelon represented by Rich Piazza and Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Eric A. Cioppa represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Mike Chaney represented by David Browning (MS); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Justin Schrader and Lindsay Crawford (NE); John Elias represented by Doug Bartlett and Patricia Gosselin (NH); Marlene Caride represented by Steve Kerner (NJ); John G. Franchini represented by Letatrice Geckler (NM); Linda A. Lacewell represented by Christine Graiton (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Joel Sander (OK); Jessica Altman represented by Joe DiMemmo (PA); Larry Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Hui Wattanaskolpant (TN); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Mark Afable represented by Amy Malm (WI); and James A. Dodrill represented by Jamie Taylor (WV).

1. **Adopted its 2020 Proposed Charges**

Ms. Walker directed the Task Force to the 2020 proposed charges of the Task Force and its working groups which were exposed at the Summer National Meeting. Robin Marcotte (NAIC) stated that the charges of Blanks (E) Working Group and the Task Force are proposed to remain unchanged. She stated that three of the Statutory Accounting Principles (E) Working Group charges, which were recommended to the Financial Condition (E) Committee by the Variable Annuities Issues (E) Working Group, are proposed for deletion. She stated that one of the charges proposed for deletion was completed with the adoption of Statement of Statutory Accounting Principle (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees effective Jan. 1, 2020, with early adoption Jan. 1, 2019, permitted. She stated that a second charge to develop a change in valuation basis guidance for the implementation of the Variable Annuities (VA) Framework was completed with the change in valuation basis guidance, which was added to SSAP No. 51R—Life Contracts, which specifically notes Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43).

Ms. Marcotte stated that the Statutory Accounting Principles (E) Working Group has recommended to the Task Force that the charge to develop a model guideline to exceed state investment limitations for hedges be deleted. She stated that after a review of annual statement information on the extent of derivative investments, the Working Group does not believe such a model guideline is necessary. She stated that no comments were received by the Task Force on the exposed charges; therefore, the exposed charges are recommended for adoption.

Mr. Garn made a motion, seconded by Mr. Bruggeman, to adopt the Task Force’s 2020 proposed charges (see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment One-A)

Mr. Garn stated that the Blanks (E) Working Group met Aug. 20. He stated that the Working Group adopted its July 2 and June 24 minutes (Note that the actions from those meetings were adopted by the Task Force at the Summer National Meeting). He stated that the Working Group adopted the following two previously exposed proposals:
a. 2019-18BWG – Add an NAIC Designation Modifier to the “NAIC Designation” column for Schedule D, Schedule DL and Schedule BA to accommodate the NAIC Designation Category granularity framework adopted by the Valuation of Securities (E) Task Force with an annual 2020 effective date.

b. 2019-20BWG – Add “Qualification Documentation” to the Property and Casualty Actuarial Opinion instructions, as requested by the Casualty Actuarial and Statistical (C) Task Force and the Executive (EX) Committee, requiring the Appointed Actuary to maintain workpapers explaining how the actuary meets the definition of “Qualified Actuary.” The proposal provides a new objective definition of “Qualified Actuary” and the results of an assessment of actuarial educational syllabi in an “Accepted Actuarial Designation” section. The changes of the Task Force were adopted on June 11, and the additional changes were adopted by the Executive (EX) Committee on June 25.

Mr. Garn stated that proposal 2019-19BWG on unaffiliated certificates of deposit was withdrawn to allow NAIC staff to work with industry on a new proposal in the future. He said the Working Group deferred revisions to its procedures to allow for future discussion.

Mr. Garn said the Working Group exposed three proposals for a public comment period ending Oct. 8, and it adopted the editorial listing.

Mr. Garn stated that agenda item 2019-20BWG on the actuarial qualifications was adopted, but it was adopted with four no votes and one abstention during the Working Group’s Aug. 20 conference call. Ms. Walker stated that given that proposal 2019-20BWG on the actuarial qualification documentation had a split vote and some discussion during the Working Group’s Aug. 20 call, the Task Force will take a separate vote on that item.

Mr. Garn made a motion, seconded by Mr. Hudson to adopt the report of the Blanks (E) Working Group except for agenda item 2019-20BWG which would have a separate vote (Attachment Three-A).

3. Adopted Agenda Item 2019-20BWG

Ms. Walker called on Mr. Piazza, Chief Actuary in Louisiana, to introduce the proposal. Mr. Piazza noted that he previously chaired the Casualty Actuarial and Statistical (C) Task Force for seven years and vice-chaired it for three years. He noted that the proposed change to the Property/Casualty (P/C) Instructions sets forth a workable, objective and principle-based definition of a P/C qualified actuary, and it recognizes the Society of Actuaries’ (SOA) general insurance track, along with the Casualty Actuarial Society (CAS), as meeting the minimum basic education requirement for a qualified actuary.

Mr. Piazza said key elements of the proposal include that it provides guidance developed with a consultant to objectively define the qualified actuary and be transparent about what state insurance regulators want from an appointed actuary. He stated that the role of the appointed actuary is probably the most important role actuaries serve in the state insurance regulator’s eyes. He said state insurance regulators that review reserve adequacy for company solvency in order to protect the interests of their state’s consumers rely heavily upon the accuracy of the appointed actuary’s reserve assessment and information contained in the appointed actuary’s Statement of Actuarial Opinion (SAO). Mr. Piazza said the proposal adds the definition of qualified actuary which retains the CAS designations and adds the SOA general insurance track.

Mr. Piazza said the proposal also adds that the qualification documentation is the primary addition to the instructions. He said the documentation under existing qualification requirements should already exist, and it should not be a burden to any actuary. He stated that the proposal includes what is called qualification documentation, which effectively pulls together an actuary’s resumé and already required continuing education documentation as a workpaper so state insurance regulators can view that information if they wish and companies can use it in their governance review of the appointed actuary.

Mr. Piazza said the proposal has an effective date of year-end 2019, and the effective date was agreed to by all three actuarial organizations. He noted that the proposal has little impact on any actuary currently appointed, and all former Appointed Actuaries remain “qualified” under the new definition, with the only impact being that they have to document their qualifications.

Mr. Piazza then noted that he would be providing background on the project that led to the proposal. He said the project began almost seven years ago with the Casualty Actuarial and Statistical (C) Task Force, and it has been proceeding almost non-stop
since then. He said the Task Force was asked to evaluate the SOA’s general insurance track and determine if it should be accepted by state insurance regulators, just as the CAS’s membership is accepted. He stated that both of these organizations have been educating, testing and credentialing actuaries for decades, if not the past century, and both are really good at what they do for the actuarial profession.

Mr. Piazza noted that when the Casualty Actuarial and Statistical (C) Task Force was first asked to determine if the SOA’s general insurance track met minimum basic education expectations, there was no established standard to compare an education track against. He said there was some reluctance among the three actuarial organizations to take a direct role in creating an education standard suitable for a minimum basic education evaluation. He said the American Academy of Actuaries (Academy) was asked and declined to undertake the project, though it did say it would change its qualification requirements in accordance with revised instructions from the state insurance regulators. He said that this is why the Task Force took on this task itself.

Mr. Piazza noted that the Casualty Actuarial and Statistical (C) Task Force was a divided group, discussing at least four ways to tackle this task on how to address the SOA’s general insurance track with respect to the qualified actuary, but it could not reach an agreement on a path forward. He said after many open discussions, the Task Force requested outside help. He said the request went up to the Property and Casualty Insurance (C) Committee and then up to the Executive (EX) Committee. He said the Executive (EX) Committee first hired a consultant with the goal of evaluating whether any actuarial educational track meets industry standards to produce qualified actuaries.

Mr. Piazza noted that the consultant was asked to guide subject matter experts to define what an appointed actuary should know and do to be an appointed actuary. He said this set the basis for the educational standards developed by expert actuaries and began the work requested by the Executive (EX) Committee to develop an objective qualified actuary definition. He noted that 30 subject matter experts nominated by the three actuarial organizations to inform the consultant and the entire process. He said this project resulted in the proposal which defines a qualified actuary and recognizes the SOA’s track as meeting the minimum basic education requirement.

Mr. Piazza stated that the work starting seven years ago through today has not been performed in a vacuum, and the proposed instruction changes were vetted many times since the beginning of this project. He said in the past year-and-a-half, there were four exposures and one hearing. He noted that input was considered from interested parties, the Casualty Actuarial and Statistical (C) Task Force, and commissioners themselves. He noted that similar to other large, multi-faceted NAIC projects, there was a bit of compromise in the development of the proposal before you, and not all participants in the development process are 100% satisfied with the result. He said there was consensus by the respective groups.

Mr. Piazza stated that the commissioners at different levels discussed this proposal, and policy decisions were made culminating in a request from the Executive (EX) Committee for the Blanks (E) Working Group to implement the proposal before you. The proposal passed from the Blanks (E) Working Group on Aug. 20. He said the proposal clearly meets the Executive (EX) Committee’s objective at the start of the project by setting forth a workable, objective and principle-based “qualified actuary” definition that includes both the SOA and CAS basic education tracks found to meet the minimum basic education standard for an appointed actuary.

Mr. Chou noted appreciation for the hard work and time spent on the proposal. He indicated that his remarks were to better serve the actuarial professional for higher professional standards, and to help the insurance industry effectively, the qualified actuary proposal needs to be reviewed more and refined properly. He said it is better to be late than incomplete. He stated that the Academy worked well with volunteers from both the CAS and the SOA to provide professional standards and services for several decades. He noted that while they were not opposed to most of the good work in the proposal, there were concerns that the proposal does not mention that the Academy membership will cause some confusion in three areas.

Mr. Chou noted that excluding the requirement for Academy membership would continue inconsistency for the different annual statement blanks requirements between life, P/C and health. He noted that the P/C annual statement blank mentioned CAS membership only due to aggressive SOA merger talk. He noted that there are unresolved disagreements between the two societies on educational requirements.

Mr. Chou noted that adding a requirement to have Academy membership would not cause an issue with fees in Connecticut as all appointed actuaries are currently Academy members. He said there was not a good justification for the costs and benefits when the Executive (EX) Committee’s ad hoc group decided to delete the requirement for Academy membership.
Mr. Chou said his last point was being provided on behalf of Ralph Blanchard (Travelers) who could not be present during this conference call. He said Mr. Blanchard had concerns that omitting the requirement for Academy membership for actuaries seeking review under the exception process would add liability exposure to the Casualty Practice Council if it is the group to review non-Academy members.

Mr. Chou said the regulation responsibilities of the NAIC and the states are to regulate the insurance companies, not the professional members like actuary, account, etc. He stated that this proposal has set an unnecessary exception and practice. Mr. Bruggeman asked if the proposal includes the recommendations from the Casualty Actuarial and Statistical (C) Task Force and the Executive (EX) Committee’s ad hoc group. Mr. Piazza agreed that the proposal was a result of work from both groups. Mr. Bruggeman asked for confirmation that the Blanks (E) Working Group’s role is not policy making, but it is a group that determines the implementation of instructions for policies developed by other groups. He asked for confirmation that the Working Group’s role is the implementation of policies determined by other NAIC groups. Mr. Hudson, vice chair of the Working Group, and Mr. Garn, chair of the Working Group, both indicated that Mr. Bruggeman was correct regarding the role of the Working Group.

Ms. Walker said the term “NAIC Accepted Actuarial Designation” causes Texas some concerns because of legislative concerns about the incorporation by reference of NAIC requirements. She asked if the proposal provided the flexibility for the commissioner to approve actuaries with different requirements. Kay Noonan (NAIC) noted that her understanding of the proposal sets out a definition of a qualified actuary, but it also includes the ability for the insurance commissioner to approve other actuarial qualifications or requirements. She noted that originally, there was one educational track, but once there were two tracks, it was necessary to evaluate to ensure that both met minimum qualifications. Ms. Noonan stated that while this proposal was being developed, having NAIC in the title of the term did not receive much discussion that she was aware of. She noted that the NAIC was not necessary to the term name. She noted that the state insurance regulators would apply the standard and have the ability to accept a different actuarial educational track. Ms. Walker asked if modifying the term name would cause any concerns. Ms. Noonan stated the instructions include the requirements, and the terminology name would not change the requirements.

Mr. Chou asked if the Casualty Actuarial and Statistical (C) Task Force could consider a future discussion on the topic of the actuarial qualification instructions and the groups. Mr. Piazza noted that discussion on the requirements could occur with the Casualty Actuarial and Statistical (C) Task Force in the future if determined necessary. Mr. Piazza noted that he did not expect the Executive (EX) Committee’s ad hoc group to necessarily be involved in the future as the primary project that involved the Executive (EX) Committee would be complete. Ms. Noonan agreed that the Executive (EX) Committee was involved because of the request for assistance and the request to hire a supervisor. She noted that if the Task Force believes there are issues that need to be addressed in the future, the discussion would start at the Task Force, and it would not typically involve the Executive (EX) Committee unless there was a request for assistance. Ms. Walker asked Mr. Piazza if a technical change to the name of the term from “NAIC Accepted Actuarial Designation” to “Accepted Actuarial Designation” would be of concern. Mr. Piazza and Mr. Wattanaskolpant agreed that the technical change to the terminology name would not be a concern as it would not change the content.

Ms. Walker said to Mr. Chou that she did not view the role of the Accounting Practices and Procedures (E) Task Force to override the policy decisions that had been discussed by the Casualty Actuarial and Statistical (C) Task Force and the Executive (EX) Committee to not include the Academy membership requirements. She said harking back to Mr. Bruggeman’s comments, she did not believe that the role of the Task Force was to override policy decisions that had been thoroughly discussed by other groups. Mr. Chou thanked Ms. Walker and noted that he would report back regarding the discussion that the issues he raised were of a policy nature rather than a technical change.

Craig Hanna (Academy) stated that the Academy noted that it fully supported the comments from Connecticut. He noted agreement that this time was not the appropriate avenue, but at the appropriate time, the Academy would further pursue the inconsistencies in the different annual statement type requirements.

Mr. Piazza made a motion, seconded by Mr. Wattanaskolpant to adopt agenda item 2019-20BWG (Attachment Three-A) with the minor revision suggested by Texas, to modify the proposal to change the name of the term in the proposal from “NAIC Accepted Actuarial Designation” to “Accepted Actuarial Designation.” The motion passed, with Connecticut and Missouri dissenting.
4. **Discussed Other Matters**

Ms. Walker announced that the Accounting Practices and Procedures (E) Task Force report will be discussed via conference call by the Financial Condition (E) Committee on Aug. 29.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.

IDENTIFICATION OF ITEM(S) TO CHANGE

The Casualty Actuarial and Statistical (C) Task Force proposes addition of “Qualification Documentation” so the Appointed Actuary would be required to maintain workpapers explaining how the actuary meets the definition of “Qualified Actuary.” These proposed changes were adopted by the Task Force on June 11, 2019.

The Executive (EX) Committee proposes the remainder of the changes, including a new objective definition of “qualified actuary” and the results of an assessment of actuarial educational syllabi in a “NAIC-Accepted Actuarial Designation” section. These proposed changes were adopted by the Committee on June 25, 2019.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

There are now competing property/casualty (P/C) actuarial educational organizations and no specific standards around the minimum level of education expected for an Appointed Actuary. The proposed change is designed to avoid any potential development of lower educational standards in a competitive environment, to ensure Appointed Actuaries can be expected to have a minimum level of basic education to perform the duties of an Appointed Actuary, and to provide regulatory expectations of a profession that provides a vital service for regulators and the public by issuance of the financial statement actuarial opinion. Regulators deemed it was important, especially in the absence of any licensure of Appointed Actuaries, to develop and maintain the definition of Qualified Actuary for the purpose of being an Appointed Actuary. (Note: professional actuarial associations are still allowed to implement stricter standards or modify the referenced documents/policies.)

© 2019 National Association of Insurance Commissioners 1
**Background on the Qualified Actuary Project**

Historically in the U.S., the Casualty Actuarial Society (CAS) provided actuarial education for property and casualty (P/C) actuaries. The NAIC’s definition of a qualified actuary to be eligible to be an Appointed Actuary currently includes membership in the CAS as a core requirement. When the Society of Actuaries (SOA) introduced a general insurance (GI—aka P/C) actuarial educational track, the SOA asked the NAIC to also include a Fellow of the Society of Actuaries (SOA) who had successfully completed the SOA GI track in the qualified actuary definition.

The Casualty Actuarial and Statistical (C) Task Force was first asked to evaluate the SOA’s GI track to determine if it was acceptable to be included in that definition. In 2015 the Task Force informed its parent committee, the Property and Casualty Insurance (C) Committee, of its preference to conduct an independent review of the SOA’s GI track. At the request of the Property and Casualty Insurance (C) Committee, the Executive (EX) Committee decided it would ask the NAIC to hire a consultant to conduct such a review and would assign an EX Ad Hoc Group of commissioners to oversee the project. The NAIC released the results of the consultant’s work in July 2017. The SOA’s GI track was found to lack necessary breadth and depth to meet minimum educational standards. The CAS membership was found acceptable, with some question about the associateship level and whether the advanced reserving on Exam 7 should be required in addition to the ACAS designation.

Upon receiving advice from a consultant on the NAIC’s definition of a “Qualified Actuary,” the NAIC began a project to re-define a Qualified Actuary using objective criteria. At the 2017 Summer National Meeting, the Executive (EX) Committee adopted a fiscal to hire a consultant to conduct a P/C Appointed Actuary Job Analysis. The NAIC then worked with the CAS, SOA, and the Academy of Actuaries (Academy) to develop an aggressive timeline to complete the job analysis, draft educational standards, conduct assessments of the CAS and SOA syllabi, and expose/implement revised actuarial opinion instructions. All parties agreed with the timeline and plan.

The Job Analysis was completed by the NAIC and numerous subject matter experts (nominated by the CAS, SOA, and Academy). The NAIC’s P/C Appointed Actuary Job Analysis Project resulted in documentation of knowledge statements, or what an Appointed Actuary needs to know and do for the P/C Appointed Actuary job. Following the job analysis, the NAIC’s P/C Educational Standards and Assessment Project resulted in documentation of which elements in each knowledge statement should be included in basic education as a minimum standard, with the remaining elements achievable through experience or continuing education. Using the minimum educational standards, the NAIC and subject matter experts assessed the CAS and SOA syllabi and reading materials. The CAS and SOA have made or agreed to make specific changes to their syllabi and/or reading materials to meet these minimum standards. The revised syllabi and reference materials are required to be in place by Jan. 1, 2021.

On May 31, 2019, the NAIC finalized the assessments of the CAS and SOA. With mutual agreement to make a few additional changes to syllabi, the following designations with particular exam requirements were recommended to be accepted by the NAIC:

- FCAS with successful completion of Exam 6-US
- ACAS with successful completion of Exam 6-US and Exam 7
- FSA with successful completion of the general insurance track, including the Financial and Regulatory Environment-U.S. Exam and the Advanced Topics in General Insurance Exam.

The exam requirements were added to meet the minimum educational standards when there are choices of examination. For example, both organizations have or will offer non-US regulatory and statutory accounting exams. The new definition requires the Appointed Actuary to have successfully completed the U.S. regulatory exam. In response to comments made, allowable substitutions for specific exams were added (e.g., having passed a U.S. regulatory exam under an old syllabi) and the Grandfathering clause was replaced with allowable substitutions. The desired impact is that the NAIC would not retroactively change requirements for Appointed Actuaries. However, the instructions include additional documentation that is required if an actuary previously met the 2018 qualified actuary definition but lacks the specific exams and/or tracks under the new definition. The table of substitutions was discussed with both the CAS and SOA and agreed upon prior to adoption.

Concurrently, the EX Ad Hoc Group drafted a revised definition of Qualified Actuary to be eligible to become a P/C Appointed Actuary in instructions for the P/C Statement of Actuarial Opinion. Instructions were exposed Dec. 2017, September 2018, December 2018, and May 2019 for public comment. A public hearing was conducted on March 22, 2019.
As a result of these NAIC projects, the definition of “Qualified Actuary” was crafted to include education requirements, experience requirements, and professionalism requirements (e.g. application of U.S. Qualification Standards, Code of Conduct, and Actuarial Board of Counseling and Discipline—ABCD). The definition of Qualified Actuary replaces the requirement to be “a member in good standing of the Casualty Actuarial Society” with a requirement to obtain and maintain an “NAIC-Accepted Actuarial Designation.” An NAIC-Accepted Actuarial Organization is one that was assessed by the NAIC to meet the NAIC’s minimum educational standards for an Appointed Actuary. Continued membership in either the CAS or SOA would be required for two reasons: 1) professionalism requirements, counseling, and discipline would be applied by these actuarial organizations and 2) the CAS and SOA have an audit process to evaluate actuarial qualifications regarding Continuing Education (CE) (which the Academy does not).

The 2018 definition of qualified actuary does not require a P/C Appointed Actuary to be a member of the Academy and there has not been such a requirement since the P/C actuarial opinion was first established. (There is mention of Academy membership in current instructions, but that is limited to a rare exception whereby the Appointed Actuary does not meet the definition of Qualified Actuary in the instructions and has been evaluated by the Academy.)

Through comment letters and oral testimony, the Academy suggested that the (iii) in the definition of Qualified Actuary could be modified to require Academy membership. The Executive (EX) Committee at its June 25th meeting, on the recommendation of the EX Ad Hoc Group, agreed that the Academy’s new proposal for mandatory membership is not necessary for the P/C Appointed Actuary.

The following describes the professionalism requirements for U.S. P/C Appointed Actuaries today:

1) All professionalism standards established by the Actuarial Standards Board (ASB) are required and the Actuarial Board of Counseling and Discipline (ABCD) is applicable for all CAS and SOA members;
2) The ASB and ABCD are included in the Academy’s corporate structure but one does not have to be an Academy member for professionalism requirements to apply; and
3) All U.S. P/C Appointed Actuaries pay dues to support the ASB and the ABCD, whether or not a member of the Academy.

The EX Ad Hoc Group sent a May 10, 2019, letter to the Academy explaining its reasoning for the proposal to not add an Academy membership requirement:

Regulators recognize the value in Academy membership, as well as the Academy’s contributions to the NAIC and the entire actuarial profession. However, we are not adding Academy membership to the Statement of Actuarial Opinion instructions as a requirement. Membership in the Academy does not guaranty that an Appointed Actuary receives any license, has participated in the Appointed Actuary opinion writing seminar, has participated in any particular Academy training, nor has been certified as being qualified. If the actuary chooses not to participate in Academy activities, such abstention does not compromise the qualification of that actuary. Our conclusion is that regulators cannot derive any significant additional information about an Appointed Actuary’s qualifications, experience, or knowledge from Academy membership beyond what they already know about the actuary that holds one of the new NAIC-Accepted Actuarial Designations.

We also did not add the membership in the Academy as a requirement for review by the Academy’s Casualty Practice Council. The Academy may establish that as a requirement, just as they may charge a fee or require particular documentation even if it is not in the instructions.

The NAIC process requires a recurring assessment every 5-10 years. The process to develop standards and assess the CAS and SOA has not impacted state regulators who did not volunteer to undertake the development and assessment. Regulators may continue to employ similar processes in future years without impact to non-volunteer states.

---

ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of a Qualified Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Property and Casualty.

Upon initial engagement, the Qualified Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).

b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).

c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

The Appointed Actuary shall provide to the Board of Directors qualification documentation on occasion of their appointment, and on an annual basis thereafter, directly or through company management. The documentation should include brief biographical information and a description of how the definition of “Qualified Actuary” is met or expected to be met (in the case of continuing education) for that year. The documentation should describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion. The Board of Directors shall document the company’s review of those materials and any other information they may deem relevant, including information that may be requested directly from the Appointed Actuary. The qualification documentation shall be considered workpapers and be available for inspection upon regulator request or during a financial examination.

If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary’s satisfaction and those not resolved to the former Appointed Actuary’s satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer’s letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.
The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

1A. Definitions

“Appointed Actuary” for purposes of these instructions is a Qualified Actuary (or individual otherwise approved by the domiciliary commissioner) appointed by the Board of Directors in accordance with Section 1 of these instructions.

“Board of Directors” for purposes of these instructions can include the designated Board of Directors, its equivalent or an appropriate committee directly reporting to the Board of Directors.

“Qualified Actuary” is a person who:

(i) meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States (U.S. Qualification Standards), promulgated by the American Academy of Actuaries (Academy), and is either:

(ii) has obtained and maintains an NAIC-Accepted Actuarial Designation; and

(iii) is a member of a professional actuarial association that requires adherence to the same Code of Professional Conduct promulgated by the Academy, requires adherence to the U.S. Qualification Standards, and participates in the Actuarial Board for Counseling and Discipline when its members are practicing in the U.S.

An exception to parts (i) and (ii) of this definition would be an actuary evaluated by the Academy’s Casualty Practice Council and determined to be a Qualified Actuary for particular lines of business and business activities.

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

“NAIC-Accepted Actuarial Designation” in item (ii) of the definition of a Qualified Actuary, is an actuarial designation accepted by the NAIC as meeting or exceeding the NAIC’s Minimum Property/Casualty (P/C) Actuarial Educational Standards for a P/C Appointed Actuary (published on the NAIC website). The following actuarial designations, with any noted conditions, are accepted by the NAIC as meeting or exceeding basic education minimum standards:

(i) Fellow of the CAS (FCAS) – Condition: basic education must include Exam 6 – Regulation and Financial Reporting (United States);

(ii) Associate of the CAS (ACAS) – Conditions: basic education must include Exam 6 – Regulation and Financial Reporting United States) and Exam 7 – Estimation of Policy Liabilities, Insurance Company Valuation, and Enterprise Risk Management;

(iii) Fellow of the SOA (FSA) – Conditions: basic education must include completion of the general insurance track, including the following optional exams: the United States’ version of the Financial and Regulatory Environment Exam and the Advanced Topics in General Insurance Exam.
The table below provides some allowable exam substitutions for (i), (ii) and (iii) in the definition of “NAIC-Accepted Actuarial Designation.” Noting that CAS exams have changed over time, exceptions for (i) and (ii) provide for FCAS/ACAS designations achieved before an exam was created (e.g., CAS Exam 6-US) or with an earlier version of an exam or exam topic (e.g., 2010 CAS Exam 6 instead of the current CAS Exam 7 Section A). FCAS/ACAS qualified under the 2018 and prior Statement of Actuarial Opinion instructions can use the noted substitution rules to achieve qualification under the new instructions by demonstrating basic and/or continuing education of the required topics including material in CAS Exam 6 (US) and section A of CAS Exam 7 (in the May 2019 CAS syllabus). Exceptions for (iii) for an FSA are also included in the table. The SOA exams completed in the general insurance track in 2019 and prior should be supplemented with continuing education and experience to meet basic education requirements in the *U.S. Qualification Standards.* For purpose of these instructions only, the table also includes specific exams from other organizations that are accepted by the NAIC as substitutes.

<table>
<thead>
<tr>
<th>Exception for (i), (ii), or (iii)</th>
<th>Exam:</th>
<th>Exam Substitution Allowed*</th>
</tr>
</thead>
</table>
| (i) and (ii)                    | CAS Exam 6 (US) | 1. Any CAS version of a U.S. P/C statutory accounting and regulation exam administered prior to creation of the CAS Exam 6 (US) in 2011.  
2. An FCAS or ACAS earned prior to 2021 who did not pass CAS Exam 6 (US) or an allowable exam substitution, may substitute experience and/or continuing education for CAS Exam 6 (US) provided the Appointed Actuary explains in his/her qualification documentation how knowledge of U.S. financial reporting and regulation was obtained.  
3. SOA FREU (US) Exam |
| (ii)                            | CAS Exam 7 | 1. Any CAS version of an exam including advanced P/C reserving administered prior to creation of Exam 7 in 2011.  
2. An ACAS earned prior to 2021 who did not pass CAS Exam 7 or an allowable exam substitution, may substitute experience and/or continuing education for CAS Exam 7 provided the Appointed Actuary explains in his/her qualification documentation how knowledge of the additional reserving topics in CAS Exam 7 (Section A) in the May 2019 syllabus was obtained.  
3. SOA Advanced Topics Exam (Note: The ERM portion of Exam 7 is not needed to meet NAIC educational standards, therefore SOA ERM Exam is not needed for the substitution for this purpose.) |
| (iii)                           | SOA FREU (US) Exam | 1. CAS Exam 6 (US)  
| (iii)                           | SOA Advanced Topics Exam | 1. CAS Exam 7  
2. Any CAS version of an exam containing the advanced techniques to estimate policy liabilities (i.e., advanced reserving). |

*Note: These exam substitutions only apply to these instructions and are not applicable for CAS or SOA exam waivers.*
“Insurer” or “Company” means an insurer or reinsurer authorized to write property and/or casualty insurance under the laws of any state and who files on the Property and Casualty Blank.

“Actuarial Report” means a document or other presentation prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary’s professional conclusions and recommendations of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary’s opinion or findings, and of documenting the analysis underlying the opinion. The required content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

“Property and Casualty (P&C) Long Duration Contracts” refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to 13 months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65—Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual.

“Accident and Health (A&H) Long Duration Contracts” refers to A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves, as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.

1B. Exemptions

An insurer who intends to file for one of the exemptions under this Section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if he or she deems the exemption inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.
Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption. Financial hardship is presumed to exist if the projected reasonable cost of the Actuarial Opinion would exceed the lesser of:

(i) One percent (1%) of the insurer’s capital and surplus reflected in the insurer’s latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer’s direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer’s latest quarterly statements filed with its domiciliary commissioner.

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company’s share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be $0 and to question 6 should be “not applicable.” Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary’s work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary’s relationship to the Company, qualifications for acting as Appointed Actuary, and date of appointment, and specify that the appointment was made by the Board of Directors.

If the Appointed Actuary was approved by the Academy to be a “Qualified Actuary,” with or without limitation, or if the Appointed Actuary is not a Qualified Actuary but was approved by the domiciliary commissioner, the company must attach, each year, the approval letter and reference such in the identification paragraph.

A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These Instructions require that a Qualified Actuary prepare the Actuarial Opinion. Nevertheless, if a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state’s requirements for rendering the Actuarial Opinion.
4. The SCOPE paragraph should contain a sentence such as the following:

“I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date.”

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

“In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by __________ (officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company’s current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.”

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

“In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.”

If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:

D. Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards and principles.

If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary’s control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.
A Statement of Actuarial Opinion should be made in accordance with one of the following sections (1 through 5). The Appointed Actuary must explicitly identify in Exhibit B which type applies.

1. **Determination of Reasonable Provision.** When the carried reserve amount is within the Appointed Actuary’s range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

2. **Determination of Deficient or Inadequate Provision.** When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable.

3. **Determination of Redundant or Excessive Provision.** When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable.

4. **Qualified Opinion.** When, in the Appointed Actuary’s opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material.

5. **No Opinion.** The Appointed Actuary’s ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

   **A. Company-Specific Risk Factors**

   The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

   **B. Risk of Material Adverse Deviation**

   The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.
C. Other Disclosures in Exhibit B

RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

D. Reinsurance

RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.

The Appointed Actuary’s comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary’s comments do not imply an opinion on the financial condition of any reinsurer.

Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

E. IRIS Ratios

If the Company’s reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s).

F. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Actuarial Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to Company management, the Board of Directors, the regulator or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.
Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC Accounting Practices and Procedures Manual requires a company with over 10,000 in force lives covered by long-term care (LTC) insurance contracts as of the valuation date to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term “Actuarial Memorandum” is synonymous with Actuarial Report and workpapers.

The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.

The Actuarial Report must also include:

A. A description of the Appointed Actuary’s relationship to the Company, with clear presentation of the Appointed Actuary’s role in advising the Board of Directors and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board of Directors and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

B. An exhibit that ties to the Annual Statement and compares the Appointed Actuary’s conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary’s conclusions include the Appointed Actuary’s point estimate(s), range(s) of reasonable estimates or both.

C. An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary’s analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences.

D. An exhibit or appendix showing the change in the Appointed Actuary’s estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis, but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

E. Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

F. Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, and how these factors were addressed in prior and current analyses.

8. Both the Actuarial Opinion and the Actuarial Report should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the respective dates when the Actuarial Opinion was rendered and the Actuarial Report finalized. The signature and date should appear in the following format:

___________________________________
Signature of Appointed Actuary
Printed name of Appointed Actuary
Employer’s name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

© 2019 National Association of Insurance Commissioners
9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification is required when discovery is made between the issuance of the Actuarial Opinion and Dec. 31 of that year. Notification should include a summary of such findings.

If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended Actuarial Opinion submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended Actuarial Opinion has been finalized.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibits A and B are to be filed in both print and data capture format.

Exhibit B: DISCLOSURES
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

1. Name of the Appointed Actuary
   Last _______ First _____ Mid ______

2. The Appointed Actuary’s relationship to the Company
   Enter E or C based upon the following:
   E if an Employee of the Company or Group
   C if a Consultant

3. The Appointed Actuary’s NAIC-Accepted Actuarial Designation has the following designation (indicated by the letter code):
   F if a Fellow of the Casualty Actuarial Society (FCAS)
   A if an Associate of the Casualty Actuarial Society (ACAS)
   S if a Fellow of the Society of Actuaries (FSA) through the General Insurance track
   M if the actuary does not have an NAIC-Accepted Actuarial Designation, but is not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Academy’s Casualty Practice Council, as documented with the attached approval letter.
   O for Other

4. Type of Opinion, as identified in the OPINION paragraph.
   Enter R, I, E, Q, or N based upon the following:
   R if Reasonable
   I if Inadequate or Deficient Provision
   E if Excessive or Redundant Provision
   Q if Qualified. Use Q when part of the OPINION is Qualified.
   N if No Opinion

5. Materiality Standard expressed in U.S. dollars (used to Answer Question #6) $ _______

6. Are there significant risks that could result in Material Adverse Deviation? Yes [ ] No [ ] Not Applicable [ ]

7. Statutory Surplus (Liabilities, Surplus and Other Funds page, Col 1, Line 37) $ _______

8. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000) $ _______

9. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P
   9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3, & 4 $ _______
   9.2 Tabular Discount [Notes, Line 32A23, (Amounts 1 & 2)], Electronic Filing Col 1 & 2 $ _______
10. The net reserves for losses and loss adjustment expenses for the Company’s share of voluntary and involuntary underwriting pools’ and associations’ unpaid losses and loss adjustment expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines $ _______

11. The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines *
   11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year) Electronic Filing Col 5 $ _______
   11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 5 $ _______

12. The total claims made extended loss and loss adjustment expense, and unearned premium reserves (Greater than or equal to Schedule P Interrogatories)
   12.1 Amount reported as loss and loss adjustment expense reserves $ _______
   12.2 Amount reported as unearned premium reserves $ _______

13. The net reserves for the A&H Long Duration Contracts that the Company carries on the following lines on the Liabilities, Surplus and Other Funds page:
   13.1 Losses $ _______
   13.2 Loss Adjustment Expenses $ _______
   13.3 Unearned Premium $ _______
   13.4 Write-In (list separately, adding additional lines as needed, and identify (e.g., “Premium Deficiency Reserves”, “Contract Reserves other than Premium Deficiency Reserves” or “AG 51 Reserves”)) $ _______

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _______

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor’s Pollution Liability, Consultant’s Environmental Liability, and Pollution and Remediation Legal Liability.

The Capital Adequacy (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Task Force members participated:

- David Altmaier, Chair (FL); Todd E. Kiser, Vice Chair, represented by Dan Applegarth (UT); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Sheila Travis (AL); Andrew N. Mais represented by Wanchin Chou (CT); Stephen C. Taylor represented by Philip Barlow (DC); Trinidad Navarro represented by Ryllyn Brown (DE); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Kevin Fry and Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Mike Causey represented by Jackie Obusek (NC); Marlene Caride (NJ); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Stephanie McGee (NV); Jillian Froment represented by Tom Botsko and Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by John Tudino (RI); Kent Sullivan represented by Mike Boerner (TX); Mike Kreidler represented by Patrick McNaughton (WA); and Mark Afaile represented by Randy Milquet (WI).

1. **Adopted its Oct. 8 Minutes**

   The Task Force met Oct. 8 and took the following action: 1) adopted its Sept. 18 minutes, which was an e-vote to adopt its 2020 proposed charges; and 2) exposed its referrals: 1) NAIC Designations for Schedule D, Part 2, Section 2; 2) Mutual Funds; 3) Comprehensive Funds; and 4) Supplemental Investment Risk Interrogatories (SIRI).

   Ms. Orth made a motion, seconded by Mr. Botsko, to adopt the Task Force’s Oct. 8 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its Working Group Reports**

   Mr. Barlow mentioned an addition to the Life Risk-Based Capital (E) Working Group’s summary report to include phase-in and spreading of variable annuity reserves capital.

   Mr. Milquet made a motion, seconded by Ms. Obusek, to adopt the following reports: Health Risk-Based Capital (E) Working Group, which met Dec. 8 (Attachment Two); Life Risk-Based Capital (E) Working Group, which met Dec. 7 (Attachment Three); and Property and Casualty Risk-Based Capital (E) Working Group, which met Dec. 8 (Attachment Four). The motion passed.

3. **Adopted its Working Agenda**

   Mr. McNaughton said the completion dates for stop loss insurance, health care receivables and the health test ad hoc group were extended to better reflect the expected completion of each of these projects. The referral letter to the Task Force on guaranty funds, long-term care (LTC) and health maintenance organizations (HMOs) and the review of LTC and long-term disability under the H2 component were removed from the agenda. The Health Risk-Based Capital (E) Working Group completed the memorandum on the LTC and guaranty funds and referred it to the Task Force, and the Working Group determined that due to materiality, the item on LTC and long-term disability would be removed and, if needed, can be reassessed in the future.

   Mr. Botsko summarized the changes to the to the 2020 Property and Casualty Risk-Based Capital (E) Working Group’s working agenda: 1) removed “evaluate the proposed changes from the Investment Risk-Based Capital (E) Working Group related to bond changes in the property/casualty (P/C) formula” in the new items section; and 2) added “evaluate the possibility of using the NAIC as a centralized location for reinsurer designations” and “evaluate the possibility of allowing additional third-party models to calculate the cat model losses” in the carry-over items and new items sections, respectively.

   Mr. Botsko summarized the changes to the to the 2020 Property and Casualty Risk-Based Capital (E) Working Group’s working agenda: 1) removed “evaluate the proposed changes from the Investment Risk-Based Capital (E) Working Group related to bond changes in the property/casualty (P/C) formula” in the new items section; and 2) added “evaluate the possibility of using the NAIC as a centralized location for reinsurer designations” and “evaluate the possibility of allowing additional third-party models to calculate the cat model losses” in the carry-over items and new items sections, respectively.

   Mr. Botsko said the Affiliated Investment Ad Hoc Group has continued its biweekly conference calls since the Summer National Meeting and met in person Dec. 6. The Ad Hoc Group has finalized the instructions for directly owned subsidiaries for all three forms. It also has made progress on the instructions for indirect-owned subsidiaries and alien subsidiaries. The Ad Hoc Group will continue to move forward with the remaining instructions over the next few months. Mr. Botsko said he plans to present the direct and indirect instructions to the respective working groups and the Task Force by the 2020 Spring National Meeting.

© 2019 National Association of Insurance Commissioners
Mr. Botsko made a motion, seconded by Mr. Boerner, to adopt its working agenda (Attachment Five). The motion passed.

4. **Received an LTC/Guaranty Fund Memorandum**

Mr. McNaughton summarized a referral from the Task Force regarding adopted amendments to the *Life and Health Insurance Guaranty Association Model Act* (#520) and to determine if changes were warranted to the health risk-based capital (RBC) formula. The health RBC formula currently includes a 0.5% charge on all premiums that are subject to a guaranty fund assessment.

Mr. McNaughton added that through their analysis: 1) that while some states have not yet adopted the model law changes, once adopted, a majority of the states will allow for a premium tax or corporate tax offset, or the ability to impose a minimal surcharge to help offset the assessment; 2) at a maximum, HMOs would incur a charge of 2% (depending upon each state’s guaranty fund law) and if they were unable to pay or meet this obligation, they could request a waiver from the guaranty fund of some or all of the assessment; and 3) given the differences and complexities between states in the regulation and taxation of HMOs and that the RBC formula is a generic formula, the goal of which is to be applied as uniformly as possible and not at such a granular level, it would be difficult to incorporate such changes into the formula that could address all the different scenarios needed to provide a different charge, offset or credit to such a distinct population in such diverse regulatory environments.

Mr. McNaughton said based on these findings, the Working Group does not recommend any changes to the health RBC formula (Attachment Six).

6. **Adopted the Proposals of the Property and Casualty Risk-Based Capital (E) Working Group**

   a. **Proposal 2019-11-P (Clarification to Instructions Regarding Lloyd’s of London) and the 2019 Reporting Guideline**

   Mr. Botsko said upon review of 2018 Annual Statement Schedule F, Part 3 filings, it was observed that many filers reported reinsurance recoverable amounts due from Lloyd’s of London syndicates as NAIC 6 – unrated; therefore, they are subject to the highest R3 charge. He stated that the purpose of this proposal is to clarify that the reinsurance recoverable from individual syndicates of Lloyd’s of London that are covered under the Lloyd’s Central Fund may use the lowest financial strength group rating received from an approved rating agency. He said that because the deadline for the change of the 2019 RBC instructions has passed, a guideline for 2019 RBC reporting will be posted to the Working Group’s web page pending the proposal’s adoption by the Working Group. He also stated that the Working Group received no comments during the exposure period.

   b. **Proposal 2019-12-P (Remove PR038 Adjustment for Reinsurance Penalty)**

   Mr. Botsko said that because the computation of the RBC charge for reinsurance recoverable amounts has been moved to the Annual Statement Schedule F, Part 3 in 2018 reporting, the adjustment for reinsurance penalty for affiliates applicable to Schedule F in PR038 is no longer needed. He stated that the purpose of this proposal is to eliminate the adjustment for reinsurance penalty for affiliates applicable to Schedule F section in PR038. Mr. Botsko also said the Working Group received no comments during the exposure period.

   Mr. Botsko said in order to avoid double-counting the catastrophe losses in the RBC formula, the U.S. and non-U.S. catastrophe event lists provide a routine annual update for those catastrophe events that should be excluded from the R5 calculation. He stated that the Subgroup exposed the list during its Nov. 8 conference call; no comments were received during the exposure period.

   Mr. Botsko indicated that any additional events that occur between Nov. 1 and Dec. 31 will be exposed during the first week of January 2020. The Subgroup will either schedule a conference call or conduct an e-vote to consider adoption of the updated list after the Committee Assignment Meeting.

Mr. Botsko made a motion, seconded by Mr. Chou, to adopt proposal 2019-11-P (Attachment Seven), proposal 2019-12-P (Attachment Eight) and proposal 2019-14-CR (Attachment Nine). The motion passed.
7. **Adopted the RBC Preamble**

Commissioner Altmaier said the purpose of the RBC preamble is to provide some history and background on the RBC as a reference when reviewing the numerous referrals and proposals that pass to the Capital Adequacy (E) Task Force and its working groups. He added that the preamble was re-exposed for a 30-day public comment period ending Sept. 4 and was modified to include comments received from America’s Health Insurance Plans (AHIP) (Attachment Eleven).

Bill Weller (AHIP) thanked the Task Force for including the changes suggested in AHIP’s comment letter.

Commissioner Altmaier said he received a comment that indicates there are some states that are allowing insurers’ permitted practices to adjust their RBC outside the accounting permitted practices to their financial statement. The wording in the preamble states that permitted practices are not allowed, and the Task Force was not aware that this was allowed by any state.

Ms. Brown said that if permitted practices are allowed, there should be some type of disclosure of the permitted practice and why it is allowed. She added that it is not a good idea to allow permitted practices in the RBC, which would be a disadvantage of companies that are following the rules.

Mr. Barlow said he has heard there are permitted practices in RBC, which he believes there should not be because of the significant solvency to the insurance company.

Mr. Bruggeman said RBC is a tool used to monitor solvency, and when a company’s RBC falls into various action levels that may require monitoring, adjusting those numbers will skew their results. He added that permitted practices are allowed in the financial statement and that is where they belong, not by adjusting the RBC numerator.

Mr. Fry said there may be state laws that allow for a permitted practice in RBC.

Mr. McNaughton said this tool is a cornerstone to solvency regulation, noting that the *Risk-Based Capital (RBC) for Insurers Model Act* (#312) and the *Risk-Based Capital (RBC) for Health Organizations Model Act #315* are part of the accreditation standards; therefore, if this is allowed, there is a risk of regulatory arbitrage.

Commissioner Altmaier said the paragraph in question would be paragraph 10 of Attachment Eleven, which states: “RBC instructions, RBC reports and adjusted report(s) are intended solely for use by the commissioner/state in monitoring the solvency of insurers and the need for possible corrective action with respect to insurers and are considered confidential. All domestic insurers are required to file an RBC report unless exempt by the Commissioner. There are no state permitted practices to modify the RBC formula, and all insurers are required to abide by the RBC instructions.” He said adoption would eliminate the state’s authority to allow permitted practices.

Mr. Fry suggested that the Task Force table this adoption.

Lou Felice (NAIC) said RBC should not allow for permitted practices to the denominator, which would change the RBC formula and factors. The denominator could be an accounting permitted practice, or a state permitted practice that flows into RBC.

Mr. Yanacheak said he is in favor of moving forward with the current wording today.

Commissioner Altmaier said, if adopted, the Task Force could look into the states that are allowing a permitted practice and if the numerator or denominator is being adjusted.

Mr. Yanacheak made a motion, seconded by Mr. Barlow, to adopt the RBC preamble (Attachment Ten). The motion passed.

8. **Heard Comments on Exposed Referrals**

Commissioner Altmaier said the Task Force has received numerous referrals regarding investments that could affect the RBC formula. Three referrals were exposed for a 30-day public comment period ending Nov. 8, and the Task Force requested that the following questions be considered: a) if changes to the RBC formula were appropriate; b) if so, what was the best way for the Task Force to move forward; and c) what resources should the Task Force consider for research and analysis of these investments.
a. Comprehensive Fund Referral

This exposure is outlined in two memorandums from the Statutory Accounting Principles (E) Working Group (Attachment Twelve and Attachment Thirteen).

Nancy Bennett (American Academy of Actuaries—Academy) said the risk in a single bond is not the same as the risk associated with comprehensive bonds. She added that using speculative risk analysis (default rate and credit experience) to rate bond funds may reduce the capital requirement for fund investments below state insurance regulators’ state statistical level. She said the Academy recommends further analysis so that similar treatment does not under mind the RBC calculation.

Josh Bean (Transamerica), representing the American Council of Life Insurers (ACLI) and the North American Securities Valuation Association (NASVA), said they encourage the Task Force to continue discussion on the bond. He said they prefer stock focused on fund structures’ risk profile and to determine a risk-based factor appropriate for this investment portfolio. Mr. Bean said these funds offer insurance companies access to diversification and solid risk adjusted returns, as well as liquidity and cash flows well suited to insurers asset/liability matching needs.

Chris Anderson (Anderson Insights) said, for regulatory purposes, open-end funds—which include exchange-traded funds (ETFs)—should not be treated like closed-end funds (actual bonds) and could encourage insurers to invest in assets with low C-1 factors for various reasons: 1) they do not have the same predictability and periodicity of cash flows of actual bonds; 2) they have indeterminate, not fixed, lives; 3) they do not offer promises of cash flows that insurers can use to provide their projected future liability needs, and due to time constraints, they will end on item; and 4) they are not subject to credit analysis because there is no party to be evaluated making specific promises concerning the amounts of future cash flows. He asked that the Task Force determine whether it is appropriate to assign the same risk factor for these funds as if they were a bond or preferred stock.

Commissioner Altmaier said the comment letter from Everest Reinsurance Company is included in the materials.

Erinn King (Payden & Rygel) said Payden & Rygel is in support of assigning bond factors for fixed income designation for all bond and preferred stock funds, and ETFs, both private and public, regardless of which schedule they are reported on in the annual financial statement that are determined/designated by the NAIC Securities Valuation Office (SVO). She added that funds allow smaller insurers to achieve better pricing economies of scale and diversification of investment risk than many can find purchasing individual securities, but the RBC charges are inconsistent across the formulas.

Kelly Sweppenhiser (Vanguard Institutional Investor Group) focused on two important points from Vanguard’s research: 1) there is 1/10 of 1% of bond mutual funds that apply for designations, so there is minimal impact to RBC; and 2) if bond funds were afforded bond-like treatment in RBC, that amount would slowly increase, and a small subset of U.S. Securities and Exchange Commission (SEC)-registered bonds would be submitted for designation.

Commissioner Altmaier asked the Task Force members to consider the comments heard today so, when the Task Force reconvenes, a determination can be made on how to move forward.

b. Structured Notes Referral

Mr. Bean stressed that the RBC should exclude nonadmitted structured notes from receiving an RBC charge. The RBC rules for P/C companies refer to the net book/adjusted carrying values (net of a nonadmit amount) when calculating RBC charges. This is inconsistent with the treatment in the life RBC formula (reducing statutory capital and surplus by 100% of the net book/adjusted carrying value of the asset), and the gross asset (before reducing it for nonadmitted) has an RBC charge associated with it. Mr. Bean said that should an insurer receive a permitted practice to admit structured notes as “other derivatives,” the ACLI and NASVA recommend the RBC rules associated with derivatives on Schedule DB be modified to treat such instruments like equity securities.

Commissioner Altmaier asked the Task Force members to consider the comments heard today so, when the Task Force reconvenes, a determination can be made on how to move forward.

10. Discussed Other Matters

Commissioner Altmaier thanked Mr. McNaughton for his years of service as chair of the Health Risk-Based Capital (E) Working Group, as well as for his expertise and diligence with the health RBC formula. Commissioner Altmaier expressed admiration for Mr. McNaughton receiving the Robert Dineen Award for Outstanding Service and Contribution and said he looks forward to seeing him participate in a non-regulatory capacity.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Capital Adequacy (E) Task Force met via conference call Oct. 8, 2019. The following Task Force members participated: David Altmaier, Chair (FL); Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Stephen C. Taylor represented by Philip Barlow (DC); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Chlora Lindley-Myers (MO); Marlene Caride represented by Diana Sherman (NJ); John G. Franchini represented by Anna Krylova (NM); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Joel Sander (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Jamie Walker (TX); Mike Kreidler represented by Patrick McNaughton (WA); and Mark Afable represented by Randy Milquet (WI). Also participating was: Jim Everett (NY).

1. **Adopted its Sept. 18 Minutes**

The Task Force conducted an e-vote that concluded Sept. 18 to adopt its 2020 proposed charges.

Director Lindley-Myers made a motion, seconded by Mr. Bruggeman, to adopt the Task Force’s Sept. 18 minutes (Attachment One-A). The motion passed unanimously.

2. **Exposed its Referrals**

Commissioner Altmaier said the Task Force has received numerous referrals dating back to August 2018. The referrals relate to investments and various other groups under the Financial Condition (E) Committee, such as the Statutory Accounting Principles (E) Working Group and the Valuation of Securities (E) Task Force. The referrals indicate that some changes to the way certain investments are treated either from an accounting standpoint or an investment standpoint which may or may not result in necessary changes to the risk-based capital (RBC).

Due to the volume of referrals, Commissioner Altmaier said it is apparent that some can be grouped together, and the purpose of this call is to discuss a path forward. He said these items will be exposed for a 30-day public comment period ending Nov. 8 to receive input on how to approach each one of the referrals.

Commissioner Altmaier added that this is an opportunity for interested stakeholders to provide feedback to the Capital Adequacy (E) Task Force on how these referrals could help state insurance regulators identify insurance companies that might have issues from a capital standpoint and how the RBC formula can be more efficient to meet that goal by updating investment risk factors within the formula.

   a. **NAIC Designations for Schedule D, Part 2, Section 2 – Common Stocks**

   Mr. Fry said the Valuation of Securities (E) Task Force did look at this and item C – Comprehensive Funds, which are somewhat related, and he said the framework already allows for this investment through the Statement of Statutory Accounting Principles (SSAP) No. 26R—Other Admitted Assets; but was written a long time ago, and these investments are allowed on Schedule D, Part 1 and are given the same factor as bonds. He added that in the life and fraternal RBC, these funds are reported on Schedule BA and are given the same bond treatment.

   Mr. Fry said he believes that these funds should be given a designation similar to bonds instead of a factor similar to common stock, which is a fix flat factor charge of 15% for property/casualty (P/C) and health. He added that re-evaluating the funds would be a lengthy process and a quicker way of updating would be to treat it like a bond.

Commissioner Altmaier added that some of these referrals are similar to each other; although listed separately on the agenda, they can be lumped into one comment letter to the Capital Adequacy (E) Task Force.
Mr. Barlow added that the investments should be evaluated first to determine the appropriate charge, and he disagrees that just giving them the bond factor is wrong. He added, especially when the sole purpose of this referral is to change the RBC factor, he disagrees with changing the factor firsts and then evaluating what it should be later. He stressed that the analysis to determine the appropriate risk charge should be done first, and he stated that it is clear the proposal’s objective is to change the RBC charge. He asked for clarification on the exposure and whether these referrals will apply to all RBC formulas.

Commissioner Altmaier said for now, they will remain at the Task Force level; after the comments are reviewed, the Task Force will determine the appropriate direction, whether that will be to refer them to all RBC working groups for further review or not. He added that if any of the proposal moves beyond this exposure period, there will be other opportunities for further discussion on methodology and what changes should occur in the formulas.

b. Mutual Funds

Commissioner Altmaier pointed out that this referral was received some time ago and was also directed to the Valuation of Securities (E) Task Force.

Julie Gann (NAIC) said the Statutory Accounting Principle (E) Working Group already adopted this change based on feedback received during its exposure period and determined that it was previously included in SSAP No. 30R—Unaffiliated Common Stock and inadvertently excluded mutual funds reported on the common stock schedule. She added that a referral to the Blanks (E) Working Group to include designations for mutual funds and include them in the top 10 exposures based on diversified and non-diversified funds.

Hearing no comments, the Capital Adequacy (E) Task Force will consider this referral complete.

c. Comprehensive Funds

Commissioner Altmaier said both of these referrals came from the Valuation of Securities (E) Task Force regarding funds that predominately hold bonds.

Charles Therriault (NAIC) said the Securities Valuation Office (SVO) is charged with evaluating credit risk and assigning a designation based on that risk by looking into the required payments within the investment and what the source of those payments are (e.g., for a typical corporate bond, the source of those payments are the operating business entity whose financial statements are reviewed and analyzed along with the bond’s legal agreement, and an opinion is formed based on the likelihood that the contractual payments will be met; that opinion is provided by assigning a designation).

Mr. Therriault said funds are a portfolio of individual bonds, and the portfolio is the source of those payments. For example, if an investor holds 10 bonds directly, those 10 bonds would be exposed to a credit risk; therefore, the fund would be exposed to the same level of credit risk, assuming they all have the same market value change and credit events. The substance of the risk has not changed, just the legal form. The weighted average ratings factor (WARF) is applied to each underlying investment and reflects the relative risk of each of the delineations and credit risk A bonds with an A+ rating would get a factor of roughly 100. If compared to another bond with a rating of B+, it would get a factor of 50, 858 times the level of risk; and through the application of these rating factors to the underlying investments they are aggregated up to essentially become an aggregate fund, the risk level, which is why there is a lot of comfort in terms of the analysis process and how NAIC designations are assigned to this portfolio. Analysis would be difficult based on the number of different classes of investment included in a fund.

Mr. Everett said the first thing to consider is how many mutual funds and exchange-traded funds (ETFs) are being reported on Schedule D, Part 2, Section 2. Back in the time when ETFs were first given bond treatment, there were only two or three funds. Currently, these funds are receiving a 15% charge, same as common stock for the health and P/C RBC. It would be helpful to know what the growth rate is and what amount is being talked about. There are definitely more funds today, and if the market is much larger and the percentage of funds are at an increase, then it would seem that the best place to catch hold of it, if dealing with credit default risk and averaging ratings as opposed to averaging percentages of default, it would be helpful to capture that information on a separate schedule. He that it is important to understand the trend before factors are changed and its impact to RBC.

Commissioner Altmaier agreed and asked that NAIC staff provide any analysis already collected on these funds.
Mr. Barlow said it would also be helpful to find out where in the schedule these funds are currently reported; assuming that the volume is significant, there might be some benefit in either creating a specific schedule or an identifier to put all these funds together. He added that in a lot of cases, companies are misreporting and examiners have missed things or are not quite sure where they should be reported. If a separate schedule for these funds were added, only then could the real exposure be seen and the different funds and individual investments be differentiated.

Commissioner Altmaier said the Capital Adequacy (E) Task Force would welcome any feedback from the interested stakeholders on the referral or on any of the comments from the state insurance regulators’ discussion, these should be included in comments during the 30-day public comment period.

d. **Supplemental Investment Risk Interrogatories (SIRI)**

Ms. Gann explained that this was exposed at the Summer National Meeting, and the Statutory Accounting Principles (E) Working Group will discuss comments received during the Fall National Meeting. Pending comments, this proposal may not be finalized at that time. Her summary stated that if an equity exposure is diversified, open-end diversified funds would not necessarily have to be looked into to identify all exposures for aggregation. However, if a closed-end fund is not diversified or an open-end fund is not diversified, then the exposure would need to be looked through to identify what the exposures are, and it would need to aggregate those with other individual exposures. Essentially, it is preventing the inclusion of a fund environment to prevent identifying key exposures for an insurance entity. It was referred over simply because a comment was received that there could potentially be an RBC impact for this with regard to concentration risk.

Commissioner Altmaier said this referral will be moved to the top of the list, exposed for a 30-day public comment period and specifically, and he asked that any comments regarding its impact to RBC that the Capital Adequacy (E) Task Force should provide to the Working Group be provided within.

e. **Structured Notes**

Commissioner Altmaier said this referral includes revisions to several SSAPs—specifically, SSAP No. 2R—*Cash, Drafts, and Short-term Investments*; SSAP No. 26R—*Bonds*; SSAP No. 43R—*Loan-Backed and Structured Securities*; and SSAP No. 86—*Derivatives*—that affect structure notes, and revisions were adopted with a Dec. 31, 2019, effective date. The Capital Adequacy (E) Task Force will expose this referral for a 30-day public comment period to receive any feedback or objections to the changes.

Commissioner Altmaier reiterated that the referral for mutual funds is considered completed and the SIRI referral is open for comments by the Statutory Accounting Principles (E) Working Group, noting that the Working Group will allow the Capital Adequacy (E) Task Force until mid-November to provide comments. The common stocks, comprehensive funds and structured notes referrals will be exposed for a 30-day public comment period, asking specifically if these referrals affect RBC, what resources should be used to analyze the investments, and how the analysis should be done.

3. **Discussed its Working Agenda**

Commissioner Altmaier said the only updates to the working agenda will be to prioritize the referrals as “3 – low priority” during the exposure period.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Capital Adequacy (E) Task Force conducted an e-vote that concluded Sept. 18, 2019. The following Task Force members participated: Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Ricardo Lara represented by Rachel Hemphill (CA); Andrew N. Mais represented by Wanchin Chou (CT); Stephen C. Taylor (DC); Trinidad Navarro represented by Dave Lonchar (DE); Vicki Schmidt represented by Tish Becker (KS); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Marlene Caride (NJ); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Joel Bengo (NV); Jillian Froment represented by Tom Botsko and Dale Bruggeman (OH); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Doug Slape (TX); Mike Kreidler represented by Patrick McNaughton (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its 2020 Proposed Charges**

The Task Force conducted an e-vote to consider adoption of its 2020 proposed charges.

Mr. Broccoli made a motion, seconded by Ms. Krylova, to adopt the Task Force’s 2020 proposed charges (*see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment One-A*). The motion passed.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Working Group members participated: Patrick McNaughton, Chair, and Steve Drutz (WA); Steve Ostlund (AL); Eric Unger (CO); Wanchin Chou (CT); Carolyn Morgan (FL); Tish Becker (KS); Rhonda Ahrens (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Mike Boerner (TX). Also participating was: Tom Botsko (OH); and Andrew Schallhorn (OK).

1. Adopted its October 21 and Sept. 9 Minutes

The Working Group met Oct. 21 and Sept. 9. During these meetings, the Working Group took the following action: 1) expose the health test language proposal to the Life Risk-Based Capital (E) Working Group and the Health Risk-Based Capital (E) Working Group for a 30-day public comment period ending Nov. 20; 2) discuss the field testing in relation to the proposed changes to the health test; 3) refer the long-term care (LTC) health maintenance organization (HMO) guaranty fund memorandum to the Capital Adequacy (E) Task Force; 4) receive comments and rejected proposal 2019-04-H for health care receivables and agreed to continue to look into the matter; 5) receive comments on the excessive growth charge and the health bond structure; 6) discussed the managed care credit; and 7) receive an update on the Health Test Ad Hoc Group.

The Working Group also met Oct. 10 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.

Mr. Ostlund made a motion, seconded by Mr. Chou, to adopt the Working Group’s Oct. 21 (Attachment Two-A) and Sept. 9 (Attachment Two-B) minutes. The motion passed.

2. Discussed the Draft Health Bond Structure

Mr. McNaughton said that over the last couple of years, the Working Group has discussed the proposed recommendations from the American Academy of Actuaries (Academy) on the bond factors. During that time period, the Working Group exposed the Academy’s report “An Update to the Property & Casualty and Health Risk-Based Capital Bond Factors: Report to the NAIC Investment Risk-Based Capital (E) Working Group, Health Risk-Based Capital (E) Working Group, and Property and Casualty Risk-Based Capital (E) Working Group” and a draft of the proposed structure changes (Attachment Two-C). The Working Group received comments from UnitedHealth Group and America’s Health Insurance Plans (AHIP) in which they raised concerns regarding the inclusion of investment income, factors for the Aaa and AA1 bonds, and the bond portfolio adjustment included in the factors for speculative grade bonds. The Working Group asked the Academy to review these comments and provide its feedback.

Mr. McNaughton summarized the comments received from UnitedHealth on the investment income (Attachment Two-D). He said that in the Academy’s response (Attachment Two-E), it was noted that the property/casualty formula used investment income in the development of the underwriting risk and considered it to be redundant to include it in the development of the bond factors. The Academy also noted that it was unclear if investment income was used in the development of the underwriting risk in the health formula and indicated that updating the factors to include the investment income would require a number of considerations and assumptions to accommodate the impact.

Mr. McNaughton said that NAIC reviewed past minutes for the Working Group and did not find any discussion that investment income was considered in the development of the underwriting portion of the health risk-based capital (RBC) formula. He said investment income does not seem to be of significant relevance due to the need to hold liquid assets to cover short-term liabilities and that while health insurers may not pay dividends to policyholders, it is not uncommon for larger profitable health insurers to pay dividends to stockholders from earnings, which would include investment income.

Mr. Ostlund asked the significance of including or not including it in the factor development. Crystal Brown (NAIC) said it is her understanding that the Academy would have to go back into the data and update the model for a number of considerations and assumptions to incorporate or identify the impact of the investment income into the factors. Mr. Ostlund said it seems that the Working Group is expending a lot of time on something that may not have much of an impact. Mr. McNaughton agreed
and said that RBC is a regulator-only tool and that making changes to the formula that do not have a material impact may not be in the best interest of the Working Group.

Donna Novak (Novarest Consulting) said she was one of the actuaries who worked with the Academy on the development of the original health RBC formula. She said she did the modeling for the underwriting risk and does not remember including investment income; it was based all on the claims.

Mr. McNaughton said that UnitedHealth also commented on the proposed factors of Aaa and Aa1 bonds. He indicated that those bonds are less risky than the Aa2 bonds and recommended that a lower factor should be applied to these types of bonds. UnitedHealth suggested factors of 0.03% and 0.07% as opposed to the proposed factor of 0.1% from the Academy. Mr. McNaughton noted that the Academy responded that the factor of 0.1% for Aaa, AA1 and Aa2 bonds was recommended for reasons of conservatism. He said that the Academy noted that in considering a minimum risk factor, it also took into consideration the risk charge associated to the cash. He said that the Academy noted that if cash had a risk charge, then bonds should have a charge at least as great and that there could be other risks outside of the modeled risk of misuse or loss that should also be taken into consideration. Mr. McNaughton said that from a solvency and conservatism perspective, he recommended that the Working Group consider retaining the factor of 0.1% for the Aaa and AA1 bonds.

Mr. McNaughton said that AHIP (Attachment Two-F) expressed concerns with the recommended Academy factors that included the bond portfolio adjustment for the speculative grade bonds. In its letter, AHIP noted that it could find no basis for the assumption that the statistical fluctuation based on the portfolio size from the default/no-default variation is appropriate for any presumed variation by portfolio size due to market value fluctuations.

Mr. McNaughton said that it is important to note that from a consistency basis, the health formula is deviating from the treatment of the bond portfolio adjustment used in the life and P/C formulas by incorporating the bond portfolio adjustment into the factor itself. He said it is also important to remember that the life and P/C formulas do not differentiate between investment grade and speculative grade bonds when calculating the bond portfolio adjustment. Therefore, excluding the bond portfolio adjustment from the speculative bond factors would be an additional inconsistency incorporated into the health formula.

Mr. McNaughton said that through additional discussions with the Academy, it indicated that the data was not split between investment grade and speculative grade bonds when the factors were developed. Therefore, the Academy would have to go back and re-evaluate the data, which could result in a significant amount of effort. The Academy indicated that by removing the bond portfolio adjustment from the speculative grade bond factors, it could increase the investment grade bond factors. Mr. Chou suggested caution in moving forward with any changes to the factors.

Mr. McNaughton said that a conference call will be scheduled the week of Dec. 16 for the Working Group to address this item further with the Academy and determine how to move forward.

3. Received an Update on the Health Test Ad Hoc Group and Discussed Comments Received on the Health Test Language Proposal

Mr. McNaughton said the ad hoc group was formed to look at the health test and the impact it had on the results received for health premiums written in the US. The Working Group exposed the initial draft of the health test language proposal (Attachment Two-G) during its Oct. 21 conference call, and one comment letter was received from the American Council of Life Insurers (ACLI).

Steve Clayburn (ACLI) summarized the ACLI’s comments (Attachment Two-H). He said the review of the exposure with the ACLI’s members raised some practical implications because reducing the premium threshold from 95% to 90% could cause some companies to move from blank to blank each year. He suggested that the test be strengthened to make it a two-way test and suggested that the premium threshold be characterized as a threshold rather than a passing/failing test.

Mr. McNaughton said that the ad hoc group is aware of the possible burden on industry and the concern of having to move back and forth across blanks. He said that there could be some changes to the language to move towards a threshold approach and to give states greater discretion in working with their domestic companies when those thresholds are triggered. He said the main purpose is to identify what kind of business that company is writing.
Mr. McNaughton said that the ad hoc group met Nov. 8 via conference call to discuss the exposure of the health test language and the possibility of field testing. He said that they continue to evaluate enhancements to the health test language based on comments received and ongoing feedback.

Mr. McNaughton said that the ad hoc group will continue to evaluate how to move forward with field testing. However, a review of data found approximately 40 companies that have moved from the life blank to the health blank in the last 10 years, and this could be used as a starting point to evaluate the potential impact of moving from one blank to another. Mr. McNaughton said that the comments received will be referred to the ad hoc group for further consideration.

4. **Exposed the Health Care Receivable Guidance**

Mr. McNaughton said the Working Group rejected proposal 2019-04-H for health care receivables during its Oct. 21 conference call. He said the Working Group agreed to draft guidance on the reporting of the health care receivables within the annual statement filing and provide an explanation of how this data will be used in the development and re-evaluation of the health care receivable factors in the health RBC formula. He asked industry and states to consider providing examples or concerns that they have encountered in completing the Exhibit 3, Exhibit 3A and U&I Part 2B that could be incorporated into the guidance.

Hearing no objections, the Working exposed the Health Care Receivable Guidance proposal for a 30-day public comment period ending Jan. 7, 2020.

5. **Adopted Updates to its 2020 Working Agenda**

Ms. Brown said the health RBC working agenda was revised to update the priority of item 22 to a 3 and the expected completion date to 2023; item 23 and item 24 were updated to change the expected completion dates to the 2023 and 2022, respectively; and item 25 and item 26 were removed. Item 25 was removed because the response memorandum was completed and referred to the Capital Adequacy (E) Task Force, and Item 26 was removed due to premium amounts reported and the limited number of health entities that write long-term care (LTC) and long-term disability.

Mr. Chou asked for further clarification on the reason for the change to the expected completion of the health test ad hoc group. Ms. Brown explained that the group is moving forward in a two-phase approach: 1) review of the health test language; and 2) review of the annual statement blank to consider changes to schedules or supplements. Mr. McNaughton said that due to deadlines in which to make changes in the various groups, it will likely be closer to 2022 for implementation.

Mr. Ostlund made a motion, seconded by Mr. Chou, to adopt the updates to the 2020 health RBC working agenda. The motion passed.

6. **Received an Update on the Excessive Growth Charge Ad Hoc Group**

Mr. Drutz said the Excessive Growth Charge ad hoc group is moving forward with the referral from the Operational Risk (E) Subgroup and is considering possible changes.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
Health Risk-Based Capital (E) Working Group
Conference Call
October 21, 2019

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Oct. 21, 2019. The following Working Group members participated: Patrick McNaughton, Chair, and Steve Drutz (WA); Steve Ostlund (AL); Eric Unger and Rolf Kaumann (CO); Wanchin Chou (CT); Carolyn Morgan and Gilbert Moreau (FL); Tish Becker (KS); Kristi Bohn (MN); Michael Muldoon (NE); Christine Gralton (NY); and Aaron Hodges and Mike Boerner (TX).

1. Discussed Oct. 10 Regulator-to-Regulator Conference Call

The Working Group met Oct. 10 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings to: 1) hear a recap of the Health Care Receivable Project from the American Academy of Actuaries (Academy) as it relates to the misreporting of health care receivables; and 2) discuss the Health Care Receivables proposal.

2. Exposed a Health Test Proposal

Mr. McNaughton said the Health Test Ad Hoc Group was developed by the Working Group to look at the health test language in the annual financial statement instructions due to the significant amount of health business that is reported on the life blank. The ad hoc group began its work in 2018 and agreed to approach the review in two phases. The first phase was to look specifically at the health test language as it is in the annual financial statement instructions. The second phase is to review the life and health annual financial statement blanks and identify changes or supplemental schedules that can be incorporated into each of these annual financial statement blanks.

Mr. McNaughton said the ad hoc group has completed the initial draft of the health test language blanks proposal, and the language was significantly modified to remove the following components of the test: 1) reserve ratio; 2) entity is licensed and actively issuing and/or renewing business in five states or less; 3) at least 75% of the entity’s current year premiums are written in the domiciliary state; and 4) the values for the premium and reserve ratios equal 100% in both the reporting and prior year. The premium ratio was also changed in the proposal; currently, the premium ratio must equal or exceed 95% of premiums. The proposal lowers the premium ratio to 90%.

Mr. McNaughton said this change alone will transition a significant amount of the health business currently being reported on the life blank over to be filed on the health blank. He said changes were made to the section labeled as “Variances from following these instructions,” in an effort to create dialogue and discussion with the entity’s state insurance regulator should the entity fall below the 90% premium ratio. He said the ad hoc group discussed this in detail and felt that it did not want to create a scenario where an entity may be required to move back and forth between blanks if they fell below 90%. The language, as drafted, will allow the entity to discuss business changes with the domestic regulator and allow for flexibility if business writings change.

Hearing no objections, the Working Group agreed to expose the draft proposal to the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group for a 30-day public comment period ending Nov. 20.

Mr. McNaughton said it is anticipated that there will be at least one subsequent exposure after the first of the year, likely for a 60-day public comment period.

3. Discussed Field-Testing the Health Test

Mr. McNaughton said, in conjunction with the initial exposure of the health test language, the ad hoc group is moving forward with a possible field-test exercise. The purpose of this field-testing is two-fold: 1) it could assist in identifying changes needed to the health test language, as well as identifying possible changes to the annual financial statement blanks that will be reviewed as part of Phase 2; and 2) it will allow state insurance regulators to identify the potential risk-based capital (RBC) impact on an entity that has been reporting on the life blank.
Mr. McNaughton said if the entity passes the health test, it would then be required to report on the health blank. The field-testing will be strictly voluntary, and a confidentiality agreement would be drafted between the company and the NAIC indicating that this information would be used only for this project. The field-testing memo outlines this approach.

Mr. McNaughton said the ad hoc group would like to move forward with the project as outlined and reach out to those companies who would meet the proposed 90% premium ratio requirement to see if they would be willing to volunteer. The goal is to have field-testing complete by the end of the year, if possible, and it would be based on the 2018 annual financial statement filing.

Hearing no objections, the ad hoc group will move forward with field-testing the health test.

4. **Agreed to Refer a Memorandum Regarding an RBC Charge for Guaranty Association Assessment Risk to the Capital Adequacy (E) Task Force**

Mr. McNaughton said the Working Group previously received a request from the Capital Adequacy (E) Task Force to review the referral letter regarding adopted amendments to the *Life and Health Insurance Guaranty Association Model Act* (#520) and determine if changes were warranted to the health RBC formula. The referral outlined significant amendments to Model #520, including: 1) broadening the assessment base for long-term care insurance (LTCI) insolvencies to include both life and health insurers and splitting the assessment equally between the life and health insurers; 2) clarifying the guaranty associations’ coverage of LTCI; and 3) including health maintenance organizations (HMOs) as members of the guaranty association, similar to other health insurers.

Mr. McNaughton said the Working Group exposed a response letter during its May 13 conference call that addressed the items noted in the referral letter. Currently, the guaranty fund assessment risk charge under the H4 – Business Risk component is 0.5%, and it is applied to direct earned premiums (as reported in Schedule T) in any state in which the reporting entity is subject to guaranty fund assessments. He said, based on the current instructions and reporting, there do not appear to be any modifications needed to the health RBC formula as a result of this change at this time.

Mr. McNaughton noted that there were no comments received on the original exposure of the letter; however, the Working Group was asked by other state insurance regulators to perform additional analysis on the consideration of those HMOs that do not pay premium taxes and would not have a method to recoup those assessments other than through premium increases. He said he and NAIC staff further reviewed the changes to Model #520 and the potential impact it could have on the health RBC formula with respect to HMOs. Based on the additional analysis of data specific to the application of guaranty fund laws in each state, we continue to believe that no changes to the formula are needed at this time.

Through the additional analysis performed, it was found that: 1) while some states have not yet adopted the changes to Model #520, once adopted, a majority of the states will allow for a premium tax or corporate tax offset, or the ability to impose a minimal surcharge to help offset the assessment; 2) at a maximum, HMOs would incur a charge of 2% (depending on each state’s guaranty fund law), and if they were unable to pay or meet this obligation, they could request a waiver from the guaranty fund of some or all of the assessment (currently, this is a fairly frequent practice); and 3) given the differences and complexities between the statutes in the regulation and taxation of HMOs, and given that the RBC formula is a generic formula, the goal of which is to be applied as uniformly as possible and not at such a granular level, it would be difficult to incorporate such changes into the formula that could address all the different scenarios needed to provide a different charge, offset or credit to such a distinct population in such diverse regulatory environments.

Mr. Kaumann made a motion, seconded by Mr. Ostlund, to refer a memorandum regarding an RBC charge for guaranty association assessment risk to the Capital Adequacy (E) Task Force (see *NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Six*). The motion passed unanimously.

5. **Rejected Proposal 2019-04-H**

Mr. McNaughton said the health care receivables proposal was developed due to misreporting problems identified by the Academy in its review of the data for the health care receivable factor development. The proposal was designed to apply an additional charge for receivable amounts that were accrued in the prior year, but not recovered in the current year. The recommendation was to implement the proposal on an informational-only basis for 2020 and 2021, with full implementation in 2022.
Mr. McNaughton said the Working Group exposed the proposal on two separate occasions with comments received from America’s Health Insurance Plans (AHIP) and UnitedHealth Group (UHG). He said the original intent of the proposal was to encourage companies to report the health care receivables correctly within the annual financial statement blank.

Mr. McNaughton proposed an alternative option for moving forward with the health care receivables factor review. He suggested that the Working Group: 1) reject proposal 2019-04-H; and 2) draft guidance on the problems encountered with the reporting of the health care receivable data in the annual financial statement. He said the Working Group can work with the trades, the Academy and companies to identify the reporting concerns. Through these avenues, the Working Group can then draft guidance for reporting health care receivables in Underwriting & Investment Exhibit, Part 2h, Exhibit 3, and Exhibit 3a. The guidance includes an explanation of how the data reported in these exhibits will be used in the development of the revised health care receivables factors, beginning with data year 2020–2022. Included in the guidance could be scenarios of items encountered and how to correct those. This guidance could then be posted on the health RBC web page and sent to companies’ financial and RBC contacts.

Mr. Ostlund made a motion, seconded by Mr. Boerner, to reject proposal 2019-04-H. The motion passed unanimously.

Mr. McNaughton said the Working Group will continue to move to look at the health care receivables factors, but in a different manner.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Sept. 9, 2019. The following Working Group members participated: Patrick McNaughton, Chair, David Hippen and Steve Drutz (WA); Steve Ostlund (AL); Wanchin Chou (CT); Carolyn Morgan (FL); Tish Becker (KS); Kristi Bohn (MN); Lindsay Crawford and Michael Muldoon (NE); Annette James (NV); Christine Gralton (NY); Kimberly Rankin (PA); and Mike Boerner (TX).

1. **Received Comments on Proposal 2019-04-H**

Mr. McNaughton said that the health care receivable proposal 2019-04-H (Attachment Two-B1 was re-exposed to include instructions from the Working Group’s July 17 conference call for a 30-day public comment period. Comment letters were received from UnitedHealth Group (Attachment Two-B2) and America’s Health Insurance Plans (AHIP) (Attachment Two-B3).

Jim Braue (UnitedHealth Group) summarized UnitedHealth Group’s comment letter. UnitedHealth Group suggested: 1) changes to the mathematical structure of the formula; 2) a review of the asymmetry; 3) exclusion of remaining receivables; 4) lack of proportionality; and 5) limitation of one-year of history. He said that UnitedHealth Group thinks it is important the proposal be in as final a form as possible before being implemented on even an informational-only basis. This will provide more useful information in how the proposal would work in practice and how it will affect companies going forward. He said that it may be beneficial to delay moving the proposal forward for a year in order to ensure that it is correct. Mr. Braue said that UnitedHealth Group has suggested an alternative formula and provided an example.

Kevin Russell (American Academy of Actuaries—Academy) said the issue of proportionality makes sense and while it adds some complexity to the formula, it could readily be accomplished. He said that the proportionality change could have a limit on the impact that any change would have on this year’s factor and that this may be a reason for not looking back a full three years but instead just looking back one or two years. He said all the suggestions are something that could be incorporated into the proposed changes.

The Working Group agreed to take the recommendations under advisement and to continue to review the proposal and discuss on a future conference call.

2. **Received Comments on the Excessive Growth Charge**

Mr. McNaughton said the Working Group received the excessive growth charge referral letter (Attachment Two-B4) from the Operational (E) Risk Subgroup and established an ad hoc group at the Spring National Meeting. Prior to the ad hoc group meeting, the Working Group exposed the referral letter and will use comments received in evaluating how to move forward with the excessive growth charge. Comment letters were received from AHIP (Attachment Two-B5) and UnitedHealth Group.

Mr. Braue summarized UnitedHealth Group’s comment letter (Attachment Two-B6) and agreed that there should be a review of the charge. However, he noted that charges are typically updated as a result of new experience or due to enhancements in the models used to produce them. However, this is not the case for the excessive growth charge. He said that the excessive growth charge as it exists today was more judgmentally based, and the rationale for changing it should be based on a review of: 1) if it has been working adequately in the past; 2) if there have been issues; 3) if it has failed to reflect actual problems that have occurred; or 4) if it has resulted false positives.

Mr. McNaughton said that based on the referral letter and comments received, the ad hoc group will focus on the key elements outlined in the letter if the charge should be revised or kept as it is. He said the group may consider if the risk is appropriately accounted for and if not, the group may need to look at how to describe and quantify the risk along with the parameters that should be considered. He said the first conference call will be set up for late September or early October.
3. Received Comments on Health Bond Structure

Mr. McNaughton said the Working Group exposed the draft structure and instructions for the 20 designations for NAIC bonds and recommended factors during its June 24 conference call. Comment letters were received from AHIP (Attachment Two-F) and UnitedHealth Group.

Mr. Braue summarized UnitedHealth Group’s comment letter (Attachment Two-D) on the bond structure proposal. He suggested that the factors used for miscellaneous fixed income assets and unaffiliated preferred stock that were based on the original bond factors be updated to reflect these changes suggested for bonds. He said this would not preclude any future studies’ independent factors for these asset types. He said UnitedHealth Group has some continuing concerns related to the factors for investment income, investment grade bond factors and speculative grade bonds.

Tim Deno (Academy) summarized the Academy’s response letter (Attachment Two-E). He said that through the Joint P&C/Health Bond Factors Analysis Work Group, the Academy identified that the property/casualty (P/C) risk-based capital (RBC) formula does include a portion of investment income in the underwriting risk. It is not clear if investment income is currently included in the underwriting risk portion of the health RBC formula.

Mr. Deno said that a minimum factor was set for the investment grade bonds because there is a minimum risk charge for cash. He said an appropriate relationship between the investment grade bond factors and cash factor should be considered.

Mr. Deno said that the life and P/C formulas include speculative grade bonds in the bond size adjustment, and for consistency purposes, speculative grade bonds were included in health. He said when the factors were developed, the data did not distinguish between the number of issuers on investment grade and speculative grade bonds, and if they were split, the data would have to be re-evaluated. He said that by doing this, in theory, the investment grade bond factors would raise some while speculative grade bond factors would go down slightly because of the volume that is there. He said a review of what assumptions are driving conservatism versus what assumptions are driving aggressiveness may need to be reviewed and to make sure that the Working Group is comfortable with these assumptions.

Crystal Brown (NAIC) said that the focus of the proposal at this time will be to update only the bond factors, with the recognition that there are other asset types whose factors were based on the original bond factors that will need to be looked at separately from the bonds. Ms. Brown said language could be added to the instructions for these other asset types indicating that the current factors were based on the original bond factors.

The Working Group asked NAIC staff to research through historical minutes to try to identify if investment income is currently included in the health formula. The Working Group will also research the inclusion of speculative grade bonds in the bond portfolio adjustment.

4. Discussed MCC

Mr. McNaughton said a question was brought to the Working Group in December 2018 pertaining to the execution of a risk-sharing contract with providers, which shifted paid claims from “Category 1 – Payments Made According to Contractual Arrangements” to “Category 2 – Payments Made Subject to Withholds or Bonuses That Are Otherwise Managed Care Category 1,” specifically when the change is modeled. There does not appear to be much of a benefit or change in credit when shifting from Category 1 to Category 2B. Mr. McNaughton said this resulted in a broader question: What was the original intent of the formula? Was it that the formula would yield the same managed care credit (MCC) (e.g., a 15% result) under Category 1 and 2B, even though the underlying arrangements are subject to different MCCs on their own? Or should a company get an additional credit under 2B compared to a 15% result under 1?

Mr. McNaughton said NAIC staff have reviewed the past minutes of the Health Risk-Based Capital (E) Working Group and found the original instructions. The instructions direct that the maximum credit for Category 2 withhold arrangements was 25% based upon a calculation that determines the ratio of withholds returned/bonuses paid to providers during the year prior to the reporting year to total withholds/bonuses during such year and then applies that ratio to the average provider withhold rate for the same prior year. If the underlying payment arrangement would otherwise fall under Category 1, and the MCC credit calculated under this category is less than 15%, the managed care organization (MCO) may use the Category 1 credit above and eliminate the effect of these payments on the calculation of the Category 2 credit. However, where payments that would otherwise fall under Category 0 are the only payments included in the credit calculation, the maximum credit is 15%. Mr. McNaughton reminded the Working Group that only one category may be used for each dollar of claims payment. Additional instructions and clarifications have been incorporated over time.
Ms. Rankin said that this could still be evolving with some of the federal Centers for Medicare & Medicaid Services (CMS) benefits and the rural hospital model as there could be some new factors that may affect this going forward.

The Working Group directed NAIC staff to continue to investigate how the formula is being calculated in comparison to the instructions.

5. Heard an Update on the Health Test Ad Hoc Group

Mr. McNaughton said the Health Test Ad Hoc Group met Aug. 26 and continued its discussion of revisions to the health test language that include: 1) removal of the reserve ratio requirement; and 2) added language that would provide guidance to state insurance regulators as to when a company would or would not move blanks if premium ratio falls below 90%. He said that the group also discussed the possibility of field testing. The group would like life insurers that meet the revised health test requirements to volunteer to complete the health RBC forecasting spreadsheet. This would assist state insurance regulators with understanding the overall impact of moving from the life RBC formula to the health RBC formula, as well as assist in identifying schedules that may be considered as supplements across blanks. He said the ad hoc group will next meet Sept. 27.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

DESCRIPTION OF CHANGE(S)

Add a break out for health care receivables accrued vs. recovered from the CY and PY.

REASON OR JUSTIFICATION FOR CHANGE **

The purpose of the proposal is to apply an additional charge for receivable amounts that were accrued in the PY but not recovered in the CY.

Additional Staff Comments:

The proposal is being exposed would be on an informational only basis for 2020 & 2021 reporting with full implementation to the formula in 2022. The factors and instructions will be discussed in more detail on future calls and will exposed around the Summer National Meeting.

The proposed calculations include the current 5% and 19% factors for the health care receivables, additional consideration to change the factors will be addressed by the Working Group after 2020 data has been received.

4-7-19 cg The WG exposed the proposal along with a copy of the numeric examples for a 30-day comment period ending on 5-7-19.

5-7-19 cg Comment letter received from UnitedHealth Group.

7-17-19 cg Instructions were incorporated into the proposal. The WG agreed to re-expose the proposal for comment on the structure including annual statement references and instructions for a 30-day comment period ending on 8-19-19.

** This section must be completed on all forms.
XR020 - Other Receivables – L(25) through L(31)

There is an RBC requirement of 1 percent of the annual statement amount of investment income receivable and an RBC requirement of 5 percent of the annual statement amount for pharmaceutical rebates and amounts due from parents, subsidiaries, and affiliates, and aggregate write-ins for other than invested assets and an RBC requirement of 19 percent of the annual statement amount for all other health care receivables reported in Lines (26.2) through (26.6). Enter the appropriate value in Lines (25) through (31).

Line (26.1). Pharmaceutical rebates are arrangements between pharmaceutical companies and reporting entities in which the reporting entities receive rebates based upon the drug utilization of its subscribers at participating pharmacies. These rebates are sometimes recorded as receivables by reporting entities using estimates based upon historical trends which should be adjusted to reflect significant variables involved in the calculation, such as number of prescriptions written/filled, type of drugs prescribed, use of generic vs. brand-name drugs, etc. In other cases, the reporting entity determines the amount of the rebate due based on the actual use of various prescription drugs during the accumulation period and then bills the pharmaceutical company. Oftentimes, a pharmacy benefit management company may determine the amount of the rebate based on a listing (of prescription drugs filled) prepared for the reporting entity’s review. The reporting entity will confirm the listing and the pharmaceutical rebate receivable. Pharmaceutical rebates may relate to insured plans or uninsured plans. Only the receivable amount related to the insured plans should be reported on this line. Amount comes from annual statement Exhibit 3, Column 7, Line 0199999.

Line (26.2). Claim overpayments may occur as a result of several events, including but not limited to claim payments made in error to a provider. Reporting entities often establish receivables for claim overpayments. Amount comes from annual statement Exhibit 3, Column 7, Line 0299999.

Line (26.3). A health entity may make loans or advances to large hospitals or other providers. Such loans or advances are supported by legally enforceable contracts and are generally entered into at the request of the provider. In many cases, loans or advances are paid monthly and are intended to represent one month of fee-for-service claims activity with the respective provider. Amount comes from annual statement Exhibit 3, Column 7, Line 0399999.

Line (26.4). A capitation arrangement is a compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider. In some instances, advances are made to a provider under a capitation arrangement in anticipation of future services. Amount comes from annual statement Exhibit 3, Column 7, Line 0499999.

Line (26.5). Risk sharing agreements are contracts between reporting entities and providers with a risk sharing element based upon utilization. The compensation payments for risk sharing agreements are typically estimated monthly and settled annually. These agreements can result in receivables due from the providers if annual utilization is different than that used in estimating the monthly compensation. Amount comes from annual statement Exhibit 3, Column 7, Line 0599999.

Line (26.6). Any other health care receivable not reported in Lines (26.1) through (26.5). Amount comes from annual statement Exhibit 3, Column 7, Line 0699999.

Line (27). Only include on this line amounts receivable related to pharmaceutical rebates on uninsured plans that are in excess of the liability estimated by the reporting entity for the portion of such rebates due to the uninsured accident and health plans.
XR020-A Other Receivables for Informational Purposes Only

There is an RBC requirement of 1 percent of the annual statement amount of investment income receivable and an RBC requirement of 5 percent of the annual statement amount for amounts receivable relating to uninsured accident and health plans, amounts due from parents, subsidiaries, and affiliates, and aggregate write-ins for other than invested assets.

An additional charge will be applied to health care receivables amounts reported in Lines (30) through (35) that were accrued in the prior year but not recovered in the current year.

An example of the calculation is included below:

Example 1:

Claim overpayment receivable as of 12/31/2020 with substantial recoveries (but still a little less than the accrual)

a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
b. Claim overpayment receivable as of 12/31/2019 of $900,000
c. Claim overpayment recoveries of $800,000 reported achieved in 2020 against accruals at 12/31/2019
d. Current formula amount: $1,000,000 x 0.19 = $190,000
e. Informational formula amount =
   = $1,000,000 x 0.19 + (1 - 0.19) x max(0, $900,000 - (1 + 0.19) x $800,000)
   = $190,000 + 0.81 x max(0, $900,000 - $952,000)
   = $190,000 + 0.81 x max(0, -$52,000)
   = $190,000

Example 2:

Claim overpayment receivable as of 12/31/2020, but with no recoveries:

a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
b. Claim overpayment receivable as of 12/31/2019 of $900,000
c. Claim overpayment recoveries of $0 reported achieved in 2020 against accruals at 12/31/2019
d. Current formula amount: $1,000,000 x 0.19 = $190,000
e. Informational formula amount =
   = $1,000,000 x 0.19 + (1 - 0.19) x max(0, $900,000 - (1 + 0.19) x $0)
   = $190,000 + 0.81 x max(0, $900,000)
   = $190,000 + 0.81 x $900,000
   = $190,000 + $729,000
   = $919,000
Example 3:

Claim overpayment receivable as of 12/31/2020, but with recoveries of half the amount of the accrual:

a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
b. Claim overpayment receivable as of 12/31/2019 of $900,000
c. Claim overpayment recoveries of $450,000 reported achieved in 2020 against accruals at 12/31/2019
d. Current formula amount: $1,000,000 x 0.19 = $190,000
e. Informational formula amount =

\[ \text{Amount} = 1,000,000 \times 0.19 + (1 - 0.19) \times \max(0, 900,000 - (1 + 0.19) \times 450,000) \]
\[ = 190,000 + 0.81 \times \max(0, 900,000 - 535,500) \]
\[ = 190,000 + 0.81 \times 364,500 \]
\[ = 190,000 + 295,245 \]
\[ = 485,245 \]

Kansas City, MO  64106-2197

Via electronic mail to Crystal Brown.

Re: Proposal 2019-04-H

Dear Mr. McNaughton:

I am writing on behalf of UnitedHealth Group Incorporated. We appreciate the opportunity to comment on RBC Proposal 2019-04-H, exposed for comment by the Health Risk-Based Capital (E) Working Group on July 19, 2019. The proposal seeks to alter the risk charges applied to health care receivables, on an informational-only basis in 2020 and 2021, with the expectation of full implementation in 2022. The current proposal is a modification, adding instructional language, of the proposal exposed on April 8, 2019.

Need for changes to the proposal.

The currently exposed proposal, while adding instructional language to the previously exposed proposal, does not make any substantive changes to that proposal. In particular, it does not address any of the points raised in our May 7, 2019, comment letter, which we have attached for reference.

We recognize that initially the proposed charge for health care receivables would be used for informational purposes only, and would not affect the Risk-Based Capital measures on which regulatory action may be based. We also recognize that, at least in part, the proposed charge is intended to encourage accurate financial reporting by penalizing entities that fail to properly report their experience with the collection of health care receivables. However, once the proposed charge becomes fully implemented in 2022, its use as a penalty will no longer be appropriate; the charge will affect the solvency regulation of insurance companies and HMOs, and must be directed solely to that purpose. Therefore, before 2022, the charge for health care receivables must be put in a form that will enhance solvency regulation. As explained in our
previous comment letter, the current formulation of the charge does not seem to serve that purpose well.

As the charge will not be fully implemented until 2022, there is still time to refine it. However, the informational phase of the charge will be most useful if the informational formula is as close as possible to what will ultimately be implemented. The entities subject to RBC will also be able to plan more effectively if the informational charge closely represents the ultimate form. Therefore, as far as possible, any anticipated changes to the charge should be made now, at the beginning of the informational period.

We note again that while this charge probably will not be significant for most reporting entities, it may be significant in specific cases. If that were never true, there would be no purpose in revising the charge at all. Therefore, if the charge is indeed to be revised, it should be revised to be as appropriate and effective as possible.

Specific recommendations.

It seems clear to us that some changes to the proposal are indeed necessary. The changes that we recommend, and the rationales for those changes, are addressed in detail in the attached comments from May 7; but we will summarize them here, for convenience.

Mathematical structure of the formula.

The mathematical structure of the exposed formula is unintuitive. A simpler form is recommended, which would have a more obvious interpretation.

Asymmetry.

Under the current proposal, reporting entities are penalized for poor collection experience, but receive no benefit from good collection experience. This does not seem to reflect relative risks properly. We recommend that the formula also allow a charge below the current standard factor, with a floor of 1%.

Exclusion of remaining receivables.

The current proposal reflects only those amounts collected in the following year, and not amounts outstanding at the end of the year that are still expected to be received. This is especially problematic for items such as loans and advances to providers, which may not ever have been intended to be collected in full within the first year. We recommend that the receivables still outstanding at the end of the year also be reflected.

Lack of proportionality.

The proposed add-on charge is based on the prior-year receivable. We recommend that it be scaled proportionally to the current-year receivable, as better reflecting the current risk profile of the reporting entity.
Limitation to one year of history.

The proposed charge is based on one year of run-out. The result could be distorted by one-time issues, as well as normal year-to-year fluctuations in experience. A longer, but still relatively current, time period should be used. We recommend the use of three years of experience (including, as noted above, any receivables still remaining at the end of each year). Although there was some concern expressed by members of the Working Group that this would add complexity, the necessary data would be readily available and the complexity is more an appearance than an actual practical hindrance. A more stable and meaningful result would justify the use of the additional years of data.

Recommended formula.

Based on the matters discussed above, we recommended the following formula for the risk charge for each category of health care receivables.

(A) Sum of receivables for the preceding three years.

(B) Sum of collections of those receivables in the subsequent year, plus any amount of such receivables that remained outstanding at the end of the subsequent year.

(C) Shortfall percentage: \[1 - \frac{(B)}{(A)}\]

(D) Receivable for the current year.

(E) Risk charge: greater of \[0.01 \cdot (D)\] and \[(C) \cdot (D)\].

There may be instances where an entity does not have recent history for a particular type of receivable (e.g., because a provider risk-sharing arrangement produced a payable rather than a receivable in the prior year). This would probably occur less frequently if the calculation used three years of history, as we have recommended, but might still occur. In such cases, it would be appropriate for the risk charge to default to the current standard factor (i.e., 5% for pharmacy rebate receivables and 19% for other categories of health care receivables) multiplied by the current receivable amount.

Instructional language.

The instructional language that was added to the latest exposed proposal seems appropriate for the proposal as such. However, it would need to be modified to reflect the recommendations stated above. Such modified language follows the body of this letter.

* * * * * *

We appreciate your consideration of our comments, and we would be happy to discuss this matter further with the Working Group.

Attachment: UnitedHealth Group comment letter of May 7, 2019

cc: Crystal Brown, NAIC
    Randi Reichel, UnitedHealth Group
XR020-A Other Receivables for Informational Purposes Only

There is an RBC requirement of 1 percent of the annual statement amount of investment income receivable and an RBC requirement of 5 percent of the annual statement amount for amounts receivable relating to uninsured accident and health plans, amounts due from parents, subsidiaries, and affiliates, and aggregate write-ins for other than invested assets.

An additional charge will be applied to health care receivables amounts reported in Lines (30) through (35) that were accrued in prior years but not recovered in later years.

Examples of the calculations are included below:

Example 1:
Claim overpayment receivable as of 12/31/2020 with substantial recoveries (but still a little less than the accrual)
   a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
   b. Claim overpayment receivable as of 12/31 in 2017 through 2019 totaling $2,700,000
   c. Claim overpayment recoveries of $2,400,000 received or accrued in 2018-2020 against accruals at 12/31 for 2017-2019
   d. Shortfall percentage: \((1 - \frac{2,400,000}{2,700,000}) = 11.1111\%\)
   e. Informational formula amount = 
     \[= \max(1\%, 11.1111\%) \times \$1,000,000\]
     \[= \$111,111\]

Example 2:
Claim overpayment receivable as of 12/31/2020, but with no recoveries:
   a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
   b. Claim overpayment receivable as of 12/31 in 2017 through 2019 totaling $2,700,000
   c. Claim overpayment recoveries of $0 received or accrued in 2018-2020 against accruals at 12/31 for 2017-2019
   d. Shortfall percentage: \(1 - \frac{0}{2,700,000} = 100\%\)
   e. Informational formula amount = 
     \[= \max(1\%, 100\%) \times \$1,000,000\]
     \[= \$1,000,000\]

Example 3:
Claim overpayment receivable as of 12/31/2020, but with recoveries of half the amount of the accrual:
   a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
   b. Claim overpayment receivable as of 12/31 in 2017 through 2019 totaling $2,700,000
   c. Claim overpayment recoveries of $1,350,000 received or accrued in 2018-2020 against accruals at 12/31 for 2017-2019
   d. Shortfall percentage: \((1 - \frac{1,350,000}{2,700,000}) = 50\%\)
e. Informational formula amount = 
   = max(1%, 50%) x $1,000,000 
   = $500,000

Re: Proposal 2019-04-H

Dear Mr. McNaughton:

I am writing on behalf of UnitedHealth Group, Incorporated. We appreciate the opportunity to comment on RBC Proposal 2019-04-H, exposed for comment by the Health Risk-Based Capital (E) Working Group on April 8, 2019. The proposal seeks to alter the risk charges applied to health care receivables, on an informational-only basis in 2020 and 2021, with the expectation of full implementation in 2022.

We understand the purpose of the changes being proposed. We do have several concerns, however, about how the underlying intent would be implemented by this proposal. Our concerns relate to several areas, as indicated by the headings below.

Mathematical structure of the formula.

The proposed risk charge formula can be summarized as follows, where “f” means the factor of 0.05 for pharmaceutical rebate receivables and 0.19 for all other categories of health care receivables; “CY” and “PY” refer to “current year” and “prior year” receivables, respectively; and “COLL” is the collections during the current year on the prior-year receivable. The proposed risk charge is equal to the currently applicable risk charge, $f \cdot CY$, plus an add-on equal to the greater of zero and the following:

\[(1 - f) \cdot (PY - [1+f] \cdot COLL)\]

This add-on (when not zero) can be restated as:

\[(1 - f) \cdot PY - (1 - f^2) \cdot COLL\]
The proper interpretation of this expression is not clear. The motivation for the add-on perhaps is that if the shortfall in collections of the prior-year receivable exceeds the risk charge that the existing formula would have produced, the excess should be treated as an additional risk charge. However, that is not the outcome of the formula as proposed. For that purpose, the formula should be comparing the prior-year risk charge, \((f \cdot PY)\), to the shortfall in collections, \((PY - COLL)\). In that case, the add-on would be the greater of zero and \((PY - COLL - f \cdot PY)\); that last expression can also be written as \(((1-f) \cdot PY - COLL)\).

Note that the add-on as currently proposed is either greater than or equal to the revised add-on suggested above.

**Asymmetry.**

As currently proposed, the add-on is one-sided: reporting entities are penalized for poor collection experience, but receive no benefit from good collection experience. Even if the entity collects every dollar which it reported as receivable — in fact, even if it recovers more than it conservatively expected to — it receives no reduction from the standard risk charge.

This is particularly troublesome with respect to the categories of health care receivables to which the factor of 0.19 applies. As we explained in our letter of May 20, 2016, regarding RBC Proposal 2016-06-H, we have several concerns about the analysis that led to the adoption of the 0.19 factor. Given the tenuous basis for that factor, it should not be considered a floor. At a minimum, the add-on should be allowed to be negative, at least to the extent that it reduced the effective factor to the original level of 0.05.

However, it is questionable whether even 0.05 should be the floor. The 0.05 factor was intended to cover a fairly wide range of possible outcomes, in order to provide the appropriate level of conservatism for RBC. If a wider range of unfavorable outcomes will be addressed by the add-on, then presumably a lower factor can be applied to the entities with favorable outcomes. A minimum of 0.01 (which is the maximum charge for non-controlled assets, the charge for NAIC 2 bonds and preferred stock, and the charge for investment income receivable) might be more appropriate.

**Exclusion of remaining receivables.**

Based on the tentative references in the proposal, which refer to Exhibit 3A column 1 only and not to column 3, only actual collections during the subsequent year would be recognized in determining the add-on. For some receivables, such as pharmaceutical rebate receivables, it might be reasonable to suppose that substantially all collections would take place within one year. However, for other receivables, such as loans and advances to providers, the intention of the parties may very well have been that the amount would be repaid over a longer period of time. Therefore, not only the subsequent-year collections, but any receivable remaining at the end of the year, should be reflected in calculating the add-on. That is to say, both column 1 and column 3 of Exhibit 3A should be used (or, equivalently, column 5, which is the sum of columns 1 and 3).
We realize that there may have been some concern about the collectability of any receivable remaining after the passage of a full year. However, we note that the reporting entity is required to perform an analysis of the collectability of its receivables, and to write off any amounts if it is probable that they are uncollectable (per Statement of Statutory Accounting Principles No. 84). This analysis is subject to review by the entity’s auditors and examination by the entity’s regulators. It does not seem appropriate to completely exclude assets that are deemed to have value under the NAIC’s accounting rules.

We note furthermore that the remaining receivable will in fact be subject to a credit risk charge, along with all other health care receivables reported at year-end. Therefore, the collectability of such receivables will be addressed by the credit risk charge calculation.

**Lack of proportionality.**

The add-on is based on the prior-year receivable; but this is appropriate only if the level of receivables is reasonably stable from year to year. Receivables for pharmaceutical rebates are likely to be stable if the volume of business is stable, but receivables for provider risk-sharing can be quite volatile; and even receivables for pharmaceutical rebates can change greatly from year to year if there is significant growth or decline in the book of business. This could, in some cases, lead to the total risk charge (basic risk plus add-on) actually exceeding the current-year receivable, which seems wholly unreasonable.

To address this problem, it would be appropriate to scale the add-on based on the relationship of the current-year receivable to the prior-year receivable.

**Limitation to one year of history.**

The add-on is calculated based on one year of run-out for the most recent prior-year receivable. This could lead to the results being distorted by a non-recurring issue, e.g., difficulty in collecting claim overpayments from a provider group that has been terminated from the network. Since the group has been terminated, it will not be producing additional receivables subject to collection; but the proposed formula will penalize the entity for that past problem, regardless of its applicability to the future.

One way to address this is to look at the collection history over a longer period. It is true that a longer period might mute the effect of changes in methodology (either estimation methodology or collection methodology); however, such changes would not be picked up in the year they occurred in any case. That said, it is true that the longer the historical period that is reviewed, the less relevance it may have to current conditions. Therefore, it seems appropriate to use an intermediate-length period such as three years.

Because of the possibility of non-recurring issues, and just normal year-to-year fluctuations in experience, the add-on factor could be highly variable in amount from year to year. This creates problems for the reporting entities, which will find capital planning much more difficult. It also creates problems for the regulator, as it calls into question the meaningfulness of RBC if the
amount changes significantly from year to year for a reasonably stable book of business. The use of a multi-year experience period will help to smooth out this volatility.

We understand the Working Group’s preference to use only information that is available from the current year’s Annual Statement. However, there are other portions of the Health RBC formula that use information available only from company records. As in those cases, it seems that here the advantages of using extra information outweigh the disadvantages, especially since the extra information can be verified from previous years’ Annual Statements rather than relying on internal company records.

Conclusion

We have discussed above the problems that we perceive to exist with the proposal, related to the interpretation of the add-on charge, the asymmetry of that charge, the exclusion of the receivables remaining at the end of the year, the non-proportionality of the charge, and the volatility of the charge. We believe that all of those problems can be addressed, by using a calculation such as the following:

(A) Sum of receivables for the preceding three years.

(B) Sum of collections of those receivables in the subsequent year, plus any amount of such receivables that remained outstanding at the end of that subsequent year.

(C) Shortfall percentage: [1 – (B) / (A)].

(D) Receivable for the current year.

(E) Risk charge: greater of [0.01 • (D)] and [(C) • (D)].

(Note that (C) is based on the sum of three years’ amounts, rather than the average of percentages calculated separately for each year. This is so that a small amount in one year will not be given undue weight.)

It might be suggested that this somewhat more complicated formula is not warranted, because the covariance adjustment will greatly reduce the impact of this risk charge. While that may be true in general, the charge could be significant for specific reporting entities. If that were not the case — if this charge were never significant — then there would be no need to alter the formula at all. If any change is to be contemplated, it should be designed to address the concerns that we have stated above.

We appreciate your consideration of our comments, and we would be happy to discuss this matter further with the Working Group.

Re: Comments on Exposure of Proposed 2019-04-H

Dear Mr. McNaughton:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to provide these comments on the exposure of 2019-04-H with respect to Healthcare Receivables.

We understand that the general approach as outlined by the Academy’s proposal is trying to address the issue that a number of companies do not report significant payments against the various Healthcare Receivable amounts established at each year-end. Because this is more than just a few companies, the factor applied to the year-end admitted asset to be higher than necessary. We have some concern with using the RBC filing to address financial reporting issues that are more a financial analysis function. That being said, if the resulting approach reduces the RBC requirement for those companies that are correctly reporting payments of these receivables and/or increases the accuracy of the reporting of payments, we can support the temporary use of the proposed informational filing, thus giving time for the actual issue to be addressed in the proper forum.

We would support small modifications to the proposal as recommended by UnitedHealth Group as follows:

1. Adjust the portion of the uncovered Healthcare receivable from the prior year by the ratio of the current year amount to the prior year amount. We would recommend that this be done during the test phase in two parts – (i) for Pharmacy Rebates and (ii) for all other types combined. This is because there is less credible data for the types of receivables other than Pharmacy rebates and the same average factor is applied to all other types. We also recommend that this ratio factor be limited to a minimum of not more than 2.00 so that a small amount of prior year receivable amounts do not overly increase the RBC for the assumed non-recovery for the current year receivable amounts.

2. Adjust the factor applied to the current year-end amount to 60-75% of the current factor to recognize that the new approach applies a significant factor to address the under-reporting of payments against these receivables. Since the large under-reporting is the cause of the use of a higher factor than if such under-reporting did not occur (i.e. if there was only mis-estimation of the amount to be recovered, the factor should be significantly lower), the test
AHIP Comments on HRBCWG Exposure 2019-04-H
August 19, 2019
Page 2

should assume that, after review of the information reported in 2020-2021, the Academy will be recommending some reduction from the 5% or 19% current factors.

To make the above changes (using 60% of the current factor) on page XR020A, the factor in line (30.1) would be 0.030 and the factor in Lines (31.1, 32.1, 33.1, 34.1 and 35.1) would be 0.120. In addition, the footnotes on page XR020A would be changed to:

# For Pharmaceutical Rebates: [Greater of 0 or L(30.2) minus (1+.03) times Line (30.3)] times (1-.03) times [min 2, {Line (30.1) divided by Line (30.2)}] \(^1\)

* For Claim Overpayment, Loan and Advances to Providers, Capitation Arrangements and Risk Sharing, and Other Health Care Receivables: [Greater of 0 or (L3.2 minus (1+.12) times L(3.3)] times (1-.12) times [min 2, {Sum of L(31.1) + L(32.1) + L(33.1) + (L34.1) + L35.1) divided by Sum of L(31.2) + L(32.2) + L(33.2) + (L34.2) + L35.2)] \(^2\)

Attached are our recommended revisions to the instructions consistent with the above changes to the formula.

We would be happy to address any questions the Working Group has with these comments.

Sincerely,

William C. Weller
Actuarial Consultant to AHIP

c/c: Crystal Brown, NAIC
       Candy Gallaher, AHIP

\(^1\) If Line 30.2 is zero use a ratio factor of 1.
\(^2\) If the sum of Lines 31.2 + 32.2 + 33.2 + 34.2 + 35.2 is zero use a ratio factor of 1.
XR020 - Other Receivables – L(25) through L(31)

There is an RBC requirement of 1 percent of the annual statement amount of investment income receivable and an RBC requirement of 5 percent of the annual statement amount for pharmaceutical rebates and amounts due from parents, subsidiaries, and affiliates, and aggregate write-ins for other than invested assets and an RBC requirement of 19 percent of the annual statement amount for all other health care receivables reported in Lines (26.2) through (26.6). Enter the appropriate value in Lines (25) through (31).

Line (26.1). Pharmaceutical rebates are arrangements between pharmaceutical companies and reporting entities in which the reporting entities receive rebates based upon the drug utilization of its subscribers at participating pharmacies. These rebates are sometimes recorded as receivables by reporting entities using estimates based upon historical trends which should be adjusted to reflect significant variables involved in the calculation, such as number of prescriptions written filled, type of drugs prescribed, use of generic vs. brand-name drugs, etc. In other cases, the reporting entity determines the amount of the rebate due based on the actual use of various prescription drugs during the accumulation period and then bills the pharmaceutical company. Occasionally, a pharmacy benefit management company may determine the amount of the rebate based on a listing (of prescription drugs filled) prepared for the reporting entity’s review. The reporting entity will confirm the listing and the pharmaceutical rebate receivable. Pharmaceutical rebates may relate to insured plans or uninsured plans. Only the receivable amount related to the insured plans should be reported on this line. Amount comes from annual statement Exhibit 3, Column 7, Line 01999999.

Line (26.2). Claim overpayments may occur as a result of several events, including but not limited to claim payments made in error to a provider. Reporting entities often establish receivables for claim overpayments. Amount comes from annual statement Exhibit 3, Column 7, Line 02999999.

Line (26.3). A health entity may make loans or advances to large hospitals or other providers. Such loans or advances are supported by legally enforceable contracts and are generally entered into at the request of the provider. In many cases, loans or advances are paid monthly and are intended to represent one month of fee-for-service claims activity with the respective provider. Amount comes from annual statement Exhibit 3, Column 7, Line 03999999.

Line (26.4). A capitation arrangement is a compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider. In some instances, advances are made to a provider under a capitation arrangement in anticipation of future services. Amount comes from annual statement Exhibit 3, Column 7, Line 04999999.

Line (26.5). Risk sharing agreements are contracts between reporting entities and providers with a risk sharing element based upon utilization. The compensation payments for risk sharing agreements are typically estimated monthly and settled annually. These agreements can result in receivables due from the providers if annual utilization is different than that used in estimating the monthly compensation. Amount comes from annual statement Exhibit 3, Column 7, Line 05999999.

Line (26.6). Any other health care receivable not reported in Lines (26.1) through (26.5). Amount comes from annual statement Exhibit 3, Column 7, Line 06999999.

Line (27). Only include on this line amounts receivable related to pharmaceutical rebates on uninsured plans that are in excess of the liability estimated by the reporting entity for the portion of such rebates due to the uninsured accident and health plans.

XR020-A Other Receivables for Informational Purposes Only
There is an RBC requirement of 1 percent of the annual statement amount of investment income receivable and an RBC requirement of 5 percent of the annual statement amount for amounts receivable relating to uninsured accident and health plans, amounts due from parents, subsidiaries, and affiliates, and aggregate write-ins for other than invested assets. These are intended to reflect the potential for mis-estimation of the amount to be received in the following year as well as a small amount to reflect the potential for non-payment.

For health care receivable amounts, there is an additional risk that repayments will not occur or will not be appropriately reported as repayments. This makes it more difficult to use a single factor to reflect both risks. This informational filings will address these risks separately. There is an RBC requirement of 3% of the annual statement amount for pharmacy rebates and an RBC requirement of 12 percent of the annual statement amount for the other health care receivables reported as lines 31.1 through 35.1 and an additional charge will be applied to health care receivables amounts reported in Lines 35.0 through 35.3 where the amount accrued in the prior year was not recovered in the current year calculated as a factor times the current year amount times the ratio of the current year amount reported as a receivable to the prior year amount reported as a receivable. For pharmacy rebates this calculation is done for that line itself. For the other health care receivables a single ratio is calculated and applied to lines 31.3 through 35.3. To avoid applying too large a factor, the ratio has a maximum value of 2. Where the prior year receivable amount(s) used for a ratio is zero, a factor of 1 is used.

Examples of the calculation are included below but do not include the use of a common ratio of prior year amounts repaid to prior year receivable:

Example 1:

Claim overpayment receivable as of 12/31/2020 with substantial recoveries that still a little less than the accrual.

a. Claim overpayment receivable as of 12/31/2020 of $1,000,000 (col (1) Line 31.1)
b. Claim overpayment receivable as of 12/31/2019 of $900,000 (col (1) Line 31.2)
c. Claim overpayment recoveries of $80,000 reported achieved in 2020 against accruals at 12/31/2019 (col (1) Line 31.3)
d. Current formula amount: $1,000,000 x 0.19 = $190,000 X R020 (col (3) Line 30.2)
e. Informational formula amount XR020

\[
\text{XR020} = \begin{cases} 
1000000 \times 0.19 = 190000 & \text{if } \min(0, 900000 \times (1 - 1.2) - 840000) = 0 \\
0 \times (1 - 1.2) \times \text{Min}(\min(0, 900000 \times (1 - 1.2) - 840000), 35) & \text{else}
\end{cases}
\]

Example 2:

Claim overpayment receivable as of 12/31/2020, but with no recoveries:

a. Claim overpayment receivable as of 12/31/2020 of $1,000,000
b. Claim overpayment receivable as of 12/31/2019 of $900,000
c. Claim overpayment recoveries of 0 reported achieved in 2020 against accruals at 12/31/2019
d. Current formula amount: $1,000,000 x 0.19 = $190,000 X R020 (col (3) Line 30.2)
e. Informational formula amount:

\[
\text{XR020} = \begin{cases} 
1000000 \times 0.19 = 190000 & \text{if } \min(0, 900000 \times (1 - 1.2) - 840000) = 0 \\
0 \times (1 - 1.2) \times 35 & \text{else}
\end{cases}
\]
Example 3:

Claim overpayment receivable as of 12/31/2020, but with recoveries of half the amount of the accrual:

- Claim overpayment receivable as of 12/31/2020 of $1,000,000 (col (1) Line 31.1)
- Claim overpayment receivable as of 12/31/2019 of $900,000 (col (1) Line 31.2)
- Claim overpayment recoveries of $400,000 reported achieved in 2020 against accruals at 12/31/2019 (col (1) Line 31.3)
- Current formula amount: $1,000,000 x 0.19 = $190,000
- Total RBC = $120,000 + $387,200 = $507,200

Example 4:

Claim overpayment receivable as of 12/31/2020, but with recoveries of half the amount of the accrual which is much smaller than current year receivable:

- Claim overpayment receivable as of 12/31/2020 of $1,000,000 (col (1) Line 31.1)
- Claim overpayment receivable as of 12/31/2019 of $900,000 (col (1) Line 31.2)
- Claim overpayment recoveries of $100,000 reported achieved in 2020 against accruals at 12/31/2019 (col (1) Line 31.3)
- Current formula amount: $1,000,000 x 0.19 = $190,000
- Total RBC = $120,000 + $354,880 = $474,880
- Total RBC = $120,000 + $387,200 = $507,200
MEMORANDUM

TO: Patrick McNaughton, Chair, Health Risk-Based Capital (E) Working Group

FROM: Stephen Wiest, Chair, Operational Risk (E) Subgroup

DATE: February 26, 2019

RE: Referral for Further Work on Health Growth Operational Risk

The operational Risk (E) Subgroup believes that there is an opportunity to improve the assessment of growth risk in the Health Risk-based Capital (HRBC) formula. While alternatives to the existing growth risk methodology that have been tested by the Subgroup have not proved to be better indicators of risk, there are reasons to consider whether the existing methodology is working as intended. The Health RBC (E) Working Group is best positioned to continue the review. The Operational Risk (E) Subgroup recommends that the review focus on the existing growth risk by forming an ad hoc subgroup of regulators and interested parties familiar with the HRBC formula similar to what was utilized to review the existing growth risk methodology and factors in the Property RBC formula. This document should be used as a starting point for that review. That ad hoc group would provide suggestions for potential enhancements to the existing growth charge to the HRBCWG. The review could include:

- Given the current array of company types that now file Health RBC, should the variables used in the application of the 10% threshold be reversed (i.e., the charge is assessed if risk revenue is increasing faster than RBC)?
- Determine if a 10% threshold is still reasonable.
- Should the normal growth risk calculation (existing or as adjusted) apply to start-up companies? If not, what adjustments should be applied to the calculation for start-ups?
- Should the Health RBC growth risk methodology (existing or as adjusted) be adopted into the Life RBC formula for companies that write a material amount (e.g. > X%) of their premiums in health business, where such business would be subject to the growth risk calculation in the Health RBC formula?

Background

How the Existing Growth Risk Charge Works:

- Growth in Underwriting Risk RBC year over year is measured against growth in underwriting risk revenue year over year. Thus, the formula recognized that as risk was added, revenue should respond accordingly.
- If growth Underwriting Risk RBC exceeds growth in underwriting risk revenue by greater than 10%, growth risk is triggered.
- A factor of 50% is applied to the excess of growth in Underwriting Risk RBC above the 10% threshold.
Considerations in Developing the Existing Methodology:

- The risk of growth, while included in H-4, is most related to increased pricing risk caused by growth rather than increased operational risk that that may be caused by rapid growth.
- The methodology is better designed to capture change in product mix or introductions of new managed care products with differing levels of managed care features.
- At the time that the HRBC formula was being developed, there were significant issues around transfer of risk to providers which were driving a change from capitated arrangements and HMO products to greater use of contractual fee-for-service and withholds / incentives in provider agreements and PPO and POS products.
- The developers of the HRBC formula considered the potential for premium rate impact related to increasing competition from national carriers into local markets, and consolidation in the market.

Reasons to Consider a Change to the Existing Methodology:

- The original Health Organizations RBC (HQRBC) formula applied primarily to HMOs and Not-for-profit health plans (e.g., hospital and medical indemnity plans). In the early 2000s, with the adoption of Statutory Accounting Principles and the Health financial reporting blank (and the addition of a health test to that reporting blank), insurers became subject to the renamed Heath RBC (HRBC) formula.
- Relatively few entities triggered the current growth risk charge, even during recent periods of rapid growth caused by the ACA.
- The application of growth risk to new entities is unclear. A number of entities that were new to the market and which grew rapidly in 2014 and 2015 ultimately failed regardless of original projections. If sufficient capital was put in place during the licensing process based on reasonably accurate projections, then there should be little impact from growth risk. If not, perhaps growth risk should be recognized as an early warning indicator. The growth should smooth out over time and the charge removed.
- For various reasons, neither the informational approach nor other alternatives explored thus far by the Operational Risk (E) Subgroup have indicated a significantly improved ability to identify companies that are not sufficiently capitalized to absorb the impact of rapid growth.
- Companies that file the Life RBC formula, but write the same type of health business written by companies that are required to file the Health RBC formula are not currently subject to a growth risk capital requirement.

Re: Comments on Health Growth Risk Analysis

Dear Mr. McNaughton:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to provide these comments on the potential review of changes to the manner in which growth risk is addressed by the Health RBC formula.

We have followed the extensive work done within the Operations Risk WG to look at alternatives to the current growth risk. It does not appear that any of the potential ways that were reviewed changed the number of companies that had an increase in their RBC values when a changed growth approach was applied to several prior years data. We note that different approaches for a growth risk charge caused different companies to have an increase in their RBC values. That analysis did not show whether any of the companies with such an added charge fell into lower RBC levels or insolvency in the immediate following two years. We believe that only if another approach proved more useful in identifying such failing companies should the current growth risk approach be changed for mature companies.

With respect to non-mature companies in their first five or so years, we believe that the current growth risk approach does address changes in “mix” of the managed care credit for the coverage provided and that that issue is important for the regulators to be aware of. The actual growth in premium volume and number of covered lives necessary for a new company to reach maturity is much higher than any “normal” growth risk. The actual growth should be compared to the planned growth for such companies. Where actual growth exceeds planned growth by a significant amount, revised plans would be a more appropriate vehicle for regulatory review than RBC reporting – it does not require waiting for annual RBC reporting or the use of an average growth assumption.

Finally, we do not support the inclusion of a separate health growth risk adjustment in the Life RBC formula. Whether or not the companies using the Life Blank that write significant amounts

1 We recommend excluding companies with less than five years of RBC reporting experience for this part of future analysis.
AHIP Comments on Health Growth Risk Review  
July 24, 2019  
Page 2

Of health premium are impacted by changes to the Health Test and the results of any application of a growth segment to the Life RBC formula are ongoing considerations that must be addressed first. We believe that it would be necessary to establish some link between continuing declines and ultimate insolvency of Life companies and their health lines of business before any such extensive changes are considered.

We would be happy to address any questions the Working Group has with these comments.

Sincerely,

William C. Weller

Re: Excessive Growth Charge Referral Letter

Dear Mr. McNaughton:

I am writing on behalf of UnitedHealth Group, Incorporated. We appreciate the opportunity to comment on the memorandum addressed to you from the chair of the Operational Risk (E) Subgroup, dated February 26, 2019, on the subject, “Referral for Further Work on Health Growth Operational Risk.” This referral memorandum recommended that your Working Group review certain aspects of the Excessive Growth Risk charge as it currently exists in the Health Risk-Based Capital formula. For the reasons set forth below, we do not believe any change to the RBC Excessive Growth Risk charge (except perhaps for start-up companies) is necessary or appropriate.

We will examine each of the areas recommended for review below, but first we must address the need for review in general. Where factors within the RBC formula are developed from theoretically appropriate models using actual historical data, it is reasonable to periodically review and possibly revise those factors to reflect updated information (and perhaps enhancements to the models). In this case, however, where the RBC charge was not based on historical data, there can be no updated data that would compel an update to the charge. The only reason for a change would be if the existing Excessive Growth Risk charge has not been performing adequately. So far, no evidence has been presented that would indicate that this has been the case, especially with respect to established companies that have significant experience and expertise in health insurance. It is important that any changes to the formula be based on an
analysis of how the Excessive Growth Risk charge has performed historically, especially if the changes being contemplated might result in a broader application or more burdensome level of the charge.

The referral memorandum cites the experience of certain new entities in 2014 and 2015. However, these entities were all or nearly all CO-OPs established under the ACA, and they are not relevant for several reasons. First, the CO-OPs were not just growing rapidly; they were start-ups, with no operating history at all. That is very different from rapid growth of an established book of business. Second, the CO-OPs were operating in a marketplace that was undergoing significant disruption, where pricing was particularly difficult because of the lack of relevant historical data. Third, the pricing difficulties were severely exacerbated by the failure of the federal government to meet its obligations arising from the ACA Risk Corridor program. Fourth, the non-profit structure of the majority of the CO-OPs meant that they did not have ready access to additional capital. These conditions were unique to the CO-OPs and that specific period of time, and have nothing to do with how the health insurance market generally functions.

Therefore, while there may be some rationale for revisiting the application of the formula to start-up companies, we suggest that any more general review should be preceded by an evaluation of how the existing Excessive Growth Risk charge has performed historically. If there are instances (other than the CO-OPs as just cited) where excessive growth has led to financial difficulties for an entity, and the Excessive Growth Risk charge did not properly reflect those circumstances, they should be identified and thoroughly discussed prior to determining if any changes are necessary. If there are no such instances, then presumably the Excessive Growth Risk charge is working as intended, and no further review is needed.

With that preface, we address in more detail each of the areas recommended for review by the referral memorandum.

1. **Given the current array of company types that now file Health RBC, should the variables used in the application of the 10% threshold be reversed (i.e., the charge is assessed if risk revenue is increasing faster than RBC)?**

There is no evident rationale for such a change. Reversing the calculation would suggest that an entity has greater risk if its growth is in lower-risk products. That could only occur if those products were not actually lower-risk, which would call into question the remainder of the underwriting risk charges in the Health RBC formula. As we explain below, if the concern is simply that there is a shift to new products, that is adequately addressed by the current structure of the Excessive Growth risk charge.

There is a clear rationale for the Excessive Growth Risk charge as it exists today in the Health RBC formula, and the charge serves to capture operational risk as opposed to pure underwriting risk. To the extent that underwriting (pricing) risk increases proportionately with growth in business volume, the additional risk is reflected in the H-2 (Underwriting Risk) section of the formula. In contrast, the Excessive Growth Risk charge is applicable when underwriting risk is
growing significantly faster than business volume. There are a variety of reasons why this might occur, including the following:

- The business mix may be shifting from provider payment mechanisms that control underwriting risk to a higher degree (such as capitations) to mechanisms that provide less control (such as payment at usual and customary rates).

- The business mix may be shifting from products that are considered to have a lower degree of risk (such as Medicare Supplement) to products that are deemed higher-risk (such as Comprehensive Medical).

- The degree of risk control provided via premium stabilization reserves may have been reduced as such reserves decrease.

- The loss ratio for the business may be deteriorating for some reason other than the three just listed.

In each of those situations, pricing is made more difficult by changing from a less-risky to a more-risky environment. However, the reporting entity’s risk increases disproportionately only if its pricing and underwriting processes are unable to deal with that change (and the fourth situation above may in fact be evidence of such an inability); otherwise, the change in risk is captured adequately by the H-2 section of the RBC formula. But the failure of the entity’s pricing and underwriting processes to appropriately address these changes is in fact a form of operational risk, as that has been defined by the NAIC. Therefore, very clearly, the existing Excessive Growth Risk charge is structured appropriately to address the operational risks that arise from excessively rapid growth.

It is true that the current Excessive Growth Risk charge is focused on the failure of one category of operational functions. However, this category — that is, pricing and underwriting processes — is the category that is most likely to be adversely affected by dramatic growth in business, and therefore should in fact be the focus of the Excessive Growth Risk charge.

Another potential financial problem arising from rapid growth is the entity’s inability to process claims properly, leading to excessive losses. This would lead to the fourth situation in the list above, and therefore also would be addressed by the existing Excessive Growth Risk charge.

We also point out that, if the growth were occurring in products that were nominally lower-risk, but the extent of the growth was causing operational issues, those issues would be reflected in the manner described above.

Accordingly, we believe that the structure of the Excessive Growth Risk charge as it exists currently in the Health RBC formula is an appropriate means to address any additional risk that arises from excessive growth in business.
2. Determine if a 10% threshold is still reasonable.

In our comments on area #1 above, we noted that we believe the existing structure of the Excessive Growth Risk charge is appropriate. That does not automatically imply that the 10% threshold itself is appropriate. As we discussed in our opening comments, any revision of this aspect of the formula should be based on a review of how the Excessive Growth Risk charge has performed historically. The only way to know whether the 10% threshold is reasonable is to determine whether it has excluded some entities that suffered operational failures from excessive growth (i.e., the threshold is too high), or has included entities that were growing but did not experience material adverse effects from growth (i.e., the threshold is too low). Without such a review, we see no way to make a determination as to the reasonableness of the 10% threshold.

3. Should the normal growth risk calculation (existing or as adjusted) apply to start-up companies? If not, what adjustments should be applied to the calculation for start-ups?

As we state above, there may be some justification for reconsidering how the Excessive Growth Risk charge should apply to start-up entities. We will note again, though, that the problems cited in the referral memorandum had causes that went far beyond excessive growth.

We also note that applying too high a charge to start-up business would discourage entry into a market by new parties, which would tend to limit competition to the detriment of consumers.

Accordingly, we suggest that the treatment applied to start-ups should not reflect all the problems underlying the failures previously cited, but should be focused on excessive growth per se, as being more relevant to the broader industry; and we believe the resulting capital requirement should not be so onerous as to discourage new entries into the marketplace.

4. Should the Health RBC growth risk methodology (existing or as adjusted) be adopted into the Life RBC formula for companies that write a material amount (e.g. > X%) of their premiums in health business, where such business would be subject to the growth risk calculation in the Health RBC formula?

As we have discussed above, having seen no evidence to the contrary, we suggest that the Excessive Growth Risk charge as it currently exists in the Health RBC formula is performing as it was intended, addressing the risk that arises from immoderate growth. Therefore, we see no compelling reason why it should not be imported into the Life RBC formula as well.

We are not certain that a percentage threshold for health business is necessary. If health business represents only a small part of an entity’s business, then any Excessive Growth Risk charge would presumably have negligible impact on the entity’s Company Action Level, especially when the effect of the covariance adjustment is taken into account. A threshold for application would be necessary only if the data collection and entry for the Excessive Growth Risk component of the formula were deemed to be a material burden.
We appreciate your consideration of our foregoing comments. We would be happy to discuss the matter with you further.

OFF-BALANCE SHEET SECURITY LENDING COLLATERAL AND SCHEDULE DL, PART 1 ASSETS
XR006

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements, and incur the related risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

The collateral in these accounts is maintained by a third party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/adjusted carrying value, and maturity date.

The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Off-balance sheet collateral included in General Interrogatories Part I, Lines 24.05 and 24.06 of the annual statement should agree with Line (4022), Column (1).

Lines (1) through (926) – Bonds – Bond factors described on page XR007, Fixed Income Assets – Bonds.

Line (4828) through (4633) – Preferred Stock – Preferred stock factors described on page XR009 – Equity Assets

Line (4735) – Common Stock – Common stock factors described on page XR009 – Equity Assets

Line (4836) – Real Estate and Property and Equipment Assets – Real Estate and Property and Equipment Assets factors described on page XR010 – Property & Equipment Assets

Line (4937) – Other Invested Assets – Other invested assets factor described on page XR007, Fixed Income Assets – Miscellaneous Assets.

Line (2038) – Mortgage Loans on Real Estate – Mortgage Loans on Real Estate factors described on page XR007, Fixed Income Assets – Miscellaneous Assets.

Line (3924) – Cash, Cash Equivalents and Short-Term Investments – Cash, Cash Equivalents and Short-Term Investments factors described on page XR007, Fixed Income Assets – Miscellaneous Assets.
FIXED INCOME ASSETS
XR007.1 AND XR007.2

The RBC requirement for fixed income assets is largely driven by the default risk on those assets. There are two major subcategories: Bonds and Miscellaneous. Bonds are obligations issued by business units, governmental units, and certain nonprofit units, having a fixed schedule for one or more future payments of money. This definition includes commercial paper, negotiable certificates of deposit, repurchase agreements, and equipment trust certificates. Miscellaneous fixed income assets are other assets with fixed repayments schedules, such as mortgages and collateral loans.

Bonds

The bond risk factors for investment grade bonds (NAIC Classes 1.A - 2.C) are based on cash flow modeling using historically adjusted default rates for each bond category. For each of 2,000 trials, annual economic conditions were generated for the ten-year modeling period. Each bond of a 400 bond portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by designation category and that year’s economic environment. When a default takes place, the actual loss considers the expected principal loss by category, the time until the sale actually occurs, and the assumed tax consequences. Only default is recognized in the RBC factors because, under statutory accounting, bonds are generally carried at their amortized value on the statutory annual statement, so changes in the market value of the bonds following swings in interest rates do not, as a general rule, affect the capital and surplus of the regulated entities unless the bonds are actually sold. The accounting for reporting entities can be substantially different from other regulated entities, but the RBC formula continues to recognize only default risk. The default probabilities were based on historical data intended to reflect a complete cycle of favorable and unfavorable credit environments. The risk of default was measured over a 2-year time horizon, selected considering the duration of health assets and liabilities.

U.S. government bonds that are direct and guaranteed and backed by the full faith and credit of the U.S. government (including SVO Identified Funds that are determined by the SVO to be the equivalent of U.S. government guaranteed bonds or NAIC 01 bonds) receive a zero factor (see Annual Statement Instructions). There is no RBC requirement for bonds guaranteed by the full faith and credit of the United States because there is virtually no default risk associated with these securities.

The factors for NAIC Classes 3.A to 6 recognizes the factor for NAIC 06 bonds recognizes that the book/adjusted carrying value of these non-investment grade bonds reflects a loss of value upon default by being marked to market. These bond risk factors are based on the market value fluctuation for each of the NAIC classes compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

A bond portfolio adjustment has been incorporated into the bond factors based on a portfolio of 382 issuers.

The book/adjusted carrying value of all bonds and related fixed income investments should be reported in Column (1). The bonds are split into seven different risk classifications. These risk classifications are based on the NAIC designations assigned. For long-term bonds, these classifications are found on Lines 10.4 through 10.6 less the hybrid Lines 7.1 through 7.6 of Schedule D, Part 1A. Section (b) in the electronic only column of Schedule D, Part 1; short-term bonds will be found in the electronic only column of Schedule DA, Part 1 and the bonds reported as cash equivalents will be found in the electronic only column of Schedule E, Part 2 of the annual statement.[B11]

Enter the book/adjusted carrying value of the bonds, by NAIC designation, in Column (1). The RBC requirement will be automatically calculated in Column (2).
Miscellaneous Fixed Income Assets

The factor for cash is 0.3 percent. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held and this factor, equivalent to an unaffiliated NAIC 01 bond, reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company’s cash position is negative.

The Short-Term Investments to be included in this section are those short-term investments not reflected elsewhere in the formula. The 0.3 percent factor is equal to the factor for cash. The amount entered here should equal the total short-term investments found in Schedule DA, Part 1, Column 7, Line 839999 less bonds that are contained in Schedule D, Part IA, Section 4.

Collateral loans and mortgage loans are generally a small portion of the total portfolio value. A factor of 5 percent is consistent with other risk-based capital formulas studied by the working group.

The book adjusted carrying value of NAIC 01 and 02 Working Capital Finance Investments, Lines (2441) and (2542), should equal the Notes to Financial Statement, Lines 5M(01a) and 5M(01b), Column 3 of the annual statement.

Other Long-Term Invested Assets are those that are listed in Schedule BA and are somewhat more speculative and risky than most other investments. Therefore, a 20 percent factor is consistent with other risk-based capital formulas studied by the working group.

Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93 — Low Income Housing Tax Credit Property Investments.

Federal Guaranteed Low-Income Housing Tax Credit (LIHTC) investments are to be included in Line (2744). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.

Federal Non-Guaranteed LIHTC investments with the following risk mitigation factors are to be included in Line (2845):

a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
   b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.

State Guaranteed LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments are to be included in Line (2046).

State Non-Guaranteed LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments are to be included on Line (3047).

All Other LIHTC investments, state and federal LIHTC investments that do not meet the requirements of Lines (2744) through (3047) would be reported on Line (4844).
EQUITY ASSETS
XR009

Unaffiliated Preferred Stocks
Experience data to develop preferred stock factors is not readily available; however, it is believed that preferred stocks are somewhat more likely to default than bonds. The loss on default would be somewhat higher than that experienced on bonds; however, formula factors are equal to bond factors.

The RBC requirements for unaffiliated preferred stocks and hybrids are based on the NAIC designation. Column (1) amounts are from Schedule D, Part 2, Section 1 not including affiliated preferred stock. The preferred stocks and hybrids must be broken out by asset designation (NAIC 01 through NAIC 06) and these individual groups are to be entered in the appropriate lines. The total amount of unaffiliated preferred stock and hybrids reported should equal annual statement Page 2, Column 3, Line 2.1, less any affiliated preferred stock in Schedule D Summary by Country, Column 1, Line 18. The total amount of hybrid securities reported should equal annual statement Schedule D, Part 1A, Section 1, Column 7, Line 7.7.

Unaffiliated Common Stock
Non-government money market mutual funds are more like cash than common stock, therefore it is appropriate to use the same factor as for cash. Federal Home Loan Bank Stock has characteristics more like a fixed income instrument rather than common stock. A 2.3 percent factor was chosen. The factor for other unaffiliated common stock is based on studies which indicate that a 10 percent to 12 percent factor is needed to provide capital to cover approximately 95 percent of the greatest losses in common stock over a one-year future period. The higher factor of 15 percent contained in the formula reflects the increased risk when testing a period in excess of one year. This factor assumes capital losses are unrealized and not subject to favorable tax treatment at the time of loss in market value.

ASSET CONCENTRATION
XR011

The purpose of the asset concentration calculation is to reflect the additional risk of high concentrations of certain types of assets in single exposures, termed “issuers.” An issuer is a single entity, such as IBM or the Ford Motor Company. When the reporting entity has a large portion of its asset portfolio concentrated in only a few issuers, there is a heightened risk of insolvency if one of those issuers should default. An issuer may be represented in the reporting entity’s investment portfolio by a single security designation, such as a large block of NAIC Designation Category 42–2.A bonds, or a combination of various securities, such as common stocks, preferred stocks, and bonds. The additional RBC for asset concentration is applied to the ten largest issuers.

Concentrated investments in certain types of assets are not expected to represent an additional risk over and above the general risk of the asset itself. Therefore, prior to determining the ten largest issuers, you should exclude those assets that are exempt from the asset concentration factor. Asset types that are excluded from the calculation include: NAIC 06 bonds and NAIC 06 preferred stock; affiliated common stock; affiliated preferred stock; affiliated bonds; property and equipment; U.S. government guaranteed bonds (including SVO Identified Funds that are determined by the SVO to be the equivalent of U.S. government guaranteed bonds or NAIC 01 bonds); NAIC 01 bonds and NAIC 01 preferred stock and hybrids; any other asset categories with risk-based capital factors less than 1 percent, and investment companies (mutual funds) and common trust funds that are diversified within the meaning of the federal Investment Company Act of 1940 [Section 5(b) (1)]. The proportionate share of individual securities within an investment company (mutual fund) or common trust fund are to be included in the determination of concentrated investments, subject to the exclusions identified.

With respect to investment companies (mutual funds) and common trust funds, the reporting entity is responsible for maintaining the appropriate documentation as evidence that such is diversified within the meaning of the federal Investment Company Act and providing this information upon request of the Commissioner, Director or Superintendent of the Department of Insurance. The reporting entity is also responsible for maintaining a listing of the individual securities and corresponding...
book/adjusted carrying values making up its investment companies (mutual funds) and common trust funds portfolio, in order to determine whether a concentration charge is necessary. This information should be provided to the Commissioner, Director or Superintendent upon request.

The assets that **ARE INCLUDED** in the calculation when determining the 10 largest issuers are as follows:

- NAIC Designation Category 2.A Unaffiliated Bonds
- NAIC Designation Category 2.B Unaffiliated Bonds
- NAIC Designation Category 2.C Unaffiliated Bonds
- NAIC Designation Category 3.A Unaffiliated Bonds
- NAIC Designation Category 3.B Unaffiliated Bonds
- NAIC Designation Category 3.C Unaffiliated Bonds
- NAIC Designation Category 4.A Unaffiliated Bonds
- NAIC Designation Category 4.B Unaffiliated Bonds
- NAIC Designation Category 4.C Unaffiliated Bonds
- NAIC Designation Category 5.A Unaffiliated Bonds
- NAIC Designation Category 5.B Unaffiliated Bonds
- NAIC Designation Category 5.C Unaffiliated Bonds
- NAIC 02 Unaffiliated Bonds
- NAIC 03 Unaffiliated Bonds
- NAIC 04 Unaffiliated Bonds
- NAIC 05 Unaffiliated Bonds
- Collateral Loans
- Mortgage Loans
- NAIC 02 Unaffiliated Preferred Stock
- NAIC 03 Unaffiliated Preferred Stock
- NAIC 04 Unaffiliated Preferred Stock
- NAIC 05 Unaffiliated Preferred Stock
- NAIC 02 Hybrids
- NAIC 03 Hybrids
- NAIC 04 Hybrids
- NAIC 05 Hybrids
- Other Long-Term Assets
- NAIC 02 Working Capital Finance Investments
- Federal Guaranteed Low Income Housing Tax Credits
- Federal Non-Guaranteed Low Income Housing Tax Credits
- State Guaranteed Low Income Housing Tax Credits
- State Non-Guaranteed Low Income Housing Tax Credits
- All Other Low Income Housing Tax Credits
- Unaffiliated Common Stock

The concentration factor basically doubles the risk-based capital factor (up to a maximum of 30 percent) for assets held in the 10 largest issuers. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, this factor itself only serves to add an additional risk-based capital requirement on these assets.
The name of each of the largest 10 issuers is entered at the top of the table and the appropriate statement amounts are entered in Column (2), Lines (1) through (262). Aggregate all similar asset types before entering the amount in Column (2). To determine the 10 largest issuers, first pool all of the assets subject to the concentration factor. From this pool, aggregate the various securities by issuer. The aggregate book/adjusted carrying values for the assets are computed, and the 10 largest are subject to the concentration factor. For example, an organization might own $10,000,000 in NAIC Designation Category 42.A bonds of IBM plus $5,000,000 of common stock. The total investment in that issuer is $15,000,000. If that is the largest issuer, then the identifier (“IBM Corporation”) would be entered in the space allowed for the first Issuer Name, and the $10,000,000 would be entered under the book/adjusted carrying value column for Line (1) (NAIC Designation Category 42.A unaffiliated bonds) and the $5,000,000 would be entered on Line (262) (unaffiliated common stock).

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

Re: Draft Bond Structure and Instructions

Dear Mr. McNaughton:

I am writing on behalf of UnitedHealth Group Incorporated. We appreciate the opportunity to comment on the Draft Bond Structure and Instructions that were exposed for comment by your Working Group on June 24, 2019.

From your remarks during the conference call on June 24, we understand that the focus of this exposure is the new structure for bond risk charges, and not the values of the risk factors themselves. Accordingly, we will simply note in passing that we continue to have concerns about the values of the factors, as expressed in our letter of October 4, 2018, addressed to you and the chair of the Investment Risk-Based Capital (E) Working Group.

With regard to the draft structure per se, and the accompanying instructions, we support the expansion of the bond risk factors to twenty-one categories from the current seven. Additionally, we would again refer you to our 10/4/18 comment letter — specifically, to the following paragraph.

Other asset classes,

As the Academy notes (page 13 of the report), there are other factors in the Health RBC formula that are based directly on the bond factors. They cite the factors for cash and preferred stock; the factor for receivables for securities is another example. We feel strongly that all such factors should be updated to be consistent with any new bond factors that are adopted.
That position has implications not only for the factors themselves, but also for the structure of the formula and the corresponding instructions. Therefore, we recommend the following.

1. In the instructions for Miscellaneous Fixed Income Assets on the second page of the exposure document, we recommend restoring the deleted language that linked the factor for cash to the factor for NAIC 01 bonds. We recognize that, now that the NAIC 01 designation will be split into three NAIC Designation Categories, the reference may become more complicated. Nonetheless, we believe that the linkage between the factors should be maintained, and that it should be appropriately documented in the instructions.

2. Likewise, in the instructions for Unaffiliated Preferred Stocks on the third page of the exposure document, we recommend restoring the deleted language that states that the preferred stock factors are equal to the bond factors for the corresponding categories. We note that the expanded system of NAIC Designation Categories has been proposed to apply to preferred stocks as well as bonds, and that therefore the necessary split of preferred stock holdings should be available.

3. In keeping with our recommendation #2 immediately preceding, we recommend that the list of preferred stock categories on the fifth page of the exposure document be expanded to reflect the NAIC Designation Categories. We point out that even if some other set of factors is ultimately selected for preferred stocks, those can be mapped to the NAIC Designation Categories; whereas, if the bond factors are used, those cannot be directly applied to the current seven-category structure.

4. Similarly, on the drafts of Page XR006 (the sixth page of the exposure document), Page XR009 (the tenth page of the exposure document), and Page XR011 (the eleventh page of the exposure document), the list of preferred stock categories should be expanded to reflect the NAIC Designation Categories.

We appreciate your consideration of our comments. We would be happy to discuss the matter with you further.

Kevin Fry, Chair
Investment Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Via electronic mail to Jane Barr and Julie Garber.

Dear Mr. Fry:

We are writing today as a follow-up to our comment letter of October 4, 2018, and the discussion of that letter during the October 23, 2018, conference call of the Investment Risk-Based Capital Subgroup. In particular, we would like to expand our comments on the subject of including investment income in the calculation of the bond risk factors for the Health Risk-Based Capital formula.

During the call, a speaker suggested that incorporating investment income into the analysis would be contrary to the current system of regulating insurance entities’ capital flows. We believe that this comment arose from a misunderstanding of what our recommendation entailed, and although we tried to correct that misunderstanding during the conference call, we believe it will be useful to provide additional written comments on the subject.

It is certainly true that, because of entities’ ability to dividend out their earnings on a regular basis, it would not be appropriate to accumulate investment income over multiple years to offset losses in future years. However, that objection does not really apply to investment income (in this case, interest income) being earned contemporaneously with the losses. It is unlikely that an entity would dividend out all of its income over the course of the year, right up until December 31, and then suddenly discover that it had losses to offset. That does not mean that all of the investment income from that year would necessarily be available; but it seems reasonable to suppose that some part of it would be. Therefore, it does seem appropriate to include some reasonably conservative level of investment income in the analysis.

We understand that it would be difficult to modify the Academy’s models to reflect the investment income on a year-by-year basis. However, we believe that a relatively simple bottom-line adjustment could be made to the Academy’s proposed factors in order to reflect investment income. In the remainder of this letter, we will describe how such an adjustment could be constructed.
There are four elements of the adjustment to be considered: the portion of the annual investment income that should be considered available; the portion of the bonds that are generating income; the yield on the bonds; and the discount factor. Below, we will address each of these in turn.

Portion of annual investment income available.

In actuality, statutory limitations on ordinary dividends are typically based on prior-year income and surplus. Accordingly, an ordinary dividend should not be considered to include current-year investment income.

An entity can request an extraordinary dividend, which requires regulatory approval. Although the dividend request will usually include projections of year-end surplus and Authorized Control Level RBC, the regulators will also review the most recently filed financial statements. Therefore, unless the dividend is being requested very late in the year, the regulatory review will reflect at most one-half of the year’s investment income; and, if the dividend is being requested late in the year, probably a large portion of the losses on bonds will also be known, and taken into account in both the request and the review.

Accordingly, it seems reasonably but not excessively conservative to assume that 50% of the year’s investment income would be available to offset losses on bonds.

Ideally, this offset would be applied to losses on a year-by-year basis. However, to further simplify the calculation, and to add further conservatism, we can assume that all of the losses take place in a single year, and therefore only 50% of one year’s income is available. Since the modeling for the Health RBC bond factors used a two-year period, the conservatism introduced by this assumption, while significant, should be acceptable.

Portion of bonds that are generating income.

Not all of the bonds will actually be generating income during the year; some portion will be in default. Again, it is possible to make some reasonably conservative simplifying assumptions about the portion of bonds that are non-income-producing.

For investment-grade bonds, the Academy’s modeling for the bond factors indicates the proportion that is in default. Ideally, the year-by-year defaults would be examined to determine the portion of bonds that were income-producing. However, as a simplification, we can assume that all of the defaults take place in a single year. That is the maximum that could take place in a single year, and thus is a conservative assumption; also, it is consistent with the assumption stated above with regard to how many years of investment income should be considered.

Therefore, for example, if the Academy’s analysis produced a default factor of 5%, we would assume that only 95% of the bonds were producing income during that year. This is additionally conservative, as it assumes that the defaulting bonds are in default for the full year.
For speculative-grade bonds, the Academy’s factors were based on an analysis of market-value changes, rather than defaults. However, the Academy did publish the corresponding default-based factors in Table IV-1 of their report. Those default-based factors could be used in the same fashion as proposed above for investment-grade bonds.

We will note that the Academy’s bond factors are present values, and therefore could be considered to be understated for the purpose described here. However, in light of the two-year projection period used by the Academy, the understatement should be small, and should be more than compensated for by the conservatism introduced into this calculation elsewhere.

Yield on bonds.

Yield assumptions should be set separately for each credit rating category. Yields may vary significantly between the highest-rated and lowest-rated bonds.

The yields should be selected assuming a two-year maturity. In general, the bond portfolios of health entities have a somewhat longer average maturity than two years. However, since yields generally increase with maturity, using the two-year yield will introduce some additional conservatism. Also, the Academy’s selection of a two-year projection period was based on their analysis of liability duration; to the extent that assets are longer on average than liabilities, the additional income could be considered as compensation for the mismatch risk, and therefore not available for the present purpose.

The NAIC has performed substantial analysis, in connection with its Principle-Based Reserving activities, of how bond yields have historically varied by credit rating and maturity. The information that the NAIC has already collected for that purpose should be useful in determining appropriate yields for the calculation described here.

Discount factor.

The bond risk factors are calculated as a present value, and therefore the offset for investment income should be calculated in the same fashion. The discount rate should be the same as was used by the Academy for discounting the risk factors, as a matter of consistency. For purposes of conservatism, the discount should be applied assuming that the offset takes place at the end of the projection period (i.e., two years out), which would produce the maximum discount.

In conclusion.

The offset factor for each credit category would then be calculated as:

\[ 0.5 \times (1 - \text{default} \%) \times \text{yield} \% \times \text{(discount factor)} \]

The resulting offset factor would then be subtracted from the bond risk factor for the same credit category.
Obviously, many simplifying assumptions have been made in this approach, and it therefore is not altogether correct from a theoretical standpoint. However, we believe it provides a reasonable approximation of the proper offset. The simplifying assumptions tend to add significant conservatism to the approximation, which should make it more acceptable for purposes of RBC.

We will again note that ignoring investment income entirely in the determination of the bond factors introduces significant, and at this point unquantified, conservatism to the factors. If the Working Group chooses not to reflect investment income at all, then you should recognize that the formula will include this extra level of conservatism, and take that into account in any other decisions that you make.

We would be happy to discuss this matter further with your Working Group.

Sincerely,

James R. Braue

Via electronic mail to Jane Barr and Julie Garber.

Dear Mr. Fry and Mr. McNaughton:

We are writing in regard to the report from the American Academy of Actuaries titled, “An Update to the Property & Casualty and Health Risk-Based Capital Bond Factors: Report to the NAIC Investment Risk-Based Capital (E) Working Group, Health Risk-Based Capital (E) Working Group, and Property and Casualty Risk-Based Capital (E) Working Group,” as exposed for comment by your Working Groups. UnitedHealth Group is one of the nation’s largest managed care and healthcare services companies, which administers and provides healthcare benefits serving individuals in all fifty states and the District of Columbia. We thank you for the opportunity to comment on the Academy’s report.

We begin with a comment regarding the treatment of investment income in the analysis. Beyond that, our comments are directed at three distinct areas addressed by the Academy’s report: investment-grade bonds; speculative-grade bonds; and other asset classes. All of our comments relate solely to the factors for Health Risk-Based Capital (RBC), although some of our comments may also be relevant to the comparable aspects of the analysis for Property and Casualty RBC.

**Treatment of investment income.**

Our first comment is relevant to both investment-grade bonds and speculative-grade bonds. We would like to raise a point that we cannot recall being addressed in previous discussions (and which we have not ourselves raised previously).
Investment income (i.e., bond coupon payments) was not reflected in the development of the bond risk factors for the Life RBC formula, except to a very limited extent. In their report of August 3, 2015, titled, “Model Construction and Development of RBC Factors for Fixed Income Securities for the NAIC’s Life Risk-Based Capital Formula,” the Academy explained the exclusion of most investment income as follows (on page 13): “The implicit assumption is that any profit from investments is fully distributed to policyholder dividends or used to absorb product or operational losses.” (The “profit from investments” referred to was previously described as “investment income (e.g., coupon income)

These considerations do not seem relevant to Health RBC. For companies subject to the Health RBC formula, generally very little of their business provides policyholder dividends (or retrospective rate credits) that involve investment income. (The Medical Loss Ratio rebate requirements for some business could be considered to be similar to policyholder dividends, but those rebates do not reflect investment income.) As to absorbing “product or operational losses,” we do not believe that the corresponding risk factors in the Health RBC formula were developed on the assumption that losses would be offset by investment income. If that latter understanding is correct, then neither reason that the Academy stated for exclusion of investment income in the Life analysis would be applicable to Health.

In light of that, it does seem appropriate to include investment income in the development of the bond risk factors for the Health RBC formula. Just as the formula would not reflect losses from insurance claims and operating expenses without also reflecting the insurance premium that is charged to fund those losses, likewise the formula should not reflect the losses from investments without reflecting the income from those investments. However, as the report being commented on does not describe a deviation from the Life default model in this respect, we must suppose that the proposed Health bond risk factors do not reflect investment income, except to the very limited extent permitted in the Life default model.

Accordingly, we request that your Working Groups consider whether investment income should be included, on some conservative basis, in the development of the bond factors for the Health RBC formula.

Investment-grade bonds.

For the most part, we agree with the Academy’s approach for investment-grade bonds. The assumptions made for purposes of the analysis seem reasonable (with the caveat about investment income discussed above), and the results of the analysis likewise do not present significant concerns, except in one area.

For the Aaa and Aa1 rating classes, the Academy’s analysis indicated risk factors of zero percent (at least, rounded to the nearest tenth of a percent). For reasons of conservatism, the Academy imposed a minimum risk factor of 0.1%, which is also the factor for the Aa2 rating class.

We understand and agree with the need for conservatism. However, we feel it is also necessary to reflect that the Aaa and Aa1 classes are indeed less risky than Aa2 (as borne out by the Academy’s analysis for longer bond durations). Therefore, while we agree that the factors
should be greater than zero, we also believe they should be lower than the factor for Aa2 bonds. That would not appear to be a problem from a mechanical standpoint, since the Health RBC formula already includes factors that are stated to the hundredth of a percent (e.g., the current factors for Working Capital Finance Investments).

We propose, therefore, that the factors for Aaa and Aa1 be graded down from the factor for Aa2; and as a matter of convenience, we suggest using the same proportions as represented by the Academy’s proposed factors for Property and Casualty RBC. Thus, the factor for Aaa would be $(0.2\% / 0.6\%) \times 0.1\% = 0.03\%$, and the factor for Aa1 would be $(0.4\% / 0.6\%) \times 0.1\% = 0.07\%$.

If, for the sake of consistency, your Working Groups wanted to round all of the bond factors to the nearest hundredth of a percent, that would be reasonable. However, we do not feel it is absolutely necessary.

**Speculative-grade bonds.**

The Academy has noted, in their report, many potential shortcomings of their analysis underlying the proposed bond risk factors for speculative-grade bonds. We do feel concern about several aspects of the analysis. However, given the limited amount of information available, we do not feel that there is a superior alternative. In particular, we do not feel that an analysis such as that presented in Appendix 3, using the standard deviations of S&P bond indices, provides an appropriate comparison. Standard deviation reflects favorable fluctuations as well as unfavorable ones, and the issue at hand is how the potential losses on speculative-grade bonds compare with the potential losses on common stock. Also, the Annual Statement data that the Academy used reflect that bonds are held at the lower of amortized cost and market value; this has a dampening effect on fluctuations in value, which is not reflected in the index data. Furthermore, as the Academy has noted, the composition of the bond indices is not necessarily representative of the bonds actually held by insurers. Therefore, we believe that an analysis based on the fluctuations in value of bonds held by insurers is preferable.

In keeping with that belief, the only adjustment that we would suggest to the analysis of speculative-grade bonds is the inclusion of investment income, as discussed above.

**Other asset classes.**

As the Academy notes (page 13 of the report), there are other factors in the Health RBC formula that are based directly on the bond factors. They cite the factors for cash and preferred stock; the factor for receivables for securities is another example. We feel strongly that all such factors should be updated to be consistent with any new bond factors that are adopted.

* * * * *

We look forward to discussing these matters with your Working Groups.
Sincerely,

James R. Braue

Re: Draft Bond Structure and Instructions

Dear Mr. McNaughton:

The American Academy of Actuaries\(^1\) Health Solvency Subcommittee is pleased to provide this response letter to the NAIC Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the HRBC Working Group comment letters received on the exposure of the Draft Bond Structure and Instructions.

**United Health Group (UHG) sent two comment letters which comprised comments on:**

**Treatment of Investment Income**

Investment income is utilized in the development of the underwriting risk in the property and casualty (P&C) Risk-Based Capital Formula. Therefore it would be redundant to include as an offset to the default risk within the bond factor development. It is unclear whether the Health Risk-Based Capital Formula used a similar consideration in the development of the underwriting risk. The HRBC Working Group should consider the implications of investment income already included in the formula.

As stated in UHG’s second letter dated November 13, 2018, the bond factors would require a number of considerations and assumptions in order to accommodate the impact of investment income in the model. An alternative approach could be considered if determined appropriate.

**Investment-Grade Bonds**

As noted in the UHG comments, the Joint P&C/Health Bond Factors Analysis Work Group’s (PCHWG) report\(^2\) suggests a minimum risk factor of 0.1%, which UHG has stated it views as being too conservative. In considering the minimum risk charge, it’s important to recognize the risk charge associated with cash. If cash has a risk charge, then bonds should have a charge at

The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

\(^2\) *An Update to the Property & Casualty and Health Risk-Based Capital Bond Factors*, Joint P&C/Health Bond Factors Analysis Work Group, July 30, 2018.
least as great. Related to bond risk, there may be other risks outside of the modeled risk of misuse or loss that should be taken into consideration.

Speculative-Grade Bonds

While the UHG comments expressed some general concerns with the approach, UHG also acknowledged that given the limited amount of information available, there was no superior alternative.

Other Asset Classes

UHG has stated it concurs with the PCHWG report on page 13—that all factors based upon bond factors should be updated.

America’s Health Insurance Plans (AHIP) provided comments on:

Speculative Grade—Size Adjustment

The AHIP comments surround the use of a bond size factor in the development of the speculative grade bond factors. It’s important to note that both life and P&C utilize a bond size adjustment factor on speculative-grade bond factors in their respective formulas. Therefore from a consistency standpoint, health incorporated a similar type of adjustment on the speculative-grade bond factors.

It’s important to note that footnote 74 in the PCHWG report acknowledged that the modeled approach was simplified and identified potential inconsistencies. However, the last sentence outlines why the approach was reasonable overall: “However, as the bond size factor is based on the total number of issuers (excluding US government issuers), rather than issuers by rating class, and as the proportion of [speculative-grade] bonds is not large for either life or P&C, we believe this approach is reasonable.”

If the HRBC Working Group decided to adjust the speculative-grade modeling to remove the size adjustment factor, then the investment-grade bonds would also need to be adjusted to account for a lower number of issuers on this asset class. This would lead to an increase in the proposed size adjustment and resulting factors.

*****

We appreciate the opportunity to provide these comments and would welcome the opportunity to speak with you regarding these comments in more detail and answer any questions you might have. If you have any questions or would like to discuss further, please contact David Linn, the Academy’s senior health policy analyst, at 202-223-8196 or linn@actuary.org.

Re: Comments on Draft Bond Structure and Instructions

Dear Mr. McNaughton:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to provide these comments on the request for comments on the proposed changes to the RBC calculations for bonds that include more categories and revised factors for both Investment Grade bonds (IG) and Speculative Grade bonds (SG). We would ask that the NAIC consider an alternative to the use of “speculative” for bonds in NAIC classes 3-5. Many bonds in these categories may have been purchased when they were rated as Investment Grade and have since had the rating lowered but are still in fully compliant status. A better term would be Higher Risk bonds.

The Academy has developed bond factors under two different approaches for Investment Grade bonds and Speculative Grade bonds.

For IG bonds, the model looked at the impact of bond default rates applied to an average portfolio. The HRBCWG is recommending an average bond size adjustment from the model’s assumption for portfolio size to the average for a Health insurer. It is based on statistical variations of a default/no-default modeling approach.

For SG bonds, the Academy developed factors based on the same model (since some of these factors are actually used for the LRBC formula) and modified them to 50% of the model value to reflect the different Statutory accounting rules for these bonds versus the assumptions in the model (held at amortized book value). The Academy recommended an alternative approach for SG Bonds. This alternative was a market value change approach and relied on the decrease in market value of bonds from 2007-2008.

However, the final factors for SG Bonds presented by the Academy included the same adjustment for portfolio size used for IG Bonds. We can find no basis for the assumption that the statistical fluctuation based on portfolio size from the default/no-default variation is appropriate for any presumed variation by portfolio size due to market value fluctuations. We continue to request that the WG seek review of this issue by the Academy.
AHIP Comments on HRBC Bond Structure and Instructions
July 24, 2019
Page 2

We do not have any comments with respect to the instructions as proposed.

We would be happy to address any questions the Working Group has with these comments.

Sincerely,

William C. Weller

IDENTIFICATION OF ITEM(S) TO CHANGE

Revise the Health Annual Statement Test language

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the change is to move those filers who write predominantly health business and file on the life blank to begin filing on the health blank.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:________________________

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
Health Annual Statement

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions and Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Test:**

   If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

   The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. The purpose of this test is to identify a reporting entity writing predominantly health business (premium ratio of 90% or more) to file on a Health Statement and the associated Health RBC filing (if required). Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   **Passing the Test:**

   A reporting entity is deemed to have passed the Health Statement Test if the values for the premium ratio in the Health Statement Test (General Interrogatories, Part 2) equal or exceed 90% for both the reporting and prior year.

   **Failing the Test:**

   Once the reporting entity has passed the health test and is currently filing on the Health Statement (Health RBC filing), the health test will be used to demonstrate that the insurer is still predominantly writing health business as defined above. If the premium ratio falls below 90% the company could still be viewed as writing predominantly health business and should continue to file on the Health Statement (and Health RBC Filing) but notify the domestic regulator as indicated below.

   **Variances from following these instructions:**

   If the reporting entity has consistently reported a premium ratio of 90% or greater and filed on the health blank but falls below the 90% premium ratio, the reporting entity shall apprise the domestic regulator if they fall below 90% and should advise of significant changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the health annual statement and risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty annual statement form and risk-based capital report. The domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Test is submitted.

Life Annual Statement

GENERAL

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The purpose of the Health Statement Test is to identify a reporting entity writing predominantly health lines of business (premium ratio of 90% or more), to move and file on a Health Statement and the associated Health RBC filing (if required). Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium ratio in the Health Statement Test equal or exceed 90% for both the reporting and prior year

If a reporting entity completes the Life, Accident and Health annual statement for the reporting year and b) passes the Health Statement Test (as described above), the reporting entity must begin completing the health statement with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end. (e.g. If the company passed the health test for year-end-2019 reporting, the company must begin filing the health blank with first quarter 2021).

Variances from following these instructions:

If the reporting entity has consistently reported a premium ratio of 90% or greater and filed on the health blank but falls below the 90% premium ratio, the reporting entity shall apprise the domestic regulator if they fall below 90% and should advise of significant changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the health annual statement and risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty annual statement form and risk-based capital report. The domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Test is submitted.

This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.
Property/Casualty Annual Statement

GENERAL

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

   If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

   The purpose of Health Statement Test is to identify a reporting entity writing predominantly health lines of business, to move and file on a Health Statement and the associated Health RBC filing (if required). Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   Passing the Test:

   A reporting entity is deemed to have passed the Health Statement Test if:

   The values for the premium ratio in the Health Statement Test equal or exceed 90% for both the reporting and prior year

   If a reporting entity is a) completes the property and casualty annual statement for the reporting year and b) passes the Health Statement Test (as described above), the reporting entity must begin completing the health statement with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end. (e.g. if the company passed the health test for YE-2019 reporting, the company must begin filing the health blank with first quarter 2021)

   Variances from following these instructions:

   If the reporting entity has consistently reported a premium ratio of 90% or greater and filed on the health blank but falls below the 90% premium ratio, the reporting entity shall apprise the domestic regulator if they fall below 90% and should advise of significant changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the health annual statement and risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty annual statement form and risk-based capital report. The domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Test is submitted.

Mr. Patrick McNaughton
Chair, Health Risk-Based Capital (E) Working Group

Re: Health Test Exposure

Dear Mr. McNaughton:

The American Council of Life Insurers (ACLI)\(^1\) is pleased to submit the following comments regarding the exposed revisions to the health test.

ACLI is appreciative of the simplification of the health test from the prior requirements, but we have some concerns about the practical implications of the changes. The reduction in the premium threshold from 95% to 90% will increase the likelihood of companies to “bounce” back and forth between meeting the requirement and not, which may potentially create undue burden on the companies. ACLI is appreciative of the discretion granted by the commissioner in the “Variances from following these instructions” section, but note as constructed is a one-way test. ACLI would suggest strengthening this safe harbor to be a two-way test that gives greater discretion to the commissioner.

ACLI believes the premium threshold should be characterized as a “threshold”, rather than a passing/failing a test. We would suggest changing the sections from “Passing the Test” and “Failing the Test” to “Meeting the Test Threshold” and “Not Meeting the Test Threshold”.

ACLI is concerned that without greater clarification of the changes, it could create undue cost and effort for companies, which ultimately would create a worse outcome for consumers. There are considerable differences between the Health Blank and the Life Blank, and companies needing to switch between the two would need to develop expertise on how to properly complete them. Further, companies would need to license different software due to the change, which would cause additional cost. Insurance groups with multiple companies achieve efficiencies within the organization through consistency in reporting, with appropriate processes and controls and systems in place. From a regulator’s perspective, it may be difficult to properly assess the solvency position of the company due to swings in the RBC ratios were they to move from one set of RBC requirements to another.

We look forward to a discussion of these issues. Thank you.

---

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
Sincerely,

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Austin, TX, Dec. 7, 2019. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Eric Unger (CO); Carolyn Morgan (FL); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Puran Bheamsain (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT). Also participating were: Mike Yanacheak (IA); and Peter Weber (OH).

1. **Adopted its Oct. 23 and Summer National Meeting Minutes**

Mr. Ostlund made a motion, seconded by Ms. Eom, to adopt the Working Group’s Oct. 23 (Attachment Three-A) and Aug. 3 (see NAIC Proceedings – Summer 2019, Capital Adequacy (E) Task Force, Attachment Three) minutes. The motion passed unanimously.

2. **Adopted the Longevity Risk (A/E) Subgroup’s Nov. 25, Nov. 4, Oct. 7, Sept. 30 and Sept. 18 Minutes**

Ms. Ahrens made a motion, seconded by Mr. Ostlund, to adopt the Longevity Risk (A/E) Subgroup’s Nov. 25 (Attachment Three-B), Nov. 4 (Attachment Three-C), Oct. 7 (Attachment Three-D), Sept. 30 (Attachment Three-E) and Sept. 18 (Attachment Three-F) minutes. The motion passed unanimously.

3. **Exposed the Longevity Risk (A/E) Subgroup’s Recommendation for Public Comment**

Ms. Ahrens said the Subgroup has been meeting to work on its recommendation for a longevity C-2 charge. She said the Subgroup’s memorandum (Attachment Three-G) to the Working Group provides an introduction with the general discussions that the Subgroup has had, provides its recommendation that the Working Group accept the factors proposed by the American Academy of Actuaries (Academy) Longevity Risk Task Force (Academy Task Force) (see NAIC Proceedings – Spring 2019, Capital Adequacy (E) Task Force, Attachment Five-D), and highlights the areas where the Subgroup did not reach full agreement. She said one of these areas is scope and, specifically, longevity reinsurance transactions (LRT) where there are still some complicated questions that need to be addressed. She said the Subgroup is recommending that the Working Group move forward with LRT scoped out for now with direction to the Subgroup to continue its study of LRT. She said the memorandum also addresses correlation and includes the Subgroup’s conclusion that correlation between longevity and mortality risk within the formula extends beyond the Subgroup’s charge. She said the memorandum includes as attachments the Academy Task Force’s original proposal, which is what the Subgroup’s recommendation is based upon (see NAIC Proceedings – Spring 2019, Capital Adequacy (E) Task Force, Attachment Five-D), the Academy Task Force’s update on correlation, which was presented to the Working Group at the Summer National Meeting (see NAIC Proceedings – Summer 2019, Capital Adequacy (E) Task Force, Attachment Three-H), and the actual proposal form with the risk-based capital (RBC) blank and instruction changes. She highlighted the fact that the blank and instruction changes being recommended do not include correlation (Attachment Three-H), but that the Academy Task Force also submitted an alternative presentation of the blank and instruction changes, which does include correlation (Attachment Three-I). Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter (Attachment Three-J) suggesting that the Working Group include the Academy Task Force’s alternative, including correlation in any exposure.

The Working Group agreed with the Subgroup’s recommendation to scope out LRT for now with direction to the Subgroup to continue its work on this aspect. The Working Group also agreed to having consideration of correlation done by the Working Group. The Working Group agreed to expose the Subgroup’s recommended RBC blank and instructions changes, which do not include correlation, along with the Academy Task Force’s alternative, including correlation in order to get comments on both, for a public comment period ending Feb. 7, 2020.
4. Heard an Update from the Academy C2 Work Group

Chris Trost (Academy) said the Academy C2 Work Group’s charge is to review and, if appropriate, recommend changes to the life mortality RBC factors which, for the most part, have not been updated since they were originally developed. He said an update was given to the Working Group in June covering the assumptions and methods that were being used, and they have tried to incorporate the feedback that they got into their work. While the Work Group had presented some preliminary factors, based on that feedback and other constraints, he said the Work Group is not yet at a point to recommend factors; but he provided an update (Attachment Three-K) that includes that feedback’s impact on its work on each of the components of mortality risk. Mr. Barlow suggested scheduling a call specifically to discuss this before a final proposal is presented so Working Group member’s questions regarding some of the technical considerations can be addressed.

5. Received an Update on ESGs

Pat Allison (NAIC) said a request was made to NAIC staff during a July 16 joint conference call of the Working Group and the Life Actuarial (A) Task Force to develop a request for proposal (RFP) to find a vendor to provide an economic scenario generator (ESG) to replace the Academy’s ESG and be enhanced over time. She said work is continuing on the RFP, and the plan is for it to be a prescribed ESG for life and annuity reserves and capital involving VM-20, Requirements for Principle-Based Reserves for Life Products; VM-21, Requirements for Principle-Based Reserves for Variable Annuities; C3 Phase I; and C3 Phase II. She said the group drafting the RFP includes state insurance regulators, NAIC staff, the Academy, the ACLI, and industry subject-matter experts (SMEs); and it is working with a target completion date of the first quarter of 2020. She said there are a lot of steps after the RFP is issued, and the earliest implementation date would be 2022.

6. Discussed Comments Received on Life Growth Risk

Mr. Barlow said there were two comment letters received (Attachments Three-L and Three-M). Mr. Bayerle presented the ACLI’s comment letter and said the ACLI does not believe that there is a need for a life growth risk at this time, and he highlighted the two main points detailed in their comment letter: 1) state insurance regulators already have tools to assess life growth risk; and 2) rapid growth is less prevalent than in health or property/casualty (P/C) insurance. Mr. Barlow said he struggles with the same issue that the Operational Risk (E) Subgroup did in that there does not appear to be a good way to implement a growth risk charge for life insurance. He suggested tabling this issue until an actual approach to implementing it is presented or otherwise arises as something the Working Group needs to address. The Working Group agreed.

7. Discussed Other Matters

Ms. Hemphill detailed an issue with the new Variable Annuities Framework with regard to the phase in and smoothing. She said if there are voluntary reserves under the old framework, they will inappropriately reduce the C-3 RBC amount in the total asset requirement (TAR) under the new framework, even if there are no voluntary reserves being held under the new framework. She said there is a disconnect in that for the VM-21 reserve, the phase in is done as of Dec. 31, 2020. Doing a comparison between the old and the new frameworks while the C-3 phases in is based on a 2019 year-end calculation. She said there is a related issue with smoothing due to the treatment of voluntary reserves. She said she has discussed this with Mr. Bayerle, and there is agreement that this was an unintended piece of the language that was adopted, so they will be working on a way to address this. This can be addressed for 2020 on the capital side, but it is an issue to the extent that companies have voluntary reserves early adopted for 2019. Mr. Barlow noted that it is too late for the Working Group to change anything for 2019, but he suggested that the Working Group could issue some guidance on this issue and asked NAIC staff to assist in facilitating this.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Oct. 23, 2019. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Perry Kupferman (CA); Deborah Batista (CO); Wanchin Chou (CT); Gilbert Moreau (FL); Bruce Sartain (IL); John Robinson and Fred Andersen (MN); William Leung (MO); Rhonda Ahrens (NE); Kevin Clarkson (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); and Mike Boerner (TX). Also participating was: Mike Yanacheak (IA).

1. Discussed the Comments Received on a Proposal to Update the RBC Charge for Unaffiliated Common Stock Supporting Long-Horizon Contractual Commitments

Mr. Barlow said the Working Group received several comment letters. He said there was an additional letter from Allstate, which is not included in the materials because it came in after the comment period. However, he said those comments can be raised as part of this discussion. He provided those submitting comment letters the opportunity to speak on their comments.

Mark Prindiville (Allstate) said Allstate submitted the original proposal, documentation of the underlying rationale, a 20-page example, a comment letter (Attachment Three-A1) and a response to the American Academy of Actuaries’ (Academy) comment letter, so Allstate’s views are well documented for the Working Group. He said the six guiding principles that form the foundation of the proposal that are listed on page three of Allstate’s comment letter. He made two points in response to the Academy’s comment letter. The first is whether the proposal should be implemented in the C-3 risk component as opposed to the C-1 component. Mr. Prindiville said this has been a discussion almost from the beginning. He agreed that there are reasons to support C-3 because there is a long horizon and a liability connection, so Allstate understands this position. However, he said by definition of the framework, this is a C-1 issue. C-1 covers the change in equity value, exclusively, while C-3 covers the risk of loss due to changes in interest rate levels and variable products. As a result, there is not any question, according to the current definition, this is a C-1 issue. He asked whether there should be a massive framework overhaul and move equity volatility to C-3 because of the long horizon and liability question. He said this would be complicated with which scenarios to use and how to do covariance. Mr. Prindiville said it would end up with the same issue, and it centers on that low-water mark. For short-term investing, that low-water mark is very important, but for a long-horizon product with the type of guardrails Allstate is proposing, he said this is much less relevant.

Mr. Prindiville said the second point is potential disconnect with the accounting because there are differing amounts of volatility modeled in risk-based capital (RBC) versus what may be included in statutory surplus and the capitalization ratio. He said there is not internal consistency currently and that the capitalization ratio amortization concept included in the proposal is an attempt to provide more consistency because the capitalization ratios would both be calibrated to seven-year horizons. He said Allstate does not believe accounting needs to change but that RBC is the modernization of statutory capital as a measurement of strength because statutory capital does not incorporate how risky a portfolio is or the recoverability of assets over longer horizons. What RBC measures is the claims paying ability of assets, which changes over the short run and the long run. Mr. Prindiville said that over the long run, if equities are used demonstrably, the claims paying ability is higher because the returns are much greater than those for bonds and much more able to support a long-term product.

Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter (Attachment Three-A2). He said the ACLI’s comments are high-level and that they do not take an explicit position on the proposal. He said the ACLI appreciates the Working Group and other state insurance regulators having these discussions about how to improve retirement security. Obviously, the purpose of the RBC framework is to make sure companies are appropriately capitalized, and he said the ACLI would not be in favor of anything that would weaken that. Conceptually, he said the ACLI believes the Allstate proposal has appropriate guardrails, but in discussing any details, that main objective needs to be maintained. He said the ACLI’s comment letter addresses several technical issues but that the ACLI believes there are more discussions that could be had on this topic with other potential solutions.

Chris Trost (Academy) presented the Academy’s comment letter (Attachment Three-A3). With respect to the point made by Allstate about the inconsistency between the accounting and RBC, he said the Academy is concerned because the capital will be immediately impacted and fully reflected in the capital position on the statutory statement by reductions in the equity market, while RBC would be assuming some amortization. He said the Academy also commented that product-specific features tend
to be reflected in C-3 and not C-1. When looking at the product liabilities being considered here, the long-horizon contracts, he said there is really no aspect of those liability cash flows that would offset the loss. Mr. Barlow asked about the Academy’s point that product-specific investment choices are reflected in C-3 In the current RBC framework, Mr. Trost said there are certain specific places where liability characteristics are reflected, and those are with variable annuities and fixed annuities, where interest rates and assets are addressed. To reflect the common stock component in C-3, he said that would require redesign of the RBC framework where it would bring in equity performance for fixed annuities where it currently does not exist.

Mr. Andersen said he believes Allstate did a good job of presenting the history of stock market performance over the long-term but reiterated his concern that there needs to be an equal analysis of theory to prevent an unreasonable result where money can be borrowed at a low rate with a guarantee of a higher rate over time.

Mr. Carmello reiterated New York’s position that this proposal is a bad idea as it is not the time to be reducing RBC for equities. He noted that there was a 66% drop in equities in 2008 and 2009.

Mr. Barlow said this proposal would be a significant change to RBC and something requiring a lot of consideration. He said with other proposals in the past, the Working Group has referred them to the Academy for consideration, conducted field tests or asked NAIC staff to do some work. He asked Working Group members for any additional thoughts on the proposal and any input on how to move forward with the proposal. Ms. Ahrens said her initial thought is to agree with Mr. Andersen and suggested also that the Working Group should study this from more of a macro perspective beyond one company. She said the Working Group needs to keep in mind the concern Mr. Carmello raised about equities losing two-thirds of their value in recent history. She said there are a lot of questions to answer about whether this is a C-1 or C-3 risk. While she believes it is a C-3 risk, she said she does not fully agree that C-3 is not already set up in some ways to address something like this, citing C-3 Phase I cash-flow testing, which could potentially be leveraged to accommodate it. She said she believes there is a lot of discussion that needs to take place before the Working Group moves forward on something like this.

Mr. Sartain said this may be the same type of issue companies have with having reserves at too high a level and affecting pricing in that RBC charges that are too high can affect investment decisions. He said it seems indisputable that if you have a long-term liability, you are going to want to match that with some equities. He said this is probably true on the investment side, but the question is whether it fits into the RBC framework. If RBC is a regulatory tool, he asked how it is so critical for companies to make sure the RBC charges are not too conservative. He said rating agencies have their own capital models and that RBC is generally recognized as a blunt regulatory tool. He said it would be helpful to get the perspective of companies on that.

Mr. Barlow said he has had that same question for a long time. He said he was on a panel last year where there were quotes from analysts specifically referencing the RBC of a company and indicating that if that RBC fell below a certain percentage, it was time to be concerned. He said that certain percentage was not 200% but something significantly higher. He said while RBC is a tool with a single purpose to identify weakly capitalized companies, it seems this dynamic is a fact of life right now for the insurance industry. He said Allstate indicated to him that it is following a strategy of investing in equities for these liabilities, where interest rates and assets are addressed. To reflect the common stock component in C-3, he said that would require redesign of the RBC framework where it would bring in equity performance for fixed annuities where it currently does not exist.

Mr. Prindiville confirmed that Allstate has invested its block along the lines of what it believes is an optimal RBC charge because in its own economic capital framework, it has made the change that is being proposed. He said this was not easy and took several years of internal dialogue to get everyone comfortable with the underlying concepts and to ensure that all the right protections were in place so that Allstate will be able to withstand an untoward event in the markets. He said Allstate believes the concepts are more widely applicable and could be useful to the entire industry, which is why it has submitted the proposal. Mr. Robinson asked how long Allstate has been using this investment approach. Mr. Prindiville said about five years. In response to Mr. Andersen’s comment on theory, he said the last two pages in its comment letter are an attempt to provide the kind of theory being requested but that Allstate would be happy to engage further on this topic.

When considering whether equities are appropriate for immediate annuities, Mr. Trost said a portion of equities may be appropriate. However, he said he believes the real issue is that it is necessary to cover what the potential downside of the equities is, which is the short, concentrated event where losses can occur in a hurry. Mr. Sartain said it seems like the proposal covers this, at least in part, by having seven years of liquidity. He said the research would show that the longer the years extend, the more unlikely there would be that negative return on the equities. With equities, Mr. Trost said there is not the luxury of...
waiting for that entire seven-year period. He noted the example given of equities dropping rapidly by two-thirds. He said the issue is that this would be reflected in a much lower capital position in the statutory statements if they had a large portion of equities as opposed to if they did not invest in equities. He said it is a mismatch between how an insurance company’s capital is measured relative to its particular investment strategy. If there was a change in statutory accounting, whether or not it makes sense to hold them at something other than market value given their fluctuations, he said there would be a better consistency between the proposal and how statutory solvency would be measured.

Mr. Barlow agreed and said one of his concerns is a scenario where a company is insolvent but has a healthy RBC. He acknowledged that this would take an extraordinary set of circumstances but said it does happen occasionally. Mr. Prindiville said the capitalization ratio amortization part of the proposal is an attempt to mimic what the asset valuation reserve (AVR) does for statutory surplus. Mr. Yanacheak said he shares Mr. Barlow’s concern and said he believes that scenario definitely exists. He said it is a severe scenario, and while it may not be likely, severe scenarios are never regarded as likely. If it is a conditional tail expectation (CTE) type analysis, he said, when looking at tail events, he believes it might flip to likely, and that concerns him about this proposal. Mr. Barlow said there are some guardrails in the proposal that are good for what they do, but he is concerned that companies could use equities in a way that may not be appropriate for the liabilities they are backing and then, at the end of the year, trade to something for the purpose of RBC and then go back afterward. He said he does not yet have a clear view of what the next step is but suggested the Working Group could come up with additional questions. He asked Working Group members for their thoughts. Mr. Carmello suggested rejecting the proposal and moving on to other issues. He said RBC has been reduced for the last 20 years, and that is why the rating agencies’ multiples are up to four or five. Mr. Boerner said he has been struggling with what type of analysis would be useful right now, but he is not comfortable with the proposal at this point and said he would not oppose Mr. Carmello’s suggestion.

Mr. Carmello made a motion, seconded by Mr. Boerner, to reject the proposal. Mr. Andersen said he supports that for now but suggested a more independent and rigorous study as to what happens over a 30-year period would make this a discussion worth having again. The motion passed, with Illinois abstaining.

2. Exposed the Memorandum on Potential Further Work on Life Growth Operational Risk

The Working Group agreed to expose the memorandum from the Operational Risk (E) Subgroup for a 25-day public comment period ending Nov. 20. Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

2301 McGee Street, Suite 800
Kansas City, MO 64108

Re: Comments on Exposure of a Proposal to Update the RBC Charge for Unaffiliated Common Stock Supporting Long-Horizon Contractual Commitments

Dear Associate Commissioner Barlow, and members of the Life Risk-Based Capital Working Group:

We are writing on behalf of Allstate Life Insurance Company and its affiliated insurance companies (collectively, Allstate) regarding the Life Risk-Based Capital Working Group’s exposure of a proposal, sponsored by the Illinois Department of Insurance, to Update the Risk-Based Capital (RBC) Charge for Unaffiliated Common Stock Supporting Long-Horizon Contractual Commitments (Proposal). Allstate acknowledges the important work of the Life Risk-Based Capital Working Group (Working Group) and appreciates the significant contributions that Associate Commissioner Barlow, many state regulators, industry groups and peers have made in helping refine this Proposal. Feedback has consistently helped us to refine and strengthen the Proposal, and we welcome further dialogue once comments have been received.

Allstate is a multi-line insurance company with approximately $40 billion in annual revenues, 130 million policies in force, and $80 billion of assets under management, of which $9 billion backs structured settlement and immediate annuity policies. These commitments are long term in nature and fixed in all respects other than mortality. As is the case for pensions and endowments with similar obligations, equity investments can play an important role in the asset portfolio. Our research shows that an allocation to equity investments for products like these is likely to enable greater returns to policyholders while reducing the long-term solvency risk of the insurer. Such
investments diversify insurer portfolios and strengthen their long term financial ability to meet contractual guarantees.

Despite the expected benefits of holding equity investments for the long-term in a low interest rate environment, RBC charges for all insurance company investments are still tied to a short time horizon. The current C-1cs capital charge for unaffiliated common stock is 30% regardless of the underlying contractual obligations. As a result, insurers with business that includes long-term contractual obligations that are not subject to disintermediation risk often hold suboptimal economic portfolios that are too heavy on bonds and too light on equities. This investment mix reduces long-term investment performance and increases the risk to all stakeholders from extended periods of low interest rates. It also creates disincentives for the insurance industry to participate in solutions to long-term retirement needs such as pension buyouts and individual payout annuities.

Accordingly, this Proposal is to revise the life RBC framework to incorporate the existence of time diversification in equity markets. The amended life RBC calculation would allow eligible companies to voluntarily elect a C-1cs credit for unaffiliated common stock in the range of 15-20% pre-tax against the current 30% C-1cs capital charge specifically relating to equity investments backing long-term, contractual obligations not subject to disintermediation risk. An extensive set of guardrails will prevent an increase in risk to the insurance industry as a whole and mitigate insolvency risk at the company level.

Such guardrails include:

1. Equities must back reserves held for 7 years or more;
2. Reserves must not be subject to discretionary withdrawals which could shorten the time horizon;
3. An effective asset-liability strategy must be in place to mitigate short term liquidity risk;
4. A certification from a qualified Actuary is required to ensure documentation and transparency;
5. A management certification is required as to the company’s “intent and ability” to execute its investment strategy and live into the required guardrails;
6. Segmentation is required to separate long-duration assets and enhance transparency; and
7. Volatility associated with long horizon equities would be amortized into the Capitalization Ratio over a 7-year period.
Under this Proposal, we believe that insurers would be encouraged to follow sound, responsible investment policies that benefit consumers many years into the future, providing retirement security or a safe, reliable income stream for individuals with special needs.

Allstate believes strongly in a set of defining principles that form the foundation of this Proposal:

1. The RBC framework can be enhanced to encourage solutions that target the retirement security gap that exists for consumers;
2. Equity investments can help achieve the returns necessary to meet legacy obligations and improve the consumer value proposition for newly designed products;
3. Equities held for the long term demonstrate lower volatility and risk due to the benefit of time diversification;
4. Any credit for time diversification should be linked to company intent and ability to maintain equity exposure over the long term;
5. Companies taking such a credit must demonstrate compliance with guardrails designed to maintain the financial strength of companies and the industry; and
6. Payout annuities, with no exposure to disintermediation risk, are a simple and transparent test case to introduce a credit for time diversification.

To provide further context, we provide supplementary materials that relate the current Proposal to prior analysis, including a memorandum issued as part of the 2013 study by the NAIC Investments RBC Working Group. Through this lens, the Proposal can be seen as a logical extension of prior discussion. It evolves the RBC framework away from a rigid "one size fits all" approach to equities by linking the calibration interval to the expected duration of the investment. If a long horizon and requisite liquidity can be guaranteed, a "beginning to end" lens is more appropriate than application of a quarterly low watermark calculation.

As noted during the August 3rd Working Group meeting, Chairman Barlow outlined key questions to help guide the analysis and discussion of this Proposal by group members. Although Allstate has discussed and answered many of these questions in prior conversations with individual regulators, we now provide answers on the record for the benefit of all interested parties.
1. Allstate is focusing on the element of time diversification and urging that it be incorporated into the formula. Is C-1 the right place to accomplish that?

Following many conversations on this topic, Allstate continues to believe that the C-1 charge is the appropriate place to recognize time diversification of investment risk. The C-1 framework already recognizes other types of diversification - for example, diversification across issuers and industries. Diversification across time periods has a similarly powerful and beneficial impact on risk and is a logical addition in cases where it can be assured by demonstrating intent and ability to hold. The C-1 framework includes actuarial and management certifications to provide transparency and disclosure regarding this intent and ability.

Moreover, C-1 is the appropriate place according to the definitions and rules of the RBC framework itself. C-1 is defined and calibrated to cover the risk of asset default of principal and interest, or the risk of fluctuation in fair value. The latter part of this definition clearly encompasses equity risk, which varies significantly by horizon due to the existence of time diversification.

C-3, in contrast, is defined to cover the risk of loss due to changes in interest rate levels and changes in market levels associated with variable products. The volatility associated with equity investments backing immediate annuities and structured settlements is not in scope, as the products under discussion are not variable products.

Though equity volatility could in theory be moved to the C-3 calculation, this would represent a fundamental change to the overall framework, introducing a large number of complicated issues such as the scenarios to be used, the usage of “low watermark” adjustments, and the calibration of diversification assumptions across RBC categories. A more straightforward approach is to retain equity volatility within C-1 capital, but to consider it in the context of the investment horizon. Charges based on a short holding period are appropriate in cases where liquidity constraints exist. In contrast, where liquidity is not an issue and where a long holding period can be supported, time diversification reduces the impact of short-term volatility and reduces tail risk over the length of the holding period. Appropriate holding period requirements would be required in calculating C-1 charges to maintain the integrity and consistency of RBC category definitions.

The proposed C-1 adjustment modernizes the RBC framework while requiring full transparency and disclosure, and without the complexities associated with measuring risk in a C-3 context.

2. Is Allstate saying there is a risk of not holding equities?

The key consideration is the investment horizon. Over short time periods, stocks are generally acknowledged to be a higher risk investment than bonds. Over long time periods, in contrast, stocks benefit from compounding of returns and time diversification of risk. These two forces significantly increase the likelihood of a favorable outcome for stocks when compared to bonds.
Over this longer time period, the expected return of a diversified stock portfolio becomes much higher than that of a bond portfolio, due primarily to the compounding of returns. More importantly from a capital perspective, 95th percentile tail outcomes become more favorable for stocks than for bonds, due in large part to the impact of time diversification.

When considering the risk of not being able to make liability payments across the entire life of a long-tailed product line, a properly diversified stock portfolio represents a lower risk investment than a portfolio of bonds. Especially at times when interest rates are low for extended periods, stocks provide greater returns than fixed income securities and improve the insurer’s ability to meet obligations associated with long horizon liabilities.

3. **Should there be a change in NAIC accounting standards as well as the RBC formula?**

Allstate believes that NAIC accounting standards provide a sound and robust valuation of the capital of the company. RBC complements capital and measures the ability for the capital to meet policyholder obligations. Capitalization levels can only be evaluated in light of the company’s assets and liabilities. In cases where there is no disintermediation risk and liquidity is managed appropriately, liabilities due long into the future do not require immediate liquidation of balance sheet assets, and RBC charges should be adjusted to reflect the fact that short term price volatility is less important.

Though Allstate believes that a change in accounting standards is not necessary, proposed adjustments to the Capitalization Ratio would modernize it in a manner consistent with the incorporation of a time diversification credit for long horizon equity investments.

If equity C-1 charges are differentiated by time horizon as proposed, accounting and RBC frameworks will remain internally consistent to the extent that equity-related volatility is realized in a pattern that reflects the investment horizon used to calibrate the C-1 charges. In cases where C-1 charges are set to reflect a seven-year horizon, consistency suggests that equity gains and losses be amortized into the Capitalization Ratio over an identical seven-year period. Doing so equilibrates the expected volatility embedded in the C-1 charge to the realized volatility likely to flow through the Capitalization Ratio.

4. **The proposal assumes a diversified portfolio of equities. How can regulators be assured of that?**

Concentration risk is an important consideration that is not unique to this Proposal. Existing RBC charges assume a diversified portfolio of equities; adjustments and regulations are in place to guarantee diversified portfolios.

Single issuer concentration limits vary by state. In Illinois, for example, equity investments in a single issuer must be less than 3% of admitted assets. In addition, incremental capital charges are applied to large portfolio concentrations. “Top five” equity concentrations currently receive a 50% capital surcharge, effectively increasing the base C-1 charge from 30% to 45%. Finally,
beta adjustments increase required capital in cases where lack of diversification increases stock portfolio volatility above that of the market. These limits, penalties, and adjustments would all remain in place under the Proposal. Management certifications will continue to include statements of intent to follow all applicable statutes, including these revised requirements.

Reassessment of whether these protections are sufficient may be a worthy exercise, though it can be undertaken separately from the current Proposal.

From an audit perspective, Allstate agrees that a clear trail must be prepared showing that the assets receiving the credit are clearly intended to retire liabilities far into the future. Such assets should be segregated into company records with appropriate audit trails to the RBC workpapers.

5. How would reinsurance impact this change in the formula?

The credit is designed net of reinsurance. The equity assets identified for the credit will be demonstrated in the supporting memo of the actuarial certification to back long horizon liabilities.

6. How can we ensure the proposed change is limited to payout annuities/structured settlements?

Supplemental exhibits and certifications must be filed by companies opting for the credit, as framed by three interrogatories in the Blue Book presentation:

- Will the Risk-Based Capital Credit for Long Horizon Equity Investments Supplement Exhibits be filed with the state of domicile and the NAIC by March 1?

- Will the Actuarial Certification Related to the Risk-Based Capital Credit for Long Horizon Equity Investments be filed with the state of domicile and the NAIC by March 1?

- Will the Management Certification Related to the Risk-Based Capital Credit for Long Horizon Equity Investments be filed with the state of domicile and the NAIC by March 1?

A new supplement to Note 32 will show amounts applicable to the credit. As proposed, line 32.G.1 will include the liability related to the long horizon credit.

Finally, the equity assets identified for the credit will be demonstrated in the supporting memo of the actuarial certification to back only long horizon annuity liabilities.

7. Are there implications for PBR?

PBR, a reserve measurement framework, is separate from the RBC calculation. No implications are expected.
8. The NAIC is discussing the importance of retirement security. Could this proposal help with that? Should the NAIC take that into consideration?

Allstate believes that the changes proposed would provide social benefits in two ways. First, the Proposal enhances the ability of insurers to play an integral role in helping consumers to navigate challenges associated with saving for retirement. In an era of low interest rates, bond investments do not provide returns sufficient to meet the goals and needs of future retirees. Investment theory has consistently demonstrated that equites are a very important component of a diversified portfolio for investors with long time horizons. Allowing insurers to voluntarily elect this RBC credit allows them to diversify their investment risk and strengthen their long-term financial ability to meet the guarantees provided to customers. A supportive RBC framework would foster innovation within the life insurance industry and encourage companies to offer a wider array of products at attractive rates and terms that meet the retirement-oriented needs of consumers.

Our nation faces a second challenge in the form of its aging infrastructure. For many years, we have underinvested in this area and have fallen behind other countries, threatening our economic competitiveness. Infrastructure investments are long term in nature, and many are made in equity form. Because the characteristics of infrastructure investments align with the risk and return profile desired by long term investors, this Proposal would result in greater insurance industry participation in these investments. Notwithstanding this Proposal, if the NAIC is interested in encouraging infrastructure investments, capital requirements could be further reduced.

9. Should the proposal be limited to forward-looking investments and liabilities only, or can it be used for existing blocks of business?

Allstate believes that the Proposal should apply both to existing blocks and to new business. For existing blocks, which were generally written in economic regimes characterized by higher interest rates, appropriately-managed equity investments increase expected portfolio returns and reduce long term solvency risk. For new business, equity investment strategies enable insurers to offer higher returns that meet policyholder needs.

10. We have had a low interest rate environment for some time. What if interest rates go back up?

The principles of return compounding and time diversification are durable across time. They are not limited to a low interest rate environment. The data that backs our research goes all the way back to 1800. These two principles are apparent in all subsets of data that we have analyzed, including recent history.

The historical record clearly demonstrates that equities provide a long run return premium over bonds, observable across a wide variety of time periods, economic regimes, and geographic...
markets. Whether interest rates are low or high, we expect this premium to persist and to compound through time, making stock investments an attractive part of a long horizon portfolio.

In addition, equity returns are ultimately tied to corporate earnings growth in the economy. Cyclical volatility exists, related to short term growth cycles as well as changing investor sentiment and expectations for the future. However, this volatility is generally resolved across a longer-term horizon. This has been demonstrated in both high interest rate regimes (early 1980’s) and low interest rate regimes (the 2008 financial crisis and its aftermath).

Though durable, these principles are even more important in the existing environment, with bond yields well below guaranteed payment rates. Reinvestment risk associated with fixed income investments is acute. Making matters worse, many debt instruments have call or refinancing provisions that would delay expected benefits should yields to return to higher levels. Though borrowers may opt to refinance when rates fall, they tend to hold their loans when rates increase. Lower yielding bonds can be much “stickier” than their higher-yielding cousins. All told, the likelihood of bonds providing necessary returns for legacy structured settlement and payout blocks has declined significantly, making the equity alternative even more compelling than usual.

Regardless of interest rate conditions, we believe that the principles of return compounding and time diversification should be leveraged appropriately by long run investors. Time diversification and the proposed credit should be a permanent part of the RBC framework.

11. Time diversification has been demonstrated empirically, but is there corresponding theory to support the concept?

The previously cited connection of stock returns to corporate earnings growth is highly relevant. Popular models decompose stock returns into two underlying components: (1) current income (dividends) and (2) corporate earnings growth (which evolves into future dividends). Corporate earnings are cyclical in nature, tied to the much-studied business cycle. Periods of optimism, borrowing, capital investment, and earnings growth swing naturally to periods characterized by pessimism, deleveraging, and retrenchment. Stock returns will continue to traverse cyclical patterns, and the recovery parts of such cycles form the theoretical underpinning of time diversification.

Though derived and calibrated using empirical data, statistical theories regarding time diversification have also been advanced. Many risk models assume that returns across time periods are independent, demonstrating zero correlation between one period and the next. Under this assumption, cumulative risks associated with stock investments continue to grow with time, though at a decreasing rate as the horizon gets longer.

However, the historical record suggests that correlations are negative across time, particularly after a large directional change. All available information may be incorporated continuously into stock prices, but investors tend to overreact to news over short periods of time. According to this theory, negative returns in one period (a correction or bear market) are likely to be followed
by positive returns (recovery and the return of “animal spirits”). Mean-reverting behavior has long been a staple of interest rate risk modeling and forecasting, and similar concepts are being applied to stock returns by researchers and practitioners.

Academic and practitioner literature on this topic is deep, and we would be happy to provide examples to interested parties. One comprehensive reference is Jeremy Siegel’s book “Stocks for the Long Run” (fifth edition published in 2014 by McGraw-Hill).

12. Is long run equity investing a “money machine” that should not exist in principle?

This is a broad question that is not specific to stock markets. Historically, investors have earned “risk premia” in asset markets by bearing different types of risk. Versus a “safe” alternative such as Treasury bills, investors can earn expected profits by taking interest rate risk and investing in long term bonds. They can take credit risk and invest in corporate bonds, and they can take equity risk in the stock market. With the historical record as our guide, these investments should indeed be profitable over the long run, and the term “money machine” could be reasonably applied.

However, the reason that investors are compensated for taking these risks is the uncertainty and potential for short term loss. Interest rates could rise, borrowers could default, and equity markets could fall. Aversion to such losses creates the need for a premium paid on investments that involve greater risk and forms a foundation that provides attractive return opportunities for long run investors.

These short run risks are real and must be managed appropriately. Periods of steep short term loss and investor insolvency can be found across markets, including interest rates (the inflationary 1970’s), credit investments (the junk bond crisis), and equity risk (the recent financial crisis). In most cases of insolvency, liquidity was not available to allow the investor to weather the storm. An important part of our Proposal is to require demonstration of adequate short term liquidity that would forestall recognition of short term losses. At Allstate, we manage the payout annuity portfolio in two parts – (1) a laddered, high quality bond portfolio structured to provide seven years of liquidity to pay liability cash flows, and (2) an equity portfolio to leverage the powerful forces of return compounding and time diversification.
Allstate appreciates the opportunity to work with you and the members of the Life RBC Working Group to develop these proposed changes to RBC. Thank you very much for your consideration of these comments. Should you have any questions concerning the matters raised in this letter, please feel free to contact us.

Sincerely,

Theresa Resnick

The C-1 charge for equity investments was formally reconsidered by the Investment RBC Working Group in 2013.

An accompanying Memorandum was informed by rigorous analysis of historical stock market losses.

The S&P 500 was chosen as the representative public equity universe.

### 2013 IRBCWG Memorandum – Summary of Key Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Options Considered</th>
<th>Option Chosen</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>Historical Period</td>
<td>• 1926 – 2012&lt;br&gt;• 1946 – 2012&lt;br&gt;• 1960 – 2012&lt;br&gt;• 1982 – 2012</td>
<td>• 1946 - 2012</td>
<td>• The Great Depression and World War eras (as well as preceding periods) may not be representative of the modern era.&lt;br&gt;• Starting with the post-WW2 period, a longer data set is preferable in order to include more economic regimes.&lt;br&gt;• Usage of short data sets would make calibration volatile.</td>
</tr>
<tr>
<td>Horizon</td>
<td>• One Year&lt;br&gt;• Two Years&lt;br&gt;• Longer</td>
<td>• Two Years</td>
<td>• Usage of two years is more conservative than one year, and captures most of the maximum drawdown for a buy-and-hold investor.</td>
</tr>
<tr>
<td>Interval</td>
<td>• Worst Monthly&lt;br&gt;• Worst Quarterly&lt;br&gt;• Beginning to End</td>
<td>• Worst Quarterly</td>
<td>• Monthly intervals incorporate too much short term volatility.&lt;br&gt;• quarterly intervals align with statutory reporting.&lt;br&gt;• Pros and cons of &quot;Beginning to End&quot; are summarized on the next page.</td>
</tr>
<tr>
<td>Confidence Level</td>
<td>• 92nd&lt;br&gt;• 94th&lt;br&gt;• 95th</td>
<td>• 95th</td>
<td>• The 92nd and 94th percentiles offer consistency with other studies, but the 95th percentile is standard in the investment industry (roughly two standard deviations) and adds a measure of conservatism.</td>
</tr>
<tr>
<td>Beta</td>
<td>• Retain beta adjustments&lt;br&gt;• Eliminate beta adjustments</td>
<td>• Retain beta adjustments</td>
<td>• It is logical for more volatile, higher beta portfolios to receive a greater charge.&lt;br&gt;• Existing beta factors appear to appropriately differentiate insurer portfolios.</td>
</tr>
<tr>
<td>Private Equity</td>
<td>• Same charge as common stock&lt;br&gt;• Different charge</td>
<td>• Same charge as common stock</td>
<td>• Once historical private equity returns are adjusted for serial correlation, their annual standard deviation is comparable to that of the S&amp;P 500.</td>
</tr>
</tbody>
</table>

Recommendation: maintain 30% C-1 charge for common stock and schedule 8A private equity investments, retaining beta adjustments with an embedded cap and floor.
Connecting the 2013 Study to the Current Proposal

- On pages 4 and 11, the Memorandum notes that the equity C-1 charge would decrease if a longer horizon were applied
  - "When considering only endpoints, the risk-based capital requirement decreases as the time period increases." (page 4)
  - "... a longer period allows for time for the market to recover" (page 11)
- On page 12, the Memorandum quotes from a 1997 predecessor in debating the relevance of intermediate results, comparing “low watermark” and “beginning to end” approaches
  - "The original two-year holding period was used as being typical of the holding period for common stock”
  - In favor of beginning to end: “First, if an insurer has enough assets that it can meet cash flow requirements over the life of its obligations, the risk is solven on an economic basis even if it fails a solvency test at intermediate points. Second, even if one focuses on such intermediate results, there is no need to do so any more frequently than the company files its risk-based capital report.”
  - In favor of intermediate results: "... intermediate results are important, especially if the company is exposed to disintermediation risk.”
- Appendix 2 included a chart which graphically illustrated these considerations:

![Chart](image)

The chart included in Appendix 2 is based on data from 1960 to 2012 and uses 94th percentile results

These statements lay the foundation for the current proposal

The recommended 30% charge is appropriate to a two year horizon, but lower charges are reasonable when the holding period is longer than two years

By setting appropriate guardrails, the current proposal agrees with both sides in this debate; “beginning to end” is preferable in cases where there is no disintermediation risk (guardrail #2) and appropriate liquidity is demonstrated (guardrail #3); in addition, the proposal includes amortization of gains & losses into the Capitalization Ratio to reduce the potential for undercapitalization at intermediate points (guardrail #6)

This shorter data set excludes the 1950s, a period of general calm and low volatility

As such, the blue “intermediate result” approach suggests a capital charge above 30% at horizons of 20 months or greater

However, in its red “beginning to end” line, the chart affirms the central observation driving the current proposal; somewhere between five and seven years, equity market losses tend to flip to gains, even in tail scenarios
The Current Proposal as an Extension of the 2013 Study

- In 2013, the Investment RBC Working Group took a “one size fits all” approach to equity C-1 charges
  - It adopted a 30% charge for all equity holdings, regardless of product line and holding period
  - For a single, uniform charge to be applied in all cases, 30% was a reasonable outcome
- The current proposal modernizes the framework by adding nuance in dimensions foreseen by the 2013 Working Group
  - “One size fits all” is not appropriate to long investment horizons, where time diversification and compounding alter the landscape
  - Net of the proposed credit, a 15% charge is conservative and prudent, sufficient even in 99th percentile outcomes

Current Proposal – Summary of Key Elements

**Recommendation:** Maintain 30% C-1 charge for most equity investments; reduce to 15% in cases where investments are intended for long horizons and align with specified guardrails.
September 20, 2019

Mr. Philip Barlow
Chair, Life Risk-Based Capital Working Group

Re: Risk-Based Capital Requirements for Long-Horizon Equity Investments Exposure

Dear Philip:

The American Council of Life Insurers (ACLI) is pleased to submit the following comments regarding the long-horizon equity investments proposal.

While not currently taking a position on this proposal, the ACLI supports solutions that enable consumers to purchase products they need to protect their financial and retirement security. Reducing the RBC charge for equities under certain circumstances could increase the availability of products and make those products more affordable. That said, companies must maintain appropriate capital levels to ensure that they can deliver on the promises they make.

ACLI supports continued discussion of the details associated with this proposal, and how this and similar approaches may benefit consumers. While this proposal only addresses payout annuities and structured settlements, we believe that the concepts could apply in other instances. If this proposal is pursued, ACLI also believes any such proposal should apply to all business, and not solely have a forward looking view. If solvency is appropriately measured and maintained, incentives can help achieve returns necessary to meet legacy obligations as well as improve consumer value for newly designed products.

Every capital framework introduces incentives and disincentives; this proposal addresses the disincentives in the RBC framework for companies to invest in equities. The concept behind the proposal is that well-capitalized companies would be able to weather the volatility of the assets held over the long term.

ACLI recognizes that, should this proposal be introduced into the RBC framework, appropriate guardrails would need to be established to maintain the financial strength of each company and the industry. Such guardrails may include requirements around the level of diversity of the portfolio and the minimum RBC ratio before the credit is allowed.

ACLI has identified technical aspects of this proposal that should be further discussed before proceeding. The proposal involves revisions to the RBC framework without explicit changes to the current accounting treatment of equities. Because equities are accounted for on a market value basis, an RBC

1 The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
ratio that amortizes equity losses will not reflect adverse equity impacts in the midst of a market downturn. Care needs to be taken if the NAIC does not intend to eventually revise the accounting treatment of equities to be on a book value basis, which aligns with the proposed concept.

We look forward to a discussion of these issues. Thank you.

Sincerely,

cc Dave Fleming, NAIC
September 20, 2019

Mr. Philip Barlow
Chair, Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Dear Philip,

The Life Capital Adequacy Committee (LCAC) of the American Academy of Actuaries’ (Academy) Life Practice Council is pleased to submit comments on the “Risk-Based Capital (RBC) Requirements for Long-Horizon Equity Investments” exposure. The exposure proposes a reduction in the RBC C-1 (asset risk) equity charge for a portion of equities that support long-duration payout contracts.

The LCAC does not support the reduction in the RBC C-1 equity charge for a portion of equities that back long-duration payout contracts for the following reasons:

1. Any consideration of product specific investment choices is reflected in C-3, not C-1. The C-1 component covers the risk of asset performance (e.g., default, change in equity value) as reported in statutory surplus.
2. The C-1 common stock equity charge is already reduced through the RBC covariance adjustment. For example, 2018 overall industry data shows about a 50% reduction.
3. The proposal only measures loss at the end of a stated period. RBC is designed to cover the capital requirement throughout a stated period consistent with a Greatest Present Value of Accumulated Deficiency (GPVAD) approach.
4. The proposed approach for determining total adjusted capital (TAC) in RBC (i.e., amortization of equity gains and losses) is inconsistent with how actual statutory capital is reported. As a result, the RBC amount calculated for the purposes of identifying weakly capitalized companies would not reflect the actual statutory solvency risk.
5. The potential statutory capital loss from equity risk would be based on asset performance only and would not be offset by the long-duration payout liabilities.

With those general comments in mind, the LCAC has drafted the following responses to the questions that were raised at the Life Risk-Based Capital Working Group meeting on Aug. 3:

1. Is time diversification something that should be reflected in RBC and if so, is it appropriately considered in the C-1 Risk category?

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
Our comments reflect two possible aspects of “time diversification”:

One aspect is that time diversification occurs when different risks emerge more fully at different points in time, so the total amount needed to satisfy a risk measure at any one time is less than the sum of each separate risk measure across all time points in a projection. We believe this aspect of time diversification should be reflected in RBC. Under the current RBC framework:

- This phenomenon is directly considered in RBC covariance adjustments.
- This phenomenon is not directly considered in C-1 RBC because the risks are evaluated over different time horizons that are consistent with the typical cycle of each risk.
- This phenomenon is partially considered in C-3 testing, but only within each scenario, rather than across scenarios, because the GPVAD methodology takes results from potentially many different time horizons.

Another aspect is that time diversification occurs when the holding period for a stock increases and that results in a lower probability of losing money relative to the initial investment. However, equity investments like common stocks are held at market value, so any change in market value of a stock is immediately reflected in its statement value, and hence, immediately reflected in statutory capital. An entire stock portfolio, regardless of when it is acquired, is subject to the same mark-to-market risk. The RBC requirement is based on the GPVAD over the specified period, so RBC is determined to be sufficient both at the end of a specified period and at interim points as well. We believe this aspect of time diversification should not be reflected in RBC because it does not reduce mark-to-market risk.

2. *Is there an unrecognized solvency risk with payout annuities and structured settlements in this ongoing low interest rate environment and will a shift to equity investments to back those products alleviate that risk?*

There is not an unrecognized solvency risk with payout annuities and structured settlement options in the ongoing low-interest-rate environment. This risk is appropriately captured in RBC C-3 and asset adequacy testing. A shift to equities, while potentially leading to a higher expected return, would also increase mark-to-market risk (i.e., the risk of statutory losses from declines in market value of the common stocks) and would not decrease solvency risk.

3. *Should there be a complementary change to the accounting for the equities or is the proposal to modify the total adjusted capital (TAC) to smooth equity gains and losses sufficient?*

RBC is calibrated to identify potentially weakly capitalized companies. In order for the RBC ratio to operate as intended, the calculation needs to be on the same accounting basis as the reported statutory capital. Otherwise, the calculated capital amount will not be accurate for the statutory solvency risk. Therefore, if smoothing of TAC is done in the RBC calculation, the same change would need to be made to the accounting of statutory capital. This statutory change, if made, must also be reviewed for other impacts as well.

4. *The proposal assumes a diversified portfolio. How do we require an initial diversified portfolio backing the reserves and how do we allow reasonable trades in that portfolio while preventing inappropriate activity?*

To the extent that an individual insurer’s stock portfolio is more or less diversified than the diversification in the S&P 500 portfolio assumed in the proposal, a more sophisticated approach for measuring the relative diversification risk would need to be developed. For example, the
current LRBC formula adjusts the equity charge through a beta adjustment that measures the volatility of an individual stock relative to the S&P 500 index; the bond charges are adjusted based on the number of bond holdings in an insurer’s bond portfolio; and both bonds and stocks have a concentration factor requirement.

5. How might the use of reinsurance impact this proposal?

RBC should reflect the net risks that a company retains or assumes.

6. How do we ensure that this proposal is strictly limited to payout annuities and structured settlements?

An approach to accurately measure, monitor, and report which equity investments are allocated to payout annuities and structured settlements would need to be developed. It should be noted that other products like long-term care have similar characteristics as to payout annuities (i.e., longer liabilities with no immediate cash needs). Any adoption of a change to RBC should establish the rationale for the change as well as for excluding or including other product types.

7. Are there implications in this proposal for PBR or Asset Adequacy Analysis and if so, how should those be coordinated?

The proposal only addresses the calculation of RBC. The requirements for PBR and asset adequacy analysis would be unchanged. Any change in investment strategy that a company would choose as a result of this proposal would need to be reflected in its PBR and asset adequacy testing.

8. Retirement security is a big issue and a proposal that has the potential to put more money into the hands of retired people will help, but should that be a criterion that we consider in developing RBC?

The focus and purpose of RBC has always been a tool for regulators to identify weakly capitalized companies. Introducing other objectives would dilute that objective and introduce judgment and subjectivity in determining the capital requirement for risks.

9. Should this proposal be forward looking only? Given that there is no opportunity to adjust the payments for existing payout annuities and structured settlements is there a reason to allow it for existing contracts?

The issues that we have identified in the proposal are applicable to both new and existing contracts. In addition, RBC has not been designed to establish separate capital requirements by year of issue.

10. Does the proposal work for environments other than the current low-interest environment?

This proposal would introduce similar risks in different interest rate environments. The tradeoff of investing in equities is the prospect of higher expected returns but also greater risk of market value loss on a statutory basis. The capital requirements should appropriately reflect the higher level of risk. RBC factors and requirements are designed to measure risks accurately over most economic environments.
In addition to the questions that the Life Risk-Based Capital Working Group posed, we identified the following questions regarding this proposal that you may want to consider:

1. How does the analysis differ if periods other than seven years are used?
2. Would smoothed results also be used for insolvency impacts as to when state guaranty fund systems would be used?
3. Are equity dividends included, or just price movements?
4. How do the risk/return characteristics of this option compare with a variable payout annuity that has an allocation to variable and fixed funds?
5. How would federal income taxes be impacted?
6. Would the RBC covariance adjustment be appropriate in light of the proposed change?

If you have any questions on our comments, please contact Ian Trepanier, life policy analyst at the Academy (trepanier@actuary.org).

Sincerely,

Chris G. Trost, MAAA, FSA
Chairperson, Life Capital Adequacy Committee
American Academy of Actuaries
The Longevity Risk (A/E) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Nov. 25, 2019. The following Subgroup members participated: Rhonda Ahrens, Chair (NE); Seong-min Eom (NJ); Bill Carmello (NY); and Peter Weber (OH). Also participating was Philip Barlow (DC).

1. Adopted its Recommendation to the Life Risk-Based Capital (E) Working Group on Longevity Risk

Ms. Ahrens said the Subgroup is considering adoption of the recommendation to the Life Risk-Based Capital (E) Working Group on new C-2 factors for longevity risk. She discussed the memorandum, which includes as attachments: 1) the American Academy of Actuaries (Academy) Longevity Risk Task Force’s proposal document, which was presented at the Spring National Meeting; 2) the Academy’s update on correlation, which was presented at the Summer National Meeting; and 3) the actual proposed changes to the risk-based capital (RBC) blank and instructions. She said this memorandum was also discussed during the Subgroup’s Nov. 4 conference call and now includes the edits that have been suggested. With respect to longevity reinsurance transactions (LRT), Ms. Ahrens said the issues that have been discussed by the Subgroup are highlighted in the third paragraph, with the following paragraph indicating that the Subgroup believes these transactions should ultimately be in scope of the proposal but that the Subgroup needs more time and guidance from the Working Group on this aspect. She said the issue of correlation is presented next explaining the discussions the Subgroup has had along with its recommendation that this is an issue to be considered by the Working Group.

Mr. Carmello suggested modifying the memorandum to indicate that a majority of the Subgroup members, as opposed to the Subgroup as a whole, supports scoping out LRT for now since he believes there is a way to have it included and it was not unanimous. He also suggested inclusion of the changes needed for the tax page and the authorized control level (ACL) page, LR030 and LR031, respectively, as part of the recommended RBC blank changes.

Ms. Eom expressed concern with the statement in the Academy’s proposal document concerning longevity reinsurance indicating that premium amounts excluded from statutory reserves should be netted against C-2 capital. She said she wants to make it clear that not everyone supports this. The Subgroup agreed to modify the paragraph on LRT to make clear that the need for further analysis is because the Subgroup did not reach a consensus, along with modifying the premium offset bullet point to reference a portion of future premiums, as opposed to all future premiums.

Mr. Carmello made a motion, seconded by Ms. Eom, to adopt as the recommendation to the Working Group the memorandum with the changes discussed along with the three attachments with pages showing the changes needed to LR030 and LR031 without correlation added. Brian Bayerle (American Council of Life Insurers—ACLI) said the Subgroup indicates in the memorandum that it has not taken a position on correlation and said the ACLI believes it would be better to advance the recommendation with versions of LR030 and LR031 with and without correlation and let the Working Group decide whether it wants to expose one or both of the versions. Mr. Barlow said he appreciates Mr. Bayerle’s comments and that he is not speaking for the Working Group, but it would be his preference that only one version rather than multiple versions be advanced to the Working Group. The motion passed unanimously.

2. Discussed the Academy’s Offer of Additional Assistance on Correlation

Ms. Ahrens said the Academy submitted a letter on the implementation of longevity C-2 with correlation that includes the RBC blanks changes that would be needed. With the Subgroup not taking a position on correlation, she said she believes this is something the Academy could direct to the Working Group. Paul Navratil (Academy) said the Academy is presenting this to make sure that the operational details are provided to facilitate the Working Group’s discussion of the issue. Mr. Barlow said he understands that the correlation aspect may fall outside of the specific consideration of longevity risk and is something that the Working Group can appropriately address.

Having no further business, the Longevity Risk (A/E) Subgroup adjourned.

The Longevity Risk (A/E) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Nov. 4, 2019. The following Subgroup members participated: Rhonda Ahrens, Chair (NE); Mike Yanacheak (IA); John Robinson (MN); Seong-min Eom (NJ); Bill Carmello (NY); and Peter Weber (OH).

1. Continued Discussion of the Academy’s Longevity Risk Task Force Proposal

Ms. Ahrens said a memorandum to the Life Risk-Based Capital (E) Working Group was drafted per the Subgroup’s discussion on Oct. 7 describing the Subgroup’s work on the proposed longevity risk C-2 charges. She said the memorandum outlines the Subgroup’s recommendation, which includes the proposal document along with the actual risk-based capital (RBC) blank and instruction changes, the discussions to date and the presentations from the American Academy of Actuaries (Academy) Longevity Risk Task Force. She said the memorandum also includes the Subgroup’s consideration of correlation explaining that the Subgroup believes that this aspect may not be in the Subgroup’s purview. Ms. Ahrens said the Subgroup has also discussed the scope of products to be included and, specifically, longevity reinsurance. She said state insurance regulators received some education on this during a regulator-to-regulator conference call held on Oct. 21 to discuss the similarities and differences to other longevity exposures in the life and fraternal annual statement that are included in the proposal’s scope. She said she believes it should be in scope but that the Subgroup seems to be divided on how a credit for this would be calculated or whether there should be a credit at all. Because there is more work to be done in this area, she believes that rather than holding up C-2 factors for other products, it should be scoped out for now and the additional work done possibly by a drafting group.

The Subgroup discussed edits to the memorandum, including adding detail to explain the issues with respect to longevity reinsurance, along with more clarity on those products that are within the scope of the proposal. Ms. Ahrens suggested: 1) having the suggested edits included; 2) having Subgroup members, the American Council of Life Insurers (ACLI) and the Academy review the updated memorandum; and 3) scheduling another conference call to consider adoption of the recommendation prior to the Fall National Meeting. The Subgroup agreed with this approach.

Having no further business, the Longevity Risk (A/E) Subgroup adjourned.
The Longevity Risk (A/E) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Oct. 7, 2019. The following Subgroup members participated: Rhonda Ahrens, Chair (NE); Mike Yanacheak (IA); Seong-min Eom (NJ); Bill Carmello and Amanda Fenwick (NY); and Peter Weber (OH).

1. Continued Discussion of the Academy’s Longevity Risk Task Force Proposal

Ms. Ahrens said two remaining aspects of the American Academy of Actuaries (Academy) Longevity Risk Task Force’s proposal to incorporate a charge for longevity risk in the life and fraternal risk-based capital (RBC) formula are the covariance and the scope. With respect to scope, she said there may be a need to schedule a regulator-to-regulator conference call to provide some education on pension risk transfer (PRT) transactions. With respect to the covariance aspect, she asked whether this was actually part of the Task Force’s recommendation or whether it was an aspect it is highlighting for additional consideration.

Paul Navratil (Academy) said the proposal document, which was presented to the Life Risk-Based Capital (E) Working Group at the Spring National Meeting, presented the work done on the factors for longevity risk, but the recommendation was that in implementing the factors, covariance needed to be considered at the same time. He said the presentation at the Summer National Meeting provided more detail, but the summary was that the recommendation was for a correlation of -33% between longevity and mortality C-2. He said the key premise in the work when the factors for longevity risk were developed was to calibrate them to get to a 95th percentile, which entailed including consideration of both longevity risk and mortality risk.

Ms. Ahrens noted the presentation included other jurisdictions having correlations of -50% and -25%. She asked Subgroup members for their thoughts on what the Subgroup should present to the Life Risk-Based Capital (E) Working Group as part of the recommendation with respect to correlation. Ms. Fenwick reiterated New York’s opposition to including any correlation within C-2. When the Subgroup first started to look at longevity risk, she said it was to introduce a factor for longevity, and it is being watered down and made less conservative with the work looking at different assumptions on reserve levels and covariance. She said it is uncertain what is going to happen with longevity risk because it involves two different groups of people with life insurance versus annuities, and how this ultimately works out is an inexact science. Mr. Weber said that Ohio would probably favor some correlation. He said there may be some appeal in recommending something less than the -33%. He acknowledged that it is not an exact science but that 0% seems extreme so perhaps -25% as another jurisdiction is using may be appropriate. Ms. Ahrens noted concern expressed with the possibility of the overall C-2 component actually going down with the introduction of longevity risk and suggested a possible approach could be to require a floor of one of the two C-2 components on its own after application of any covariance adjustment. Mr. Yanacheak reiterated his belief that this is a Life Risk-Based Capital (E) Working Group-level discussion. He said he thinks the Subgroup has an obligation to point out this issue as it has been presented to the Subgroup that relates to the longevity risk and what the Subgroup is proposing. He said if the Working Group wants the Subgroup to do additional work, it can provide that guidance. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI believes covariance is appropriate but would support consideration of this aspect going to the Working Group.

Ms. Ahrens suggested moving forward with recommending the Task Force’s Spring National Meeting proposal to Working Group along with a memorandum documenting: 1) the Subgroup’s considerations of the factors and the assumptions; 2) the actual RBC blank and instruction changes needed to implement the proposal; and 3) the Subgroup’s consideration of covariance with the consensus that the Subgroup believes this is an aspect that merits the Working Group’s consideration but that the Subgroup is willing to continue work on it with further direction. Mr. Yanacheak supported this approach. Mr. Bayerle said the ACLI supports the approach as well.

Having no further business, the Longevity Risk (A/E) Subgroup adjourned.

w:\national meetings\2019\Fall\tf\CapAdequacy\LRBC\Att Longevity Risk Subgroup 2019-10-7 minutes.docx
The Longevity Risk (A/E) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Sept. 30, 2019. The following Subgroup members participated: Rhonda Ahrens, Chair (NE); Mike Yanacheak (IA); Seong-min Eom (NJ); Bill Carmello (NY); and Peter Weber (OH). Also participating was: Vincent Tsang (IL).

1. Continued Discussion of the Academy’s Longevity Risk Task Force Proposal

The Subgroup continued its discussion of the requested sensitivities the American Academy of Actuaries (Academy) Longevity Risk Task Force provided in its Sept. 10 letter. Ms. Ahrens reminded the Subgroup that the Task Force’s proposal targets a 95th percentile total asset requirement (TAR) assuming an 85th percentile reserve. She said the Subgroup questioned whether this assumption could actually be made and what the factors would be at different assumed reserve levels that the Task force provided. Mr. Carmello reiterated his preference to go with the factors at the 75th percentile level without a covariance adjustment. Mr. Yanacheak said reserves are to cover moderately adverse events and that he believes the 85th percentile is close to a mean plus one standard deviation, so he is not opposed to going with the 85th percentile factors. Ms. Eom said she is also supportive of the 85th percentile since that is what is assumed for reserves in other product lines and, if there is a problem with the actual reserve level, the reserves can be addressed separately.

Ms. Ahrens said she agrees with using the 85th percentile. She noted a small study done with Nebraska companies that have payout products when she was new to the Subgroup. She said the study was not to determine what the current reserve formulation produces but rather to: 1) determine whether there was an issue with asset adequacy testing not working for these types of risks; and 2) verify that they were testing the longevity risk and that it was covered in the establishment of the moderately adverse condition coverage. She said there was also acknowledgement of the fact that there most likely was a lot of aggregation on the life sufficiency used to prevent additional asset adequacy reserves. At that time, she said she believes the Subgroup decided to focus on the risk-based capital (RBC) charge and that any insufficiencies in the reserves could be addressed separately. Mr. Weber said that is his recollection of the study; they were looking at things in aggregate and that there were certain sensitivities around it. He said he is supportive with using the 85th percentile.

Ms. Ahrens noted Mr. Carmello’s concerns with potential reserve inadequacies and asked him if he thought even using the 75th percentile would actually be the appropriate assumption. Mr. Carmello said the only positive about going with the 85th percentile is that state insurance regulators could start holding companies to it in examinations as another reason to increase reserves. For this product especially, he said he does not believe companies are very far from best estimates. He said he would pick the 60th percentile. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI is supportive of using the 85th percentile and that the ACLI believes any concern with reserves not being at the appropriate level should be addressed separately.

Nancy Bennett (Academy) said that when RBC was developed, it was designed to establish minimum capital requirements and was built on the premise that reserves were adequate whether it was formulaic or formulaic plus any additional reserves established through cash flow testing. She said RBC was not intended to rectify any problems with reserves but rather to be built on top of that and that there was nothing specifically quantified about reserves in the development of individual RBC factors. Ms. Ahrens said her preference would be that the Subgroup recommend using the 85th percentile but explain that the Subgroup also looked at other levels and why as part of the recommendation. Mr. Yanacheak, Ms. Eom and Mr. Weber expressed support for this approach.

With respect to the sensitivity to the assumed average reserve per policy, Ms. Ahrens said she does not have an issue with the assumed average although she said she is surprised it was only 50,000 for payout-type products and questioned whether this might go up over time as insurers’ expertise with these products increased. Mr. Yanacheak said he does not have a concern with the 50,000 average assumption. Mr. Tsang noted the reduction in the factors as the size of the total reserve increases and the fact that the reductions get proportionally smaller with the increases. He questioned whether this would penalize smaller companies. Paul Navratil (Academy) said the two main risks considered were: 1) mortality improvement or trend risk, which is a risk that applies evenly to all sizes of business; and 2) estimation of base mortality or mortality level risk, which is much
higher on a small block of business. He said the grading down of the factors reflects the fact that level risk is much higher on a small block of business and then levels off as trend risk becomes the more dominant risk.

With respect to covariance, Ms. Ahrens said she has discussed the potential for the introduction of a covariance factor, which does not currently exist at Life Risk-Based Capital (E) Working Group meetings. She said there is a case to be made that diversification is a positive, and she asked for members’ thoughts. Mr. Carmello reiterated his opposition to this aspect. Mr. Yanacheak suggested this may be an issue for the Working Group to decide and expressed concern with the Subgroup potentially leading them astray if they have not specifically directed the Subgroup to address this aspect. Ms. Ahrens said she understands the theoretical justification for including this aspect but shares that concern. She suggested making the recommendation on factors and highlighting the potential for a correlation component along with alternatives for how it could be implemented, including limitations or guardrails that would address concerns about the introduction of an RBC charge potentially leading to decreased RBC.

Having no further business, the Longevity Risk (A/E) Subgroup adjourned.

w:\national meetings\2019\Fall\tf\CapAdequacy\LRBC\Att Longevity Risk Subgroup 2019-9-30 minutes.docx
The Longevity Risk (A/E) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Sept. 18, 2019. The following Subgroup members participated: Rhonda Ahrens, Chair (NE); Mike Yanacheak (IA); John Robinson (MN); Seong-min Eom (NJ); Bill Carmello and Amanda Fenwick (NY); and Peter Weber (OH).

1. Continued Discussion of the Academy’s Longevity Risk Task Force Proposal

Ms. Ahrens said the Subgroup discussed the comments received on the questions posed by the Subgroup as part of the exposure of the American Academy of Actuaries (Academy) Longevity Risk Task Force’s proposed approach for incorporating a risk charge into the life and fraternal risk-based capital (RBC) formula during its July 17 conference call. As part of that discussion, she said the Subgroup asked the Academy for some sensitivities around the assumed 85th percentile reserve level and the assumed average reserve per policy. Paul Navratil (Academy) presented the Academy’s responses (Attachment Three-F1).

With respect to what issues remained prior to being able to go forward with its recommendation, Ms. Ahrens said the correlation component is one. She said she has indicated to the Life Risk-Based Capital (E) Working Group that the Subgroup is focused on longevity and that it may be appropriate for the Working Group, where there is a larger audience, to decide whether there should be a correlation component within C-2. She said the Subgroup’s choices include simply adopting the Academy’s proposal and working with the Working Group on the next steps or also providing the Working Group with some alternatives along with the pros and cons of each.

Ms. Eom suggested that another issue is to limit the products to which the proposal will be specifically applicable. Ms. Ahrens agreed and said she believes the Subgroup may indicate that there may be other C-2 factors that need to be developed for products that are outside the scope of the proposal. The Subgroup discussed differences between various products and the possible need for a different approach for some, specifically longevity, reinsurance. Mr. Navratil indicated that this product was included in the Task Forces’ request in the field study, but there were not enough responses received from participating companies. Mr. Robinson asked if there was a maintenance recommendation as to how often the factors should be reviewed or updated. Mr. Navratil suggested that it might be more appropriate to look at that aspect in terms of things changing around product structure and the emergence and expectation of longevity risk as opposed to timeframe. Ms. Ahrens said she believes the Subgroup is in a position to recommend C-2 factors for longevity for year end 2020, and she suggested that the recommendation could include the Subgroup continuing to work on this product for the following year.

Ms. Ahrens asked Subgroup members for comments on the range of factors in the sensitivities presented with respect to the reserve level. Mr. Carmello acknowledged that the 85th percentile may be ideal, but it is not what the reality is and has been in that it is actually in the 60–65th percentile range for payout annuities; so the 75th percentile would be a compromise. Ms. Ahrens said the Subgroup has discussed in force versus business going forward and noted the complications of developing a factor that addresses both. She asked how this might tie into the discussion of a maintenance schedule and, specifically, how to address choosing a factor at the 75th percentile and then having reserves updated for business going forward. Mr. Carmello said that if the new mortality tables are more conservative than thought to be, it would be something that needed to be reviewed. The Subgroup discussed potential ways to identify the blocks of business in the information available in the annual statement.

Ms. Ahrens asked Subgroup members for comments on the range of factors in the sensitivities presented with respect to the reserve level. Mr. Carmello acknowledged that the 85th percentile may be ideal, but it is not what the reality is and has been in that it is actually in the 60–65th percentile range for payout annuities; so the 75th percentile would be a compromise. Ms. Ahrens said the Subgroup has discussed in force versus business going forward and noted the complications of developing a factor that addresses both. She asked how this might tie into the discussion of a maintenance schedule and, specifically, how to address choosing a factor at the 75th percentile and then having reserves updated for business going forward. Mr. Carmello said that if the new mortality tables are more conservative than thought to be, it would be something that needed to be reviewed. The Subgroup discussed potential ways to identify the blocks of business in the information available in the annual statement.

Ms. Ahrens said she believes the Subgroup needs to discuss three things during upcoming calls: 1) whether the Subgroup wants to recommend one of the longevity factor choices presented by the Academy, given the discussions on assumed reserve levels; 2) whether the Subgroup wants to make any adjustment to the assumed average reserve size; and 3) whether the Subgroup recommends a correlation component, which is part of the Academy’s proposal.

Having no further business, the Longevity Risk (A/E) Subgroup adjourned.

Re: Requested sensitivities to longevity risk-based capital (RBC) factors

Dear Rhonda,

On behalf of the Longevity Risk Task Force of the American Academy of Actuaries, I am providing additional assumption sensitivities to the proposed longevity C-2 risk factors as requested by the Longevity Risk Subgroup at the July 17, 2019, call.

1. Sensitivity to Assumed Reserve Level (85th percentile)

The proposed longevity C-2 factors we have suggested were calibrated to cover risk between a reserve level that was assumed to represent an 85th percentile outcome and a 95th percentile capital objective. The following are important to consider in setting the reserve level assumption for the purpose of calibrating risk-based capital factors:

- The appointed actuary is required to opine that aggregate reserves are adequate under moderately adverse conditions.
- Principle-based reserve requirements (e.g., VM-20 and VM-21) define prudent estimate assumptions at a conditional tail expectation (CTE) 70 level that is at least as adverse as the 85th percentile, although this is different from prescribing reserves at a specific level.
- The sufficiency of the overall reserve is the important result and key assumption in calibrating capital levels. It is not necessary or appropriate to consider the severity level of individual assumptions prescribed in statutory reserves—only whether aggregate reserve levels are appropriate.

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
• RBC is based on the premise that reserves are adequate. If there are concerns that prescribed statutory reserve levels are insufficient, these are best addressed in reserve requirements directly.
• There should be consistency in assumed reserve levels across the RBC framework and any change to this fundamental RBC assumption should be applied consistently across risks rather than arbitrarily to longevity risk alone.

The sensitivities below show the impact to the RBC factor if the longevity stress were adjusted to represent the difference between reserves at different assumed levels of adequacy (85th, 80th, 75th) and the total asset requirement consistently calibrated to a 95th percentile outcome, as requested. Factors continue to be expressed as a percentage of statutory reserves as reported through the longevity risk field study (denominator is consistent across all sensitivities).

Providing these requested sensitivities does not imply that there is an actuarial basis for these alternatives or constitute any level of endorsement that they would be appropriate for use in calibrating risk-based capital factors.

2. Sensitivity to Assumed Average Reserve per Policy ($50k)

There was discussion at the July 17 Longevity Risk Subgroup call of the average reserve per policy assumption used to scale the factors on a dollar reserve basis rather than a life count basis.

We commented in our original proposal that the number of individual exposures is a better proxy for scaling longevity risk than the dollar size of reserves and would support such an approach if it is judged to be feasible to implement within RBC.

The preliminary factors we proposed are scaled to the dollar size of reserves, which is a simplification that more easily aligns to existing statutory reported values. In our view, $50,000 average reserve per policy is a reasonable assumption, though we do expect that this average reserve would vary significantly across companies and blocks of business.
The sensitivity below shows alternative scaling of the factors using different assumed reserve per policy values ($40k, $50k, $60k).

RE: Recommendation for Incorporating an RBC Charge for Longevity Risk

The NAIC’s Longevity Risk (A/E) Subgroup was formed in 2016 with the charge to provide recommendations for recognizing longevity risk in statutory reserves and/or risk-based capital (RBC), as appropriate. The Subgroup has worked closely with the American Academy of Actuaries’ (Academy) Longevity Risk Task Force (Academy Task Force) over the ensuing three years to focus efforts on addressing RBC for longevity risk after determining that statutory reserves would be addressed through the work of other NAIC groups. After many discussions and considerable input from the Subgroup, the Academy Task Force conducted a field study in 2018. The intent of the field study was to quantify longevity risk coverage at an appropriate confidence level. The results of that field study were presented to the Life Risk-Based Capital (E) Working Group at the 2018 Summer National Meeting. Those results were used to produce a proposal for an RBC charge for longevity (the proposal) which was exposed for comment by the Subgroup, along with a list of questions on which the Subgroup requested input, on its March 5, 2019 conference call. The proposal was presented to the Working Group at the 2019 Spring National Meeting (see NAIC Proceedings – Spring 2019, Capital Adequacy (E) Task Force, Attachment Five-D). The comments and the responses to the Subgroup’s questions were discussed on its July 17, 2019 conference call.

The Subgroup wants the Working Group to be aware that special consideration was given to the proposal’s assumption of statutory reserves being at the 85th percentile. While differing views were expressed, the Subgroup’s consensus is that any deviation in reality from this assumption should be addressed as part of consideration of reserves and not as a factor in determining a capital charge. The Academy Task Force did produce potential factors that would address the gap if reserves were actually at the 75th or 80th percentile. Those factors are not included in the proposal being recommended as the Subgroup reached consensus on the after-tax factors as presented on page three of the proposal. These factors are then included on a pre-tax basis in the RBC instructions.

The Subgroup has also evaluated longevity reinsurance transactions (LRT), a reinsurance arrangement initially in scope for longevity C-2. LRT is a relatively new type of arrangement which involves the transfer of longevity risk associated with group annuities to a reinsurer and is discussed on slide nine of the proposal. While the Subgroup has held several discussions on LRT, because the Subgroup did not reach a consensus, we believe further analysis of the arrangement addressing key considerations is necessary for the Subgroup to issue a recommendation. These key considerations include:

- The basis for the factors – Statutory reserves may not be the appropriate basis to which the factor applies since reserves are generally zero at inception. The present value of future payout benefits using VM 22 criteria was discussed as a potential basis, however this would not be a statutory reporting item that could be pulled from the financial statement. The basis needs to be determined and the process for including it in the RBC pages needs to be established.
- Premium offset – Whether and how to allow a portion of future premiums due to the reinsurer under a reinsurance arrangement to offset the capital requirement resulting from applying the factor to the present value of benefits.
- Treatment for primary insurer – How capital would be reflected for a primary insurer that has reinsured longevity risk to a reinsurer.

The comments and responses to the Subgroup’s questions were discussed on its July 17, 2019 conference call.

The Subgroup wants the Working Group to be aware that special consideration was given to the proposal’s assumption of statutory reserves being at the 85th percentile. While differing views were expressed, the Subgroup’s consensus is that any deviation in reality from this assumption should be addressed as part of consideration of reserves and not as a factor in determining a capital charge. The Academy Task Force did produce potential factors that would address the gap if reserves were actually at the 75th or 80th percentile. Those factors are not included in the proposal being recommended as the Subgroup reached consensus on the after-tax factors as presented on page three of the proposal. These factors are then included on a pre-tax basis in the RBC instructions.

The Subgroup has also evaluated longevity reinsurance transactions (LRT), a reinsurance arrangement initially in scope for longevity C-2. LRT is a relatively new type of arrangement which involves the transfer of longevity risk associated with group annuities to a reinsurer and is discussed on slide nine of the proposal. While the Subgroup has held several discussions on LRT, because the Subgroup did not reach a consensus, we believe further analysis of the arrangement addressing key considerations is necessary for the Subgroup to issue a recommendation. These key considerations include:

- The basis for the factors – Statutory reserves may not be the appropriate basis to which the factor applies since reserves are generally zero at inception. The present value of future payout benefits using VM 22 criteria was discussed as a potential basis, however this would not be a statutory reporting item that could be pulled from the financial statement. The basis needs to be determined and the process for including it in the RBC pages needs to be established.
- Premium offset – Whether and how to allow a portion of future premiums due to the reinsurer under a reinsurance arrangement to offset the capital requirement resulting from applying the factor to the present value of benefits.
- Treatment for primary insurer – How capital would be reflected for a primary insurer that has reinsured longevity risk to a reinsurer.
The Subgroup recommends LRT arrangements should ultimately be included in scope for longevity C-2, however, additional time is needed in order to further review and consider these key issues. Therefore, for purposes of our current recommendations to the Working Group, a majority of the Subgroup supports scoping out LRT and seeks support on forming a drafting group to continue evaluation and development of a recommendation.

Another aspect the Subgroup discussed at length with differing viewpoints expressed was possible correlation between longevity and mortality risk. Correlation is an aspect that the Subgroup feels extends beyond our charges and is an issue for the Working Group to decide. The proposal includes the Academy Task Force’s recommendation that updated C-2 mortality factors and new C-2 longevity factors be implemented concurrently along with a covariance adjustment within C-2. Various correlation factors of 0%, -25% and -50% were included to demonstrate hypothetical company impacts related to implementation with or without correlation noting that additional work on coordinating and consideration of the proper level of covariance was needed. An update on this by the Academy Task Force was provided in a presentation to the Working Group at the 2019 Summer National Meeting (see NAIC Proceedings – Summer 2019, Capital Adequacy (E) Task Force, Attachment Three-H). The Subgroup believes the factors presented by the Academy Task Force may be reasonable but believes the Working Group is in a better position to consider this as it involves more than just the longevity component. As such, the Subgroup is only providing a recommendation for the factors as presented in slide three of the proposal, and is raising the topic of correlation for the entire Working Group to address.

The proposal, as produced and presented by the Academy Task Force (see NAIC Proceedings – Spring 2019, Capital Adequacy (E) Task Force, Attachment Five-D) and includes the Academy Task Force’s objectives and analysis approach along with the results of the field study and the calibration of the longevity factor. Proposal 2019-13-L (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Three-H) presents the RBC blank and instruction changes necessary to implement the proposal.

DESCRIPTION OF CHANGE(S)
This proposal creates a new schedule in the life and fraternal RBC formula along with the necessary instructions to incorporate a charge for longevity risk.

REASON OR JUSTIFICATION FOR CHANGE **
The Longevity Risk (A/E) Subgroup was charged with providing recommendations for recognizing longevity risk in statutory reserves and/or RBC, as appropriate. This represents the Subgroup’s recommendation as it applies to RBC.

Additional Staff Comments:
•  11-4-19: Proposal was exposed for comments (DBF)

Revised 2-2019
LONGEVITY RISK
LRtbd

Basis of Factors

The factors chosen represent surplus needed to provide for claims in excess of reserves resulting from increased policyholder longevity calibrated to a 95th percentile level. For the purpose of this calibration aggregate reserves were assumed to provide for an 85th percentile outcome.

Longevity risk was considered over the entire lifetime of the policies since these annuity policies are generally not subject to repricing. Calibration of longevity risk considered both trend risk based on uncertainty in future population mortality improvements, as well as level or volatility risk which derives from misestimation of current population mortality rates or random fluctuations. Trend risk applies equally to all populations whereas level and volatility risk factors decrease with larger portfolios consistent with the law of large numbers.

Statutory reserve was chosen as the exposure base as a consistent measure of the economic exposure to increased longevity. Factors were also scaled by reserve level since number of insured policyholders is a less accessible measure of company specific volatility risk. Factors provided are pre-tax and were developed assuming a 21% tax adjustment would be subsequently applied.

Specific Instructions for Application of the Formula

Annual statement reference is for the total life contingent reserve for the products in scope. The scope includes annuity products with life contingent payments where benefits are to be distributed in the form of an annuity. It does not include annuity products that are not life contingent, or deferred annuity products where the policyholder has a right but not an obligation to annuitize. Line (3) for General Account Life Contingent Miscellaneous reserves is included in the event there are any reserves for products in scope reported on Exhibit 5 line 0799999, it is not meant to include cash flow testing reserves reported on this line. Included in scope are:

- Single Premium Immediate Annuities (SPIA) and other payout annuities in pay status
- Deferred Payout Annuities which will enter annuity pay status in the future upon annuitization
- Structured Settlements for annuitants with any life contingent benefits
- Group Annuities, such as those associated with pension liabilities with both immediate and deferred benefits

[additional instructions would be required if Longevity Reinsurance product remains in scope – placeholder pending decision on scope]

The total reserve exposure is then further broken down by size as in a tax table. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to reserves is completed automatically. The calculation is as follows:

<table>
<thead>

Ms. Rhonda Ahrens  
Chair, Longevity Risk (A/E) Subgroup  
National Association of Insurance Commissioners

Via email: Dave Fleming (dfleming@naic.org)

Re: RBC Blank Implementation of Longevity C-2

Dear Rhonda,

On behalf of the Longevity Risk Task Force of the American Academy of Actuaries,¹ I am providing sample changes to risk-based capital (RBC) blanks to implement longevity C-2 factors to assist the Longevity Risk Subgroup.

Changes from the existing blanks are highlighted in yellow in the attached excel file.

- The LRbd tab was previously provided to calculate the pre-tax longevity C-2 amount based on the factors proposed by the LRTF.
- Changes to LR030 include longevity risk in the calculation of tax effect for C-2.
- Changes to LR031 include longevity risk in the calculation of Net C-2 Post-Tax.

It was necessary to add new lines to LR030 and LR031 for longevity risk. This was done in this sample by adding lines numbered with “b.” It may be preferable in a final version to renumber the entire calculation so that longevity risk uses a uniquely numbered line.

Correlation between longevity and mortality is included in the formulas suggested for implementation. The formula includes a TBD Correlation Factor which can be inserted into the formula pending a decision by Life RBC on correlation.

At your request we have also included an alternative formula (provided to the right in the exhibit) that includes a Guardrail Factor that could be used to limit the reduction from correlation. We do not believe this Guardrail Factor is needed as part of the implementation of longevity C-2. If correlation is implemented with the Guardrail Factor, we recommend that it be

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

November 26, 2019

Mr. Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group

Re: Longevity Risk (A/E) Subgroup Recommendation for incorporating an RBC charge for longevity risk

Dear Philip:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to provide comments regarding the November 25\(^{th}\), 2019 Recommendation for incorporating an RBC charge for longevity risk (Recommendation) from Longevity Risk (A/E) Subgroup (Subgroup).

While ACLI believes the memorandum itself appropriately captures the deliberations and decisions made by the Subgroup, we are concerned about the removal of the formula reflecting the correlation adjustment between the C-2 mortality and longevity factors in LR030 and LR031. As the Recommendation makes clear, the Subgroup deemed it appropriate that any decision on the correlation adjustment be made by the Life Risk-Based Capital (E) Working Group (Working Group). However, the removal of the formula is equivalent to a +100% correlation between the factors, which is inconsistent with the Recommendation and the American Academy of Actuaries’ (Academy) proposal. ACLI strongly urges any exposure from the Working Group reflect the correlation factor in the formulas on LR030 and LR031. We note that the Academy recommended formula would work correctly regardless of the level of correlation that the Working Group ultimately decides.

The following table illustrates the formula using the examples of the Academy deck, and specifically that a +100% correlation factor is equivalent to the sum of the mortality and longevity risk charges. Formulaically, the C-2 risk is SQRT(C2a^2 + C2b^2 + 2*(Correlation Factor)*C2a*C2b):

<table>
<thead>
<tr>
<th>C2a Mortality/Other Insurance Risk</th>
<th>25.1</th>
<th>25.1</th>
<th>25.1</th>
<th>25.1</th>

Academy C-2 Mortality Work Group Update

Chris Trout, MAAA, FSA
Chairperson, C-2 Work Group
American Academy of Actuaries

Life Risk-Based Capital (E) Working Group [AE/01/69] – NAIC 2019 Fall National Meeting

C-2 Mortality Overall Approach

- C-2 requirement covers mortality risk at the 99th percentile and is net of risk covered in statutory reserves
- C-2 requirement includes mortality risks related to:
  - Volatility Risk – natural statistical deviations in experienced mortality
  - Level Risk – error in base mortality assumption
  - Trend Risk – adverse mortality trend
  - Catastrophe Risk – large temporary mortality increase from a severe event
- Evaluate mortality risks using Monte Carlo simulation
- Express capital requirement using a factor-based approach (e.g., factor applied to NAR)

Current C-2 Life Mortality Risk-Based Capital

</tr>
<tr>
<td>M400</td>
<td>0.87</td>
<td>0.76</td>
</tr>
</tbody>
</table>

*Reflects updates due to tax reform.
Summary of Current Developments

- Preliminary analysis suggests a possible decrease in C-2 requirement, however more analysis needed
- Biggest reductions are due to exclusion of AIDS scenarios at early '90s estimates and improvement in mortality levels compared to what was expected in the original C-2 factors
- Some increase in trend and catastrophe components

Next Steps

- Additional analysis
  - Appropriate projection period
  - Differences between products
  - Size breakpoints; exposure base
  - Analysis of industry data; implication of “high” vs. “low” mortality company
  - Group Life
- Preliminary factor development completion targeted for 2020
- Provide LRBCWG call update in Q1/Q2

- We are in favor of having a growth risk RBC charge for life insurers. There have been several insolvencies or near insolvencies over the years triggered in part by rapid growth including Executive Life and Mutual Benefit Life in the early 1990s. Many of these involved excessive sale of deferred annuities and/or GICs with high guaranteed interest rates. Even within the last five years, we have had to stop some insurers from selling deferred annuities with high guaranteed interest rates.

William B. Carmello, Jr., FSA, MAAA
Chief Life Actuary

New York State Department of Financial Services
One Commerce Plaza, Albany, NY 12257
November 20, 2019

Mr. Philip Barlow
Chair, Life Risk-Based Capital Working Group

Re: Life Growth Operational Risk Memorandum

Dear Philip:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to comment on the March 27th NAIC Operational Risk (E) Subgroup Memorandum “Potential Further Work on Life Growth Operational Risk” (Memorandum) on behalf of our member companies.

As previously articulated in comments and captured in the Memorandum, ACLI does not support the inclusion of a life growth risk charge to the Life RBC formula. Our main arguments against the need for a life growth risk charge are summarized as follows:

1) Regulators already have tools to assess life growth risk

The Life Trend Test already captures the impact of growth by testing if a similar amount of strain in the next year would lead to an RBC event. Under today’s RBC formula, fast-growing companies will indeed have corresponding fast-growing RBC requirements. Furthermore, if a company grows through acquisition, regulators must approve such transactions and have extensive access to information about both the acquiring company and the target company.

2) Rapid growth is less prevalent than in health or property/casualty insurance

The purpose of a growth risk charge is to measure the risk associated with rapid growth of a company’s book of business. In the health and property/casualty space, much of the business is renewed annually, and entire books of business may turn over in a few years. Rapid growth is likely a sign of mispricing that is not adequately captured in the pricing risk charge. For life insurance, the duration of the business is measured in years, and does not generally allow for frequent premium re-rating. As such, life books of business are generally stable over time. Further, the life insurance industry is fairly mature which limits aggregate growth. Rapid growth for a life insurer is more likely a sign of a reinsurance transaction or block acquisition, both of which would adequately be covered by the additional C-1, C-2, C-3, and C-4 charges that would occur when the business is added. Both the proposed methods for life growth risk charges may result in many companies being subject to a growth charge, which is not only counterintuitive, but not indicative of additional risk not already captured elsewhere.

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 290 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States.
3) Appropriate measurement is difficult and application of a single year charge is inappropriate

Unlike in health or property/casualty insurance, a one-year measurement is not appropriate for life insurance due to the long duration of the business written. Were a life growth risk charge to be developed, it would likely need to look very different than the rest of the RBC framework, applicable for several years after the risk is first added to the life insurance company. The Memorandum acknowledges Method 1 (informational filing) was flawed and would not be an effective measurement of growth risk. Method 2 (enhanced add-on) creates an arbitrary threshold which is not risk sensitive and would create a “cliff effect”. Treating all companies below the threshold identically won’t give regulators reliable information about the riskiness of the various companies. For some companies, this has the potential to lead to an on-again, off-again application of this charge that would be difficult to plan for and would not add meaningful signal value to the company or its regulator.

While we agree that RBC is an integral part of the regulatory framework to address risk, we believe that an explicit life growth charge creates challenges. A question for regulators is whether an explicit life growth charge is necessary for the RBC calculation given that growth is implicitly captured elsewhere in the RBC framework; the absence of an explicit measure is not an indication that a risk is not being captured. Other regulatory risk frameworks have different purposes than RBC, so there is not an apples-to-apples comparison between frameworks. Finally, while we acknowledge that smaller companies may not be subject to the same regulatory tools as larger companies, the introduction of an additional life growth risk charge may introduce unwarranted volatility into the RBC ratio for smaller companies and thus make them less competitive in the marketplace.

We are available to discuss our positions on this topic at the convenience of working group members or other regulators.

Sincerely,

cc Dave Fleming, NAIC
Property and Casualty Risk-Based Capital (E) Working Group
Austin, Texas
December 8, 2019

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Working Group members participated: Tom Botsko, Chair (OH); Sheila Travis (AL); Eric Unger (CO); Wanchin Chou (CT); Virginia Christy (FL); Judy Mottar (IL); Anna Krylova (NM); Lee Hill (SC); Miriam Fisk (TX); and Randy Milquet (WI). Also participating were: Patrick McNaughton and Steve Drutz (WA).

1. Adopted its Nov. 8 Minutes

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met Nov. 8 in joint session with the Catastrophe Risk (E) Subgroup and took the following action: 1) adopted the Subgroup’s Summer National Meeting minutes; 2) adopted the Working Group’s Summer National Meeting minutes; 3) adopted proposal 2019-11-P, which clarifies instructions regarding Lloyd’s of London and the 2019 reporting guideline; 4) adopted proposal 2019-12-P, which removes PR038 adjustment for reinsurance penalty; 5) exposed the 2019 catastrophe event lists; 6) heard updates from the American Academy of Actuaries (Academy) on reviewing the underwriting risk components; 7) discussed the appropriate factor of unrated uncollateralized recoverables; and 8) discussed the factor of using aggregate exceedance probability (AEP) basis vs. occurrence exceedance probability (OEP) basis.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt the Working Group and Subgroup’s Nov. 8 joint minutes (Attachment Four-A). The motion passed unanimously.

2. Adopted the Report of the Catastrophe Risk (E) Subgroup

Mr. Botsko said the Catastrophe Risk (E) Subgroup met Dec. 6 and took the following action: 1) adopted its Nov. 8 minutes; 2) adopted proposal 2019-14-CR (2019 Catastrophe Event Lists); 3) heard presentations from the Academy on: a) “Wildfire: Lessons Learned from the 2017-2018 Events”; and b) the Actuaries Climate Index (ACI); and 3) discussed the possibility of allowing additional third-party commercial vendor models.

Ms. Mottar made a motion, seconded by Ms. Travis, to adopt the report of the Catastrophe Risk (E) Subgroup (Attachment Four-B). The motion passed unanimously.

3. Exposed Proposal 2018-19-P (Vulnerable 6 or Unrated Risk Charge)

Mr. Botsko said the purpose of this proposal is to modify the instruction to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance. He stated that the current 14% factors for uncollateralized reinsurance recoverable was based on Standard & Poor’s 500 index (S&P 500) asset risk factors for reinsurance credit risk plus a margin of 3% for other than credit risk. Also, the analysis the Working Group members performed earlier that confirmed that the factor changed between 10–30% would be minimally effective with respect to risk-based capital (RBC) action level changes for filers. Mr. Botsko recommended that the Working Group consider using the 14% in 2020 reporting. Then, the data will be re-evaluated annually until reaching any agreed-upon change to the factor.

Ralph Blanchard (Travelers) commented that unrated reinsurers should not be grouped with vulnerable companies.

4. Agreed to Refer its Working Agenda to the Capital Adequacy (E) Task Force

Mr. Botsko summarized the changes to the 2020 Property/Casualty (P/C) RBC working agenda: 1) removed “evaluate the proposed changes from the Investment Risk-Based Capital WG related to Bond changes in the P/C formula” in the new items section; and 2) added “evaluate the possibility of using the NAIC as centralized location for reinsurer designations” and...
“evaluate the possibility of allowing additional third-party models to calculate the catastrophe model losses” in the carry-over items and new items sections, respectively.

Mr. Milquet made a motion, seconded by Mr. Chou, to agree to refer the 2020 P/C RBC working agenda to the Capital Adequacy (E) Task Force for consideration (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Five). The motion passed unanimously.

5. Discussed the Possibility of Using the NAIC as a Centralized Location for Reinsurer Designations

Mr. Botsko said based on the previous 2018 credit risk analysis, the Working Group identified a large amount of possible reporting errors on Schedule F, Part 3, such as incorrectly filed by: 1) wrongful categories; 2) pool status; and 3) overstated/understated reinsurer financial strength ratings. He stated that one of the possible solutions is using the NAIC as a centralized location for reinsurer designations. However, prioritization of the technology resources and obtaining the approval funds will be the biggest hurdle of this project. He anticipated that it would move faster if the industry is willing to assist with the funding portion.

Mr. Blanchard suggested that any such effort should focus on reinsurers with material volumes in Schedule F, Part 3, as this would reduce the cost.

Mr. Milquet commented that one of the options is to integrate the Jumpstart report to validate whether the items reported in the Schedule F are correct.

Scott Williamson (Reinsurance Association of America—RAA) said analysis indicated that many reinsurer designations reported in the Annual Statement Schedule F were understated. Using the NAIC as a centralized location will benefit the industry, as this will potentially reduce the R3 charges. He also stated regarding the issue of the resources and cost of this project, that he anticipated that it should be a straightforward process; and it should not be taking a long time to implement it.

Mr. Blanchard suggested that any effort should focus on reinsurers with material volumes in Schedule F, as this would reduce the cost. He also stated that reinsurers with small volumes below $100,000 are not significant, so it may not have an impact.

Mr. Botsko asked all the interested parties to consider: 1) whether building a centralized location for reinsurer designations will be a benefit to both state insurance regulators and the industry; and 2) the possibility of funding the project from the industry.

6. Discussed the Possible Treatment of the R3 Related to the Runoff and Captive Companies

Mr. Botsko said during the previous call and meeting, some companies asked the Working Group to consider different R3 treatment for run-off and captive companies. Mr. Blanchard said that there are two types of runoff companies; vulnerability runoff and others. As for captives, he believed that most of the balances are collateralized, so they should not create any RBC issues.

Mr. Williamson said identifying the run-off companies will be the biggest challenge for this issue.

Mr. Botsko asked all the interested parties to consider what the appropriate charges are for these groups of companies and provide thoughts to the Working Group during the upcoming conference call.

7. Discussed Other Matters

Mr. Botsko said the Mortgage Guaranty Insurance (E) Working Group is currently working with the consultant on the testing and finalization of a proposed risk-based mortgage guaranty capital model for monoline mortgage guaranty insurers. The Working Group will closely monitor the model development and discuss any potential impact to the P/C RBC formula.

Mr. Botsko also said the Restructuring Mechanisms (E) Subgroup is considering the need to make changes to the P/C RBC formula to better assess the minimum surplus requirements for companies in runoff. He stated that the Working Group will work closely with the Subgroup to address this issue.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.
The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Nov. 8, 2019, in joint session with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Working Group members participated: Tom Botsko, Chair (OH); Susan Bernard (CA); Mitchell Bronson (CO); Wanchin Chou (CT); Robert H. Lee (FL); Judy Mottar (IL); Sak-man Luk (NY); Anna Krylova (NM); Miriam Fisk (TX); and Randy Milquet (WI). The following Subgroup members participated: Tom Botsko, Chair (OH); Robert H. Lee, Vice Chair (FL); Susan Bernard (CA); Mitchell Bronson (CO); Wanchin Chou (CT); Judy Mottar (IL); Anna Krylova (NM); and Miriam Fisk (TX). Also participating were: Vincent Gosz (AZ); Julie Lederer (MO); and Steve Drutz (WA).

1. Adopted the Catastrophe Risk (E) Subgroup’s Summer National Meeting Minutes

Mr. Botsko said the Catastrophe Risk (E) Subgroup met Aug. 2 and took the following action: 1) heard a presentation from AIR Worldwide (AIR) on how the aggregate exceedance probability (AEP) and occurrence exceedance probability (OEP) curves are created based on the AIR modeling results; and 2) heard a presentation from Risk Management Solutions (RMS) on how the AEP and OEP are calculated and a comparison of the results.

Ms. Krylova made a motion, seconded by Ms. Mottar, to adopt the Subgroup’s Aug. 2 minutes (see NAIC Proceedings – Summer 2019, Capital Adequacy (E) Task Force, Attachment Four-B). The motion passed unanimously.

2. Adopted the Property and Casualty Risk-Based Capital (E) Working Group’s Summer National Meeting Minutes

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met Aug.4 and took the following action: 1) adopted its May 17 minutes; 2) adopted the report of the Catastrophe Risk (E) Subgroup; 3) adopted the Property/Casualty (P/C) Risk-Based Capital (RBC) newsletter; and 4) exposed proposal 2019-11-P, which clarifies to instructions regarding Lloyd’s of London and proposal 2019-12-P, which removes PR035 adjustment for reinsurance penalty.

Mr. Milquet made a motion, seconded by Mr. Luk, to adopt the Working Group’s Aug. 4 minutes (see NAIC Proceedings – Summer 2019, Capital Adequacy (E) Task Force, Attachment Four). The motion passed unanimously.

3. Adopted Proposal 2019-11-P (Clarification to Instructions Regarding Lloyd’s of London) and the 2019 Reporting Guideline

Mr. Botsko said upon review of 2018 Annual Statement Schedule F, Part 3 filings, it was observed that many filers reported reinsurance recoverable amounts due from Lloyd’s of London syndicates as NAIC 6 – unrated; therefore, they are subject to the highest R3 charge. He stated that the purpose of this proposal is to clarify that the reinsurance recoverable from individual syndicates of Lloyd’s of London that are covered under the Lloyd’s Central Fund may use the lowest financial strength group rating received from an approved rating agency.

Mr. Botsko said that because the deadline for the change of the 2019 RBC instructions has passed, a guideline for 2019 RBC reporting will be posted to the Working Group’s web page pending the proposal’s adoption by the Working Group. He also stated that the Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt the guidance for 2019 RBC reporting. The motion passed unanimously.

Mr. Milquet made a motion, seconded by Ms. Krylova, to adopt proposal 2019-11-P (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Seven). The motion passed unanimously.
4. **Adopted Proposal 2019-12-P (Remove PR038 Adjustment for Reinsurance Penalty)**

Mr. Botsko said that because the computation of RBC charge for reinsurance recoverable has been moved to the Annual Statement Schedule F, Part 3 in 2018 reporting, the adjustment for reinsurance penalty for affiliates applicable to Schedule F in PR038 is no longer needed. He stated that the purpose of this proposal is to eliminate the adjustment for reinsurance penalty for affiliates applicable to Schedule F section in PR038. Mr. Botsko also said the Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt proposal 2019-12-P (*see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Eight*). The motion passed unanimously.

5. **Exposed the 2019 Catastrophe Event Lists**

Mr. Botsko said that in order to avoid double-counting the catastrophe losses in the RBC formula, the U.S. and non-U.S. catastrophe event lists provide a routine annual update for those catastrophe events that should be excluded from the R5 calculation.

The Working Group and the Subgroup agreed to expose the 2019 catastrophe event lists for a 14-day public comment period ending Nov. 22.

6. **Heard Updates from the Academy on Reviewing the Underwriting Risk Components**

Lauren Cavanaugh (American Academy of Actuaries—Academy) said a scope letter from the Academy that was provided in May listed three elements that the Academy is currently researching: 1) investment income adjustment (IIA); 2) loss concentration factor (LCF) and premium concentration factor (PCF); and 3) line of business (LOB) underwriting (UW) risk factors. She anticipated that the Academy will provide three reports to the Working Group for consideration in next year. The updated LOB UW risk factor report will be provided at the 2020 Spring National Meeting; the IIA report will be presented at the 2020 Summer National Meeting; and the LCF and PCF report will be discussed at the 2020 Fall National Meeting.

7. **Discussed the Appropriate Factor of Unrated Uncollateralized Recoverables**

Mr. Botsko said during the Summer National Meeting, the Working Group discussed an issue as to whether there should be a factor change for uncollateralized unrated reinsurance recoverable from captives, risk retention groups (RRGs), solvent run-off reinsurers, and fully collateralized/funds held/sidecars/cat bonds reinsurers.

Ralph Blanchard (Travelers) recommended that the Working Group consider a separate category for run-off companies in its groupings for the purpose of setting reinsurance recoverable RBC charges, as the charge should not be too high for the run-off companies. He also stated that the factors quoted from rating agencies appear to be selections rather than being purely data driven. Those selections appear to be excessively conservative for a solvency-regulated run-off company.

Scott Williamson (Reinsurance Association of America—RAA) said Mr. Luk presented an impact analysis of changing the R3 factor for uncollateralized unrated balances under a variety of options ranging from 10–30% at the Summer National Meeting. He said the analysis may be able to assist the state insurance regulators to determine what the appropriate factor should be.

Mr. Botsko urged the Working Group members and the interested parties to consider whether to: 1) consider a separate category for run-off companies; 2) make any change on the factors; and 3) phase-in any agreed upon change to the factor. Discussion will be continued at the Fall National Meeting.

8. **Discussed the Factor of Using AEP Basis vs. OEP Basis**

Mr. Botsko said that based on the RMS presentation at the Summer National Meeting, low frequency of earthquake peril leads to a small gap between the OEP and AEP factors, whereas a higher tendency for the clustering of hurricane peril leads to a slightly higher tendency on both factors. Also, the OEP to AEP factor for severe convective storms is higher than almost all other perils. In conclusion, the factors to adjust OEP to AEP depend on: 1) peril; 2) geographic scope; 3) portfolio composition; and 4) insurance structure.
Mr. Botsko asked all the interested parties to think about this issue and provide thoughts to the Subgroup at the Fall National Meeting.

9. **Discussed Other Matters**

Mr. Botsko said the Subgroup and the Working Group will meet at the Fall National Meeting to continue discussing all the outstanding items.

Mr. Chou said the Health Risk-Based Capital (E) Working Group is currently working on the changes in the health test. He said a referral would be sent to the Working Group in the near future.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

W:\National Meetings\2019\Fall\TF\CapAdequacy\PCRBC\Att01 11-8propertyrcwg-catrisksgmin .doc
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Austin, TX, Dec. 6, 2019. The following Subgroup members participated: Tom Botsko, Chair (OH); Virginia Christy, Vice Chair (FL); Rolf Kaumann (CO); Wanchin Chou and Qing He (CT); Judy Mottar (IL); Anna Krylova (NM); Andy Schallhorn (OK); Joe Cregan (SC); and Miriam Fisk (TX). Also participating was: Phil Vigliaturo (MN).

1. **Adopted its Nov. 8 Minutes**

   Mr. Botsko said the Catastrophe Risk (E) Subgroup met via conference call Nov. 8, 2019, in joint session with the Property and Casualty Risk-Based Capital (E) Working Group and took the following action: 1) adopted the Subgroup’s Summer National Meeting minutes; 2) adopted the Working Group’s Summer National Meeting minutes; 3) adopted proposal 2019-11-P, which clarifies the instruction regarding Lloyd’s of London and the 2019 reporting guideline; 4) adopted proposal 2019-12-P, which removes the PR038 adjustment for reinsurance penalty; 5) exposed the 2019 catastrophe event lists; 6) heard updates from the American Academy of Actuaries (Academy) on reviewing the underwriting risk components; 7) discussed the appropriate factor of unrated uncollateralized recoverables; and 8) discussed the factor of using aggregate exceedance probability AEP basis vs. occurrence exceedance probability (OEP) basis.

   Mr. Chou made a motion, seconded by Mr. Schallhorn, to adopt the Subgroup’s Nov. 8 minutes (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Four-A). The motion passed unanimously.

   Mr. Botsko said, in order to avoid double-counting the catastrophe losses in the risk-based capital (RBC) formula, the U.S. and non-U.S. catastrophe event lists provide a routine annual update for those catastrophe events that should be excluded from the R5 calculation. He stated that the Subgroup exposed the list during the Nov. 8 conference call; no comments were received during the exposure period. Mr. Botsko also indicated that any additional events that occur between Nov. 1 and Dec. 31 will be exposed during the first week of January 2020. The Subgroup will either schedule a conference call or conduct an e-vote to consider adoption of the updated list.

   Mr. Kaumann made a motion, seconded by Mr. Chou, to adopt proposal 2019-14-CR (2019 Catastrophe Event Lists). The motion passed unanimously.

3. **Heard Presentations from the Academy on Wildfires and the ACI**

   Jeri Xu (Academy) said wildfires in California in 2017 and 2018 were among the largest and most costly on record. However, modeling of wildfire risk is very complex; acceptance and use of wildfire models by insurers and regulators is limited. She recommended the Subgroup: 1) study detailed claims from recent events to improve understanding of wildfire losses; 2) increase stakeholders’ confidence in wildfire modeling by increasing the transparency of model assumptions; and 3) establish generally accepted modeling standards for wildfire model review.

   Steve Jackson (Academy) said the Actuaries Climate Index (ACI) is an educational tool providing information about weather trends in the U.S. and Canada. It covers rainfall, temperature, dry spells, wind speed and sea level. He stated that the increase in average winter values is one factor driving the ACI’s five-year moving average to new highs.

   Mr. Botsko encouraged interested parties to review the materials the Academy provided and share their comments during an upcoming conference call.
4. **Discussed the Factor of Using AEP Basis vs. OEP Basis**

Mr. Botsko said, based on the Risk Management Solutions (RMS) presentation at the Summer National Meeting, the factors to adjust OEP to AEP depend on: 1) peril; 2) geographic scope; 3) portfolio composition; and 4) insurance structure.

Mr. Botsko asked all interested parties to think about this issue and provide thoughts to the Subgroup during an upcoming conference call.

5. **Discussed Modeling of Projected Losses**

Mr. Botsko said, based on the RBC instructions, the projected losses can be modeled using: 1) one of the five approved third-party commercial vendor catastrophe models; or 2) any internal models that have been granted permission by the domestic or lead state insurance regulators. He stated that recently, more and more commercial vendors have informed the Subgroup on the process to become one of the approved vendors.

Mr. Botsko asked all interested parties to think about the potential approaches and provide thoughts to the Subgroup during an upcoming conference call.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

MEMORANDUM

TO: Commissioner David Altmaier (FL), Chair, Capital Adequacy (E) Task Force

FROM: Patrick McNaughton (WA), Chair, Health Risk-Based Capital (E) Working Group

DATE: October 21, 2019

RE: Recommendation Regarding Risk-Based Capital Charge for Guaranty Association Assessment Risk

On Sept. 21, 2018 the Health Risk-Based Capital (E) Working Group received a request from the Capital Adequacy (E) Task Force to review the referral letter regarding adopted amendments to the Life and Health Insurance Guaranty Association Model Act, Model #520. The referral outlined significant amendments to Model #520, including: 1) broadening the assessment base for long-term care insurance (LTCI) insolvencies to include both life and health insurers and splitting the assessment 50%/50% between the life and health insurers; 2) clarifying the guaranty associations’ coverage of LTCI; and 3) including health maintenance organizations (HMOs) as members of the guaranty association, similar to other health insurers. The referral letter requested that the Task Force consider if changes were warranted to the health RBC formula in light of the changes made to Model #520.

Based upon our review of existing Guaranty Fund Assessment Risk charge under the H4-Business Risk component, a charge of .5% is applied to direct earned premiums (as reported in Schedule T) in any state in which the reporting entity is subject to guaranty fund assessments. Based on the current instructions and reporting the Working Group does not believe that modifications to the Health Risk-Based Capital formula are required for the change to Model #520.

The recommendation above does not preclude the Working Group from potential changes to long-term care or the business risk component charge in the future.

If you have any questions regarding this memorandum, please contact me at PatM@oic.wa.gov or Crystal Brown (NAIC) at cbrown@naic.org.

### DESCRIPTION OF CHANGE(S)

The proposed changes clarify the reinsurance recoverable from individual syndicates of Lloyds’ of London that are covered under the Lloyd’s Central Fund may utilize the lowest financial strength group rating received from an approved rating agency.

---

### REASON OR JUSTIFICATION FOR CHANGE **

Upon review of 2018 Schedule F Part 3 filings, it has been observed that many filers reported reinsurance recoverable amounts due from Lloyd’s of London Syndicates as being NAIC 6-Unrated; and therefore, subject to the highest credit risk charge.

---

### Additional Staff Comments:

8-3-19 The PCRBCWG exposed for comment until 9-3-19
11-8-19 This proposal has been adopted at the Joint Catastrophe Risk Subgroup and Property/Casualty Risk-Based Capital Working Group conference call on Nov. 8.

---

**This section must be completed on all forms.**

**Revised 2-2019**
Reinsurance Recoverables

The calculation of the credit risk charge for reinsurance recoverables is detailed in Schedule F Part 3 Columns 28 through 36 of the Property/Casualty Annual Statement. This calculation is performed at the transaction level and those results are then summed to determine the charge. Reinsurance balances receivable on reinsurance ceded to non-affiliated companies (excluding certain pools) and to alien affiliates are subject to the credit risk-based capital charge. The following types of cessions are exempt from this charge:

- Cessions to State Mandated Involuntary Pools and Associations or to Federal Insurance Programs.
- This category includes all federal insurance programs [e.g., National Flood Insurance Program (NFIP), Federal Crop Insurance Corporation (FCIC), etc., all state mandated residual market mechanisms and the National Council on Compensation Insurance (NCCI)].
- Cessions to U.S. Parents, Subsidiaries and Affiliates.

The categories above are automatically excluded from the data that is calculated in Schedule F Part 3 of the Annual Statement.

Since the Annual Statement requires the collectability of reinsurance balances be considered via the reinsurance penalty, the appropriate balances must be offset by any liability that has been established for this purpose. The amount from Page 3, Line 16 should be allocated to the appropriate (re)insurers listed on Schedule F. The total amount recoverable from reinsurers less any applicable reinsurance penalty is multiplied by 120% to stress the recoverable balance. The total of reinsurance payable and/or funds held amounts (not in excess of the stressed recoverable) are applied as offsets to arrive at the stressed net recoverable.

Since there are different reinsurance credit risk factors for collateralized and uncollateralized reinsurance recoverables, the stressed net recoverable should be offset by any available collateral, such as letters of credit, multiple beneficiary trusts, and single beneficiary trusts and other allowable offsets (not in excess of the stressed net recoverable). The collateralized amounts are derived from Schedule F Part 3 Column 32 and the uncollateralized amounts are derived from Column 33.

The risk-based capital for the various credits (including collateral offsets where applicable) taken for reinsurance may not be less than zero even if the amount reported or the amount net of offsets is negative.

The factor for reinsurance recoverables (paid and unpaid less any applicable reinsurance penalty) due from a particular reinsurer is determined based on that reinsurer’s financial strength rating assigned on a legal entity basis.

For the purpose of the credit risk-based capital charge, the equivalent rating category assigned will correspond to current financial strength rating received from an approved rating agency as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. If the reinsurer is unauthorized and does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated Unauthorized” equivalent rating. If the reinsurer is authorized and does not have at least one financial strength rating, it should be assigned the “Unrated Authorized Reinsurers” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “Secure 3” equivalent rating. An authorized association including incorporated and individual unincorporated underwriters or a member thereof [e.g. individual authorized syndicates of Lloyds of London that are backed by the Central Fund] may utilize the lowest financial strength group rating received from an approved rating agency. The table below shows the R3 reinsurance equivalent rating categories and corresponding factors for A.M. Best, Standard and Poor’s, Moody’s and Fitch ratings.
Proposed Guidance Statement:

Upon review of 2018 Schedule F Part 3 filings, it has been observed that many filers reported reinsurance recoverable amounts due from Lloyd’s of London Syndicates as being NAIC 6-Unrated; and therefore subject to the highest credit risk charge.

However, the RBC Instructions for PR012 - Credit Risk for Receivables provides that: “An authorized association including incorporated and individual unincorporated underwriters or a member thereof may utilize the lowest financial strength group rating received from an approved rating agency.” This instruction is applicable to reinsurance recoverable from individual syndicates of Lloyds’ of London that are covered under the Lloyd’s Central Fund; and are therefore eligible to be treated as rated for the purposes of PR012 and the R3 Credit Risk component of RBC. This treatment is consistent with the NAIC Credit for Reinsurance Model Law and Regulation concerning applicable NAIC ratings designations for the purpose of determining reduced collateral requirements.

DESCRIPTION OF CHANGE(S)

Eliminate PR038 Adjustment for Reinsurance Penalty for Affiliates Applicable to Schedule F.

REASON OR JUSTIFICATION FOR CHANGE **

As the computation of RBC charge for reinsurance recoverable has been moved to the Annual Statement Schedule F, Part 3 in 2018 reporting, the adjustment for Reinsurance Penalty for Affiliates Applicable to Schedule F in PR038 is no longer needed.

Additional Staff Comments:
8-4-19 The PCRBCWG exposed proposal 2019-12-P until 9-3-19.
11-8-19 This proposal has been adopted at the Joint Catastrophe Risk Subgroup and Property/Casualty Risk-Based Capital Working Group conference call on Nov. 8.

[ ] Life RBC Blanks  [ ] Fraternal RBC Instructions  [ x ] OTHER __Cat Event Lists__

DESCRIPTION OF CHANGE(S)
2019 U.S. and non-U.S. Catastrophe Event Lists

REASON OR JUSTIFICATION FOR CHANGE **
New events were determined based on the sources from Swiss Re and Aon Benfield.

Additional Staff Comments:

11/8/19 The Catastrophe Risk SG exposed the proposal for 14 days public comment period ending 11/24/19.

** This section must be completed on all forms.  Revised 11-2013

Risk-Based Capital Preamble

History of Risk-Based Capital by the NAIC

A. Background

1. The NAIC, through its committees and working groups, facilitated many projects of importance to the insurance regulators, industry and users of statutory financial information in the early 1990s. That was evidenced by the original mission statement and charges given to the NAIC Capital Adequacy (E) Task Force (CADTF) of the Financial Condition (E) Committee.

2. From the inception of insurance regulation in the middle 1800s, the limitation of insurance company insolvency risk has been a major goal of the regulatory process. The requirement of adequate capital has been a major tool in limiting insolvency costs throughout the history of insurance regulation. Initially, the states enacted statutes requiring a specified minimum amount of capital and surplus for an insurance company to enter the business or to remain in business.

3. Fixed minimum capital requirements were largely based on the judgement of the drafters of statutes and varied widely among the states. Those fixed minimum capital and surplus requirement have served to protect the public reasonably well for over a century. However, they fail to recognize variations in risk between broad categories of key elements of insurance, nor do they recognize difference in the amount of capital appropriate for the size of various insurers.

4. In 1992, the NAIC adopted the life risk-based capital (RBC) formula with an implementation date of year-end 1993. The formula was developed for specific regulatory needs. Four major categories were identified for the life formula: Asset Risk, Insurance Risk, Interest Rate Risk and All other Business Risk. The property and casualty and health formulas were implemented in 1994 and 1998, respectively. The focus of these formulas is Asset Risk, Underwriting Risk, Credit Risk and Business Risk (Health).

5. The total RBC needed by an insurer to avoid being taken into conservatorship is the Authorized Control Level RBC, which is 50 percent of the sum of the RBC for the categories, adjusted for covariance. The covariance adjustment is meant to take into account that problems in all risk categories are not likely to occur at the same time.

6. The mission of the Capital Adequacy (E) Task Force CADTF was to determine the minimum amount of capital an insurer should be required to hold to avoid triggering various specific regulatory actions. The risk-based capital (RBC) formula largely consists of a series of risk factors that are applied to selected assets, liabilities or other specific company financial data to establish the minimum capital threshold levels generally needed to bear the risk arising from that item.

37. To carry out the mission, the Capital Adequacy (E) Task Force CADTF was charged with carrying out the following initiatives:

- Evaluate emerging "risk" issues for referral to the risk-based capital (RBC) working groups/subgroups for certain issues involving more than one RBC formula. Monitor emerging and existing risks relative to their consistent or divergent treatment in the three RBC formulas.
Preamble

- Review and evaluate company submissions for the schedule and corresponding adjustment to total adjusted capital (TAC).
- Monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the revised NAIC Accounting Practices and Procedures Manual (AP&P Manual) and the NAIC Valuation Manual to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives.

The Risk-based Capital (RBC) forecasting and instructions were developed and are now maintained in accordance with the mission of the Capital Adequacy (E) Task Force (CADTF) as a method of measuring the minimum threshold amount of capital appropriate for an insurance company to support its overall business operations in consideration of avoid capital specific regulatory requirements based on its size and risk profile.

B. Purpose of Risk-Based Capital

The purpose of risk-based capital (RBC) is to identify potentially weakly capitalized companies. This facilitates regulatory actions that in most cases ensure policyholders will receive the benefits promised without relying on a guaranty association or taxpayer funds. Consequently, the RBC formula calculates capital level trigger points that enable regulatory intervention in the operation of such companies. The minimum capital (RBC levels) an insurer needs to operate its business and insurers should seek to maintain capital above the RBC levels.

Instructions, RBC reports and adjusted report(s) are intended solely for use by the commissioner/state in monitoring the solvency of insurers and the need for possible corrective action with respect to insurers and are considered confidential. All domestic insurers are required to file an RBC report unless exempt by the Commissioner. There are no state permitted practices to modify the RBC formula and all insurers are required to abide by the RBC instructions.

Comparison of an insurer’s TAC to any RBC level is a regulatory tool which may indicate the need for possible corrective action with respect to the insurer and is not intended as a means to rank insurers generally. Therefore, except as otherwise required under the provisions of Risk-Based Capital (RBC) for Insurers Model Act (#312) or Risk-Based Capital (RBC) for Health Organizations Model Act (#315) (Model Laws), the making, publishing, disseminating, circulation or placing before the public, or causing, directly or indirectly to be made, published, disseminated, circulated or placed before the public, in a newspaper, magazine or other publication, or in a form of a notice, or in any other way, an advertisement, announcement or statement containing an assertion, representation or statement with regard to the RBC levels of any insurer or of any component derived in the calculation by any insurer is prohibited.

C. History of Risk-Based Capital

From the inception of insurance regulation in the middle 1900s, the limitation of insurance company insolvency risk has been a major goal of the regulatory process. The requirement of adequate capital has been a major tool in limiting insolvency costs throughout the history of insurance regulation. Initially, the states enacted statutes requiring a specified minimum amount of capital and surplus for an insurance company to enter the business or to remain in business.

In 1992, the NAIC adopted the life-risk-based-capital formula with an implementation date of year-end 1993. The formula was developed for specific regulatory needs. Four major categories were identified for the life formula: Asset Risk, Insurance Risk, Interest Rate Risk, and All other Business Risk. The property and casualty and health formulas were implemented in 1994 and 1998, respectively. The focus of these formulas is Asset Risk, Underwriting Risk, Credit Risk and Business Risk (Health).
10. The total risk-based capital needed by an insurer to avoid being taken into conservatorship is the Authorized Control Level Risk-Based Capital, which is 50 percent of the sum of the risk-based capital for the categories, adjusted for covariance. The covariance adjustment is meant to take into account that problems in all risk categories are not likely to occur at the same time.

**BC. Objectives of Risk-Based Capital Reports**

**¶112.** The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute, to provide an adequate margin of safety.

To support this role, the RBC reports identify potentially weakly capitalized companies in that each insurer must report situations where the actual Total Adjusted Capital is below a threshold amount for any of the several RBC levels. This is known as an RBC Event and reporting is mandatory. The state regulatory response is likely to be unique to each insurer as each insurer’s risk profile will have some differences from the average risk profile used to develop the RBC Formula factors and calculations.

There are several RBC Levels with different levels of anticipated additional regulatory oversight following the reporting of an RBC Event. Company Action Level (CAL) has the least amount of additional regulatory oversight as it envisions the company providing to its regulator a plan of action to increase capital or reduce risk or otherwise satisfy the regulator of the adequacy of its capital. The Regulatory Action Level (RAL) is the next higher level where the regulator is more directly involved in the development of the plan of action. The Authorized Control Level (ACL) anticipates an even higher amount of regulatory action in implementing the plan of action.

**CD. Critical Concepts of Risk-Based Capital**

**¶113.** Fixed minimum capital requirements have been largely based on the judgement of the drafters of statutes and varied widely among the states. Those fixed minimum capital and surplus requirement have served to protect the public reasonably well for over a century. Beginning in the 1960’s rapidly rising inflation brought rapidly rising interest rates.

**¶114.** Over the years, various financial models have been developed to try to measure the “right” amount of capital that an insurance company should hold. Risk-based capital seeks to modify the risk profile of all insurance companies to the point where they all have an equal probability of insolvency. "No single formula or ratio can give a complete picture of a company’s operations, let alone the operation of an entire industry. However, a properly designed formula will help in the early identification of companies with inadequate capital levels and allow corrective action to begin sooner. This should ultimately lower the number of company failures and reduce the cost of any failures that may occur.”

**¶115.** Because the NAIC formula develops a minimum threshold levels of capitalization rather than a target level, it is impractical to use the RBC formula to compare the minimum RBC level Ratio developed by one insurance company to the minimum level RBC Ratio developed by another. Comparisons of amounts that exceed the minimum threshold standards do not provide a definitive assessment of their relative financial strength. For this reason, the Model Law prohibits insurance companies, their agents and others involved in the business of insurance using the company’s RBC results to compare competitors.

**¶116.** The principal focus of solvency measurement is determination of financial condition through analysis of the financial statements and risk-based capital. However, protection of the policyholders can

---

1 Page 6- Report of the Industry Advisory Committee to the Life Risk-Based Capital (E) Working Group (11/17/91)
only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise’s ability to maintain itself as a going concern.

4E16. The Capital Adequacy Task Force (CADTF) and its RBC Working Groups are charged with evaluating refinements to the existing NAIC risk-based capital formula and considering improvements and revisions to the various RBC blanks to 1) conform the RBC blanks to changes made in other areas of the NAIC to promote uniformity (when it is determined to be necessary); and 2) oversee the development of additional reporting formats within the existing RBC blanks as needs are identified.

4E17. The Capital Adequacy (E) Task Force (CADTF) and its RBC Working groups will monitor and evaluate changes to the Annual Statement Blanks and Purposes and Procedure Manual of the NAIC Investment Analysis Office to determine if assets or specifically investments evaluated by the Security Valuation Office are relevant to the Risk-Based Capital formula in determining the minimum threshold capital and surplus for all insurance companies or whether reporting available to the regulator as a more appropriate means to addressing the risk. The Task Force will consider different methods of determining whether a particular risk should be added as a new risk to be studied and selected for a change to the applicable RBC formula, but due consideration will be given to the materiality of the risk to the industry as well as the very specific purpose of the RBC formulas to develop regulatory minimum threshold capital levels.

Re: AHIP’s Comments on the August 2019 exposure of a Risk-Based Capital (RBC) Preamble

Dear Commissioner Altmaier and Ms. Barr:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to provide these comments on the RBC Preamble exposed at the August 2019 Summer National NAIC Meeting.

As AHIP noted in comments to the previous draft, we believe that a preamble is a positive addition to the RBC Framework and are supportive of adding one. We thank the Task Force for their receptiveness to comments on the previous draft. We believe the new version contains many improvements, however there are a few remaining areas where we believe small changes are needed in order to clarify the intent of RBC. These areas are as follows: (Note that we have also included a mark-up of the exposed preamble with the suggested wording changes):

Paragraph 3 - The last sentence seems to imply that RBC was/is needed because of rising interest rates and inflation. However, we think that was not the rationale. From the very beginning the concerns were with companies’ capital and variation in risk, as well as size of the company. Therefore, we recommend suggesting adding in place of the paragraph’s last sentence the following:

‘However, they fail to recognize variations in risk between broad categories of key elements of insurance, nor do they recognize differences in the amount of capital appropriate for the size of various insurers.’

Paragraph 6 – we suggest avoiding the use of the term “minimum capital” anywhere in the Preamble. The original purpose of RBC is not intended to set minimums, but rather specifies four threshold amounts or trigger points for varying types of regulatory oversight (see the comments on paragraph 12). Since the RBC formulas do not address all company issues (e.g. expansion into new areas, concentration of risk, etc.), the trigger points are for IDENTIFICATION and potential specific actions not minimums (like the state statutory requirements).
AHIP Comments on Risk-Based Capital (RBC) Preamble
August 26, 2019
Page 2

Paragraph 7 - The third bullet should also note the need to monitor the NAIC Valuation Manual as changes to reserves may well impact the risks (up or down) to the company's capital and surplus.

Paragraph 8 – We again suggest replacement of the word “minimum” with “threshold”. In addition, support for a company’s business operations goes well beyond RBC including future plans and potential needs to maintain certain business financial ratings. These are addressed by ORSA not by RBC. Hence, we have suggested alternate wording.

Paragraph 9 - The ending of this paragraph appears to say the all companies identified as "potentially weakly capitalized companies" are indeed weakly capitalized. That has been shown to not always be the case, as many companies have shown their regulators how the RBC components mis-identify them. We would recommend changing the ending to "in the operation of such companies."

In Paragraph 12 - We believe that the Preamble should not be silent on one of its most important elements - the use of multiple thresholds to identify issues and address them with less regulatory action. We recommend including the following additional paragraphs which outline the structure of the RBC Events approach.

“To support this role, the RBC Reports identify potentially weakly capitalized companies in that each insurer must report situations where the actual Total Adjusted Capital is below a threshold amount for any of the several RBC Levels. This is known as an RBC Event and reporting is mandatory. The state regulatory response is likely to be unique to each insurer as each insurer’s risk profile will have some differences from the average risk profile used to develop the RBC Formula factors and calculations.

There are several RBC Levels with different levels of anticipated additional regulatory oversight following the reporting of an RBC Event. Company Action Level (CAL) has the least amount of additional regulatory oversight as it envisions the company providing to its regulator a plan of action to increase capital or reduce risk or otherwise satisfy the regulator of the adequacy of its capital. The Regulatory Action Level (RAL) is the next higher level where the regulator is more directly involved in the development of the plan of action. The Authorized Control Level (ACL) anticipates an even higher amount of regulatory action in implementing the plan of action.”

In Paragraph 14 - We recommend the use of “RBC Ratio” and “threshold” rather than “minimum level” and “minimum” in this paragraph.

In Paragraph 17 - We recommend replacing “minimum” with “threshold” in this paragraph.
AHIP Comments on Risk-Based Capital (RBC) Preamble
August 26, 2019

Risk-Based Capital
Preamble

History of Risk-Based Capital by the NAIC

A. Background

1. The NAIC, through its committees and working groups, facilitated many projects of importance to the insurance regulators, industry and users of statutory financial information in the early 1990s. That was evidenced by the original mission statement and charges given to the NAIC Capital Adequacy (E) Task Force (CADTF) of the Financial Condition (E) Committee.

2. From the inception of insurance regulation in the middle 1800s, the limitation of insurance company insolvency risk has been a major goal of the regulatory process. The requirement of adequate capital has been a major tool in limiting insolvency costs throughout the history of insurance regulation. Initially, the states enacted statutes requiring a specified minimum amount of capital and surplus for an insurance company to enter the business or to remain in business.

3. Fixed minimum capital requirements were largely based on the judgement of the drafters of statutes and varied widely among the states. Those fixed minimum capital and surplus requirement have served to protect the public reasonably well for over a century. Beginning in the 1960’s rapidly rising inflation brought rapidly rising interest rates. However, they fail to recognize variations in risk between broad categories of key elements of insurance, nor do they recognize differences in the amount of capital appropriate for the size of various insurers.

4. In 1992, the NAIC adopted the life risk-based capital (RBC) formula with an implementation date of year-end 1993. The formula was developed for specific regulatory needs. Four major categories were identified for the life formula: Asset Risk, Insurance Risk, Interest Rate Risk and All other Business Risk. The property and casualty and health formulas were implemented in 1994 and 1998, respectively. The focus of these formulas is Asset Risk, Underwriting Risk, Credit Risk and Business Risk (Health).

5. The total RBC needed by an insurer to avoid being taken into conservatorship is the Authorized Control Level RBC, which is 50 percent of the sum of the RBC for the categories, adjusted for covariance. The covariance adjustment is meant to take into account that problems in all risk categories are not likely to occur at the same time.

6. The mission of the Capital Adequacy (E) Task Force CADTF was to determine the minimum amount of capital an insurer should be required to hold to avoid triggering various specific regulatory actions. The risk-based capital (RBC) formula largely consists of a series of risk factors that are applied to selected assets, liabilities or other specific company financial data to establish the minimum capital threshold levels generally needed to bear the risk arising from that item.

32. To carry out the mission, the Capital Adequacy (E) Task Force CADTF was charged with carrying out the following initiatives:

- Evaluate emerging "risk" issues for referral to the risk-based capital (RBC) working groups/subgroups for certain issues involving more than one RBC formula. Monitor emerging and existing risks relative to their consistent or divergent treatment in the three RBC formulas.
- Review and evaluate company submissions for the schedule and corresponding adjustment to total adjusted capital (TAC).
Preamble

- Monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the revised NAIC Accounting Practices and Procedures Manual (AP&P Manual) and the NAIC Valuation Manual to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives.

48. The Risk-based Capital—RBC forecasting and instructions were developed and are now maintained in accordance with the mission of the Capital Adequacy (E) Task Force (CADTF) as a method of measuring the minimum threshold amount of capital appropriate for an insurance company to avoid capital specific regulatory requirements based on support its overall business operations in consideration of its size and risk profile.

B. Purpose of Risk-Based Capital

59. The purpose of risk-based capital—RBC is to identify potentially weakly capitalized companies. This facilitates regulatory actions that in most cases ensure policyholders will receive the benefits promised without relying on a guaranty association or taxpayer funds. Consequently, the RBC formula calculates capital level trigger points that enable regulatory intervention in the operation of such weakly capitalized companies. Determine the minimum capital (RBC levels) an insurer needs to operate its business and insurers should seek to maintain capital above the RBC levels.

610. RBC instructions, RBC reports and adjusted report(s) are intended solely for use by the commissioner/state in monitoring the solvency of insurers and the need for possible corrective action with respect to insurers and are considered confidential. All domestic insurers are required to file an RBC report unless exempt by the Commissioner. There are no state permitted practices to modify for the RBC formula and all insurers are required to abide by the RBC instructions.

211. Comparison of an insurer’s TAC to any RBC level is a regulatory tool which may indicate the need for possible corrective action with respect to the insurer and is not intended as a means to rank insurers generally. Therefore, except as otherwise required under the provisions of Risk-Based Capital (RBC) for Insurers Model Act (#312) or Risk-Based Capital (RBC) for Health Organizations Model Act (#315) (Model Laws), the making, publishing, disseminating, circulation or placing before the public, or causing, directly or indirectly to be made, published, disseminated, circulated or place before the public, in a newspaper, magazine or other publication, or in a form of a notice, or in any other way, an advertisement, announcement or statement containing an assertion, representation or statement with regard to the RBC levels of any insurer or of any component derived in the calculation by any insurer in is prohibited

C. History of Risk-Based Capital

8. From the inception of insurance regulation in the middle 1800s, the limitation of insurance company insolvency risk has been a major goal of the regulatory process. The requirement of adequate capital has been a major tool in limiting insolvency costs throughout the history of insurance regulation. Initially, the states enacted statutes requiring a specified minimum amount of capital and surplus for an insurance company to enter the business or to remain in business.

9. In 1992, the NAIC adopted the life risk-based capital formula with an implementation date of year-end 1993. The formula was developed for specific regulatory needs. Four major categories were identified for the life formula: Asset Risk, Insurance Risk, Interest Rate Risk, and All other Business Risk. The property and casualty and health formulas were implemented in 1994 and 1998, respectively. The focus of these formulas is Asset Risk, Underwriting Risk, Credit Risk and Business Risk (Health).

10. The total risk-based capital needed by an insurer to avoid being taken into conservatorship is the Authorized Control Level Risk-Based Capital, which is 50 percent of the sum of the risk-based capital for the categories, adjusted for covariance. The covariance adjustment is meant to take into account that problems in all risk categories are not likely to occur at the same time.
Preamble

**BC. Objectives of Risk-Based Capital Reports**

**4412.** The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute, to provide an adequate margin of safety.

To support this role, the RBC Reports identify potentially weakly capitalized companies in that each insurer must report situations where the actual Total Adjust Capital is below a threshold amount for any of the several RBC Levels. This is known as an RBC Event and reporting is mandatory. The state regulatory response is likely to be unique to each insurer as each insurer’s risk profile will have some differences from the average risk profile used to develop the RBC Formula factors and calculations.

There are several RBC Levels with different levels of anticipated additional regulatory oversight following the reporting of an RBC Event. Company Action Level (CAL) has the least amount of additional regulatory oversight as it envisions the company providing to its regulator a plan of action to increase capital or reduce risk or otherwise satisfy the regulator of the adequacy of its capital. The Regulatory Action Level (RAL) is the next higher level where the regulator is more directly involved in the development of the plan of action. The Authorized Control Level (ACL) anticipates an even higher amount of regulatory action in implementing the plan of action.

**CQ. Critical Concepts of Risk-Based Capital**

12. Fixed minimum capital requirements have been largely based on the judgement of the drafters of statutes and varied widely among the states. Those fixed minimum capital and surplus requirements have served to protect the public reasonably well for over a century. Beginning in the 1960’s rapidly rising inflation brought rapidly rising interest rates.

1213. Over the years, various financial models have been developed to try to measure the “right” amount of capital that an insurance company should hold. Risk-based capital seeks to modify the risk profile of all insurance companies to the point where they all have an equal probability of insolvency. No single formula or ratio can give a complete picture of a company’s operations, let alone the operation of an entire industry. However, a properly designed formula will help in the early identification of companies with inadequate capital levels and allow corrective action to begin sooner. This should ultimately lower the number of company failures and reduce the cost of any failures that may occur."

14. Because the NAIC formula develops a minimum threshold levels of capitalization rather than a target level, it is impractical to use the RBC formula to compare the RBC Rationminimum RBC level developed by one insurance company to the RBC Ration minimum level developed by another. Comparisons of amounts that exceed the thresholdminimum standards do not provide a definitive assessment of their relative financial strength. For this reason, the Model Law prohibits insurance companies, their agents and others involved in the business of insurance using the company’s RBC results to compare competitors.

15. The principal focus of solvency measurement is determination of financial condition through analysis of the financial statements and risk-based capital. However, protection of the policyholders can only be maintained through continual monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise’s ability to maintain itself as a going concern.

16. The Capital Adequacy Task Force (CADTF) and its RBC Working Groups are charged with evaluating refinements to the existing NAIC risk-based capital formula and considering improvements and revisions to the various RBC blanks to 1) conform the RBC blanks to changes made in other areas of the NAIC to promote uniformity (when it is determined to be necessary); and 2) oversee the development of
Preamble

additional reporting formats within the existing RBC blanks as needs are identified

1217. The Capital Adequacy (E) Task Force CADTF and its RBC Working groups will monitor and evaluate changes to the Annual Statement Blanks and Purposes and Procedure Manual of the NAIC Investment Analysis Office to determine if assets or specifically investments evaluated by the Security Valuation Office are relevant to the Risk-Based Capital formula in determining the threshold\text{minimum} capital and surplus for all insurance companies or whether reporting available to the regulator as a more appropriate means to addressing the risk. The Task Force will consider different methods of determining whether a particular risk should be added as a new risk to be studied and selected for a change to the applicable RBC formula, but due consideration will be given to the materiality of the risk to the industry as well as the very specific purpose of the RBC formulas to develop regulatory threshold\text{minimum} capital levels.

Re: NAIC Designations for Schedule D, Part 2 – Section 2 – Common Stocks

The purpose of this referral is to communicate the Statutory Accounting Principles (E) Working Group’s support for the consideration of reporting revisions to permit NAIC designations for SEC registered funds (mutual funds, closed end funds and unit investment trusts), in scope of SSAP No. 30—Unaffiliated Common Stock (reported on Schedule D, Part 2 – Section 2 – Common Stock (D-2-2)), if determined appropriate based on the underlying holdings of the fund. (It is presumed that such NAIC designations would only be permitted for SEC registered funds that are comprised of bond or qualifying preferred stock investments.)

This referral was developed in response to requests to move equity investments that have underlying bond investments from the scope of SSAP No. 30 to the scope of SSAP No. 26R—Bonds in order to obtain more appropriate risk-based capital (RBC) charges. In reviewing the request, the Statutory Accounting Principles (E) Working Group has concluded against moving these equity investments to SSAP No. 26R for the following reasons:

- SEC registered funds in scope of SSAP No. 30 are not bonds, and do not represent a creditor relationship whereby there is a fixed schedule for one or more future payments.

- The long-term bond schedule (Schedule D-1) is not conducive to the reporting of funds, and questions often arise on the proper completion of Schedule D-1 for the limited equity investments already captured in scope of SSAP No. 26R. (For example, several columns on Schedule D-1 are not applicable for funds including interest rate, par value, maturity date, etc.)

- Existing guidance that allows SVO-Identified ETFs to be reported in scope of SSAP No. 26R, on Schedule D-1, has historically resulted with inconsistent reporting for similar investments. Companies may not identify that they have investments permitted for reporting on Schedule D-1 and continue to report these investments on Schedule D-2-2, or companies may infer the limited SSAP No. 26R provisions to additional investments that do not qualify for Schedule D-1 reporting.

- The desire for equity investments to be within scope of SSAP No. 26R is driven by RBC charges and not the investment structure or the measurement method for the investment.

Although the Statutory Accounting Principles (E) Working Group supports the consideration of revisions to permit NAIC designations on Schedule D-2-2, the Statutory Accounting Principles (E) Working Group defers to each of the identified groups in determining whether it is appropriate and feasible to incorporate these revisions. The ability to report NAIC designations on Schedule D-2-2 would require revisions that would include, at a minimum, the following assessments:

2. Valuation of Securities (E) Task Force – Consider and establish a methodology for reviewing equity investments with underlying bond investments and in determining the appropriate NAIC designation.
3. Capital Adequacy (E) Task Force – Consider and determine the extent, if any, the reported NAIC designation for the SEC registered investment should be factored into the RBC calculation.

Although the Statutory Accounting Principles (E) Working Group has previously communicated that they do not plan to entertain future requests to reclassify investments to be in scope of a different SSAP when the key driver is an RBC charge, this issue was raised as part of the Statutory Accounting Principles (E) Working Group’s current project to review SSAP No. 30 under the investment classification project. Going forward, if future requests are received, the Working Group intends to direct inquirers to the appropriate NAIC group for RBC assessment.

A referral response is not expected, as there will be no statutory accounting impact regardless of the ultimate decision. As noted, the Statutory Accounting Principles (E) Working Group has previously concluded against moving these equity investments from the scope of SSAP No. 30 to SSAP No. 26R.

Please contact NAIC staff of the Statutory Accounting Principles (E) Working Group with any questions.

Re: Foreign Mutual Funds

During the Fall National Meeting, the Statutory Accounting Principles (E) Working Group exposed agenda item 2018-34 proposing to explicitly include registered foreign mutual funds in scope of SSAP No. 30R—Unaffiliated Common Stock. (The revisions explicitly exclude other foreign funds from the scope of the SSAP.) This agenda item was developed pursuant to an industry request in response to substantive revisions to SSAP No. 30R. Although industry supported adopting the substantive revisions, it was identified that foreign mutual funds have previously been captured in scope of SSAP No. 30 (under the generic scope reference of “mutual funds”). The industry comments identified that the substantive revisions to include SEC-registered open-end funds (mutual funds), closed-end funds and unit-investment trusts in scope of SSAP No. 30R, perhaps inadvertently excluded foreign mutual funds. Consistent with industry’s request, the substantive revisions to SSAP No. 30R were adopted during the Fall National Meeting (under agenda item 2017-32), and the Working Group exposed proposed revisions to consider foreign mutual funds in scope.

Although there is a general assessment that foreign mutual funds should be treated similarly to foreign common stock, (which are in scope of SSAP No. 30R), the Statutory Accounting Principles (E) Working Group directed referrals to the Valuation of Securities (E) Task Force and the Capital Adequacy (E) Task Force to inquire on the exposure and solicit input. Specifically, comments were requested on the following questions:

1) Should only certain jurisdictions be permitted to have their registered mutual funds included as common stock? (For example, UK, Hong Kong, Canadian, etc.)

2) Should Canadian registered mutual funds continue to be considered “domestic securities” in accordance with the current annual statement instructions? (Under current annual statement instructions, Canadian securities are considered domestic securities.) Would the classification of Canadian mutual funds as “domestic” securities result with an inappropriate assessment that they represent U.S. SEC registered funds? If reported as domestic securities, should a new code or other reporting mechanism be established to identify Canadian mutual funds on Schedule D-2-2?

3) Should all foreign mutual funds be captured in the Supplemental Investment Risk Interrogatory as foreign investments? For example, question 4.01 of the Interrogatory asks whether foreign investments are less than 2.5% of total admitted assets. If an entity has more than 2.5% in foreign investments, then additional information on the foreign securities is required. The ultimate question is whether an investment in a registered foreign mutual fund should be captured in determining whether the foreign threshold percentage is met. If included in the total, then the issue is whether the subsequent foreign investment Integratory questions should be answered in accordance with the country that registered the fund, without a look-through to the underlying origin of the investments held in the foreign mutual fund. (The subsequent questions ask for the foreign investment exposure by the NAIC sovereign designation.) The risk is that allocating a foreign mutual fund to the registration country may not provide accurate information on the actual exposure of the investments within the fund, particularly if the registered foreign fund is made up of investments from other countries.
• For example, SEC-registered mutual funds could be “global funds,” meaning they invest primarily in foreign companies with investments also in U.S. companies, or “international funds,” meaning that they invest in companies outside of the United States. Other SEC-Registered funds include “regional or country funds,” which invest primarily in a particular region or country, or “international index funds,” which seek to track the results of a particular foreign market or international index.

4) Should there be clarification that only U.S. SEC registered mutual funds are permitted to be identified as “diversified” and excluded from the Asset Concentration Factor section of the risk-based capital filing, or should all funds that are diversified in accordance with the SEC Investment Company Act of 1940 be excluded from this factor?

• The current interrogatory asks whether there are diversified mutual funds reported on Schedule D-2-2 (diversified according to the SEC Investment Company Act of 1940, Section 5(b)(1)). Technically, this current question does not restrict the reporting to SEC registered mutual funds. As such, it is uncertain whether foreign mutual funds that meet the diversification requirements of the 1940 Act are permitted to be reported in this Interrogatory.

• It has been communicated that certain Exchange Traded Funds (ETFs), although not registered as mutual funds, are diversified in accordance with the Investment Company Act of 1940, Section 5(b)(1). The question is whether these funds should be captured in the general interrogatory for exclusion from the asset concentration factor for RBC purposes. (If these funds should be captured in the GI, then a subsequent revisions will likely be proposed to clarify what is permitted to be reported.)

Thank you for your attention to this referral. If possible, a response would be preferred by Feb 15, 2019 to correspond with the Statutory Accounting Principles (E) Working Group exposure deadline. Consideration of comments received is planned to occur during the 2019 Spring National Meeting.

Please contact NAIC staff of the Statutory Accounting Principles (E) Working Group with any questions.

MEMORANDUM

TO:        David Altmair, Chair, Capital Adequacy (E) Task Force
FROM:     Kevin Fry, Chair, Valuation of Securities (E) Task Force
CC:        Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
           Robert Carcano, NAIC Consultant
RE:       Referral to the Capital Adequacy (E) Task Force – Request for Assignment of Risk-Based Capital (RBC) Charges for Funds That Predominantly Hold Bonds
DATE:     May 10, 2019

1. **Introduction** – The Valuation of Securities (E) Task Force requests that the Capital Adequacy (E) Task Force consider formally integrating the comprehensive instructions for mutual funds recently adopted for the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) into the NAIC RBC framework. The mutual funds for which integration is sought: 1) are issued by investment companies registered with and regulated by the U.S. Securities and Exchange Commission (SEC); 2) whose offering is registered with the SEC; 3) whose published investment objective is to invest solely in bonds or solely in preferred stock; 4) are all within scope of the *Accounting Practices and Procedures Manual* (AP&P Manual); 5) cannot be purchased and reported as filing exempt (FE) on the basis of a nationally recognized statistical rating organization (NRSRO) credit rating; and 6) are subject to a *pre-purchase review and identification procedure* performed by the SVO.¹

2. **Background** – The primary financial solvency tool of the Valuation of Securities (E) Task Force is a number of related analytical methodologies for the quantification of non-payment risk. These tools have often been used to identify and facilitate investments that provide insurers a needed return at a lower non-payment risk. The Task Force first recognized that bond mutual funds could be structured to perform much better than equity in 1991. Over the next (almost) 30 years, the Task Force developed specific narrow exceptions where the SVO could analyze the cash flow from these specific bond fund types and determine if there would be lower non-payment risk than that associated with shares of common stock. Two Task Force exceptions adopted prior to the adoption of the AP&P Manual and one adopted afterward sought to characterize shares of such funds as being “bond-like” and were accommodated by including them as in scope of *Statement of Statutory Accounting Principles SSAP No. 26R—Bonds*. Over time, it became increasingly clear that the reporting of non-bond instruments in a framework developed for bonds produces reporting problems that can be avoided if it is recognized that the intent is to provide regulatory treatment consistent with credit risk.

¹ The Valuation of Securities (E) Task Force’s procedure permits the sponsor of a fund or an insurer to request an SVO assessment of a fund to determine if it meets requirements imposed by the Task Force for more appropriate treatment and if the fund is in scope of the AP&P Manual. If the fund is eligible, the SVO adds the name of the fund to the relevant list with a **preliminary** NAIC designation. The various lists are published. If an insurance company buys a fund on a list, it files that security with the SVO for an official NAIC designation. The SVO assigns an official NAIC designation and enters the security and designation into NAIC systems only after it confirms that nothing has changed since its initial assessment.
Since 2013, the SVO has expressed concern that it was frequently presented with bond mutual funds it could not designate, solely because they were not issued by an investment company operating as open-end management companies (the only company in scope of SSAP No. 30R—Unaffiliated Common Stock). Significant staff resources were being expended by the SVO and the NAIC Financial Regulatory Services (FRS) Division to manage the situation. In 2017, the SVO and the FRS Division asked the Task Force for permission to draft a clarifying amendment to the P&P Manual, explaining that mutual funds should not be filed with the SVO unless they strictly comply with the rules in the P&P Manual and AP&P Manual. The SVO staff also cautioned that the lack of a comprehensive approach to this asset class posed a significant risk to state insurance regulation because credit rating organizations were assigning credit ratings to funds that insurers could use to report fund shares as bonds under the FE rule. Therefore, the SVO urged the Task Force to consider modernizing the rules for bond mutual funds. On Sept. 27, 2017, the Task Force directed NAIC staff to develop a comprehensive proposal to ensure consistent treatment for investments in funds that only hold bond portfolios across all the schedules. About the same time, the Statutory Accounting Principles (E) Working Group announced a project to expand the scope of SSAP No. 30R to bring in scope funds issued by closed-end management companies and unit investment trusts. Subsequently, and in partial response to the Task Force’s fund initiative, the Working Group and the Blanks (E) Working Group expressed support for adding a column to Schedule D, Part 2, Section 2 that would permit funds designated by the SVO (and only funds designated by the SVO) to be reported on that schedule, but with an NAIC designation that could, in turn, align with an RBC factor to be determined by the Capital Adequacy (E) Task Force.

3. Referral – The Valuation of Securities (E) Task Force received and considered 18 comment letters: 15 in support and three opposed. The letters in support emphasized that the continued designation of bond funds assists financial solvency objectives of all insurers, but it is especially important for small and medium-size insurers, who face significant challenges and incur significant costs when purchasing individual bonds.

One letter opposed to the instructions argued that C-1 for bonds is based on default which bonds held by a fund will never experience because fund managers have an incentive to sell any bond that is downgraded. (The commenter’s observation that bonds in a portfolio would be sold before the default would seem to the SVO staff to be a positive attribute and in alignment with financial solvency objectives.) The point of this commenter was that funds are more likely to experience losses attributable to credit deterioration than to default, with the conclusion being that funds are not a proper subject for RBC. A second comment letter agreed that the current C-1 treatment for funds could be refined, but expressed concern that adopting a credit rating methodology could trigger materially lower, and potentially inadequate, life RBC charges without proper consideration of the risks to statutory surplus. Both of these arguments interpose highly technical arguments that not only ignore that the NAIC, through the Task Force and the SVO, have been assessing the cash flow and risk characteristics of bond funds for almost 30 years, but also ignores that the Task Force intentionally made a policy decision to use NAIC designations as a proxy to represent those risk characteristics of bond funds. They also ignore that while RBC factors are derived from an assessment of corporate bond defaults, they are applied to municipal and structured securities, as well as many other instruments that are not corporate bonds and do not have the cash flow or default risk characteristics of corporate bonds. The proposed continued use of the RBC framework for bond mutual funds is a similar recognition of the need to use available tools to provide workable (if imperfect) solutions to real-world challenges. Concerns expressed in a third comment letter were factually clarified in a number of public discussions, and the factual clarifications are summarized below for your convenience.2

2 The comprehensive instructions do not expand bond treatment or permit funds not in scope of the SSAPs. The proposal expands the existing framework to funds issued by investment companies organized as closed-end management companies and unit investments trusts. This was done to recognize that such U.S. Securities and Exchange Commission (SEC)-regulated funds may be identical to those issued by open-end management companies and to align the SVO framework with the AP&P Manual SSAPs, which bring these entities in scope of SSAP No. 30R as common stock reported on Schedule D, Part 2, Section 2. Investments in SVO-verified money market funds would still be reported as cash equivalents under SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments without a designation. SVO-identified bond exchange-traded funds (ETFs) would still be reported as bonds under SSAP No. 26R with an SVO-assigned NAIC designation, as has been the case since 2006. Investments in ETFs not captured on an SVO listing would continue to be reported as common stock under SSAP No. 30R without an NAIC designation. Private funds would still be reported as joint ventures under SSAP No. 46—Joint Ventures, Partnerships and Limited Liability Companies captured on
The Task Force requests that the Capital Adequacy (E) Task Force consider attributing the bond RBC factors to all bond and preferred stock funds. This approach is easy to implement and consistent with past NAIC practice; including both the role of the Valuation of Securities (E) Task Force in identifying the risks in securities and the practical approach expressed in the administration of the RBC framework, which is based on default characteristics of corporate bonds but applied to many other instruments with risk and default characteristics unlike those of corporate bonds. The recommended approach is sought for an NAIC activity successfully conducted for almost 30 years and for an asset class that is heavily regulated, has been successful for 85 years in many differing economic environments and provides potentially significant efficiencies to insurers.

---

Schedule BA, and annual financial statement instructions will continue to permit life and fraternal companies to report an NAIC designation for fixed-income investments.

Re: Referral to the Capital Adequacy Task Force - Comprehensive Fund Proposal

1. **Introduction** – In mid-2017, the SVO and FRS asked for an instruction to draft guidance for the *Purpose and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to clarify eligibility of fund investments for assignment of NAIC Designations. The SVO explained that many funds are excluded from designation eligibility but are structurally identical to those permitted under the P&P Manual and the Accounting Practices and Procedures Manual (AP&PM). On Sept. 27, 2017, the Valuation of Securities (E) Task Force (VOS TF) directed NAIC staff to develop a comprehensive proposal to ensure consistent treatment for investments that involved funds that invest in bond portfolios.

2. **Background** – The VOS TF has permitted more appropriate treatment to funds that invest in bonds and possess other defined characteristics since 1991, as summarized below:

   - **1991** – Money market mutual funds that hold short-term U.S. Treasuries - exempted from reserve.¹
   - **1992** – Funds holding U.S. direct and full faith and credit obligations - exempted from reserving
   - **1992** – Funds holding high quality corporate bonds & U.S. Government obligations - reserve as NAIC 1 bonds².
   - **1995** – Short-term bond funds - holding high quality corporate & U.S./GSO obligations) - Schedule D; market value & reserved as bonds for AVR and RBC³.
   - **2003** – Exchange Traded Funds that held bonds – report as bonds.⁴
   - **2005** – BA assets with fixed income characteristics can be assigned NAIC Designations.⁵
   - **2017** – SVO authorized to assign NAIC Designations to private Schedule BA funds, joint ventures or partnership interests if underlying investments are fixed-income like to align with Annual Reporting Instruction.⁶

Significant efforts have also been made to align guidance in the P&P Manual and the AP&PM for this investment, as summarized below:

- Investments in money market mutual funds are reported as cash equivalents under SSAP No. 2R without an NAIC Designation.
- SVO-Identified Bond ETFs are reported as bonds under SSAP No. 26R with an NAIC designation as assigned by the SVO.
- SVO-Identified Preferred Stock ETFs are reported as preferred stock under SSAP No. 32 with an NAIC designation as assigned by the SVO.

³ NAIC Proceedings, 1995 2Q, pages 419, 437, 467 – 472
⁴ NAIC Proceedings 2003 1Q, page 730; 2003 2Q, pages 810 - 813; 4Q page, 1859
⁶ See the minutes of the Valuation of Securities (E) Task Force conference call held November 13, 2017
Investments in ETFs (not captured on an SVO listing) are reported as common stock under SSAP No. 30 without an NAIC designation.

SVO-Identified Bond Mutual Funds are reported under SSAP No. 26R with an NAIC 1 designation.

All other mutual funds (regardless of what they hold, if they are not on an SVO listing) are reported under SSAP No. 30 without an NAIC designation.

Under a current initiative related to a review of SSAP No. 30 the SAP WG is considering whether all investments in a registered investment company should be captured in scope of SSAP No. 30. (This would expand the current reference to “mutual funds” to also include closed-end funds and unit investment trusts within scope of SSAP No. 30.) (A related initiative is discussed in this footnote.)

Guidance for non-SEC registered funds is not explicit within the AP&PM, but industry has reported such investments as joint ventures pursuant to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. These investments are captured on Schedule BA, with an NAIC designation permissible for fixed-income investments held by life and fraternal companies.

The Comprehensive Fund Proposal would unify guidance for all fund investments in a new section in the P&P Manual. All existing procedures for fund investments developed by the VOS TF since 1991 would be retained. The proposal would expand existing policy to funds issued by an investment company that is a closed end fund or a unit investment trust type registered with and regulated by the U.S. SEC. This tracks the SAPWG’s proposed expansion of SSAP No. 30 discussed above and the blanks initiative discussed in footnote 7. The policy that fund investments are not eligible for filing exemption would be extended to the new fund procedure and to private (Schedule BA) funds. Analytical definitions, criteria, methodology and instructions are modernized. Greater detail on analytics provides enhanced transparency to insurers.

3. **Referral** – The VOS TF refers to the CAD TF a recommendation that it conduct a comprehensive review of all funds (as described above) that can be assigned NAIC Designations by the SVO and consider how those NAIC Designations should be included into the RBC calculation; specifically, for the CAD TF to consider what RBC changes they would like to make once NAIC Designations are added to Schedule D-2-2. Currently, bond ETFs and private funds receive different RBC treatment than other similarly structured funds. Equalizing the RBC treatment for assets with similar credit risk, represented by the SVO assigned NAIC Designation, when joined with the proposed changes in the P&P Manual and those made in the AP&PM over the last several years would provide a consistent and uniform NAIC process consistent with regulatory needs for an asset that has experienced significant evolution since 1991.

G:\DATA\Vos-tf\Meetings\2018\October\Task Force 2018 Referral To CAD TF Re Fund Proposal.docx

---

7 In furtherance of its consideration of SSAP No. 30, on August 15, 2018, the SAP WG sent a referral to the Capital Adequacy (E) Task Force, Valuation of Securities (E) Task Force and the Blanks (E) Working Group noting support for the consideration of revisions to permit NAIC designations on Schedule D-2-2 – Common Stock. As detailed within that referral, the SAPWG defers to each of the noted groups in determining whether it is appropriate and feasible to incorporate the revisions.

8 In each of the above assignments, if the SVO confirms that criteria and characteristics specified by the VOS TF are met, it places the name of the fund on a published list. An insurer can purchase any fund on the list and then files the fund shares with the SVO for an NAIC Designation. If the criteria and characteristics have not changed in the interim, the SVO assigns an NAIC Designation to the fund and annually reviews the Designation.

Roach represented by Glendina Matthew (VI); Mike Kreidler represented by Patrick McNaughton (WA); Mark Afable represented by Amy Malm (WI); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its Sept. 13 and Summer National Meeting Minutes**

Ms. Weaver made a motion, seconded by Ms. Malm, to adopt the Task Force’s Sept. 13 (Attachment One) and Aug. 4 (see NAIC Proceedings – Summer 2019, Examination Oversight (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Reports of its Working Groups**

   a. **Electronic Workpaper (E) Working Group**

The Electronic Workpaper (E) Working Group met Dec. 3 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue discussions in evaluating replacement options for TeamMate AM, which will be reaching its end of life in 2023.

   b. **Financial Analysis Solvency Tools (E) Working Group**

The Financial Analysis Solvency Tools (E) Working Group met Sept. 4 to discuss changes to the Financial Analysis Handbook (Handbook) and Insurance Regulatory Information System (IRIS) for 2019 annual financial statement filings. The following proposals were adopted via an e-vote that concluded Oct. 15:

   1. Combined two quantitative procedures under property/casualty (P/C) reserving, where the materiality procedure and the related quantitative benchmark procedure were combined under one procedure.
   2. Exposed enhanced regulatory guidance to the Handbook related to parental guarantees and troubled insurance companies that resulted from referrals from the Financial Analysis (E) Working Group.
   3. Adopted Handbook guidance on salary compensation that was drafted by the Risk-Focused Surveillance (E) Working Group and exposed at the 2018 Fall National Meeting.
   4. Adopted previously exposed guidance updates to the Handbook related to intercompany pooling, which was referred by the Group Solvency Issues (E) Working Group.
   5. Adopted previously exposed changes to the life IRIS for 2020 annual financial statement filings due to blank changes.

At the close of the Sept. 4 meeting, the Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
c. **Financial Examiners Coordination (E) Working Group**

The Financial Examiners Coordination (E) Working Group met Aug. 5 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exam coordination efforts from selected states.

d. **IT Examination (E) Working Group**

Mr. McNaughton said the IT Examination (E) Working Group met Sept. 26 to adopt revisions on the following topics:

1. Information technology (IT) review conclusions – Revisions are intended to clarify the scope of the IT review and the way examiners should respond to IT review findings.
2. Use of third-party work – Revisions are intended to clarify the ways that third-party work can be evaluated and used during an exam’s IT review.
3. Cybersecurity self-assessment tools – Revisions allow state insurance regulators to incorporate the results of a company’s completed self-assessment. Additionally, a drafting group developed a mapping between IT exam guidance and the cybersecurity self-assessment tool developed by the Financial Services Sector Coordinating Council (FSSCC) to facilitate state insurance regulator use of the information contained within the tool.

Mr. Eft made a motion, seconded by Mr. Wheeler, to adopt the reports from the Electronic Workpaper (E) Working Group; the Financial Analysis Solvency Tools (E) Working Group, including its Sept. 4 (Attachment Two) and Oct. 15 (Attachment Three) minutes; the Financial Examiners Coordination (E) Working Group; and the IT Examination (E) Working Group, including its Sept. 26 minutes (Attachment Four).

e. **Financial Examiners Handbook (E) Technical Group**

Mr. Schrader said the Financial Examiners Handbook (E) Technical Group met Nov. 14 and Sept. 12 to adopt revisions on the following topics:

1. Troubled Companies – Revisions incorporate insights from the Troubled Insurance Company Handbook on the following topics: priority ratings guidance, communication expectations for companies that are troubled or potentially troubled, and pre-receivership considerations.
2. Management Letters – Revisions clarify which level of the management a letter should be addressed to and the level of information that should be included therein.
3. Exhibit V (Prospective Risk Assessment) – Revisions encourage enhanced testing of overarching prospective risks and better facilitate the communication of examination results with the financial analysts.
4. Exhibit AA (Summary Review Memorandum) – Revisions add guidance for determining the level of concern and overall trend for a particular risk component.
5. C-level Interviews – Revisions address the order in which C-level interviews should be conducted and provide a new interview template for interviewing a chief marketing officer (CMO).
6. Regulator Compensation – Revisions include a description of commonly held roles and responsibilities for commonly held regulatory positions and suggest salary ranges for examiners and analysts based on the results of a state insurance regulator compensation study.

Before the Task Force meeting, Joseph Zolecki (Blue Cross and Blue Shield Association—BCBSA) submitted a comment on behalf of interested parties, suggesting an amendment to the management letter revisions, which Susan Bernard (CA), chair of the Technical Group, accepted as a friendly amendment. The revisions would clarify that the judgements made by state insurance regulators regarding management letters would be based on the new guidance that the Technical Group agreed to add on its conference calls.

Ms. Weaver and Ms. Belfi asked about the intent of the revisions. Mr. Zolecki said they were to clearly link the discretion that the state insurance regulators have to the new revisions added, which detail some of the factors state insurance regulators may consider in issuing management letters.

Mr. Schrader and Mr. Romero commented that the new revisions would likely not materially affect the issuance of management letters.
Tom Finnell (America’s Health Insurance Plans—AHIP) offered an updated amendment, which would replace the use of the words “based on” with “considering.”

Ms. Belfi made a motion, seconded by Ms. Weaver, to adopt the Financial Examiners Technical Group’s report as amended during the Task Force meeting, including its Nov. 14 minutes (Attachment Five) and the revisions to the *Financial Condition Examiners Handbook* (Attachment Six).

3. **Heard an Update on LIBOR**

The Task Force received an update from Michele Lee Wong (NAIC) that provided an update to state insurance regulators, noting that the use of the London Inter-bank Offered Rate (LIBOR) as a reference rate within U.S. financial markets would be changing soon. The NAIC’s Capital Markets Bureau (CMB) will be providing a further state insurance regulator-only update to clarify the implications to U.S. state insurance regulators.

4. **Heard an Update on Jumpstart Reports**

The Task Force received an update from Mr. Romero regarding state insurance regulator-only work that had taken place to update the NAIC’s Jumpstart reports. That work was completed at the end of 2019, and Mr. Romero noted that further state insurance regulator-only communication would be sent with information on the nature of the changes made.

Having no further business, the Examination Oversight (E) Task Force adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exams open past 22 months.
The Examination Oversight (E) Task Force conducted an e-vote that concluded Sept. 13, 2019. The following Task Force members participated: Jillian Froment, Chair, represented by Dwight Radel (OH); Allen W. Kerr, Vice Chair, represented by Mel Anderson (AR); Jim L. Ridling represented by Richard Ford (AL); Ricardo Lara represented by Susan Bernard (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by William Arfanis (CT); Trinidad Navarro represented by Rylvonn Brown (DE); Colin M. Hayashida represented by Tian Xiao (HI); Doug Ommen represented by Jim Armstrong (IA); Stephen W. Robertson represented by Roy Eft (IN); Nancy G. Atkins represented by Sandra Batts (KY); Anita G. Fox represented by Judy Weaver (MI); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); John Elias represented by Doug Bartlett (NH); Marlene Caride represented by Steve Kerner (NJ); Glen Mulready represented by Joel Sander (OK); Larry Deiter represented by Johanna Nickelson (SD); Kent Sullivan represented by Ignatius Wheeler (TX); Todd E. Kiser represented by Jake Garn (UT); Tregenza A. Roach represented by Gwendolyn Brady (VI); Mike Kreidler represented by Patrick McNaughton (WA); Mark Afable represented by Amy Malm (WI); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its 2020 Proposed Charges**

The Task Force conducted an e-vote to consider adoption of its 2020 proposed charges (*see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment One-A*). New in 2020, the groups reporting to the Task Force will have updated charges as follows:

- The Electronic Workpaper (E) Working Group was asked to ensure its review of regulator needs includes consideration of both hosting and software needs, as well as considers needs of the broader regulatory community.
- The Financial Analysis Solvency Tools (E) Working Group and the Financial Examiners Handbook (E) Technical Group had a charge related to their principle-based reserving (PBR) work removed. A broad charge asking that the groups work with the Life Actuarial (A) Task Force on PBR remains.

The motion passed unanimously.

Having no further business, the Examination Oversight (E) Task Force adjourned.
The Financial Analysis Solvency Tools (E) Working Group of the Examination Oversight (E) Task Force met via conference call Sept. 4, 2019. The following Working Group members participated: Judy Weaver, Chair (MI); Patricia Gosselin, Vice Chair represented by Douglas Bartlett (NH); Sheila Travis (AL); Scott Persten and Kurt Regner (AZ); Emma Hirschhorn (CA); Kathy Belfi and Lynn Reed (CT); N. Kevin Brown (DC); Eric Moser (IL); Roy Eft (IN); James Matheson (NY); Dwight Radel and Tim Biler (OH); Ryan Keeling (OR); Kimberly Rankin (PA); Jack Broccoli (RI); Amy Garcia (TX); and Kristin Forsberg (WI).

Ms. Weaver said an NAIC staff proposal was received to expose revisions to certain benchmarks and guidance in the Financial Analysis Handbook. She called on NAIC staff to summarize the proposed revisions.

Bree Wilson (NAIC) summarized a proposal to eliminate two questions from the annual property/casualty (P/C) reserving repository because of the lack of a materiality threshold and because the subsequent questions address both the metric and materiality threshold. She said eliminating these questions prevents the repositories from flagging the same exposure multiple times.

Ms. Wilson said other proposed revisions resulted from NAIC staff’s review of benchmarks across all analysis tools and that the proposed revisions are to sync-up the benchmarks in certain Financial Analysis Handbook procedures where differences were noted.

Ms. Wilson also summarized the proposed revisions to the P/C Statement of Actuarial Opinion Worksheet to align with changes in the current instructions.

Hearing no objections, Ms. Weaver said the proposals would be exposed for a 30-day public comment period ending Oct. 4.

Ms. Weaver said the Financial Analysis (E) Working Group sent two referrals to add enhanced regulatory guidance to the Financial Analysis Handbook related to parental guarantees and troubled insurance companies for the Working Group’s consideration.

Regarding parental guarantees, Ms. Weaver said that referral stems from the Financial Analysis (E) Working Group’s observation of situations where such agreements were not honored or fulfilled.

Ms. Weaver said the troubled insurance company referral was to consider adding new guidance in the Financial Analysis Handbook on communication expectations of troubled or potentially troubled insurers and pre-receivership considerations. She said this proposal resulted from recent revisions made to the Troubled Insurance Company Handbook.

Ms. Weaver called on NAIC staff to summarize the proposed updates to the Financial Analysis Handbook related to these referrals.

Rodney Good (NAIC) summarized the additional guidance in the Financial Analysis Handbook related to parental guarantees and capital maintenance agreements. He said that NAIC staff propose the additional guidance to be added to the analyst reference guide for strategic risk. The added guidance outlines certain considerations for the analyst in assessing current and prospective risks related to such agreements. For example, he said that in addition to reviewing and understanding the terms of the agreement, the guidance includes: 1) assessing the financial background of the entity providing the commitment; 2) obtaining additional information from the insurer, such as contingency plans if the agreement is not honored; and 3) for the
analyst to review the holding company analysis for additional insight into the parent company or ultimate controlling person, specifically the financial condition and in determining if there are liquidity concerns.

Regarding the troubled insurance company referral, Mr. Good summarized NAIC staff’s proposal to include the additional guidance under the Department Organization and Communication section of the Financial Analysis Handbook. Mr. Good said that this consists of a new section for Considerations for Troubled Insurance Companies. He said that, the associated guidance is a condensed version of what is included in the Troubled Insurance Company Handbook, which is a regulator-only resource. The proposed guidance in the Financial Analysis Handbook includes communication of troubled or potentially troubled companies within the department and with other states and/or other parties, as needed.

Hearing no objections, Ms. Weaver said the enhanced regulatory guidance to the Financial Analysis Handbook would be exposed for a 30-day public comment period ending Oct. 4.

3. **Adopted a Referral from the Risk-Focused Surveillance (E) Working Group**

Ms. Weaver said the third agenda item is to consider adoption of salary compensation guidance drafted by the Risk-Focused Surveillance (E) Working Group in the 2020 Financial Analysis Handbook. She called on NAIC staff to summarize the referral and updates to the handbook.

Mr. Good said the salary compensation guidance was drafted by the Risk-Focused Surveillance (E) Working Group and exposed at the 2018 Fall National Meeting for a 45-day comment period ending Jan. 18, 2019. No comments were received. As such, the guidance was referred to Financial Analysis Solvency Tools (E) Working Group and the Financial Examiners Handbook (E) Technical Group for consideration of adoption. The proposed guidance in the Financial Analysis Handbook reflects the final draft and is ready for consideration of adoption.

Ms. Rankin made a motion, seconded by Mr. Regner, to adopt the guidance in the 2020 Financial Analysis Handbook. The motion passed unanimously (Attachment Two-A).

4. **Adopted a Referral from the Group Solvency Issues (E) Working Group**

Ms. Weaver said that no comments were received on the previously exposed updates to the 2020 Financial Analysis Handbook related to analysis documentation standards for insurers that are part of a large insurance group, which resulted from a referral received from the Group Solvency Issues (E) Working Group. She called on NAIC staff to provide a brief overview of the referral.

Ralph Villegas (NAIC) said that these referrals were jointly exposed in June for a public comment period ending July 12. He said there was one comment letter received from Wisconsin to address how to efficiently document analysis of pooled insurance groups, as well as information on the insurance group when the ultimate controlling person of the group is an insurance entity, and additional information that would be expected from the non-lead state.

5. **Adopted its July 25 Minutes**

Ms. Weaver said the Working Group met on July 25 to expose revisions to the life Insurance Regulatory Information System (IRIS) Ratio 4, Adequacy of Investment Income; Ratio 10, Change in Product Mix; and Ratio 12, Change in Reserving for a 30-day public comment period ending Aug. 26.

Mr. Regner made a motion, seconded by Ms. Garcia, to adopt the Working Group’s July 25 minutes (See NAIC Proceedings – 2019 Summer, Examination Oversight (E) Task Force, Attachment One). The motion passed unanimously.

6. **Adopted Revisions to the Life IRIS**

Ms. Weaver said the next agenda item is to hear comments received from the exposed IRIS revisions and consider adoption of those changes. She called on NAIC staff to summarize the comments and revisions.
Kelly Hill (NAIC) said comments were received from the American Council of Life Insurers (ACLI), with the first two comments relating to the mortality risk column that was added by the Blanks (E) Working Group to the analysis by line of business table. She said that NAIC staff agreed that these elements should be included; therefore, the elements were added to IRIS (2A). Ms. Hill said the third comment was to include group credit life in the credit life element for Ratio 10. She agreed that these elements should be considered and revised the proposed changes to IRIS accordingly.

Mr. Regner made a motion, seconded by Mr. Broccoli, to adopt the IRIS revisions (Attachment Two-C). The motion passed unanimously.

Having no further business, the Financial Analysis Solvency Tools (E) Working Group adjourned.
Proposed Additions to Financial Analysis Handbook

It is proposed that a new section of guidance be adopted into the NAIC’s Financial Analysis Handbook to contain compensation guidance and recommended salary ranges for financial analysts. The guidance is proposed as follows:

I. Introduction A. Department Organization and Communication

Financial Analyst Salary Guidelines
The compensation guidelines in this section of the Handbook were developed in recognition of the importance of compensation particularly as it affects an Insurance Department’s ability to hire and retain well-qualified employees. The guidelines were developed based on surveys of analyst pay across Insurance Departments, as well as external comparisons to other similar professions, including other financial regulators, internal auditors and external auditors. In using the information below, the following are brief descriptions of the associated positions listed:

Financial Analyst
Financial Analysts are responsible for conducting Risk-Focused Financial Analysis on assigned insurers under the supervision of an Analyst Supervisor. The Financial Analyst reviews annual and quarterly insurer financial statements and all related supplemental regulatory filings to assess and monitor the current financial condition and prospective financial solvency of insurance companies.

Senior Financial Analyst
Senior Financial Analysts are responsible for conducting Risk-Focused Financial Analysis on assigned insurers under the supervision of the Supervising Analyst. The Senior Financial Analyst reviews annual and quarterly insurer financial statements and all related supplemental regulatory filings to assess and monitor the current financial condition and prospective financial solvency of more complex and higher priority insurance companies. Senior Financial Analysts may also be asked to provide guidance, support and training to Financial Analysts.

Supervising & Assistant Chief Analyst
A Supervising or Assistant Chief Analyst is responsible for supervising the Financial Analysts and Senior Financial Analysts conducting Risk-Focused Financial Analysis on assigned insurers. This position provides input on technical matters, acts as a reviewer of the work performed by the Financial Analysts and Senior Financial Analysts and ensures that analyst work is an appropriate execution of the Risk-Focused Analysis approach.

Chief Analyst
This position is responsible for overall staff performance & development and should serve as the department’s main point of contact for analysis and ongoing monitoring of regulated entities. This position should oversee company assignments and priority ratings. This position should work under the general direction of a Commissioner or Deputy Commissioner and should oversee a consistent Risk-Focused Financial Analysis process across the Department.
Use of Compensation Salary Tables:
The compensation salary tables included below generally require certain adjustments before being applied by a State or Jurisdiction in setting analyst compensation. Factors to consider in setting analyst compensation include:

- Specific job responsibilities and expectations
- Location or market based adjustments
- Complexity of industry
- Specialization requirements (e.g. Reinsurance/Investment/IT Specialist)
- Travel expectations (including consideration of amount of travel and in consideration of work from home or other similar arrangements)
- Retirement and other benefits (not included in table)

<table>

Note: The data above is based on a national average and is not appropriate to be applied to all locations without consideration of market and cost of living variances.
Discussion of Analysis for Intercompany Pooling Arrangements

Intercompany pooling arrangements involve the establishment of a quota share reinsurance agreement under which pooled business is ceded to a lead entity and then retroceded back to pool participants in accordance with stipulated shares (if any). This generally results in pool participants sharing exposure to the various insurance risks ceded into the pool. Because of this structure, financial analysts may be able to gain efficiencies by conducting and documenting the analysis of insurance risks associated with the pooled business on a combined basis and then leveraging the results of that work to complete legal entity analysis. For example, in situations where the majority of the group’s writings are ceded into the intercompany pool and there are few unique legal entity risks, the analyst may choose to create and maintain a combined risk assessment and/or IPS for all of the legal entities participating in the pool (if domiciled in the same state). In other situations, it may be more appropriate to maintain separate risk assessment worksheets and/or IPSs for each legal entity, but to reference work completed in the pool lead’s documentation or include substantially similar information in each legal entity’s risk assessment worksheet and IPS.

While insurers participating in intercompany pooling arrangements often share exposure to pooled insurance risks, differences in the overall risk exposure of participants may arise due to a number of factors including, but not limited to, the following:

- Surplus/RBC levels
- Balance sheet composition
- Pool participation percentages
- The timing of pool participation
- Premiums not ceded to the pool
- Reinsurance arrangements outside of the pool (e.g., facultative placement prior to cessions to the pool lead).
- Current or legacy risks (e.g., asbestos exposure) disclosed within the financial statement

Regardless of the method utilized to assess and document the analysis of the pool, the financial analyst should ensure that all significant, unique exposures of each pool participant are separately assessed and addressed within analysis documentation.

If pool participants are domiciled in various states, communication and coordination across states is strongly encouraged to achieve efficiencies in analysis. For example, it might be appropriate for the domestic state of the pool lead to complete the analysis of the pooled insurance risks early in the analysis cycle to enable other states with domestics in the pool to leverage the completed work.

In situations where an insurer cedes business to an intercompany pool, but does not participate in retrocession, the analysis of the pooled business should be obtained/reviewed to evaluate reinsurance credit risk. If the pool is troubled or potentially troubled, this may require more in-depth analysis to evaluate the potential impact of claims associated with the insurer’s direct writings not being covered by the pool.
VI.C. Group-Wide Supervision – Insurance Holding Company System Analysis Guidance (Lead State)

Lead State Holding Company Analysis – Process and Procedures

In completing the process of holding company analysis and developing a GPS, analysts are encouraged to customize the work performed and documented at a level commensurate with the nature and complexity of the group. Analysts may elect to limit the amount of analysis and supporting documentation performed outside of the GPS and/or eliminate certain sections of the GPS to promote efficiencies in conducting analysis work. Conversely, analysts working on very complex groups may elect to perform additional analysis (including those listed in the Additional Procedures on Key Risk Areas – Insurance Holding Company System) as well as provide additional documentation within the GPS and/or in supporting analysis workpapers. Keep in mind, the GPS should provide sufficient information about the group and its risks to enable other state, federal and international regulators to understand the group risks that may be relevant to their regulated legal entities.

If the domestic insurers in a holding company system consist of only run-off companies, the domestic regulator, at its discretion, should determine the value, if any, of performing a holding company system analysis. If it is determined that a holding company system analysis would be of no added value, this determination should be documented.

If the ultimate controlling person of the holding company is an insurance company, the analyst may consider preparing one document that includes elements of the IPS and the GPS, in order to promote efficiency in the overall analysis. For example, in addition to the standard elements of the IPS, such a hybrid document may also include sections such as corporate governance, ERM/ORSA, non-insurance affiliates/subsidiaries, etc.

As the lead state, the department should coordinate the ongoing surveillance of companies within the group with input from other affected states (with the understanding that the domestic state has the ultimate authority over the regulation of the domestic insurer under its jurisdiction). The documentation contained in the GPS is considered to be part of the workpapers, and represents proprietary, confidential information that is not intended to be distributed to individuals other than state regulators.

Confidentiality of Information: Financial analysts are reminded that information collected from the group, generally under the authority of their holding company statutes or their more specific statutes dealing with the ORSA Summary Report may be confidential by law. Accordingly, before sharing statutorily confidential information with other jurisdictions, regulators will need to review their own statutory authority to do so, which generally requires that the receiving jurisdiction is able to maintain also the confidentiality of such information.

UCP is an Insurer: If the ultimate controlling person (UCP) of the holding company is a U.S. domiciled insurance company with a cocode, the analyst may consider preparing one document that includes all the elements of the IPS and the GPS, in order to promote efficiency in the overall analysis. For example, in addition to the standard elements of the IPS, the document may also include sections such as corporate governance, ERM/ORSA, non-insurance affiliates/subsidiaries, etc. In addition, depending on the nature and extent of risks, the analyst should consider whether it is more appropriate to assess and document certain risk exposures from a group or legal entity perspective (or both) in the IPS/GPS. In all cases, the analyst is expected to document and complete both the legal entity and holding company analysis work in accordance with timeliness expectations. Therefore, the analyst and supervisor should demonstrate that the combined IPS/GPS is updated for both the results of legal entity analysis and holding company analysis through separate signoffs at different dates, as necessary.
V.A. Domestic and/or Non-Lead State Analysis – Holding Company Procedures (Non-Lead State)

Special Notes: The following procedures are intended to be performed by non-lead domestic states to develop and document an analysis of the impact of the holding company system on the domestic insurer. Form procedures do not supersede state regulation, but are merely additional guidance an analyst may consider useful.

Name of Holding Company System ___________________
Name of Lead State ___________________

Compliance Assessment - Form B (and C)

1. Review the registration statement to determine if it was filed in accordance with the state’s Insurance Holding Company System Regulatory Act\(^1\) and if it included the required current information. The information provided should include a description of the transaction or agreement, including, at least, the nature and purpose of the transaction, the nature and amounts of any payments or transfers of assets between the parties, the identity of all parties to the transaction, and the relationship of the affiliated parties to the registrant. (LG)

2. Did each domiciled registered insurers properly report dividends and other distributions to shareholders in accordance with the following Model #440 requirements? (LG)

3. If dividends and other distributions to shareholders were considered extraordinary, did the transaction receive proper regulatory approval? (LG)

4. Did the insurer receive proper prior regulatory approval for any transaction, which occurred during the last calendar year involving the insurer and others in its holding company system that required such prior regulatory approval? (LG)

Assess the Impact of the Holding Company Group on the Domestic Insurer

Assessment of Group Profile Summary from the Lead State

5. Obtain a copy of the lead state’s Group Profile Summary (GPS).

6. Consider the GPS’s branded risk assessment in determining the impact of the holding company on the domestic insurer.

7. Review the conclusion and supervisory plan of the GPS. Did the lead state identify any holding company risks impacting the domestic insurers’ in the group and/or supervisory plans that impact your state’s domestic insurer?

8. Consider the nature of the domestic insurer(s)’ interdependence on the holding company group or affiliated entities for business operations or financial stability (e.g., employees, services provided, reinsurance and/or capital support in the near term). (OP, CR, ST)

---

\(^1\) The list provided is based on the NAIC Insurance Holding Company System Regulatory Act (#440); however analysts should review the Form B compliance in relation to their own state’s requirements.
9. Consider the level of reputational risk that the holding company (as a group) poses to the domestic insurer(s). (RP)

10. Determine if income of the domestic insurer(s) is being used to service holding company debt or other corporate initiatives (e.g., acquisitions). (OP, ST)

Assessment of Form B (and C)

11. Based upon a review of the registration statement, were any significant and/or unusual items noted, such as, but not limited to, the following?
   a. Person(s) holding 10% or more of any class of voting security who also have a history of transacting business of any kind directly or indirectly with the insurer. (OP, ST)
   b. Biographical information about directors or officers, which may elevate concerns such as convictions of crimes. (OP, ST)
   c. Any litigation or administrative proceeding involving the ultimate controlling entity or any of its directors and officers, such as criminal prosecutions or proceedings which may have a material effect upon the solvency or capital structure of the ultimate holding company, such as bankruptcy, receivership, or other corporate reorganization. (LG)
   d. The absence of an affirmative statement that transactions entered into since the filing of the prior year’s annual registration statement are not part of a plan or series of like transactions to avoid statutory threshold amounts. (OP, ST)

Assessment of Affiliated Risks on the Domestic Insurer

12. Were any material deficiencies or risks noted during the annual review of the domestic insurer’s Notes to Financial Statements, Interrogatories, Schedule Y – Part 2, Holding Company, Forms B & C, or recent examination reports with respect to affiliated transactions? (CR, LQ, OP, ST)
   a. Management agreements
   b. Third-party administrative agreements
   c. Managing general agent agreements
   d. Investment management pools
   e. Reinsurance agreements and pools
   f. Consolidated tax sharing agreements
   g. Other

13. If any of the following forms have been filed with the domestic regulator since the last review, indicate if risks or concerns were noted in any of the reviews of these forms.
   a. Form A (Acquisition of Control or Merger)
   b. Form D (Prior Notice of a Transaction)
   c. Form E (Pre-Acquisition Notification) or Other Required Information
   d. Extraordinary Dividend/Distribution
V.A. Domestic and/or Non-Lead State Analysis – Holding Company Procedures (Non-Lead State)

**Assessment of Form F - Enterprise Risk Statement**

14. Obtain either the Form F from the lead state, if available, and/or the lead state’s analysis of the Form F if it addresses the impact of the holding company on each your state’s domestic insurer(s).

15. Based on the analyst’s review of Form F and/or the lead state’s analysis of the Form F, and any additional information related to enterprise risk available (e.g., Form B, other filings), document any material concerns regarding enterprise risk that could impact the financial condition of the domestic insurer.

16. Do any of the risks identified pose an immediate material risk to the insurer’s policyholder surplus or risk-based capital position, insurance operations (e.g., changes in writings, licensure, and organizational structure), balance sheet, leverage or liquidity?

**Assessment of Own Risk and Solvency Assessment (ORSA), if applicable**

17. Obtain the lead state’s analysis of the ORSA Summary Report (see section VI.F-Own Risk and Solvency Assessment Procedures).

18. Did the lead state document in its analysis any risks or concerns that in its opinion have an impact on the overall financial condition of the insurance holding company system? If so, do any of the risks or concerns identified pose a material risk to the domestic insurer?

**Assessment of Corporate Governance Annual Disclosure (CGAD), if applicable**

19. Obtain the lead state’s analysis of the CGAD and determine if it addresses corporate governance policies and practices of the group applicable to your state’s domestic insurer(s).

a. If the CGAD analysis does not address corporate governance policies and practices of the group applicable to the non-lead states’ domestic insurer, request the CGAD from the insurer.

20. Based on the analyst’s review of the CGAD or the lead state’s analysis of the CGAD, and any additional available information related to corporate governance, document any material concerns regarding corporate governance impacting the domestic insurer.

21. Do any of the concerns identified pose an immediate material risk to the domestic insurer’s financial condition (e.g., operations, policyholder surplus or capital position)?

**Communication & Follow-Up with the Lead State**

- Notify the lead state of any additional material events or concerns applicable to the domestic insurer, or the group as a whole, that the lead state may not otherwise be aware of, and that should be considered in the evaluation of the overall financial condition of the holding company system.

- If any material risks or events were identified during your holding company analysis that were not discussed in the lead state’s holding company analysis, communicate those findings to the lead state.
V.A. Domestic and/or Non-Lead State Analysis – Holding Company Procedures (Non-Lead State)

Update the Insurer Profile Summary

Update the Insurer Profile Summary of the domestic insurer with the summary and conclusion of the impact of the holding company system on the domestic insurer based on the above analysis performed.

Non-Lead State Holding Company System Analysis Procedures

Refer to section VI.C. Group-Wide Supervision - Insurance Holding Company System Analysis Guidance (Lead State) for guidance on the Lead State’s holding company analysis procedures.

Procedures #5-17 assist the analyst in assessing the impact of the holding company system on the domestic insurer. This includes five primary segments of the analysis as follows.

- **#5-10** Assessment of the Group Profile Summary (GPS) from the Lead State: If the Lead State is not your state, the Lead State should provide a GPS to the non-lead states in the group by Oct. 31. Using the GPS consider the risks identified and assessed by the Lead State to determine any material impacts on the branded risks of the domestic insurer, the interdependence of the holding company and its affiliated entities, including the domestic insurer, dividend obligations of the domestic insurer to service holding company debt or fund other holding company initiatives, and the holding company’s reputation.

- **#11** Assessment of Form B (and C): Model #440 defines insurance holding companies and the related registration, disclosure, and approval requirements. Form B is the insurance holding company system annual registration statement. Model #440 requires every insurer, which is a member of an insurance holding company system, to register by filing a Form B within 15 days after it becomes subject to registration, and annually thereafter. Any non-domiciliary state may require any insurer that is authorized to do business in the state, which is a member of a holding company system, and which is not subject to registration in its state of domicile, to furnish a copy of the registration statement. An insurance holding company system consists of two or more affiliated individuals, one or more of which is an insurer. An affiliate is an entity that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, another entity. Control is presumed to exist when an entity or person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies, representing 10 percent or more of the voting securities.

- **#12-13** Assessment of Affiliated Risks on the Domestic Insurer: Affiliated risks may exist due to interdependence of the holding company and its affiliated entities through affiliated transactions. Consider also the guidance included in the Operational Risk Analyst Reference Guide as well as guidance in this section regarding supplemental form filings for review of affiliated agreements.

- **#14-165** Assessment of Form F – Enterprise Risk Statement: The purpose of the Form F is to identify if there is any contagion risk within the group, and domestic states should not be discouraged from reviewing such information because ultimately they are required to relate the financial condition of the group to their domestic state. The Form F must be reviewed by the lead state but other domestic states are also expected to review it. To the extent the Lead State’s analysis of Form F assesses the impact of any contagion risk of the group on the non-lead state’s domestic insurer, that analysis may be leveraged by the non-lead state to reduce the analysis work of the non-lead state. If the Lead State’s analysis of Form F does not assess the impact of the group on the non-lead state’s domestic insurer, consider a review as noted in Procedures #15 and #16, or similar to the procedures in section VI.G. Group-Wide Supervision - Form F - Enterprise Risk Report Procedures for reviewing Form F.
V.F. Domestic and/or Non-Lead State Analysis – Analyst Reference Guide

- **#176-187 Assessment of Own Risk and Solvency Assessment (ORSA):** If the Holding Company files an ORSA Summary Report, it is the responsibility of the Lead State to review and perform analysis of the report. At the completion of this review, the lead state should prepare a thorough summary of its review, which would include an initial assessment of each of the three sections. The lead state should also consider and include key information to share with other domestic states that are expected to place significant reliance on the lead state’s review. Non-lead states are not expected to perform an in-depth review of the ORSA, but instead rely on the review completed by the lead state. The non-lead state’s review of an ORSA should be performed only for the purpose of having a general understanding of the work performed by the lead state, and to understand the risks identified and monitored at the group-level so the non-lead state may better monitor and communicate to the lead state when its legal entity could affect the group. Any concerns or questions related to information in the ORSA or group risks should be directed to the lead state.

- **#19-21 Assessment of Corporate Governance Annual Disclosure (CGAD):** Analysis of CGAD only applies where states have enacted such legislation as that in the Corporate Governance Annual Disclosure Model Act (#305) and Corporate Governance Annual Disclosure Model Regulation (#306). The purpose of the CGAD is to provide a summary of an insurer or insurance group’s corporate governance structure, policies and practices to permit the regulator to gain and maintain an understanding of the insurer’s corporate governance framework. The CGAD must be filed to the lead state if on a group basis or the domestic state if on a legal entity basis, but other domestic states are may request the filing. To the extent the Lead State’s analysis of a group CGAD assesses the impact of corporate governance practices and procedures of the group on the non-lead state’s domestic insurer, that analysis may be leveraged by the non-lead state to reduce the analysis work of the non-lead state. If the Lead State’s analysis of CGAD does not assess the impact of the group on the non-lead state’s domestic insurer, review the filing to identify and assess any material concerns and determine if any material immediate risks impact the domestic insurer’s financial condition.

TEXT NOT SHOWN TO CONSERVE SPACE

w:\national meetings\2019\fall\tf\examo\_draft minutes\2b - attachment 10c.docx
VI.D. Group-Wide Supervision – Corporate Governance Disclosure Procedures

Special Note: The following procedures do not supersede state regulation, but are merely additional guidance an analyst may consider useful.

The Corporate Governance Annual Disclosure Model Act (#305) and Corporate Governance Annual Disclosure Model Regulation (#306) provide a summary of an insurer or insurance group’s corporate governance structure, policies and practices to permit the Commissioner to gain and maintain an understanding of the insurer’s corporate governance framework. As of the date of this publication, most states had not adopted such legislation. The following procedures are applicable to only those states that have adopted such legislation.

All other states should instead consider completion of applicable questions within the Operational and Strategic risk repositories of this Handbook based upon the level of concern an analyst may have with management performance and the driving forces behind operations. The risk repositories may also be used by an analyst of a state that has obtained the disclosure for an insurer or insurance group subject to the aforementioned corporate governance disclosure. However, the analyst should avoid duplicate information requests.

Introduction

Model #305 and #306 requires an insurer, or an insurance group, to file a summary of an insurer or insurance group’s corporate governance structure, policies and practices with the commissioner by June 1 of each calendar year. Model #305 allows the information to be at the ultimate controlling parent level, an intermediate holding company level and/or the individual legal entity level, depending upon how the insurer or insurance group has structured its system of corporate governance. Because most corporate governance is driven at a controlling or intermediate holding company level, this guidance is contained within this section dealing with group supervision. Although by inclusion in this section, reviewing the corporate governance disclosure of a group is a responsibility of the lead state, the approach on this is different from that taken with the Own Risk Solvency and Analysis (ORSA).

This is because it’s common for most groups to have different layers of governance that is important in achieving the objectives of the group. More specifically, most groups have some level of governance at the individual legal entity level. However, because it is common for legal entity governance to be a less significant aspect of the governance objectives, even those companies that incorporate governance at the individual legal entity level are likely to include materially less documentation on such, may instead summarize such processes and list those entities for which they exist.

Non-Lead State Reliance on the Lead State Analysis of Corporate Governance Annual Disclosure:

Because Model #305 allows the filing to be made with the lead state, however, non-lead domestic states may request the CGAD filing from the insurer. Because the filing may be made on a group basis or legal entity basis, it may contain group information that applies to all insurers within the group or it may contain information applicable to a specific legal entity. It may be necessary for the lead state to share the filing with another state that has adopted a substantially similar law including similar confidentiality requirements. Alternatively, or in addition, it may be necessary or acceptable for the lead state to share its work papers with another state, related to such filing, provided such information is shared in accordance with the confidentiality provisions of Model #305. This is because similar to other solvency regulation models, Model #305 contemplates both off-site and on-site examination of such information. The Lead State can share the analysis of the filing through NAIC tools (i.e., iSite+ Regulator File Sharing System) or other means deemed appropriate. Before a non-lead states requests the CGAD filing or conducts a full review of CGAD to determine its impact on their domestic insurers, non-lead domestic states should consider obtaining and reviewing the Lead State’s analysis of CGAD to reduce duplication of analysis efforts.
VI.D. Group-Wide Supervision – Corporate Governance Disclosure Procedures

To the extent the Lead State’s analysis of the Corporate Governance Annual Disclosure (CGAD) addresses policies and practices of the group applicable to the non-lead state’s domestic insurer, that analysis may be leveraged by the non-lead state to reduce the analysis work of the non-lead state. If the Lead State’s analysis of CGAD does not assess the impact on the non-lead state’s domestic insurer or the CGAD is on a legal entity basis, the non-lead domestic state should consider a review of CGAD. Analysis steps are included in the non-Lead State analysis procedures.

Procedures #1 - 2 assist the analyst in reviewing the Corporate Governance disclosure for completeness and help guide the analyst through each of the major items of information required by Model #306.

Procedures #3 - 5 assist the analyst in summarizing any concerns relative to the insurer or insurance group’s corporate governance and its impact.

***************************TEXT NOT SHOWN TO CONSERVE SPACE*******************************

Form F-Enterprise Risk Report

The 2010 revisions to Model #440 and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) introduced a new filing requirement for a Form F. The Form F requires the ultimate controlling person to identify the material risks within the insurance holding company system that could pose enterprise risk to the insurer. The Form F may be completed using information contained in the financial statement, annual report, proxy statement, statement filed with a governmental authority, or other documents if such information meets the disclosure requirements. Form F is focused on disclosing the enterprise risk associated with the entire insurance holding company system including non-regulated entities. The Form F is filed with the lead state commissioner of the insurance holding company system for every insurer subject to registration under Model #440. Adoption of the applicable Form F and related confidentiality provisions outlined in the 2010 revisions to Model #440 is required for a state to be designated the lead state for Form F filings. Lead states and other domestic states receiving and sharing the Form F must have in place confidentiality agreements as prescribed in Model #440.

Non-Lead State Reliance on the Lead State Analysis of Form F:

Although by inclusion in this section, reviewing the group Form F report is a responsibility of the lead state, the approach on this is different from that taken with the ORSA. Generally speaking, a non-lead state should not review the ORSA with the same level of depth as the lead state. However, that same approach is not encouraged with respect to the Form F. The entire purpose of the Form F is to identify if there is any contagion risk within the group, and domestic states should not be discouraged from reviewing such information because ultimately they are required to relate the financial condition of the group to their domestic state. Most believe that the ORSA is much more detailed and less related to contagion as it is the group’s actual risk management processes used to mitigate risk.

The Form F must be reviewed by the lead state and significant findings incorporated into the GPS. However, other domestic states are also expected to review the Form F in order to assess the impact of the group on their domestic insurers. One exception for non-lead states should be noted. To the extent the Lead State’s analysis of Form F assesses the impact of any contagion risk of the group on the non-lead state’s domestic insurer, that analysis may be leveraged by the non-lead state to reduce the analysis work of the non-lead state. If the Lead State’s analysis of Form F does not assess the impact of the group on the non-lead state’s domestic insurer, the non-lead domestic state should review Form F. The Lead State can share the Form F and its analysis through NAIC tools (Form F Sharing Tool for the filings and the iSite+ Regulator File Sharing System for the analysis). Analysis steps are included in the non-Lead State analysis procedures with that in mind. To reduce duplication, domestic states should consider obtaining and reviewing the Lead State’s analysis of Form F before determining if a full review of the filing is necessary to determine its impact on their domestic insurers.

NAIC Enterprise Risk Report (Form F) Implementation Guide

In March 2018, the Group Solvency Issues (E) Working Group adopted the NAIC Enterprise Risk Report (Form F) Implementation Guide, which is located at:

https://www.naic.org/documents/committees_e_isftf_group_solvency_related_form_f_guide.pdf?97

As outlined in the Guide, it is intended to assist insurers and regulators in maximizing the usefulness of the Form F by proposing best practices for consideration in preparing and reviewing filings. Therefore, while the Guide does not constitute authoritative guidance for information to be included in a Form F filing, filers are requested to consider the best practices outlined within the Guide when preparing their Form F filing. By adhering to the best practices outlined within the Guide, registrants will be able to reduce the extent of regulator follow-up and correspondence necessary to utilize the information provided, which should lead to a more effective and efficient process. The regulators’ goal in developing this document was to provide some consistency and uniformity across states in reviewing and utilizing information obtained through the Form F. Therefore, it is recommended that states utilize the best practices outlined in the Guide to support their review and feedback process.

**Procedures**

*Procedures #1 - 2* assist the analyst in reviewing the Form F filing for completeness and help guide the analyst through each of the major items of information required by Form F. The analyst should review Form F in conjunction with a review of Form B and should document any nondisclosure of information.

*Procedures #3 - 7* assist the analyst in evaluating the risks described within Form F. The analyst should consider whether any enterprise risks not reported in Form F exist, and for all risks identified both within Form F and by the analyst, the analyst should review information available and document any concerns. The analyst should also evaluate whether the risks identified result in an impact to the insurers financial condition (e.g., surplus, RBC, insurance operations, or balance sheet, leverage and liquidity).
Financial Analysis Research & Development (E) Working Group

Exposure Draft to Change Life IRIS Ratios No. 4, 10, and 12 for a 30-day Public Comment Period

Public Comment Period Ends August 26, 2019

Updates made since July 25, 2019 call:

1. A YRT Mortality Risk Only Column was added to page 6.1 so the columns were adjusted for Attachment A-2 and A-3.
2. The Group Credit Life Column from page 6.2 was moved from 10.E to 10.D to more accurately match prior year.

Recommendation to change three IRIS ratios due to Blanks changes beginning with the 2019 annual filings.

- **Attachment A-1** – Life IRIS Ratio 4 (Adequacy of Investment Income) change recommendation
- **Attachment A-2** – Life IRIS Ratio 10 (Change in Product Mix) change recommendation
- **Attachment A-3** – Life IRIS Ratio 12 (Change in Reserving) change recommendation

The 2019 Fraternal IRIS report will no longer be available, due to the removal of the Fraternal blanks, beginning with the 2019 filings. Fraternal societies will file on the Life blank beginning in 2019.
Life IRIS Ratio No. 4 (Adequacy of Investment Income)

Adequacy of Investment Income

\[ \text{Result} = \frac{A}{(B+C+D)} \times 100 \]

- If \((B+C+D)\) is zero, result is 999.
- If insurer has no beginning or ending reserves per page 7 of the annual financial statement and item B is zero, no result is calculated (NR).

A. Net Investment Income Page 4, Line 3, Column 1

B. Tabular Interest Involving Life or Disability Contingencies Page 7.1, Line 4, Column 1 + Page 7.2, Line 4, Column 1 + Page 7.3, Line 4, Column 1 + Page 7.4, Line 4, Column 1

C. Tabular Fund Interest on Accident and Health Contracts Page 14, Exhibit of Aggregate Reserve for A&H Contracts, Line 18, Column 1

D. Investment Earnings Credited to Deposit-Type Contract Accounts Page 15, Exhibit of Deposit-Type Contracts, Line 3, Column 1
## Life IRIS Ratio No. 10 (Change in Product Mix)

### Premiums & Annuity Considerations

**Page 6, Line 1**

A. Industrial Life, **Column 2**

B. Ordinary Life Ins., **Column 3**

C. Ind. Annuities, **Column 4**

D. Credit Life, **Column 6**

E. Group Life, **Column 7**

F. Group Annuities, **Column 8**

G. Group A&H, **Column 9**

H. Credit A&H, **Column 10**

I. Other A&H, **Column 11**

J. Total

K. Total of Ratio Column 5 Disregarding Sign

Result = \( \frac{K}{9} \) %

- If J for either current or prior year is zero or negative, no result is calculated (NR).
- Ratio is calculated as follows: First determine the percentage of premium from each product line for CY and PY. Next, determine the difference in the percentage of premium between the two years for each product line. Finally, the total of these differences, without regard to sign, is divided by the number of product lines to determine the change in the percentage of premium for the average product line.

Financial Analysis Solvency Tools (E) Working Group  
Sept. 4, 2019 Conference Call

Life IRIS Ratio No. 12 (Change in Reserving)

Result = \[
\frac{(\text{CY} \times (A+B))}{(\text{CY} \times (C+D+E+F))} - \frac{(\text{PY} \times (A+B))}{(\text{PY} \times (C+D+E+F))}\] \times 100

- If \((A+B)\) and \((C+D+E+F)\) for current or prior year are both zero or negative, \(\frac{(A+B)}{(C+D+E+F)} = 0\) for that year.
- If \((A+B)\) is positive and \((C+D+E+F)\) is zero or negative for current or prior year, \(\frac{(A+B)}{(C+D+E+F)} = 100\%\) for that year.
- This ratio represents the number of percentage points of difference between the reserving ratio for current and prior years. For each of these years, the reserving ratio is equal to the aggregate increase in reserves for individual life insurance taken as a percentage of renewal and single premiums for individual life insurance.
Financial Analysis Solvency Tools (E) Working Group
E-Vote
October 15, 2019

The Financial Analysis Solvency Tools (E) Working Group of the Examination Oversight (E) Task Force conducted an e-vote that concluded Oct. 15, 2019. The following Working Group members participated: Patricia Gosselin, Vice Chair (NH); Kurt Regner (AZ); Emma Hirschhorn (CA); Lynn Reed (CT); N. Kevin Brown (DC); Eric Moser (IL); Debbie Doggett (MO); John Sirovetz (NJ); Tim Biler (OH); Ryan Keeling (OR); Kimberly Rankin (PA); Jack Broccoli (RI); Amy Garcia (TX); and Kristin Forsberg (WI).

1. **Adopted Exposed Revisions to the 2020 Financial Analysis Handbook**

The Working Group conducted an e-vote to consider adoption of exposed revisions (Attachment Three-A) to the 2020

A majority of the Working Group members voted in favor of adopting these revisions. The motion passed.

Having no further business, the Financial Analysis Solvency Tools (E) Working Group adjourned.

Actuarial Opinion – Assurance That an Actuarial Report Has Been Prepared, Signature, Requirements for Actuarial Report

9. Determine whether the Appointed Actuary indicates that an Actuarial Report has been prepared that supports the findings expressed in the Actuarial Opinion. Determine whether the Actuarial Opinion has been signed according to the Instructions. If the Actuarial Report is requested, determine if the report contains the required elements.

<table>
<thead>
<tr>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. The Appointed Actuary indicates that an Actuarial Report and underlying actuarial work papers supporting the Actuarial Opinion will be maintained at the company and available for regulatory examination for seven years.</td>
</tr>
<tr>
<td>b. The Actuarial Opinion concludes with the signature, the printed name, the employer’s name, the address, the telephone number and the email address of the Appointed Actuary, as well as the date the Actuarial Opinion was rendered.</td>
</tr>
<tr>
<td>c. Copy of the Actuarial Report requested.</td>
</tr>
<tr>
<td>d. Requirements of the Actuarial Report (to be verified by analyst if report is requested):</td>
</tr>
<tr>
<td>i. The Actuarial Report is signed and dated by the Appointed Actuary.</td>
</tr>
<tr>
<td>ii. The Actuarial Report is consistent with Actuarial Standard of Practice (ASOP) No. 41, <em>Actuarial Communications</em> and includes:</td>
</tr>
</tbody>
</table>
<pre><code>| • Narrative component that provides sufficient detail to clearly explain to company management, the board of directors, the regulator, or other authority the findings, recommendations and conclusions, as well as their significance. |
| • Technical component that provides sufficient documentation and disclosures for another actuary practicing in the same field to evaluate the work and shows the analysis from the basic data (e.g., loss triangles) to the conclusions. |
</code></pre>

### iii. Actuarial report includes required elements from the Instructions:

<table>
<thead>
<tr>
<th>Description</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Description of the Appointed Actuary’s relationship to the company with clear presentation of the Appointed Actuary’s role in advising the board of directors and/or management regarding the carried reserves. The actuarial report should identify how and when the Appointed Actuary presents the analysis to the board of directors.</td>
<td></td>
</tr>
<tr>
<td>• An exhibit that ties to the Annual Statement and compares the Appointed Actuary’s conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary’s conclusions include the Appointed Actuary’s point estimate(s), range(s) of reasonable estimates or both.</td>
<td></td>
</tr>
<tr>
<td>• An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the analysis, to the Annual Financial Statement, Schedule P line of business reporting. An explanation should be provided for any material differences.</td>
<td></td>
</tr>
<tr>
<td>• An exhibit or appendix showing the change in the Appointed Actuary’s estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. If the Appointed Actuary is newly appointed and does not review the work of the prior Appointed Actuary, the Appointed Actuary should disclose this.</td>
<td></td>
</tr>
<tr>
<td>• Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.</td>
<td></td>
</tr>
<tr>
<td>• Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Surplus (#11), Two-Year Reserve Development to Surplus (#12) or Estimated Current Reserve Deficiency to Surplus (#13), and how these factors were addressed in current and prior year analyses.</td>
<td></td>
</tr>
<tr>
<td>• Disclosure of all reserve amounts associated with A&amp;H long duration contracts</td>
<td></td>
</tr>
</tbody>
</table>
Risk Assessment Levels and Trends

Developing an Overall Assessment
Risk assessment, either for an individual risk component or for the overall branded risk classification reflected in the heat map of the IPS, should be based on the ultimate overall assessment of the risk to the insurer, which should take into account any known positive attributes including risk-mitigation strategies and internal controls established by the insurer to ensure management’s business objectives are being followed. Risk-mitigation strategies and internal controls are assessed during examinations; however, they may not all be apparent or known to the analyst during interim analysis periods. To the extent known either through current analysis, recent examination results or communication with the insurer, the analyst should factor risk-mitigation strategies and internal controls into the overall assessment of the risk. Analysts should also consider that changes in risk-mitigation strategies and internal controls may occur between examinations, which will affect the overall risk assessment process. Therefore the overall assessment reflects the ultimate impact of unmitigated risks on the insurer after consideration of mitigation strategies and controls.

Examples of risk-mitigation strategies that may be considered positive attributes during the analysis may include (but are not limited to):

- reinsurance programs intended to mitigate underwriting & strategic risks
- derivatives hedging programs intended to mitigate market risks
- strong enterprise management controls over IT systems to mitigate operational risks
- regular auditing and strong oversight of MGAs & TPAs to mitigate underwriting and operational risks
- strong corporate governance and enterprise risk management that mitigate various risk components
- capital maintenance agreements with a financially strong parent holding company that ensure payment of claims and/or maintenance of capital above certain thresholds to mitigate strategic risk
Parental Guarantees and Capital Maintenance Agreements

Procedure #11X assists the analyst in assessing current and prospective risk related to existing Parental Guarantees and/or Capital Maintenance agreements.

Parental Guarantees and Capital Maintenance Agreements are commitments aimed at providing assurance that the insurer will be able to meet minimum financial obligations if financial or liquidity issues arise. These documents should be carefully reviewed along with the financial background of the entity required to fund the guarantee or agreement. The analyst may also inquire of the insurer if a contingency plan is in place in the event the parental guarantee or capital maintenance agreement is not honored.

Review and assess any parental guarantees, capital maintenance agreements or other commitments in place and determine if concerns exist regarding financial support or failures to act on these commitments. The analyst should thoroughly review the terms related to the agreement to gain a clear understanding of what is covered in the agreement (e.g. limit on lines of business, commitment to pay policyholder claims, commitment to maintain RBC level, etc.) and the impact to the insurer.

The analyst should also consider the following:

- Expected source and form of liquidity should guarantees be called upon.
- If the parental guarantee or capital maintenance agreement specifically address the concerns identified and provide adequate support to the insurer:
  - If concerns exist, consider requesting additional information, as necessary to understand the level of commitment.
- Whether the document contains detailed requirements or expectations for capital support.
- The financial stability of the parent holding company to determine if the parent is adequately capitalized to support maintenance of capital in the insurer above certain thresholds.

If a holding company analysis group profile summary (GPS) is available, the analyst should review the GPS for insight into the parent company or ultimate controlling person (UCP) and its ability to meet the financial demands of the guarantee currently or prospectively. Review pertinent data on the holding company and its organizational structure as well as the operations and financial condition of the holding company or UCP. Determine if there are liquidity or other concerns identified within the GPS that warrant additional information from the company.
Considerations for Troubled Insurance Companies

In troubled or potentially troubled insurance company situations, proactive and timely communication to the appropriate persons within the department and with non-domiciliary state departments (for multi-state companies) is critical. It is also important that the non-domiciliary state communicate with the domestic regulator prior to taking any action against the insurer. In certain circumstances, it may also be appropriate to communicate certain information with other parties (e.g., other regulatory bodies, company management, state guaranty funds, etc.) Establishing a coordinated communication system among the relevant parties will help facilitate the domestic regulator’s surveillance of the troubled or potentially troubled insurance company. The *Troubled Insurance Company Handbook* provides additional guidance to assist in enhancing a state’s monitoring and surveillance of troubled insurance companies, including communication and coordination of troubled or potentially troubled insurance companies.

At some point, the insurance department may determine that a corrective action plan cannot be implemented or completed successfully. Under these circumstances, the department may determine that the appropriate course of action is to place the troubled company in receivership. The *Troubled Insurance Company Handbook* outlines specific steps the department should take at all times during the development and implementation of a corrective action plan to prepare itself for this eventuality. This includes knowledge and control over the company’s assets, determining and reviewing the company’s obligations, operational considerations, information gathering, data/IT systems, other jurisdiction/regulatory considerations, etc. In addition to the *Troubled Insurance Company Handbook*, the *Receiver’s Handbook for Insurance Company Insolvencies* provides detailed information and guidance regarding pre-receivership considerations.
The IT Examination (E) Working Group of the Examination Oversight (E) Task Force met via conference call Sept. 26, 2019. The following Working Group members participated: John Jacobson, Chair (WA); Jerry Ehlers, Vice Chair (IN); Blase Abreo (AL); Mel Heaps (AR); Ber Vang (CA); William Arfanis and Ken Roulier (CT); Ginny Godek (IL); Shane Mead (KS); Greg Brelsford (MD); Kim Dobbs and Cynthia Amann (MO); Justin Schrader (NE); Eileen Fox (NY); Metty Nyangoro (OH); Eli Snowbarger (OK); Melissa Greiner (PA); and Dave Jensen (WI).

1. **Adopted Revisions to Handbook Guidance**

Mr. Ehlers and Jacob Steilen (NAIC) provided a brief overview of updates to the revisions to the NAIC Financial Condition Examiners Handbook (Handbook) that were being considered by the Working Group. The guidance considered covered three topics. The first topic relates to the conclusions reached on IT General Controls at the end of an information technology (IT) examination. The second topic relates to updates on using IT work performed by a third party to assist in a state insurance regulator’s IT review process. The final agenda topic for revisions would create a new reference to cyber self-assessments and create a mapping to one of those self-assessments developed by the Financial Services Sector Coordinating Council (FSSCC). The revisions would affect Section 1-3 and Exhibit C of the Handbook guidance. Materials were previously exposed and subject to a public comment period ending Aug. 30, with several comments received and incorporated into the newly updated conference call materials. Mr. Steilen provided an update on updates that were incorporated to the draft guidance.

Tom Finnell (America’s Health Insurance Plans—AHIP) inquired as to whether the updated Section 1-3 guidance was clear enough that the use of cyber assessment tools was optional. The way the guidance is stated, companies may opt to use cyber tools depending on their business type. Mr. Finnell noted that the wording made it sound like IT examiners should choose between the listed examples. A friendly amendment was added to clarify that use of the tool is optional.

The next comment related to the criteria for concluding on a generally effective versus ineffective IT general controls environment. Criteria were added to the existing list that included in-process remediation and management’s risk tolerance as mitigating factors that could be used to conclude that an IT general controls environment is generally effective. Mr. Roulier, Ms. Dobbs and Mr. Mead suggested the revisions be removed as they did not consider the new factors to be appropriate considerations in evaluating the impact of findings on IT general controls. A friendly amendment was therefore made to remove the previously added guidance. As these criteria are also reflected on Exhibit C, the Working Group elected to make the same changes for internal consistency. Michael Monahan (ACLI) had two additional clarification suggestions in Section 1-3 that were accepted as friendly amendments. The first edit changed the phrase “may be required to perform additional testing” to “may perform additional testing.” The second edit changed the phrase “may also need to consider additional procedures” to “may also consider additional procedures.”

On Exhibit C – IT Review Standard Summary Memorandum, Ms. Dobbs suggested a friendly amendment to change a sentence to the past-tense because at the time an IT examiner would be filling out the Summary Review Memorandum, the work would already have been performed. The suggested change was accepted as a friendly amendment. Mr. Nyangoro asked if non-IT factors should be considered in the “mitigating factors” column on the Exhibit C findings chart. Miguel Romero (NAIC) stated that the mitigating factors columns is meant to allow IT examiners to provide context in support of why their individual findings were or were not significant to the broader conclusion on IT general controls. The group did not have questions or concerns on the remainder of Exhibit C.

In conjunction with the edit regarding the optional nature of using cyber assessment reports, Mr. Romero suggested adding a similar clarification to the instructions provided at the beginning of the FSSCC mapping tool. There were no objections to this suggestion.

Mr. Roulier made a motion, seconded by Mr. Jensen, to adopt the Handbook guidance (Attachment Four-A), which would include the friendly amendments noted above. The motion passed.

Having no further business, the IT Examination (E) Working Group adjourned.
III. GENERAL EXAMINATION CONSIDERATIONS

This section covers procedures and considerations that are important when conducting financial condition examinations. The discussion here is divided as follows:

A. General Information Technology Review
B. Materiality
C. Examination Sampling
D. Business Continuity
E. Using the Work of a Specialist
F. Outsourcing of Critical Functions
G. Use of Independent Contractors on Multi-State Examinations
H. Considerations for Insurers in Run-Off
I. Considerations for Potentially Troubled Insurance Companies
J. Comments and Grievance Procedures Regarding Compliance with Examination Standards

A. General Information Technology Review

The examination of information technology (IT) utilized by an insurer has become an increasingly important part of the examination process as companies have placed a greater reliance on IT systems to run their business. IT general controls (ITGCs) are policies and procedures that help ensure proper operation of computer systems, including controls over network operations, software acquisition and maintenance, and access security. ITGCs provide a foundation necessary to ensure the completeness, integrity and availability of IT systems and data and comprise the environment from which application controls are designed, implemented and operated. An effective ITGC environment can, therefore, provide examiners with greater assurance regarding the overall reliability of a company’s IT systems and the reports generated from those systems. In addition, this allows the opportunity to test and rely on automated application controls during Phase 3 of the exam. As such, a formalized process to complete a general IT review has been developed to assist the IT examiner in completing this important section of the financial condition examination. In a risk-focused examination, steps 1–5 of the general IT review process should be performed prior to the completion of planning the overall financial condition examination. Step 6 of the IT review process should be performed in conjunction with the remaining portion of the overall examination. The following steps document the process to be followed in completing the general IT review:

1. Gather Necessary IT Planning Information

The first step in performing a general IT review is to gather the information necessary to plan the IT review of the insurer. At this time, the examiner-in-charge (EIC) and the IT examiner should work together to request that the insurer complete the Information Technology Planning Questionnaire (ITPQ), included in Exhibit C – Part One, to assist in the planning process. In addition, other relevant information to obtain in planning the IT review might include prior examination workpapers, work on IT systems performed by internal/external auditors or consultants, and information maintained by the insurance department’s financial analysts. The reports and results from third-party cyber self-assessment tools may also be utilized for an IT review. Note that if companies do not use these tools, the examiner can continue with the normal IT review process. There are a variety of cyber self-assessment tools that companies may opt to use depending on their business type. Examples of cyber assessment tools that have been developed include, but are not limited to, tools developed by, or to facilitate compliance with the following: the Financial Services Sector Coordinating Council (FSSCC), the Health Information Technology for Economic and Clinical Health Act (HITECH), and the Health Insurance Portability and Accountability Act of 1996 (HIPAA). Based on a consideration of the assessment tool’s scope, date of preparation, and quality of information presented (including whether or not the information has been validated by an independent third-party), the state insurance regulator may determine the information contained within the assessment that
can be extensively leveraged during the IT review. Depending on the assessment of the IT examiner, the results of the cyber self-assessment tool may be used to:

- Populate Exhibit C with risk statements and controls to be tested.
- Reduce the extent of testing within Exhibit C if the state insurance regulator determines that the self-assessment has already been sufficiently validated.

2. Review Information Gathered

After the information for planning the IT review has been gathered, including the ITPQ, the IT examiner should review the information obtained to assist in planning and determining the scope of the general IT risks to be reviewed. Some factors to consider as part of this process include:

- The complexity of the insurer’s information systems and IT risk mitigation strategies;
- The extent to which reliance will be placed on those risk mitigation strategies in the financial examination;
- The length of time the existing system has been in place and any significant changes to the system;
- The types of subsystems being used and how data is shared among systems;
- The hardware and software being used and whether the software was internally or externally developed;
- The extent to which the insurer outsources its IT functions;
- Past issues the insurer may have had with its systems;
- Answers provided from the insurer via the ITPQ;
- Documentation available from other sources, including external and internal auditors;
- The insurer’s participation in electronic business and electronic data interchange;
- The amount of reliance placed on the work of third parties;
- The type, volume, and external availability of sensitive information that is processed and/or stored by the company and;
- Changes to the company’s controls and/or processes to ensure compliance with the General Data Protection Regulation (GDPR), if applicable, or other relevant data protection requirements.

The IT examiner should consider which risks included on the Evaluation of Controls in Information Technology (IT) Work Program (Exhibit C – Part Two) are applicable to the insurer under examination and determine if there are additional general IT risks that should be reviewed for this insurer. Additionally, based on the review of internal and external audit work, the IT examiner may determine that sufficient testing has been performed to fully address specific risks or areas of concern. In this case, the IT examiner may document in the IT planning memo their comfort with, and planned reliance on, the specific internal and/or external audit work included in the file. Additionally, the IT examiner need not include these specific risks or areas of concern in the IT work program.

3. Request Insurer Control Information and Complete IT Review Planning

After the initial planning information has been gathered and reviewed, the Evaluation of Controls in Information Technology (IT) Work Program (Exhibit C – Part Two) to be utilized in the review should be created. As part of this process, the IT examiner should customize the standard work program to include only the general IT risks that are of concern for the insurer under examination. In addition to providing a list of risks in the work program, the IT examiner may wish to provide a list of common controls that indicate how a typical insurer may mitigate these risks to assist the insurer in developing its response. Finally, the IT examiner may consider prompting the insurer to include information supporting the IT controls in place to mitigate risks by including an information request in the work program distributed to
the insurer. The IT review team should coordinate with the appropriate staff at the insurer to request a response. The insurer’s response should indicate their controls in place to mitigate the risks identified in the work program. The IT examiner should review the company responses, considering the adequacy of the controls identified, and request evidence to test the effectiveness of the insurer’s mitigating controls. The IT examiner may consider some of the examination procedures listed in the Evaluation of Controls in Information Technology (IT) Work Program (Exhibit C – Part Two), and complete the planning of the IT review.

After the work program has been finalized, the IT examiner should document the plan to complete the IT review. The plan should document the staffing to be used to complete the review, the scope of work to be performed and a proposed budget to complete the review. The plan should be subject to the review and approval of the EIC and additional examination supervisors, as considered appropriate by the state. This plan may be documented through the use of an IT review planning memo, or other workpaper that documents the approval of the EIC.

4. Conduct IT Review Fieldwork

The IT examiner should schedule examination fieldwork, with the initial fieldwork to include conducting interviews of key IT staff. These interviews should serve as an opportunity to substantiate and clarify some of the information provided by the insurer in Exhibit C – Part Two. The IT examiner may also gain additional information relating to key activities, risks, and risk mitigation strategies for the financial examination. As such, the IT examiner may want to invite the examiner-in-charge and/or other financial examination staff to participate in the interview process. Some of the potential candidates for interview include the Chief Information Officer, Chief Technology Officer, Chief Security Officer, System Architect, Chief System Engineer, and any other individuals responsible for maintaining, updating and testing the insurer’s business continuity and disaster recovery plans. Example agenda items for IT interviews, subject to the areas of expertise for the interviewee, include but are not limited to:

- IT Strategic Planning;
- IT Governance;
- Leadership development and succession planning;
- Organizational structure;
- Risk management;
- Development and maintenance of policies;
- Budgeting;
- Security;
- E-Business;
- Business continuity;
- Acquisitions and integration;
- Architecture, development and implementation of major programs;
- External environment, and
- Any other items necessary to evaluate the insurer’s general IT controls.

After the IT review team has completed the interviews, the team should begin to test the general controls identified by the insurer. This work should be completed with the assistance of the insurer’s IT staff and should utilize the existing work of others, if deemed appropriate. As noted in step 2 above, if the IT examiner has determined that reliance will be placed on all or some of the work performed by external auditors or the company’s internal audit function (if deemed independent) to fully address a specific risk or area of concern, the IT examiner would not be required to include those specific risks or areas of concern on the work program. However, if the IT examiner determines that the work performed by the third-party only partially addresses a risk, but additional work would be required to fully address that risk, the IT
examiner should include the relevant third-party documentation in the file and map or link it to the respective risk in the work program.

While it is expected that audit work (external/internal) would be the most common type of work relied on by the exam team, work performed by other regulatory agencies and/or cybersecurity experts may also be leveraged to reduce the independent work performed during an exam. Regardless of the work being reviewed, state insurance regulators should specifically consider the scope of work, the independence and qualifications of the entity (or person) performing the work, the timing of the work performed, and the findings included in any report received. Qualifications should be evaluated based on the training, experience, and education of personnel performing the work (see Section 1-2 Letter E for more information on the use of specialists). Based on the state insurance regulator’s review of the third-party work, state insurance regulators may be able to use the work to enhance the risk assessment, interview, and scoping process performed during the IT review. While the IT examiner is responsible for performing his/her own independent risk assessment, third-party work that directly addresses an identified risk may be relied upon in a similar manner to external/internal audit work. In this case, the IT examiner should briefly document his/her understanding of the third-party testing performed and any conclusions reached from the testing procedures. To the extent that findings are noted in the report obtained, state insurance regulators may find it more useful to corroborate the remediation of the findings as opposed to performing an independent review of the company’s controls to confirm the findings’ existence.

After considering the utilization of existing work, testing of general IT controls and other procedures should be performed in order to gain an appropriate level of understanding of the insurer’s IT environment and the effectiveness of general IT controls in place. As noted above, the IT examiner may consider performing examination procedures listed in the Evaluation of Controls in Information Technology (IT) Work Program (Exhibit C – Part Two) or any other procedures necessary to conclude upon the effectiveness of the company’s general controls in mitigating the risks identified. All testing should be documented appropriately to ensure that the work may be referenced within the financial examination workpapers, as necessary.

5. Document Results of IT Review

At the conclusion of the IT review fieldwork (at or prior to the conclusion of planning of the financial examination process), the IT examiner should have a completed IT controls work program supported by documentation and testing as a deliverable. In addition, a summary of findings regarding the insurer’s IT environment and general IT controls should be prepared at this time. The findings may be considered prospective in nature (resulting in recommendations to the company) or current in nature (which may have an impact on the financial exam). These findings should be documented through the use of an IT summary report (or similar document), which should include a description of recommendations to the company and/or how the findings may impact the examiner’s reliance on general IT controls and approach to application control testing in Phase 3. The IT summary report may also include a summary of the insurer’s IT operations, and detail on the IT review work performed. Based on the impact of the findings, the IT examiner should determine whether the ITGC environment is generally effective. A generally effective environment would indicate that IT risks have been sufficiently mitigated and findings are not pervasive enough to limit the ability to allow for testing of application controls in Phase 3. If the IT general control environment is not deemed effective, the examiner would be required to perform additional testing in later phases of the exam before relying on system generated reports or controls in place at the insurer.

Whether the IT general control environment is deemed effective ultimately depends on the IT examiner’s professional judgment. From the IT examiner’s perspective, controls over IT systems are considered generally effective when they maintain the integrity of information and the security of the data that such systems process and when they include effective general IT controls and application controls. Typically, at the end of the IT review, the ITGC environment would be considered generally effective, unless specific
adverse findings summarized in the IT summary memorandum indicate otherwise. Professional judgement and skepticism should be exercised when making this determination. Often, even when issues are identified, the IT examiner may be able to determine that the finding is isolated to a specific system or point in time and, therefore, would not impact the overall reliability of the ITGC environment. In this case, the IT examiner should document in the IT summary memo which key activities or specific applications may be impacted by IT review findings and how.

In some instances, the overall ITGC environment may be deemed ineffective. In reaching this conclusion, the IT examiner should consider whether the findings outlined in the IT summary report:

- Are pervasive throughout the ITGC general control environment.
- Significantly impact the systems used in calculating and reporting financial results or the accuracy of information used in reaching major strategic decisions.
- Indicate deficiencies relating to management involvement and oversight of the IT strategy and direction.
- Are not alleviated by other mitigating factors.

If the ITGC general control environment is not deemed generally effective, the examiner would may be required to perform additional testing in later phases of the exam before relying on system generated reports or application controls in place of the insurer. The additional testing procedures should be designed to prove that the application control or system report is complete and correct despite the generally ineffective ITGC environment. Whether the ITGC general control environment is deemed generally effective ultimately depends on the IT examiner’s professional judgment. To determine the impact of the IT review findings on the remainder of the examination, the examiner should next consider if the nature of the findings affects the quality of information produced by the company’s applications and systems. For instance, a finding that the company has inadequate continuity management controls may be significant. However, such a finding would be unlikely to affect information produced by the company’s IT systems. The IT examiner should assess ITGCs with regard to their effect on applications and data that become part of the financial statements or are used in making strategic business decisions.

The examiner may also consider performing additional procedures to determine the extent of the impact of specific findings. For instance, the company may have deficient user access controls. If the examiner is able to determine that in the period under examination, the key systems to the exam were not accessed inappropriately, the impact of the examination’s findings may not substantively affect the examination in later phases of the exam beyond the reporting of the finding. Given the complexity of evaluating the impact of individual findings and/or findings in the aggregate, communication of the results and mitigating factors in the IT Summary Conclusion Memorandum is important.

The IT examiner is cautioned against defaulting to the conclusion that the overall ITGC environment is ineffective, as such a conclusion could have a significant impact on the approach taken by the financial examiner on the remainder of the examination. For instance, in Phase 3, the examiner would be required to test manual or compensating controls for an identified risk if application controls cannot be relied upon and, therefore, may not be able to reach strong controls reliance. This may lead to additional detail testing in Phase 5 to fully address the identified risk. Additionally, the examiner would be required to test the accuracy and completeness of system generated reports, prior to those reports being utilized in addressing the identified risk in Phase 5.

The IT review process outlined up to this point, along with the corresponding documentation of results, may be performed on each examination, regardless of insurer size. These documents should also be appropriately presented and discussed with the examiner-in-charge to help facilitate a general understanding of the IT systems in place at the insurer and the impact that any findings may have on the ongoing exam.
6. Assist on Financial Examination

Following the completion of the IT review of the examination, the IT examiners involved in the IT review should remain available to assist in the completion of the financial portion of the examination. Such assistance could include data mapping, ACL testing, clarification of work performed during the IT review, assistance in completing the examination report and recommendation letter, and additional assistance in testing IT application controls to mitigate risks identified by the financial examination team.

Although the identification and assessment of risk mitigation strategies is the responsibility of the examination team as a whole, the IT review staff may have additional insight and experience that may be beneficial in identifying and testing IT controls associated with particular insurer applications. The involvement of IT review staff in this area of the examination may be especially beneficial when examining companies with well documented internal controls that may allow the examination team to reduce substantive testing.

Cybersecurity Considerations

As the examiner reviews an insurer’s operations, he or she may determine that the insurer has significant exposure to cybersecurity risks. The specific risk exposure for the insurer may vary based on volume, type of sensitive information (e.g. Social Security numbers, protected health information, personally identifiable health information, etc.) and the broad security environment in which the insurer is operating. The examiner should be mindful that the insurer is not required to use any particular IT security framework, nor are its IT security systems or controls required to include all of the components of any single or particular IT security framework or the examiner’s work program. The examiner should broadly consider not only the volume and type of sensitive information obtained, maintained or transmitted by the insurer, but also the laws and regulations to which the insurer is subject, as well as the size and complexity of the insurer’s operations and the nature and scope of its activities. All of these factors will influence the cybersecurity policies and systems and the IT security framework or frameworks that are appropriate for a particular insurer to effectively protect its sensitive information. As a result, responding to a particular insurer’s risk will require judgment by the examiner in tailoring the use of existing Handbook guidance. In these situations, examination teams should review the insurer’s risk mitigation strategies and/or controls that identify cybersecurity risks to protect against and detect cybersecurity incidents, and respond to and recover from cybersecurity incidents when they do occur.

When assessing the level of an insurer’s cybersecurity controls/processes, the examiner should take into account the distinction between the roles of the insurer’s board of directors and its senior management. The examiner should recognize that, while it is the role of the board to understand and oversee the insurer’s cybersecurity policies, systems and controls, it is the role of its senior management to implement the insurer’s cybersecurity policies and to ensure the performance and outcomes of the insurer’s risk mitigation strategies and controls are appropriate. Strategies and controls should identify, protect against, and detect cybersecurity incidents, as well as allow the insurer to respond/recover from such incidents. Each of the primary information security functions are described below:

- **Identify** - The identification of cybersecurity risks is important in helping the organization understand the best way to deploy its limited resources. Internal risk assessment is crucial for organizations to understand constantly evolving risks. Participation in information networks, though not required, is likely to enhance understanding of risks. In a robust control environment, insurers devote resources to a risk assessment process that includes some amount of management/board involvement, appropriate to the distinct roles of the board and senior management, as well as a sufficient level of technical expertise to ensure that issues are well understood and responded to appropriately.

- **Protect** - Protection is an important element in the overall strategy for any risk and cybersecurity is no exception. A robust risk mitigation strategy may include a combination of strong policies, system and
network access controls, and data security protection (e.g. data-at-rest, in use, in transit, and in storage are protected, etc.), as appropriate to the broad security environment in which the insurer is operating, including the volume and type of sensitive information obtained, maintained, or transmitted by the insurer, the security laws and regulations to which it is subject, its size and complexity, and the nature and scope of its activities. When applicable, controls should directly address risks presented by third party access to the insurer’s network, systems and data (including access by vendors, agents, brokers, third-party administrators [TPAs] and managing general agents [MGAs]). Training is also an important part of the insurer’s response to cybersecurity risks as many incidents occur due to improper execution of controls rather than the lack of controls. Control effectiveness is limited if employees are not provided adequate training to understand the objectives and importance of their assigned responsibilities.

- Detect - Insurers should also have a strong set of detective controls that enable timely identification and mitigation of threats to the organization. These may include anti-virus and anti-malware software as well as network monitoring and intrusion detection related processes and controls. Organizations may perform vulnerability scans and penetration tests to ensure that weaknesses in the protective/detective controls are identified and addressed.

- Respond and Recover - A review of the insurer’s incident response plan is an important consideration in the overall assessment of cybersecurity at an insurer. The response to a cybersecurity incident may leverage concepts from the insurer’s broader disaster recovery plan, but may also require unique considerations since recovering from a cybersecurity incident requires a different response than recovering from an environmental incident (e.g. fire, earthquake, tornado, etc.). The examiner should note, however, that network threats and incidents are not rare events like environmental incidents. It is also important that people with assigned responsibilities within the disaster recovery plan have the necessary background/training to perform the assigned duties. Insurers should include in their plan who they are required to contact in the event of a security incident (regulators, affected parties, etc.) and how public relations will be managed to limit the impact of the incident on the organization’s reputation. Importantly, response plans should be tested to ensure that the organization is ready to deploy the plan in the event of an actual incident.

When significant incidents do occur, it is important that the insurer performs a thorough post-remediation analysis and restores services that were affected as a result of the incident in accordance with the response plan. Examination teams may consider reviewing incident reports to consider how the organization has learned and adapted when security protocols are breached.

Depending on the insurer’s operations, there may be unique risks that the examiner identifies for further review. For instance, some insurers may leverage controls at service providers to provide assurance over cybersecurity risks. While this may be appropriate, insurers should be able to confirm that the service provider has appropriate risk mitigations strategies and controls in place and that appropriate protections are built into their service agreement (e.g. indemnification clauses, right to audit, technology errors and omissions insurance coverage, etc.) to address the risks presented to the insurer.

Although uncommon, if the examiner determines that the insurer has significant exposure to cybersecurity risk, the examiner may consider incorporating the use of a cybersecurity expert to assist in performing cybersecurity procedures. The specific risk exposure assessment for the insurer should be based on the IT examiner’s judgment and may consider the insurer’s line of business, the size and complexity of operations, known cybersecurity incidents; risks presented by third-party access to the insurer’s network systems and data, recent acquisitions, concerns about the controls in place to protect against, detect, respond and recover from cybersecurity incidents, or any other significant risk factors related to cybersecurity. Note that the decision to use additional expertise to address cybersecurity concerns should be based on the accumulation of circumstances and not necessarily due to any one situation discussed above.
The following insights may assist regulators and/or cybersecurity experts as they assess the strength of the insurer’s security program and therefore the risk that cybersecurity events present to the insurer. These insights are for informational purposes and are not intended to be requirements for insurers. Companies may be assessed by their individual risk profile and the organization’s risk strategy.

Events, Incidents and Breaches

As regulators engage insurers in discussion regarding past cybersecurity events, it may be useful to understand the difference between various types of events. A “cybersecurity event” can be defined as an event resulting in unauthorized access to, disruption or misuse of an information system or information stored on such an information system. Insurance companies may also use terms such as incidents and breaches or may distinguish between successful and unsuccessful events as they discuss their cybersecurity program. Regardless, regulators should gain an understanding of how the insurer defines its events and incidents. Insurers should consider both unsuccessful cybersecurity events and successful cybersecurity events (incidents), as appropriate. For instance, while an unsuccessful event may only access the company’s network without accessing sensitive information, it may still represent an event that the insurer should consider, correlate with other activity, and learn from to ensure security practices are enhanced, as appropriate. Timely, effective incident response is extremely critical in minimizing the impact of a cybersecurity incident.

Integration of Cybersecurity Risk into Enterprise Risk Management

As noted before, an insurer’s board and/or senior management often play a significant role overseeing a cybersecurity program. As an insurer’s cybersecurity risk increases, examination teams may want to scrutinize the integration of cybersecurity risk into the insurer’s Enterprise Risk Management. This may include consideration of the level of information provided to the board and/or senior management and the appropriateness of the insurer’s risk identification and assessment process. It may be appropriate for board and/or senior management to receive summary level information, but there should be a designated person with cybersecurity expertise that is responsible for developing the insurer’s response to mitigate cybersecurity risks. This person should be deemed the insurer’s cybersecurity risk owner and should receive information that is tailored to the insurer’s specific cyber risk exposures. For instance, use of third-party service providers, integration of acquired companies, legacy systems, etc. may all represent unique exposures that require specific consideration as mitigation strategies are developed.

Information Security Program

Note: The guidance that follows should only be used in states that have enacted the NAIC Insurance Data Security Model Law (#668). Moreover, in performing work during an exam in relation to the Model #668, it is important the examiners first obtain an understanding and leverage the work performed by other units in the department, including, but not limited to, market conduct-related work.

Specific requirements related to an insurance company’s information security program are included in Model #668. States that have passed the law may have an enhanced ability to encourage remediation of control issues in relation to issues identified during the exam. To the extent a state has adopted Model #668 and it is in effect at the time of the examination, examiners may consider tailoring the IT review to include consideration of the items below. As evidenced below, implementation of each control identified for consideration shall be done based on the insurer’s individual risk assessment:

Section 4-C of Model #668 details the requirements for performing a risk assessment. As part of a risk assessment, the licensee shall perform the following:

1. Designate one or more employees, an affiliate or an outside vendor designated to act on behalf of the licensee who is responsible for the Information Security Program.
2. Identify reasonably foreseeable internal or external threats that could result in unauthorized access, transmission, disclosure, misuse, alteration or destruction of nonpublic information, including the security of information systems and nonpublic information that are accessible to, or held by, third-party service providers.

3. Assess the likelihood and potential damage of these threats, taking into consideration the sensitivity of the nonpublic information.

4. Assess the sufficiency of policies, procedures, information systems and other safeguards in place to manage these threats, including consideration of threats in each relevant area of the licensee’s operations, including:
   a. Employee training and management.
   b. Information systems, including network and software design, as well as information classification, governance, processing, storage, transmission and disposal.
   c. Detecting, preventing and responding to attacks, intrusions or other systems failures.

5. Implement information safeguards to manage the threats identified in its ongoing assessment, and no less than annually, assess the effectiveness of the safeguards’ key controls, systems and procedures.

Based on this risk assessment, Section 4-D requires the licensee to execute the following:

1. Design its Information Security Program to mitigate the identified risks, commensurate with the size and complexity of the licensee’s activities, including its use of third-party service providers, and the sensitivity of the nonpublic information used by the licensee or in the licensee’s possession, custody or control.

2. Determine which security measures listed below are appropriate, and implement such security measures.
   a. Place access controls on information systems, including controls to authenticate and permit access only to authorized individuals to protect against the unauthorized acquisition of nonpublic information.
   b. Identify and manage the data, personnel, devices, systems and facilities that enable the organization to achieve business purposes in accordance with their relative importance to business objectives and the organization’s risk strategy.
   c. Restrict access at physical locations containing nonpublic information only to authorized individuals.
   d. Protect by encryption or other appropriate means all nonpublic information while being transmitted over an external network and all nonpublic information stored on a laptop computer or other portable computing or storage device or media.
   e. Adopt secure development practices for in-house developed applications utilized by the licensee and procedures for evaluating, assessing or testing the security of externally developed applications utilized by the licensee.
   f. Modify the information system in accordance with the licensee’s Information Security Program.
   g. Utilize effective controls, which may include multifactor authentication procedures for any individual accessing nonpublic information.
h. Regularly test and monitor systems and procedures to detect actual and attempted attacks on, or intrusions into, information systems.

i. Include audit trails within the Information Security Program designed to detect and respond to cybersecurity events and designed to reconstruct material financial transactions sufficient to support normal operations and obligations of the licensee.

j. Implement measures to protect against destruction, loss or damage of nonpublic information due to environmental hazards, such as fire and water damage or other catastrophes or technological failures.

k. Develop, implement and maintain procedures for the secure disposal of nonpublic information in any format.

3. Include cybersecurity risks in the licensee’s ERM process.

4. Stay informed regarding emerging threats or vulnerabilities, and utilize reasonable security measures when sharing information relative to the character of the sharing and the type of information shared.

5. Provide its personnel with cybersecurity awareness training that is updated as necessary to reflect risks identified by the licensee in the risk assessment.

Review section 3 of the Model #668 for legal definitions of relevant and commonly used terms. For purposes of the exam process, licensees include, but are not limited to, insurance companies. Model #668 also covers the topics of board of directors oversight, third-party service providers, program adjustments, incident response plan, and the annual certification to the commissioner of the domiciliary state. Review Model #668 language for further insights on the topics above.

Evaluating Employee Training / Security Awareness Programs

Employees often represent the front line of any strong security program. However, without proper training, employees may also represent vulnerability in the company’s defense program. Therefore, strong security awareness training can help in mitigating the risk presented by phishing e-mails and other social engineering attacks. Strong security awareness training may be characterized by:

- Use of real world examples to help users be able to identify phishing e-mails;
- Use of phishing emails sent to the user community by the insurers internal security specialists or security vendor to measure effectiveness of user training;
- A clear protocol that provides employees help in identifying and reporting phishing e-mails; and
- Elements of a training that are tailored to the employee’s specific roles, responsibilities, and access rights.

Since cybersecurity threats are constantly evolving, it is important to have a strong and up-to-date training regimen. Additionally, in a strong cybersecurity program trainings should be performed on a consistent and periodic (e.g. annually) basis to ensure the information reaching the employees is commensurate with the modern-day threats facing the company. As regulators evaluate the appropriateness of the program, they should consider whether the training is mandatory for all employees and whether it includes procedures and instructions for employees to follow...
in the event that the employee has a good faith, fact-based belief that a breach or cybersecurity event may have occurred.

**Vulnerability Management**

In the most robust information security programs, companies understand that not all vulnerabilities can be eliminated, typically due to business needs or time and resources. However, companies should have an understanding and should inventory their identified vulnerabilities as well as have a plan to ensure vulnerabilities that can’t be eliminated are mitigated as much as possible. For instance, if the insurer is unable to confirm that a third-party service provider is able to secure their own access to the company’s information system, the company should ensure they monitor the service provider’s access to determine if improper activity occurs on the company’s network. As many vulnerabilities originate with a company’s patching practice, it is important that regulators obtain an understanding of the company’s patch management. Research suggests that in any given year, the majority of breaches have a root in a Common Vulnerability and Exposure (CVE) that often has been known and identified for several years. An insurer should maintain a strong practice of patch management, or at least a practice of understanding and mitigating existing vulnerabilities as an important part of a robust security program.

**Company Acquisitions**

Finally, in situations where a company has recently acquired/integrated another company, the IT examiner should also pay special attention to the procedures performed in integrating company systems. This is often when companies are most vulnerable to cybersecurity threats as controls are often in flux and mistakes in integration may create vulnerabilities that are not easily identified or remedied.

Exhibit C, Part Two (Instruction Note 3) includes specific mention of risk statements and sections of the exhibit that can be applied to ensure the examination has an appropriate response to identified cybersecurity risks.

Note that the findings identified through the review of the company’s cybersecurity control environment should be communicated to the financial examiner via the IT Summary Memo.

**Customization for Small Companies**

When conducting an IT review of a small company or a company with a non-complex IT environment, it is acceptable to limit the extent of test procedures performed. However, the examination must adhere to the six-step process outlined above. This includes obtaining the ITPQ responses from the insurer, completing a basic work program, and preparing a summary memo concluding on the results of the IT review and its impact on the rest of the examination.

The most significant area to be customized for small insurers is the IT work program. Regardless of size or complexity, some level of testing is required to be performed to verify the basic design and operating effectiveness of the insurer’s IT environment; however, the presentation of such work may vary. It is recommended that IT examiners perform some level of review for ITGCs in place within each domain of the COBiT Framework. This may be shown using a customized version of Exhibit C – Part Two, where a limited number of controls applicable to the insurer are populated and reviewed. In limited circumstances, as described below, IT examiners may bypass the utilization of Exhibit C – Part Two:

1. If the CPAs or the company’s internal audit function (if deemed independent) have performed a review of ITGCs that sufficiently cover risks within each of the COBiT domains, the IT examiner may rely on such work without mapping or linking the work to a separate work program. However, the IT examiner must document their comfort with and planned reliance on the work performed.

2. When the IT environment is simplistic and the insurer utilizes purchased software programs from well-known vendors, IT examiners may choose to summarize, in memo format, the procedures performed for
each domain of the COBiT Framework. However, before determining that it is appropriate to bypass the utilization of Exhibit C, IT examiners should consider whether the company has made significant modifications to the software being used, as modifications may impact the software’s reliability. In situations where significant modifications have been made and continue to be made, IT examiners should utilize Exhibit C – Part Two to document a consideration of risks relating to change management.

---Detail Eliminated to Conserve Space---
EXHIBIT C
IT REVIEW STANDARD SUMMARY MEMORANDUM

A summary memorandum should be developed by the IT examiner to communicate the results of the IT review to the examiner-in-charge, or any other users. Some of the topics the IT examiner may want to consider incorporating into the summary memorandum are included in the illustration below, along with a brief description of information that could be discussed relating to each topic. This document should provide sufficient detail of the results of the IT review for use during the financial condition examination.

Salutation

This section should be in any format the state deems appropriate for its purposes. At a minimum, all states that are placing reliance on the IT review should be included in the distribution of this memo.

Background and Scope

This section should include an introductory paragraph identifying the following: companies under examination (domiciliary state and type may be helpful), the exam as-of date and time period under examination, where the work was performed, when the work was performed, and who performed the work, and the scope/topic of the work performed.

Summary of Control Environment

This section should provide a summary description of the IT environment and the general IT controls assessed during the IT review. This section should also provide a general description of the insurer’s overall processes and controls, including access controls, in place to protect sensitive information. This section should also include discussion of any breaches identified during the period under exam.

Work Performed

This section of the memo should provide an overview of the work performed to evaluate general IT controls throughout the IT review process, as well as the reliance placed on external sources (e.g., Model Audit Rule documentation/testing, Sarbanes-Oxley documentation, external audit work, etc.). If the results of external audit, third-party work, and/or cyber self-assessment tools are utilized to populate Exhibit C procedures, include a review of the external work in this section. This review could include an assessment of the source, scope, and robustness of the third-party work being utilized.

Summary / Detail of Findings (Including Cybersecurity Related Findings)

This section should provide a summary description of the findings that were identified while performing the IT review. These findings may include: areas that affect the company’s current operations; areas that will be relevant for future examinations; or areas of recommendation for the company to consider. The IT examiner should document the recommendation and impact of the finding on the financial examination and provide reference to the supporting detail located in the completed Exhibit C, Part Two (or similar document). The IT examiner should consider mitigating factors in their assessment of the impact that findings will have on the exam (additional testing may be required to assess the effectiveness of the mitigating factors). Findings that are sufficiently mitigated by other factors may be found to have a minimal ongoing impact for examination purposes. The following table(s) or similar format may be used in assessing findings, mitigating factors, and the overall impact on the exam.
Findings

<table>
<thead>
<tr>
<th>IT Review Finding</th>
<th>Recommendation for Company</th>
<th>Mitigating Factors</th>
<th>Impact on Financial Examination</th>
<th>Supporting Detail Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Conclusion/Results of IT General Control Review

This section should document the conclusion/results of the ITGC review. Based on the impact of the findings, the IT examiner should determine whether the ITGC environment is effective and would, therefore, indicate that IT risks have been sufficiently mitigated to allow for reliance on general IT controls and testing of application controls in Phase 3. If the ITGC environment is not effective, the examiner would be required to perform additional testing in later phases of the exam before relying on system-generated reports or controls in place at the insurer. The IT examiner should consider the impact of the findings on the exam in totality and consider the following when concluding between a generally effective or ineffective ITGC environment. In some instances, the overall ITGC environment may be deemed ineffective. In reaching this conclusion, the IT examiner should consider whether the findings outlined in the IT summary report:

- Are pervasive throughout the ITGC environment.
- Significantly impact the systems used in calculating and reporting financial results or the accuracy of information used in reaching major strategic decisions.
- Indicate deficiencies relating to management involvement and oversight of the IT strategy and direction.
- Are not alleviated by other mitigating factors.

If the impact of a finding is isolated to a point in time or a less significant system, the IT examiner may still determine a generally effective ITGC environment while listing the particular system(s) as an exception. The IT examiner should document the possible implications on the exam with the goal of helping the exam team adjust their testing approach around the affected area. For additional guidance regarding the conclusion of the ITGC review refer to Section 1, Part III, A – General Information Technology Review.

Note: The IT Examiner should provide a conclusion on the effectiveness of the ITGCs using the terminology prescribed by the Handbook (effective or ineffective). Using alternate language may leave the Financial Examiner in an unclear position on whether ITGC’s can be relied upon and may lead to inefficiencies later in the examination process.

Meeting with Examiner-In-Charge and Other Financial Examiners

This section should document the date and time of the meeting with the EIC and other examiners (e.g., examiners from other states participating in the financial examination) that was conducted to discuss the findings and results of the IT review.

Assistance on the Financial Examination

This section should identify the remaining areas of the financial examination in which the IT review team will be asked to provide assistance. This may include testing application controls in conjunction with Phase 3 of the risk-focused examination, performing data mapping or ACL testing, and/or assisting with drafting the examination report and/or management letter.
**Completed Exhibit C, Part Two (or Similar Document) and Supporting Documentation**

A completed IT Review Work Program should be referenced here and provided to the EIC. Detail findings should be noted within the work program and referenced in the “Detail of Findings” section above.
The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met via conference call Nov. 14, 2019. The following Technical Group members participated: Susan Bernard, Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Cindy Andersen (IL); Shannon Schmoeger (MO); Justin Schrader (NE); Colin Wilkins (NH); John Sirovetz (NJ); Tracy Snow (OH); Joel Sander (OK); Melissa Greiner (PA); Pat McNaughton (WA); and John Litweiler (WI).

1. Adopted Minutes from its Sept. 12, Conference Call

The Financial Examiners Handbook (E) Technical Group met via conference call Sept. 12 and took the following action: 1) adopted salary range guidelines for inclusion in the Financial Condition Examiners Handbook (Handbook); 2) adopted revisions Handbook guidance to emphasize the importance and timing of interviews; 3) adopted a new template for interviewing a chief marketing officer; 4) exposed Handbook guidance related to troubled insurance companies, management letters, Exhibit V – Overarching Prospective Risk Assessment, and Exhibit AA – Summary Review Memorandum; 5) received an update on the status of the examination repository updates; and 6) received an update from IT Examination (E) Working Group on the status of its projects.

Mr. Schrader made a motion, seconded by Ms. Greiner, to adopt the Sept. 12 conference call minutes (Attachment Five-A). The motion passed unanimously.

2. Adopted Handbook Guidance

a. Troubled Insurance Companies

Ms. Bernard said NAIC staff developed proposed revisions to incorporate considerations when examining a troubled or potentially troubled insurance company in response to a referral from the Financial Analysis (E) Working Group. The revisions provide guidance regarding specific key elements from the Troubled Insurance Company Handbook, including communication expectations for companies that are troubled or potentially troubled, and pre-receivership considerations. Ms. Bernard said the referral also requested consideration of guidance regarding the priority rating framework. However, because existing guidance addresses the priority framework, no additional changes were made. Ms. Bernard said no comment letters were received regarding this proposed change.

b. Management Letters

Ms. Bernard said NAIC staff developed proposed revisions to clarify to whom the management letter should be provided and what information should be provided therein. Ms. Bernard said that a comment letter was received from interested parties during the exposure period. The comment letter suggested that the circumstances in which a management letter is provided to a level beyond the legal entity be more clearly defined.

Ms. Bernard said that the revisions were amended as follows: 1) indicate that depending on the issues to be communicated, it may be appropriate to prepare two different management letters: one to be provided at the legal entity level and one to be provided to a level above the legal entity; and 2) additional guidance for determining which findings would be appropriate to communicate to a higher level within the organizational structure. Ms. Bernard said that the additional guidance describes several considerations to be used when determining the significance of both financial reporting matters and other-than-financial-reporting matters.

These considerations may include: 1) the level at which corrective measures can be taken; 2) whether the findings meet the definitions for significant deficiency or material weakness; 3) the likelihood of the finding having a significant adverse impact on the insurer’s overall condition; 4) whether a conflict of interest exists; and 5) whether management has sufficient understanding and capacity to anticipate and respond to changing conditions.

Tom Finnell (America’s Health Insurance Plans—AHIP) said that it appears that amendments made to the exposure draft, based on the comments provided in the interested party comment letter, appear to capture the spirit of the interested party
feedback. Mr. Finnell requested that the guidance explaining that two management letters may be prepared be moved after the paragraph describing how to determine the significance of the findings. Mr. Finnell suggested that it would be clearer to discuss the difference in issues to be reported and because of that, it may be appropriate to prepare two different letters. There were no objections, and therefore, the suggestion was accepted and incorporated into the proposed revisions.

Mr. Finnell asked if it was common for there to be a conflict of interest with the management at the legal entity level that would necessitate sending a management letter to a level above the legal entity. Ms. Bernard said that there are circumstances when many or all individuals of the management team are also members of the board of directors. In this case, it would be beneficial to be able to send the management letter to a higher level within the organization to ensure independence in considering the communication provided and action taken, if needed. Joe Zolecki (Blue Cross Blue Shield Association—BCBSA) agreed with commentary provided by Mr. Finnell.

Mr. Arfanis requested that additional guidance be added to indicate that the content and recipient(s) of the management letter(s) is at the discretion of the examination team. There were no objections, and therefore, the suggestion was accepted and incorporated into the proposed revisions.

Ms. Bernard said that enhancements will be added to the Financial Exam Electronic Tracking System (FEETS) to all regulators to proactively share the management letter with each other. Changes are expected to be implemented early 2020. Mr. Snow asked if management letters shared in FEETS will be kept confidential. Ms. Henning said that FEETS is a regulator-only tool. Furthermore, it is expected that a management letter is uploaded to FEETS or an explanation is provided regarding why a management letter was not uploaded. Additional language is anticipated to be added to indicate that the viewer should contact the domestic regulator with any questions or to request a management letter if it is not uploaded to FEETS. Mr. Snow asked if all FEETS users would have access to view the management letter. Ms. Henning said that all FEETS users have access to view all information in the application.

c. **Exhibit V and Exhibit AA Enhancements**

Ms. Bernard said NAIC staff developed proposed revisions to Exhibit V – Overarching Prospective Risk Assessment and Exhibit AA – Summary Review Memorandum to enhance the documentation prospective risk assessment. Changes include: 1) revised column headings to clarify the purpose of each column; 2) additional columns to align the assessment made on Exhibit V with the communication used on the SRM/IPS when transitioning information between exam and analysis; and 3) updated the examples shown on Exhibit V. Minor changes to Exhibit AA – Summary Review Memorandum were made to include definitions and considerations related to the trend and risk assessment level for identified risks. Ms. Bernard said no comment letters were received regarding this proposed change.

Mr. Arfanis made a motion, seconded by Ms. Andersen, to adopt the guidance related to 1) Troubled Insurance Companies; 2) Management Letters, as amended; 3) Exhibit V – Overarching Prospective Risk Assessment; and 4) Exhibit AA – Summary Review Memorandum (Attachment Five-B)

3. **Discussed 2019 Project Listing**

Bailey Henning (NAIC) said that most of the items on the project listing have been completed. Ms. Henning said that volunteers from the Technical Group have met to discuss updates to the reserves examination repositories and that work is ongoing. Ms. Henning said that the volunteers expect to wrap up their work and provide a recommendation to the Technical Group to consider in spring 2020. Ms. Henning also stated that the Technical Group will need to consider the impact of changes to the NAIC Credit for Reinsurance Model Law and Regulation (#785/786) on the guidance provided in the Handbook.

4. **Received an Update on IT Examination (E) Working Group Projects**

Mr. Romero informed the Technical Group that the IT Examination (E) Working Group recently adopted revisions related to: 1) language used when documenting the conclusions reached as a result of the information technology (IT) review; 2) considerations when using the work of third parties; and 3) considerations when using company-prepared cybersecurity self-assessments to supplement the IT review.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.
The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met via conference call Sept. 12, 2019. The following Technical Group members participated: Susan Bernard, Chair, and Laura Clements (CA); Richard Ford (AL); William Arfanis (CT); N. Kevin Brown (DC); Grace Kelly (MN); Levi Nwasoria (MO); Lindsay Crawford (NE); Colin Wilkins (NH); John Sirovetz (NJ); Joel Bengo (NV); Tracy Snow (OH); Jamille Jaffurs (OK); Melissa Greiner (PA); John Jacobson (WA); and John Litweiler (WI).

1. Adopted Handbook Guidance
   a. Salary Range Guidelines

Ms. Bernard said the Risk-Focused Surveillance (E) Working Group referred proposed revisions regarding salary range guidelines for the Technical Group to consider. The proposed salary range guidelines were developed based on a survey of the states, as well as research to understand compensation practices in similar job roles, such as public accounting, private industry and other areas of financial regulation.

To avoid causing undue burden to the states using the existing salary and per diem guidance within the Financial Condition Examiners Handbook (Handbook), the Working Group recommends that the existing guidance be retained, with explanatory language describing its purpose and expectations. The Working Group also recommends that each set of salary guidelines be maintained, with annual updates to the existing salary and per diem guidelines and biennial updates to the proposed salary range guidelines.

Ms. Bernard said no comment letters were received regarding this proposed change.

   b. Interviews

Ms. Bernard said NAIC staff developed proposed revisions to address a referral received in 2018 from the Risk-Focused Surveillance (E) Working Group regarding takeaways from the 2018 Exam Peer Review sessions. These revisions attempt to emphasize the importance of customizing questions that are asked during C-level interviews in examination planning. The proposed revisions also suggest that the chief risk officer be among the first C-level individuals to be interviewed, when possible, as the information obtained through that interview can help inform subsequent interviews. NAIC staff also developed a new template for interviewing a chief marketing officer. This template provides possible questions that the exam team may consider when conducting this interview.

Ms. Bernard said two comment letters were received regarding these proposed changes. Ms. Clements said the comment letter that California submitted suggested additional language to clarify that information obtained during each interview could be used to tailor subsequent interviews. Ms. Bernard said these suggestions were incorporated as friendly amendments.

A comment letter that Tom Finnell (America’s Health Insurance Plans—AHIP) submitted suggested additional language to clarify specific questions on the interview template for the chief marketing officer. These minor revisions were accepted as friendly amendments. Ms. Bernard said that other comments provided in the letter related to items already covered in other sections of the Handbook and, therefore, were not incorporated. Mr. Finnell thanked the Technical Group for considering the comment letter provided.

Mr. Arfanis made a motion, seconded by Mr. Nwasoria, to adopt the guidance related to salary range guidelines and C-level interviews (Attachment Five-A1). The motion passed unanimously.
2. **Exposed Handbook Guidance**

   a. **Troubled Insurance Companies**

   Ms. Bernard said NAIC staff developed proposed revisions to incorporate considerations when examining a troubled or potentially troubled insurance company in response to a referral from the Financial Analysis (E) Working Group. The proposed revisions provide guidance regarding specific key elements from the *Troubled Insurance Company Handbook*, including communication expectations for companies that are troubled or potentially troubled, and pre-receivership considerations. Ms. Bernard said the referral also requested consideration of guidance regarding the priority rating framework. However, because existing guidance addresses the priority framework, no additional changes were made.

   b. **Management Letters**

   Ms. Bernard said NAIC staff developed proposed revisions to guidance for management letters in response to a referral from the Chief Financial Regulator Forum. The proposed revisions clarify that there may be circumstances in which the insurance department provides the management letter to a different level within the holding company structure. Situations when this may be appropriate include when the examination team wishes to issue a group management letter covering multiple entities and when a board of directors with members independent of management exists above the legal entity level.

Ms. Bernard said the referral also requested that the Technical Group consider whether the management letter issued as part of a financial examination should be proactively shared among the states using the Financial Exam Electronic Tracking System (FEETS). Ms. Bernard said that FEETS implementation is pending and asked NAIC staff to continue to monitor the status of implementation.

   c. **Exhibit V – Prospective Risk Assessment and Exhibit AA – Summary Review Memorandum**

Ms. Bernard said the referral regarding 2018 Exam Peer Review takeaways also suggested that the Technical Group consider the format of Exhibit V – Prospective Risk Assessment. The referral indicated that peer review attendees thought the format of the exhibit created confusion and did not appropriately emphasize the importance of the risks that should be addressed using the exhibit. Proposed revisions to the exhibit include revising the columns and column headers to more clearly indicate the expected documentation and aligning the exhibit more closely with the Summary Review Memorandum (SRM) and the Insurer Profile Summary (IPS). The examples provided in the Exhibit were also updated to reflect the proposed format changes. Ms. Bernard said that proposed guidance for the second part of the exhibit clarifies that common areas of concern are included for reference only. Examiners are not required to included risks for each common area of concern, nor are they required to provide a rationale for not identifying a risk for each area of concern. Proposed revisions also include using the Own Risk and Solvency Assessment (ORSA) filing, when available, as a source for identifying potential prospective risks. Ms. Bernard said that Exhibit AA – Summary Review Memorandum was revised to include definitions and considerations for determining the trend and risk assessment level of identified risks.

Mr. Finnell said that examiners may need to engage a specialist to assist in performing some of the procedures that are illustrated within the examples on Exhibit V. He also said that examiners should attempt to test mitigation strategies in place at the insurer before conducting independent testing, as some of the testing can become very specialized and require additional resources. Ms. Bernard agreed that examiners are expected to first gain an understanding of the mitigation strategies and controls in place, and only perform additional independent testing if warranted based on the risk assessment.

The Technical Group agreed to expose the proposed revisions to: 1) Troubled Insurance Companies; 2) Management Letters; 3) Exhibit V – Overarching Prospective Risk Assessment; and 4) Exhibit AA – Summary Review Memorandum for a 30-day public comment period ending Oct. 14.

3. **Received an Update on Reserves/Claims Handling Repository Project**

Bailey Henning (NAIC) said that a group of volunteers from the Technical Group has now reviewed two of the three reserves/claims handling repositories, using input provided by the Life Actuarial (A) Task Force, the Health Actuarial (B) Task Force and the Actuarial Opinion (C) Working Group. She said the volunteers plan to meet at the end of September to discuss the remaining repository. After each repository has been reviewed, the volunteers expect to meet at least once more before providing a recommendation of changes for the Technical Group to consider. Miguel Romero (NAIC) said that it is possible
that this project may extend into 2020.

4. **Received an Update on IT Examination (E) Working Group Projects**

Mr. Romero informed the Technical Group that the IT Examination (E) Working Group plans to meet via conference call Sept. 26 to consider adopting revisions related to: 1) language used when documenting the conclusions reached as a result of the information technology (IT) review; 2) considerations when using the work of third parties; and 3) considerations when using company-prepared cybersecurity self-assessments to supplement the IT review. Mr. Romero said that due to the technical nature of the subject matter, the IT Examination (E) Working Group has authority to adopt guidance directly into the Handbook. Therefore, anybody wishing to be part of the discussion should attempt to participate in the upcoming conference call.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.
II. EXAMINATION PERSONNEL

This section of the Handbook addresses the following subjects:

A. Examiner Definitions and Qualifications
B. Authority and Responsibility of the Examiner-In-Charge
C. Duties and Responsibilities of Non-Domestic Participating Examiners
D. Salary and Per Diem Guidelines
E. General Salary Guidelines

Note: The guidance in A. - D. was initially developed for zone examinations but is also used as a reference point for states in setting compensation for their Department. In contrast, the guidance in E. General Salary Guidelines is intended to provide flexibility in setting salary expectations for purposes of all staff performing Risk-Focused Surveillance.

-----------------------------------------------Detail Eliminated to Conserve Space-------------------------------------------

E. General Salary Guidelines

The compensation guidelines in this section of the Handbook were developed in recognition of the importance of compensation particularly as it affects an Insurance Department’s ability to hire and retain well-qualified employees. The guidelines were developed based on surveys of examiner pay across Insurance Departments, as well as external comparisons to other similar professions, including other financial regulators, internal auditors and external auditors. In using the information below, the following are brief descriptions of the associated positions listed:

Financial Examiner
Financial Examiners are responsible for performing tasks in accordance with the Risk-Focused Examination approach under the supervision of the Examiner-In-Charge. The Financial Examiner is responsible for investigating and analyzing insurance company risks, policies, procedures, and controls in an attempt to assist the Insurance Department in its responsibility to assess and monitor the current financial condition and prospective financial solvency of insurance companies.

Senior Financial Examiner
Senior Financial Examiners are responsible for performing tasks in accordance with the Risk-Focused Examination approach under the supervision of the Examiner-In-Charge. The Senior Financial Examiner is responsible for investigating and analyzing insurance company risks, policies, procedures, and controls in an attempt to assist the Insurance Department in its responsibility to assess and monitor the current financial condition and prospective financial solvency of insurance companies. Senior Financial Examiners may also be asked to provide guidance and support to Financial Examiners and may assist in all areas of examinations, as requested.

Examiner-In-Charge (EIC)

EIC’s are responsible for the execution of the Risk-Focused Examination approach. The EIC is responsible for ensuring the exam approach is appropriately designed to investigate and analyze insurance company risks, policies, procedures, and controls in an attempt to assist the Insurance Department in its responsibility to assess and monitor the current financial condition and financial solvency of insurance companies. The EIC provides guidance to Financial Examiners and Senior Financial Examiners, conducts detailed reviews of examiner work and ensures a proper flow of communication with company management and Department officials, as appropriate.

Supervising & Assistant Chief Examiner

A Supervising or Assistant Chief Examiner is responsible for supervising EIC’s on examinations. This person provides input on technical matters, acts as a reviewer of the work performed by the EIC and ensures that examination work is an appropriate execution of the Risk-Focused Examination approach.

Chief Examiner

This position is responsible for overall examination staff performance & development, the ongoing scheduling of financial examinations and general communications regarding the examinations of regulated entities. This position should work under the general direction of a Commissioner or Deputy Commissioner and should oversee a consistent Risk-Focused Examination process across the Department.

Use of Salary Tables:

The salary tables included below generally require certain adjustments before being applied by a State or Jurisdiction in setting examiner compensation. Factors to consider in setting examiner compensation include:

- Specific job responsibilities and expectations
- Location or market-based adjustments
- Complexity of industry
- Specialization requirements (e.g. Reinsurance/Investment/IT Specialist)
- Travel expectations (including consideration of amount of travel and in consideration of work from home or other similar arrangements)
- Retirement and benefits (not included in table)

Suggested Salary Ranges:

Note: The data above is based on a national average and is not appropriate to be applied to all locations without consideration of market and cost of living variances.
In Phase 1 of a risk-focused examination, key activities will be confirmed or identified using background information gathered on the company from various sources. Some of this information will already have been available in the department prior to the initial planning meeting, or can be obtained from the company’s internal audit department or external auditors. A Phase 1 goal is to gather any additional or current information necessary to begin a risk-focused examination. Sources of information may include organizational charts, filings required by sections 302 and 404 of the Sarbanes-Oxley Act of 2002 (where applicable), interviews with senior management, or other publicly available information.

To ensure the appropriate risk-focused examination scope, it is important to identify the key functional activities (i.e., business activities) of the company. Information gathered by understanding the company, the company’s corporate governance structure, and assessing the company’s audit function will form the basis for determining key activities.

Essential to executing the risk-focused surveillance process is interviewing executive management and possibly board members of the company to identify key activities and risks. Risks identified through these interviews and each part of Phase 1 should be documented on Exhibit CC – Issue/Risk Tracking Template or a similar document to ensure they are carried through the remaining phases of the examination. Examiners and company officials should attempt to maintain an ongoing dialogue to assist the examiners in understanding the company and identifying key functional activities. It is also critical for the examination team to understand and leverage the company’s risk management program; that is, how the company identifies, controls, monitors, evaluates and responds to its risks. For companies required to submit an Own Risk and Solvency Assessment (ORSA) summary report to the lead or domestic state, the report provided by the company may be a useful tool in this evaluation. The discipline and structure of risk management programs vary dramatically from company to company. “Best practices” are emerging for risk management programs and more companies are appointing chief risk managers whose responsibilities go well beyond the traditional risk management function (the buying of insurance). The Committee of Sponsoring Organizations (COSO) has published internal control standards that are widely-held, although not required, in many industries and has released an Enterprise Risk Management Integrated Framework, which is anticipated to be incorporated by several entities, as well as guidance to apply the integrated framework and internal control standards to small public companies. The examination team should evaluate the strength of the company’s risk management process, which can include a “hind-sight” evaluation of why a particular negative surprise or event occurred (i.e., why was it not identified in the current risk management program of the company).

One crucial aspect to a successful planning process is the tailoring of planning procedures to the company under review. As the exam team learns about risks, subsequent planning procedures should be tailored to ensure they provide further information on the risks already identified. For instance, if after meeting with the Department’s analyst, the examination identifies a risk related to the company’s planned expansion of business into new jurisdictions, subsequent procedures performed in planning (i.e. C-Level Interviews, review of company ERM, etc.) should be tailored to include consideration on the risk.

There are five parts to Phase 1 that are key components of performing a risk assessment, the results of which drive the direction of the risk-focused examination: (1) Understanding the Company; (2) Understanding the Corporate Governance Structure; (3) Assessing the Adequacy of the Audit Function; (4) Identifying Key Functional Activities; and (5) Consideration of Prospective Risks for Indications of Solvency Concerns. The Risk Assessment Matrix (Exhibit K), the tool developed to serve as the central location for the documentation of risk assessment and testing conclusions, should be updated with the identified key activities of the company after the
examiner is able to obtain an understanding of the company and corporate governance structure. The five parts of Phase 1 are discussed as follows:

A. Part 1: Understanding the Company
B. Part 2: Understanding the Corporate Governance Structure
C. Part 3: Assessing the Adequacy of the Audit Function
D. Part 4: Identifying Key Functional Activities
E. Part 5: Consideration of Prospective Risks for Indications of Solvency Concerns

A. Part 1: Understanding the Company

Step 1: Gather Necessary Planning Information

Meet with the Assigned Analyst

Gathering information is the first step in gaining an understanding of the company. While general information may have been requested from the company during examination pre-planning through use of Exhibits B and C, the examination team should determine what other information is already available to the department before making additional information requests. To do so, the examination team should meet (in-person or via conference call) with the assigned financial analyst (and/or analyst supervisor) prior to requesting additional information for use in examination planning. An email exchange, in and of itself, is not deemed sufficient to achieve the expectation of a planning meeting with the assigned analyst.

In addition to gaining an understanding of the information already available to the department, the meeting with the analyst should focus on the company’s financial condition, prospective risks and operating results since the last examination. The analyst should be asked to discuss risks and concerns highlighted in the Insurer Profile Summary (IPS)/Group Profile Summary (GPS) and to describe the reasons for unusual trends, abnormal ratios and transactions that are not easily discernible. The analyst may also request specific matters or concerns for verification and review during the financial examination. To summarize the input received from financial analysis, the examination team should document risks identified by the analyst for further review on the examination and post significant items to Exhibit CC – Issue/Risk Tracking Template for incorporation into the examination process. When possible, the examiner should meet with the department analyst prior to scheduling “C”-Level interviews with company personnel. Meeting with the analyst can help the examiner gain a basic understanding of the company, which can then be used in planning and scoping the interview process and subsequent planning procedures.

If the company under examination has redomesticated since the prior exam, the department analyst will typically take a primary role in communicating with the prior domestic regulator in order to adequately transfer regulatory insights accumulated over years of oversight. The department analyst would then share these insights with the examiner in charge during the examiner/analyst meeting during the planning phase of the examination. This communication may include a discussion of the Insurer Profile Summary and key risks, the supervisory plan, the former regulator’s assessment of Senior Management, the Board of Directors and corporate governance, and other relevant solvency monitoring information. If after meeting with the analyst the examiner requires additional information or further clarification, the examiner may consider contacting the former regulator.

The avoidance of redundancy between analysis and examination processes is of critical importance for an enhanced and more efficient overall regulatory process that will benefit both regulators and industry. An efficient regulatory process fosters clarity and consistency, which results in a better understanding of how individual insurers operate across the different aspects of the regulatory spectrum, including the areas of financial examination, financial analysis and other solvency-related regulation.

By utilizing information and input provided by the analysts, the examination team can request updates to existing information available to the department rather than duplicating requests for information already provided to the
analyst. This process eliminates the need for examiners to redevelop the financial analysis information in the examination workpapers so that examination resources may instead be used to update the information while on-site at the insurer. Similar to the benefits of reviewing and using external or internal auditor workpapers, examiners use of detailed financial analysis workpapers in the examination files should result in examinations being more efficient and streamlined.

B. Part 2: Understanding the Corporate Governance Structure

This section’s purpose is to assist the examiner in documenting the understanding and assessment of an insurer’s board of directors and management. A favorable overall assessment of governance does not, by itself, serve to reduce the scope or extent of examination procedures; rather, specific governance controls need to be assessed for their adequacy in managing specific risks, in conjunction with other controls designed to manage the same. See Exhibit M – Understanding the Corporate Governance Structure for additional guidance in understanding the corporate governance structure of the company. When completing this assessment, the examiner should utilize the Corporate Governance Annual Disclosure (CGAD), which is required to be filed with the Department of Insurance (DOI) annually in accordance with Corporate Governance Annual Disclosure Model Act (#305) and Corporate Governance Annual Disclosure Model Regulation (#306). The CGAD provides a narrative description of the insurer’s or insurance group’s corporate governance framework and structure and may enhance examination efficiencies when leveraged. Examiners should inquire of the financial analyst to gain an understanding of and leverage the analyst’s work in assessing the company’s corporate governance.

Management

Interviews with senior management at the “C” level should be used at the beginning of the examination or at any time during the examination as necessary. “C” level management may include the CEO (Chief Executive Officer), CFO (Chief Financial Officer), COO (Chief Operating Officer), CIO (Chief Information Officer), CRO (Chief Risk Officer), Controller, Chief Actuary or other appropriate executive-level management. Examiners should consider the size of the organization in determining which individual(s) would provide the examiner with the most beneficial information regarding the company for the stage of the examination. This interview process is a key step in the “top down” approach, beginning with senior management and then drilling down through the various levels of management to obtain a thorough understanding of the organization to assist in scoping the examination. Topics of these high-level interviews should include, but not be limited to (1) corporate strategic initiatives; (2) external/environmental factors of concern to management; (3) political/regulatory changes that might affect business; (4) competitive advantages/disadvantages; (5) management of key functional activities; and (6) how management establishes and monitors the achievement of objectives.

The examiners should consider which individuals should be interviewed and the sources of data to be evaluated to complete each planning step. The examiners should also consider the order in which the interviews are conducted as information gleaned from certain “C”-level individuals can assist in providing additional information to tailor subsequent interviews. In order to select the individuals to interview, the examiners should obtain an organizational chart from the company and compile a list of potential interviewees. In addition to accounting department personnel, the interview list should include managers of key functional business units (depending on the company structure, lines of business or revenue centers might be more appropriate). Because all companies have different organizational structures, it is important that the interview schedule and the examination plan match the company. Examiners should form their objectives, or what they want to get out of the interview, prior to conducting the interview. In order to accomplish this, the examiner should have a basic knowledge of the job function of the person that they are interviewing. This will allow the examiner to ask relevant questions and get the most information possible in one setting, as it may be difficult to coordinate multiple contacts with a “C”-level interviewee or a member of the board of directors. The information contained in Exhibit Y – Examination Attachment Five-A1 Examination Oversight (E) Task Force 12/8/19 © 2019 National Association of Insurance Commissioners 3
Interviews provides some basic questions that an examiner may consider when conducting “C”-level interviews. Exhibit Y, however, does not provide examples for functional positions at the insurer (e.g., claims handling, sales and marketing, etc.). These functional interviews are typically best documented in a narrative format and may be done in conjunction with walkthroughs or other control documentation procedures. Exhibit CC – Issue/Risk Tracking Template or a similar document may should be used in conjunction with Exhibit Y to document significant risks or concerns accumulated during the interview process.
EXHIBIT Y
EXAMINATION INTERVIEWS

Overview

Interviews are a useful examination tool to gather information about key activities, risks and risk mitigation strategies. Employees can also provide information on fraudulent activity within the company. It is critical for the examination team to understand and leverage the company’s risk management program; i.e., how the company identifies, controls, monitors, evaluates and responds to its risks. The discipline and structure of risk management programs vary dramatically from company to company. Interviews should be performed in the early stages of the examination so that regulators can adjust their procedures accordingly. An examiner can perform alternate, additional or fewer detail and control tests as a result of interviews with the company.

Interviews should be conducted with key members within management of the company, as well as members of the board of directors, audit committee, internal/external auditors and any other employees deemed necessary. These interviews can be used at the beginning of the examination or at any time during the examination, as necessary. In order to conduct a productive interview, the examiner should have However, a basic understanding of the company is essential to obtain prior to conducting commencing the interviews process. When possible, the examiner should meet with the department analyst prior to scheduling interviews with company personnel to assist in gaining this basic understanding. Examiners should continue to tailor each interview as information is learned about the company throughout the planning process.

Examiners should consider the size and complexity of the organization in determining which individuals to interview. The interview process is a key step in the “top–down” approach, beginning with senior management and then drilling down through the various levels of management to obtain a thorough understanding of the organization to assist in scoping the examination. In order to select the individuals to interview, the examiners should obtain an organizational chart from the company and compile a list of potential interviewees. Interviews of board members and senior company management should be conducted by examiners who possess the appropriate background and training. The examiner should also carefully consider the order of interviews as information gleaned from certain “C”-level individuals can inform subsequent interviews. For example, the Chief Risk Officer (CRO) is uniquely positioned to have an awareness of the various risks facing the company from multiple perspectives. The information obtained through an interview with the CRO can help the examiner have a greater understanding of the key risk areas of the company, which can then be used to further customize subsequent interviews as well as determine which additional members of management should be interviewed. While it can be challenging to coordinate the interview schedule with company personnel at this level, examiners are encouraged to attempt interviewing the CRO as early in the interview process as possible.

Interviews should be performed in person, if possible. This allows the interviewer to receive both verbal and nonverbal communication. The interviews should be kept confidential when possible; however, if a significant fraud or other pertinent issue was discovered through the interviews, the regulator has a duty to report the conflict to the appropriate officials.

The examiner should conduct the interview in a location where both parties are free to talk openly. The examiner should ask relevant questions, with the most general questions posed first as building blocks for additional conversation. The examiner may want to consider alternating between open-ended questions (e.g., “Explain to me how this process works?”) vs. closed-ended questions (e.g., “How many claim processors do you have in your department?”) to obtain the information. Open-ended questions are generally better suited for explanation and processes, while closed-ended questions are better suited to obtain concise information. The examiner should be prepared, listen carefully and focus on the speaker’s entire message, as well as the non-verbal cues expressed during the interview process.
Significant risks and concerns identified through completion of the examination interviews should be adequately addressed within the examination workpapers. As such, all significant risks identified by the examiner during the interview process should be recorded in a central location for tracking purposes, such as Exhibit CC – Issue/Risk Tracking Template or a similar document.

Because information obtained from the interview serves as important evidence in the examination process, the examiner should develop techniques to plan, conduct, document and consider interview information. Although interviews play a key role in gaining useful insight into company operations, interviews alone are not sufficient exam evidence and should be corroborated with other exam documentation to evaluate the accuracy of the information.

---Detail Eliminated to Conserve Space---

Sample Interview Questions for the Chief Marketing Officer

Experience and Background
  • How has your professional experience and background prepared you to be the Chief Marketing Officer for this company?

Duties and Responsibilities
  • Briefly describe your duties and responsibilities.
  • How does management establish objectives, and how is the achievement of those objectives monitored?
  • How is your performance evaluated? Is it based on the performance of the company?
  • How do you evaluate your staff?

Reporting Structure
  • Describe the reporting structure of the marketing function, including to whom you report, as well as those reporting to you.
  • Is there a marketing committee?
    - How is it organized and who are its members?
    - How are differences resolved?
  • Describe your interaction with the CFO/CEO/BOD.
    - Do you provide them with any specific reports?

Ethics
  • Does the company have a code of conduct/ethics in place? Is it enforced? Approved?
  • Explain management’s commitment to ethics and explain how that commitment is conveyed to employees.
  • Do you have any knowledge or suspicion of fraud within the company?

Risk Areas
  • How are key risks faced by the company identified and monitored?
    - What are the key prospective risks the company faces?
  • How are these risks communicated to senior management and throughout the company?
  • What is the current marketing strategy? Describe any changes over the past five years.
Risk Mitigation Strategies (Internal Controls)
- What is the formal procedure for reporting on risk management to senior management and the board?

Corporate Strategy
- Give a general description of the company’s marketing philosophy.
- Where is the company headed strategically? What type of plan is in place to implement this strategy? How does the strategy impact activities within your department?
- Explain strengths or weaknesses of the company, as well as opportunities and threats the company is facing, and how the company’s marketing strategy and tactics is responding to each.
- Explain what types of key tools or reports you utilize to evaluate marketing decisions.
- What key measures do you assess to evaluate the company’s performance and competitive position?

Other Topics
- Explain any significant turnover in the marketing department.
- Explain the distribution channels used by the company.
- What is the compensation/commission structure for each distribution channel?
III. GENERAL EXAMINATION CONSIDERATIONS

This section covers procedures and considerations that are important when conducting financial condition examinations. The discussion here is divided as follows:

A. General Information Technology Review
B. Materiality
C. Examination Sampling
D. Business Continuity
E. Using the Work of a Specialist
F. Outsourcing of Critical Functions
G. Use of Independent Contractors on Multi-State Examinations
H. Considerations for Insurers in Run-Off
I. Considerations for Potentially Troubled Insurance Companies
J. Comments and Grievance Procedures Regarding Compliance with Examination Standards

I. Considerations for Potentially Troubled Insurance Companies

A troubled insurance company is broadly defined as an insurance company that is either in or is moving towards a financial position that subjects its policyholders, claimants and other creditors to greater-than-normal financial risk, including the possibility that the company may not maintain compliance with the applicable statutory capital and/or surplus requirements (Troubled Insurance Company Handbook). The “Prioritization Framework” as discussed in the NAIC’s Financial Analysis Handbook identifies troubled companies as Priority 1.

The Troubled Insurance Company Handbook provides a number of insights to assist in enhancing a state’s monitoring and surveillance, and it outlines several regulatory actions available to Departments of Insurance (DOIs). In situations in which an examination is being planned for a troubled insurance company (i.e., Priority 1 company), the NAIC’s Accreditation Program Manual (Part B3: Department Procedures and Oversight) indicates that “the department should generally follow and observe procedures set forth in the NAIC Troubled Insurance Company Handbook.” However, regulators may also consider leveraging the insights in the Troubled Insurance Company Handbook for Priority 2 companies, which are defined in the Financial Analysis Handbook as “high-priority insurers that are not yet considered troubled but may become so if recent trends or unfavorable metrics are not addressed.”

The following guidance provides an overview of key elements to consider during an examination. Additional insights to assist in enhancing a state’s monitoring and surveillance of troubled insurance companies, including regulatory actions available to Departments of Insurance (DOIs), can be found in the Troubled Insurance Company Handbook.

Communication Expectations

If an examination is planned or ongoing for a troubled or potentially troubled company, or through the course of the examination the domestic regulator elevates the priority level of the company to troubled or potentially troubled, it is critical that the domestic regulator communicates proactively and timely with other impacted state insurance regulators. It is also important that the non-domiciliary state communicate with the domestic regulator prior to taking any action against the insurer. This can be particularly important if the corrective action plan implemented by the domestic regulator depends on continued operations of the insurer in other states. Depending on the circumstances, it may also be appropriate to communicate certain information with other parties, such as other regulatory bodies, company management, and state guaranty funds. Establishing a coordinated
communication system among the relevant parties will help facilitate the domestic regulator’s surveillance of the troubled company.

The timeliness of communication with other regulators should be commensurate with the severity of the event and should include information about the troubled company’s situation and the proposed corrective action. It may also include a request for other jurisdictions to assist in implementation of the plan. When determining which states to notify, the department may consider those in which the company 1) has a significant amount of written, assumed or ceded insurance business; 2) has significant market share; 3) is licensed; 4) has affiliates; 5) utilizes fronting entities; 6) has pooled companies; and 7) is seeking to write business or obtain a license. If it is reasonably anticipated that corrective plans will not prevent a finding of insolvency or insolvency is reasonably possible, advance communication to the guaranty funds is critically necessary for a successful transition to liquidation. If the guaranty funds are notified in a timely manner, they may be able to provide additional guidance and assistance in preparing the company for liquidation.

Pre-Receivership Considerations

Depending on the circumstances of the troubled company’s situation, the department may determine that the appropriate course of action is to place the company in receivership. There are several steps the department can take to ensure a smooth transition to receivership, should that be necessary. Having a thorough understanding of the company’s rights and ownership of its assets, as well as its liabilities and obligations can help the department manage the possible transactions that could occur if the company is placed in receivership. It may also help the regulator understand if inappropriate transactions occur in anticipation of receivership, such as preferential payments to related entities and payment of management bonuses or expense reimbursements. As part of the corrective plan, the department may consider requesting implementation of controls surrounding the troubled company’s operations. For instance, it may be necessary for management to establish controls around acceptance of new business or new commitments by the company, as well as recordkeeping requirements if the insurer is involved with reinsurance.

If an examination is planned or ongoing for a troubled or potentially troubled company, the examination should increase its review of risks and controls surrounding financial reporting processes in the areas discussed above. For example, the exam may have a greater focus on the following areas:

- Gaining an understanding of the location (i.e., bank accounts, deposits, custodial accounts, letters of credit, etc.) and ownership (i.e., funds held with reinsurers, intermediaries, MGAs/TPAs, etc.) of company assets;
- Gaining an understanding of possible encumbrances on company assets that may be triggered if the financial position of the company continues to deteriorate;
- Gaining an understanding of the provisions within various agreements that company has entered into (i.e., reinsurance agreements, agreements with service providers, investment advisors, etc.) that could be impacted by being placed into receivership;
- Reviewing transactions involving the movement of company assets;
- Identifying primary responsibility for obligations and liabilities such as tax payments, pension plan contributions, pledges of assets, etc.; and
- Additional testing to ensure the completeness of policy and claims data.

If receivership or liquidation is triggered, and assets are transferred to the receiver or guaranty fund to settle obligations, it is important that the company’s data be maintained in such a format to ensure that policies can continue to be maintained and claims can continue to be paid. For example, the company should have the ability to export its claims data through a defined format (Uniform Data Standards—UDS) that would allow the data to be received and utilized by a third-party guaranty fund. Therefore, the examination may include additional
procedures as part of the IT review to identify and locate data storage and processes, understand the format of the data, and ensure proper functionality exists for timely and efficient export of policy and claims data in the event of a receivership.
EXHIBIT V – OVERARCHING PROSPECTIVE RISK ASSESSMENT

Background

The concept of risk on a risk-focused examination encompasses not only risks as of the examination date, but also risks that extend or commence during the time in which the examination was conducted, as well as risks that are anticipated to arise or extend past the point of examination completion. As such, consideration of “prospective risks” (including moderate or high residual risks existing at the balance sheet date that will impact future operations, risks anticipated to arise due to assessments of company management and/or operations, or risks associated with future business plans of the company) is an intrinsic element of a risk-focused examination and should occur throughout all phases of the examination process.

Use of this Exhibit

In completing this exhibit and documenting the examiner’s consideration of prospective risks throughout the examination process, the examiner should conduct an evaluation and, if possible, conduct examination procedures on the noted prospective insolvency risks to assess the degree of risk present and recommend future monitoring. Throughout the examination process and at the conclusion of the exam, the examiner should communicate with the department’s financial analysts to keep them informed of the identified prospective risks and examiner assessments. The branded risk classifications, risk assessment level and trend and associated rationale should be used to summarize prospective risks identified for communication to the analyst via Exhibit AA—Summary Review Memorandum (SRM). This communication should include relevant details obtained during the examination that will enhance the ongoing monitoring of the company.

In conducting examinations of insurers that are part of a holding company group, it is important to note that many critical prospective risks may occur at the holding company level. The exam team should seek to coordinate the identification and assessment of prospective risk in accordance with the exam coordination framework and lead state approach outlined in Section 1 of this Handbook. Where possible, in a coordinated examination, the lead state’s work on prospective risk should be utilized to prevent duplication of effort and to leverage examination efficiencies.

As discussed throughout this Handbook guidance, the consideration of prospective risks should occur throughout each phase of the examination process. If the examiner identifies a prospective risk that relates to one specific key activity of the company, this prospective risk should be documented in the corresponding risk matrix for that key activity and treated similarly to other identified risks. However, if the examiner identifies an overarching prospective risk (a prospective risk that does not relate to a specific key activity identified, or relates to more than one key activity identified), the examiner should utilize this exhibit to document the process to consider the investigation of the overarching prospective risks. Individual risks should either be addressed on Exhibit V or a key activity matrix, but not both.

By the end of Phase 1, the examiner should have a preliminary listing of overarching prospective risks included on Exhibit V – Overarching Prospective Risk Assessment. By the end of Phase 2, the list of risks on Exhibit V should be updated to include all significant overarching prospective risks identified on Exhibit CC – Issue/Risk Tracking Template.

Prospective risks may continue to be identified beyond Phase 1 and Phase 2, but all significant overarching prospective risks identified during later phases of the exam should continue to be documented and investigated on Exhibit V, regardless of the phase in which the risk was identified.

All of the instructions for the investigation of prospective risks on Exhibit V should be completed by the end of Phase 5. It is not required that the various steps to investigate prospective risks on Exhibit V directly coincide with the seven-phase exam approach, but it is recommended that examiners complete each step of Exhibit V as early in the exam as practical to ensure each risk identified is sufficiently tested and reviewed.
**Exhibit V, Part One – Overarching Prospective Risk Testing Template**

Examiners should use this worksheet to document a review and testing investigation of overarching prospective risks throughout the examination. Examiners may also use the examples provided on the template as a guide to assist in determining the nature and extent of the prospective risk review to be performed. **Please Note:** The risk mitigation strategies identified in the template are only examples, and the examiner should be aware that the insurer might use other strategies to mitigate the identified risk. Instructions for completing and documenting a review of prospective risk within the template are as follows:

<table>
<thead>
<tr>
<th>Template Column</th>
<th>Instructions for Completing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overarching Prospective Risk Identified</td>
<td>Based on the knowledge and understanding of the company obtained during the planning stages of the exam, document any overarching prospective risks identified.</td>
</tr>
<tr>
<td>Branded Risk Classification</td>
<td>For each identified risk, document the associated branded risk classification(s) from the following list: Credit (CR), Legal (LG), Liquidity (LQ), Market (MK), Operational (OP), Pricing/Underwriting (PR/UW), Reputation (RP), Reserving (RV), and Strategic (ST).</td>
</tr>
<tr>
<td>Risk Mitigation Strategies</td>
<td>Identify risk mitigation strategies in place at the insurer (if any) to address the prospective risk.</td>
</tr>
<tr>
<td>Testing to support mitigation strategies</td>
<td>Test the mitigation strategies identified by management. Consider both the design and operating effectiveness of the mitigation strategies as part of the procedures performed. Provide corroborating evidence and documentation to support the procedures performed. Perform additional independent testing, if necessary, to further understand or address the risk. Testing may include evaluation of the company’s historical trends, stress testing of company exposures, or other additional procedures specifically tailored by the examiner based on the company’s risk. Attach and reference supporting workpapers.</td>
</tr>
<tr>
<td>Corroborating Evidence and Documentation</td>
<td>Provide corroborating evidence and documentation supporting the risk mitigation strategy. Attach and reference supporting workpapers.</td>
</tr>
<tr>
<td>Prospective Risk Assessment</td>
<td>Using professional judgment, determine the appropriate prospective risk level (High, Moderate or Low) after considering the nature of the risk and the company’s mitigation strategies. Provide a brief explanation regarding the prospective risk level determined.</td>
</tr>
<tr>
<td>Risk Assessment Level</td>
<td>Document the risk assessment level of the identified risk considering the test procedures performed (i.e., Significant, Moderate, or Minimal). Refer to Exhibit AA—Summary Review Memorandum for guidance on determining an appropriate risk assessment level.</td>
</tr>
<tr>
<td>Trend</td>
<td>Document the trend level of the identified risk considering the test procedures performed to indicate the direction the risk is moving (i.e., Increasing, Static, or Decreasing). Refer to Exhibit AA—Summary Review Memorandum for guidance on determining an appropriate trend level.</td>
</tr>
<tr>
<td>Rationale</td>
<td>Document the rationale for the trend and level of concern.</td>
</tr>
<tr>
<td>Ongoing Examination Procedures and Follow-Up Communicate Findings to Financial Analysis</td>
<td>Document any additional procedures deemed necessary to be performed to further understand or address the risk. Document specific information to be communicated to the department analyst. Information should include specific procedures for continual monitoring, specific documents to obtain from the company, expected timelines for follow-up, and contact information. Describe the plan for follow-up, such as specific procedures for continual monitoring, communication with the analyst, limited-scope examinations, revisions to the Supervisory Plan or Insurer Profile Summary, etc.</td>
</tr>

</table>
Exhibit V, Part Two – Common Areas of Concern

Examiners should use this as a reference guide to assist in identifying categories of prospective risk that may be relevant for review and inclusion on the Exhibit V, Part One. Note: examiners are not required to identify a risk from each category listed or provide a rationale for not identifying risks from the common areas of concern.
## PART ONE – OVERARCHING PROSPECTIVE RISK TESTING TEMPLATE

<table>
<thead>
<tr>
<th>Overarching Prospective Risk Identified</th>
<th>Branded Risk</th>
<th>Risk Mitigation Strategies</th>
<th>Investigate Risk Exposure</th>
<th>Risk Assessment Level</th>
<th>Trend</th>
<th>Rationale</th>
<th>Communicate Findings to Financial Analysis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example Prospective Risk 1:</td>
<td>ST RP</td>
<td>The company has processes in place to monitor and manage its financial performance in accordance with metrics considered significant by rating agencies. The company utilizes modeling to determine its economic and rating agency capital needs.</td>
<td>Reviewed financial reports for evidence of monitoring of rating agency performance measures and management review, noting that the company appears to be meeting its benchmarks (See wp A.1.4). Obtained and reviewed the economic capital calculation at 12/31/XX, noting that rating agency considerations are included in the process and that the company appears to hold capital in excess of the calculated amount. See A.1.5 for more information.</td>
<td>Moderate</td>
<td>Static</td>
<td>The company has product lines sensitive to a ratings decrease; however, it appears the company has appropriate controls and strategies in place to maintain strong ratings.</td>
<td>If a future rating downgrade occurs the DOI should meet to determine an appropriate course of action (e.g., limited scope exam).</td>
</tr>
<tr>
<td>Example Prospective Risk 2:</td>
<td>LGST</td>
<td>Mergers and acquisitions are part of the company’s growth strategy and incorporated into its 3-year strategic plan. The company has a defined due diligence process which includes detailed procedures for mergers &amp; acquisitions, and business divestitures. The process is reviewed annually, making changes as needed, and approved by the Board of Directors and senior management. The company has a mergers and acquisitions steering committee that meets quarterly to review analyses and forecasts prepared for planned and/or in-process mergers/acquisitions/divestitures. Obtained the most recent strategic plan and verified that it discussed the company’s plan for future mergers and acquisitions to support its strategic goals. Reviewed minutes from the 20XX annual Board of Directors meeting, noting that the mergers &amp; acquisitions process was reviewed and approved by the Board of Directors and Management. (See wp B.2.2) The exam team also obtained documentation from the company’s most recent acquisition of XLX Corporation and confirmed that the due diligence process outlined in the M&amp;A policy was followed. (see additional detail regarding documents reviewed at B.2.PRG) Reviewed minutes from Q1 and Q3 M&amp;A steering</td>
<td>Moderate</td>
<td>Increasing</td>
<td>Although the company is actively involved with merger and acquisition activities, the exam team verified that this activity is part of its strategic plan and that an effective due diligence process is in place. However, given the significance of the last transaction and the stage of implementation, trend is rated as increasing. The exam team is comfortable with the Company’s abilities with regard to mergers and acquisitions. However, if the analyst identifies changes to the Company’s strategic business plan, the DOI should meet to discuss whether the changes warrant action before the next examination date.</td>

</tr>
<tr>
<td>Example Prospective Risk 3: PR/UW</td>
<td></td>
<td>Company analysts perform significant research regarding current market conditions and demands, product mix and profitability, and other product/market characteristics on a regular basis. Reports summarizing the findings are generated monthly. The company has a group of individuals from departments across the company (legal, actuarial, marketing, financial, etc.) that compose an ad-hoc group specifically charged with product development. This group has significant experience in developing, marketing and pricing new products. Issuance of new products requires input and approval from the board of directors. There is a special subcommittee that meets on a quarterly basis to discuss</td>
<td>Reviewed the monthly market conditions report, noting that the company has compiled detailed industry information regarding similar products and pricing, market demand, customer location, etc. (see A.2.1). Reviewed the qualifications and background of the employees within the product development “team,” noting that all members have extensive experience in the many aspects of product development.</td>
<td></td>
<td>Minimal</td>
<td>Static</td>
<td>The company has a verified history of successful product launches and its process for considering and launching products going forward is fully vetted throughout the company.</td>

PART TWO – COMMON AREAS OF CONCERN

The prospective risk categories provided within this exhibit are not designed to be an all-inclusive list and might not apply to all insurance companies under examination. The examiner’s understanding of the company obtained in Phase 1, including a review of the company’s Enterprise Risk Report (Form F) and/or ORSA Filing, should be utilized to determine whether risks in these categories might be applicable to the company. The company will likely face additional prospective risks that do not fit within the categories in this exhibit.

<table>
<thead>
<tr>
<th>Prospective Risk Category</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Merger and Acquisition Activity</td>
<td>If applicable, review the company’s process to identify and perform due diligence on potential acquisitions. In addition, consider reviewing the company’s process to integrate acquired entities and business into its systems.</td>
</tr>
<tr>
<td>Product Development</td>
<td>If applicable, review and assess the company’s process to identify, develop, price and market new products in accordance with the company’s strategy and business needs.</td>
</tr>
<tr>
<td>Legal and Regulatory Changes</td>
<td>If applicable, review how the company identifies, monitors and addresses changes to the legal and regulatory environment it operates within. For example, review the company’s processes in place to analyze the impact that health care reform could have on the company, including support for company projections and strategies for appropriateness.</td>
</tr>
<tr>
<td>HR/Personnel Risks</td>
<td>If applicable, review and assess the company’s HR processes to identify, mitigate and monitor risks related personnel management (including succession planning for critical positions) as well as hiring, managing, retaining and terminating personnel in accordance with company needs.</td>
</tr>
<tr>
<td>Strategic Planning</td>
<td>If applicable, review and assess the company’s processes for strategic planning to determine whether the company regularly analyzes its strengths and weaknesses, as well as opportunities and threats, on an ongoing basis. In addition, it might be appropriate to review the company’s process to update its overall business plan on a regular basis.</td>
</tr>
<tr>
<td>Compensation Structure</td>
<td>If applicable, review the company’s process for developing, monitoring and adjusting its compensation structure to ensure that employees are appropriately compensated without creating an incentive to misrepresent financial results.</td>
</tr>
<tr>
<td>Rating Agency Downgrade</td>
<td>If applicable, review the company’s process to monitor and prepare for potential adverse changes in its credit ratings. If a future rating agency downgrade is deemed likely, consider whether the company is adequately prepared to handle the results of such a downgrade.</td>
</tr>
<tr>
<td>Costs of Capital</td>
<td>If applicable, review the company’s access and ability to obtain capital, reinsurance and letters of credit, if necessary, to meet funding and risk diversification needs.</td>
</tr>
<tr>
<td>Business Continuity</td>
<td>If applicable, review the company's business continuity plan. Follow the steps outlined in Section 1, Part III.</td>
</tr>
<tr>
<td>Climate Change</td>
<td>If applicable, review the company’s process for identifying and monitoring risks resulting directly or indirectly from the impact of climate change risk.</td>
</tr>
</tbody>
</table>
The following is an illustration of how a summary review memorandum (SRM) may be set up to assist examiners in documenting the key issues and results of a risk-focused examination that should be shared with the Chief Examiner and the assigned analyst. The illustration also includes a high-level overview of the insurer’s holding company structure (if applicable) and how that structure affected exam coordination with other states. Additionally, the SRM includes discussion of the insurer’s governance and risk management practices, and a summary, by branded risk classification, of significant exam findings and/or concerns warranting communication. These findings may include overarching solvency concerns, examination adjustments, other examination findings, management letter comments, subsequent events and other residual risks or concerns the examiner may want to communicate to department personnel. The final sections, prioritization level and changes to the supervisory plan, provide discussion of the examiner’s overall conclusions regarding ongoing monitoring, including specific follow-up recommended to the analyst.

This exhibit provides an example template, which is not intended to be all-inclusive and should be tailored to each examination. Reference to each branded risk classification is necessary and should be included in the examination’s SRM; however, it is not necessary to address each of the supporting areas and points discussed herein. Therefore, the examiner-in-charge should use his or her judgment in determining which sections of this illustration are applicable and document any other relevant information deemed necessary. The purpose of the SRM is to provide interpretative analyses relative to significant examination areas and to provide a basis for communicating examination findings and recommendations to department personnel. In so doing, the SRM will provide input into the Insurer Profile Summary (IPS) and the supervisory plan. In fulfilling this purpose, the SRM should not merely repeat comments made in the examination report or management letter, but instead provide a comprehensive summary of examination conclusions both objective and subjective in nature. Conclusions should provide information necessary for ongoing supervision of the insurer that includes areas of concern as well as areas that support a positive outlook for the insurer.

COMPANY NAME:  
EXAMINATION DATE:  

EXAMINATION BACKGROUND

The purpose of this section of the memorandum is to document at a high level what, if any, group the insurer belongs to, if the insurer was part of a coordinated exam and how the coordinated exam was conducted. Additional information regarding the timing of the exam, staffing resources utilized—including what specialists were used—or other background information necessary to understand the results presented in the memo should also be included.

GOVERNANCE AND RISK MANAGEMENT

The purpose of this section of the memorandum is to summarize an understanding and assessment of an insurer’s board of directors, senior management and organizational structure, as well as the results of the review of the enterprise risk management (ERM) function of the insurer. This assessment should include information obtained during both the planning and the completion stages of the examination. Therefore, consideration of information gathered during C-level interviews, completion of Exhibit M and review of the insurer’s Own Risk and Solvency Assessment (ORSA), if applicable, should be combined with information obtained during detail testwork to reach a concise final assessment that focuses on communicating significant areas of strength or weakness within the overall corporate governance and ERM functions of the insurer. When the insurer is part of a holding company, documentation should reference the level at which conclusions are reached. Additional assessment may be necessary at the individual entity level, but the primary focus of the assessment will commonly be at the holding company level in a coordinated examination.
BRANDED RISK ASSESSMENTS

This section of the memorandum should be organized to address each of the nine branded risk classifications: Credit; Legal; Liquidity; Market; Operational; Pricing/Underwriting; Reputation; Reserving; and Strategic. If needed, an Other category may also be used. In documenting each assessment, consideration should first be given to the branded risk assessments provided by the analyst in the initial IPS. The examiner then summarizes the work performed during the examination to arrive at a final assessment for each classification. For those branded risk classifications that are not impacted by examination results and provide no additional information for the ongoing monitoring of the insurer, this can be noted without further explanation. For those classifications that are impacted, documentation in the summary should focus on new information uncovered during the course of the examination and should not duplicate the summary initially provided in the IPS. The summary for each classification should be prepared at a level of detail that will enable the analyst to update the existing IPS and understand the context for items that require additional follow-up or specific monitoring procedures. This may be done within the table format provided below, referencing other examination documents as necessary.

In documenting the key points for each branded risk classification, consideration should be given to the following areas, if deemed applicable:

- Prospective solvency concerns
- Examination adjustments
- Control/risk mitigation strategy issues
- Report findings and management letter comments
- Responses to issues raised by financial analysis
- Subsequent events
- Residual risks and concerns

Following the summary, the examiner should update the areas of concern, as needed, based on the information obtained during the examination and provide an overall assessment of minimal, moderate or significant concern for each branded risk classification. The SRM is a primary tool for communicating the results of an examination to the financial analysis function. Therefore, it is important that the examiners have the same understanding of the considerations going into the risk assessment level and trend. The following guidelines may be used to assist in assigning the risk assessment level and trend, when necessary. Additional guidance for selecting the risk assessment level and trend is available in the Financial Analysis Handbook.

Risk Assessment Level Considerations:

- Significant: The highest level of severity of risk from a solvency perspective. Risks assessed at this level require an elevated level of ongoing monitoring and/or regulatory action.
- Moderate: The medium level of severity of risk from a solvency perspective. Risks assessed at this level require routine ongoing regulatory monitoring and oversight and/or regulatory action.
- Minimal: The lowest level of severity of risk from a solvency perspective. Risks assessed at this level do not currently indicate a need for additional monitoring or regulatory actions.

Risk Assessment Trend Considerations:

- Consider trending within quantitative metrics to assist in determining the trend assessment
- Consider qualitative factors such as the insurer’s planned business strategies to address the risk
- Consider both historical/current and prospective/planned trends in exposure
If the examiner’s assessment is different from the original assessment documented in the IPS, the information summarized must provide sufficient detail to support the change. Issues that require specific monitoring or follow-up by the analyst should then be identified individually in the table under the section designated for recommended follow-up. This table includes a brief reference to the issue, recommended follow-up or action items to be performed and the timeline in which the analyst should expect to obtain information referenced in the follow-up procedures.

### Branded Risk Classification (Example: Credit)

*Note: A separate summary and table should be completed for each of the nine branded risk classifications, as well as a category for Other, if deemed necessary.*

#### Analyst Initial Assessment

**Credit:** This risk is considered moderate, driven primarily by a fairly conservative investment mix (96.4% of bonds are NAIC 1 designation, with 28% U.S. government, 14% U.S. states and most of the rest high-quality corporates) and limited exposure to equities, offset by a relatively high amount of real estate ($33 million), growing agent balances ($99 million) and significant reinsurance recoverables (paid and unpaid) of $81 million. However, the reinsurance recoverables are diversified across a number of highly rated reinsurers.

#### Examiner Summary and Assessment

**Credit:** Examiner agrees with analyst assessment regarding bonds and reinsurance recoverables. Although the reinsurance recoverables balance has increased significantly in recent years, the change is in line with increases in premium volume and strategic plan of partnering with high-quality reinsurers to increase the volume of its product liability business. Real Estate – Home Office was tested during the exam, with a recent appraisal reviewed showing the value of the property to be $40 million. Therefore, the examiner proposes that the credit risk associated with the home office be reclassified as a minimal concern. In reviewing agent balances, the exam team recognized a growing concern regarding slow-paying agents for the company’s growing product liability business. In discussing this with the company, a lack of company controls related to agency audits was noted. As such, the exam team agrees with the analyst’s assessment of high credit risk in this area and has included a management letter comment regarding agency audits as described below.

PRIORITIZATION AND ONGOING MONITORING

The purpose of this section of the memorandum is to allow the examiner to document any suggested changes to the prioritization level and/or to document the examiner’s rationale for maintaining the current prioritization level.

PROPOSED CHANGES TO SUPERVISORY PLAN

The purpose of this section of the memorandum is to propose any changes to the supervisory plan that the examiner believes are necessary based on the preceding information.
**PHASE 7 – DRAFT EXAMINATION REPORT AND MANAGEMENT LETTER**

This section of the Handbook addresses the following subjects:

A. Examination Report  
B. Management Letter  
C. Summary Review Memorandum  
D. Letter of Representation

---  

**B. Management Letter**

Significant results and observations noted during the examination that are not appropriate or necessary for inclusion in the public report, as determined by the state insurance department conducting the examination, should be communicated to the board and/or management. A management letter is considered an examination workpaper and may be used for this purpose. Those states not utilizing the management letter should communicate comments to the board and/or management during the exit conference or other means deemed appropriate. For group examinations, the lead state, after discussion with other participating states, will determine which results and observations will be included.

The letter to management, or other means of communication as determined by the state, can serve as a vehicle for an ongoing dialogue between the regulator and the insurer and should be shared with those states an insurer is licensed in, as long as confidentiality can be maintained. This letter or communication should be issued and delivered by the regulators to the board members and/or management based on the scope and severity of the issues identified. Judgements on the matters covered within the management letter(s) and the recipient(s) of the management letter(s), and considering the following guidance, are to be determined at the discretion of the examination team.

Based on the findings to be included in the management letter, the examiner should determine the most appropriate party within the holding company structure to whom the letter should be provided. There may be circumstances when the examination team considers sharing the management letter to a level of the organization above the legal entity’s management and/or Board of Directors (i.e. parent company Board). Depending on the issues to be communicated, it may also be appropriate to prepare two different management letters; one to be delivered to management and/or BoD of the legal entity, and one to be delivered to a level of the organization above the legal entity.

When determining which findings are appropriate to communicate to a higher level within the organizational structure, the exam team should consider the significance and severity of the findings or comments, as well as the level at which corrective measures can be taken. For financial reporting matters, the exam team may utilize the definitions for material weakness or significant deficiency (refer to Phase 4 for definitions) to help with this assessment. Findings and comments meeting these definitions may be appropriate for communication to the board of directors and/or audit committee at a level above the legal entity. For other than financial reporting matters and issues or comments related to prospective risks, the examiner should consider the likelihood of such having a significant adverse impact on the insurer’s overall condition. Additional considerations include whether management at the legal entity level has a conflict of interest with the items to be communicated and/or whether management has sufficient understanding and capacity to anticipate and respond to changing conditions. Because there may be differences in the significance of issues to be communicated it may be appropriate to prepare two
different management letters; one to be delivered to management and/or BoD of the legal entity, and one to be delivered to a level of the organization above the legal entity.

Examples of when it may be appropriate to provide the management letter at a level above the legal entity’s management and/or Board of Directors may include when a conflict of interest exists with the legal entity management/Board of Directors, and when a group management letter covering multiple companies is prepared.

The examiner should request a response from the company regarding the plan to address the identified issues. This response should be received within a reasonable time frame (e.g., 90 days) from the date the examiner issued the letter or communication. In addition to communication with the insurer, the examiner is responsible for communicating significant results and observations to the analyst and should consider including the analyst throughout the communication process with the insurer. In accordance with the Financial Analysis Handbook, the analyst must follow-up and document a review of any management letter comments. The examiner should coordinate with the analyst on the follow-up of the identified issues. As the examiner moves on to other examinations, it is important that the analyst be involved with the resolution and monitoring of the identified issues.

Example Management Letter
An example management letter template has been developed below to provide a suggested format to examiners in drafting this correspondence. As with the elements that may be included within these non-public letters, the actual format utilized should be determined by the state insurance department conducting the examination.

June 1, 20XX
Board of Directors
XYZ Insurance Company (XYZ)

The Board of Directors (Board) has a duty to ensure that XYZ Insurance Company is operated in a safe and sound manner in the best interest of the policyholders. The Department of Insurance (the Department) is charged with the responsibility to protect insurance consumers and other creditors.

Following are comments related to the examination of XYZ Insurance Company as of December 31, 20XX, and other related information regarding XYZ. The Department has identified the following issues and concerns regarding specific operations or practices of the Company. In accordance with the nature of these items, the department has chosen not to include these comments within the Report of Examination.

For each item/issue noted:

- State the issue using a concise statement of the problem identified;
- Provide commentary on the examiner’s understanding on what caused or created this issue;
- Illustrate the effect of this issue including the materiality impact, and what impact it has had on the financial statements, the company’s financial condition, or company operations; and
- Provide information regarding the criteria that elevated this issue (i.e., non-compliance with statute).

We will review the response and determine what further actions are appropriate. Please contact me by telephone (number) or email (xxxxx@xxxxx) if you have any questions.

Sincerely,
Examiner

The Receivership and Insolvency (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Task Force members participated: Kent Sullivan, Chair, represented by James Kennedy (TX); Stephen C. Taylor, Vice Chair, represented by N. Kevin Brown (DC); Lori K. Wing-Heier represented by David Phifer (AK); Allen W. Kerr represented by Mel Heaps (AR); Ricardo Lara represented by Joe Holloway (CA); Michael Conway represented by Rolf Kaumann and Eric Unger (CO); Andrew N. Mais represented by Jared Kosky (CT); David Altmairer represented by Toma Wilkerson (FL); Doug Ommen represented by Carrie Mears and Kim Cross (IA); Robert H. Muriel represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Nancy G. Atkins represented by Sandy Batts (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Chlora Lindley-Myers represented by Shelley Forrest (MO); Matthew Rosendale represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Bruce R. Range represented by Lindsay Crawford (NE); Marlene Caride, represented by Diana Sherman (NJ); John G. Franchini represented by Leatrice Geckler (NM); Glen Mulready represented by Donna Wilson (OK); Jessica Altman represented by Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Raymond G. Farmer represented by Lee Hill (SC); Hodgen Mainda represented by Bill Huddleston (TN); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Vicki Ayers (VA); and Mike Kreidler represented by Steve Drutz (WA). Also participating was: Robert Wake (ME).

1. Adopted its 2019 Summer National Meeting Minutes

   Mr. Phifer made a motion, seconded by Ms. Obusek, to adopt the Task Force’s Aug. 4 minutes (see NAIC Proceedings – Summer 2019, Receivership and Insolvency (E) Task Force). The motion passed unanimously.

   Mr. Baldwin said the Receivership Financial Analysis (E) Working Group met Aug. 4 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings. The Working Group discussed the status of individual receiverships and related issues.

   Ms. Wilson made a motion, seconded by Mr. Joyce, to adopt the Working Group’s report. The motion passed unanimously.

3. Adopted the Report of the Receivership Large Deductible Workers’ Compensation (E) Working Group

   Ms. Wilson made a motion, seconded by Mr. Phifer, to adopt the Working Group’s report, including its Dec. 2 (Attachment One) and Oct. 24 minutes. The motion passed unanimously.

4. Adopted Revisions to the Receiver’s Handbook

   Mr. Baldwin made a motion, seconded by Ms. Wilkerson, to adopt the Receiver’s Handbook for large deductible workers’ compensation receiverships (Attachment Two). The motion passed unanimously.

5. Exposed Revisions to the Receiver’s Handbook

   Mr. Kennedy said the Macroprudential Initiative (MPI) report adopted at the Summer National Meeting identified outdated references in the Receiver’s Handbook for federal taxes and federal releases was outdated. Revisions were requested and received from several state insurance regulators and interested parties.

© 2019 National Association of Insurance Commissioners
6. Discussed Recommendations from the MPI Report

Mr. Kennedy summarized recommendations from the MPI report. The first item involves legal remedies that ensure the continuity of essential services in a receivership by affiliated entities within the group, including non-regulated entities. This is especially problematic in situations where the insurer has no employees, and all services, employees, and records are provided by an affiliate or the holding company, whose sole purpose is to administer the insurance business. Mr. Kennedy recommended having a discussion with the Financial Condition (E) Committee chair about possible legal remedies in the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). He asked states to consider their own experiences with this issue in order to have a productive future discussion on this issue. There was no objection to this plan.

The second item is to identify methods for encouraging states to adopt key provisions in receivership laws. Model #555 is not widely adopted by states, and past efforts to encourage states to adopt key provisions from the current model have largely been unsuccessful. One exception is Florida, which amended its laws to incorporate certain Model #555 provisions. Mr. Kennedy recommended delegating the development of recommendations to the Receivership Model Law (E) Working Group, which is within the scope of its charges. He suggested that the Working Group’s process include: 1) identifying a short list of key provisions critical to consistency, focusing on issues in multistate receiverships; 2) determining which states do not currently have those key provisions in their laws, and any impediments to adopting those provisions; and 3) identifying options to encourage states’ adoption of those provisions, including a discussion of the Financial Regulation Standards and Accreditation Program Part A standards for receivership and guaranty fund laws. Currently, these standards include a broad requirement for a receivership scheme and a regulatory framework for guaranty funds. There was no objection to this plan.

Francine Semaya (Legal and Insurance Regulatory Consulting) spoke about an issue in the liquidation of Oceanus Insurance Risk Retention Group (Oceanus), a South Carolina Risk Retention Group (RRG). Ms. Semaya is counsel to the Liquidator and has encountered difficulties with the enforcement of the receivership stay and permanent injunction in other states. Oceanus was defending over 200 cases in New York. An appellate court recently ruled that the stay should not be recognized because Oceanus is an RRG, and the stay is not entitled to recognition under New York’s Uniform Insurers Liquidation Act. Another ruling found that South Carolina courts had no jurisdiction over the plaintiffs, and it was a matter of public policy to provide plaintiffs with a forum in their state of residence. She expressed concerns that the decisions are so broad, they might create precedents in receiverships involving other types of insurers and could be followed in other states. She urged the Task Force to discuss this issue. Mr. Kennedy noted that the Task Force reviewed the enforcement of stays in 2017 and issued guidance to the states regarding stay provisions in receivership laws. He said that the Receivership Model Law (E) Working Group will consider this issue in the context of the MPI work that is delegated to it.

7. Heard a Presentation on the IAIR Designation Program

Wayne Johnson (Risk & Regulatory Consulting LLC) provided an overview of the revised professional designation program adopted by the International Association of Insurance Receivers (IAIR). The program includes requirements, testing and qualifications of an Accredited Insurance Resolutions Director and a Certified Insurance Resolutions Director. The intent of the revised program is to ensure broader expertise for insurance resolutions, promote consistent standards for the administration of receiverships and deepen the pool of qualified individuals (Attachment Three).

Mr. Kennedy commented that a tremendous amount of work was expended to ensure that this is a robust, meaningful process with standards that can be relied upon. He said that state insurance commissioners entrust the handling of receiverships to special deputy receivers, and there needs to be a mechanism to ensure that they are qualified. He said that the life & health and property & casualty guaranty funds have been supportive of this initiative. Mr. Gendron asked if IAIR had consulted with the Society of Financial Examiners (SOFE) or the NAIC about the IAIR classes counting toward continuing education (CE) credits for SOFE or NAIC designations. Mr. Johnson replied he had spoken to SOFE.

8. Heard an Update on International Resolution Activities

Mr. Wake reported that the International Association of Insurance Supervisors (IAIS) Resolution Working Group (ReWG) met in September to finalize the Application Paper on Recovery Planning and to continue development of the Application Paper on Resolution Planning. He said that the U.S. submitted its response to an ReWG questionnaire on resolution authority. Work will continue in 2020. Mr. Kennedy said that states can volunteer to assist in reviewing the ReWG’s drafts.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
The Receivership Large Deductible Workers’ Compensation (E) Working Group of the Receivership and Insolvency (E) Task Force met via conference call Dec. 2, 2019. The following Working Group members participated: Donna Wilson, Co-Chair (OK); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynowycz (AR); Toma Wilkerson (FL); Kevin Baldwin (IL); Robert Wake (ME); John Rehagen (MO); Tom Green (NE); and James Kennedy (TX).

1. **Adopted its Minutes**

Ms. Wilson presented the minutes from the Working Group’s Oct. 24 conference call (Attachment One-A). Mr. Baldwin made a motion, seconded by Ms. Wilkerson, to adopt the Working Group’s Oct. 24 minutes. The motion passed unanimously.

2. **Exposed a Model Guideline for #555**

Ms. Slaymaker presented the NAIC staff memorandum to the Working Group (Attachment One-B). The Working Group focused their discussion on the variations from the National Conference of Insurance Guaranty Funds (NCIGF) model adopted by some states. The Working Group directed NAIC staff to amend the draft guideline for the *Insurer Receivership Model Act* (#555) as an alternative approach to Section 712 based on the NCIGF model to reflect administrative fees, a state specific citation for the definition of large deductible, and the guaranty association entitlement to the net amount of the reimbursement. The Working Group exposed the model guideline for a 60-day comment period ending Jan. 31, 2020. Comments are to be submitted to Sherry Flippo (NAIC) (Attachment One-C).

Having no further business, the Receivership Large Deductible Workers’ Compensation (E) Working Group adjourned.
The Receivership Large Deductible Workers’ Compensation (E) Working Group of the Receivership and Insolvency (E) Task Force met via conference call Oct 24, 2019. The following Working Group members participated: Donna Wilson, Co-Chair (OK); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynowycz (AR); Kevin Baldwin (IL); Robert Wake (ME); John Rehagen (MO); Tom Green (NE); Christopher Brennan (NJ); and James Kennedy (TX).

1. Adopted Revisions to the Receiver’s Handbook for Insurance Company Insolvencies

Ms. Slaymaker presented the revisions to the Receiver’s Handbook for Insurance Company Insolvencies (Handbook) from the minutes of the Working Group’s May 8 conference call, which were discussed during its July 18 call. Ms. Wilson made a motion, seconded by Mr. Brennan, to adopt the Handbook revisions (Attachment Two). The motion passed unanimously.

2. Heard a Presentation on Distributive Variation Between Model #555 Section 712 and the NCIGF Model

Sherry Flippo (NAIC) presented the PowerPoint presentation (Attachment One-A1). The Working Group directed NAIC staff to draft a model guideline for the Insurer Receivership Model Act (#555) as an alternative approach to Section 712 based on the National Conference of Insurance Guaranty Funds (NCIGF) model.

Having no further business, the Receivership Large Deductible Workers’ Compensation (E) Working Group adjourned.
Receivership Large Deductible Workers’ Compensation Working Group

Distributive variation between:
1. Reinsurance Option Approach - Model #555 section 712
2. Secure Claim Approach - NCIGF Model
2 Approaches Defined

1. Reinsurance option approach which lead to section 712 of NAIC Model #555, and
2. Secured Claim approach which is the NCIGF Model.

• There are strong arguments for both options which made the issue contentious when Model #555 was under development.
• Functionally, in both a scenario where you have a large deductible policy and where an insurer is fronting for a captive reinsurer, the policyholder is economically responsible for the claim. The SAP accounting is not similar to reinsurance because the liability is NOT booked from the first dollar with off-setting credit for deductible recoveries. Rather SAP books the liability starting after the deductible amount on the insurer’s books, unless the insurer goes into receivership
• NCIGF is consistence. There are scenarios where it is proper for policyholder to pay the claims and scenarios where the guaranty fund should have an unconditional right of reimbursement.
• The difference between the large deductible and reinsurance is that you have a statutory right of reimbursement running from the employer to the claimant that preceded the policy. Therefore, it is reasonable to treat the policyholder reimburse obligation as security for the benefits being paid to the claimant.
Distributive Variation

- Distributive variation between the two approach would be minimal where there is appropriate collateral and an efficient collection process in place.
- The significant distributive variation occurs when the collateral is:
  - inadequate,
  - co-mingled, or
  - dissipated
Scenario # 1- NCIGF- 100% of Losses Available

MEMORANDUM

TO: Receivership Large Deductible Workers’ Compensation (E) Working Group
FROM: NAIC Staff
DATE: November 12, 2019
RE: Guideline: Alternative to Section 712 of Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies

Executive Summary

Having the necessary statutory authority specific to large deductible workers’ compensation products in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted: 1) Section 712 of the NAIC Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies; and 2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation.

NAIC staff has been asked to draft the attached Guideline: Alternative to Section 712 of Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies as alternative language to Section 712 of Model #555.

Guideline v. Model Law

The NAIC model law development process helps provide uniformity while balancing the needs of insurers operating in multiple jurisdictions with the unique nature of state judicial, legislative and regulatory frameworks. In 2007, the NAIC changed the way model laws and model regulations were developed. The criteria for development of a model law or regulation now involve a two-pronged test. First, the subject matter of the model law or regulation must call for a minimum national standard or require uniformity among the states. The second part of the test is the NAIC members must be committed to dedicating significant regulator and NAIC staff resources to educating, communicating and supporting the adoption of the model law or regulation.

When issues arise where a proposed model law does not meet the two-pronged test, a group can proceed to develop a guideline to address the regulatory issue. Guidelines are not considered to be equivalent to model laws of the NAIC. They are considered regulatory best practices. While Section 712 of Model #555 is a model law, it is the opinion of NAIC staff that the alternative language to Section 712 should be drafted as a guideline, because it does not meet the two-pronged test to be a model law.
2016 Workers’ Compensation Large Deductible Study

Section 712 of Model #555 was originally adopted in 2007 separately from the other provisions of Model #555. After discussion and consideration of recent workers’ compensation insurer insolvencies, the growth of the large deductible market and the increased number of workers affected by large deductibles, the NAIC/IAIABC Joint (C) Working Group was charged in 2015 to provide an update to the 2006 Workers’ Compensation Large Deductible Study. The 2016 Workers’ Compensation Large Deductible Study provides the following discussion on the use, business practices and potential risks of large deductible policies in workers’ compensation:

Current State of the Law

In most states, there is little guidance governing the rights and obligations of the parties when an insurance company with a large deductible portfolio becomes insolvent. One approach to the problem could be called the “secured claim” approach, which places the highest importance on the principle that claims within the deductible are primarily the obligation of the policyholder. Under this approach, deductible reimbursements are earmarked to pay those claims, and any collateral posted by or on behalf of the policyholder is held to ensure that those claims are paid. Accordingly, when the guaranty association takes on the responsibility of paying a claim within the deductible, it earns the benefit of the reimbursement due from the policyholder, and the right to draw on the collateral if necessary, or to initiate a draw by the receiver, for the benefit of the guaranty fund. [Note: this is the approach of the NCIGF Model].

Another approach could be called the “reinsurance” approach, which places the highest importance on the principle that the insurer’s obligation to pay all covered claims and the policyholder’s obligation to reimburse the insurer are unconditional and that each is independent of the other. Under this approach, deductible reimbursements are a general asset of the estate so that large deductible policies and guaranteed cost policies are essentially identical from the guaranty fund’s perspective, and the guaranty fund only benefits from the deductible reimbursements in proportion to its share as a creditor of the estate. The NAIC has largely taken the second approach. Under the Insurer Receivership Model Act (#555), Section 712—Administration of Loss Reimbursement Policies, the receiver has the right to collect all deductible reimbursements, drawing on collateral as necessary. All such payments are general assets of the estate. Any reimbursements paid to the guaranty association are treated as early access distributions and offset from future recoveries from the estate. However, the receiver also has the option to enter into an agreement under which the policyholder takes on responsibility for claims within the deductible, directly or through a TPA, and any such claims remain off the books of both the estate and the guaranty fund. It should be noted that no state has enacted the reinsurance approach embodied in Model #555. The NCIGF approach, on the other hand, has had some success in state legislatures, as the paragraph below demonstrates. Further, some states may have concerns about the impact of the Model #555 approach on statutory deposit requirements in California.

[Update: Eight Eleven states currently have statutes in place: California, Florida, Illinois, Indiana, Michigan, Missouri, New Jersey, Pennsylvania, Texas, West Virginia and Utah.] Most of these states follow the NCIGF approach and have amended their insurance liquidation acts to clarify the following when to secure competing claims such as deductible amounts owed the insurer and retroactive premium balances: 1) the ownership of the deductible reimbursements or collateral drawdowns; 2) claims-handling matters; 3) collection responsibility; and 4) allocation of collateral.

Variations on NCIGF Model

Some states have adopted variations from the NCIGF model that may be considered by states when they are considering adding such language. For example, Illinois, Michigan, and Pennsylvania adopted laws that provide for a three percent administrative fee for the receiver:
The Director as rehabilitator or liquidator is entitled to deduct from reimbursements owed to guaranty associations or the Illinois Insurance Guaranty Fund or collateral to be returned to a policyholder reasonable actual expenses incurred in fulfilling the responsibilities under this provision, not to exceed 3% of the collateral or the total deductible reimbursements actually collected by the Director as rehabilitator or liquidator. [215 ILCS 5/205.1].

- California noted in their adoption of the NCIGF model that deductible amounts under their law may vary from as little as five thousand dollars to as much as one million dollars or more.
  - Refers to Section A(1)(b): A large deductible shall include any policy with a deductible of fifty thousand dollars or greater.

**Receivership Accreditation Standard**

The NAIC Financial Regulation Standards and Accreditation Program requires that a state have a “receivership scheme” for the administration, by the insurance commissioner, of insurance companies found to be insolvent similar to that set forth in Model #555. Section 712 of Model #555 is part of that receivership scheme, and it will be necessary for the Financial Regulation Standards and Accreditation (F) Committee to determine that the NCIGF Model also satisfies the receivership scheme requirements of this accreditation standard, and may be considered as alternative language that may be adopted by the states. By having two options for the states to consider, it will foster uniformity between the states, because the variation between states will be minimized as the state will consider adopting statutory authority consistent with one of the approaches rather than developing their own framework for large deductible workers’ compensation products.

Attachment
GUIDELINE: ALTERNATIVE TO SECTION 712 OF INSURER RECEIVERSHIP MODEL ACT (#555)
“ADMINISTRATION OF LOSS REIMBURSEMENT POLICIES”

Drafting Note: Having the necessary statutory authority specific to large deductible workers’ compensation products in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted: 1) Section 712 of the NAIC Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies; and 2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation. Generally, both approaches provide for the collection of reimbursements, resolve disputes over who gets the reimbursements and ensure that the claimants are paid. The provisions in each of the two options generally complement each other, except for conflicting provisions regarding the issue of the ultimate ownership of, and entitlement to, the deductible recoveries and collateral as between the estate and the guaranty fund. The issue is whether the guaranty funds, on behalf of the claimants, are entitled to any deductible reimbursements or whether they are a general estate asset that is shared pro rata by the guaranty funds and the uncovered claimants.

The NAIC Financial Regulation Standards and Accreditation Program requires that a state have a “receivership scheme” for the administration, by the insurance commissioner, of insurance companies found to be insolvent similar to that set forth in Model #555. Section 712 of the NCIGF Model has been determined to satisfy the receivership scheme requirements of this accreditation standard, and may be considered as alternative language that may be adopted by the states to meet the essential requirements of Section 712 of Model #555. By having two options for the states to consider, it will foster uniformity between the states, because the variation between states will be minimized as the state will consider adopting statutory authority consistent with one of the approaches rather than developing their own framework for large deductible workers’ compensation products.

Alternative Model Section 712. Administration of Large Deductible Policies and Insured Collateral

This section shall apply to workers’ compensation large deductible policies issued by an insurer subject to delinquency proceedings under this chapter; however, this section shall not apply to first party claims, or to claims funded by a guaranty association net of the deductible unless paragraph B. of this section applies. Large deductible policies shall be administered in accordance with their terms, except to the extent such terms conflict with this section.

A. Definitions. For purposes of this section:

(1) “Large deductible policy” means any combination of one or more workers compensation policies and endorsements issued to an insured, and contracts or security agreements entered into between an insured and the insurer in which the insured has agreed with the insurer to:

(a) Pay directly the initial portion of any claim under the policy up to a specified dollar amount, or the expenses related to any claim; or

(b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term “large deductible policy” also includes policies which contain an aggregate limit on the insured’s liability for all deductible claims in addition to a per claim deductible limit. The primary purpose and distinguishing characteristic of a large deductible policy is the shifting of a portion of the ultimate financial responsibility under the large deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer. A large deductible shall include any policy with a deductible of fifty thousand dollars or greater.

Large deductible policies do not include policies, endorsements or agreements which provide that the initial portion of any covered claim shall be self-insured and further that the insurer shall have no payment obligation within the self-insured retention. Large deductible policies also do not include policies that provide for retrospectively rated premium payments by the insured or reinsurance arrangements or agreements, except to the extent such arrangements or agreements assume, secure, or pay the policyholder’s large deductible obligations.

(2) “Deductible claim” means any claim, including a claim for loss and defense and cost containment expense (unless such expenses are excluded), under a large deductible policy that is within the deductible.

(3) “Collateral” means any cash, letters of credit, surety bond, or any other form of security posted by the insured, or by a captive insurer or reinsurer, to secure the insured’s obligation under the large...
deductible policy to pay deductible claims or to reimburse the insurer for deductible claim payments. Collateral may also secure an insured’s obligation to reimburse or pay to the insurer as may be required for other secured obligations.

(4) “Commercially Reasonable” means, to act in good faith using prevailing industry practices and making all reasonable efforts considering the facts and circumstances of the matter.

(5) “Other secured obligations” means obligations of an insured to an insurer other than those under a large deductible policy, such as those under a reinsurance agreement or other agreement involving retrospective premium obligations the performance of which is secured by collateral that also secures an insured’s obligations under a large deductible policy.

B. Handling of Large Deductible Claims.

Unless otherwise agreed by the responsible guaranty association, all large deductible claims, which are also “covered claims” as defined by the applicable guaranty association law, including those that may have been funded by an insured before liquidation, shall be turned over to the guaranty association for handling. To the extent the insured funds or pays the deductible claim, pursuant to an agreement by the guaranty fund or otherwise, the insured’s funding or payment of a deductible claim will extinguish the obligations, if any, of the receiver and/ or any guaranty association to pay such claim. No charge of any kind shall be made against the receiver or a guaranty association on the basis of an insured’s funding or payment of a deductible claim.

C. Deductible claims paid by a guaranty association.

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the full amount of the reimbursement, and available collateral as provided for under this section to the extent necessary to reimburse the guaranty association. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [cite to priority distribution statute] or as early access payments under [cite to early access statute].

To the extent that a guaranty association pays a deductible claim that is not reimbursed either from collateral or by insured payments, or incurred expenses in connection with large deductible policies that are not reimbursed under this section, the guaranty association shall be entitled to assert a claim for those amounts in the delinquency proceeding.

Nothing in this subsection limits any rights of the receiver or a guaranty association that may otherwise exist under applicable law to obtain reimbursement from insureds for claims payments made by the guaranty association under policies of the insurer or for the guaranty association's related expenses, such as those provided for pursuant to [insert cite to guaranty association net worth provision], or existing under similar laws of other states.

D. Collections

(1) The receiver shall have the obligation to collect reimbursements owed for deductible claims as provided for herein and shall take all commercially reasonable actions to collect such reimbursements. The receiver shall promptly bill insureds for reimbursement of deductible claims:

(a) Paid by the insurer prior to the commencement of delinquency proceedings;

(b) Paid by a guaranty association upon receipt by the receiver of notice from a guaranty association of reimbursable payments; or

(c) Paid or allowed by the receiver.
If the insured does not make payment within the time specified in the large deductible policy, or within sixty (60) days after the date of billing if no time is specified, the receiver shall take all commercially reasonable actions to collect any reimbursements owed.

Neither the insolvency of the insurer, nor its inability to perform any of its obligations under the large deductible policy, shall be a defense to the insured’s reimbursement obligation under the large deductible policy.

Except for gross negligence, an allegation of improper handling or payment of a deductible claim by the insurer, the receiver and/or any guaranty association shall not be a defense to the insured’s reimbursement obligations under the large deductible policy.

E. Collateral.

Subject to the provisions of this subsection, the receiver shall utilize collateral, when available, to secure the insured’s obligation to fund or reimburse deductible claims or other secured obligations or other payment obligations. A guaranty association shall be entitled to collateral as provided for in this subsection to the extent needed to reimburse a guaranty association for the payment of a deductible claim. Any distributions made to a guaranty association pursuant to this subsection shall not be treated as distributions under [Insert state insurance liquidation priority distribution statute] or as early access payments under [Insert state early access statute].

All claims against the collateral shall be paid in the order received and no claim of the receiver, including those described in this Subsection, shall supersede any other claim against the collateral as described in Subsection (4) of this Section.

The receiver shall draw down collateral to the extent necessary in the event that the insured fails to:

(a) Perform its funding or payment obligations under any large deductible policy;
(b) Pay deductible claim reimbursements within the time specified in the large deductible policy or within sixty (60) days after the date of the billing if no time is specified;
(c) Pay amounts due the estate for pre-liquidation obligations;
(d) Timely fund any other secured obligation; or
(e) Timely pay expenses.

Claims that are validly asserted against the collateral shall be satisfied in the order in which such claims are received by the receiver.

Excess collateral may be returned to the insured as determined by the receiver after a periodic review of claims paid, outstanding case reserves and a factor for incurred but not reported claims.
Proposed Changes to Receiver’s Handbook for Insurance Company Insolvencies

RE: Large Deductible Worker’s Compensation

Inserts into Existing Handbook shown in “tracked” change.
Text between sections/pages eliminated to conserve space.

Chapter 1 – Takeover & Administration (Page 30)

VIII. CLAIMS

A. Control the Claim Department’s Records

Obtain copies of the insurer’s claim policies and procedures manuals. Review them to determine if the insurer has formal procedures that address the following areas:

- Actual claim processing flow;
- The level of claim file documentation required;
- The coverage confirmation process;
- Claims reserving and settlement philosophy;
- Claims settlement authority;
- Litigated claims;
- Aggregate policy procedures;
- Large Deductible Policy Procedures including collection, collateral and aggregates;
- Reinsurance recovery procedures;
- Theories relevant to property/casualty insurers, such as trigger theories for asbestos and environmental claims; and
- The insurer’s relationships with and responsibilities to managing general agents, TPAs, outside claim adjusters, reinsurance intermediaries and other outside parties.

</tbody>
</table>
**Collection procedures, personnel and responsibilities, staffing and what will be required from staff as a result of the order**
- Conduct interviews of appropriate large deductible collection department personnel to determine policies and procedures. Document same.
- Establish a large deductible recoverable balance as of the receivership date

### Gathering Documentation
- Determine location of large deductible records – secure and inventory. This should include:
  - All policies containing large deductible endorsements
  - Claims files arising under such policies
  - Correspondence files
  - Billing records
    - Letters of credit, trust agreements, deductible reimbursement policies or other collateral
- For all LOCs, trust accounts, funds withheld:
  - Secure all originals
  - Notify all banks and trustees of the order

### Documenting Large Deductible Collection Procedures
- Review recent billings for all large deductible policies
- Obtain a list of large deductible payment history and determine whether insured payments have been ongoing or if payment from collateral has been required.
- Obtain a list of paid and unpaid bills updated after liquidation
- Obtain claim documentation for claims arising under large deductible policies
  - By paid loss and loss reserves and ALAE paid and reserves
  - List of claims in litigation/arbitration
- Review large deductible billing system; determine that all paid losses arising under large deductible policies have been billed.
- Determine whether large deductible endorsements provide that losses within the deductible are limited in the aggregate
- Evaluate recovery processes and determine if new procedures are appropriate
- Determine whether collateral is held by affiliated/unaffiliated third party via large deductible reimbursement policy, trust
agreement or other vehicle, and evaluate whether collateral
can be transferred to the receivership
- Document insured collection disputes
- Determine which functional group handles disputes
- Interview members of each group responsible for
  coordinating, monitoring and controlling large deductible
  collection disputes
- Audit large deductible collection-specific systems. Track
data from source to final product to verify billings are correct
  and inclusive and internal controls are adequate

Chapter 2- Information System (Page 139)

H. Common Systems Applications

8. Email

Virtually every insurer uses an industry standard email system. Emails are important company records
that must be preserved. In addition to performing a backup of the email server at the start of the
receivership, it is also good practice to extract individual email boxes of key employees at that time as
well. Consideration should be given to periodically backing-up these files throughout the receivership
to insure preservation of communications. Email backup restoration often requires the use of outsource
computer forensic experts. Extracting email boxes in readable format at the outset of a receivership will
save costs down the road should email records be required for litigation purposes,

9. Large deductible recoverables can be a large asset of the receivership, and, like reinsurance,
collection is highly dependent on reliable policy and loss information. Use of information systems in
recording and tracking this information is fairly common. As with reinsurance, this system may be a
part of, or at least closely connected with, the accounting or claims systems

Chapter 2- Information System (Page 141)

C. Types of Business Written

Initially, it will be necessary to identify general characteristics of the insurer’s business practices. This analysis
will provide a general idea of systems sizing and related requirements and should include an analysis of:

- Lines of business – The lines of business underwritten and the characteristics of this business may have a
  substantial impact on information systems requirements. If it is a business in which claims will develop
  quickly, the requirement may be quite different from long-tail business in which claims will take a long
time to develop. If the business included large-deductible or loss-sensitive features such a retrospectively
  rated premiums, there will be additional system demands. This also will impact the amount of historical
  information that must be maintained in the systems.
I. Existing Systems

The receiver’s staff (or an independent consultant) needs to determine if the existing systems adequately process the business or if those systems must be supplemented with manual processing. If it is the latter, the receiver should then determine whether the level of supplemental manual processing required is acceptable, in terms of accuracy and the cost of processing. This will establish whether the existing system(s) are adequate to provide the receiver with the amount and types of information required.

The receiver may require various types of information in the administration of an estate. Especially with systems that do not permit online inquiry, it is imperative that reports which are adequate for the receiver’s purposes be produced. At a minimum, the existing systems should have the capability of generating a wide variety of reports. The receiver’s staff should carefully examine the available reports to determine whether they are adequate or if custom reports need to be developed, assuming the data stored in the systems can support custom reports. Reports are normally required for the following types of information:

- Policies and contracts;
- Accounting;
- Claims;
- Accounts receivable/payable;
- Cash;
- Reinsurance;
- Guaranty fund claims counts and reserves by state; and
- Earned and unearned premium.
- Large Deductible Collections and Collateral

D. Salvage and Subrogation (Property/Casualty Only)

5. Salvage and Subrogation (Property/Casualty- Large Deductible Recoveries - Only)

a. Large Deductible Recoveries

Large deductible recoveries are amounts received by an insurer from an insured covered under a policy having an endorsement providing that the insured is responsible to indemnify the insurer for certain losses and LAE incurred. While these policies share some characteristics with retrospectively rated policies, the accounting treatment of recoveries under the two types of policies is different.

b. Accounting Practices

Under statutory accounting practices, recoveries under large deductible policies are not treated as premium. Unpaid losses are booked net of the deductible, except where the deductible is deemed not to be collectible, in which case the losses are booked on a gross basis. Because losses within the large deductible limit are not booked, it is important that the receiver examine the records, systems and procedures to identify and follow up large deductible recoveries on both paid and unpaid claims. Because these recoverables do not appear on the balance sheet...
VI. OTHER SIGNIFICANT TRANSACTIONS

B. Large Deductible Policies

Large deductible recoveries can represent a significant source of recoveries for insolvent companies, especially those property and casualty companies that wrote workers’ compensation insurance. Because these recoverables do not appear on the balance sheet unless uncollectible, but may be a significant recoverable amount, the receiver should examine the scope of the large deductible business written, and the collection and collateral procedures employed by the company.

1. General Considerations

   a. The receiver’s recovery of large deductible recoverables is dependent on the claims handling and reporting of both claims covered and those not covered by guaranty funds.

   b. The key to effective collection and collateral administration is ensuring that the historical records for paid losses under the deductible policies and the program design are maintained and available. Another key is retaining the personnel that have knowledge and history of the insurer's deductible business operations.

   c. Collateral for Large Deductible Balances.

      - The importance of collateral cannot be overstated. But adequate collateral must be established prior to liquidation as it is unlikely to be collected after liquidation.
      - Large Deductible balances frequently will be secured to ensure collectability and preserve the insurer’s statutory accounting credit. The receiver should identify and closely review these security arrangements early in the receivership. Particular attention should be paid to security arrangements where the insured’s collateral is held by third parties, especially affiliates of the insurer.
      - Notices to financial institutions or others involved in security arrangements are critical to preserve the security by ensuring compliance with terms of the security arrangements and the exercise of any related rights or obligations.

2. Communication

   Deductible collection, in addition to requiring collateral, is dependent on communication of all parties (i.e., between receiver and insured, receiver and guaranty associations, guaranty association and insured). It must be quickly established with insured as to procedure for ongoing claim processing, continuation of their responsibility to reimburse the deductible payments and responsibility to maintain appropriate collateral. Guaranty associations must also recognize that they will be required at times to communicate with insureds regarding claims handling. All parties should be mindful of security...
concerns related to communication of sensitive claims data. The SUDS server hosted by NCIGF is a useful tool for communication between receivers and guaranty associations. Guaranty funds may opt for telephonic communication with insureds. The collection process should proceed with minimal delay as the passage of time will impact success of collection efforts. In these efforts it is imperative that the guaranty associations and the receiver work together and offer consistent messages to the insured regarding any collection issues. It should also be noted that the release of collateral from a receiver to a guaranty association may not fully satisfy the policyholder’s obligation for costs related to the claim under a state’s guaranty association law.

3. Deductible Collection Procedure

a. A working process must also be established quickly between the receiver and the guaranty associations to provide claim handling, payment information and all other required claim financials to allow the receiver to bill and collect loss payments.

b. The information would include the receiver providing the guaranty associations all pertinent information to establish the policies that are deductibles along with effective dates, deductible limits, treatment of ALAE and deductible aggregates where available.

c. Copies of deductible policies should be made available if required.

d. Guaranty Association’s will provide, through the establishment of UDS data feed, all financial information regarding deductible claims that they are handling.

e. Receiver will collate data from guaranty associations and review historical billing information to invoice the insureds on a monthly or quarterly basis.

f. Receiver will calculate and track the payment history pre-liquidation and post Liquidation within the deductible and within a deductible aggregate for the policy if applicable. This ensures that the insured is only billed for amounts that remain within their deductible.

g. To assist in the collection process receiver and guaranty association should work to provide sufficient information and explanation to allow the insured to recognize its obligation. In the event where the insured refuses to pay, the receiver will either begin litigation or draw on collateral or both. This should be coordinated with the guaranty associations.

4. Professional Employer Organizations (“PEOs”)

a. Policies issued to PEOs often have large deductible endorsements.

b. Because of the prevalence of abuse in the underwriting of PEOs, post-liquidation collection of deductible payments may be challenging.

c. Clients may have been added without notice (or payment) to the insurer; Client class of business may have been misrepresented or expanded to include riskier classes of business – all of which may lead to inadequate or exhausted collateral.

d. Client companies of PEO may not have received notice of cancelation, leading to coverage disputes. If collateral is inadequate and the PEO does not have assets to pay the deductible reimbursement in full, the policy terms might make the client companies liable for the shortfall, either for their own exposure or on a joint-and-several basis. However, this might not be a meaningful source of recovery, because it could be impractical, inappropriate, or impossible to collect significant amounts from the clients.
5. Commutations

a. Generally, commutations are negotiated terminations of the rights and liabilities between insurers and large deductible insureds. A commutation is a settlement of all obligations, both current and future, between the parties for a lump sum payment.

b. There are many valid reasons for commutations of large deductibles. They may provide immediate cash for the receivership estate, avoid future uncertainties, resolve disputes between insurer and insured, and provide some protection or limitation of exposure from the insolvency of the insured. Commutations of long tail business (i.e., workers’ compensation) may be essential for the early termination of the receivership.

c. Commutations, however, may be a detriment to the receivership if the commutation is consummated for less than fair consideration. A receiver should carefully review the commutation to determine whether the benefit to the insurer outweighs the disadvantages.

Chapter 5 – Claims (Page 288)

V. PAYMENT OF APPROVED CLAIMS

A. Priority of Distribution in Receiverships

5. Class 3 and 4 – Claims for Policy Benefits

a. Deductible and Limits

The policyholder’s claim is for the amount that the insurer should have paid. For some policies (e.g., workers’ compensation policies), the insurer is required to pay the claim and seek the deductible from the insured (thereafter, known as “Large Deductible Policies”). It is common for insureds to post collateral with the insurer for deductible payments that may be made by the insurer, for which the insurer then seeks reimbursement from the insureds. With other policies, the insurer’s liability attaches after the deductible has been paid by the insured (“Non Advancement Policies”). IRMA Section 712 provides for the disposition of Large Deductible Policy or Loss Reimbursement Policy recoveries between receivers and guaranty associations. Individual state statutes (see, for example, 40 PA §221.43a) differ from IRMA Section 712 in certain respects.”

Chapter 9 – Legal Considerations (Page 518)

G. Assets that are not General Assets, Special Deposits and Letters of Credit

3. Letters of Credit

There has been some controversy surrounding the rights and obligations of receivers regarding letters of credit (LOCs). LOCs are typically used to support reinsurance and large deductible obligations. Letters of credit issued in connection with reinsurance transactions are discussed in detail in Chapter 7, Section VIII and in connection with large deductible transactions in Chapter 4, Section A.

Chapter 9 – Legal Considerations (Page 539)
I. Large Deductibles

Many liability policies for large commercial insureds are being written with deductible limits that may exceed $100,000. The purpose of these large deductible amounts is to reduce premiums for the insured while permitting the insured to meet statutory or regulatory insurance requirements. Large deductible policies are most common in the workers’ compensation area but may be found in other types of liability insurance.

Typically, a large deductible policy provides that the insurer will pay claims in full and then collect the deductible amount from the insured (first dollar coverage). Conversely, first party claims against an auto policy with a deductible are paid minus the amount of the deductible. To ensure that the deductible will be paid, most insurers that write this type of policy will require the insured to post some form of security. This can be a letter of credit or securities placed in a trust or escrow account for the benefit of the insurer, or some other form of a third-party commitment to reimburse for claims within the large deductible, such as a bond or large deductible reimbursement insurance policy. When the insurer pays a claim, depending on the agreement with the insured, the insurer may either submit a bill to the insured for the amount of the claim paid within the deductible or collect directly from the collateral.

As long as the insurer and the insured remain solvent, there are seldom any difficulties with large deductible arrangements. If the insured becomes insolvent and stops paying the deductible billings and if the collateral held is insufficient to pay current and future billings, the insurer’s ability to collect the amounts due will be adversely affected. Or funding the collateral account, the insurer remains liable for injuries sustained prior to the termination of the policy.
Proposed Changes to Receiver’s Handbook for Insurance Company Insolvencies

RE: Large Deductibles

(NEW SECTION IN EXISTING HANDBOOK)

Chapter 5 – Claims (Page 304)

VIII. BEST PRACTICES FOR SUCCESSFUL BILLING AND COLLECTION OF LARGE DEDUCTIBLE PROGRAMS IN LIQUIDATION

A. Overview of Large Deductible Worker’s Compensation

A large deductible worker’s compensation policy or program is a method of insuring workers’ compensation risk with the employer assuming some of that risk in a deductible of $100,000, $250,000, or even higher per claim (varies by state) and an insurer taking on the remaining risk. In states that permit professional employer organizations (PEOs), PEO’s often operate large deductible programs. A PEO is an outsourcing firm which provides services to small and medium sized businesses. The PEO enters into a contractual co-employment agreement with its clientele. If the employer or PEO fails to pay for any reason, the insurer incurs an unexpected liability, and the failure of the claim reimbursement mechanism has been a significant factor in a number of insurer insolvencies.

B. Administration of Large Deductible Plans

The administration of large deductible plans is impacted by entry of an order of liquidation. In such cases, there are two options available regarding statutory authority concerning Large Deductible Worker’s Compensation, namely:

1) Insurer Receivership Model Act (Model #555—IRMA) Section 712 Administration of Loss Reimbursement Policies; or

2) National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Act.

Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which would greatly enhance the ability to manage complex large deductible programs post-liquidation. Generally, both approaches provide for the collection of large deductible reimbursements from policyholders, clarify entitlement to reimbursement, and ensure that the claimants are paid. The provisions in each of the two options generally complement each other except for conflicting provisions regarding the issue of the ultimate ownership of and entitlement to the deductible recoveries and collateral as between the estate and the guaranty fund.

C. Communication and Reporting Between the Liquidator, Policyholders and Guaranty Associations, Including Administration of Self-Funded Policyholder Programs

1. Claim payment, reserve, and reimbursement reporting.

The administration of large deductible programs requires strong communication and reporting programs between the Liquidator, guaranty associations and policyholders. Under the both Model Acts, the Liquidator is required to administer large deductible programs, and related collateral securing large deductible obligations, consistent with the policyholder’s policy provisions and large deductible agreement (“LDA”) as amended by the provisions of the Model Act. Both Model Acts make provision for two types of LDAs, those that permit self-funding by the policyholder, and those that require initial payment by the insurer or guaranty association with reimbursement by the policyholder. Both arrangements necessitate the reporting of claim payments and outstanding claim reserves to the Liquidator for billing, guaranty association reimbursement, and establishing
collateral need requirements. The Liquidator’s uniform data standard or UDS should be deployed as the reporting protocol for guaranty association claim payments and outstanding claim reserves. Policyholders that continue self-funding under their LDA will need to continue or establish a claim information reporting protocol with the Liquidator through the policyholder’s third-party claim administrator or through a proprietary claim information aggregator. Both Model Acts require the Liquidator to form an independent opinion on outstanding claim reserves reported by policyholders and guaranty associations, including a safety factor and incurred but not reported liability to ensure that collateral remains adequate throughout the administration of the program.

2. Agreements between Liquidator and guaranty associations.

For states that have enacted the either of the two Model Acts or similar statutory framework for the Liquidator’s administration of large deductible programs an agreement between the Liquidator and the guaranty associations is not necessary. The Models provide a comprehensive framework for administration of the program. For states that have not enacted either Model, an agreement between the Liquidator and guaranty associations may be advisable. The Models can serve as an outline for the issues that should be addressed in such an agreement. Among other things, an agreement should address: whether large deductible recoveries are estate assets subject to the Liquidator’s distribution regime or directly pass-through to the guaranty association on account of its prior claim payments, claim reporting protocols, frequency of collateral review and reimbursement activity, and administration of collateral for under collateralized non-performing policyholder accounts.

3. Converting policyholder accounts from an incurred to paid basis under the Model Act.

The NCIGF Model Act provides for the conversion of a policyholder’s LDA at liquidation from an “incurred” to a “paid” basis. Conversion is beneficial to policyholders in several ways. Most importantly, conversion at liquidation treats pre-liquidation incurred loss payments made by the policyholder to the insurer as collateral, and thus property of the policyholder pledged to the insurer and restricted to the satisfaction of that policyholder’s claims, rather than as a general asset of the liquidation estate. Conversion also offers flexibility to a policyholder as to the type of security provided to an insurer in satisfaction of the collateral requirement. Conversion affords policyholders the ability to utilize a letter of credit to secure an insurer for the outstanding portion of their loss, rather than payment of cash, since the outstanding bill after conversion is reflected in the Liquidator’s collateral need analysis, rather than an incurred loss billing.

The NCIGF Model Act recognizes these important policyholder rights and provides incentive to policyholders to cooperate with the Liquidator’s administration of large deductible programs and guaranty association reimbursement. The Liquidator should consider notifying large deductible policyholders of these important policyholder rights at the inception of a liquidation proceeding and offer policyholders the opportunity to elect to convert their large deductible programs from an incurred to paid basis in accordance with the NCIGF Model Act, memorializing any elections with an endorsement that otherwise follows and requires the policyholder to adhere to the provisions of the NCIGF Model Act.

2.4. Large deductible billing by Liquidator.

The Liquidator should establish a large deductible billing and collection program that bills policyholders on a periodic basis, e.g., quarterly, that meets Liquidator and policyholder expectations for claim payments made by the estate prior to liquidation and by guaranty associations after liquidation. The Liquidator’s invoice to policyholders should communicate a claim payment summary that includes detail such as the insurer or guaranty association’s check number, date of payment, payee, account year, and remaining large deductible limits. Large deductible programs that are self-funded by policyholders should also report their claim payments to the Liquidator on a similar periodic basis, so that the Liquidator can establish appropriate claim reserves, track the exhaustion of the policyholder’s deductible limits, report to reinsurers and collect reinsurance. Consideration should be given to using one of many proprietary billing and collection software programs to automate the large deductible billing and collection process. Large deductible recoveries that are subject to
guaranty association reimbursements should be aggregated and distributed on a quarterly or other periodic basis that balances the Liquidator’s accounting requirements and the guaranty associations’ reimbursement needs.

### 3.5. Annual collateral review by Liquidator.

The NCIGF Model Act, consistent with the typical LDA, requires the Liquidator to perform an annual collateral review for each policyholder account to ensure that the Liquidator holds adequate collateral to support a policyholder’s large deductible obligations and to release any excess collateral held back to the policyholder. This review should include a report to the policyholder on total incurred claims, claims paid, outstanding reserves, any additional safety factor and total collateral need. The Liquidator’s collateral review should result in a report to the policyholder and an invoice for additional collateral need or a release and distribution of excess collateral. The Liquidator should consider whether any additional safety factor should be included for non-performing policyholder accounts. The NCIGF Model Act provides flexibility on the timing of the annual review, enabling the Liquidator to perform the annual review process throughout the calendar year so that all policyholder account reviews are not due at the same time.

**D. Administration Fees**

Section 712 (G) OF IRMA provides:

> The receiver is entitled to recover through billings to the insured or from large deductible policy collateral all reasonable expenses that the receiver or guaranty associations incur in fulfilling their responsibilities under this Section. All such deductions or charges shall be in addition to the insured’s obligation to reimburse claims and related expenses and shall not diminish the rights of claimants.

Further, Section 712(F) provides, in part:

> The expenses incurred by a guaranty association in pursuing reimbursement shall not be permitted as a claim in the delinquency proceeding at any priority; however, a guaranty association may net the expenses incurred in collecting any reimbursement against that reimbursement.

Several states have adopted statutory provisions similar to the IRMA provisions regarding handling of large deductibles in an insolvency and provide for the Receiver to retain reasonable actual expenses incurred from the reimbursement to the guaranty association(s). Similarly, statutes may provide for the guaranty association to net expenses incurred in collecting a reimbursement.

When there is no statutory guidance, receivers should include a provision for reimbursement of reasonable actual expenses in an agreement with the guaranty associations regarding the collection and allocation of large deductibles.

**E. Policy and Collateral Definitions**

It is important that state laws define large deductible workers’ compensation policies and large deductible collateral. Defining the treatment of such policies and associated collateral is imperative for developing polices and processes for administering the collection of assets. For purposes of this handbook, “Large deductible policy” means any combination of one or more workers compensation policies and endorsements issued to an insured, and contracts or security agreements entered into between an insured and the insurer in which the insured has agreed with the insurer to:

(a) Pay directly the initial portion of any claim under the policy up to a specified dollar amount, or the expenses related to any claim; or
(b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term “large deductible policy” also includes policies which contain an aggregate limit on the insured’s liability for all deductible claims in addition to a per claim deductible limit. The primary purpose and distinguishing characteristic of a large deductible policy is the shifting of a portion of the ultimate financial responsibility under the large deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer. The dollar amount of “large” will vary by state law. While many states might associate a minimum financial threshold, it is more important to consider the administration of the policy compared to a traditional policy. Deductible amounts can include claim-related payments by the insurer for medical and indemnity benefits, allocated loss adjustment expenses, such as medical case management expenses, legal defense fees and independent medical exam expenses. It is critical that the policy specify the claim-related payments that are the responsibility of the policyholder and not be inside agreements or other agreements outside of the policy. Collateral held by the insurer should be defined as amounts held for large deductible policy. The policy should provide acceptable financial instruments that can be held for large deductible policy. Typical collateral requirements include: cash, letters of credit, surety bonds or other liquid financial means held for the benefit of the insurer.

F. Whether receiver or guaranty fund should be Responsible Party For Collection of Large Deductible Reimbursements

It is critical to immediately establish the party responsible for billing and collecting large deductibles. While some states might have specific statutory language that specifies the entity responsible, some statutes might be silent. In the case where the statutes do not specify responsibility, it is recommended that the receivers and guaranty associations enter into an agreement that allows for the most efficient administration of the large deductible collections.

Specific consideration should be given to large deductible policies that provide coverage in multiple states and have claimants subject to the jurisdiction of multiple guaranty funds. If feasible, the most efficient approach for such policies would likely be for the receiver to administer the deductible billing and collection process. Throughout the life of the estate, claimants continue to incur benefit payments and expenses and deductible collection efforts may last beyond the life of the estate. The party responsible for collections needs the ability to compromise and settle the future obligations.

The receiver should make provisions in its discharge motion and Court order, to the extent possible, regarding the transition of ongoing deductible collections to the guaranty as well as the disposition of any collateral being held by the receiver.

G. Treatment of Collateral in Receivership

When collateral has been posted by or on behalf of a large deductible policyholder, what does the receivership estate actually own? The answer is generally found in the documents pledging the collateral to the insurer.

The Insurance Receivership Model Act, NAIC Model Law # 555 (“IRMA”) defines “property of the estate” to include “all right, title and interest in property ... includ[ing] choses in action, contract rights, and any other interest recognized under the laws of this state.”

In states without an explicit statutory definition, the common-law definition is substantially similar.

1 IRMA § 104(V)(1).
This means that the insurer’s right to draw on the collateral automatically becomes an asset of the receivership estate, but the collateral itself is not an estate asset unless and until it is drawn. In the first instance, the conditions and procedures for drawing the collateral should be spelled out in the relevant contract documents (which could include third-party instruments such as letters of credit or surety bonds), but state law could provide additional rights, and will specify what the receiver may do when the documents are silent, incomplete, or missing.

Possession and control over the collateral are distinct from ownership. The insurer could already be in possession of the collateral before the receivership, or the receiver might act to take possession by enforcing applicable contract rights or by negotiating an agreement. Nevertheless, this does not immediately give the receiver the right to use the collateral to pay claims. The defining characteristic of collateral is that it is intended to serve as a backstop in case the policyholder does not meet its obligations to pay all reimbursements promptly and in full. Commonly, the right to draw on collateral only attaches after the policyholder has defaulted or has consented to a draw, or, if the collateral is a letter of credit, after the issuer has given notice of nonrenewal (in which case the receiver must act promptly to call the LOC or obtain replacement collateral). There could also be the opportunity to negotiate an agreement under which the policyholder turns over the collateral and makes a lump-sum payment to commute any further reimbursement obligations, or the collateral might have been structured from the outset as a “working” loss fund from which the insurer was expected to pay claims in the ordinary course of business.

In any case, while it is essential for the receiver to preserve and exercise the right to access the collateral as needed, it is also essential to ensure that collateral is not dissipated to pay claims that the policyholder should be funding. Special consideration needs to be given in situations where the policyholder is at risk of being or becoming judgment-proof, or where rights to the collateral are shared with other creditors of the policyholder and prompt action is necessary to preserve the receiver’s priority.

When the guaranty association is paying the claims, it is generally entitled to receive the proceeds of any policyholder reimbursements, including draws on the collateral. Under laws substantially similar to IRMA, these payments are considered early access distributions (but without the necessity for court approval) which may be subject to subsequent clawback, while laws substantially similar to the NCIGF Model treat them as the ultimate source of funding for the underlying claims, so that they belong unconditionally to the guaranty association. Either way, however, it is the receiver rather than the guaranty association that has the right and obligation to draw on the collateral, unless there is a formal written agreement assigning that right to the guaranty association.

Finally, there is always the hope that the policyholder’s reimbursement obligations will be oversecured or will become oversecured as claims are run off. In that case, any excess collateral will revert to the policyholder or the policyholder’s guarantor. State law might expressly provide a process for determining when excess collateral is being held by or on behalf of the receiver, or the ability to return collateral before the estate is closed might be part of the general powers of the receiver. However, because workers’ compensation is a long-tail exposure with significant risk of adverse reserve development, receivers must take great care not to make premature or excessive return distributions.

H. Issues Raised by Net Worth Exclusions and Deductible Exclusions

Unlike other lines of insurance, workers’ compensation insurance is generally exempt from the statutory caps on guaranty association coverage, so that the guaranty fund is usually obligated to pay workers’ compensation claims

---

2 For example, IRMA § 712(D) specifically provides that the relevant provisions of the policy are not controlling “where the loss reimbursement policy conflicts with this section.”

3 Compare IRMA § 712(C)(3) with NCIGFMA § 712(C).

4 See NCIGFMA § 712(E)(3).

5 See, e.g., NCIGFMA § 712(E)(5).
in full. However individual states may have adopted caps on guaranty association coverage.\textsuperscript{6} States have created this exception to honor their state’s promise that injured workers will be paid the full benefits to which they are entitled. The general purpose of these exclusions is to avoid any obligation for the guaranty association to pay losses that can and should be borne by the policyholder. Net worth exclusions make guaranty association protection unavailable to policyholders with net worth above a specified threshold, while deductible exclusions expressly prohibit guaranty association coverage for amounts within a policy deductible.

Unless these exclusions are drafted and implemented carefully, there is a risk that they could result in delays in claims payments or even a complete loss of coverage. In some states, claimants might be protected by an uninsured employer fund, but that is not the purpose of those funds, so even if such a fund exists in your state, it should be a priority to ensure that however it is done, the estate, employer, or guaranty association will provide for payment in full of all benefits due under the state’s workers’ compensation laws. If this is not possible under current law, regulators should advocate for a change in the law. A variety of successful approaches are available; there is not a single one-size-fits-all solution that is best for every state.

\textit{I. Net Worth Exclusions:}

The PC GA Act contains an optional section, with a variety of alternative provisions states can select, excluding coverage for high-net-worth insureds, whether they are individuals or business entities.\textsuperscript{7} The base version sets the threshold at $50 million, while one of the alternatives sets the threshold at $25 million. Many states have enacted some version of this clause or some comparable net worth exclusion.

The impact on workers’ compensation coverage depends on how the exclusion is structured. In states with provisions substantially similar to any of the three alternatives under the PC GA Act, coverage is excluded completely for first-party claims by high-net-worth insureds, but workers’ compensation claims against high-net-worth policyholders are administered by the guaranty association on a “pay-and-recover” basis: that is, the guaranty association has the obligation to pay the claim in the first instance, and the right to be reimbursed by the policyholder.\textsuperscript{8} Thus, claimants are fully protected, and for large deductible policies, this mirrors the structure of the policy for claims within the deductible. In states with guaranty association laws similar to the NCIGF Model, this is the same reimbursement right the guaranty association would have in the absence of the exclusion as the insurer’s successor.

If the policyholder is cooperative, the guaranty association has the option of negotiating an agreement where the policyholder advances funding for claims within the deductible. However, if the policyholder is not cooperative, guaranty associations have expressed concern that the pay-and-recover framework is burdensome and gives the policyholder too much leverage to avoid or delay paying its obligations in full. If PC GA Act’s Alternative 2 is modified to treat workers’ compensation claims the same as other third-party claims, then the guaranty association has no obligation unless the formerly high-net-worth policyholder has become insolvent.\textsuperscript{9} Otherwise, the claimant’s

\textsuperscript{6} See Property and Casualty Insurance Guaranty Association Model Act, NAIC Model Law # 540 (“PC GA Act”), § 8(A)(1)(a)(i). Almost all states have some provision requiring payment in full of workers’ compensation claims, but some states might have caps or other limitations on coverage.

\textsuperscript{7} PC GA Act, § 13.

\textsuperscript{8} Alternative 1 applies the pay-and-recover obligation to all third-party claims. Alternative 2 excludes most third-party claims as well as all first-party claims, but requires the guaranty association to pay workers’ compensation claims, statutory automobile insurance claims, and other claims for ongoing medical payments. Alternative 3 excludes only first-party claims and claims by out-of-state claimants that are subject to a net worth exclusion in the claimant’s home state; this alternative does not create any statutory right of recovery when the guaranty association is obligated to pay a third-party claim.

\textsuperscript{9} PC GA Act, § 13(B)(2) Alternative 2.
only recourse is against the policyholder or the insured’s estate. As stated above, the injured worker should be protected by some means in these cases.

When a guaranty association net worth exclusion and a large deductible both come in to play on the same claim, it is imperative that the receiver and guaranty association stay in close communication in order to avoid any confusion regarding which entity is responsible for the collection. In both IRMA 712 and the NCIGF large deductible model statute, the guaranty fund is entitled to collect net worth reimbursements. Coordination of these collections with receiver efforts to collect on high deductible will do much to avoid duplication of billings and potential resulting collection delays.

2. Deductible Exclusions:

The PC GA Act does not contain any explicit deductible exclusion. Instead, it simply provides that “In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises.”10 However, some states have enacted explicit language further clarifying that there is no guaranty association coverage for amounts within a policy’s deductible or self-insured retention.11 For example, Minnesota law excludes “any claims under a policy written by an insolvent insurer with a deductible or self-insured retention of $300,000 or more, nor that portion of a claim that is within an insured’s deductible or self-insured retention” from coverage by the property and casualty guaranty association.12 A Minnesota employer entered into an employee leasing arrangement with a PEO, which obtained a workers’ compensation policy with a $1 million deductible. Both the PEO and the insurer became insolvent, and the Minnesota Court of Appeals held that there was no guaranty association coverage for workers’ compensation claims against the client employer because of the statutory deductible exclusion.13 The court observed that the Legislature deliberately chose to protect the guaranty association from unlimited exposure, without mentioning that the Legislature also deliberately created an exception making the cap on coverage inapplicable to workers’ compensation claims (which strongly suggests that the statute in question, which is tied to the statutory $300,000 cap on coverage, was not written with workers’ compensation in mind).14 Likewise, the court took for granted that the statute’s undefined term “deductible” included the contract provision at issue in the case, even though the insurer had assumed the unconditional liability to pay all claims in full. The opinion did not consider the possibility that the Legislature’s intent was simply to clarify that the guaranty association has no obligation to drop down and pay claims from the first dollar if the insurer would have had no obligation to pay those claims.

Therefore, if states determine that there is a need to include express provisions addressing deductibles and self-insured retentions in their guaranty association laws, it is essential to avoid unintended consequences. In particular, the key terms should not be left undefined. For this reason, IRMA coined the term “loss reimbursement policy” in its section addressing these types of policies, to distinguish them from true deductibles, where the insurer has no obligation to pay anything except the portion of the loss that exceeds the deductible.15

---

10 PC GA Act, § 8(A)(1)(b). Compare LH GA Act, § 3(B)(2)(a), expressly excluding from life and health guaranty association coverage “A portion of a policy or contract not guaranteed by the member insurer, or under which the risk is borne by the policy or contract owner.”

11 Currently, the only states with language specifically excluding claims within policy “deductibles” are Iowa, Louisiana, Minnesota, Missouri, and Nevada. Louisiana’s exclusion applies only to policies issued to group self-insurance funds, and Missouri’s does not apply to workers’ compensation claims.

12 Minn. Stat. § 60C.09(2)(4).

14 Minn. Stat. § 60C.09(3).

15 For example, if a consumer has an auto policy with a collision deductible of $1,000, and the repair costs $5,000, the insurer’s liability is limited to $4,000. “Self-insured retentions” (SIRs) in commercial excess policies are designed to function the same
This is the crucial difference between a “large deductible” workers’ compensation policy and an excess policy. Although “large deductible” policies transfer a significant amount of risk back to the policyholder, they do not extinguish the insurer’s liability. That is why “large deductible” policies, in states that allow them, are accepted as a mechanism for satisfying the policyholder’s compulsory coverage obligations, while excess policies generally are not. Usually, excess workers’ compensation policies may only be issued to self-insurers that have been approved by the state. It is the approved self-insurance program, not the excess policy, that satisfies the employer’s compulsory coverage obligation, and the insurer has no liability for any portion of a claim that falls within the employer’s self-insured retention. Thus, despite the terminology that is commonly used, it is the excess policy, not the large deductible policy, that functions as a “deductible” in the traditional sense of the term.

It is worth noting, however, that commercial self-insured retention and large deductible policies can vary widely in policy terms and sometimes “side agreements” supplement the policies. Arrangements can contain aggregate limits, can vary on the obligation for defense cost and expenses and, in some cases permit the insured to “self-fund” its claims with an account in the possession of the TPA which is handling the claims. Because of these complexities, policy terms and any related endorsements and side agreements should be carefully reviewed. Whether such side agreements are legally enforceable requires a thorough case-by-case analysis in light of applicable state laws.

way on a larger scale. If a business is found liable (or a third-party claim is settled) for $500,000, and its liability policy has an SIR of $300,000, the insurer is never responsible for more than the remaining $200,000, even if the policyholder is bankrupt.

16 In many states, a separate self-insurance guaranty fund protects claimants if a self-insured employer becomes insolvent. Those funds typically operate entirely under the state’s workers’ compensation laws, not the state’s insurance receivership or insurance guaranty fund laws.
Professional Designation Program

December 8, 2019

Objectives of IAIR’s Professional Designation Program

• Broader Expertise in Insurance Resolutions
• Promoting Consistent Standards for Administration of Insurance Resolutions
• Rigorous Program and Objective Designation Testing
• Deepening of the Pool of Qualified Individuals to Assist Commissioners with Troubled Companies
Professional Designation Program  
Effective January 1, 2020

- Accredited Insurance Resolutions Director
  - Verification of Formal Education and Training
  - Verification of References
  - Verification of Continuing Education
  - Background Certification
  - Test of Basic Hazardous Condition, Administrative Supervision and Receivership Knowledge
  - Applicant Interview by the IAIR Ethics Committee

Professional Designation Program  
Effective January 1, 2020

- Certified Insurance Resolutions Director
  - Accounting and Financial Reporting
  - Actuarial
  - Claims and Guaranty Associations
  - Information Technology
  - Legal
  - Reinsurance
  - Resolution Management
Certified Insurance Resolutions Director

- Verification of References
- Verification of Continuing Education
- Background Certification
- Passing Score on Test for Designation Sought
- Minimum of Three Years’ Insurance Company Resolutions Experience
- Applicant Interview by the IAIR Ethics Committee

Website Updates January 1, 2020

- iair.org
- Designation Programs Selection on Home Page
- Overview of the IAIR Professional Designation Program
- Specific Listing of AIRD and CIRD Designation Requirements
- Updated and Streamlined Professional Designation Application and Instructions
- Listing of Recommended AIRD and CIRD Study Materials
- Listing of IAIR Members with IAIR Designations
IAIR Contact Information

• Nancy Margolis
  • nancy@accolademgt.com
  • (610) 992-0017

IAIR Continuing Education Program

• Requirements
  • 30 Hours Total of Eligible Continuing Education over a 2 Year Period
  • 5 Hours of Continuing Education Must be IAIR Programs

• Reporting
  • Annual Reporting Requirement
  • Reporting Period Begins January 1 of Each Odd Numbered Year
  • Reporting Period Concludes December 31 of the Following Even Numbered Year
I’m lost, can you go over that again?

The Reinsurance (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Task Force members participated: Chlora Lindley-Myers, Chair, and John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Lee Hill (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Allen W. Kerr represented by Mel Anderson (AR); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi and Wanchin Chou (CT); Stephen C. Taylor represented by Philip Barlow (DC); Trinidad Navarro represented by Rylunn Brown (DE); David Altmaier represented by Virginia Christy and Susanne Murphy (FL); Doug Ommen represented by Kim Cross (IA); Dean L. Cameron represented by Nathan Faragher (ID); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Matthew Rosendale represented by Steve Matthews (MT); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramey represented by Lindsay Crawford (NE); John Elias represented by Doug Bartlett (NH); Linda A. Lacellw represented by Puran Bheamsain (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccolli (RI); Hodgen Mainda represented by Trey Hancock (TN); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Michael S. Pieciak represented by David Provost (VT); Mark Afable represented by Randy Milquet (WI); and James A. Dodrill represented by Ellen Potter (WV).

1. Adopted its Oct. 22 and Summer National Meeting Minutes

The Task Force met Oct. 22 to: 1) adopt revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions; 2) adopt the re-evaluations of France, Germany, Ireland and the United Kingdom (UK) as Qualified Jurisdictions; and 3) adopt the recommendation on revisions to the Reinsurance Ceded section of the Accreditation Program Manual.

Mr. Eft made a motion, seconded by Mr. Kaumann, to adopt the Task Force’s Oct. 22 (Attachment One) and Aug. 4 (see NAIC Proceedings – Summer 2019, Reinsurance (E) Task Force) minutes. The motion passed unanimously.

Mr. Kaumann provided the report of the Reinsurance Financial Analysis (E) Working Group. He stated that the Working Group met Oct. 10, in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the applications of four new certified reinsurers and the renewal of 10 certified reinsurers. The Working Group met Nov. 26, in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the application of one new certified reinsurer and the renewal of 17 certified reinsurers. Mr. Kaumann stated that the Working Group would meet once more during December to consider one additional application for a certified reinsurer.

Mr. Kaumann stated that the Working Group monitors 33 certified reinsurers that have been recommended for passporting, noting that the Working Group will begin discussions to determine the best and most effective approaches for the financial solvency surveillance of these non-U.S. reinsurers as reciprocal jurisdictions.

Mr. Kaumann made a motion, seconded by Mr. Wake, to adopt the report of the Reinsurance Financial Analysis (E) Working Group. The motion passed unanimously.

3. Adopted the Report of the Qualified Jurisdiction (E) Working Group

Mr. Wake provided the report of the Qualified Jurisdiction (E) Working Group. He stated that the Working Group met three times since the Summer National Meeting in regulator-to-regulator sessions, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings.
Mr. Wake stated that the Working Group met Aug. 22 and discussed and agreed upon revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions and approved the Re-Evaluation of Qualified Jurisdiction and Summary of Findings and Determination for France, Germany, Ireland and the UK as qualified jurisdictions. He stated that the documents were exposed for a 30-day public comment period ending Oct. 4, noting that the Task Force adopted the revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions and reapproved France, Germany, Ireland and the UK as qualified jurisdictions during its Oct. 22 conference call.

Mr. Wake stated that the Working Group met Nov. 5 and Oct. 7 to discuss the evaluations of Bermuda, Japan and Switzerland as both qualified jurisdictions and reciprocal jurisdictions. On the Nov. 5 conference call, the Working Group and the Task Force exposed the Re-Evaluation of Qualified Jurisdiction and the Evaluation of Reciprocal Jurisdiction for Bermuda, Japan and Switzerland for 30-day public comment periods ending Dec. 5. Mr. Wake stated that NAIC staff kept the Federal Insurance Office (FIO) and the Office of the U.S. Trade Representative (USTR) updated in accordance with the revised Process for Evaluating Qualified and Reciprocal Jurisdictions.

Mr. Wake made a motion, seconded by Mr. Milquet, to adopt the report of the Qualified Jurisdiction (E) Working Group. The motion passed unanimously.

Craig Swan (Bermuda Monetary Authority) provided a statement supporting the adoption of Bermuda as a reciprocal jurisdiction and the re-evaluation as a qualified jurisdiction.

Mr. Rehagen stated that the qualified jurisdiction re-evaluations for France, Germany, Ireland and the UK were adopted by the Task Force on the Oct. 22 conference call. He stated that with the adoption of Bermuda, Japan and Switzerland as qualified jurisdictions by the Task Force at this meeting, the Executive (EX) Committee and Plenary will be able to adopt the re-evaluations of the seven qualified jurisdictions together at the Fall National Meeting. He noted that the original approvals of these seven qualified jurisdictions are due to expire Dec. 31.

Dan Schelp (NAIC) stated that the use of certified reinsurers domiciled in qualified jurisdictions will be gradually phased-out over the next few years in favor of reciprocal jurisdictions, but these jurisdictions must maintain their status as qualified jurisdictions until that time. Mr. Schelp stated that the meeting materials contained the Summary of Findings and Determination as qualified jurisdictions for Bermuda, Japan and Switzerland. There was only one comment letter from the American Council of Life Insurers (ACLI) (Attachment Five) received when these were exposed for public comment.

Mr. Schelp stated that 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) and the revised Process for Evaluating Qualified and Reciprocal Jurisdictions provide that qualified jurisdictions that are not subject to an in-force covered agreement and that meet certain other requirements may be approved as reciprocal jurisdictions and receive similar reinsurance collateral treatment. He stated that the jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital.

Mr. Schelp stated that a determination was made on a minimum solvency or capital ratios to be applied to reinsurers licensed and domiciled in the Bermuda, Japan and Switzerland because these jurisdictions do not utilize either the solvency capital requirement under Solvency II or risk-based capital under the U.S. system. He added that each jurisdiction must have a memorandum of understanding in place with a state for the purpose of regulatory cooperation and the sharing of confidential information. Mr. Schelp stated that Bermuda, Japan and Switzerland had each completed these requirements and had provided the confirmation letter that is outlined in the Process for Evaluating Qualified and Reciprocal Jurisdictions.

Mr. Schelp stated that the meeting materials contained the Summary of Findings and Determination as reciprocal jurisdictions for Bermuda, Japan and Switzerland. There was only one comment letter from the ACLI (Attachment Nine) received when these were exposed for public comment.

Ms. Belfi made a motion, seconded by Ms. Murphy, to: 1) adopt the Summary of Findings and Determination for Bermuda (Attachment Two), Japan (Attachment Three) and Switzerland (Attachment Four) with respect to their re-evaluations as qualified jurisdictions; 2) adopt the Summary of Findings and Determination for Bermuda (Attachment Six), Japan (Attachment Seven) and Switzerland (Attachment Eight) for their approval as reciprocal jurisdictions; and 3) place them on the NAIC List of Reciprocal Jurisdictions. The motion passed unanimously.
5. Exposed an Annual Reporting Blanks Proposal to Incorporate the 2019 Revisions to Model #785 and Model #786 into the Annual Reporting Blanks and Instructions

Jake Stultz (NAIC) stated that this agenda item updates the annual reporting blanks to allow companies to report reinsurance with reciprocal jurisdiction reinsurers when the 2019 revisions to Model #785 and Model #786 are enacted by the state legislatures. He stated that the reciprocal jurisdiction reinsurers will need to get a new identification number for this reporting, noting that this is the same process as was done with certified reinsurers.

Mr. Stultz stated that the Blanks (E) Working Group plans to expose this agenda item during its Dec. 17 meeting, noting that this exposure will last until approximately Feb. 21, 2020, with final consideration of adoption expected at the 2020 Spring National Meeting.

Ms. Travis made a motion, seconded by Ms. Crawford, to expose the Annual Reporting Blanks proposal, which incorporates the 2019 revisions from the Model #785 and Model #786 into the annual reporting blanks and instructions (Attachment Ten). The motion passed unanimously.

6. Received an Update on Model #787 and the 2019 Revisions to Model #785 and Model #786 as Accreditation Standards

Mr. Schelp stated that the Financial Regulation Standards and Accreditation (F) Committee adopted the 2019 revisions to Model #785 and Model #786 as revisions to the Reinsurance Ceded accreditation standard in the Accreditation Program Manual during its Dec. 9 meeting. He stated that the Committee also adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as a new accreditation standard.

Mr. Schelp noted that these revisions will be incorporated on an expedited basis and a waiver of process will be used, with an effective date for these accreditation standards of Sept. 1, 2022, with enforcement beginning Jan. 1, 2023. He noted that this date coincides with the date by which the FIO must complete federal preemption determination of state laws under the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Steve Clayburn (ACLI) stated that several state legislatures are beginning work on enacting the 2019 revisions to Model #785 and Model #786, but few have acted on Model #787 or the 2016 revisions to Model #785.

Mr. Schelp stated that a legislative packet with information on the 2019 revisions to Model #785 and Model #786 have been sent to the state legislatures, noting that this packet will be updated to include Model #787 and resubmitted to the state legislatures.

Having no further business, the Reinsurance (E) Task Force adjourned.
The Reinsurance (E) Task Force met via conference call Oct. 22, 2019. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Lee Hill (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Richard Ford (AL); Allen W. Kerr represented by Kim Johnson (AR); Ricardo Lara represented by Monica Macaluso and Kim Hudson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Joel Henry (CT); Stephen C. Taylor represented by Philip Barlow (DC); Trinidad Navarro represented by Dave Lonchar (DE); David Altmaier represented by Susanne Murphy (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen represented by Carrie Mears (IA); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Nancy G. Atkins represented by Sandy Batts (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Colton Schulz (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); John Elias represented by Doug Bartlett and Patricia Gosselin (NH); Marlene Caride represented by John Tirado (NJ); Linda A. Lacewell represented by Michael Campanelli (NY); Jillian Froment represented by Dale Bruggeman (OH); Hodgen Mainda represented by Hui Wattanasankolpat (TN); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); and Mark Afable represented by Randy Milquet (WI). Also participating was: Susan Berry (IL).

1. **Adopted the Process for Evaluating Qualified and Reciprocal Jurisdictions**

Mr. Wake stated that the Qualified Jurisdiction (E) Working Group met Oct. 7 and Aug. 22 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to consider revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions (Qualified and Reciprocal Jurisdiction Process). He stated that the Working Group exposed draft revisions to the Qualified and Reciprocal Jurisdiction Process on Sept. 4 for a 30-day public comment period (Attachment One-A) and received eight comment letters (Attachment One-B).

Mr. Wake stated that as a result of the comment letters received and a discussion held with representatives from the U.S. Department of the Treasury, the Office of the U.S. Trade Representative and the Federal Insurance Office (FIO), the Working Group formed a drafting group to address the comments.

Mr. Wake and Dan Schelp (NAIC) provided a summary of the revisions that had been made and a description of the process. Mr. Wake stated that the final draft version of the Qualified and Reciprocal Jurisdiction Process was the version that includes the revisions that were sent out by NAIC staff via email on Oct. 21, and this is the version being considered for adoption.

Mr. Wake also provided a recommendation that the Working Group revise the process for revocation or suspension of a Qualified Jurisdiction or Reciprocal Jurisdiction during 2020.

Karalee C. Morell (Reinsurance Association of America—RAA) thanked the Task Force and Working Group for their efforts during this process and offered her assistance as the process continues.

Yvette Pierre (Bermuda Monetary Authority—BMA) offered to assist in the process of getting Bermuda to Reciprocal Jurisdiction status.

Mr. Wake made a motion, seconded by Mr. Kaumann, to adopt the Process for Evaluating Qualified and Reciprocal Jurisdictions (Attachment One-C). The motion passed unanimously.
2. **Adopted the Re-Evaluation of Qualified Jurisdictions and Summary of Findings and Determinations for France, Germany, Ireland and the UK**

Mr. Wake stated that the Qualified Jurisdiction (E) Working Group met Aug. 22 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to consider the **Re-Evaluation of Qualified Jurisdictions and Summary of Findings and Determinations** for France, Germany, Ireland and the United Kingdom (UK) as Qualified Jurisdictions. He stated that the Working Group exposed the draft **Re-Evaluation of Qualified Jurisdictions and Summary of Findings and Determinations** on Sept. 4 for a 30-day public comment period and received eight comment letters (Attachment One-B).

Mr. Wake stated that the final drafts to be considered for adoption included nonsubstantive revisions from the exposed versions as a result of the comment letters received. The revisions were: 1) for France, the lead state has been changed from New York to Delaware; and 2) for Germany, a reference has been added to additional information received during the re-evaluation process received from Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin).

Mr. Wake stated that the Working Group has also approved and exposed the **Re-Evaluation of Qualified Jurisdictions and Summary of Findings and Determinations** for a 30-day public comment period ending Nov. 6; it is intended that the seven Qualified Jurisdictions will be re-approved together; and Bermuda, Japan and Switzerland will be approved as Reciprocal Jurisdictions by the Executive (EX) Committee and Plenary at the Fall National Meeting.

Ms. Berry asked for clarification about whether France, Germany, Ireland and the UK must be approved by the Financial Condition (E) Committee or if they must only be adopted by the Executive (EX) Committee and Plenary after the Task Force and if there will be another call of the Task Force to adopt Bermuda, Japan and Switzerland as Qualified Jurisdictions prior to the Fall National Meeting.

Mr. Schelp stated that the way that the Qualified and Reciprocal Jurisdiction Process is written, after adoption by the Task Force, it can then be sent directly to the Executive (EX) Committee and Plenary, and the Task Force does not intend to hold another conference call prior to the Fall National Meeting.

Mr. Wake made a motion, seconded by Mr. Tirado, to adopt the **Re-Evaluation of Qualified Jurisdictions and Summary of Findings and Determinations** for France (Attachment One-D), Germany (Attachment One-E), Ireland (Attachment One-F) and the UK (Attachment One-G) as Qualified Jurisdictions. The motion passed unanimously.

3. **Adopted the Reciprocal Jurisdiction Accreditation Standard**

Mr. Rehagen stated that the Task Force met Sept. 11 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of accreditation issues) to: 1) discuss revisions to the Reinsurance Ceded section of the **Accreditation Program Manual**; and 2) expose draft revisions for a 30-day public comment period ending Oct. 11.

Mr. Rehagen stated that the Task Force received five comment letters (Attachment One-H), and the letters agreed with the revisions. He noted that one letter with combined comments from the RAA, the American Property and Casualty Insurance Association (APCIA), and the National Association of Mutual Insurance Companies (NAMIC) recommended an effective date of April 1, 2021, which is the date when the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement) allows the FIO to begin its federal preemption analysis.

Mr. Schelp provided a brief discussion of the revisions that were considered for adoption.

Ms. Morell stated that using April 1, 2021, as the effective date would be more effective since it would require the states to enact the revisions 18 months before FIO can begin its preemption determination of the states’ laws.

Mr. Schelp clarified the specific provisions of the Covered Agreements that discuss the federal preemption process.

Mr. Rehagen asked if it would be necessary to move the proposed accreditation enforcement from Jan. 1, 2023, to an earlier date if the effective date was moved to April 1, 2021.
Ms. Morell stated that the enforcement date would need to be moved to an earlier date.

Mr. Bruggeman stated that what matters is the date when FIO may begin its actual preemption of state laws.

Mr. Bruggeman made a motion, seconded by Ms. Obusek, to: 1) adopt the revisions to the Reinsurance Ceded section of the Accreditation Program Manual, with a recommended effective date of Oct. 1, 2022, and accreditation reviews beginning on Jan. 1, 2023 (Attachment One-I); and 2) direct NAIC staff to prepare a referral document from the Task Force to the Financial Regulation Standards and Accreditation (F) Committee for consideration as a possible addition to the accreditation standards and with an additional discussion about the beginning of preemption analysis by FIO to start on April 1, 2021. The motion passed unanimously.

4. Discussed Other Matters

Andrew T. Vedder (Northwest Mutual) stated that he had submitted a letter to the NAIC in conjunction with New York Life that recommended that the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) be adopted as an accreditation standard with the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786).

Mr. Schelp stated that this had been recommended to the Financial Regulation Standards and Accreditation (F) Committee in 2017 but has been delayed, pending the revisions to Model #785 and Model #786 for the Covered Agreements.

Mr. Wake asked if the accreditation motion from earlier in the meeting should be revised to add a recommendation that Model #787 be included.

Mr. Schelp advised against revising the motion, and he stated that Model #787 would likely be discussed by the Committee at the Fall National Meeting.

Having no further business, the Reinsurance (E) Task Force adjourned.

I. Preamble

Purpose

The revised Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the Credit for Reinsurance Models) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes. In 2012, the NAIC Reinsurance (E) Task Force was charged to develop an NAIC process to evaluate the reinsurance supervisory systems of non-U.S. jurisdictions, for the purposes of developing and maintaining a list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. This charge was extended in 2019 to encompass the recognition of Reciprocal Jurisdictions in accordance with the 2019 amendments to the Credit for Reinsurance Models, including the maintenance of a list of recommended Reciprocal Jurisdictions. The purpose of the Process for Developing and Maintaining the NAIC List of Evaluating Qualified and Reciprocal Jurisdictions is to provide a documented evaluation process for creating and maintaining these NAIC lists.

Background

On November 6, 2011, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions serve to reduce reinsurance collateral requirements for certified reinsurers that are licensed and domiciled in Qualified Jurisdictions. Under the previous version of the Credit for Reinsurance Models, in order for U.S. ceding insurers to receive reinsurance credit, the reinsurance was required to be ceded to U.S.-licensed reinsurers or secured by collateral representing 100% of U.S. liabilities for which the credit is recorded. When considering revisions to the Credit for Reinsurance Models, the Reinsurance (E) Task Force contemplated establishing an accreditation-like process, modeled on the current NAIC Financial Regulation Standards and Accreditation Program, to review the reinsurance supervisory systems of non-U.S. jurisdictions. Under the revised Credit for Reinsurance Models, the approval of Qualified Jurisdictions is left to the authority of the states; however, the models provide that a list of Qualified Jurisdictions will be created through the NAIC committee process, and that individual states must consider this list when approving jurisdictions.

The enactment in 2010 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) created the Federal Insurance Office (FIO), which has the following authority: (1) coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters; (2) assist the Secretary of the U.S. Department of the Treasury in negotiating covered agreements (as defined in the Dodd-Frank Act); (3) determine whether the states’ insurance measures are preempted by covered agreements; and (4) consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into covered agreements on behalf of the United States. It is the NAIC’s intention to communicate and coordinate with the FIO and related federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.

On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance,” followed by a similar agreement with the United Kingdom (UK) on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance
collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

**Reciprocal Jurisdictions**

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions were intended to conform the Models to the relevant provisions of the Covered Agreements. The Covered Agreements would eliminate reinsurance collateral requirements for EU and UK reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or UK or post reinsurance collateral. Under the revised Credit for Reinsurance Models, jurisdictions that are subject to in-force Covered Agreements are considered to be Reciprocal Jurisdictions, and reinsurers that have their head office or are domiciled in a Reciprocal Jurisdiction are not required to post reinsurance collateral if they meet all of the requirements of the Credit for Reinsurance Models.

Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to Covered Agreements treated as Reciprocal Jurisdictions for reinsurance collateral purposes, but any other Qualified Jurisdictions can also qualify for collateral elimination as Reciprocal Jurisdictions. States that meet the requirements of the NAIC Financial Standards and Accreditation Program are also considered to be Reciprocal Jurisdictions.

The NAIC has updated and revised this *Process for Evaluating Qualified and Reciprocal Jurisdictions* to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.
II. Principles for the Evaluation of Non-U.S. Jurisdictions

1. The NAIC model revisions applicable to certified reinsurers are intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. To be eligible for certification, a reinsurer must be domiciled and licensed in a Qualified Jurisdiction as determined by the domestic regulator of the ceding insurer. A Qualified Jurisdiction not subject to an in-force Covered Agreement under the Dodd-Frank Act may also be determined to be a Reciprocal Jurisdiction, and reinsurers that have their head office or are domiciled in any such Reciprocal Jurisdiction will not be required to post reinsurance collateral, provided they meet the minimum capital and financial strength requirements and comply with the other requirements of the Credit for Reinsurance Models.

2. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions and Reciprocal Jurisdictions will be conducted in accordance with the provisions of the Credit for Reinsurance Models and any other relevant guidance developed by the NAIC.

3. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program (Accreditation Program), adherence to international supervisory standards, and relevant international guidance for recognition of reinsurance supervision. It is not intended as a prescriptive comparison to the NAIC Accreditation Program. In order for a Qualified Jurisdiction that is not subject to an in-force Covered Agreement to be evaluated as a Reciprocal Jurisdiction, that Qualified Jurisdiction must agree to adhere to the same reciprocity standards that have been imposed under the EU and UK Covered Agreements, including the requirement that the Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, as provided under the Credit for Reinsurance Models.

4. The states shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the Qualified Jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of Qualified Jurisdiction status is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

5. Each state may evaluate a non-U.S. jurisdiction to determine if it is a Qualified Jurisdiction. A list of Qualified Jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of Qualified Jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Qualified Jurisdictions contained in the Credit for Reinsurance Models. The creation of this list does not constitute a delegation of regulatory authority to the NAIC. The regulatory authority to recognize a Qualified Jurisdiction resides solely in each state and the NAIC List of Qualified Jurisdictions is not binding on the states.

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.
7. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination that a jurisdiction is a Qualified or Reciprocal Jurisdiction. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings. The NAIC Lists of Qualified and Reciprocal Jurisdictions are intended to facilitate the passporting process.

5.8. Both Qualified Jurisdictions and Reciprocal Jurisdictions must agree to share information and cooperate with the state with respect to all certified applicable reinsurers domiciled within that jurisdiction. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

6.9. The determination of Qualified Jurisdiction status can only be made with respect to the reinsurance supervisory system in existence and applied by a non-U.S. jurisdiction at the time of the evaluation.

7.10. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
III. Procedure for Evaluation of Non-U.S. Jurisdictions

   a. The NAIC will initially evaluate and expedite the review of those jurisdictions that were approved by the states of Florida and New York prior to the adoption of the revised Credit for Reinsurance Models (i.e., Bermuda, Germany, Switzerland and the United Kingdom). The NAIC may also consider expediting the review of additional jurisdictions, as outlined in paragraph 1(d) below. While the same evaluation procedure and methodology will be applicable to any jurisdiction under review, U.S. state insurance regulators’ familiarity with these particular jurisdictions may lead to a more expeditious review. Subsequent priority will be on the basis of objective factors including but not limited to ceded premium volume and reinsurance capacity issues raised by the states. Priority will also be given to requests from the states and from those jurisdictions specifically requesting an evaluation by the NAIC.
   b. Formal notification of the NAIC’s intent to initiate the evaluation process will be sent by the NAIC to the reinsurance supervisory authority in the jurisdiction selected, with copies to the FIO and other relevant federal authorities as appropriate. The NAIC will issue public notice on the NAIC website upon confirmation that the jurisdiction is willing to participate in the evaluation process. The NAIC will at this time request public comments with respect to consideration of the jurisdiction as a Qualified Jurisdiction. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document, subject to a preliminary confidentiality and information sharing agreement between the NAIC, relevant states and the applicant jurisdiction.
   c. Relevant U.S. state and federal authorities will be notified of the NAIC’s decision to evaluate a jurisdiction.
   d. Expedited Review Procedure. Based on the prior review and approval by Florida and New York of reinsurers domiciled in Bermuda, Germany, Switzerland and the United Kingdom, the NAIC will apply an expedited review procedure with respect to these jurisdictions. The NAIC may also consider extending this expedited review procedure to other jurisdictions approved by a state as a Qualified Jurisdiction, provided that:
      i. The state provides a report to the Qualified Jurisdiction Working Group confirming that it has completed a full review of the jurisdiction in accordance with that set forth in Part IV: Evaluation Methodology. If current information as outlined in paragraph 1(e)(i) (i.e., FSAP Report and ROSC) is not available to the state, it must demonstrate that it has obtained and reviewed information consistent with Appendix A and Appendix B.
      ii. The state completes the full review and lists the jurisdiction as a Qualified Jurisdiction within 60 days of the NAIC’s adoption of the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions. This procedure is not intended to eliminate or reduce any element provided under Part IV: Evaluation Methodology, but is intended to allow for a designation of Conditional Qualified Jurisdiction of these jurisdictions in order to facilitate the certification of reinsurers domiciled therein. Final qualification of each jurisdiction will be contingent upon completion of the full, outcomes-based evaluation procedure.
e. Upon confirmation that a jurisdiction is willing to be considered for designation as a Conditional Qualified Jurisdiction, the following expedited review procedure will apply:

i. The Qualified Jurisdiction Working Group will perform an initial review of the jurisdiction’s most recent Detailed Assessment of Observance on Insurance Core Principles under the International Monetary Fund (IMF)/World Bank Financial Sector Assessment Program (FSAP Report), Report on Observance for Standards and Codes (ROSC), and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system in conjunction with the information provided under Section C through Section G of the Evaluation Methodology. The NAIC will invite each jurisdiction (or its designee) to provide information relative to Section C through Section G of the Evaluation Methodology in order to complete or supplement publicly available information. The NAIC may designate the jurisdiction as a Conditional Qualified Jurisdiction, to be effective immediately, upon: (1) receipt of all necessary initial information requested in this section; (2) opportunity for comment by interested parties; and (3) conclusion of any appropriate communication with the FIO, USTR and other relevant federal authorities.

ii. During this period as a Conditional Qualified Jurisdiction, the Qualified Jurisdiction Working Group will complete its full analysis of the information provided by the jurisdiction, in addition to any specific information that is subsequently requested by the NAIC, in order to evaluate the jurisdiction’s laws, regulations, practices and procedures from an outcomes-based perspective in accordance with the guidance provided under Appendix A and Appendix B of the Evaluation Methodology. Upon satisfactory completion of the outcomes-based review of this information, the NAIC may upgrade the jurisdiction’s designation to Qualified Jurisdiction. The NAIC may also address any issues identified within the review or revoke the designation of Conditional Qualified Jurisdiction.

iii. A jurisdiction may be permitted to maintain the designation of Conditional Qualified Jurisdiction for one year, unless: (1) an extension is granted by the Qualified Jurisdiction Working Group; or (2) a determination is made that the jurisdiction is not a Qualified Jurisdiction.

2. Evaluation of Jurisdiction

a. Evaluation Materials. The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Qualified Jurisdiction Working Group will begin by undertaking a review of the most recent Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), including the Technical Note on Insurance Sector Supervision, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will also invite each jurisdiction or its designee to provide information relative to Section A through Section G of the Evaluation Methodology in order to update, complete or supplement publicly available information. The Qualified Jurisdiction Working Group may also request or accept relevant information from reinsurers domiciled in the jurisdiction under review.

b. The Qualified Jurisdiction Working Group will notify the jurisdiction of any additional information upon which the Working Group is relying beyond the information provided by the jurisdiction. In that communication, the NAIC will invite the supervisory authority to compare the materials identified by the
NAIC to the materials described in Appendix A and Appendix B, and provide information required to update the identified public information or supplement the public information, as required, to address the topics identified in Section A through Section G of the Evaluation Methodology. The use of publicly available information (e.g., the FSAP Report and/or the ROSC: Insurance Sector Technical Note) is intended to lessen the burden on applicant jurisdictions by requiring the production of information that is readily available, while still addressing substantive areas of inquiry detailed in the Evaluation Methodology. The Qualified Jurisdiction Working Group’s review at this stage will be focused on how the jurisdiction’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial solvency of its domestic reinsurers in comparison to key principles underlying the U.S. financial solvency framework1 and other factors set forth in the Evaluation Methodology.

c. After reviewing the Evaluation Materials, the Qualified Jurisdiction Working Group may request that the applicant jurisdiction submit supplemental information as necessary to determine whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. The Working Group will address specific questions directly with the jurisdiction related to items detailed in the Evaluation Methodology that are not otherwise addressed in the Evaluation Materials.

d. The NAIC will request that all responses from the jurisdiction being evaluated be provided in English. Any responses submitted with respect to a jurisdiction’s laws and regulations should be provided by a person qualified in that jurisdiction to provide such analyses and, in the case of statutory analysis, qualified to provide such legal interpretations, to ensure that the jurisdiction is providing an accurate description.

e. The NAIC does not intend to review confidential company-specific information in this process, and has focused the procedure on reviewing publicly available information. No confidential company-specific information shall be disclosed or disseminated during the course of the jurisdiction’s evaluation unless specifically requested, subject to appropriate confidentiality safeguards addressed in a preliminary confidentiality and information-sharing agreement. If no such agreement is executed or the jurisdiction is unable to enter into such an agreement under its regulatory authority, the NAIC will not accept any confidential company-specific information.

3. NAIC Review of Evaluation Materials

a. NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise will review the jurisdiction’s Evaluation Materials.

b. Expenses with respect to the evaluations will be absorbed within the NAIC budget. This will be periodically reviewed.

c. Timeline for review. A project management approach will be developed with respect to the overall timeline applicable to each evaluation.

d. Upon completing its review of the Evaluation Materials, the internal reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to FIO and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

---

1 The U.S. financial solvency framework is understood to refer to the key elements provided in the NAIC Financial Regulation Standards and Accreditation Program. Appendix A and Appendix B are derived from this framework.
4. Discretionary On-site Review

a. The NAIC may request the jurisdiction under consideration for the opportunity to perform an on-site review of the jurisdiction’s reinsurance supervisory system. Factors that the Qualified Jurisdiction Working Group will consider in determining whether an on-site review is appropriate include the completeness of the information provided by the jurisdiction under review, the general familiarity of the jurisdiction by the NAIC staff or other state regulators participating in the review based on prior conduct or dealings with the jurisdiction, and the results of other evaluations performed by other regulatory or supervisory organizations. If the review is performed, it will be coordinated through the NAIC, utilizing personnel with the appropriate knowledge, experience and expertise. Individual states may also request that representatives from their state be added to the review team.

b. The review team will communicate with the supervisory authority in advance of the on-site visit to clearly identify the objectives, expectations and procedures with respect to the review, as well as any significant issues or concerns identified within the review of the Evaluation Materials. Information to be considered during the on-site review includes, but is not limited to, the following:

i. Interviews with supervisory authority personnel.

ii. Review of organizational and personnel practices.

iii. Any additional information beneficial to gaining an understanding of document and communication flows.

c. Upon completing the on-site review, the reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation.

5. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

6. Additional Information to be Considered as Part of Evaluation

The NAIC may also consider information from sources other than the jurisdiction under review. This information includes:

a. Documents, reports and information from appropriate international, U.S. federal and U.S. state authorities.

b. Public comments from interested parties.

c. Rating agency information.

d. Any other relevant information.
7. Preliminary Evaluation Report

a. NAIC staff and/or outside consultants will prepare a Preliminary Evaluation Report for review by the Qualified Jurisdiction Working Group. This preliminary report will be private and confidential (i.e., may only be reviewed by Working Group members, designated NAIC staff, consultants, the states, the FIO and other relevant federal authorities that specifically request to be kept apprised of this information, provided that such entities have entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction. Any outside consultants retained by the NAIC will be required to enter into a confidentiality and nondisclosure agreement.).

b. The report will be prepared in a consistent style and format to be developed by NAIC staff. It will contain detailed advisory information and recommendations with respect to the evaluation of the jurisdiction’s reinsurance supervisory system and the documented practices and procedures thereunder. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a Qualified Jurisdiction.

c. All workpapers and reports, including supporting documentation and data, produced as part of the evaluation process are the property of the NAIC and shall be maintained at the NAIC Central Office. In the event that the NAIC shall come into possession of any confidential information, the information shall be held subject to a confidentiality and information-sharing agreement, which will outline the appropriate actions necessary to protect the confidentiality of such information.

a. The Qualified Jurisdiction Working Group’s review of the Preliminary Evaluation Report will be held in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings.

b. The Qualified Jurisdiction Working Group will make a preliminary determination as to whether the jurisdiction under consideration satisfies the Standard of Review and is deemed acceptable to be included on the NAIC List of Qualified Jurisdictions. If the preliminary determination is that the jurisdiction should not be included on the NAIC List of Qualified Jurisdictions, the Qualified Jurisdiction Working Group will set forth its specific findings and identify those areas of concern with respect to this determination.

c. The results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review.

a. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. This is not intended to be a formal appeals process that would initiate U.S. state administrative due process requirements.

b. The Qualified Jurisdiction Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Qualified Jurisdiction Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings. This report will be approved upon an affirmative vote of a majority of the members in attendance at this meeting.
c. Upon approval of the Final Evaluation Report, the Qualified Jurisdiction Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the summary for public comment. The detailed report will be a confidential, regulator-only document. The report may be shared with any state indicating that it is considering relying on the NAIC List of Qualified Jurisdictions and has entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction.

10. NAIC Determination regarding List of Qualified Jurisdictions

a. Once the Qualified Jurisdiction Working Group has adopted its Final Evaluation Report, it will submit the summary of its findings and its recommendation to the Reinsurance (E) Task Force at an open meeting. Upon approval by the Reinsurance (E) Task Force, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the FIO, USTR and other relevant federal authorities for consultation purposes. Upon approval as a Qualified Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Qualified Jurisdictions. The NAIC will maintain the List of Qualified Jurisdictions on its public website and in other appropriate NAIC publications.

b. In the event that a jurisdiction is not approved as a Qualified Jurisdiction, the supervisory authority will be eligible for reapplication at the discretion of the NAIC.

c. Upon final adoption of the Qualified Jurisdiction Working Group’s determination with respect to a jurisdiction, the Final Evaluation Report will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential.

11. Memorandum of Understanding (MOU)

a. A Qualified Jurisdiction must agree to share information and cooperate on a confidential basis with the U.S. state insurance regulatory authority with respect to all certified reinsurers domiciled within that jurisdiction.

b. The International Association of Insurance Supervisors (IAIS) Multilateral Memorandum of Understanding (MMoU) is the recommended method under which a Qualified Jurisdiction will agree to share information and cooperate with U.S. state insurance regulatory authorities. However, until such time as a state has been approved as a signatory to the MMoU by the IAIS, the state may rely on an MOU entered into by a “Lead State” designated by the NAIC. This Lead State will act as a conduit for information between the Qualified Jurisdiction and other states that have certified a reinsurer domiciled and licensed in that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the applicable IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this Lead State to act as the contact for purposes of obtaining information concerning its certified reinsurers, provided the Lead State share that information with the other states requesting the information consistent with the terms governing the further sharing of information included in the applicable IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction.
c. If a Qualified Jurisdiction has not been approved by the IAIS for use of the MMoU, it must enter into an MOU with a Lead State. The MOU will also provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

d. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.

12. Process for Periodic Evaluation after Initial Approval

a. The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review.

b. Qualified Jurisdictions must provide the Qualified Jurisdiction Working Group with notice of any material change in the applicable reinsurance supervisory system that may affect the status of the Qualified Jurisdiction. A U.S. jurisdiction should also notify the Qualified Jurisdiction Working Group if it receives notice of any material change in the applicable reinsurance supervisory system, or any adverse developments with respect to enforcement of final U.S. judgments, that may affect the status of the Qualified Jurisdiction. Upon receipt of any such notice, the Qualified Jurisdiction Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction.

c. Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate.

d. If the Qualified Jurisdiction Working Group finds the jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked. The Qualified Jurisdiction Working Group will perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group to be appropriate.

e. The Qualified Jurisdiction Working Group will monitor those jurisdictions that have been approved as Qualified Jurisdictions by individual states, but are not included on the NAIC List of Qualified Jurisdictions.

13. Review of Qualified Jurisdictions as Reciprocal Jurisdictions

a. In undertaking the evaluation of a Qualified Jurisdiction as a Reciprocal Jurisdiction, the Qualified Jurisdiction Working Group shall utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section III, Procedure for Evaluation of Non-U.S. Jurisdictions such as the Qualified Jurisdiction Working Group deems is appropriate. Specifically, the Qualified Jurisdiction Working Group will use processes and procedures outlined in paragraph 1 (Initiation of Evaluation of the Reinsurance Supervisory System of an Individual Jurisdiction), paragraph 3 (NAIC Review of Evaluation Materials), paragraph 7 (Preliminary Evaluation Report), paragraph 8 (Review of Preliminary Evaluation Report), paragraph 9 (Opportunity to Respond to Preliminary Evaluation Report), paragraph 10 (NAIC Determination regarding List of Qualified Jurisdictions), paragraph 11 (Memorandum of Understanding) and paragraph 12 (Process for Evaluation after Initial Approval), as modified for use with Reciprocal Jurisdictions.
b. A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions, unless it has undergone the Evaluation Methodology outlined in Section IV, and remains in good standing with the NAIC as a Qualified Jurisdiction. The Qualified Jurisdiction Working Group may, if it determines an extended review period to be appropriate after its initial approval of a new Qualified Jurisdiction, defer consideration of that jurisdiction as a possible Reciprocal Jurisdiction until there has been sufficient United States experience with that jurisdiction and its Certified Reinsurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination. Nothing in this process requires a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group may base such recommendation on factors not specifically included in this process.

c. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the NAIC List of Reciprocal Jurisdictions. In making its recommendation with respect to whether a Qualified Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group shall undergo the following analysis in making its evaluation:

i. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in that jurisdiction is received by United States ceding insurers;

ii. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

iii. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

iv. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information
shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

v. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each assuming insurer that is domiciled in the Qualified Jurisdiction, and has been granted an exemption from state collateral requirements under Section 9 of Model #786, continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

d. In order to satisfy the requirements of subsection (c) above, the chief insurance supervisor of the Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction may provide the NAIC with a written letter confirming, as follows:

[Jurisdiction] is a Qualified Jurisdiction under the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), and is currently in good standing on the NAIC List of Qualified Jurisdictions. As the lead insurance regulatory supervisor for [Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- An insurer which has its head office or is domiciled in [Jurisdiction] shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in [Jurisdiction] is received by United States ceding insurers. [Jurisdiction] does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by [Jurisdiction] or as a condition to allow the ceding insurer to recognize credit for such reinsurance.

- [Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurers and insurance groups that are domiciled or maintain their headquarters in jurisdictions accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].

- [Jurisdiction] confirms that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the [Jurisdiction].

- [Jurisdiction] will annually provide to the states confirmation that applicable assuming insurers domiciled in [Jurisdiction] maintain minimum capital and surplus of no less than $250,000,000, and maintain on an ongoing basis the required minimum solvency or capital ratio, as applicable.
• Finally, I confirm that [Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

e. The Qualified Jurisdiction Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate, and will prepare for the review by the Reinsurance Task Force a Summary of Findings and Determination recommending that the Qualified Jurisdiction be recognized as a Reciprocal Jurisdiction. Upon approval by the Task Force, the Summary of Findings and Determination must be adopted by a vote of the NAIC Executive (EX) Committee and Plenary for inclusion on the List of Reciprocal Jurisdictions.

f. The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

g. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions under paragraph 12. If cause is found to question the fitness of a Reciprocal Jurisdiction that is subject to an in-force covered agreement, or its compliance with applicable requirements of the covered agreement, the Qualified Jurisdiction Working Group shall promptly bring the matter to the attention of the applicable dispute resolution mechanism under the covered agreement.
IV. Evaluation Methodology

The Evaluation Methodology was developed to be consistent with the provisions of the NAIC Credit for Reinsurance Models. It is intended to provide an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. Although the methodology includes a comparison of the jurisdiction’s supervisory system to a number of key elements from the NAIC Accreditation Program, it is not intended as a prescriptive assessment under the NAIC Accreditation Program. Rather, the NAIC Accreditation Program simply provide the framework for the outcomes-based analysis. The NAIC will evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the jurisdiction and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of a Qualified Jurisdiction is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

The Evaluation Methodology consists of the following:

- Section A: Laws and Regulations
- Section B: Regulatory Practices and Procedures
- Section C: Jurisdiction’s Requirements Applicable to U.S.-Domiciled Reinsurers
- Section D: Regulatory Cooperation and Information Sharing
- Section E: History of Performance of Domestic Reinsurers
- Section F: Enforcement of Final U.S. Judgments
- Section G: Solvent Schemes of Arrangement

This information will be the basis for the Final Evaluation Report and the determination of whether the jurisdiction will be included on the NAIC List of Qualified Jurisdictions.
Section A: Laws and Regulations

The NAIC will review publicly available information, as well as information provided by an applicant jurisdiction with respect to its laws and regulations, in an effort to evaluate whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. This will include a review of elements believed to be basic building blocks for sound insurance/reinsurance regulation. A jurisdiction’s effectiveness under Section A may be demonstrated through law, regulation or established practice that implements the general authority granted to the jurisdiction, or any combination of laws, regulations or practices that meet the objective.

The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by gathering and undertaking a review of the most recent FSAP Report, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will simultaneously invite each jurisdiction (or its designee) to provide information relative to Section A (and other sections, as relevant) to assist the NAIC in evaluating its laws and regulations. The NAIC will review this information in conjunction with Appendix A, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix A is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction is requested to address the following information, which the NAIC will consider, at a minimum, in determining whether the outcomes achieved by the jurisdiction’s laws and regulations meet an acceptable level of effectiveness for the jurisdiction to be included on the NAIC List of Qualified Jurisdictions:

1. Confirmation of the jurisdiction’s most recent FSAP Report, including relevant updates with respect to descriptions or elements of the FSAP Report in which changes have occurred since the assessment or where information might otherwise be outdated.

2. Confirmation of the jurisdiction’s ROSC, including relevant updates with respect to descriptions or elements of the ROSC in which changes have occurred since the report was completed or where information might otherwise be outdated.

3. If materials responsive to the topics under review have been provided in response to information exchanges between the jurisdiction under review and the NAIC, such prior responses may be cross-referenced provided updates are submitted, if required to address changes in laws or procedures.

4. Any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix A.

The NAIC will review the information provided by the applicant jurisdiction and determine whether it is adequate to reasonably conclude whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. After reviewing the initial submission, the NAIC may request that the applicant jurisdiction

---

2 The basic considerations under this section are derived from Model #786, Section 8C(2), which include: (a) the framework under which the assuming reinsurer is regulated; (b) the structure and authority of the jurisdiction’s reinsurance supervisory authority with regard to solvency regulation requirements and financial surveillance; (c) the substance of financial and operating standards for reinsurers domiciled in the jurisdiction; and (d) the form and substance of financial reports required to be filed or made publicly available by reinsurers domiciled in the jurisdiction and the accounting principles used.
submit supplemental information as necessary in order to make this determination. An applicant jurisdiction is strongly encouraged to provide thorough, detailed and current information in its initial submission in order to minimize the number and extent of supplemental information requests from the NAIC with respect to Section A of this Evaluation Methodology. The NAIC will provide a complete description in the Final Evaluation Report of the information provided in the Evaluation Materials, and any updates or other information that have been provided by the applicant jurisdiction.

**Section B: Regulatory Practices and Procedures**

Section B is intended to facilitate an evaluation of whether the jurisdiction effectively employs baseline regulatory practices and procedures to supplement and support enforcement of the jurisdiction’s financial solvency laws and regulations described in Section A. This evaluation methodology recognizes that variation may exist in practices and procedures across jurisdictions due to the unique situations each jurisdiction faces. Jurisdictions differ with respect to staff and technology resources that are available, as well as the characteristics of the domestic industry regulated. A determination of effectiveness may be achieved using various financial solvency oversight practices and procedures. This evaluation is not intended to be prescriptive in nature.

The NAIC will utilize the information provided by the jurisdiction as outlined under Section A in completing this section of the evaluation. The NAIC will review this information in conjunction with Appendix B, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix B is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction should also provide any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix B.

**Section C: Jurisdiction’s Requirements Applicable to U.S. Domiciled Reinsurers**

The jurisdiction is requested to describe and explain the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. supervisory authority to reinsurers licensed and domiciled in the U.S.

**Section D: Regulatory Cooperation and Information-Sharing**

The Credit for Reinsurance Models require the supervisory authority to share information and cooperate with the U.S. state insurance regulators with respect to all certified reinsurers domiciled within their jurisdiction. The jurisdiction is requested to provide an explanation of the supervisory authority’s ability to cooperate, share information and enter into an MOU with U.S. state insurance regulators and confirm that they are willing to enter into an MOU. This should include information with respect to any existing MOU with U.S. state and/or federal authorities that pertain to reinsurance. Both the jurisdiction and the states may rely on the IAIS MMoU to satisfy this requirement, and any states that have not yet been approved by the IAIS as a signatory to the MMoU may rely on an MOU entered into by a Lead State with the jurisdiction until such time that the state has been approved as a signatory to the IAIS MMoU. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.
Section E: History of Performance of Domestic Reinsurers

The jurisdiction is requested to provide a general description with respect to the historical performance of reinsurers domiciled in the jurisdiction. The NAIC does not intend to review confidential company-specific information under this section. Rather, it is intended that any information provided would be publicly available, unless specifically addressed with the jurisdiction under review. This discussion should address, at a minimum, the following information:

a. Number of reinsurers domiciled in the jurisdiction, and a list of any reinsurers domiciled in the jurisdiction that have and maintain, on an ongoing basis, minimum capital and surplus, or its equivalent, of no less than $250,000,000.

b. Up to a 10-year history of any regulatory actions taken against specific reinsurers.

c. Up to a 10-year history listing any reinsurers that have gone through insolvency proceedings, including the size of each insolvency and a description of the related outcomes (e.g., reinsurer rehabilitated or liquidated, payout percentage of claims to priority classes, payout percentage of claims to domestic and foreign claimants).

d. Up to a 10-year history of any significant industry-wide fluctuations in capital or profitability with respect to domestic reinsurers.

Drafting Note: The NAIC will determine the appropriate time period for review on a case-by-case basis with respect to this information.

Section F: Enforcement of Final U.S. Judgments

The NAIC has previously collected information from a number of jurisdictions with respect to enforcement of final U.S. judgments. The jurisdiction is also requested to provide a current description or explanation of any restrictions with respect to the enforcement of final foreign judgments in the jurisdiction. Based on the foregoing information, the NAIC will make an assessment of the effectiveness of the ability to enforce final U.S. judgments in the jurisdiction. This will include a review of the status, interpretations, application and enforcement of various treaties, conventions and international agreements with respect to final judgments, arbitration and choice of law. The Qualified Jurisdiction Working Group will monitor the enforcement of final U.S. judgments and the Qualified Jurisdiction is requested to notify the NAIC of any developments in this area.

Section G: Solvent Schemes of Arrangement

The jurisdiction is requested to provide a description of any legal framework that allows reinsurers domiciled in the jurisdiction to propose or participate in any solvent scheme of arrangement or similar procedure. In addition, the jurisdiction is requested to provide a description of any solvent scheme of arrangement or similar procedure that a domestic reinsurer has proposed or participated in and the outcome of such procedure.
V. Appendices: Specific Guidance with Respect to Section A and Section B

It is important to note that Part IV, Section A: Laws and Regulations, and Part IV, Section B: Regulatory Practices and Procedures, are derived from the NAIC Financial Regulation Standards and Accreditation Program, which is intended to establish and maintain standards to promote sound insurance company financial solvency regulation among the U.S. states. As such, the NAIC Accreditation Program requires the states to employ laws, regulations and administrative policies and procedures substantially similar to the NAIC accreditation standards in order to be considered an accredited state.

However, it is not the intent of the Evaluation Methodology to require applicant jurisdictions to meet the standards required by the NAIC for accreditation. Instead, Section A and Section B (and their corresponding appendices) are intended to provide a framework to facilitate an outcomes-based evaluation by the NAIC and state insurance regulators of the effectiveness of the jurisdiction’s supervisory authority. This framework consists of a description of the jurisdiction’s laws, regulations, practices and procedures applicable to the supervision of its domestic reinsurers. The amount of detail provided within these appendices should not be interpreted as specific requirements that must be met by the applicant jurisdiction. Rather, the information is intended to provide direction to the applicant jurisdiction in an effort to facilitate a complete response and increase the efficiency and timeliness of the evaluation process.
Appendix A: Laws and Regulations

1. Examination Authority

Does the jurisdiction have the authority to examine its domestic reinsurers? This description should address the following:

   a. Frequency and timing of examinations and reports.

   b. Guidelines for examination.

   c. Whether the jurisdiction has the authority to examine reinsurers whenever it is deemed necessary.

   d. Whether the jurisdiction has the authority to have complete access to the reinsurer’s books and records and, if necessary, the records of any affiliated company.

   e. Whether the jurisdiction has the authority to examine officers, employees and agents of the reinsurer when necessary with respect to transactions directly or indirectly related to the reinsurer under examination.

   f. Whether the jurisdiction has the authority to share confidential information with U.S. state insurance regulatory authorities, provided that the recipients are required, under their law, to maintain its confidentiality.

2. Capital and Surplus Requirement

Does the jurisdiction have the authority to require domestic reinsurers to maintain a minimum level of capital and surplus to transact business? This description should address the following:

   a. Whether the jurisdiction has the authority to require reinsurers to maintain minimum capital and surplus, including a description of such minimum amounts.

   b. Whether the jurisdiction has the authority to require additional capital and surplus based on the type, volume and nature of reinsurance business transacted.

   c. Capital requirements for reinsurers, including reports and a description of any specific levels of regulatory intervention.

3. Accounting Practices and Procedures

Does the jurisdiction have the authority to require domestic reinsurers to file appropriate financial statements and other financial information? This description should address the following:

   a. Description of the accounting and reporting practices and procedures.

   b. Description of any standard financial statement blank/reporting template, including description of content/disclosure requirements and corresponding instructions.

4. Corrective Action

Does the jurisdiction have the authority to order a reinsurer to take corrective action or cease and desist certain practices that, if not corrected or terminated, could place the reinsurer in a hazardous financial condition? This description should address the following:

   a. Identification of specific standards which may be considered to determine whether the continued operation of the reinsurer might be hazardous to the general public.

   b. Whether the jurisdiction has the authority to issue an order requiring the reinsurer to take corrective action when it has been determined to be in hazardous financial condition.
5. **Regulation and Valuation of Investments**

What authority does the jurisdiction have with respect to regulation and valuation of investments? This description should address the following:

a. Whether the jurisdiction has the authority to require a diversified investment portfolio for all domestic reinsurers as to type, issue and liquidity.

b. Whether the jurisdiction has the authority to establish acceptable practices and procedures under which investments owned by reinsurers must be valued, including standards under which reinsurers are required to value securities/investments.

6. **Holding Company Systems**

Does the jurisdiction have laws or regulations with respect to supervision of the group holding company systems of reinsurers? This description should address the following:

a. Whether the jurisdiction has access to information via the parent or other regulated group entities about activities or transactions within the group involving other regulated or non-regulated entities that could have a material impact on the operations of the reinsurer.

b. Whether the jurisdiction has access to consolidated financial information of a reinsurer’s ultimate controlling person.

c. Whether the jurisdiction has the authority to review integrity and competency of management.

d. Whether the jurisdiction has approval and intervention powers for material transactions and events involving reinsurers.

e. Whether the jurisdiction has authority to monitor, or has prior approval authority over:
   i. Change in control of domestic reinsurers.
   ii. Dividends and other distributions to shareholders of the reinsurer.
   iii. Material transactions with affiliates.

7. **Risk Management**

Does the jurisdiction have the authority to require its domestic reinsurers to maintain an effective risk-management function and practices? This description should address the following:

a. Whether the jurisdiction has Own Risk and Solvency Assessment (ORSA) requirements and reporting.

b. Any requirements regarding the maximum net amount of risk to be retained by a reinsurer for an individual risk based on the reinsurer’s capital and surplus.

c. Whether the jurisdiction has authority to monitor enterprise risk, including any activity, circumstance, event (or series of events) involving one or more affiliates of a reinsurer that, if not remedied promptly, is likely to have a material adverse effect on the financial condition or liquidity of the reinsurer or its insurance holding company system as a whole.

d. Whether the jurisdiction has corporate governance requirements for reinsurers.
8. **Liabilities and Reserves**

Does the jurisdiction have standards for the establishment of liabilities and reserves (technical provisions) resulting from reinsurance contracts? This description should address the following:

a. Liabilities incurred under reinsurance contracts for policy reserves, unearned premium, claims and losses unpaid, and incurred but not reported (IBNR) claims (including whether discounting is allowed for reserve calculation/reporting).

b. Liabilities related to catastrophic occurrences.

c. Whether the jurisdiction requires an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist for all domestic reinsurers, and the frequency of such reports.

9. **Reinsurance Ceded**

What are the jurisdiction’s requirements with respect to the financial statement credit allowed for reinsurance retroceded by its domestic reinsurers? This description should address the following:

a. Credit for reinsurance requirements applicable to reinsurance retroceded to domestic and non-domestic reinsurers.

b. Collateral requirements applicable to reinsurance contracts.

c. Whether the jurisdiction requires a reinsurance agreement to provide for insurance risk transfer (i.e., transfer of both underwriting and timing risk).

d. Requirements applicable to special purpose reinsurance vehicles and insurance securitizations.

e. Affiliated reinsurance transactions and concentration risk.

f. Disclosure requirements specific to reinsurance transactions, agreements and counterparties, if such information is not provided under another item.

10. **Independent Audits**

Does the jurisdiction require annual audits of domestic reinsurers by independent certified public accountants or similar accounting/auditing professional recognized in the applicant jurisdiction? This description should address the following:

a. Requirements for the filing of audited financial statements prepared in conformity with accounting practices prescribed or permitted by the supervisory authority.

b. Contents of annual audited financial reports.

c. Requirements for selection of auditor.

d. Allowance of audited consolidated or combined financial statements.

e. Notification of material misstatements of financial condition.

f. Supervisor’s access to auditor’s workpapers.

g. Audit committee requirements.

h. Requirements for reporting of internal control-related matters.
11. **Receivership**

Does the jurisdiction have a receivership scheme for the administration of reinsurers found to be insolvent? This should include a description of any liquidation priority afforded to policyholders and the liquidation priority of reinsurance obligations to domestic and non-domestic ceding insurers in the context of an insolvency proceeding of a reinsurer.

12. **Filing with Supervisory Authority**

Does the jurisdiction require the filing of annual and interim financial statements with the supervisory authority? This description should address the following:

   a. The use of standardized financial reporting in the financial statements, and the frequency of relevant updates.

   b. The use of supplemental data to address concerns with specific companies or issues.

   c. Filing format (e.g., electronic data capture).

   d. The extent to which financial reports and information are public records.

13. **Reinsurance Intermediaries**

Does the jurisdiction have a regulatory framework for the regulation of reinsurance intermediaries?

14. **Other Regulatory Requirements with respect to Reinsurers**

Any other information necessary to adequately describe the effectiveness of the jurisdiction’s laws and regulations with respect to its reinsurance supervisory system.
Appendix B: Regulatory Practices and Procedures

1. Financial Analysis

What are the jurisdiction’s practices and procedures with respect to the financial analysis of its domestic reinsurers? Such description should address the following:

a. **Qualified Staff and Resources**
   The resources employed to effectively review the financial condition of all domestic reinsurers, including a description of the educational and experience requirements for staff responsible for financial analysis.

b. **Communication of Relevant Information to/from Financial Analysis Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the financial analysis staff and the process under which the findings of the financial analysis staff are communicated to the appropriate person(s).

c. **Supervisory Review**
   How the jurisdiction’s internal financial analysis process provides for supervisory review and comment.

d. **Priority-Based Analysis**
   How the jurisdiction’s financial analysis procedures are prioritized in order to ensure that potential problem reinsurers are reviewed promptly.

e. **Depth of Review**
   How the jurisdiction’s financial analysis procedures ensure that domestic reinsurers receive an appropriate level or depth of review commensurate with their financial strength and position.

f. **Analysis Procedures**
   How the jurisdiction has documented its financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic reinsurer.

g. **Reporting of Material Adverse Findings**
   The process for reporting material adverse indications, including the determination and implementation of appropriate regulatory action.

h. **Early Warning System/Stress Testing**
   Whether the jurisdiction has an early warning system and/or stress testing methodology that is utilized with respect to its domestic reinsurers.
2. **Financial Examinations**

What are the jurisdiction’s practices and procedures with respect to the financial examinations of its domestic reinsurers? Such description should address the following:

a. **Qualified Staff and Resources**
   The resources employed to effectively examine all domestic reinsurers. This should include whether the jurisdiction prioritizes examination scheduling and resource allocation commensurate with the financial strength and position of each reinsurer, and a description of the educational and experience requirements for staff responsible for financial examinations.

b. **Communication of Relevant Information to/from Examination Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the examination staff and the process under which the findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**
   Whether the supervisory authority’s examination staff includes specialists with appropriate training and/or experience or whether the supervisory authority otherwise has available qualified specialists that will permit the supervisory authority to effectively examine any reinsurer.

d. **Supervisory Review**
   Whether the supervisory authority’s procedures for examinations provide for supervisory review.

e. **Examination Guidelines and Procedures**
   Description of the policies and procedures the supervisory authority employs for the conduct of examinations, including whether variations in methods and scope are commensurate with the financial strength and position of the reinsurer.

f. **Risk-Focused Examinations**
   Does the supervisory authority perform and document risk-focused examinations and, if so, what guidance is utilized in conducting the examinations? Are variations in method and scope commensurate with the financial strength and position of the reinsurer?

g. **Scheduling of Examinations**
   Whether the supervisory authority’s procedures provide for the periodic examination of all domestic reinsurers, including how the system prioritizes reinsurers that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**
   Description of the format in which the supervisory authority’s reports of examinations are prepared, and how the reports are shared with other jurisdictions under information-sharing agreements.

i. **Action on Material Adverse Findings**
   What are the jurisdiction’s procedures regarding supervisory action in response to the reporting of any material adverse findings.

3. **Information Sharing**

Does the jurisdiction have a process for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with U.S. state regulatory officials, provided that the recipients are required, under their law, to maintain its confidentiality?
4. Procedures for Troubled Reinsurers

What procedures does the jurisdiction follow with respect to troubled reinsurers?

5. Organization, Licensing and Change of Control of Reinsurers

What processes does the supervisory authority use to identify unlicensed or fraudulent activities? The description should address the following:

a. Licensing Procedure
   Whether the supervisory authority has documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

b. Staff and Resources
   The educational and experience requirements for staff responsible for evaluating company licensing.

c. Change in Control of a Domestic Reinsurer
   Procedures for the review of key pieces of information included in filings with respect to a change in control of a domestic reinsurer.
Re: Process for Evaluating Qualified and Reciprocal Jurisdictions & evaluations of France, U.K., Ireland and Germany

Dear Messrs. Stultz and Schelp:

The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. Ninety million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. ACLI also represents all professional life reinsurers assuming mortality and morbidity risks in the United States.

We appreciate the opportunity to comment on the exposure draft updating the process for evaluating qualified and reciprocal jurisdictions. We generally support the exposure draft, although there were a few areas we felt could benefit from additional clarity or minor revisions. Our technical comments are below:

TECHNICAL COMMENTS

Section II. Principles for the Evaluation of Non-U.S. Jurisdictions

Item 3, page 5
The proposed language in item 3 states that in order for a Qualified Jurisdiction to become a Reciprocal Jurisdiction it must "agree to adhere to the same reciprocity standards" as Covered Agreement Jurisdictions “including the requirement that the Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, as provided under the Credit for Reinsurance Model Act.” While this is true, the reciprocity standards go beyond the recognition of the U.S. group capital and group supervision regime (e.g., the qualified jurisdiction cannot require a local presence requirement in exchange for reinsurance credit, impose group supervision/group capital at the world-wide parent level, and must establish an information sharing agreement).

**Recommendation:** Consider expanding this section to include all relevant reciprocity standards.

Questions about item 3, page 5:
- How will adherence to reciprocity be evaluated by the Qualified Jurisdiction Working Group?

**Section III. Procedure for Evaluation of Non-US Jurisdictions**

**Item 2b (Evaluation of Jurisdiction), page 8**

In item 2b (page 8), the draft adds a provision indicating the NAIC will notify non-US jurisdictions of any “additional information” upon which the Working Group is relying on “beyond the information” provided by the jurisdiction.

Item 2a notes that the Working Group may request or accept relevant information from reinsurers domiciled in the jurisdiction under review. It is unclear if information from reinsurers domiciled in the jurisdiction is the “additional information” that the Working Group is referencing in 2b, or if the Working Group is contemplating sources other than reinsurers who are domiciled in the jurisdiction and the other listed sources in 2a. In any case, it might be useful to know the authority surrounding the collection of “additional” information. It would also be instructive to know if the Working Group currently relies on this type of “additional information” in their evaluation practices.

**Item 13(c)(iii) (Review of Qualified Jurisdictions as Reciprocal Jurisdictions), page 14**

Item 13(c)(iii) tracks section 9(B)(3)(c) of the Credit for Reinsurance Model Regulation (#786) very closely. It appears that the intent of item 13(c)(iii) is to establish that an insurer’s group supervisor, and the corresponding group supervisory authority and rules, should be controlling. Thus, all other supervisors should respect the jurisdiction’s supervisory authority and not apply additional “group governance, solvency, capital or reporting requirements.” While we recognize that this language mirrors section 9(B)(3)(c) of the Credit for Reinsurance Model Regulation, we are recommending a small change to improve the clarity of the provision:

**Recommendation:** We suggest rewording, as follows, to clarify the applicable supervisor authority:

“The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another US jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as by the applicable US regulator, and will not be subject to group supervision, at the level of the worldwide parent undertaking of the insurance or reinsurance group, by the Qualified Jurisdiction;”
Item 13(c)(v), page 14-15
This item requires that non-U.S. jurisdictions must confirm that their assuming insurers who have been granted an “exemption” from state collateral requirements are complying with the minimum capital and surplus levels and ratios required in section 9(c)(2) and 9(c)(3) of the Credit for Reinsurance Model Regulation.

We recommend substituting the word “relief” for exemption, because “relief” is a better representation of the public policy positions guiding the collateral reduction provisions in section 9. The sections providing for reduced and zero collateral are just two, among a variety of ways, that a U.S. ceding insurer may receive credit for reinsurance. We don’t believe that these two mechanisms for credit are “exemptions” – instead they represent public policy decisions based on sound domiciliary regulation and the assuming insurers ability and willingness to pay.

Recommendation: Substitute the word “relief” for exemption in item 13(c)(v), page 14.

Item 13(d), bullet 2, page 15
This section sets the criteria for the written confirmation that the chief insurance supervisor of a Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction must provide to the NAIC. We recommend clarifying the language in bullet 2, for the same reasons we cited in item 13(c)(iii).

Recommendation: We suggest rewording, as follows, to clarify the applicable supervisor authority:

“The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another US jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as by the applicable US regulator, and will not be subject to group supervision, at the level of the worldwide parent undertaking of the insurance or reinsurance group, by the Qualified Jurisdiction;”

Conclusion
Again, thank you for the opportunity to review and submit comments on the exposure draft, as well as the opportunity to review the re-evaluations and approvals of the United Kingdom, France, Germany, and Ireland. We look forward to the opportunity to review the re-evaluations of Bermuda, Switzerland and Japan. Thank you for your ongoing work on this task.

Sincerely,

Mariana Gomez-Vock  Steven Clayburn, FSA, MAAA
9/30/2019

Dear Mr. Schelp,

Many thanks for giving us the opportunity to comment the report.

We have read it and have no further comments to the current text. We would be satisfied with the proposed result of your evaluation.

In addition to it we would like to take the opportunity to inform you that our new leaflet for US reinsurers is online in English language (please see link below).

The planned amendment of § 67 (1) VAG with respect to the exemption from the license requirement in cases where the EU has concluded an agreement is now part of another legislative procedure (implementation of the Money Laundering Directive). Although the clarification in the law will still take some time, nonetheless, the leaflet describes the situation for US reinsurers with the sufficient legal clarity.

Just as a suggestion, an additional reference on this in your report may be also helpful for the understanding and could provide the reader of the report with the latest information of the German market.

Link to the English version: https://www.bafin.de/dok/13008940

Reinsurers from the USA to carry out reinsurance business with primary insurance or reinsurance undertakings in Germany

Content
- I. Conditions for carrying out business without the need for authorisation
- II. Submission process
- III. Information to be provided to market participants

The EU and the USA have signed a bilateral agreement that, among other things, will make it possible for reinsurers from the USA to carry out reinsurance business with primary insurance or reinsurance undertakings in the EU without a branch being required in the relevant EU member state ("Bilateral Agreement between the European Union and the United States of America on prudential measures regarding insurance and reinsurance", referred to in the following as "the Agreement"). This is only possible, however, if the reinsurer from the USA meets the requirements set out in the Agreement.

I. Conditions for carrying out business without the need for authorisation

If the undertaking-specific criteria set out in the Agreement are met, no authorisation or branch under section 67 (1) sentence 1 of the Insurance Supervision Act (Versicherungsaufsichtsgesetz - VAG) is required to carry out reinsurance business in Germany. The relevant requirements can be found in Article 3(4) of the Agreement. These relate on the one hand to certain financial conditions. On the other, reinsurers from the USA are required to submit certain declarations to the insurance supervisory authority responsible for the ceding insurer and to meet further conditions applying to their business activities. A distinction is made here between initial and subsequent submissions.

1. Initial submission

The following documents must be submitted to BaFin for the initial submission:

1.1. a declaration by the assuming reinsurer that it will provide prompt written notice and explanations to BaFin if:
a. it falls below the minimum capital and surplus or own funds, as applicable, specified in Article 3(4)(a) of the Agreement, or the capital ratio specified in Article 3(4)(b) of the Agreement; or

b. any regulatory action is taken against it for serious noncompliance with applicable law (Article 3(4)(c) of the Agreement).

1.2. a written confirmation by the assuming reinsurer regarding its consent to the jurisdiction of the courts of the territory in which the ceding insurer has its head office or is domiciled (Article 3(4)(d) of the Agreement).

1.3. a written declaration that the assuming reinsurer will pay all final judgments, wherever enforcement is sought, obtained by a ceding insurer, that have been declared enforceable in the territory where the judgment was obtained (Article 3(4)(f) of the Agreement).

1.4. submission of the following documents and information:

a. annual audited financial statements in accordance with the applicable law of the territory of the head office of the assuming reinsurer, including the external audit report, with respect to the preceding two years (Article 3(4)(h)(i) of the Agreement).

Note: if the undertaking is not subject to a requirement to prepare its own audit annual financial statements and if it is included in annual financial statements that cover several undertakings, this must be stated explicitly.

b. solvency and financial condition reports or actuarial opinions, if filed with the assuming reinsurer's supervisor, with respect to the preceding two years (Article 3(4)(h)(ii) of the Agreement);

c. a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance contracts from ceding insurers from Germany (Article 3(4)(h)(iii) of the Agreement);

Note: if this information is not evident from the documents submitted, reference must be made to the precise location of the information. If there are no such reinsurance claims, an express statement to this effect must be made.

d. information regarding the assuming reinsurer's assumed reinsurance by ceding undertaking, ceded reinsurance by the assuming reinsurer, and reinsurance recoverable on paid and unpaid losses by the assuming reinsurer, to allow for the evaluation of the criteria defined in Article 3(4)(i) of the Agreement (Article 3(4)(h)(i) of the Agreement).

Note: The undertaking is at liberty to submit the annual statement, or extracts from it, prepared under national law in the home country. Reference must be made to the precise source of the information. To determine whether payments are prompt as required by Article 3(4)(i) of the Agreement, the following information must always be submitted in summary form:

• the amount of reinsurance recoverables due from the assuming reinsurer from the USA and
• the amount of reinsurance recoverables due from the assuming reinsurer in the USA that are
  overdue and in dispute (see Article 3(4)(i)(i) of the Agreement);
• the number of ceding insurers and reinsurers of the assuming reinsurer from the USA and
• the number of ceding insurers and reinsurers of the assuming reinsurer from the USA that have
  overdue reinsurance recoverables on paid losses of 90 days or more that are not in dispute and
  that exceed USD 100,000 for each ceding insurer (see Article 3(4)(i)(ii) of the Agreement);
• the aggregate amount of reinsurance recoverables due from the reinsurer from the USA that are
  not in dispute but are overdue by 90 days or more (see Article 3(4)(i)(iii) of the Agreement).

1.5. written confirmation by the assuming reinsurer that it is not presently participating in any solvent
    scheme of arrangement that involves European Union ceding insurers, and a declaration that it will
    notify the ceding insurer and BaFin and provide 100 per cent collateral to the ceding insurer consistent
    with the terms of the scheme should the reinsurer enter into such an arrangement (Article 3(4)(j) of the
    Agreement).

1.6. confirmation by the competent authority that the reinsurer complies with the risk-based capital
    ratio within the meaning of Article 3(4)(b) (Article 3(4)(l) of the Agreement).
Note: Evidence of compliance with the capital requirements as defined in Article 3(4)(a) of the
Agreement must be provided. Where compliance with the capital requirements is not already evident
from the confirmation by the competent authority, compliance with the capital requirements as
defined in Article 3(4)(a) of the Agreement must be evidenced by other means. Where attached
documents are referred to, reference must be made to the precise location of the information.

2. Subsequent submissions
Under the Agreement, the supervisory agency can periodically require the reinsurer from the USA to
submit documents. BaFin expects the following documents to be submitted each year:

a. annual audited financial statements in accordance with the applicable law of the territory of the
   head office of the assuming reinsurer, including the external audit report (Article 3(4)(h)(i) of the
   Agreement).

b. a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding
   reinsurance contracts from ceding insurers from Germany (Article 3(4)(h)(iii) of the Agreement);

c. information regarding the assuming reinsurer’s assumed reinsurance by ceding company, ceded
   reinsurance by the assuming reinsurer, and reinsurance recoverable on paid and unpaid losses by the
   assuming reinsurer, to allow for the evaluation of the criteria set forth in Article 3(4)(l) of the
   Agreement (Article 3(4)(h)(l) of the Agreement).
d. confirmation by the competent authority that the reinsurer complies with the risk-based capital ratio within the meaning of Article 3(4)(b) of the Agreement (Article 3(4)(l) of the Agreement).

The notes contained in paragraph 1.4 above must be observed in this respect. BaFin presumes that the documents will be submitted directly after the audit of the annual financial statements within the meaning of Article 3(4)(h)(i) of the Agreement.

3. Other conditions

The reinsurer must additionally observe the following conditions:

3.1 the assuming reinsurer must meet certain capital requirements (“capital and surplus” of at least EUR 226 million (Article 3(4)(a) of the Agreement) as well as certain local risk-based capital requirements (at least 300% “Authorized Control Level” (Article 3(4)(b) of the Agreement)).

3.2. the assuming reinsurer agrees in each reinsurance contract subject to the Agreement that it will provide collateral for 100 per cent of the assuming reinsurer’s liabilities attributable to reinsurance ceded pursuant to this agreement if the assuming reinsurer resists enforcement of a final judgment that is enforceable under the law of the territory in which it was obtained or a properly enforceable arbitration award, whether obtained by the ceding insurer or by its resolution estate, if applicable (Article 3(4)(g) of the Agreement).

3.3. the assuming reinsurer maintains a practice of prompt payment of claims under reinsurance contracts; the lack of prompt payment will be evidenced if any of the criteria specified in Article 3(4)(i)(i–iii) of the Agreement is met (Article 3(4)(i) of the Agreement).

3.4 if subject to a legal process of resolution, receivership or winding-up proceedings as applicable, the ceding insurer, or its representative, may seek and, if determined appropriate by the court in which the resolution, receivership or winding-up proceedings is pending, may obtain an order requiring that the assuming reinsurer post collateral for all outstanding ceded liabilities (Article 3(4)(k) of the Agreement).

3.5. In addition, the assuming reinsurer is subject to requirements to provide information to BaFin in the cases referred to in Article 3(4)(c) and to BaFin and the ceding insurer in the cases referred to Article 3(4)(j) of the Agreement.

3.6. BaFin presumes that the declaration by the assuming reinsurer under Article 3(4)(f) of the Agreement that it will pay all final judgments obtained by a ceding insurer, wherever enforcement is sought, that have been declared enforceable in the territory where the judgment was obtained, will also be communicated to the German ceding insurer or will be embedded in reinsurance contracts.

II. Submission process

1. Formal requirements
Original versions of all declarations by the assuming reinsurer referred to above must be submitted to BaFin in writing and signed by the governing body authorised to represent the assuming reinsurer. Scans are not sufficient in this respect.

The documentation can be filed in English. If no translation into German of the submitted documents is filed, an original version of a declaration, signed by the governing body authorised to represent the assuming reinsurer, must be submitted in which the reinsurer undertakes to submit a translation of the documents to BaFin on request.

2. Submission method

Submissions and questions can be sent by email to reinsurance@bafin.de. For the submissions, it should be noted that the declarations referred to above that must be notified to BaFin must be submitted as original documents, and not merely as scans. The other documents can be submitted electronically.

3. Contact data and communication

It is recommended to provide details of contacts at the undertaking to which questions about the submissions can be sent as well as details of contacts at the competent authority. BaFin will respond in writing to submissions. This can be sent in advance by fax on request if the undertaking has notified a fax number.

III. Information to be provided to market participants

A summary of reinsurers from the USA that have submitted the necessary documents and information by 30 June of each year will be made available in a table published on BaFin's website. The table will only contain reinsurers that have expressly given their consent to be included in the table. Where market participants send questions to BaFin about individual reinsurers from the USA, BaFin will only provide information about the submissions if the reinsurer from the USA has consented to the communication of information about the status of the submissions.

**RE: Qualified Jurisdiction (E) Working Group: Notice of Exposures - Process for Evaluating Qualified and Reciprocal Jurisdictions (the “Exposure”)**

The Bermuda International Long Term Insurers and Reinsurers ("**BILTIR**") thanks the National Association of Insurance Commissioners ("**NAIC**")’s Qualified Jurisdiction (E) Working Group ("**QJWG**") for its commendable work. The following comments are submitted by BILTIR, on behalf of our member companies, regarding the Exposure.

BILTIR was formally incorporated on June 9, 2011 and represents 63 companies. BILTIR is committed to supporting the long-term insurance and reinsurance industry’s growth and success in Bermuda and globally.

We have outlined the thoughts and comments of our BILTIR members to the Exposure below.

<table>
<thead>
<tr>
<th>Section</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Delay in re-approving Bermuda, Switzerland, and Japan as Qualified Jurisdictions (general comment)</td>
<td>The QJWG’s delay in exposing the Qualified Jurisdiction (&quot;QJ&quot;) status of the non-covered-agreement countries arguably is not consistent with the NAIC’s commitment to try to achieve parity. On one hand it is understandable that the NAIC would wait to assess QJ’s status and Reciprocal Jurisdiction status at the same time. On the other hand, the process to re-approve Bermuda, Japan, and Switzerland as QJ’s is not very onerous. Likewise, since there could be unexpected developments during updating of the process or related workstreams, setting the re-designation process in motion would be worthwhile. Consideration should be given to moving forward with QJWG re-approval for all jurisdictions, rather than just those under a covered agreement.</td>
</tr>
<tr>
<td>Switch from 5-year to 1-year review (page 13)</td>
<td>While this change may create additional regulatory burdens, we are operating on the assumption that the regulators’ intent is to make the designation process more regular rather than to create additional process. We ask the NAIC to ensure that the diligence related to the annual process not be overly burdensome, since the process will now be more frequent.</td>
</tr>
<tr>
<td>Ambiguity regarding regulatory authority (page 14)</td>
<td>Page 14 of the Exposure contains some inartful drafting. The language in paragraph 13.c.iii does not confirm whom a group will be &quot;subject only to worldwide prudential insurance group supervisions …&quot; One clarifying approach would be as follows: The QJ must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its</td>
</tr>
</tbody>
</table>
competent regulatory authority that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, from the U.S. national state-based system of regulation, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the QJ... If a change is made in 13.c.ii, a corresponding change should be made in 13.d on page 15, regarding the confirming letter provided by a Reciprocal Jurisdiction.

Characterization of “Exemption” (page 14)

Page 14, paragraph 13.c.v refers to collateral relief through the Reciprocal Jurisdiction process as an “exemption” however in our view the collateral relief is better thought of as one of the ways to qualify for full credit for reinsurance. Reference to the Reciprocal Jurisdiction provisions as an “exemption” mischaracterizes the basis for collateral relief as an exception to the rule rather than an avenue specifically contemplated as a way to get credit for reinsurance cessions.

Consider referring to the collateral relief as “qualifying for credit for reinsurance,” rather than an “exemption.”

We look forward to working with the NAIC’s QJWG further in this regard.

Sincerely,

BILTIR

Re: Re-Evaluation of Ireland as a Qualified Jurisdiction

Dear Mr. Schelp,

I refer to your email of 3rd of September advising the Central Bank of Ireland of a 30-day public comment period on the proposed recommendation for Ireland to continue to be recognized as a Qualified Jurisdiction based on the conclusions reached in the “Summary of Findings and Determination with respect to Ireland”.

Considering that this time has just expired, we are looking forward to continue to engage with the NAIC in order to finalize the process and we are committed to providing whatever assistance is required.

Yours sincerely

Re: GIAJ Comments on the proposed Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions

Dear Director Lindley-Myers and Director Farmer,

The General Insurance Association of Japan (GIAJ) appreciates the opportunity to comment on the proposed revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions.

We note that the proposed revisions incorporate principles such as consistency with existing rules, fair treatment among insurers, efficiency of supervision, and removal of duplicative regulations, which the GIAJ has been seeking.

We expect the actual evaluation processes regarding the Reciprocal Jurisdictions to which Qualified Jurisdictions are to be subjected and criteria which will be applied on Certified Reinsurers to be transparent and efficient.

We wish to submit some comments on the proposed revisions to individual paragraphs and the future evaluation processes.

I. Preamble

The sentence in the last paragraph, “recognize key NAIC solvency initiatives, including group supervision and group capital standards”, does not seem to be used in the Credit for Reinsurance Model Law (#785) and Regulation (#786). From the standpoint of eliminating any prejudgments, we propose aligning the phrase with Section 9.B.(3)(c) in #786 and III. 13. c. iii. in this proposed revision. Specifically, it should be rewritten as follows: ”recognize the U.S. state regulatory approach to group supervision and group capital”

Also, another sentence in the same paragraph, ”receive similar treatment as that provided under the EU and UK Covered Agreements”, seems ambiguous. Those jurisdictions which are RJ should be given the same treatment whether they conclude Covered Agreement with the US or not. Therefore, we propose revising it to ”the same
treatment as that of the EU and UK”. Where it is necessary to cater for unintended legal interpretations caused by conclusion/non-conclusion of Covered Agreement, we propose revising it to "substantially the same treatment as that of the EU and UK”.

II. Principles for Evaluation of Non-U.S. Jurisdictions

Paragraph 3.
The sentence ‘recognize the states’ approach to group supervision, including group capital” does not seem to be used in the Credit for Reinsurance Model Law (#785) and Regulation (#786). From the standpoint of eliminating any prejudgments, we propose aligning the phrase with Section 9.B.(3)(c) in #786 and III. 13. c. iii. in this proposed revision. Specifically, it should be rewritten as follows: "recognize the U.S. state regulatory approach to group supervision and group capital”

Paragraph 7.
We welcome a reference to the “passporting” process which facilitates multi-state recognition of assuming insurers and encourages uniformity among states.

III. Procedure for Evaluation of Non-U.S. Jurisdictions

We note that “a yearly due diligence review” will be performed to determine whether ‘significant changes’ that might affect their status as Qualified Jurisdictions exist. We expect the review will not be too specific and will be performed efficiently. We would like the NAIC to clarify what will be assumed to be ‘significant changes’ as soon as the specific process of the review is determined.

From the standpoint of the efficiency of the regulations, we support the sentences below: “utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section III. Procedure for Evaluation of Non-U.S. Jurisdictions such as the Qualified Jurisdiction Working Group deems appropriate.”

13. Review of Qualified Jurisdictions as Reciprocal Jurisdictions b.

At the same time, we propose clarifying to the extent possible from the standpoint of clarity of regulation, what are required in “until there has been sufficient United States experience with that jurisdiction and its Certified Reinsurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination” and "Nothing in this process requires a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group may base such recommendation on factors not specifically included in this process”.

13. Review of Qualified Jurisdictions as Reciprocal Jurisdictions d.

In line with the points we made in our past comments, from the standpoint of efficiency, it should be sufficient if the recognition of the U.S. state regulatory approach to group supervision by Qualified Jurisdictions is secured in effect.
Others

We would like the NAIC to clarify the future process and schedule which Qualified Jurisdictions not subjected to an in-force Covered Agreement including Japan will go through, with regard to a yearly due diligence review of Qualified Jurisdictions and review of Qualified Jurisdictions as Reciprocal Jurisdictions.

Sincerely,

Makoto Kawagoe

Chair, Qualified Jurisdictions Working Group

Re: Exposure Re: Qualified Jurisdictions

Dear Mr. Wake,

This comment letter is submitted on behalf of Underwriters at Lloyd's, London ("Lloyd's"). We appreciate the hard work of the Qualified Jurisdictions Working Group in conducting the re-evaluation process for France, Germany, Ireland and the United Kingdom. Lloyd's supports the Working Group's recommendations to re-affirm these regulatory regimes as Qualified Jurisdictions.

We have also reviewed the proposed update to the process document to create a method for evaluating Reciprocal Jurisdictions. Lloyd's support the proposed updates and the new process for Reciprocal Jurisdictions.

We would like to thank the regulators on the Qualified Jurisdictions Review Group for their swift and efficient work on this implementation.

Regards,

Re: NAIC Request for Comments on Draft Process for Evaluating Qualified and Reciprocal Jurisdictions

Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA) and the American Property and Casualty Insurance Association (APCIA) appreciate the opportunity to submit comments on the NAIC’s exposure draft of its Process for Evaluating Qualified and Reciprocal Jurisdictions.

The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates.

Representing nearly 60 percent of the U.S. property casualty insurance market, the American Property Casualty Insurance Association (APCIA) promotes and protects the viability of private competition for the benefit of consumers and insurers. APCIA represents the broadest cross-section of home, auto, and business insurers of any national trade association. APCIA members represent all sizes, structures, and regions, which protect families, communities, and businesses in the U.S. and across the globe.

NAMIC membership includes more than 1,400 member companies. The association supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies write $268 billion in annual premiums. Our members account for 59 percent of homeowners, 46 percent of automobile, and 29 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.

We appreciate the swift action on the part of the Reinsurance Task Force to prepare a revised draft of its Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (now renamed the Process for Evaluating Qualified and Reciprocal Jurisdictions) to reflect the recently adopted 2019 revisions to the NAIC Credit for Reinsurance Model Law and Model Regulation. This is another important step in the implementation process for the U.S./EU and U.S./UK covered agreements and in the NAIC’s expressed goal to revise the credit for reinsurance framework in the
U.S. to create an equal playing field for all reinsurers that meet the legal requirements and commitments from the new category of “Reciprocal Jurisdictions.” The Process for Evaluating Qualified and Reciprocal Jurisdictions provides the framework through which U.S. and non-U.S. jurisdictions will be evaluated as Reciprocal Jurisdictions, principles for that evaluation and a structure for review of Reciprocal Jurisdiction status.

At a high level, the exposure draft makes the necessary changes to implement the changes reflected in the Credit for Reinsurance Model Law and Regulation. We appreciate the changes with respect to treatment of jurisdictions subject to an in-force covered agreement as well as those relevant to the treatment of U.S. NAIC-accredited jurisdictions and other non-U.S. jurisdictions seeking Reciprocal Jurisdiction status. That said, we ask RTF to consider the following comments:

Enforcement/Evaluation Process

As set forth in Section III (12), the Reciprocal Jurisdiction itself is obligated to provide notice to the Qualified Jurisdiction Working Group (QJWG) of a material change in their law that might affect their status as a Reciprocal Jurisdiction. Self-reporting without any enforcement mechanism is ineffective. At a minimum, a process should be specified for a dialogue between the QJWG and the Reciprocal Jurisdiction to address any issues once they have been identified. The framework should provide a mechanism for potential suspension of a Qualified or Reciprocal Jurisdiction’s status if it fails to bring a material detrimental change in their supervisory system to the attention of the QJWG and the matter cannot be promptly resolved. Suspension would continue while the matter is being fully evaluated by the QJWG and would be lifted upon resolution of the matter. With respect to jurisdictions subject to an in-force covered agreement, the framework should include a process for notification to relevant supervisory authorities for evaluation (such as the Joint Committee as specified in the U.S./EU and U.S./UK covered agreements).

In addition, the process for re-evaluation of the Reciprocal Jurisdiction’s status should be clearly set forth in the framework. We appreciate that the QJWG has moved away from reevaluation at specified time periods; however, the process followed by the QJWG should have some greater detail, including clear direction on how U.S. companies experiencing issues in a foreign jurisdiction may bring those to the attention of the Working Group. The framework does not specify a mechanism for companies to directly raise their concerns with the QJWG. While a U.S. jurisdiction (i.e. a company’s domestic regulator) can notify the QJWG of material changes to a Reciprocal Jurisdiction’s supervisory system as set forth in Section III (12) b, we recommend that the right of a U.S. company to bring an issue directly to the attention of the QJWG, any time they experience a serious issue, should be formally recognized in the Process document.

In addition, the framework does not provide immediacy to the review and suspension process for a Reciprocal or Qualified Jurisdiction. No timelines are specified in Section III (12) or elsewhere. The QJWG should consider adding timelines to Section III (12) b for notice by the jurisdiction of the adoption of a material adverse change, the time period in which a decision to re-evaluate or not will be made, with written reports relating to that decision whatever the outcome, and adding a timeframe for when suspensions and revocations take effect, as well as reinstatement upon proof that the law in question has been withdrawn.
Points of Clarification

Sections III (13) c iii and III (13) d address the commitments that a Reciprocal Jurisdiction not subject to an in-force covered agreement must make through a written conformation letter. With respect to the bullet point addressing recognition of the U.S. approach to group supervision we suggest the following clarifying revision:

*The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another U.S. jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as by the applicable U.S. regulator, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;*

In addition, in Section III (13) (c) (v) there is reference to Qualified Jurisdiction having “been granted an exemption” from state collateral requirements. We suggest that this phrase be edited to read “been granted relief” from state collateral requirements.

Conclusion

We appreciate the opportunity to offer comments and work with the NAIC to effectively implement revisions to framework for evaluating Qualified and Reciprocal Jurisdictions consistent with the U.S./EU and U.S./UK covered agreements and as reflected in the 2019 revisions to the NAIC Credit for Reinsurance Model Law and Regulation. Please do not hesitate to contact us with any questions or concerns.

Sincerely,

Reinsurance Association of America (RAA)
American Property Casualty Insurance Association (APCIA)
National Association of Mutual Insurance Companies (NAMIC)
October 4, 2019

Dear Mr. Stultz,
Dear Mr. Schelp

Thank you and the NAIC for the possibility to comment on the proposed revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions. We appreciate the substantial effort the NAIC and state regulators have invested into bringing forward this subject matter.

As to the reciprocal jurisdiction’s recognition of the U.S. state regulatory approach to group supervision and group capital,
We would like to comment on one specific subparagraph in section III.13.d. on page 15 of the exposed document. In the draft, this paragraph reads:

[Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurers and insurance groups that are domiciled or maintain their headquarters in jurisdictions accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].

Our understanding during the process has been that US state insurance regulators want to prevent (sub-)group supervisors of other jurisdictions from performing a worldwide insurance group supervision if the worldwide parent is domiciled in the US. In lieu thereof, such an insurance group should be supervised by one of the U.S. state regulators. As a matter of fact, Switzerland never has and would not claim to supervise the global group in this context, hence we have no objection against the intention of the paragraph cited above.

However, we believe the drafted wording is ambiguous as it is not sufficiently clear that the term “worldwide parent undertaking” refers to the worldwide insurance parent undertaking domiciled in the US. We illustrate this with the following example: In the case of an insurance group with the worldwide parent undertaking domiciled in the qualified jurisdiction and with a subgroup domiciled in the US, the paragraph could be interpreted and read in a way that the supervisor in the qualified jurisdiction would not be allowed to perform the worldwide group supervision, while this would be rather done by a U.S. state supervisor. This means that a regulator of a U.S. state being home to a subgroup of an international insurance group would request to be the global group supervisor.

This second interpretation is probably not the intended goal of the exposure draft. In order to avoid any ambiguity and legal uncertainty in this respect, we suggest an alternative wording, for instance:

[Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurers and insurance or reinsurance groups that maintain their headquarters and the worldwide insurance parent undertaking in jurisdictions accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].
The same observation and suggestion applies also to a corresponding paragraph in section III.13.c, which could be amended as well.

We thank you for carefully considering our concern and thank again for the opportunity to comment. We stand ready to address any questions you may have.

Sincerely,

Thomas Luder

I. Preamble

Purpose

The revised Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the Credit for Reinsurance Models) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes. In 2012, the NAIC Reinsurance (E) Task Force was charged to develop an NAIC process to evaluate the reinsurance supervisory systems of non-U.S. jurisdictions, for the purposes of developing and maintaining a list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. This charge was extended in 2019 to encompass the recognition of Reciprocal Jurisdictions in accordance with the 2019 amendments to the Credit for Reinsurance Models, including the maintenance of a list of recommended Reciprocal Jurisdictions. The purpose of the Process for Evaluating Qualified and Reciprocal Jurisdictions is to provide a documented evaluation process for creating and maintaining these NAIC lists.

Background

On November 6, 2011, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions serve to reduce reinsurance collateral requirements for certified reinsurers that are licensed and domiciled in Qualified Jurisdictions. Under the previous version of the Credit for Reinsurance Models, in order for U.S. ceding insurers to receive reinsurance credit, the reinsurance was required to be ceded to U.S.-licensed reinsurers or secured by collateral representing 100% of U.S. liabilities for which the credit is recorded. When considering revisions to the Credit for Reinsurance Models, the Reinsurance (E) Task Force contemplated establishing an accreditation-like process, modeled on the current NAIC Financial Regulation Standards and Accreditation Program, to review the reinsurance supervisory systems of non-U.S. jurisdictions. Under the revised Credit for Reinsurance Models, the approval of Qualified Jurisdictions is left to the authority of the states; however, the models provide that a list of Qualified Jurisdictions will be created through the NAIC committee process, and that individual states must consider this list when approving jurisdictions.

The enactment in 2010 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) created the Federal Insurance Office (FIO), which has the following authority: (1) coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters; (2) assist the Secretary of the U.S. Department of the Treasury in negotiating covered agreements (as defined in the Dodd-Frank Act); (3) determine whether the states’ insurance measures are preempted by covered agreements; and (4) consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into covered agreements on behalf of the United States. It is the NAIC’s intention to communicate and coordinate with the FIO and related federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.

On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance,” followed by a similar agreement with the United Kingdom (UK) on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.
Reciprocal Jurisdictions

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions were intended to conform the Models to the relevant provisions of the Covered Agreements. The Covered Agreements would eliminate reinsurance collateral requirements for EU and UK reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or UK or post reinsurance collateral. Under the revised Credit for Reinsurance Models, jurisdictions that are subject to in-force Covered Agreements are considered to be Reciprocal Jurisdictions, and reinsurers that have their head office or are domiciled in a Reciprocal Jurisdiction are not required to post reinsurance collateral if they meet all of the requirements of the Credit for Reinsurance Models.

Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to Covered Agreements treated as Reciprocal Jurisdictions for reinsurance collateral purposes, but any other Qualified Jurisdictions can also qualify for collateral elimination as Reciprocal Jurisdictions. States that meet the requirements of the NAIC Financial Standards and Accreditation Program are also considered to be Reciprocal Jurisdictions.

The NAIC has updated and revised this *Process for Evaluating Qualified and Reciprocal Jurisdictions* to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.
II. **Principles for the Evaluation of Non-U.S. Jurisdictions**

1. The NAIC model revisions applicable to certified reinsurers are intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. To be eligible for certification, a reinsurer must be domiciled and licensed in a Qualified Jurisdiction as determined by the domestic regulator of the ceding insurer. A Qualified Jurisdiction not subject to an in-force Covered Agreement under the Dodd-Frank Act may also be determined to be a Reciprocal Jurisdiction, and reinsurers that have their head office or are domiciled in any such Reciprocal Jurisdiction will not be required to post reinsurance collateral, provided they meet the minimum capital and financial strength requirements and comply with the other requirements of the Credit for Reinsurance Models.

2. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions and Reciprocal Jurisdictions will be conducted in accordance with the provisions of the Credit for Reinsurance Models and any other relevant guidance developed by the NAIC.

3. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program (Accreditation Program), adherence to international supervisory standards, and relevant international guidance for recognition of reinsurance supervision. It is not intended as a prescriptive comparison to the NAIC Accreditation Program. In order for a Qualified Jurisdiction that is not subject to an in-force Covered Agreement to be evaluated as a Reciprocal Jurisdiction, that Qualified Jurisdiction must agree to adhere to the same reciprocity standards that have been imposed under the EU and UK Covered Agreements, including the requirement that the Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, and such other requirements as provided under the Credit for Reinsurance Models.

4. The states shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the Qualified Jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of Qualified Jurisdiction status is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

5. Each state may evaluate a non-U.S. jurisdiction to determine if it is a Qualified Jurisdiction. A list of Qualified Jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of Qualified Jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Qualified Jurisdictions contained in the Credit for Reinsurance Models. The creation of this list does not constitute a delegation of regulatory authority to the NAIC. The regulatory authority to recognize a Qualified Jurisdiction resides solely in each state and the NAIC List of Qualified Jurisdictions is not binding on the states.

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.
7. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination that a jurisdiction is a Qualified or Reciprocal Jurisdiction. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings. The NAIC Lists of Qualified and Reciprocal Jurisdictions are intended to facilitate the passporting process.

8. Both Qualified Jurisdictions and Reciprocal Jurisdictions must agree to share information and cooperate with the state with respect to all applicable reinsurers domiciled within that jurisdiction. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

9. The determination of Qualified Jurisdiction status can only be made with respect to the reinsurance supervisory system in existence and applied by a non-U.S. jurisdiction at the time of the evaluation.

10. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
III. Procedure for Evaluation of Non-U.S. Jurisdictions

   a. Priority will be given to requests from the states and from those jurisdictions specifically requesting an evaluation by the NAIC.
   b. Formal notification of the NAIC’s intent to initiate the evaluation process will be sent by the NAIC to the reinsurance supervisory authority in the jurisdiction selected, with copies to the FIO and other relevant federal authorities as appropriate. The NAIC will issue public notice on the NAIC website upon confirmation that the jurisdiction is willing to participate in the evaluation process. The NAIC will at this time request public comments with respect to consideration of the jurisdiction as a Qualified Jurisdiction. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document, subject to a preliminary confidentiality and information sharing agreement between the NAIC, relevant states and the applicant jurisdiction.
   c. Relevant U.S. state and federal authorities will be notified of the NAIC’s decision to evaluate a jurisdiction.

2. Evaluation of Jurisdiction
   a. Evaluation Materials. The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Qualified Jurisdiction Working Group will begin by undertaking a review of the most recent Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), including the Technical Note on Insurance Sector Supervision, and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will also invite each jurisdiction or its designee to provide information relative to Section A through Section G of the Evaluation Methodology in order to update, complete or supplement publicly available information. The Qualified Jurisdiction Working Group may also request or accept relevant information from reinsurers domiciled in the jurisdiction under review.
   b. The Qualified Jurisdiction Working Group will notify the jurisdiction of any additional information upon which the Working Group is relying beyond the information provided by the jurisdiction. In that communication, the NAIC will invite the supervisory authority to compare the materials identified by the NAIC to the materials described in Appendix A and Appendix B, and provide information required to update the identified public information or supplement the public information, as required, to address the topics identified in Section A through Section G of the Evaluation Methodology. The use of publicly available information (e.g., the FSAP Report and/or the Insurance Sector Technical Note) is intended to lessen the burden on applicant jurisdictions by requiring the production of information that is readily available, while still addressing substantive areas of inquiry detailed in the Evaluation Methodology. The Qualified Jurisdiction Working Group’s review at this stage will be focused on how the jurisdiction’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial
solvency of its domestic reinsurers in comparison to key principles underlying the U.S. financial solvency framework\(^1\) and other factors set forth in the Evaluation Methodology.

c. After reviewing the Evaluation Materials, the Qualified Jurisdiction Working Group may request that the applicant jurisdiction submit supplemental information as necessary to determine whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. The Working Group will address specific questions directly with the jurisdiction related to items detailed in the Evaluation Methodology that are not otherwise addressed in the Evaluation Materials.

d. The NAIC will request that all responses from the jurisdiction being evaluated be provided in English. Any responses submitted with respect to a jurisdiction’s laws and regulations should be provided by a person qualified in that jurisdiction to provide such analyses and, in the case of statutory analysis, qualified to provide such legal interpretations, to ensure that the jurisdiction is providing an accurate description.

e. The NAIC does not intend to review confidential company-specific information in this process, and has focused the procedure on reviewing publicly available information. No confidential company-specific information shall be disclosed or disseminated during the course of the jurisdiction’s evaluation unless specifically requested, subject to appropriate confidentiality safeguards addressed in a preliminary confidentiality and information-sharing agreement. If no such agreement is executed or the jurisdiction is unable to enter into such an agreement under its regulatory authority, the NAIC will not accept any confidential company-specific information.

3. **NAIC Review of Evaluation Materials**

   a. NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise will review the jurisdiction’s Evaluation Materials.

   b. Expenses with respect to the evaluations will be absorbed within the NAIC budget. This will be periodically reviewed.

   c. Timeline for review. A project management approach will be developed with respect to the overall timeline applicable to each evaluation.

   d. Upon completing its review of the Evaluation Materials, the internal reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to FIO and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

4. **Discretionary On-site Review**

   a. The NAIC may ask the jurisdiction under consideration for the opportunity to perform an on-site review of the jurisdiction’s reinsurance supervisory system. Factors that the Qualified Jurisdiction Working Group will consider in determining whether an on-site review is appropriate include the completeness of the information provided by the jurisdiction under review, the general familiarity of the jurisdiction by the NAIC staff or other state regulators participating in the review based on prior conduct or dealings with the jurisdiction, and the results of other evaluations performed by other regulatory or supervisory organizations. If the review is performed, it will be coordinated through the NAIC, utilizing personnel with the appropriate

\(^1\) The U.S. financial solvency framework is understood to refer to the key elements provided in the NAIC Financial Regulation Standards and Accreditation Program. Appendix A and Appendix B are derived from this framework.
knowledge, experience and expertise. Individual states may also request that representatives from their state be added to the review team.

b. The review team will communicate with the supervisory authority in advance of the on-site visit to clearly identify the objectives, expectations and procedures with respect to the review, as well as any significant issues or concerns identified within the review of the Evaluation Materials. Information to be considered during the on-site review includes, but is not limited to, the following:

   i. Interviews with supervisory authority personnel.
   
   ii. Review of organizational and personnel practices.
   
   iii. Any additional information beneficial to gaining an understanding of document and communication flows.

c. Upon completing the on-site review, the reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation.

5. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

6. Additional Information to be Considered as Part of Evaluation

The NAIC may also consider information from sources other than the jurisdiction under review. This information includes:

a. Documents, reports and information from appropriate international, U.S. federal and U.S. state authorities.

b. Public comments from interested parties.

c. Rating agency information.

d. Any other relevant information.

7. Preliminary Evaluation Report

a. NAIC staff and/or outside consultants will prepare a Preliminary Evaluation Report for review by the Qualified Jurisdiction Working Group. This preliminary report will be private and confidential (i.e., may only be reviewed by Working Group members, designated NAIC staff, consultants, the states, the FIO and other relevant federal authorities that specifically request to be kept apprised of this information, provided that such entities have entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction. Any outside consultants retained by the NAIC will be required to enter into a confidentiality and nondisclosure agreement.).
b. The report will be prepared in a consistent style and format to be developed by NAIC staff. It will contain detailed advisory information and recommendations with respect to the evaluation of the jurisdiction’s reinsurance supervisory system and the documented practices and procedures thereunder. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a Qualified Jurisdiction.

c. All workpapers and reports, including supporting documentation and data, produced as part of the evaluation process are the property of the NAIC and shall be maintained at the NAIC Central Office. In the event that the NAIC shall come into possession of any confidential information, the information shall be held subject to a confidentiality and information-sharing agreement, which will outline the appropriate actions necessary to protect the confidentiality of such information.

a. The Qualified Jurisdiction Working Group’s review of the Preliminary Evaluation Report will be held in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings.

b. The Qualified Jurisdiction Working Group will make a preliminary determination as to whether the jurisdiction under consideration satisfies the Standard of Review and is deemed acceptable to be included on the NAIC List of Qualified Jurisdictions. If the preliminary determination is that the jurisdiction should not be included on the NAIC List of Qualified Jurisdictions, the Qualified Jurisdiction Working Group will set forth its specific findings and identify those areas of concern with respect to this determination.

c. The results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review.

a. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. This is not intended to be a formal appeals process that would initiate U.S. state administrative due process requirements.

b. The Qualified Jurisdiction Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Qualified Jurisdiction Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings. This report will be approved upon an affirmative vote of a majority of the members in attendance at this meeting.

c. Upon approval of the Final Evaluation Report, the Qualified Jurisdiction Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the summary for public comment. The detailed report will be a confidential, regulator-only document. The report may be shared with any state indicating that it is considering relying on the NAIC List of Qualified Jurisdictions and has entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction.
10. NAIC Determination regarding List of Qualified Jurisdictions

a. Once the Qualified Jurisdiction Working Group has adopted its Final Evaluation Report, it will submit the summary of its findings and its recommendation to the Reinsurance (E) Task Force at an open meeting. Upon approval by the Reinsurance (E) Task Force, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the FIO, USTR and other relevant federal authorities for consultation purposes. Upon approval as a Qualified Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Qualified Jurisdictions. The NAIC will maintain the List of Qualified Jurisdictions on its public website and in other appropriate NAIC publications.

b. In the event that a jurisdiction is not approved as a Qualified Jurisdiction, the supervisory authority will be eligible for reapplication at the discretion of the NAIC.

c. Upon final adoption of the Qualified Jurisdiction Working Group’s determination with respect to a jurisdiction, the Final Evaluation Report will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential.

11. Memorandum of Understanding (MOU)

a. A Qualified Jurisdiction must agree to share information and cooperate on a confidential basis with the U.S. state insurance regulatory authority with respect to all certified reinsurers domiciled within that jurisdiction.

b. The International Association of Insurance Supervisors (IAIS) Multilateral Memorandum of Understanding (MMoU) is the recommended method under which a Qualified Jurisdiction will agree to share information and cooperate with U.S. state insurance regulatory authorities. However, until such time as a state has been approved as a signatory to the MMoU by the IAIS, the state may rely on an MOU entered into by a “Lead State” designated by the NAIC. This Lead State will act as a conduit for information between the Qualified Jurisdiction and other states that have certified a reinsurer domiciled and licensed in that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the applicable IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this Lead State to act as the contact for purposes of obtaining information concerning its certified reinsurers, provided the Lead State share that information with the other states requesting the information consistent with the terms governing the further sharing of information included in the applicable IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction.

c. If a Qualified Jurisdiction has not been approved by the IAIS for use of the MMoU, it must enter into an MOU with a Lead State. The MOU will also provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

d. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.
12. Process for Evaluation after Initial Approval

a. The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review. The Qualified Jurisdiction Working Group will perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group to be appropriate.

b. Qualified Jurisdictions must provide the Qualified Jurisdiction Working Group with notice of any material change in the applicable reinsurance supervisory system that may affect the status of the Qualified Jurisdiction. A U.S. jurisdiction should also notify the Qualified Jurisdiction Working Group if it receives notice of any material change in the applicable reinsurance supervisory system, or any adverse developments with respect to enforcement of final U.S. judgments, that may affect the status of the Qualified Jurisdiction. Upon receipt of any such notice, the Qualified Jurisdiction Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction.

c. If the Qualified Jurisdiction Working Group finds the jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked. The Qualified Jurisdiction Working Group will perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group to be appropriate.

d. The Qualified Jurisdiction Working Group will monitor those jurisdictions that have been approved as Qualified Jurisdictions by individual states, but are not included on the NAIC List of Qualified Jurisdictions.

13. Review of Qualified Jurisdictions as Reciprocal Jurisdictions

a. In undertaking the evaluation of a Qualified Jurisdiction as a Reciprocal Jurisdiction, the Qualified Jurisdiction Working Group shall utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section III. Procedure for Evaluation of Non-U.S. Jurisdictions such as the Qualified Jurisdiction Working Group deems is appropriate. Specifically, the Qualified Jurisdiction Working Group will use processes and procedures outlined in paragraph 1 (Initiation of Evaluation of the Reinsurance Supervisory System of an Individual Jurisdiction), paragraph 3 (NAIC Review of Evaluation Materials), paragraph 7 (Preliminary Evaluation Report), paragraph 8 (Review of Preliminary Evaluation Report), paragraph 9 (Opportunity to Respond to Preliminary Evaluation Report), paragraph 10 (NAIC Determination regarding List of Qualified Jurisdictions), paragraph 11 (Memorandum of Understanding) and paragraph 12 (Process for Evaluation after Initial Approval), as modified for use with Reciprocal Jurisdictions.

b. A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions, unless it has undergone the Evaluation Methodology outlined in Section IV, and remains in good standing with the NAIC as a Qualified Jurisdiction. The Qualified Jurisdiction Working Group may, if it determines an extended review period to be appropriate after its initial approval of a new Qualified Jurisdiction, defer consideration of that jurisdiction as a possible Reciprocal Jurisdiction until there has been sufficient United States experience with that jurisdiction and its Certified Reinsurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination. Nothing in this process requires
a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group may base such recommendation on factors not specifically included in this process.

c. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the NAIC List of Reciprocal Jurisdictions. In making its recommendation with respect to whether a Qualified Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group shall undergo the following analysis in making its evaluation:

i. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in that jurisdiction is received by United States ceding insurers;

ii. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

iii. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurers and insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

iv. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

v. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction, and has been granted an exemption from state collateral requirements under Section 9 of Model #786, continues to comply with the requirements set forth in Section 9C(2) and (3) of Model #786; i.e., must maintain minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.
d. In order to satisfy the requirements of subsection (c) above, the chief insurance supervisor of the Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction may provide the NAIC with a written letter confirming, as follows:

[Jurisdiction] is a Qualified Jurisdiction under the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), and is currently in good standing on the NAIC List of Qualified Jurisdictions. As the lead insurance regulatory supervisor for [Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- An insurer which has its head office or is domiciled in [Jurisdiction] shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in [Jurisdiction] is received by United States ceding insurers. [Jurisdiction] does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by [Jurisdiction] or as a condition to allow the ceding insurer to recognize credit for such reinsurance.

- [Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurers and insurance groups that are domiciled or maintain their worldwide headquarters in jurisdictions accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].

- [Jurisdiction] confirms that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the [Jurisdiction].

- [Jurisdiction] will annually provide to the states confirmation that applicable assuming insurers domiciled in [Jurisdiction] maintain minimum capital and surplus of no less than $250,000,000, and maintain on an ongoing basis the required minimum solvency or capital ratio, as applicable.

- Finally, I confirm that [Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

e. The Qualified Jurisdiction Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate, and will prepare for the review by the Reinsurance Task Force a Summary of Findings and Determination recommending that the Qualified Jurisdiction be recognized as a Reciprocal Jurisdiction. Upon approval by the Task Force, the Summary of Findings and Determination must be adopted by a vote of the NAIC Executive (EX) Committee and Plenary for inclusion on the List of Reciprocal Jurisdictions.
f. The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

g. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions under paragraph 12. If cause is found to question the fitness of a Reciprocal Jurisdiction that is subject to an in-force covered agreement, or its compliance with applicable requirements of the covered agreement, the Qualified Jurisdiction Working Group shall promptly bring the matter to the attention of the applicable dispute resolution mechanism under the covered agreement.
IV. Evaluation Methodology

The Evaluation Methodology was developed to be consistent with the provisions of the NAIC Credit for Reinsurance Models. It is intended to provide an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. Although the methodology includes a comparison of the jurisdiction’s supervisory system to a number of key elements from the NAIC Accreditation Program, it is not intended as a prescriptive assessment under the NAIC Accreditation Program. Rather, the NAIC Accreditation Program simply provide the framework for the outcomes-based analysis. The NAIC will evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the jurisdiction and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of a Qualified Jurisdiction is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

The Evaluation Methodology consists of the following:

- Section A: Laws and Regulations
- Section B: Regulatory Practices and Procedures
- Section C: Jurisdiction’s Requirements Applicable to U.S.-Domiciled Reinsurers
- Section D: Regulatory Cooperation and Information Sharing
- Section E: History of Performance of Domestic Reinsurers
- Section F: Enforcement of Final U.S. Judgments
- Section G: Solvent Schemes of Arrangement

This information will be the basis for the Final Evaluation Report and the determination of whether the jurisdiction will be included on the NAIC List of Qualified Jurisdictions.
Section A: Laws and Regulations

The NAIC will review publicly available information, as well as information provided by an applicant jurisdiction with respect to its laws and regulations, in an effort to evaluate whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. This will include a review of elements believed to be basic building blocks for sound insurance/reinsurance regulation. A jurisdiction’s effectiveness under Section A may be demonstrated through law, regulation or established practice that implements the general authority granted to the jurisdiction, or any combination of laws, regulations or practices that meet the objective.

The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by gathering and undertaking a review of the most recent FSAP Report, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will simultaneously invite each jurisdiction (or its designee) to provide information relative to Section A (and other sections, as relevant) to assist the NAIC in evaluating its laws and regulations. The NAIC will review this information in conjunction with Appendix A, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix A is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction is requested to address the following information, which the NAIC will consider, at a minimum, in determining whether the outcomes achieved by the jurisdiction’s laws and regulations meet an acceptable level of effectiveness for the jurisdiction to be included on the NAIC List of Qualified Jurisdictions:

1. Confirmation of the jurisdiction’s most recent FSAP Report, including relevant updates with respect to descriptions or elements of the FSAP Report in which changes have occurred since the assessment or where information might otherwise be outdated.

2. Confirmation of the jurisdiction’s ROSC, including relevant updates with respect to descriptions or elements of the ROSC in which changes have occurred since the report was completed or where information might otherwise be outdated.

3. If materials responsive to the topics under review have been provided in response to information exchanges between the jurisdiction under review and the NAIC, such prior responses may be cross-referenced provided updates are submitted, if required to address changes in laws or procedures.

4. Any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix A.

The NAIC will review the information provided by the applicant jurisdiction and determine whether it is adequate to reasonably conclude whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. After reviewing the initial submission, the NAIC may request that the applicant jurisdiction

---

2 The basic considerations under this section are derived from Model #786, Section 8C(2), which include: (a) the framework under which the assuming reinsurer is regulated; (b) the structure and authority of the jurisdiction’s reinsurance supervisory authority with regard to solvency regulation requirements and financial surveillance; (c) the substance of financial and operating standards for reinsurers domiciled in the jurisdiction; and (d) the form and substance of financial reports required to be filed or made publicly available by reinsurers domiciled in the jurisdiction and the accounting principles used.
submit supplemental information as necessary in order to make this determination. An applicant jurisdiction is
strongly encouraged to provide thorough, detailed and current information in its initial submission in order to
minimize the number and extent of supplemental information requests from the NAIC with respect to Section A of
this Evaluation Methodology. The NAIC will provide a complete description in the Final Evaluation Report of the
information provided in the Evaluation Materials, and any updates or other information that have been provided by
the applicant jurisdiction.

Section B: Regulatory Practices and Procedures

Section B is intended to facilitate an evaluation of whether the jurisdiction effectively employs baseline regulatory
practices and procedures to supplement and support enforcement of the jurisdiction’s financial solvency laws and
regulations described in Section A. This evaluation methodology recognizes that variation may exist in practices
and procedures across jurisdictions due to the unique situations each jurisdiction faces. Jurisdictions differ with
respect to staff and technology resources that are available, as well as the characteristics of the domestic industry
regulated. A determination of effectiveness may be achieved using various financial solvency oversight practices
and procedures. This evaluation is not intended to be prescriptive in nature.

The NAIC will utilize the information provided by the jurisdiction as outlined under Section A in completing this
section of the evaluation. The NAIC will review this information in conjunction with Appendix B, which provides
more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation
under this section. Appendix B is not intended as a prescriptive checklist of requirements a jurisdiction must meet
in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison
to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction should also
provide any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s
evaluation process in order to address, on an outcomes basis, the key elements described within Appendix B.

Section C: Jurisdiction’s Requirements Applicable to U.S. Domiciled Reinsurers

The jurisdiction is requested to describe and explain the rights, benefits and the extent of reciprocal recognition
afforded by the non-U.S. supervisory authority to reinsurers licensed and domiciled in the U.S.

Section D: Regulatory Cooperation and Information-Sharing

The Credit for Reinsurance Models require the supervisory authority to share information and cooperate with the
U.S. state insurance regulators with respect to all certified reinsurers domiciled within their jurisdiction. The
jurisdiction is requested to provide an explanation of the supervisory authority’s ability to cooperate, share
information and enter into an MOU with U.S. state insurance regulators and confirm that they are willing to enter
into an MOU. This should include information with respect to any existing MOU with U.S. state and/or federal
authorities that pertain to reinsurance. Both the jurisdiction and the states may rely on the IAIS MMoU to satisfy
this requirement, and any states that have not yet been approved by the IAIS as a signatory to the MMoU may rely
on an MOU entered into by a Lead State with the jurisdiction until such time that the state has been approved as a
signatory to the IAIS MMoU. The NAIC and the states will communicate and coordinate with the FIO, USTR and
other relevant federal authorities as appropriate with respect to this process.
Section E: History of Performance of Domestic Reinsurers

The jurisdiction is requested to provide a general description with respect to the historical performance of reinsurers domiciled in the jurisdiction. The NAIC does not intend to review confidential company-specific information under this section. Rather, it is intended that any information provided would be publicly available, unless specifically addressed with the jurisdiction under review. This discussion should address, at a minimum, the following information:

a. Number of reinsurers domiciled in the jurisdiction, and a list of any reinsurers domiciled in the jurisdiction that have and maintain, on an ongoing basis, minimum capital and surplus, or its equivalent, of no less than $250,000,000.

b. Up to a 10-year history of any regulatory actions taken against specific reinsurers.

c. Up to a 10-year history listing any reinsurers that have gone through insolvency proceedings, including the size of each insolvency and a description of the related outcomes (e.g., reinsurer rehabilitated or liquidated, payout percentage of claims to priority classes, payout percentage of claims to domestic and foreign claimants).

d. Up to a 10-year history of any significant industry-wide fluctuations in capital or profitability with respect to domestic reinsurers.

Drafting Note: The NAIC will determine the appropriate time period for review on a case-by-case basis with respect to this information.

Section F: Enforcement of Final U.S. Judgments

The NAIC has previously collected information from a number of jurisdictions with respect to enforcement of final U.S. judgments. The jurisdiction is also requested to provide a current description or explanation of any restrictions with respect to the enforcement of final foreign judgments in the jurisdiction. Based on the foregoing information, the NAIC will make an assessment of the effectiveness of the ability to enforce final U.S. judgments in the jurisdiction. This will include a review of the status, interpretations, application and enforcement of various treaties, conventions and international agreements with respect to final judgments, arbitration and choice of law. The Qualified Jurisdiction Working Group will monitor the enforcement of final U.S. judgments and the Qualified Jurisdiction is requested to notify the NAIC of any developments in this area.

Section G: Solvent Schemes of Arrangement

The jurisdiction is requested to provide a description of any legal framework that allows reinsurers domiciled in the jurisdiction to propose or participate in any solvent scheme of arrangement or similar procedure. In addition, the jurisdiction is requested to provide a description of any solvent scheme of arrangement or similar procedure that a domestic reinsurer has proposed or participated in and the outcome of such procedure.
V. Appendices: Specific Guidance with Respect to Section A and Section B

It is important to note that Part IV, Section A: Laws and Regulations, and Part IV, Section B: Regulatory Practices and Procedures, are derived from the NAIC Financial Regulation Standards and Accreditation Program, which is intended to establish and maintain standards to promote sound insurance company financial solvency regulation among the U.S. states. As such, the NAIC Accreditation Program requires the states to employ laws, regulations and administrative policies and procedures substantially similar to the NAIC accreditation standards in order to be considered an accredited state.

However, it is not the intent of the Evaluation Methodology to require applicant jurisdictions to meet the standards required by the NAIC for accreditation. Instead, Section A and Section B (and their corresponding appendices) are intended to provide a framework to facilitate an outcomes-based evaluation by the NAIC and state insurance regulators of the effectiveness of the jurisdiction’s supervisory authority. This framework consists of a description of the jurisdiction’s laws, regulations, practices and procedures applicable to the supervision of its domestic reinsurers. The amount of detail provided within these appendices should not be interpreted as specific requirements that must be met by the applicant jurisdiction. Rather, the information is intended to provide direction to the applicant jurisdiction in an effort to facilitate a complete response and increase the efficiency and timeliness of the evaluation process.
Appendix A: Laws and Regulations

1. Examination Authority

Does the jurisdiction have the authority to examine its domestic reinsurers? This description should address the following:

   a. Frequency and timing of examinations and reports.
   b. Guidelines for examination.
   c. Whether the jurisdiction has the authority to examine reinsurers whenever it is deemed necessary.
   d. Whether the jurisdiction has the authority to have complete access to the reinsurer’s books and records and, if necessary, the records of any affiliated company.
   e. Whether the jurisdiction has the authority to examine officers, employees and agents of the reinsurer when necessary with respect to transactions directly or indirectly related to the reinsurer under examination.
   f. Whether the jurisdiction has the authority to share confidential information with U.S. state insurance regulatory authorities, provided that the recipients are required, under their law, to maintain its confidentiality.

2. Capital and Surplus Requirement

Does the jurisdiction have the authority to require domestic reinsurers to maintain a minimum level of capital and surplus to transact business? This description should address the following:

   a. Whether the jurisdiction has the authority to require reinsurers to maintain minimum capital and surplus, including a description of such minimum amounts.
   b. Whether the jurisdiction has the authority to require additional capital and surplus based on the type, volume and nature of reinsurance business transacted.
   c. Capital requirements for reinsurers, including reports and a description of any specific levels of regulatory intervention.

3. Accounting Practices and Procedures

Does the jurisdiction have the authority to require domestic reinsurers to file appropriate financial statements and other financial information? This description should address the following:

   a. Description of the accounting and reporting practices and procedures.
   b. Description of any standard financial statement blank/reporting template, including description of content/disclosure requirements and corresponding instructions.

4. Corrective Action

Does the jurisdiction have the authority to order a reinsurer to take corrective action or cease and desist certain practices that, if not corrected or terminated, could place the reinsurer in a hazardous financial condition? This description should address the following:

   a. Identification of specific standards which may be considered to determine whether the continued operation of the reinsurer might be hazardous to the general public.
   b. Whether the jurisdiction has the authority to issue an order requiring the reinsurer to take corrective action when it has been determined to be in hazardous financial condition.
5. **Regulation and Valuation of Investments**

What authority does the jurisdiction have with respect to regulation and valuation of investments? This description should address the following:

a. Whether the jurisdiction has the authority to require a diversified investment portfolio for all domestic reinsurers as to type, issue and liquidity.

b. Whether the jurisdiction has the authority to establish acceptable practices and procedures under which investments owned by reinsurers must be valued, including standards under which reinsurers are required to value securities/investments.

6. **Holding Company Systems**

Does the jurisdiction have laws or regulations with respect to supervision of the group holding company systems of reinsurers? This description should address the following:

a. Whether the jurisdiction has access to information via the parent or other regulated group entities about activities or transactions within the group involving other regulated or non-regulated entities that could have a material impact on the operations of the reinsurer.

b. Whether the jurisdiction has access to consolidated financial information of a reinsurer’s ultimate controlling person.

c. Whether the jurisdiction has the authority to review integrity and competency of management.

d. Whether the jurisdiction has approval and intervention powers for material transactions and events involving reinsurers.

e. Whether the jurisdiction has authority to monitor, or has prior approval authority over:
   i. Change in control of domestic reinsurers.
   ii. Dividends and other distributions to shareholders of the reinsurer.
   iii. Material transactions with affiliates.

7. **Risk Management**

Does the jurisdiction have the authority to require its domestic reinsurers to maintain an effective risk-management function and practices? This description should address the following:

a. Whether the jurisdiction has Own Risk and Solvency Assessment (ORSA) requirements and reporting.

b. Any requirements regarding the maximum net amount of risk to be retained by a reinsurer for an individual risk based on the reinsurer’s capital and surplus.

c. Whether the jurisdiction has authority to monitor enterprise risk, including any activity, circumstance, event (or series of events) involving one or more affiliates of a reinsurer that, if not remedied promptly, is likely to have a material adverse effect on the financial condition or liquidity of the reinsurer or its insurance holding company system as a whole.

d. Whether the jurisdiction has corporate governance requirements for reinsurers.
8. **Liabilities and Reserves**

Does the jurisdiction have standards for the establishment of liabilities and reserves (technical provisions) resulting from reinsurance contracts? This description should address the following:

a. Liabilities incurred under reinsurance contracts for policy reserves, unearned premium, claims and losses unpaid, and incurred but not reported (IBNR) claims (including whether discounting is allowed for reserve calculation/reporting).

b. Liabilities related to catastrophic occurrences.

c. Whether the jurisdiction requires an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist for all domestic reinsurers, and the frequency of such reports.

9. **Reinsurance Ceded**

What are the jurisdiction’s requirements with respect to the financial statement credit allowed for reinsurance retroceded by its domestic reinsurers? This description should address the following:

a. Credit for reinsurance requirements applicable to reinsurance retroceded to domestic and non-domestic reinsurers.

b. Collateral requirements applicable to reinsurance contracts.

c. Whether the jurisdiction requires a reinsurance agreement to provide for insurance risk transfer (i.e., transfer of both underwriting and timing risk).

d. Requirements applicable to special purpose reinsurance vehicles and insurance securitizations.

e. Affiliated reinsurance transactions and concentration risk.

f. Disclosure requirements specific to reinsurance transactions, agreements and counterparties, if such information is not provided under another item.

10. **Independent Audits**

Does the jurisdiction require annual audits of domestic reinsurers by independent certified public accountants or similar accounting/auditing professional recognized in the applicant jurisdiction? This description should address the following:

a. Requirements for the filing of audited financial statements prepared in conformity with accounting practices prescribed or permitted by the supervisory authority.

b. Contents of annual audited financial reports.

c. Requirements for selection of auditor.

d. Allowance of audited consolidated or combined financial statements.

e. Notification of material misstatements of financial condition.

f. Supervisor’s access to auditor’s workpapers.

g. Audit committee requirements.

h. Requirements for reporting of internal control-related matters.

11. **Receivership**

Does the jurisdiction have a receivership scheme for the administration of reinsurers found to be insolvent? This should include a description of any liquidation priority afforded to policyholders and the liquidation priority of
reinsurance obligations to domestic and non-domestic ceding insurers in the context of an insolvency proceeding of a reinsurer.

12. Filings with Supervisory Authority

Does the jurisdiction require the filing of annual and interim financial statements with the supervisory authority? This description should address the following:

   a. The use of standardized financial reporting in the financial statements, and the frequency of relevant updates.
   b. The use of supplemental data to address concerns with specific companies or issues.
   c. Filing format (e.g., electronic data capture).
   d. The extent to which financial reports and information are public records.

13. Reinsurance Intermediaries

Does the jurisdiction have a regulatory framework for the regulation of reinsurance intermediaries?

14. Other Regulatory Requirements with respect to Reinsurers

Any other information necessary to adequately describe the effectiveness of the jurisdiction’s laws and regulations with respect to its reinsurance supervisory system.
Appendix B: Regulatory Practices and Procedures

1. Financial Analysis

What are the jurisdiction’s practices and procedures with respect to the financial analysis of its domestic reinsurers? Such description should address the following:

a. Qualified Staff and Resources
   The resources employed to effectively review the financial condition of all domestic reinsurers, including a description of the educational and experience requirements for staff responsible for financial analysis.

b. Communication of Relevant Information to/from Financial Analysis Staff
   The process under which relevant information and data received by the supervisory authority are provided to the financial analysis staff and the process under which the findings of the financial analysis staff are communicated to the appropriate person(s).

c. Supervisory Review
   How the jurisdiction’s internal financial analysis process provides for supervisory review and comment.

d. Priority-Based Analysis
   How the jurisdiction’s financial analysis procedures are prioritized in order to ensure that potential problem reinsurers are reviewed promptly.

e. Depth of Review
   How the jurisdiction’s financial analysis procedures ensure that domestic reinsurers receive an appropriate level or depth of review commensurate with their financial strength and position.

f. Analysis Procedures
   How the jurisdiction has documented its financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic reinsurer.

g. Reporting of Material Adverse Findings
   The process for reporting material adverse indications, including the determination and implementation of appropriate regulatory action.

h. Early Warning System/Stress Testing
   Whether the jurisdiction has an early warning system and/or stress testing methodology that is utilized with respect to its domestic reinsurers.

2. Financial Examinations

What are the jurisdiction’s practices and procedures with respect to the financial examinations of its domestic reinsurers? Such description should address the following:

a. Qualified Staff and Resources
   The resources employed to effectively examine all domestic reinsurers. This should include whether the jurisdiction prioritizes examination scheduling and resource allocation commensurate with the financial strength and position of each reinsurer, and a description of the educational and experience requirements for staff responsible for financial examinations.
b. **Communication of Relevant Information to/from Examination Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the examination staff and the process under which the findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**
   Whether the supervisory authority’s examination staff includes specialists with appropriate training and/or experience or whether the supervisory authority otherwise has available qualified specialists that will permit the supervisory authority to effectively examine any reinsurer.

d. **Supervisory Review**
   Whether the supervisory authority’s procedures for examinations provide for supervisory review.

e. **Examination Guidelines and Procedures**
   Description of the policies and procedures the supervisory authority employs for the conduct of examinations, including whether variations in methods and scope are commensurate with the financial strength and position of the reinsurer.

f. **Risk-Focused Examinations**
   Does the supervisory authority perform and document risk-focused examinations and, if so, what guidance is utilized in conducting the examinations? Are variations in method and scope commensurate with the financial strength and position of the reinsurer?

g. **Scheduling of Examinations**
   Whether the supervisory authority’s procedures provide for the periodic examination of all domestic reinsurers, including how the system prioritizes reinsurers that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**
   Description of the format in which the supervisory authority’s reports of examinations are prepared, and how the reports are shared with other jurisdictions under information-sharing agreements.

i. **Action on Material Adverse Findings**
   What are the jurisdiction’s procedures regarding supervisory action in response to the reporting of any material adverse findings.

3. **Information Sharing**

   Does the jurisdiction have a process for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with U.S. state regulatory officials, provided that the recipients are required, under their law, to maintain its confidentiality?

4. **Procedures for Troubled Reinsurers**

   What procedures does the jurisdiction follow with respect to troubled reinsurers?

5. **Organization, Licensing and Change of Control of Reinsurers**

   What processes does the supervisory authority use to identify unlicensed or fraudulent activities? The description should address the following:
a. **Licensing Procedure**  
Whether the supervisory authority has documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

b. **Staff and Resources**  
The educational and experience requirements for staff responsible for evaluating company licensing.

c. **Change in Control of a Domestic Reinsurer**  
Procedures for the review of key pieces of information included in filings with respect to a change in control of a domestic reinsurer.
Summary of Findings and Determination

France: Autorité de Contrôle Prudentiel et de Résolution (ACPR)

Re-Evaluation of Qualified Jurisdiction

Issued for Public Comment By:

Qualified Jurisdiction (E) Working Group

September 4, 2019

Updated: October 16, 2019
I. Re-Evaluation of France as a Qualified Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Autorité de Contrôle Prudentiel et de Résolution (ACPR), the lead insurance regulatory supervisor for France. It is the recommendation of the Working Group that the NAIC re-approve the ACPR as a Qualified Jurisdiction and continue its designation on the *NAIC List of Qualified Jurisdictions*, to be effective as of January 1, 2020. Further, the Working Group recommends that New York and Delaware be the Lead State for purposes of regulatory cooperation and information sharing with the ACPR. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the *Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions* (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved the ACPR as a Qualified Jurisdiction and placed it on the *NAIC List of Qualified Jurisdictions*, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the ACPR would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

> Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the *NAIC List of Qualified Jurisdictions*. The Working Group met in regulator-to-regulator session on August 22, 2019, and heard a presentation by NAIC staff.

---

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. Because the ACPR’s status as a Reciprocal Jurisdiction arises under a covered agreement under the Dodd-Frank Wall Street Reform and Consumer Protection Act, it is not affected by this re-evaluation of the ACPR as a Qualified Jurisdiction.
on whether the ACPR should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of the ACPR:

3. Summary of Findings and Determination France: Autorité de Contrôle Prudentiel et de Résolution (ACPR) approved by NAIC Executive (EX) Committee and Plenary on December 16, 2014.

4. NAIC Staff Workpapers on Initial Review and Findings dated August 7, 2014 (Confidential).

III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that the ACPR’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that the ACPR’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize the ACPR as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions*, with such re-evaluation to be effective as of January 1, 2020.
Summary of Findings and Determination

Germany: Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin)

Re-Evaluation of Qualified Jurisdiction

Issued for Public Comment By:

Qualified Jurisdiction (E) Working Group

September 4, 2019

Updated: October 16, 2019
I. Re-Evaluation of Germany as a Qualified Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Bundesanstalt für FinanzdienstleistungsAufsicht (BaFin), the lead insurance regulatory supervisor for Germany. It is the recommendation of the Working Group that the NAIC re-approve BaFin as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that California be the Lead State for purposes of regulatory cooperation and information sharing with BaFin. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved BaFin as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which BaFin would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the NAIC List of Qualified Jurisdictions. The Working Group met in regulator-to-regulator session on August 22, 2019, and heard a presentation by NAIC staff.

---

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. Because BaFin’s status as a Reciprocal Jurisdiction arises under a covered agreement under the Dodd-Frank Wall Street Reform and Consumer Protection Act, it is not affected by this re-evaluation of BaFin as a Qualified Jurisdiction.
on whether BaFin should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of BaFin:

3. Summary of Findings and Determination Germany: Federal Financial Supervisory Authority (BaFin) approved by NAIC Executive (EX) Committee and Plenary on December 16, 2014.

5. BaFin Comment Letter (Sept. 30, 2019): “The planned amendment of § 67 (1) VAG with respect to the exemption from the license requirement in cases where the EU has concluded an agreement is now part of another legislative procedure (implementation of the Money Laundering Directive)...the leaflet describes the situation for US reinsurers with the sufficient legal clarity”:
   https://www.bafin.de/dok/13008940

III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that BaFin’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that BaFin’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.
Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize BaFin as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions*, with such re-evaluation to be effective as of January 1, 2020.
Summary of Findings and Determination

Ireland: Central Bank of Ireland

Re-Evaluation of Qualified Jurisdiction

Issued for Public Comment By:

Qualified Jurisdiction (E) Working Group

September 4, 2019
I. Re-Evaluation of Ireland as a Qualified Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Central Bank of Ireland (Central Bank), the lead insurance regulatory supervisor for Ireland. It is the recommendation of the Working Group that the NAIC re-approve the Central Bank as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that Delaware be the Lead State for purposes of regulatory cooperation and information sharing with the Central Bank. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved the Central Bank as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the Central Bank would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

> Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the NAIC List of Qualified Jurisdictions. The Working Group met in regulator-to-regulator session on August 22, 2019, and heard a presentation by NAIC staff

---

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. Because the Central Banks’s status as a Reciprocal Jurisdiction arises under a covered agreement under the Dodd-Frank Wall Street Reform and Consumer Protection Act, it is not affected by this re-evaluation of the Central Bank as a Qualified Jurisdiction.
on whether the Central Bank should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of the Central Bank:

1. *International Monetary Fund (IMF), Ireland: Report on Observance of Standards and Codes (ROSC), May, 2015 (IMF Country Report No. 15/117).*

4. *Summary of Findings and Determination Central Bank of Ireland approved by NAIC Executive (EX) Committee and Plenary on December 16, 2014.*

5. *NAIC Staff Workpapers on Initial Review and Findings dated July 25, 2014 (Confidential).*

**III. Standard of Review**

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

**IV. Summary of Findings and Recommendation**

Upon review of the available information, the Working Group has reached the conclusion that the Central Bank’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that the Central Bank’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.
Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize the Central Bank as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions*, with such re-evaluation to be effective as of January 1, 2020.
Summary of Findings and Determination

United Kingdom (UK):
Prudential Regulation Authority of the
Bank of England

Re-Evaluation of Qualified Jurisdiction

Issued for Public Comment By:
Qualified Jurisdiction (E) Working Group

September 4, 2019
I. Re-Evaluation of the United Kingdom as a Qualified Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Prudential Regulation Authority of the Bank of England (PRA), the lead insurance regulatory supervisor for the United Kingdom (UK). It is the recommendation of the Working Group that the NAIC re-approve the PRA as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that New York be the Lead State for purposes of regulatory cooperation and information sharing with the PRA. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved the PRA as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the PRA would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the NAIC List of Qualified Jurisdictions. The Working Group met in regulator-to-regulator session on August 22, 2019, and heard a presentation by NAIC staff

---

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. Because the PRA’s status as a Reciprocal Jurisdiction arises under a covered agreement under the Dodd-Frank Wall Street Reform and Consumer Protection Act, it is not affected by this re-evaluation of the PRA as a Qualified Jurisdiction.
on whether the PRA should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of the PRA:

4. *NAIC Staff Workpapers on Initial Review and Findings dated July 22, 2014 (Confidential).*

### III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

### IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that the PRA’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that the PRA’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize the PRA as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions,* with such re-evaluation to be effective as of January 1, 2020.

Re: Reciprocal Jurisdiction Accreditation Standard Exposure

Dear Messrs. Stultz and Schelp:

The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers' financial and retirement security. Ninety million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers' products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. ACLI also represents all professional life reinsurers assuming mortality and morbidity risks in the United States.

We appreciate the opportunity to comment on the exposure draft updating the reciprocal jurisdiction accreditation standard. Our review did not find any concerns or edits to suggest. We do appreciate that the Reinsurance Task Force members have decided to encourage the expedited adoption of this update to become part of the accreditation standard. ACLI supports this exposure.

Sincerely,

Steven M. Clayburn, FSA, MAAA

The Honorable Chlora Lindley-Myers
Director of the Missouri Department of Commerce & Insurance
Chair, NAIC Reinsurance Task Force

Re: Exposure of Revisions to Credit for Reinsurance Accreditation Standard

Dear Director Lindley-Myers,

This comment letter is submitted on behalf of Underwriters at Lloyd’s, London (“Lloyd’s”). Lloyd’s is one of the largest non-US domiciled providers of reinsurance capacity to the US insurance industry. In 2018, the Lloyd’s market assumed over $5.6 billion in reinsurance premiums from the US. We appreciate the opportunity to provide these comments on the Reinsurance Task Force’s proposal to make the covered agreement implementation an accreditation standard.

As the Reinsurance Task Force knows, Lloyd’s has been one of the main advocates for reinsurance collateral reform for more than a decade. Over the last several years, we have worked with a number of state insurance departments and legislatures to achieve enactment of the certified reinsurer regime. That experience helped impress upon us the value of making crucial reforms like this part of the NAIC accreditation program. We believe the certified reinsurer regime would not have been enacted in all 50 states if it had not been made an accreditation requirement. Often state legislators are faced with a daunting number of topics to cover in a very limited timeframe. The knowledge that the state insurance regulators who make up the NAIC – the experts in insurance regulatory standard setting – have deemed a particular standard important enough to be part of the accreditation program can go a long way towards convincing state legislators that a particular piece of legislation is a priority.

Given the important role that accreditation can play at the state level, Lloyd’s strongly supports the Reinsurance Task Force’s proposal to make the covered agreement implementation an accreditation standard effective October 1, 2022. Aligning the accreditation standard deadline with the covered agreement deadline will help to encourage all states to adopt the changes in a timely manner. We applaud the Reinsurance Task Force’s work on this important issue.

Regards,

Re: Credit for Reinsurance Model Accreditation Decisions

Dear Commissioner Kiser and Director Lindley-Myers:

New York Life and Northwestern Mutual are writing in response to the current exposure by the Reinsurance (E) Task Force of draft revisions to the NAIC Accreditation Program Manual intended to incorporate the 2019 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) to implement the US-EU Covered Agreement.

Our comments are not with respect to those revisions, but rather to urge that the NAIC follow through on prior recommendations and set the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as an accreditation standard in parallel with the Covered Agreement revisions. Our companies have long advocated that Model #787 should be an accreditation requirement, which is consistent with the prior recommendation by the Reinsurance Task Force.

By way of background, the NAIC adopted Model #787 in 2016 as the permanent method to implement the NAIC’s XXX/AXXX Reinsurance Framework that it spent years developing. Model #787 establishes the credit for reinsurance that a ceding company may be allowed for a subject captive reinsurance transaction. The requirements for Primary Security and Other Security in Model #787 are substantively the same as those in Actuarial Guideline 48, the NAIC’s interim tool to implement its XXX/AXXX Reinsurance Framework. However, whereas Model #787 binds the ceding company’s allowed credit for reinsurance, AG 48 can only impose requirements on the ceding company’s appointed actuary.

On March 20, 2017, the Reinsurance Task Force recommended to the F Committee that Model #787 be made an accreditation standard on an expedited basis, so that it would become an accreditation requirement by January 1, 2020. This was consistent with the NAIC’s recognition that (1) uniformity in implementation of the XXX/AXXX Reinsurance Framework is critical to its success; and (2) AG 48 was intended from the start as only an interim solution until the ultimate credit for reinsurance mechanism could be implemented. On August 24, 2017, the Reinsurance Task Force recommended the elements of Model #787 to be included in the accreditation standard.
However, as progress was being made toward an expedited accreditation action for Model #787, the need arose to amend Models #785 and #786 to address the Covered Agreement. Not wanting states to face multiple rulemaking processes, the F Committee decided at the 2017 Fall National Meeting to defer adoption of Model #787 as an accreditation requirement until the changes to Models #785 and #786 to implement the Covered Agreement had been completed. Our companies agreed that the NAIC’s announced process made sense.

Now that the Covered Agreement changes to Models #785 and #786 have been adopted and are being considered for accreditation on an expedited basis, we strongly urge that the F Committee move forward as originally contemplated and complete the accreditation decisions on Model #787 in synch with the Model #785 and #786 changes. Doing so will make state implementation of the credit for reinsurance changes more efficient. Moreover, since the Reinsurance Task Force has already done the work to identify the accreditation elements for Model #787, moving in parallel should not delay the NAIC’s efforts on Models #785 and #786.

It is important to remember that the NAIC has already made compliance with its XXX/AXXX Reinsurance Framework an accreditation requirement. That was decided in 2015, when the NAIC revised the Part A Preamble to the 2016 Accreditation Program Manual to subject the regulation of XXX/AXXX captives to the Part A accreditation requirements, and deemed regulation according to the NAIC’s XXX/AXXX Reinsurance Framework to meet those requirements. What remains to be done is to solidify that earlier conclusion by making Model #787 itself an accreditation requirement.

While AG 48 has served as a critical interim measure to implement the XXX/AXXX Reinsurance Framework, it was never intended to be nor is it an adequate permanent substitute for Model #787. Only Model #787 embeds the Primary Security and Other Security requirements directly into the determination of reinsurance credit. AG 48, by contrast, relies upon an indirect enforcement approach: requiring a ceding company’s appointed actuary to perform an analysis and, in the event the Primary Security or Other Security requirements are not met, deliver a qualified actuarial opinion. The allowance, or not, of reinsurance credit as a matter of law under Model #787 serves as a more direct and consequential incentive for compliance and uniformity than can the actuarial opinion requirements of AG 48. While some may question the need to make Model #787 an accreditation standard in light of the existence of AG 48, we would note that the intent of the accreditation program is to ensure uniformity among accredited jurisdictions with respect to solvency regulation. That uniformity can be best achieved by making Model #787 an accreditation standard, thereby ensuring uniform consequences and enforcement with respect to this aspect of the XXX/AXXX Reinsurance Framework. Moreover, it was recognized from the beginning that utilizing an actuarial opinion requirement as a tool for enforcement of the NAIC’s XXX/AXXX Reinsurance Framework puts the actuarial opinion requirement to a novel use going beyond what is ordinarily contemplated as the purpose of the Actuarial Opinion and Memorandum Regulation.

For these reasons, the NAIC has always described AG 48 as the interim method to implement its XXX/AXXX Reinsurance Framework, and the credit for reinsurance changes set forth in
Model #787 as the permanent implementation method. This is also reflected in the fact that AG 48 itself includes sunset provisions to apply in individual states as they adopt Model #787.

There is no longer any reason for delay in the NAIC’s action to make Model #787 an accreditation requirement. We again urge that the F Committee take this up and move forward in parallel with the Covered Agreement changes to Models #785 and #786. Doing so will allow the NAIC to finally complete the important work of uniformly implementing its XXX/AXXX Reinsurance Framework.

We appreciate the opportunity to comment on this important topic. Please let us know if you need any additional information or would like to discuss our comments.

Sincerely,

Douglas A. Wheeler
Senior Vice President, Office of Governmental Affairs
New York Life Insurance Company

Andrew T. Vedder
Vice President – Solvency Policy & Risk Management
The Northwestern Mutual Life Insurance Company
Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA), the American Property and Casualty Insurance Association (APCIA) and the National Association of Mutual Insurance Companies (NAMIC) appreciate the opportunity to submit comments on the NAIC’s Exposure Draft of Accreditation Standard Relating to the Credit for Reinsurance Model Law/Regulation.1

Swift implementation of the 2019 changes to the NAIC Credit for Reinsurance Model Law and Regulation is critical to the U.S.’s commitments under the U.S./EU and U.S./UK covered agreements, as well as to provide the opportunity to extend equal collateral treatment to other reinsurers from other jurisdictions that meet the requirements specified in the revised Model Law/Regulation. We support prompt action by the NAIC to make the 2019 Credit for Reinsurance Model Law/Regulation accreditation requirements. Accreditation is an important tool to support efforts to spur legislative action. Where there is a looming threat of federal preemption as the result of the commitments in the two in-force covered agreements, the NAIC should use every available resource to urge implementation by the states within the required time frame.

1 The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates.

Representing nearly 60 percent of the U.S. property casualty insurance market, the American Property Casualty Insurance Association (APCIA) promotes and protects the viability of private competition for the benefit of consumers and insurers. APCIA represents the broadest cross-section of home, auto, and business insurers of any national trade association. APCIA members represent all sizes, structures, and regions, which protect families, communities, and businesses in the U.S. and across the globe.

NAMIC membership includes more than 1,400 member companies. The association supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies write $268 billion in annual premiums. Our members account for 59 percent of homeowners, 46 percent of automobile, and 29 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
The proposed changes to the accreditation standard appear to fully incorporate the 2019 changes to the NAIC Credit for Reinsurance Model Law and Regulation. In addition, we understand the Task Force recommendation setting October 1, 2022 as the effective date for this accreditation standard, with reviews of this part of the accreditation standard to begin on January 1, 2023. October 1, 2022 is the date on which preemption of U.S. state laws may begin in accordance with the U.S/EU and U.S./UK covered agreements. However, we ask the Task Force to consider whether an expedited process and an earlier date that would allow some review before the deadline for preemption arrives is more appropriate in this context. This is particularly true because the Federal Insurance Office must begin a preemption analysis 42 months after the date of signature of the U.S./EU covered agreement, or April 2, 2021. For this reason, we suggest that the effective date for the accreditation standard should be April 2, 2021.

Conclusion

We appreciate the opportunity to offer comments and work with the NAIC on the Accreditation Standard Relating to the Credit for Reinsurance Model Law/Regulation. Please do not hesitate to contact us with any questions or concerns.

Sincerely,

Reinsurance Association of America (RAA)
American Property Casualty Insurance Association (APCIA)
National Association of Mutual Insurance Companies (NAMIC)

National Association of Insurance Commissioners

Dear Ms. Lindley-Myers and Mr. Farmer:

Texas submits the following comment regarding the effective date of the new reinsurance ceded section of the accreditation standard. Texas agrees with October 1, 2022 as the effective date for the accreditation standard, with reviews of this part of the accreditation standard beginning on January 1, 2023.

Sincerely,

Amy Garcia
Chief Analyst – Associate Commissioner
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) and the NAIC Life and Health Reinsurance Agreements Model Regulation (#791) or substantially similar laws.

**Changes to the Accreditation Standard:**

*NOTE: For both full reviews and interim annual reviews, this standard must be completed in its entirety. Please include all applicable citations in the reference column for each of the questions in this particular standard.

The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Regulation (#786), or a substantially similar law, was adopted as an update to the accreditation standard effective January 1, 2019.

Please provide a copy of the statute or regulation that specifically addresses the newly applicable sections.

Additionally, if there were any other changes that would impact one of the significant elements of this standard, please place an asterisk (*) in the reference column on the right-hand side of the page by each citation that has been changed and include below a brief description of the nature or reason for the change. Please also attach a copy of the statutes or regulations that had a change and ensure that they are clearly marked for the changes that have been made (i.e., highlight the changes, redlined version, etc.).

### Reinsurance Ceded – continued

**Credit for Reinsurance Model Regulation (#786)**

- **o.** Credit for reinsurance allowed for reinsurance ceded by domestic insurers to assuming insurers that were licensed in the state as of the last date of the ceding insurers’ statutory financial statement?

- **p.** Credit for reinsurance provisions for accredited reinsurer similar to Section 5?

- **q.** Credit for reinsurance provisions for reinsurers licensed and domiciled in other states similar to Section 6?

- **r.** Credit for reinsurance provisions for reinsurers maintaining trust funds similar to Section 7?

- **s.** Credit for reinsurance required by law similar to Section 910?

- **t.** Reduction from liability for reinsurance ceded to an unauthorized assuming insurer similar to Section 1011?

- **u.** Provisions for trust agreements similar to Section 1112?

- **v.** Provisions for letters of credit similar to Section 1213?

- **w.** Provisions for unencumbered funds similar to Section 1314?

- **x.** Provisions for reinsurance contracts similar to Section 1415?

- **y.** The adoption of Form AR-1—Certificate of Assuming Insurer.

### Reinsurance Ceded to Certified Reinsurers

- **z.** A state’s laws and regulations shall allow credit for reinsurance ceded to a certified reinsurer, including affiliated reinsurance transactions. Its laws and regulations shall contain provisions that are substantially similar to those applicable to certified reinsurers contained in Section 2E of Model #785 and Section 8 of Model #786.

  - **i.** The credit allowed is based upon the security held by or on behalf of the ceding insurer in accordance with the rating assigned to the certified reinsurer by the commissioner? The amount of security required in order for full credit to be allowed shall not be less than that required under Section 8A(1) of Model #786.

  - **ii.** The security provided by the certified reinsurer is in a form consistent with the provisions of Section 2E(5) of Model #785 and Section 8A of Model #786?

  - **iii.** The commissioner requires the certified reinsurer to post 100% security upon the entry of an order of rehabilitation, liquidation or conservation against the ceding insurer?
iv. A state’s laws or regulations shall include provisions for granting a certified reinsurer a deferral period for posting security applicable to catastrophe recoverables, substantially similar to Section 8A(4) of Model #786. The deferral period shall not exceed one year from the date of the first instance of a liability reserve entry by the ceding company as a result of a loss from a catastrophic occurrence as recognized by the commissioner, and shall not apply to lines of business other than those provided in Section 8A(4) of Model #786.

v. Credit for reinsurance ceded to a certified reinsurer shall apply only to reinsurance contracts meeting requirements substantially similar to Section 8A(5) of Model #786?

aa. In order to be a certified reinsurer, an assuming insurer must be certified by the commissioner in accordance with the process similar to Section 8B of Model #786?

i. The commissioner is required to post notice upon receipt of any application for certification substantially similar to the requirements of Section 8B(1) of Model #786?

ii. The commissioner is required to publish a list of all certified reinsurers and their ratings substantially similar to the requirements in Section 2E(4) of Model #785 and Section 8B(2) of Model #786?

iii. A certified reinsurer must be domiciled and licensed to transact insurance or reinsurance in a qualified jurisdiction, as determined by the commissioner?

iv. A certified reinsurer must maintain capital and surplus, or its equivalent, of no less than $250,000,000, calculated in accordance with Section 8B(4)(h) of Model #786? This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

v. A certified reinsurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner, and the maximum rating that a certified reinsurer may be assigned will correspond to its financial strength rating as set forth in Section 8B(4)(a) of Model #786? These ratings must be based on interactive communication between the rating agency and the assuming insurer and not based solely on publicly available information.
Reinsurance Ceded – continued

vi. A certified reinsurer is rated by the commissioner on a legal entity basis, with consideration given to the group rating where appropriate (an association including incorporated and individual unincorporated underwriters that have been approved to do business as a single certified reinsurer may be evaluated on the basis of its group rating)? Factors may be considered in the evaluation process similar to those provided under Section 8B(4) and (5) of Model #786.

vii. A certified reinsurer must submit a properly executed Form CR-1 as evidence of its submission to the jurisdiction of the state, appointment of the commissioner as an agent for service of process in the state, and agreement to provide security for one hundred percent (100%) of its liabilities attributable to reinsurance ceded by ceding insurers if it resists enforcement of a final U.S. judgment? The commissioner must not certify any assuming insurer that is domiciled in a jurisdiction that the commissioner has determined does not adequately and promptly enforce final U.S. judgments or arbitration awards.

viii. A certified reinsurer must agree to meet applicable information filing requirements substantially similar to those provided under Section 8B(7) of Model #786, both with respect to an initial application for certification and on an ongoing basis?

ix. Changes in rating or revocation of certification of a certified reinsurer are applied by the commissioner in a manner substantially similar to the provisions of Section 2I2J of Model #785 and Section 8B(8) of Model #786?

x. A certified reinsurer must file audited financial statements, regulatory filings and actuarial opinion (as filed with the certified reinsurer’s supervisor, with a translation into English) consistent with the requirements set forth in Section 8B(4)(h) and Section 8B(7)(d) of Model #786? Upon the initial application for certification, the commissioner will consider audited financial statements for the last two (2) years filed with its non-U.S. jurisdiction supervisor?

bb. The commissioner is required to create and publish a list of qualified jurisdictions, under which an assuming insurer licensed and domiciled in such jurisdiction is eligible to be considered for certification by the commissioner as a certified reinsurer?

i. In determining whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the commissioner evaluates the reinsurance supervisory system of the non-U.S. jurisdiction, both initially and on an ongoing basis, under criteria substantially similar to those provided under Section 8C(2) of the model regulation?
ii. The commissioner shall consider the list of qualified jurisdictions published by the NAIC in determining qualified jurisdictions? If the commissioner approves a jurisdiction as qualified that does not appear on the NAIC list of qualified jurisdictions, the commissioner must provide thoroughly documented justification with respect to criteria substantially similar to that provided under Section 8C(2) of Model #786.

iii. U.S. jurisdictions that meet the requirements for accreditation under the NAIC financial standards and accreditation program are recognized as qualified jurisdictions?

c. A state’s laws and regulations shall allow a commissioner to defer to the certification and rating of a certified reinsurer issued by another NAIC accredited jurisdiction. Recognition of certification is made in accordance with provisions substantially similar to Section 8D of Model #786?

d. Reinsurance contracts entered into or renewed with a certified reinsurer must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurer for reinsurance ceded to the certified reinsurer?

Reciprocal Jurisdictions

e. A state’s laws and regulations shall allow credit for reinsurance ceded to an assuming insurer that has its head office or is domiciled in, and is licensed in, a Reciprocal Jurisdiction. Its laws and regulations shall contain provisions that are substantially similar to those contained in Section 2F of Model #785 and Section 9 of Model #786. Its laws and regulations must provide that a Reciprocal Jurisdiction is a jurisdiction that meets one of the following:

i. A non-U.S. jurisdiction that is subject to an in-force covered agreement meeting the requirements of Section 2F(1)(a)(i) of Model #785 and Section 9B(1) of Model #786?

ii. A U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program pursuant to Section 2F(1)(a)(ii) of Model #785 and Section 9B(2) of Model #786?

iii. A Qualified Jurisdiction that meets all of the requirements of Section 2F(1)(a)(iii) of Model #785 and Section 9B(3) of Model #786?

ff. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction, and which meets each of the conditions set forth in Section 2F(1)(b) – (g) of Model #785 and Section 9C of Model #786;
i. The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction of no less than $250,000,000 similar to Section 2F(1)(b) of Model #785 and Section 9C(2) of Model #786? This minimum capital and surplus requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) or own funds of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

ii. The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio, as applicable, as set forth in Section 2F(1)(c) of Model #785 and Section 9C(3) of Model #786?

iii. The assuming insurer must submit a properly executed Form RJ-1 consistent with Section 2F(1)(d) of Model #785 and Section 9C(4) of Model #786:

- The assuming insurer must agree to provide prompt written notice and explanation to the commissioner if it falls below the minimum requirements set forth in this subsection, or if any regulatory action is taken against it for serious noncompliance with applicable law pursuant to Section 2F(1)(d)(i) of Model #785 and Section 9C(4)(a) of Model #786?

- The assuming insurer must consent in writing to the jurisdiction of the courts of this state and to the appointment of the commissioner as agent for service of process pursuant to Section 2F(1)(d)(ii) of Model #785 and Section 9C(4)(b) of Model #786? The commissioner may also require that such consent be provided and included in each reinsurance agreement under the commissioner’s jurisdiction.

- The assuming insurer must consent in writing to pay all final judgments, wherever enforcement is sought, obtained by a ceding insurer, that have been declared enforceable in the territory where the judgment was obtained pursuant to Section 2F(1)(d)(iii) of Model #785 and Section 9C(4)(c) of Model #786?
Each reinsurance agreement must include a provision requiring the assuming insurer to provide security in an amount equal to one hundred percent (100%) of the assuming insurer’s liabilities attributable to reinsurance ceded pursuant to that agreement if the assuming insurer resists enforcement of a final judgment that is enforceable under the law of the jurisdiction in which it was obtained or a properly enforceable arbitration award, whether obtained by the ceding insurer or by its legal successor on behalf of its estate, if applicable pursuant to Section 2F(1)(d)(iv) of Model #785 and Section 9C(4)(d) of Model #786?

The assuming insurer must confirm that it is not presently participating in any solvent scheme of arrangement, which involves this state’s ceding insurers, and agrees to notify the ceding insurer and the commissioner and to provide one hundred percent (100%) security to the ceding insurer consistent with the terms of the scheme, should the assuming insurer enter into such a solvent scheme of arrangement pursuant to Section 2F(1)(d)(v) of Model #785 and Section 9C(4)(e) of Model #786?

The assuming insurer must agree in writing to meet the applicable information filing requirements pursuant to Section 9C(4)(f) of Model #786?

iv. The assuming insurer or its legal successor must provide, if requested by the commissioner, on behalf of itself and any legal predecessors, the documentation to the commissioner as outlined in Section 2F(1)(e) of Model #785 and Section 9C(5) of Model #786:

For the two years preceding entry into the reinsurance agreement and on an annual basis thereafter, the assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report pursuant to Section 9C(5)(a) of Model #786?

For the two years preceding entry into the reinsurance agreement, the solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor pursuant to Section 9C(5)(b) of Model #786?

Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, an updated list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States pursuant to Section 9C(5)(c) of Model #786?
• Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer pursuant to Section 9C(5)(d) of Model #786?

v. The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements consistent with Section 2F(1)(f) of Model #785 and Section 9C(6) of Model #786?

vi. The assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the minimum capital and surplus requirements and the minimum solvency or capital ratio requirements as required under Section 2F(1)(g) of Model #785 and Section 9C(7) of Model #786?

gg. The commissioner is required to timely create and publish a list of Reciprocal Jurisdictions similar to Section 2F(2) of Model #786 and Section 9D of Model #786?

i. If the commissioner approves a jurisdiction that does not appear on the NAIC list of Reciprocal Jurisdictions, the commissioner must provide thoroughly documented justification in accordance with criteria published through the NAIC Committee Process pursuant to Section 2F(2)(a) of Model #785 and Section 9D(1) of Model #786?

ii. The commissioner may remove a jurisdiction from the list of Reciprocal Jurisdictions upon a determination that the jurisdiction no longer meets one or more of the requirements of a Reciprocal Jurisdiction pursuant to Section 2F(2)(b) of Model #785 and Section 9D(2) of Model #786, except that the commissioner shall not remove from the list a Reciprocal Jurisdiction as defined under Section 9B(1) and (2) of Model #786?

hh. The commissioner shall timely create and publish a list of assuming insurers to which cessions shall be granted credit consistent with Section 2F(3) of Model #785 and Section 9E of Model #786? Such assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require.

i. If an NAIC accredited jurisdiction has determined that the conditions set forth in Section 2F of Model #785 and Section 9 of Model #786 have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit in accordance pursuant to Section 2F(3) of Model #785 and Section 9E(1) of Model #786? The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC with respect to such reinsurer.
ii. When requesting that the commissioner defer to another NAIC accredited jurisdiction’s determination, an assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require pursuant to Section 9E(2) of Model #786?

ii. If the commissioner determines that an assuming insurer no longer meets one or more of the requirements set forth in Section 2F of Model #786 and Section 9 of Model #786, the commissioner may revoke or suspend the eligibility of the assuming insurer consistent with Section 2F(4) of Model #785 and Section 9F of Model #786?

i. While an assuming insurer’s eligibility is suspended, no reinsurance agreement issued, amended or renewed after the effective date of the suspension qualifies for credit except to the extent that the assuming insurer’s obligations under the contract are otherwise secured pursuant to Section 2F(4)(a) of Model #785 and Section 9F(1) of Model #786?

ii. If an assuming insurer’s eligibility is revoked, no credit for reinsurance may be granted after the effective date of the revocation with respect to any reinsurance agreements entered into by the assuming insurer, including reinsurance agreements entered into prior to the date of revocation, except to the extent that the assuming insurer’s obligations under the contract are otherwise secured in a form acceptable to the commissioner pursuant to Section 2F(4)(b) of Model #785 and Section 9F(2) of Model #786?

iii. Before denying statement credit or imposing a requirement to post security or adopting any similar requirement that will have substantially the same regulatory impact as security, the commissioner shall follow the process set forth in Section 9G of Model #786?

jj. If subject to a legal process of rehabilitation, liquidation or conservation, as applicable, the ceding insurer, or its representative, may seek and, if determined appropriate by the court in which the proceedings are pending, may obtain an order requiring that the assuming insurer post security for all outstanding liabilities in accordance with Section 2F(5) of Model #785 and Section 9H of Model #786?

kk. Nothing shall limit or in any way alter the capacity of parties to a reinsurance agreement to agree on requirements for security or other terms in that reinsurance agreement, except as expressly prohibited by other applicable law or regulation similar to Section 2F(6) of Model #785?
II. Credit may be taken only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal consistent with the provisions of Section 2F(7) of Model #785?
Summary of Findings and Determination

BERMUDA MONETARY AUTHORITY

Re-Evaluation of Qualified Jurisdiction

Approved By:

Qualified Jurisdiction (E) Working Group          October 7, 2019
Reinsurance (E) Task Force                       December 8, 2019
Executive (EX) Committee and Plenary             December 10, 2019
I. Re-Evaluation of Bermuda Monetary Authority

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to the Bermuda Monetary Authority (BMA), the lead insurance regulatory supervisor for Bermuda. It is the recommendation of the Working Group that the NAIC re-approve the BMA as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that the BMA’s status as a Qualified Jurisdiction only be applicable to (re)insurers of Class 3A, Class 3B and Class 4, and long-term insurers of Class C, Class D and Class E, which is consistent with the original approval of the BMA as a Qualified Jurisdiction. Finally, the Working Group recommends that Florida be the Lead State for purposes of regulatory cooperation and information sharing with the BMA. These recommendations are based on the following analysis:

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved the BMA as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the BMA would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under a separate evaluation by the Working Group.
The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the *NAIC List of Qualified Jurisdictions*. The Working Group met in regulator-to-regulator session on October 7, 2019, and received a presentation from NAIC staff on whether the BMA should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of the BMA:

2. BMA Power Point Presentation on Group and Commercial Insurer Supervision (Confidential).
3. BMA Power Point Presentation on Legal Entity/Group Supervision Framework (Confidential).
4. BMA NAIC Qualified Jurisdiction Assessment: Summary of Appendices A & B, September 30, 2019 (Confidential).
5. Bermuda Response to Section D—Regulatory Cooperation and Information Sharing (Confidential).
8. Bermuda Response to Section G—Solvent Schemes of Arrangement (Confidential).
9. International Association of Insurance Supervisors Thematic Self-Assessment and Peer Review on Reinsurance and Macroprudential Surveillance (ICPs 13 and 24), September 19, 2016 (Confidential).

### III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other public documentation that the Working Group would consider to be relevant to this determination. It should be noted that the BMA’s last FSAP report was in 2008; therefore, the BMA supplied additional information (described above) to provide the Working...
Group with an accurate understanding of its supervisory regulatory regime deemed equal to the level of an IMF FSAP report. The Working Group also reviewed a confidential self-assessment and peer review on the BMA prepared by the International Association of Insurance Supervisors. In addition, the Working Group considered its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that the BMA’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that the BMA’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize the BMA as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions*, with such re-evaluation to be effective as of January 1, 2020. Further, the Working Group recommends that the BMA’s status as a Qualified Jurisdiction continues to be only applicable to (re)insurers of Class 3A, Class 3B and Class 4, and long-term insurers of Class C, Class D and Class E.
Summary of Findings and Determination

Japan:
Financial Services Agency (FSA)

Re-Evaluation of Qualified Jurisdiction

Approved By:

Qualified Jurisdiction (E) Working Group          October 7, 2019
Reinsurance (E) Task Force                          December 8, 2019
Executive (EX) Committee and Plenary          December 10, 2019
I. Re-Evaluation of Financial Services Agency of Japan

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Financial Services Agency (FSA), the lead insurance regulatory supervisor for Japan. It is the recommendation of the Working Group that the NAIC re-approve the FSA as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that California continue to be the Lead State for purposes of regulatory cooperation and information sharing with the FSA. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.1

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved the FSA as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the FSA would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the NAIC List of Qualified Jurisdictions. The Working Group met in regulator-to-regulator session on October 7, 2019, and heard a presentation by NAIC staff

---

1 The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under a separate evaluation by the Working Group.
on whether the FSA should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of the FSA:

6. *Summary of Findings and Determination Japan: Financial Services Agency (FSA) approved by NAIC Executive (EX) Committee and Plenary on December 16, 2014.*

7. *NAIC Staff Workpapers on Initial Review and Findings dated September 30, 2014 (Confidential).*

### III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

### IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that the JSA’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency
regulation that is acceptable for purposes of reinsurance collateral reduction, that the JSA’s
demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent
with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of
Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize the JSA
as a Qualified Jurisdiction and place it on the **NAIC List of Qualified Jurisdictions**, with such re-
evaluation to be effective as of January 1, 2020.
Summary of Findings and Determination

Switzerland: Financial Market Supervisory Authority (FINMA)

Re-Evaluation of Qualified Jurisdiction

Approved By:

Qualified Jurisdiction (E) Working Group October 7, 2019
Reinsurance (E) Task Force December 8, 2019
Executive (EX) Committee and Plenary December 10, 2019
I. Re-Evaluation of Switzerland: Financial Market Supervisory Authority

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to its re-evaluation of the Financial Market Supervisory Authority (FINMA), the lead insurance regulatory supervisor for Switzerland. It is the recommendation of the Working Group that the NAIC re-approve FINMA as a Qualified Jurisdiction and continue its designation on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that Missouri be the Lead State for purposes of regulatory cooperation and information sharing with FINMA. These recommendations are based on the following analysis.

II. Procedural History

The NAIC adopted the Process for Developing and Maintaining the NAIC List of Qualified Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013 (which was further amended on August 19, 2014). The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a Qualified Jurisdiction in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.¹

On December 16, 2014, the NAIC Executive (EX) Committee and Plenary approved FINMA as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which FINMA would be re-evaluated under the provisions of the Qualified Jurisdiction Process. Specifically, paragraph III(12)(c) of the Qualified Jurisdiction Process currently provides, as follows:

> Once approved, a Qualified Jurisdiction is subject to a re-evaluation every five years. The Periodic Evaluation may follow a similar process as that set forth above, or such abbreviated process as the Qualified Jurisdiction Working Group may deem appropriate. [Emphasis added].

The Working Group has determined that it would follow such an abbreviated process in its re-evaluations of the jurisdictions currently on the NAIC List of Qualified Jurisdictions. The Working Group met in regulator-to-regulator session on October 7, 2019, and heard a presentation by NAIC staff.

¹ The Credit for Reinsurance Models were further revised on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under a separate evaluation by the Working Group.
on whether FINMA should be re-approved as a Qualified Jurisdiction. The Working Group considered the following information with respect to the re-evaluation of FINMA:

1. **International Monetary Fund (IMF), Switzerland: Financial Sector Assessment Program, June 2019 (IMF Country Report No. 19/183).**

5. **Switzerland: Enforcement of Foreign Judgments 2019 (International Comparative Legal Guide, Global Legal Group, 2019).**

6. **Summary of Findings and Determination Switzerland: Financial Market Supervisory Authority (FINMA) approved by NAIC Executive (EX) Committee and Plenary on December 16, 2014.**

7. **NAIC Staff Workpapers on Initial Review and Findings dated August 5, 2014 (Confidential).**

### III. Standard of Review

The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction. In addition, the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system and the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

This same standard was deemed appropriate by the Working Group with respect to the re-evaluation of a Qualified Jurisdiction under the abbreviated process. Specifically, the Working Group determined that it would be appropriate to review a jurisdiction’s most recent IMF report prepared under its Financial Sector Assessment Program (FSAP), and any other documentation that the Working Group would consider to be relevant to this determination. In addition, the Working Group would consider its past experience in working with the Qualified Jurisdiction and any certified reinsurers domiciled in the Qualified Jurisdiction.

### IV. Summary of Findings and Recommendation

Upon review of the available information, the Working Group has reached the conclusion that FINMA’s reinsurance supervisory system continues to achieve a level of effectiveness in financial solvency
regulation that is acceptable for purposes of reinsurance collateral reduction, that FINMA’s demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

Therefore, it is the recommendation of the Working Group that the NAIC continue to recognize FINMA as a Qualified Jurisdiction and place it on the *NAIC List of Qualified Jurisdictions*, with such re-evaluation to be effective as of January 1, 2020.

Kansas City, MO 64106 (via email)

Re: Reciprocal Jurisdiction Accreditation Standard Exposure

Dear Messrs. Stultz and Schelp:

The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. Ninety million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. ACLI also represents all professional life reinsurers assuming mortality and morbidity risks in the United States.

We appreciate the opportunity to review and comment on the three Summary of Findings and Determination exposures regarding the re-evaluations of the Bermuda Monetary Authority (Bermuda), the Financial Services Agency (Japan), and the Financial Market Supervisory Authority (Switzerland). With all three Qualified Jurisdictions needing review prior to their December 31, 2019 expiration date, we are pleased that all three jurisdictions continue to meet the requirements as Qualified Jurisdictions. Furthermore, we appreciate the timely reviews and look forward to these jurisdictions being reviewed to qualify as Reciprocal Jurisdictions.

Sincerely,

Steven M. Clayburn, FSA, MAAA
Mariana Gomez-Vock
Summary of Findings and Determination

BERMUDA MONETARY AUTHORITY

Evaluation of Reciprocal Jurisdiction

Issued for Public Comment By:

Qualified Jurisdiction (E) Working Group

November 5, 2019
I. Evaluation of Bermuda Monetary Authority as Reciprocal Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to the evaluation of the Bermuda Monetary Authority (BMA), the lead insurance regulatory supervisor for Bermuda, as a Reciprocal Jurisdiction. It is the recommendation of the Working Group that the NAIC approve the BMA as a Reciprocal Jurisdiction and place it on the NAIC List of Reciprocal Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that the BMA’s status as a Reciprocal Jurisdiction only be applicable to (re)insurers of Class 3A, Class 3B and Class 4, and long-term (re)insurers of Class C, Class D and Class E, which is consistent with the approval of the BMA as a Qualified Jurisdiction. Finally, the Working Group recommends that Florida be the Lead State for purposes of regulatory cooperation and information sharing with the BMA. These recommendations are based on the following analysis:

II. Procedural History

On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

The NAIC adopted revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under the revised Credit for Reinsurance Models.

A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.

On October 22, 2019, the Reinsurance (E) Task Force updated and revised the Process for Evaluating Qualified and Reciprocal Jurisdictions to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other
requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.

III. BMA’s Status of a Qualified Jurisdiction

A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions unless it remains in good standing with the NAIC as a Qualified Jurisdiction. The NAIC originally designated the BMA as a Conditional Qualified Jurisdiction effective January 1, 2014, with the designation to continue for one year. On December 16, 2014, the NAIC approved the BMA as a Qualified Jurisdiction and placed it on the NAIC List of Qualified Jurisdictions, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the BMA would be re-evaluated.

The Working Group met in regulator-to-regulator session on October 7, 2019 and re-approved the BMA as a Qualified Jurisdiction. The Reinsurance (E) Task Force is expected to approve the re-evaluation of the BMA as a Qualified Jurisdiction, which is expected to be confirmed by the NAIC Executive (EX) Committee and Plenary at its 2019 Fall National Meeting. This Summary of Findings and Determination with respect to the BMA as a Reciprocal Jurisdiction is expressly made contingent upon the NAIC’s re-approval of the BMA as a Qualified Jurisdiction.

IV. Written Confirmation

In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group shall undertake the following analysis in making its evaluation:

1. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in that jurisdiction is received by United States ceding insurers;

2. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

3. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group supervision.
governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

4. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMOU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

5. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

The BMA provided the NAIC and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories with this written confirmation by letter dated October 30, 2019. The Qualified Jurisdiction Working Group performed a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate on November 5, 2019.

V. Minimum Solvency or Capital Ratio

The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency decision made by the European Commission (EC) based on assessments conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

In a Note dated September 27, 2019, the BMA advised the NAIC that Bermuda’s risk-based solvency regime for commercial (re)insurers (Bermuda Enhanced Regime) reached full Solvency II equivalence on 24th March 2016. The regulatory capital requirement for the Bermuda Enhanced Regime is designated Enhanced Capital Requirement (ECR). Full Solvency II equivalence means that the EC and
EIOPA recognize the Bermuda Enhanced Regime as producing equivalent outcomes to Solvency II, namely that a 100% Enhanced Capital Requirement (ECR) ratio is equivalent on an outcome basis to a 100% Solvency II SCR ratio. The BMA also advised the NAIC that it considers a 100% ECR ratio produces results equivalent to a 300% RBC ratio on an outcomes basis. Furthermore, the BMA advised that it had made some enhancements to certain aspects of its Bermuda Enhanced Regime in 2018, which became effective on January 1, 2019. The BMA further reported that in July 2018, the BMA engaged with EIOPA in a series of meetings as part of the monitoring of its Solvency II equivalence status. The overall assessment was “positive” which means that EIOPA confirmed that the Bermuda Enhanced Regime remains fully Solvency II equivalent and that a 100% ECR ratio as calculated under the revised rules remains equivalent on an outcome basis to a 100% Solvency II SCR ratio.

The Qualified Jurisdiction Working Group approved 100% ECR as the minimum solvency or capital ratio for reinsurers domiciled in Bermuda, and the Reinsurance Financial Analysis (E) Working Group approved 100% ECR as the minimum solvency or capital ratio on October 11, 2019.

VI. Summary of Findings and Recommendation

Therefore, it is the recommendation of the Qualified Jurisdiction Working Group that the NAIC recognize the BMA as a Reciprocal Jurisdiction and place it on the NAIC List of Reciprocal Jurisdictions, with such evaluation to be effective as of January 1, 2020. Further, the Working Group recommends that the BMA’s status as a Reciprocal Jurisdiction only apply to (re)insurers of Class 3A, Class 3B and Class 4, and long-term (re)insurers of Class C, Class D and Class E. Finally, the Working Group recommends that the minimum solvency or capital ratio for eligible reinsurers domiciled in Bermuda to be a 100% ECR ratio.

W:\National Meetings\2019\Fall\TF\Reinsurance\National Meeting Minutes\Att 06 - Bermuda Reciprocal Jurisdiction Findings
Summary of Findings and Determination

Japan:
Financial Services Agency (FSA)

Evaluation of Reciprocal Jurisdiction

Issued for Public Comment By:
Qualified Jurisdiction (E) Working Group
November 5, 2019
I. Evaluation of Japan as Reciprocal Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Summary of Findings and Determination with respect to the evaluation of the Financial Services Agency (FSA), the lead insurance regulatory supervisor for Japan, as a Reciprocal Jurisdiction. It is the recommendation of the Working Group that the NAIC approve the FSA as a Reciprocal Jurisdiction and place it on the NAIC List of Reciprocal Jurisdictions, to be effective as of January 1, 2020. Further, the Working Group recommends that California be the Lead State for purposes of regulatory cooperation and information sharing with the FSA. These recommendations are based on the following analysis:

II. Procedural History

On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

The NAIC adopted revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under the revised Credit for Reinsurance Models.

A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.

On October 22, 2019, the Reinsurance (E) Task Force updated and revised the Process for Evaluating Qualified and Reciprocal Jurisdictions to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.
III. Japan’s Status of a Qualified Jurisdiction

A Qualified Jurisdiction may not be reviewed for inclusion on the *NAIC List of Reciprocal Jurisdictions* unless it remains in good standing with the NAIC as a Qualified Jurisdiction. On December 16, 2014, the NAIC approved the FSA as a Qualified Jurisdiction and placed it on the *NAIC List of Qualified Jurisdictions*, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which the FSA would be re-evaluated.

The Working Group met in regulator-to-regulator session on October 7, 2019 and re-approved the FSA as a Qualified Jurisdiction. The Reinsurance (E) Task Force is expected to approve the re-evaluation of the FSA as a Qualified Jurisdiction, which is expected to be confirmed by the NAIC Executive (EX) Committee and Plenary at its 2019 Fall National Meeting. This *Summary of Findings and Determination* with respect to the FSA as a Reciprocal Jurisdiction is expressly made contingent upon the NAIC’s re-approval of the FSA as a Qualified Jurisdiction.

IV. Written Confirmation

In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the *NAIC List of Reciprocal Jurisdictions*, the Qualified Jurisdiction Working Group shall undertake the following analysis in making its evaluation:

1. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in that jurisdiction is received by United States ceding insurers;

2. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

3. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

4. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if
applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

5. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

The FSA provided the NAIC and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories with this written confirmation by letter dated October 31, 2019. The Qualified Jurisdiction Working Group performed a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate on November 5, 2019.

V. Minimum Solvency or Capital Ratio

The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

In the 2015 EIOPA Advice to the European Commission: Equivalence assessment of the Japanese supervisory system in relation to Article 172 of the Solvency II Directive (EIOPA-CP-14/043), EIOPA made the following observations on the FSA’s capital requirements:

JFSA regulation defines a capital requirement that is named the ‘total risk’ in Ministry of Finance Notice No. 50 “Calculation methods...”. This capital requirement broadly corresponds to the Solvency II Solvency Capital Requirement (SCR) (see below)…JFSA regulation defines a ‘Solvency Margin Ratio’ (hereunder SMR), which equates to double the own funds divided by the ‘total risk’.

JFSA regulation defines three levels of supervisory intervention:
• Even when the SMR is **above 200%**, the JFSA may require insurers to adopt ‘improvement measures’, notably on profitability, credit risk (including a reduction to their credit concentration risk), stability (reduction to their market and interest rate risks) and liquidity risk. The JFSA refers to this ‘early’ supervisory intervention as the “early warning system”.

• When the SMR is **between 100% and 200%**, the JFSA may order insurers to submit and implement an improvement plan for ensuring managerial soundness.

• When the SMR is **between 0% and 100%**, the JFSA may order a series of measures such as reduction of dividends to shareholders, reduction of dividends to policyholders, and contraction of business operations.

• When the SMR is **below 0%**, JFSA may order the total or partial suspension of business.

…From the above description, it follows that in terms of supervisory action the JFSA system has at least one supplementary level of intervention, compared to the Solvency II system. It also follows that supervisory actions taken at 200% of the SMR would, broadly speaking, correspond to those taken at the Solvency II SCR level of intervention—even though JFSA may intervene in a legally binding manner even if the SMR is more than 200%—, while supervisory actions taken at 0% of the SMR along with actions taken at the level of 100% of the SMR would, broadly speaking, correspond to possible actions under the Solvency II MCR.

In its consultation e-mail to the NAIC dated October 3, 2019, the FSA advised as follows: “an SMR of 200 percent triggers early remedial action such as submission of a management plan to restore the SMR, as an SCR of 100 percent triggers supervisory action such as submission of a realistic recovery plan. In this regard, we understand supervisory actions taken at 200% of the SMR would correspond to those taken at the Solvency II SCR level of intervention, even though the FSA may take supervisory actions in a proactive manner even if the SMR is more than 200%.”

The Qualified Jurisdiction Working Group approved 200 percent of the SMR as the minimum solvency or capital ratio for reinsurers domiciled in Japan, and the Reinsurance Financial Analysis (E) Working Group approved 200 percent of the SMR as the minimum solvency or capital ratio on October 11, 2019.

**VI. Summary of Findings and Recommendation**

Therefore, it is the recommendation of the Qualified Jurisdiction Working Group that the NAIC recognize the FSA as a Reciprocal Jurisdiction and place it on the *NAIC List of Reciprocal Jurisdictions*, with such evaluation to be effective as of January 1, 2020. Further, the Working Group recommends that the minimum solvency or capital ratio for eligible reinsurers domiciled in Japan to be 200 percent of the SMR.
Summary of Findings and Determination

Switzerland:
Financial Market Supervisory Authority (FINMA)

_Evaluation of Reciprocal Jurisdiction_

Issued for Public Comment By:
Qualified Jurisdiction (E) Working Group
November 5, 2019
I. Evaluation of Switzerland as Reciprocal Jurisdiction

The Qualified Jurisdiction (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this *Summary of Findings and Determination* with respect to the evaluation of the Swiss Financial Market Supervisory Authority FINMA, the lead insurance regulatory supervisor for Switzerland, as a Reciprocal Jurisdiction. It is the recommendation of the Working Group that the NAIC approve FINMA as a Reciprocal Jurisdiction and place it on the *NAIC List of Reciprocal Jurisdictions*, to be effective as of January 1, 2020. Further, the Working Group recommends that Missouri be the Lead State for purposes of regulatory cooperation and information sharing with FINMA. These recommendations are based on the following analysis:

II. Procedural History

On September 22, 2017, the United States and the European Union (EU) entered into the “*Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.*” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

The NAIC adopted revisions to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786) (collectively, the “Credit for Reinsurance Models”) on June 25, 2019, to recognize a new designation of “Reciprocal Jurisdiction” under which certain reinsurers licensed and domiciled in Reciprocal Jurisdictions are not required to post reinsurance collateral. A Qualified Jurisdiction which meets certain additional requirements described in the Credit for Reinsurance Models may be determined to be a Reciprocal Jurisdiction under the revised Credit for Reinsurance Models.

A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.

On October 22, 2019, the Reinsurance (E) Task Force updated and revised the *Process for Evaluating Qualified and Reciprocal Jurisdictions* to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.
III. FINMA’s Status of a Qualified Jurisdiction

A Qualified Jurisdiction may not be reviewed for inclusion on the *NAIC List of Reciprocal Jurisdictions* unless it remains in good standing with the NAIC as a Qualified Jurisdiction. The NAIC originally designated FINMA as a Conditional Qualified Jurisdiction effective January 1, 2014, with the designation to continue for one year. On December 16, 2014, the NAIC approved FINMA as a Qualified Jurisdiction and placed it on the *NAIC List of Qualified Jurisdictions*, to be effective as of January 1, 2015. This designation as a Qualified Jurisdiction was to be valid for five years (absent a material change in circumstances) ending on December 31, 2019, after which FINMA would be re-evaluated.

The Working Group met in regulator-to-regulator session on October 7, 2019 and re-approved FINMA as a Qualified Jurisdiction. The Reinsurance (E) Task Force is expected to approve the re-evaluation of FINMA as a Qualified Jurisdiction, which is expected to be confirmed by the NAIC Executive (EX) Committee and Plenary at its 2019 Fall National Meeting. This *Summary of Findings and Determination* with respect to FINMA as a Reciprocal Jurisdiction is expressly made contingent upon the NAIC’s re-approval of FINMA as a Qualified Jurisdiction.

IV. Written Confirmation

In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the *NAIC List of Reciprocal Jurisdictions*, the Qualified Jurisdiction Working Group shall undertake the following analysis in making its evaluation:

1. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance assumed by insurers domiciled in that jurisdiction is received by United States ceding insurers;

2. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

3. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;
4. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

5. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

FINMA provided the NAIC and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories with this written confirmation by letter dated October 29, 2019. The Qualified Jurisdiction Working Group performed a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate on November 5, 2019.

V. Minimum Solvency or Capital Ratio

The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

In the 2015 EIOPA Advice to the European Commission: Equivalence assessment of the Swiss supervisory system in relation to Articles 172, 227 and 260 of the Solvency II Directive (EIOPA-BoS-15/041), EIOPA made the following observations on Switzerland’s ladder of supervisory intervention:

Under the Swiss Solvency Test (SST), the capital requirement which is more commonly referred to as the Target Capital (TC) under the SST, is calculated to cover unexpected losses arising from existing business that correspond to the Tail Value-at Risk (Tail-VaR) of the Risk Bearing Capital (RBC) subject to a confidence level of 99% over a one-year period.
The SST ratio of an insurer determines its supervisory zone (green, yellow, amber or red) and the corresponding degree of supervisory intervention:

- **If the SST ratio is 100% or more, there will be no supervisory intervention – i.e. the insurer will be subject to normal supervisory monitoring. [Emphasis added].**

- If the SST ratio falls below 100%, the intensity of supervisory intervention and the intrusiveness of supervisory actions will increase as the SST ratio decreases.

- If the SST ratio falls below 33%, the insurer will be required to take immediate actions to restore the SST ratio, the failure of which will trigger FINMA to revoke its license.

In its consultation letter to the NAIC dated October 2, 2019, FINMA advised as follows:

FINMA would consider in principle 100% SST to be comparable to some extent to 100% SCR under Solvency II. In addition, we would like to make the following comments:

- There is a significant degree of commonalities between the two solvency regimes, but also some different approaches applied.
- The application for the tail value-at-risk with a confidence level of 99% under the SST as opposed to the value-at-at risk with a confidence level of 99.5% leads in the case of a reinsurer typically to more conservative results, i.e. to a higher insurance target capital.
- In this context, one can also refer to recent IMF FSAP Reports.

The Qualified Jurisdiction Working Group approved 100% SST as the minimum solvency or capital ratio for reinsurers domiciled in Switzerland, and the Reinsurance Financial Analysis (E) Working Group approved 100% SST as the minimum solvency or capital ratio on October 11, 2019.

**VI. Summary of Findings and Recommendation**

Therefore, it is the recommendation of the Qualified Jurisdiction Working Group that the NAIC recognize FINMA as a Reciprocal Jurisdiction and place it on the **NAIC List of Reciprocal Jurisdictions**, with such evaluation to be effective as of January 1, 2020. Further, the Working Group recommends that the minimum solvency or capital ratio for eligible reinsurers domiciled in Switzerland to be a 100% SST ratio.

Re: Evaluation of Reciprocal Jurisdictions Exposures

Dear Messrs. Stultz and Schelp:

The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. Ninety million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. ACLI also represents all professional life reinsurers assuming mortality and morbidity risks in the United States.

We appreciate the opportunity to review and comment on the three Summary of Findings and Determination exposures regarding the evaluations of the Bermuda Monetary Authority (Bermuda), the Financial Services Agency (Japan), and the Financial Market Supervisory Authority (Switzerland) as Reciprocal Jurisdictions. We are pleased that the Qualified Jurisdiction Working Group has deemed all three jurisdictions to meet the requirements as Reciprocal Jurisdictions. ACLI supports those findings.

Sincerely,

Steven M. Clayburn, FSA, MAAA  
Mariana Gomez-Vock

Attachment Ten
Reinsurance (E) Task Force
12/8/19
On June 25, 2019, NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) to incorporate the relevant provisions from the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement). Under the revisions, credit for reinsurance is allowed for domestic ceding insurers for reinsurance that has been ceded to reinsurers from Reciprocal Jurisdictions, and that those reinsurers are not required to post collateral. As a result, it is necessary to consider revisions to the appropriate reinsurance schedules and instructions in order to collect the relevant information with respect to these reinsurance transactions.

IDENTIFICATION OF ITEM(S) TO CHANGE

Annual Statement Instructions

Life/Fraternal and Health

Schedule S General Instructions
- Modify instructions to include section on numbers for Reciprocal Jurisdiction Companies.
- Modify note on applying Reciprocal Jurisdiction.
- Add Reciprocal Jurisdiction to the instruction for determining status.
- Reference in certified reinsurer number paragraph.

Schedule S, Part 1, Section 1
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 1, Section 2
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 2
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 3, Section 1
- Add category lines for Reciprocal Jurisdiction Companies.
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 3, Section 2
- Add category lines for Reciprocal Jurisdiction Companies.
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 4
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Schedule S, Part 5
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

Life/Fraternal

Workers’ Compensation Cave-out Supplement
- Schedule F General Instructions
  - Modify instructions to include section on numbers for Reciprocal Jurisdiction Companies.
  - Modify note on applying Reciprocal Jurisdiction.
  - Add Reciprocal Jurisdiction to the instruction for determining status.
  - Reference in certified reinsurer number paragraph.
Schedule F, Part 1
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 2
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Supplemental term and Universal Life Insurance Reinsurance Exhibit
   Part 1
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 2.

   Part 2A
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 3.

   Part 2B
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 3.

Trusteed Surplus Statement
   • Add instructions for Line 4.4 Reciprocal Jurisdiction Companies

Property

Schedule F General Instructions
   • Modify instructions to include section on numbers for Reciprocal Jurisdiction Companies.
   • Modify note on applying Reciprocal Jurisdiction.
   • Add Reciprocal Jurisdiction to the instruction for determining status.
   • Reference in certified reinsurer number paragraph.

Schedule F, Part 1
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 2
   Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 3
   • Add category lines for Reciprocal Jurisdiction Companies.
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.
   • Modify category lines references for the list of lines for Reciprocal Jurisdiction Companies for Columns 28 through 36.
   • Modify category lines references for the list of lines for Reciprocal Jurisdiction Companies for Columns 71 and 72.
   • Modify category lines references for the list of lines for Reciprocal Jurisdiction Companies for Columns 73 and 74.

Supplemental Schedule for Reinsurance Counterparty Reporting Acceptations – Asbestos and Pollution Contracts
   • Add category lines for Reciprocal Jurisdiction Companies.
   • Add Reciprocal Jurisdiction to list of type of reinsurers for Columns 1 and 5.

Notes to Financial Statement 23F(1)f
   • Add section to illustration for Reciprocal Jurisdiction Companies

Trusteed Surplus Statement
   • Add instructions for Line 7.4 Reciprocal Jurisdiction Companies
Title

Schedule F General Instructions
- Modify instructions to include section on numbers for Reciprocal Jurisdiction Companies.
- Modify note on applying Reciprocal Jurisdiction.
- Add Reciprocal Jurisdiction to the instruction for determining status.
- Reference in certified reinsurer number paragraph.

Schedule F, Part 1
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 2
- Add category lines for Reciprocal Jurisdiction Companies.
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 3
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Schedule F, Part 4
- Add Reciprocal Jurisdiction to list of type of reinsurers for Column 1.

Operations and Investments Exhibit – Part 2B
- For Line 2 remove the references to authorized, unauthorized and certified. Line is for all types of reinsurers so specifying is not needed.

Notes to Financial Statement 23F(1)f
- Add section to illustration for Reciprocal Jurisdiction Companies

Life/Fraternal, Health, Property, Title

Schedule Y, Part 1A
- Add Reciprocal Jurisdiction to the list of ID numbers provided in Column 4

Schedule Y, Part 2
- Add Reciprocal Jurisdiction to the list of ID numbers provided in Column 2

Schedule D, Part 6, Section 1
- Add Reciprocal Jurisdiction to the list of ID numbers provided in Column 5

- Add Line 7.4 for Reciprocal Jurisdiction Companies
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL AND HEALTH (INCLUDES HEALTH LIFE SUPPLEMENT)

SCHEDULE S – REINSURANCE

These parts (except Part 1, which shows reinsurance assumed) provide an analysis by reinsurance carrier of reinsurance ceded data shown in total in various parts of the statement. Information is included on all reinsurance ceded to other entities authorized as well as unauthorized or certified in the state of domicile of the reporting entity. Additional data for unauthorized companies is displayed in Part 4; additional data for certified reinsurers is displayed in Part 5.

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal Jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule S. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. This will also be the case for Reciprocal Jurisdiction reinsurance, which may have been classified as certified reinsurance prior to the enactment of the 2019 revisions to the Credit for Reinsurance Models by the domiciliary state of the ceding entity. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Effective date as used in this schedule is the date the contract originally went into effect.

ID Number

Most parts of Schedule S require that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not to be listed, because Schedule S is intended to identify the risk-bearing entities.
A ceding insurer can have unauthorized reinsurance, certified reinsurance and Reciprocal Jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for Reciprocal Jurisdiction reinsurance.

**Use of Federal Employer Identification Number**

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

**Alien Insurer Identification Number (AIIN)**

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule S instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Pool and Association Numbers**

In order to report transactions involving non-risk bearing pools or associations consisting of nonaffiliated companies correctly, the company must include on Schedule S the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC *Listing of Companies*. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Certified Reinsurer Identification Number (CRIN)**

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule S instead of the FEIN, AIIN or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving Reciprocal Jurisdiction reinsurers correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule S instead of the FEIN, AIIN or CRIN. The RJIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If a company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company...
Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**NAIC Company Code**

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

---

**Determination of Authorized Status**

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule S shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
SCHEDULE S – PART 1 – SECTION 1
REINSURANCE ASSUMED LIFE INSURANCE, ANNUITIES, DEPOSIT FUNDS AND OTHER LIABILITIES WITHOUT LIFE OR DISABILITY CONTINGENCIES, AND RELATED BENEFITS LISTED BY REINSURED COMPANY AS OF DECEMBER 31, CURRENT YEAR

This section should include data on all reinsurance assumed for life insurance, annuities, deposit fund and other liabilities without life or disability contingencies, and related benefits by reinsured company as of December 31, current year.

Detail Eliminated to Conserve Space

Column 2 – ID Number
Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

Federal Employer Identification Number (FEIN)

**SCHEDULE S – PART 3 – SECTION 2**

**REINSURANCE CEDED ACCIDENT AND HEALTH INSURANCE LISTED BY REINSURING COMPANY AS OF DECEMBER 31, CURRENT YEAR**

Include actual reinsurance ceded on group cases but exclude jointly underwritten group contracts.

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total line and number:

**Detail Eliminated to Conserve Space**
SCHEDULE S – PART 4

REINSURANCE CEDED TO UNAUTHORIZED COMPANIES

Contains data on life and accident and health insurance in force that is reinsured with companies not authorized in the state of domicile of the reporting insurance company. The purpose of this schedule is to display reinsurance ceded data used in the development of the liability for reinsurance in unauthorized companies. This liability serves to offset those assets and liability reductions that reflect the result of reinsurance ceded with unauthorized companies.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

SCHEDULE S – PART 5

REINSURANCE CEDED TO CERTIFIED REINSURERS

NOTE: This schedule is to be completed by those reporting entities whose domiciliary state has enacted the Credit for Reinsurance Model Law (#785) and/or Credit for Reinsurance Model Regulation (#786) with the defined certified reinsurer provisions.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

SCHEDULE F – REINSURANCE

Index to Schedule F

Part 1 – Assumed Reinsurance
Part 2 – Portfolio Reinsurance
Part 3 – Ceded Reinsurance
Part 4 – Issuing or Confirming Banks for Letters of Credit from Schedule F, Part 3
Part 5 – Interrogatories for Schedule F, Part 3
Part 6 – Restatement of Balance Sheet to Identify Net Credit for Ceded Reinsurance

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal Jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule F. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. This will also be the case for Reciprocal Jurisdiction reinsurance, which may have been classified as certified reinsurance prior to the enactment of the 2019 revisions to the Credit for Reinsurance Models by the domiciliary state of the ceding entity. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Due Date

All parts of Schedule F are to be filed with the annual statement.

Please note that Parts 1, 3, 4 and 5 of this schedule are reported with thousands omitted. Parts 2 and 6 are reported in whole dollars.

ID Number

Most parts of Schedule F require that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and Reciprocal Jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule F by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for Reciprocal Jurisdiction reinsurance.
Use of Federal Employer Identification Number

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers, even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact with the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Certified Reinsurer Identification Number (CRIN). The RJIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**NAIC Company Code**

Company codes are assigned by the NAIC and are listed in the NAIC *Listing of Companies*. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC *Listing of Companies*, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

**Determination of Authorized Status**

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
**SCHEDULE F – PART 1**

ASSUMED REINSURANCE
AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>
<thead>
<tr>
<th>Column 1</th>
<th>ID Number</th>
</tr>
</thead>
</table>

**Detail Eliminated to Conserve Space**

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

**SCHEDULE F – PART 2**

PREMIUM PORTFOLIO REINSURANCE EFFECTED OR (CANCELED)
DURING CURRENT YEAR

This schedule should list by portfolio any original premiums and reinsurance premiums for portfolio reinsurance transactions affected or canceled during the year. Portfolio reinsurance is the transfer of the entire liability of a reporting entity for in force policies as respects a described segment of the reporting entity’s business.

<table>
<thead>
<tr>

* - Pools and Associations consisting of affiliated companies should be listed by individual company names.

@ - Include in Mandatory Pools all U.S. Government programs (e.g., National Flood Insurance, National Crop Insurance Corporation), all state residual market mechanisms, the Workers Compensation Reinsurance Pool, and the National Council on Compensation Insurance.

% - Include in Voluntary Pools all pool participation that is voluntary on the part of the reporting entity. Include participation in any state program for which participation is not mandatory.

# - Alien Pools and Associations should be reported on Schedule F under the category “Other Non-U.S. Insurers.”
Column 1 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

Total Reciprocal Jurisdiction Excluding Protected Cells (Sum of 5099999, 5199999, 5299999, 5399999 and 5499999): 5699999

Total Authorized, Reciprocal Jurisdiction, Unauthorized and Certified Excluding Protected Cells (Sum of 1499999, 2899999, 4299999 and 42999995699999): 43999995799999

Total Protected Cells (Sum of 1399999, 2799999, 4199999 and 41999995599999): 44999995899999

Totals (Sum of 4399999, 5799999 and 44999995899999): 9999999

* – Pools and Associations consisting of affiliated companies should be listed by individual company names.

@ – Include in Mandatory Pools all U.S. Government programs (e.g., National Flood Insurance, National Crop Insurance Corporation), all state residual market mechanisms, the Workers Compensation Reinsurance Pool, and the National Council on Compensation Insurance.

% – Include in Voluntary Pools all pool participation that is voluntary on the part of the reporting entity. Include participation in any state program for which participation is not mandatory.

# – Alien Pools and Associations should be reported on Schedule F under the category “Other Non-U.S. Insurers.”

### Column 1 – ID Number (Original Reinsurer)

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number
Column 5 – ID Number (Retroactive Reinsurer)

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number
ID Number

Schedule F requires that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and Reciprocal Jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for Reciprocal Jurisdiction reinsurance.

Use of Federal Employer Identification Number

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN, or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.
Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Certified Reinsurer Identification Number (CRIN). The RJIN is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**NAIC Company Code**

Company codes are assigned by the NAIC and are listed in the NAIC *Listing of Companies*. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC *Listing of Companies*, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

**Determination of Authorized Status**

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
SCHEDULE F – PART 1

ASSUMED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number:

---

Column 1 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

---

SCHEDULE F – PART 2

CEDED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

* Pools and Associations consisting of affiliated companies should be listed by individual company names.

# Alien Pools and Associations should be reported on Schedule F under the category “Other Non-U.S. Insurers.”

**NOTE:** Disclosure of the five largest provisional commission rates should exclude mandatory pools and joint underwriting associations.

**Column 1 – ID Number**

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- **Federal Employer Identification Number (FEIN)**
- **Alien Insurer Identification Number (AIIN)**
- **Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**
- **Certified Reinsurer Identification Number (CRIN)**
- **Pool/Association Identification Number**
SCHEDULE F – PART 3

PROVISION FOR UNAUTHORIZED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

Column 1 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

SCHEDULE F – PART 4

PROVISION FOR REINSURANCE Ceded TO CERTIFIED REINSURERS AS OF DECEMBER 31, CURRENT YEAR

NOTE: This schedule is to be completed by those reporting entities whose domiciliary state has enacted the Credit for Reinsurance Model Law (#785) and/or Credit for Reinsurance Model Regulation (#786) with the defined certified reinsurer provisions.

Column 1 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number
This schedule reports unpaid loss and loss adjustment expenses on direct and agency operations. Affiliated agencies are those that meet the affiliation standards defined by SSAP No. 25—Affiliates and Other Related Parties. Refer to SSAP No. 57—Title Insurance, paragraphs 8–13, for accounting guidance.

Line 2 – Reinsurance Recoverable from Authorized, Unauthorized and Certified Companies

The amounts shown on this line represents reinsurance ceded recoverables (from authorized, unauthorized and certified companies) on unpaid losses of which notice has been received. This can be done through reinsurance ceded treaties, facultative reinsurance assumed agreements, or under transfer and assumption agreements.

The amounts shown on this line should reconcile to amounts reported in Schedule F, Part 2, Column 9, Total.

The amount shown in Column 1 should agree to Schedule P, Part 1A, Column 19, Line 12.

The amount shown in Column 2 plus the amount shown in Column 3 should as agree to Schedule P, Part 1B, Column 19, Line 12.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

WORKERS’ COMPENSATION CARVE-OUT SUPPLEMENT

The Workers’ Compensation Carve-out Supplement shall be completed by those reporting entities that assume or cede workers’ compensation carve-out business.

Workers’ compensation carve-out business is defined as reinsurance (including retrocessional reinsurance) assumed by life and health insurers of medical, wage loss and death benefits of the occupational illness and accident exposures, but not the employer’s liability exposures, of business originally written as workers compensation insurance.

SCHEDULE F – REINSURANCE

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal Jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule FS. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Index to Schedule F

| Part 1 | Assumed Reinsurance |
| Part 2 | Ceded Reinsurance |

ID Number

Schedule F requires that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and Reciprocal Jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for Reciprocal Jurisdiction reinsurance.
Use of Federal Employer Identification Number

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Pools and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The NAIC Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**NAIC Company Code**

Company codes are assigned by the NAIC and are listed in the NAIC *Listing of Companies*. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC *Listing of Companies*, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

**Determination of Authorized Status**

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting company’s state of domicile.
SCHEDULE F – PART 1

ASSUMED REINSURANCE

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number.

Detail Eliminated to Conserve Space

Column 1 — ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

Federal Employer Identification Number (FEIN)
Alien Insurer Identification Number (AIIN)
Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
Certified Reinsurer Identification Number (CRIN)
Pool/Association Identification Number

Detail Eliminated to Conserve Space

SCHEDULE F – PART 2

CEDED REINSURANCE

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, categories, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total line and number.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY AND TITLE

NOTES TO FINANCIAL STATEMENTS

Notes to the Annual Statement are to be filed on March 1.

Detail Eliminated to Conserve Space

23. Reinsurance

Instruction:

A. Unsecured Reinsurance Recoverables

If the company has with any individual reinsurers (authorized, reciprocal jurisdiction, unauthorized or certified), an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium that exceeds 3% of the company’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting company, and the total unsecured aggregate recoverables for the entire group.

Include: The NAIC group code number, where appropriate, and the Federal Employer Identification Number for each individual company.

Detail Eliminated to Conserve Space

F. Retroactive Reinsurance

(1) Provide the following information for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions:

Detail Eliminated to Conserve Space

f. List the total Paid Loss/LAE amounts recoverable (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers), any amounts more than 90 days overdue (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers) and for amounts recoverable the collateral held (for unauthorized and certified reinsurers).

The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Do not report transactions utilizing deposit accounting in this note.
Illustration:

A. Unsecured Reinsurance Recoverables

The Company does not have an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses and unearned premium with any individual reinsurers, authorized or unauthorized, that exceeds 3% of the Company’s policyholder surplus.

ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE Y

PART 1A – DETAIL OF INSURANCE HOLDING COMPANY SYSTEM

All insurer and reporting entity members of the holding company system shall prepare a schedule for inclusion in each of the individual annual statements that is common for the group with the exception of Column 10, Relationship to Reporting Entity.

--- Detail Eliminated to Conserve Space ---

Column 4  –  ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN) *
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) *
- Certified Reinsurer Identification Number (CRIN) *

* RJIN, AIINs or CRINs are only reported if the entity in Column 8 is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another entity regardless of whether the entity in Column 8 is part of reporting entity’s group.

If not applicable for the entity in Column 8, leave blank.

--- Detail Eliminated to Conserve Space ---
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE Y

PART 2 – SUMMARY OF INSURER’S TRANSACTIONS WITH ANY AFFILIATES

This schedule was designed to provide an overview of transactions among insurance holding company system members. It is intended to demonstrate the scope and direction of major fund and/or surplus flows throughout the system. This schedule should be prepared on an accrual basis.

Detail Eliminated to Conserve Space

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN) *
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) *
- Certified Reinsurer Identification Number (CRIN) *

* RJIN, AIIN or CRIN numbers are only reported if the entity in Column 3 is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another entity regardless of whether the entity in Column 3 is part of reporting entity’s group or not.

If not applicable for the entity in Column 3, leave blank.

Detail Eliminated to Conserve Space
SCHEDULE D – PART 6 – SECTION 1

VALUATION OF SHARES OF SUBSIDIARY, CONTROLLED OR AFFILIATED COMPANIES

If a reporting entity has any common stock or preferred stock reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

Column 5 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

Federal Employer Identification Number (FEIN)
Alien Insurer Identification Number (AIIN) *
Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) *
Certified Reinsurer Identification Number (CRIN) *

* RJIN, AIINs or CRINs are only reported if the entity is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another reporting entity.

If not applicable for the entity, leave blank.

SHOWING ALL NEW REINSURANCE TREATIES – CURRENT YEAR TO DATE

<table>
<thead>
<tr>
<th>Column 1</th>
<th>NAIC Company Code</th>
</tr>
</thead>
</table>

Company codes are assigned by the NAIC and are listed in the NAIC *Listing of Companies*. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the instruction for Column 2 for details on assignment of Pool/Association Identification Numbers. Risk bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk bearing entity (e.g., risk bearing pools or associations) does not appear in the NAIC *Listing of Companies*, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

<table>
<thead>
<tr>
<th>Column 2</th>
<th>ID Number</th>
</tr>
</thead>
</table>

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions in the annual statement instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

**Federal ID Number (FEIN)**

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “Federal ID Number” for other alien insurers even if the federal government has issued such a number.

**Alien Insurer Identification Number (AIIN)**

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule S instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.
Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule S the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule S instead of the FEIN, or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule S instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Column 7 – Type of Reinsurer

The determination of the authorized, certified or unauthorized status of an insurer or reinsurer shall be based on the status of that insurer or reinsurer in the reporting company’s state of domicile.

Enter “Authorized” “Reciprocal Jurisdiction” “Certified” or “Unauthorized” to indicate the type of reinsurer.
QUARTERLY STATEMENT INSTRUCTIONS – PROPERTY AND TITLE

SCHEDULE F – CEDED REINSURANCE

SHOWING ALL NEW REINSURERS – CURRENT YEAR TO DATE

Detail Eliminated to Conserve Space

Column 1 – NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the instruction for Column 2 for details on assignment of Pool/Association Identification Numbers. Risk bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk bearing entity (e.g., risk bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions in the annual statement instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

Federal ID Number (FEIN)

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.
Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Column 5 — Type of Reinsurer

The determination of the authorized, certified or unauthorized status of an insurer or reinsurer shall be based on the status of that insurer or reinsurer in the reporting company’s state of domicile.

Enter “Authorized” “Reciprocal Jurisdiction” “Certified” or “Unauthorized” to indicate the type of reinsurer.

© 2019 National Association of Insurance Commissioners 63
Risk Retention Group (E) Task Force  
Austin, Texas  
December 7, 2019

The Risk Retention Group (E) Task Force met in Austin, TX, Dec. 7, 2019. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Christine Brown (VT); Stephen C. Taylor, Vice Chair, represented by Sean O’Donnell (DC); Nancy G. Atkins represented by Sandy Batts (KY); James J. Donelson represented by Stewart Guerin (LA); Matthew Rosendale represented by Steve Matthews (MT); Glen Mulready represented by Eli Snowbarger (OK); and Raymond G. Farmer represented by Lee Hill (SC).

1. **Adopted its Oct. 7 Minutes**

Mr. Hill made a motion, seconded by Mr. O’Donnell, to adopt the Task Force’s Oct. 7 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the FAQ Document and Best Practices Document**

Ms. Brown stated that over the past year, the Task Force has been working diligently to provide additional guidance to both state insurance regulators and industry regarding the registration process for risk retention groups (RRGs) in non-domestic states. The process started last year with a letter from the National Risk Retention Association (NRRA) citing concerns regarding fees and delays in the review of registration forms. The discussion that followed also raised concerns from non-domiciliary states, such as incomplete registration forms or potentially non-compliant RRGs.

As a result, a drafting group was formed to develop three documents: “Risk Retention Groups: Frequently Asked Questions” (FAQ document); “Best Practices: Risk Retention Groups” (Best Practices document); and the NAIC Uniform Risk Retention Group Registration Form (Registration Form). These documents were exposed for public comment at the Summer National Meeting, and several comment letters were received. The comment letters were discussed during the Task Force’s Oct. 7 conference call where there was agreement on many of the issues, but a few outstanding items were referred back to the drafting group for additional consideration.

The drafting group provided its input, and the FAQ document, the Best Practices document and the Registration Form were exposed again. During that exposure period, three comment letters were received from the District of Columbia (comments incorporated into Attachment Two and Attachment Three), the NRRA (Attachment Four) and the Vermont Captive Insurance Association (VCIA) (Attachment Five).

Becky Meyer (NAIC) summarized the recommendations from the drafting group, as noted in the FAQ document and the Best Practices document.

Mr. O’Donnell made a motion, seconded by Mr. Hill, to adopt the FAQ document (Attachment Two) and the Best Practices document (Attachment Three), including the suggestions as noted by comment bubbles in each document. The motion passed unanimously.

3. **Adopted a Referral to the Property and Casualty Insurance (C) Committee to Consider Proposed Revisions to the Registration Form**

Ms. Brown stated that the Registration Form is a little different than the FAQ document and the Best Practices document because the proposal is for changes to an existing document rather than creating something new. This document is housed in the Risk Retention and Purchasing Group Handbook (Handbook). This Handbook is overseen by the Property and Casualty Insurance (C) Committee. Therefore, any changes to the Registration Form adopted by the Task Force will be referred to the Property and Casualty Insurance (C) Committee for consideration.

Ms. Meyer summarized the recommendations from the drafting group as noted on the Registration Form.

Mr. Snowbarger made a motion, seconded by Mr. Matthews, to adopt the referral to the Property and Casualty Insurance (C) Committee to the Registration Form, including the revisions proposed by the drafting group (Attachment Six). The motion passed unanimously.
4. Discussed its Next Steps

Ms. Brown noted that it is encouraging that the items the Task Force just adopted touch on many of the concerns identified earlier in the year. However, there are still several other areas that can be worked on and the areas of highest importance for the Task Force, interested state insurance regulators and interested parties can be decided.

Skip Myers (NRRA) stated that within the coming months, the impact of these three documents and whether they are working as intended should be seen. If not, they may need to be tweaked. He also noted the importance of the role of the state of domicile to resolve any issues, if necessary. He stated that he was sure that these forms would be referred to frequently by the industry, and he mentioned taking steps in the future to include the issues in an NAIC model or as part of the Handbook, which is something that is referred to by the industry frequently.

Chrys D. Lemon (VCIA) noted that the adoption of these items are important to the industry and regulation, noting that he looks forward to ongoing discussions.

Ms. Brown stated that one of the main goals is to quantify and monitor how helpful these documents are to facilitate discussions between the states and alleviate the questions and concerns that non-domiciliary states have. One item that is not mentioned in the summary, but is important, is monitoring and training on the information developed this year, such as conducting a webinar, working with some of the states’ captive insurance associations, and getting feedback from the NRRA. When the Task Force reconvenes in 2020, she suggested it may consider ways to further spread information and the concepts included in the FAQ document and the Best Practices document. When talking about next steps, the Task Force should keep with the spirit of the federal Liability Risk Retention Act (LRRA). As Mr. Myers mentioned, she said the Task Force should also try to incorporate some of the best practices into the Handbook

Mr. Hill noted that it is difficult to put the next steps in a priority order, and he asked that NRRA and others that have raised the issues that led to these discussions review the list of concerns and be prepared to provide input to the Task Force once more information is gathered on the impact of the items adopted.

Mr. O’Donnell noted that the Task Force will need to consider how to distribute the FAQ document and the Best Practices document, as well as the revised Registration Form, to all the states and RRGs.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
Risk Retention Group (E) Task Force
Conference Call
October 7, 2019

The Risk Retention Group (E) Task Force met via conference call Oct. 7, 2019. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Stephen C. Taylor, Vice Chair, represented by Sean O’Donnell (DC); Nancy G. Atkins represented by Sandy Batt (KY); James J. Donelon represented by Stewart Guerin (LA); Matthew Rosendale represented by Steve Matthews (MT); Barbara D. Richardson represented by Kathy Kelley (NV); Glen Mulready represented by Joel Sander (OK); and Raymond G. Farmer represented by Michael Shull (SC). Also participating was: John Talley (MO).

1. Adopted its May 8 and Summer National Meeting Minutes

Mr. Shull made a motion, seconded by Mr. O’Donnell, to adopt the Task Force’s May 8 (Attachment One-A) and Aug. 3 (see NAIC Proceedings – Summer 2019, Risk Retention Group (E) Task Force) minutes. The motion passed unanimously.

2. Adopted its 2020 Proposed Charges

Ms. Bigglestone stated that a new charge is proposed for 2020 to better align with the ongoing work the Task Force is doing to address questions raised related to the registration of risk retention groups (RRGs) in non-domestic states. Overall, the focus for the next year will be to monitor the progress of the work the Task Force has done so far on this issue. The Task Force will then consider how effective the guidance and information is, provide training on the guidance and information, and ultimately determine if there is more work that needs to be done based on feedback received.

Mr. Matthews made a motion, seconded by Ms. Batts, to adopt the Task Force’s 2020 proposed charges (Attachment One-B). The motion passed unanimously.

Ms. Bigglestone stated that the three documents that were exposed—“Risk Retention Groups: Frequently Asked Questions” (FAQ document) (Attachment One-C), “Best Practices: Risk Retention Groups” (Best Practices document) (Attachment One-D) and the NAIC Uniform Risk Retention Group Registration Form (Registration Form) (Attachment One-E)—were developed as a result of concerns raised by both industry and non-domestic states about the registration process for RRGs in non-domestic states.

A total of seven comment letters were received from: District of Columbia; Nevada; Pennsylvania; the National Risk Retention Association (NRRA); the Nonprofits Insurance Alliance; the Vermont Captive Insurance Association (VCIA); and Premier Insurance Management Services (Attachment One-F).

All comments as shown on the three documents were agreed to by the Task Force with the exception of the following: 1) discussion on the FAQ document of what constitutes a “complete” registration form; 2) inclusion of biographical affidavits for all board members on the best practices listing of items provided to the domestic state; and 3) comments on the registration form related to items 7, 17 and 19. These items require more discussion and have been sent back to the drafting group to recommend a solution to the Task Force. This recommendation will then be exposed for a public comment period prior to the Fall National Meeting.

In addition to the comments discussed, Mr. Talley raised a question about handling the registration for an RRG in a hazardous financial condition or that is otherwise non-compliant.

Robert H. Myers Jr. (NRRA) referenced the remedies put forth in Section 3902(a)1 of the Liability Risk Retention Act (LRRRA). He also mentioned the importance of communication with the domestic state.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
The Risk Retention Group (E) Task Force met via conference call May 8, 2019. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Stephen C. Taylor, Vice Chair, represented by Sean O’Donnell and Dana Sheppard (DC); Colin M. Hayashida represented by Andrew Kurata (HI); Nancy G. Atkins represented by Sandy Batts (KY); James J. Donelon represented by Bill Werner (LA); Matthew Rosendale represented by Steve Matthews (MT); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Peter Rao (NV); Glen Mulready represented by Joel Sander (OK); and Raymond G. Farmer represented by Michael Shull (SC). Also participating were: Janet Grace (CT); Kathleen Orth (MN); and Barbara Kluger (NY).

1. Discussed Summary of Concerns Regarding Registration of RRGs in Non-Domiciliary States

Ms. Bigglestone stated that a list of concerns/issues regarding non-domiciliary state registration actions, along with potential action items, has been developed to guide the work of the Task Force. She said the list includes concerns raised by the National Risk Retention Association (NRRA) and non-domiciliary states responsible for registering risk retention groups (RRGs). Becky Meyer (NAIC) summarized the list of concerns (Attachment One-A1).

Ms. Bigglestone noted that the list includes concerns of fees and delayed registration time frames presented by the NRRA. It also includes concerns voiced by non-domiciliary states such as incomplete, inaccurate or even non-compliant registrations. The possible action items include short-term solutions such as a frequently asked questions (FAQ) document or updates to the registration form, as well as long-term solutions such as updates to Part D—Organization, Licensing and Change of Control of a Domestic Insurer (Part D) of the Financial Regulation Standards and Accreditation Program or updates to the Model Risk Retention Act (#705).

Ms. Bigglestone stated that it could be beneficial to start work on items that can make the most impact in a short amount of time such as an FAQ document or updating the registration form, then the Task Force could move to more in-depth solutions as needed. She noted that some solutions could be developed by the Task Force while others, such as opening Model #705 for revisions, would require referrals to other NAIC groups.

Robert H. Myers Jr. (NRRA) said there appears to be some confusion about the federal Liability Risk Retention Act (LRRA). The LRRA was designed to give authority to the domestic state; therefore, it does not preempt the domestic state’s ability to regulate an RRG. Consequently, when a non-domestic state has a question or issue, it should be able to contact the domestic state. Because this communication may be a key to mitigating many of the issues summarized, the Task Force may consider starting its work by developing best practices for communication between the domestic and non-domestic state insurance regulators.

Ms. Bigglestone stated that she has seen questionnaires sent from a non-domestic state to a domestic state that appear helpful in gathering information, and they may be a starting point for the Task Force to develop best practices. She also stated that the Task Force could consider drafting guidance for filling out the registration form to further help ensure that information is appropriately shared and received.

Mr. O’Donnell agreed with taking a look at the registration form, and he suggested that the registration form may need to be updated to provide contact information for the domestic state insurance regulator overseeing the RRG. He noted that there is sometimes confusion about what information should be provided to the non-domiciliary state in accordance with the LRRA, and he suggested that updates to the registration form could provide clarity.

Ms. Kluger agreed that updates to the registration form could facilitate speeding up the registration process. She provided the example that sometimes there is confusion about the type of coverage being offered by the RRG and its compliance with the LRRA; if this is clear upfront, she believes delays in registrations may be reduced.
Ms. Bigglestone noted that there are differences between a new RRG registering in other states and an existing RRG that decides to expand to other states. For those RRGs expanding, it is possible that the original feasibility study that must be provided to the non-domiciliary state under the LRRA may not be useful if the business plan has changed. Therefore, the Task Force should consider what information the domiciliary state should be responsible for providing, as the domiciliary state should be aware of any changes in business plan and any expansion activity (which is, in itself, a change in business plan).

Mr. Matthews agreed that communication with the domiciliary state is important, and he suggested that the Task Force consider whether including contact information for the domiciliary state insurance regulator is sufficient or if it should go a step further and request that a statement from the domiciliary state insurance regulator be included with the registration form.

Ms. Orth stated that one concern is when a registration form is received from an RRG that is in a weak financial state and there are concerns of ongoing solvency. She questioned if a statement from the domestic state would remedy the issue or if other steps would be needed. Ms. Bigglestone agreed that situations would vary, and the concept of best practices for a system of communication could contemplate a variety of scenarios.

Mr. Sheppard stated that the ability to trust and rely on other states is a core element of the regulatory system. To help support this system of trust, he recommended reviewing Model #705 and updating it, if needed, including elements from Model #705 in Part B—Regulatory Practices and Procedures (Part B) of the Financial Regulation Standards and Accreditation Program, as well as subjecting RRGs to Part D of the accreditation program.

Ms. Grace stated that the domestic state must take responsibility for sound regulation of the licensing process for RRGs. One challenge with this system is that the RRG may write little to no business in the domestic state, lowering the priority for the domestic state as it focuses on companies with policyholders in its state.

Ms. Meyer stated that subjecting RRGs to Part D of the accreditation program could encourage domestic states to take more responsibility for the licensing process and enhance the states’ reliance on each other. Ms. Bigglestone asked if state insurance regulators believe that subjecting RRGs to Part D would help alleviate concerns. Mr. Matthews stated that there are still challenges with traditional companies that are already subject to Part D. Ms. Bigglestone noted that, per her review of the Part D standards, the process for domestic RRGs is similar, and including RRGs in the Part D standards should not add a burden to the RRG process.

Mr. Sheppard stated that it is important to hold both the domestic and non-domestic states accountable for their roles in regulating RRGs. Mr. Myers agreed, noting that this is the key to addressing the NRRA’s request for the Task Force to review concerns about treatment of non-domiciliary registrations. The NRRA wants to take steps that support a healthy RRG industry, and it believes this includes putting more emphasis on the role of the the domestic states and encouraging non-domestic states to rely on the domestic state as intended by the LRRA. One element to ensure that the process is successful is enhancing communication between the domestic and non-domestic state. If a non-domestic state has questions, concerns or lacks information, it should be able to go to the domestic state for assistance. Developing best practices for communication would support this goal.

Ms. Bigglestone suggested establishing a volunteer drafting group to start developing initial solutions such as best practices in communication, updates to the registration form, instructions/supporting guidance for the registration form, or answers for the FAQ document. The drafting group will report back to the Task Force during its next meeting.

Having no further business, the Risk Retention Group (E) Task Force adjourned.

</table>
The mission of the Risk Retention Group (E) Task Force is to stay apprised of the work of other NAIC groups as it relates to financial solvency regulation and the NAIC Financial Regulation Standards and Accreditation Program. The Task Force may make referrals to the Financial Regulation Standards and Accreditation (F) Committee and/or other NAIC groups, as deemed appropriate.

**Ongoing Support of NAIC Programs, Products or Services**

1. The **Risk Retention Group (E) Task Force** will:
   A. Monitor and evaluate the work of other NAIC committees, task forces and working groups related to risk retention groups (RRGs). Specifically, if any of these changes affect the NAIC Financial Regulation and Accreditation Standards Program, assess whether and/or how the changes should apply to RRGs and their affiliates.
   B. Monitor and analyze federal actions, including any U.S. Government Accountability Office (GAO) reports. Consider any action necessary as a result of federal activity.
   C. Monitor the impacts of recent tools and resources made available to domiciliary and non-domiciliary state insurance regulators pertaining to RRGs. Report developments on the effort to improve communication between regulators and consistent treatment of risk retention groups. Consider whether additional action is necessary, including educational opportunities, updating resources and further clarifications.

NAIC Support Staff: Becky Meyer
1. What publications are available to help understand RRGs and state’s authority?
      The following key documents can be found as Appendices in the Handbook:
      - Appendix A: Federal Liability Risk Retention Act
      - Appendix B: NAIC Model Risk Retention Act (#705)
      - Appendix D: NAIC Uniform Risk Retention Group Registration Form
   b. Accreditation Program Manual
      - Part A: Laws and Regulations – 18 accreditation standards that outline the laws required specifically for states that charter RRGs
      - Part B: Regulatory Practices and Procedures - RRG specific procedures for financial analysis and procedures when a disclaimer of affiliation is filed

2. How does the LRRA address regulation of RRGs?
   a. Under §3002 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the formation and operation of an RRG, except as provided in the LRRA. Only the domiciliary state may regulate the formation and operation of an RRG.
   b. The implementation of the LRRA was intended to allow organizations to come together in the creation of a risk-bearing, risk-sharing entity (the RRG) to offer its members, who are the beneficiaries of the insurance provided, liability coverage in an expedient and economical manner.

3. How does RRG registration in a non-domiciliary state differ from the licensing process for a traditional insurer?
   a. There are no solvency requirements imposed by the non-domiciliary state upon an RRG seeking to register in the State. Regulation as to formation and operation, including the imposition of solvency requirements, are imposed by the domestic state.
   b. RRGs are subject to a substantially similar application and licensing process imposed by the domestic state, or state of domicile. For registration to conduct business in non-domiciliary states, RRGs are not subject to the standard application and licensing process (NAIC UCAA Instructions or NAIC Company Licensing Handbook).
   c. The registration process is intended to be simpler than the licensing process for other types of insurers. Registration is focused on information gathering rather than decision making. Registration is not the same as admission or company licensing; it is not intended to provide non-domiciliary states with any regulatory powers over RRGs other than that provided in the LRRA. It is not within a state’s authority to use the processing of a registration to bar RRGs seeking to lawfully operate in a state, nor can a state declare a “moratorium” on the filing of RRG registrations. Once an RRG provides a complete NAIC Uniform Risk Retention Group Registration Form, they may begin operating in the state and approval from the non-domiciliary state is not required. However, best practice is for the non-domiciliary state to notify the RRG following their initial review of the NAIC Uniform Risk Retention Group Registration Form that either the form received was complete, or that the form was missing
information. The non-domiciliary state may also reach out to the domiciliary state for more information and is encouraged to do so. (see the Best Practices—Risk Retention Groups document)

d. The LRRA references two documents that must be provided to the non-domestic state—a plan of operation OR a feasibility study. There is also additional information such as contact information of the RRG, chartering state information, and the lines of liability insurance business that are written by the RRG seeking to register. All this information is provided in the completed NAIC Uniform Risk Retention Group Registration Form.

e. For an RRG that is compliant with the LRRA and the regulation of their domestic state (including authorization to register to do business in another state), the non-domestic state cannot deny the RRG’s registration. If there is uncertainty, the domestic state should be contacted.

4. What are the steps for the non-domiciliary insurance regulator to take in the registration process for an RRG?

a. Review the NAIC Uniform Risk Retention Group Registration Form and verify the RRG has provided a complete form.

b. Once a complete form is received, the RRG is authorized to write in the state where it registers. The following best practices may also be considered during the registration process; however, they do not impact the registration status of the RRG:
   a. Review the information provided with the registration form for reasonableness.
   b. Reach out to the domiciliary state insurance regulator for additional information or concerns. The best practices Inquiry Template can be used and modified as appropriate.
   c. Notify the RRG once the registration form is deemed complete. They are now registered in the state.

5. What should a non-domiciliary state do if they have concerns about a complete RRG registration form received?

a. If the RRG provided a complete form, but there are concerns about the lines of business or financial solvency, or some other matter, the non-domiciliary state should first communicate with the domiciliary state. If necessary, the non-domiciliary state should consider pursuing the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

6. When can a non-domiciliary state reject an RRG registration?

a. A non-domiciliary state cannot reject the registration of an RRG that submits a complete registration form. Instead the non-domiciliary state should communicate concerns to the domiciliary state or refer to the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

7. Can an RRG registration be delayed if a financial statement filing and/or audit is not yet available at the time of application or registration?

a. No, an RRG can register prior to filing of an annual financial statement audit and a statement of opinion on loss and loss adjustment expense reserves with its domiciliary state.

b. Once these initial filings are made, they are available on i-Site for review.

c. If questions arise due to lack of this information, the non-domiciliary state should reach out to the domiciliary state to address its concerns.
8. What items does the LRRA require an RRG provide to the non-domiciliary state in conjunction with the registration?
   a. It is recommended that states adopt the NAIC Uniform Risk Retention Group Registration Form, which has been developed by the NAIC in order to facilitate uniformity. Such forms are included in the Risk Retention and Purchasing Group Handbook.
   b. Consistent with LRRA, each RRG shall submit a copy of the plan of operation OR a feasibility study before it may offer insurance in the state. Note: If the RRG is newly formed, the feasibility study provides relevant information on rates and expected losses. If the RRG is expanding the states in which it operates and has been writing business for an extended period, the feasibility study becomes less relevant and a current business plan, along with documents a non-domiciliary state can easily obtain from the NAIC’s site (Annual Statement(s), RBC Report(s), MD&A(s), Audited Financial Statement(s), Actuarial Certification(s)) provide pertinent information.
   c. If the plan of operation or feasibility study does not appear to be updated, a non-domiciliary state should contact the domiciliary state regulator to obtain more information, including the IPS, and may request revised documents from the RRG if original submission is found to be inaccurate or unclear.

9. What should be included in a plan of operation?
   a. The LRRA states that an RRG’s plan of operation or feasibility study includes information on liability insurance coverages, deductibles, coverage limits, rates, and rating classification systems for each line of insurance the group intends to offer.
   b. In addition, the Best Practices – Risk Retention Groups document offers a list of other suggested items for inclusion in a plan of operations or feasibility study.

10. What does the LRRA say about renewals for RRGs in non-domiciliary states?
    a. The LRRA is silent; therefore, initial registration is sufficient unless the operation of an RRG is affected by runoff, rehabilitation or liquidation processes. RRGs file changes in business plans, financial filings, etc. on an ongoing basis with non-domiciliary states; therefore, non-domiciliary states should consider developing a process for communicating with the domiciliary state (such as the example in the Best Practices—Risk Retention Groups document) and consider an annual request for Certificate of Good Standing/Compliance from the domiciliary state.
    b. Section 3902(4)(3) of the LRRA requires that an RRG submit to the insurance commissioner of each state in which it is doing business a copy of the annual financial statement that it files with the RRG’s domiciliary state. Non-domiciliary states should be aware that in many states where RRGs are licensed/chartered as captive insurers in conformity with NAIC accreditation standards, RRGs are permitted to use Generally Accepted Accounting Principles rather than Statutory Accounting Principles to report on their financial conditions, with required disclosure and reconciliation in footnote one. (see also Section II, page 3 of the Risk Retention and Purchasing Group Handbook)
    c. The filing is an ongoing requirement that must be complied with on an annual basis and is generally due to non-domiciliary states upon filing with the domiciliary state. The annual financial statement shall be certified by an independent public accountant and contain a statement of opinion on loss and loss adjustment expense reserves made by an actuary or loss reserve specialist who is qualified in accordance with the criteria established by the NAIC in the annual statement Instructions.
11. What does the LRRA say about taxes and fees charged by a non-domiciliary RRG?
   a. LRRA §3902(a)(1)(B) says any state may require an RRG to:
      a. Pay on a nondiscriminatory basis, applicable premium and other taxes, which are levied on admitted insurers and surplus lines insurers, brokers, or policyholders under the laws of the state.
   b. Fees are not directly addressed in the LRRA and as such, there has been disagreement about the legality of both initial and renewal registration fees and compliance with LRRA. The authority on this topic is therefore federal case law. Thus far, there is one case, Nat’l Risk Retention Assoc. v. Brown, 927 F. Supp. 195 (M.D. La. 1996) in which the court ruled that certain state requirements, including the payment of an annual renewal registration fee, were preempted by the LRRA. See the Risk Retention and Purchasing Group Handbook for additional detail on the case and other fee considerations.

12. What remedies are available to a non-domiciliary state if violations of applicable State laws occur?
   a. Secure clarification from the RRG’s state of domicile;
   b. Call for an examination of the RRG by the state of domicile [15 U.S.C. §3902(a)(1)(E)];

13. Is there a list of domestic and non-domestic state contact persons in state insurance regulator offices who are knowledgeable about RRGs?
   a. Yes. Appendix C of the NAIC Risk Retention and Purchasing Group Handbook includes a list of state insurance department contact persons. The most recent list is maintained as a separate document on the NAIC’s publication webpage alongside a complete copy of the Risk Retention and Purchasing Group Handbook.

Best Practices – Risk Retention Groups

The domiciliary state maintains authority and has responsibility to regulate the formation and operation of a Risk Retention Group (RRG). Therefore, when concerns arise in a non-domiciliary state about a RRG, the best resource is the domiciliary state. This includes concerns about solvency and capital levels, financial condition, or other non-compliance of an RRG as well as operational questions and concerns that should be directed to the domiciliary state.

States are encouraged to examine their RRG laws to make certain that they are consistent with (1) the LRRA and (2) the NAIC Model Risk Retention Act.

Questions/Concerns from Non-domiciliary State

Upon initial registration of an RRG in a non-domiciliary state, it is not uncommon for questions to arise that are best directed to the domiciliary state. Attachment A outlines a sample Inquiry Template that can be used to request this information. The template may be customized as deemed appropriate by the non-domiciliary state. Domiciliary states should respond in a timely manner to such requests.

Questions about operations and financial solvency that arise following initial registration should also be addressed to the domiciliary state.

If significant concerns still exist after communication with the domiciliary state and the non-domiciliary state concludes that the RRG is not compliant with any of the specific procedures set forth in the LRRA, the following steps may be undertaken:
   a. Refer to your own state RRG statute to ensure compliance of your prospective action;
   b. Provide written notice of any non-compliance directly to the RRG;
   c. Submit a demand for examination of the RRG to the domiciliary regulator, as provided by the LRRA [15 U.S.C. 53902(a)(1)(E)];
   d. Institute suit in a court of competent jurisdiction.

A non-domiciliary state may request the following from the domiciliary state and similarly, the domiciliary state should be prepared to provide the following to the non-domiciliary state:
   e. Insurer Profile Summary (IPS)
   f. Inquire about the extent of biographical affidavit review and results of background checks
   g. Most recent examination report (may be obtained from I-Site)
   h. Amendments to the RRG’s business plan or feasibility study
   i. Verification of domiciliary state approval to expand into non-domiciliary state

Alternatively, Attachment A – Inquiry Template may be used for this request with modifications as necessary.
Registration Timeline

The registration process for RRGs should be shorter than the licensing process for other types of insurers as the RRG is responsible only for a complete registration form and the related attachments. The non-domestic state cannot reject a complete registration that complies with state and federal laws. However, it is still necessary for the non-domiciliary state to review the registration form to ensure it is complete and demonstrates that the RRG complies with the LRRA. In addition, concerns can be raised with the domiciliary state, who has the authority to regulate the formation and operation of an RRG. The following guidelines take into consideration similar guidelines for ordinary insurance companies, and adherence is at the discretion of each state.

- A non-domiciliary state should review the registration form for completeness within 10 business days of its receipt of the form and notify the Risk Retention Group of the need to submit any missing elements.
- Following receipt of a complete application, a non-domiciliary state should notify the RRG within 30 days that its registration is confirmed.
- The domiciliary state should respond to inquiries from a non-domiciliary state in a prompt manner, typically no later than 10 business days after receiving the inquiry.

Domiciliary State Responsibilities

When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the Troubled Insurance Company Handbook). Although the domiciliary regulator is responsible for taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to them.

Plan of Operation/Feasibility Study

Domiciliary states should ensure the RRG’s plan of operation or feasibility study includes the following, at a minimum:

- information sufficient to verify that its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business, trade, product, services, premises or operations;
- information sufficient to verify that the liability insurance coverage to be provided by the Risk Retention Group will only cover the members of the Risk Retention Group;
- for each state in which it intends to operate, information regarding the liability insurance coverages, deductibles, coverage limits, rates and/or rating/underwriting methodology for each line of commercial liability insurance the group intends to offer;
- historical and expected loss experience of proposed members and national experience of similar exposures to the extent that this experience is reasonably available;
- appropriate opinions/feasibility work by a qualified independent casualty actuary, including a determination of minimum premium participation levels required to commence operation and to prevent a hazardous financial condition;
- pro forma financial statements and projections, including assumptions, on an expected and adverse basis;
- identification of Board of Directors, including independence determination;
- biographical affidavits for all BOD members;
- evidence of compliance with corporate governance standards, including draft policies;
- underwriting and claim procedures;
- marketing methods and materials if available;
- draft insurance policies;
- names of reinsurers and reinsurance agreements, if available;
- investment policies;
- identification of each state in which the RRG intends to write business/registry;
- identification of service providers, including fee structure and relationships to members; and
- subsequent material revisions to the plan of operation or feasibility study.

Commented [MB1]: Pamela Davis: Can you provide examples of state laws that might be used to deny the Registration of an RRG?

Commented [MB2]: VCI: Recommend revising to: "The non-domestic state cannot reject a complete registration that complies with those laws of the non-domestic state that are not pre-empted under the LRRA. In the event a non-domestic state has concerns with an RRG registration, such concerns should be raised with the domiciliary state regulator, who has the authority to regulate the formation and operation of an RRG."

Commented [MB3]: Pennsylvania: Depending on how "complete" is defined, a 10-day turnaround may not be reasonable.

Commented [MB4]: District of Columbia: Suggests adding "or application for licensing". With this change, also add "//Application" to the heading.

Commented [MB5]: Premier: Will listing this here prompt a non-domiciliary state to also ask for it when this is something handled by the domiciliary state? Limiting the distribution of confidential information (such as SSN#) can help ensure this information is not subject to a security breach and remains confidential.
Attachment A – Inquiry Template

The above-subject company has applied for Registration as a Risk Retention Group ("RRG") in the State of ______ to write __________ liability coverage to its members who are in the business of _______. As you can appreciate, due to the provisions of the Liability Risk Retention Act of 1986 the (state) has limited authority to regulate RRGs and therefore to a large extent, the (state) relies on the RRGs’ domiciliary state to exercise general oversight and responsibility in the areas of licensing, solvency, rates and marketing. As part of our due diligence, we would appreciate any information your office can share with us regarding the company with respect to the following items, some of which may be satisfied by providing the Insurer Profile Summary:

1. Any significant concerns the State of [domicile] has regarding the company.
2. Any issues that may have a significant impact on the company going forward.
3. Any issues regarding the number of consumer complaints the company has in [state of domicile] or other states that may have been brought to your attention.
4. Comments and/or concerns about the financial condition of the company.
5. Comments or concerns about the management or performance of the company.
6. Results of any financial analysis or market conduct findings.
7. The company’s priority level within the Financial Analysis Division.
8. Any conditions imposed by your Department upon the company’s license.
9. Any significant non-compliance issues with the State of [domicile] regulatory authority including filing requirements and corrective action, if any.
10. Comments regarding the company’s application for registration in the State of [state registering].
11. Approval from State of [domicile] for the RRG to register in the State of [state registering].
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

Appendix D

The following is the uniform registration form adopted in 1991 by the NAIC. This registration form is being filed by a Risk Retention Group (RRG) operating in accordance with the Federal Liability Risk Retention Act of 1986 (LLRA), 15 USC 3901-3906, chartered or licensed to write only liability insurance by the state of domicile listed in #1c. The registration form and supplemental documents are provided in accordance with §3902(d)(2) of the LLRA. Under §3902 of the LLRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those laws specified in the LLRA. The domiciliary state regulates the formation and operation of the RRG.

Part A

STATE OF [Insert State in which the Risk Retention Group intends to do business]
DEPARTMENT OF INSURANCE
RISK RETENTION GROUP - NOTICE AND REGISTRATION
(All Information Should Be Typed)

1a. Name of the Risk Retention Group as it appears on its Certificate of Authority:

1b. FEIN:

1c. State of domicile and date licensed/chartered:

1d. Primary contact person for state of domicile to whom questions regarding the Risk Retention Group should be addressed (include name, phone number and email address):

2. List any other name(s) by which the Risk Retention Group is known or may be doing business in this State or any other state:

Commented [MB1]: VCIA: Replace with "not exempted by §3902 of "

Commented [MB2]: VCIA: Suggests requesting the address and NAIC cociode of the RRG.

Commented [MB3]: Request feedback from the full Task Force on how this is used and if it is necessary.

Commented [MB4R3]: District of Columbia: DC does not routinely require or use this information from domestic RRGs as suggests deleting the requirement for the FEIN.

Commented [MB5R3]: VCIA: It may be more appropriate to request the organization’s FEIN here in Item 1 rather than requiring in Item 9 the FEIN of the manager.

Commented [MB6]: Pennsylvania: generally speaking, isn’t it likely that the date chartered and the date licensed are different dates.
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

3. The Risk Retention Group is chartered and licensed as a liability insurance company under the laws of the State of ______________________, and is authorized to engage in the following lines and/or classifications of liability insurance under the laws of its chartering State:

4. Give a general description of the liability insurance coverages the Risk Retention Group plans to write in the state it is registering to do business in:

5. Has the Risk Retention Group’s domiciliary state approved the Risk Retention Group to register and expand its writings in the state it is seeking to become registered in?

6. Ownership of the Risk Retention Group consists of one or the other of the following (check one):
   a) the owners of the Group are the only persons who comprise the membership of the Group and the only ones who are provided insurance by the Group.
   b) the sole owner of the Group is: ________________________________
      (Name and Address of Organization)

   an organization which has as its members only persons who comprise the membership of the Group and which has as its owners only persons who comprise the membership of the Group and who are provided insurance by the Group.

7. The Risk Retention Group members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations. Give a general description of businesses or activities engaged in by the Group’s members:

Commented [MB7]: Pamela Davis: How is “persons” defined for the purposes of this form. Since RRGs may only insure commercial insurance, does this word encompass both individual professionals and business entities?

Commented [MB8]: NRRA: Recommends revising as follows for consistency with LRRA:
   “the owners of the Group are only persons who comprise the membership of the Group and who are provided insurance by the Group.”

Commented [MB9]: VCIA: makes a similar comment as NRRA - with respect to members and insureds, we recommend that the language in the form be the same as in the LRRA because the language in the proposed form appears to be more restrictive than that in the LRRA.

Commented [MB10]: VCIA: We recommend Item 7 be deleted and a new Item 15 created as follows: “In accordance with the LRRA, and as evidenced by the domiciliary state’s action in approving licensure of the Risk Retention Group, the RRG affirms its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations.” *See explanation in comment letter.*
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

8. (a) List the name, **position with the Risk Retention Group, SSR**, and address of each officer and director of the Risk Retention Group: (Attach additional pages, if necessary.)

<table>
<thead>
<tr>
<th>Name</th>
<th>Telephone Number</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(b) Identify and give the telephone number of the officer or director of the Risk Retention Group who can be contacted for any information regarding the management of the insurance activities of the Group:

Name: __________________________ Telephone Number: __________________________

9. List the name, address (postal and email), telephone number and Federal Employer Identification Number (FEIN) of the company responsible for managing the insurance operations of the Risk Retention Group and the company contact person’s name and telephone number at the company. (If none, answer none.)

<table>
<thead>
<tr>
<th>Contact Person</th>
<th>Telephone #</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

11. **In accordance with the Liability Risk Retention Act, we verify the following:**

Commented [MB11]: District of Columbia: DC does not request the FEIN of the manager.

Commented [MB12]: VCIA: It may be more appropriate to request the organization’s FEIN above in Item 1 rather than here in Item 9 the FEIN of the manager.

Commented [MB13]: Pennsylvania: consider requesting an email address for the company contact person.

Commented [MB14]: Items a-d are not new, but were previously items 3,4,6 and 9 on the original form.
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

A. The Risk Retention Group is a corporation or other limited liability association whose primary activity consists of assuming and spreading all, or any portion, of the liability exposure of its members.

B. The Risk Retention Group is organized for the primary purpose of conducting the activity described under Item “A” above.

C. The Risk Retention Group does not exclude any person from membership in the Group solely to provide for members of the Group a competitive advantage over such a person.

D. The activities of the Risk Retention Group do not include the provision of insurance other than:
   i. liability insurance for assuming and spreading all or any portion of the similar or related liability exposure of its Group members; and
   ii. reinsurance with respect to the similar or related liability exposure of another Risk Retention Group (or a member of such other Risk Retention Group) engaged in business or activities so that such Risk Retention Group or member meets the requirement under Item #7 above for membership in the Risk Retention Group which provides such reinsurance.

12. In accordance with the LRRA, if the State in which the Risk Retention Group is registering requires compliance with the following laws and requirements, the RRG agrees to the following:

   A. The Risk Retention Group will comply with the unfair claim settlement practices laws of this State.

   B. The Risk Retention Group will pay, on a non-discriminatory basis, applicable premium and other taxes which are levied on admitted insurers, surplus line insurers, brokers or policyholders, such Group under the laws of this State.

   B.C. The Risk Retention Group will participate, on a nondiscriminatory basis, in any mechanism established or authorized under the law of the State for the equitable apportionment among insurers of liability insurance losses and expenses incurred on policies written through such mechanism.

   C.D. The Risk Retention Group will be designated the Insurance Commissioner [Director, Superintendent] of this State as its agent solely for the purpose of receiving service of legal documents or process by executing Part B of this form, attached hereto.

   D.E. The Risk Retention Group will submit to examination by the Insurance Commissioner [Director, Superintendent] of this State to determine the Group’s financial condition, if:

      i. the Insurance Commissioner [Director, Superintendent] of the Group’s chartering State has not begun or has refused to initiate an examination of the Group; and
      ii. any such examination by the Insurance Commissioner [Director, Superintendent] shall be coordinated to avoid unjustified duplication and unjustified repetition.

   E.F. The Risk Retention Group will comply with a lawful order issued in a delinquency proceeding commenced by the Insurance Commissioner [Director, Superintendent] of this
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

State upon a finding of financial impairment, or in a voluntary dissolution proceeding.

The Risk Retention Group will comply with the laws of this State concerning regarding deceptive, false or fraudulent acts or practices, including any injunctions regarding such conduct obtained from a court of competent jurisdiction.

The Risk Retention Group will comply with an injunction issued by a court of competent jurisdiction upon petition by the Insurance Commissioner [Director, Superintendent] of this State alleging that the Group is in hazardous financial condition or is financially impaired.

The Risk Retention Group will provide the following notice, in at least 10-point type, in any insurance policy issued by the Group:

NOTICE
This policy is issued by your risk retention group. Your risk retention group may not be subject to all of the insurance laws and regulations of your State. State insurance insolvency guaranty funds are not available for your risk retention group.

In accordance with the LRRA, the Risk Retention Group affirms that it has submitted to the Insurance Commissioner [Director, Superintendent] as part of this filing and before it has offered any insurance in this State, a copy of the plan of operation or feasibility study which it has filed with the Insurance Commissioner [Director, Superintendent] of its abating State of domicile. This plan or study includes the name of the State in which the Group is chartered, as well as the Group’s principal place of business, and such plan of operation or feasibility study further includes the coverages, deductibles, coverage limits, rates, and rating classification systems for each line of liability insurance the Group intends to offer. The Group has also promptly submitted to the Insurance Commissioner [Director, Superintendent] of this State any revisions of such plan of operation or feasibility study to reflect any changes to the plan if the Group intends to offer any additional lines of liability insurance or including any change in the designation of the State in which it is chartered.

The Risk Retention Group will submit a copy of its annual financial statement submitted to its chartering state, to the Insurance Commissioner [Director, Superintendent] of this State by March 1 of each year. The annual financial statement will be certified by an independent public accountant and include a statement of opinion on loss and loss adjustment expense reserves made by a member of the American Academy of Actuaries or a qualified loss reserve specialist. The annual financial statement, certification and statement of opinion on loss and loss adjustment expense reserves will be submitted to the Insurance Commissioner [Director, Superintendent] of this State by the date it is required to be submitted to its chartering state.

The Risk Retention Group will not solicit or sell insurance to any person in this State who is not eligible for membership in the Group.

The Risk Retention Group will not solicit or sell insurance in this State, or otherwise operate in this State, if the Group is in hazardous financial condition or is financially impaired.

The Risk Retention Group will not issue any insurance policy in this State which provides coverage prohibited generally by statute of this State or declared unlawful by the highest court of this State whose law applies to such policy.

The Risk Retention Group has submitted a registration fee of $________________, if applicable, payable to the Insurance Commissioner [Director, Superintendent] of this State.

To the extent required by the LRRA, the Risk Retention Group will comply with all other
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM
applicable state laws.

19. The Risk Retention Group will notify the Insurance Commissioner [Director, Superintendent] as to any subsequent changes in any of the items included in this form.

The undersigned hereby swear and affirm that the foregoing statements and information regarding their principal, the___________________________(Name of Risk Retention Group) are true and correct.

Commented [MB16]: Pamela Davis: Is the Insurance Commissioner in Item 19 the domicile or non-domicile Commissioner? If non-domicile, does that mean that an RRG must report every change in the board of directors to every non-domicile regulator? If so, how soon after the change?
PART B

APPOINTMENT OF ATTORNEY TO ACCEPT SERVICE AND DESIGNATION

The _______________ ("the Group"), a risk retention group which is chartered and licensed as a liability insurance company under the laws of the State of _______________, having notified the Insurance Commissioner [Director, Superintendent] of the State of _______________ of its intention to do business in this State as a risk retention group pursuant to the federal Liability Risk Retention Act of 1986, hereby appoints the Insurance Commissioner [Director, Superintendent] of the State of _______________, any successor in office, and any authorized deputy its true and lawful attorney, in and for the State of _______________, upon whom all legal documents or process in any proceeding against it may be served. Such service of legal documents or process shall be of the same legal force and validity as if served personally upon the Group.

The Group designates:

________________________________________
(Name)

________________________________________
(Address)

________________________________________
(City, Town or Village)

________________________________________
(State and ZIP Code)

as its officer, agent or other person to whom shall be forwarded all legal documents or process served upon the Insurance Commissioner [Director, Superintendent] of the State of _______________, any successors in office, or any authorized deputy, for the Group. This designation shall continue in full force and effect until superseded by a new written designation filed with the Insurance Commissioner [Director, Superintendent].
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

This appointment and designation is made pursuant to a resolution by the Group’s governing body authorizing it, and a certified copy of the resolution is attached hereto. This appointment shall be binding upon any person or corporation which as successor acquires the Group’s assets or assumes its liabilities, by merger or consolidation or otherwise.

This appointment may be withdrawn only upon a written notice of termination and, in any event, shall not be terminated by the Group or its successor so long as any contracts or liabilities or duties arising out of contracts entered into by the Group while it was doing business in this State are in effect.

IN WITNESS OF THIS APPOINTMENT AND DESIGNATION, the Group, in accordance with the resolution of its Board of Directors duly passed on _________________, 20__, has affixed its corporate seal, and caused the same to be subscribed and attested in its name by its President and Secretary, at the City of _________________ in the State of _________________ on _________________, 20__.

Risk Retention Groups: Frequently Asked Questions

1. What publications are available to help understand RRGs and state’s authority?
      The following key documents can be found as Appendices in the Handbook:
      • Appendix A: Federal Liability Risk Retention Act
      • Appendix B: NAIC Model Risk Retention Act (#705)
      • Appendix D: NAIC Uniform Risk Retention Group Registration Form
   b. Accreditation Program Manual
      • Part A: Laws and Regulations – 18 accreditation standards that outline the laws required specifically for states that charter RRGs
      • Part B: Regulatory Practices and Procedures - RRG specific procedures for financial analysis, credit for reinsurance for RRGs, and procedures when a disclaimer of affiliation is filed.

2. How does the LRRA address regulation of RRGs?
   a. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the formation and operation of an RRG, except as provided in the LRRA. Only the domiciliary state may regulate the formation and operation of an RRG.
   b. The implementation of the LRRA was intended to allow organizations to come together in the creation of a risk-bearing, risk-sharing entity (the RRG) to offer its members, who are the beneficiaries of the insurance provided, liability coverage in an expedient and economical manner.

3. How does RRG registration in a non-domiciliary state differ from the licensing process for a traditional insurer?
   a. There are no solvency requirements imposed by the non-domiciliary state upon an RRG seeking to register in the State. Regulation as to formation and operation, including the imposition of solvency requirements, are imposed by the domestic state.
   b. RRGs are subject to a substantially similar application and licensing process imposed by the domestic state, or state of domicile. For registration to conduct business in non-domestic states, RRGs are not subject to the standard application and licensing process (NAIC UCAA Instructions or NAIC Company Licensing Handbook).
   c. The registration process is intended to be simpler than the licensing process for other types of insurers. Registration is focused on information gathering rather than decision making. Registration is not the same as admission or company licensing; it is not intended to provide non-domiciliary states with any regulatory powers over RRGs other than that provided in the LRRA. It is not within a state’s authority to use the processing of a registration to bar RRGs seeking to lawfully operate in a state, nor can a state declare a “moratorium” on the filing of RRG registrations. Once an RRG provides a complete NAIC Uniform Risk Retention Group Registration Form, it is considered licensed in the non-domiciliary state.
Registration Form they may begin operating in the state and approval from the non-domestic state is not required. However, best practice is for the non-domiciliary state to notify the RRG following their initial review of the NAIC Uniform Risk Retention Group Registration Form that either the form received was complete, or that the form was missing information. The non-domiciliary state may also reach out to the domiciliary state for more information and is encouraged to do so. (see the Best Practices—Risk Retention Groups document)

d. The LRRA references two documents that must be provided to the non-domestic state – a plan of operation OR a feasibility study. There is also additional information such as contact information of the RRG, chartering state information, and the lines of liability insurance business that are written by the RRG seeking to register. All this information is provided in the completed NAIC Uniform Risk Retention Group Registration Form.

e. For an RRG that is compliant with the LRRA and the regulation of their domestic state (including authorization to register to do business in another state), the non-domestic state cannot deny the RRG’s registration. If there is uncertainty, the domestic state should be contacted.

4. What are the steps for the non-domiciliary insurance regulator to take in the registration process for an RRG?

a. Review the NAIC Uniform Risk Retention Group Registration Form and verify the RRG has provided a complete form.

b. Once a complete form is received, the RRG is authorized to write in the state where it registers. The following best practices may also be considered during the registration process; however, they do not impact the registration status of the RRG:

   a. Review the information provided with the registration form for reasonableness.

   b. Reach out to the domestic state insurance regulator for additional information or concerns. The best practices Inquiry Template can be used and modified as appropriate.

   c. Notify the RRG once the registration form is deemed complete. They are now registered in the state.

5. What should a non-domiciliary state do if they have concerns about a complete RRG registration form received?

a. If the RRG provided a complete form, but there are concerns about the lines of business or financial solvency, or some other matter, the non-domiciliary state should first communicate with the domestic state. If necessary, the non-domiciliary state should consider pursuing the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

6. When can a non-domiciliary state reject an RRG registration?

a. A non-domestic state cannot reject the registration of an RRG that submits a complete registration form. Instead the non-domestic state should communicate concerns to the domestic state or refer to the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.
7. Can an RRG registration be delayed if a financial statement filing and/or audit is not yet available at the time of application or registration?
   a. No, an RRG can register prior to filing of an annual financial statement audit and a statement of opinion on loss and loss adjustment expense reserves with its domiciliary state.
   b. Once these initial filings are made, they are available on I-Site for review.
   c. If questions arise due to lack of this information, the non-domiciliary state should reach out to the domestic state to address its concerns.

8. What items does the LRRA require an RRG provide to the non-domiciliary state in conjunction with the registration?
   a. It is recommended that states adopt the NAIC Uniform Risk Retention Group Registration Form, which has been developed by the NAIC in order to facilitate uniformity. Such forms are included in the Risk Retention and Purchasing Group Handbook.
   b. Consistent with LRRA, each RRG shall submit a copy of the plan of operation OR a feasibility study before it may offer insurance in the state.
      Note: If the RRG is newly formed, the feasibility study provides relevant information on rates and expected losses. If the RRG is expanding the states in which it operates and has been writing business for an extended period, the feasibility study becomes less relevant and a current business plan, along with documents a non-domiciliary state can easily obtain from the NAIC’s I-Site (Annual Statement(s), RBC Report(s), MD&A(s), Audited Financial Statement(s), Actuarial Certification(s)) provide pertinent information.
   c. If the plan of operation or feasibility study does not appear to be updated, a non-domiciliary state should contact the domiciliary state regulator to obtain more information, including the IPS, and may request revised documents from the RRG if original submission is found to be inaccurate or unclear.

9. What should be included in a plan of operation?
   a. The LRRA states that an RRG’s plan of operation or feasibility study includes information on liability insurance coverages, deductibles, coverage limits, rates, and rating classification systems for each line of insurance the group intends to offer.
   b. In addition, the Best Practices – Risk Retention Groups document offers a list of other suggested items for inclusion in a plan of operations or feasibility study.

10. What does the LRRA say about renewals for RRGs in non-domiciliary states?
   a. The LRRA is silent; therefore, initial registration is sufficient unless the operation of an RRG is affected by runoff, rehabilitation or liquidation processes. RRGs file changes in business plans, financial filings, etc. on an ongoing basis with non-domiciliary states; therefore, non-domiciliary states should consider developing a process for communicating with the domiciliary state (such as the example in the Best Practices—Risk Retention Groups document) and consider an annual request for Certificate of Good Standing/Compliance from the domiciliary state.
   b. Section 3902(d)(3) of the LRRA requires that an RRG submit to the insurance commissioner of each state in which it is doing business a copy of the annual financial statement that it files with
the RRG’s domiciliary state. Non-domiciliary states should be aware that in many states where RRGs are licensed/chartered as captive insurers in conformity with NAIC accreditation standards, RRGs are permitted to use Generally Accepted Accounting Principles rather than Statutory Accounting Principles to report on their financial conditions, with required disclosure and reconciliation in footnote one. (see also Section II, page 3 of the Risk Retention and Purchasing Group Handbook)

c. The filing is an ongoing requirement that must be complied with on an annual basis and is generally due to non-domiciliary states upon filing with the domiciliary state. The annual filing requirements for RRGs include an unaudited filing using the Official NAIC Annual Statement Blank (Property/Casualty), an audited financial statement shall be certified by an independent public accountant, and contain a statement of opinion on loss and loss adjustment expense reserves made by an actuary or loss reserve specialist who is qualified in accordance with the criteria established by the NAIC in the annual statement instructions. See the above-mentioned NAIC Accreditation Program Manual, Part A: Laws and Regulations for RRGs, for annual filing requirements for RRGs.

11. What does the LRRA say about taxes and fees charged by a non-domiciliary RRG?
   a. LRRA §3902(a)(1)(B) says any state may require an RRG to:
      a. Pay on a nondiscriminatory basis, applicable premium and other taxes, which are levied on admitted insurers and surplus lines insurers, brokers, or policyholders under the laws of the state.
      b. Fees are not directly addressed in the LRRA and as such, there has been disagreement about the legality of both initial and renewal registration fees and compliance with LRRA. The authority on this topic is therefore federal case law. Thus far, there is one case (Nat’l Risk Retention Assoc. v. Brown, 927 F. Supp. 195 (M.D. La. 1996)) in which the court ruled that certain state requirements, including the payment of an annual renewal registration fee, were preempted by the LRRA. See the Risk Retention and Purchasing Group Handbook for additional detail on the case and other fee considerations.

12. What remedies are available to a non-domiciliary state if violations of applicable State laws occur?
   a. Secure clarification from the RRG’s state of domicile;
   b. Call for an examination of the RRG by the state of domicile [15 U.S.C. §3902(a)(1)(E)];

13. Is there a list of domestic and non-domestic state contact persons in state insurance regulator offices who are knowledgeable about RRGs?
   a. Yes. Appendix C of the NAIC Risk Retention and Purchasing Group Handbook includes a list of state insurance department contact persons. The most recent list is maintained as a separate document on the NAIC’s publication webpage alongside a complete copy of the Risk Retention and Purchasing Group Handbook:
      https://www.naic.org/prod_serv_alpha_listing.htm#risk_retention
Best Practices – Risk Retention Groups

The domiciliary state maintains authority and has responsibility to regulate the formation and operation of a Risk Retention Group (RRG). Therefore, when concerns arise in a non-domiciliary state about a RRG, the best resource is the domiciliary state. This includes concerns about solvency and capital levels, financial condition, or other non-compliance of an RRG as well as operational questions and concerns that should be directed to the domiciliary state.

States are encouraged to examine their RRG laws to make certain that they are consistent with (1) the LRRA and (2) the NAIC Model Risk Retention Act.

Questions/Concerns from Non-domiciliary State

Upon initial registration of an RRG in a non-domiciliary state, it is not uncommon for questions to arise that are best directed to the domiciliary state. Attachment A outlines a sample Inquiry Template that can be used to request this information. The template may be customized as deemed appropriate by the non-domiciliary state. Domiciliary states should respond in a timely manner to such requests.

Questions about operations and financial solvency that arise following initial registration should also be addressed to the domiciliary state.

If significant concerns still exist after communication with the domiciliary state and the non-domiciliary state concludes that the RRG is not compliant with any of the specific procedures set forth in the LRRA, the following steps may be undertaken:

a. Refer to your own state RRG statute to ensure compliance of your prospective action;
b. Provide written notice of any non-compliance directly to the RRG;
c. Submit a demand for examination of the RRG to the domiciliary regulator, as provided by the LRRA [15 U.S.C. S3902(a)(1)(E)];
d. Institute suit in a court of competent jurisdiction.

A non-domiciliary state may request the following from the domiciliary state and similarly, the domiciliary state should be prepared to provide the following to the non-domiciliary state:

e. Insurer Profile Summary (IPS)
f. Inquire about the extent of biographical affidavit review and results of background checks
g. Most recent examination report (may be obtained from I-Site)
h. Amendments to the RRG’s business plan or feasibility study
i. Verification of domiciliary state approval to expand into non-domiciliary state

Alternatively, Attachment A – Inquiry Template may be used for this request with modifications as necessary.
Registration Timeline
The registration process for RRGs should be shorter than the licensing process for other types of insurers as the RRG is responsible only for a complete registration form and the related attachments. The non-domestic state cannot reject a complete registration that complies with state and federal laws. However, it is still necessary for the non-domiciliary state to review the registration form to ensure it is complete and demonstrates that the RRG complies with the LRRA. In addition, concerns can be raised with the domiciliary state, who has the authority to regulate the formation and operation of an RRG. The following guidelines take into consideration similar guidelines for ordinary insurance companies, and adherence is at the discretion of each state:

- A non-domiciliary state should review the registration form for completeness within 10 business days of its receipt of the form notify the Risk Retention Group of the need to submit any missing elements.
- Following receipt of a complete application, a non-domiciliary state should notify the RRG within 30 days that its registration is confirmed.
- The domiciliary state should respond to inquiries from a non-domiciliary state in a prompt manner, typically no later than 10 business days after receiving the inquiry.

Domiciliary State Responsibilities
When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the Troubled Insurance Company Handbook). Although the domiciliary regulator is responsible taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to the them.

Plan of Operation/Feasibility Study/Application
Domiciliary states should ensure the RRG’s plan of operation, feasibility study, or application for licensing includes the following, at a minimum:
- information sufficient to verify that its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business, trade, product, services, premises or operations;
- information sufficient to verify that the liability insurance coverage to be provided by the Risk Retention Group will only cover the members of the Risk Retention Group;
- for each state in which it intends to operate, information regarding the liability insurance coverages, deductibles, coverage limits, rates and/or rating/underwriting methodology for each line of commercial liability insurance the group intends to offer;
- historical and expected loss experience of proposed members and national experience of similar exposures to the extent that this experience is reasonably available;
- appropriate opinions/feasibility work by a qualified independent casualty actuary, including a determination of minimum premium participation levels required to commence operation and to prevent a hazardous financial condition;
- pro forma financial statements and projections, including assumptions, on an expected and adverse basis;
- identification of Board of Directors, including independence determination;
- biographical affidavits for all BOD members;
- evidence of compliance with corporate governance standards, including draft policies;
- underwriting and claim procedures;
- marketing methods and materials if available;
- draft insurance policies;
- names of reinsurers and reinsurance agreements, if available;
- investment policies;
- identification of each state in which the RRG intends to write business/register;
- identification of service providers, including fee structure and relationships to members/ and
- subsequent material revisions to the plan of operation or feasibility study.
Attachment A – Inquiry Template

The above-subject company has applied for Registration as a Risk Retention Group ("RRG") in the State of ________, to write __________ liability coverage to its members who are in the business of_______________________________. As you can appreciate, due to the provisions of the Liability Risk Retention Act of 1986 the (state) has limited authority to regulate RRGs and therefore to a large extent, the (state) relies on the RRGs’ domiciliary state to exercise general oversight and responsibility in the areas of licensing, solvency, rates and marketing. As part of our due diligence, we would appreciate any information your office can share with us regarding the company with respect to the following items, some of which may be satisfied by providing the Insurer Profile Summary:

1. Any significant concerns the State of [domicile] has regarding the company.

2. Any issues that may have a significant impact on the company going forward.

3. Any issues regarding the number of consumer complaints the company has in [state of domicile] or other states that may have been brought to your attention.

4. Comments and/or concerns about the financial condition of the company.

5. Comments or concerns about the management or performance of the company.

6. Results of any financial analysis or market conduct findings.

7. The company’s priority level within the Financial Analysis Division.

8. Any conditions imposed by your Department upon the company’s license.

9. Any significant non-compliance issues with the State of [domicile] regulatory authority including filing requirements and corrective action, if any.

10. Comments regarding company’s application for registration in the State of [state registering].

11. Approval from State of [domicile] for the RRG to register in the State of [state registering].
Appendix D

NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

The following is the uniform registration form adopted by the NAIC. This registration form is being filed by a Risk Retention Group (RRG) operating in accordance with the Federal Liability Risk Retention Act of 1986 (LRRA), 15 USC 3901-3906, chartered or licensed to write only liability insurance by the state of domicile listed in #1c. The registration form and supplemental documents are provided in accordance with §3902(d)(2) of the LRRA. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those laws specified in the LRRA. The domiciliary state regulates the formation and operation of the RRG.

Part A

STATE OF [Insert State in which the Risk Retention Group intends to do business]

DEPARTMENT OF INSURANCE

RISK RETENTION GROUP - NOTICE AND REGISTRATION

(All Information Should Be Typed)

1a. Name of the Risk Retention Group as it appears on its Certificate of Authority:

1b. FEIN:

1c. State of domicile and date licensed/chartered:

1d. Primary contact person for state of domicile to whom questions regarding the Risk Retention Group should be addressed (include name, phone number and email address):

2. List any other name(s) by which the Risk Retention Group is known or may be doing business in this State or any other state:

3. The Risk Retention Group is authorized to engage in the following lines and/or classifications of liability insurance under the laws of its chartering State:
4. Give a general description of the liability insurance coverages the Risk Retention Group plans to write in the state it is registering to do business in.

5. Has the Risk Retention Group’s domiciliary state approved the Risk Retention Group to register and expand its writings in the state it is seeking to become registered in?

6. Ownership of the Risk Retention Group consists of one or the other of the following (check one):
   a) ___ the owners of the Group are the only persons who comprise the membership of the Group and the only ones who are provided insurance by the Group.
   b) ___ the sole owner of the Group is: ________________________________
      (Name and Address of Organization)
      an organization which has as its members only persons who comprise the membership of the Group and which has as its owners only persons who comprise the membership of the Group and who are provided insurance by the Group.

7. The Risk Retention Group members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations. Give a general description of businesses or activities engaged in by the Group’s members:

8. (a) List the name, position with the Risk Retention Group, and address of each officer and director of the Risk Retention Group: (Attach additional pages, if necessary.)

   (b) Identify and give the telephone number of the officer or director of the Risk Retention Group who can be contacted for any information regarding the management of the insurance activities of the Group:
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

Name: __________________________ Telephone Number: __________________________

9. List the name, addresses (postal and email), telephone number and Federal Employer Identification Number (FEIN) of the company responsible for managing the insurance operations of the Risk Retention Group and the company contact person’s name and telephone number. (If none, answer none.)

Contact Person: _______________________ Telephone #: __________________________

10. List the name(s) NPR#, and address(es) of the licensed insurance agent(s) or broker(s) who will be responsible for marketing the Risk Retention Group’s insurance policies in the State of [Insert State in which the Risk Retention Group intends to do business] and the current licensing status in the State of [Insert State in which the Risk Retention Group intends to do business]: (If none, answer none. Attach additional pages, if necessary.)

11. In accordance with the Liability Risk Retention Act, we verify the following:

A. The Risk Retention Group is a corporation or other limited liability association whose primary activity consists of assuming and spreading all, or any portion, of the liability exposure of its members.

B. The Risk Retention Group is organized for the primary purpose of conducting the activity described under item “A” above.

C. The Risk Retention Group does not exclude any person from membership in the Group solely to provide for members of the Group a competitive advantage over such a person.

D. The activities of the Risk Retention Group do not include the provision of insurance other than:
   
i. liability insurance for assuming and spreading all or any portion of the similar or related liability exposure of its Group members; and
   
ii. reinsurance with respect to the similar or related liability exposure of another Risk Retention Group (or a member of such other Risk Retention Group) engaged in
12. In accordance with the LRRA, if the State in which the Risk Retention Group is registering requires compliance with the following laws and requirements, the RRG agrees to the following:

A. The Risk Retention Group will comply with the unfair claim settlement practices laws of this State.

B. The Risk Retention Group will pay, on a non-discriminatory basis, applicable premium and other taxes which are levied on admitted insurers, surplus line insurers, brokers or policyholders under the laws of this State.

C. The Risk Retention Group will participate, on a nondiscriminatory basis, in any mechanism established or authorized under the law of the State for the equitable apportionment among insurers of liability insurance losses and expenses incurred on policies written through such mechanism.

D. The Risk Retention Group will designate the Insurance Commissioner [Director, Superintendent] of this State as its agent solely for the purpose of receiving service of legal documents or process by executing Part B of this form, attached hereto.

E. The Risk Retention Group will submit to examination by the Insurance Commissioner [Director, Superintendent] of this State to determine the Group’s financial condition, if:

   i. the Insurance Commissioner [Director, Superintendent] of the Group’s chartering State has not begun or has refused to initiate an examination of the Group; and

   ii. any such examination by the Insurance Commissioner [Director, Superintendent] shall be coordinated to avoid unjustified duplication and unjustified repetition.

F. The Risk Retention Group will comply with a lawful order issued in a delinquency proceeding commenced by the Insurance Commissioner [Director, Superintendent] of this State upon a finding of financial impairment, or in a voluntary dissolution proceeding.

G. The Risk Retention Group will comply with the laws of this State regarding deceptive, false or fraudulent acts or practices, including any injunctions regarding such conduct obtained from a court of competent jurisdiction.

H. The Risk Retention Group will comply with an injunction issued by a court of competent jurisdiction upon petition by the Insurance Commissioner [Director, Superintendent] of this State alleging that the Group is in hazardous financial condition or is financially impaired.

I. The Risk Retention Group will provide the following notice, in at least 10-point type, in any insurance policy issued by the Group:

   NOTICE

   This policy is issued by your risk retention group. Your risk retention group may not be subject to all of the insurance laws and regulations of your State. State insurance insolvency guaranty funds are not available for your risk retention group.
13. In accordance with the LRRA, the Risk Retention Group affirms that it has submitted to the Insurance Commissioner [Director, Superintendent] as part of this filing and before it has offered any insurance in this State, a copy of the plan of operation or feasibility study which it has filed with the Insurance Commissioner [Director, Superintendent] of its state of domicile. This plan or study includes the name of the State in which the Group is chartered, as well as the Group’s principal place of business, and such plan of operation or feasibility study further includes the coverages, deductibles, coverage limits, rates, and rating classification systems for each line of liability insurance the Group intends to offer. The Group has also submitted to the Insurance Commissioner [Director, Superintendent] of this State any revisions of such plan of operation or feasibility study to reflect any changes if the Group intends to offer any additional lines of liability insurance or change in the designation of the State in which it is chartered.

14. The Risk Retention Group will submit a copy of its annual financial statement submitted to its chartering state, to the Insurance Commissioner [Director, Superintendent] of this State. The annual financial statement shall be certified by an independent public accountant and include a statement of opinion on loss and loss adjustment expense reserves made by a member of the American Academy of Actuaries or a qualified loss reserve specialist. The annual financial statement, certification and statement of opinion on loss and loss adjustment expense reserves will be submitted to the Insurance Commissioner [Director, Superintendent] of this State by the date it is required to be submitted to its chartering state.

15. The Risk Retention Group will not solicit or sell insurance to any person in this State who is not eligible for membership in the Group.

16. The Risk Retention Group will not solicit or sell insurance in this State, or otherwise operate in this State, if the Group is in a hazardous financial condition or is financially impaired.

17. The Risk Retention Group will not issue any insurance policy in this State which provides coverage prohibited generally by statute of this State or declared unlawful by the highest court of this State whose law applies to such policy.

18. To the extent required by the LRRA, the Risk Retention Group will comply with all other applicable state laws.

19. The Risk Retention Group will notify the Insurance Commissioner [Director, Superintendent] as to any subsequent changes in any of the items included in this form.

The undersigned hereby swear and affirm that the foregoing statements and information regarding their principal, the __________________________ (Name of Risk Retention Group) are true and correct.

NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

Part B

APPOINTMENT OF ATTORNEY TO ACCEPT SERVICE AND DESIGNATION

The ___________________________ ("the Group"), a risk retention group which is chartered and licensed as a liability insurance company under the laws of the State of ________________, having notified the Insurance Commissioner [Director, Superintendent] of the State of ________________ of its intention to do business in this State as a risk retention group pursuant to the federal Liability Risk Retention Act of 1986, hereby appoints the Insurance Commissioner [Director, Superintendent] of the State of ________________, any successor in office, and any authorized deputy its true and lawful attorney, in and for the State of ________________, upon whom all legal documents or process in any proceeding against it may be served. Such service of legal documents or process shall be of the same legal force and validity as if served personally upon the Group.

The Group designates:

______________________________
(Name)

______________________________
(Address)

______________________________
(City, Town or Village)

______________________________
(State and ZIP Code)

as its officer, agent or other person to whom shall be forwarded all legal documents or process served upon the Insurance Commissioner [Director, Superintendent] of the State of ________________, any successors in office, or any authorized deputy, for the Group. This designation shall continue in full force and effect until superseded by a new written designation filed with the Insurance Commissioner [Director, Superintendent].
This appointment and designation is made pursuant to a resolution by the Group’s governing body authorizing it, and a certified copy of the resolution is attached hereto. This appointment shall be binding upon any person or corporation which as successor acquires the Group’s assets or assumes its liabilities, by merger or consolidation or otherwise.

This appointment may be withdrawn only upon a written notice of termination and, in any event, shall not be terminated by the Group or its successor so long as any contracts or liabilities or duties arising out of contracts entered into by the Group while it was doing business in this State are in effect.

IN WITNESS OF THIS APPOINTMENT AND DESIGNATION, the Group, in accordance with the resolution of its Board of Directors duly passed on ____________, 20__, has affixed its corporate seal, and caused the same to be subscribed and attested in its name by its President and Secretary, at the City of ____________ in the State of ____________on ______________, 20__.

NAIC Uniform Risk Retention Group – Notice and Registration form

Item 1c. – generally speaking, isn’t it likely that the date chartered and date licensed are different dates.

Item 8. – typo “Rroup”

Item 9. – consider requesting an email address for the company contact person

Risk Retention Groups: Frequently Asked Questions

General observation - “Complete” is used but not defined throughout the document. Several examples follow:

3.c. Once an RRG provides a complete NAIC Uniform Risk Retention Group Registration Form they may begin operating in the state and approval from the non-domestic state is not required.

4.a. Review the NAIC Uniform Risk Retention Group Registration Form and verify the RRG has provided a complete form.

6.a. A non-domestic state cannot reject the registration of an RRG that submits a complete registration form.

There is a difference between (1) a registration form in which all questions are answered and attachments are provided; and, (2) a registration form in which all questions are answered and attachments are provided with responses/documents demonstrating compliance with state and federal laws.

Considering the interpretation of the LRRA that an RRG can commence business in the state once a “complete” registration is filed, consider adding some definition or discussion around what a “complete” registration form is.

FAQ 4.b.a. – consider changing “for reasonableness” to “to verify that the RRG is qualified under the definition of Risk Retention Group.”

Best Practices – Risk Retention Groups

Registration Timeline – depending upon how “complete” is defined, a 10-day turnaround may not be reasonable.

Domiciliary State Responsibilities – Second sentence clean-up to read as:

Although the domiciliary regulator is responsible for taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to the them.
Attachment A – Inquiry Template – revisions to 5, 6 and 10 as follows:

Item 5 – Comments and/or concerns about the management or performance of the company.

Item 6 – Results of any financial analysis and/or market conduct findings.

Item 10 – Comments regarding the company’s application for registration in the State of [state registering].

Becky Meyer, CPA
Senior Accreditation Manager
National Association of Insurance Commissioners
1100 Walnut, Suite 1500
Kansas City, MO 64106

Re: Risk Retention Group (E) Task Force
Ongoing Support of NAIC Programs, Products or Services

Dear Ms. Meyer:

Attached are the comments of the National Risk Retention Association (NRRA) in redline format.

Our only comment on the Best Practices document is grammatical so that the sentence would read properly.

For the FAQ document, we only added the *ALAS v. Fitzgerald* case and a cite to the NAIC RRG Handbook where both *NRRA v. Brown* and the *ALAS v. Fitzgerald* cases are discussed.

We recommend one change for the Notice and Registration document. The current version of Item 6(a) deviates from the language in the LRRA, 15 USC § 3901 (a)(4)(E)(i). In order to be consistent, 6(a) should be:

_____ the owners of the Group are only persons who comprise the membership of
the Group and who are provided Insurance by the Group.

The drafting committee has done an excellent job of conforming the Notice and Registration document to the LRRA, *e.g.*, in Items 11 and 12, which is important to avoid a conflict between state and federal law. To avoid any confusion, we believe Item 6(a) should be conformed as noted above.
Becky Meyer, CPA

The NRRA very much appreciates the opportunity to comment on the work of the Risk Retention Group Task Force.

Very truly yours,

[Signature]
Joseph E. Deems
Executive Director
National Risk Retention Association

rjm
Risk Retention Groups: Frequently Asked Questions

1. What publications are available to help understand RRGs and state’s authority?
   a. NAIC Risk Retention and Purchasing Group Handbook is available from the NAIC publications webpage at https://www.naic.org/documents/prod_serv_legal_ris_bb.pdf. The following key documents can be found as Appendices in the Handbook:
      • Appendix A: Federal Liability Risk Retention Act
      • Appendix B: NAIC Model Risk Retention Act (#705)
      • Appendix D: NAIC Uniform Risk Retention Group Registration Form
   b. Accreditation Program Manual
      • Part A: Laws and Regulations – 18 accreditation standards that outline the laws required specifically for states that charter RRGs
      • Part B: Regulatory Practices and Procedures - RRG specific procedures for financial analysis and procedures when a disclaimer of affiliation is filed

2. How does the LRRA address regulation of RRGs?
   a. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the formation and operation of an RRG, except as provided in the LRRA. Only the domiciliary state may regulate the formation and operation of an RRG.
   b. The implementation of the LRRA was intended to allow organizations to come together in the creation of a risk-bearing, risk-sharing entity (the RRG) to offer its members, who are the beneficiaries of the insurance provided, liability coverage in an expedient and economical manner.

3. How does RRG registration in a non-domiciliary state differ from the licensing process for a traditional insurer?
   a. There are no solvency requirements imposed by the non-domiciliary state upon an RRG seeking to register in the State. Regulation as to formation and operation, including the imposition of solvency requirements, are imposed by the domestic state.
   b. RRGs are subject to a substantially similar application and licensing process imposed by the domestic state, or state of domicile. For registration to conduct business in non-domestic states, RRGs are not subject to the standard application and licensing process (NAIC UCAA Instructions or NAIC Company Licensing Handbook).
   c. The registration process is intended to be simpler than the licensing process for other types of insurers. Registration is focused on information gathering rather than decision making. Registration is not the same as admission or company licensing; it is not intended to provide non-domiciliary states with any regulatory powers over RRGs other than that provided in the LRRA. It is not within a state’s authority to use the processing of a registration to bar RRGs seeking to lawfully operate in a state, nor can a state declare a “moratorium” on the filing of RRG registrations. Once an RRG provides a complete NAIC Uniform Risk Retention Group
Registration Form they may begin operating in the state and approval from the non-domestic state is not required. However, best practice is for the non-domiciliary state to notify the RRG following their initial review of the NAIC Uniform Risk Retention Group Registration Form that either the form received was complete, or that the form was missing information. The non-domiciliary state may also reach out to the domiciliary state for more information and is encouraged to do so. (see the Best Practices—Risk Retention Groups document)

d. The LRRA references two documents that must be provided to the non-domestic state – a plan of operation OR a feasibility study. There is also additional information such as contact information of the RRG, chartering state information, and the lines of liability insurance business that are written by the RRG seeking to register. All this information is provided in the completed NAIC Uniform Risk Retention Group Registration Form.
e. For an RRG that is compliant with the LRRA and the regulation of their domestic state (including authorization to register to do business in another state), the non-domestic state cannot deny the RRG’s registration. If there is uncertainty, the domestic state should be contacted.

4. What are the steps for the non-domiciliary insurance regulator to take in the registration process for an RRG?
   a. Review the NAIC Uniform Risk Retention Group Registration Form and verify the RRG has provided a complete form.
   b. Once a complete form is received, the RRG is authorized to write in the state where it registers. The following best practices may also be considered during the registration process; however, they do not impact the registration status of the RRG:
      a. Review the information provided with the registration form for reasonableness.
      b. Reach out to the domestic state insurance regulator for additional information or concerns. The best practices Inquiry Template can be used and modified as appropriate.
      c. Notify the RRG once the registration form is deemed complete. They are now registered in the state.

5. What should a non-domiciliary state do if they have concerns about a complete RRG registration form received?
   a. If the RRG provided a complete form, but there are concerns about the lines of business or financial solvency, or some other matter, the non-domiciliary state should first communicate with the domestic state. If necessary, the non-domiciliary state should consider pursuing the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

6. When can a non-domiciliary state reject an RRG registration?
   a. A non-domestic state cannot reject the registration of an RRG that submits a complete registration form. Instead the non-domestic state should communicate concerns to the domestic state or refer to the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.
7. Can an RRG registration be delayed if a financial statement filing and/or audit is not yet available at the time of application or registration?
   a. No, an RRG can register prior to filing of an annual financial statement audit and a statement of opinion on loss and loss adjustment expense reserves with its domiciliary state.
   b. Once these initial filings are made, they are available on I-Site for review.
   c. If questions arise due to lack of this information, the non-domiciliary state should reach out to the domestic state to address its concerns.

8. What items does the LRRA require an RRG provide to the non-domiciliary state in conjunction with the registration?
   a. It is recommended that states adopt the NAIC Uniform Risk Retention Group Registration Form, which has been developed by the NAIC in order to facilitate uniformity. Such forms are included in the Risk Retention and Purchasing Group Handbook.
   b. Consistent with LRRA, each RRG shall submit a copy of the plan of operation or a feasibility study before it may offer insurance in the state.
      Note: If the RRG is newly formed, the feasibility study provides relevant information on rates and expected losses. If the RRG is expanding the states in which it operates and has been writing business for an extended period, the feasibility study becomes less relevant and a current business plan, along with documents a non-domiciliary state can easily obtain from the NAIC’s I-Site (Annual Statement(s), RBC Report(s), MD&A(s), Audited Financial Statement(s), Actuarial Certification(s)) provide pertinent information.
   c. If the plan of operation or feasibility study does not appear to be updated, a non-domiciliary state should contact the domiciliary state regulator to obtain more information, including the IPS, and may request revised documents from the RRG if original submission is found to be inaccurate or unclear.

9. What should be included in a plan of operation?
   a. The LRRA states that an RRG’s plan of operation or feasibility study includes information on liability insurance coverages, deductibles, coverage limits, rates, and rating classification systems for each line of insurance the group intends to offer.
   b. In addition, the Best Practices – Risk Retention Groups document offers a list of other suggested items for inclusion in a plan of operations or feasibility study.

10. What does the LRRA say about renewals for RRGs in non-domiciliary states?
    a. The LRRA is silent; therefore, initial registration is sufficient unless the operation of an RRG is affected by runoff, rehabilitation or liquidation processes. RRGs file changes in business plans, financial filings, etc. on an ongoing basis with non-domiciliary states; therefore, non-domiciliary states should consider developing a process for communicating with the domiciliary state (such as the example in the Best Practices—Risk Retention Groups document) and consider an annual request for Certificate of Good Standing/Compliance from the domiciliary state.
b. Section 3902(d)(3) of the LRRA requires that an RRG submit to the insurance commissioner of each state in which it is doing business a copy of the annual financial statement that it files with the RRG’s domiciliary state. Non-domiciliary states should be aware that in many states where RRGs are licensed/chartered as captive insurers in conformity with NAIC accreditation standards, RRGs are permitted to use Generally Accepted Accounting Principles rather than Statutory Accounting Principles to report on their financial conditions, with required disclosure and reconciliation in footnote one. (see also Section II, page 3 of the Risk Retention and Purchasing Group Handbook)

c. The filing is an ongoing requirement that must be complied with on an annual basis and is generally due to non-domiciliary states upon filing with the domiciliary state. The annual financial statement shall be certified by an independent public accountant and contain a statement of opinion on loss and loss adjustment expense reserves made by an actuary or loss reserve specialist who is qualified in accordance with the criteria established by the NAIC in the annual statement instructions.

11. What does the LRRA say about taxes and fees charged by a non-domiciliary RRG?
   a. LRRA S3902(a)(1)(B) says any state may require an RRG to:
      a. Pay on a nondiscriminatory basis, applicable premium and other taxes, which are levied on admitted insurers and surplus lines insurers, brokers, or policyholders under the laws of the state.
   b. Fees are not directly addressed in the LRRA and as such, there has been disagreement about the legality of both initial and renewal registration fees and compliance with LRRA. The authority on this topic is therefore federal case law. Thus far, there is one case are two cases (Nat’l Risk Retention Assoc. v. Brown, 927 F. Supp. 195 (M.D. La. 1996) and Attorney’s Liab. Assurance Society, Inc. v. Fitzgerald, 174 F. Supp. 2d 619 (W.D. Mich. 2001) in which the court ruled that certain state requirements, including the payment of an annual renewal registration fee, were preempted by the LRRA. See the Risk Retention and Purchasing Group Handbook [II-5, 6, 7] for additional detail on the case and other fee considerations.

12. What remedies are available to a non-domiciliary state if violations of applicable State laws occur?
   a. Secure clarification from the RRG’s state of domicile;
   b. Call for an examination of the RRG by the state of domicile [15 U.S.C. §3902(a)(1)(E)];

13. Is there a list of domestic and non-domestic state contact persons in state insurance regulator offices who are knowledgeable about RRGs?
   a. Yes. Appendix C of the NAIC Risk Retention and Purchasing Group Handbook includes a list of state insurance department contact persons. The most recent list is maintained as a separate document on the NAIC’s publication webpage alongside a complete copy of the Risk Retention and Purchasing Group Handbook.
The domiciliary state maintains authority and has responsibility to regulate the formation and operation of a Risk Retention Group (RRG). Therefore, when concerns arise in a non-domiciliary state about a RRG, the best resource is the domiciliary state. This includes concerns about solvency and capital levels, financial condition, or other non-compliance of an RRG as well as operational questions and concerns that should be directed to the domiciliary state.

States are encouraged to examine their RRG laws to make certain that they are consistent with (1) the LRRA and (2) the NAIC Model Risk Retention Act.

**Questions/Concerns from Non-domiciliary State**

Upon initial registration of an RRG in a non-domiciliary state, it is not uncommon for questions to arise that are best directed to the domiciliary state. *Attachment A* outlines a sample Inquiry Template that can be used to request this information. The template may be customized as deemed appropriate by the non-domiciliary state. Domiciliary states should respond in a timely manner to such requests.

Questions about operations and financial solvency that arise following initial registration should also be addressed to the domiciliary state.

If significant concerns still exist after communication with the domiciliary state and the non-domiciliary state concludes that the RRG is not compliant with any of the specific procedures set forth in the LRRA, the following steps may be undertaken:

a. Refer to your own state RRG statute to ensure compliance of your prospective action;
b. Provide written notice of any non-compliance directly to the RRG;
c. Submit a demand for examination of the RRG to the domiciliary regulator, as provided by the LRRA [15 U.S.C. S3902(a)(1)(E)];
d. Institute suit in a court of competent jurisdiction.

A non-domiciliary state may request the following from the domiciliary state and similarly, the domiciliary state should be prepared to provide the following to the non-domiciliary state:

e. Insurer Profile Summary (IPS)
f. Inquire about the extent of biographical affidavit review and results of background checks
g. Most recent examination report (may be obtained from I-Site)
h. Amendments to the RRG’s business plan or feasibility study
i. Verification of domiciliary state approval to expand into non-domiciliary state

Alternatively, *Attachment A – Inquiry Template* may be used for this request with modifications as necessary.
Registration Timeline
The registration process for RRGs should be shorter than the licensing process for other types of insurers as the RRG is responsible only for a complete registration form and the related attachments. The non-domiciliary state cannot reject a complete registration that complies with state and federal laws. However, it is still necessary for the non-domiciliary state to review the registration form to ensure it is complete and demonstrates that the RRG complies with the LRRA. In addition, concerns can be raised with the domiciliary state, who has the authority to regulate the formation and operation of an RRG. The following guidelines take into consideration similar guidelines for ordinary insurance companies, and adherence is at the discretion of each state.

- A non-domiciliary state should review the registration form for completeness within 10 business days of its receipt of the form and notify the Risk Retention Group of the need to submit any missing elements.
- Following receipt of a complete application, a non-domiciliary state should notify the RRG within 30 days that its registration is confirmed.
- The domiciliary state should respond to inquiries from a non-domiciliary state in a prompt manner, typically no later than 10 business days after receiving the inquiry.

Domiciliary State Responsibilities
When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the Troubled Insurance Company Handbook). Although the domiciliary regulator is responsible taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to them.

Plan of Operation/Feasibility Study
Domiciliary states should ensure the RRG’s plan of operation or feasibility study includes the following, at a minimum:
- information sufficient to verify that its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business, trade, product, services, premises or operations;
- information sufficient to verify that the liability insurance coverage to be provided by the Risk Retention Group will only cover the members of the Risk Retention Group;
- for each state in which it intends to operate, information regarding the liability insurance coverages, deductibles, coverage limits, rates and/or rating/underwriting methodology for each line of commercial liability insurance the group intends to offer;
- historical and expected loss experience of proposed members and national experience of similar exposures to the extent that this experience is reasonably available;
- appropriate opinions/feasibility work by a qualified independent casualty actuary, including a determination of minimum premium participation levels required to commence operation and to prevent a hazardous financial condition;
- pro forma financial statements and projections, including assumptions, on an expected and adverse basis;
- identification of Board of Directors, including independence determination;
- biographical affidavits for all BOD members;
- evidence of compliance with corporate governance standards, including draft policies;
- underwriting and claim procedures;
- marketing methods and materials if available;
- draft insurance policies;
- names of reinsurers and reinsurance agreements, if available;
- investment policies;
- identification of each state in which the RRG intends to write business/register;
- identification of service providers, including fee structure and relationships to members; and
- subsequent material revisions to the plan of operation or feasibility study.
Attachment A – Inquiry Template

The above-subject company has applied for Registration as a Risk Retention Group ("RRG") in the State of _______ to write _________ liability coverage to its members who are in the business of_____________________________. As you can appreciate, due to the provisions of the Liability Risk Retention Act of 1986 the (state) has limited authority to regulate RRGs and therefore to a large extent, the (state) relies on the RRGs’ domiciliary state to exercise general oversight and responsibility in the areas of licensing, solvency, rates and marketing. As part of our due diligence, we would appreciate any information your office can share with us regarding the company with respect to the following items, some of which may be satisfied by providing the Insurer Profile Summary:

1. Any significant concerns the State of [domicile] has regarding the company.
2. Any issues that may have a significant impact on the company going forward.
3. Any issues regarding the number of consumer complaints the company has in [state of domicile] or other states that may have been brought to your attention.
4. Comments and/or concerns about the financial condition of the company.
5. Comments or concerns about the management or performance of the company.
6. Results of any financial analysis or market conduct findings.
7. The company’s priority level within the Financial Analysis Division.
8. Any conditions imposed by your Department upon the company’s license.
9. Any significant non-compliance issues with the State of [domicile] regulatory authority including filing requirements and corrective action, if any.
10. Comments regarding company’s application for registration in the State of [state registering].
11. Approval from State of [domicile] for the RRG to register in the State of [state registering].
RISK RETENTION GROUP FORM

Appendix D

The following is the uniform registration form adopted in 1991 by the NAIC. This registration form is being filed by a Risk Retention Group (RRG) operating in accordance with the Federal Liability Risk Retention Act of 1986 (LRRA), 15 USC 3901-3906, chartered of licensed to write only liability insurance by the state of domicile listed in #1c. The registration form and supplemental documents are provided in accordance with §3902(d)(2) of the LRRA. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those laws specified in the LRRA. The domiciliary state regulates the formation and operation of the RRG.

Part A

STATE OF [Insert State in which the Risk Retention Group intends to do business]

DEPARTMENT OF INSURANCE

RISK RETENTION GROUP - NOTICE AND REGISTRATION

(All Information Should Be Typed)

1a. Name of the Risk Retention Group as it appears on its Certificate of Authority:

1b. FEIN:

1c. State of domicile and date license/chartered:

1d. Primary contact person for state of domicile to whom questions regarding the Risk Retention Group should be addressed (include name, phone number and email address):

2. List any other name(s) by which the Risk Retention Group is known or may be doing business in this State or any other state:

3. The Risk Retention Group is chartered and licensed as a liability insurance company under the laws of the State of ____________ and is authorized to engage in the following lines and/or classifications of liability insurance under the laws of its chartering State:

Commented (Meyer, Becky): Request feedback from the full Task Force on how this is used and if it is necessary.
RISK RETENTION GROUP FORM

4. Give a general description of the liability insurance coverages the Risk Retention Group plans to write in the state it is registering to do business in.

5. Has the Risk Retention Group’s domiciliary state approved the Risk Retention Group to register and expand its writings in the state it is seeking to become registered in?

6. Ownership of the Risk Retention Group consists of one or the other of the following (check one):
   a) ______ the owners of the Group are the only persons who comprise the membership of the Group and the only ones who are provided insurance by the Group.
   b) ______ the sole owner of the Group is: ________________________________

   (Name and Address of Organization)

   an organization which has as its members only persons who comprise the membership of the Group and which has as its owners only persons who comprise the membership of the Group and who are provided insurance by the Group.

7. The Risk Retention Group members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations. Give a general description of businesses or activities engaged in by the Group’s members.

8. (a) List the name, position with the Risk Retention Group, SSI, and address of each officer and director of the Risk Retention Group: (Attach additional pages, if necessary.)
RISK RETENTION GROUP FORM

(b) Identify and give the telephone number of the officer or director of the Risk Retention Group who can be contacted for any information regarding the management of the insurance activities of the Group:

Name: __________________________ Telephone Number: __________________________

9. List the name, address(es), postal and email, telephone number and Federal Employer Identification Number (FEIN) of the company responsible for managing the insurance operations of the Risk Retention Group and the contact person’s name and telephone number at the company: (If none, answer none.)

Contact Person: __________________________ Telephone #: __________________________

10. List the name(s), NPR#, SS# and address(es) of the licensed insurance agent(s) or broker(s) who will be responsible for marketing the Risk Retention Group’s insurance policies in the State of [Insert State in which the Risk Retention Group intends to do business] and the current licensing status in the State of [Insert State in which the Risk Retention Group intends to do business] in which they are licensed: (If none, answer none. Attach additional pages, if necessary.)

11. In accordance with the Liability Risk Retention Act, we verify the following:

A. The Risk Retention Group is a corporation or other limited liability association whose primary activity consists of assuming and spreading all, or any portion, of the liability exposure of its members.

B. The Risk Retention Group is organized for the primary purpose of conducting the activity described under Item “A” above.

C. The Risk Retention Group does not exclude any person from membership in the Group solely to provide for members of the Group a competitive advantage over such a person.

D. The activities of the Risk Retention Group do not include the provision of insurance other than:
RISK RETENTION GROUP FORM

i. Liability insurance for assuming and spreading all or any portion of the similar or related liability exposure of its Group members; and

ii. Reinsurance with respect to the similar or related liability exposure of another Risk Retention Group (or a member of such other Risk Retention Group) engaged in business or activities so that such Risk Retention Group or member meets the requirement under Item #7 above for membership in the Risk Retention Group which provides such reinsurance.

12. In accordance with the LRRA, if the State in which the Risk Retention Group is registering requires compliance with the following laws and requirements, the RRG agrees to the following:

A. The Risk Retention Group will comply with the unfair claim settlement practices laws of this State.

B. The Risk Retention Group will pay, on a non-discriminatory basis, applicable premium and other taxes which are levied on admitted insurers, surplus line insurers, brokers or policyholders, each Group under the laws of this State.

H-C. The Risk Retention Group will participate, on a nondiscriminatory basis, in any mechanism established or authorized under the law of the State for the equitable apportionment among insurers of liability insurance losses and expenses incurred on policies written through such mechanism.

G-D. The Risk Retention Group will designate the Insurance Commissioner [Director, Superintendent] of this State as its agent solely for the purpose of receiving service of legal documents or process by executing Part B of this form, attached hereto.

D-E. The Risk Retention Group will submit to examination by the Insurance Commissioner [Director, Superintendent] of this State to determine the Group’s financial condition, if:

i. the Insurance Commissioner [Director, Superintendent] of the Group’s chartering State has not begun or has refused to initiate an examination of the Group; and

ii. any such examination by the Insurance Commissioner [Director, Superintendent] shall be coordinated to avoid unjustified duplication and unjustified repetition.

E-F. The Risk Retention Group will comply with a lawful order issued in a delinquency proceeding commenced by the Insurance Commissioner [Director, Superintendent] of this State upon a finding of financial impairment, or in a voluntary dissolution proceeding.

E-G. The Risk Retention Group will comply with the laws of this State concerning deceptive, false or fraudulent acts or practices, including any injunctions regarding such conduct obtained from a court of competent jurisdiction.

G-H. The Risk Retention Group will comply with an injunction issued by a court of competent jurisdiction upon petition by the Insurance Commissioner [Director, Superintendent] of this State alleging that the Group is in hazardous financial condition or is financially impaired.

H-I. The Risk Retention Group will provide the following notice, in at least 10-point type, in any insurance policy issued by the Group:
RISK RETENTION GROUP FORM

NOTICE

This policy is issued by your risk retention group. Your risk retention group may not be subject to all of the insurance laws and regulations of your State. State insurance insolvency guaranty funds are not available for your risk retention group.

12.13. In accordance with the LRRA, the Risk Retention Group affirms that it has submitted to the Insurance Commissioner [Director, Superintendent] as part of this filing and before it has offered any insurance in this State, a copy of the plan of operation or feasibility study which it has filed with the Insurance Commissioner [Director, Superintendent] of its chartered State of domicile. This plan or study includes the name of the State in which the Group is chartered, as well as the Group's principal place of business, and such plan of operation or feasibility study further includes the coverages, deductibles, coverage limits, rates, and rating classification systems for each line of liability insurance the Group intends to offer. The Group has also submitted to the Insurance Commissioner [Director, Superintendent] of this State any revisions of such plan of operation or feasibility study to reflect any changes to the plan if the Group intends to offer any additional lines of liability insurance or including any change in the designation of the State in which it is chartered.

12.14. The Risk Retention Group will submit a copy of its annual financial statement submitted to its chartering state, to the Insurance Commissioner [Director, Superintendent] of this State by March 1 of each year. The annual financial statement will be certified by an independent public accountant and include a statement of opinion on loss and loss adjustment expense reserves made by a member of the American Academy of Actuaries or a qualified loss reserve specialist. The annual financial statement certification and statement of opinion on loss and loss adjustment expense reserves will be submitted to the Insurance Commissioner [Director, Superintendent] of this State by the date it is required to be submitted to its chartering state.

14.15. The Risk Retention Group will not solicit or sell insurance to any person in this State who is not eligible for membership in the Group.

14.16. The Risk Retention Group will not solicit or sell insurance in this State, or otherwise operate in this State, if the Group is in hazardous financial condition or is financially impaired.

14.17. The Risk Retention Group will not issue any insurance policy in this State which provides coverage prohibited generally by statute of this State or declared unlawful by the highest court of this State whose law applies to such policy.

17. The Risk Retention Group has submitted a registration fee of $__________ if applicable, payable to the Insurance Commissioner [Director, Superintendent] of this State.

18. To the extent required by the LRRA, the Risk Retention Group will comply with all other applicable state laws.

19. The Risk Retention Group will notify the Insurance Commissioner [Director, Superintendent] as to any subsequent changes in any of the items included in this form.

The undersigned hereby swear and affirm that the foregoing statements and information regarding their principal, ________________ (Name of Risk Retention Group) are true and correct.

RISK RETENTION GROUP FORM

Part B

APPOINTMENT OF ATTORNEY TO ACCEPT SERVICE AND DESIGNATION

The ________________ (“the Group”), a risk retention group which is chartered and licensed as a liability insurance company under the laws of the State of ________________, having notified the Insurance Commissioner [Director, Superintendent] of the State of ________________ of its intention to do business in this State as a risk retention group pursuant to the federal Liability Risk Retention Act of 1986, hereby appoints the Insurance Commissioner [Director, Superintendent] of the State of ________________, any successor in office, and any authorized deputy its true and lawful attorney, in and for the State of ________________, upon whom all legal documents or process in any proceeding against it may be served. Such service of legal documents or process shall be of the same legal force and validity as if served personally upon the Group.

The Group designates:

________________________________________
(Name)

________________________________________
(Address)

________________________________________
(City, Town or Village)

________________________________________
(State and ZIP Code)

as its officer, agent or other person to whom shall be forwarded all legal documents or process served upon the Insurance Commissioner [Director, Superintendent] of the State of ________________, any successors in office, or any authorized deputy, for the Group. This designation shall continue in full force and effect until superseded by a new written designation filed with the Insurance Commissioner [Director, Superintendent].
RISK RETENTION GROUP FORM

This appointment and designation is made pursuant to a resolution by the Group’s governing body authorizing it, and a certified copy of the resolution is attached hereto. This appointment shall be binding upon any person or corporation which as successor acquires the Group’s assets or assumes its liabilities, by merger or consolidation or otherwise.

This appointment may be withdrawn only upon a written notice of termination and, in any event, shall not be terminated by the Group or its successor so long as any contracts or liabilities or duties arising out of contracts entered into by the Group while it was doing business in this State are in effect.

IN WITNESS OF THIS APPOINTMENT AND DESIGNATION, the Group, in accordance with the resolution of its Board of Directors duly passed on ________________, 20__, has affixed its corporate seal, and caused the same to be subscribed and attested in its name by its President and Secretary, at the City of ________________ in the State of ________________ on ________________, 20__.

Comments on the Uniform Registration Form for RRGs

Item 6 (a) and (b): How is “persons” defined for the purposes of this form. Since RRGs may only insure commercial insurance, does this word encompass both individual professionals and business entities?

Item 19: Is the Insurance Commissioner in Item 19 the domicile or non-domicile Commissioner? If non-domicile, does that mean that an RRG must report every change in the board of directors to every non-domicile regulator? If so, how soon after the change?

Comments on the Q&A

In the paragraph entitled Registration Timeline it states that, “The non-domestic state cannot reject a complete registration that complies with state and federal laws.” Can you provide examples of state laws that might be used to deny the Registration of an RRG?

Please let me know if you have any questions.

Cordially,

Pamela

Re: Comments on Risk Retention Group (E) Task Force on RRG Notice and Registration Form; Frequently Asked Questions and Best Practices

Dear Ms. Meyer:

The Vermont Captive Insurance Association (VCIA) and its 450 member organizations appreciate the opportunity to provide comments on these three documents relating to risk retention groups (RRGs). The State of Vermont is the domicile of approximately 40% of the roughly 220 active RRGs operating in the United States, and most of these are members of VCIA.

We greatly appreciate the hard work of the RRG (E) Task Force to tackle some of the issues raised by impermissible requirements imposed by non-domiciliary states on RRGs. We believe that many of the problems encountered by RRGs in non-domiciliary states result from efforts to impose requirements, particularly registration requirements and fees, not permitted by the Liability Risk Retention Act (LRRA).

VCIA commends the Task Force for its efforts to clarify application of the LRRA and educate state regulators and the RRG community on authority given by the LRRA to domiciliary states and to non-domiciliary states. The Task Force has done an excellent job addressing and clarifying these issues. The revised NAIC Uniform RRG Notice and Registration Form, Frequently Asked Questions, and Best Practices are comprehensive and straightforward, and provide clarity to the most serious registration issues raised by RRGs.
VCIA comment letter re: NAIC RRG TF Exposure Drafts – September 6, 2019

VCIA has four comments on the draft registration form:

(1) We recommend the second to last sentence of the introductory paragraph on page 1 be rephrased as follows: “Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those specific state laws not exempted by §3902 of the LRRA.” We believe this revision is important to clarify that the right of non-domiciliary states to regulate RRGs is limited to specific state laws.

(2) The Task Force may want to consider in Item 1 requesting the address and NAIC Company Code of the organization. It may also be more appropriate to request the organization’s FEIN in Item 1 rather than requiring in Item 9 the FEIN of the manager.

(3) In Item 6(a), with respect to members and insureds, we recommend that the language in the form be the same as in the LRRA because the language in the proposed form appears to be more restrictive than that in the LRRA. [See Section 3901 (a)(4)(E)(i)].

(4) We recommend Item 7 be deleted and a new Item 15 created as follows: “In accordance with the LRRA, and as evidenced by the domiciliary state’s action in approving licensure of the Risk Retention Group, the RRG affirms its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations.” Presently, Item 7 of the registration form requires RRG registrants to affirmatively prove to non-domiciliary states that the RRG is compliant with this LRRA requirement by requiring the RRG to include a description of the businesses or activities engaged in by the RRG’s members. Including this affirmative requirement in the registration form is inconsistent with the LRRA. The LRRA is very clear that the domicile state is solely empowered to regulate the formation and operation of RRGs. To form and license an RRG, the domicile state must review the RRG application to determine whether the applicant meets the federal law requirements for forming an RRG. One of the key requirements is a showing that the applicant’s members are sufficiently similar or related with respect to their liability exposures by virtue of any related, similar or common business, etc. Without satisfying this LRRA requirement, the RRG cannot be licensed in its domicile state. The revision recommended above will help clarify that the membership’s compliance with the LRRA is confirmed by the domicile state as part of formation and licensure and that this is not a determination subject to non-domiciliary state regulation.

(5) Item 17 appears to expand Section 3905(c) of the LRRA, which provides: “Prohibited insurance policy coverage. The terms of any insurance policy provided by a risk retention group . . . shall not provide or be construed to provide insurance policy coverage prohibited generally by the state statute or declared unlawful by the highest court of the state whose law applies to such policy.”
VCIA comment letter re: NAIC RRG TF Exposure Drafts – September 6, 2019

As drafted, Item 17 states that the law of the state in which the RRG is registering applies to the policy and that RRGs are barred from writing coverages that have been declared unlawful by such state’s highest court. This prohibition is much broader than what is contained in the LRRA. VCIA recommends that the language of Item 17 track Section 3905(c) more closely; i.e., “[t]he risk retention group will not issue any policy in the state which provides coverage prohibited generally by statute or declared unlawful by the highest court of the state whose law applies to the policy.”

In addition, VCIA has one comment on the draft Best Practices document:

(1) We recommend the second and third sentences of the section titled “Registration Timeline” be revised as the current language could be interpreted as implying that non-domiciliary states have broader authority over the registration process than that granted under the LRRA. Our suggested revision is as follows: “The non-domestic state cannot reject a complete registration that complies with those laws of the non-domestic state that are not pre-empted under the LRRA. In the event a non-domestic state has concerns with an RRG registration, such concerns should be raised with the domiciliary state regulator, who has the authority to regulate the formation and operation of an RRG.”

Thank you again for the opportunity to submit these comments.

Sincerely,

[Signature]

cc: Sandra Bigglestone
    Vermont Dept. of Financial Regulation
I think the three exposed RRG documents are well drafted and I support them. I have been managing RRGs since 1990 and have struggled in dealing with non-domiciliary states over the years. I think these documents would help clarify roles and responsibilities.

I did notice a couple of typos in the Best Practice document:

On page 2 in the Registration Timeline section

- A non-domiciliary state should review the registration form for completeness within 10 business days of its receipt of the form and notify the Risk Retention Group of the need to submit any missing elements.

On page 2 in the Domiciliary State Responsibilities section

When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the Troubled Insurance Company Handbook). Although the domiciliary regulator is responsible for taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to the them.

Also in the plan of operations/feasibility section I do question the need to provide copies of biographical affidavits to the non-domiciliary states. There are a couple of states that take this to heart and request that we send them updated bios whenever a new director is elected. In this day and age of identity theft and state level data theft/data ransom events (even though the bio form in VT no longer asks for SSN), directors expect us to keep their information confidential. What I typically do is tell the non-domiciliary state that the bio has been filed with Vermont DFR and they can contact Vermont for access to the bio if need be. So far that has been successful.

Sincerely,

Kate Boucher

For information on AEIX: www.aeixrrg.com
1. What publications are available to help understand RRGs and state’s authority?
   
   The following key documents can be found as Appendices in the Handbook:
   
   - Appendix A: Federal Liability Risk Retention Act
   - Appendix B: NAIC Model Risk Retention Act (#705)
   - Appendix D: NAIC Uniform Risk Retention Group Registration Form

2. How does the LRRA address regulation of RRGs?
   a. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from all state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the formation and operation of an RRG, except as provided in the LRRA. Only the domiciliary state may regulate the formation and operation of an RRG.
   b. The implementation of the LRRA was intended to allow organizations to come together in the creation of a risk-bearing, risk-sharing entity (the RRG) to offer its members, who are the beneficiaries of the insurance provided, liability coverage in an expedient and economical manner.

3. How does RRG registration in a non-domiciliary state differ from the licensing process for a traditional insurer?
   a. There are no solvency requirements imposed by the non-domiciliary state upon an RRG seeking to register in the State. Regulation as to formation and operation, including the imposition of solvency requirements, are imposed by the domiciliary state.
   b. RRGs are subject to a substantially similar application and licensing process imposed by the domestic state, or state of domicile. For registration to conduct business in non-domestic states, RRGs are not subject to the standard application and licensing process (NAIC UCAA Instructions or NAIC Company Licensing Handbook).
   c. The registration process is intended to be simpler than the licensing process for other types of insurers. Registration is focused on information gathering rather than decision making. Registration is not the same as admission or company licensing; it is not intended to provide non- domiciliary states with any regulatory powers over RRGs other than that provided in the LRRA. It is not within a state’s authority to use the processing of a registration to bar RRGs seeking to lawfully operate in a state, nor can a state declare a “moratorium” on the filing of RRG registrations. Once an RRG provides a complete NAIC Uniform Risk Retention Group Registration Form they may begin operating in the state and approval from the non-domiciliary state is not required. However, best practice is for the non-domiciliary state to notify the RRG following their initial review of the NAIC Uniform Risk Retention Group Registration Form that either the form received was complete, or that the form was missing information. The non-domiciliary state may also reach out to the domiciliary state for more information and is encouraged to do so. (see the Best Practices—Risk Retention Groups document)

Commented [MB1]: Pennsylvania: Consider defining what constitutes a “complete” registration form as reference throughout this document.

Commented [MB2R1]: Drafting group recommends replacing this sentence with:
"Once an RRG (that it is in compliance with the definition of an RRG as stated in the LRRA) provides the NAIC Uniform Risk Retention Group Registration Form with all required information entered and attached, they may begin operating in the state. Approval from the non-domestic regulator is not required."

Commented [OS3]: DC agrees with the proposed change with the following highlighted modification:
"Once an RRG (that it is in compliance with the definition of an RRG as stated in the LRRA) provides the NAIC Uniform Risk Retention Group Registration Form with all required information entered and attached (i.e., a "complete form"), they may begin operating in the state. Approval from the non-domestic regulator is not required."
d. The LRRA references two documents that must be provided to the non-domestic state – a plan of operation OR a feasibility study. There is also additional information such as contact information of the RRG, chartering state information, and the lines of liability insurance business that are written by the RRG seeking to register. All this information is provided in the completed NAIC Uniform Risk Retention Group Registration Form.

e. For an RRG that is compliant with the LRRA and the regulation of their domestic state (including authorization to register to do business in another state), the non-domestic state cannot deny the RRG’s registration. If there is uncertainty, the domestic state should be contacted.

4. What are the steps for the non-domiciliary insurance regulator to take in the registration process for an RRG?
   a. Review the NAIC Uniform Risk Retention Group Registration Form and verify the RRG has provided a complete form.
   b. Once a complete form is received, the RRG is authorized to write in the state where it registers. The following best practices may also be considered during the registration process; however, they do not impact the registration status of the RRG:
      a. Review the information provided with the registration form for reasonableness.
      b. Reach out to the domestic state insurance regulator for additional information or concerns. The best practices Inquiry Template can be used and modified as appropriate.
      c. Notify the RRG once the registration form is deemed complete. They are now registered in the state.

5. What should a non-domiciliary state do if they have concerns about a complete RRG registration form received?
   a. If the RRG provided a complete form, but there are concerns about the lines of business or financial solvency, or some other matter, the non-domiciliary state should first communicate with the domestic state. If necessary, the non-domiciliary state should consider pursuing the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

6. When can a non-domiciliary state reject an RRG registration?
   a. A non-domestic state cannot reject the registration of an RRG that submits a complete registration form. Instead the non-domestic state should communicate concerns to the domestic state or refer to the remedies in LRRA §3902(a)(1) also discussed in FAQ #12.

7. Can an RRG registration be delayed if a financial statement filing and/or audit is not yet available at the time of application or registration?
   a. No, an RRG can register prior to filing of an annual financial statement audit and a statement of opinion on loss and loss adjustment expense reserves with its domiciliary state.
   b. Once these initial filings are made, they are available on I-Site for review.
   c. If questions arise due to lack of this information, the non-domiciliary state should reach out to the domestic state to address its concerns.

8. What items does the LRRA require an RRG provide to the non-domiciliary state in conjunction with the registration?
   a. It is recommended that states adopt the NAIC Uniform Risk Retention Group Registration Form, which has been developed by the NAIC in order to facilitate uniformity. Such forms are included in the Risk Retention and Purchasing Group Handbook.
   b. Consistent with LRRA, each RRG shall submit a copy of the plan of operation OR a feasibility study before it may offer insurance in the state.
Note: If the RRG is newly formed, the feasibility study provides relevant information on rates and expected losses. If the RRG is expanding the states in which it operates and has been writing business for an extended period, the feasibility study becomes less relevant and a current business plan, along with documents a non-domiciliary state can easily obtain from the NAIC's I-Site (Annual Statement(s), RBC Report(s), MD&A(s), Audited Financial Statement(s), Actuarial Certification(s)) provide pertinent information.

c. If the plan of operation or feasibility study does not appear to be updated, a non-domiciliary state should contact the domiciliary state regulator to obtain more information, including the IPS, and may request revised documents from the RRG if original submission is found to be inaccurate or unclear.

9. What should be included in a plan of operation?
   a. The LRRA states that an RRG’s plan of operation or feasibility study includes information on liability insurance coverages, deductibles, coverage limits, rates, and rating classification systems for each line of insurance the group intends to offer.
   b. In addition, the Best Practices – Risk Retention Groups document offers a list of other suggested items for inclusion in a plan of operations or feasibility study.

10. Where can the non-domiciliary state get information about an RRG's directors and officers?
    a. Directors and officers are listed in the annual and quarterly financial statements available from the NAIC’s I-Site. All changes in Directors and Officers, with accompanying biographical affidavit(s), are submitted to and reviewed by the domiciliary state. In order to eliminate the need for redundant regulatory functions and unnecessary transfer of sensitive personal identifiable information, a non-domiciliary state should rely on the domiciliary state’s review, which includes background checks on directors, officers and key management personnel of an RRG to ensure the competency, character and integrity of the insurer’s management.

10.11. What does the LRRA say about renewals for RRGs in non-domiciliary states?
    a. The LRRA is silent; therefore, initial registration is sufficient unless the operation of an RRG is affected by runoff, rehabilitation or liquidation processes. RRGs file changes in business plans, financial filings, etc. on an ongoing basis with non-domiciliary states; therefore, non-domiciliary states should consider developing a process for communicating with the domiciliary state (such as the example in the Best Practices—Risk Retention Groups document) and consider an annual request for Certificate of Good Standing/Compliance from the domiciliary state.
    b. Section 3902(d)(3) of the LRRA requires that an RRG submit to the insurance commissioner of each state in which it is doing business a copy of the annual financial statement that it files with the RRG’s domiciliary state. Non-domiciliary states should be aware that in many states where RRGs are licensed/chartered as captive insurers in conformity with NAIC accreditation standards, RRGs are permitted to use Generally Accepted Accounting Principles rather than Statutory Accounting Principles to report on their financial conditions, with required disclosure and reconciliation in footnote one. (See also Section II, page 3 of the Risk Retention and Purchasing Group Handbook)
    c. The filing is an ongoing requirement that must be complied with on an annual basis and is generally due to non-domiciliary states upon filing with the domiciliary state. The annual filing requirements for RRGs include an unaudited filing using the official Annual Statement Blank (property/casualty), an audited financial statement certified by an independent public accountant and a statement of opinion on loss and loss adjustment expense reserves made by an actuary or loss reserve specialist who is qualified in accordance with the criteria established by the NAIC in the annual statement instructions. See the
above-mentioned NAIC Accreditation Program Manual, Part A: Laws and Regulations for annual filing requirements for RRGs.

12. What does the LRRA say about taxes and fees charged by a non-domiciliary RRG?
   a. LRRA §3902(a)(1)(B) says any state may require an RRG to:
      a. Pay on a nondiscriminatory basis, applicable premium and other taxes, which are levied on admitted insurers and surplus lines insurers, brokers, or policyholders under the laws of the state.
   b. Fees are not directly addressed in the LRRA and as such, there has been disagreement about the legality of both initial and renewal registration fees and compliance with LRRA. The authority on this topic is therefore federal case law. For example, there is one case (Nat'l Risk Retention Assoc. v. Brown, 927 F. Supp. 195 (M.D. La. 1996)) in which the court ruled that certain state requirements, including the payment of an annual renewal registration fee, were preempted by the LRRA. See the Risk Retention and Purchasing Group Handbook for additional detail on relevant cases and other fee considerations.

13. What remedies are available to a non-domiciliary state if violations of applicable State laws occur?
   a. Secure clarification from the RRG’s state of domicile;
   b. Call for an examination of the RRG by the state of domicile [15 U.S.C. §3902(a)(1)(E)];

14. Is there a list of domestic and non-domestic state contact persons in state insurance regulator offices who are knowledgeable about RRGs?
   a. Yes. Appendix C of the NAIC Risk Retention and Purchasing Group Handbook includes a list of state insurance department contact persons. The most recent list is maintained as a separate document on the NAIC’s publication webpage alongside a complete copy of the Risk Retention and Purchasing Group Handbook. (Link to Handbook: https://www.naic.org/documents/prod_serv_legal_ris_bb.pdf)
Best Practices – Risk Retention Groups

The domiciliary state maintains authority and has responsibility to regulate the formation and operation of a Risk Retention Group (RRG). Therefore, when concerns arise in a non-domiciliary state about a RRG, the best resource is the domiciliary state. This includes concerns about solvency and capital levels, financial condition, or other non-compliance of an RRG as well as operational questions and concerns that should be directed to the domiciliary state.

States are encouraged to examine their RRG laws to make certain that they are consistent with (1) the LRRA and (2) the NAIC Model Risk Retention Act.

Questions/Concerns from Non-domiciliary State

Upon initial registration of an RRG in a non-domiciliary state, it is not uncommon for questions to arise that are best directed to the domiciliary state. Attachment A outlines a sample Inquiry Template that can be used to request this information. The template may be customized as deemed appropriate by the non-domiciliary state. Domiciliary states should respond in a timely manner to such requests.

Questions about operations and financial solvency that arise following initial registration should also be addressed to the domiciliary state.

If significant concerns still exist after communication with the domiciliary state and the non-domiciliary state concludes that the RRG is not compliant with any of the specific procedures set forth in the LRRA, the following steps may be undertaken:

a. Refer to your own state RRG statute to ensure compliance of your prospective action;
b. Provide written notice of any non-compliance directly to the RRG;
c. Submit a demand for examination of the RRG to the domiciliary regulator, as provided by the LRRA [15 U.S.C. 53902(a)(1)(E)];
d. Institute suit in a court of competent jurisdiction.

A non-domiciliary state may request the following from the domiciliary state and similarly, the domiciliary state should be prepared to provide the following to the non-domiciliary state:

ea. Insurer Profile Summary (IPS)
b. Inquire about the extent of biographical affidavit review and results of background checks
c. Most recent examination report (may be obtained from I-Site)
d. Amendments to the RRG’s business plan or feasibility study
e. Verification of domiciliary state approval to expand into non-domiciliary state

Alternatively, Attachment A – Inquiry Template may be used for this request with modifications as necessary.

Registration Timeline

The registration process for RRGs should be shorter than the licensing process for other types of insurers as the RRG is responsible only for a complete registration form and the related attachments. The non-domiciliary
state cannot reject a complete registration* that complies with those laws of the non-domiciliary state that are not preempted under the LRRA. In the event a non-domiciliary state has concerns with an RRG registration, such concerns should be raised with the domiciliary state, who has the authority to regulate the formation and operation of an RRG. The following guidelines take into consideration similar guidelines for ordinary insurance companies, and adherence is at the discretion of each state.

- A non-domiciliary state should review the registration form to ensure all required information is entered on the form within 10 business days of its receipt of the form and notify the Risk Retention Group of the need to submit any missing elements.
- Following receipt of a complete registration* application, a non-domiciliary state should notify the RRG within 30 days that its registration is confirmed.
- The domiciliary state should respond to inquiries from a non-domiciliary state in a prompt manner, typically no later than 10 business days after receiving the inquiry.

Domiciliary State Responsibilities
When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the Troubled Insurance Company Handbook). Although the domiciliary regulator is responsible for taking actions involving their domiciliary RRGs, awareness of a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to them.

General Licensing Guidance
Domiciliary states should ensure the RRG’s application for licensing, which includes the plan of operation and feasibility study, includes the following, at a minimum:
- information sufficient to verify that its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business, trade, product, services, premises or operations;
- information sufficient to verify that the liability insurance coverage to be provided by the Risk Retention Group will only cover the members of the Risk Retention Group;
- for each state in which it intends to operate, information regarding the liability insurance coverages, deductibles, coverage limits, rates and/or rating/underwriting methodology for each line of commercial liability insurance the group intends to offer;
- historical and expected loss experience of proposed members and national experience of similar exposures to the extent that this experience is reasonably available;
- appropriate opinions/feasibility work by a qualified independent casualty actuary, including a determination of minimum premium participation levels required to commence operation and to prevent a hazardous financial condition;
- pro forma financial statements and projections, including assumptions, on an expected and adverse basis;
- identification of Board of Directors, including independence determination;
- biographical affidavits for all BOD members;
- evidence of compliance with corporate governance standards, including draft policies;
- underwriting and claim procedures;
- marketing methods and materials if available;
- draft insurance policies;
- names of reinsurers and reinsurance agreements, if available;
- investment policies;
- identification of each state in which the RRG intends to write business/register;
- identification of service providers, including fee structure and relationships to members; and
- subsequent material revisions to the plan of operation or feasibility study.

Commented [MB1]: Premier: Will listing this here prompt a non-domiciliary state to also ask for it when this is something handled by the domiciliary state? Limiting the distribution of confidential information (such as SSNs) can help ensure this information is not subject to a security breach and remains confidential.

Commented [MB2R1]: Drafting Group recommends adding the following FAQ to the FAQ document.
FAQ: Where can the non-domiciliary state get information about an RRG's directors and officers?
•Directors and officers are listed in the annual and quarterly financial statements available from the NAIC’s L-File. All changes in Directors and Officers, with accompanying biographical affidavits(s), are submitted to and reviewed by the domiciliary state. In order to eliminate the need for redundant regulatory functions and unnecessary transfer of sensitive personal identifiable information, a non-domiciliary state should rely on the domiciliary state’s review, which includes background checks on directors, officers and key management personnel of an RRG to ensure the competency, character and integrity of the insurer’s management.
Attachment A – Inquiry Template

The above-subject company has applied for Registration as a Risk Retention Group ("RRG") in the State of ______ to write ________ liability coverage to its members who are in the business of ________. As you can appreciate, due to the provisions of the Liability Risk Retention Act of 1986 the (state) has limited authority to regulate RRGs and therefore to a large extent, the (state) relies on the RRGs' domiciliary state to exercise general oversight and responsibility in the areas of licensing, solvency, rates and marketing. As part of our due diligence, we would appreciate any information your office can share with us regarding the company with respect to the following items, some of which may be satisfied by providing the Insurer Profile Summary:

1. Any significant concerns the State of [domicile] has regarding the company.
2. Any issues that may have a significant impact on the company going forward.
3. Any issues regarding the number of consumer complaints the company has in [state of domicile] or other states that may have been brought to your attention.
4. Comments and/or concerns about the financial condition of the company.
5. Comments and/or concerns about the management or performance of the company.
6. Results of any financial analysis and/or market conduct findings.
7. The company's priority level within the Financial Analysis Division.
8. Any conditions imposed by your Department upon the company's license.
9. Any significant non-compliance issues with the State of [domicile] regulatory authority including filing requirements and corrective action, if any.
10. Comments regarding the company's application for registration in the State of [state registering].
11. Approval from State of [domicile] for the RRG to register in the State of [state registering].

Re: Comments on Risk Retention Group (E) Task Force on RRG Notice and Registration Form, Frequently Asked Questions, and Best Practices

Dear Ms. Meyer:

The National Risk Retention Association (“NRRA”) appreciates the opportunity to comment on the three documents issued by the Risk Retention (E) Task Force (“RRG Task Force”) on October 18, 2019:

1. NAIC Uniform Risk Retention Group – Notice and Registration Form
2. Risk Retention Groups: Frequently Asked Questions

NRRA has no specific changes to suggest to these documents. We appreciate the hard work of the Task Force, particularly the Drafting Group, in producing these documents. We believe that when the documents are adopted by the states and put into use on a daily basis, they will provide guidance to both the industry and to the regulators and will help to make the RRG registration process more fair and efficient.

We would particularly like to commend the Task Force on their adherence to the language of the Liability Risk Retention Act, 15 U.S.C. 3901, et seq. The intent of Congress was to enact a type of regulation which provides to the chartering, or “lead state,” the vast preponderance of authority over its RRGs, while specifying those limited authorities permitted under federal law to the non-domiciliary states. Where there is a conflict regarding the interpretation of the law, the federal law, under the Supremacy Clause of the U.S. Constitution, will prevail.

Re: Comments on Risk Retention Group (E) Task Force on RRG Notice and Registration Form; Frequently Asked Questions and Best Practices

Dear Ms. Meyer:

The Vermont Captive Insurance Association (VCIA) and its 450 member organizations appreciate the opportunity to provide comments on the three updated RRG (E) Task Force documents relating to risk retention groups (RRGs).

We greatly appreciate the hard work of the Task Force to tackle many of the issues raised by impermissible requirements imposed by non-domiciliary states on RRGs. VCIA commends the Task Force for its efforts to clarify application of the LRRA and educate state regulators and the RRG community on authority given by the LRRA to domiciliary states and to non-domiciliary states.

We understand the position of the Task Force regarding one of VCIA’s recommendations in the registration form that sought to clarify compliance with the Liability Risk Retention Act (LRRA). We believe that many of the problems encountered by RRGs in non-domiciliary states result from efforts to impose requirements, particularly registration requirements and fees, not permitted by the LRRA. Therefore we suggested adherence to the language in the statute as much as possible.

Overall, the Task Force has done an excellent job addressing and clarifying these issues. The updated NAIC Uniform RRG Notice and Registration Form, Frequently Asked Questions, and Best Practices are comprehensive and straightforward, and provide clarity to the most serious registration issues raised by RRGs.
VCIA comment letter re: NAIC RRG TF Exposure Drafts – November 8, 2019

Thank you again for your work.

Sincerely,

[Signature]

Richard Smith

Vermont Dept. of Financial Regulation
MEMORANDUM

TO: Property and Casualty Insurance (C) Committee

FROM: Risk Retention Group (E) Task Force

DATE: December 7, 2019

RE: Revisions to the NAIC Uniform Risk Retention Group Registration Form

The Risk Retention Group (E) Task Force has worked to address concerns from non-domiciliary states and industry regarding the registration process of risk retention groups (RRGs) in non-domiciliary states.

Concerns were initially raised by the National Risk Retention Association (NRRA) in a letter to the Task Force dated Nov. 19, 2018. The letter specifically cited extensive registration processing time and fees imposed. In discussions that followed, non-domiciliary states also raised concerns, including RRGs attempting to register that were in a hazardous financial condition or were not compliant with the federal Liability Risk Retention Act (LRRA).

To help address some of the concerns, the Task Force proposed updates to the NAIC Uniform Risk Retention Group Registration Form (Registration Form). The revisions were exposed for two public comment periods before finalizing the attached recommendation to the Property and Casualty Insurance (C) Committee.

The Task Force requests that the Committee consider adopting the proposed revisions to the Registration Form for inclusion in the Risk Retention and Purchasing Group Handbook.

If you have any questions regarding this referral, please contact NAIC staff (Becky Meyer, bmeyer@naic.org).

NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

Appendix D

The following is the uniform registration form adopted in 1991 by the NAIC. This registration form is being filed by a Risk Retention Group (RRG) operating in accordance with the Federal Liability Risk Retention Act of 1986 (LRRA), 15 USC 3901-3906, chartered or licensed to write only liability insurance by the state of domicile listed in #1e. The registration form and supplemental documents are provided in accordance with §3902(d)(2) of the LRRA. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from any state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those laws specified in §3902(a)(1)(A),(B),(C) and (G) of the LRRA. The domiciliary state regulates the formation and operation of the RRG.

Part A

STATE OF [Insert State in which the Risk Retention Group intends to do business]

DEPARTMENT OF INSURANCE

RISK RETENTION GROUP - NOTICE AND REGISTRATION
(All Information Should Be Typed)

1a. Name of the Risk Retention Group as it appears on its Certificate of Authority:

__________________________________________________________________________

1b. Address of the Risk Retention Group:

__________________________________________________________________________

1c. NAIC Company Code:

__________________________________________________________________________

1d. FEIN:

__________________________________________________________________________

1e. State of domicile, date licensed and date chartered:

__________________________________________________________________________

1f. Primary contact person for state of domicile to whom questions regarding the Risk Retention Group should be addressed (include name, phone number and email address):

__________________________________________________________________________
2. List any other name(s) by which the Risk Retention Group is known or may be doing business in this State or any other state:

__________________________________________________________________________

3. The Risk Retention Group is chartered and licensed as a liability insurance company under the laws of the State of ____________ and is authorized to engage in the following lines and/or classifications of liability insurance under the laws of its chartering State:

__________________________________________________________________________

4. Give a general description of the liability insurance coverages the Risk Retention Group plans to write in the state it is registering to do business in:

__________________________________________________________________________

5. Has the Risk Retention Group’s domiciliary state approved the Risk Retention Group to register and expand its writings in the state it is seeking to become registered in?

__________________________________________________________________________

6. Ownership of the Risk Retention Group consists of one or the other of the following (check one):
   a) _____ the owners of the Group are only persons who comprise the membership of the Group and who are provided insurance by the Group.

   b) _____ the sole owner of the Group is: ________________________________

   (Name and Address of Organization)

   an organization which has as its members only persons who comprise the membership of the Group and which has as its owners only persons who comprise the membership of the Group and who are provided insurance by the Group.

7. The Risk Retention Group members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations. Give a general description of businesses or activities engaged in by the Group’s members:

__________________________________________________________________________

Commented [MB1]: VCIA: We recommend Item 7 be deleted and a new Item 15 created as follows: “In accordance with the LRRA, and as evidenced by the domiciliary state’s action in approving licensure of the Risk Retention Group, the RRG affirms its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations.” *See explanation in comment letter.*

Commented [MB2R1]: Drafting group recommendation is to leave #7 here.
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

8. (a) List the name, position with the Risk Retention Group, SSB, and address of each officer and director of the Risk Retention Group. (Attach additional pages, if necessary.)

NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

11. In accordance with the Liability Risk Retention Act, we verify the following:

A. The Risk Retention Group is a corporation or other limited liability association whose primary activity consists of assuming and spreading all, or any portion, of the liability exposure of its members.

B. The Risk Retention Group is organized for the primary purpose of conducting the activity described under Item “A” above.

C. The Risk Retention Group does not exclude any person from membership in the Group solely to provide for members of the Group a competitive advantage over such a person.

D. The activities of the Risk Retention Group do not include the provision of insurance other than:
   i. liability insurance for assuming and spreading all or any portion of the similar or related liability exposure of its Group members; and
   ii. reinsurance with respect to the similar or related liability exposure of another Risk Retention Group (or a member of such other Risk Retention Group) engaged in business or activities so that such Risk Retention Group or member meets the requirement under Item #7 above for membership in the Risk Retention Group which provides such reinsurance.

12. In accordance with the LRRA, if the State in which the Risk Retention Group is registering requires compliance with the following laws and requirements, the BRG agrees to the following:

A. The Risk Retention Group will comply with the unfair claim settlement practices laws of this State.

B. The Risk Retention Group will pay, on a non-discriminatory basis, applicable premium and other taxes which are levied on admitted insurers, surplus line insurers, brokers or policyholders, such Group under the laws of this State.

B.C. The Risk Retention Group will participate, on a nondiscriminatory basis, in any mechanism established or authorized under the law of the State for the equitable apportionment among insurers of liability insurance losses and expenses incurred on policies written through such mechanism.

C.D. The Risk Retention Group will be designated the Insurance Commissioner [Director, Superintendent] of this State as its agent solely for the purpose of receiving service of legal documents or process by executing Part B of this form, attached hereto.

D.E. The Risk Retention Group will submit to examination by the Insurance Commissioner [Director, Superintendent] of this State to determine the Group’s financial condition, if:
   i. the Insurance Commissioner [Director, Superintendent] of the Group’s charting State has not begun or has refused to initiate an examination of the Group; and
   ii. any such examination by the Insurance Commissioner [Director, Superintendent] shall be coordinated to avoid unjustified duplication and unjustified repetition.

E.F. The Risk Retention Group will comply with a lawful order issued in a delinquency
**NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM**

proceeding commenced by the Insurance Commissioner [Director, Superintendent] of this State upon a finding of financial impairment, or in a voluntary dissolution proceeding.

E-G. The Risk Retention Group will comply with the laws of this State concerning regarding deceptive, false or fraudulent acts or practices, including any injunctions regarding such conduct obtained from a court of competent jurisdiction.

G4. The Risk Retention Group will comply with an injunction issued by a court of competent jurisdiction upon petition by the Insurance Commissioner [Director, Superintendent] of this State alleging that the Group is in hazardous financial condition or is financially impaired.

H4. The Risk Retention Group will provide the following notice, in at least 10-point type, in any insurance policy issued by the Group:

NOTICE

This policy is issued by your risk retention group. Your risk retention group may not be subject to all of the insurance laws and regulations of your State. State insurance insolvency guaranty funds are not available for your risk retention group.

14.13. In accordance with the LRRA, the Risk Retention Group **affirms that it has** submitted to the Insurance Commissioner [Director, Superintendent] as part of this filing and before it has offered any insurance in this State, a copy of the plan of operation or feasibility study which it has filed with the Insurance Commissioner [Director, Superintendent] of its chartering State/state of domicile. This plan or study includes the name of the State in which the Group is chartered, as well as the Group’s principal place of business, and such plan of operation or feasibility study further includes the coverages, deductibles, coverage limits, rates, and rating classification systems for each line of liability insurance the Group intends to offer. The Group **has also** submitted to the Insurance Commissioner [Director, Superintendent] of this State any revisions of such plan of operation or feasibility study to reflect any changes in the plan if the Group intends to offer any additional lines of liability insurance or including any change in the designation of the State in which it is chartered.

14.14. The Risk Retention Group will submit a copy of its annual financial statement submitted to its chartering state, to the Insurance Commissioner [Director, Superintendent] of this State, by March 31 of each year. The annual financial statement shall be certified by an independent public accountant and include a statement of opinion on loss and loss adjustment expense reserves made by a member of the American Academy of Actuaries or a qualified loss reserve specialist. The annual financial statement, certification and statement of opinion on loss and loss adjustment expense reserves will be submitted to the Insurance Commissioner [Director, Superintendent] of this State by the date it is required to be submitted to its chartering state.

14.15. The Risk Retention Group will not solicit or sell insurance to any person in this State who is not eligible for membership in the Group.

14.16. The Risk Retention Group will not solicit or sell insurance in this State, or otherwise operate in this State, if the Group is in hazardous financial condition or is financially impaired.

16.17. The Risk Retention Group will not issue any insurance policy in this State which provides coverage prohibited generally by statute of this State or declared unlawful by the highest court of this State whose law applies to such policy. In accordance with the LRRA, the terms of any insurance policy provided by the Risk Retention Group shall not provide or be construed to provide insurance policy coverage prohibited generally by State statute or declared unlawful by the highest court of the State whose law applies to such policy.
**NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM**

17. The Risk Retention Group has submitted a registration fee of $__________, if applicable, payable to the Insurance Commissioner (Director, Superintendent) of the State.

18. To the extent required by the LRRA, the Risk Retention Group will comply with all other applicable state laws.

19. The Risk Retention Group will notify the Insurance Commissioner (Director, Superintendent) as to any subsequent changes in any of the items included in this form (except for items #11, #8 and #10).

The undersigned hereby swear and affirm that the foregoing statements and information regarding their principal, the________________________(Name of Risk Retention Group) are true and correct.

---

Commented [MB6]: Pamela Davis: Is the Insurance Commissioner in Item 19 the domicile or non-domicile Commissioner? If non-domicile, does that mean that an RRG must report every change in the board of directors to every non-domicile regulator? If so, how soon after the change?

Commented [MB7R6]: Drafting Group notes the reporting is to the non-domiciliary regulatory and recommends including a list of items that would not require notification (11, #8 and #10 on this form).

Further, the drafting group recommends adding an item to the Task Force’s Issues Summary to consider if further guidance should be considered in the future.
**NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM**

**Part B**

**APPOINTMENT OF ATTORNEY TO ACCEPT SERVICE AND DESIGNATION**

The [name of the group] ("the Group"), a risk retention group which is chartered and licensed as a liability insurance company under the laws of the State of [name of state], having notified the Insurance Commissioner [Director, Superintendent] of the State of [name of state] of its intention to do business in this State as a risk retention group pursuant to the federal Liability Risk Retention Act of 1986, hereby appoints the Insurance Commissioner [Director, Superintendent] of the State of [name of state], any successor in office, and any authorized deputy its true and lawful attorney, in and for the State of [name of state], upon whom all legal documents or process in any proceeding against it may be served. Such service of legal documents or process shall be of the same legal force and validity as if served personally upon the Group.

The Group designates:

__________________________
(Name)

__________________________
(Address)

__________________________
(City, Town or Village)

__________________________
(State and ZIP Code)

as its officer, agent or other person to whom shall be forwarded all legal documents or process served upon the Insurance Commissioner [Director, Superintendent] of the State of [name of state], any successors in office, or any authorized deputy, for the Group. This designation shall continue in full force and effect until superseded by a new written designation filed with the Insurance Commissioner [Director, Superintendent].
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

This appointment and designation is made pursuant to a resolution by the Group’s governing body authorizing it, and a certified copy of the resolution is attached hereto. This appointment shall be binding upon any person or corporation which as successor acquires the Group’s assets or assumes its liabilities, by merger or consolidation or otherwise.

This appointment may be withdrawn only upon a written notice of termination and, in any event, shall not be terminated by the Group or its successor so long as any contracts or liabilities or duties arising out of contracts entered into by the Group while it was doing business in this State are in effect.

IN WITNESS OF THIS APPOINTMENT AND DESIGNATION, the Group, in accordance with the resolution of its Board of Directors duly passed on ________________, 20__, has affixed its corporate seal, and caused the same to be subscribed and attested in its name by its President and Secretary, at the City of ______________ in the State of ______________ on ________________, 20__.

Valuation of Securities (E) Task Force
Austin, Texas
December 8, 2019

The Valuation of Securities (E) Task Force met in Austin, TX, Dec. 8, 2019. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); James J. Donelon, Vice Chair, represented by Stewart Guerin (LA); Lori K. Wing-Heier represented David Phifer and Wally Thomas (AK); Andrew N. Mais represented by Kathy Belfi and William Arfanis (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Ray Spudeck and Carolyn Morgan (FL); Doug Ommen represented by Carrie Mears (IA); Vicki Schmidt represented by Tish Becker and Joe McGarry (KS); Gary Anderson represented by John Turchi (MA); Al Redmer Jr. represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford and Justin Schrader (NE); Marlene Caride represented by John Sirovetz (NJ); John G. Franchini represented by Lea Geckler (NM); Glen Mulready represented by Eli Snowbarger (OK); Jessica Altman represented by Kimberly Rankin (PA); Kent Sullivan represented by Jamie Walker and Amy Garcia (TX); Todd E. Kiser represented by Jake Garn and Reed Stringham (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Patrick McNaughton (WA); and Mark Afable represented by Randy Milquett (WI).

1. Adopted its Oct. 31, Sept. 5 and Summer National Meeting Minutes

Ms. Belfi made a motion, seconded by Mr. Phifer, to adopt the Task Force’s Oct. 31 (Attachment One), Sept. 5 (Attachment Two) and Aug. 4 (see NAIC Proceedings – Summer 2019, Valuation of Securities (E) Task Force) minutes. The motion passed unanimously.

2. Heard a Staff Report on Projects Before the Statutory Accounting Principles (E) Working Group

Mr. Fry said the next item on the agenda is to hear a report on projects before the Statutory Accounting Principles Working Group from Julie Gann (NAIC).

Ms. Gann said the purpose of the update aligns with the coordination efforts between the Working Group and the Task Force. She highlighted a few items to the Task Force, beginning with the adopted items:

- **Other Derivatives** – The Working Group adopted revisions to clarify that other derivatives—which are derivatives that are not used in hedging, income generation or replication transactions—shall be reported at fair value and nonadmitted.

- **Goodwill** – For subsidiary, controlled and affiliated investments (SCAs), the Working Group adopted minor revisions to clarify that goodwill from an insurance entity acquisition of an SCA is subject to the 10% adjusted capital and surplus limit, regardless if the goodwill had been “pushed down.” The Working Group re-exposed the agenda item considering pushdown to provide more time for the industry to provide examples on the application of pushdown.

- **Wash Sales** – The Working Group adopted revisions to clarify that the wash sale disclosure shall only include wash sale transactions that cross reporting periods. Insurers are currently reporting wash sales that occur inter-quarter (for example, sell in January, purchase back in February). There is no need to report that transaction in the wash sale disclosure.

**Items Exposed by Working Group:**

- **Preferred Stock** – The Working Group exposed a revised issue paper and proposed substantively revised Statement of Statutory Accounting Principles (SSAP) No. 32R—Preferred Stock as part of the investment classification project. The overall project proposes to revise definitions, measurement and impairment guidance for these investments. The issue paper was revised to consider a number of the industry comments received from the past exposure.

- **Related Party Transactions** – The Working Group exposed two separate agenda items focusing on related party transactions. The first agenda item proposes to data-capture existing disclosures in accordance with SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties. Affiliate transactions already captured in Schedule Y would not need to be duplicated in these disclosures, but the data-capture would collect...
information on related party (non-affiliate) transactions. These disclosures already exist in narrative form but are not currently data-captured. The second exposure clarifies the types of entities that are included as related parties, clarification that non-controlling ownership interest greater than 10% is a related party subject to related party disclosures, and guidance for disclaimers of affiliation and control for statutory accounting. Although an entity may have a disclaimer of control, the edits clarify that the entity is still a related party. These two items are being addressed separately to ensure that the data-capturing of disclosures is available for year-end 2020.

- **Working Capital Finance Investments** – The Working Group exposed substantive revisions to SSAP No. 105—Working Capital Finance Investments as directed by the Working Group at the Summer National Meeting. These revisions reflect six of the recommendations provided by the industry and referred from the Task Force.

- **Qualifying Cash Pools** – The Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to incorporate concepts to allow cash pools to be reported as cash equivalents. The proposed revisions will only allow cash pools that meet certain criteria for this reporting.

- **Rolling Short-Term Investments** – The Working Group exposed revisions to SSAP No. 2R to incorporate principle concepts in classifying investments as cash equivalents or short-term investments. This exposure intends to limit the amount of time an investment can be reported as a short-term investment. For investments that are expected to terminate after 364 days and are renewed for another 364 days, this proposal would no longer allow that to be reported as a short-term investment. There are specific exclusions to this guidance to avoid unintended consequences for short-term investments like cash pools that are expected to be regularly renewed and rolled. As such, the proposed revisions would not include any nonaffiliated SSAP No. 26R—Bonds investments. It would include affiliated SSAP No. 26R investments, all SSAP No. 43R—Loan-Backed and Structured Securities investments and anything that would be reported as a Schedule BA investment if not reported as short-term.

- **Financial Modeling** – SSAP No. 43R – The Working Group exposed revisions to eliminate the financial modeling guidance from SSAP No. 43R, noting that this exposure was contingent on the Task Force taking a similar action. The Working Group will not consider adoption action on this guidance until after the Task Force takes final action.

- **Financing Derivatives** – The Working Group exposed revisions for the reporting of derivatives with financing premiums. With the exposed revisions, the gross value of the derivative—without reflection of financing components—would be reported for the derivative on Schedule DB. The financing provisions (e.g., liability for derivative) would be reported separately.

- **Equity Instruments in SSAP No. 43R** – The Working Group did not discuss the agenda item for equity instruments in SSAP No. 43R. A conference call is scheduled for Jan. 8, 2020, for this discussion. The comment deadline is Jan. 31, 2020.

3. **Received and Exposed a Nonsubstantive Proposed P&P Manual Amendment to Reflect the SEC’s Adoption of a New Rule to Modernize Regulation of Exchange-Traded Funds**

Mr. Fry said that on Sept. 26, the U.S. Securities and Exchange Commission (SEC) adopted Rule 6c-11 under the Investment Company Act of 1940, for exchange-traded funds (ETFs). Mr. Fry asked Marc Perlman (NAIC) to give a brief update on this change and proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual).

Mr. Perlman said Rule 6c-11 will permit ETFs that satisfy certain conditions to operate without first obtaining an exemptive order from the SEC under the Act. The SEC has stated that the intent of the rule is to modernize the regulatory framework for ETFs by reducing expenses and delays in creating new ETFs; promoting greater consistency, transparency and efficiency for ETFs; and facilitating greater competition among ETFs. The rule becomes effective Dec. 23, followed by a one-year transition period for compliance.

Mr. Perlman noted that ETFs contain certain features that distinguish them from the types of investment companies originally contemplated by the Act and its rules and, therefore, have needed to rely on SEC exemptive orders to operate as investment companies under the Act. The new rule will end the need for most exemptive relief. Additionally, the rule permits ETFs to use “custom baskets” that do not reflect a pro rata representation or representative sampling of the ETF’s portfolio holdings, and the SEC is rescinding current ETF marketing restrictions. In order to rely on the new rule, an ETF must satisfy a new definition of ETF and various conditions, including: updated website disclosures (such as historical net asset value (NAV), premium and
discount, and bid-ask spread information), and adoption of policies and procedures that govern the construction and acceptance of baskets.

The new rule will rescind the exemptive orders from existing ETFs, which will be able to rely on the rule going forward. However, certain categories of ETFs will not be covered by the rule, including leveraged ETFs, inverse ETFs, ETFs organized as unit investment trusts (UITs), share class ETFs and non-transparent active ETFs. The SEC expects the “vast majority” of ETFs to be covered by the rule.

Mr. Perlman said the NAIC Securities Valuation Office (SVO) takes the position that because the new rule primarily affects SEC exemptive relief and ETF reporting and disclosure, it will not impact the quantitative and qualitative factors the SVO considers when analyzing ETFs. As such, the SVO recommends nonsubstantive P&P Manual amendments to remove references to SEC exemptive orders from descriptions of ETFs and clarification that Regulatory Treatment Analysis Service (RTAS) application filers only need to provide SEC exemptive orders to the SVO to the extent they are applicable.

Ms. Mears made a motion, seconded by Ms. Belfi, to receive this P&P Manual amendment to remove references to SEC exemptive orders from descriptions of ETFs and clarification that RTAS application filers only need to provide SEC exemptive orders to the SVO, to the extent they are applicable, and to expose this proposed amendment for a 45-day public comment period ending Jan. 23, 2020. The motion passed unanimously.

4. Adopted a Proposed P&P Manual Amendment to Add Instructions for GLF Transactions

Mr. Fry said the next item on the agenda is a substantive proposed amendment to the P&P Manual to add instructions for ground lease financing (GLF) transactions. This is a joint proposed amendment was exposed during the Task Force’s Oct. 31 conference call for a public comment period that ended Nov. 22.

Mr. Fry said the SVO became aware that certain insurance company filers were submitting credit tenant loan (CTL) transactions and transactions—which the SVO is now calling GLF transactions—through the filing exempt (FE) process. The SVO considers GLF transactions distinct from CTL transactions. The SVO studied the GLF transactions, working closely with the industry, several of whom agreed to jointly sponsor this proposed amendment. He asked Mr. Perlman to provide a summary of the proposal.

Mr. Perlman said the amendment recommends a “decision-tree” approach to analyzing GLF transactions. First, the SVO would analyze the ground lease to determine if it meets the P&P Manual CTL criteria (meaning it is “hell or high water” or “triple net”). Second, the SVO would determine if the sub-leases would similarly meet the CTL criteria and, if so, potentially review the transaction as akin to a CTL. Third, if the SVO cannot look at the whole structure as akin to a CTL, the SVO would work with the NAIC Structured Securities Group (SSG) to determine if SSG can model the sub-leases or business operation like it would a commercial mortgage-backed security (CMBS). And, lastly, if the SSG determines that it cannot model the sub-leases or business operation, and if the GLF transaction has been assigned a rating by a rating agency, the SVO can use the rating agency analysis to assist in its analysis. The SVO’s analysis will be entirely at the discretion of the SVO, and the SVO will be under no obligation to accept the rating agency analysis, conclusions or ratings. Most GLF transactions are expected to fall in this final category.

Mr. Fry said this effort is the best of what the Task Force does when it coordinates with the industry, noting that the SVO staff worked closely and had several meetings with the industry to come to an amicable solution. This all started from a spot in the P&P Manual that identifies which securities are not eligible for filing exemptions. CTLs are not eligible for filing exemption and are securities that do not fit the definition of CTLs but are still in the spirit of a CTL. It is this subset of securities for which the Task Force needed to find a solution. The solution that was found covers the ground lease, which covers the more concerning of the securities that lost the regulatory treatment. In 2020, the Task Force will need to do some work on another subset of securities and this framework may serve as a template or at least a starting point to develop that solution. Mr. Fry thanked the industry and the SVO staff for working so productively on this effort.

David Persky (TIAA), representing the American Council of Life Insurers (ACLI) and interested parties, said the industry worked closely since last August to reach this compromise, noting that it works well for everyone and the industry look forward to implementing it. There are several deals in the marketplace right now and the market is eager to see the actual implementation of this change beginning Jan. 1, 2020.

Mr. Guerin made a motion, seconded by Ms. Walker to adopt this this P&P Manual amendment to add instructions for GLF transactions and make a referral to the Statutory Accounting Principles (E) Working Group so it can assess this definition for inclusion in the Accounting Practices and Procedures Manual (Attachment Three). The motion passed unanimously.
5. Received and Exposed a Substantive Proposed P&P Manual Amendment to Remove the Financial Modeling Instruction for RMBS/CMBS Securities and Direct IAO Staff to Produce NAIC Designation and NAIC Designation Categories for These Securities

Mr. Fry said the next agenda item is a substantive proposed amendment to the P&P Manual to add instructions to remove the financial modeling instructions for residential mortgage-backed securities (RMBS)/CMBS and direct NAIC Investment Analysis Office (IAO) staff to produce NAIC designation and NAIC designation categories for these securities.

At the Summer National Meeting, the SVO staff discussed the idea that, at some point, the NAIC should align the RMBS/CMBS modeling to provide a single NAIC designation for modeled RMBS/CMBS. This would be a change from the current practice of providing a series of book/adjusted carrying value price breakpoints to companies to determine the NAIC designation. Staff raised this issue because of the upcoming implementation of NAIC designation categories for year-end 2020; i.e., the addition of 20 levels of credit risks instead of six. This will add a lot of complexity to create 19 breakpoints instead of the five current breakpoints that are being used now, and might add expense and create some inconsistency across insurers reporting on these securities.

Mr. Fry said the IAO staff is recommending that the Task Force move to a single NAIC designation and NAIC designation category for the modeled assessment of credit risk for RMBS/CMBS to simplify NAIC and insurer processes, along with improving uniformity. The Task Force has discussed this a few times and it will be wise to expose this for a public comment period to get formal comments from the industry during a longer comment period. The SSG has offered to do some impact studies during the comment period that will give the Task Force additional insights.

Joshua Bean (Transamerica), representing the ACLI, said the industry appreciates the extended comment period and asked if it is possible to make it 75 days. The financial modeling process has been occurring for almost 10 years and there is a diversity of legitimate interest across this constituency to understand the new mappings. Mr. Fry said NAIC staff are recommending a 60-day public comment period to meet the year-end deadline.

Ms. Belfi made a motion, seconded by Ms. Rankin to receive and expose for a 60-day public comment period this P&P Manual amendment to remove the financial modeling instructions for RMBS/CMBS securities and move to the production of a single NAIC designation and NAIC designation categories for these securities and to make a referral to the Statutory Accounting Principles (E) Working Group, as this would impact SSAP No. 43R. The motion passed unanimously.

6. Heard an NAIC Staff Update on the Definition of “Principal Protected Securities”

Mr. Fry said SVO staff discussed during the Task Force’s meeting at the Summer National Meeting an observation that certain classes of structured securities receive ratings that may not reflect a regulator’s view of risk. The SVO advised the Task Force that it believes the credit rating providers are following their published methodologies for these investments but those methodologies, in staff’s opinion, do not meet the NAIC’s needs. The recommendation of the IAO directors was to exclude these investments from filing exemption and permit the SVO to review them using their methodologies, in this case most likely a look-through approach. On its Oct. 31 call, the Task Force directed the IAO staff to work with the industry on refining the definition that was exposed. This is a matter that may affect some insurers, so the Task Force is trying to accurately reflect the scope of securities. Mr. Fry asked Charles Therriault (NAIC) to provide an update on that work.

Mr. Therriault said the IAO staff met with industry representatives on calls held Dec. 3, Nov. 22, Nov. 15 and Nov. 8. There have been multiple versions of this definition exchanged to address each group’s concerns. A general framework has evolved that identifies principal protected notes (PPNs) as a type of security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule are satisfied by proceeds from an underlying bond(s) that, if purchased by an insurance company on a stand-alone basis, would be eligible for filing exemption, but for which the underlying investments could generate potential returns in addition to the contractually promised cash flows paid according to a fixed schedule or the contractual interest rate paid by the PPN is zero or below market and the insurer would obtain a more favorable risk-based capital (RBC) charge or regulatory treatment for the PPN through filing exemption than it would were it to separately file the underlying investments in accordance with the policies in the P&P Manual.

Investments meeting these criteria would need to be filed with the SVO to determine if the security possesses any other non-payment risks that the SVO must assess under its Subscript S authority. There were a few noted exclusions, such as defeased or pre-refunded securities, and broadly syndicated securitizations. IAO staff believe this criteria hits upon the core issue—i.e. restructing an investment to receive a more favorable RBC charge—and provides the SVO with discretion to review the transaction. At the industry’s request, SVO staff is expanding the definition to include transaction examples. The goal of adding
the examples is to provide additional clarity as to the regulatory concern and transactional structure that is a concern to the Task Force. Staff will bring this back to the Task Force for consideration in early 2020.

Mr. Fry said one of the principles is that a security—for example, a bond—usually has fixed cash flows. If a security promises additional returns in excess of those fixed cash flows, then that is a characteristic to identify that security. The second is that a lot of these are rated, and the rating agencies are rating these to achieve a below market return. The third principle—when looking underneath one of these securities—it just carries that same asset on a fixed income schedule, so it produces one set of RBC charges. It is questionable that those same securities can be packaged into a different structure to create a more favorable RBC charge, so on its surface, this causes some pause. Those are the three tenants that staff are looking at right now and are working with the industry to define. My Fry asked if there were any questions from the Task Force members or interested parties.

Ms. Becker said Kansas is supportive of this framework and approach, and that the Task Force is looking at this matter. She expressed appreciation for the effort and cooperation involved in coming to a consensus and helping ensure that this is moving forward appropriately and to making sure all of the regulatory issues are being addressed.

Mr. Spudeck said this is a fairly important issue for a lot of people on both sides of the aisle. He asked whether there is a target timeline for when there will be some physical documentation revised for people to look at and start digesting before the market starts creating the next generation.

Mr. Fry said he is open to suggestions and will continue working on this and finalize it early next year when the Task Force has a call, possibly as early as Feb. 15, 2020. He said he wants people to get a sense of what the Task Force is doing and asked Mr. Therriault when a draft could be ready for exposure.

Mr. Therriault said he would also expect a draft could be ready for the Task Force’s first meeting in 2020. There has been extensive work already and a draft amendment is almost ready, but another iteration is needed. Ideally, he said he would like to have this ready for consideration at the Spring National Meeting.

Mr. Andersen (Andersen Insights) said he knows that a number of people have been working on this issue and commended them. Hopefully, as the discussions are open, some of the things that were mentioned will be considered but, most important, is how these assets meet the regulatory views of risk and meet the NAIC needs. His understanding of credit instruments, in general, is a question of credit because these are debt instrument and maybe are not as complicated as they may seem. There are three things Mr. Fry listed, one as promised returns that could exceed based returns, and it is true that an asset can be structured so that the returns that are reflected on the books and records of an insurer as one thing, and an asset may offer returns that are better than that. In his opinion, as long as the returns that are reported on a financial statement are minimal returns that are governed by the credit rating, he does not see how having excess returns is necessarily a problem. The question of what is the market rate of return can be a difficult and complicated thing for staff of a limited number to look at a broad number of deals and try to determine what a market rate of return is. Even if that is done, he is not sure what the question is. If an insurer elects to invest in an asset with a relatively lower return and reports that on its books and records, then the question of solvency and creditworthiness is addressed. The third point looking “underneath the hood” as to what the asset is, he said he believes everyone should support that, and it is possible with these structures to include assets that are prohibited assets. It is possible to include assets in these structures that will fill or overfill the basket. He said he believes that through structuring, it is possible to reduce risks—and the notion that there are building blocks and the building blocks result in the same risk additively as the structure itself is not necessarily always the case. He appreciates the fact that the Task Force is willing to have a discussion and open this up.

Mr. Bean said he appreciates Mr. Therriault’s summary of the discussion thus far. It has been an excellent collaboration with a lot of different perspectives to cover. Ultimately, this has been successful in working toward truly defining in assessible terms what the actual analytical concern is and how it can be addressed in a manner that actually provides guidance and clear instruction to the filing entities and does not create unintended “scope creep.” As Mr. Therriault has outlined, there is some work that we are continuing to do and hope that some of the examples will help illustrate further exactly what is meant to be targeted by this updated guidance, noting that it legitimately does present a risk profile that should be subjected to additional review at the hands of the SVO and the SSG and that is ultimately the core objective.

Mr. Fry said people should realize that what this would create is that these securities would not be able to use rating agencies ratings through the FE process. These securities will still be able to be filed with the SVO and will likely remain on the bond schedule; they may just get a different NAIC designation because the SVO will be using a different methodology.
7. Received an IAO Staff Report on the Infrastructure Investment Study

Mr. Fry said NAIC staff earlier this year conducted a request for information on the U.S. insurance industry’s infrastructure investments. He asked Nikki Hall (NAIC) to provide an update on this study.

Ms. Hall said the NAIC Center for Insurance Policy and Research (CIPR) and the NAIC Capital Markets Group—specifically, Michele Wong and Eric Kolchinsky—are collaborating on this study. The study will focus on infrastructure investment as an asset class and the insurance industry’s participation in the infrastructure market, including barriers and opportunities.

The study was initiated in late August shortly after the Summer National Meeting with a request for information (RFI) to gather information and input from market participants and interested parties on key topics, such as the definition of infrastructure, the market size for infrastructure assets, the historical credit performance of infrastructure investments, and the treatment of infrastructure investments by state insurance regulators.

The first deadline for the RFI was in late September, where initial comments were requested on the definition of “infrastructure.” Fourteen comment letters were received to this request and, after a thorough review and internal discussion, a proposed definition was drafted of “infrastructure,” which was discussed during an Oct. 18 conference call with interested parties.

For the purposes of the study, it was decided the definition will focus on economic infrastructure, which is defined as “long-lived, capital intensive, large physical assets that provide essential services or facilities to a country, state, municipality, or region and contributes to its economic development or prosperity.”

Some of the comments received suggested that social infrastructure should also be included in the definition; however, it was decided to exclude social infrastructure from the definition for now and do a separate analysis of social infrastructure at a later time.

Ms. Hall said the presentation, which includes the proposed definition, can be found on the CIPR website. The RFI document that was distributed in August is also available on the CIPR website.

The second deadline was Nov. 22, where a request was made for comments on the other components of the request for information, such as market size, credit performance and NAIC treatment of infrastructure. Seven comment letters have been received so far. While the comment deadline has passed, additional comments from interested parties can be submitted.

In regard to next steps for the study, the process of reviewing all the submissions received from the Nov 22 deadline has begun. The team is also following up with some that have submitted comments, and this work will continue over the next few weeks.

An issue brief is being drafted that will explain the rationale behind the proposed definition, which will be shared and posted to the NAIC website when final. Drafting of the full study will begin after that.

There are plans to hold another conference call before the 2020 Spring National Meeting to provide an update on the study drafting process.

8. Heard a Staff Update on Projects

Mr. Therriault provided updates on five projects:

- The integration of securities identifiers into the FE process. These two projects have both been deferred. The first component was the incorporation of the business entity cross-reference service (BECRS), which identifies the relationship between issuers and securities. The second component was the incorporation of the global identifier cross-reference service (GICRS) which would have added additional security identifiers. These two services can be implemented separately, but they are both complex. Given the other projects that are being worked on, coupled with the complexity of this data, the two projects had to be deferred.

- The next project is a status of the application of the Japan Credit Rating Agency, Ltd., to be a vendor of credit ratings to the NAIC. The securities rated by this credit ratings provider (CRP) require NAIC systems to have International Securities Identification Numbers (ISINs). Those identifiers are part of the GICRS data set, which is a project that is being deferred. Because of that dependency, this project is also being deferred.
• Implementation of CRP data feeds for securities subject to the private rating letters component of filing exemption is also deferred for data feeds from Fitch Ratings, Morningstar and HR Ratings de Mexico. Priority was given to the carry-over procedure project and NAIC designation category project.

• Implement of the carry-over procedure in 2019 was released this month. This project implements the administrative symbols and process to extend an NAIC designation into the next filing year with a “YE” suffix and identify initial filing properly filed and self-designated with an “IF” suffix. The project also included the change over from administrative symbol NR (not rated) to ND (not designated) along with some operational improvements related to these processes and downstream reporting through AVS+.

• The effort to add NAIC designation categories into NAIC systems is on schedule for release in early 2020. This project will add the letter modifier to create NAIC designation categories for reporting at year-end 2020. This project was discussed in passing during the discussion on RMBS/CMBS modeling. NAIC designations will continue to be produced and reported, but this additional level of granular assessment of credit risk reporting will be available for insurer reporting for Dec. 31, 2020. There are no RBC factors associated with the NAIC designation categories, so there is no change to the RBC charges; however, this detail reporting of investment credit risk still has significant value when looking at an insurer portfolio.

9. Discussed Other Matters

Mr. Kolchinsky said the Capital Markets Group, working with the SSG, completed the collateralized loan obligation (CLO) stress test, or at least the initial batch of the CLO stress test. A special report was published Dec. 6 on the NAIC website, and an in-depth methodology for CLO stress testing was also published. He said he will be covering some of the results at the Financial Stability (EX) Task Force and will be contacting the states to talk about what was found.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
Valuation of Securities (E) Task Force
Conference Call
October 31, 2019

The Valuation of Securities (E) Task Force met via conference call Oct. 31, 2019. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); James J. Donelon, Vice Chair, represented by Stewart Guerin (LA); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmairer represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); Gary Anderson represented by John Turchi (MA); Al Redmer Jr. represented by Vincent O’Grady (MD); Chlora Lindley-Myers represented by John Rehagen (MO); Bruce R. Range represented by Lindsay Crawford and Justin Schrader (NE); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by James Matheson and Jim Everett (NY); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Patrick McNaughton (WA); and Marlene Caride represented by Randy Milquet (WI). Also participating were: Howard Liebers (DC); and Matt Kozak (MD).

1. Received a Nonsubstantive Proposed P&P Manual Amendment to Add Instructions for ETFs that Contain a Combination of Preferred Stocks and Bonds

Mr. Fry said this agenda item is a proposed nonsubstantive amendment to add instructions for exchange-traded funds (ETFs) that contain both preferred stocks and bonds. The current instructions permit the Securities Valuation Office (SVO) to consider for inclusion on the bond or preferred stock list ETFs that predominantly only invest in one or the other security type. This amendment proposes permitting an ETF that invests in both preferred stocks and bonds to be included on the preferred stock ETF list. This leads to issues of classification in a situation in which it holds 75% preferred stock and 25% bonds. Derivatives are also permitted up to certain levels, called speculative risk, and above that level it is ineligible. Mr. Fry suggested combining these issues into an SVO paper.

Charles Therriault (NAIC) said it was a good description of the concerns and the issues. The SVO keeps the list fairly pure, and if there is any excess outside the definition of predominantly bond or preferred stock, the ETF will be rejected.

Mr. Everett said the U.S. Securities and Exchange Commission (SEC) guidance has been as low as 65% in fund guidance of whatever the title might indicate, which is what is tied into the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual); the title of the fund should reflect what is in it. He asked what is being used now to determine what predominately is and what percentage of funds are permitted for derivatives, and how that percentage is calculated.

Mr. Therriault said is not a hard-set limit, but the SVO looks at what the ETF strategy is, how those instruments are being used to achieve bond like performance, and if it is consistent with what the SVO considers a portfolio of bonds. Generally, there is a minor percentage of derivatives overall; the exposure is based on market value. Funds should not have any embedded leverage.

Mr. Everett asked if it is the market value as of the date of the valuation or if the percentage of the fund that is set out in the offering is circular. Mr. Therriault said the typical process looks at multiple quarters of historical holdings, and it is the market value as of those quarter ends.

Mr. Fry said while the SEC may have a limit of 65%, the SVO would be uncomfortable approving a fund with such a low concentration. Mr. Therriault said the SVO expects “predominant” to mean a portfolio with a high percentage invested only in bonds.

Mr. Everett asked, when speaking about derivatives, if it is limited to only the three types that are permitted in the Statements of Statutory Accounting Principles (SSAPs) that are limited to income generation, hedging etc., and what kinds of derivatives are being considered in the universe of these. Mr. Therriault said different types of derivative instruments may be used. The SVO looks at what derivative instruments are used, how they are used to achieve the fund objective, and the strategy that it performs as a portfolio bond.
Mr. Kozak said he has seen confusion with insurers reporting a U.S.-issued ETF with the underlying investments being non-U.S. based. Mr. Fry agreed and said a separate schedule may be needed for fund investments.

Mr. Fry directed SVO staff to prepare a memorandum working with the Statutory Accounting Principles (E) Working Group staff summarizing the issues discussed to classify an ETF.

2. Received a Nonsubstantive Proposed P&P Manual Amendment to Rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the U.S. Government Fund List and Discontinue the Bond Fund List

Mr. Fry said the SVO maintains the following two fund lists: 1) the U.S. Direct Obligations/Full Faith and Credit Exempt List; and 2) the Bond Fund List. The title of the first list is lengthy and sometimes confusing; this amendment proposes shortening it to the “NAIC U.S. Government Money Market Fund List.”

The second list, called the Bond Fund List, comprises funds that have only U.S. government investments and maintain the “highest market risk rating,” a rating type that is no longer assigned by any rating agency. There are only four funds on this list today, and the proposal is to merge these existing funds that were on the list for 2019 over to the new NAIC Fixed Income-Like SEC Registered Funds List when they come up for renewal in 2020.

Mr. Therriault said the first list is sometimes confusing as to the definition. The idea is to just call it the “NAIC U.S. Government Money Market Fund List” to make it clearer. For the Bond Fund List, the SVO analysts preparing the list report that there is no longer a “highest market risk rating” available from any of the rating agencies, and they are concerned that no fund may qualify. The Bond Fund List would fit into the NAIC Fixed Income-Like SEC Registered Funds List; and if the Task Force agrees, it can be migrated there.

Mr. Everett said the first list was prepared on an explicit backing by the U.S. government of issuances and issuances by Fannie Mae and Freddie Mac if those issuances were backed by the direct power and authority by the U.S. government. He asked if there was some way that the default risks or the weighted average default risks could be looked at for funds of the two different lists. The way the lists were broken down initially when the Task Force adopted this is that they were two fundamentally different types of securities. If the lists are going to be merged, it would seem that they should be merged only if there is a statistical identity between the two types of securities.

Mr. Fry said the U.S. Direct Obligations/Full Faith and Credit Exempt List gets no risk-based capital (RBC). The Bond Fund List would be going away, and it would be included with the other mutual funds.

Mr. Therriault said the U.S. Direct Obligations/Full Faith and Credit Exempt List is reported on the cash schedule; and the second list, the Bond Fund List, is reported on Schedule D. They do get different reporting treatment, but they are both high quality. There is no “market risk rating” being produced any longer, and the funds on the Bond Fund List would satisfy the criteria for the NAIC Fixed Income-Like SEC Registered Funds List.

Mr. Everett said being registered with the SEC does not address the quality or default risk of the funds, only that they have made the correct representations. He asked if there was a statistical identity between the two lists that would justify them being joined.

Mr. Therriault said the intent of the proposal was not to combine the U.S. Direct Obligations/Full Faith and Credit Exempt List and the Bond Fund List. The U.S. Direct Obligations/Full Faith and Credit Exempt List would be renamed, this is a title change and the definition remains the same. The Bond Fund List would be migrated to the NAIC Fixed Income-Like SEC Registered Funds List on the stock schedule with the appropriate NAIC designation based on its underlying investments. Once the Capital Adequacy (E) Task Force decides on the RBC factors for those funds, it would receive that treatment.

Mr. Rehagen made a motion, seconded by Mr. Milquet, to receive and expose a proposed P&P Manual to rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the U.S. Government Fund List, and discontinue the Bond Fund List and make a referral to Statutory Accounting Principles (E) Working Group for a 45-day public comment period. The motion passed, with New York abstaining.
3. Received a Nonsubstantive Proposed P&P Manual Amendment to Add Instructions to Limit NAIC Designations to the NAIC Assigned Sovereign Rating

Mr. Fry said this agenda item is a nonsubstantive proposed amendment to the P&P Manual to add instructions limiting all NAIC designations to the NAIC foreign sovereign designation equivalent. This change is being proposed because the current limitation could be interpreted to mean that only NAIC designations assigned by the SVO (as opposed those produced through the filing exempt [FE] process) are capped at the NAIC Foreign Sovereign Designation Equivalent List. This amendment addresses the potential interpretation inconsistency by clarifying that all NAIC designations for foreign securities will be capped according to the NAIC Foreign Sovereign Designation Equivalent List published on the SVO’s webpage. This change would ensure consistency and uniformity regardless of how an NAIC designation is assigned and that the NAIC Foreign Sovereign Designation Equivalent List would govern over all NAIC designations.

Mr. Everett made a motion, seconded by Mr. Liebers, to receive and expose a proposed P&P Manual amendment to add instructions to limit NAIC designations to the NAIC Foreign Sovereign Designation Equivalent List for a 45-day public comment period. The motion passed unanimously.

4. Adopted a Nonsubstantive Proposed P&P Manual Amendment to Update the Interim Instructions for Mortgage-Referenced Securities

Mr. Fry said this agenda item is a nonsubstantive proposed amendment to the P&P Manual to update the interim instructions for mortgage-referenced securities. This is a group of securities that are residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS), but the SVO gets involved in designating. The amendment provides guidance to insurers on how to assign an NAIC designation to a newly issued or newly acquired mortgage-referenced security prior to the publication of the annual surveillance data.

Mr. Fry said this change was requested by the industry and discussed at the Summer National Meeting, where it was exposed for a 30-day public comment period ending Sept. 4. One comment letter was received from the American Council of Life Insurers (ACLI) and the North American Securities Valuation Association (NASVA) in support of the proposal. Mr. Fry asked if anyone from the ACLI or NASVA would like to comment on their letter.

Josh Bean (Transamerica), representing the ACLI, said he submitted a comment letter in support of this clarification. It provides appropriate instructions for reporting entities and appreciation for the time and work on this exposure.

Robin Marcotte (NAIC) noted that the Statutory Accounting Principles (E) Working Group is working on a Form A that will include these securities, and she recommended a referral to the Working Group.

Ms. Mears made a motion, seconded by Mr. Fletcher, to adopt the P&P Manual amendment to update the interim instructions for mortgage-referenced securities and send a referral to the Statutory Accounting Principles (E) Working Group (Attachment One-A). The motion passed unanimously.

5. Received a Substantive Proposed P&P Manual Amendment to Add Instructions for Ground Lease Transactions

Mr. Fry said this agenda item is a substantive joint proposed amendment to the P&P Manual to add instructions for ground lease financing (GLF) transactions. This is an item that came up in recent credit tenant loan (CTL) discussions when the Task Force decided that CTLs were outside of FE. Certain transactions are like CTLs, but they do not qualify to be a CTL. The SVO has done some good work with industry on finding a treatment for these securities that have historically performed well. If the Task Force would like to consider this at the Fall National Meeting, it will require a shorter than usual exposure period. Mr. Fry said he would ask Mr. Therriault and Marc Perlman (NAIC) to provide a summary of this proposal.

Mr. Therriault thanked Mr. Perlman, Daniel Favero (Mayer Brown LLP) and David Persky (Nuveen) for the hard work they put into this proposal, along with others from the industry group. Technical methodologies like this require a lot of research, discussion and brainstorming on different possible analytical and structural approaches. Through this interactive and dynamic process, which was also used to develop the power generation projects methodology, a better end-product for the Task Force, industry and SVO staff has been produced. Assuming that the Task Force and industry agree, SVO staff will continue using this approach for the other lease-based transactions.
Mr. Perlman said the SVO considers CTL transactions to be different from ground lease transactions. First, Mr. Perlman explained why the SVO makes this distinction; and second, he outlined the SVO’s proposed approach to analyzing GLF transactions going forward.

Mr. Perlman said in a CTL transaction, the loan is made, primarily in reliance on the credit standing of a highly rated tenant on a long-term lease of the property. Importantly, the SVO can rely on the credit tenant rating because CTLs are generally structured around the terms of the lease which, in its strongest form, require the tenant to perform all or most obligations related to the leased premises and continue to pay rent regardless of what occurs to the premises. These leases are typically called “hell or high water” or “triple net” leases.

Mr. Perlman said GLF transactions, while sharing certain similarities with CTL transactions, differ in several crucial ways. A GLF transaction typically has two components. First, there is a ground lease for up to 99 years, between a ground lessor who owns the land and a ground lessee who leases the land for the purpose of developing it. Second, there is the subleasing of space by the ground lessee or operation of a business in an existing or to-be-constructed building to one or more subtenants under shorter subleases or a business operator under a franchise agreement or other arrangement.

In a GLF transaction, it is often the case that the terms of the ground lease itself (the first leg of the transaction) makes it a “hell or high water” or “triple net” lease. However, because the ground lessee is a special purpose entity, rather than an operating entity, there is no rating agency rating to rely on; there is no credit tenant. To determine whether the ground lessee will have sufficient funds to pay its ground lease obligations, the SVO must look to the rent payments of the subtenants or the operation of the business being conducted on the property.

Mr. Perlman said the SVO, in conjunction with the NAIC Structured Securities Group (SSG), takes the position that the analysis of subleases and subtenants can be more akin to a CMBS analysis than the corporate analysis in a CTL transaction. This is because ultimate payment on the ground lease loan is dependent not on a single credit tenant, but rather on payments by multiple, possibly unrated, subtenants of differing credit profiles pursuant to multiple subleases of differing terms (which are not necessarily “hell or high water” or “triple net”). The SVO also noted that some of the rating agencies which assign ratings to GLF transactions have utilized their CMBS models in their GLF ratings process, but their methodologies and criteria vary widely.

Mr. Perlman said recognizing that there are variances in how GLF transactions are structured, the SVO proposes amending the P&P Manual to institute a multi-pronged, decision-tree approach to analyzing these transactions. The proposed P&P amendments would include adding GLF transactions as a new asset class and outline the GLF analytic process as follows.

- First, the SVO would analyze the ground lease to determine if it meets the P&P Manual CTL criteria (meaning, it is “hell or high water” or “triple net”). The SVO expects most ground leases to meet this test.

- Second, if the ground lease meets the CTL criteria, it would be determined whether three or fewer subtenants combined comprise 90% or more of the total sublease payment obligations, whether those subtenants are rated or can be analyzed by the SVO, and whether their subleases each meet the P&P Manual criteria for CTLs. If so, the SVO could, in its sole discretion, analyze the transaction as akin to a CTL, based on the triple-net nature of both the ground and subleases, the limited number of subleases, and the credit profiles of the subtenants. The SVO expects a small fraction of all GLF transactions to fall into this category.

- Third, if the ground lease meets the P&P Manual CTL criteria and there are four or more subtenants; the SVO has determined that the transaction does not meet the criteria just explained; or there are no subtenants, but a single operator of a business, the SVO may refer the subleases or the business operation to the SSG for possible financial modeling. If the SSG determines that the subleases or business operation can be modeled, it would analyze the subleases or business operation to determine whether they will provide sufficient cash flow to pay the ground lease rent payments and any additional costs which the ground lessee would be obligated to cover pursuant to the ground lease terms.
Fourth, if the SSG determines that it is unable to model the subleases or business operation, and if the GLF transaction has been assigned a public or private rating by a rating agency, the SVO may use the rating agency analysis provided by the filer to assist the SVO in its own analysis. The SVO’s analysis will be entirely at the discretion of the SVO, and the SVO will be under no obligation to accept the rating agency analysis, conclusions or ratings. The SVO expects most GLF transactions to fall into this final category.

Mr. Perlman concluded with a summary of the proposed GLF amendment to the P&P Manual, and he recommended that this criteria should apply to all GLF securities purchased after Jan. 1, 2020.

Resh Reese (Teachers Insurance and Annuity Association of America—TIAA) and Mr. Persky said they would like to thank the Task Force and SVO staff for the continued engagement with industry on this matter. With respect to the ground lease topic, the industry is appreciative of the efforts and thorough analysis that was put forth by staff in creating and crafting a resolution for both industry and state insurance regulators, and they look forward to continuing to partner with the Task Force and the SVO on all future matters.

John Garrison (John Hancock) said the framework that was just outlined is a well thought-out and workable solution.

Mr. Everett said he appreciates the clarity of the materials and summary.

Benjamin Guzman (Catholic Order of Foresters) said they appreciate all the SVO and Task Force’s hard work on this solution, noting that it is an important asset class.

Tom Sargent (Waterway Capital) said Waterway is also appreciative of the work it took to develop a palatable solution.

Michael M. Monahan (ACLI) said the ACLI supports the expedited comment deadline.

Mr. Everett made a motion, seconded by Mr. Kozak, to receive and expose a proposed P&P Manual amendment to add instructions for GLF transactions and make a referral to the Statutory Accounting Principles (E) Working Group for a 22-day public comment period. The motion passed unanimously.

6. Discussed a Substantive Proposed P&P Manual Amendment for Principal Protected Securities

Mr. Fry said this agenda item is to discuss a substantive proposed amendment to the P&P Manual to update the definition and instructions for principal protected securities. The amendment may benefit from some additional work on the definition and the Task Force may direct the SVO staff to work with the industry to refine it and re-expose the amendment at the Fall National Meeting. The idea is to take this class of securities called principal protected notes, sometimes called “collateralized loan obligation (CLO) combo notes,” and make them ineligible for FE. The SVO would apply a look-through methodology to capture the regulatory risk. Mr. Fry asked Mr. Therriault to provide an update on the proposal.

Mr. Therriault said the NAIC Investment Analysis Office (IAO), SVO and SSG staff believe that these securities should not be FE. IAO staff also believe that the rating agencies are following their published methodologies, which focus primarily on the contractual payments, particularly the re-payment of principal, but do not believe the rating assigned using these methodologies reflects how the NAIC views risk from a financial solvency perspective.

Mr. Therriault said the concerns voiced in the comment letters focused primarily on four issues:

- The first issue is one centered on the resources of the SVO. The NAIC has and does assign resources where it is needed to meet the needs of its members. Mr. Therriault advised the Task Force that policy decisions should not be made based on resource concerns. The Executive (EX) Committee is charged with that responsibility, and it makes those decisions based on member needs and industry feedback. As of today, the SVO does not believe that additional resources will be required to analyze this asset class.

- Second, there were concerns about assigning a specific methodology to analyze these securities. Summarizing existing P&P Manual instructions, the SVO has reasonable professional latitude to interpret how the instructions and methodologies contained in the P&P manual apply to specific securities, financial products, or differing analytical situations. Factors that may affect how the SVO interprets instructions and methodologies include, but are not limited
to, the terms of individual securities, unique features or characteristics of securities, legal or regulatory issues associated with structured transactions, the issuer’s industry, the introduction of a new security type or asset class, and NAIC regulatory objectives. The SVO is expressly authorized to employ any analytical technique that is taught in standard undergraduate and graduate business school financial analysis curriculum and any analytical technique otherwise widely or commonly used by lending officers, securities professionals, or credit rating analysts, despite the lack of an express authorization to use the technique in the P&P Manual. Mr. Therriault said these existing instructions are being mentioned because these securities can come in a number of forms, and the SVO needs the flexibility and analytical discretion to apply the methodology that it believes is appropriate to the security being reviewed.

The SVO is also authorized in the P&P manual to analyze securities for other non-payment risk and can express this by assignment of an NAIC Designation with a subscript S. SVO staff believe that these securities fall into such a category. State insurance regulators attach certain economic expectations to certain terms used to describe securities or financial instruments owned by insurers and reported as invested assets. This reflects that the regulatory objective is to assess the financial ability of an insurer to pay claims. Any contractual modification of these regulatory assumptions is deemed to create a rebuttable inference that the security or instrument contains an additional or other non-payment risk—albeit one that is sanctioned by the contract—that may result in the insurer not being paid in accordance with the underlying regulatory assumption. The SVO is granted significant discretion when assigning an NAIC designation to a security that reflects other non-payment risk.

The proposal requests that the Task Force permit the SVO to apply these existing instructions to this class of securities and reflect these other risks that, while sanctioned by the contract, may result in the insurer not being paid in accordance with the underlying regulatory assumption. Rating agencies, while they may be adhering to their methodologies, do not have these same concerns or responsibilities as the Task Force.

Nevertheless, the SVO is likely to apply a variant of the look through weighted average rating factor (WARF) methodology because such a methodology permits the SVO to look at each source of risk. For example, in analyzing a CLO Combo Note, the SVO would look at the underlying securities based on their credit rating provider (CRP) ratings and weight the ratings factor by their balances to generate the overall NAIC designation. However, the SVO would not want to be artificially constrained to only that one methodology.

- A third concern was definitional, that additional assets may be pulled in that do not possess the characteristics that are of concern. The SVO agrees that this may be an issue and would be happy to work with the ACLI to refine the definition of these securities in the amendment. There was also concern expressed about the performance assets not being eligible for Schedule D reporting. Any guidance on the admissibility of an asset falls under the NAIC’s accounting standards of the Statutory Accounting Principles (E) Working Group; and as mentioned in the memorandum, the SVO recommends a referral to the Working Group to consider the issue.

- The fourth concern related to application of this amendment to only newly acquired securities. The SVO is sensitive to disrupting insurer investing; particularly, near year end. Mr. Therriault said the SVO recommends that this amendment become effective on Jan. 1, 2020, to avoid any such disruption and provide insurers an ample transition period; however, the SVO does not recommend exempting any securities from this policy because of the potentially significant inherent risks the SVO sees in these securities. When the SVO sees a situation where it does not believe a security’s rating reflects risk from the NAIC’s perspective, the SVO is obligated to bring it to the Task Force’s attention and propose a recommendation to address that risk; the SVO recommends removing this class of securities from FE eligibility.

Mr. Fry said the Task Force received comments letters from the ACLI, NASVA, Kroll Bond Rating Agency (KBRA), Security Benefit Life Insurance, Delaware Life Insurance Company and Guggenheim Life and Annuity Company. He asked if anyone from those organizations would like to make any brief comments.

Mr. Bean said Mr. Therriault did a nice job of outlining the concerns and has already gone down the road of alleviating or addressing some of them. Certainly Mr. Fry’s comments about directing the SVO and industry to work further on the definition and appropriately refine the scope is really the ultimate focus of the ACLI and NASVA as of this point in time. The ACLI and NASVA look forward in continuing to refine that definition and ensure that the scope is appropriate but truly supports the analytical objectives, and they appreciate the opportunity to be part of the process.
Patrick Welch (KBRA) said principal-protected notes (PPNs), from a credit risk analysis perspective, are not inherently or always problematic. KBRA provides thoughtful, clear, respected credit rating methodology that addresses the terms of the issue or the issuance. The credit rating addresses the downside credit risk, and the performance asset could return zero and the rating will still hold.

Joseph Wittrock (Security Benefit Life Insurance) said not all PPNs are created equal. If one looks at statutory accounting guidance, if it immediately went to zero, not only will the insurer get all their principal back plus the contractual coupon; but because the risk asset immediately goes to zero, statutory accounting guidance requires an immediate write down and impairment—a direct impact to surplus—of the diminution in value of these PPN assets because of the risk asset going to zero. Mr. Wittrock said he believes that the current accounting guidance already provides significant protection to policy holders because of their requirements to address prospective cashflow when assessing current carrying value on a statutory balance sheet. In regards to the definition, Security Benefit Life Insurance has engaged in multiple conversations with industry participants, as well as the ACLI; it was quite clear that there were many industry participants that were not engaged and elected not to get involved because the definition was not clear or they did not have any PPNs. Depending on how the definition of a PPN ultimately falls, there may be a lot more industry feedback because there may be a quite a number of insurance companies who have PPN exposures. Mr. Wittrock urged the Task Force to consider a definition which provides crystal clarity of what a PPN is versus what a PPN is not, with no qualitative assessment or ambiguity in terms of what a PPN is.

Mr. Fry said this is not being considered for adoption today, and the SVO has already offered to work with the ACLI and whomever else would like to provide input into refining the definition of these securities in the amendment. Hopefully an update will be available to review at the Fall National Meeting.

Mr. Fry said the last two agenda items can be deferred, having run out of time. One of those deferred items is moving from price breakpoints on RMBS/CMBS securities to assigning a single NAIC designation independent of the carrying value, a capability that the SSG already has. The idea is to get input on this change, as it would simplify processes. The other item was an update on an SEC adoption. He said both topics can be discussed at the Fall National Meeting.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
MEMORANDUM

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Update the Interim Instructions for Mortgage-Referenced Securities

1. **Introduction** – The SVO proposes a non-substantive amendment to the P&P Manual to update guidance in Part Four under the The NAIC Structured Securities Group, Mortgage-Referenced Securities. The Structured Securities Group (SSG) is responsible to financially model this group of securities; however, they only review them during their annual surveillance process. Insurers currently do not have instructions to assign an NAIC designation to a newly issued or newly acquired mortgage reference security prior to the publication of the annual surveillance data. This proposal would provide that interim guidance.

2. **Proposed Amendment** – The proposed amendment is shown below in red-underline.

   **Part Four The NAIC Structured Securities Group**

   **MORTGAGE REFERENCED SECURITIES**

   **Definition**

   ...

   **Quarterly Reporting for Mortgage Reference Securities**

   To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing status.

© 2019 National Association of Insurance Commissioners
The Valuation of Securities (E) Task Force met via conference call Sept. 5, 2019. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); James J. Donelon, Vice Chair, represented by Stewart Guerin (LA); Lori K. Wing-Heier, represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); Gary Anderson represented by John Turchi (MA); Al Redmer Jr. represented by Vincent O’Grady (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford and Justin Schrader (NE); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by James Matheson and Jim Everett (NY); Glen Mulready represented by Eli Snowbarger (OK); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Patrick McNaughton (WA); and Mark Afable represented by Randy Milquet (WI).

1. Adopted an Updated Amendment to the P&P Manual to Add Instructions for New Administrative Fields “RTS” and “RT”

Mr. Fry said this agenda item is a referral from the Statutory Accounting Principles (E) Working Group requesting the Task Force add new reporting codes for investments that meet the definition of “regulatory transaction” in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). Given the P&P Manual restrictions in reporting NAIC designations for regulatory transactions, the Working Group noted that there was no reporting mechanism to identify regulatory transactions or a Securities Valuation Office (SVO) analytical value for risk-based capital (RBC) assessment on the investment schedules.

Charles A. Therriault (NAIC) said the Task Force discussed this referral and amendment during its Aug. 4 meeting at the Summer National Meeting. At that time, the industry had requested some language clarifications and inclusion of needed administrative symbols. The Task Force agreed and directed SVO staff to work with industry on these clarifications and administrative updates to the amendment and then re-expose the amendment, after those revisions were made, for a two-week public comment period ending Aug. 30.

Mr. Therriault said given that it is now in September, it is unlikely that Blanks (E) Working Group or insurers can implement these symbol changes by year-end. He said SVO staff recommend that these symbols be optional for year-end 2019 reporting, but required as of Jan. 1, 2020. This would include the application of the carry-over administrative symbols “YE” and “IF” for regulatory transaction that were properly filed with the SVO. The amendment highlights in yellow the changes that were made to the amendment since the Summer National Meeting.

Mr. Fry said the Task Force received one joint comment letter from the American Council of Life Insurers (ACLI) and the North American Securities Valuation Association (NASVA). He said they are supportive of the revised proposal and its adoption. Mr. Fry asked if anyone here from the ACLI or NASVA would like to comment on this letter.

Joshua Bean (Transamerica), representing the ACLI and NASVA, said they appreciate the opportunity to comment on the proposal and support its adoption, as recommended by NAIC staff.

Mr. Everett made a motion, seconded by Ms. Belfi, to adopt the revised amendment adding the new reporting codes for investments that meet the definition of a regulatory transaction within the P&P Manual and make referrals to Blanks (E) Working Group to add these codes to the SVO Administrative Symbol list in the 2020 Annual Statement Instructions. This amendment would be optional for Dec. 31, 2019, annual financial statement reporting, but required effective Jan. 1, 2020 (Attachment Two-A). The motion passed unanimously.
2. **Adopted its 2020 Proposed Charges**

Mr. Fry provided an overview of the Task Force’s 2020 proposed charges. He said there was one deletion from its 2019 charges: the implementation of the NAIC designation category was removed as this project is on track and will be implemented in 2020. He also said there was an addition to: “Identify potential improvements to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC’s financial solvency objectives.” This charge is consistent with recent discussions by Task Force on the use of credit ratings.

The Financial Condition (E) Committee manages the work of its various task forces by assigning time periods for any activity that is not an ongoing activity. No new deadlines were proposed in these charges.

Mr. Sirovetz made a motion, seconded by Mr. Thomas, to adopt the Task Force’s 2020 proposed charges and direct SVO staff to provide them to the Financial Condition (E) Committee for consideration (see *NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment One-A*). The motion passed unanimously.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
       Robert Carcano, NAIC Consultant

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

DATE: April 20, 2019 (Amended August 15, 2019)

I. Introduction – The Valuation of Securities (E) Task Force has received a referral (Exhibit One) from the Statutory Accounting Principles (E) Working Group to address reporting for regulatory transactions. The P&P Manual defines the term “regulatory transactions” and provides that such transactions: 1) are not eligible for credit assessment by the SVO; 2) are not eligible for filing exemption (FE); 3) cannot be self-assigned the administrative symbol Z under the 120 rule; 4) cannot be self-assigned as 5GI securities; and 5) cannot be entered into NAIC systems maintained for the Task Force. The P&P Manual also provides that a domiciliary state insurance department may request SVO or SSG assistance in the assessment of a regulatory transaction, with the understanding that the state can adopt the SVO or SSG work product as its own, but the determination is a state determination and not an NAIC work product. Despite this specified treatment, there is no specific instruction for reporting regulatory transactions, and reporting entities do not have any available reporting options when investment schedules require an NAIC designation. The Working Group initiated a project (agenda item 2018-06) to address reporting for regulatory transactions in response to a referral from the Reinsurance (E) Task Force.

On April 6, the Working Group adopted a revised staff recommendation to add reporting codes for the investment component of regulatory transactions. Under the adopted procedure, a reporting entity would use the code “RTS” when the domiciliary state has received assistance from the SVO (or SSG) in reviewing a regulatory transaction. In those cases, the code would be reported with the “analytical value” (a new term defined below) assigned by the SVO and given to the state. The code “RT” would be used for all other regulatory transactions; i.e., those in which the domiciliary state did not ask the SVO for assistance or those where the SVO was unable to determine an analytical value for the transaction for the state. This code would be reported with an NAIC 6 designation for measurement and risk-based capital (RBC) assessments. These codes are specific to Schedule D, Part 1 reporting because those schedules require reporting a “designation” for all securities. A reporting entity may identify a regulatory transaction on other investment schedules, but such other schedules do not require that an NAIC designation be reported (e.g., Schedule BA items are not required to be reported with an NAIC designation.)

The Working Group’s referral requests that the new codes be incorporated into the P&P Manual as part of the guidance on regulatory transactions. SVO staff worked with staff in the NAIC Financial Regulatory Services (FRS) Division...
on the outline of the adopted proposal and so supports the recommended change because it aligns the reporting for regulatory transactions structured as bonds with the limitations prescribed by the P&P Manual mentioned above. Accordingly, the SVO proposes an amendment to the P&P Manual, shown below, to implement it. If the Task Force adopts the proposed amendment, the SVO recommends a further referral to the Blanks (E) Working Group to add these codes to the administrative list in the instructions.

2. Proposed Amendments – The proposed amendments are shown in both the 2018 P&P Manual format and in the newly adopted 2019 P&P Manual format. Please note that the Task Force adopted revisions to the text to clarify treatment for an investment security that may be a component of a regulatory transaction. That version of the text, which is on the Task Force’s/SVO page on the NAIC website, is used to show the proposed amendments in both P&P Manual formats.

The updated amendment includes instructions and Administrative Codes for newly acquired regulatory transactions, the continuation of an analytical value over year-end and clarifying updates to the definitions.
Amendments Shown in 2018 P&P Manual Format

Part One—Purposes, General Policies and Instructions to the SVO

Section 2—Policies Defining the SVO Staff Function

\[d\] SVO Regulatory Products

\[iii\] Authority to Direct Insurers on Reporting

The SVO has responsibility and authority to assess securities that are reportable on Schedule D and Schedule BA of the NAIC Financial Statement Blank. It is, therefore, part of the role of the SVO to determine when financial instruments or securities are not eligible for reporting on Schedule D and Schedule BA. The SVO may, therefore, be required to inform an insurer filer to redirect a financial instrument or security reported to the SVO to another schedule. Similarly, the SVO may also be required to inform an insurer filer that an instrument filed with the SVO pursuant to Part Two, Section 2 a) of this Manual does not meet the definition of an Investment Security and cannot be assessed as such or that a financial transaction or security filed with the SVO meets the definition of a Regulatory Transaction eligible for assessment by the SVO only in accordance with the procedures discussed in under Part Three, Section 6 of this Manual. In all cases in which a situation described in this subparagraph is presented, final determination as to what statutory accounting and reporting applies to the instrument or security is made in consultation between NAIC statutory accounting staff and the SVO.

Part Two—Filing with the SVO

Section 2—General Reporting Framework

\[a\] Obligation to Report

Insurance companies domiciled in any state of the United States, or any of its territories or possessions, and required by the law of their domiciliary state or territory to report NAIC Designations for their Investment Securities in the NAIC Financial Statement Blank, shall report purchases of Investment Securities to the SVO or, in the case of Investment Securities exempt from filing with the SVO, for example, pursuant to Part Three, to the NAIC, as required by this Manual.

For purposes of this Part Two, Section 2 a), an Investment Security means an instrument evidencing a lending transaction between an insurance company as lender and a non-affiliated borrower, where the borrower’s sole motivation is to borrow money and the insurance company’s sole motivation is to make a profit on the loan that the state of domicile regulates by reference to the NAIC Financial Regulation Standards and Accreditation Program.
The SVO shall have no authority to issue NAIC Designations or any other NAIC analytical product to an insurance company for a Regulatory Transaction under Section 2 a) of this Part.

Part Three, Section 6 of this Manual provides that the SVO may assist a state insurance department in the assessment of the security component of a Regulatory Transaction and may issue an SVO Analytic Value to the department at the conclusion of the assessment. Part Three, Section 6 also provides instructions to insurance companies on how to report the security component of a Regulatory Transaction on investment schedules. See Part Three, Section 6 of this Manual for the definition of Regulatory Transaction and a description of the processes governing their assessment.

Part Three Credit Assessment
Section 6—Regulatory Transactions

a) Defined

Regulatory Transaction means a security or other instrument in a transaction submitted to one or more state insurance departments for review and approval under the regulatory framework of the state or states. The term Regulatory Transaction is more broadly defined as a transaction engineered to address a regulatory concern one or more insurers have or may have that should be submitted to a state insurance department for approval and that has as a component a security or other instrument which on a stand-alone version may be an Investment Security, as defined in this Manual, that is eligible for assignment of an NAIC Designation.

b) Status of Regulatory Transactions—A Regulatory Transaction is not eligible for:

—— Assignment of an NAIC Designation by the SVO;
—— The filing exemption process for publicly rated securities;
—— The private letter rating component of the filing exemption or for use of the PLGI designation symbol;
—— Self-assignment by an insurer of the administrative symbol Z under the 120 rule;
—— Self-reporting by an insurer on the general interrogatory for securities eligible for filing exemption but for which no NAIC CRP credit rating is available (i.e., 5GI) and
—— Inclusion in the SVO List of Investment Securities or any other NAIC electronic system or processes maintained for operations of the Valuation of Securities (E) Task Force.

c) Intent

This Section provides guidance to the SVO and the SSG on how to manage requests for assistance made by a state insurance department under Part Two, Section 2 b) of this Manual. Insurance companies shall not report a Regulatory Transaction as a Filing Exempt security, and the NAIC staff shall not assign an NAIC Designation to the security component of a Regulatory Transaction or to the Regulatory Transaction or add them to the Filing Exempt Securities Process of the SVO List of Investment Securities. See, the instructions on Regulatory Transactions contained in the compilation instructions in Part One, Section 3. e) and g) — l). This does not preclude the SVO from working directly with a state insurance department and issuing an opinion to the department consistent with the instructions outlined in this Manual.

d) The Security Component of a Regulatory Transaction

However, as discussed defined above, the security component of a Regulatory Transaction may be an Investment Security that is eligible for designation under filing exemption or by the SVO on a stand-alone basis,
For example,

A. An insurance company entered into a coinsurance reinsurance transaction that requires regulatory approval and as part of that transaction, received an IBM bond. The IBM bond, when owned by an insurance company as a stand-alone investment, would be considered Filing Exemption but the whole regulatory transaction would not be eligible for Filing Exemption. In this example, the IBM bond is assumed to be an Investment Security, as defined in this Manual.

B. An IBM bond that was eligible for Filing Exemption was sold/transferred from an insurance company to an affiliated insurance company that requires regulatory approval. Such an IBM bond would still be considered eligible for Filing Exemption when owned by an insurance company as a stand-alone investment. In this example, the IBM bond is assumed to be an Investment Security, as defined in this Manual. Any other parts of the transaction requiring regulatory approval, if any, would not be eligible for Filing Exemption.

Procedure – Assessment of the Investment Security Component of a Regulatory Transaction

Guidelines

The SVO or SSG is authorized to conduct an analytical assessment on behalf of any state insurance department that requests such assistance.

If an insurance company files a Regulatory Transaction with the SVO via the ATF process or under the Regulatory Treatment Analysis Service (RTAS) process, the SVO shall first contact the state insurance department of the insurance company’s state of domicile to disclose that a Regulatory Transaction has been submitted and inquire whether the state insurance department wants SVO analytical assistance.

The SVO or SSG is authorized to conduct an analytical assessment on behalf of any state insurance department that requests such assistance. If the state insurance department of the insurer’s state of domicile requests such assistance, the SVO shall engage in the requested analytical assessments of the security component of the Regulatory Transaction. In its assessment the SVO determinations would make use of include and refer to NAIC analytical benchmarks, such as those used to produce NAIC Designations, valuation or classification assessments, and such determinations may be given by the SVO or SSG to the state insurance department.

Determinations made by the SVO or SSG given to a state insurance department in connection with the assessment of the security component of a Regulatory Transaction shall be referred to as an SVO Analytic Value, (defined below) to prevent confusion in the reporting by an insurer of the Regulatory Transaction or the security component of the Regulatory Transaction to the domiciliary state insurance department and the reporting of a stand-alone Investment Security under the general procedures applicable to them.

SVO or SSG determinations given in connection with the assessment of a Regulatory Transaction may be given to the state insurance department may be and adopted by the state insurance department as part of that state’s internal determination of the regulatory issues presented by the Regulatory Transaction. However, SVO assessments of the security component of a Regulatory Transaction will not be entered into NAIC computer systems reserved for Investment Securities, as defined in Part Two, Section 2 a) of this Manual or added to the SVO List of Securities as defined in Part One, Section 3 k) of this Manual. The insurance department may give the SVO Analytical Value to the insurer and instruct the insurer to use the SVO Analytical Value to report the security component of the Regulatory Transaction to the state, as more fully discussed below.
f. Reporting Regulatory Transactions on Investment Schedules

A Regulatory Transaction is reported on an investment schedule. A Regulatory Transaction reported on Schedule D, Part I, must be reported with one of the two codes described below. The codes track the security component. Other investment schedules do not require that an NAIC Designation be reported. (For example, Schedule BA items are not required to be reported with an NAIC Designation.) The codes ONLY communicate information about the security component of the Regulatory Transaction. Each of the two codes identifies a different reporting paradigm and requires the reporting entity to report an SVO Analytical Value, defined below.

g. Definition of SVO Analytical Value

An SVO Analytical Value produced by the SVO is an expression of the credit quality of the security component of a Regulatory Transaction which is expressed with the numerical symbols 1 through 6 in the case of a Regulatory Transaction within the reporting paradigm associated with the RTS code. In the case of the security component of a Regulatory Transaction within the reporting paradigm associated with the RT code the SVO has not developed the SVO Analytical Value but in that case the Value is expressed with the numerical symbol 6.

h. Codes and Their Meaning

RTS is reported for a Regulatory Transaction for which: 1) a state insurance department requested SVO assistance in assessing the credit quality of the security component of the Regulatory Transaction; 2) the SVO provided an SVO Analytical Value for the security to the department and 3) the department thereafter directed its insurer to report the SVO Analytical Value. For the securities components of a Regulatory Transaction within the RTS reporting paradigm, the reporting entity reports the analytical value it received from the department which is the same one the SVO provided to the department. The SVO Analytical Value associated with the RTS code is expressed as a numerical symbol from 1 through 6; i.e., 4RTS. An SVO Analytical Value is ONLY assigned by the SVO if the SVO determines the Regulatory Transaction is an Investment Security if engaged in on a stand-alone basis. An SVO Analytical Value is not a preliminary or an official NAIC Designation and cannot be entered into NAIC systems maintained to support the operations of the Valuation of Securities Task Force either by the SVO or anyone else.

RT is reported for a Regulatory Transaction for which a state insurance department did not request assistance from the SVO in assessing the credit quality of the security component of the Regulatory Transaction or in which the department requested the assistance of the SVO but the SVO determined the security component of the Regulatory Transaction was not an Investment Security if engaged in on a stand-alone basis or the SVO was unable to provide an SVO Analytical Value for the security component of the Regulatory Transaction. For the security component of Regulatory Transactions within the RT reporting paradigm, the reporting entity always self-assigns and reports the SVO Analytical Value 6; i.e., 6RT.

Part One Policies of the NAIC Valuation of Securities Task Force

Authority to Direct Insurers on Reporting

40. The SVO is assigned to assess investment securities reported to state regulators on Schedule D and Schedule BA. To fulfill its function SVO must be able to communicate to an insurer that has filed a financial instrument or security that the financial instruments or security is not an investment security eligible for reporting on Schedule D and Schedule BA. SVO may be required to communicate to an insurer that it must refile a financial instrument or security to another schedule. SVO may also have to communicate to an insurer that an instrument the insurer has filed does not meet the definition of an Investment Security in this Manual and is therefore not eligible to be assessed or that the financial transaction or security is a Regulatory Transaction that can only be assessed by the SVO. The SVO, in assessing a Regulatory Transaction, will only do so in accordance with the procedures discussed in this Manual if requested by a state insurance department. When situations occur that require the SVO to communicate reporting or related statutory guidance to an insurer, SVO consults with Financial Regulatory Services Division staff to ensure the communication to the insurer is accurate.

Part One Policies of the NAIC Valuation of Securities Task Force

Filing Securities with the SVO

NOTE: See “General Filing Procedures” and “Filing Process and Required Documents” in Part Two and the various asset specific sections in Part Three for filing instructions and documentation requirements specific to the security or asset type discussed in those section.

Obligation to File Securities with the SVO

48. Insurance companies domiciled in any state of the United States, or any of its territories or possessions, that have adopted laws incorporating the standards in the NAIC Financial Regulation Standards and Accreditation Program that require the use of NAIC Designations or other analytical products for Investment Securities are required by those laws to file purchases of Investment Securities with the SVO as indicated in this Manual to obtain the NAIC Designation or other analytical product required by state law.

49. Investment Security means an instrument that documents a lending transaction between an insurance company as lender and a non-affiliated borrower, where the borrower’s sole motivation is to borrow money and the insurance company’s sole motivation is to make a profit on the loan that the state of domicile regulates by reference to the NAIC Financial Regulation Standards and Accreditation Program.

50. The SVO shall have no authority to issue NAIC Designations or any other NAIC analytical product to an insurance company for a Regulatory Transaction. This Manual provides that the SVO may assist a state insurance department in the assessment of the security component of a Regulatory Transaction and may issue an SVO Analytic Value to the department at the conclusion of the assessment. This Manual also provides instructions to insurance companies on how to report the security component of a Regulatory Transactions on investment schedules.
Part One Policies of the NAIC Valuation of Securities Task Force
Policies Applicable to Specific Asset Classes
Regulatory Transactions

Defined

111. Regulatory Transaction means a security or other instrument in a transaction submitted to one or more state insurance departments for review and approval under the regulatory framework of the state or states. The term Regulatory Transaction is more broadly defined as a transaction engineered to address a regulatory concern one or more insurers have or may have that should be submitted to a state insurance department for approval and that has as a component a security or other instrument which on a stand-alone version may be an Investment Security, as defined in this Manual, that is eligible for assignment of an NAIC Designation.[RC4]

Intent

112. This section provides guidance to the SVO and the SSG on how to manage requests for assistance made by a state insurance department made as permitted in this Manual. Insurance companies shall not report a Regulatory Transaction as a Filing Exempt security, and the NAIC staff shall not assign an NAIC Designation to the security component of a Regulatory Transaction or to the Regulatory Transaction or add them to the Filing Exempt Securities Process of the SVO List of Investment Securities. This does not preclude the SVO from working directly with a state insurance department and issuing an opinion to the department consistent with the instructions outlined in this Manual.[RC5] See Regulatory Transactions in Part Three for guidance on the status of the security component of a Regulatory Transaction.

NOTE: See “Regulatory Transactions” in Part Three and “Compilation and Publication of the SVO List of Investment Securities” in Part Two. Regulatory Transactions are excluded from all NAIC data files used to produce the SVO List of Investment Securities, including the data file that houses information about insurer-owned filing exempt securities.

Part Three SVO Procedures and Methodology for the Production of NAIC Designations

Regulatory Transactions

NOTE: See “Policies Applicable to Specific Asset Classes” in Part One for the policies governing this activity, as well as “Specific Populations of Securities Not Eligible for Filing Exemption” in “Procedure Applicable to Filing Exempt (FE) Securities and Private Letter (PL) Rating Securities” above.

Defined

9. Regulatory Transaction means a security or other instrument in a transaction submitted to one or more state insurance departments for review and approval under the regulatory framework of the state or states.

The term Regulatory Transaction is more broadly defined as a transaction engineered to address a regulatory concern one or more insurers have or may have that should be submitted to a state insurance department for approval and that has as a component a security or other instrument which on a stand-alone version may be an Investment Security, as defined in this Manual, that is eligible for assignment of an NAIC Designation.[RC6]
Status of Regulatory Transactions

10. - A Regulatory Transaction is not eligible for:

   Assignment of an NAIC Designation by the SVO;
   The filing exemption process for publicly rated securities;
   The private letter rating component of the filing exemption or for use of the PLGI designation symbol;
   Self-assignment by an insurer of the administrative symbol Z under the 120-rule;
   Self-reporting by an insurer on the general interrogatory for securities eligible for filing exemption but for which no NAIC CRP credit rating is available (i.e., 5GI) and
   Inclusion in the SVO List of Investment Securities or any other NAIC electronic system or processes maintained for operations of the Valuation of Securities (E) Task Force.
Intent

11. This Section provides guidance to the SVO and the SSG on how to manage requests for assistance made by a state insurance department under as authorized in Part Two, Section 2 b) of this Manual. Insurance companies shall not report a Regulatory Transaction as a Filing Exempt security, and the NAIC staff shall not assign an NAIC Designation to the security component of a Regulatory Transaction or to the Regulatory Transaction or add them to the Filing Exempt Securities Process of the SVO List of Investment Securities. See, the instructions on Regulatory Transactions contained in the compilation instructions in Part One, Section 3. e) and g) – l) this Manual. This does not preclude the SVO from working directly with a state insurance department and issuing an opinion to the department consistent with the instructions outlined in this Manual. [RC7]

The Security Component of a Regulatory Transaction

12. However[RC8], as discussed defined above, the security component of a broadly defined Regulatory Transaction – a transaction engineered to address a regulatory concern one or more insurers have or may have that should be submitted to a state insurance department for approval may be an Investment Security that Filing Exempt or may be eligible for designation under filing exemption or by the SVO on a stand-alone basis. For example,

A. An insurance company entered into a coinsurance reinsurance transaction that requires regulatory approval and as part of that transaction, received an IBM bond. The IBM bond, when owned by an insurance company as a stand-alone investment, would be considered eligible for Filing Exemption but the whole regulatory transaction would not be eligible for Filing Exemption. In this example, the IBM bond is assumed to be an Investment Security, as defined in this Manual.

B. An IBM bond that was eligible for Filing Exemption was sold/transferred from an insurance company to an affiliated insurance company that requires regulatory approval. Such an IBM bond would still be considered eligible for Filing Exemption when owned by an insurance company as a stand-alone investment. In this example, the IBM bond is assumed to be an Investment Security, as defined in this Manual. Any other parts of the transaction requiring regulatory approval, if any, would not be eligible for Filing Exemption.

Guidelines

Procedure – Assesment of the Security Component of a Regulatory Transaction

10. The SVO or SSG is authorized to conduct an analytical assessment on behalf of any state insurance department that requests such assistance.

13. If an insurance company files a Regulatory Transaction with the SVO via the ATF process or under the Regulatory Treatment Analysis Service (RTAS) process, the SVO shall first contact the state insurance department of the insurance company’s state of domicile to disclose that a Regulatory Transaction has been submitted and inquire whether the state insurance department wants SVO analytical assistance.

14. The SVO or SSG is authorized to conduct an analytical assessment on behalf of any state insurance department that requests such assistance. If the state insurance department of the insurer’s state of domicile requests such assistance, the SVO shall engage in the requested analytical assessments of the security component of the Regulatory Transaction. In its assessment, the SVO would make use of SVO determinations may include and refer to NAIC analytical benchmarks, such as those used to produce NAIC Designations, valuation or classification assessments, and such determinations may be given by the SVO or SSG to the state insurance department.
15 Determinations made by the SVO or SSG given to a state insurance department in connection with the assessment of the security component of a Regulatory Transaction shall be referred to as an SVO Analytic Value, (defined below) to prevent confusion in the reporting by an insurer of the Regulatory Transaction or the security component of the Regulatory Transaction to the domiciliary state insurance department and the reporting of a stand-alone Investment Security under the general procedures applicable to them.

16. SVO or SSG determinations given in connection with the assessment of a Regulatory Transaction may be given to and adopted by the state insurance department. However, SVO assessments for the security component of a Regulatory Transaction will not be entered into NAIC computer systems reserved for Investment Securities as defined in this Manual or added to the SVO List of Securities as defined in this Manual. The insurance department may give the SVO Analytical Value to the insurer and instruct the insurer to use the SVO Analytical Value to report the security component of the Regulatory Transaction to the state, as more fully discussed below.

Reporting Regulatory Transactions on Investment Schedules

17. A security component of a Regulatory Transaction is reported on an investment schedules. The security component of a Regulatory Transaction reported on Schedule D, Part I, must be reported with one of the two codes described below, unless it would otherwise qualify as an Investment Security eligible for designation under filing exemption or by the SVO on a stand-alone basis absent the broadly defined Regulatory Transaction (as discussed above). The codes track the security component. Other investment schedules do not require that an NAIC Designation be reported. (For example, Schedule BA items are not required to be reported with an NAIC Designation.) The codes apply ONLY to the security component of the Regulatory Transaction. Each of the two codes identifies a different reporting paradigm and requires the reporting entity to report an SVO Analytical Value, defined below.

Definition of SVO Analytical Value

18. An SVO Analytical Value produced by the SVO is an expression of the credit quality of the security component of a Regulatory Transaction which is expressed with the numerical symbols 1 through 6 in the case of a Regulatory Transaction within the reporting paradigm associated with the RTS code and is expressed with the numerical symbol 6 can be expressed with the grade indicated by the letters A through G for Analytical Value of 1, and three delineations each for the Analytical Value 2, 3, 4 and 5 indicated by the letters A, B and C, and one delineation for Analytical Value 6. In the case of the security component of a Regulatory Transaction within the reporting paradigm associated with the RT code the SVO has not developed the SVO Analytical Value but in that case the Value is expressed with the numerical symbol 6.

Codes and Their Meaning

19. RTS is reported for the security component of a Regulatory Transaction for which: 1) a state insurance department requested SVO assistance in assessing the credit quality of the security component of the Regulatory Transaction; 2) the SVO provided an SVO Analytical Value for the security to the department and 3) the department thereafter directed its insurer to report the SVO
Analytical Value. For the security component of a Regulatory Transaction within the RTS reporting paradigm, the reporting entity reports the analytical value it received from the department which is the same one the SVO provided to the department. The SVO Analytical Value associated with the RTS code is expressed as a numerical symbol from 1 through 6; i.e., 4RTS. The RTS SVO Analytical Value may be used in conjunction with the SVO Analytical Department Symbols and instructions defined in this manual and assigned by the SVO associated with: IF, YE and Z (but only for RTS securities issued within 120-days of the reporting period-end date); i.e. 1.G RTSYE, 4.B RTSIF, 3.A RTSZ as detailed in the Annual Statement Instructions.

An SVO Analytical Value is ONLY assigned if the SVO determines the security component of the Regulatory Transaction would not qualify as an Investment Security eligible for designation under filing exemption or by the SVO if engaged on a stand-alone basis. An SVO Analytical Value is not a preliminary or an official NAIC Designation and cannot be entered into NAIC systems maintained to support the operations of the Valuation of Securities Task Force either by the SVO or anyone else.

20. RT is reported for the security component of a Regulatory Transaction for which a state insurance department did not request assistance from the SVO in assessing the credit quality of the security component of the Regulatory Transaction or in which the department requested the assistance of the SVO but the SVO determined the security component of the Regulatory Transaction was not an Investment Security if engaged in on a stand-alone basis or the SVO was unable to provide an SVO Analytical Value for the security component of the Regulatory Transaction. For the security component of Regulatory Transactions within the RT reporting paradigm, the reporting entity always self-assigns and reports the SVO Analytical Value 6; i.e. 6RT.

RE: Joint Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Add Ground Lease Financing Transactions as New Asset Class

DATE: October 17, 2019

1. **Introduction** – Earlier in 2019 the SVO became aware that certain insurance company filers were submitting credit tenant loan (CTL) transactions and transactions which are herein defined as ground lease financing (GLF) transactions through the Filing Exempt (FE) process. The SVO subsequently explained to the market that (i) all CTL structures must be submitted to the SVO for review pursuant to Part One, Paragraph 106 and Part Three, Paragraph 4 of the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P), (ii) the SVO considered GLF transactions distinct from CTL transactions and (iii) the SVO identified that it would need to study the GLF transactions before they could make a recommendation to the Valuation of Securities (E) Task Force on whether NAIC Designations could be assigned to these structures and if they should be eligible for Schedule D reporting given their credit and legal risks. The SVO has now completed that study and a discussion of the SVO’s evaluation of the GLF asset class, its proposed approach to analyzing GLF transactions, and its recommended related amendments to the P&P follow.

2. **Analytic Overview** –

   **Credit Tenant Loans** – CTLs are loans made to the owner of real property but made primarily in reliance on the credit standing of the tenant on a long-term lease of such property (generally highly rated by an NAIC CRP), structured with an assignment of the rental payments under such lease to the lender with such real property pledged as collateral in the form of a first lien. CTLs are generally structured around the terms of the lease which, in its strongest form, requires the tenant to perform all obligations related to the leased premises thereby obligating the tenant to continue to pay rent regardless of what occurs to the leased premises (e.g. casualty or condemnation). The leases are typically considered, with certain recognized variants in the P&P, to be “hell or high water” or “triple net” in nature. Therefore, the SVOs analytic focus is on the credit worthiness of the tenant (or its guarantor), and not the...
real property characteristics of the premises. As explained in the CTL section of Part Three of the P&P, the SVO recognizes four categories of CTLs as eligible for reporting on Schedule D (Bond Lease Based CTLs, Credit Lease Based CTLs, Acceptable CTL Variants (ACVs), and Multiple Property Transactions (MPTs)), each with varying degrees of landlord obligation and real estate risk exposure and varying legal and structural complexity. Pursuant to the P&P’s CTL criteria, each enumerated permitted landlord obligation or risk must be explicitly addressed with an enumerated mitigant. (CTLs are explained extensively in the P&P, Part Three, Paragraphs 71 – 91.)

Ground Lease Financings – A GLF transaction typically has two components: (i) a ground lease for a long period (e.g. 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land, and (ii) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc. in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g. 5-15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc. under a franchise agreement or other arrangement.

Both the ground lessor and ground lessee will typically finance their respective estates (i.e., the fee estate of the ground lessor and the leasehold estate of the ground lessee); (i) the ground lessor, typically, with the issuance of debt-like certificates or notes, and (ii) the ground lessee, typically, by borrowing from a financial institution or traditional mortgage lender. To secure the financing, the ground lessor will grant to the lender a mortgage on the fee property such ground lessor owns, and the ground lessee will pledge to the leasehold lender its leasehold estate and its rights under the ground lease and in the improvements which it owns and the space leases if any.

Typically, in a GLF transaction neither the ground lessor nor the ground lessee is an entity either (i) rated by an NAIC CRP or (ii) whose credit worthiness can be evaluated by the SVO. Rather, they are special purpose vehicles (SPVs) intended to be bankruptcy remote.

Comparison of CTLs and GLFs – Due to the “hell or high water” or “triple net” nature of the lease in a CTL transaction or, in the instance where there are variances, their mitigation in accordance with the P&P CTL criteria, the SVO can focus its analysis on the credit worthiness of the credit tenant and not on an analysis of the underlying property. This type of lease eliminates the investor’s exposure to property risk as all payments owed to the investor ultimately come from the tenant.

In a GLF transaction it is often the case that the terms of the ground lease itself (the first leg of the transaction) is structured with the same attributes as a lease in a CTL transaction (e.g. it is “hell or high water” or “triple net”). However, because the ground lessee is an SPV rather than an operating entity, there is no NAIC CRP credit rating or SVO credit analysis to rely on. To determine whether the ground lessee will have sufficient funds to pay its ground lease obligations the SVO must look to the rent payments of the space tenants or the operation of the business being conducted on such property. The SVO, in conjunction with the NAIC Structured Securities Group (SSG) takes the position that the analysis of space leases and space tenants can be more akin to a commercial mortgage backed security (CMBS) analysis than the corporate analysis in a CTL transaction because the space leases may not meet the CTL criteria and can consist of several space tenants of differing credit profiles and each with differing space lease terms. We note that some of the NAIC CRPs which assign ratings to GLF transactions have utilized their CMBS models in their GLF ratings process, but their methodologies and criteria vary widely. The SVO understands that in most GLF transactions the certificate holder, the insurer as the investor, is in a “last loss”, or most senior, position. However, regardless of where they stand in the waterfall, unlike a traditional CTL transaction, ultimate payment on the GLF certificates is dependent not on a single credit tenant, but rather on payments by all the space tenants (which are not necessarily NAIC CRP rated or SVO analyzed entities) pursuant to space leases (which do not necessarily meet the CTL criteria).
Proposal – Recognizing that there are variances in how GLF transactions are structured the SVO proposes amending the P&P to institute a multi-pronged approach to analyzing these transactions. The proposed P&P amendments would include adding GLF transactions as a new asset class and would outline our GLF analytic process as follows:

a. The SVO would analyze the ground lease to determine if it meets the criteria for Bond Lease Based CTLs or Credit Lease Based CTLs in the P&P. We expect most ground leases to meet this test. Ground lease inconsistency with the Bond or Credit Lease Based CTL criteria would result in ineligibility for Schedule D reporting.

b. If the ground lease meets the Bond or Credit Lease Based CTL criteria and if three or fewer space tenants, each of which either (i) are rated by an NAIC CRP or (ii) whose credit worthiness can be evaluated by the SVO, when combined comprise 90% or more of the total space lease payment obligations, the SVO would analyze the space leases to determine if they meet the CTL criteria for one of the four CTL categories in the P&P. If so, the SVO could, in its sole discretion and based on its analytic judgement, analyze the transaction as akin to a CTL, based on the CTL-like nature of both the ground and space leases, the limited number of space leases and the credit profiles of the space tenants. We expect a small fraction of all GLF transactions to fall in this category.

c. If the ground lease meets the Bond or Credit Lease Based CTL criteria and there are four or more space tenants, or the SVO has determined that the transaction does not meet the criteria set forth in clause (b.) above or if there are no space tenants but one operator of a business on the leasehold such as a hotel, warehouse, intermodal facility, etc., the SVO may refer the space leases or the business operation to the SSG for possible financial modeling. If the SSG, in conjunction with its third-party modeling vendor, determines that the space leases or business operation can be modeled, the SSG would analyze the space leases or business operation, as the case may be, to determine whether they will provide sufficient cash flow to pay the ground lease rent payments and any additional costs which the ground lessee would be obligated to cover pursuant to the ground lease terms (e.g. taxes, utilities, maintenance, insurance).

d. If the SSG, in conjunction with its third-party modeling vendor, determines that it is unable to model the space leases or business operation, as the case may be, and if the transaction has been assigned an Eligible NAIC CRP Rating, public or private, the SVO may use the NAIC CRP analysis provided by the filer to assist the SVO in its own analysis. The SVO’s analysis will be entirely at the discretion of the SVO, and the SVO will be under no obligation to accept the NAIC CRP analysis, conclusions or ratings. Furthermore, upon completion of its analysis the SVO can decline to assign an NAIC Designation, in which case the security would be ineligible for Schedule D reporting.

e. Insurers that would like the SVO to review the GLF transactions prior to purchasing them may submit them through the Regulatory Treatment Analysis Service (RTAS) process. The SVO is willing to set up new RTAS processes for each of these three paths, at the request of the submitting investor: 1) SVO credit analysis, 2) SSG modeling and 3) SVO review of NAIC CRP analysis.

f. Additionally, the SVO would look for evidence that (i) the transaction is properly insured because, unlike a credit tenant in a CTL transaction, the ground lessee SPV will not have access to extra funds to cover costs such as repairs in the event of casualty, and (ii) that satisfactory Phase I and, if necessary, Phase II environmental reports have been delivered to provide comfort that there will be no unexpected environmental liabilities.

3. Recommended Amendment – The recommended changes to the P&P regarding the addition of Ground Lease Financing criteria are shown below in red, showing how it will appear in the 2019 P&P format. The SVO recommends that this amendment also be referred to the Statutory Accounting Principles (E) Working Group for affirmation that these investments are eligible for Schedule D, Part 1 reporting under the criteria proposed.

POLICIES APPLICABLE TO SPECIFIC ASSET CLASSES

... 

GROUND LEASE FINANCING TRANSACTIONS

GLF Overview

107. A ground lease financing transaction (GLF) typically has two components: (i) a ground lease for a long period (e.g. 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land, and (ii) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc. in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g. 5-15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc. under a franchise agreement or other arrangement.

108. The ground lease itself typically meets the Credit Tenant Loan (CTL) criteria for Bond Lease Based or Credit Lease Based CTLs in this Manual. Additionally, there can be one or several space tenants or business operators (which (i) may or may not be NAIC CRP rated entities or (ii) whose credit worthiness can or cannot be evaluated by the SVO) making lease payments under separate space leases (which may or may not meet the CTL criteria) or a business operation. As such, the SVO cannot rely solely on the CTL criteria for its analysis of GLF transactions and instead must rely on a combination, as necessary and available, of the CTL criteria, the CMBS criteria, the documented analysis of NAIC CRPs, and the SVOs own analytic judgement.

109. A GLF transaction reported as a CTL on transaction on Schedule D, acquired prior to January 1, 2020, and reported with an NAIC Designation produced under filing exemption, can continue to be reported on the basis of that Eligible NAIC CRP Rating until sold or disposed of.

NOTE: See “Ground Lease Financing Transactions” in Part Three for filing instructions, documentation requirements and methodology applicable to GLFs.

Specific Populations of Securities Not Eligible for Filing Exemption

4. The filing exemption procedure does not apply to:
Ground Lease Financing Transactions – A Ground Lease Financing (GLF) transaction typically has two components: (i) a ground lease for a long period (e.g. 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land, and (ii) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc. in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g. 5-15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc. under a franchise agreement or other arrangement. GLF transactions are not eligible for filing exemption. The GLF section in this Part provides further guidance on how the SVO analyzes GLF transactions for purposes of determining Schedule D eligibility and whether the SVO can assign an NAIC Designation.

Part Three – SVO Procedures and Methodology for Production of NAIC Designations

Ground Lease Financing Transactions

NOTE: See “Policies Applicable to Specific Asset Classes” in Part One for policies governing this activity, as well as “Specific Populations of Securities Not Eligible for Filing Exemption” in “Procedure Applicable to Filing Exempt (FE) Securities and Private Letter (PL) Rating Securities” above.

Initial Filing Requirements

305. For ground lease financing (GLF) transactions, the reporting insurance company shall submit a complete GLF Evaluation Form together with the documentation described in the GLF Evaluation Form and, if available, evidence of a current Eligible NAIC CRP Rating and related NAIC CRP analysis for (i) the GLF Transaction (including, but not limited to rating methodology used, model assumptions and stress test results) and (ii) each space lessee or its guarantor or business operator in the case of a hotel, warehouse, intermodal facility, etc. or other business operation.

Subsequent Filing Requirements

306. For GLF Transactions, the reporting insurance company shall submit evidence, if available, of a current Eligible NAIC CRP Rating and related NAIC CRP analysis for (i) the GLF Transaction (including, but not limited to rating methodology used, model assumptions and stress test results) and (ii) each space lessee or its guarantor or business operator. For purposes of this section, a current Eligible NAIC CRP Rating is defined as one issued or reviewed within the past 12 calendar months. If the GLF Transaction is modeled by the NAIC’s third-party modeling vendor, the reporting insurance company will submit the data required by the vendor in the form such vendor specifies. In the event a space lessee or its guarantor or the business operator, as the case may be, is not rated by an NAIC CRP and a space lease or business operation is not modeled, the reporting insurance company shall file the Audited Financial Statements and other relevant credit information of the space lessee or its guarantor or business operator, as the case may require, consistent with all corporate bond filing requirements.

SVO Procedure
Upon receipt of a GLF Evaluation Form, the SVO analyst shall review the form and all documentation submitted with it and shall proceed with analysis in accordance with section “SVO Approach to GLF Transactions” below.

Ground Lease Financing Transaction – Definition and Overview

A ground lease financing (GLF) transaction typically has two components: (i) a ground lease for a long period (e.g. 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land, and (ii) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc. in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g. 5-15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc. under a franchise agreement or other arrangement.

Both the ground lessor and ground lessee will typically finance their respective estates (i.e., the fee estate of the ground lessor and the leasehold estate of the ground lessee); (i) the ground lessor, typically, with the issuance of debt-like certificates or notes, and (ii) the ground lessee, typically, by borrowing from a financial institution or traditional mortgage lender. To secure the financing, the ground lessor will grant to the lender a mortgage on the fee property such ground lessor owns, and the ground lessee will pledge to the leasehold lender its leasehold estate and its rights under the ground lease and in the improvements which it owns and the space leases if any.

Typically, in a GLF transaction neither the ground lessor nor the ground lessee is an entity either (i) rated by an NAIC CRP or (ii) whose credit worthiness can be evaluated by the SVO. Rather, they are special purpose vehicles (SPVs) intended to be bankruptcy remote.

In a GLF transaction it is often the case that the ground lease (the first leg of the transaction) is structured with the same attributes as a lease in a CTL transaction (e.g. it is “hell or high water” or “triple net”). However, because the ground lessee is an SPV rather than a corporate entity, there is no NAIC CRP corporate credit rating or SVO corporate analysis to rely on. To determine whether the ground lessee will have sufficient funds to pay its ground lease obligations the SVO must look to the rent payments of the space tenants or the operation of the business conducted in such improvements (such as a hotel, warehouse, intermodal facility, etc.). Depending on the specifics of a GLF transaction, analysis of space leases and space tenants and business operations and business operators could be more akin to a commercial mortgage backed security (CMBS) analysis than the corporate analysis in a CTL transaction because (i) the space leases may not meet the CTL criteria and can consist of one or several space tenants of differing credit profiles and each with differing space lease terms and ultimate payment on the GLF is dependent on the space tenants making their rent payment on the space leases or (ii) in the event there is a business operation, ultimate payment on the GLF is dependent on the operation of such business to generate cashflow for ground rent and other expenses. For this reason, the SVO may refer certain GLF transaction space lease or business operations analyses to the NAIC Structured Securities Group (SSG) because of the SSG’s financial modeling capabilities and because, in accordance with this Manual, it analyzes and assigns NAIC Designations to CMBS transaction.

SVO Approach to GLF Transactions

All GLF transactions are ineligible for filing exemption and must be submitted to the SVO. The SVO will conduct GLF transaction review in the following manner:
a. The SVO will analyze the GLF transaction structure and determine whether the ground lease meets the CTL criteria for Bond Lease Based or Credit Lease Based CTLs, except for not having a credit tenant. If the SVO, in its sole discretion, determines the ground lease does not meet the Bond Lease Based or Credit Lease Based CTL criteria, except for a credit tenant, the security would be ineligible for Schedule D reporting.

b. If the ground lease meets the CTL criteria, except for a credit tenant, and if three or fewer space tenants, each of which (i) are rated by an NAIC CRP or (ii) whose credit worthiness can be evaluated by the SVO, when combined comprise ninety percent (90%) or more of the total space tenant lease obligations, the SVO will analyze the space leases to determine if they meet the CTL criteria for one of the four CTL categories in this Manual. If so, the SVO can, in its sole discretion and based on its analytical judgment, analyze the transaction as akin to a CTL, based on the CTL-like nature (e.g. “hell or high water” or “triple net” features) of both the ground and space leases, the limited number of space leases and the corporate credit profiles of the space tenants.

c. If the ground lease meets the criteria for Bond Lease Based or Credit Lease Based CTLs and there are four or more space tenants, or the SVO has determined that it cannot apply the approach in (b.) above or the transaction does not meet the criteria set forth in clause (b) above, the SVO will refer the space leases or the business operation, as the case may be, to the SSG for possible financial modeling. If the SSG, in conjunction with its third-party modeling vendor, and in its sole discretion and analytical judgment based on factors including, but not limited to, availability of data, transaction structure and other transaction specific risks, determines that the space leases or business operation can be modeled, it will analyze the space leases or business operation, as the case may be, to determine whether they will provide sufficient cash flow to pay the ground lease rent payments and any additional costs which the ground lessee is required to cover pursuant to the ground lease terms (e.g. taxes, utilities, maintenance, insurance).

d. If the SSG, in conjunction with its third-party modeling vendor, and in its sole discretion and analytical judgment, determines that it is unable to model the space leases or business operation, as the case may be, and if the transaction has been assigned a public or private Eligible NAIC CRP Rating the SVO shall proceed with an analysis of the transaction guided by the available analyses of all NAIC CRPs that provided an Eligible NAIC CRP Rating on the transaction. For the avoidance of doubt, the SVO’s analysis will be entirely at the discretion of the SVO and the SVO is not obligated to accept or follow the rating methodology of any NAIC CRP and can, in its sole discretion and based on its analytical judgement, assign an NAIC Designation which differs from the correlated Eligible NAIC CRP Rating or choose not to assign any NAIC Designation. The SVO may, in its sole discretion, upon written request from the submitting investor, disclose its rationale as to why such transaction was not given a Designation correlated to the Eligible NAIC CRP Rating.

e. Should the SVO or, if applicable, SSG determine that it cannot assign an NAIC Designation to the GLF, the GLF would be ineligible for Schedule D reporting.

GLF Specific Considerations

313. The space lease payments or business operation, as the case may be, should be sufficient to cover any recurring costs the ground lessee is obligated to pay (e.g. taxes, utilities, maintenance, insurance) pursuant to the terms of the ground lease. All such ground lessee obligations will be factored into the SSG’s financial model of the space leases or business operations, if applicable.

314. To provide comfort that there will be no environmental liabilities, the filing documents shall include a Phase I environmental report showing no environmental problems and, if the Phase I report shows a
problem or the nature and prior used of the land indicates a substantial likelihood of preexisting environmental contamination, a Phase II environmental report.

315. Typically, a ground lease will require the ground lessee to hold the following insurance to protect the ground lease payments from potential shortfall due to the termination or abatement of space lease payments or reduction or termination of business operation upon the occurrence of condemnation or casualty or other insurable condition. Any of the insurable risks below that are not insured should be otherwise mitigated and evidence of such mitigant should be included in the filing documents.

   a. Casualty insurance in an amount of coverage equal to 100% of the replacement value of the improvements with the fee lender named as the loss payee.

   b. Rent loss insurance in an amount of coverage equal to at least 12 months of ground rent with the fee lender named as loss payee.

   c. General liability insurance. The amount of coverage shall be sized appropriately, depending on the size and type of building (e.g. office, hotel, warehouse, intermodal facility, etc.).

   d. Ground Lessor would be required to purchase special risk condemnation insurance in an amount of coverage equal to the principal amount of the GLF. This policy shall be prepaid and remain in place for the entire term of the GLF secured by the fee mortgage.

Note: All insurance must be issued by a carrier with an NAIC Designation equivalent rating of 1.G or better.

Part Four – The NAIC Structured Securities Group

Ground Lease Financing Transactions

Definition

36. Ground Lease Financing (GLF) transactions are defined and explained in “Ground Lease Financing Transactions” in Part Three of this Manual.

SSG Role and Process

37. On occasion the SVO may refer a GLF transaction to the SVO for financial modeling of the GLF space leases or business operation, as applicable, in accordance with the process set forth in “Ground Lease Financing Transactions” in Part Three of this Manual. Following an SVO referral the SSG and SVO will maintain open communication related to requests for additional data, analytical questions and analytical conclusions. Any GLF transaction NAIC Designation will be assigned by the SVO.
FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

Reinsurance (E) Task Force Memorandum Regarding 2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), Nov. 15, 2019 (Attachment Three) ............................................................................................................ 11-15
Reinsurance (E) Task Force Memorandum Regarding 2016 Revisions Model #785 and Term and Universal Life Insurance Reserve Financing Model Regulation (#787), March 20, 2017 (Attachment Four) .................................................................................................................................................. 11-29
The Financial Regulation Standards and Accreditation (F) Committee met in Austin, TX, Dec. 7, 2019. The following Committee members participated: Todd E. Kiser, Chair (UT); Jillian Froment, Vice Chair, (OH); Lori K. Wing-Heier represented by David Phifer (AK); Allen W. Kerr represented by Mel Anderson (AR); Andrew N. Mais represented by Kathy Belfi (CT); Nancy G. Atkins (KY); Gary Anderson represented by Rachel M. Davison (MA); Mike Causey (NC); Bruce R. Ramge and Justin Schrader (NE); Elizabeth Kelleher Dwyer (RI); Larry Deiter (SD); Scott A. White represented by Doug Stolte (VA); Michael S. Pieciak represented by David Provost (VT); and Jeff Rude (WY). Also participating was: Chlora Lindley-Myers (MO).

1. Adopted its Summer National Meeting Minutes

Commissioner Kiser said the Committee met Dec. 6 and Aug. 3. During its Dec. 6 meeting, the Committee met in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to: 1) discuss state-specific accreditation issues; and 2) vote to award continued accreditation to the insurance departments of Connecticut, Massachusetts, New York and, for the first time, the U.S. Virgin Islands.

Director Ramage made a motion, seconded by Director Dieter, to adopt the Committee’s Aug. 3 minutes (see NAIC Proceedings – Summer 2019, Financial Regulation Standards and Accreditation (F) Committee). The motion passed unanimously.

2. Adopted Revisions to the SEG/IAR for Consistency with Revisions to Part D of the Accreditation Standards

Commissioner Kiser stated that at the Summer National Meeting, the Committee adopted changes to Part D: Organizational, Redomestications and Change of Control of the Review Team Guidelines, which included updates to the standards for primary applications for new companies and Form A filings, and the addition of a new standard related to redomestications. When changes are made to the Review Team Guidelines, the related questions in the Self-Evaluation Guide (SEG) must also be updated for consistency. The Review Team Guidelines represent the requirements for accreditation. The SEG is the means through which the states report on compliance with those guidelines. These related changes to the SEG were exposed at the Summer National Meeting, and no formal comments were received.

Becky Meyer (NAIC) summarized a suggestion to remove duplicative language from (b)1 in the SEG/Interim Annual Review (IAR) for Part D. When the Review Team Guidelines were changed, the section was moved, so number two is where that information should reside. It is recommended that the highlighted portion be removed.

Ms. Belfi made a motion, seconded by Mr. Provost, to adopt the changes to the Review Team Guidelines—Procedures for Troubled Companies effective Jan. 1, 2020 (Attachment Two). The motion passed unanimously.

3. Adopted a Referral from the Financial Analysis (E) Working Group Regarding Updates to the Troubled Company Accreditation Guidelines

Commissioner Kiser stated that earlier this year, updates were made to the Troubled Insurance Company Handbook to clarify expectations regarding timely and effective communication between domiciliary and non-domiciliary state insurance departments. In situations when a company becomes troubled, communication between affected states is very important. Therefore, these concepts are incorporated into the accreditation guidelines. The referral was exposed for a 30-day public comment period and no comments were received.

Ms. Belfi made a motion, seconded by Mr. Provost, to adopt the changes to the Review Team Guidelines—Procedures for Troubled Companies effective Jan. 1, 2020 (Attachment Two). The motion massed unanimously.
4. **Adopted the 2019 Revisions to Model #785 and Model #786 as an Update to the Accreditation Standards**

Commissioner Kiser stated that on June 25, the Executive (EX) Committee and Plenary unanimously adopted revisions to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786), which incorporate relevant provisions in the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. Because the models are part of the accreditation standards, the impact on accreditation must be considered.

Director Lindley-Myers summarized the referral memorandum from the Reinsurance Task (E) Force with respect to the 2019 revisions to Model #785 and Model #786. Attached to this memorandum are proposed new accreditation standards with respect to reciprocal jurisdictions. The 2019 revisions to Model #785 and Model #786 were intended to incorporate the relevant provisions of the Covered Agreements signed with the European Union (EU) and United Kingdom (UK) with respect to reinsurance collateral requirements. The 2019 revisions also extend similar treatment to qualified jurisdictions and accredited NAIC jurisdictions.

At its meeting on Oct. 22, the Reinsurance (E) Task Force agreed to submit the following recommendations to the Committee: 1) the 2019 revisions to Model #785 and Model #786 for reciprocal jurisdictions should be adopted as an update to the Reinsurance Ceded accreditation standard with significant elements as outlined in the attached memorandum; and 2) the Committee should consider a waiver of procedure, as provided for in the *Accreditation Program Manual*, and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Sept. 1, 2022, the end of the 60-month period when federal preemption determinations must be completed, with enforcement of the standard to commence on Jan. 1, 2023. After the Oct. 22 conference call, NAIC staff had conversations with representatives of the Federal Insurance Office (FIO), who advised us that the end of the 60-month period when federal preemption determinations must be completed is Sept. 1, 2022, and not Oct. 1, 2022, as originally thought.

The key aspect of a Covered Agreement under the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) is that it can preempt a state insurance measure that is inconsistent with the Covered Agreement. Another important element of federal preemption is the effective date of implementation of the Covered Agreement. The Covered Agreement with the EU was signed on Sept. 22, 2017, and it says, “42 months after the date of signature of this Agreement, the United States shall begin evaluating a potential preemption determination” with respect to any state insurance measure that is determined to be inconsistent with the Covered Agreement. The 42-month date is March 1, 2021. The Covered Agreement goes on to say, “60 months after the date of signature of this Agreement, the United States shall complete any necessary preemption determinations.” This date would be Sept. 1, 2022. So, 42 months after the date of signature the FIO shall begin its preemption determinations on inconsistent state laws, which must be completed no later than 60 months after the date of signature. Finally, the Reinsurance (E) Task Force recommends that the accreditation standard be adopted on a “substantially similar” basis. However, it should be noted that the Dodd-Frank Act requires the state insurance measure to be “consistent” with the Covered Agreement in order to avoid federal preemption, which may be interpreted as a higher standard than “substantially similar.” Therefore, it is the recommendation of the Task Force that the states adopt the 2019 revisions in close to identical form to the models in order to best avoid the possibility of federal preemption.

Director Ramge suggested that while he is in favor of exposing items for comment, it would be more expeditious to take the matter up for adoption immediately due to the states’ legislatures resuming session in January.

Dan Schelp (NAIC) stated that it was exposed at the Reinsurance (E) Task Force for a 30-day public comment period and did not receive any negative feedback. Considering the waiver of procedure requested per the *Accreditation Program Manual*, he stated that he knew of no procedural timelines that would prevent adoption without a public comment period.

Ms. Meyer stated that the decision would be presented to the Executive (EX) Committee and Plenary and require a 60% majority of members to adopt the proposal.

Director Ramage made a motion, seconded by Superintendent Dwyer, to adopt the referral, including the recommended significant elements, the waiver of procedure to expeditiously adopt the standard, and an effective date of Sept. 1, 2022 (Attachment Three). The motion massed unanimously.
5. **Adopted the Referral from the Reinsurance (E) Task Force Regarding Model #787 and the 2016 Revisions to Model #785**

Commissioner Kiser stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787), more commonly referred to as the XXX/AXXX Model Regulation, was adopted by the NAIC in 2016. This model establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees. Model #787 also includes provisions to ensure that funds backing these captive reinsurance transactions, which consist of primary security and other security, are held in the forms and amounts that are appropriate. Model #787 was first referred to the Committee at the 2017 Spring National Meeting for consideration for inclusion in the accreditation standards, along with the 2016 revisions to Model #785, which provided enabling language related to adoption of Model #785. Significant elements were then developed, exposed and up for adoption at the 2017 Fall National Meeting. However, the Covered Agreement had recently been signed and the Committee agreed to defer a decision on Model #787 until the effect of the Covered Agreement was known. With the adoption of the 2019 revisions to Model #785 and Model #786, it is now time to re-address this issue.

Commissioner Kiser prompted the Committee to consider if there is still strong support to make Model #787 an accreditation standard. He raised the question of whether the general acceptance of *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48) has alleviated the issues that drove development of Model #787.

Andrew T. Vedder (Northwestern Mutual Life Insurance Company) commented on the joint letter from Northwestern Mutual and New York Life (Attachment Five), and he stated that he believes it is necessary to adopt Model #787; and he urges the NAIC to follow through on prior recommendations to make Model #787 an accreditation standard in parallel with the Covered Agreement revisions. He stated that companies have long advocated that Model #787 should be an accreditation requirement, which is consistent with the prior recommendation by the Reinsurance (E) Task Force.

Douglas Wheeler (New York Life Insurance Company) stated that there is no longer any reason for delay in the NAIC’s action to make Model #787 an accreditation requirement, and he urged the Committee to move forward today with adoption. Doing so will allow the NAIC to finally complete the important work of uniformly implementing its XXX/AXXX Reinsurance Framework.

Mr. Schrader stated that he did not see a reason to delay the recommendation.

Ms. Belfi agreed that there is no reason to delay, and she stated that consistency among the states is key.

Director Ramge made a motion, seconded by Ms. Belfi, to adopt Model #787 as an accreditation standard consistent with the referral from the Reinsurance (E) Task Force (Attachment Four) with an effective date of Sept. 1, 2022. The motion massed unanimously.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.

DATE: July 10, 2019
RE: Company Licensing Accreditation Standards – Self-Evaluation Guide

At the Spring National Meeting, the Financial Regulation Standards and Accreditation (F) Committee exposed revisions to the Part D: Organization, Licensing and Change of Control of Domestic Insurers standards and Review Team Guidelines. The National Treatment and Coordination (E) Working Group’s recommended revisions include: 1) updating the Guidelines to reflect current practices; 2) expanding the scope to include redomestications; and 3) including Part D in the review team’s recommendation with the result that the outcome can affect a state’s accredited status. The Working Group recommended that the revisions be adopted with an effective date of Jan. 1, 2020; however, the recommended effective date for subjecting Part D to Recommendation A or B, and thus impacting a state’s accredited status, is Jan. 1, 2022.

The proposed revisions to the Part D standards and Guidelines will require the Self-Evaluation Guide (SEG) to be updated. The SEG facilitates the state’s reporting of compliance with the Guidelines; therefore, any change to the Guidelines must be accounted for in the SEG.

In addition, as a result of these revisions, the Accreditation Program Manual’s references to Part D will need to be updated. NAIC staff will ensure that these non-substantive changes will be made accordingly.

The proposed SEG revisions for Part D to ensure consistency with the Guidelines are attached.
Accreditation Program Manual
SEG/IAR Form | Part D

PART D: **ORGANIZATION, PRIMARY LICENSING, REDOMESTICATION AND CHANGE OF CONTROL OF DOMESTIC INSURERS**

a) **Sufficient Qualified Staff and Resources**

The department should have the appropriate staff and resources to effectively and timely review applications for primary licensure of new companies and redomestications and Form A filings for all domestic insurers.

1. Does the department staff have the capacity to effectively review applications for primary licensure of new companies, redomestications and Form A filings in a timely manner?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Does the department have established minimum educational and experience requirements for staff positions in the company licensing area which are commensurate with the duties and responsibilities of the position?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. As a separate attachment, provide a current year list of staff responsible for analyzing company applications. With that list, please include the following:
   - Name,
   - Title,
   - Years employed by the department (include functional area),
   - Type of college degree, including major areas of concentration,
   - Prior regulatory or insurance experience, and
   - Indicate whether the individual is a department employee (full/part time) or a contractual employee (exclusive to the department/not exclusive to the department).

4. As a separate attachment, provide a listing of any L/H and P/C primary licensure applications and any multi-state L/H and P/C Form A filings (whether approved or denied) received since the department’s last full review. Also include any multi-state L/H and P/C primary redomestication applications received Jan 1, 2020 and after. With that list, please include the following:
   - Name of person responsible for reviewing the filing,
   - **Type of filing,**
   - Date the filing was received,
   - Date the filing was reviewed for completeness,
   - Date(s) the department contacted the company for additional or supplementary information (if applicable), and
   - Date the company was informed of licensure, approval/denial of the filing.
   - Whether the filing review was completed timely per department procedures, and
   - If the review was not completed timely, provide the reason.
Primary Licensing, Redomestications and Change of Control – continued

5. If the department has developed timing requirements that differ from the NAIC Company Licensing Best Practices Handbook, please attach a copy of the timing requirements policy, be sure to include timing expectations for initial review from date of receipt, notification to the insurer, and completion of the review.

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

6. If there are extenuating circumstances and the required timing guidelines cannot be met for a particular application, are such circumstances clearly documented in the application file?

76. Do the department’s statutes or regulations specify timing requirements for the completion of primary licensure applications?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

87. If the answer to #7 above is yes, please attach a copy of the department’s authority discussing such requirement.

*If this is an interim annual review, only provide the department’s timing requirements if there has been a change from the previous submission of this information, otherwise indicate “no changes”.

9. If the answer to #7 above is no, does the department follow the timing requirements set forth in the Review Team Guidelines, which state the review should be completed within 90 calendar days of receipt (barring exceptions for when information is requested).

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>
Primary Licensing, Redomestications and Change of Control – continued

b) Scope and Performance of Procedures for Primary Applications

The department should have documented licensing procedures to provide for consistency in the review process and to ensure that appropriate procedures are being performed on all primary applications. The use of the NAIC Company Licensing Best Practices Handbook is considered acceptable.

1. Does the department have documented licensing procedures that require a review and/or analysis of the following:

   • Identification and evaluation of the business and strategic plans of the applicant, including pro forma financial projections?
   • Pro forma financial projections?
   • Biographical Affidavits?
   • Adequacy of proposed reinsurance program?
   • Adequacy of investment policy?
   • Adequacy of short-term and long-term financing agreements:
     • Initial financing of proposed operations or transaction?
     • Maintenance of adequate capital and surplus levels?

   YES | NO

2. Do department procedures require a review of the Form A and Market Action Tracking System (MATS) databases for related information about the primary applicant and other key persons?

23. In a separate attachment, provide such licensing procedures and discuss any additional processes developed to review/analyze a primary licensure application.

   *If this is an interim annual review, only provide the department’s procedures for reviewing primary applications if there has been a substantial change from the previous submission of this information, otherwise indicate “no changes”.

24. Do the department’s files contain evidence, including whether the applicant meets licensure requirements (i.e. approve or deny), and adequately demonstrate licensing procedures for primary applications were followed?

YES | NO
Primary Licensing, Redomestications and Change of Control – continued

c) **Scope and Performance of Procedures for Redomestication**

The department should have documented procedures for the review of redomestication applications to provide for consistency in the review process and to ensure that appropriate procedures are performed for all redomestications. The use of the NAIC Company Licensing Best Practices Handbook is considered acceptable.

**d) Scope and Performance of Procedures for Form A Filings**

The department should have documented procedures for the review of Form A filings to provide for consistency in the review process and to ensure that appropriate procedures are being performed on all Form A filing reviews. *The use of the NAIC Company Licensing Best Practices Handbook is considered acceptable.*

1. Does the department have documented procedures for the review of Form A filings that include at least the following:

   - Business and strategic plans of the insurer?
   - Identity and background of the applicant and individuals associated with the applicant, including use of biographical affidavits to assess the quality and expertise of the following:
     - Ultimate controlling person?
     - Proposed officers and directors (as listed on the Jurat page of the most recent or upcoming financial statement)?
     - Other owners of 10% or more of voting securities?
   - The source, nature and amount of the consideration used or to be used in effecting the merger or other acquisition of control?
   - Fully audited financial information regarding the earnings and financial condition of the ultimate controlling person(s) for the preceding five years? (If fully audited financial information is not available, substantially similar information such as compiled financial statements or tax returns, as deemed acceptable to the commissioner, may be reviewed in lieu of fully audited financial information.)
   - Unaudited financial information regarding the earnings and financial condition of the ultimate controlling person(s) as of a date not earlier than 90 days prior to the filing of each statement of Form A?

2. In a separate attachment, provide such procedures and discuss any additional processes developed for the review of Form A filings.

   *If this is an interim annual review, only provide the department’s procedures for reviewing Form A filings if there has been a substantial change from the previous submission of this information, otherwise indicate “no changes”.*

3. Is it the department’s policy to review the Form A database to obtain information on prior filings made by an applicant and the ultimate outcome of such to inform other states of the receipt and status of Form A filings?

4. If the answer to #3 above is yes, do the department’s procedures for such utilization of the Form A database include the following:

   - Review the Form A database for any prior filings made by the Form A applicant and the ultimate outcome of such filing(s)?
Primary Licensing, Redomestications and Change of Control – continued

- Pertinent and relevant information from the Form A filing should be manually entered into the Form A database within 10 business days of receipt of the Form A?
  - YES
  - NO

- Any changes to the status of a filing or other data elements should be entered into the Form A database within 10 business days?
  - YES
  - NO

- Updating the Form A database when a filing stalls, at a minimum of once every six months to confirm the status of the filing and document the reason the filing has stalled?
  - YES
  - NO

5. If the answer to #3 above is no, please provide the department’s policy and procedures on utilizing the Form A Database or any other independently developed procedures followed to obtain information on an applicant’s filings and to inform other states of the receipt and status of Form A filings in a timely manner.

  *If this is an interim annual review, only provide the department’s policy and/or procedures if there has been a substantial change from the previous submission of this information, otherwise indicate “no changes”.

65. Do the department’s files contain evidence of conclusions regarding whether the Form A filing was approved or denied, and sufficient documentation that its procedures for Form A filings were adequately performed?
  - YES
  - NO
To: Financial Regulation Standards and Accreditation (F) Committee  
From: Financial Analysis (E) Working Group (FAWG)  
Date: April 5, 2019  
Re: Recommendation for Updated Part B.3 Procedures for Troubled Companies

On February 27, 2019, the Financial Analysis (E) Working Group (FAWG) adopted revisions to the Troubled Insurance Company Handbook, a regulator only publication. Specifically, the revisions included updated guidance for timely and effective communication between the domiciliary and non-domiciliary state departments of insurance of necessary information on troubled or potentially troubled insurance companies that may impact other jurisdictions. A cooperative communication system between states’ insurance departments promotes coordinated efforts in identifying troubled company situations and coordinating regulatory actions.

Part B.3 Procedures for Troubled Companies states that departments should generally follow and observe procedures set forth in the Troubled Insurance Company Handbook. To align the Part B.3 guidelines with the recently adopted revisions to the Handbook, the FAWG recommends the attached revisions which define more specifically which states should be included in the communication of troubled or potentially troubled insurance companies.

If you have any questions regarding his referral, please contact NAIC staff (Jane Koenigsman, jkoenigsman@naic.org).
b. Procedures for Troubled Companies

Standard: The department should generally follow and observe procedures set forth in the NAIC Troubled Insurance Company Handbook. Appropriate variations in application of procedures and regulatory requirements should be commensurate with the identified financial concerns and operational problems of the insurer.

Results-Oriented Guidelines:

1. The department should demonstrate that application of procedures and regulatory requirements are commensurate with the identified financial concerns and operational problems of the insurer. When assessing compliance with this guideline, consideration should be given to the following:
   - Whether identified concerns are adequately addressed.
   - Appropriate consideration and execution of more frequent examinations, including appropriateness of the scope of the examination.
   - Timing, quality and reasonableness of communication with other states where the insurance company is licensed, has a significant amount of written, assumed or ceded insurance business, has a significant market share, or has an impacted affiliate domiciled in that state, has pooled companies, or utilizes fronting entities, or where the domestic state is aware the company is either seeking to write business or is seeking a license.

Process-Oriented Guidelines:

1. Once the department has identified an insurance company as troubled or potentially troubled, the department should take steps, such as those set forth in the NAIC Troubled Insurance Company Handbook, to address the identified concerns. This shall apply from the point the department identifies the insurance company as troubled, or potentially troubled, to the point the company has been placed into receivership.

2. The department should examine those insurance companies that the department has identified as troubled or potentially troubled more frequently than once every five years as outlined in the NAIC Model Law on Examinations (#390) or provide rationale for not conducting more frequent examinations. Limited scope examinations are acceptable in meeting this guideline; however, the department is still required to complete a full-scope examination in compliance with statutory requirements.

3. Once the department has identified an insurance company as troubled or potentially troubled, the department should, within an appropriate time consistent with the severity of the event, make efforts to communicate proactively with other state insurance regulators where the insurance company is licensed, has a significant amount of written, assumed or ceded insurance business, has a significant market share, has an affiliate domiciled in that state, has pooled companies, or utilizes fronting entities, or where the domestic state is aware the company is either seeking to write business or is seeking a license in which affiliates of the troubled company are domiciled or those states where the troubled company has significant market share. Department files should contain written evidence of such communication(s). To a lesser extent, oral verification may provide such evidence.
MEMORANDUM

To:   Financial Regulation Standards and Accreditation (F) Committee

From:  Reinsurance (E) Task Force

Date:   November 15, 2019

Re:  2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786)

Executive Summary

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). These revisions were intended to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. The Covered Agreement would eliminate reinsurance collateral and local presence requirements for European Union (EU) reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or post collateral in any EU jurisdiction. On Dec. 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK). In addition, the 2019 revisions extend similar treatment to Qualified Jurisdictions and accredited NAIC jurisdictions.

At the 2019 Summer National Meeting, Director Chlora Lindley-Myers (MO), Chair of the NAIC Reinsurance (E) Task Force, made the following recommendation to the Financial Regulation Standards and Accreditation (F) Committee: 1) the Committee recognize that states may begin adoption of provisions that are substantially similar to the 2019 revisions to Model #785 and Model #786 and remain in compliance with the Reinsurance Ceded accreditation standard; 2) the accreditation standard be modified in accordance with the normal processes and procedures outlined in the Accreditation Program Manual, and that the Task Force and Financial Condition (E) Committee prepare a formal recommendation to the Financial Regulation Standards and Accreditation (F) Committee for consideration at the 2020 Spring National Meeting; and 3) in the interim, states should be encouraged to adopt the 2019 revisions in the form adopted by Plenary within the 60-month timeframe set forth in the Covered Agreement to best avoid potential federal preemption. Committee Chair Commissioner Todd E. Kiser (UT) asked if there were any objections to the approach proposed in the referral from the Reinsurance (E) Task Force, and none were noted.

At its meeting on October 22, the Reinsurance (E) Task Force agreed to submit the following new recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

   1. The 2019 revisions to Model #785 and Model #786 should be adopted as a new accreditation standard by the NAIC, Reciprocal Jurisdictions, with significant elements as outlined in Attachment A.
2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Oct. 1, 2022, the end of the 60-month period when federal preemption determinations must be completed, with enforcement of the standard to commence Jan. 1, 2023. [Note: after the Oct. 22 conference call, NAIC staff had conversations with representatives of the Federal Insurance Office (FIO), in which they advised NAIC staff that in their opinion the end of the 60-month period when federal preemption determinations must be completed is Sept. 1, 2022].

A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The current Reinsurance Ceded accreditation standard requires that state law shall contain the significant elements from Model #785 and Model #786. The models serve to provide regulators with an effective method of monitoring the reinsurance activities of U.S. companies. U.S. primary insurance companies may be given reinsurance credit on their statutory financial statements for insurance risk they transfer via reinsurance that meets the legal and accounting risk transfer requirements and other relevant laws. Both the 2011 revisions to the credit for reinsurance models, which served to reduce reinsurance collateral requirements for certified reinsurers domiciled in qualified jurisdictions, and the 2019 revisions with respect to Reciprocal Jurisdictions, address the reinsurance collateral requirements necessary for U.S. ceding companies to take credit for certain reinsurance transactions.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The Dodd-Frank Wall Street Reform and Consumer Protection Act provides that a state insurance measure shall be preempted to the extent that the Director of FIO “determines” that the measure is inconsistent with the covered agreement and results in less favorable treatment of a non-U.S. insurer domiciled in a foreign jurisdiction that is subject to a “covered agreement” than a U.S. insurer domiciled, licensed or otherwise admitted in that state. A “covered agreement” under Dodd-Frank is an agreement entered into between the U.S. and foreign government(s) on prudential measures with respect to the business of insurance or reinsurance that achieves a level of protection for consumers that is “substantially equivalent” to the level of protection under state law. The revisions to Model #785 and #786 are considered by the Reinsurance (E) Task Force to be consistent with the requirements of the Covered Agreements entered into with the EU and UK.

Article 9(4) of the Covered Agreements provide, as follows with respect to Implementation of the Agreement:

4. Provided that this Agreement has entered into force, on a date no later than the first day of the month, 42 months after the date of signature of this Agreement [22 September 2017], the United States shall begin evaluating a potential preemption determination under its laws and regulations with respect to any U.S. State insurance measure that the United States determines is inconsistent with this Agreement and results in less favourable treatment of an EU insurer or reinsurer domiciled, licensed, or otherwise admitted in that U.S. State. Provided that this Agreement has entered into force, on a date no later than the first day of the month 60 months after the date of signature of this Agreement [22 September 2017], the United States shall complete any necessary preemption determination under its laws and regulations with respect to any U.S. State insurance measure subject to such evaluation. For the purposes of this paragraph, the United States shall prioritise those States with the highest volume of gross ceded reinsurance for purposes of potential preemption determinations. [Emphasis added].

To summarize, FIO may begin evaluating potential preemption “determinations” 42 months after the signature of the Covered Agreement, or March 1, 2021. FIO must complete any necessary preemption determinations 60 months after signature, which they believe to be Sept. 1, 2022. In order to avoid potential federal preemption determinations by the FIO Director, each state should adopt the 2019 revisions to Model #785 and Model #786 in a timely manner.
A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

The pre-2011 versions of Model #785 and Model #786 are currently part of the Reinsurance Ceded accreditation standard, and the significant elements have been adopted in substantially similar form by all NAIC-accredited jurisdictions. The 2011 revisions to these models implemented reinsurance collateral reduction for Reinsurance Ceded to Certified Reinsurers domiciled in qualified jurisdictions. At the current time, all NAIC accredited jurisdictions have adopted the 2011 revisions to Model #785, and only 5 jurisdictions have not adopted the 2011 revisions to Model #786, which became part of the accreditation standard effective January 1, 2019.

We are not currently aware of any states that have adopted the 2019 revisions to Model #785 and Model #786, although we have been advised that many states have begun their legislative processes for adoption of these revisions. We are not aware of any negative impact to any jurisdiction or its domiciliary ceding insurers that has adopted these revisions, which are similar in function and format to the Reciprocal Jurisdiction requirements of the 2019 revisions.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

The current accreditation standard for Model #785 and Model #786 requires state adoption on a substantially similar basis. In addition, the Covered Agreements themselves and the Dodd-Frank Act require that the United States cannot impose reinsurance collateral or local presence requirements that result in less favorable treatment for EU or UK reinsurers, and further that any state insurance measures cannot be inconsistent with the Covered Agreements. Therefore, the Reinsurance (E) Task Force recommends that the attached proposed significant elements for Reciprocal Jurisdictions (Attachment A) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. Note: While the Task Force is recommending that the Committee adopt a “substantially similar” standard for accreditation purposes, it should be noted that Dodd-Frank requires the state insurance measure to be “consistent” with the Covered Agreement in order to avoid federal preemption, which may be interpreted as a higher standard. It is the recommendation of the Task Force that states adopt the 2019 revisions in close to identical form to the models in order to best avoid the possibility of federal preemption.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to the 2019 revisions to Model #785 and Model #786, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable.

1 31 U.S.C. §313(f) provides the process for making a “determination” in this context:

(2) Determination.—

(A) Notice of potential inconsistency.—Before making any determination under paragraph (1), the Director shall—

(i) notify and consult with the appropriate State regarding any potential inconsistency or preemption;

(ii) notify and consult with the United States Trade Representative regarding any potential inconsistency or preemption;
(iii) cause to be published in the Federal Register notice of the issue regarding the potential inconsistency or preemption, including a description of each State insurance measure at issue and any applicable covered agreement;

(iv) provide interested parties a reasonable opportunity to submit written comments to the Office; and

(v) consider any comments received.

***

(C) Notice of determination of inconsistency.—Upon making any determination under paragraph (1), the Director shall—

(i) notify the appropriate State of the determination and the extent of the inconsistency;

(ii) establish a reasonable period of time, which shall not be less than 30 days, before the determination shall become effective; and

(iii) notify the Committees on Financial Services and Ways and Means of the House of Representatives and the Committees on Banking, Housing, and Urban Affairs and Finance of the Senate.

(3) Notice of effectiveness.—Upon the conclusion of the period referred to in paragraph (2)(C)(ii), if the basis for such determination still exists, the determination shall become effective and the Director shall—

(A) cause to be published a notice in the Federal Register that the preemption has become effective, as well as the effective date; and

(B) notify the appropriate State.
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) and the NAIC Life and Health Reinsurance Agreements Model Regulation (#791) or substantially similar laws.

Credit for Reinsurance Model Law (#785)

a. Credit allowed for reinsurance ceded to a licensed insurer?

b. Credit allowed for reinsurance ceded to an accredited insurer who meets requirements similar to those in Section 2B and 2421 of the model law?

c. Credit allowed for reinsurance ceded to an insurer domiciled and licensed in a state which employs substantially similar standards regarding credit for reinsurance and who maintains capital and surplus of at least $20,000,000 and submits to this state’s authority to examine its books and records?

d. Credit allowed for reinsurance ceded to an insurer who maintains a trust fund, established in a form approved by the commissioner, in a qualified U.S. financial institution for the payment of the valid claims of its U.S. policyholders and ceding insurers, their assigns and successors in interest and who reports financial information annually to the commissioner to determine the sufficiency of the trust fund?

e. In instances where reinsurance is ceded to insurers maintaining a trust fund, trustees of the trust required to report to the department annually, on or before February 28, the balance of the trust and a listing of the trust’s assets as of the end of the year and a certification of the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the next following December 31?

f. Credit for reinsurance allowed under c. or d. above only permitted where assuming insurer agrees in the reinsurance agreements: 1) that in the event of a failure of the assuming insurer to perform its obligations, the assuming insurer shall submit to the jurisdiction of any court of competent jurisdiction in any state of the U.S., and 2) to designate the commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process instituted by or on behalf of the ceding company?
g. Credit allowed for reinsurance ceded to an insurer not meeting the requirements of a., b., c., or d. above, or with respect to a certified reinsurer described below, in an amount not exceeding the liabilities carried by the ceding insurer and only in the amount of funds held by or on behalf of the ceding insurer in the form of cash, securities listed by the Securities Valuation Office of the NAIC, including those deemed exempt from filing as defined by the Purposes and Procedures Manual of the Securities Valuation Office, and qualifying as admitted assets, clean, irrevocable, unconditional letters of credit, and other forms of security acceptable to the commissioner?

h. Ceding insurers must be subject to notification requirements with respect to reinsurance concentration risk substantially similar to those in Section 222K of Model #785.

Life and Health Reinsurance Agreements Model Regulation (#791)

i. Scope similar to Section 3?

j. No insurer, for reinsurance ceded establishes any asset or reduces any liability due to the terms of the reinsurance agreement, in substance or effect if any of the conditions in Section 4A exist?

k. Agreements entered into after the effective date of this regulation which involve the reinsurance of business issued prior to the effective date of agreements, along with subsequent amendments shall be filed by the ceding company with the commissioner within 30 days from the execution date along with attachments noted in Section 4C(1)?

l. Any increase in surplus net of federal income tax resulting from arrangements described in Section 4C(1) to be reported as described in Section 4C(2)?

m. Written agreements with provisions similar to Section 5?

n. Insurers required to reduce to zero any reserve credits or assets established with respect to existing reinsurance agreements entered into prior to the effective date of this regulation which would not be recognized under the provisions of this regulation?

Credit for Reinsurance Model Regulation (#786)

o. Credit for reinsurance allowed for reinsurance ceded by domestic insurers to assuming insurers that were licensed in the state as of the last date of the ceding insurers’ statutory financial statement?

p. Credit for reinsurance provisions for accredited reinsurer similar to Section 5?

q. Credit for reinsurance provisions for reinsurers licensed and domiciled in other states similar to Section 6?

r. Credit for reinsurance provisions for reinsurers maintaining trust funds similar to Section 7?
s. Credit for reinsurance required by law similar to Section 910?

-----------

t. Reduction from liability for reinsurance ceded to an unauthorized assuming insurer similar to Section 4011?

-----------

u. Provisions for trust agreements similar to Section 4412?

-----------

v. Provisions for letters of credit similar to Section 4213?

-----------

w. Provisions for unencumbered funds similar to Section 4314?

-----------

x. Provisions for reinsurance contracts similar to Section 4415?

-----------

y. The adoption of Form AR-1—Certificate of Assuming Insurer.

-----------

Reinsurance Ceded to Certified Reinsurers

z. A state’s laws and regulations shall allow credit for reinsurance ceded to a certified reinsurer, including affiliated reinsurance transactions. Its laws and regulations shall contain provisions that are substantially similar to those applicable to certified reinsurers contained in Section 2E of Model #785 and Section 8 of Model #786.

i. The credit allowed is based upon the security held by or on behalf of the ceding insurer in accordance with the rating assigned to the certified reinsurer by the commissioner? The amount of security required in order for full credit to be allowed shall not be less than that required under Section 8A(1) of Model # 786.

-----------

ii. The security provided by the certified reinsurer is in a form consistent with the provisions of Section 2E(5) of Model #785 and Section 8A of Model #786?

-----------

iii. The commissioner requires the certified reinsurer to post 100% security upon the entry of an order of rehabilitation, liquidation or conservation against the ceding insurer?

-----------

iv. A state’s laws or regulations shall include provisions for granting a certified reinsurer a deferral period for posting security applicable to catastrophe recoverables, substantially similar to Section 8A(4) of Model #786. The deferral period shall not exceed one year from the date of the first instance of a liability reserve entry by the ceding company as a result of a loss from a catastrophic occurrence as recognized by the commissioner, and shall not apply to lines of business other than those provided in Section 8A(4) of Model #786.

-----------

v. Credit for reinsurance ceded to a certified reinsurer shall apply only to reinsurance contracts meeting requirements substantially similar to Section 8A(5) of Model #786?
aa. In order to be a certified reinsurer, an assuming insurer must be certified by the commissioner in accordance with the process similar to Section 8B of Model #786?

i. The commissioner is required to post notice upon receipt of any application for certification substantially similar to the requirements of Section 8B(1) of Model #786?

ii. The commissioner is required to publish a list of all certified reinsurers and their ratings substantially similar to the requirements in Section 2E(4) of Model #785 and Section 8B(2) of Model #786?

iii. A certified reinsurer must be domiciled and licensed to transact insurance or reinsurance in a qualified jurisdiction, as determined by the commissioner?

iv. A certified reinsurer must maintain capital and surplus, or its equivalent, of no less than $250,000,000, calculated in accordance with Section 8B(4)(h) of Model #786? This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

v. A certified reinsurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner, and the maximum rating that a certified reinsurer may be assigned will correspond to its financial strength rating as set forth in Section 8B(4)(a) of Model #786? These ratings must be based on interactive communication between the rating agency and the assuming insurer and not based solely on publicly available information.

vi. A certified reinsurer is rated by the commissioner on a legal entity basis, with consideration given to the group rating where appropriate (an association including incorporated and individual unincorporated underwriters that have been approved to do business as a single certified reinsurer may be evaluated on the basis of its group rating)? Factors may be considered in the evaluation process similar to those provided under Section 8B(4) and (5) of Model #786.

vii. A certified reinsurer must submit a properly executed Form CR-1 as evidence of its submission to the jurisdiction of the state, appointment of the commissioner as an agent for service of process in the state, and agreement to provide security for one hundred percent (100%) of its liabilities attributable to reinsurance ceded by ceding insurers if it resists enforcement of a final U.S. judgment? The commissioner must not certify any assuming insurer that is domiciled in a jurisdiction that the commissioner has determined does not adequately and promptly enforce final U.S. judgments or arbitration awards.
viii. A certified reinsurer must agree to meet applicable information filing requirements substantially similar to those provided under Section 8B(7) of Model #786, both with respect to an initial application for certification and on an ongoing basis?

ix. Changes in rating or revocation of certification of a certified reinsurer are applied by the commissioner in a manner substantially similar to the provisions of Section #421 of Model #785 and Section 8B(8) of Model #786?

x. A certified reinsurer must file audited financial statements, regulatory filings and actuarial opinion (as filed with the certified reinsurer’s supervisor, with a translation into English) consistent with the requirements set forth in Section 8B(4)(h) and Section 8B(7)(d) of Model #786? Upon the initial application for certification, the commissioner will consider audited financial statements for the last two (2) years filed with its non-U.S. jurisdiction supervisor?

bb. The commissioner is required to create and publish a list of qualified jurisdictions, under which an assuming insurer licensed and domiciled in such jurisdiction is eligible to be considered for certification by the commissioner as a certified reinsurer?

i. In determining whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the commissioner evaluates the reinsurance supervisory system of the non-U.S. jurisdiction, both initially and on an ongoing basis, under criteria substantially similar to those provided under Section 8C(2) of the model regulation?

ii. The commissioner shall consider the list of qualified jurisdictions published by the NAIC in determining qualified jurisdictions? If the commissioner approves a jurisdiction as qualified that does not appear on the NAIC list of qualified jurisdictions, the commissioner must provide thoroughly documented justification with respect to criteria substantially similar to that provided under Section 8C(2) of Model #786.

iii. U.S. jurisdictions that meet the requirements for accreditation under the NAIC financial standards and accreditation program are recognized as qualified jurisdictions?

cc. A state’s laws and regulations shall allow a commissioner to defer to the certification and rating of a certified reinsurer issued by another NAIC accredited jurisdiction. Recognition of certification is made in accordance with provisions substantially similar to Section 8D of Model #786?

dd. Reinsurance contracts entered into or renewed with a certified reinsurer must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurer for reinsurance ceded to the certified reinsurer?
Reciprocal Jurisdictions

ee. A state’s laws and regulations shall allow credit for reinsurance ceded to an assuming insurer that has its head office or is domiciled in, and is licensed in, a Reciprocal Jurisdiction. Its laws and regulations shall contain provisions that are substantially similar to those contained in Section 2F of Model #785 and Section 9 of Model #786. Its laws and regulations must provide that a Reciprocal Jurisdiction is a jurisdiction that meets one of the following:

i. A non-U.S. jurisdiction that is subject to an in-force covered agreement meeting the requirements of Section 2F(1)(a)(i) of Model #785 and Section 9B(1) of Model #786.

ii. A U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program pursuant to Section 2F(1)(a)(ii) of Model #785 and Section 9B(2) of Model #786.

iii. A Qualified Jurisdiction that meets all of the requirements of Section 2F(1)(a)(iii) of Model #785 and Section 9B(3) of Model #786.

ff. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction, and which meets each of the conditions set forth in Section 2F(1)(b) – (g) of Model #785 and Section 9C of Model #786:

i. The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction of no less than $250,000,000 similar to Section 2F(1)(b) of Model #785 and Section 9C(2) of Model #786. This minimum capital and surplus requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) or own funds of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

ii. The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio, as applicable, as set forth in Section 2F(1)(c) of Model #785 and Section 9C(3) of Model #786.

iii. The assuming insurer must submit a properly executed Form RJ-1 consistent with Section 2F(1)(d) of Model #785 and Section 9C(4) of Model #786.
• The assuming insurer must agree to provide prompt written notice and explanation to the commissioner if it falls below the minimum requirements set forth in this subsection, or if any regulatory action is taken against it for serious noncompliance with applicable law pursuant to Section 2F(1)(d)(i) of Model #785 and Section 9C(4)(a) of Model #786.

• The assuming insurer must consent in writing to the jurisdiction of the courts of this state and to the appointment of the commissioner as agent for service of process pursuant to Section 2F(1)(d)(ii) of Model #785 and Section 9C(4)(b) of Model #786. The commissioner may also require that such consent be provided and included in each reinsurance agreement under the commissioner’s jurisdiction.

• The assuming insurer must consent in writing to pay all final judgments, wherever enforcement is sought, obtained by a ceding insurer, that have been declared enforceable in the territory where the judgment was obtained pursuant to Section 2F(1)(d)(iii) of Model #785 and Section 9C(4)(c) of Model #786.

• Each reinsurance agreement must include a provision requiring the assuming insurer to provide security in an amount equal to one hundred percent (100%) of the assuming insurer’s liabilities attributable to reinsurance ceded pursuant to that agreement if the assuming insurer resists enforcement of a final judgment that is enforceable under the law of the jurisdiction in which it was obtained or a properly enforceable arbitration award, whether obtained by the ceding insurer or by its legal successor on behalf of its estate, if applicable pursuant to Section 2F(1)(d)(iv) of Model #785 and Section 9C(4)(d) of Model #786.

• The assuming insurer must confirm that it is not presently participating in any solvent scheme of arrangement, which involves this state’s ceding insurers, and agrees to notify the ceding insurer and the commissioner and to provide one hundred percent (100%) security to the ceding insurer consistent with the terms of the scheme, should the assuming insurer enter into such a solvent scheme of arrangement pursuant to Section 2F(1)(d)(v) of Model #785 and Section 9C(4)(e) of Model #786.

• The assuming insurer must agree in writing to meet the applicable information filing requirements pursuant to Section 9C(4)(f) of Model #786.

iv. The assuming insurer or its legal successor must provide, if requested by the commissioner, on behalf of itself and any legal predecessors, the documentation to the commissioner as outlined in Section 2F(1)(e) of Model #785 and Section 9C(5) of Model #786.
For the two years preceding entry into the reinsurance agreement and on an annual basis thereafter, the assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report pursuant to Section 9C(5)(a) of Model #786?

For the two years preceding entry into the reinsurance agreement, the solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor pursuant to Section 9C(5)(b) of Model #786?

Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, an updated list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States pursuant to Section 9C(5)(c) of Model #786?

Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer pursuant to Section 9C(5)(d) of Model #786?

v. The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements consistent with Section 2F(1)(f) of Model #785 and Section 9C(6) of Model #786?

vi. The assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the minimum capital and surplus requirements and the minimum solvency or capital ratio requirements as required under Section 2F(1)(g) of Model #785 and Section 9C(7) of Model #786?

gg. The commissioner is required to timely create and publish a list of Reciprocal Jurisdictions similar to Section 2F(2) of Model #786 and Section 9D of Model #786?

i. If the commissioner approves a jurisdiction that does not appear on the NAIC list of Reciprocal Jurisdictions, the commissioner must provide thoroughly documented justification in accordance with criteria published through the NAIC Committee Process pursuant to Section 2F(2)(a) of Model #785 and Section 9D(1) of Model #786?

ii. The commissioner may remove a jurisdiction from the list of Reciprocal Jurisdictions upon a determination that the jurisdiction no longer meets one or more of the requirements of a Reciprocal Jurisdiction pursuant to Section 2F(2)(b) of Model #785 and Section 9D(2) of Model #786, except that the commissioner shall not remove from the list a Reciprocal Jurisdiction as defined under Section 9B(1) and (2) of Model #786?
hh. The commissioner shall timely create and publish a list of assuming insurers to which cessions shall be granted credit consistent with Section 2F(3) of Model #785 and Section 9E of Model #786. Such assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require.

i. If an NAIC accredited jurisdiction has determined that the conditions set forth in Section 2F of Model #785 and Section 9 of Model #786 have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit in accordance pursuant to Section 2F(3) of Model #785 and Section 9E(1) of Model #786. The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC with respect to such reinsurer.

ii. When requesting that the commissioner defer to another NAIC accredited jurisdiction’s determination, an assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require pursuant to Section 9E(2) of Model #786.

iii. If the commissioner determines that an assuming insurer no longer meets one or more of the requirements set forth in Section 2F of Model #786 and Section 9 of Model #786, the commissioner may revoke or suspend the eligibility of the assuming insurer consistent with Section 2F(4) of Model #785 and Section 9F of Model #786.

i. While an assuming insurer’s eligibility is suspended, no reinsurance agreement issued, amended or renewed after the effective date of the suspension qualifies for credit except to the extent that the assuming insurer’s obligations under the contract are otherwise secured pursuant to Section 2F(4)(a) of Model #785 and Section 9F(1) of Model #786.

ii. If an assuming insurer’s eligibility is revoked, no credit for reinsurance may be granted after the effective date of the revocation with respect to any reinsurance agreements entered into by the assuming insurer, including reinsurance agreements entered into prior to the date of revocation, except to the extent that the assuming insurer’s obligations under the contract are otherwise secured in a form acceptable to the commissioner pursuant to Section 2F(4)(b) of Model #785 and Section 9F(2) of Model #786.

iii. Before denying statement credit or imposing a requirement to post security or adopting any similar requirement that will have substantially the same regulatory impact as security, the commissioner shall follow the process set forth in Section 9G of Model #786.
ii. If subject to a legal process of rehabilitation, liquidation or
conservation, as applicable, the ceding insurer, or its representative,
may seek and, if determined appropriate by the court in which the
proceedings are pending, may obtain an order requiring that the
assuming insurer post security for all outstanding liabilities in
accordance with Section 2F(5) of Model #785 and Section 9H of
Model #786?

kk. Nothing shall limit or in any way alter the capacity of parties to a
reinsurance agreement to agree on requirements for security or other
terms in that reinsurance agreement, except as expressly prohibited by
other applicable law or regulation similar to Section 2F(6) of Model
#785?

ll. Credit may be taken only for reinsurance agreements entered into,
amended, or renewed on or after the effective date of the statute, and
only with respect to losses incurred and reserves reported on or after
the later of (i) the date on which the assuming insurer has met all
eligibility requirements, and (ii) the effective date of the new
reinsurance agreement, amendment, or renewal consistent with the
provisions of Section 2F(7) of Model #785?
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: John F. Finston (CA)
Chair, Reinsurance (E) Task Force

DATE: March 20, 2017

RE: 2016 Revisions to Credit for Reinsurance Model Law (#785)
Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

On June 30, 2014, the Principle-Based Reserving Implementation (EX) Task Force adopted the recommendations in the report of Rector & Associates, Inc. dated June 4, 2014, regarding a proposal for the XXX/AXXX Reinsurance Framework. The Framework sought to address concerns regarding reserve financing transactions and to do so without encouraging them to move offshore. The changes would be prospective and apply only to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life with secondary guarantees business (XXX/AXXX). The NAIC Executive (EX) Committee adopted the Framework (in concept) on Aug. 17, 2014. As an interim step to implementing the Framework, the NAIC adopted Actuarial Guideline XLVIII Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) on Dec. 16, 2014. It was expected that AG 48 would eventually be replaced by effective codification through the Credit for Reinsurance Model Law (#785) and creation of a new model regulation to establish requirements regarding the reinsurance of XXX/AXXX policies.

The NAIC adopted revisions to Model #785 on Jan. 8, 2016, which give insurance commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework. The Reinsurance (E) Task Force adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the Summer National Meeting on Aug. 27, 2016, and it was adopted by the Financial Condition (E) Committee with slight revisions via conference call on Sept. 30, 2016. Model #787 was then adopted by the Executive (EX) Committee and Plenary on Dec. 13, 2016. At that same time, the NAIC also revised AG 48 to conform with the provisions of Model #787, effective Jan. 1, 2017.

The Reinsurance (E) Task Force hereby submits the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. The 2016 revisions to Model #785 and new Model #787 should be adopted as a new accreditation standard by the NAIC.

2. The F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force would recommend that the accreditation standard become effective January 1, 2020.
A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The 2016 revisions to Model #785 provide that the commissioner may adopt regulations with respect to (1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; (2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; (3) variable annuities with guaranteed death or living benefits; (4) long-term care insurance policies; and (5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is (1) licensed in at least 26 states; or (2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

Model #787 does not materially change the ability of insurers to obtain credit for reinsurance ceded to “certified” reinsurers or to obtain credit for reinsurance ceded to “licensed” or “accredited” reinsurers that follow statutory accounting and risk-based capital (RBC) rules. As a practical matter, the Model #787 requirements apply to reinsurance ceded to captive insurers, SPVs, reinsurers that are not eligible to become “certified” reinsurers, or reinsurers that materially deviate from statutory accounting and/or RBC rules. In those situations, subject to certain exemptions and grandfathering provisions, the ceding insurer may receive credit for reinsurance if:

- The ceding insurer continues to establish gross reserves, in full, using applicable reserving guidance;
- Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis;
- The Actuarial Method used to establish the Required Level of Primary Security for each reinsurance treaty subject to Model #787 is based on VM-20, applied on a treaty-by-treaty basis;
- Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held are held by or on behalf of the ceding insurer as security under the reinsurance contract; and
- The reinsurance arrangement is approved by the ceding insurer’s domestic regulator.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The NAIC Principle-Based Reserving Implementation (EX) Task Force serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. This Task Force was also charged with further assessing, and making recommendations regarding the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013, NAIC White Paper Captives and Special Purpose Vehicles, which provides in relevant part:

The Captive and Special Purpose Vehicle (SPV) Use (E) Subgroup studied the use of captives and SPVs formed by commercial insurers. The Subgroup concluded that commercial insurers cede business to captives for a variety of business purposes. The Subgroup determined that the main use of captives and SPVs by commercial insurers was related to the financing of XXX and AXXX perceived reserve redundancies. The implementation of principle-based reserving (PBR) could reduce the need for commercial insurers to create new captives and SPVs to address perceived reserve redundancies; however, existing captives and SPVs are likely to remain in existence for several years or decades, until the existing blocks of business are run-off. **Regulators need to be able to assess and monitor the risks**
that captives and SPVs may pose to the holding company system, and the current regulatory process should be enhanced to provide standardized tools and processes to be used by all regulators when reviewing such transactions. Commercial insurer-owned captives and SPVs should not be used to avoid statutory accounting. To the extent that insurer-affiliated captives and SPVs may be created in the future for unforeseen purposes, additional guidance should be developed by the NAIC to assist the states in a uniform review of transactions. [Emphasis added].

In addition, in coordination with the adoption in principle of the XXX/AXXX Reinsurance Framework, the Financial Regulation Standards and Accreditation (F) Committee was given the following charge: “As the various work products are adopted by the Principle-Based Reserving (EX) Task Force, Executive Committee, and Plenary, consider them for inclusion in the Part A and Part B Accreditation Standards.”

Finally, effective Jan. 1, 2016, the NAIC amended the Preamble for Part A: Laws and Regulations of the NAIC Policy Statement on Financial Regulation Standards to apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct with respect to XXX/AXXX business, which is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction satisfies the XXX/AXXX Reinsurance Framework requirements adopted by the NAIC. Further, the revised Preamble provided, as follows: “The revisions to the Credit for Reinsurance Model Act (#785) and the new XXX/AXXX Model Regulation will need to be specifically considered for accreditation purposes once adopted by the NAIC.”

A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

AG 48 became effective Jan. 1, 2015, and became part of the NAIC Accounting Practices and Procedures Manual through its inclusion in Appendix C. As such, provisions similar to the proposal have been effective in all states since that date.

As of this date, three states (Louisiana, Oklahoma and Utah) have gone beyond AG 48 and have adopted the 2016 revisions to Model #785 giving commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework, with several other states currently considering such revisions.

The new Part A Preamble became effective Jan. 1, 2016, with regard to XXX/AXXX reinsurance captives. NAIC staff worked with necessary state insurance departments to assess compliance with the new Part A Preamble related to captives that assume XXX/AXXX business, and reported its findings at the 2016 Fall National Meeting to the Financial Regulation Standards and Accreditation (F) Committee. NAIC staff reviewed all of the Dec. 31, 2015, XXX/AXXX Reinsurance Supplements that were filed with the NAIC to first ascertain whether the appropriate level of primary and other securities was being held to back the non-exempt XXX/AXXX reinsurance transactions. NAIC staff reported that all of the transactions held the required amount of securities, and therefore, all of the transactions satisfied the new Part A requirements.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

Regulators needed to be able to assess and monitor the risks posed with respect to XXX/AXXX captive reinsurance transactions, and the regulatory process was enhanced through the adoption of the XXX/AXXX Reinsurance Framework, AG 48 and Model #787 to provide standardized tools and processes to be used by all regulators when reviewing such transactions. However, these new tools are complex and technical in nature, requiring the use of a new actuarial methodology to achieve the desired financial solvency results. Therefore, the Reinsurance (E) Task Force recommends that any new accreditation standard developed for Model #787 be
adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program.

In addition, all of the elements of the XXX/AXXX Reinsurance Framework have been put into place, with the exception of the new accreditation standard. Therefore, F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this new standard effective as of January 1, 2020.

**An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:**

The NAIC has not performed a cost/benefit analysis with respect to Model #787, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, it should be noted that Model #787 does not require dramatic changes from how insurance companies have been financing XXX/AXXX captive reinsurance transactions since the NAIC’s adoption of AG 48. As with AG 48, Model #787 provides “standardized tools and processes to be used by all regulators when reviewing such transactions.” Prior to the adoption of AG 48, insurers would enter into various captive reinsurance transactions to “finance” different portions of the statutory reserve differently—i.e., to fund different portions of the reserve using different kinds of assets—based on what insurers believed to be a better correlation between the kind of asset used and the probability that it would be needed. Many state regulators were comfortable with these transactions in theory, but there was significant unease regarding how these transactions were being implemented, and especially as to the lack of consistency from insurer to insurer and regulator to regulator regarding key aspects as to how these transactions may have been approved. Such transactions are still permitted under Model #787, but now a clear and consistent process has been implemented to ensure that the proper amount and type of assets have been applied with respect to these transactions in order to ensure that they continue to meet strong financial solvency standards.
MEMORANDUM

TO:       Financial Regulation Standards and Accreditation (F) Committee
FROM:     Reinsurance (E) Task Force
DATE:     August 24, 2017
RE:       Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

The NAIC membership adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the 2016 Fall National Meeting on Dec. 13, 2016. At that same time, the NAIC membership also adopted revisions to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) to conform with the provisions of Model #787, effective Jan. 1, 2017. Model #787 establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees, and ensures that funds consisting of primary security and other security are held in the forms and amounts required.

At its meeting on Aug. 7, 2017, the Reinsurance (E) Task Force agreed to submit the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. Model #787 should be adopted as a new accreditation standard by the NAIC, with significant elements as outlined in Attachment A.

2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Jan. 1, 2020. The Task Force further recommends that a state’s adoption of AG 48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787.

3. The 2016 revisions to the Credit for Reinsurance Model Law (#785) should be considered acceptable but not required by the states.

In addition to the preceding recommendations, the Task Force is offering the following additional information in order to assist the Financial Regulation Standards and Accreditation (F) Committee in reviewing the proposed accreditation standard for Model #787.
**Substantially Similar**

The Task Force has recommended in the draft accreditation standard that the “substantially similar” standard be utilized to meet the minimum requirements of the standard. However, the Task Force did note that Drafting Notes to Section 2, Section 3 and Section 5 of Model #785 might suggest a stronger standard of review than “substantially similar.” The Drafting Notes provide, as follows: “To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are **substantially similar in all material respects** to NAIC adopted model regulations in the handling and treatment of such reinsurance arrangements.” [Emphasis added]. In recognition of this, and to assist in review of the actuarial method used to determine the required level of primary security as described in Section 6 of Model #787, the Task Force recommends that the NAIC Legal Division specifically note any material changes in a state’s regulation during an accreditation review for consideration by the Financial Regulation Standards and Accreditation (F) Committee.

**State Adoption of AG 48**

The Task Force recommends that the accreditation standard become effective on an expedited basis beginning Jan. 1, 2020. However, the Task Force further recognizes that meeting the expedited date may not be feasible for some states in instances due, in whole or part, to other legislative priorities of the states. It is the recommendation of the Task Force that, in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Financial Regulation Standards and Accreditation (F) Committee as substantial compliance with Model #787. AG 48 became effective Jan. 1, 2015, and became part of the *Accounting Practices and Procedures Manual* through its inclusion in Appendix C, and has been amended to conform with Model #787 effective Jan. 1, 2017.

**2016 Revisions to Model #785**

The Task Force does not recommend that the 2016 revisions to Model #785 be included in the proposed accreditation standard. These revisions provide that the commissioner may adopt regulations with respect to: 1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; 2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; 3) variable annuities with guaranteed death or living benefits; 4) long-term care insurance policies; and 5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the *Accounting Practices and Procedures Manual*, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices, and is: 1) licensed in at least 26 states; or 2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

The reasoning of the Task Force is that Model #787 only applies to term life and universal life with secondary guarantees (XXX/AXXX) captive reinsurance transactions, and that variable annuities, long-term care insurance and other life and health insurance and annuity products are not currently addressed. Therefore, it would be considered to be premature to require the states to adopt these provisions. In addition, the professional reinsurer exemption of Section 5B(4) of Model #785 is specifically referenced in the draft accreditation standard. Therefore, it is the recommendation of the Task Force that the 2016 revisions to Model #785 are optional, and should be considered as acceptable but not required by the states.
Attachment A

Proposed Accreditation Standard

Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

State statute and/or regulation should be substantially similar to uniform, national standards that govern reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees, to ensure that both the total security and the primary security are provided in forms and amounts that are in compliance with the requirements set forth in the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

a. Provides that the Credit for Reinsurance Model Regulation (#786) and Model #787 shall both apply to reinsurance treaties that cede liabilities pertaining to Covered Policies; provided, that in the event of a direct conflict between the provisions of Model #787 and the provisions of Model #786, the provisions of Model #787 shall apply, but only to the extent of the conflict, substantially similar to Section 3 of Model #787?

b. Provides that Model #787 does not apply to reinsurance exempt by the provisions of Section 4 of Model #787, including reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of the Credit for Reinsurance Model Law (#785), which pertains to certain certified reinsurers, or Section 5B(4)(b) of Model #785, which pertains to reinsurers meeting certain threshold size and licensing requirements?

c. Provides definitions of “Covered Policies,” “Grandfathered Policies,” “Required Level of Primary Security,” “Actuarial Method,” “Primary Security,” “Other Security” and “Valuation Manual” that are substantially similar to such terms as defined in Section 5 of Model #787?

d. Provides for an Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation that is substantially similar to the methodology as set forth in Section 6A of Model #787?

e. Provides for valuations to be used 1) in calculating the Required Level of Primary Security pursuant to the Actuarial Method; and 2) in determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, that are substantially similar to the valuations set out in Section 6B of Model #787?

f. Provides for requirements to obtain credit for reinsurance with respect to ceded liabilities pertaining to Covered Policies that are substantially similar to the requirements set out in Section 7A of Model #787?

g. Provides for requirements at inception date and on an ongoing basis substantially similar to Section 7B(1) of Model #787?

h. Provides that if the requirements to hold Primary Security and total security are not both satisfied, the ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held, unless any deficiency has been eliminated pursuant to remediation provisions substantially similar to Section 7B(2) of Model #787?

i. Includes a prohibition against avoidance provision similar to Section 9 of Model #787?

Re: Credit for Reinsurance Model Accreditation Decisions

Dear Commissioner Kiser and Director Lindley-Myers:

New York Life and Northwestern Mutual are writing in response to the current exposure by the Reinsurance (E) Task Force of draft revisions to the NAIC Accreditation Program Manual intended to incorporate the 2019 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) to implement the US-EU Covered Agreement.

Our comments are not with respect to those revisions, but rather to urge that the NAIC follow through on prior recommendations and set the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as an accreditation standard in parallel with the Covered Agreement revisions. Our companies have long advocated that Model #787 should be an accreditation requirement, which is consistent with the prior recommendation by the Reinsurance Task Force.

By way of background, the NAIC adopted Model #787 in 2016 as the permanent method to implement the NAIC’s XXX/AXXX Reinsurance Framework that it spent years developing. Model #787 establishes the credit for reinsurance that a ceding company may be allowed for a subject captive reinsurance transaction. The requirements for Primary Security and Other Security in Model #787 are substantively the same as those in Actuarial Guideline 48, the NAIC’s interim tool to implement its XXX/AXXX Reinsurance Framework. However, whereas Model #787 binds the ceding company’s allowed credit for reinsurance, AG 48 can only impose requirements on the ceding company’s appointed actuary.

On March 20, 2017, the Reinsurance Task Force recommended to the F Committee that Model #787 be made an accreditation standard on an expedited basis, so that it would become an accreditation requirement by January 1, 2020. This was consistent with the NAIC’s recognition that (1) uniformity in implementation of the XXX/AXXX Reinsurance Framework is critical to its success; and (2) AG 48 was intended from the start as only an interim solution until the ultimate credit for reinsurance mechanism could be implemented. On August 24, 2017, the Reinsurance Task Force recommended the elements of Model #787 to be included in the accreditation standard.
However, as progress was being made toward an expedited accreditation action for Model #787, the need arose to amend Models #785 and #786 to address the Covered Agreement. Not wanting states to face multiple rulemaking processes, the F Committee decided at the 2017 Fall National Meeting to defer adoption of Model #787 as an accreditation requirement until the changes to Models #785 and #786 to implement the Covered Agreement had been completed. Our companies agreed that the NAIC’s announced process made sense.

Now that the Covered Agreement changes to Models #785 and #786 have been adopted and are being considered for accreditation on an expedited basis, we strongly urge that the F Committee move forward as originally contemplated and complete the accreditation decisions on Model #787 in synch with the Model #785 and #786 changes. Doing so will make state implementation of the credit for reinsurance changes more efficient. Moreover, since the Reinsurance Task Force has already done the work to identify the accreditation elements for Model #787, moving in parallel should not delay the NAIC’s efforts on Models #785 and #786.

It is important to remember that the NAIC has already made compliance with its XXX/AXXX Reinsurance Framework an accreditation requirement. That was decided in 2015, when the NAIC revised the Part A Preamble to the 2016 Accreditation Program Manual to subject the regulation of XXX/AXXX captives to the Part A accreditation requirements, and deemed regulation according to the NAIC’s XXX/AXXX Reinsurance Framework to meet those requirements. What remains to be done is to solidify that earlier conclusion by making Model #787 itself an accreditation requirement.

While AG 48 has served as a critical interim measure to implement the XXX/AXXX Reinsurance Framework, it was never intended to be nor is it an adequate permanent substitute for Model #787. Only Model #787 embeds the Primary Security and Other Security requirements directly into the determination of reinsurance credit. AG 48, by contrast, relies upon an indirect enforcement approach: requiring a ceding company’s appointed actuary to perform an analysis and, in the event the Primary Security or Other Security requirements are not met, deliver a qualified actuarial opinion. The allowance, or not, of reinsurance credit as a matter of law under Model #787 serves as a more direct and consequential incentive for compliance and uniformity than can the actuarial opinion requirements of AG 48. While some may question the need to make Model #787 an accreditation standard in light of the existence of AG 48, we would note that the intent of the accreditation program is to ensure uniformity among accredited jurisdictions with respect to solvency regulation. That uniformity can be best achieved by making Model #787 an accreditation standard, thereby ensuring uniform consequences and enforcement with respect to this aspect of the XXX/AXXX Reinsurance Framework. Moreover, it was recognized from the beginning that utilizing an actuarial opinion requirement as a tool for enforcement of the NAIC’s XXX/AXXX Reinsurance Framework puts the actuarial opinion requirement to a novel use going beyond what is ordinarily contemplated as the purpose of the Actuarial Opinion and Memorandum Regulation.

For these reasons, the NAIC has always described AG 48 as the interim method to implement its XXX/AXXX Reinsurance Framework, and the credit for reinsurance changes set forth in
Model #787 as the permanent implementation method. This is also reflected in the fact that AG 48 itself includes sunset provisions to apply in individual states as they adopt Model #787.

There is no longer any reason for delay in the NAIC’s action to make Model #787 an accreditation requirement. We again urge that the F Committee take this up and move forward in parallel with the Covered Agreement changes to Models #785 and #786. Doing so will allow the NAIC to finally complete the important work of uniformly implementing its XXX/AXXX Reinsurance Framework.

We appreciate the opportunity to comment on this important topic. Please let us know if you need any additional information or would like to discuss our comments.

Sincerely,

Douglas A. Wheeler  
Senior Vice President, Office of Governmental Affairs  
New York Life Insurance Company

Andrew T. Vedder  
Vice President – Solvency Policy & Risk Management  
The Northwestern Mutual Life Insurance Company
The International Insurance Relations (G) Committee met in Austin, TX, Dec. 7, 2019. The following Committee members participated: Gary Anderson, Chair (MA); Andrew Stolfi, Vice Chair (OR); Andrew N. Mais (CT); Stephen C. Taylor (DC); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers (MO); Bruce R. Ramge represented by Justin Schrader (NE); Marlene Caride (NJ); John G. Franchini represented by Robert Doucette (NM); Jillian Froment (OH); and Jessica Altman (PA).

1. **Adopted its Nov. 6, Oct. 15, Aug. 13 and Summer National Meeting Minutes**

The Committee met Nov. 6, Oct. 15, Aug. 13 and Aug. 3 and took the following action: 1) heard an update on upcoming International Association of Insurance Supervisors (IAIS) committee meetings; 2) approved submission of NAIC comments on the IAIS draft *Issues Paper on the Use of Big Data Analytics in Insurance*; 3) heard updates on IAIS activities and the Financial Sector Assessment Program (FSAP); 4) approved submission of NAIC comments on IAIS revised supervisory material and material related to the *Holistic Framework for Systemic Risk in the Insurance Sector*; 5) adopted the report of the ComFrame Development and Analysis (G) Working Group; and 6) discussed IAIS key 2019 projects with interested parties.

Commissioner Anderson noted that the Committee also met Nov. 19, Oct. 29 and Sept. 30 in regulator-to-regulator sessions, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss key agenda items before and after the IAIS committee meetings and the International Monetary Fund (IMF) FSAP.

Commissioner Stolfi made a motion, seconded by Commissioner Caride, to adopt the Committee’s Nov. 6 (Attachment One), Oct. 15 (Attachment Two), Aug. 13 (Attachment Three) and Aug. 3 (see *NAIC Proceedings – Summer 2019, International Insurance Relations (G) Committee*) minutes. The motion passed unanimously.

2. **Adopted the Report of the ComFrame Development and Analysis (G) Working Group**

Commissioner Anderson said the ComFrame Development and Analysis (G) Working Group met prior to the Committee meeting in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss next steps on implementation of the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) and the global insurance capital standard (ICS) and monitoring period process. He said that with the adoption of ComFrame, the Working Group has fulfilled its mandate and will be disbanded at the end of 2019.

However, Commissioner Anderson said that as work related to ComFrame and the ICS is moving into a new phase, relevant charges have been added to working groups reporting to the Financial Condition (E) Committee. He noted that the Group Solvency Issues (E) Working Group’s 2020 proposed charges include: “[a]ssess the IAIS Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) and make recommendations on its implementation in a manner appropriate for the U.S.” He also noted that the Group Capital Calculation (E) Working Group’s 2020 proposed charges include: “[l]iaise, as necessary, with the International Insurance Relations (G) Committee on international group capital developments and consider input from participation of U.S. state insurance regulators in the International Association of Insurance Supervisors (IAIS) monitoring process.”

Additionally, Commissioner Anderson said, this Committee will continue to track and provide input, as appropriate, as ComFrame is implemented and the monitoring period moves forward.

Commissioner Mais made a motion, seconded by Commissioner Caride, to adopt the report of the ComFrame Development and Analysis (G) Working Group. The motion passed unanimously.

3. **Adopted its 2020 Proposed Charges**

Commissioner Anderson explained that the Committee’s 2020 proposed charges have some minor wording changes and some of the individual charges were reordered for a more logical flow. He said that as noted in the ComFrame Development and Analysis (G) Working Group report, this is the last year for the Working Group and it will be disbanded at the end of 2019.
Commissioner Anderson added that as ComFrame moves into the next phase, the necessary analysis and coordination by the states and the NAIC, as well as interaction with interested parties, will continue under the relevant groups reporting to the Financial Condition (E) Committee.

Commissioner Altmaier made a motion, seconded by Commissioner Stolfi, to adopt the Committee’s 2020 proposed charges (Attachment Four). The motion passed unanimously.

4. **Heard an Update on Key 2019 Projects of the IAIS**

Commissioner Anderson said the NAIC was very pleased to have former Commissioner Julie Mix McPeak (TN) receive the Distinguished Fellows Award from the IAIS in Abu Dhabi, United Arab Emirates, for her dedication and work at the IAIS, including serving on multiple committees and taking key leadership positions for a number of years. He congratulated Ms. McPeak on behalf of state insurance regulators and expressed appreciation for the time and leadership she provided at the international level during her time as commissioner.

Commissioner Anderson reported that at its committee meetings and annual general meeting in mid-November in Abu Dhabi, the IAIS reached key milestones on the effective cross-border supervision of insurance groups and contributing to global financial stability. He said these achievements were made possible by a shared commitment from the world’s insurance supervisors to the maintenance of fair, safe and stable insurance markets for the benefit and protection of policyholders. He said that overall, state insurance regulators are pleased with the outcomes of these meetings.

a. **ICPs and ComFrame**

Commissioner Anderson explained that in Abu Dhabi, the IAIS adopted a revised set of its Insurance Core Principles (ICPs) and ComFrame. Revisions to the ICPs has been a multi-year process, making updates to reflect input from self-assessment and peer reviews, developments in the market, and supervision, as well as to ensure consistency between the ICPs and ComFrame. He noted that ComFrame is the result of years of work, and it is intended to be a comprehensive and outcome-focused framework that provides supervisory minimum requirements tailored to the international activity and size of internationally active insurance groups (IAIGs).

Commissioner Anderson said that moving into 2020, IAIS members will begin the implementation of ComFrame. He said the NAIC’s Group Solvency Issues (E) Working Group will assess ComFrame and make recommendations on its implementation in a manner appropriate for the U.S. He said that during this initial phase of implementation, the IAIS will be providing supporting material to help members understand expectations set out by ComFrame. He commented that there have been comments submitted previously by interested parties during the development of ComFrame related to possible deviations from U.S. regulations, and he noted that there will be careful and due deliberation to ensure that the implementation of ComFrame in the U.S. is compatible with our regulatory system. He added that it will be important to have ongoing engagement with interested parties to understand any specific concerns and address them accordingly.

Commissioner Anderson said that as part of its 2020–2024 strategic plan, the IAIS plans to focus on developing supporting material for its members more broadly, which will include issues and application papers on a variety topics. He added that the IAIS will also be continuing with its implementation assessment activities through peer reviews of ICPs on a thematic basis.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) commented that the APCIA appreciates the final outcomes on ComFrame, especially with regard to the overarching principles, which include recognizing that IAIGs can be organized in different manners, as long as the objectives of ComFrame are ultimately achieved. He also agreed that any regulatory changes made in the U.S. to implement ComFrame should be consistent with the U.S. regulatory framework.

b. **Holistic Framework for Systemic Risk in the Insurance Sector**

Commissioner Anderson said the IAIS adopted the holistic framework for the assessment and mitigation of systemic risk in the insurance sector. He said this new framework moves away from a solely entities-based approach and instead recognizes that systemic risk can arise both from sector-wide trends with regard to specific activities and exposures, as well as from a concentration of these activities and exposures in individual insurers. He explained that the holistic framework consists of: 1) an enhanced set of supervisory policy measures and powers of intervention; 2) an annual IAIS global monitoring exercise; and 3) a robust implementation assessment.
With regard to the global monitoring exercise, Commissioner Anderson said the IAIS will undertake an annual process to assess insurance market trends and developments and determine any potential build-up of systemic risk in the global insurance sector. He said this will include an assessment of potential systemic risk arising from sector-wide trends with regard to specific activities and exposures, which will leverage and build upon existing IAIS work, such as the Global Insurance Market Report. He said this will also assess the possible concentration of systemic risks at an individual insurer level arising from these activities and exposures using an updated version of the former global systemically important insurer (G-SII) assessment methodology.

Commissioner Anderson said the global monitoring exercise will also see a collective discussion by the IAIS on the assessment of potential systemic risk in the global insurance sector, at both a sector-wide and individual insurer level, and appropriate supervisory responses to systemic risk if it arises. He noted that the IAIS will share the outcomes of the global monitoring exercise each year with participants in the global monitoring exercise (participating insurers as well as participating IAIS members), other IAIS members, the Financial Stability Board (FSB) and the general public.

Commissioner Anderson explained that another key element of the holistic framework is the IAIS’s implementation assessment of related supervisory material. He said this approach builds on existing methodology for assessing the implementation of ICPs and ComFrame, while considering the specific nature of the holistic framework as a subset of the ICP and ComFrame material that is relevant to the assessment and mitigation of systemic risk. He said the assessments will proceed in phases, beginning with a baseline assessment in 2020 and moving towards more intensive jurisdictional assessments in 2021, which will include targeted in-depth verification of supervisory practices. He noted that the IAIS will share the outcomes of the holistic framework implementation assessments with the FSB and the general public.

Commissioner Anderson said the implementation of the holistic framework is expected to provide an enhanced basis for assessing and mitigating systemic risk in the insurance sector and therefore eliminate the need for identification of insurers as G-SIIs. He said the FSB will determine whether to discontinue G-SII identification in November 2022 based on the initial years of implementation of the holistic framework.

Commissioner Anderson noted that as implementation gets underway, state insurance regulators will be mindful of the appropriate role for the IAIS, as there have been concerns expressed about the role of the IAIS and it taking on regulatory-like powers.

c. ICS and Monitoring Period

Commissioner Anderson said the IAIS agreed on version 2.0 of the ICS for a five-year monitoring period, starting in January 2020. He said that during the monitoring period, ICS Version 2.0 will be used for confidential reporting and discussion in supervisory colleges to provide feedback to the IAIS on the ICS design and performance. He said that at the same time, the IAIS agreed on a definition of comparable outcomes and an overarching approach and timeline for the development of criteria to assess whether the aggregation method (AM) being developed by the U.S. and other interested jurisdictions, provides comparable outcomes to the ICS.

Commissioner Anderson noted that going into these meetings, there was a lot of attention domestically on the ICS, including significant time dedicated by this Committee. He said an agreement was secured that advances critical U.S. objectives as part of the IAIS debate on the next phase of the ICS project. He added that state insurance regulator support came about after the IAIS agreed to an achievable definition and approach to the assessment of comparable outcomes, providing a clear path forward for the AM. He said other objectives that were met include having timelines and governance for operationalizing the monitoring period, a commitment to consider modifications to the ICS itself, and conducting an economic impact assessment.

Commissioner Anderson said members of Team USA have been clear that this pathway ensures that the AM, as one part of a comprehensive U.S. regulatory framework, will be viewed through outcomes that it provides and not simply a quantitative lens. He said that while state insurance regulators will not be implementing the ICS, they will remain committed to an approach to group capital analysis, which can and should be viewed as comparable to the outcomes achieved by the ICS.

Commissioner Anderson noted that the IAIS posted a number of documents explaining various parts of the monitoring period. He said this includes a document that sets out the overarching principles and concepts for the annual confidential reporting of the reference ICS and, at the option of group-wide supervisors (GWS), additional reporting during the five-year monitoring period. He said there is a note that explains some of the technical decisions that were made for the reference ICS, including ICS balance sheet, market-adjusted valuation (MAV), qualifying capital resources, and margin-over-current-estimate (MOCE).
Commissioner Anderson said that as state insurance regulators have had concerns over the development phase of the ICS on some of these technical points, they will continue to see how these perform during the monitoring period and to what extent improvements and changes are merited.

Commissioner Anderson said materials have also been posted that explain the definition of comparable outcomes and the overall approach to the comparability assessment, as well as the governance and timeline planned for this work. He explained that the agreed upon definition reads, “[c]omparable outcomes to the ICS means that the Aggregation Method (AM) would produce similar, but not necessarily identical, results over time that trigger supervisory action on group capital adequacy grounds.” He said agreement on the definition also included an approach for developing high-level principles and criteria for the comparability assessment, which will be subject to further discussion over the monitoring period and will help make an informed process to develop and perform the comparability assessment of the AM, an important workstream for next year.

Commissioner Anderson said that in addition to comparability, the workplan for the monitoring period also addresses how things like the generally accepted accounting principles plus (GAAP+) valuation approach and the use of internal models will be assessed and whether they are ultimately included as part of the ICS. He also said the IAIS plans to perform an economic impact assessment, which state insurance regulators think will help inform the version of the ICS that is to be used as a prescribed capital requirement (PCR).

Commissioner Anderson noted that it will be important to develop a timeline for engagement with interested parties to help inform state insurance regulators and be best positioned to advocate at the IAIS for goals relative to comparability. The IAIS plans to issue a consultation in early July 2020 on the high-level principles to be used for the comparability assessment. These high-level principles could build upon the NAIC’s interpretative guidance issued while in Abu Dhabi, which was intended to provide context and details about the interpretation of the agreement, outlining what was included, but just as important, what was not included.

Marty Hansen (American International Group—AIG) commended the NAIC for a successful negotiation in Abu Dhabi. He noted that the way forward on the reference ICS has been substantially changed to reflect U.S. practices, including senior debt and NAIC designations for credit risk. He commented that this would also provide the necessary breathing room for the NAIC’s group capital calculation (GCC) to be developed without an artificial IAIS deadline on the AM. He said there are some concrete steps on the definition of comparable outcomes and an overarching approach to guide the development of high-level principles and criteria for assessing comparability. He suggested that a precondition for comparability will be a credible and implementable GCC, and he encouraged the NAIC to continue to maintain this positive momentum and keep moving forward.

Ian Adamczyk (Prudential) thanked the NAIC for the successful outcome achieved in Abu Dhabi with regard to the positioning of the AM and the future development of high-level principles and criteria for the comparability assessment. He noted that the additional parameters surrounding governance for the AM, economic impact analysis, and ongoing stakeholder engagement during the monitoring period are all positive outcomes.

Joe Engelhard (MetLife) noted that in 2019, the IAIS delivered the largest set of standard setting material in decades. He commented that going into the Abu Dhabi meeting, industry had three main goals for the ICS, and all three were achieved. He complimented Team USA for successfully changing the direction of the IAIS to be more positive than the previous position on the ICS. He suggested that the IAIS should consider broader public policy goals as the ICS is further refined and ensure alignment with the G20 themes of sustainable growth and the role of long-term investment. He also commented that attention should be given by IAIS members to implementing the holistic framework to ensure its credibility and effectiveness. He commended the NAIC for being ahead of the game with regard to its work on macroprudential supervision.

Robert Neill (American Council of Life Insurers—ACLI) thanked the NAIC for all the hard work that went into the final outcomes in Abu Dhabi, which met the ACLI’s stated objectives from earlier in the year. He also appreciated that the NAIC had conducted outreach to ACLI members in advance of bilateral dialogues and meetings with other jurisdictions.

Mariana Gomez-Vock (ACLI) sought clarification on the relationship between the GCC, AM and supervisory intervention. She also sought additional clarity on the transparency principles embedded within the comparability assessment approach.

Commissioner Altmaier said the AM is an aggregation-based framework being developed internationally in conjunction with other jurisdictions. He said that while the AM is influenced by work on the GCC, the AM will be more jurisdictionally agnostic, and, therefore, perhaps simpler than the GCC. He said the ultimate intention is to have the GCC serve domestically as implementation of an AM approach. He added that there are still a number of unknowns, including final design of the AM and GCC, recognition of the AM as comparable, the ultimate fate of the ICS project, and how any prescribed capital requirement
(PCR) will be implemented and evaluated in international active insurance group (IAIG) jurisdictions. He noted that there will be ongoing engagement with stakeholders as state insurance regulators get clarity on these outstanding issues.

Tracey Laws (Chubb) commented on the positive outcomes from Abu Dhabi and noted that the additional clarity shared by the IAIS about the voluntary nature of participation in ICS field testing was quite helpful. She raised the issue of the relationship between a PCR for IAIGs and non-IAIGs and the potential for creating a competitive disadvantage for IAIGs.

Tom Finnell (America's Health Insurance Plans—AHIP) reiterated earlier comments made about the good outcomes from the Abu Dhabi meetings. He sought clarification about certain elements regarding comparability and whether the IAIS will compare the GCC to the ICS or if it will compare the AM to the ICS, which would be jurisdictionally agnostic.

Commissioner Anderson replied that it would be a comparison of the AM to the ICS.

Commissioner Anderson thanked the speakers for their comments and views, and he noted that these topics are important workstreams that the NAIC will continue discussing throughout the monitoring period.

5. **Heard an Update on International Activities**

   a. **Regional Supervisory Cooperation**

   Regarding Asia, Commissioner Mais said the NAIC hosted the 11th NAIC-Financial Services Agency, Japan (JFSA) Insurance Regulatory Dialogue in Washington, DC, in October. He said the biannual dialogue brings together regulators from two of the world’s largest insurance markets, representing more than 47% of worldwide premium income. He noted that the meeting allowed regulators an opportunity to discuss regulatory issues of mutual concern, including Japan’s desire to become a reciprocal jurisdiction under the revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) and key issues at the IAIS, including the ICS and holistic framework. He said the 12th Dialogue will be hosted in Japan in the first half of 2020, where these ongoing discussions will continue.

   Regarding Europe, Commissioner Mais said the U.S.-EU Insurance Dialogue Project is continuing its work on cyberinsurance, cybersecurity, and big data with a public event expected to take place in March in Washington, DC. He thanked Commissioner Ommen and Director Froment for serving as the NAIC’s Steering Committee members for the project. He said that state insurance regulators and the NAIC continue to meet directly with counterparts at the European Insurance and Occupational Pensions Authority (EIOPA) and the European Commission on a regular basis throughout the year on matters of mutual regulatory concern, including IAIS issues such as ICS developments, developments relating to innovation and technology, and revisions to Model #785 and Model #786.

   Regarding Latin America, Commissioner Mais said state insurance regulators have been working closely with the Association of Latin American Supervisors (ASSAL) as part of the NAIC’s efforts to share best practices with other supervisors and enhance regulatory cooperation to help with the supervision of international insurance groups. He said that in October, the NAIC participated in ASSAL’s regional seminar for insurance supervisors of Latin America in San Jose, Costa Rica. He said he and Director Cameron spoke on various topics throughout the two-day meeting, including insurtech, conduct of business, and corporate governance. Commissioner Mais said that in late April, the NAIC will participate in the ASSAL’s Annual Meeting in Lima, Peru.

   Commissioner Mais said one of the NAIC’s most successful capacity building projects is the International Fellows Program, which is in its 15th year. He said that since the program started in 2004, more than 300 fellows from 35 countries have participated in this program designed to advance working relations with foreign markets, emphasizing the exchange of regulatory techniques and technology. He noted that for the fall 2019 session, the NAIC welcomed 11 international regulators from Bermuda, India, Kenya, Saudi Arabia, Taiwan, Thailand and Tunisia. He thanked the host states for this session, which included: Arkansas; California; District of Columbia; Louisiana; Missouri; New York; Oregon; Texas; and Washington. He said the NAIC is always interested in having more states host fellows, an experience that is valuable not only for fellows but also for host states.

   b. **Organisation for Economic Co-operation and Development (OECD)**

   Commissioner Mais noted that the OECD’s Insurance and Private Pensions Committee (IPPC) met earlier in the week in Paris, France, hosting a half-day roundtable on digitalization of insurance intermediation and regulatory responses. He said that during the meeting, there were updates on: 1) a revised report on the regulatory and supervisory framework of insurance intermediaries and market conduct; 2) a report on big data and artificial intelligence (AI) in the insurance sector; 3) draft revised guidance on
the structure of insurance regulation and supervision; 4) a project proposal on the interaction between public and private sectors in long-term and health care; 5) a policy framework for accessing international property catastrophe reinsurance markets; 6) a project proposal on assessing the integration of environmental, social, and governance (ESG) factors by institutional investors; and 7) a draft report on the impact of public policy and regulation on cyberinsurance coverage.

6. **Heard an Update on the FSAP**

Mr. Schrader explained that as previously reported to the Committee, the IMF is conducting its third FSAP of the U.S. financial regulatory system in 2019–20. He said the FSAP is comprised of Mission 1 and Mission 2, with much of the insurance-related work concentrated in Mission 1 and additional work happening during Mission 2 in early 2020. He noted that meetings for Mission 1 took place this fall and concluded Nov. 8 with a closing meeting hosted by the U.S. Department of the Treasury (Treasury).

Mr. Schrader said the NAIC and several states participated in a number of these meetings with IMF staff, and he added that the IMF also conducted meetings with the private sector. He said that since the last FSAP of the U.S. in 2015, state insurance regulators and the NAIC have further enhanced the U.S. state-based system, and Mission 1 included many good, in-depth discussions with the IMF on these regulatory developments. He said Mission 2 is scheduled for mid-February to early March with meetings expected at the NAIC and several states. He said the IMF is expected to publish a technical note on insurance by the summer of 2020.

Mr. Schrader added that as with previous FSAPs, it is expected that there will be areas where state insurance regulators will continue to disagree with the IMF’s approach and recommendations, as well as areas where state insurance regulators can hopefully provide constructive feedback relating to any inaccuracies or particular characterizations of the U.S. system in the document before it is published. He also thanked participating states for the time they took to meet with the IMF on the U.S. state-based system of insurance regulation and NAIC staff for their many contributions to the work so far.

7. **Discussed Other Matters**

Commissioner Anderson said the IAIS recently released its draft *Application Paper on Liquidity Risk Management* for public consultation, with a comment deadline of Jan. 20, 2020. He said this paper is intended to provide guidance on the supervisory material related to liquidity risk management in the relevant ICP and ComFrame material. He said the usual NAIC review process will take place for this paper, noting that a Committee call will be held in mid-January 2020 to approve submission of any NAIC comments.

Commissioner Anderson noted that a question-and-answer session with the IAIS secretariat would begin immediately following this Committee meeting.

Ryan Workman (NAIC) noted that the international calendars for 2019 and 2020 have been posted to the website.

Having no further business, the International Insurance Relations (G) Committee adjourned.
1. Heard an Update on Upcoming IAIS meetings

Commissioner Anderson said a number of commissioners and NAIC staff would be attending the upcoming International Association of Insurance Supervisors (IAIS) committee meetings, general meeting, and annual conference in Abu Dhabi where some important projects involving years of work by IAIS members and stakeholders would be finalized.

Commissioner Anderson noted that the holistic framework for systemic risk would be adopted. He said that following the financial crisis, the IAIS, in conjunction with the Financial Stability Board (FSB), established a methodology for analyzing and identifying global systemically important insurers (G-SIIs) and accompanying policy measures. He explained that the shortcomings of this solely entities-based approach for the insurance sector soon became evident, and the IAIS began looking at an activities-based approach, resulting in the development of the holistic framework, which takes a broader look at how systemic risk may arise in the insurance sector—whether from an individual insurer or a number of insurers undertaking a certain activity—and a broader approach to how such risks can be monitored and mitigated by supervisors. He said the holistic framework consists of: 1) new supervisory material contained within the Insurance Core Principles (ICPs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame); 2) a global monitoring exercise that leverages and enhances existing IAIS work individual insurer monitoring and sector-wide monitoring; and 3) an implementation assessment component. He added that it is expected that there will be discussion in Abu Dhabi about some of the more detailed processes within the holistic framework, in particular as they relate to the global monitoring exercise; but in general, state insurance regulators are supportive of the holistic framework, and they believe it will show that a G-SII list is no longer needed for the insurance sector.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) asked if revisions to the holistic framework document will be published before adoption or shortly thereafter so stakeholders are able to see the final product. Ryan Workman (NAIC) said a list of comments received from the public consultation will likely be published and a public call will be scheduled on the holistic framework after the annual conference. He also said a forthcoming document will explain how the holistic framework fits with relevant parts of ComFrame and the ICPs.

Commissioner Anderson said adoption of the revised ICP Introduction and Assessment Methodology, IAIS glossary terms, and revised versions of a number of ICPs is the result of a multi-year process to ensure that the ICPs are understandable, applicable and implementable by IAIS members. He said ComFrame has evolved over the years through a number of consultations and field-testing processes, with the end result being standards and guidance that are tailored for the supervision of internationally active insurance groups (IAIGs). He said that to avoid overlap and provide better context, ComFrame was integrated into the ICPs for presentation purposes, which resulted in a need to ensure consistency and coherency between the two. Commissioner Anderson explained that following adoption of the revised ICPs and ComFrame, IAIS members will begin the process of implementation with the expectation that the IAIS’s core supervisory material will remain stable for a number of years.

Commissioner Anderson said the global insurance capital standard (ICS) and comparability of the aggregation method (AM) have attracted significant attention over the course of 2019 and decisions in Abu Dhabi would affect the next five years over the monitoring period. He said state insurance regulators have been clear about ongoing concerns over some of the outstanding design issues of the reference ICS, which as a result make the ICS not fit for purpose for the U.S. supervisory system or the U.S. insurance market. He said state insurance regulators are in the process of developing the AM to provide comparable outcomes to the ICS.
Commissioner Anderson explained that while the ICS will eventually become part of ComFrame, what will be approved in Abu Dhabi is separate from adoption of the ComFrame material, as ICS version 2.0 will still be subject to further development during the monitoring period. Regarding ICS materials to be adopted in Abu Dhabi, he said this would include the final technical design of the reference ICS version 2.0 for the monitoring period, a definition of comparable outcomes and overarching approach to guide development of the assessment process, and a broader workplan and timeline for entire monitoring period, and a public communication on operationalizing the monitoring period.

Commissioner Anderson said that finalizing the reference ICS and coming up with a definition of comparable outcomes and accompanying overarching guidelines for the comparability assessment process has proven to be a challenge, as IAIS members have different philosophies on group capital, which influences their approach on how technical issues and issues of comparability should be viewed and determined. He noted that at an October stakeholder event hosted by the Federal Insurance Office (FIO), Team USA shared how it envisioned a definition of comparable outcomes. He said that following the event, the IAIS had calls and meetings to discuss comparability, along with the technical design issues and how the monitoring period will operate. He said that following the recent ICS Task Force meetings in London to discuss comparability, there are still some sticking points with differences of view and interpretation. He said state insurance regulators hope to have these successfully resolved in Abu Dhabi so that there is an achievable definition of comparable outcomes and a clear path forward on the AM.

Commissioner Anderson said state insurance regulators are aware that there are a number of questions as to how to proceed if an agreement on comparability is not reached in Abu Dhabi. He said that there are a variety of moving parts to this issue and different ways they could play out. He said state insurance regulators are trying to be as productive as possible with international colleagues to find a way forward; however, the NAIC and state insurance regulators will not move forward in a way that is contrary to our interests. He also said if there is not an agreement, it does not mean that the NAIC and state insurance regulators will disengage from the ICS project or the IAIS more broadly.

Michelle M. Rogers (National Association of Mutual Insurance Companies—NAMIC) asked if other IAIS members have raised concerns about the current ICS draft and whether other members might oppose approval of ICS version 2.0. Commissioner Anderson responded that there have been some concerns raised by other jurisdictions.

Ms. Rogers asked for elaboration on the sticking points on comparable outcomes. Commissioner Anderson said these are subject to internal discussions within the IAIS but reiterate that state insurance regulators will not agree to a deal that could be detrimental to the U.S. market.

Bryan Pickel (Prudential Financial) said the AM can provide comparable outcomes to the ICS, as defined by the Kuala Lumpur agreement. He said it should be contemplated what a “no” vote on the ICS might mean in a larger context, especially for larger companies that do business internationally. Commissioner Anderson responded that if the U.S. agrees to a deal, it will need to meet the NAIC’s objectives and be a good deal for the U.S. market, and state insurance regulators will be mindful of the consequences of any outcome in Abu Dhabi.

Birny Birnbaum (Center for Economic Justice—CEJ) noted that comparability could be considered in terms of outcomes of what the different models produce and comparability that triggers supervisory action. He asked for clarity about the Team USA position on what constitutes comparability. Commissioner Anderson said that Team USA has focused on outcomes for supervisory intervention, with a clear path for the AM to be deemed comparable. Mr. Birnbaum said a standard for supervisory action could be subjective, and he asked for further insight. Commissioner Anderson responded that since the ICS and AM are built differently, the two approaches will not produce the exact same numbers, thus the focus on the action that the results produce, not the result itself.

Joe Engelhard (MetLife) said he understands that the ICS market-adjusted valuation (MAV) approach will not be implemented in the U.S., but he noted that for comparability, MAV and the AM will not come up with the same ratio since they are different approaches. Instead, he said the metric should be whether the solvency ratio accurately reflects assets and liabilities. He also noted that the NAIC can likely demonstrate that risk-based capital (RBC) ratios do appropriately reflect the time needed to intervene with an insurer, and therefore the level of risk of the underlying assets and liabilities. He added that on the other hand, MAV is procyclical, potentially overstating or understating risk.

Mr. Birnbaum said that while the position of the industry regarding ICS is not unreasonable, he believed Team USA’s position would likely not change during the monitoring period. He said that Team USA is asking other IAIS members to accept the AM as functionally equivalent regardless of outcomes during the monitoring period. Commissioner Anderson disagreed with that.
characterization and said the monitoring period does matter to demonstrate comparable outcomes, noting that Team USA does not expect the IAIS to give the AM a free pass.

Mr. Broadie asked whether U.S.-based IAIGs will be required to participate in the field testing of MAV during the ICS monitoring period. Commissioner Anderson responded that based on the positions of the group-wide supervisors of U.S.-based IAIGs, the U.S. will not go forward with something contrary to its interests.

DiAnn C. Behrens (Allstate) asked for clarification regarding the intended relationship of the NAIC’s group capital calculation (GCC) under development to the AM. She asked which one will be used in the U.S. or internationally and how they relate to the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement). She also asked how these approaches compare to the ICS. Commissioner Anderson responded that these points will continue to be discussed as the work moves forward, and he noted that the Group Capital Calculation (E) Working Group and NAIC leadership will be part of these discussions as well.

Andrew T. Vedder (Northwestern Mutual) asked about Team USA’s continued efforts during the monitoring period to improve design elements of the reference ICS. He said that it is important for non-IAIG insurers to see improvements in the reference ICS. Commissioner Anderson said there would be continued engagement by Team USA regarding design elements, no matter the outcome of Abu Dhabi.

Patrick C. Reeder (American Council of Life Insurers—ACLI) asked if Team USA plans to stay engaged during the ICS monitoring period, regardless of the vote in Abu Dhabi. Commissioner Anderson said regardless of the vote, Team USA will continue working with IAIS colleagues to address deficiencies in the ICS. He noted that the NAIC approach to member engagement on topics on which there are different views serves as a good model.

Tom Leonardi (AIG) asked if it would be difficult to demonstrate comparability of the AM if not all U.S.-based IAIGs provide reference ICS data during the monitoring period. Commissioner Anderson responded that the data to be provided should be sufficient for demonstrating comparability and that there has been engagement with the relevant group-wide supervisors on regarding participation during the monitoring period.

Mr. Reeder said that after Abu Dhabi, whatever the outcome, the ACLI’s members will need to understand how to budget and allocate resources for GCC development, as well as the monitoring period. Commissioner Anderson responded that these points will be taken into account.

Commissioner Anderson noted that the Committee will meet Dec. 7 at the Fall National Meeting.

Having no further business, the International Insurance Relations (G) Committee adjourned.
The International Insurance Relations (G) Committee met via conference call Oct. 15, 2019. The following Committee members participated: Gary Anderson, Chair (MA); Andrew Stolfi, Vice Chair (OR); Andrew N. Mais represented by John Loughran (CT); David Altmaier (FL); Doug Ommen represented by Carrie Mears (IA); James J. Donelon (LA); Anita G. Fox represented by John Rehagen (MO); Bruce R. Ramge (NE); Marlene Caride (NJ); John G. Franchini (NM); Jillian Froment (OH); and Jessica Altman (PA).

1. **Approved Submission of NAIC Comments on IAIS Draft Issues Paper on the Use of Big Data Analytics in Insurance**

Commissioner Anderson said the International Association of Insurance Supervisors (IAIS) draft *Issues Paper on the Use of Big Data Analytics in Insurance*, which is currently out for public consultation, builds on a previous IAIS issues paper and focuses more specifically on issues regarding the use of personal and other data by insurers as a result of digitalization. He said the paper considers the manner in which insurers are able to collect, process and use data across various stages of the insurance product lifecycle, namely product design, marketing, sales and distribution, pricing and underwriting, and claims handling. He said the paper also makes certain observations about the potential implications for supervisors as a result of the use of big data analytics in insurance.

Commissioner Anderson said that per the usual process, the paper was reviewed internally, which resulted in the initial draft NAIC comments that were circulated in advance of the conference call. He said input for consideration by the Committee was received from the American Property Casualty Insurance Association (APCIA) (Attachment Two-A).

Ryan Workman (NAIC) provided an overview of the draft NAIC comments.

David F. Snyder (APCIA) provided support for the NAIC draft comments, and he said the APCIA would be submitting its own comments.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ disagrees with the APCIA comments, and it believes that the IAIS paper is not intended to provide regulatory practice or guidance; instead, it features extensive discussion on benefits and concerns related to the use of big data. He said that while the CEJ has suggestions to improve the paper, it believes that it is balanced.

Taylor Walker (American Council of Life Insurers—ACLI) agreed with the APCIA comments and noted that the ACLI will be submitting its own comments. She said the ACLI believes the issues paper should focus more on consumer benefits for big data and emphasize that concerns around big data are not new to the insurance industry. She said that while technology and techniques have evolved, commitment to the law and actuarial standards have not changed.

Commissioner Caride made a motion, seconded by Commissioner Donelon, to approve submission of the NAIC comments (Attachment Two-B). The motion passed unanimously.

Commissioner Anderson said the NAIC comments on the draft issues paper would be submitted in advance of the Oct. 16 deadline, and he urged interested parties to submit comments, as well.

2. **Heard an Update on IAIS Activities**

Commissioner Anderson reported that in November, the IAIS will have three days of committee meetings followed by its general meeting and annual conference. He said finalization of a number of long-term projects at the IAIS is expected, including revisions of several Insurance Core Principles (ICPs), the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), the global insurance capital standard (ICS) for the monitoring period, and the Holistic Framework for Systemic Risk in the Insurance Sector. He said that while this phase of revising existing and developing new supervisory material is coming to a close, an important phase of implementation begins, and discussions in November will be laying out related plans.
Commissioner Anderson said during the week of Oct. 21, the IAIS ICS Task Force and the Executive Committee will be meeting in London, mostly to focus on reaching agreement on outstanding design issues on the ICS version 2.0 for the monitoring period and comparability of the aggregation method (AM).

Commissioner Anderson noted that the U.S. Chamber of Commerce recently released a report on the ICS and AM.

Bill Hulse (U.S. Chamber of Commerce) shared highlights of this report, noting that it aims to build an argument for why the AM is a credible approach to group capital. He gave an overview of the report’s main sections, which covers how a market-adjusted valuation approach to capital could affect product availability, competition, global competitiveness, and capital markets in the U.S., as well as the merits of the AM. He said the report also discusses market implications of adopting the reference ICS, as adoption in other jurisdictions could make the ICS the de facto international standard even with the U.S. taking the AM approach.

Commissioner Anderson said that in early October, the Federal Insurance Office (FIO) hosted a stakeholder session on the ICS during which views of Team USA were presented, including a strawman proposal for a definition of comparable outcomes. He said that in state insurance regulators’ view, the outcome should focus on group capital approaches, signaling the need for supervisory intervention. He said that based on input from that meeting, Team USA made some tweaks to help clarify the proposal submitted to the IAIS.

Commissioner Anderson noted that other IAIS members were invited to provide their thoughts on defining comparable outcomes, and he said the IAIS Secretariat will attempt to bridge the gap between the various proposals for discussion at the meetings in London. He noted the difficulty of coming up with a meaningful, high-level definition that avoids being criteria itself or suggesting that the only way to have comparable outcomes to the ICS is to adopt the ICS. He said state insurance regulators hope that the meeting reaches an agreed-upon, achievable definition of comparable outcomes and overarching guidelines that will govern the IAIS’s overall comparability assessment process for the AM.

Mariana Gomez-Vock (ACLI) said that while the ACLI supports the Team USA goal of having the AM recognized as comparable, it has some concerns with the strawman definition. She said the ACLI sent a letter outlining these concerns, and it asked if these concerns have been addressed.

Commissioner Anderson said stakeholder comments were taken into consideration in preparation for London, and he said the ACLI comments were similar to those from others at the FIO stakeholder session.

Ms. Gomez-Vock asked if the goal of the ICS Task Force meeting in London is to finalize the definition of comparable outcomes, or if a draft will come out of the meeting and feedback will be sought from stakeholders.

Commissioner Anderson said discussions will likely continue following the London meeting, though the expectation is to come away from London with an achievable definition of comparable outcomes. He said the Committee would reengage with interested parties following the meetings in London.

Tracey Laws (Chubb) asked what form such reengagement will take and whether it will be an open Committee conference call. Commissioner Anderson responded that no specific plans had been made yet.

Tom Finnell (Finnell & Co. LLC) asked if stakeholders can see the strawman definition for ICS comparability submitted by Team USA. Commissioner Anderson responded that given the status of the discussions within the IAIS, it could not be shared, but it was in line with what was discussed at the FIO stakeholder session.

Michael F. Consedine (NAIC, Chief Executive Officer) said he appreciates stakeholders’ interest in the submission, although discussions on a definition are still fluid. He noted that Team USA is unified going into the London meetings and, with a number of strawman proposals to be discussed in London, the definition is still a moving target.

Brad Smith (ACLI) asked about the Committee’s expected process for coordinating with interested parties after London or in preparation for London, and he asked about engagement of the Financial Stability Board (FSB) on the outcome at the IAIS discussions on the ICS. Commissioner Anderson said cooperation amongst Team USA will continue, and engagement with interested parties will be similar to other Committee work.
Mr. Consedine noted that FSB engagement at this stage is unlikely, though it will continue to monitor relevant developments at the IAIS as it currently does.

Ms. Gomez-Vock (ACLI) asked for clarification regarding whether the NAIC is contemplating adopting the AM with specific supervisory intervention points and whether this would be a workstream of the Committee or the Group Capital Calculation (E) Working Group.

Commissioner Anderson responded that discussion on supervisory intervention points as part of the group capital calculation (GCC) is premature at this point.

Mr. Workman said the ComFrame Development (G) Working Group will be disbanded in 2020 and that the Group Capital Calculation (E) Working Group will look at ComFrame implementation more broadly.

3. Heard an Update on the FSAP

Commissioner Anderson said the International Monetary Fund (IMF) is conducting its third Financial Sector Assessment Program (FSAP) for the U.S. in 2019 and 2020. He said that as with the last two FSAPs, the U.S. Department of the Treasury (Treasury Department) Office of Financial Markets is coordinating this FSAP for participating U.S. agencies.

Commissioner Anderson noted that the FSAP is comprised of Mission 1 and Mission 2, with much of the work for the FSAP exercise for insurance concentrated in Mission 1 and additional work happening during Mission 2 in early 2020. He said the opening meeting for Mission 1 took place earlier in the day. He explained that the NAIC and several states will be participating in a number of meetings with the IMF over the coming weeks, ending with a closing meeting on Nov. 8. He noted that several interested parties were likely also contacted about private sector meetings with the IMF.

Commissioner Anderson said the IMF is expected to publish a technical note on insurance by the summer of 2020. He noted that since the last FSAP of the U.S. in 2015, state insurance regulators and the NAIC have further enhanced the state-based system of insurance regulation, and they look forward to further in-depth discussions on these regulatory developments with the IMF in the coming weeks. He said the Committee and interested parties will continue to be informed of further developments relating to the FSAP as the process moves forward.

Stephen Broadie (APCIA) asked if the IMF would be focusing its assessment on those ICPs that are related to financial stability or have been recently revised. Commissioner Anderson replied that the IMF would be assessing the U.S. against a subsection of ICPs.

Gita Timmerman (NAIC) added that the IMF is trending to a more focused assessment rather than an assessment of all the ICPs.

Having no further business, the International Insurance Relations (G) Committee adjourned.
APCIA COMMENTS 
ON NAIC COMMENTS 
ON THE IAIS DRAFT ISSUES PAPER ON THE USE OF BIG DATA ANALYTICS

The NAIC’s work is appreciated and the NAIC’s proposed comments are straightforward and balanced. Here are several suggestions for consideration if the NAIC expands on its comments:

1. Contrary to the IAIS paper’s stated concern that more granularity in risk assessment leads to unavailability of coverage, increased granularity has often helped to promote more coverage availability. An example would be the decline in the U.S. auto residual market plan populations.

2. The IAIS paper does not need to provide more guidance or discussion on standards of “fairness” as “fairness” is determined by each jurisdiction’s laws, and existing regulatory standards are adequate to address Big Data Analytics.

3. We urge the NAIC to reject any request from interested parties that would cite to a single U.S. regulator’s action, that would elevate one U.S. regulator’s views over the majority view of others, or that would argue for acceptance of a standard of conduct that has not been enacted by the States.

4. The IAIS paper should discuss the benefit of companies engaging in an upfront dialogue with regulators when they plan to deploy a new model or use significant new data.

5. The IAIS paper should more fully demonstrate the value of Big Data Analytics in loss prevention and risk mitigation, including usage-based insurance, improved catastrophe models, and the greater ability to partner with policyholders.

6. The IAIS paper should be clearer that maintaining confidentiality and protecting intellectual property are critical to encouraging innovation and delivering its related benefits.

We appreciate this opportunity to comment. APCIA will be submitting its own comments to IAIS directly and through the Global Federation of Insurance Associations.

Sincerely,

David Snyder
Vice President, International Policy
APCIA

The International Insurance Relations (G) Committee met via conference call Aug. 13, 2019. The following Committee members participated: Gary Anderson, Chair (MA); Andrew Stolfi, Vice Chair (OR); Andrew N. Mais (CT); Stephen C. Taylor (DC); David Altmaier (FL); Colin M. Hayashida represented by Martha Im (HI); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers (MO); Bruce R. Ramge represented by Mitchell Higgins (NE); Marlene Caride (NJ); Jillian Froment (OH); and Jessica Altman (PA).

1. **Approved Submission of NAIC Comments on IAIS Revised Supervisory Material and Material Related to the Holistic Framework for Systemic Risk in the Insurance Sector**

Commissioner Anderson explained the purpose of the conference call is to discuss and approve submission of NAIC comments on draft revised International Association of Insurance Supervisors (IAIS) supervisory material and new material related to the *Holistic Framework for Systemic Risk*, which are currently out for public consultation. Commissioner Anderson said the IAIS is currently seeking feedback on supervisory material including: draft revised IAIS Glossary; draft Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) Assessment Methodology; changes in the Introduction to the Insurance Core Principles (ICPs) and ICP 7 (Corporate Governance) for consistency with ComFrame development; and draft revised ICP 22 (Anti-Money Laundering and Combatting the Financing of Terrorism). Commissioner Anderson noted the ComFrame-related material in the consultation document reflects revisions based on comments received during the 2018 public consultation on the overall ComFrame.

Commissioner Anderson said that per the usual NAIC process, the consultation material was reviewed internally, including by the: Antifraud (D) Task Force for ICP 22, ComFrame Development and Analysis (G) Working Group for the ComFrame material, and Financial Stability (EX) Task Force for the holistic framework material, which resulted in the initial draft NAIC comments that were circulated on July 25. He said the draft NAIC comments, which included two new comments, and input for consideration received from Northwestern Mutual (Attachment B) were also circulated in advance of the call.

Ryan Workman (NAIC) provided an overview of the draft NAIC comments, highlighting specific substantive comments across the material.

Commissioner Anderson noted that comments received from Northwestern Mutual focus on the holistic framework material and raise valid points. He said the NAIC plans to follow up on these comments as part of the internal IAIS review process.

Steven Simchak (American Property Casualty Insurance Association—APCIA) said substantial language was added to the holistic framework material in the consultation document that focuses on the size of insurance groups and such an emphasis on size is not constructive in moving toward an activities based approach to addressing potential systemic risk. Mr. Simchak commented the consultation document lacks clarity as to how, to whom, and under what circumstances these measures will be applied, which could be problematic during times of economic stress. He stated that in applying the principle of proportionality, it would be appropriate to be more specific about the lines of insurance and types of companies or business models for which liquidity and macroprudential effects have, or have not, been an issue. Mr. Simchak said it would be helpful for the final version of text to distinguish holistic framework material from the ICPs and ComFrame material given the different scopes of application.
David Snyder (APCIA) noted the APCIA is coordinating its comments with the Global Federal of Insurance Associations, which has similar concerns. He suggested the NAIC include in its submission a general comment on the importance of defining and using proportionality.

Robert Neill (American Council of Life Insurers—ACLI) supported the NAIC’s comment on the holistic framework material related to the Own Risk and Solvency Assessment (ORSA) being non-prescriptive and comments on stress testing. He noted that data collections conducted as part of the holistic framework should be reasonable and leverage existing data where possible.

Tom Finnell (APCIA) said the ComFrame material is unclear regarding which supervisory requirements necessitate direct versus indirect power. Mr. Workman responded that the IAIS has tried to better clarify the distinction for direct and indirect in both the ComFrame Introduction and the relevant ComFrame material.

Commissioner Mais made a motion, seconded by Commissioner Donelon, to approve submission of the NAIC comments (Attachment A). The motion passed.

Having no further business, the International Insurance Relations (G) Committee adjourned.
We have the following suggestions regarding holistic framework material.

1. **Clarify the priority of policyholder protection.** We agree that microprudential tools often support macroprudential objectives and vice versa. However, it is also possible that in a crisis an action proposed for a macroprudential purpose (to address perceived systemic risk) will conflict with microprudential objectives (policyholder protection). An extreme case could be the movement of capital from a regulated insurance entity to elsewhere in the group in order to satisfy creditors of the group. We believe that in such a circumstance, insurance regulators should act in the interests of policyholder protection. The new supervisory material is not clear on this point. Accordingly, we suggest that a sentence be added to ICP 24.4.2 to the effect that: “In the event a conflict arises between microprudential and macroprudential objectives, the insurance supervisor should prioritize policyholder protection.”

2. **Acknowledge the need for cross-sectoral perspective and analysis.** In its November 2018 consultation on the Holistic Framework for Systemic Risk in the Insurance Sector, the IAIS acknowledged the importance of taking into account a cross-sectoral view of systemic risk. This aligns with the recognition that insurers are acknowledged generally to have low potential to contribute to systemic risk. Added data collection, analysis, assessments, and supervisory responses should be done in a proportionate manner, avoiding efforts that will not have a material impact on risk to the financial system. To understand where the material impacts are, macroprudential efforts need to be considered from a cross-sectoral perspective. Yet, the proposed supervisory material does not incorporate this perspective. While it may not be realistic to expect insurance supervisors individually to be fully connected with their banking and securities counterparts, nonetheless it is important that the supervisory expectations set forth in ICP 24 be framed by a cross-sectoral perspective. Therefore, we suggest that text be added to the Introductory Guidance in ICP 24.0 to the effect that: “In order for macroprudential supervision to be performed in a proportionate manner, the supervisory framework for macroprudential supervision takes account of a cross-sectoral perspective.”

3. **Clarify language on potential liquidity risk associated with products with cash value.** The language in ICPs 16, 20, and 24 referring to the liquidity risk associated with cash value insurance products does not specifically recognize that the risk will vary widely based on attributes of the product, including attributes outside of the contract itself, such as the insurance purpose for which the product is purchased, potential loss of insurability, and tax consequences upon surrender.
   - We suggest adding language to ICP 16.9.1 acknowledging that the actual liquidity risk of the identified activities will vary greatly based upon a variety of factors, including the specific attributes of insurance products with cash value.
   - With respect to ICP 20.11.1, we observe that reporting surrender value alone, without a reasonable classification of the types of insurance policies at issue, is not likely to provide a meaningful view of liquidity risk, given the wide variation in liquidity risk across products. The NAIC recognized this with its liquidity-related changes to the Blanks, and included basic categorization by product types.
   - ICP 24.1.2 refers to “information on the surrender value of insurance products, product features that increase or decrease the propensity for early pay outs under certain circumstances (such as penalties or delays in the ability to access the cash value of a policy)”. We suggest that the parenthetical be broadened to reference “or other factors contributing to reduced propensity for surrender”.

<tr>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>As new material related to the holistic framework includes using stress testing as a way to assess liquidity, the current draft definition of stress testing may be read to cover only solvency rather than liquidity as well, so that there is no real definition for liquidity testing purposes. Suggest ensuring the definition is broad enough to encompass both by deleting “solvency”: “A method of solvency assessment that measures the financial impact of stressing one or more factors which could severely affect the insurer.”</td>
</tr>
<tr>
<td>For consistency, suggest changing the last sentence to read: “…observance of ComFrame Standards requirements.”</td>
</tr>
<tr>
<td>For clarity, suggest adding: “…to share results of an assessment within the supervisory college…”</td>
</tr>
<tr>
<td>For better readability, suggest adding a comma after “information”: “While legislation provides the authority to coordinate and exchange information, the supervisor…”</td>
</tr>
<tr>
<td>Standards and guidance in other ICPs and ComFrame that address conflicts of interest use wording like address, manage, mitigate, avoid, etc., in recognition that in some cases it may not be possible to have no conflicts of interest. Suggest revising the new text to be consistent with other material on conflicts of interest: “…the group should have in place appropriate measures so that there is no conflicts of interest between the different roles to be performed by such individuals are avoided or mitigated.”</td>
</tr>
</tbody>
</table>

## IAIS draft revised ICP 22 (Anti-Money Laundering and Combating the Financing of Terrorism) - NAIC Draft Comments

### Section/Paragraph

<table>
<thead>
<tr>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>In changing terminology from FT to TF, we assume this is for the purpose of being consistent with FATF terminology but is not intended to change the scope of the concept itself.</td>
</tr>
<tr>
<td>Suggest doing a review to ensure commas and other punctuation are consistent (e.g., use of oxford comma in a series).</td>
</tr>
<tr>
<td>Insert missing period at the end of the first sentence.</td>
</tr>
<tr>
<td>It’s not clear whether the first sentence is intended to reflect action that has been taken at the FATF or reflect the nature of the relationship between the IAIS and the FATF. If it is the former, this wording seems appropriate. However, if it is the latter, as the IAIS is also an observer member of other international organizations, the wording used should either 1) reflect established policies for external relationships as “has endorsed” suggests that the IAIS as an organization has taken some type of (formal) action on the FATF Recommendations; or 2) use more general wording that reflects support for other standard setters work. Suggest revising the first and second sentences to read: “As the IAIS is a FATF Observer Organization and is supportive of FATF’s work, this ICP is intended to be consistent with FATF Recommendations.”</td>
</tr>
</tbody>
</table>
However, compliance with the FATF Recommendations does not necessarily imply observance of ICP 22 nor does observance of ICP 22 necessarily imply compliance with the FATF Recommendations.

### 22.0.11
Given the wording of the third bullet of Standard 22.1, suggest revising first sentence to read: “Part A describes how the RBA is applied by supervisors, insurers and intermediaries consistent with the FATF Recommendations.”

### 22.1.5
As the rest of the first sentence is singular, suggest using “its design.”
For better readability, suggest moving the second sentence to 22.1.6 (see comment on 22.1.6)
For consistency, change period after second bullet to a semi-colon.

### 22.1.6
Assuming the second sentence of 22.1.5 is moved down, suggest revising first and second sentences to read: “Product risk also encompasses service and transaction risk, which refers to the vulnerability of a product to third party use by a third party or unintended use based on the methods of transactions available. The following are examples of service and transaction attributes which may tend to increase the ML/TF risk profile:”

### 22.1.8
For consistency, suggest revising first sentence to read: “The following are examples of geographic attributes which may tend to increase the ML/TF risk profile:”

### 22.1.13
As both of these should be seen as equally important, suggest revising last sentence to read: “The supervisor should participate in such an assessment to both help inform the assessment and also to improve its understanding of the risks.”

### 22.3.1
For wording consistency with other ICPs, suggest revising sentence to read: “The supervisor should take into account of the risk of ML/TF at each stage of the supervisory process, where relevant, including the licensing stage.”

### 22.5.2
As the supervisor may need to cooperate and coordinate with other supervisors beyond relevant MAL/CFT competent authorities to effectively address policy issues, suggest broadening the second bullet to read: “policy cooperation and, where appropriate, coordination across all relevant AML/CFT competent other relevant authorities.”

### 22.5.5
As the supervisor may need to exchange of information on AML/CFT issues with other authorities than just competent authorities, suggest broadening this read: “The supervisor should consider appointing within its office a contact for AML/CFT issues and to liaise with other relevant AML/CFT competent authorities to promote an efficient exchange of information.”

### 22.6.3
To help with readability, suggest revising second sentence to read: “Such information may be relevant to the risk profile of, or the effectiveness of risk management by, an insurer or intermediary.”

---

**IAIS draft supervisory material related to the Holistic Framework for Systemic Risk - NAIC Draft Comments**

<table>
<thead>
<tr>
<th>Section/Paragraph</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>While we agree that the scope of risk identification and analysis of risk interdependencies in an ORSA process should typically cover liquidity and concentration risks, U.S. state insurance regulators support a non-prescriptive ORSA process that encourages insurers to identify and assess their own material and relevant risks. This encourages insurers to develop their own methodology for determining which risk exposures require assessment and reporting through the ORSA process. We believe this provides the supervisor more opportunities to evaluate the effectiveness of an insurer’s ERM process and avoids confusion between the roles of senior management, the Board of Directors and insurance supervisors. While setting out what risks should be covered “at a minimum” may provide consistency across insurers, it is important that this does not</td>
</tr>
<tr>
<td>Paragraph</td>
<td>Notes/Recommendations</td>
</tr>
<tr>
<td>--------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>lead to more prescription or turn the ORSA into a tick-the-box exercise which in turn diminishes the purpose and effectiveness of the ORSA process itself.</td>
<td></td>
</tr>
<tr>
<td>CF 9.2.b.8</td>
<td>Second sentence, remove the extra “s” in “ass” (should be “as”). Given that this idea is already addressed in the second sentence, suggest deleting in the last sentence “or where its distress, disorderly failure, or its contribution to collective activities or exposures, could adversely impact financial stability” as it is superfluous.</td>
</tr>
<tr>
<td>CF 16.9a</td>
<td>CF 16.9a states: “The group-wide supervisor requires the Head of the IAIG to assess the IAIG’s resilience against severe but plausible liquidity stresses to determine whether current exposures are within the IAIG’s liquidity risk appetite.” However, most of the guidance provided under this standard focuses on stress testing. In order to help show that there are other tools available to perform the assessment, suggest adding to the guidance under CF 16.9a: “The liquidity assessment should consider results of additional tools such as various liquidity metrics, analysis of cash flow statements, cash flow projections as well as the level of readily available liquid assets.”</td>
</tr>
<tr>
<td>16.7.5</td>
<td>The new text in Standard 16.7 addresses “material relationship with macroeconomic conditions”; however, the idea of materiality is not carried through in the related guidance in 16.7.5. Suggest adding: “The underwriting policy should address the potential material impact on the insurer’s financial position from correlations between macroeconomic conditions and the insurance portfolio...”</td>
</tr>
<tr>
<td>16.9.2</td>
<td>The “more detailed liquidity risk management processes” in Standard 16.9 is in relation to Standard 16.8 which “requires the insurer’s ERM framework to address liquidity risk and to contain strategies, policies and processes to maintain adequate liquidity”. However, a reader who has not been involved in drafting this work may not easily make the association, so it may be helpful to add something more explicit to make it clear what the “more” is referring to. Suggest adding the following as a new first sentence to Guidance 16.9.2: “Some insurers require more detailed liquidity risk management processes as compared to those processes set out in Standard 16.8.”</td>
</tr>
<tr>
<td>20.11.1</td>
<td>Suggest adding some additional text on what qualitative information disclosures should include: “qualitative information on the insurer’s liquidity risk issues and concerns and management strategies, policies, and processes to address those.”</td>
</tr>
<tr>
<td>24.0.4</td>
<td>In the last sentence it is not clear what “these” refers to. Based on the previous sentence it seems “these” refers to exposures but then exposures is mentioned in the last sentence which would read in a circular manner. Suggest clarifying.</td>
</tr>
<tr>
<td>24.2.4</td>
<td>Given that the first sentence addresses “horizontal reviews to reveal the range of practices among insurers”, it would make more sense for the example to use insurers (plural): “appropriateness of insurers’ assumptions”.</td>
</tr>
<tr>
<td>24.2.10</td>
<td>The first sentence is quite long and seems to combine two ideas that could be separated: 1) monitoring liquidity of insurers in general; and 2) analyzing potential asset sales focusing on large insurers. Suggest: “The supervisor should monitor the liquidity of an insurer’s invested assets relative to its insurance liabilities based on their characteristics. Additionally, the supervisor should analyse the potential that a large insurer’s operations could require it, or a sufficiently large number of insurers, to engage in asset sales of a significant size.”</td>
</tr>

</table>
2020 Proposed Charges

INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

The mission of the International Insurance Relations (G) Committee is to coordinate NAIC participation in international discussions on and the development of insurance regulatory and supervisory standards and to promote international cooperation. The Committee also coordinates on international insurance matters with the U.S. federal government, including the U.S. Department of the Treasury (Treasury Department), the Federal Reserve Board, the Office of the U.S. Trade Representative (USTR), the U.S. Department of Commerce, and other federal agencies. In addition, the Committee provides an open forum for NAIC communication with U.S. interested parties and stakeholders on international insurance matters.

Ongoing Support of NAIC Programs, Products or Services

1. The International Insurance Relations (G) Committee will:
   A. Monitor and assess international activities at forums like the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB), and the Organisation for Economic Co-operation and Development (OECD), among others, that affect U.S. insurance regulation, U.S. insurance consumers, and the U.S. insurance industry.
   B. Support and facilitate the participation of state insurance regulators and the NAIC in relevant IAIS, FSB, OECD and similar workstreams.
   C. Develop NAIC policy on international activities, coordinating as necessary with other NAIC committees, task forces and working groups, and communicating key international developments to those NAIC groups.
   D. Coordinate and facilitate state efforts to participate in key bilateral and multilateral dialogues, projects, conferences and training opportunities with international regulators and international organizations, both directly and in coordination with the federal government, as appropriate.
   E. Strengthen international regulatory systems and relationships by interacting with international regulators and sharing U.S. supervisory best practices, including conducting an International Fellows Program and educational (technical assistance) seminars to provide an understanding of the U.S. state-based system of insurance regulation.
   F. Coordinate the NAIC’s participation in the International Monetary Fund (IMF)/World Bank Financial Sector Assessment Program (FSAP).
   G. Coordinate state efforts to assist in achieving U.S. international trade objectives through reviewing relevant materials, developing input, and providing assistance and expertise on insurance matters to the USTR and/or other federal entities.

NAIC Support Staff: Ryan Workman/Ethan Sonnichsen

W:\National Meetings\2019\Fall\Cmte\G\2020 Charges_draft.docx
The NAIC/Consumer Liaison Committee met in Austin, TX, Dec. 9, 2019. The following Liaison Committee members participated: Stephen C. Taylor, Chair (DC); Michael Conway, Vice Chair (CO); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling represented by Mark Fowler (AL); Andrew N. Mais represented by Kurt Swan (CT); Trinidad Navarro (DE); David Altmair represented by Mike Yaworsky (FL); John F. King (GA); Doug Ommen (IA); Dean L. Cameron represented by Randy Pipal (ID); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt (KS); James J. Donelon represented by Ron Henderson (LA); Steve Kelley and Peter Brickwedde (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Janelle Middlestead (ND); Bruce R. Ramge (NE); John G. Franchini and Paige Duhamel (NM); Barbara D. Richardson (NV); Linda A. Lacewell (NY); Jillian Froment represented by Jana Jarrett (OH); Glen Mulready (OK); Andrew Stolfi (OR); Jessica Altman (PA); Kent Sullivan and Cindy Wright (TX); Todd E. Kiser represented by Tanji Northrup (UT); Scott A. White represented by Don Beatty (VA); Tregenza A. Roach (VI); Mike Kreidler and Todd Dixon (WA); Mark Afable (WI); and James A. Dodrill represented by Ellen Potter (WV).

1. **Heard Opening Remarks**

Commissioner Taylor said, as chair of the Consumer Participation Board of Trustees, he wanted to mention that the Consumer Participation Board of Trustees, which is composed of six state insurance regulator members and six funded consumer representative members, met Dec. 8 in regulator-to-regulator session pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. He said the Board of Trustees discussed selection of 2020 consumer representatives and consumer members of the 2020 NAIC Consumer Participation Board of Trustees. In accordance with the terms in the plan of operation for the consumer participation program, selection is required by the end of the year, and notification about all appointments occurs after committee assignments early next year.

2. **Adopted its Summer National Meeting Minutes**

Commissioner Schmidt made a motion, seconded by Commissioner King, to adopt the Liaison Committee’s Aug. 5 minutes (see NAIC Proceedings – Summer 2019, NAIC/Consumer Liaison Committee). The motion passed unanimously.

3. **Observed a Presentation by NAIC Consumer Representatives of the Excellence in Consumer Advocacy Award**

Matthew Smith (Coalition Against Insurance Fraud—CAIF) and Katie Keith (Out2Enroll) presented Commissioner Conway with the Excellence in Consumer Advocacy Award.

Ms. Keith said the NAIC consumer representatives enjoy the great fortune to work Commissioner Conway and his staff on a variety of critical consumer protection issues. She said, in Colorado and at the NAIC, Commissioner Conway champions the needs of consumers, especially in promoting access to affordable, quality health insurance products. Ms. Keith said his leadership in Colorado has been critical to innovative new programs such as the Peak Health Alliance, a state-based reinsurance program that directs additional premium relief to rural communities, and to some of the nation’s most extensive consumer protections against surprise medical bills. She said his office is currently in the process of engaging stakeholders around a unique public option proposal that could be introduced in the state soon, offering additional affordable options for consumers.

Ms. Keith said beyond these broad-scale initiatives, Commissioner Conway and his staff continue to ensure that Colorado consumers, including consumers with preexisting medical conditions, have equal access to the health care they need. These policies include new drug formulary protections for patients with chronic conditions and nondiscrimination provisions for LGBTQ Coloradans.

Mr. Smith said, in addition to his leadership in Colorado, Commissioner Conway devotes a significant amount of time to promoting consumer interests at the NAIC. He said Commissioner Conway serves as chair of the Regulatory Framework (B) Task Force, which is tasked with ensuring that the major working groups of the Health Insurance and Managed Care (B) Committee continue their important work, and chair of the NAIC/American Indian and Alaska Native Liaison Committee, among other leadership positions at the NAIC.
Mr. Smith said Commissioner Conway’s office is always open to hearing input from the consumer representatives, and his staff go out of their way to help on issues at the NAIC and beyond. He said it is, therefore, a privilege and honor to present the 2019 NAIC Consumer Representative Excellence in Consumer Advocacy Award to Commissioner Conway.

Commissioner Conway said this award means so much as it is an award for his entire team in Colorado because it is the team that does the work noted by Ms. Keith. He said he often gets the credit, but without the people behind him, he could not have done any of those things. Commissioner Conway said thank you so much from the folks in Colorado. He said he would display the award proudly but said it really should say the Colorado Division of Insurance—not Michael Conway—as they are ones who get things done.

4. **Heard a Presentation on What State Insurance Regulators Can Do to Promote Retirement Security from the CEJ**

Birny Birnbaum (Center for Economic Justice—CEJ) said retirement security encompasses a broad spectrum of financial tools, including many insurance-related products and services such as life insurance, annuities and long-term care insurance (LTCI). He said the marketing and sales of these products are also areas that fall under the retirement security umbrella.

Mr. Birnbaum said state insurance departments and the NAIC could play an important role in helping American consumers prepare for financial security because insurance is a key part of a comprehensive retirement plan. He said the NAIC focuses on three major areas of retirement security: 1) education; 2) consumer protection; and 3) innovation. Mr. Birnbaum recommended that the NAIC and state insurance regulators promote retirement security in four ways. He said one was by identifying and removing retirement insecurity caused by 1) insurance rate and price increases for long-term care (LTC) products; 2) misleading sales materials and illustrations; and 3) hollowed-out property and health insurance policies resulting from major exclusions and massive deductibles.

Mr. Birnbaum said state insurance regulators no longer allow insurers to recoup costs in the form of rate increases or permit the continued use of, or approve new, LTCI products with no cap on future rate increases. He said the current framework for life insurance and annuity illustrations need rethinking, reengineering and modernization in order to serve—not defeat—consumers’ retirement planning. Mr. Birnbaum said the growth in exclusions and higher deductibles in insurance products designed to guard against natural and health catastrophic events undermines the role of these types of insurance products in recovery and retirement security.

Mr. Birnbaum said the second way was by supporting strong public social programs that deliver benefits more efficiently and effectively than the private sector. He said private insurers could deliver flood insurance more effectively and efficiently than the federal National Flood Insurance Program (NFIP). Mr. Birnbaum said public programs like Social Security and Medicare deliver retirement benefits and health care far more efficiently than the private sector. He said the decline of employer-based pensions and the rise of individual retirement accounts has caused much higher transaction costs for individuals.

Mr. Birnbaum said while the insurance industry has critical problems to offer to help with retirement security, he suggests state insurance regulators should support the strengthening of public programs when those programs deliver benefits more efficiently and effectively.

Mr. Birnbaum said the third way was to ensure that insurance products deliver good value to consumers and to not strip consumers of crucial retirement assets. He said an essential role for state insurance regulators is to ensure life insurance and annuity products deliver solid value to consumers, meaning most of the premium dollars are spent on benefits paid to the consumer. Mr. Birnbaum said insurance products that deliver only little value in the form of few premium dollars being spent on consumer benefits systematically strip consumers of scarce retirement assets. He said ensuring good value in products means that state insurance regulators need to assess the value of the products approved for sale and to communicate that value to consumers.

Mr. Birnbaum said the fourth way was to develop insurance consumer information, education and disclosures that identify the value and cost of the insurance proposition, as well as to focus on the value-added by state insurance regulators. He urged the NAIC to focus on activities for which state insurance regulators have expertise and can best leverage that expertise, such as partnering with educators and other organizations already deeply engaged in research and education related to American’s savings and financial practices.

Mr. Birnbaum said there is a need to inventory and review annuity and LTC models related to retirement security and to recommend improvements and coordination as needed. He said there is currently little or no information regarding the value of life insurance and annuity products as measured by traditional benefit (claims) ratios. However, Mr. Birnbaum said we
regularly see the loss ratios and aggregate value to consumers of most types of property/casualty (P/C) insurance and health insurance. He said developing and publishing benefit ratios and/or the cost of insurance would better enable consumers to see the value of insurance products.

Mr. Birnbaum said when consumers buy an auto or home insurance policy, they pay a premium and know the cost of the insurance protection they are receiving. However, when a consumer buys an indexed life insurance policy that provides important insurance protections, the cost of those protections is not currently available to the consumer. He suggested that the NAIC develop methods and metrics to assess the cost and benefits of life insurance, annuity and LTCI products.

Commissioner Taylor said as chair of the NAIC’s Retirement Security (A) Working Group, he found this presentation helpful. Brenda J. Cude (University of Georgia) said education is not the NAIC’s comparative advantage but that content and subject matter expertise is. Therefore, partnering with the many organizations whose expertise is education and who have already created wonderful curriculum regarding education from kindergarten through 12th grade and college through employer-based programs to create insurance and risk management courses makes sense.

Commissioner Mulready said at the beginning of the presentation, Mr. Birnbaum mentioned rate caps for LTCI. He asked what rate cap Mr. Birnbaum would recommend as proper for LTCI.

Mr. Birnbaum said he would start with no more than a 50% rate increase over the life of the product as it would give some opportunity to address some of the vagaries of LTCI over a long period of time, and it would also give some certainty to consumers. He said after 40 years of experience, insurance companies should be able to develop a product in which they can provide a rate cap on that as there are many other types of insurance products for which companies have been able to do this. Mr. Birnbaum said this is not only possible, but also it is necessary.

Commissioner Roach said he is curious about the comment Mr. Birnbaum made about flood insurance being more effectively delivered by the private sector. He said at present, it is subsidized federally, so he is curious about how states could maintain price competitiveness if it were provided privately. Mr. Birnbaum said right now, the federal government is involved in the direct provision of flood insurance. He said it is done very inefficiently through existing carriers through the write-your-own (WYO) program, and it is subject to a variety of conflicting constraints imposed by the U.S. Congress, but most importantly, it is one of the few property insurance perils that is not regulated by states and offered as part of residential or commercial property insurance, which is regulated by the states.

Mr. Birnbaum said it is his opinion that flood insurance should be given back to the states and that the NFIP, instead of being a direct provider of insurance, should be a mega-catastrophe reinsurer along the same lines as the Terrorism Risk Insurance Program, with states taking on flood insurance the way they have every other type of insurance peril, but there would be a mandatory offer of flood as part of every personal and commercial insurance.

5. **Heard a Presentation on Navigating Troubled Waters from United Policyholders**

Amy Bach (United Policyholders) said her presentation featured state insurance regulator approaches to controlling residual market growth when home insurance availability and competition shrinks dramatically. She said the once robust home insurance market has declined rapidly in recent years, necessitating intervention by state insurance regulators.

Ms. Bach said a series of catastrophes caused private companies to flee the market due to what the companies called “rating inadequacies” and “uninsurable risks” like floods, fires, etc. When asked what the NAIC can do, she said it is imperative for state insurance regulators to keep a fine balance. Ms. Bach said on one hand, it is important to maintain an option for property owners to protect their assets and comply with mandatory purchase or mortgage requirements for the economic health of individuals and communities and for preserving real estate values through buy and sell transactions. She said it is also important for preserving the benefits to consumers of competition.

Ms. Bach said it is possible for state-sponsored solutions to lead the effort by example on essential protections, quality claim handling, mitigation assistance and rewards. She said private market solutions would include non-admitted surplus lines insurance, risk pools, market assistance plans and cooperative buyer arrangements. Ms. Bach said shared market solutions would include assigned risk plans, joint underwriting associations and syndicates, as well as reinsurance facilities. She said regulatory and legislative solutions include moratoriums on non-renewals, limitations on non-renewals, enhancements to or creation of state-run insurer of last resort, and state-sponsored insurance or reinsurance programs.
Ms. Bach said due to Hurricane Andrew in 1992, Florida granted the insurance commissioner statutory emergency powers to issue emergency rules—29 in 1992 and 30 in 1993—valid for 90 days that included a rule activating the Florida Residential Property and Casualty Joint Underwriting Association (FRPCJUA) to provide property coverage to policyholders who became insolvent as a result of the hurricane and two rules setting and extending regulations relating to withdrawal of insurance companies. She said in 1993, a moratorium was imposed on the cancellation and nonrenewal of residential property coverage, and another moratorium of policies was imposed until the legislature had a chance to respond to the recommendations of a study commission on current insurance issues in special session.

Ms. Bach said the stated purpose was that, “The Legislature further finds that the massive cancellations and nonrenewals announced, proposed, or contemplated by certain insurers constitute a significant danger to the public health, safety, and welfare, especially in the context of a new hurricane season, and destabilize the insurance market.” She said recommendations from the study implemented a three-year moratorium phaseout prohibiting an insurer from cancelling or nonrenewing more than 5% of its homeowner’s policies in Florida in any 12-month period and 10% of its policies in any county.

Ms. Bach said it was immediately followed by a similar three-year phaseout moratorium requiring insurers to offer premium discounts for structural mitigation improvements and creating the Florida Hurricane Catastrophe Fund (FHCF) as a state trust fund that provides additional reinsurance for insurers writing residential insurance. She said Citizens Property Insurance Corporation (Citizens) was created in August 2002 as a nonprofit, tax-exempt, government entity as an insurer of last resort through a merger of the FRPCJUA and the Florida Windstorm Underwriting Association (FWUA).

Ms. Bach said as of June 30, 2019, Citizens has the third largest market share in terms of Total Insured Value (TIV) of personal residential property. She said since Citizens’ recent peak number of accounts in 2011, there has been a high volume of depopulation activity. Ms. Bach said Citizens attributes its strong current financial position to depopulation driven by continued interest in the private market for Citizens’ policies, a healthy private commercial market, substantial levels of Citizens’ surplus and a robust risk transfer program.

Ms. Bach said California’s current crisis is that insurers dropped more than 350,000 homeowners in high fire risk areas in 2019, noting that homeowners in ZIP codes affected by 2015 and 2017 fires saw a 10% increase in nonrenewals last year per the California Department of Insurance. She said the most recent data does not reflect or measure the full impact of non-renewals of homeowner policies linked to 2018 fires (i.e., Camp Fire, Carr Fire and Woolsey Fire).

Ms. Bach said the California Fair Access to Insurance Requirements (FAIR) Plan is the insurer of last resort and that the number of FAIR Plan policies has grown by 177% between 2015 and 2018 in the 10 counties with the most homes in high-risk or very high-risk areas. She said changes ordered to the California FAIR Plan include an option for an HO-3 Policy Equivalent no later than June 1, 2020; an increase in the option for combined coverage limit of $1.5 million to $3 million, not including the option for an additional $300,000 available for liability coverage, no later than April 1, 2020; and an option to pay for the policy in monthly installments, by credit card, or electronic fund transfer without any additional fees.

Ms. Bach suggested the states prevent insurers of last resort from getting too big.

6. **Heard a Presentation on Consumers Filing Complaints or Reporting Improper Insurer Behavior in the Automotive Repair Context from the AEPI**

Erica Eversman (Automotive Education and Policy Institute—AEPI) said department of insurance complaint systems typically accept complaints only from consumers. She said auto insurance consumers do not have the requisite knowledge or information to file an enforceable complaint; infrequently use auto insurance, unlike health insurance; do not know or understand how to frame such a complaint; and cannot explain why certain procedures or parts are necessary for safe, proper repairs.

Ms. Eversman said insurers use consumer subrogation to allege fraud or recoup money from repair facilities for alleged overpayment for “unnecessary” procedures; rental charges for perceived excessive days in repair; or overpayment for “unauthorized” parts. She said if insurers are in privity with repair facilities for subrogation, then repairers must be in privity for complaint purposes because insurer information is needed to protect consumers.

Ms. Eversman said insurers are permitted to make complaints about repairers to repair oversight entities—e.g., departments of motor vehicles (DMVs), attorneys general and secretaries of state—by claiming “qualified interest” to protect consumers. She said the reason why accepting complaints from providers is good for the system is that consumers do not file complaints because they believe state insurance departments will not do anything; they are afraid of retribution by insurers; repairers are able to
articulate specific reasons why insurers are underpaying claims; and repairers have daily interaction with insurers, which enables them to identify unfair claims payment patterns and practices by insurers.

Ms. Eversman said misinformation about complaints recently caused a New Hampshire state legislator to use the lack of any complaints in the state insurance database for insurers engaging in “improper repair” as the basis for derailing legislation for quality repairs. She said the failure is in not understanding that insurers do not repair cars and that complaint systems are not set up to address insurer involvement in unsafe repairs that result in complaints, so such complaints end up being filed under “insufficient claim payment.”

Ms. Eversman recommended state insurance regulators enable or permit motor vehicle repair professionals to submit complaints regarding insurer practices related to a specific consumer or to a specific claim; allow repair professionals to assist consumers with drafting and substantiating complaints to prevent insurers from bringing allegations of public adjuster regulations and statutes or unauthorized practice of law claims against repairers who assist consumers; and meet with vehicle repair professionals to understand their frustrations and concerns about insurers’ actions that compromise consumers’ ability to receive insurance payments for safe, proper vehicle repairs. She said insurance contracts do not include service providers as part of the contract but said maybe they should.

Commissioner Taylor said he liked Ms. Eversman’s ideas and that this is something he is going to look at when he goes back home.

Commissioner Schmidt said Kansas does take these types of complaints but that they do not do a good job of communicating that back to the body shops. She asked Ms. Eversman how state insurance regulators should go about doing that.

Ms. Eversman suggested that if states could designate a contact person within each state insurance department or, at least on the complaint form, have an attention to, that would be helpful.

Commissioner Schmidt said it could come into their general complaint division and then it could be handled by certain people from there. She agreed that the problem is a lack of data, so when legislators ask for things like this, they do not have any complaints documented. She said the Kansas Insurance Department has anecdotal information, but it does not have the type of documented evidence that would be helpful in Kansas.

7. **Heard a Presentation on Protecting Patients from Surprise Medical Bills and the Impact of Other Federal Policy Changes on Consumers from Families USA and the CBPP**

Claire McAndrew (Families USA) said the first key principle of consumer protections in surprise billing legislation is to hold consumers harmless. She said balance billing should be completely prohibited in any care situation where consumers cannot ensure they will see an in-network provider or visit an in-network facility, including in emergencies, at in-network facilities, and for air and ground emergency transit.

Ms. McAndrew said for out-of-network care that individuals incur due to no fault of their own, they should pay no more than in-network cost-sharing (including copayments, co-insurance and deductibles). She said out-of-pocket spending should count towards a consumer’s in-network out-of-pocket maximum.

Ms. McAndrew said the second key principle is to hold down health care costs for everyone. She said to ensure that insurance premiums are not unfairly increased, a reasonable payment level between insurers and out-of-network providers for surprise billing situations must be established. Ms. McAndrew said a reasonable payment level should be based on actual costs for care and should not be inflationary (e.g., should not be based on billed charges, which almost always do not accurately reflect price). She said the third key principle is to ensure comprehensive protection nationwide.

Ms. McAndrew said federal law should apply to surprise billing situations unless state law is equal or more robust in terms of consumer protections. She said federal law should determine the payment level owed by a plan to a provider in a surprise bill situation, except when a state law already established a payment level prior to passage of federal law. Ms. McAndrew said if the federal law covers surprise billing situations not covered by an established state law, the federal law should wrap around the state law to set the payment rate in those situations. She said even if states have robust surprise billing laws, federal law should apply to any situations that states cannot fully regulate, such as self-insured, federal Employee Retirement Income Security Act (ERISA)-regulated plans and air ambulance bills.
Ms. McAndrew said the current status of federal congressional action is that the U.S. Senate Committee on Health, Education, Labor and Pensions (HELP) passed legislation that protects consumers and holds down costs and that the U.S. House Committee on Energy and Commerce passed legislation that protects consumers and holds down costs. She said the House Committee on Education and Labor and the House Committee on Ways and Means have not taken any action.

Ms. McAndrew said the timeline for passage in 2019 is that Congress must pass government funding before the deadline on Dec. 20. She said leadership can include surprise billing legislation in this package, noting that it often includes miscellaneous legislation that are priorities and “must-pass” legislation that makes it hard for opposing members to vote “no.”

Ms. McAndrew said state regulatory actions still matter because protections like those proposed in Colorado HB 19-1174 are needed in all care settings, include ambulances, to provide protections even if Congress does not act, as well as to examine current payment mechanisms and their impact on costs and premiums in states that already have a law in place.

Sarah Lueck (Center on Budget and Policy Priorities—CBPP) said everyone is still waiting for decisions to come down from the federal level that will affect issues like the Texas case rule changes and proposed changes to the benefit payment parameters, but she would like to focus on other issues. One is that the CBPP is seeing the first state respond to the federal administration’s guidance on changes to Section 1332 waivers. Ms. Lueck said the CBPP is seeing proposals from the state of Georgia to do reinsurance, which many are familiar with, but to also make some unprecedented changes to its marketplace. She said the CBPP has been concerned about policies that do not meet the guardrails set under the federal Affordable Care Act (ACA).

Ms. Lueck said the CBPP wants to make sure that states with Section 1332 waivers still provide consumers with affordable, comprehensive coverage and that they are enrolled to the same extent that they would have been without the waiver in place. She said Georgia’s recent Section 1332 waiver proposal includes exiting the Healthcare.gov platform without creating its own state-based marketplace so consumers could only enroll in coverage through private web brokers and insurers, who would also be responsible for many of the other marketplace functions that the Liaison Committee is familiar with.

Ms. Lueck said, in addition, the state is proposing establishing its own subsidies in place of the ACA’s. She said, under the waiver, these subsidies could be used for plans that do not meet ACA standards, and the total amount of the subsidies would be capped and would be distributed on a first-in, first-out basis, which means that those most in need could potentially be denied benefits. Ms. Lueck said the CBPP is concerned about this proposal and how the structure of it could raise premiums for ACA-fully compliant coverage, push people into substandard plans and likely cause others to lose coverage altogether. She said it would also be a massive undertaking by any state requiring lots of legislative changes.

Ms. Lueck said the CBPP continues to be concerned about short-term health plans and rule changes that allowed those to expand so more people could be covered under them for longer periods of time. She said the CBPP is beginning to see evidence that some consumers have been harmed by such plans and hearing in news reports about consumers who are being subjected to post-claims underwriting.

Ms. Lueck said the CBPP is pleased that the NAIC is moving forward with its data calls to gather information about such coverages moving forward. She encouraged the states to continue to be vigilant in protecting consumers.

8. **Heard a Presentation on Clarifying Insurance Coverage of Living Donors from the AKF**

Deborah Darcy (American Kidney Fund—AKF) said 37 million Americans have kidney disease and that it is the 9th leading cause of death in the U.S. She said it is End Stage Renal Disease (ESRD) or kidney failure, for which the treatment options are dialysis and transplant. Ms. Darcy said Medicare spent $35.4 billion on ESRD patients in 2016 and that ESRD patients make up 1% of the total Medicare population, but they use 7% of the total Medicare budget. She said on July 10, President Trump signed an Executive Order on “Advancing American Kidney Health.”

Ms. Darcy said the order has three policy goals: 1) to reduce the risk of kidney failure; 2) to improve access to and the quality of person-centered treatment options; and 3) to increase access to kidney transplants. She said only 30% of individuals with kidney failure are living with a functioning kidney transplant; there were 94,754 individuals on the kidney transplant waiting list as of June 18, 2019; and in 2018, there were 5,645 living donors and 14,516 deceased donors.

Ms. Darcy said advancing American kidney health includes increasing access to kidney transplants by: 1) increasing the use of available organs from deceased donors by increasing organ recovery and reducing the organ discard rate; and 2) increasing the number of living donors by removing disincentives to donation and ensuring appropriate financial support. She said the insurer
of the kidney recipient is responsible for the health care costs of the donor associated with the surgery and that Medicare covers complications for the life of the donor.

Ms. Darcy said there are currently no standards regarding the amount of time a kidney recipient’s insurance must cover the donor. She said the time frame is generally 90 days, but it can be shorter or longer depending on the insurance plan. She said donors can be held responsible for complications. Ms. Darcy said living organ donors tend to be healthier than the general public. However, she said complications can occur. She said concerns about health coverage of complications outside of the contracted time can serve as a disincentive to organ donation and that the kidney community is working to address this disincentive.

Ms. Darcy asked state insurance regulators that receive a complaint from a living donor who is being charged for donor-related costs to ensure that the kidney recipient’s insurance pay for those costs. She asked that as the kidney community works with state legislatures to standardize private health insurance coverage for living donors, state insurance regulators are supportive of those who are giving the gift of life.

9. Heard a Presentation on Raising Consumer Concerns About Wellness Programs from Out2Enroll

Ms. Keith said the business of wellness programs is a booming $8 billion industry, with 84% of large employers offering wellness programs in 2019 and 14% of employers penalizing or rewarding workers for achieving a positive biometric outcome (e.g., body mass index [BMI]). She said studies show that wellness programs are ineffective, resonating with healthier employees but having little effect on medical spending or absenteeism. Ms. Keith said the first large-scale, multi-site randomized controlled trial indicated no significant effects on health outcomes, medical spending or utilization, or employment outcomes.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) said wellness programs are ineffective, with randomized controlled studies finding no impact on health or employment outcomes. She said such programs are legally questionable as evidenced by the AARP successfully challenging Equal Employment Opportunity Commission (EEOC) wellness rules under the federal Americans with Disabilities Act (ADA) and the Genetic Information Nondiscrimination Act (GINA). Ms. Yee said wellness programs discriminate against employees and dependents with disabilities and/or in poorer health. She said such programs are invasive because employees must disclose medical information and actions even during non-working (and unpaid) hours.

Ms. Keith said under the individual market wellness demonstration option, up to 10 states can participate in a wellness demonstration project in the individual market. She said participatory wellness programs are already allowed in individual markets (e.g., gym membership, gift card for smoking cessation, etc.) and would allow insurers to impose a “wellness” surcharge of up to 30% for health-contingent wellness programs (e.g., must reach a biometric outcome, such as a target BMI or blood pressure) to avoid the surcharge.

Ms. Yee said recommendations for state insurance regulators are to: 1) avoid the wellness demonstration project for the individual market; 2) monitor the use of wellness programs in the fully-insured markets; 3) consider learning more about the degree of take-up of participatory wellness programs in the individual market; and 4) collect data on the extent of use in the fully insured group market.

10. Heard a Presentation on the HFPP and How it is Protecting Americans from Insurance Fraud

Mr. Smith said the CAIF helped to create the Healthcare Fraud Prevention Partnership (HFPP). He said it was not created to investigate fraud committed by consumers. He said what it exists for is to aggregate medical fraud data throughout the nation, look at that data through a larger platform, and protect consumers from organized fraud in the medical arena that may not be identified through individual states, the federal government, other governmental agencies or private insurers.

Dan Kreitman (HFPP) said the HFPP is a voluntary, public-private partnership, with approximately 20 partners. He said in the past 12 months, the HFPP membership has grown 33%; as of today, the HFPP has 147 partners, including 13 federal agencies, 71 private plans, 13 associations, and 50 state and local partners.

Mr. Kreitman said the purpose of the HFPP is to be an unparalleled data source. He said the HFPP represents the full spectrum of health care payers and antifraud associations and enables the performance of sophisticated data analytics against a unique cross payer data set, as well as information-sharing for the benefit of all partners. Mr. Kreitman said the HFPP promotes...
collaboration and strategic partnerships. He said partners meaningfully participate, guide the partnership and have opportunities to establish strategic collaborations across diverse stakeholders.

Mr. Kreitman said the HFPP wants to help partners move from a reactive approach to taking a preventive approach to address fraud when it first appears. He said the HFPP’s most important goal is generating comprehensive approaches and strategies that materially affect each partner’s effort to combat health care fraud, waste and abuse.

Mr. Kreitman said the HFPP is the only organization through which partners can combine their data with public and private data, including the federal Centers for Medicare & Medicaid Services (CMS), in order to gain heightened antifraud insights. He said the aggregated data, across public and private sectors, provide partners with broader visibility into fraud, waste and abuse. Mr. Kreitman said partners share data, outcomes and lessons learned. He said participation in crowdsourcing on study ideas and design provides maximum impact to address emerging fraud, waste and abuse trends.

Mr. Kreitman said by contributing claims data and conducting studies through a trusted third party (TTP), each participating organization can reap the benefits of cross-sector analysis while maintaining the anonymity of their data. He said no partner—public or private—has access to the data of other partners. Mr. Kreitman said through a variety of HFPP events—including regional information sharing sessions, webinars on trending topics and working groups—partners leverage their collective experiences to play a leading role in shaping the future of the partnership and in combating health care fraud across the nation.

Mr. Kreitman said the HFPP can receive data on 112 million individuals, which is equivalent to more than one in three insured Americans. He said if all partners shared their data, at 228 million covered lives, the HFPP data set would represent more than three out of every four insured Americans. Mr. Kreitman said every additional partner that shares their data further increases the impact the HFPP cross-payer data set has in delivering outcomes for the partners. He said the principles of the partnership that underlie sharing claims for analysis start with data sharing, which is the driving force of the partnership. He said the TTP analyzes claims data contributed by participating entities for studies that offer a system-wide perspective. As a result, the information shared consists of cross-payer findings not otherwise available to partners.

Mr. Kreitman said the TTP supports the HFPP in its day-to-day operations by: 1) delivering subject matter expertise in data analytics that facilitates the design and execution of studies; 2) providing a secure environment for hosting and sharing data; 3) ensuring that non-attribution and confidentiality is maintained for data-sharing partners; and 4) communicating timely and relevant information. He said the goals for HFPP studies include: 1) delivering actionable results based on current data; 2) limiting the additional analysis required to interpret the results; 3) incorporating ideas from partner meetings into studies; and 4) increasing the level of partner participation in all study phases.

Mr. Kreitman said the purpose of data-sharing is to gather a holistic view of federal, state and private payer claims that will give HFPP fraud studies a unique view of health care. He said the studies that the HFPP runs cannot be performed in any other environment, and the data collected can only be used for HFPP studies.

Mr. Kreitman said partners must safeguard the information they receive and only distribute it as agreed-upon. He said partner data is only accessible to the TTP; partners do not have access to each other’s data. Mr. Kreitman said the purpose of studies is to provide leads to partners. He said the TTP does not do investigations and that when partners use a TTP lead, they must determine based on their own data if there is a problem with a specific provider.

Mr. Kreitman said an important strategy to overcome differences in payer policies, as well as priorities and resources, is partner engagement. Therefore, he said the TTP study life cycle built in partner participation and collaboration from beginning to end, including a pipeline where partners can share successes and challenges related to program integrity activities and where partners can suggest study topics by sharing cases or schemes.

Mr. Kreitman said it includes submissions of professional and/or institutional claims data to the TTP portal with initial submissions for the prior two years of data. He said updated claims may be submitted monthly, quarterly or semi-annually and that partners also submit reference files, such as member ID crosswalks that allow the TTP to securely assign HFPP IDs to each beneficiary during transmission, so personally identifiable information (PII) is never stored in the TTP.

Mr. Kreitman said the HFPP IDs allow tracking of billings for the same beneficiary across multiple partners. He said each study relies on specific data elements from professional claims on a preplanned production schedule and that all available data is included in each study the TTP conducts unless it is not relevant (e.g., if the study is related to physical therapy, partners from a mental health carve out will not be included).
Mr. Kreitman said partners receive a variety of outcomes from TTP studies that include their individual study findings, such as a report related to national provider identifiers (NPIs), that meet the study criteria and that partners use study results for qualified lead generation, corroborating evidence or their own analysis for allocating program integrity resources to address the issues related to the study. He said the TTP is currently conducting four types of studies to deliver a variety of value propositions across the payer spectrum.

Mr. Kreitman said the top two types of findings result from claims studies and that by applying algorithms to predefined combinations of current procedural terminology (CPT) codes and their modifiers, dates of service and other data elements, the TTP creates a unique cross-payer analysis of potential fraud, waste and abuse. He said evidence-based findings identify occurrences of suspected fraud, waste and abuse. For instance, the TTP conducts two studies that identify NPIs who have continued to bill partners after their NPI was deactivated from participation with federal programs, such as Medicare and Medicaid, with the findings revealing billing patterns across multiple payers after deactivation.

Mr. Kreitman said outlier detection findings identify claims data patterns that indicate potential fraud, waste or abuse activities. For instance, the TTP conducts studies that compare the total amount of timed procedure codes billed by one NPI across partners with the findings revealing the sum of hours billed by NPIs to all partners included in the study. He said broader analytic activities that can incorporate non-claims information are informational findings such as white papers or issue papers that are typically about emerging topics or known complex fraud schemes.

Mr. Kreitman said the HFPP uses literature review and qualitative research, although sometimes the TTP can conduct sample or test studies and that the TTP is currently studying schemes related to genetic testing. He said aggregate findings come from studies that produce a compilation of results from other studies and include additional information. For example, the TTP creates a monthly Law Enforcement Review List that identifies all the organizational and individual NPIs that were identified in the claims-based studies the TTP conducted in the prior month. In addition, he said each NPI in the list has corresponding partner IDs and contact information, so law enforcement can coordinate investigational activities appropriately.

Mr. Kreitman said because resources differ widely across participating partners, the TTP expanded its analytic products to suit a broader audience. For each study conducted, he said summary results are available for all HFPP partners, which include aggregate results of the impact on the partnership.

Mr. Kreitman said participating entities receive an individual report containing an interactive dashboard with personalized results of the analysis and study results according to risk levels and a consolidated report with combined findings for all participating entities. He said the improved visualizations use Tableau software to more easily identify suspect providers because the application graphically illustrates study objectives and suspicious billing patterns. He also said a complimentary Tableau reader application is available for partners.

Commissioner Taylor asked if there are any special obligations required for states to join the HFPP. Mr. Kreitman said there are not and that he would stay after the meeting to talk with states. A general memorandum of understanding (MoU) is signed to enter into partnership with the HFPP.

Ms. Duhamel asked what kind of fraud they are seeing from labs. Mr. Kreitman said the HFPP is seeing lab testing for drug abuse five days a week, which is unheard of in the industry because opiates and other types of drugs being abused stay in the bloodstream for several days.

Ms. Duhamel said in cases where abuse or mental illness is present, New Mexico is seeing evidence that consumers are being shuttled out of state or out of the country to receive treatment. Mr. Kreitman said the HFPP is seeing evidence of this, as well as fraudulent providers using so-called scholarships to entice patients into other states for treatment in fake treatment facilities.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The NAIC/American Indian and Alaska Native Liaison Committee met in Austin, TX, Dec. 8, 2019. The following Liaison Committee members participated: Michael Conway, Chair (CO); Lori K. Wing-Heier, Vice Chair (AK); Trinidad Navarro (DE); Matthew Rosendale represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Johnny Palsgraaf (ND); Andrew Stolfi (OR); Larry Deiter represented by Frank Marnell (SD); Mike Kreidler (WA); and Mark Afable represented by Olivia Hwang (WI). Also participating were: Brian Fordham (OR); and Todd Dixon (WA).

1. **Adopted its Summer National Meeting Minutes**

   Director Wing-Heier made a motion, seconded by Ms. Biehn, to adopt the Liaison Committee’s Aug. 4 minutes (see NAIC Proceedings – Summer 2019, NAIC/American Indian and Alaska Native Liaison Committee, Attachment One). The motion passed unanimously.

2. **Heard a Presentation on Improving How the States Work with Tribes**

   Vicki Lowe (American Indian Health Commission—AIHC) said she had worked with American Indian tribes for over two years. During that time, she has learned that the most important issue for tribes is sovereignty, which, along with Indian law, reigns over all else. She said tribes are distinct political communities. She said tribal sovereignty is exercised each time a tribe governs their own people, resources and lands. She said tribal powers include the establishment of government; the determination of membership; the policing and administration of justice; and the exclusion of people from reservation, charter business organizations, and sovereign immunity. Tribal sovereignty in practice means that tribes have the authority to govern themselves. Ms. Lowe said sovereignty ensures control over the future of the tribes and encourages the preservation of tribal culture, religions and traditional practices. She said tribes have the authority to, among other things, govern their people and their land; define their own tribal membership criteria; create tribal legislation, law enforcement and court systems; and impose taxes in certain situations. She said a lack of understanding of Indian law can have detrimental impacts to tribal governments, American Indians and Alaska Natives (AI/AN). She said one example was seen during a recent outbreak of measles when tribal leaders sought to distribute the limited vaccine themselves within their own tribes, giving the highest priority to the elderly and the very young. However, local health authorities had different priorities—giving the highest priority of the limited vaccine to those with chronic health conditions. The tribe refused to follow these priority guidelines, so the tribes received no vaccine, which resulted in many cases of measles that lead to deaths in tribal communities.

   Ms. Lowe said in order to understand the Indian Health Care Delivery system, it is necessary to go back before relationships were established between the tribes and the federal government. She said prior to such contact in the 1880s, indigenous people lived everywhere across what is now known as the U.S., with many tribes inhabiting several states. She said history is the key to understanding Indian law more than any other type of law. She said it is heavily intertwined with federal Indian policy, which shifts back and forth with the flow of popular and governmental attitudes toward American Indians. She said Indian law is the body of law dealing with the status of Indian tribes and their relationship with the federal government and the consequences/impact of that legal status/relationship for tribes and their members, states and citizens, as well as the federal government and local jurisdictions. She said understanding and respecting Indian law can bring about great improvements for tribal nations—AI/AN—and benefit the citizens of each state. She said in 2010, the Washington Department of Social and Health Services, in conflict with federal law, attempted to require tribal health programs to obtain state licensure for their facilities. She said an insurance issuer’s failure to recognize a tribal health program as a licensed or certified facility can result in loss of funds for critically underfunded tribal health programs. She also said that a Washington court’s failure to recognize a tribal health programs as a licensed or certified facility can result in AI/AN unable to receive treatment from their tribal health program medical home. She said tribal members have triple citizenship—as Tribal citizens, Federal as America citizens, and as citizens of the state in which they live.
Ms. Lowe said Executive Order 13175: “Consultation and Coordination with Indian Tribal Governments,” which was issued by U.S. President Bill Clinton on Nov. 6, 2000, requires federal departments and agencies to consult with Indian tribal governments when considering policies that would affect tribal communities, and it reiterates the federal government's previously acknowledged commitment to tribal self-government and sovereignty. She said based on this federal law, tribal governments have a government-to-government relationship with the federal government. She said tribal governments are not stakeholders, minority groups, or other community groups. She said they are consulted with as governments, which means there are certain notice requirements for federal and state policies and actions that other stakeholders do not have. She said through the Centennial Accord of 1989, Washington established a unique relationship with tribes that honors the government-to-government relationship. She said the accord is an agreement between Washington and the tribes in which each party “respects the sovereign status of the parties, enhances and improves communications between them, and facilitates the resolution of issues.” She said at the state level, Chapter 43.376 RCW requires state agencies to “make reasonable efforts to collaborate with Indian tribes in the development of policies, agreements, and program implementation that directly affect Indian tribes.” She said it requires state agencies to “develop a consultation process that is used by the agency for issues involving specific tribes.” She said RCW 43.376.050 also requires that: 1) at least once a year, the governor and other statewide elected officials must meet with leaders of Indian tribes to address issues of mutual concern; 2) the governor must maintain, for public reference, an updated list of the names and contact information for the individuals designated as tribal liaisons and the names and contact information for tribal leadership as submitted by an Indian tribe; and 3) an annual meeting between the governor and tribal leaders take place. She said it requires five state agency duties in establishing a government-to-government relationship with the tribes. State agencies must:

1. Collaborate. Make reasonable efforts to collaborate with Indian tribes in the development of policies, agreements and program implementation that directly affect Indian tribes.
2. Consultation Policy. Develop a consultation process that is used by the agency for issues involving specific Indian tribes.
3. Tribal Liaison. Designate a tribal liaison who reports directly to the head of the state agency.
4. Training. Ensure that tribal liaisons who interact with Indian tribes and the executive directors of state agencies receive training, as described in this chapter.
5. Reporting. Submit to the governor on activities of the state agency involving Indian tribes on implementation of this chapter.

Ms. Lowe said when things go south in a consultation, tribal leaders often cite one of the following as the cause:

- A misunderstanding of the difference between collaboration and consultation.
- Consultation is a formal process with specific requirements established in advance regarding:
  - The level or depth of the required consultation—it must be meaningful.
  - The result or goal of the consultation—it must be a regular, ongoing exchange of information and opinions resulting in a mutual understanding between Indian tribes as sovereign nations and the state on all policies and actions that directly affect Indian tribes.
  - Who the required parties to the consultation are.
  - The Insurance Commissioner, Chief Deputy Insurance Commissioner, or Deputy Insurance Commissioner with the appropriate decision-making authority.
  - Indian tribes represented by the Tribal President, Tribal Chair, Tribal Governor, an elected or appointed Tribal Leader, or their authorized representative(s).
  - Urban Indian Health Programs.
  - AIHC Board Chair or authorized representative who has the authority to make decisions on behalf of the AIHC. The AIHC is a not-for-profit entity that works on behalf of the Indian tribes and two urban Indian health organizations in Washington on health policy and priority AI/AN health issues that improve the Washington tribal health delivery system and the health of individual AI/AN residents. The AIHC does not represent any Indian tribe or Indian Health Service (IHS), Tribes and Tribal organizations, and urban Indian organizations (I/T/U) Provider.
  - Tribal organizations organized under the Indian Self-Determination and Education Assistance Act (P.L. 93-638; 25 U.S.C. § 450 b (1)).
When tribal consultations must occur: prior to implementation of all Office of the Insurance Commissioner’s (OIC) policies and actions that directly affect Indian tribes except for emergency rulemaking, which means the development of policies, agreements and program implementation by the OIC that have substantial direct effects on Indian tribes or the relationship between the OIC and Indian tribes, and which may include rulemaking, interpretive and policy statements. These include, but are not limited to, rules regarding consumer access to health care providers/essential community provider provisions and health insurance issuer contract requirements.

- The collaboration requirements: only tribes can determine what has tribal implications.

Ms. Lowe said tribal leaders are very familiar with the consultation policy, so agency staff and its leaders must be as well. She said common pitfalls are: 1) the agency does not keep its tribal liaison informed at the policy level; 2) an improper determination has been made regarding tribal implications; 3) agency staff are not following the consultation procedure due to a lack of training, awareness, willingness or presence; 4) tribes are engaged or consulted too late in the process; and/or 5) tribes are improperly viewed as stakeholders and not as sovereign governments.

Director Wing-Heier asked how often consultations are typically held. Ms. Lowe said consultations are held whenever needed, if they are needed more often than the required annual consultation.

Commissioner Conway asked Ms. Lowe to elaborate a little more on what happened with the H1N1 incident. Ms. Lowe said most of what the U.S. Centers for Disease Control and Prevention (CDC) does has been unclear because the federal government does not know what effect tribal implications have on the states, and the states are used to having total jurisdiction over everything. She said the local health offices are used to being an authority all unto themselves. She said they were very strictly following the instructions they had been given due to the limited number of vaccines available, so they would not give tribes any vaccine, as the tribes refused to follow those rules.

3. **Heard a Summary on the Removal of Tribal Resources from the HHS Website**

Holly Weatherford (NAIC) said that on March 6, 2019, Senators Udall, Cortez Masto and Tester co-signed a letter addressed to Alex Azar, Secretary of the U.S. Department of Health and Human Services (HHS), expressing concerns about the removal of “federal health services information for Tribal communities from HHS-run websites.” Senator Udall also requested information about what information is still available to tribal communities and answers to the following questions:

1. Why were the above referenced resources removed from the Office of Minority Health (OMH) website? When did this occur? When do you expect them to be restored?
2. In 2015, the Administration of Native Americans (ANA) offered technical assistance to tribes to provide strategies for increasing enrollment by AI/AN in Medicaid, the Children’s Health Insurance Program (CHIP), and insurance available through the Health Insurance Marketplace. The request forms are still available on your website.
   - Is that technical assistance still available to tribes? If no longer available, why not?
   - What are you doing to ensure that Native populations and tribes know about the technical assistance that this program provides?
3. How is the HHS working to ensure that Native populations and tribes can access the resources that the federal Affordable Care Act (ACA) provides?
4. How was Healthy Tribes financed originally? Did funding come from ANA appropriations or elsewhere at the HHS? What is the function of that program today?
5. If services provided under the Healthy Tribes program are no longer available, how has the ANA repurposed those funds?

To our knowledge, there has been no response to this letter. However, OMH Press Secretary Tony Welch, in response to questions about the removal of this information from the OMH website, commented the following to Government Executive:

a. “As is standard website management practice, the Office of Minority Health [OMH] routinely reviews and updates the content on the OMH website. We also continue to make improvements to the site by reorganizing content on the site,” OMH Press Secretary Tony Welch said. He said some of the materials cited by the Web Integrity Project (WIP) have been “restructured” and made available.
b. “As with the ACA, which is administered by the Centers for Medicare and Medicaid Services,” he continued. The minority health office “regularly supports the initiatives of other federal offices, summarizing or linking to their information and resources. When OMH updates its pages, information that has left the OMH site is still available to the public.”

One of the items initially removed from the OMH website included “ACA Guidance for American Indians and Alaska Natives.” This page featured an infographic providing an overview of how to receive benefits under the ACA. While this page is no longer available, there is an article on the Administration for Children and Families website, also run by the HHS, titled “American Indians/Alaska Natives and the Affordable Care Act – General Information,” which includes a link directing users to the resource “Health coverage for American Indians & Alaska Natives” on the HealthCare.gov website.

A May 2019 article in MedPage Today states that for over a two-year period, “the Department of Health and Human Services has been removing or downplaying information about the rights, benefits, and services granted by the Affordable Care Act.” This is based on a report from the WIP, which is an arm of the Sunlight Foundation. The article goes on to say that since 2017, the HHS has removed at least 85 fact sheets, press releases, and other informational documents from its websites. In addition to minority health, the website changes have affected several issues, including climate change and women’s health.

In March 2019, the Sunlight Foundation and American Oversight jointly filed a lawsuit in the U.S. District Court for the District of Columbia to compel the HHS to release records related to the Office of Women’s Health’s removal of fact sheets and other public information on multiple issues, including lesbian and bisexual health and affordable breast cancer screenings. This lawsuit is the result of unsuccessful Freedom of Information Act (FOIA) requests, and it seeks injunctive relief to require the delivery of documents related to the HHS’s communications with the public affairs firm Hager Sharp, which runs the website for the Office of Women’s Health. The lawsuit also calls for the delivery of communications involving website user messages to the women’s health website and the agency’s handling of the website.

No lawsuit has been filed to compel similar documents from the HHS regarding federal health care information specific to tribal communities removed from the OMH website, and we are unaware if any FOIA requests have been made. Federal agencies retain much of the responsibility and discretion to determine what information is posted to their websites and what deleted content is retained as federal records.

Ms. Weatherford said for next steps, NAIC legal staff could coordinate with HHS contacts on the hill, and they would also be happy to continue to track the progression of the lawsuit with reporting feedback to the Liaison Committee.

Commissioner Conway asked if it seemed like the OMH was going to respond to those FOIA requests. Ms. Weatherford said the OMH declined to respond to the FOIA requests. Commissioner Conway asked how the OMH declined. Ms. Weatherford said the OMH relied on some exceptions to the FOIA law that this group disagreed with.

Commissioner Conway asked if the NAIC could provide resources to file FOIA requests or if the NAIC could help in pulling these resources off the HHS website in order to put the resources on the NAIC website or on the states’ websites. Ms. Weatherford said she would take this request to the NAIC Legal Division and then respond to the Liaison Committee.

4. Discussed Other Matters

Commissioner Conway said one of the Liaison Committee members, Superintendent Franchini, sent three of his staff members to participate with Lois Alexander (NAIC) at the Liaison Committee’s information booth during the 76th Annual Convention and Marketplace held by the National Congress of American Indians (NCAI) in Albuquerque, NM, Oct. 20–25, 2019. Hundreds of American Indians and Alaska Natives were assisted with their insurance concerns by these Liaison Committee representatives.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
NAIC/INDUSTRY LIAISON COMMITTEE

The NAIC/Industry Liaison Committee did not meet at the Fall National Meeting.
The NAIC/State Government Liaison Committee met in Austin, TX, Dec. 7, 2019. The following Committee members participated: Eric A. Cioppa, Chair (ME); Raymond G. Farmer, Vice Chair (SC); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling represented by Mark Fowler (AL); Allen W. Kerr represented by Ryan James (AR); Michael Conway represented by Peg Brown (CO); Trinidad Navarro represented by Christina Haas (DE); Dean L. Cameron (ID); Al Redmer Jr. (MD); Mike Causey (NC); Jon Godfread (ND); John G. Franchini represented by Robert Doucette (NM); Jillian Froment represented by Meredith Alexander (OH); Glen Mulready represented by Buddy Combs (OK); Andrew Stolfi represented by Richard Blackwell (OR); Larry Deiter (SD); Hodgen Mainda (TN); Kent Sullivan represented by Luke Bellsnyder (TX); Mike Kreidler and Lonnie Johns-Brown (WA); and James A. Dodrill and Erin K. Hunter (WV). Also participating were: Chance McElhaney (IA); Anita G. Fox and Karin Gyger (MI); Chlora Lindley-Myers (MO); Barbara D. Richardson (NV); and Scott A. White (VA). The following state legislators and government officials participated: Rep. Kerry Rich (AL); Rep. Deborah Ferguson (AR); Sen. Matthew Lesser (CT); Daniel Jacob (HI); Elizabeth Matney (IA); Del. Teresa Reilly and Del. Kathleen Dumais (MD); Rep. Donna Lasinski (MI); Sen. Gary Dahms (MN); Sen. Paul Wieland (MO); Sen. Jim Burgin (NC); Sen. Shawn Vedaa (ND); Rep. Micaela Lara Cadena (NM); Terry Reynolds (NV); Sen. Jay Hottinger and Sen. Bob Peterson (OH); Rep. Brian Patrick Kennedy (RI); Rep. Robin Smith (TN); Rep. Tom Oliverson, Emily Amps, Jarrett Hill, and Jesse Sifuentes (TX); Rep. Jean O'Sullivan (VT); Rep. Nicole Macri (WA); and Sen. Cale Case (WY).

1. **Heard a Welcome from the President**

Superintendent Cioppa thanked legislators and state government officials for attending the meeting. He mentioned how the NAIC has made progress on a number of important initiatives, including recently adopting amendments to the *Credit for Reinsurance Model Law* (#785). He said these changes to the model implement the provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (U.K. Covered Agreement). He said the states have until 2022 to adopt these amendments or be subject to federal preemption.

2. **Adopted its 2018 Summer National Meeting Minutes**

Director Farmer made a motion, seconded by Director Cameron, to adopt the Liaison Committee’s Aug. 4 minutes (see *NAIC Proceedings – Summer 2018, NAIC/State Government Liaison Committee*). The motion passed unanimously.

3. **Reaffirmed its Mission Statement for 2020**

The mission of the NAIC/State Government Liaison Committee is to discuss issues of common interest to state insurance regulators and state officials.

Superintendent Cioppa asked Liaison Committee members if there were any objections to reaffirming the Liaison Committee’s mission statement for 2020. Hearing none, the Liaison Committee’s mission statement was reaffirmed for 2020.

4. **Discussed Health Insurance Issues**

Director Farmer discussed health insurance developments. He said open enrollment began on Nov. 1 and ends Dec. 15. He noted that markets appear to be more stable for 2020, with some states experiencing a decrease in rates and new players in the marketplace. He said things are not looking as positive in the small group market, where rates continue to increase rapidly. He noted that state insurance regulators remain concerned about legal uncertainty, and they are closely watching several court cases. He said state insurance regulators are also tracking congressional activity on surprise billing, and he noted the creation of the U.S. Department of Transportation’s Air Ambulance and Patient Billing Advisory Committee, which Commissioner Godfread has been appointed to.
5. **Discussed LTCI**

Commissioner White discussed long-term care insurance (LTCI) and the creation of the NAIC’s Long-Term Care Insurance (EX) Task Force. He said the Task Force has two goals: 1) to develop a consistent national approach for reviewing LTCI rates that result in actuarially appropriate increases being granted by the states in a timely manner; and 2) to focus on ensuring that consumers are provided with meaningful options to reduce their benefits in situations where the premiums are no longer affordable. To achieve these objectives, the Task Force has formed six workstreams: 1) Multistate Rate Review Practices; 2) Restructuring Techniques; 3) Reduced Benefit Options and Consumer Notices; 4) Valuation of LTCI Reserves; 5) Non-Actuarial Variations; and 6) Data Call Design and Oversight.

6. **Discussed Big Data and Data Privacy**

Commissioner Godfread discussed state insurance regulatory considerations regarding big data and data privacy. He said that while big data application is allowing insurers to more accurately underwrite and price risk, these evolving technologies have made it increasingly challenging for state insurance regulators to evaluate rating plans that incorporate complex predictive models. He discussed how state insurance regulators recognize the need to be sure that no rating factors used violate existing laws, unfairly harm consumers, or result in inappropriate bias. He said state insurance regulators are working to safeguard consumer protections while fostering innovation in the insurance marketplace. He also addressed data privacy and said the NAIC has formed the Privacy Protections (D) Working Group. The Working Group’s charge is to “[r]eview state insurance privacy protections regarding the collection, use and disclosure of information gathered in connection with insurance transactions, and make recommended changes, as needed, to certain NAIC models.”

Director Fox asked if the Innovation and Technology (EX) Task Force is looking into possible consumer discrimination that may occur as insurers move away from pooling and more towards targeted/individual data collection and risk factors. Commissioner Godfread said the Task Force is studying these microtargeted risk considerations.

Rep. Kennedy said state legislators are seeing a lot of privacy legislation introduced, and he expressed concern about possible federal preemption. Commissioner Godfread said state insurance regulators share this concern, and they are working quickly to try and stay in front of the U.S. Congress (Congress).

Rep. O’Sullivan asked about blockchain technology and whether the NAIC is looking at that technology. She said Vermont recently passed blockchain legislation. Commissioner Godfread said state insurance regulators continually receive updates on blockchain technology. However, to date, they have not seen substantive developments.

Director Farmer mentioned the *Insurance Data Security Model Law* (#668).

7. **Discussed the GCC and MPI**

Superintendent Cioppa discussed the group capital calculation (GCC) and Macroprudential Initiative (MPI). He said the GCC will be a tool that state insurance regulators can use in their solvency-monitoring activities. He discussed how in 2019, the NAIC has been focused on testing the calculation and that the results will be discussed during the Fall National Meeting. State insurance regulators plan to utilize the feedback from the testing to make improvements, and the plan is to expose a revised GCC in early spring 2020. He subsequently discussed macroprudential monitoring and how it provides state insurance regulators with a better understanding of how the insurance sector is affected by various risk exposures in the broader financial markets and economy. He said state insurance regulators are focused on identifying potential enhancements in four key areas, including capitals stress testing, recovery and resolution, counterparty exposure/concentration, and liquidity risk.

8. **Discussed Other Matters**

Rep. Kennedy asked if the NAIC has looked at the insurance implications of state gender identification laws and individuals who identify as non-binary or transgender. Superintendent Cioppa replied that there is no official NAIC workstream, but some state insurance regulators have addressed this in their respective states.

Having no further business, the NAIC/State Government Liaison Committee adjourned.
