2021 Proceedings of the National Association of Insurance Commissioners

2021 Virtual Spring National Meeting
April 7 – 14, 2021

Concerning Business Conducted
December 10, 2020 to April 14, 2021
The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

**Accounting & Reporting**
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

**Special Studies**
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

**Consumer Information**
Important answers to common questions about auto, home, health and life insurance — as well as buyer’s guides on annuities, long-term care insurance and Medicare supplement plans.

**Statistical Reports**
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

**Financial Regulation**
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

**Supplementary Products**
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

**Legal**
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

**Capital Markets & Investment Analysis**
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

**Market Regulation**
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

**White Papers**
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

**NAIC Activities**
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

CERTIFICATE OF INCORPORATION OF
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
a Nonstock Corporation

I. Name
The name of the Corporation is: National Association of Insurance Commissioners (NAIC).

II. Duration
The period of duration of the NAIC is perpetual.

III. Registered Office and Agent
The NAIC’s Registered Office in the State of Delaware is to be located at: 1209 Orange St., in the City of Wilmington, Zip Code 19801. The registered agent in charge thereof is The Corporation Trust Company.

IV. Authority to Issue Stock
The NAIC shall have no authority to issue capital stock.

V. Incorporators
The name and address of the incorporator are as follows:
Catherine J. Weatherford
National Association of Insurance Commissioners
120 W. 12th St., Suite 1100
Kansas City, MO 64106

VI. Purpose
The NAIC is organized exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), including without limitation, to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:

(a) Protect the public interest, promote competitive markets and facilitate the fair and equitable treatment of insurance consumers;
(b) Promote, in the public interest, the reliability, solvency and financial solidity of insurance institutions; and
(c) Support and improve state regulation of insurance.

VII. Restrictions
A. No substantial part of the activities of the Corporation shall be the carrying of propaganda, or otherwise attempting to influence legislation except as otherwise permitted by Section 501(h) of the Code and in any corresponding laws of the State of Delaware, and the Corporation shall not participate in or intervene in including the publishing or distribution of statements concerning any political campaign on behalf of or in opposition to any candidate for public office.

B. For any period for which the Corporation may be considered a private foundation, as defined in Section 509(a), the Corporation shall be subject to the following restrictions and prohibitions:

1. The Corporation shall not engage in any act of self-dealing as defined in section 4941(d) of the Code.
2. The Corporations shall make distributions for each taxable year at such time and in such manner so as not to become subject to the tax on undistributed income imposed by section 4942 of the Code.
3. The Corporation shall not retain any excess business holdings as defined in section 4943(c) of the Code.
4. The Corporation shall not make any investments in such manner as to subject it to tax under section 4944 of the Code.
5. The Corporation shall not make any taxable expenditures as defined in section 4945(d) of the Code.
VIII. Membership

The NAIC shall have one class of members consisting of the Commissioners, Directors, Superintendents, or other officials who by law are charged with the principal responsibility of supervising the business of insurance within each State, territory, or insular possession of the United States. Members only shall be eligible to hold office in and serve on the Executive Committee, Committees and Subcommittees of the NAIC. However, a member may be represented on a Committee or Subcommittee by the member’s duly authorized representative as defined in the Bylaws. Only one official from each State, territory or insular possession shall be a member and each member shall be limited to one vote. Any insurance supervisory official of a foreign government or any subdivision thereof, which has been diplomatically recognized by the United States government, may attend and participate in all meetings of this Congress but shall not be a member and shall not have the power to vote.

IX. Activities

The NAIC is a nonprofit charitable and educational organization and no part of the net earnings or property for the corporation will inure to the benefit of, or be distributable to its members, directors, officers or other private individuals, except that the NAIC shall be authorized and empowered to pay reasonable compensation for services rendered by employees and contractors, and to make payments and distributions in furtherance of the purposes set forth in Article VI hereof.

X. Powers

The NAIC shall have all of the powers conferred by the Delaware General Corporation Law for non-profit corporations, except that, any other provision of the Certificate to the contrary notwithstanding, the NAIC shall neither have nor exercise any power, nor carry on any other activities not permitted: (a) by a corporation exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); or (b) by a corporation contributions to which are deductible under Section 170(c)(2) of the Internal Revenue Code of 1986, as amended, (or the corresponding provision of any future United States Internal Revenue law).

XI. Immunity

All officers and members of the Executive Committee shall be immune from personal liability for any civil damages arising from acts performed in their official capacity, and shall not be compensated for their services as an officer or member of the Executive Committee on a salary or a prorated equivalent basis. The immunity shall extend to such actions for which the member of the Executive Committee or officer would not otherwise be liable, but for the Executive Committee member’s or officer’s affiliation with the NAIC. This immunity shall not apply to intentional conduct, wanton or willful conduct or gross negligence. Nothing herein shall be construed to create or abolish an immunity in favor of the NAIC itself. Nothing herein shall be construed to abolish any immunities held by the state officials pursuant to their individual state’s law.

XII. Exculpation and Indemnification

A member of the Executive Committee shall not be liable to the NAIC or its members for monetary damages for breach of fiduciary duty as a member of the Executive Committee, provided that this provision shall not eliminate or limit the liability of a member of the Executive Committee for any breach of the duty of loyalty to the NAIC or its members, for acts or omissions not in good faith, or which involve intentional misconduct or a knowing violation of law, or for any transaction from which the member of the Executive Committee involved derived an improper personal benefit. Any amendment, modification or repeal of the foregoing sentence shall not adversely affect any right or protection of a member of the Executive Committee of the Corporation hereunder in respect of any act or omission occurring prior to the time of such amendment, modification, or repeal. If the Delaware General Corporation Law hereafter is amended to authorize the further elimination or limitation of the liability of the members of the Executive Committee, then the liability of a member of the Executive Committee, in addition to the limitation provided herein, shall be limited to the fullest extent permitted by the amended Delaware General Corporation Law.

The NAIC shall indemnify to the full extent authorized or permitted by the laws of the State of Delaware, as now in effect or as hereafter amended, any person made or threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative, including an action by or in the right of the NAIC) by reason of the fact that the person is or was a member of the Executive Committee, officer, member, committee member, employee or agent of the NAIC or serves any other enterprise as such at the request of the NAIC.
The foregoing right of indemnification shall not be deemed exclusive of any other rights to which such person may be entitled apart from this Article XII. The foregoing right of indemnification shall continue as to a person who has ceased to be a member of the Executive Committee, officer, member, committee member, employee or agent and shall inure to the benefit of the heirs, the executors and administrators of such a person.

XIII. Dissolution

In the event of the dissolution of the NAIC, the Executive Committee shall, after paying or making provision for the payment of all of the liabilities of the NAIC, dispose of all the assets of the NAIC equitably to any state government which is represented as a member of the NAIC at the time of dissolution, provided that the assets are distributed upon the condition that they be used primarily and effectively to implement the public purpose of the NAIC, or to one or more such organizations organized and operated exclusively for religious, charitable, education, scientific, or literary purposes or similar purposes as shall at the time qualify: (a) as an exempt organization under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); and (b) as an organization contributions to which are deductible under Section 170(c) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), as the Executive Committee shall determine.

XIV. Bylaws

The Bylaws of the NAIC may prescribe the powers and duties of the several officers, members of the Executive Committee and members and such rules as may be necessary for the work of the NAIC provided they are in conformity with the Certificate of Incorporation.

XV. Amendments

This Certificate of Incorporation may be altered or amended at any meeting of the full membership (Plenary Session) of the NAIC by an affirmative vote of two-thirds of the members qualified to vote, or their authorized representatives, provided that previous notice of the proposed amendment has been mailed to all members by direction of the Executive Committee at least thirty (30) days prior to the meeting.

IN WITNESS WHEREOF, this Certificate of Incorporation has been signed this 4th day of October 1999.

/signature/
Catherine J. Weatherford, Incorporator

ADOPTED 1999, Proc. Third Quarter
BYLAWS OF THE
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

ARTICLE I Name, Organization and Location

The name of this corporation is NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS (NAIC). The NAIC is organized under the General Corporation Law of the State of Delaware. The NAIC may have one (1) or more office locations within or without the State of Delaware as the Executive Committee may from time to time determine.

ARTICLE II Membership

The Membership of the NAIC shall be comprised of those persons designated as members in the Certificate of Incorporation. Each member of the NAIC shall have the power to vote and otherwise participate in the affairs of the NAIC as set forth herein or as required by applicable law. This power may be exercised through a duly authorized representative who shall be a person officially affiliated with the member’s department and who is wholly or principally employed by said department.

The organization may charge members an annual assessment, the amount of which shall be determined by the Executive Committee. Members failing to pay all NAIC assessments on a timely basis shall be placed in an inactive status. Members in an inactive status shall not have any voting rights and shall be denied membership on NAIC committees and task forces, access to mailings and services of the NAIC Offices, as well as access to zone examination processes and other benefits of membership in the NAIC.

The NAIC’s receipt of full payment from the inactive member of all current and past due assessments shall serve to immediately remove them from inactive status.

The Membership of the NAIC shall be subject to a conflict of interest policy and disclosure form as adopted by the members.

The Executive Committee is empowered to reinstate, in part or in whole, an inactive member’s participation on the committees and task forces, access to mailings and services of the NAIC Offices and satellite offices, as well as access to zone examination processes, and other benefits of membership in the NAIC upon good cause shown as determined by the Executive Committee.

ARTICLE III Officers

The officers of the NAIC shall be a President, a President-Elect, a Vice President, and a Secretary-Treasurer. Annual officer elections shall be held at the last regular National Meeting of each calendar year or at such other plenary session as agreed to by the members. The voting membership, by secret ballot, shall elect officers as provided in these Bylaws. Officers’ terms shall be for one year, beginning on January 1 following their election. The officers shall hold office until their death, resignation, removal or the election and qualification of their successors, whichever occurs first. Any Officer may resign at any time by giving notice thereof in writing to the President of the NAIC. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

If an interim vacancy occurs in the office of President, the President-Elect shall cease to hold his or her office effective immediately and shall assume the office of President. If an interim vacancy occurs in any one or more of the other officer positions, an interim election shall be held to fill the vacancy. No member may hold any office for more than two consecutive years. Notwithstanding the foregoing, at no time shall more than two officer positions be filled by members of the same Zone during the same term. Any officer may be removed from office by the affirmative vote of two-thirds (2/3) of the members, but only after a resolution for removal is adopted by two-thirds (2/3) of the Executive Committee whenever, in their judgment, the best interests of the NAIC would be served thereby.

The President shall serve as Chairman of the Executive Committee and shall preside at all special and regular meetings of the members. The President shall serve as the leader of the organization and its principal spokesperson. The President shall work closely with the Executive Committee to establish and achieve the strategic, business and operational goals of the organization; ensure appropriate policies and procedures for the organization are implemented and followed; and protect the integrity as well as the resources of the organization. After a member completes his or her term or terms as President, he or she shall not be able to hold another officer position for a period of twelve (12) months from the date such member completes his or her term or terms as President, which shall be referred to as a "waiting period"; provided however, the Executive Committee may waive the twelve month waiting period if warranted by exigent circumstances.
The President-Elect shall serve as Vice-Chairman of the Executive Committee. In the absence of the President at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, the President-Elect shall preside over such meeting to the extent of the President’s absence. The President-Elect shall perform such other duties and tasks as may be assigned by the President. Where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office.

The Vice President, in the absence of the President and President-Elect at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, shall preside over such meeting to the extent of the President’s and the President-Elect’s absence; and shall perform such other duties as may be assigned by the President or President-Elect, or in the absence thereof, by the Executive Committee.

The Secretary-Treasurer shall assist the President and, as applicable, the President-Elect or the Vice President in the conduct of meetings of the Executive Committee and members. For member meetings, the Secretary-Treasurer shall call the roll of the membership and certify the presence of a quorum and shall receive, validate and maintain all proxies for elections held at member meetings. The Secretary-Treasurer shall also recommend to the Executive Committee such policies and procedures to maintain the history and continuity of the NAIC. The Secretary-Treasurer shall also assist the President and President-Elect in all matters relating to the budget, accounting, expenditure and revenue practices of the NAIC; including, but not limited to reviewing the financial information of the organization and consulting with NAIC management, independent auditors, and other necessary parties regarding the financial operations and condition of the organization.

**ARTICLE IV Executive Committee**

The business and affairs of the NAIC shall be managed by and under the direction of the Executive Committee. The Executive Committee shall be made up entirely of members of the NAIC. The Executive Committee shall consist of the following members: the officers of the NAIC; the most recent past president; the twelve (12) members of the zones as provided for in Article V of these Bylaws. The members of the Executive Committee shall be subject to a conflict of interest policy as adopted by the members. Any Executive Committee member may resign at any time by giving notice thereof in writing to the members of the NAIC. Resignation as an Executive Committee member also operates as resignation as a Zone officer. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

1. The Executive Committee shall have the authority and responsibility to:

   (a) manage the affairs of the NAIC in a manner consistent with the Certificate of Incorporation and Bylaws;

   (b) make recommendations to achieve the goals of the NAIC based upon either its own initiative or the recommendations of the Standing Committees or Subcommittees reporting to it, for consideration and action by the members at any NAIC Plenary Session;

   (c) create and terminate one or more Task Forces reporting to it to the extent needed and appropriate;

   (d) establish and allocate, from time to time, functions and responsibilities to be performed by each Zone;

   (e) to the extent needed and appropriate, oversee NAIC Offices to assist the NAIC and the individual members in achieving the goals of the NAIC;

   (f) submit to the NAIC at each National Meeting, during which a Plenary Session is held, its report and recommendations concerning the reports of the Standing Committees. All Standing Committee reports shall be included as part of the Executive Committee report;

   (g) plan, implement and coordinate communications and activities with other state, federal and local government organizations in order to advance the goals of the NAIC and promote understanding of state insurance regulation.
2. Duties and Operations of the Executive Committee.

(a) The Executive Committee shall hold at least two (2) regular meetings annually at a designated time and place. Special meetings may be held when called by the President, or by at least three (3) members of the Executive Committee in writing. In any case, the Executive Committee shall meet at least once per calendar month. At least five (5) days notice shall be given of all regular and special meetings. Meetings may be held in person or by means of conference telephone or other communication equipment by means of which all persons participating in the meeting can hear each other, and such participation in a meeting shall constitute presence in person at such meeting in accordance with applicable laws. The presiding member of the Executive Committee shall only cast his or her vote in order to break a tie vote. In addition, the Executive Committee may act by written consent as provided by law.

(b) The Executive Committee may, with the concurrence of two-thirds of the members of the Executive Committee, establish rules for its conduct that shall not conflict with the Certificate of Incorporation and Bylaws. Such rules may be changed only by a concurrence of two-thirds of the members of the Executive Committee after twenty-four (24) hours notice to all members of the Executive Committee.

(c) Any action required or permitted to be taken at any meeting of the Executive Committee or any committee thereof may be taken without a meeting if all members of the Executive Committee or such committee, as the case may be, consent thereto in writing in accordance with applicable law.

(d) The Executive Committee shall cause to be kept minutes of its meeting and have information of any action of a general character taken by it published to members qualified to vote.

(e) NAIC OFFICES

(i) The Executive Committee shall oversee an Executive Office and a Central Office with management and staff personnel and appropriate resources for performance of duties and assigned responsibilities. Additional satellite offices may be established as needed. The Executive Committee shall have the authority to select, employ and terminate a Chief Executive Officer who shall not be a member of the NAIC and who shall have the primary responsibility for the internal management and functioning of the NAIC Offices within the direction of the Executive Committee, as well as other duties assigned by the Executive Committee through execution of an Employment Agreement or other authorization. The Chief Executive Officer appointed by the Executive Committee pursuant to this section shall not be considered an officer for purposes of Article III hereof and shall not be a member of the Executive Committee. The Executive Committee, through the Internal Administration (EX1) Subcommittee, shall provide oversight and direction to the Chief Executive Officer regarding Office operations.

(ii) Consistent with the purposes of the NAIC, the role of the NAIC Offices is to: (1) provide services to the NAIC through support to the NAIC Committees, Subcommittees, Task Forces or otherwise; (2) provide services to individual State insurance departments; and (3) develop recommendations for consideration as to NAIC policy and administrative decisions of the NAIC.

(iii) In performing its role, subject to the oversight and direction specified in (paragraph i) the NAIC Offices may engage in a variety of functions including but not limited to the following: research; analysis; information gathering and dissemination; library services; data collection; data base building and maintenance; report generation and dissemination; government liaison; non-regulatory liaison; securities valuation; administration; litigation; legislative and regulatory drafting; and educational development.

(iv) The Chief Executive Officer shall prepare an annual budget, related to the priorities of the NAIC, for the NAIC Offices to be submitted through the EX1 Subcommittee to the Executive Committee, which shall make its recommendations to the members of the NAIC for action at the next Plenary Session of the NAIC.
3. Internal Administration (EX1) Subcommittee

The Internal Administration (EX1) Subcommittee shall be a Subcommittee reporting to the Executive Committee. Appointments of the Chair and Vice Chair of the Executive Subcommittee and members other than those specifically designated herein shall be made by the President and President-Elect.

This Subcommittee shall be comprised of the President, President-Elect, Vice President, the Secretary-Treasurer, the most recent past President, and three (3) other members of the Executive Committee. The presiding member of the Subcommittee shall only cast his or her vote in order to break a tie vote.

The Internal Administration (EX1) Subcommittee shall:

(a) Exercise such powers and authority as may be delegated to it by the Executive Committee.

(b) Generally oversee the NAIC Offices including, without limitation: (i) periodically monitor operations of the NAIC Offices, (ii) review and revise the budget of the NAIC, hold an annual hearing to receive public comments on the budget of the NAIC, and submit the revised budget to the Executive Committee, (iii) approve emergency expenditures which vary from the adopted budget and promptly certify its action in writing to the Executive Committee, (iv) evaluate the Chief Executive Officer and make appropriate recommendations to the Executive Committee, (v) assist the Chief Executive Officer in resolving competing demands for NAIC resources, (vi) review compensation of all senior management and (vii) quarterly prepare a report containing the current budget and expenditures which the Secretary-Treasurer shall present to the Executive Committee.

4. Audit Committee

The Executive Committee shall appoint an Audit Committee made up of at least four (4) members of the NAIC, including at least one member from each zone, in addition to the NAIC Secretary-Treasurer. The NAIC Secretary-Treasurer shall chair the Audit Committee. The Audit Committee shall report to the Executive Committee without any NAIC employees being present. The Audit Committee shall be directly responsible for the appointment, compensation, and oversight of the independent certified public accountant employed to conduct the audit. The Audit Committee shall also have the power, to the extent permitted by law, to: (i) initiate or review the results of an audit or investigation into the business affairs of the NAIC; (ii) review the NAIC’s financial accounts and reports; (iii) conduct pre-audit and post-audit reviews with NAIC staff, members and independent auditors; and (iv) exercise such other powers and authority as delegated to it by the Executive Committee.

ARTICLE V Zones

To accomplish the purposes of the NAIC in a timely and efficient manner, the United States, its territories and insular possessions shall be divided into four Zones. Each Zone shall consist of a group of at least eight States, located in the same geographical area, with each State being contiguous to at least one other State in the group so far as practicable, plus any territory or insular possession that may be deemed expedient, all as determined by majority of the Executive Committee. Members of each Zone shall annually elect a Chairman, a Vice Chairman and a Secretary from among themselves prior to or during the last regular National Meeting of each calendar year or at such time as agreed to by the Zone members. The Chairman, Vice Chairman and Secretary of each Zone shall be members of the Executive Committee with terms of office corresponding to that of the officers. Each Zone shall perform such functions as are designated by the Executive Committee of the NAIC or by the members of the NAIC as a whole or by the members of the Zone. Each Zone may hold Zone Meetings for such purposes as may be deemed appropriate by members of the Zone.

ARTICLE VI Standing Committees and Task Forces

1. General

The Standing Committees shall not be subcommittees of the Executive Committee and shall have no power or authority for the management of the business and affairs of the NAIC. Each Standing Committee shall be composed of not more than 15 members, including a Chair and one or more Vice Chairs, appointed by the President and President-Elect, and such appointments shall remain effective until the succeeding President and President-Elect appoint members for the following year. Standing Committees shall meet at least twice a year at National Meetings and may meet more often at the call of the Chair as required to complete its assignments from the Executive Committee in a timely manner.
The Executive Committee shall make all assignments of subject matter to the Standing Committees and shall require coordination between Committees and Task Forces of the subject matter if more than one Committee or Task Force is affected. The format of the Committee reports shall be prescribed by the Executive Committee. All appointments or elections of members of the NAIC to any office or Committee of the NAIC shall be deemed the appointment or election of a particular member and shall not automatically pass to a successor in office.

2. Specific Duties

The Standing Committees of the NAIC, their duties and responsibilities shall be as follows:

(a) Life Insurance and Annuities (A) Committee: This Standing Committee shall consider issues relating to life insurance and annuities.

(b) Health Insurance and Managed Care (B) Committee: This Standing Committee shall consider issues relating to health and accident insurance and managed care.

(c) Property and Casualty Insurance (C) Committee: This Standing Committee shall consider issues relating to personal and commercial lines of property and casualty insurance, worker’s compensation insurance, statistical information, surplus lines, and casualty actuarial matters.

(d) Market Regulation and Consumer Affairs (D) Committee: This Standing Committee shall consider issues involving market conduct in the insurance industry; competition in insurance markets; the qualifications and conduct of agents and brokers; market conduct examination practices; the control and management of insurance institutions; consumer services of State insurance departments; and consumer participation in NAIC activities.

(e) Financial Condition (E) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to accounting practices and procedures; blanks; valuation of securities; the Insurance Regulatory Information System (IRIS), as it relates to solvency and profitability; the call, monitoring and concluding report of Zone Examinations; and financial examinations and examiner training.

(f) Financial Regulation Standards and Accreditation (F) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to administration and enforcement of the NAIC Accreditation Program, including without limitation, consideration of standards and revisions of standards for accreditation, interpretation of standards, evaluation and interpretation of states’ laws and regulations, and departments’ practices, procedures and organizations as they relate to compliance with standards, examination of members for compliance with standards, development and oversight of procedures for examination of members for compliance with standards, qualification and selection of individuals to perform the examination of members for compliance with standards, and decisions regarding whether to accredit members.

(g) International Insurance Relations (G) Committee. This Standing Committee shall have the responsibility for issues relating to international insurance.

3. Task Forces

The Executive Committee, its Subcommittee and the Standing Committees may establish one or more Task Forces, subject to approval of the Executive Committee. The parent Committee or Subcommittee, subject to approval of the Executive Committee, may vote to discontinue a Task Force once its charge has been completed.

Vacancies in the positions of Chair or Vice Chair of any Task Force shall be filled by the parent Committee or Subcommittee from within or outside the present Task Force membership; provided, however, that the chief insurance regulatory official of the state of the former Chair or Vice Chair shall become a member of the Task Force. A vacancy in the position of member shall be filled by the chief insurance regulatory official of the vacating member’s state.

If an existing Task Force is dealing with insurance issues that require continuing study, the Executive Committee may adopt the recommendation of the parent Committee or Subcommittee that the Task Force be designated a Standing Task Force. A Standing Task Force shall continue in effect until terminated by the Executive Committee.
ARTICLE VII Meetings of the Membership

1. Regular Meetings.

The NAIC shall hold at least two (2) regular meetings of the members (“National Meetings”) each calendar year. Notice, stating the place, day and hour and any special purposes of the National Meeting, shall be delivered by the Executive Committee not less than ten (10) calendar days nor more than sixty (60) calendar days before the date on which the National Meeting is to be held, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

2. Special Meetings.

Special meetings of the members may be called by any five (5) members of the Executive Committee by giving all members notice of such meeting at least ten (10) but not more than sixty (60) days prior thereto, or by any twenty (20) members of the NAIC by giving all members notice of such meeting at least thirty (30) but not more than sixty (60) days prior thereto. Notice of the special meeting shall state the place, day and hour of the special meeting and the purpose or purposes for which the special meeting is called, and shall be delivered by the persons calling the meeting within the applicable time period set forth herein, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

3. Waiver of Notice; Postponement.

Member meetings may be held without notice if all members entitled to notice are present (except when members entitled to notice attend the meeting for the express purpose of objecting, at the beginning of the meeting, because the meeting is allegedly not lawfully called or convened), or if notice is waived by those not present. Any previously scheduled meeting of the members may be postponed by the Executive Committee (or members calling a special meeting, as the case may be) upon notice to members, in person or writing, given at least two (2) days prior to the date previously scheduled for such meeting.

4. Quorum.

Except as otherwise provided by law or by the Certificate of Incorporation, the presence, by person or proxy, of a majority of the members shall constitute a quorum at a member meeting, a meeting of a Standing Committee, Task Force or a working group. The chairman of the meeting may adjourn the meeting from time to time, whether or not there is such a quorum. The members present at a duly called member meeting at which a quorum is present may continue to transact business until adjournment, notwithstanding the withdrawal of enough members to leave less than a quorum.

5. Any meeting of the NAIC may be held in executive session as defined in the NAIC policy on open meetings. Any member may attend and participate in any meeting of the NAIC or any meeting of a Standing Committee or Task Force whether or not such member has the right to vote. All National Meetings shall provide for a Plenary Session of the NAIC as a whole in order to consider and take action upon the matters submitted to the NAIC.

ARTICLE VIII Elections

1. The election of officers of the NAIC shall be scheduled for the plenary session of the last National Meeting of the calendar year or at such other plenary session as agreed to by the members.

2. At the beginning of such Plenary Session, the Secretary-Treasurer shall ascertain and announce the presence of a quorum.

3. Upon the determination of a quorum, the chair shall briefly review the provisions of the Certificate of Incorporation and Bylaws in regard to voting.

4. The President shall ask for and announce all proxies. Proxies shall be held by the Secretary-Treasurer or a designee throughout the election session. Proxies shall be valid, subject to their term, until superseded by the member and shall be governed by ARTICLE IX of the Bylaws.

5. Every individual voting by proxy must meet the requirements of Article II of the Bylaws of the NAIC which requires that such a person be “...officially affiliated with the member’s (the member delegating authority to vote) department, and is wholly or principally employed by said department.”
6. Prior to opening the nominations for office, the Chair shall appoint three (3) members of the NAIC to act as voting inspectors. The voting inspectors shall distribute, collect, count and/or verify ballots, and report their findings to the Secretary-Treasurer. If a voting inspector is nominated for an office and does not withdraw as a candidate, he or she shall not be a voting inspector for the election of the office to which he or she is nominated and the chair shall appoint another voting inspector in his or her place.

7. The Chair shall announce the opening of nominations for offices in the following order:

   (a) President. Provided, however, where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office. In those cases where the President runs for re-election or where a vacancy exists because the President-Elect fails or is otherwise unable to assume the Presidency, this office will be subject to an election.

   (b) President-Elect.

   (c) Vice President.

   (d) Secretary-Treasurer.

8. Only members or duly authorized proxyholders may make nominations.

9. One nominating speech, not to exceed three (3) minutes in duration, shall be allowed for each nominee.

10. After nominations are closed for each office, each nominee must indicate whether he or she accepts the nomination and, if he or she accepts, shall be permitted to address the membership for a period of up to seven (7) minutes. Such addresses shall be given in the order by which the nominations were made.

11. The votes of members, in person or by proxy, constituting a majority of the quorum present at the meeting shall be necessary for election to such office. If no candidate receives a majority, the two candidates with the most votes will participate in a run-off election. The candidate with the most votes in the run-off election shall win such election.

12. Voting need not be by written ballot, unless otherwise required by these Bylaws, the Certificate of Incorporation, or applicable law.

**ARTICLE IX Proxies; Waiver of Notice**

Where the delegation of power to vote or participate in the membership of the NAIC is required by ARTICLE II of these Bylaws to be in writing, such delegation must be effected by proxy. All proxies must be dated, give specific authority to a named individual who meets the requirements of ARTICLE II for duly authorized representatives, and meet any other applicable legal requirement. Documents such as electronic transmission, telegrams, mailgrams, etc. are acceptable as proxies if they otherwise meet the requirements contained herein and applicable law. Proxies should be maintained by NAIC Central Office staff. Notwithstanding the foregoing, a member may not vote by proxy in a meeting of the Executive Committee, Financial Regulation Standards and Accreditation (F) Committee in a vote concerning a state-specific item, Government Relations Leadership Council, or International Insurance Relations Leadership Group, or any respective subcommittees.

Whenever any notice is required to be given to any member (for a meeting of members or the Executive Committee) under the provisions of the Certificate of Incorporation, these Bylaws or applicable law, a written waiver, signed by the person entitled to notice, or a waiver by electronic transmission by person entitled to notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice. Neither the business to be transacted at, nor the purpose of, any annual or special meeting of the members or any committee, subcommittee or task force need be specified in any waiver of notice of such meeting.

Unless otherwise restricted by the Certificate of Incorporation or these Bylaws, Members may participate in a meeting by means of conference telephone or by any means by which all persons participating in the meeting are able to communicate with one another, and such participation shall constitute presence in person at the meeting.

Any notice required under these Bylaws may be provided by mail, facsimile, or electronic transmission.
ARTICLE X Procedures: Books and Records

The Executive Committee shall adopt policies and procedures for the conduct of meetings. In the event such policies and procedures conflict with the NAIC’s Certificate of Incorporation or Bylaws, the Certificate of Incorporation and Bylaws shall govern.

The books and records of the NAIC may be kept outside the State of Delaware at such place or places as may from time to time be designated by the Internal Administration Subcommittee (EX1) of the Executive Committee.

ARTICLE XI Amendments

These Bylaws may be altered or repealed and new Bylaws may be adopted at any regular or special meeting of the members by an affirmative vote, in person or by proxy, of a majority of the members entitled to vote at such meeting; provided, however, that any proposed alteration (except to correct typographical or grammatical errors or article, section or paragraph cross-references caused by other alterations, repeals, or adoptions) or repeal of, or the adoption of any Bylaw inconsistent with, Article II [Membership], Article VII, Paragraph 2 [Special Meetings of Members] and Paragraph 4 [Quorum], Article VIII [Elections], or this Article XI [Amendments] of these Bylaws (the “Supermajority Bylaws”) by the members shall require the affirmative vote, in person or by proxy, of at least two-thirds (2/3) of the members entitled to vote at such meeting and provided, further, that in the case of any such member action at a special meeting of members, notice of the proposed alteration, repeal or adoption of the new Bylaw or Bylaws must be contained in the notice of such special meeting. Corrections for typographical or grammatical errors or to article, section or paragraph cross-references caused by other alterations, repeals or adoption, shall only be made if approved by the affirmative vote of at least two-thirds (2/3) of the Executive Committee.

NAIC Policy Statement on Open Meetings
Revised: April 1, 2014

The NAIC is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. NAIC members are the elected and appointed state government officials who, along with their departments and staff, regulate the conduct of insurance companies and agents in their respective state or territory. The NAIC is committed to conducting its business openly. This policy statement applies to meetings of NAIC committees, subcommittees, task forces and working groups. It does not apply to Roundtable discussions, zone meetings, commissioners’ conferences, and other like meetings of the members. Applicable meetings will be open unless the discussion or action contemplated will include:

1. Potential or pending litigation or administrative proceedings which may involve the NAIC, any NAIC member, or their staffs, in any capacity involving their official or prescribed duties, requests for briefs of amicus curiae, or legal advice;

2. Pending investigations which may involve either the NAIC or any member in any capacity;

3. Specific companies, entities or individuals, including, but not limited to, collaborative financial and market conduct examinations and analysis;

4. Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder;

5. Voting on the election of officers of the NAIC;

6. Consultations with NAIC staff members related to NAIC technical guidance, including, but not limited to, Annual and Quarterly Statement Blanks and Instructions, the Accounting Practices and Procedures Manual, and similar materials;

7. Consideration of individual state insurance department’s compliance with NAIC financial regulation standards by the Financial Regulation Standards and Accreditation (F) Committee or any subgroup appointed thereunder;

8. Consideration of strategic planning issues relating to federal legislative and regulatory matters or international regulatory matters; or

9. Any other subject required to be kept confidential under any Memorandum of Understanding or other agreement, state or federal law or under any judicial or administrative order.

Because not all situations requiring a regulator to regulator discussion can be anticipated at the time a meeting is scheduled, a meeting convened in open session can move into regulator to regulator session on motion by the chair or other member approved by a majority of the members present. Public notice will be provided of all applicable meetings. The reason for holding a meeting in regulator only session will be announced when the meeting notice is published, at the beginning of any regulator only session, and when an open meeting goes into regulator only session.

This revised policy statement shall take effect upon adoption by the membership.

[NOTE: (Effective Jan. 1, 1996, conference call meetings are included in the application of the policy statement, by action of the NAIC on June 4, 1995). This policy statement was originally adopted by the NAIC membership during the 1994 Fall National Meeting in Minneapolis, Minnesota, Sept. 18–20, 1994.]

</tbody>
</table>
1. Sept. 23, 1886: John K. Tarbox (MA) was elected President for the 1887 Convention; Samuel H. Cross (RI) was elected Vice-President; and Robert B. Brinkerhoff (Ohio chief clerk) was elected Secretary. Commissioner Tarbox died May 28, 1887. Auditor Cross was out of office effective June 1, 1887. Mr. Brinkerhoff was out of office effective May 3, 1887. Oliver Pillsbury (NH) was chosen to preside over the 1887 Convention. It is unknown who acted as Vice-President. Jacob A. McEwen (Ohio chief clerk) was chosen to act as Secretary.

2. Aug. 21, 1890: Charles B. Allan (Nebraska deputy auditor) was elected Secretary for the 1891 Convention; however, he resigned before the Convention assembled. Sept. 30, 1891: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1891 Convention.
3. Sept. 18, 1895: William M. Hahn (OH) was elected President for the 1896 Convention and James R. Waddill (MO) was elected Vice-President; however, Superintendent Hahn was out of office effective June 3, 1886. Sept. 22, 1896: Superintendent Waddill was elected President for the 1896 Convention and Stephen W. Carr (ME) was chosen to act as Vice-President.

4. Sept. 23, 1896: James R. Waddill (MO) was elected President for the 1897 Convention and Stephen W. Carr (ME) was elected Vice-President; however, Mr. Waddill was out of office effective March 1, 1897. Sept. 7, 1897: Commissioner Carr was elected President for the 1897 Convention. It is unknown who acted as Vice-President.

5. Sept. 23, 1896: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1897 Convention; however, he was out of office at the date of the Convention. Sept. 7, 1897: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1897 Convention.

6. Sept. 7, 1897: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1898 Convention; however, he declined the offer. Sept. 13, 1898: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1898 Convention.

7. Sept. 15, 1898: Elmer H. Dearth (MN) was elected President for the 1899 Convention; however, he was out of office at the date of the Convention. Sept. 5, 1899: Edward T. Orear (MO) was elected President for the 1899 Convention.

8. Sept. 20, 1900: John A. O’Shaughnessy (MN) was elected President for the 1901 Convention; however, he was out of office at the date of the Convention. September 1901: William H. Hart (IN) was elected President for the 1901 Convention.

9. Sept. 29, 1910: Theodore H. Macdonald (CT) was elected President for the 1911 Convention; however, he was out of office at the date of the Convention. It is unknown who acted as Vice-President.

10. Aug. 25, 1911: Harry R. Cunningham (MT) was elected Secretary for the 1912 Convention; however, he resigned before the Convention assembled. March 1912: Fitz Hugh McMaster (SC) was elected Secretary for the 1912 Convention.

11. Aug. 1, 1913: Willard Done (UT) was elected First Vice-President for the 1914 Convention; however, he resigned before the Convention assembled. It is unknown who acted as First Vice-President.

12. Aug. 31, 1917: Emory H. English (IA) was elected President for the 1918 Convention; Robert J. Merrill (NH) was elected First Vice-President; and Michael J. Cleary (WI) was elected Second Vice-President. November 1917: Mr. Merrill resigned as First Vice-President. Dec. 6, 1917: Mr. Cleary was elected First Vice-President for the 1918 Convention and Walter K. Chorn (MO) was elected Second Vice-President. Jan. 1, 1918: Mr. English resigned as President and Mr. Cleary was elected President for the 1918 Convention by the Executive (EX) Committee. It is unknown who acted as First Vice-President.

13. Aug. 31, 1917: Fitz Hugh McMaster (SC) was elected Secretary for the 1918 Convention; however, he resigned before the Convention assembled. Dec. 6, 1917: Joseph L. Button (VA) was elected Secretary for the 1918 Convention.

14. Sept. 12, 1919: John B. Sanborn (MN) was elected Second Vice-President for the 1920 Convention; however, he resigned before the Convention assembled. June 1920: Alfred L. Harty (MO) was chosen to act as Second Vice-President for the 1920 Convention.

15. Sept. 3, 1920: Frank H. Ellsworth (MI) was elected President for the 1921 Convention; Alfred L. Harty (MO) was elected First Vice-President; and Thomas B. Donaldson (PA) was elected Second Vice-President. Commissioner Ellsworth resigned effective April 30, 1921, as NAIC President and Michigan Insurance Commissioner. June 27, 1921: Superintendent Harty was elected President for the 1921 Convention by the Executive (EX) Committee; Commissioner Donaldson was elected First Vice-President; and Platt Whitman (WI) was elected Second Vice-President.

16. Sept. 8, 1922: Platt Whitman (WI) was elected President for the 1923 Convention; Herbert O. Fishback (WA) was elected First Vice-President; and John C. Luning (FL) was elected Second Vice-President. July 1, 1923: Commissioner Whitman resigned as President; Commissioner Fishback was elected President for the 1923 Convention by the Executive (EX) Committee; and Mr. Luning was elected First Vice-President by the Executive (EX) Committee. It is unknown who acted as Second Vice-President.

17. Sept. 18, 1925: William R. C. Kendrick (IA) was elected President for the 1926 Convention. January 1926: Commissioner Kendrick resigned as NAIC President and Harry L. Conn (OH) was elected President for the 1926 Convention. Commissioner Kendrick remained as Iowa Insurance Commissioner until March 1, 1926.
18. Nov. 19, 1926: Harry L. Conn (OH) was elected President for the 1927 Convention and Albert S. Caldwell (TN) was elected First Vice-President. April 15, 1927: Superintendent Conn resigned as NAIC President and Ohio Insurance Superintendent. May 3, 1927: Commissioner Caldwell was elected President for the 1927 Convention and James A. Beha (NY) was elected First Vice-President.

19. Sept. 26, 1928: Charles R. Detrick (CA) was elected President for the 1929 Convention; James A. Beha (NY) was elected First Vice-President; and Howard P. Dunham (CT) was elected Second Vice-President. Jan. 1, 1929: Superintendent Beha resigned as NAIC First Vice-President and New York Insurance Superintendent. Commissioner Dunham was elected First Vice-President for the 1929 Convention. April 24, 1929: Commissioner Detrick resigned as NAIC President and California Insurance Commissioner. Commissioner Dunham was elected President for the 1929 Convention; Clarence C. Wysong (IN) was elected First Vice-President; and Jess G. Read (OK) was elected Second Vice-President.

20. Sept. 19, 1929: Joseph L. Button (VA) was elected Secretary for the 1930 Convention; however, he resigned effective Oct. 15, 1929, as NAIC Secretary and Virginia Commissioner of Insurance and Banking. Dec. 10, 1929: Albert S. Caldwell (TN) was elected Secretary for the 1930 Convention.

21. Sept. 9, 1930: Clarence C. Wysong (IN) was elected President for the 1931 Convention; Jess G. Read (OK) was elected First Vice-President; and Clare A. Lee (OR) was elected Second Vice-President. January 1931: Commissioner Wysong resigned effective Jan. 1, 1931, as NAIC President and Indiana Insurance Commissioner; Commissioner Lee was no longer serving as Second Vice-President; and Commissioner Read was elected President by the Executive (EX) Committee for the 1931 Convention. June 17, 1931: Charles D. Livingston (MI) was elected First Vice-President by the Executive (EX) Committee for the 1931 Convention and William A. Tarver (TX) was elected Second Vice-President by the Executive (EX) Committee.

22. Oct. 20, 1932: William A. Tarver (TX) was elected President for the 1933 Convention; Garfield W. Brown (MN) was elected First Vice-President; and Daniel C. ‘Dan’ Boney (NC) was elected Second Vice-President. Commissioner Tarver resigned effective Feb. 10, 1933, as NAIC President and Texas Life Insurance Commissioner. Commissioner Brown was elected President for the 1933 Convention; Commissioner Boney was chosen to act as First Vice-President and George S. Van Schaick (NY) was chosen to act as Second Vice-President.

23. July 1935: It is unclear why no one acted as First Vice-President or Second Vice-President for the 1935 Convention.

24. June 23, 1939: J. Balch Moor (DC) was elected Vice-President; however, he died July 22, 1939, before the 1940 Convention assembled. John C. Blackall (CT) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

25. June 6, 1945: Edward L. Scheufler (MO) was elected Vice-President for the 1946 Convention; however, he resigned effective Oct. 15, 1945, as NAIC Vice-President and Missouri Insurance Superintendent. Dec. 3, 1945: Robert E. Dineen (NY) was elected Vice-President by the Executive (EX) Committee for the 1946 Convention.

26. June 11, 1946: Jess G. Read (OK) was elected Secretary for the 1947 Convention; however, he died July 20, 1946. Sept. 4, 1946: Nellis P. Parkinson (IL) was elected Secretary by the Executive (EX) Committee to fill the unexpired term.

27. June 1953: George B. Butler (TX) was elected Vice-President; however, he died Sept. 28, 1953. It is unknown who acted as Vice-President for the November 1953 Convention. Nov. 30, 1953: Donald Knowlton (NH) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

28. May 1956: George A. Bowles (VA) was elected Secretary; however, he died June 1, 1956. Paul A. Hammel (NV) was elected Secretary to fill the unexpired term.

29. June 1958: Arch E. Northington (TN) was elected President; however, he resigned effective Dec. 23, 1958, as NAIC President and Tennessee Insurance Commissioner. January 1959: Paul A. Hammel (NV) was elected President and Sam N. Beery (CO) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

30. June 1962: Joseph S. Gerber (IL) was elected Vice-President; however, he resigned effective Jan. 29, 1963, as NAIC Vice-President and Illinois Insurance Director. The office of Vice-President was vacant for the June 1963 Convention.

31. June 1968: Charles R. Howell (NJ) was elected President; however, he resigned effective Feb. 28, 1969, as NAIC President and New Jersey Commissioner of Banking and Insurance. Ned Price (TX) was elected by the Executive (EX) Committee to fill the unexpired term.

33. A constitutional amendment moved NAIC officer elections from June to December (commencing December 1974), President Johnnie L. Caldwell (GA) served a six-month term.

34. Kenneth E. ‘Ken’ DeShetler (OH) was elected President; however, he resigned effective Jan. 13, 1975, as NAIC President and Ohio Insurance Director. William H. Huff, III (IA) was elected by the Executive (EX) Committee to fill the unexpired term.

35. H. Peter ‘Pete’ Hudson (IN) was elected President; however, he resigned as NAIC President and Indiana Insurance Commissioner effective Nov. 15, 1979. It is unknown who presided over the December 1979 Convention.

36. John W. Lindsay resigned effective Sept. 3, 1981, as NAIC Vice-President and South Carolina Insurance Commissioner. Johnnie L. Caldwell (GA) was elected by the Executive (EX) Committee to fill the unexpired term.

37. David J. Lyons resigned effective June 17, 1994, as NAIC Vice President but remained as Iowa Insurance Commissioner until July 31, 1994. A special interim Plenary election was held June 12, 1994: Arkansas Insurance Commissioner Lee Douglass was elected Vice President to serve June 17, 1994, to Dec. 31, 1994.

38. September 2001: NAIC members unanimously agreed that the 2001 Fall National Meeting should be canceled in the wake of the tragic events that occurred Sept. 11, 2001. The meeting had been scheduled for Sept. 22–25, 2001, at the Marriott and Westin Copley Place hotels in Boston, Massachusetts.

39. Ernst N. ‘Ernie’ Csiszar resigned effective Aug. 18, 2004, as NAIC President and South Carolina Director of Insurance. Approximately two weeks later, James A. ‘Jim’ Poolman resigned as NAIC Vice President but remained as North Dakota Insurance Commissioner. A special interim Plenary election was held Sept. 13, 2004, during the Fall National Meeting in Anchorage, Alaska: Pennsylvania Insurance Commissioner M. Diane Koken was elected President; Oregon Insurance Administrator Joel S. Ario was elected Vice President; and Maine Insurance Superintendent Alessandro A. ‘Al’ Iuppa was elected Secretary-Treasurer to serve from Sept. 13, 2004, to Dec. 31, 2004.

40. December 2004: NAIC members voted at its 2004 Winter National Meeting to adopt amendments to the NAIC Bylaws, which included the creation of a President-Elect position as an NAIC officer.

41. September 2005: NAIC members agreed to cancel the 2005 Fall National Meeting due to the devastation caused by Hurricane Katrina on Aug. 29, 2005. The meeting had been scheduled for Sept. 10–13, 2005, at the Sheraton hotel in New Orleans, Louisiana.

42. Eric P. Serna resigned effective June 14, 2006, as NAIC Secretary-Treasurer and New Mexico Superintendent of Insurance. A special Plenary interim election was held during the 2006 Summer National Meeting: New Hampshire Insurance Commissioner Roger A. Sevigny was elected Secretary-Treasurer to serve from June 14, 2006, to Dec. 31, 2006.

43. Michael T. McRaith resigned effective May 31, 2011, as NAIC Secretary-Treasurer and Illinois Director of Insurance. A special Plenary interim election was held via conference call May 16, 2011: North Dakota Insurance Commissioner Adam Hamm was elected Secretary-Treasurer to serve from May 31, 2011, to Dec. 31, 2011.

45. Michael F. ‘Mike’ Consedine resigned effective Jan. 20, 2015, as NAIC President-Elect and Pennsylvania Insurance Commissioner. A special Plenary interim election was held via conference call Feb. 8, 2015: Missouri Insurance Director John M. Huff was elected President-Elect to serve from Feb. 8, 2015, to Dec. 31, 2015.

46. Sharon P. Clark resigned effective Jan. 11, 2016, as NAIC President-Elect and Kentucky Insurance Commissioner. A special Plenary interim election was held in Bonita Springs, Florida, on Feb. 7, 2016: Wisconsin Insurance Commissioner Theodore K. ‘Ted’ Nickel was elected President-Elect; Tennessee Insurance Commissioner Julie Mix McPeak was elected Vice President; and Maine Insurance Superintendent Eric A. Cioppa was elected Secretary-Treasurer to serve from Feb. 7, 2016, to Dec. 31, 2017.

47. David C. Mattax, NAIC Secretary-Treasurer and Texas Insurance Commissioner, died in office April 13, 2017. A special Plenary interim election was held via conference call on May 12, 2017: South Carolina Insurance Director Raymond G. Farmer was elected Secretary-Treasurer to serve from May 12, 2017, to Dec. 31, 2017.
48. Gordon I. Ito resigned effective Dec. 31, 2018, as NAIC Vice President and Hawaii Insurance Commissioner. A special Plenary interim election was held in La Quinta, California, on Feb. 4, 2019: Florida Insurance Commissioner David Altmaier was elected Vice President to serve from Feb. 4, 2019, to Dec. 31, 2019.

49. March 11, 2020: Due to concerns about the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Spring National Meeting in a virtual format. However, on March 23, 2020, the NAIC officers decided to suspend holding any further sessions of the virtual Spring National Meeting to allow NAIC members and staff more time to focus on the health emergency. The meeting had been scheduled for March 21–24, 2020, at the Phoenix Convention Center and the Sheraton Grand and Hyatt Regency hotels in Phoenix, Arizona.

50. June 10, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Summer National Meeting in a virtual format. The meeting had been scheduled for Aug. 8–11, 2020, at the Minneapolis Convention Center and the Hilton and Hyatt Regency hotels in Minneapolis, Minnesota.

51. Sept. 21, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Fall National Meeting in a virtual format. The meeting had been scheduled for Nov. 14–17, 2020, at the JW Marriott hotel in Indianapolis, Indiana.

52. Feb. 24, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Spring National Meeting in a virtual format. The meeting had been scheduled for April 10–13, 2021, at the Gaylord Texan Hotel and Convention Center in Grapevine, Texas.

CALL TO ORDER

The 231st session of the National Association of Insurance Commissioners (NAIC) will now come to order. Good morning, my name is David Altmaier. I’m Florida’s Commissioner and President of the NAIC; and I’m honored to open the first national meeting of the year.

INTRODUCTION OF HEAD TABLE

To start us off, I’d like to introduce the members of our virtual head table.

Honorable James J. Donelon, NAIC Past President and Louisiana Insurance Commissioner
Honorable Eric A. Cioppa, NAIC Past President and Maine Insurance Superintendent
Honorable Raymond G. Farmer, NAIC Most Recent Past President and South Carolina Insurance Director
Honorable Dean L. Cameron, NAIC President-Elect and Idaho Insurance Director
Honorable Chlora Lindley-Myers, NAIC Vice President and Missouri Insurance Director
Honorable Andrew N. Mais, NAIC Secretary-Treasurer and Connecticut Insurance Commissioner
Andrew J. Beal, NAIC Chief Operating Officer (COO) and Chief Legal Officer (CLO)
Michael F. Consedine, NAIC Chief Executive Officer (CEO)

Please welcome the members of our NAIC Spring National Meeting virtual head table. I would also like to recognize our new members in this short video. [New Member Video Plays]

PRESIDENTIAL ADDRESS

Welcome to the 2021 Spring National Meeting of the National Association of Insurance Commissioners. It is an honor to welcome you this year as NAIC president. I know many of us continue to respond to the COVID-19 pandemic, and I want to thank you for your ongoing commitment to our mission of supporting state insurance regulators and ensuring that consumer protection keeps pace with our changing markets. This is our fourth virtual national meeting; and while this is no substitute for getting to meet with one another face to face, I know we will continue to make great strides towards all we are looking to accomplish this year and moving forward. The NAIC provides a framework for incredible collaboration across our 56 states and territories, and we are truly a member-driven organization.

Our workstreams, task forces, and national meetings like this bring together a broad spectrum of viewpoints and encourage discourse crucial to supporting our state-based system of insurance regulation. 2021 marks the 150th anniversary of the NAIC. Not many organizations can claim this milestone, and this longevity is a testament to the leadership provided by our membership and the dedicated NAIC employees who serve them.

On May 24, 1871, the NAIC held its first meeting. Twenty state delegates met for nine days to develop a plan for interstate insurance regulation serving the public good and building a strong foundation for the future of the insurance industry. Some of the leading underwriters of the day asserted that the founding of the NAIC and the collaboration it encouraged would probably do more to help American consumers understand the insurance market than anything the United States had yet seen. While NAIC founders assuredly did not meet via WebEx, the intent of their meeting is not so different from our meeting today. Gather regulators and stakeholders from around the country to discuss important issues and collaborate on ways to best serve the insurance consumers in their states.

Our history provides us with valuable lessons as we move forward. As the 2020 pandemic hit, we went back to our archive from the 1918 pandemic to see what regulators at the time had documented, what action they had taken to navigate unprecedented challenges, and how they protected consumers. While none of us know what the future holds, our work today will serve as a guidepost for future generations. Our thoughts, decisions and actions will provide valuable insight for those we represent now and for those who will follow in our footsteps. Those two fundamental traits, collaboration and coordination, have served us well and allowed us to adapt and evolve our regulation and the protection of consumers to the world around us. Throughout the NAIC’s history, we have seen that when tested, we have not just persevered, but we have adapted, improved, and come out as a stronger system. It is a system that has been tested by two World Wars, the Great Depression, the Great Depression, the Great Depression, the Great Depression, the Great Depression, the Great Depression, the Great Depression, the Great Depression.
Recession, two pandemics, and countless other challenges; and our system remains strong and resilient. The NAIC’s success lies in its member driven approach. The unique backgrounds, experiences and perspectives of our members in service to our common mission are central to the NAIC’s ability to adapt to a changing marketplace. Throughout our 150-year history, we have demonstrated that we can anticipate and absorb change, shift priorities, and work through numerous challenges to strengthen our collective efforts. As you look at our history, a pattern emerges. We are tested by the events of the day, and we respond, coming out the other side of the challenge stronger than before. In 1968, a subcommittee was formed to establish and study the applicability of data processing techniques. The Michigan Insurance Department developed a computer program, along with Michigan State University, to assist in the auditing of annual statements. This program proved successful and was transitioned to the NAIC, allowing insurers to input data into a single location accessible to all regulators. By 1974, the NAIC was working to develop early warning systems for solvency monitoring and developed capabilities for its database. By 1978, the NAIC had established itself as a trusted source for industry data. Today, the NAIC holds one of the most robust financial data repositories in the world. The NAIC membership came together to adopt financial regulation standards and in 1990 established the accreditation program. The strength of the system resides in the interdependence of state regulators and the corresponding need for a credible and robust state-based system focused on consumer protection and strong solvency oversight. I have seen these advancements firsthand. Following the financial crisis of 2008, the NAIC and state insurance regulators embarked on the Solvency Modernization Initiative (SMI), which included a review of international developments that would inform and influence the next decade of our work. The Solvency Modernization Initiative focused on enhancements to capital requirements, governance and risk management, group supervision, statutory accounting and financial reporting and reinsurance requirements, among other facets. The financial crisis, also led to a redoubling of the NAIC’s coordination and outreach with federal agencies, Congress and international counterparts to ensure our actions informed and were informed by global developments. Later in 2016, as it became clear life insurance beneficiaries were too often unaware of the benefits they were owed, NAIC members developed the life insurance policy locator, helping reunite beneficiaries with more than $1 billion in unclaimed benefits since its inception. These are important milestones, but represent only a small fraction of what we have done and what we will do through the NAIC. While it's challenging to encapsulate 150 years of accomplishments into a short speech, I would like to take a few minutes to share a short video looking at NAIC’s rich history. [NAIC 150th Anniversary Video Plays]

The past has taught us we can never take our eyes off the road ahead. Our past informs our present here at the NAIC, as well as our plans for the future. So let me turn now from our past to our present and future. I am proud to lead the dedicated members of the NAIC during this historic year, and I’m pleased to share some of our upcoming celebrations around the NAIC’s 150th anniversary. For the past several years, as we looked at the brands in anticipation of our 150th anniversary, it seems like an ideal time to explore other options and improve the performance of the overall look and feel of the NAIC for our members, our consumers and our industry. Working with our membership that NAIC has developed a new logo. In thinking about what makes the unique, we understood the success of our organization is due to the commitment of our members and how they work together to serve the public good. So, we worked on creating a logo which emphasizes the commissioner’s collaboration protecting consumers. I'm pleased to unveil our new logo for you now. [NAIC Logo Video Plays]

Embedded in that simple, intertwined "C" is all of our DNA from that first meeting. Our commissioners, their collaboration, the community they have created, and the consumers they protect. Our logo will be rolled out starting today. In the coming weeks, you will see revisions to our website and other documents that reflect who we are, but now let's look ahead to 2021 and the actions we are taking as part of our 150-year commitment to consumers and the insurance sector. We have some challenging work ahead of us this year. The NAIC and its members highlight its priorities annually. We determine what the priorities are during the first quarter of each year. Focus areas support the core mission of protecting consumers and safeguarding markets.

As you know, priorities can change quickly, especially with a major event like the pandemic. In 2020, the NAIC had a set of priorities in place, but it quickly pivoted to focus on COVID-19. Understandably, COVID-19 continues to be a topic we are intensely focused on. The pandemic challenged us throughout 2020, and while the vaccines offer hope that there is an end in sight, there is still much work to be done as vaccines roll out to create widespread immunity. We will continue to make sure policyholders have access to affordable testing and treatment and engage with the administration, Congress and federal agencies regarding ongoing COVID-19 recovery efforts. As court challenges continue over business interruption insurance coverage, the NAIC remains steadfast in its commitment to work with Congress and offer guidance around solutions for a federal mechanism to help ensure widespread availability of business interruption insurance for pandemic risks. For a more detailed account of the extraordinary efforts made by state insurance regulators and the NAIC throughout 2020, you can access three reports chronicling our efforts at www.naic.org.

In 2021, we will continue our focus on natural catastrophes and climate risk. We have focused on natural catastrophes for many years. The NAIC added climate risk to its charge in February 2005 at the annual commissioners’ conference. The Climate Change and Global Warming Task Force met for the first time at the 2006 Summer National Meeting and began working on a white paper released in 2008 titled "The Potential Impact of Climate Change on Insurance Regulation." In 2010, the insurer
Climate Risk Disclosure Survey was adopted. In 2020, we formed the Climate and Resiliency Task Force, which reports directly to the Executive Committee, a move signaling our increased engagement and commitment to this initiative. Task Force members are considering appropriate climate disclosures within the insurance sector; evaluating financial regulatory approaches; investigating innovative insurer solutions to climate risk and resiliency; and identifying sustainability, resilience and mitigation issues related to the insurance industry. The Climate Task Force began holding weekly calls in January 2021 to gain information and perspectives around the NAIC Climate Risk Disclosure Survey and other climate disclosures. This was done with the goal of developing recommendations to address who should report, what will be reported, and how data will be collected and used in the future. The NAIC is committed to engaging, protecting, educating and advocating for our consumers in the face of the historic challenges posed by climate risk. Once again, as we have in the past, we will rise to meet this challenge.

We will also continue our work on the critical issue of race and insurance. Over the years, the NAIC has tackled several issues related to bias and discrimination in the insurance sector. The first version of the Unfair Trade Practices Act was adopted by the NAIC in 1947. The act defines and prohibits unfair discrimination for life, health, property and casualty insurance. The act also prohibits, among other things, the refusal to insure, refusal to renew, and cancelation or limitation of coverage amounts because of sex, marital status, race, religion or national origin of the individual. In 1978, the NAIC issued a report making policy recommendations to address problems facing inner city homeowners who are having trouble securing adequate insurance due to the legacy of redlining. In the 1990s, state insurance departments aggressively pursued companies using zip codes or redlining as an early form of proxy discrimination, targeting mostly urban areas. The NAIC also worked to dismantle race-based premiums for life insurance. In 2000, NAIC members signed a resolution encouraging state regulators to investigate whether life insurers were charging black customers more than white customers for certain life policies. Last year, our members formed a Special Executive Committee to continue to address issues related to race and insurance, including a commitment to diversity, equity and inclusion (DE&I) within the NAIC and across the insurance industry. The response from our membership was tremendous, with almost all NAIC members joining the committee. In February this year, the NAIC shared its internal diversity, equity and inclusion framework, which is built on four pillars: the workforce, the workplace, its members and the community. The NAIC’s employees and leadership developed this framework collaboratively to drive change, promote accountability in the workplace, and offer the insurance sector a model to build similar programs. The NAIC will continue to lead by example in the areas of DE&I. Through the NAIC, the commissioners conducted research and held public forums to foster understanding and address concerns from within the insurance industry, consumer representatives and other interested parties. Our listen and learn efforts have given us much to consider as we develop a plan of short- and long-term initiatives. We are currently reviewing research and commentary to evaluate steps we can take to eliminate practices or barriers which potentially disadvantage people of color or historically underrepresented groups. To have so many members and stakeholders join the discussion will only further our efforts of having a diverse, inclusive member-led discussion. There are still a lot of work ahead as we strive to eliminate unfair discrimination, whether intentional or unintentional, within the insurance sector. We know this is a journey that will take continual effort, but we are up to the task.

Another focus area this year is big data and consumer data privacy. The insurance industry has always been data driven. The speed by which data is being utilized by both regulatory and insurance-focused functions was hastened by the pandemic. From online applications to accelerated underwriting, the immense amount of available public data is growing. Commissioners must not only stay up to date on current technology, but regulators must also understand how emerging technology may impact insurance consumers and the sector both positively and negatively. They must also ensure consumer data is protected, as we have seen an escalation in breaches across several sectors. The implications of big data and artificial intelligence, as well as consumer privacy, protection and cybersecurity, remain important issues for us in 2021 and beyond. Last year, the membership adopted the AI principles. These principles inform and articulate general expectations for businesses, professionals and stakeholders across the insurance industry. As we implement AI tools, these principles will serve as critical guideposts for any members. We will continue to engage in appropriate and informed regulation of big data driven insurance practices. The Innovation and Technology Task Force continues to research developments related to big data and algorithmic modeling and risk management practices, with the goal of releasing a report at the Fall National Meeting. Technological advancements, AI, and consumer data privacy protections cut across a wide range of activities and work groups. Our members will continue to engage with each other, state attorneys general, Congress, and federal and international agencies to share best practices and insights around the implementation of emerging technology while protecting the privacy and rights of the public we serve. State insurance regulators interact with their federal counterparts on a regular basis on cybersecurity matters. Director Farmer represents the NAIC on the Financial and Banking Information Infrastructure Committee, which is charged with coordinating efforts to improve the security and reliability of the infrastructure for financial markets. The NAIC participates in FBICIC calls with Treasury, Federal and state financial regulators and the Cybersecurity and Infrastructure Security Agency to share information around cyber activity. In addition to cyber information sharing, Treasury, state insurance regulators and the NAIC have collaborated to facilitate several tabletop exercises with insurers to explore cyber incidents, response and recovery. These exercises help regulators and the insurance industry test their ability to respond effectively to potential incidents. The NAIC is
committed to continuing to coordinate future exercises with additional state insurance departments, industry, and federal and state law enforcement officials.

Long-term care insurance (LTCI) also remains a focus. State insurance regulators have been grappling with the issue of LTCI for many years. This includes issues surrounding a shrinking market, the threat of current and future insolvencies, and the impact of large rate increases on our most vulnerable residents. As part of the initiatives around long-term care (LTC), the Long-Term Care Insurance (EX) Task Force was formed last year with commissioner level involvement to help determine the path forward. As a result of the hard work of the members in these groups, we have seen tangible progress towards the goals of the Task Force, including improved analysis of companies’ reserves, a pilot program for a uniform and efficient multi-state rate review process, and a principles document regarding reduced benefit options. We will continue ongoing efforts to improve the consistency around LTC rate review processes and remain focused on the consumer. We want to ensure that consumers are able to understand these increases and the available mitigation options so that they can choose the option that best aligns with their needs while maintaining affordability.

In addition to advancing our policy priorities, our members are overseeing the implementation of State Ahead and the development of our State Ahead 2.0 plan. State Ahead is NAIC’s the strategic blueprint for the future of our state system. Some highlights of this initiative include enhanced tools for state insurance departments, improved actuarial modeling resources, enhanced financial analysis tools, improved data modeling capabilities, and updated consumer resources. The goal of State Ahead remains to provide our members with the tools, talent and technology they need to ensure the U.S.’s ongoing preeminence as the largest single insurance market. Later this year, NAIC members will get together and build the strategy for State Ahead 2.0.

And like most things at the NAIC, we are not building this just for ourselves, but for the generations of regulators to come. As we imagine the future of insurance, I am sure that the NAIC will be at the forefront of progress and continue its legacy for years to come. The insurance market of 150 years ago doesn't look much like the market of today, but as we always have, we will continue to adapt and forecast what the insurance sector may look like five, 25, 50 or another 150 years from now. Today's priorities may be COVID-19, natural catastrophe and climate, race and insurance, AI, big data, consumer data, privacy protection, and LTC. but rest assured; while we have an eye on the issues of today, the members of the NAIC are constantly scanning forward to see what may be in the future to ensure this rich 150-year legacy will continue for another 150 years. We will, as we have been from the very beginning, be guided by our commitment to each other and the consumers we protect.

I want to thank those of you participating in this virtual Spring National Meeting. This is an important avenue for supporting our unique state-based system of insurance. I believe that as regulators, we make our best decisions when we consider as many different perspectives on issues as we can so that the decisions we ultimately make are as informed as they can possibly be. This is a member driven effort, and communication with one another and open discussions with stakeholders are vital to our consumer protection efforts. There are a number of important sessions in the days ahead, and I encourage you to engage as much as possible. At the end of the day, we can make consumer driven and data driven decisions that promote solid and stable markets for consumers to rely on. I look forward to working and connecting with each of you.

ADJOURNMENT

David Altmaier, NAIC President

My door is always open, and with that, I officially conclude this opening session of the 231st meeting of the National Association of Insurance Commissioners.
Synopsis of the NAIC Committee, Subcommittee and Task Force Meetings
Virtual 2021 Spring National Meeting
April 7–14, 2021

TO: Members of the NAIC and Interested Parties
FROM: The Staff of the NAIC

Committee Action
NAIC staff have reviewed the committee, subcommittee and task force reports and highlighted the actions taken by the committee groups during the Virtual 2021 Spring National Meeting. The purpose of this report is to provide NAIC members, state insurance regulators and interested parties with a summary of these meeting reports.

EXECUTIVE (EX) COMMITTEE AND PLENARY (Joint Session)
April 14, 2021
1. Adopted the report of the Executive (EX) Committee. See the Committee listing for details.
2. Adopted by consent the committee, subcommittee and task force minutes of the 2020 Fall National Meeting.
4. Received the report of the Life Insurance and Annuities (A) Committee. See the Committee listing for details.
5. Received the report of the Health Insurance and Managed Care (B) Committee. See the Committee listing for details.
6. Received the report of the Property and Casualty Insurance (C) Committee. See the Committee listing for details.
7. Received the report of the Market Regulation and Consumer Affairs (D) Committee. See the Committee listing for details.
8. Received the report of the Financial Condition (E) Committee. See the Committee listing for details.
9. Received the report of the Financial Regulation Standards and Accreditation (F) Committee. See the Committee listing for details.
10. Received the report of the Real Property Lender-Placed Insurance Model Act (#631).
15. Received a status report on state implementation of NAIC-adopted model laws and regulations.

EXECUTIVE (EX) COMMITTEE
April 14, 2021
1. Adopted the report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee, which met April 7 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee and Subcommittee took the following action:
   A. Adopted its March 16, 2021; Feb. 24, 2021; and 2020 Fall National Meeting minutes.
   B. Adopted the report of the Audit Committee, which met April 1 and took the following action:
      2. Received the 2020 audit report from RSM.
      3. Received an update on the 2020/2021 Service Organization Control (SOC) 1 and SOC 2 reviews.
   C. Adopted the report of the Information Systems (EX1) Task Force, which met March 24 and took following action:
      1. Adopted its 2020 Fall National Meeting minutes.
      2. Received an update on the 2021 NAIC System for Electronic Rate and Form Filing (SERFF) fiscal.
      3. Received an operational report on the NAIC’s information technology (IT) activities.
   D. Approved the exposure of the Solvency Workpaper Software Modernization – Implementation Preparation Phase fiscal for public comment.
   E. Approved the NAIC SERFF Modernization – Mobilization and Pilot Phase fiscal.
   F. Approved the State Based Systems (SBS) State Implementations 2021 fiscal.
   G. Approved the Property/Casualty (P/C) Rate Model Review Staffing Resources fiscal.
   H. Received a joint chief executive officer (CEO)/chief operating officer (COO) report.
   I. Discussed the development of the State Ahead 2.0 strategic plan.
2. Adopted the report of the Executive (EX) Committee, which met March 16 and Feb. 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee took the following action:
   A. Adopted the March 3 minutes of the Internal Administration (EX1) Subcommittee, including investment reports and recommendations on the NAIC’s long-term investment portfolio.
   B. Approved next steps for the Long-Term Care Insurance (LTCI) Legal Restructuring fiscal, which includes:
      1. Defer action by the Executive (EX) Committee until further deliberation can be completed.
   C. Approved the exposure of the SERFF Modernization – Mobilization and Pilot Phase fiscal for public comment.
   D. Approved the SBS State Implementations 2021 fiscal for public comment.
   E. Approved the exposure of the P/C Rate Model Review Staffing Resources fiscal for public comment.
   F. Appointed Commissioner Sharon P. Clark (KY) to serve on the National Insurance Producer Registry (NIPR) Board of Directors, effective April 9.
   G. Received an update on 2020 year-end financial results.
   H. Reviewed the NAIC Conflict of Interest Policy.
   I. Approved moving the Financial Stability (EX) Task Force from the Executive (EX) Committee to the Financial Condition (E) Committee.
   J. Approved the following non-regulator appointments to the SERFF Advisory Board: Birny Birnbaum (Center for Economic Justice—CEJ) as the consumer representative; Andrea Davey (Athena Annuity and Life Company) as a life insurance representative and vice chair; Phyllis Hollerbach (Zurich North America) as a health insurance representative; and Susan Gould (The Hanover Insurance Group) as a P/C representative.
   K. Appointed the following NAIC members to serve on the 2021 NAIC/Consumer Participation Board of Trustees: Commissioner Michael Conway (CO) as chair; Director Chlora Lindley-Myers (MO) as vice chair; Commissioner John F. King (GA); Commissioner Marlene Caride (NJ); Superintendent Russell Toal (NM); and Commissioner Jessica K. Altman (PA).
   L. Reappointed the following consumer representatives to serve on the 2021 NAIC/Consumer Participation Board of Trustees: Amy Bach (United Policyholders—UP); Brendan Bridgeland (Center for Insurance Research—CIR); Bonnie Burns (California Health Advocates); Brenda J. Cude (University of Georgia); Katie Keith (Out2Enroll); and Sarah Lueck (Center on Budget and Policy Priorities—CBPP).
   M. Approved an amendment to the NAIC Grant and Zone Fund Policy.
   N. Heard an update on NAIC cybersecurity.
   O. Selected Las Vegas, NV, as the site of the 2025 Fall National Meeting.

3. Adopted the report of the Climate and Resiliency (EX) Task Force. See the Task Force listing for details.
5. Adopted the report of the Innovation and Technology (EX) Task Force. See the Task Force listing for details.
6. Adopted the report of the Long-Term Care Insurance (EX) Task Force. See the Task Force listing for details.
7. Adopted 2021 charges for the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force.
8. Adopted the report of the Special (EX) Committee on Race and Insurance. See the Special Committee listing for details.
10. Received the 2020 annual report of the NAIC Designation Program Advisory Board.
11. Received a status report on implementation of the NAIC State Ahead strategic plan.
12. Received a status report on model law development efforts for amendments to: the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); the Annuity Disclosure Model Regulation (#245); the Life Insurance Disclosure Model Regulation (#580); the Unfair Trade Practices Act (#880); the Insurance Holding Company System Regulatory Act (#440); the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450); and new models, including the Real Property Lender-Placed Insurance Model Act, the Pet Insurance Model Act, and the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act.
13. Heard reports from NIPR and the Interstate Insurance Product Regulation Commission (Compact).

**Climate and Resiliency (EX) Task Force**

April 9, 2021

1. Adopted its 2020 Fall National Meeting minutes.
2. Received reports from its workstreams, which included the following action:
   A. Solvency Workstream: Reviewed the NAIC Capital Markets Bureau response to the International Association of Insurance Supervisors (IAIS) Global Insurance Market Report (GIMAR) data call, which will be published by the IAIS in June, and sent a referral to the Catastrophe Risk (E) Subgroup to consider adding more perils to the risk-based capital (RBC) charge.
   B. Innovation Workstream: Heard presentations regarding parametric insurance to fill coverage gaps for natural disasters.
   C. Technology Workstream: Heard a presentation from the NAIC Center for Insurance Policy and Research (CIPR) and Risk Management Services (RMS) regarding an application paper that shows how mitigation activities can reduce the risk of wildfire.

3. Received a recommendation from the Climate Risk Disclosure Workstream to continue using the existing framework whereby insurers may file either the NAIC Climate Risk Disclosure Survey or a report based on the Task Force on Climate-related Financial Disclosures (TCFD) for 2021. The workstream will continue its review of modifications to the climate risk disclosure to align with the TCFD and promote uniformity in reporting requirements.

4. Heard a presentation on the Building Code and Mitigation Workshop developed under the Pre-Disaster Mitigation Workstream in coordination with the CIPR and the Federal Alliance for Safe Homes (FLASH).

5. Heard a presentation on NAIC climate-related communications activities, including a consumer survey and an update of the home inventory mobile application.

6. Heard an update on federal activities related to climate risk.

7. Heard an update on international activities related to climate risk.

Government Relations (EX) Leadership Council
The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting.

Innovation and Technology (EX) Task Force
April 9, 2021

1. Adopted its 2020 Fall National Meeting minutes.

2. Adopted the report of the Big Data and Artificial Intelligence (EX) Working Group, including its March 29 minutes. During this meeting, the Working Group took the following action:
   A. Reviewed its 2021 charges and discussed why the former Big Data (EX) Working Group and the former Artificial Intelligence (EX) Working Group were merged into one group.
   B. Discussed developing an industry survey to research how insurance companies are using big data, algorithms and artificial intelligence (AI).
   C. Heard a presentation on the development and components of a model governance framework.

3. Adopted the report of the Speed to Market (EX) Working Group, including its Nov. 10, 2020, minutes. During this meeting, the Working Group took the following action:
   A. Heard an update from the Interstate Insurance Product Regulation Commission (Compact).
   B. Discussed the results of the Product Requirements Locator (PRL) survey and next steps.
   C. Received updates on the NAIC System for Electronic Rate and Form Filing (SERFF), including recent and upcoming releases and projects, and discussed the annual review of the product coding matrix (PCM) and uniform transmittal document (UTD) suggestions.

4. Discussed follow-up comments related to the request for information (RFI) responses on continuing specific “regulatory relief” or “regulatory accommodations” offered by states or necessary related to the COVID-19 pandemic. The Task Force took the following action:
   A. Adopted a motion to appoint a working group to: 1) examine e-commerce laws and regulations; 2) survey the states regarding federal Uniform Electronic Transactions Act (UETA) exceptions; 3) work toward meaningful, unified recommendations; 4) examine whether a model bulletin would be appropriate for addressing some of the identified issues; and 5) draft a proposed bulletin, if determined appropriate.
   B. Referred identified issues related to allowing online processes to be used for producer licensing continuing education (CE) to the Producer Licensing (D) Task Force and referred surplus lines issues—such as home state taxation, insurer eligibility, exempt commercial purchaser and diligent search—to the Surplus Lines (C) Task Force because it falls within its current workstream to amend the Nonadmitted Insurance Model Act (#870).
   C. Heard a report on the activities of the NAIC Innovation and Technology State Contacts group. The group met April 1 and discussed an insurer’s perspective on the open Insurance Data Link (openIDL) solution for improving state
insurance regulators’ access to data, parametric insurance products, and possible upcoming presentations from InsurTechs.

5. Heard presentations from State Farm and the United States Automobile Association (USAA) on their auto subrogation blockchain solution; Trellis Connect on its digital data-sharing application for personal lines of property/casualty (P/C) insurance; and Vero on its online risk and insurance advisor tool offering automated advice to help agents and individuals based on AI.

6. Received updates from the Special (EX) Committee on Race and Insurance, the Accelerated Underwriting (A) Working Group, the Property and Casualty Insurance (C) Committee, and the Privacy Protections (D) Working Group regarding their work on workstreams related to innovation and technology to ensure coordination of these activities.

**Long-Term Care Insurance (EX) Task Force**

**April 9, 2021**

1. Adopted its March 1, 2021, and 2020 Fall National Meeting minutes, which included the following action:
   A. Adopted 2021 proposed charges for the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup.

2. Received the report of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup, which met March 9 and Feb. 25 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to discuss the process for drafting the multistate rate review framework and form a drafting group.

3. Exposed the operational sections of the draft long-term care insurance (LTCI) multistate rate review framework for a 45-day public comment period ending May 24.

4. Received the report of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup, which met March 24 and March 11 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to discuss plans for addressing its 2021 charges. The Subgroup plans to meet in early May to begin work on its charges by discussing current innovative long-term care (LTC) wellness pilot programs and seeking stakeholder views of related regulatory issues that need to be addressed.

5. Heard a report on industry trends that could have an impact on the solvency of LTCI companies and factors affecting reserves.

7. Heard an update on the LTCI special data call. The Task Force continues to work with the consulting firm to develop a public report of the results.

**Special (EX) Committee on Race and Insurance**

**April 12, 2021**

1. Heard a report on its activities, including:
   A. Established five workstreams to develop initial recommendations.
   B. Met April 6 and March 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to receive the workstreams’ initial recommendations and to determine where to place the continued work in the NAIC committee structure.

2. Received status reports on the following workstreams:
   A. Workstream One: Research/analyze the level of diversity and inclusion within the insurance industry.
   B. Workstream Two: Research/analyze the level of diversity and inclusion within the NAIC and state insurance regulator community.
   C. Workstream Three: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the property/casualty (P/C) line of business.
   D. Workstream Four: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the life insurance and annuities line of business.
   E. Workstream Five: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the health insurance line of business.

3. Heard comments from interested parties on its 2021 proposed charges.

4. Exposed its 2021 proposed charges for a 30-day public comment period ending May 14.
INTERNAL ADMINISTRATION (EX1) SUBCOMMITTEE
See the Executive (EX) Committee listing for details.

Information Systems (EX1) Task Force
March 24, 2021 (in lieu of the Spring National Meeting)
1. Adopted its Nov. 20, 2020, minutes.
2. Received an update on the 2021 NAIC System for Electronic Rate and Form Filing (SERFF) fiscal.
3. Received an operational report on the NAIC’s information technology (IT) activities. The report provides updates for upcoming improvements, impacts to new state technology offerings from the NAIC, and general updates on the activities of the NAIC technology team.
4. Received a project portfolio update, including project status reports for 22 active technical projects and a summary of five projects recently completed.
5. Adjourned into regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE
April 12, 2021
1. Adopted its 2020 Fall National Meeting minutes.
2. Adopted the report of the Life Actuarial (A) Task Force. See the Task Force listing for details.
3. Adopted the report of the Accelerated Underwriting (A) Working Group, including its March 19 minutes. During this meeting, the Working Group took the following action:
   A. Heard an update from the ad hoc drafting group regarding progress made in drafting an educational report on accelerated underwriting in life insurance, which included the following plans:
      1. Meet every three weeks to maintain progress in drafting language to share with the Working Group.
      2. Work from the Nov. 16, 2020, outline distributed during the Nov. 17, 2020, Working Group meeting.
      3. Focus the draft narrowly to remain consistent with and avoid conflicts with the work of other NAIC groups, such as the Innovation and Technology (EX) Task Force, the Big Data and Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group.
      4. Share draft language with the Working Group and interested parties for comment as sections are completed.
4. Adopted the report of the Annuity Suitability (A) Working Group, including its March 25 and March 9 minutes. During these meetings, the Working Group took the following action:
   A. Adopted its Feb. 22 minutes, which included the following action:
      1. Discussed potential revisions to the draft frequently asked questions (FAQ) guidance document.
   B. Adopted its Dec. 14, 2020, minutes, which included the following action:
      1. Discussed the comments received by the Oct. 2, 2020, public comment deadline on the draft FAQ guidance document the Working Group is developing to assist the states with adoption and implementation of the revised Suitability in Annuity Transactions Model Regulation (#275), which added a best interest standard of conduct for insurers and producers.
   C. Continued its discussion of potential revisions to the FAQ guidance document and directed NAIC staff to revise the document based on the discussions to date and distribute the revised document for the Working Group’s discussion and possible adoption during a meeting in late April or early May.
5. Adopted the report of the Life Insurance Illustration Issues (A) Working Group, including its March 10 and Feb. 23 minutes. During these meetings, the Working Group took the following action:
   A. Continued making progress in the development of a one- to two-page consumer-oriented policy overview document in order to achieve its charge of improving the understandability of the life insurance policy summaries already required in Section 7B of the Life Insurance Illustrations Model Regulation (#582) and Section 5A(2) of the Life Insurance Disclosure Model Regulation (#580).
   B. Revised two alternative draft versions of the sample policy overview for term life policies based on comments received during a public comment period ending Aug. 28, 2020. One version shows the sample pre-underwriting; the other, after underwriting.
   C. Planned to consider during its next meeting a motion to bring revised versions of the policy overview and corresponding revised versions of Model #580 to the Committee for guidance to the Working Group on next steps.
6. Adopted an extension of the Request for NAIC Model Law Development requested by the Life Insurance Illustration Issues (A) Working Group to allow the Working Group to make agreed-upon revisions, so the Committee can have sufficient information to provide guidance to the Working Group on next steps.

7. Heard an update on the Special (EX) Committee on Race and Insurance Workstream Four. The primary conclusion of Workstream Four, which was reflected in the proposed Special Committee charges, was that it had only just started to delve into the practices and barriers that potentially disadvantage minority and underserved populations in the life insurance and annuities line of business.

8. Discussed and adopted modifications to its 2021 charges, specifically:
   A. Adopted a motion to disband the Annuity Disclosure (A) Working Group once the Executive (EX) Committee and Plenary consider adoption of the participating income annuity revisions to the Annuity Disclosure Model Regulation (#245), which were adopted and then held by the Life Insurance and Annuities (A) Committee at the 2018 Summer National Meeting.
   B. Disbanded the Retirement Security (A) Working Group, which has fulfilled its charge.

9. Discussed life insurer practices related to the COVID-19 pandemic:
   A. Heard from the Consumer Federation of America (CFA) regarding its letter requesting that the NAIC develop a model rule for life insurance underwriters who may delay or deny coverage for people who have or have had COVID-19.
   B. Heard from the Interstate Insurance Product Regulation Commission (Compact) regarding life insurance application questions related to COVID-19 and COVID-19 vaccinations.
   C. Discussed social media misinformation that COVID-19 vaccinations will affect policyholders’ life insurance benefits, which it will not.

Life Actuarial (A) Task Force
April 8, 2021
1. Adopted its March 18, 2021; March 11, 2021; March 4, 2021; Feb. 25, 2021; Feb. 11, 2021; Feb. 4, 2021; Jan. 28, 2021; Jan. 21, 2021; and Dec. 17, 2020, minutes, which included the following action:
   A. Adopted its 2020 Fall National Meeting minutes.
   B. Discussed amendment proposal 2021-02, which would extend the use of the 2020 nonforfeiture rates through June 2022, instead of through December 2021. After discussion, the amendment proposal was withdrawn.
   C. Discussed questions received on the economic scenario generator (ESG).
   D. Heard an update on the ESG project.
   E. Heard a presentation from Conning on the equity model.
   F. Heard an overview of ESG documents that were exposed for a public comment period ending March 22. The comment period for all previous ESG exposures was also extended to March 22.
   G. Adopted amendment proposal 2020-11.
   H. Discussed amendment proposal 2019-33.
   I. Exposed amendment proposal 2020-12 for a 50-day public comment period ending March 26.
   K. Discussed comments on the “Criteria to Assess VM-20 Solutions for Modeling Non-guaranteed YTR Reinsurance.”
   L. Heard an update on recent changes to Internal Revenue Code (IRC) Section 7702 that replaces the hard-coded 4% rate for the cash value accumulation test and the 6% rate used in the net single premium calculation for the guideline premium test with an indexed rate.
   M. Exposed the ESG scenario statistics and reports, the Scenario Picker Tool, and the Stochastic Exclusion Ratio Test (SERT) documents for a 45-day public comment period ending March 7.
   N. Exposed a spreadsheet summarizing the decisions needed for the Treasury, equity and corporate models and a spreadsheet showing the parameters of the Treasury model for a public comment period ending Jan. 31.
2. Adopted the report of the Experience Reporting (A) Subgroup, including its March 2 minutes. During this meeting, the Subgroup took the following action:
   A. Received an update on the mortality experience data collection project. There are plans to start developing mandatory reporting of variable annuity data and to continue work on evaluating actuarial aspects of accelerated underwriting in 2021.
3. Adopted the report of the Guaranteed Issue (GI) Life Valuation (A) Subgroup, which has not met since the 2020 Fall National Meeting. The Subgroup is in a dormant/monitoring mode given that there have been no new known studies of GI life mortality that could prove useful in formulating a new prescriptive requirement for the reserves for GI life products.
4. Adopted the report of the Indexed Universal Life (IUL) Illustration (A) Subgroup, which has not met since the 2020 Fall National Meeting. The Subgroup plans to meet again after any significant market developments following the adoption of Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest Sold on or After November 25, 2020 (AG 49-A).

5. Adopted the report of the Longevity Risk (E/A) Subgroup, which has not met since the 2020 Fall National Meeting. A drafting group has been formed to contemplate reserve requirements related to pension risk transfer (PRT) and longevity reinsurance (LR) transactions that are more specific to the PRT reserves and are not solely related to the longevity component. The Subgroup will reconsider C-2 risk-based capital (RBC) for PRT products or LR transactions after reviewing the drafting group’s recommendations for the resolution of identified issues.

6. Adopted the report of the Variable Annuities Capital and Reserve (E/A) Subgroup, which has not met since the 2020 Fall National Meeting. The Subgroup will monitor the results of companies implementing the Variable Annuity Framework and stands ready to consider any requests of the Task Force or the Life Risk-Based Capital (E) Working Group.

7. Adopted the report of the Valuation Manual (VM) -22 (A) Subgroup, including its March 17, March 3, Feb. 24, Feb. 10, Feb. 3, Jan. 27 and Jan. 20 minutes. During these meetings, the Subgroup took the following action:
   A. Voted to use two risk categories for VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, valuations.
   B. Tabled a motion to retain the language in Section 5A of VM-20, Requirements for Principle-Based Reserves for Life Products, that allows for the aggregation of products with significantly different risk profiles if the products are managed as part of an integrated risk-management process.
   C. Voted to retain the SERT language in Section 6A of VM-20.
   D. Discussed the timing of the VM-22 field test, which is scheduled for February 2022 through June 2022.
   E. Discussed the preliminary framework elements for fixed annuity principle-based reserving (PBR) proposed by the American Academy of Actuaries (Academy).
   F. Formed a PRT drafting group to look at issues surrounding PRT business.

8. Exposed amendment proposal 2020-10 for a 45-day public comment period ending May 25.

9. Discussed and provided a response to comments on the ESG.

10. Heard an update from the Society of Actuaries (SOA) on research and education.

11. Heard an update from the Academy Life Practice Council.

13. Exposed amendment proposal 2021-04 for a 21-day public comment period ending April 28.

14. Exposed amendment proposal 2021-03 for a 25-day public comment period ending May 3.

15. Re-exposed amendment proposal 2020-12 for a 21-day public comment period ending April 28.

16. Heard an update from NAIC staff on the mortality data collection project.

### HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

**April 12, 2021**

1. Adopted its 2020 Fall National Meeting minutes.

2. Heard a presentation from the Biden administration on its federal legislative and administrative initiatives and priorities. The presentation included a discussion of the future of the health insurance marketplaces, which highlighted the sharp decrease in the uninsured after 2010, followed by an increase since 2016, and how minority rates of the uninsured were persistently higher in 2019 than for non-minorities. Enrollment in the marketplaces has steadied, and insurer participation in the marketplaces has improved, but premium cost remains a challenge. The presentation discussed how the federal American Rescue Plan Act of 2021 (ARPA) could address some of the marketplace premium cost issues. The presentation also provided updates on the number of individuals that have enrolled to date in the marketplaces using the current special enrollment period, which has been extended to Aug. 31. The presentation also touched on the consumer protections regarding surprise bills included in the recently enacted federal No Surprises Act (NSA). The Biden administration’s actions to address the COVID-19 pandemic under the federal Families First Coronavirus Response Act (FFCRA) and the federal Coronavirus Aid, Relief, and Economic Security (CARES) Act was also discussed.

3. Adopted the report of the Consumer Information (B) Subgroup, including its April 1 minutes. During this meeting, the Subgroup took the following action:
   A. Discussed potential topics for the Subgroup to address in 2021, such as the ARPA, the claims process, and the NSA.
   B. Discussed potential products for the Subgroup to develop in 2021, such as a series of briefs on claims, updating the “Frequently Asked Questions on Health Care Reform” (FAQ document), and developing new products related to the NSA and the ARPA.
4. Adopted the report of the Health Innovations (B) Working Group, including its March 26 minutes. During this meeting, the Working Group took the following action:
   A. Heard presentations on telehealth coverage issues from the Center for Connected Health Policy (CCHP), the American Psychiatric Association (APA), and Regence.
   B. Heard a presentation from Washington regarding changes to its provider network review policies resulting from a greater demand for telehealth services during the COVID-19 pandemic.
   C. Discussed the effects of increased premium tax credit payments on federal funding for state reinsurance programs.
5. Adopted the report of the Health Actuarial (B) Task Force. See the Task Force listing for details.
6. Adopted revised 2021 charges for the Health Actuarial (B) Task Force.
7. Adopted the report of the Regulatory Framework (B) Task Force. See the Task Force listing for details.
8. Received the draft [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM Model Act). The Committee plans to meet following the Spring National Meeting to discuss the proposed PBM Model Act and determine its next steps.
9. Adopted the report of the Senior Issues (B) Task Force. See the Task Force listing for details.
10. Heard an update on the work of the Special (EX) Committee on Race and Insurance Workstream Five related to its charge to examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the health insurance line of business and make recommendations on actions steps. The Workstream adopted an initial report March 23 and forwarded its recommendations to the Special Committee for consideration.
11. Heard a discussion of the Committee’s subgroup, working group and task force planned work for 2021.

Health Actuarial (B) Task Force
The Health Actuarial (B) Task Force did not meet at the Spring National Meeting.

Regulatory Framework (B) Task Force
March 25, 2021 (in lieu of the Spring National Meeting)
1. Adopted its March 18, 2021; March 1, 2021; and 2020 Fall National Meeting minutes, which included the following action:
   A. Adopted the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM Model Act).
   B. Discussed comments received on the draft PBM Model Act.
2. Adopted the report of the Accident and Sickness Insurance Minimum Standards (B) Subgroup, which has not met since December 2019 due to the COVID-19 public health emergency and the resignation of one of its co-chairs. Due to the recent appointment of a new co-chair, it is anticipated that the Subgroup will resume its meetings in late April.
3. Adopted the report of the Employee Retirement Income Security Act (ERISA) (B) Working Group, which has not met since the 2020 Fall National Meeting. It is anticipated that the Working Group will likely next meet sometime following the Spring National Meeting to discuss any updates regarding association health plans (AHPs), including the status of the appeal in State of New York et al. v. U.S. Department of Labor et al. The Working Group also could discuss the U.S. Supreme Court’s decision in Rutledge v. Pharmaceutical Care Management Association with respect to any ERISA preemption issues. It then plans to adjourn into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
4. Adopted the report of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, including its Jan. 28 minutes. During this meeting, the Working Group heard presentations from stakeholders—consumers, providers and plans—on their experiences with the implementation of and compliance with the MHPAEA’s mental health parity requirements. The Working Group also met March 10 in regulator-to-regulator session, pursuant to paragraph 2 (pending investigations which may involve either the NAIC or any member in any capacity), paragraph 3 (specific companies, entities or individuals) and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.
5. Adopted the report of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, which has not met since October 2020 because it completed its work. The Subgroup could resume meeting to start work on a new 2021 charge to develop a white paper on issues related to the state regulation of certain pharmacy benefit manager (PBM) business practices.
6. Heard an update from the Center on Health Insurance Reforms (CHIR) on its work related to federal Affordable Care Act (ACA) implementation; recently enacted federal laws, such as the federal No Surprises Act (NSA) and the federal American Rescue Plan Act of 2021 (ARPA); and other issues of interest to state insurance regulators. The update included a discussion of the CHIR’s efforts to assess the impact of the extended special enrollment periods (SEPs) into the federal health insurance exchanges, as provided in the ARPA, on access and affordability of coverage and how it will be
implemented. The CHIR is continuing its work to track state regulatory reforms affecting the individual market, such as the ACA Section 1332 waiver program, including whether the states are looking at other options, in addition to reinsurance programs, in light of the ARPA that could positively affect the affordability of comprehensive coverage. The CHIR is also continuing its work of tracking state regulatory approaches to the COVID-19 pandemic. The presentation also highlighted some of the CHIR’s future work on network adequacy, standardized health plans, and non-comprehensive coverage arrangements.

7. Heard a presentation on the NSA. The presentation highlighted the NSA’s scope, including what types of plans it covers and where its protections apply. The NSA does not apply to short-term plans and excepted benefits plans. It also does not apply to ground ambulance services, but it does apply to air ambulance services. The presentation described how the NSA protects patients from balance bills by requiring that patients be held responsible for in-network cost sharing only and barring providers from sending or collecting a bill for amounts other than in-network cost sharing. The presentation also discussed a key component of the NSA; i.e., determining the payment amount for out-of-network care when there is a payment dispute. The presentation highlighted the NSA’s enforcement mechanisms and the role that the states will have. Lastly, the presentation discussed what questions remain with the NSA with respect to states that currently have balance billing laws and those that do not. The presentation also discussed next steps regarding the NSA, including the anticipated federal regulations.

8. Heard a discussion of the U.S. Supreme Court’s decision in Rutledge v. Pharmaceutical Care Management Association and its potential effect on the ability of state insurance regulators to regulate certain PBM business practices. The Task Force anticipates more discussion of the case as part of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup’s future work to develop a white paper on state options with respect to regulating PBM business practices and the ERISA (B) Working Group’s discussion of the case’s potential impact with respect to ERISA preemption.

Senior Issues (B) Task Force
Feb. 23, 2021 (in lieu of the Spring National Meeting)
1. Discussed its 2021 agenda heard comments from interested parties regarding suggested topics to address.
2. Agreed that the Long-Term Care Insurance Model Update (B) Subgroup should begin its work.

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE
April 13, 2021
1. Adopted its 2020 Summer National Meeting and 2020 Fall National Meeting minutes.
2. Adopted the report of the Casualty Actuarial and Statistical (C) Task Force. See the Task Force listing for details.
3. Adopted the report of the Surplus Lines (C) Task Force. See the Task Force listing for details.
4. Adopted the report of the Title Insurance (C) Task Force. See the Task Force listing for details.
5. Adopted the report of the Workers’ Compensation (C) Task Force. See the Task Force listing for details.
6. Adopted the report of the Cannabis Insurance (C) Working Group, including its March 11 minutes. During this meeting, the Working Group took the following action:
   A. Discussed its 2021 work plan, which includes:
      1. Consider drafting a memorandum to the Government Relations (EX) Leadership Council to consider if the NAIC should take a position on the federal Secure and Fair Enforcement (SAFE) Banking Act of 2019.
      2. Consider drafting a memorandum to the Government Relations (EX) Leadership Council asking that it study the status of issues related to the U.S. Department of Justice (DOJ) “Cole” memorandum.
      3. Hold a fact-finding hearing to hear from insurance companies on barriers they experience in expanding coverage availability in this space. Develop a report on the findings.
      4. Consider drafting a memorandum to the Producer Licensing (D) Task Force asking that it examine how cannabis-related convictions may be preventing licensing approvals.
   B. Adopted its Nov. 17, 2020, minutes.
   C. Heard federal updates regarding the National Flood Insurance Program (NFIP) and the U.S. Department of Housing and Urban Development (HUD) proposed rule to change Federal Housing Administration (FHA) regulations to allow lenders to accept private flood insurance policies on FHA-insured properties located in Special Flood Hazard Areas (SFHAs).
   D. Heard a presentation regarding a product that runs storm surge and wind velocity models prior to a storm making landfall. The product provides data down to the individual address that is geocoded with a latitude and longitude.
   E. Heard presentations from Alabama, California, Louisiana, Mississippi and Texas regarding recent catastrophic events.
8. Adopted the report of the Pet Insurance (C) Working Group, including its April 8 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its March 26 minutes, which included the following action:
      1. Adopted its March 4 minutes, which included the following action:
         a. Adopted its Feb. 18 minutes, which included the following action:
            1. Discussed Section 7 and Section 8 of the draft Pet Insurance Model Act
            2. Discussed Section 3D of the draft Pet Insurance Model Act.
            3. Discussed policy renewals as they relate to the draft Pet Insurance Model Act.
            4. Discussed unresolved issues within the draft Pet Insurance Model Act.
   9. Adopted the report of the Terrorism Insurance Implementation (C) Working Group, which has not met since the 2020 Fall National Meeting.
10. Adopted the report of the Transparency and Readability of Consumer Information (C) Working Group, including its March 15 minutes. During this meeting, the Working Group:
   A. Adopted its Feb. 4, 2021, and Nov. 17, 2020, minutes, which included the following action:
      1. Discussed the need for consumer disclosures regarding significant premium increases on property/casualty (P/C) products.
      2. Discussed a work plan for drafting a best practices document regarding significant premium increases on P/C products.
   B. Finalized drafting group assignments to begin drafting a best practices document regarding significant premium increases on P/C products and discussed the topics each drafting group was responsible for drafting.
12. Heard an update on recent workshops related to disaster preparedness and response, including roundtables held with the Federal Emergency Management Agency (FEMA).
13. Appointed an NAIC/FEMA Advisory Group with the following charge: The NAIC/FEMA Advisory Group will assist state insurance regulators in engaging and collaborating with FEMA on an ongoing basis by establishing a process for the oversight, prioritization and reporting of disaster-related regional workshops and other exercises to improve disaster preparation and resilience.
14. Heard a presentation related to insurance rating for dog breeds, including a request for state insurance regulators to collect additional rating data and not allow the use of dangerous dog breed lists.
15. Discussed the status of proposed charges related to P/C insurance issues being developed by the Special (EX) Committee on Race and Insurance.

Casualty Actuarial and Statistical (C) Task Force
March 9, 2021 (in lieu of the Spring National Meeting)
1. Adopted its Feb. 17, 2021; Feb. 9, 2021; Feb. 2, 2021; Dec. 30, 2020; and 2020 Fall National Meeting minutes, which included the following action:
   B. Adopted the report of the Actuarial Opinion (C) Working Group.
   C. Adopted the report of the Statistical Data (C) Working Group.
   D. Discussed Ref #2019-49: Retroactive Reinsurance Exception, as referred by the Statutory Accounting Principles (E) Working Group.
   E. Discussed the Casualty Actuarial Society (CAS) decision to rescind the three Statement of Principles related to ratemaking, reserving and valuation.
2. Reported that it met Feb. 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.
4. Adopted the report of the Statistical Data (C) Working Group.
5. Adopted a letter to the CAS in opposition of the CAS’s rescission of its Statement of Principles Regarding Property and Casualty Insurance Ratemaking.
6. Received a report on NAIC rate model reviews. In 2019, with existing actuarial, legal and information technology (IT) staff, the NAIC: a) drafted a contractual agreement, called the Rate Review Support Services Agreement (Agreement), to be used so a state can gain access to a shared model database and can request a rate model technical review from the NAIC; b) developed the initial NAIC rate model technical review process with a consulting actuary; and c) created a shared model database for confidential regulatory communication. Twenty-eight states have contracted with the NAIC using the Agreement and, to date, the NAIC has reviewed 31 rate filings and objection responses for nine states.

7. Heard reports from professional actuarial associations.

Surplus Lines (C) Task Force
The Surplus Lines (C) Task Force did not meet at the Spring National Meeting.

Title Insurance (C) Task Force
March 16, 2021 (in lieu of the Spring National Meeting)
1. Adopted its Feb. 23 minutes, which included the following action:
   A. Adopted its Oct. 21, 2020, minutes.
   B. Discussed its 2021 work plan.
   C. Heard the first part of a presentation on the effects of the COVID-19 pandemic on the title insurance industry.
2. Discussed its revised 2021 work plan, which included:
   A. Exploring the effects of the COVID-19 pandemic on the title insurance industry through presentations.
   B. Revising the title insurance consumer shopping tool template, How to Buy Title Insurance in [Insert State], through member drafting sessions beginning March 23. Nine states are participating in the drafting sessions.
   C. Monitoring issues and developments occurring in the title insurance industry, including profitability and claims settlement.
   D. Assisting the Antifraud (D) Task Force in combating fraud through joint calls and meetings.
   E. Consulting with the Consumer Financial Protection Bureau (CFPB) through regulator-to-regulator calls.
   F. Determining the role of the Task Force in exploring race and insurance implications in the title insurance space.
3. Heard the second part of a presentation on the effects of the COVID-19 pandemic on the title insurance industry.
4. Discussed comments received on proposed revisions to the title insurance consumer shopping tool template, How to Buy Title Insurance in [Insert State].

Workers’ Compensation (C) Task Force
March 15, 2021 (in lieu of the Spring National Meeting)
1. Adopted its 2020 Fall National Meeting minutes.
2. Heard a presentation from the International Association of Industrial Accident Boards and Commissions (IAIABC) regarding data it has been collecting on COVID-19 workers’ compensation claims. The basic measures that have been collected include the number of claims received each year, the number of fatalities, the denial rates, and the rates per 100,000 workers in those claims. This data reported on was taken from the first reports of injury filed in 19 states.
3. Heard a presentation from the National Council on Compensation Insurance (NCCI) regarding the COVID-19 pandemic. The presentation included information on workers’ compensation presumptions regarding compensability for employees affected by COVID-19, combined ratios, COVID-19 loss summaries, and other legislative issues being introduced this year.

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE
April 13, 2021
1. Adopted its 2020 Fall National Meeting minutes.
3. Adopted revisions to the four market analysis chapters of the Market Regulation Handbook.
4. Adopted a 14-day limitation on MCAS filing extension requests.
5. Adopted a requirement for companies to identify MCAS filing attesters by both line of business and by state. This will be implemented for the 2021 data to be reported in 2022.
6. Heard a presentation on lead generators and improper marketing of health insurance. These issues have been monitored by a broad consortium of state insurance regulators with expertise in antifraud, market conduct and health insurance. The Antifraud (D) Task Force will discuss potential next steps on this issue, which could include the appointment of a new working group with new charges under the Antifraud (D) Task Force.
7. Adopted the report of the Antifraud (D) Task Force. See the Task Force listing for details.
9. Adopted the report of the Producer Licensing (D) Task Force. See the Task Force listing for details.
10. Adopted the report of the Market Conduct Annual Statement Blanks (D) Working Group, including its March 23 minutes.
   During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 24 minutes, which included the following action:
      1. Adopted its Nov. 16, 2020, minutes.
      2. Heard an update on the travel MCAS.
      3. Heard an update on the other health MCAS.
      4. Discussed a new MCAS proposal submission form.
      5. Discussed the reporting of complaint and lawsuit data elements within the home and auto MCAS reporting blanks.
      6. Discussed the MCAS lawsuit definitions.
      7. Discussed the addition of accelerated underwriting data elements to the life MCAS and digital claims data elements to the home and auto MCAS lines of business.
   B. Heard an update on the travel MCAS. The subject-matter expert (SME) group has met to discuss the definitions; the group’s next meeting is April 19.
   C. Heard an update on the other health MCAS. The SME group is focusing on short-term limited-duration (STLD) insurance products, and it plans to vote on the STLD blank and definitions prior to June 1. Work on other health products will begin after the STLD work is complete.
   D. Heard an update on the accelerated underwriting and digital claims MCAS discussions. The next SME group meetings for accelerated underwriting and digital claims MCAS will be held April 15.
   E. Discussed the placement of complaint and lawsuit data elements within the home and auto MCAS reporting blanks. The Working Group will continue this discussion during its April 28 meeting.
   F. Discussed the MCAS lawsuit definitions. The Working Group will continue this discussion during its April 28 meeting.
   G. Reported that an updated version of the MCAS proposal submission form has been posted to the Working Group’s web page.
   H. Adopted a motion to add a note in the disability income MCAS blank clarifying that Schedule 3 is designed to only collect claims information about claims that have payment.
11. Adopted the report of the Market Conduct Examination Guidelines (D) Working Group, including its March 30 minutes.
   During this meeting, the Working Group took the following action:
   A. Reviewed its 2021 charges.
   B. Discussed its potential tasks for 2021.
   C. Discussed new title insurance standardized data requests (SDRs) to address in force policies and claims for inclusion in the reference documents of the Market Regulation Handbook.
12. Adopted the report of the Market Analysis Procedures (D) Working Group, including its March 19 minutes. During this meeting, the Task Force took the following action:
   A. Adopted its Feb. 25 minutes, which included the following action:
      1. Adopted its Jan. 27 minutes, which included the following action:
         a. Adopted its Nov. 12, 2020, minutes.
         b. Discussed revisions to the MCAS Best Practices Guide.
         c. Discussed a 14-day limitation for MCAS extension requests.
         d. Discussed the MCAS attestation process.
         e. Heard an update on the small group reviewing and drafting updates to the Market Regulation Handbook chapters on market analysis.
         f. Discussed training opportunities for market regulation analysts.
      2. Discussed revisions to the MCAS Best Practices Guide.
      3. Discussed a 14-day limitation for MCAS extension requests.
      4. Discussed the MCAS attestation process.
      5. Reported that the small group reviewing and drafting updates to the Market Regulation Handbook chapters on market analysis had completed its work. The proposed revisions were exposed for a public comment period ending March 17.
      6. Discussed training opportunities for market regulation analysts.
   B. Adopted revisions to the MCAS Best Practices Guide, which included:
      1. Identify additional best practices and highlighting them in an appendix.
      2. Recommend a 14-day extension limitation.
      3. Reflect changes since the MCAS Best Practices Guide was created in 2014.
C. Adopted a 14-day limitation on MCAS filing extension requests. The MCAS filing submission tool will only allow extensions up to 14 calendar days, but it will allow multiple extension requests if additional time is required. This requires a re-coding of the submission tool. Implementation will be no earlier than 2021 data filed in 2022.

D. Adopted a proposal to change the MCAS filing blanks to require companies to identify MCAS filing attesters by both line of business and by state. This change should be implemented for the 2021 data year reported in 2022.

E. Adopted revisions to the four market analysis chapters of the Market Regulation Handbook. The revisions updated the market analysis chapters to reflect changes since the last revisions of the chapters.

F. Discussed market analysis training suggestions and opportunities.

G. Reported that NAIC staff will submit a Uniform System Enhancement Request (USER) form to the Market Information Systems Research and Development (D) Working Group in response to a notification from the industry about the file size limitation when uploading filings into the MCAS.

13. Adopted the report of the Privacy Protections (D) Working Group, including its March 29 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its 2020 Fall National Meeting minutes.
   B. Received NAIC status reports on federal and state privacy legislation.
   C. Reviewed the 2021 NAIC member-adopted strategy for consumer data privacy protections.
   D. Discussed comments received on 2020 Fall National Meeting verbal gap analysis.
   E. Announced the consumer privacy protections panel for the virtual NAIC Insurance Summit in June.

Antifraud (D) Task Force

March 24, 2021 (in lieu of the Spring National Meeting)

1. Adopted its Nov. 16, 2020, minutes.
2. Received the report of the Antifraud Education Enhancement (D) Working Group. The Working Group held a webinar on Feb. 11 from CARCO regarding the mobile capabilities it can provide state insurance departments to assist with fighting insurance fraud. The Working Group will be holding an investigator safety training on June 2.
3. Received the report of the Antifraud Technology (D) Working Group. The Working Group noted that the revision of Antifraud Plan Guideline (#1690) was the first step in its charge to “review and provide recommendations for the development of an Antifraud Plan Repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions.” The Working Group’s next step is to build a template for the industry to use when creating their antifraud plans. Once the template is finalized, the Working Group will work with NAIC staff to finalize recommendations for the Antifraud Plan Repository.
4. Discussed its 2021 charges, including the monitoring of insurance fraud related to the COVID-19 pandemic. The Task Force will continue to monitor the insurance fraud trends generated by the COVID-19 pandemic and to bring general awareness to the states, the industry and the public about possible threats.
5. Received an update on the NAIC Online Fraud Reporting System (OFRS) redesign project. The NAIC is continuing its work on the redesign of the OFRS, with beta testing on schedule to begin in April.
6. Heard reports on antifraud activity from NAIC staff, as well as the National Insurance Crime Bureau (NICB) and the Coalition Against Insurance Fraud (CAIF).

Market Information Systems (D) Task Force

March 22, 2021 (in lieu of the Spring National Meeting)

1. Adopted its 2020 Fall National Meeting minutes.
2. Reviewed its 2021 charges and assigned the charge to “develop recommendations for the incorporation of artificial intelligence (AI) abilities in NAIC Market Information Systems (MIS) for use in market analysis” to the Market Information Systems Research and Development (D) Working Group.
3. Adopted the report of the Market Information System Research and Development (D) Working Group, which met March 10 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. During this meeting, the Working Group took the following action:
   A. Adopted proposed changes to the coding structure of the NAIC Regulatory Information Retrieval System (RIRS). The proposal will be exposed on the Task Force web page.
   B. Reviewed the MIS data analysis metrics and recommendations.
   C. Adopted changes to the Uniform System Enhancement Request (USER) process reflecting the agile approach used by the NAIC.
D. Discussed how to proceed with the charge to develop recommendations for the incorporation of AI abilities in the NAIC MIS for use in market analysis.

4. Adopted the MIS data analysis metrics and recommendations.

5. Reviewed outstanding USER forms. NAIC staff will check on the status of the implementation of USER form 10069B to add complaint codes for lender-placed insurance in the NAIC Complaints Database System (CDS).

Producer Licensing (D) Task Force

March 26, 2021 (in lieu of the Spring National Meeting)

1. Adopted its Nov. 13, 2020, minutes.

2. Heard an update on the state implementation of online examinations. Thirty-two states have implemented online examinations, and three states are scheduled to implement online examinations by the end of April. The Task Force co-chairs polled the remaining states, and 13 additional states are moving toward implementation of remote examinations. Only three states have decided not to implement remote examinations at this time. The Producer Licensing Uniformity (D) Working Group will review the examination standards in the State Licensing Handbook to ensure that it is consistent with the state practices of implementing remote examinations.

3. Heard a briefing on the National Association of Registered Agents and Brokers Reform Act of 2015 (NARAB II), which is a federal law that sets nonresident producer license qualifications on a multi-state basis. The briefing addressed the impact on state producer licensing and included an overview of the National Association of Registered Agents and Brokers (NARAB) structure and governance, the timeline of activities since the adoption of NARAB II, and the responsibilities of the NARAB board.

4. Adopted the report of the Producer Licensing Uniformity (D) Working Group, including its March 18 minutes. During this meeting, the Working Group took the following action:
   A. Discussed licensing standards for pet insurance. The Working Group discussed three options:
      1. Confirm that the current uniform licensing standards for pet insurance are the correct policy direction.
      2. Recommend that pet insurance become a core limited line that all states shall adopt.
      3. Recommend that the property/casualty (P/C) major lines of authority be required to sell pet insurance.

5. Adopted the report of the Uniform Education (D) Working Group, including its March 2 minutes. During this meeting, the Working Group took the following action:
   A. Discussed the NAIC Continuing Education Reciprocity (CER) Agreement – 2019 Version, which 44 jurisdictions have signed.
   B. Discussed exam pass rates and a new process of obtaining and posting annual state exam pass rates from testing vendors.
   C. Discussed continuing education (CE) course instructor requirements and how to create greater uniformity among the states.

6. Received a report from the National Insurance Producer Registry (NIPR) Board of Directors. NIPR launched a major upgrade to its Attachments Warehouse application used to enable insurance producers and other licensees to upload licensing-related documents for review by state insurance regulators. NIPR processed 38 million credentialing and report transactions in 2020, a 5.2% increase from 2019. NIPR had $47.9 million in revenue in 2020, a 5.7% increase from 2019. The NIPR Board of Directors approved the 2021–2023 NIPR Strategic Plan – Our Bridge to the Future. The plan has the following three areas of focus: a) engaged and empowered team; b) customer-focused excellence; and c) high-quality and reliable technology.

7. Heard comments from the American Council of Life Insurers (ACLI) on how the NAIC’s initiatives on race and insurance relate to insurance producers and the desire to increase the number of minority insurance producers.

8. Discussed the Procedures for Amending Uniform Licensing Applications. These procedures set forth the process for making changes to the applications while maintaining stable applications that comply with state statutes and regulations.

9. Reported that the Task Force will be receiving a referral from the Special (EX) Committee on Race and Insurance and the Cannabis Insurance (C) Working Group on whether prior criminal charges are impeding individuals from obtaining an insurance producer license.

FINANCIAL CONDITION (E) COMMITTEE

April 13, 2021

1. Adopted its March 8, 2021, and 2020 Fall National Meeting minutes, which included the following action:
   A. Adopted an updated request from the Mortgage Guaranty Insurance (E) Working Group for an extension to draft amendments to the Mortgage Guaranty Insurance Model Act (#630).
B. Adopted the following new 2021 charge for the Qualified Jurisdiction (E) Working Group, including renaming the Working Group to the Mutual Recognition of Jurisdictions (E) Working Group and repositioning it to report directly to the Committee:
1. The Mutual Recognition of Jurisdictions (E) Working Group will “[d]evelop a process for evaluating jurisdictions that meets the NAIC requirements for recognizing and accepting the NAIC Group Capital Calculation (GCC).”
C. Adopted proposed recommendations to the Financial Regulation Standards and Accreditation (F) Committee with respect to the GCC and the liquidity stress test (LST).
3. Adopted the report of the Capital Adequacy (E) Task Force. See the Task Force listing for details.
4. Adopted the report of the Examination Oversight (E) Task Force. See the Task Force listing for details.
5. Adopted the report of the Financial Stability (E) Task Force. See the Task Force listing for details.
6. Adopted the report of the Receivership and Insolvency (E) Task Force. See the Task Force listing for details.
7. Adopted the report of the Reinsurance (E) Task Force. See the Task Force listing for details.
9. Adopted the report of the Valuation of Securities (E) Task Force. See the Task Force listing for details.
10. Adopted the report of the Group Capital Calculation (E) Working Group, including its March 10 minutes. During this meeting, the Working Group took the following action:
A. Adopted its Feb. 25, 2021; Jan. 28, 2021; Jan. 19, 2021; and 2020 Fall National Meeting minutes, which included the following action:
1. Adopted recommended accreditation standards for referral to the Financial Condition (E) Committee related to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The recommendations were exposed Jan. 19 for a public comment period ending Feb. 9.
2. Adopted a recommendation to the Financial Condition (E) Committee to modify the charges of the Qualified Jurisdiction (E) Working Group and rename the Working Group to be more encompassing.
3. Heard a presentation on the data analysis for the adopted GCC template using 2019 field test data.
4. Discussed future GCC data collection.
B. Discussed conducting a 2021 GCC trial implementation and directed NAIC staff to develop and finalize a template letter that can be distributed by lead states to insurance groups they oversee and who the lead state would like to participate in the 2021 GCC trial implementation.
11. Adopted the report of the Group Solvency Issues (E) Working Group, including its March 18 minutes. During this meeting, the Working Group took the following action:
A. Heard a report on group-related activities of the International Association of Insurance Supervisors (IAIS).
B. Received the report of the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup, which met March 10 in regulator-to-regulator session, pursuant to paragraph 6 (consultation with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to discuss matters regarding the timely receipt and review of ORSA filings and to receive an update on NAIC ORSA training initiatives.
C. Received an update on the progress of the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) drafting group, which indicated:
1. The financial analysis drafting group has met five times since being formed in August 2020, and it has made significant progress in incorporating ComFrame elements into draft revisions to the Financial Analysis Handbook.
2. The drafting group anticipates completing its work over the next month and then providing the proposed revisions to the full Working Group for public exposure and further consideration.
3. After the financial analysis drafting work is completed, drafting work is expected to begin on financial examination and ORSA topics.
D. Discussed an item referred from the 2020 Financial Sector Assessment Program (FSAP), which recommended that state insurance regulators coordinate and leverage the expertise of teams of supervisors conducting financial surveillance of large insurance groups, including internationally active insurance groups (IAIGs). As a result of the discussions, the Working Group agreed to incorporate this recommendation into its ComFrame implementation efforts.
12. Adopted the report of the Mortgage Guaranty Insurance (E) Working Group, including its April 6 minutes. During this meeting, the Working Group took the following action:
A. Discussed comments received on a draft 2021 annual property/casualty (P/C) financial statement exhibit proposal regarding the collection of mortgage guaranty insurance data. The draft proposal was exposed for a 30-day public
comment period. One comment letter from the mortgage guaranty consortium was received. As a result of the discussion, several modifications to the draft will be implemented.

13. Adopted the report of the National Treatment and Coordination (E) Working Group, including its March 4 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its revised 2021 charges, which included disbanding the Biographical Third-Party Review (E) Subgroup.
   B. Discussed a referral submitted by the Chief Regulator Forum regarding change of control. The Working Group will continue discussing this referral during future meetings to determine the best solution on where instructions or enhancements should be added to current processes.
   C. Exposed proposal 2021-01 for a 45-day public comment period ending April 19.
   D. Exposed proposal 2021-02 for a 45-day public comment period ending April 19.
   E. Received a status update on the Electronic Application Ad Hoc Group. The ad hoc group began meeting in August 2020 to gather business rules for the primary (startup) application and then the redomestication application. The ad hoc group is currently discussing business rules for domestic corporate amendment applications.
   F. Received a status update on the Domestic Surplus Lines Ad Hoc Group. The ad hoc group was formed in 2020 based on a referral from the Chief Regulator Forum regarding domestic surplus lines carriers. The ad hoc group will determine which states have enacted the new legislation and identify similarities that can be incorporated into regulatory guidance.
   G. Discussed possible enhancements to Form 2 and Form 14 of the NAIC Uniform Certificate of Authority Application (UCAA).
   H. Discussed the company licensing collaboration page.

15. Adopted the Guideline for Definition of Reciprocal State in Receivership Laws.

16. Appointed the new Receiver’s Handbook (E) Subgroup and adopted the following related charge:
   A. Review the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook) to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook. Complete by the 2022 Fall National Meeting.

**Accounting Practices and Procedures (E) Task Force**

March 23, 2021 *(in lieu of the Spring National Meeting)*

1. Adopted its 2020 Fall National Meeting minutes.
2. Reported that it met March 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings.
3. Adopted the report of the Statutory Accounting Principles (E) Working Group, including its March 15 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Jan. 25, 2021; Jan. 6, 2021; Dec. 28, 2020; Dec. 18, 2020; Dec. 8, 2020; and Nov. 12, 2020, minutes. The interim minutes included the following adoptions to Appendix B—Interpretations of Statutory Accounting Principles (INTs):
      1. Extended INT 20-03: Troubled Debt Restructuring Due to COVID-19 and INT 20-07: Troubled Debt Restructuring for Certain Debt Instruments Due to COVID-19 through Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.
      2. INT 20-10: Reporting Nonconforming Credit Tenant Loans: This INT allows nonconforming credit tenant loans (CTLs) to continue to be reported on Schedule D, Part 1 – Long-Term Bonds if filed with the NAIC Securities Valuation Office (SVO) by Feb. 15, 2021. The provisions within this INT and the ability to continue reporting nonconforming CTLs on Schedule D, Part 1 with an SVO-assigned NAIC designation are limited time exceptions that extend only to Oct. 1, 2021.
      3. INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms: This INT provides a 60-day extension from the 90-day rule for uncollected premium balances, bills receivable, and amounts due from agents and for policies directly affected by the noted events. This INT expires Feb. 28, 2021.
   B. Adopted the following nonsubstantive revisions to statutory accounting guidance:
      1. *Statement of Statutory Accounting Principles (SSAP) No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations, and SSAP No. 86—Derivatives: Revisions reject Accounting Standards Update (ASU) 2020-06, Debt—Debt with Conversion and Other Options*
5. SSAP No. 86: Interpretative revisions expose a temporary (optional) expedient and exception guidance for asset held in a foreign subsidiary should not be valued in a more favorable manner than had they been held.

4. SSAP No. 26R—Bonds:
   a. Revisions clarify that perpetual bonds are within the scope of SSAP No. 26R, and they are subject to the yield-to-worst concept. Additionally, perpetual bonds that possess a future call date will retain bond accounting (i.e., accounted for at amortized cost); however, if a perpetual bond does not possess a future call date, fair value accounting is required, regardless of NAIC designation. (Ref #2020-22)
   b. Revisions expand the current called bond disclosures to also include bonds terminated early through a tender offer. (Ref #2020-32)

3. SSAP No. 26R—Preferred Stock and SSAP No. 86: Revisions direct that publicly traded preferred stock warrants are in the scope of SSAP No. 32R, and they shall be reported at fair value. (Ref #2020-33)

2. SSAP No. 43R—Loan-Backed and Structured Securities: Revisions incorporate minor scope modifications to reflect recent changes to the Federal Home Loan Mortgage Corporation (Freddie Mac) Structured Agency Credit Risk (STACR) and Federal National Mortgage Association (Fannie Mae) Connecticut Avenue Securities (CAS) programs, which allow credit risk transfer securities from these programs to remain in the scope of SSAP No. 43R when issued through a real estate mortgage investment conduit (REMIC) structure. (Ref #2020-34)

1. SSAP No. 71—Policy Acquisition Costs and Commissions: Revisions clarify the guidance in SSAP No. 71 regarding levelized commissions, with a Dec. 31, 2021, effective date. The Working Group affirmed the nonsubstantive classification of these revisions as consistent with the original intent of SSAP No. 71. In addition, the Working Group exposed a new annual statement general interrogatory to identify the use of a third party for the payment of commission expenses, which will be concurrently exposed with the Blanks (E) Working Group. (Ref #2019-24)

Appendix D—Nonapplicable GAAP Pronouncements: Revisions reject ASU 2020-07, Not-for-Profit Entities (Topic 958): Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets as not applicable for statutory accounting. (Ref #2020-42)

Appendix F—Policy Statements: Revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles clarify the existing process regarding the Working Group’s issuance and adoption of accounting interpretations. (Ref #2020-39)

Preamble: Revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state: a) shall be reflected in the financial statements filed with the NAIC; and b) are the financial statements subject to independent audit requirements. (Ref #2020-40)

Exposed the following nonsubstantive revisions to statutory accounting guidance:

1. SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments: Exposed the interpretative guidance provided by INT 21-01T: Statutory Accounting Treatment for Cryptocurrencies, which clarifies that cryptocurrencies do not meet the definition of cash in SSAP No. 2R, and they are nonadmitted assets for statutory accounting. Requested comments on the level of interest and ownership of cryptocurrencies. (Ref #2021-05)

2. SSAP No. 26R: Revisions reject ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs for statutory accounting. (Ref #2021-02)

3. SSAP No. 47—Uninsured Plans: Revisions reject ASU 2021-02, Franchisors—Revenue from Contracts with Customers (Subtopic 952-606): Practical Expedient in SSAP No. 47. (Ref #2021-08)

4. SSAP No. 86: Interpretative revisions expose a temporary (optional) expedient and exception guidance for ASU 2021-01, Reference Rate Reform (Topic 848): Scope, with an expiration date of Dec. 31, 2022. The optional expedients would expand the current exceptions provided by INT 20-01: ASU 2020-04—Reference Rate Reform. The exceptions allow for the continuation of the existing hedge relationship, and thus not requiring hedge dedesignation for derivative instruments affected by changes to interest/reference rates due to reference rate reform, regardless of whether they reference the London Interbank Offered Rate (LIBOR) or another rate that is expected to be discontinued. The exception in INT 20-01 would apply for affected derivatives used for discounting, margining or contract price alignment. (Ref #2021-01)

5. SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities: Exposed this agenda item with the intent to dispose without statutory edits. NAIC staff note that the long-standing, required statutory adjustments to SSAP No. 97, paragraph 8.b.iv. – Foreign Insurance SCA Entities could result in negative equity valuation, as assets held in a foreign subsidiary should not be valued in a more favorable manner than had they been held...
directly by the insurer. Industry comments are requested regarding detailed instances of negative value subsidiary, controlled and affiliated entities (SCAs). (Ref #2021-04)

6. **SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities**: Revisions propose data-captured templates for existing disclosures in SSAP No. 103R, which are currently only completed in narrative form. Data-capturing of such items will permit state insurance regulators to submit system inquiries to determine the extent to which reporting entities have transferred (sold), but still retain, a material participation with said assets. A blanks proposal will be concurrently exposed with the Working Group’s exposure. (Ref #2021-03)

7. **SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act**: Revisions include state Affordable Care Act (ACA) reinsurance programs, which are using Section 1332 waivers in the scope of SSAP No. 107. The revisions continue to follow the hybrid accounting approach for the state ACA programs, as they operate in a similar manner. (Ref #2021-09)

8. **SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees**: Re-exposed this agenda item to provide additional time for interested parties to develop a proposal for establishing accounting and reporting guidance for derivatives hedging the growth in interest for fixed indexed products. (Ref #2020-36)

9. **Appendix D**: Revisions reject ASU 2020-11, Financial Services—Insurance (Topic 944): Effective Date and Early Application for statutory accounting. This ASU was issued to address the effective dates of ASU 2019-09, Financial Services—Insurance (Topic 944): Effective Date and ASU 2018-12, Financial Services—Insurance (Topic 944): Targeted Improvements to the Accounting for Long-Duration Contracts, both of which were previously rejected by the Working Group. (Ref #2021-07)

10. **Blanks:**
   a. Re-exposed this agenda item for a concurrent exposure with the Blanks (E) Working Group of blanks agenda item 2021-03BWG to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form be separately identified. The instructions will also indicate that companies may eliminate proprietary information; however, the elimination will still require the use of a unique reporting identifier. (Ref #2020-37)
   b. Re-exposed this agenda item for a concurrent exposure with the Blanks (E) Working Group. The Working Group is sponsoring blanks agenda item 2021-03BWG to clarify reporting by each separate product filing or policy form and add product identifiers, specifically for Pension Risk Transfer (PRT) and Registered Index-Linked Annuity (RILA) transactions in the Separate Account General Interrogatories. (Ref #2020-38)

D. Exposed the following editorial revisions (Ref #2021-06EP):
   1. **SSAP No. 53—Property Casualty Contracts – Premiums**: Revisions retitle to SSAP No. 53—Property and Casualty Contracts – Premiums.
   2. **SSAP No. 97**: Revisions correct grammatical errors in paragraph 54.
   3. **SSAP Glossary**: Revisions remove the footnote in the Glossary title and replace it as an opening paragraph with updated verbiage.

E. Disposed the following without revisions to statutory accounting guidance:
   1. Agenda item 2020-35: SSAP No. 97 – Audit Opinions was disposed without statutory revisions, as the issue of nonadmittance due to the inability to quantify a departure from U.S. generally accepted accounting principles (GAAP) was not deemed prevalent. (Ref #2020-35)

F. Received an update on the following projects and referrals:
   1. Received an update that NAIC staff, industry, and key state insurance regulators have made significant progress on agenda item 2019-21: SSAP No. 43R – Investment Classification Project. While discussions remain ongoing, it is anticipated that a public exposure will occur via an interim call prior to the Summer National Meeting. The exposure will include additional concepts on which investments are eligible for reporting on Schedule D as a bond.
   2. Received an update that INT 19-02: Freddie Mac Single Security Initiative remains in full effect. The Freddie Mac Single Security Initiative remains an ongoing program, and it does not appear to be subject to termination in the foreseeable future.
   3. Received an update on agenda item 2019-49: Retroactive Reinsurance Exception. This agenda item addresses a referral from the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy), which noted diversity in reporting regarding companies applying the retroactive reinsurance exception, which allows certain contracts to be reported prospectively. NAIC staff have held preliminary discussions with Casualty Actuarial and Statistical (C) Task Force members, with a preliminary
recommendation that the premium and losses transferred under such transactions should be allocated to the prior Schedule P calendar year premiums and the losses allocated to the prior accident year incurred losses.

4. Received an update on the reporting and extinguishment of loans received from the federal Paycheck Protection Program (PPP). For statutory accounting, the authoritative guidance in SSAP No. 15—Debt and Holding Company Obligations paragraph 11 provides that debt is recognized until extinguished, including formally being forgiven. In addition, per SSAP No. 15 paragraph 25, gains on termination of debt are recognized as capital gains.

5. Received an update on the Valuation of Securities (E) Task Force discussion regarding revisions to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) as coordination regarding the revisions to SSAP No. 105R—Working Capital Finance Investments adopted by the Working Group in May 2020 (agenda item 2019-25). At its Nov. 18, 2020, meeting, the Task Force directed a referral to the Working Group, which is still pending. NAIC staff anticipate addressing this referral when received.

6. Received an update on current U.S. GAAP exposures/invitations to comment, noting that no comments by the Working Group are planned during the exposure periods.

G. The public comment period for all exposed agenda items ends April 30.

Capital Adequacy (E) Task Force
March 23, 2021 (in lieu of the Spring National Meeting)

1. Adopted its Feb. 1, 2021, and 2020 Fall National Meeting minutes, which included the following action:
   A. Adopted updates to proposal 2020-12-CR (2020 Catastrophe Event Lists).

2. Adopted the report of the Health Risk-Based Capital (E) Working Group, including its March 17 minutes. During this meeting, the Working Group took the following action:
   A. Reported that it met March 5 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the company-specific impact analysis.
   B. Adopted its Feb. 10 minutes, which included the following action:
      1. Discussed the impact analysis on investment income in underwriting risk.
      2. Exposed proposal 2021-02-CA (Managed Care Credit – Incentives) for a 30-day public comment period ending March 12.
      3. Discussed the bond factor impact analysis.
   C. Adopted its Jan. 22 minutes, which included the following action:
      1. Discussed the American Academy of Actuaries (Academy) report on investment income in underwriting risk.
   D. Adopted its Dec. 18, 2020, minutes, which included the following action:
      1. Referred a blanks proposal regarding health care receivables to the Blanks (E) Working Group for consideration in 2021 reporting.
      2. Exposed the Academy report on investment income in underwriting risk for a 30-day public comment period ending Jan. 18.
      3. Received a summary of the Blanks (E) Working Group’s proposals related to health business reporting.
      4. Discussed the next steps for the Health Test Ad Hoc Group.
   E. Adopted its 2021 working agenda.
   F. Referred proposal 2021-02-CA (Managed Care Credit – Incentives) to the Capital Adequacy (E) Task Force.
   G. Heard an update from the recommended underwriting factors adjusted for investment income. The Working Group discussed the impact analysis for including the adjusted factors for a 0.5%, 1%, 1.5% and 2% return yield and the frequency for adjusting the factors.
   H. Exposed proposal 2021-04-CA (Investment Income Adjustment to Underwriting Risk Factors) for a 30-day public comment period ending April 16.
   I. Received an update on the bond factor impact analysis.

3. Adopted the report of the Life Risk-Based Capital (E) Working Group, including its March 12 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 26, 2021; Feb. 11, 2021; Jan. 21, 2021; Dec. 17, 2020; and Nov. 10, 2020, minutes, which included the following action:
      1. Adopted an update to the mortgage reporting guidance. Proposed guidance was exposed Feb. 11 for a 10-day public comment period ending Feb. 22.
      2. Discussed and exposed the real estate proposal submitted by the American Council of Life Insurers (ACLI).
      3. Discussed the Moody’s Analytics report on bonds.
      4. Adopted revisions to its working agenda.
5. Agreed to forward a guaranty fund memorandum to the Capital Adequacy (E) Task Force.
6. Received an update on work being done by the Life Actuarial (A) Task Force on economic scenario generators (ESGs).

B. Continued discussion of the ACLI’s real estate proposal.

4. Adopted the report of the Property and Casualty Risk-Based Capital (E) Working Group, including its March 15 minutes. During this meeting, the Working Group took the following action:
   A. Adopted the Catastrophe Risk (E) Subgroup’s March 8 minutes, which included the following action:
      1. Adopted its Jan. 27 minutes, which included the following action:
      2. Adopted proposal 2020-08-CR (Clarification to PR027 Interrogatories).
      3. Adopted proposal 2020-11-CR (Remove Operational Risk Factor from Rcat).
      4. Discussed the progress of developing wildfire modeling and a risk-based capital (RBC) charge.
      5. Discussed its 2021 working agenda.
      6. Discussed the internal catastrophe model evaluation process.
      7. Created an ad hoc group to conduct a more in-depth review on different wildfire models.
   B. Adopted its Jan. 27 minutes, which included the following action:
   C. Adopted proposal 2020-08-CR (Clarification to PR027 Interrogatories).
   D. Adopted proposal 2020-11-CR (Remove Operational Risk Factor from Rcat).
   E. Received an update from the Catastrophe Risk (E) Subgroup on the development process of wildfire modeling and an RBC charge.
   F. Exposed proposal 2021-03-P (Credit Risk Instruction Modification) for a 30-day public comment period ending April 14.
   G. Received an update from its Runoff Ad Hoc Group, which was created to determine the best course of treatment of companies in runoff. The ad hoc group is reviewing: 1) the possibility of adding an identifier in the annual financial statement; and 2) the current RBC calculation, including R5 and the operational risk component.
   H. Adopted its 2021 working agenda.
   I. Heard an update from the Academy on the development of the property/casualty (P/C) RBC underwriting risk factors.
5. Received a guaranty fund memorandum from the Life Risk-Based Capital (E) Working Group.
7. Exposed proposal 2021-02-CA (Managed Care Credit – Incentives) for a 30-day public comment period ending April 22.
8. Adopted proposal 2020-08-CR (Clarification to PR027 Interrogatories).
10. Adopted its 2021 working agenda.

Examination Oversight (E) Task Force
March 25, 2021 (in lieu of the Spring National Meeting)

1. Adopted its Nov. 17, 2020, minutes.
2. Adopted the report of the Electronic Workpaper (E) Working Group, which met March 15 and Jan. 27 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
3. Adopted the report of the Financial Examiners Coordination (E) Working Group, which met March 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
4. Adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exams open past 22 months.

Financial Stability (E) Task Force
Feb. 22, 2021 (in lieu of the Spring National Meeting)

2. Announced the membership of the Liquidity Assessment (E) Subgroup and its 2021 charges.
3. Received the report of the Receivership and Insolvency (E) Task Force regarding its disposition of referrals from the Financial Stability (E) Task Force.
4. Adopted recommendations to the Financial Condition (E) Committee regarding the liquidity stress test (LST) revisions to the Insurance Holding Company System Regulatory Act (#440). The Task Force believes the revisions should be required for accreditation purposes.

Receivership and Insolvency (E) Task Force
March 12, 2021 (in lieu of the Spring National Meeting)

1. Adopted its Nov. 19, 2020, minutes.
2. Adopted the report of the Receivership Financial Analysis (E) Working Group, which met Feb. 1 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss experiences and the need for best practices for data transfer from insurance companies in liquidation to guaranty funds. The Working Group met March 22, in lieu of the Spring National Meeting, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
3. Adopted the report of the Receivership Law (E) Working Group, including its March 4 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 4 minutes, which included the following action:
      1. Adopted its Dec. 17, 2020, minutes, which included the following action:
         a. Exposed proposed amendments to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) for a 35-day public comment period ending Jan. 29.
         2. Discussed comments received on proposed revisions to Model #440 and Model #450.
         3. Exposed proposed revisions to Model #440 and Model #450 for a 14-day public comment period ending Feb. 26.
   B. Reported that it met Feb. 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings.
   C. Discussed comments received on proposed revisions to Model #440 and Model #450.
   D. Exposed proposed revisions to Model #440 for a 30-day public comment period ending April 9.
4. Adopted the Guideline for Definition of Reciprocal State in Receivership Laws. This guideline provides an optional definition of “reciprocal state” for receivership laws that is intended to effectuate the recognition of stays and injunctions in a receivership affecting multiple states.
5. Appointed the Receiver’s Handbook (E) Subgroup to review and draft updates to the Receiver’s Handbook for Insurance Company Insolvencies and adopted the Subgroup’s 2021 proposed charges.
6. Heard an update on the status of Macropudential Initiative (MPI) recommendations:
   A. The Task Force will not recommend any changes to the current Part A: Accreditation Standards for Receivership and Guaranty Fund Laws or related interlineations.
   B. The Task Force will pursue training and outreach to better inform states of receivership matters. Possible activities include outreach to states’ legislative liaisons, providing legal training webinars, and encouraging that Task Force members highlight receivership matters at zone meetings.
   C. The Task Force will continue to monitor and provide feedback to the Group Solvency Issues (E) Working Group once it completes drafting updates to financial analysis guidance for crisis management groups, recovery planning, and resolution planning.

Reinsurance (E) Task Force
March 23, 2021 (in lieu of the Spring National Meeting)

1. Adopted its 2020 Fall National Meeting minutes.
2. Adopted the report of the Reinsurance Financial Analysis (E) Working Group, which met Jan. 28 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the application of one new certified reinsurer.
3. Adopted the report of the Qualified Jurisdiction (E) Working Group, which met March 17 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to:
   A. Discuss the initial review of a country being evaluated as a qualified jurisdiction.
   B. Provide updates on a previous initial review.
   C. Conduct ongoing business.
4. Reported that the Financial Condition (E) Committee met March 8 and adopted a recommendation from the Group Capital Calculation (E) Working Group to:
   A. Reposition the Qualified Jurisdiction (E) Working Group to report directly to the Committee.
   B. Modify the Working Group’s 2021 charges to include developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the group capital calculation (GCC).
   C. Rename the group to be the Mutual Recognition of Jurisdictions (E) Working Group.
5. Exposed proposed revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions for a 30-day public comment period ending April 23.
6. Received a status report on the states’ implementation of the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786). As of March 18, 23 jurisdictions have enacted the revisions to Model #785, while 21 jurisdictions have action under consideration; and eight jurisdictions have adopted the revisions to Model #786, while six jurisdictions have action under consideration.

Risk Retention Group (E) Task Force
Feb. 24, 2021 (in lieu of the Spring National Meeting)
1. Adopted its Feb. 5, 2021, and 2020 Fall National Meeting minutes, which included the following action:
   A. Approved the distribution of a survey to state insurance regulators, with the purpose to provide the Task Force with insight into future improvements and priorities in the areas of risk retention group (RRG) regulation, registration and training.
2. Discussed the applicability of the 2020 revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) related to the GCC as an accreditation standard for RRGs.
3. Discussed the need for revisions relating to RRGs to the Financial Analysis Handbook, Section III.A.3 Risk Assessment (All Statement Types) – Quarterly Quantitative Assessment of Non-Troubled Insurers. NAIC staff will draft a referral to the Financial Analysis Solvency Tools (E) Working Group for the Task Force to consider during its next meeting.
4. Discussed the survey sent to state insurance regulators in February, noting that it had a due date of March 1.
5. Discussed training initiatives, noting that a training session would be conducted at the virtual NAIC Insurance Summit.

Valuation of Securities (E) Task Force
March 22, 2021 (in lieu of the Spring National Meeting)
1. Adopted its Feb. 18, 2021; Dec. 18, 2020; and 2020 Fall National Meeting minutes, which included the following action:
   A. Exposed a proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to update the financial modeling instructions for residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) for non-legacy securities for a 30-day public comment period ending March 20.
   B. Discussed comments received on a proposed amendment to the P&P Manual to require the filing of private rating letter rationale reports. The Task Force directed NAIC staff to continue working with interested parties.
   C. Received a referral from the Statutory Accounting Principles (E) Working Group on non-conforming credit tenant loans (CTLs); specifically, about the residual risk threshold. NAIC staff are going to draft a memorandum that will address whether, in their opinion, it is appropriate to revisit the 5% residual risk threshold.
   D. Exposed a proposed amendment to the P&P Manual to update the NAIC List of Credit Rating Providers to reflect changes to nationally recognized statistical rating organizations (NRSROs) for a 30-day public comment period ending March 20.
   E. Discussed the U.S. Securities and Exchange Commission (SEC) Rule 18f-4 under the federal Investment Company Act of 1940 related to the use of derivatives by registered investment companies. The Task Force directed NAIC staff to prepare a P&P Manual amendment on the use of derivatives by funds for the Task Force to consider.
   F. Exposed an updated amendment to the P&P Manual to include instructions for financially modeled RMBS/CMBS to map NAIC designation categories for a three-day public comment period ending Dec. 22, 2020.
   G. Discussed financially modeled RMBS/CMBS price breakpoints and other issues surrounding securities that have a zero loss in 2020.
2. Adopted an amendment to the P&P Manual to update the financial modeling instructions for RMBS/CMBS.
3. Discussed additional updates on a P&P Manual amendment to require the filing of a private rating letter rationale report. The Task Force directed NAIC staff to continue working with interested parties and expose the final version for a 30-day public comment period.
4. Adopted an amendment to the P&P Manual to update the NAIC List of NAIC Credit Rating Providers to reflect changes to NSROs.

5. Received a request from the American Council of Life Insurers (ACLI) to study the national financial presentation standard for Spanish generally accepted accounting principles (GAAP). The Task Force directed NAIC staff to begin the study and report back to the Task Force with their findings; recommendations; and if appropriate, a possible amendment to the P&P Manual.

6. Exposed a proposed amendment to the P&P Manual to clarify guidance for fund leverage for a 45-day public comment period ending May 6.

7. Heard NAIC staff reports on:
   B. A referral from the Statutory Accounting Principles (E) Working Group regarding CTLs.
   C. The status of the NAIC Securities Valuation Office (SVO) on year-end carry-over filings for 2020.

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

April 12, 2021

1. Adopted its 2020 Fall National Meeting minutes.

2. Adopted, immediately by reference, revisions made during 2020 to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual [AP&P Manual]) and were deemed insignificant.

3. Exposed the proposed revisions to the Part A: Laws and Regulations Preamble for a 30-day public comment period ending May 13. The proposed revisions update the XXX/AXXX Captive Reinsurance Framework references to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787), which is effective for accreditation Sept. 1, 2022.

4. Exposed the 2020 revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) for a 30-day public comment period ending May 13, with the recommendation that the revisions will be effective for all states Jan. 1, 2026. The revisions implement the group capital calculation (GCC) for the purpose of group solvency supervision and the liquidity stress test (LST) for macroprudential surveillance.

5. Reported that it met April 8 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to:
   A. Discuss state-specific accreditation issues.
   B. Vote to award continued accreditation to the insurance departments of New Mexico and Tennessee.

INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

April 7, 2021

1. Adopted its March 25, 2021; Feb. 3, 2021; Jan. 6, 2021; and 2020 Fall National Meeting minutes, which included the following action:
   A. Approved submission of NAIC comments on the International Association of Insurance Supervisors (IAIS) draft Application Paper on Supervision of Control Functions.
   B. Approved submission of NAIC comments on the IAIS draft Application Paper on Resolution Powers and Planning and the consultation on the development of liquidity metrics.
   C. Approved submission of NAIC comments on the joint Sustainable Insurance Forum (SIF) and IAIS draft Application Paper on the Supervision of Climate-Related Risks in the Insurance Sector.

2. Heard an update on key 2021 projects and priorities of the IAIS, including:
   A. Implementation assessment activities related to the holistic framework for systemic risk.
   B. The ongoing insurance capital standard (ICS) monitoring period and expected timeline.
   C. Activities and priorities related to climate risk and sustainability.
   D. The ongoing global impact of COVID-19 on supervisors and the insurance sector.

3. Heard a presentation on scalar methodologies from the American Academy of Actuaries (Academy).

4. Heard an update on international activities, including recent virtual meetings and events with international colleagues; plans for a virtual spring 2021 NAIC International Fellows Program; recent meetings of the Organisation for the Economic Co-Operation Development (OECD) Insurance and Private Pensions Committee and Environment Directorate; recent meetings of the SIF and other regional supervisory dialogues; and the upcoming virtual 2021 NAIC International Insurance Forum.
COGRAPHICAL COMMITTEE
April 8, 2021
1. Heard a presentation on federal health care reform developments and recommendations for the states. This presentation is important to consumers and state insurance regulators because it recommended actions for the states to implement using additional funding provided by the federal American Rescue Plan Act of 2021 (ARPA) to enable uninsured persons to obtain health plans with no cost-sharing, especially those in underserved communities, such as immigrants and their family members.
2. Heard a presentation on the enforcement needed to ensure health plan compliance with HIV preventative drug requirements. This presentation is important to consumers because it highlighted the inadequacy of plans to make the regimen of pre-exposure prophylaxis (PrEP) affordable and/or available for zero cost, especially to Black and Hispanic/Latino communities that are disproportionately affected by HIV, as a preventative that reduces the risk of contracting HIV by approximately 99%.
3. Heard a presentation on how state insurance regulators can help improve maternal health outcomes for Black, Native American and Latina women experiencing disparities in maternal and infant health care, coverage and community due to bias and a lack of education and understanding of cultural differences. This presentation is important to consumers because it helps the states to identify areas of inadequacy in maternal care that need attention.
4. Heard a presentation on addressing coverage losses among kids, which is important to the states and consumers because it emphasized that the number of uninsured children has risen drastically, affecting millions of low-income, Black, Hispanic/Latino and immigrant children. New policies implemented in Colorado and Utah have promoted much-needed coverage and care for many of these children and provided templates that other states could utilize for uninsured children in their own communities.
5. Heard a presentation on a comprehensive approach to addressing systemic racism in insurance. This presentation is important to consumers, the industry and the states because it educates them about how racial bias can be inadvertently included in the algorithms used for rating insurance products. It explained the differences between disparate impact and proxy discrimination in insurance.
6. Heard a presentation on the short-term and long-term recovery of Texas in the aftermath of catastrophic disaster. This presentation is important to consumers, industry, and states because it explored collaboration opportunities for optimizing disaster recovery assistance by facilitating the flow of accurate information and insurance dollars to overwhelmed, traumatized people. It described actions taken, such as the wildfire rebuild agreement, in California, Colorado and Oregon that benefited consumers.

NAIC/AMERICAN INDIAN AND ALASKA NATIVE LIAISON COMMITTEE
March 16, 2021 (in lieu of the Spring National Meeting)
1. Adopted its 2020 Fall National Meeting minutes.
2. Heard a presentation on COVID-19 vaccine distribution and usage in Washington state. The presentation included best practices and lessons learned from building trusted relationships that can be used by other states in future outreach efforts.
3. Heard a presentation on suggestions for using the latest federal stimulus package. The presentation included identifying bronze and other metal level plans available for year-round enrollment with essential health benefits (EHBs) and no cost/premium to tribal members.
EXECUTIVE (EX) COMMITTEE AND PLENARY

Executive (EX) Committee and Plenary April 14, 2021, Minutes.................................................................3-2
Adopted Amendments to the Unfair Trade Practices Act (#880) (Attachment One).................................3-10
Adopted the Real Property Lender-Placed Insurance Model Act (#631) (Attachment Two)..................3-23
Adopted the Regulatory Review of Predictive Models White Paper (Attachment Three).........................3-34
Adopted the Antifraud Plan Guideline (#1690) (Attachment Four).............................................................3-90
Adopted the Guideline for Administration of Large Deductible Policies in Receivership (#1980) (Attachment Five)..................................................................................................................3-101
State Implementation Reporting of NAIC-Adopted Model Laws and Regulations (Attachment Six)........3-105
Executive (EX) Committee and Plenary
Virtual 2021 Spring National Meeting
April 14, 2021

The Executive (EX) Committee and Plenary met April 14, 2021. The following members participated: David Altmaier, Chair (FL); Dean L. Cameron, Vice Chair (ID); Chlora Lindley-Myers, Vice President (MO); Andrew N. Mais, Secretary-Treasurer (CT); Raymond G. Farmer, Most Recent Past President (SC); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Evan G. Daniels (AZ); Ricardo Lara represented by Bryant Henley (CA); Michael Conway (CO); Karima M. Woods represented by Sharon Shipp (DC); Trinidad Navarro (DE); John F. King represented by Martin Sullivan (GA); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severyinghaus (IL); Stephen W. Robertson represented by Holly Lambert (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Eric A. Cioppa represented by Timothy Schott (ME); Kathleen A. Birrane (MD); Anita G. Fox (MI); Grace Arnold (MN); Mike Chaney represented by Mark Haire (MS); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Michelle Osborne (NC); Jon Godfread (ND); Bruce R. Range represented by Martin Swanson (NE); Chris Nicolopoulos (NH); Marlene Caride (NJ); Russell Toal represented by Jennifer Catechis (NM); Barbara D. Richardson (NV); Linda A. Lacewell represented by My Chi To (NY); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Elizabeth Kelleheer Dwyer (RI); Larry D. Deiter (SD); Carter Lawrence (TN); Doug Slape (TX); Jonathan T. Pike (UT); Scott A. White (VA); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill (WV); and Jeff Rude (WY).

1. **Adopted the Report of the Executive (EX) Committee**

Commissioner Altmaier reported that the Executive (EX) Committee met April 14 and adopted the April 7 report from the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

The Executive (EX) Committee also adopted its interim meeting report from March 16 and Feb. 24, which included the following action: 1) adopted the March 3 minutes of the Internal Administration (EX1) Subcommittee, including investment reports and recommendations on the NAIC’s long-term investment portfolio; 2) approved next steps for the Long-Term Care Insurance (LTCI) Legal Restructuring fiscal; 3) approved the exposure of the NAIC System for Electronic Rate and Form Filing (SERFF) Modernization – Mobilization and Pilot Phase fiscal for public comment; 4) approved the State Based Systems (SBS) State Implementations 2021 fiscal for public comment; 5) approved the exposure of the Property/Casualty (P/C) Rate Model Review Staffing Resources fiscal for public comment; 6) appointed Commissioner Clark to serve on the National Insurance Producer Registry (NIPR) Board of Directors, effective April 9, 2021; 7) received an update on the 2020 year-end financial results; 8) reviewed the NAIC Conflict of Interest Policy; 9) approved moving the Financial Stability (EX) Task Force from the Executive (EX) Committee to the Financial Condition (E) Committee; 10) approved the following non-regulator appointments to the SERFF Advisory Board: Birny Birnbaum (Center for Economic Justice—CEJ) as the consumer representative; Andrea Davey (Athene Annuity and Life Company) as the life insurance representative and vice chair; Phyllis Hollerbach (Zurich North America) as the health insurance representative; and Susan Gould (The Hanover Insurance Group) as the P/C representative; 11) appointed the following members to the 2021 NAIC Consumer Participation Board of Trustees: Commissioner Conway as chair; Director Lindley-Myers; Superintendent Toal; Commissioner King; Commissioner Caride; and Commissioner Altman; 12) reappointed the following consumer representatives to serve on the 2021 Consumer Participation Board of Trustees: Amy Bach (United Policyholders); Brendan Bridgeland (Center for Insurance Research—CIR); Bonnie Burns (California Health Advocates—CHA); Brenda J. Cude (University of Georgia); Katie Keith (Out2Enroll); and Sarah Lueck (Center on Budget and Policy Priorities—CBPP); 13) approved an amendment to the NAIC Grant and Zone Fund Policy; 14) heard an update on NAIC cybersecurity; and 15) selected Las Vegas, NV, as the site of the 2025 Fall National Meeting.

The Executive (EX) Committee adopted the reports of its task forces: 1) Climate and Resiliency (EX) Task Force; 2) Government Relations (EX) Leadership Council; 3) Innovation and Technology (EX) Task Force; 4) Long-Term Care Insurance (EX) Task Force, including its new subgroup charges; and 5) Special (EX) Committee on Race and Insurance.

The Executive (EX) Committee adopted a Request for NAIC Model Law Development of amendments to the Nonadmitted Insurance Model Act (#870).

The Executive (EX) Committee received the 2020 annual report of the NAIC Designation Program Advisory Board and received a status report on the NAIC State Ahead strategic plan implementation.
The Executive (EX) Committee received a status report on model law development efforts for amendments to: the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); the Annuity Disclosure Model Regulation (#245); the Life Insurance Disclosure Model Regulation (#580); the Unfair Trade Practices Act (#880); the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450); and new models, including the Real Property Lender-Placed Insurance Model Act; the Pet Insurance Model Act; and the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act.

The Executive (EX) Committee heard reports from NIPR and the Interstate Insurance Product Regulation Commission (Compact).

Director Cameron made a motion, seconded by Commissioner Mais, to adopt the April 14 report of the Executive (EX) Committee. The motion passed.

2. Adopted by Consent the Committee, Subcommittee and Task Force Minutes of the 2020 Fall National Meeting

Commissioner Ommen made a motion, seconded by Commissioner Conway, to adopt by consent the committee, subcommittee and task force minutes of the 2020 Fall National Meeting. The motion passed.

3. Adopted Amendments to the Unfair Trade Practices Act (#880)

Commissioner Godfread reported that the amendments to Model #880 were adopted by the Executive (EX) Committee during the 2020 Fall National Meeting.

Commissioner Godfread shared that the rebating issue began when agents/brokers discounted or shared a portion of their commission with an insured or prospective insured in order to induce them into purchasing a policy. Anti-rebating laws have been the law in some states for a long time, in some cases more than 100 years. The original goal was to ensure company solvency while also leveling the playing field for insurers and preventing unfair trade practices and discrimination.

Many states have adopted the anti-rebating language contained in Model #880, while others have crafted their own anti-rebating language. The overarching intent was to prevent insurers and producers from providing an insured or a prospective insured anything of value not specified or contained in the policy that may act as an inducement to purchase insurance.

Over the years, many states have issued various bulletins that not only provide guidance with respect to their anti-rebating law, but also carve out certain exceptions to the laws, most of which focus on the ability of insurers and agents to engage in certain promotional and advertising type activities without running afoul of the law. Over time, some stakeholders have suggested anti-rebating laws are obstacles or impediments to innovation in the insurance space, and one of the concerns specifically identified by startups and incumbents alike are the inconsistencies in anti-rebating law interpretation and practices across the states.

The Innovation and Technology (EX) Task Force began discussing rebating issues at the 2018 Summer National Meeting because of the increased interest in offering value-added products and services such as risk mitigation devices and related services that are not necessarily addressed within the applicable insurance policy language.

After finding that state interpretation and application of anti-rebating laws varies and after reviewing the history of Model #880 along with the history and the intent of the anti-rebating portion, it became clear that applying the anti-rebating laws to new insurance products and services could be challenging.

During the 2019 Summer National Meeting, the Task Force voted to move forward with the development of a Request for NAIC Model Law Development to open Model #880 to amend or add to the language in Section 4(H)(2). The request was adopted by the Task Force in October 2019 and the Executive (EX) Committee during the 2019 Fall National Meeting.

The Task Force established a model drafting group led by Superintendent Dwyer that included seven additional states (Alabama, Alaska, Iowa, Missouri, North Dakota, Ohio and Washington); consumer representatives; the industry (one startup and five other industry representatives); and one state legislator, Indiana Rep. Matt Lehman, who is president of the National Council of Insurance Legislators (NCOIL).
Several drafts were exposed for public comment and all comments were reviewed. The final draft was adopted by the Task Force on Dec. 4, 2020 and adopted by the Executive (EX) Committee on Dec. 9, 2020.

Executive Deputy Superintendent of Insurance To reported that New York submitted comments to the proposed amendments at the Task Force level addressing its concerns. She said, “Our main issue with the amendment is that it includes language that is unclear or ambiguous, leaving room for consumer discrimination, which is what we are trying to avoid.” She also said the definitions of the types of value-added products or services are not clear enough, leaving too much ambiguity about what can be provided. She said the amendments focus on the offer of products while not addressing that such products or services must also be given in a nondiscriminatory manner. She also said the amendments do not address the situation where a policy is part of a group policy. She said New York encourages those states that adopt these amendments to address the ambiguities in their legislation.

Commissioner Richardson expressed support for some of New York’s issues and for the “unlevel playing field”, noting that Section 4H(2)(f) sets up a problem not only for consumers but also for independent brokers.

Commissioner Ommen expressed general concerns about uniform application of the law, particularly where there is no central place to locate how the provisions are being interpreted in other states.

Commissioner Donelon inquired as to whether the insurance agent trade associations had weighed in on the model. Superintendent Dwyer stated that the Big I submitted written and verbal comments and PIAA was on the drafting group.

Commissioner Godfread made a motion, seconded by Commissioner Mais, to adopt the amendments to the Unfair Trade Practices Act (#880) (Attachment One). Kentucky, Louisiana, Mississippi, Nevada, New York and Washington voted against the motion. The motion passed, with California abstaining.

4. Received the Report of the Life Insurance and Annuities (A) Committee

Commissioner Caride reported that the Life Insurance and Annuities (A) Committee met April 12. During this meeting, the Committee adopted its 2020 Fall National Meeting minutes and its task force and working group reports: Accelerated Underwriting (A) Working Group; Annuity Disclosure (A) Working Group; Annuity Suitability (A) Working Group; Life Insurance Illustration Issues (A) Working Group; Life Insurance Online Guide (A) Working Group; Life Actuarial (A) Task Force; Experience Reporting (A) Subgroup; Guaranteed Issue (GI) Life Valuation (A) Subgroup; Indexed Universal Life (IUL) Illustration (A) Subgroup; Longevity Risk (E/A) Subgroup; Variable Annuities Capital and Reserve (E/A) Subgroup; Valuation Manual (VM)-22 (A) Subgroup; and Retirement Security (A) Working Group.

The Committee heard an update on the Special (EX) Committee on Race and Insurance Workstream Four. Workstream Four has begun to delve into the practices and barriers that potentially disadvantage minority and underserved populations in the life insurance and annuity lines of business.

The Committee adopted modifications to its 2021 charges: 1) disbanding the Annuity Disclosure (A) Working Group pending adoption of the participating income annuity revisions to the Annuity Disclosure Model Regulation (#245); and 2) disbanding the Retirement Security (A) Working Group, as it has fulfilled its charge.

The Committee discussed life insurer practices related to COVID-19: 1) heard from the Consumer Federation of America (CFA) regarding a letter to NAIC President Altmair and the chair of the Life Insurance and Annuities (A) Committee requesting that the NAIC develop a model for life insurance underwriters who may delay or deny coverage for people who have or had COVID-19; 2) heard from the Compact regarding life insurance application questions related to COVID-19 and COVID-19 vaccinations; and 3) discussed social media misinformation that COVID-19 vaccinations will affect policyholders’ life insurance benefits.

5. Received the Report of the Health Insurance and Managed Care (B) Committee

Commissioner Godfread reported that the Health Insurance and Managed Care (B) Committee met April 12 and heard from Jeff Wu, Deputy Administrator, Centers for Medicare & Medicaid Services (CMS) on the Biden administration’s activities of interest to the Committee. He discussed the progress of enrollment to date in the health insurance marketplaces as part of the current special enrollment period. He also discussed the challenges to enrollment in the marketplaces, including the premium cost. Mr. Wu outlined how provisions in the recently enacted federal American Rescue Plan Act (ARPA) could address the premium cost issue for some marketplace enrollees. He also briefly touched on the recently enacted federal No Surprises Act.
and acknowledged the work of state insurance regulators in this area to address surprise bills. Mr. Wu also discussed the recent federal legislation focused on the COVID-19 pandemic.

The Committee also adopted its 2020 Fall National Meeting minutes.

The Committee received an update on the Special (EX) Committee on Race and Insurance Workstream Five related to its charge to examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the health insurance line of business and make recommendations on action steps.

The Committee adopted the report of the Regulatory Framework (B) Task Force, but deferred adoption of the proposed new [State] Pharmacy Benefit Manager Licensure and Regulation Model Act pending further discussion.

The Committee adopted its task force, working group and subgroup reports: the Health Actuarial (B) Task Force, Senior Issues (B) Task Force; Health Innovations (B) Working Group; Consumer Information (B) Subgroup, Health Care Reform Actuarial (B) Working Group; State Rate Review (B) Subgroup; Long-Term Care Actuarial (B) Working Group; Long-Term Care Pricing (B) Subgroup; Long-Term Care Valuation (B) Subgroup; Health Innovations (B) Working Group; Regulatory Framework (B) Task Force; Accident and Sickness Insurance Minimum Standards (B) Subgroup; Employee Retirement Income Security Act (ERISA) (B) Working Group; Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group; Pharmacy Benefit Manager Regulatory Issues (B) Subgroup; Senior Issues (B) Task Force; and Long-Term Care Insurance Model Update (B) Subgroup.

6. Received the Report of the Property and Casualty Insurance (C) Committee

Commissioner Schmidt reported the Property and Casualty Insurance (C) Committee met April 13. During this meeting, the Committee adopted its 2020 Summer National Meeting and 2020 Fall National Meeting minutes.

The Committee adopted the reports of its task forces and working groups: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers’ Compensation (C) Task Force; Cannabis Insurance (C) Working Group; Catastrophe Insurance (C) Working Group; Pet Insurance (C) Working Group; Terrorism Insurance Implementation (C) Working Group; and Transparency and Readability of Consumer Information (C) Working Group

The Committee adopted an extension for revisions to the proposed Pet Insurance Model Act.

The Committee heard an update on recent workshops related to disaster preparedness and response, including a roundtable held with the Federal Emergency Management Agency (FEMA). The Committee appointed an NAIC/FEMA Advisory Group with the following charge: The NAIC/FEMA Advisory Group will assist state insurance regulators in engaging and collaborating with FEMA on an ongoing basis by establishing a process for the oversight, prioritization and reporting of disaster-related regional workshops and other exercises to improve disaster preparation and resilience.

The Committee also: 1) heard a presentation related to insurance rating for dog breeds, including a request for state insurance regulators to collect additional rating data and not allow the use of dangerous dog breed lists; 2) discussed the status of proposed charges related to P/C insurance issues being developed by the Special (EX) Committee on Race and Insurance; and 3) heard a report from New York state insurance regulators on its recently adopted Cyber Insurance Risk Framework, which details best practices for insurers in managing cyber insurance risk.

7. Adopted the Real Property Lender-Placed Insurance Model Act (#631)

Commissioner Schmidt reported that real property lender-placed insurance issues were explored during a 2012 NAIC public hearing, as well as addressed by a New York regulation and Florida orders.

The former Creditor-Placed Insurance Model Act Review (C) Working Group first considered revising the Creditor-Placed Insurance Model Act (#375) related to lender-placed insurance on personal and real property throughout 2015, 2016 and 2017. In July 2017, the Working Group decided to split personal property from real property and draft two different models. The Property and Casualty Insurance (C) Committee adopted this Request for NAIC Model Law Development in 2017. Since that time, the Lender-Placed Insurance Model Act (C) Working Group has been tasked with creating a new model law focusing on lender-placed homeowners’ insurance.
The Working Group reviewed sections of a draft model on various conference calls and asked for comments on an ongoing basis throughout 2017 and 2018. A draft model was exposed in March 2018 and was discussed on Sept. 18, 2018. The final draft of the model was exposed for public comment from Oct. 19, 2020, through Nov. 3, 2020.

Numerous written comments were submitted to and addressed by the Working Group, including from the CEJ, the National Consumer Law Center, a joint industry group (the American Bankers Association, the Consumer Credit Industry Association, the Council of Insurance Agents & Brokers, the National Association of Mutual Insurance Companies, and the American Property Casualty Insurance Association), as well as numerous states.

Commissioner Schmidt noted a recent comment letter from consumer groups advocating for a requirement of dual interest coverage. Commissioner Schmidt stated that both the Working Group and the Committee had discussed the issue and had determined not to include such a requirement. Commissioner Mais suggested adding the dual/single interest to charges for ongoing Committee work.

Commissioner Schmidt made a motion, seconded by Commissioner Donelon, to adopt the *Real Property Lender-Placed Insurance Model Act* (#631) (Attachment Two). The motion passed, with California abstaining.

Commissioner Schmidt reported that the Casualty Actuarial and Statistical (C) Task Force was given two charges last year: 1) draft changes to the *Product Filing Review Handbook* to include best practices for the review of predictive models and analytics filed by insurers to justify rates; and 2) draft guidance for the review of state rate filings based on complex predictive models. The Task Force drafted the white paper, *Regulatory Review of Predictive Models*. More than 10 state actuaries contributed to the draft. There were many public exposures of the paper, and it was adopted by the Task Force in fall 2020 and adopted by the Property and Casualty Insurance (C) Committee on Dec. 8, 2020.

As an overview, the *Regulatory Review of Predictive Models* white paper: 1) describes best practices for regulatory review of generalized linear models (GLMs), which is the most often filed model, for the private auto and home lines of business; and 2) provides changes to the *Product Filing Review Handbook* to include best practices for review of predictive models and analytics filed by insurers to justify rates.

The Task Force developed best practices for the review of any model, line of business and insurance application. At the highest level, the best practices are: 1) ensure compliance with current rating laws; 2) review all aspects of the model, including input, assumptions, adjustments and output; 3) evaluate how the model interacts with and improves the rating plan; and 4) enable competition and innovation in the rate review process.

In addition to the best practices, there is detail attached to the paper as Appendix B—Information Elements and Guidance for a Regulator to Meet Best Practices’ Objectives (When Reviewing GLMs). Commissioner Schmidt said this section could be useful to a state insurance regulator when reviewing a rating plan based on a GLM. Additionally, there is commentary on what might be important about that information and some insight as to when the information might identify an issue the state insurance regulator needs to be aware of or explore further.

Commissioner Schmidt made a motion, seconded by Commissioner Ommen, to adopt the *Regulatory Review of Predictive Models* white paper (Attachment Three). The motion passed.

9. Received the Report of the Market Regulation and Consumer Affairs (D) Committee

Commissioner Richardson reported the Market Regulation and Consumer Affairs (D) Committee met April 13. During this meeting, the Committee took the following action: 1) adopted its 2020 Fall National Meeting minutes; 2) adopted revisions to the Market Conduct Annual Statement (MCAS) Best Practices Guide; 3) adopted revisions to the four market analysis chapters of the *Market Regulation Handbook*; 4) adopted a 14 calendar-day limitation on MCAS filing extension requests; and 5) adopted a requirement for companies to identify MCAS filing attesters by both line of business and by state. This will be implemented for the 2021 data to be reported in 2022.
The Committee heard a presentation on lead generators and improper marketing of health insurance. These issues have been monitored by a broad consortium of state insurance regulators with expertise in antifraud, market conduct and health insurance. The Antifraud (D) Task Force will discuss potential next steps on this issue.

The Committee adopted the reports of its task forces and working groups: Antifraud (D) Task Force; Market Information Systems (D) Task Force; Producer Licensing (D) Task Force; Market Conduct Annual Statement Blanks (D) Working Group; Market Conduct Examination Guidelines (D) Working Group; Market Analysis Procedures (D) Working Group; and Privacy Protections (D) Working Group.

10. **Adopted the Amendments to the Antifraud Plan Guideline (#1690)**

Commissioner Richardson reported that during the 2020 Fall National Meeting, the Market Regulation and Consumer Affairs (D) Committee adopted revisions to the Antifraud Plan Guideline (#1690). This effort was led by Commissioner Navarro, chair of the Antifraud (D) Task Force.

Commissioner Navarro reported the focus was to reorganize the guideline into a more intuitive order, to eliminate repetitive requirements and to add suggestions to better meet existing requirements in place in most states. Most of the language in the guideline was not changed but simply rearranged to simplify the process. A comprehensive narrative was added to explain the guideline is not mandated in all states but is considered a best practice. The guideline covers the application, definitions, creation and submission of an antifraud plan to the states, the regulatory requirements for an insurance company to create an antifraud plan, and confidentiality protection for a company’s antifraud plan.

The revised guideline was adopted by the Antifraud (D) Task Force on Nov. 16, 2020 and adopted by the Market Regulation and Consumer Affairs (D) Committee during the 2020 Fall National Meeting.

Commissioner Navarro made a motion, seconded by Commissioner Clark, to adopt the amendments to the Antifraud Plan Guideline (#1690) (Attachment Four). The motion passed.

11. **Received the Report of the Financial Condition (E) Committee**

Commissioner White reported that the Financial Condition (E) Committee met April 13 and adopted its March 8, 2021, and 2020 Fall National Meeting minutes, which included the following action: 1) adopted a request for extension of time for model law development from the Mortgage Guaranty Insurance (E) Working Group; 2) adopted a new charge for the Qualified Jurisdiction (E) Working Group and repositioned the Working Group to report directly to the Committee [The Qualified-Mutual Recognition of Jurisdictions (E) Working Group will: develop a process for evaluating jurisdictions that meets the NAIC requirements for recognizing and accepting the NAIC group capital calculation (GCC)]; and 3) adopted proposed recommendations to the Financial Regulation Standards and Accreditation (F) Committee with respect to the GCC and the liquidity stress test (LST).

The Committee adopted the reports of the following task forces and working groups: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Risk Retention Group (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group; Group Solvency Issues (E) Working Group; Mortgage Guaranty Insurance (E) Working Group; and National Treatment and Coordination (E) Working Group. The report of the National Treatment and Coordination (E) Working Group included disbanding the Biographical Third-Party Review (E) Subgroup.

The Committee adopted changes to the Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions.

The Committee appointed the new Receiver’s Handbook (E) Subgroup and adopted the following related charge: Review the Receiver’s Handbook for Insurance Company Insolvencies (Receiver’s Handbook) to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook. Complete by the 2022 Fall National Meeting.
Note: Items adopted within the Financial Condition (E) Committee’s task force and working group reports that are considered technical, non-controversial and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to the NAIC members shortly after completion of the Summer National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to a particular item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

12. Adopted the Guideline for Administration of Large Deductible Policies in Receivership (#1980)

Commissioner White reported that, in 2016, the Property and Casualty Insurance (C) Committee published the Workers’ Compensation Large Deductible Study. It was also suggested the Receivership and Insolvency (E) Task Force consider developing possible enhancements to the U.S. receivership regime with regard to large deductible policies. As the work was taken up, a dozen or so states had already adopted variations of model language proposed by the National Conference of Insurance Guaranty Funds (NCIGF) on the topic. This NAIC guideline follows similar principles as the NCIGF model, but the Task Force believes it is an improvement on prior versions of the NCIGF model.

Commissioner White said the states may choose to keep their existing large deductible language or update it with the new guideline. The Task Force strongly encouraged the states that do not currently have a receivership provision that addresses large deductible policies to consider adopting this guideline.

Commissioner White made a motion, seconded by Commissioner Afable, to adopt the Guideline for Administration of Large Deductible Policies in Receivership (#1980) (Attachment Five). The motion passed.

13. Received the Report of the Financial Regulation Standards and Accreditation (F) Committee

Superintendent Dwyer reported that the Financial Regulation Standards and Accreditation (F) Committee met April 8 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to: 1) discuss state-specific accreditation issues; and 2) vote to award continued accreditation to the insurance departments of New Mexico and Tennessee.

The Committee also met April 12 in open session and adopted its 2020 Fall National Meeting minutes.

The Committee adopted, immediately by reference, revisions made during 2020 to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual [AP&P Manual]) that were deemed insignificant.

The Committee exposed the proposed revisions to the Part A: Laws and Regulations Preamble for a 30-day public comment period ending May 13. The proposed revisions update the XXX/AXXX Captive Reinsurance Framework references to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787), which is effective for accreditation Sept. 1, 2022.

The Committee exposed the 2020 revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) for a 30-day public comment period ending May 13, with the recommendation that the revisions will be effective for all states beginning Jan. 1, 2026. The revisions implement a Group Capital Calculation (GCC) for the purpose of group solvency supervision and a Liquidity Stress Test (LST) for macroprudential surveillance.

The Committee encourages all states with a group impacted by the “Bilateral Agreement between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” and a substantially similar agreement between the United States and the United Kingdom (together, the Covered Agreements) to enact the GCC revisions to Model #440 and Model #450 for those groups, effective Nov. 7, 2022. The Committee also strongly encourages all states with a group impacted by the LST to enact the relevant revisions to Model #440 and Model #450 as soon as possible.
14. Received the Report of the International Insurance Relations (G) Committee

Commissioner Anderson reported that the International Insurance Relations (G) Committee met April 7 and adopted its March 25, 2021; Feb. 3, 2021; Jan. 6, 2021; and 2020 Fall National Meeting minutes, which included the following action: 1) approved submission of NAIC comments on the IAIS draft Application Paper on Supervision of Control Functions; 2) approved submission of NAIC comments on the IAIS draft Application Paper on Resolution Powers and Planning and Consultation on the Development of Liquidity Metrics; 3) approved submission of NAIC comments on the joint Sustainable Insurance Forum (SIF) and IAIS draft Application Paper on the Supervision of Climate-Related Risks in the Insurance Sector.

The Committee heard an update on key 2021 projects and priorities of the IAIS, including: 1) implementation assessment activities related to the holistic framework for systemic risk; 2) the ongoing ICS monitoring period and expected timeline; 3) activities and priorities related to climate risk and sustainability; and 4) the ongoing global impact of COVID-19 on supervisors and the insurance sector.

The Committee heard a presentation on scalar methodologies from the American Academy of Actuaries (Academy).

The Committee heard an update on international activities, including recent virtual meetings and events with international colleagues; plans for a virtual spring 2021 NAIC International Fellows Program; recent meetings of the OECD Insurance and Private Pensions Committee and Environment Directorate; recent meetings of the SIF and other regional supervisory dialogues; and the May 25–26 virtual 2021 NAIC International Insurance Forum.

15. Received a Report on the States’ Implementation of NAIC-Adopted Model Laws and Regulations

Commissioner Altmaier referred to the written report for updates on the states’ implementation of NAIC-adopted model laws and regulations (Attachment Six).

Having no further business, the Executive (EX) Committee and Plenary adjourned.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: □ New Model Law or X Amendment to Existing Model

1. Name of group to be responsible for drafting the model:
   Innovation and Technology (EX) Task Force

2. NAIC staff support contact information:
   Denise Matthews
dmatthews@naic.org
816-783-8007

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

   NAIC Unfair Trade Practices Act (Model #880)
   Section 4(H)(1)

   The Innovation and Technology (EX) Task Force will draft amendments to the NAIC Unfair Trade Practices Act (Model #880), focusing on Section 4H, to clarify what is considered a “rebate” or “inducement”.

4. Does the model law meet the Model Law Criteria? X Yes or □ No (Check one)
   (If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

   a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? X Yes or □ No (Check one)

      If yes, please explain why: Inconsistency in the interpretation of the Model language necessitates revisions to clarify the intent and ensure necessary consumer protections remain in place in light of technologies being deployed to add value to existing insurance products and services.

   b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

      X Yes or □ No (Check one)
5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

<table>
<thead>
<tr>
<th>X</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Likelihood</td>
<td>Low Likelihood</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Explanation, if necessary: A significant amount of time and discussion has already been devoted to this topic including presentations from all stakeholders and discussion around draft guideline language. That should help in accelerating the development process related to this model language.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

<table>
<thead>
<tr>
<th>1</th>
<th>X</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Likelihood</td>
<td>Low Likelihood</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Explanation, if necessary:

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

<table>
<thead>
<tr>
<th>1</th>
<th>X</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Likelihood</td>
<td>Low Likelihood</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Explanation, if necessary:

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.
UNFAIR TRADE PRACTICES ACT

Table of Contents

Section 1. Purpose
Section 2. Definitions
Section 3. Unfair Trade Practices Prohibited
Section 4. Unfair Trade Practices Defined
Section 5. Favored Agent or Insurer; Coercion of Debtors
Section 6. Power of Commissioner
Section 7. Hearings, Witnesses, Appearances, Production of Books, and Service of Process
Section 8. Cease and Desist and Penalty Orders
Section 9. Judicial Review of Orders
Section 10. Judicial Review by Intervenor
Section 11. Penalty for Violation of Cease and Desist Orders
Section 12. Regulations
Section 13. Provisions of Act Additional to Existing Law
Section 14. Immunity from Prosecution
Section 15. Separability Provision

Section 4. Unfair Trade Practices Defined

Any of the following practices, if committed in violation of Section 3, are hereby defined as unfair trade practices in the business of insurance:

A. Misrepresentations and False Advertising of Insurance Policies. Making, issuing, circulating, or causing to be made, issued or circulated, any estimate, illustration, circular or statement, sales presentation, omission or comparison that:

(1) Misrepresents the benefits, advantages, conditions or terms of any policy; or
(2) Misrepresents the dividends or share of the surplus to be received on any policy; or
(3) Makes a false or misleading statement as to the dividends or share of surplus previously paid on any policy; or
(4) Is misleading or is a misrepresentation as to the financial condition of any insurer, or as to the legal reserve system upon which any life insurer operates; or
(5) Uses any name or title of any policy or class of policies misrepresenting the true nature thereof; or
(6) Is a misrepresentation, including any intentional misquote of premium rate, for the purpose of inducing or tending to induce the purchase, lapse, forfeiture, exchange, conversion or surrender of any policy; or
(7) Is a misrepresentation for the purpose of effecting a pledge or assignment of or effecting a loan against any policy; or
(8) Misrepresents any policy as being shares of stock.
B. False Information and Advertising Generally. Making, publishing, disseminating, circulating or placing before the public, or causing, directly or indirectly to be made, published, disseminated, circulated, or placed before the public, in a newspaper, magazine or other publication, or in the form of a notice, circular, pamphlet, letter or poster, or over any radio or television station, or in any other way, an advertisement, announcement or statement containing any assertion, representation or statement with respect to the business of insurance or with respect to any insurer in the conduct of its insurance business, which is untrue, deceptive or misleading.

C. Defamation. Making, publishing, disseminating, or circulating, directly or indirectly, or aiding, abetting or encouraging the making, publishing, disseminating or circulating of any oral or written statement or any pamphlet, circular, article or literature which is false, or maliciously critical of or derogatory to the financial condition of any insurer, and which is calculated to injure such insurer.

D. Boycott, Coercion and Intimidation. Entering into any agreement to commit, or by any concerted action committing any act of boycott, coercion or intimidation resulting in or tending to result in unreasonable restraint of, or monopoly in, the business of insurance.

E. False Statements and Entries.

(1) Knowingly filing with any supervisory or other public official, or knowingly making, publishing, disseminating, circulating or delivering to any person, or placing before the public, or knowingly causing directly or indirectly, to be made, published, disseminated, circulated, delivered to any person, or placed before the public, any false material statement of fact as to the financial condition of an insurer.

(2) Knowingly making any false entry of a material fact in any book, report or statement of any insurer or knowingly omitting to make a true entry of any material fact pertaining to the business of such insurer in any book, report or statement of such insurer, or knowingly making any false material statement to any insurance department official.

F. Stock Operations and Advisory Board Contracts. Issuing or delivering or permitting agents, officers or employees to issue or deliver, agency company stock or other capital stock, or benefit certificates or shares in any common law corporation, or securities or any special or advisory board contracts or other contracts of any kind promising returns and profits as an inducement to purchase insurance.

G. Unfair Discrimination.

(1) Making or permitting any unfair discrimination between individuals of the same class and equal expectation of life in the rates charged for any life insurance policy or annuity or in the dividends or other benefits payable thereon, or in any other of the terms and conditions of such policy.

(2) Making or permitting any unfair discrimination between individuals of the same class and of essentially the same hazard in the amount of premium, policy fees or rates charged for any accident or health insurance policy or in the benefits payable thereunder, or in any of the terms or conditions of such policy, or in any other manner.

Drafting Note: In the event that unfair discrimination in connection with accident and health coverage is treated in other statutes, this paragraph should be omitted.

(3) Making or permitting any unfair discrimination between individuals or risks of the same class and of essentially the same hazard by refusing to insure, refusing to renew, canceling or limiting the amount of insurance coverage on a property or casualty risk solely because of the geographic location of the risk, unless such action is the result of the application of sound underwriting and actuarial principles related to actual or reasonably anticipated loss experience.
(4) Making or permitting any unfair discrimination between individuals or risks of the same class and of essentially the same hazards by refusing to insure, refusing to renew, canceling or limiting the amount of insurance coverage on the residential property risk, or the personal property contained therein, solely because of the age of the residential property.

(5) Refusing to insure, refusing to continue to insure, or limiting the amount of coverage available to an individual because of the sex, marital status, race, religion or national origin of the individual; however, nothing in this subsection shall prohibit an insurer from taking marital status into account for the purpose of defining persons eligible for dependent benefits. Nothing in this section shall prohibit or limit the operation of fraternal benefit societies.

(6) To terminate, or to modify coverage or to refuse to issue or refuse to renew any property or casualty policy solely because the applicant or insured or any employee of either is mentally or physically impaired; provided that this subsection shall not apply to accident and health insurance sold by a casualty insurer and, provided further, that this subsection shall not be interpreted to modify any other provision of law relating to the termination, modification, issuance or renewal of any insurance policy or contract.

(7) Refusing to insure solely because another insurer has refused to write a policy, or has cancelled or has refused to renew an existing policy in which that person was the named insured. Nothing herein contained shall prevent the termination of an excess insurance policy on account of the failure of the insured to maintain any required underlying insurance.

(8) Violation of the state’s rescission laws at [insert reference to appropriate code section].

Drafting Note: A state may wish to include this section if it has existing state laws covering rescission and to insert a reference to a particular code section.

H. Rebates.

(1) Except as otherwise expressly provided by law, knowingly permitting or offering to make or making any life insurance policy or annuity, or accident and health insurance or other insurance, or agreement as to such contract other than as plainly expressed in the policy issued thereon, or paying or allowing, or giving or offering to pay, allow, or give, directly or indirectly, as inducement to such policy, any rebate of premiums payable on the policy, or any special favor or advantage in the dividends or other benefits thereon, or any valuable consideration or inducement whatever not specified in the policy; or giving, or selling, or purchasing or offering to give, sell, or purchase as inducement to such policy or annuity or in connection therewith, any stocks, bonds or other securities of any company or other corporation, association or partnership, or any dividends or profits accrued thereon, or anything of value whatsoever not specified in the policy.

(2) Nothing in Subsection G, or Paragraph (1) of Subsection H shall be construed as including within the definition of discrimination or rebates any of the following practices:

(a) In the case of life insurance policies or annuities, paying bonuses to policyholders or otherwise abating their premiums in whole or in part out of surplus accumulated from nonparticipating insurance, provided that any such bonuses or abatement of premiums shall be fair and equitable to policyholders and for the best interests of the company and its policyholders;

(b) In the case of life insurance policies issued on the industrial debit plan, making allowance to policyholders who have continuously for a specified period made premium payments directly to an office of the insurer in an amount that fairly represents the saving in collection expenses;
(c) Readjusting the rate of premium for a group insurance policy based on the loss or expense thereunder, at the end of the first or any subsequent policy year of insurance thereunder, which may be made retroactive only for such policy year; or

(e) The offer or provision by insurers or producers, by or through employees, affiliates or third party representatives, of value-added products or services at no or reduced cost when such products or services are not specified in the policy of insurance if the product or service:

(i) Relates to the insurance coverage; and

(ii) Is primarily designed to satisfy one or more of the following:

(I) Provide loss mitigation or loss control;

(II) Reduce claim costs or claim settlement costs;

(III) Provide education about liability risks or risk of loss to persons or property;

(IV) Monitor or assess risk, identify sources of risk, or develop strategies for eliminating or reducing risk;

(V) Enhance health;

(VI) Enhance financial wellness through items such as education or financial planning services;

(VII) Provide post-loss services;

(VIII) Incent behavioral changes to improve the health or reduce the risk of death or disability of a customer (defined for purposes of this subsection as policyholder, potential policyholder, certificate holder, potential certificate holder, insured, potential insured or applicant); or

(IX) Assist in the administration of the employee or retiree benefit insurance coverage.

(iii) The cost to the insurer or producer offering the product or service to any given customer must be reasonable in comparison to that customer’s premiums or insurance coverage for the policy class.

(iv) If the insurer or producer is providing the product or service offered, the insurer or producer must ensure that the customer is provided with contact information to assist the customer with questions regarding the product or service.
v) The commissioner may adopt regulations when implementing the permitted practices set forth in this statute to ensure consumer protection. Such regulations, consistent with applicable law, may address, among other issues, consumer data protections and privacy, consumer disclosure and unfair discrimination.

vi) The availability of the value-added product or service must be based on documented objective criteria and offered in a manner that is not unfairly discriminatory. The documented criteria must be maintained by the insurer or producer and produced upon request by the Department.

Drafting Note: States may wish to consider alternative language based on their filing requirements.

vii) If an insurer or producer does not have sufficient evidence, but has a good-faith belief that the product or service meets the criteria in H(2)(e)(ii), the insurer or producer may provide the product or service in a manner that is not unfairly discriminatory as part of a pilot or testing program for no more than one year. An insurer or producer must notify the Department of such a pilot or testing program offered to consumers in this state prior to launching and may proceed with the program unless the Department objects within twenty-one days of notice.

Drafting Note: This Section is not intended to limit or curtail existing value-added services in the marketplace. It is intended to promote innovation in connection with the offering of value-added services while maintaining strong consumer protections.

(f) An insurer or a producer may:

(i) Offer or give non-cash gifts, items, or services, including meals to or charitable donations on behalf of a customer, in connection with the marketing, sale, purchase, or retention of contracts of insurance, as long as the cost does not exceed an amount determined to be reasonable by the commissioner per policy year per term. The offer must be made in a manner that is not unfairly discriminatory. The customer may not be required to purchase, continue to purchase or renew a policy in exchange for the gift, item or service.

(ii) Offer or give non-cash gifts, items, or services including meals to or charitable donations on behalf of a customer, to commercial or institutional customers in connection with the marketing, sale, purchase, or retention of contracts of insurance, as long as the cost is reasonable in comparison to the premium or proposed premium and the cost of the gift or service is not included in any amounts charged to another person or entity. The offer must be made in a manner that is not unfairly discriminatory. The customer may not be required to purchase, continue to purchase or renew a policy in exchange for the gift, item or service.

(iii) Conduct raffles or drawings to the extent permitted by state law, as long as there is no financial cost to entrants to participate, the drawing or raffle does not obligate participants to purchase insurance, the prizes are not valued in excess of a reasonable amount determined by the commissioner and the drawing or raffle is open to the public. The raffle or drawing must be offered in a manner that is not unfairly discriminatory. The customer may not be required to purchase, continue to purchase or renew a policy in exchange for the gift, item or service.
Drafting Note: If a state wishes to limit (f) to a stated monetary limit the committee would suggest that, at the time of the drafting of this model, the lesser of 5% of the current or projected policyholder premium or $250 would be an appropriate limit, however specific prohibitions may exist related to transactions governed by the Real Estate Settlement Procedures Act of 1974 and the laws and regulations governing the Federal Crop Insurance Corporation Risk Management Agency. States may want to consider a limit for commercial or institutional customers.

(3) An insurer, producer or representative of either may not offer or provide insurance as an inducement to the purchase of another policy or otherwise use the words “free”, “no cost” or words of similar import, in an advertisement.

Drafting Note: Section 104 (d)(2)(B)(viii) of the Gramm-Leach-Bliley Act provides that any state restrictions on anti-tying may not prevent a depository institution or affiliate from engaging in any activity that would not violate Section 106 of the Bank Holding Company Act Amendments of 1970, as interpreted by the Board of Governors of the Federal Reserve System. The Board of Governors of the Federal Reserve System has stated that nothing in its interpretation on combined-balance discount arrangements is intended to override any other applicable state and federal law. FRB SR 95-32 (SUP). Section 5(q) of the Home Owners’ Loan Act is the analogous provision to Section 106 for thrift institutions. The Office of Thrift Supervision has a regulation 12 C.F.R. 563.36 that allows combined-balance discounts if certain requirements are met.

Drafting Note: Each state may wish to examine its rating laws to ensure that it contains sufficient provisions against rebating. If a state does not, this section may be expanded to cover all lines of insurance.

I. Prohibited Group Enrollments. No insurer shall offer more than one group policy of insurance through any person unless such person is licensed, at a minimum, as a limited insurance representative. However, this prohibition shall not apply to employer/employee relationships, nor to any such enrollments.

J. Failure to Maintain Marketing and Performance Records. Failure of an insurer to maintain its books, records, documents and other business records in such an order that data regarding complaints, claims, rating, underwriting and marketing are accessible and retrievable for examination by the insurance commissioner. Data for at least the current calendar year and the two (2) preceding years shall be maintained.

K. Failure to Maintain Complaint Handling Procedures. Failure of any insurer to maintain a complete record of all the complaints it received since the date of its last examination under Section [insert applicable section]. This record shall indicate the total number of complaints, their classification by line of insurance, the nature of each complaint, the disposition of each complaint, and the time it took to process each complaint. For purposes of this subsection, “complaint” shall mean any written communication primarily expressing a grievance.

L. Misrepresentation in Insurance Applications. Making false or fraudulent statements or representations on or relative to an application for a policy, for the purpose of obtaining a fee, commission, money or other benefit from any provider or individual person.

M. Unfair Financial Planning Practices. An insurance producer:

(1) Holding himself or herself out, directly or indirectly, to the public as a “financial planner,” “investment adviser,” “consultant,” “financial counselor,” or any other specialist engaged in the business of giving financial planning or advice relating to investments, insurance, real estate, tax matters or trust and estate matters when such person is in fact engaged only in the sale of policies. This provision does not preclude persons who hold some form of formal recognized financial planning or consultant certification or designation from using this certification or designation when they are only selling insurance. This does not permit persons to charge an additional fee for services that are customarily associated with the solicitation, negotiation or servicing of policies.
(2) (a) Engaging in the business of financial planning without disclosing to the client prior to the execution of the agreement provided for in Paragraph 3, or solicitation of the sale of a product or service that

(i) He or she is also an insurance salesperson, and

(ii) That a commission for the sale of an insurance product will be received in addition to a fee for financial planning, if such is the case.

(b) The disclosure requirement under this subsection may be met by including it in any disclosure required by federal or state securities law.

(3) (a) Charging fees other than commissions for financial planning by insurance producer, unless such fees are based upon a written agreement, signed by the party to be charged in advance of the performance of the services under the agreement. A copy of the agreement must be provided to the party to be charged at the time the agreement is signed by the party.

(i) The services for which the fee is to be charged must be specifically stated in the agreement.

(ii) The amount of the fee to be charged or how it will be determined or calculated must be specifically stated in the agreement.

(iii) The agreement must state that the client is under no obligation to purchase any insurance product through the insurance producer or consultant.

Drafting Note: This subsection is intended to apply only to persons engaged in personal financial planning.

(b) The insurance producer shall retain a copy of the agreement for not less than three (3) years after completion of services, and a copy shall be available to the commissioner upon request.

N. Failure to file or to certify information regarding the endorsement or sale of long-term care insurance. Failure of any insurer to:

(1) File with the insurance department the following material:

(a) The policy and certificate;

(b) A corresponding outline of coverage; and

(c) All advertisements requested by the insurance department; or

(2) Certify annually that the association has complied with the responsibilities for disclosure, advertising, compensation arrangements, or other information required by the commissioner, as set forth by regulation.

O. Failure to Provide Claims History

(1) Loss Information—Property and Casualty. Failure of a company issuing property and casualty insurance to provide the following loss information for the three (3) previous policy years to the first named insured within thirty (30) days of receipt of the first named insured’s written request:

(a) On all claims, date and description of occurrence, and total amount of payments; and
(b) For any occurrence not included in Subparagraph (a) of this paragraph, the date and description of occurrence.

(2) Should the first named insured be requested by a prospective insurer to provide detailed loss information in addition to that required under Paragraph (1), the first named insured may mail or deliver a written request to the insurer for the additional information. No prospective insurer shall request more detailed loss information than reasonably required to underwrite the same line or class of insurance. The insurer shall provide information under this subparagraph to the first named insured as soon as possible, but in no event later than twenty (20) days of receipt of the written request. Notwithstanding any other provision of this section, no insurer shall be required to provide loss reserve information, and no prospective insurer may refuse to insure an applicant solely because the prospective insurer is unable to obtain loss reserve information.

(3) The commissioner may promulgate regulations to exclude the providing of the loss information as outlined in Paragraph (1) for any line or class of insurance where it can be shown that the information is not needed for that line or class of insurance, or where the provision of loss information otherwise is required by law.

Drafting Note: Loss information on workers’ compensation is an example in some states of loss information otherwise required by law.

(4) Information provided under Paragraph (2) shall not be subject to discovery by any party other than the insured, the insurer and the prospective insurer.

Drafting Note: This provision may not be required in states that have a privacy act that governs consumer access to this information. Those states considering applying this requirement to life, accident and health lines of insurance should first review their state privacy act related to issues of confidentiality of individual insured information.

P. Violating any one of Sections [insert applicable sections].

Drafting Note: Insert section numbers of any other sections of the state’s insurance laws deemed desirable or necessary to include as an unfair trade practice, such as cancellation and nonrenewal laws.
PROJECT HISTORY

UNFAIR TRADE PRACTICES ACT #880

1. Description of the Project, Issues Addressed, etc.

The NAIC’s Innovation and Technology (EX) Task Force began discussing rebating issues in 2018 during the NAIC Summer National Meeting in Boston, MA, particularly because of the increased interest in offering value-added products and services such as risk mitigation devices and related services that are not necessarily addressed within the applicable insurance policy language. After finding that state interpretation and application of anti-rebating laws varies and after reviewing the history of the NAIC’s Unfair Trade Practices Act (#880) along with the history and the intent of the anti-rebating portion, it became clear that applying the anti-rebating laws to the innovation of new insurance products and services could be challenging. The Task Force received presentations and testimony from many stakeholders, including state insurance regulators, producers, consumers, insurance companies and the startup community regarding a wide array of opinions and concerns. They also offered various suggestions for improving uniform application of anti-rebating statutes in the states. Based on this research and hearing from stakeholders, the Task Force members determined it would be appropriate to review Model #880, specifically Section 4(H)(2).

2. Name of Group Responsible for Drafting the Model and States Participating

The Innovation and Technology (EX) Task Force was responsible for the drafting of the revisions to Model #880. The process began with the formation of a drafting group. The group was led by Superintendent Elizabeth Kelleher Dwyer (RI). Seven other states participated in the drafting process: Alaska, Alabama, Iowa, Missouri, North Dakota, Ohio and Washington. Also participating were six industry representatives, including one startup; one state legislator (Rep. Matt Lehman (IN), the president of National Council of Insurance Legislators—NCOIL); and a consumer representative.

3. Project Authorized by What Charge and Date First Given to the Group

The mission of the Innovation and Technology (EX) Task Force is to: 1) provide a forum for state insurance regulator education and discussion of innovation and technology in the insurance sector; 2) monitor technology developments that affect the state insurance regulatory framework; and 3) develop regulatory guidance, as appropriate. This work was done under the specific charge:

The Innovation and Technology (EX) Task Force will:
Develop regulatory guidance, model laws or model law revisions, and white papers or make other recommendations to the Executive (EX) Committee, as appropriate.

At its meeting during the 2019 Summer National Meeting, the Task Force voted to move forward with the Request for NAIC Model Law Development to open Model #880 to amend or add to the language in Section 4(H)(2). The request was adopted by the Task Force in October 2019 and subsequently by the NAIC Executive (EX) Committee in December during the 2019 Fall National meeting.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated.

The drafting group met twice at the beginning of 2020, in January and February, and then stopped meeting for a period of time because of the COVID-19 pandemic. However, it regrouped to meet two more times in May and June. Given the Task Force had already received considerable input from stakeholders regarding this topic, the drafting group was able to move forward expeditiously and disbanded prior to the 2020 Summer National Meeting.
5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The first draft published out of the drafting group was posted for comment on June 23. Twenty-one comment letters were submitted, and Superintendent Dwyer reviewed the changes made based on those comments during the Task Force’s meeting on Aug. 7. A new draft was posted and exposed for comment on Aug. 10. Seventeen comments were reviewed, and a new draft was posted on Oct. 30. During the Task Force’s meeting on Nov. 4, Superintendent Dwyer again reviewed each substantive comment, noting whether it was accepted or rejected in the latest draft. Comments regarding the Oct. 30 draft were again requested and accepted. Seven comments were reviewed, and interested parties were given an opportunity to present their points orally. Additionally, Task Force members and interested parties had the opportunity to ask questions or pose challenges to those points during a meeting on Nov. 30. Five presentations were made. Following the meeting on Nov. 30, another draft was posted on Dec. 2. During its meeting on Dec. 4 and with 44 members of the Task Force in attendance, the revised language was adopted, with Nevada dissenting and California, Hawaii, Idaho and New Jersey abstaining.

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)

While the genesis for drafting this revised language was primarily the need to clarify intentions related to the acceptability of the offering of things of value in the best interests of the consumer and to mitigate risk associated with what is being underwritten, value-added products and services, Section H(2)(e), the group also took on drafting clarifying language related to producer and insurer marketing including non-cash gifts meals, charitable donations on behalf of a customer, raffles and drawings, Section H(2)(f).

Since the term “value-added” is relatively new, there was considerable discussion regarding its use. Ultimately, the drafters and most of the state insurance regulators and interested parties agreed it was the appropriate term and needed no further defining.

There was considerable debate and discussion regarding the list in Section H(2)(e)(ii). The term “primarily designed” was discussed very thoroughly as the early use of the term “primarily intended” gave some state insurance regulators concern given the difficulty in determining “intent.” There seemed to be consensus that “designed” was a much better term to use in this case. The list itself was heavily debated both in terms of it being comprehensive and there not being a “catch-all,” as well as in terms of the value-added product or service needing to satisfy at least one of the listed criteria.

The cost discussed in Section H(2)(e)(iii) was also heavily debated. In the end, in addition to other language in that section, it was determined to be appropriate to include a drafting note that notes states may consider alternative language depending on their filing requirements. There was great care given to there being deference or to acknowledging some states may already have statute or regulation language that addresses or sets out permitted practices.

There was also a lot of discussion regarding Section H(2)(e)(vii). The debate was primarily around differences of opinion regarding whether offering the value-added product or service would need to be preapproved by the Department of Insurance (DOI). The concern on the part of industry was slowing down the ability to move forward with a pilot or testing something new, which led, ultimately, to the decision to require notification to the DOI, with a 21-day time period for the DOI to object.

In Section H(2)(f), great care was given to the specific terms used in this section. Given the history with this issue specific to the dollar amount, a drafting note was included to offer a suggested monetary amount but ultimately left to the state. In addition, this section addresses commercial or institutional customers as there was a great deal of discussion around excluding commercial lines from this section altogether, considering the notion that a transaction between sophisticated purchasers and sellers does not require this type of oversight.

Lastly, Section H(3) is intended to make clear that original rebating language intended to prevent abuses related to inducement to purchase or renew is still in effect, and this new language should not be construed to change that.
7. List the key provisions of the model (sections considered most essential to state adoption)

Section H(2)(e), Section H(2)(f) and Section H(3)

8. Any Other Important Information (e.g., amending an accreditation standard)

No other items are identified at this time.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: ☒ New Model Law or ☐ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:
   Creditor-Placed Insurance Model Act Review (C) Working Group

2. NAIC staff support contact information:
   Aaron Brandenburg
   abrandenburg@naic.org
   816-783-8271

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.
   Real Property Lender Placed Insurance Model Act.
   The Creditor-Placed Insurance Model Act Review (C) Working Group has been discussing revisions to the Creditor-Placed Insurance Model Act (#375) which focuses on creditor-placed insurance placed on personal property and auto loans. The Working Group was originally charged with looking at lender-placed insurance on mortgage loans, including reviewing information from hearings and regulatory actions that necessitate changes to the Model Law. The Working Group has determined two separate laws should exist, one for personal property and one for real property. The Working Group would like to work on a new model concerning lender-placed insurance placed on real property mortgage loans, as described in this Model Law Request, and work on Model #375 concerning personal property loans separately.

4. Does the model law meet the Model Law Criteria? ☒ Yes or ☐ No (Check one)
   (If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).
   a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? ☒ Yes or ☐ No (Check one)
      If yes, please explain why – States have taken regulatory action following abuses in the lender-placed insurance market as it relates to homeowners insurance. A consistent regulatory structure is desired to address these issues within the market.
   b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?
      ☒ Yes or ☐ No (Check one)
5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

☐ 1 ☒ 2 ☐ 2 ☐ 4 ☐ 5 (Check one)

High Likelihood                 Low Likelihood

Explanation, if necessary: The Working Group has spent over a year hearing from interested parties on issues related to lender-placed insurance as it reviewed Model #375. It has begun drafting language but now feels that issues regarding mortgage loans should be split from issues regarding personal property loans, into two separate models. The Working Group should be able to take the existing work done on the real property discussions related to Model #375 and complete its work on a new Model.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

☐ 1 ☒ 2 ☐ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood                 Low Likelihood

Explanation, if necessary:

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1 ☒ 2 ☐ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood                 Low Likelihood

Explanation, if necessary: The Working Group feels state legislatures will be more likely to adopt a new model related to real property lender-placed insurance, rather than a model that addresses both personal and real property.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No
NEW MODEL:
Adopted by the Lender-Placed Insurance Model Act (C) Working Group, 11/13/20
Adopted by the Property and Casualty Insurance (C) Committee, 12/8/20

Section 10. Enforcement
Section 11. Regulatory Authority
Section 12. Judicial Review
Section 13. Penalties
Section 15. Effective Date

Section 1. Purpose

The purpose of this Act is to:

A. Promote the public welfare by regulating lender-placed insurance on real property.
B. Create a legal framework within which lender-placed insurance on real property may be written in this state.
C. Help maintain the separation between lenders/servicers and insurers/insurance producers.
D. Minimize the possibilities of unfair competitive practices in the sale, placement, solicitation and negotiation of lender-placed insurance.

Section 2. Scope

A. This Act applies to insurers and insurance producers engaged in any transaction involving lender-placed insurance as defined in this Act.
B. All lender-placed insurance written in connection with mortgaged real property, including manufactured and mobile homes, is subject to the provisions of this Act, except:

   (1) Transactions involving extensions of credit primarily for business, commercial or agricultural purposes.
   (2) Insurance offered by the lender or servicer and elected by the mortgagor at the mortgagor’s option.
   (3) Insurance purchased by a lender or servicer on real estate owned property.
   (4) Insurance for which no specific charge is made to the mortgagor or the mortgagor’s account.

Drafting Note: Nothing in this Act shall be construed to create or imply a private cause of action for violation of this Act, and the commissioner shall have authority to enforce this Act subject to the laws of this state. Furthermore, nothing in this Act shall be construed to extinguish any mortgagor rights available under common law or other state statutes.
Section 3. Definitions

As used in this Act:

A. “Affiliate” shall mean a person that directly, or indirectly through one or more intermediaries, controls or is controlled by, or is under common control with, the person specified.

B. “Individual lender-placed insurance” means coverage for individual real property evidenced by a certificate of coverage under a master lender-placed insurance policy or a lender-placed insurance policy for individual real property.

C. “Insurance Producer” means a person or entity (or its Affiliates) required to be licensed under the laws of this state to sell, solicit or negotiate insurance.

D. “Insurer” means an insurance company, association or exchange authorized to issue lender-placed insurance in [insert applicable state] (or its Affiliates).

E. “Investor” means a person or entity (and its Affiliates) holding a beneficial interest in loans secured by real property.

F. “Lapse” means the moment in time in which a mortgagor has failed to secure or maintain valid and/or sufficient insurance upon mortgaged real property as required by a mortgage agreement.

G. “Lender” means a person or entity (and its Affiliates) making loans secured by an interest in real property.

H. “Lender-placed insurance” means insurance obtained by a lender or servicer when a mortgagor does not maintain valid and/or sufficient insurance upon mortgaged real property as required by the terms of the mortgage agreement. It may be purchased unilaterally by the lender or servicer, who is the named insured, subsequent to the date of the credit transaction, providing coverage against loss, expense or damage to collateralized property as a result of fire, theft, collision or other risks of loss that would either impair a lender, servicer or investor’s interest or adversely affect the value of collateral covered by limited dual interest insurance. It is purchased according to the terms of the mortgage agreement as a result of the mortgagor’s failure to provide evidence of required insurance.

I. “Loss ratio” means the ratio of incurred losses to earned premium.

J. “Master lender-placed insurance policy” means a group policy issued to a lender or servicer providing coverage for all loans in the lender or servicer’s loan portfolio as needed.

K. “Mortgage agreement” means the written document that sets forth an obligation or a liability of any kind secured by a lien on real property and due from, owing or incurred by a mortgagor to a lender on account of a mortgage loan, including the security agreement, Deed of Trust and any other document of similar effect, and any other documents incorporated by reference.

L. “Mortgage loan” means a loan, advance, guarantee or other extension of credit from a lender to a mortgagor.

M. “Mortgage transaction” means a transaction by the terms of which the repayment of money loaned or payment of real property sold is to be made at a future date or dates.

N. “Mortgagee” means the person who holds mortgaged real property as security for repayment of a mortgage agreement.

O. “Mortgagor” means the person who is obligated on a mortgage loan pursuant to a mortgage agreement.

P. “Person” means an individual or entity.
Q. “Real Estate Owned Property” means property owned or held by a lender or servicer following foreclosure under the related Mortgage agreement or the acceptance of a deed in lieu of foreclosure.

R. “Replacement Cost Value (RCV)” is the estimated cost to replace covered property at the time of loss or damage without deduction for depreciation. RCV is not market value, but it is instead the cost to replace covered property to its pre-loss condition.

S. “Servicer” means a person or entity (and its Affiliates) contractually obligated to service one or more mortgage loans for a Lender or Investor. The term “Servicer” includes entities involved in subservicing arrangements.

Section 4. Term of Insurance Policy

A. Lender-placed insurance shall become effective no earlier than the date of lapse of insurance upon mortgaged real property subject to the terms of a mortgage agreement and/or any other state or federal law requiring the same.

B. Individual lender-placed insurance shall terminate on the earliest of the following dates:

1. The date insurance that is acceptable under the mortgage agreement becomes effective, subject to the mortgagor providing sufficient evidence of such acceptable insurance.

2. The date the applicable real property no longer serves as collateral for a mortgage loan pursuant to a mortgage agreement.

3. Such other date as specified by the individual policy or certificate of insurance.

4. Such other date as specified by the lender or servicer.

5. The termination date of the policy.

C. An insurance charge shall not be made to a mortgagor for lender-placed insurance for a term longer than the scheduled term of the lender-placed insurance, nor may an insurance charge be made to the mortgagor for lender-placed insurance before the effective date of the lender-placed insurance.

Section 5. Calculation of Coverage and Payment of Premiums

A. Any lender-placed insurance coverage, and subsequent calculation of premium, should be based upon the replacement cost value of the property as best determined as follows:

1. The dwelling coverage amount set forth in the most recent evidence of insurance coverage provided by the mortgagee (“last known coverage amount” or “LKCA”), if known to the lender or servicer.

2. The insurer shall inquire of the insured, at least once, as to the LKCA; and if it is not able to obtain the LKCA from the insured or in another manner, the insurer may proceed as set forth below.

3. If the LKCA is unknown, the replacement cost of the property serving as collateral as calculated by the insurer, unless the use of replacement cost for this purpose is prohibited by other state or federal law.

4. If the LKCA is unknown and the replacement cost is not available or its use is prohibited, the unpaid principal balance of the mortgage loan.

B. In the event of a covered loss, any replacement cost coverage provided by an insurer in excess of the unpaid principal balance of the mortgage loan shall be paid to the mortgagor.

C. An insurer shall not write lender-placed insurance for which the premium rate differs from that determined by the schedules of the insurer on file with the commissioner as of the effective date of any such policy.
Section 6. Prohibited Practices

A. An insurer or insurance producer shall not issue lender-placed insurance on mortgaged property that the insurer or insurance producer or an Affiliate of the insurer or insurance producer owns, performs the servicing for, or owns the servicing right to the mortgaged property.

B. An insurer or insurance producer shall not compensate a lender, insurer, investor or servicer (including through the payment of commissions) on lender-placed property insurance policies issued by the insurer.

C. An insurer or insurance producer shall not share lender-placed insurance premium or risk with the lender, investor or servicer that obtained the lender-placed insurance.

D. An insurer or insurance producer shall not offer contingent commissions, profit sharing, or other payments dependent on profitability or loss ratios to any person affiliated with a servicer or the insurer in connection with lender-placed insurance.

E. An insurer shall not provide free or below-cost outsourced services to lenders, investors or servicers, and an insurer will not outsource its own functions to lenders, insurance producers, investors or servicers on an above-cost basis.

F. An insurer or insurance producer shall not make any payments, including but not limited to the payment of expenses to a lender, insurer, investor or servicer for the purpose of securing lender-placed insurance business or related outsourced services.

Section 7. Non-Circumvention

Nothing in this Act shall be construed to allow an insurance producer or an insurer solely underwriting lender-placed insurance to circumvent the requirements set forth within this Act. Any such part of any requirements, limitations or exclusions provided herein apply in any part to any insurer or insurance producer involved in lender-placed insurance.

Section 8. Evidence of Coverage

Lender-placed insurance shall be set forth in an individual policy or certificate of insurance. A copy of the individual policy, certificate of insurance, or other evidence of insurance coverage shall be mailed, first class mailed, or delivered in person to the last known address of the mortgagor or delivered in accordance with [inset reference to Electronic Transaction Act]. Notwithstanding any other statutory or regulatory required information, the individual policy or certificate of insurance coverage shall include the following information:

A. The address and identification of the insured property.

B. The coverage amount or amounts if multiple coverages are provided.

C. The effective date of the coverage.

D. The term of coverage.

E. The premium charge for the coverage.

F. Contact information for filing a claim.

G. A complete description of the coverage provided.

Section 9. Filing, Approval and Withdrawal of Forms and Rates

A. All policy forms and certificates of insurance to be delivered or issued for delivery in this state and the schedules of premium rates pertaining thereto shall be filed with the Commissioner.
B. The Commissioner shall review the rates to determine whether the rates are excessive, inadequate or unfairly discriminatory. This analysis shall include a determination as to whether expenses included by the insurer in the rate are appropriate.

C. All insurers shall re-file lender-placed property insurance rates at least once every four (4) years.

D. All insurers writing lender-placed insurance shall have separate rates for lender-placed insurance and voluntary insurance obtained by a mortgage servicer on real estate owned property.

E. Upon the introduction of a new lender-placed insurance program, the insurer shall reference its experience in existing programs in the associated filings. Nothing in this Act shall limit an insurer’s discretion, as actuarially appropriate, to distinguish different terms, conditions, exclusions, eligibility criteria or other unique or different characteristics. Moreover, an insurer may, where actuarially acceptable, rely upon models or, in the case of flood filings where applicable experience is not credible, on Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) data.

F. No later than April 1 of each year, each insurer with at least $100,000 in direct written premium for lender-placed insurance in this state during the prior calendar year shall report to the Commissioner the following information for the prior calendar year:

   (1) Actual loss ratio.
   (2) Earned premium.
   (3) Any aggregate schedule rating debit/credit to earned premium.
   (4) Itemized expenses.
   (5) Paid losses.
   (6) Loss reserves, including case reserves and reserves for incurred but not reported losses.

This report shall be separately produced for each lender-placed program and presented on both an individual-jurisdiction and countrywide basis.

G. Except in the case of lender-placed flood insurance, to which this paragraph does not apply, if an insurer experiences an annual loss ratio of less than 35% in any lender-placed program for two consecutive years, it shall submit a rate filing (either adjusting its rates or supporting their continuance) to the Commissioner no more than 90 days after the submission of the data required in F. above.

Drafting Note: The 35% trigger for re-filing rates is not intended to be, nor should be interpreted as, a loss ratio standard for determining whether rates are excessive or inadequate. The loss ratio standard in this section is solely directed to prompt a re-filing of rates by the insurer.

H. Except as specifically set forth in this Section, rate and form filing requirements shall be subject to the insurance laws of this state.

Section 10. Enforcement

The Commissioner shall have all rights and powers to enforce the provisions of this Act as provided by section(s) [insert section(s) number] of the Insurance Code of this state.

Section 11. Regulatory Authority

The commissioner may, after notice and hearing, promulgate reasonable regulations and orders to carry out and effectuate the provisions of this Act.
Section 12. Judicial Review

A. A person subject to an order or final determination of the commissioner under Section 8 or Section 13 may obtain a review of the order or final determination by filing in the [insert title] Court of [insert county] County, within [insert number] days from the date of the service of the order, a written petition praying that the order of the commissioner be set aside. A copy of the petition shall be served upon the commissioner, and the commissioner shall certify and file in the court a transcript of the entire record in the proceeding, including all the evidence taken and the report and order or final determination of the commissioner. Upon filing of the petition and transcript, the court shall have jurisdiction of the proceeding; and the questions determined shall determine whether the filing of the petition shall operate as a stay of the order or final determination of the commissioner, and they shall have power to make and enter upon the pleadings, evidence and proceedings set forth in the transcript a decree modifying, affirming or reversing the order or final determination of the commissioner, in whole or in part. The findings of the commissioner as to the facts, if supported by [insert type] evidence, shall be conclusive.

Drafting Note: Insert appropriate language to accommodate to local procedure the effect given the commissioner’s determination.

B. To the extent that the order or final determination of the commissioner is affirmed, the court shall issue its own order commanding obedience to the terms of the order or final determination of the commissioner. If either party applies to the court for leave to adduce additional evidence and shows to the satisfaction of the court that the additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the commissioner, the court may order the additional evidence to be taken before the commissioner and be adduced upon the hearing in the manner and upon the terms and conditions the court may deem proper. The commissioner may modify the findings of fact, or make new findings by reason of the additional evidence so taken, and shall file such modified or new findings that are supported by [insert type] evidence with a recommendation if any, for the modification or setting aside of the original order or final determination, with the return of the additional evidence.

Drafting Note: Insert appropriate language to accommodate to local procedure the effect given the commissioner’s determination. In a state where final judgment, order or final determination or decree would not be subject to review by an appellate court, provision should therefore be inserted here.

C. An order issued by the commissioner under Section 13 shall become final:

(1) Upon the expiration of the time allowed for filing a petition for review if no petition has been duly filed within that time except that the commissioner may thereafter modify or set aside the order to the extent provided in Section 13.

(2) Upon the final decision of the court if the court directs that the order of the commissioner be affirmed or the petition for review be dismissed.

D. No order of the commissioner under this Act or order of a court to enforce the same shall relieve or absolve any person affected by the order from liability under any other laws of this state.

Drafting Note: States may delete this section if the substance of it already exists in state law.

Section 13. Penalties

An insurer that violates an order of the commissioner while the order is in effect may, after notice and hearing and upon order of the commissioner, be subject at the discretion of the commissioner to either or both of the following:

A. Payment of a monetary penalty of not more than $1,000 for each violation, but not to exceed an aggregate penalty of $100,000, unless the violation was committed flagrantly in a conscious disregard of this Act, in which case the penalty shall not be more than $25,000 for each violation, but not to exceed an aggregate penalty of $250,000.
B. Suspension or revocation of the insurer’s license.

Drafting Note: States may delete or modify this section if the substance of it already exists in state law.

If any provision of this Act, or the application of the provision to any person or circumstance, is for any reason held to be invalid, the remainder of the Act and the application of such provision to other persons or circumstances shall not be affected thereby.

Section 15. Effective Date

This Act shall take effect [insert effective date].
PROJECT HISTORY

REAL PROPERTY LENDER-PLACED INSURANCE MODEL ACT

1. Description of the Project, Issues Addressed, etc.

The Creditor-Placed Insurance Model Act Review (C) Working Group was appointed in May 2015 with a charge to review information from a 2012 public hearing on lender-placed insurance (LPI) and determine if changes were needed to the Creditor-Placed Insurance Model Act (#375) having to do with creditor-placed automobile insurance. The Working Group met throughout 2015, 2016 and 2017 to review a New York regulation and Florida orders concerning LPI. In 2017, the Working Group began discussing the need to split the topics of personal property and real property into two different sections or two different models. In July 2017, the Working Group decided it would need to split the personal property from real property into two different models, and the Property and Casualty Insurance (C) Committee adopted a Request for NAIC Model Law Development on July 18, 2017.

In 2018, the Property and Casualty Insurance (C) Committee appointed the Lender-Placed Insurance Model Act (C) Working Group to only focus on drafting a new model related to lender-placed homeowners’ insurance.

2. Name of Group Responsible for Drafting the Model and States Participating

The 2020 members of the Lender-Placed Insurance Model Act (C) Working Group were: Florida (Chair), Rhode Island (Vice Chair), Alaska, California, Connecticut, District of Columbia, Louisiana, Mississippi, North Dakota, Oklahoma, Texas, Virginia and Wisconsin.

3. Project Authorized by What Charge and Date First Given to the Group

On July 18, 2017, the Property and Casualty Insurance (C) Committee adopted a Request for NAIC Model Law Development. In 2018, the Property and Casualty Insurance (C) Committee appointed the Lender-Placed Insurance Model Act (C) Working Group to only focus on drafting a new model related to lender-placed homeowners’ insurance.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated

The Lender-Placed Insurance Model Act (C) Working Group reviewed sections of the Real Property Lender-Place Insurance Model Act (Model) on various conference calls and asked for comments on an ongoing basis throughout 2017 and 2018. A draft of the Model was exposed in March 2018, and it was discussed on Sept. 18, 2018. The final draft of the Model was exposed on Oct. 19, 2020, through Nov. 3, 2020.

Numerous written comments were submitted to the Working Group, including from the Center for Economic Justice (CEJ); the National Consumer Law Center (NCLC), a joint industry group made up of the American Bankers Association (ABA), the Consumer Credit Industry Association (CCIA), the Council of Insurance Agents & Brokers, the National Association of Mutual Insurance Companies (NAMIC), and the American Property Casualty Insurance Association (APCIA); as well as numerous states.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

Once the focus of the Model was limited to real property in 2018, the Lender-Placed Insurance Model Act (C) Working Group exposed the draft of a new model law for real property LPI in March 2018 for a 45-day public comment period ending April 30, 2018. On Sept. 18, 2018, the Working Group reviewed comments received, as well as a new draft of the Model reflecting those comments. The Working Group exposed the new draft through Oct. 31, 2018.

The Working Group met Oct. 19, 2020, to hear from commenters on the most recent version of the proposed Model and to expose the Model for a 15-day public comment period ending Nov. 3, 2020.

On Nov. 13, 2020, the Working Group met to hear from commenters and review new edits to the Model made by Rhode Island. The Working Group agreed to several changes to the Model and unanimously adopted the Model during this conference call.
6. **A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)**

Scope of the Model: Early on, consideration was given to revising Model #375 so that it would include both personal property and real property. The Lender-Placed Insurance Model Act (C) Working Group decided to create a new model focused on real property, and a model law request was adopted by the Property and Casualty Insurance (C) Committee on July 18, 2017. In its 2018 charges, the Working Group was charged with only creating a new model focused on real property.

Tracking Expenses and Review of Rates: Some commenters wanted a prohibition of tracking expenses because they said servicers are paid for tracking, and the practice of allowing insurers to provide free tracking and recoup the cost from LPI premiums is unfair. Working Group members argued that states retain the authority to review expenses in rate filings and judge whether expenses are appropriate to pass to consumers. The Working Group agreed to revise Section 9B to read: “The Commissioner shall review the rates to determine whether the rates are excessive, inadequate or unfairly discriminatory. This analysis shall include a determination as to whether expenses included by the insurer in the rate are appropriate.”

Loss Ratios: Some commenters argued for a lower loss ratio threshold. The Working Group agreed to a drafting note following Section 9G that reads: “The 35% trigger for re-filing rates is not intended to be nor should be interpreted as a loss ratio standard for determining whether rates are excessive or inadequate. The loss ratio standard in this section is solely directed to prompt a re-filing of rates by the insurer.”

Single and Dual-Interest: Some commenters argued that only dual-interest LPI be permitted because the borrower is named as an additional insured with dual-interest and has some rights to file a claim under the policy. The Working Group found most policies to be dual-interest, and it decided not to include a prohibition of single-interest LPI within the Model.

7. **Any Other Important Information (e.g., amending an accreditation standard).**

None.
Casualty Actuarial and Statistical (C) Task Force

Regulatory Review of Predictive Models

I. INTRODUCTION

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many state insurance regulators, who must review these techniques, without the necessary tools to effectively review insurers’ use of predictive models in insurance applications.

When a rate plan is truly innovative, the insurer must anticipate or imagine the reviewers’ interests because reviewers will respond with unanticipated questions and have unique educational needs. Insurers can learn from the questions, teach the reviewers, and so forth. When that back-and-forth learning is memorialized and retained, filing requirements and insurer presentations can be routinely organized to meet or exceed reviewers’ needs and expectations. Hopefully, this white paper helps bring more consistency to the art of reviewing predictive models within a rate filing and make the review process more efficient.

The Casualty Actuarial and Statistical (C) Task Force has been charged with identifying best practices to serve as a guide to state insurance departments in their review of the predictive models underlying rating plans. There were two charges given to Task Force by the Property and Casualty Insurance (C) Committee at the request of the Big Data (EX) Working Group:

- Draft and propose changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.

- Draft and propose state guidance (e.g., information, data) for rate filings based on complex predictive models.

This white paper will identify best practices for the review of predictive models and analytics filed by insurers with regulators to justify rates and will provide state guidance for the review of rate filings based on predictive models. Upon adoption of this white paper by the Executive (EX) Committee and Plenary, the Task Force will make a recommendation to incorporate these best practices into the Product Filing Review Handbook and will forward that recommendation to the Speed to Market (EX) Working Group.

As discussed further in the body of the white paper, this document is intended as guidance for state insurance regulators as they review predictive models. Nothing in this document is intended to, or could, change the applicable legal and regulatory standards for approval of rating plans. This guidance is intended only to assist state insurance regulators as they review models to determine whether modeled rates are compliant with existing state laws and/or regulations. To the extent these best practices are incorporated into the Product Filing Review Handbook, the handbook provides that it is intended to “add uniformity and consistency of regulatory processes, while maintaining the benefits of the application of unique laws and regulations that address the state-specific needs of the nation’s insurance consumers.”

II. WHAT IS A “BEST PRACTICE”?  

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions…will solve a problem or achieve a goal.” 2 Best practices are used to maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking. 3 Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine whether predictive models, as used in rate filings, are compliant with state laws and/or regulations?

Key Regulatory Principles

In this white paper, best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across the states:

1. State insurance regulators will maintain their current rate regulatory authority and autonomy.

1 In this white paper, references to “model” or “predictive model” are the same as “complex predictive model” unless qualified.

2. State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly across the states.4

3. State insurance regulators will share expertise and discuss technical issues regarding predictive models to make the review process in any state more effective and efficient.

4. State insurance regulators will maintain confidentiality, in accordance with state law, regarding predictive models.

Best practices are presented to state insurance regulators for the review of predictive models and to insurance companies as a consideration in filing rating plans that incorporate predictive models. As a byproduct of identifying these best practices, general and specific information elements were identified that could be useful to a regulator when reviewing a rating plan that is wholly or in part based on a generalized linear model (GLM). For the states that are interested, the information elements are identified in Appendix B, including comments on what might be important about that information and, where appropriate, providing insight as to when the information might identify an issue the regulator needs to be aware of or explore further. Lastly, provided in this white paper are glossary terms (see Appendix C) and references (contained in the footnotes) that can expand a state insurance regulator’s knowledge of predictive models (GLMs specifically).

III. SOME ISSUES IN REVIEWING TODAY’S PREDICTIVE MODELS

The term “predictive model” refers to a set of models that use statistics to predict outcomes.5 When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium. The GLM6 is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan.

Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In this modeling space, predictive modeling is often referred to as predictive analytics.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered intuitive and easy to demonstrate the relationship to costs (loss and/or expense). Today, many insurers consider univariate methods too simplistic because they do not take into account the interaction (or dependencies) of the selected input variables.

Today, the majority of predictive models used in personal automobile and home insurance rating plans are GLMs.7 According to many in the insurance industry, GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among input variables. However, it is not always easy to understand the complex predictive model output’s relationship to cost. This creates a problem for the state insurance regulator when model results are difficult to explain to someone (e.g., a consumer) who has little to no expertise in modeling techniques.

Generalized Linear Models

A GLM consists of three elements:8

- A target variable, Y, which is a random variable that is independent and is assumed to follow a probability distribution from the exponential family, defined by a selected variance function and dispersion parameter.
- A linear predictor, $\eta = X\beta$.
- A link function g, such that $E(Y) = \mu = g^{-1}(\eta)$.

---

4 The states can share information if they can maintain confidentiality and legally share such information. Information about a classification plan documented in one state could be shared with another state.

5 A more thorough exploration of different predictive models will be found in many books on statistics, including:

6 The GLM is a flexible family of models that are unified under a single method. Types of GLMs include logistic regression, Poisson regression, gamma regression, and multinomial regression.

8 Information on model elements can be found in most books on statistics.
As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret a GLM’s output than that of a univariate model.

To further complicate the regulatory review of models in the future, modeling methods are evolving rapidly and are not limited just to GLMs. As computing power grows exponentially, it is opening the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these methods include predictive models utilizing random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as “ensembles”). These evolving techniques will make a state insurance regulator’s understanding and oversight of filed rating plans that incorporate predictive models even more challenging.

In addition to the growing complexity of predictive models, many state insurance departments do not have in-house actuarial support or have limited resources to contract out for support when reviewing rate filings that include the use of predictive models. The Big Data (EX) Working Group identified the need to provide the states with guidance and assistance when reviewing predictive models underlying filed rating plans.9 The Working Group circulated a proposal addressing aid to state insurance regulators in the review of predictive models as used in personal automobile and home insurance rate filings. This proposal was circulated to all Working Group members and interested parties on Dec. 19, 2017, for a public comment period ending Jan. 12, 2018.10 The Working Group’s effort resulted in new charges for the Casualty Actuarial and Statistical (C) Task Force (see Section I—Introduction) to identify best practices that provide guidance to the states in their review of predictive models.

Credibility of GLM Output

If the underlying data is not credible, then no model will improve that credibility, and segmentation methods could make credibility worse. GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLMs effectively assume that the underlying datasets are 100% credible, no matter their size. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resultant selections are typically not credibility-weighted with any complement of credibility.11,12 And, selected relativities based on GLM model output may differ from GLM point estimates. Lack of credibility for particular estimates could be discerned if standard errors are large relative to the point estimates and/or if the confidence intervals are broad.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler—and the state insurance regulator reviewing the model—would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Another consideration is the availability of data, both internal and external, that may result in the selection of predictor variables that have spurious correlation with the target variable. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

IV. DO REGULATORS NEED BEST PRACTICES TO REVIEW PREDICTIVE MODELS?

It might be better to revise the question of “Do regulators need best practices to review predictive models?” to “Are best practices in the review of predictive models of value to regulators and insurance companies?” The answer is “yes” to both questions.

Regulatory best practices need to be developed that do not unfairly or inordinately create barriers for insurers, and ultimately consumers, while providing a baseline of analysis for state insurance regulators to review the referenced filings. Best practices will aid regulatory reviewers by raising their level of model understanding. Also, with regard to scorecard
models and the model algorithm, there is often not sufficient support for relative weight, parameter values, or scores of each variable. Best practices can potentially aid in addressing this problem.

Best practices are not intended to create standards for filings that include predictive models. Rather, best practices will assist the states in identifying the model elements they should be looking for in a filing that will aid the regulator in understanding why the company believes that the filed predictive model improves the company’s rating plan and, therefore, makes that rating plan fairer to all consumers in the marketplace. To make this work, state insurance regulators and the industry need to recognize that:

- Best practices provide guidance to state insurance regulators in their essential and authoritative role over the rating plans in their respective state.
- Every state may have a need to review predictive models, whether that occurs during the approval process of a rating plan or during a market conduct exam. Best practices help the state insurance regulator identify elements of a model that may influence the regulatory review as to whether modeled rates are appropriately justified, compliant with state laws and/or regulations, and whether to act on that information.
- Best practices provide a framework for the states to share knowledge and resources to facilitate the technical review of predictive models.
- Best practices can lead to improved quality in predictive model reviews across the states, aiding speed to market and competitiveness of the state’s insurance marketplace.
- Best practices aid training of new state insurance regulators and/or regulators new to reviewing predictive models. This is especially useful for those regulators who do not actively participate in NAIC discussions related to the subject of predictive models.
- Each state insurance regulator adopting best practices will be better able to identify the resources needed to assist their state in the review of predictive models.

V. SCOPE

The best practices identified in this white paper were derived from a ground-up study and analysis of how GLMs are used in personal automobile and home insurance rating plans. These three components (GLM, PPA, and HO) were selected as the basis to develop best practices for the regulatory review of predictive models because many state insurance regulators are familiar with, and have expertise in, such filings. In addition, the legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, for personal automobile and home insurance. It is through a review of these personal lines and the knowledge needed to review GLMs used in their rate filings that will provide meaningful best practices for state insurance regulators. The identified best practices should be readily transferrable when the review involves other predictive models applied to other lines of business or for an insurance purpose other than rating.

VI. CONFIDENTIALITY

Each state determines the confidentiality of a rate filing and the supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. Regulatory reviewers are required to protect confidential information in accordance with applicable state law. State insurance regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietary or a trade secret. However, insurers should be aware that a rate filing might become part of the public record. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with its rate filing.

State authority, regulations and/or rules governing confidentiality always apply when a state insurance regulator reviews a model used in rating. When the NAIC or a third party enters the review process, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed will continue to apply.

---

13 See Appendix B.
VII. BEST PRACTICES FOR THE REGULATORY REVIEW OF PREDICTIVE MODELS

Best practices will help the state insurance regulator understand if a predictive model is cost-based, if the predictive model is compliant with state law, and how the model improves a company’s rating plan. Best practices can also improve the consistency among the regulatory review processes across the states and improve the efficiency of each regulator’s review, thereby helping companies get their products to market faster. With this in mind, the regulator’s review of predictive models should:

1. Ensure that the selected rating factors, based on the model or other analysis, produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the proposed revisions to rate level indications provided by the filer.
   b. Determine whether individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk.
   c. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.
   d. Review the individual input characteristics to, and output factors from, the predictive model (and its sub-models), as well as associated selected relativities, to ensure they are compatible with practices allowed in the state and do not reflect prohibited characteristics.

2. Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all aspects of the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output.
   a. Obtain a clear understanding of how the selected predictive model was built.
   b. Determine whether the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values, and outliers are handled.
   c. Determine whether any adjustments to the raw data are handled appropriately, including, but not limited to, trending, development, capping, and removal of catastrophes.
   d. Obtain a clear understanding of how often each risk characteristic used as input to the model is updated and whether the model is periodically refreshed, to help determine whether the model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.
   a. Obtain a clear understanding of the characteristics that are input to the predictive model (and its sub-models).
   b. Obtain a clear understanding of how the insurer integrates the model into the rating plan and how it improves the rating plan.
   c. Obtain a clear understanding of how the model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.
   a. Enable innovation in the pricing of insurance through the acceptance of predictive models, provided such models are in compliance with state laws and/or regulations, particularly prohibitions on unfair discrimination.
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state laws and/or regulations.
   c. Review predictive models in a timely manner to enable reasonable speed to market.
VIII. PROPOSED CHANGES TO THE PRODUCT FILING REVIEW HANDBOOK

The Task Force was charged to propose modifications to the 2016 Product Filing Review Handbook to reflect best practices for the regulatory review of GLM predictive analytics. The following are the titled sections in Chapter Three—The Basics of Property and Casualty Rate Regulation.

No changes are proposed to the following sections of Chapter Three: Introduction; Rating Laws; Rate Standards; Rate Justification and Supporting Data; Number of Years of Historical Data; Segregation of Data; Data Adjustments; Premium Adjustments; Losses and LAE (perhaps just DCC) Adjustments; Catastrophe or Large Loss Provisions; Loss Adjustment Expenses; Data Quality; Rate Justification: Overall Rate Level; Contingency Provision; Credibility; Calculation of Overall Rate Level Need: Methods (Pure Premium and Loss Ratio Methods); Rate Justification: Rating Factors; Calculation of Deductible Rating Factors; Calculation of Increased Limit Factors; and Credibility for Rating Factors.

The following are the proposed changes to the remainder of Chapter Three:

Interaction between Rating Variables (Multivariate Analysis)

If each rating variable is evaluated separately, statistically significant interactions between rating variables may not be identified and, thus, may not be included in the rating plan. Care should be taken to have a multivariate analysis when practical. In some instances, a multivariate analysis is not possible. But, with computing power growing exponentially, insurers believe they have found many ways to improve their operations and competitiveness through use of complex predictive models in all areas of their insurance business.

Approval of Classification Systems

With rate changes, companies sometimes propose revisions to their classification system. Because the changes to classification plans can be significant and have large impacts on the consumers’ rates, regulators should focus on these changes.

Some items of proposed classification can sometimes be deemed to be contrary to state laws and/or regulations, such as the use of education or occupation. You should be aware of your state’s laws and regulations regarding which rating factors are allowed, and you should require definitions of all data elements that can affect the charged premium. Finding rating or underwriting characteristics that may violate state laws and/or regulations is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.

Rating Tiers – (No change is proposed.)

Rate Justification: New Products – (No change is proposed.)

Predictive Modeling

The ability of computers to process massive amounts of data (referred to as “big data”) has led to the expansion of the use of predictive modeling in insurance ratemaking. Predictive models have enabled insurers to build rating, marketing, underwriting, and claim models with significant predictive ability.

Data quality within, and communication about, models are of key importance with predictive modeling. Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine-learning. In the modeling space, predictive modeling is often referred to as “predictive analytics.”

Insurers’ use of predictive analytics along with big data has significant potential benefits to consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many state insurance regulators without the necessary tools to effectively review
insurers’ use of predictive models in insurance applications. To aid the regulator in the review of predictive models, best practices have been developed.

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium.

To further complicate regulatory review of models in the future, modeling technology and methods are evolving rapidly. Generalized linear models (GLMs) are relatively transparent and their output and consequences are much clearer than many other complex models. But as computing power grows exponentially, it is opening the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these methods are predictive models utilizing logistic regression, K-nearest neighbor classification, random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as “ensembles”). These evolving techniques will make the regulators’ understanding and oversight of filed rating plans even more challenging.

**Generalized Linear Models**

The GLM is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan. Because of this and the fact most property/casualty regulators are most concerned about personal lines, the NAIC has developed an appendix in its white paper for guidance in reviewing GLMs for personal automobile and home insurance.

**What is a “Best Practice”?**

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions… will solve a problem or achieve a goal.” Best practices can maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking. Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine whether predictive models, as used in rate filings, are compliant with state laws and/or regulations? However, best practices are not intended to create standards for filings that include predictive models.

Best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across the states:

- State insurance regulators will maintain their current rate regulatory authority and autonomy.
- State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly across the states.
- State insurance regulators will share expertise and discuss technical issues regarding predictive models to make the review process in any state more effective and efficient.
- State insurance regulators will maintain confidentiality, in accordance with state laws and/or regulations, regarding predictive models.

**Best Practices for the Regulatory Review of Predictive Models**

Best practices will help the regulator understand if a predictive model is cost-based, if the predictive model is compliant with state laws and/or regulations, and how the model improves the company’s rating plan. Best practices can also improve the consistency among the regulatory review processes across the states and improve the efficiency of each regulator’s review, thereby assisting companies in getting their products to market faster. With this in mind, the regulator’s review of predictive models should:

---

14 Refer to Appendix B in the NAIC white paper, *Regulatory Review of Predictive Models*.

1. Ensure that the selected rating factors, based on the model or other analysis, produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the proposed revisions to rate level indications provided by the filer.
   b. Determine whether individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk.
   c. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.
   d. Review the individual input characteristics to, and output factors from, the predictive model (and its sub-models), as well as associated selected relativities, to ensure they are compatible with practices allowed in the state and do not reflect prohibited characteristics.

2. Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all aspects of the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output.
   a. Obtain a clear understanding of how the selected predictive model was built.
   b. Determine whether the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values, and outliers are handled.
   c. Determine whether any adjustments to the raw data are handled appropriately, including, but not limited to, trending, development, capping, and removal of catastrophes.
   d. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated and whether the model is periodically refreshed, so model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.
   a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models).
   b. Obtain a clear understanding how the insurer integrates the model into the rating plan and how it improves the rating plan.
   c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.
   a. Enable innovation in the pricing of insurance through acceptance of predictive models, provided such models are in compliance with state laws and/or regulations, particularly prohibitions on unfair discrimination.
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state laws and/or regulations.
   c. Review predictive models in a timely manner to enable reasonable speed to market.

Confidentiality

Each state determines the confidentiality of a rate filing and the supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. Regulatory reviewers are required to protect confidential information in accordance with applicable state laws and/or regulations. State insurance Regulators should be aware of their state laws and/or regulations on confidentiality when requesting data from insurers that may be proprietary or trade secret. However, insurers should be aware that a rate filing might become part of the public record. It is incumbent on an insurer to be familiar with each state’s laws and/or regulations regarding the confidentiality of information submitted with their rate filing.

State authority, regulations and rules governing confidentiality always apply when a regulator reviews a model used in rating. When the NAIC or a third party enters into the review process, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed will continue to apply.
Advisory Organizations – (No change is proposed.)

Workers’ Compensation Special Rules – (No change is proposed.)

Premium Selection Decisions – (No change is proposed.)

Installment Plans – (No change is proposed.)

Policy Fees – (No change is proposed.)

Potential Questions to Ask Oneself as a Regulator – (No change is proposed.)

Questions to Ask a Company

If you remain unsatisfied that the company has satisfactorily justified the rate change, then consider asking additional questions of the company. Questions should be asked of the company when it has not satisfied statutory or regulatory requirements in the state or when any current justification is inadequate and could have an impact on the rate change approval or the amount of the approval.

If there are additional items of concern, the company can be notified so it can make appropriate modifications in future filings.

The NAIC white paper, Regulatory Review of Predictive Models, documents questions that a state insurance regulator may want to ask when reviewing a model. These questions are listed as “information elements” in Appendix B of the white paper. Note: Although Appendix B focuses on GLMs for personal automobile and home insurance, many of the “information elements” and concepts they represent may be transferable to other types of models, other lines of business, and other applications beyond rating.

Additional Ratemaking Information

The Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) have extensive examination syllabi that contain a significant amount of ratemaking information, on both the basic topics covered in this chapter and on advanced ratemaking topics. The CAS and SOA websites (https://www.casact.org and https://www.soa.org, respectively) contain links to many of the papers included in the syllabi. Recommended reading is the Foundations of Casualty Actuarial Science, which contains chapters on ratemaking, risk classification, and individual risk rating.

Other Reading

Additional background reading is recommended:

  - Chapter 1: Introduction
  - Chapter 3: Ratemaking
  - Chapter 6: Risk Classification
  - Chapter 9: Investment Issues in Property-Liability Insurance
  - Chapter 10: Only the section on Regulating an Insurance Company, pp. 777–787
- CAS: Statements of Principles, especially regarding property/casualty ratemaking.
- CAS: “Basic Ratemaking.”
- Association of Insurance Compliance Professionals: “Ratemaking: What the State Filer Needs to Know.”
- Review of filings and approval of insurance company rates.
Summary

Rate regulation for property/casualty lines of business requires significant knowledge of state rating laws, rating standards, actuarial science, statistical modeling, and many data concepts.

- Rating laws vary by state, but the rating laws are usually grouped into prior approval, file and use or use and file (competitive), no file (open competition), and flex rating.
- Rate standards typically included in the state rating laws require that “rates shall not be inadequate, excessive, or unfairly discriminatory.”
- A company will likely determine its indicated rate change by starting with historical years of underwriting data (earned premiums, incurred loss and loss adjustment expenses, and general expenses) and adjusting that data to reflect the anticipated ultimate level of costs for the future time period covered by the policies. Numerous adjustments are made to the data. Common premium adjustments are on-level premium, audit, and trend. Common loss adjustments are trend, loss development, catastrophe/large loss provisions, and an adjusting and other (A&O) loss adjustment expense provision. A profit/contingency provision is also calculated to determine the indicated rate change.
- Once an overall rate level is determined, the rate change gets allocated to the classifications and other rating factors.
- Individual risk rating allows manual rates to be modified by an individual policyholder’s own experience.
- Advisory organizations provide the underlying loss costs for companies to be able to add their own expenses and profit provisions (with loss cost multipliers) to calculate their insurance rates.
- The CAS’ Statement of Principles Regarding Property and Casualty Insurance Ratemaking provides guidance and guidelines for the numerous actuarial decisions and standards employed during the development of rates.
- NAIC model laws and regulations include special provisions for workers’ compensation business, penalties for not complying with state laws and/or regulations, and competitive market analysis to determine whether rates should be subject to prior-approval provisions.
- Best practices for reviewing predictive models are provided in the NAIC white paper, Regulatory Review of Predictive Models. The best practices and many of the information elements and underlying concepts may be transferrable to other types of models, other lines of insurance, and applications beyond rating.

While this chapter provides an overview of the rate determination/actuarial process and regulatory review, state statutory or administrative rule may require the examiner to employ different standards or guidelines than the ones described.

No additional changes are proposed to the Product Filing Review Handbook.

IX. PROPOSED STATE GUIDANCE

This white paper acknowledges that different states will apply the guidance within this white paper differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and the time that can be reasonably allocated to predictive-model reviews. The states with prior-approval authority over personal lines rate filings often already require answers in connection with many of the information elements expressed in this white paper. However, the states—including those with and without prior-approval authority—may also use the guidance in this white paper to choose which model elements to focus on in their reviews and/or to train new reviewers, as well as to gain an enhanced understanding of how predictive models are developed, supported, and deployed in their markets. Ultimately, the insurance regulators within each state will decide how best to tailor the guidance within this white paper to achieve the most effective and successful implementation, subject to the framework of statutes, regulations, precedents, and/or processes that comprise the insurance regulatory framework in that state.
X. OTHER CONSIDERATIONS

During the development of state guidance for the review of predictive models used in rate filings, important topics that may impact the review arose that were not within the scope of this white paper. The topics are listed below without elaboration and not in any order of importance. Note: This is not an exhaustive list. These topics may need to be addressed during the regulator’s review of a predictive model. It may be that one or more of the following topics will be addressed by an NAIC committee in the future:

- Provide guidance for state insurance regulators to identify when a rating variable or rating plan becomes too granular.
- Provide guidance for state insurance regulators on the importance of causality versus correlation when evaluating a rating variable’s relationship to risk, in general and in relation to Actuarial Standard of Practice (ASOP) No. 12, Risk Classification (for All Practice Areas).
- Provide guidance for state insurance regulators on the value and/or concerns of data mining, including how data mining may assist in the model building process, how data dredging may conflict with standard scientific principles, how data dredging may increase “false positives” during the model building process, and how data dredging may result in less accurate models and/or models that are unfairly discriminatory.
- Provide guidance and/or tools for state insurance regulators to determine how a policy premium is calculated and to identify the most important risk characteristics that underlie the calculated premium.
- Provide guidance for state insurance regulators when reviewing consumer-generated data in insurance transactions, including disclosure to the consumer, ownership of data, and verification of data procedures.
- Provide guidance, research tools, and techniques for state insurance regulators to monitor consumer market outcomes resulting from insurers’ use of data analytics underlying rating plans.
- Provide guidance for state insurance regulators to expand the best practices and information elements contained in this white paper to non-GLM models and insurance applications other than for personal automobile and home insurance rating plans.
- Provide guidance for state insurance regulators to determine whether individual input characteristics to a model or a sub-model, as well as associated relativities, are not unfairly discriminatory or a “proxy for a protected class.”
- Provide guidance for state insurance regulators to identify and minimize unfair discrimination manifested as “disparate impact.”
- Provide guidance for state insurance regulators that seek a causal or rational explanation why a rating variable is correlated to expected loss or expense, and why that correlation is consistent with the expected direction of the relationship.
APPENDIX A – BEST PRACTICES DEVELOPMENT

The development of best practices is a method for reviewing public policy processes that have been effective in addressing particular issues and could be applied to a current problem. This process relies on the assumptions that top performance is a result of good practices and these practices may be adapted and emulated by others to improve results.17

The term “best practice” can be a misleading one due to the slippery nature of the word “best.” When proceeding with policy research of this kind, it may be more helpful to frame the project as a way of identifying practices and/or processes that have worked exceptionally well and the underlying reasons for their success. This allows for a mix-and-match approach for making recommendations that might encompass pieces of many good practices.18

Researchers have found that successful best-practice analysis projects share five common phases:

1. **Define Scope**

   The focus of an effective analysis is narrow, precise, and clearly articulated to stakeholders. A project with a broader focus becomes unwieldy and impractical. Furthermore, Bardach urges the importance of realistic expectations in order to avoid improperly attributing results to a best practice without taking into account internal validity problems.

2. **Identify Top Performers**

   Identify outstanding performers in this area to partner with and learn from. In this phase, it is key to recall that a best practice is a tangible behavior or process designed to solve a problem or achieve a goal (i.e., reviewing predictive models contributes to insurance rates that are not unfairly discriminatory). Therefore, top performers are those who are particularly effective at solving a specific problem or regularly achieve desired results in the area of focus.

3. **Analyze Best Practices**

   Once successful practices are identified, analysts will begin to observe, gather information, and identify the distinctive elements that contribute to their superior performance. Bardach suggests it is important at this stage to distill the successful elements of the process down to their most essential idea. This allows for flexibility once the practice is adapted for a new organization or location.

4. **Adapt**

   Analyze and adapt the core elements of the practice for application in a new environment. This may require changing some aspects to account for organizational or environmental differences while retaining the foundational concept or idea. This is also the time to identify potential vulnerabilities of the new practice and build in safeguards to minimize risk.

5. **Implement and Evaluate**

   The final step is to implement the new process and carefully monitor the results. It may be necessary to make adjustments, so it is likely prudent to allow time and resources for this. Once implementation is complete, continued evaluation is important to help ensure the practice remains effective.

---

APPENDIX B – INFORMATION ELEMENTS AND GUIDANCE FOR A REGULATOR TO MEET BEST PRACTICES’ OBJECTIVES (WHEN REVIEWING GLMS)

This appendix identifies the information a state insurance regulator may need to review a predictive model used by an insurer to support a personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to sufficient information that helps determine if the rating plan meets state-specific filing and legal requirements.

Documentation of the design and operational details of the model will help ensure the business continuity and transparency of the models used. Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software, and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be documented and shared with regulators in a timely and appropriate manner. Information technology (IT) controls should be in place, such as a record of versions, change control, and access to the model.

Many information elements listed below are probably confidential, proprietary, or trade secret and should be treated as such, in accordance with state laws and/or regulations. Regulators should be aware of their state laws and/or regulations on confidentiality when requesting data from insurers that may be proprietary or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may compromise the model’s protection.

Although the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).

The “Level of Importance to the Regulator’s Review” is a ranking of information a regulator may need to review which is based on the following level criteria:

Level 1 – This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

Level 2 – This information is necessary to continue the review of all but the most basic models, such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

Level 3 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Level 1 and Level 2. These data elements address even more detailed aspects of the model. This information does not necessarily need to be included with the initial submission, unless specifically requested by a particular state, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws and/or regulations.

Level 4 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Level 1, Level 2, and Level 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested by a particular state. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, and/or unfairly discriminatory.

20 There are some models that are made public by the vendor and would not result in a hindrance of the model’s protection.
Lastly, although the best practices presented in this white paper will readily be transferrable to review of other predictive models, the information elements presented here might be useful only with deeper adaptations when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply; e.g., not all predictive models generate p-values or F tests. Depending on the model type, other considerations might be important but are not listed here. When information elements presented in this appendix are applied to lines of business other than personal automobile and home insurance or other type of models, unique considerations may arise. In particular, data volume and credibility may be lower for other lines of business. Regulators should be aware of the context in which a predictive model is deployed, the uses to which the model is proposed to be put, and the potential consequences the model may have on the insurer, its customers, and its competitors. This white paper does not delve into these possible considerations, but regulators should be prepared to address them as they arise.
A. SELECTING MODEL INPUT

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator's Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Available Data Sources</td>
<td>Review the details of sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model).</td>
<td>1</td>
<td>Request details of data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal, or policy year and when it was last evaluated. For each data source, get a list of all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets. Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the federal Fair Credit Reporting Act (FCRA). If the data is from an outside source, find out what steps were taken to verify the data was accurate, complete, and unbiased in terms of relevant and representative time frame, representative of potential exposures, and lacking in obvious correlation to protected classes. <strong>Note:</strong> Reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh.</td>
</tr>
<tr>
<td>A.1.a</td>
<td>Reconcile aggregated insurance data underlying the model with available external insurance reports.</td>
<td>4</td>
<td>Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer’s data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer’s data banks without further modification (i.e., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.</td>
</tr>
<tr>
<td>Section</td>
<td>Information Element</td>
<td>Level of Importance to the Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>---------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>2</td>
<td>Many models are developed using a countrywide or a regional dataset. The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing, and validation. The company should provide an explanation where the data came from geographically and that it is a good representation for a state; i.e., the distribution by state should not introduce a geographic bias. However, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur.</td>
</tr>
<tr>
<td>2. Sub-Models</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A.2.a</td>
<td>Consider the relevance of (i.e., whether there is bias) of overlapping data or variables used in the model and sub-models.</td>
<td>1</td>
<td>Check if the same variables/datasets were used in the model, a sub-model, or as stand-alone rating characteristics. If so, verify the insurance company has processes and procedures in place to assess and address double-counting or redundancy.</td>
</tr>
</tbody>
</table>
| A.2.b   | Determine if the sub-model was previously approved (or accepted) by the regulatory agency. | 1 | If the sub-model was previously approved/accepted, that may reduce the extent of the sub-model’s review. If approved, obtain the tracking number(s) (e.g., state, SERFF) and verify when and if it was the same model currently under review.  

**Note:** A previous approval does not necessarily confer a guarantee of ongoing approval; e.g., when statutes and/or regulations have changed or if a model’s indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether the prior decision needs to be revisited. In some circumstances, direct dialogue with the vendor could be quicker and more useful. |
<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.2.c</td>
<td>Determine if the sub-model output was used as input to the GLM; obtain the vendor name, as well as the name and version of the sub-model.</td>
<td>1</td>
<td>To accelerate the review of the filing, it may be desirable to request (from the company), the name and contact information for a vendor representative. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with a subject-matter expert (SME) at the vendor. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. Sub-model SMEs may need to be brought into the conversation with regulators (whether in-house or third-party sub-models are used).</td>
</tr>
<tr>
<td>A.2.d</td>
<td>If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.</td>
<td>1</td>
<td>To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The “SME” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor. For example, it is important to know hurricane model settings for storm surge, demand surge, and long-term/short-term views.</td>
</tr>
<tr>
<td>A.2.e</td>
<td>Obtain an explanation of how catastrophe models are integrated into the model to ensure no double-counting.</td>
<td>1</td>
<td>If a weather-based sub-model is input to the GLM under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double-counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model or inclusion of freeze losses when using a winter storm model.</td>
</tr>
<tr>
<td>A.2.f</td>
<td>If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.</td>
<td>1</td>
<td>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.</td>
</tr>
<tr>
<td>Section</td>
<td>Information Element</td>
<td>Level of Importance to the Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>---------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>3. Adjustments to Data</td>
<td>Determine if premium, exposure, loss, or expense data were adjusted (e.g., developed, trended, adjusted for catastrophe experience, or capped). If so, how? Do the adjustments vary for different segments of the data? If so, identify the segments and how the data was adjusted.</td>
<td>2</td>
<td>The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model’s training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane, or severe convective storm losses for personal automobile comprehensive or home insurance.</td>
</tr>
<tr>
<td></td>
<td>Identify adjustments that were made to aggregated data (e.g., transformations, binning and/or categorizations). If any, identify the name of the characteristic/variable and obtain a description of the adjustment.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Ask for aggregated data (one dataset of pre-adjusted/scrubbed data and one dataset of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.</td>
<td>4</td>
<td>This is most relevant for variables that have been “scrubbed” or adjusted. Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it. It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category are provided. This data can be displayed in either graphical or tabular formats.</td>
</tr>

<td>---------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>A.3.d</td>
<td>Determine how missing data was handled.</td>
<td>1</td>
<td>This is most relevant for variables that have been “scrubbed” or adjusted. The regulator should be aware of assumptions the modeler made in handling missing, null, or “not available” values in the data. For example, it would be helpful to the reviewer if the modeler were to provide a statement as to whether there is any systemic reason for missing data. If adjustments or recoding of values were made, they should be explained. It may also be useful to the regulator if the percentage of exposures and premium for missing information from the model data are provided. This data can be displayed in either graphical or tabular formats.</td>
</tr>
<tr>
<td>A.3.e</td>
<td>If duplicate records exist, determine how they were handled.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>A.3.f</td>
<td>Determine if there were any material outliers identified and subsequently adjusted during the scrubbing process.</td>
<td>3</td>
<td>Look for a discussion of how outliers were handled. If necessary, the regulator may want to investigate further by getting a list (with description) of the types of outliers and determine what adjustments were made to each type of outlier. To understand the filer’s response, the regulator should ask for the filer’s materiality standard.</td>
</tr>

## B. BUILDING THE MODEL

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. High-Level Narrative for Building the Model</td>
<td>Identify the type of model underlying the rate filing (e.g., GLM, decision tree, Bayesian GLM, gradient-boosting machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>It is important to understand if the model in question is a GLM and, therefore, these information elements are applicable; or if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/by-coverage. <strong>Note:</strong> If the model is not a GLM, the information elements in this white paper may not apply in their entirety.</td>
</tr>
<tr>
<td>B.1.a</td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product, and a software version reference used in model development.</td>
<td>3</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a “contact” in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist) who can place the regulator in direct contact with the appropriate SME at the vendor. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test, and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data, and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation of why that came to occur. Obtain a discussion of whether the model was rebuilt using all the data or if it was only based on the training data.</td>
<td>1</td>
<td>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all. It would be unexpected if validation and/or test data were used for any purpose other than validation and/or test, prior to the selection of the final model. However, according to the CAS monograph, “Generalized Linear Models for Insurance Rating”: “Once a final model is chosen, … we would then go back and rebuild it using all of the data, so that the parameter estimates would be at their most credible.” The reviewer should note whether a company employed cross-validation techniques instead of a training/test/validation dataset approach. If cross-validation techniques were used, the reviewer should request a description of how cross-validation was done and confirm that the final model was not built on any particular subset of the data, but rather the full dataset.</td>

</thead>
<tbody>
<tr>
<td>B.2.b</td>
<td>If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.</td>
<td>2</td>
<td>Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding of how these adjustments were done, including any statistical improvement measures relied upon.</td>
</tr>
<tr>
<td>B.2.c</td>
<td>Obtain a description of the testing that was performed during the model-building process, including an explanation of the decision-making process to determine which interactions were included and which were not.</td>
<td>3</td>
<td>There should be a description of the testing that was performed during the model-building process. Examples of tests that may have been performed include univariate testing and review of a correlation matrix. The number of interaction terms that could potentially be included in a model increases far more quickly than the number of “main effect” variables (i.e., the basic predictor variables that can be interacted together). Analyzing each possible interaction term individually can be unwieldy. It is typical for interaction terms to be excluded from the model by default, and only included where they can be shown to be particularly important. So, as a rule of thumb, the regulator’s emphasis should be on understanding why the insurer included the interaction terms it did, rather than on why other candidate interactions were excluded. In some cases, however, it could be reasonable to inquire about why a particular interaction term was excluded from a model—for example, if that interaction term was ubiquitous in similar filings and was known to be highly predictive, or if the regulator had reason to believe that the interaction term would help differentiate dissimilar risks within an excessively heterogenous rating segment.</td>
</tr>
<tr>
<td>B.2.d</td>
<td>For the GLM, identify the link function used. Identify which distribution was used for the model (e.g., Poisson, Gaussian, log-normal, Tweedie). Obtain an explanation of why the link function and distribution were chosen. Obtain the formulas for the distribution and link functions, including specific numerical parameters of the distribution. If changed from the default, obtain a discussion of applicable convergence criterion.</td>
<td>1</td>
<td>Solving the GLM is iterative and the modeler can check to see if fit is improving. At some point, convergence occurs; however, when it occurs can be subjective or based on threshold criteria. If the software’s default convergence criteria were not relied upon, an explanation of any deviation should be provided.</td>
</tr>
<tr>
<td>B.2.e</td>
<td>Obtain a narrative on the formula relationship between the data and the model outputs, with a definition of each model input and output. The narrative should include all coefficients necessary to evaluate the predicted pure premium, relativity, or other value, for any real or hypothetical set of inputs.</td>

<tr>
<td>3. Predictor Variables</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.3.a</td>
<td>Obtain a complete data dictionary, including the names, types, definitions, and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable, and all other variables in the model used on their own or as an interaction with other variables (including sub-models and external models).</td>
<td>1</td>
<td>Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of its purpose and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.</td>
</tr>
<tr>
<td>B.3.b</td>
<td>Obtain a list of predictor variables considered but not used in the final model, and the rationale for their removal.</td>
<td>4</td>
<td>The purpose of this requirement is to identify variables the company finds to be predictive but ultimately may reject for reasons other than loss-cost considerations (e.g., price optimization). Also, look for variables the company tested and then rejected. This item could help address concerns about data dredging. The reasonableness of including a variable with a given significance level could depend greatly on the other variables the company evaluated for inclusion in the model and the criteria for inclusion or omission. For instance, if the company tested 1,000 similar variables and selected the one with the lowest p-value of 0.001, this would be a far, far weaker case for statistical significance than if that variable was the only one the company evaluated. <strong>Note:</strong> Context matters.</td>
</tr>
<tr>
<td>B.3.c</td>
<td>Obtain a correlation matrix for all predictor variables included in the model and sub-model(s).</td>
<td>3</td>
<td>While GLMs accommodate collinearity, the correlation matrix provides more information about the magnitude of correlation between variables. The company should indicate what statistic was used (e.g., Pearson, Cramer’s V). The regulatory reviewer should understand what statistic was used to produce the matrix but should not prescribe the statistic.</td>
</tr>
<tr>
<td>B.3.d</td>
<td>Obtain a rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.</td>
<td>3</td>
<td>The explanation should go beyond demonstrating correlation. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate. For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the connection that variable has to increasing or decreasing the target variable.</td>

4. Adjusting Data, Model Validation, and Goodness-of-Fit Measures

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.4.a</td>
<td>Obtain a description of the methods used to assess the statistical significance/goodness-of-fit of the model to validation data, such as lift charts and statistical tests. Compare the model’s projected results to historical actual results and verify that modeled results are reasonably similar to actual results from validation data.</td>
<td>1</td>
<td>For models that are built using multistate data, validation data for some segments of risk is likely to have low credibility in individual states. Nevertheless, some regulators require model validation on state-only data, especially when analysis using state-only data contradicts the countrywide results. State-only data might be more applicable but could also be impacted by low credibility for some segments of risk. Note: It may be useful to consider geographic stability measures for territories within the state.</td>
</tr>
<tr>
<td>B.4.b</td>
<td>For all variables (discrete or continuous), review the appropriate parameter values and relevant tests of significance, such as confidence intervals, chi-square tests, p-values, or F tests. Determine if model development data, validation data, test data, or other data was used for these tests.</td>
<td>1</td>
<td>Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model; e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values, and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; e.g., confidence intervals around each level of an AOI curve might be more than what is needed.</td>

</tr>
<tr>
<td>B.4.g</td>
<td>Obtain a description how the model was tested for stability over time.</td>
<td>2</td>
<td>Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets). Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model? The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile) their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time.</td>
</tr>
<tr>
<td>B.4.h</td>

## C. THE FILED RATING PLAN

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.1.a</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (i.e., how it was used) in the rating system.</td>
<td>1</td>
<td>The “role of the model” relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model’s goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.b</td>
<td>Obtain an explanation of how the model was used to adjust the filed rating algorithm.</td>
<td>1</td>
<td>Models are often used to produce factor-based indications, which are then used as the basis for the selected changes to the rating plan. It is the changes to the rating plan that create impacts. The regulator should consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>
</tr>

<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>--------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td><strong>2. Relevance of Variables and Relationship to Risk of Loss</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.2.a</td>
<td>Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced.</td>
<td>2</td>
<td>The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model results should be consistent with the expected direction of the relationship. Note: This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated.</td>
</tr>
<tr>
<td><strong>3. Comparison of Model Outputs to Current and Selected Rating Factors</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.3.a</td>
<td>Compare relativities indicated by the model to both current relativities and the insurer’s selected relativities for each risk characteristic/variable in the rating plan.</td>
<td>1</td>
<td>“Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical.</td>
</tr>
<tr>
<td>C.3.b</td>
<td>Obtain documentation and support for all calculations, judgments, or adjustments that connect the model’s indicated values to the selected relativities filed in the rating plan.</td>
<td>1</td>
<td>The documentation should include explanations for the necessity of any such adjustments and each significant difference between the model’s indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. Note: This information is especially important if differences between model-indicated values and selected values are material and/or impact one consumer population more than another.</td>
</tr>
<tr>
<td>C.3.c</td>
<td>For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative regarding how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures.</td>
<td>2</td>
<td>Modeling loss ratios with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations; e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals.</td>
</tr>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.4.a</td>
<td>Determine what, if any, consideration was given to the credibility of the output data.</td>
<td>2</td>
<td>The regulator should determine at what level of granularity credibility is applied. If modeling was by-coverage, by-form, or by-peril, the company should explain how these were handled when there was not enough credible data by coverage, form, or peril to model.</td>
</tr>
<tr>
<td>C.4.b</td>
<td>If the rating plan is less granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>This is applicable if the company had to combine modeled output in order to reduce the granularity of the rating plan.</td>
</tr>
<tr>
<td>C.4.c</td>
<td>If the rating plan is more granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>A more granular rating plan may imply that the company had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. It may be necessary to extrapolate due to data availability or other considerations.</td>
</tr>
<tr>
<td>5. Definitions of Rating Variables</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.5.a</td>
<td>Obtain a narrative regarding adjustments made to model output (e.g., transformations, binning and/or categorizations). If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.</td>
<td>2</td>
<td>If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation of how model output was translated into these rating tiers or intermediate rating categories.</td>
</tr>
<tr>
<td>6. Supporting Data</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.6.a</td>
<td>Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation of whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.</td>
<td>4</td>
<td>For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.</td>
</tr>
<tr>

<td>Information Element</td>
<td>Level of Importance to Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>C.6.b</td>
<td>Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.</td>
<td>4</td>
<td>Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the multivariate indicated relativity is 1.25, this is potentially a plausible application of the multivariate techniques. If, however, the univariate indicated relativity is 0.7 and the multivariate indicated relativity is 1.25, a regulator may question whether the attribute in question is negatively correlated with other determinants of risk. Credibility of state-level data should be considered when state indications differ from modeled results based on a broader dataset. However, the relevance of the broader dataset to the risks being priced should also be considered. Borderline reversals are not of as much concern. If multivariate indications perform well against the state-level data, this should suffice. However, credibility considerations need to be taken into account as state-level segmentation comparisons may not have enough credibility.</td>
</tr>
<tr>
<td>7. Consumer Impacts</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.7.a</td>
<td>Obtain a listing of the top five rating variables that contribute the most to large swings in renewal premium, both as increases and decreases, as well as the top five rating variables with the largest spread of impact for both new and renewal business.</td>
<td>4</td>
<td>These rating variables may represent changes to rating factors, be newly introduced to the rating plan, or have been removed from the rating plan.</td>
</tr>
<tr>
<td>C.7.b</td>
<td>Determine if the company performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing.</td>
<td>3</td>
<td>One way to see sensitivity is to analyze a graph of each risk characteristic’s/variable’s possible relativities. Look for significant variation between adjacent relativities and evaluate if such variation is reasonable and credible.</td>
</tr>
<tr>
<td>C.7.c</td>
<td>For the proposed filing, obtain the impacts on renewal business and describe the process used by management, if any, to mitigate those impacts.</td>
<td>2</td>
<td>Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense and, hence, may be viewed as unfairly discriminatory by some states.</td>
</tr>
<tr>
<td>Section</td>
<td>Information Element</td>
<td>Level of Importance to Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>-----------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>C.7.d</td>
<td>Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business) and sufficient information to explain the disruptions to individual consumers.</td>
<td>2</td>
<td>The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan. While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated. See Appendix D for an example of a disruption analysis.</td>
</tr>
<tr>
<td>C.7.e</td>
<td>Obtain exposure distributions for the model’s output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.</td>
<td>3</td>
<td>See Appendix D for an example of an exposure distribution.</td>
</tr>
<tr>
<td>C.7.f</td>
<td>Identify policy characteristics, used as input to a model or sub-model, that remain “static” over a policy’s lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as “static,” yet change over time.</td>
<td>3</td>
<td>Some examples of “static” policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured’s risk profile based on “static” variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured’s true and current risk profile. A few examples of “non-static” policy characteristics are age of driver, driving record, and credit information (FCRA-related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.</td>
</tr>
<tr>

<td>Level of Importance to Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>----------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>C.7.g</td>
<td>Obtain a means to calculate the rate charged a consumer.</td>
<td>3</td>
<td>The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. The ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note: This information may be proprietary. For the rating plan, the rate order of calculation rule may be sufficient. However, it may not be feasible for a regulator to get all the input data necessary to reproduce a model’s output. Credit and telematics models are examples of model types where model output would be readily available, but the input data would not be readily available to the regulator.</td>
</tr>
<tr>
<td>C.7.h</td>
<td>In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors.</td>
<td>1</td>
<td>If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, it may need to be documented with an overview of who owns it. The topic of consumer verification may also need to be addressed, including how consumers can verify their data and correct errors.</td>
</tr>

<td>9. Efficient and Effective Review of Rate Filing</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.9.a</td>
<td>Establish procedures to efficiently review rate filings and models contained therein.</td>
<td>1</td>
<td>“Speed to market” is an important competitive concept for insurers. Although the regulator needs to understand the rate filing before accepting the rate filing, the regulator should not request information that does not increase his/her understanding of the rate filing. The regulator should review the state’s rate filing review process and procedures to ensure that they are fair and efficient.</td>
</tr>
<tr>
<td>C.9.b</td>
<td>Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state laws and/or regulations.</td>
<td>1</td>
<td>This is a primary duty of state insurance regulators. The regulator should be knowledgeable of state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination.</td>
</tr>
<tr>
<td>C.9.c</td>
<td>Be knowledgeable of state laws and regulations in order to determine if any information contained in the rate filing (and models) should be treated as confidential.</td>
<td>1</td>
<td>The regulator should be knowledgeable of state laws and regulations regarding confidentiality of rate filing information and apply them to a rate filing fairly and efficiently. Confidentiality of proprietary information is key to innovation and competitive markets.</td>
</tr>
</tbody>
</table>
APPENDIX B (Continued)

Mapping Best Practices to Information Elements and Information Elements to Best Practices

Table 1 maps the best practices to each GLM information element. Table 2 maps the GLM information elements to each best practice. With this mapping, a state insurance regulator interested in how to meet the objective of a best practice can consider the information elements associated with the best practice in the table.

APPENDIX C – GLOSSARY OF TERMS

Adjusting Data – Adjusting data refers to any changes made when the modeler makes any to the raw data. For example, capping losses, on-leveling, binning, transformation of the data, etc. This includes scrubbing of the data.

Aggregated Data – Data summarized or compiled in a manner that is meaningful to the intended user of the data. Aggregation involves segmenting and combining individual data entries into categories based on common features within the data. For example, aggregated raw data requested for a predictive model would be categorized in the same manner as the categories of variables which receive specific treatments within the model outputs.

Big Data – “Big data” refers to extremely large datasets analyzed computationally to infer laws (regressions, nonlinear relationships, and causal effects) to reveal relationships and dependencies or to perform predictions of outcomes and behaviors.

Composite Characteristic – A composite characteristic is the combination of two or more individual risk characteristics. Composite characteristics are used to create composite variables. 

Composite Score – A composite score is a number derived by combining multiple variables by means of a sequence of mathematical steps; e.g., a credit-based insurance scoring model.

Composite Variable – A composite variable is a variable created by incorporating two or more individual risk characteristics of the insured into a single variable.

Continuous Variable – A continuous variable is a numeric variable that represents a measurement on a continuous scale. Examples include age, amount of insurance (in dollars), and population density.21

Control Variable – Control variables are variables whose relativities are not used in the final rating algorithm but are included when building the model. They are included in the model so that other correlated variables do not pick up their signal. For example, state and year are frequently included in countrywide models as control variables so that the different experiences and distributions between the states and across time do not influence the rating factors used in the final rating algorithm.22

Correlation Matrix – A correlation matrix is a table showing correlation coefficients between sets of variables. Each random variable (Xi) in the table is correlated with each of the other variables in the table (Xj). Using the correlation matrix, one can determine which pairs of variables have the highest correlation. Below is a sample correlation matrix showing correlation coefficients for combinations of five variables (B1:B5). The table shows that variables B2 and B4 have the highest correlation coefficient (0.96) in this example. The diagonal of the table is always set to one, because the correlation coefficient between a variable and itself is always 1. The upper-right triangle would be a mirror image of the lower-left triangle (because correlation between B1 and B2 is the same as between B2 and B1). In other words, a correlation matrix is also a symmetric matrix.23

Data Dredging – Data dredging is also referred to as data fishing, data snooping, data butchery, and p-hacking. It is the misuse of data analysis to find patterns in data that can be presented as statistically significant when, in fact, there is no real underlying effect. Data dredging is done by performing many statistical tests on the data and focusing only on those that produce significant results. Data dredging is in conflict with hypothesis testing, which entails performing at most a handful of tests to determine the validity of the hypothesis about an underlying effect.24

Data Mining – Data mining is a process used to extract usable data from a larger set of any raw data. It implies analyzing data patterns in large batches of data using one or more software programs. As an application of data mining, businesses can learn more about their customers and develop strategies related to various business functions. One application of data mining for insurance companies is analyzing large datasets to charge different groups of insureds different amounts of premium corresponding to their level of risk. Data mining involves substantial data collection and warehousing, as well as computer processing. For segmenting the data and evaluating the probability of future events, data mining uses sophisticated mathematical algorithms.  

Data Source – A data source is the original repository of the information used to build the model. For example, information from internal insurance data, an application, a vendor, credit bureaus, government websites, a sub-model, verbal information provided to agents, external sources, consumer information databases, etc.

Discrete Variable – A discrete variable is a variable that can only take on a countable number of values/categories. Examples include number of claims, marital status, and gender.

Discrete Variable Level – Discrete variables are generally referred to as “factors” (not to be confused with rating factors), with values that each factor can take being referred to as “levels.” For example, “one driver” and “more than one driver” may be levels within a “number of drivers” rating variable.

Double-Lift Chart – Double-lift charts are similar to simple quantile plots, but rather than sorting based on the predicted loss cost of each model, the double-lift chart sorts based on the ratio of the two models’ predicted loss costs. Double-lift charts directly compare the results of two models.

Exponential Family – The exponential family is a class of distributions that share the same general density form and have certain properties that are used in fitting GLMs. It includes many well-known distributions, such as the Normal, Poisson, Gamma, Tweedie, and Binomial, to name a few.

Fair Credit Reporting Act – The federal Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 (FCRA) is U.S. federal government legislation enacted to promote the accuracy, fairness, and privacy of consumer information contained in the files of consumer reporting agencies. It was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in consumers’ credit reports. To that end, the FCRA regulates the collection, dissemination, and use of consumer information, including consumer credit information. Together with the federal Fair Debt Collection Practices Act (FDCPA), the FCRA forms the foundation of consumer rights law in the U.S. Originally enacted in 1970, the FCRA is enforced by the Federal Trade Commission, the Consumer Financial Protection Bureau, and private litigators.

---

25 https://economictimes.indiatimes.com/definition/data-mining
Generalized Linear Model – Generalized linear models (GLMs) are a means of modeling the relationship between a variable whose outcome we wish to predict and one or more explanatory variables. The predicted variable is called the target variable and is denoted $y$. In property/casualty insurance ratemaking applications, the target variable is typically one of the following:

- Claim count (or claims per exposure).
- Claim severity (i.e., dollars of loss per claim or occurrence).
- Pure premium (i.e., dollars of loss per exposure).
- Loss ratio (i.e., dollars of loss per dollar of premium).

For quantitative target variables such as those above, the GLM will produce an estimate of the expected value of the outcome. For other applications, the target variable may be the occurrence or non-occurrence of a certain event. Examples include:

- Whether a policyholder will renew his/her policy.
- Whether a submitted claim contains fraud.

For such variables, a GLM can be applied to estimate the probability that the event will occur.

The explanatory variables, or predictors, are denoted $x_1 \ldots x_p$, where $p$ is the number of predictors in the model. Potential predictors are typically any policy term or policyholder characteristic that an insurer may wish to include in a rating plan. Some examples are:

- Type of vehicle, age, or marital status for personal auto insurance.
- Construction type, building age, or amount of insurance (AOI) for home insurance.\(^{30}\)

Geodemographic – Geodemographics is the study of the population and its characteristics, divided according to regions on a geographical basis. This involves application of clustering techniques to group statistically similar neighborhoods and areas with the assumption that the differences within any group should be less than the difference between groups. While the main source of data for a geodemographic study is U.S. Census Bureau data, the use of other sources of relevant data is also prevalent. Geodemographic segmentation is based on two principles:

1. People who live in the same neighborhood are more likely to have similar characteristics than are two people chosen at random.
2. Neighborhoods can be categorized in terms of the characteristics of the population that they contain. Any two neighborhoods can be placed in the same category; i.e., they contain similar types of people, even though they are widely separated.

Granularity of Data – Granularity of data is the level of segmentation at which the data is grouped or summarized. It reflects the level of detail used to slice and dice the data.\(^{31}\)

For example, a postal address can be recorded, with coarse granularity, as:

- Country

Or, with finer granularity, as multiple fields:

- Country
- State

Or, with much finer granularity, as multiple fields:

- Country
- State
- County
- ZIP code
- Property geo code

Home Insurance – Home insurance may cover, depending on the specific product, damage to the property, contents, and outstanding structures of a residential dwelling, as well as loss of use, liability, and medical coverage. The perils covered, the amount of insurance provided, and other policy characteristics are detailed in the policy contract. Common examples of home insurance policy forms are homeowners insurance (HO3 or HO5), renter’s insurance (HO4), and condominium insurance (HO6).

Insurance Data – Data collected by the insurance company directly from the consumer or through direct interactions with the consumer (e.g., claims). This is often referred to as “internal data.” For example, data obtained from the consumer through communications with an agent or on an insurance application would be “insurance data.” However, data obtained from a credit bureau or census would not be considered “insurance data” but would be considered “non-insurance data” instead.

Interaction Term – Two predictor variables are said to interact if the effect of one of the predictors on the target variable depends on the level of the other. Suppose that predictor variables \(X_1\) and \(X_2\) interact. A GLM modeler could account for this interaction by including an interaction term of the form \(X_1X_2\) in the formula for the linear predictor. For instance, rather than defining the linear predictor as \(\eta = \beta_0 + \beta_1X_1 + \beta_2X_2\), they could set \(\eta = \beta_0 + \beta_1X_1 + \beta_2X_2 + \beta_3X_1X_2\).

The following two plots of modeled personal auto bodily injury pure premium by age and gender illustrate this effect. The plots are based on two otherwise identical log-link GLMs, built using the same fictional dataset, with the only difference between the two being that the second model includes the age-gender interaction term, while the first does not. Notice that the male curve in the first plot is a constant multiple of the female curve, while in the second plot the ratios of the male to female values differ from age to age.

Lift Chart – See definition of “quantile plot.”

Linear Predictor – A linear predictor is the linear combination of explanatory variables \((X_1, X_2, \ldots, X_i)\) in the model; e.g., \(\beta_0 + \beta_1X_1 + \beta_2X_2\).

Link Function – The link function, \(\eta\) or \(g(\mu)\), specifies how the expected value of the response relates to the linear predictor of explanatory variables; e.g., \(\eta = g(E(Y_i)) = E(Y_i)\) for linear regression, or \(\eta = \text{logit}(\pi)\) for logistic regression.

Missing data – Missing data occurs when some records contain blanks or “Not Available” or “Null” where variable values would normally be available.

Non-Insurance Data – Non-insurance data is any data not defined as “insurance data.” Non-insurance data includes data provided by another party other than the insurance company and is often referred to as “external data.” For example, data obtained from a credit bureau or census would be considered “non-insurance data.” However, data obtained from the consumer through communications with an agent or on an insurance application would not be considered “non-insurance data” but would be “insurance data” instead.

---

33 To see that this second definition accounts for the interaction, note that it is equivalent to \(\eta = \beta_0 + \beta_1X_1 + \beta_2X_2\) and to \(\eta = \beta_0 + \beta_1X_1 + \beta_2X_2\), with \(\beta_1' = \beta_1 + \beta_3X_2\) and \(\beta_2' = \beta_2 + \beta_3X_1\). Since \(\beta_1'\) is a function of \(X_2\) and \(\beta_2'\) is a function of \(X_1\), these two equivalences say that the effect of \(X_1\) depends on the level of \(X_2\) and vice versa.
35 https://online.stat.psu.edu/stat504/node/216.
Offset Variable – Offset variables (or factors) are model variables with a known or pre-specified coefficient. Their relativities are included in the model and the final rating algorithm, but they are generated from other studies outside the multivariate analysis and are fixed (not allowed to change) in the model when it is run. The model does not estimate any coefficients for the offset variables, and they are included in the model, so that the estimated coefficients for other variables in the model would be optimal in their presence. Examples of offset variables include limit and deductible relativities that are more appropriately derived via loss elimination analysis. The resulting relativities are then included in the multivariate model as offsets. Another example is using an offset factor to account for the exposure in the records; this does not get included in the final rating algorithm.36

Overfitting – Overfitting is the production of an analysis that corresponds too closely or exactly to a particular set of data and may, therefore, fail to fit additional data or predict future observations reliably.37

PCA Approach (Principal Component Analysis) – The PCA method creates multiple new variables from correlated groups of predictors. Those new variables exhibit little or no correlation between them, thereby making them potentially more useful in a GLM. A PCA in a filing can be described as “a GLM within a GLM.” One of the more common applications of PCA is geodemographic analysis, where many attributes are used to modify territorial differentials on, for example, a census block level.

Personal Automobile Insurance – Personal automobile insurance is insurance for privately owned motor vehicles and trailers for use on public roads not owned or used for commercial purposes. This includes personal auto combinations of private passenger auto, motorcycle, financial responsibility bonds, recreational vehicles and/or other personal auto. Policies include any combination of coverage such as the following: auto liability; personal injury protection (PIP); medical payments (MP); uninsured/underinsured motorist (UM/UIM); specified causes of loss; comprehensive; and collision.38

Post-Model Adjustment – Post-model adjustment is any adjustment made to the output of the model, including, but not limited to, adjusting rating factors or removal of variables.

Probability Distribution – A probability distribution is a statistical function that describes all the possible values and likelihoods that a random variable can take within a given range. The chosen probability distribution is supposed to best represent the likely outcomes.

Proxy Variable – A proxy variable is any variable that indirectly captures the characteristics of another variable, regardless of whether that other variable is used in the insurer’s rating plan.

38 https://content.naic.org/cipr_topics/topic_auto_insurance.htm.
Quantile Plot – A quantile plot is a visual representation of a model’s ability to accurately differentiate between the best and the worst risks. Data is sorted by predicted value from smallest to largest, and the data is then bucketed into quantiles with the same volume of exposures. Within each bucket, the average predicted value and the average actual value are calculated; and, for each quantile, the actual and predicted values are plotted. The first quantile contains the risks that the model predicts have the best experience and the last quantile contains the risks predicted to have the worst experience. The plot shows two things: 1) how well the model predicts actual values by quantile; and 2) the lift of the model (i.e., the difference between the first and last quantile), which is a reflection of the model’s ability to distinguish between the best and worst risks. By definition, the average predicted values would be monotonically increasing, but the average actual values may show reversals. An example follows:

![Quantile Plot Diagram]

Rating Algorithm – A rating algorithm is the mathematical or computational component of the rating plan used to calculate an insured’s premium.

Rating Category – A rating category is the same as a rating characteristic and can be quantitative or qualitative.

Rating Characteristic – A rating characteristic is a specific risk criterion of the insured used to define the level of the rating variable that applies to the insured; e.g., rating variable = driver age; rating characteristic = age 42.

Rating Factor – A rating factor is the numerical component included in the rate pages of the rating plan’s manual. Rating factors are used together with the rating algorithm to calculate the insured’s premium.

Rating Plan – The rating plan describes in detail how to combine the various components in the rules and rate pages to calculate the overall premium charged for any risk. The rating plan is specific and includes explicit instructions, such as:

- The order in which rating variables should be considered.
- How the effect of rating variables is applied in the calculation of premium (e.g., multiplicative, additive, or some unique mathematical expression).
- The existence of maximum and minimum premiums (or, in some cases, the maximum discount or surcharge that can be applied).
- Specifics associated with any rounding that takes place.

If the insurance product contains multiple coverages, then separate rating plans by coverage may apply.

Rating System – The rating system is the insurance company’s information technology (IT) infrastructure that produces the rates derived from the rating algorithm.

Rating Tier – A rating tier is rating based on a combination of rating characteristics rather than a single rating characteristic, resulting in a separation of groups of insureds into different rate levels within the same or separate companies. Often, rating tiers are used to differentiate quality of risk; e.g., substandard, standard, or preferred.

Rating Treatment – Rating treatment is the manner in which an aspect of the rating affects an insured’s premium.

Rating Variable – A rating variable is a risk criterion of the insured used to modify the base rate in a rating algorithm. A “rational explanation” refers to a plausible narrative connecting the variable and/or treatment in question with real-world circumstances or behaviors that contribute to the risk of insurance loss in a manner that is readily understandable to a consumer or other educated layperson. A “rational explanation” does not require strict proof of causality but should establish a sufficient degree of confidence that the variable and/or treatment selected are not obscure, irrelevant, or arbitrary.

A “rational explanation” can assist the regulator in explaining an approved rating treatment if challenged by a consumer, legislator, or the media. Furthermore, a “rational explanation” can increase the regulator’s confidence that a statistical correlation identified by the insurer is not spurious, temporary, or limited to the specific datasets analyzed by the insurer.

Raw Data – Data originating straight from the insurer’s data banks without modification (e.g., not scrubbed or transformed). Raw data may occur with or without aggregation. Aggregated raw datasets are those summarized or compiled prior to data selection and model building.

Sample Record – A sample record is one line of data from a data source including all variables. For example:

<table>
<thead>
<tr>
<th>Record</th>
<th>ZIP</th>
<th>CoverageType</th>
<th>Location</th>
<th>Age</th>
<th>Sex</th>
<th>Claims</th>
<th>LossIncurred</th>
<th>LossPaid</th>
<th>ClaimType</th>
<th>ClaimStatus</th>
<th>ClaimAmount</th>
<th>ClaimDate</th>
<th>ClaimId</th>
</tr>
</thead>
<tbody>
<tr>
<td>04254</td>
<td>25700</td>
<td>garage, basement</td>
<td>asphalt shingle</td>

<td>213000</td>
<td>FORCED HOT WATER</td>
<td>1680</td>
<td>1</td>
<td>Ranch</td>
<td>3</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Scrubbed Data – Scrubbed data is data reviewed for errors, where “N/A” has been replaced with a value, and where most transformations have been performed. Data that has been “scrubbed” is now in a useable format to begin building the model.

Scrubbing Data – Scrubbing is the process of editing, amending, or removing data in a dataset that is incorrect, incomplete, improperly formatted, or duplicated.

SME – Subject-matter expert.

Sub-Model – A sub-model is any model that provides input into another model.

Variable Transformation – A variable transformation is a change to a variable by taking a function of that variable, for example, when age’s value is replaced by the value (age)^2. The result is called a transformation variable.

Voluntarily Reported Data – Voluntarily reported data is data directly obtained by a company from a consumer. Examples would be data taken directly from an application for insurance or obtained verbally by a company representative.

Univariate Model – A univariate model is a model that only has one independent variable.
APPENDIX D – SAMPLE RATE-DISRUPTION TEMPLATE

PROJECT HISTORY

REGULATORY REVIEW OF PREDICTIVE MODELS

1. Description of the Project, Issues Addressed, etc.

The Regulatory Review of Predictive Models white paper: 1) describes best practices for regulatory review of generalized linear models (GLMs), which is the most often filed model, for the private auto and home lines of business; and 2) provides changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.

In addition to the best practices, there is detail attached to the paper as Appendix B labeled as general and specific information elements that could be useful to a state insurance regulator when reviewing a rating plan based on a GLM. Additionally, there is commentary on what might be important about that information and some insight as to when the information might identify an issue the state insurance regulator needs to be aware of or explore further.

2. Name of Group Responsible for Drafting the Model and States Participating

The white paper was drafted by the Casualty Actuarial and Statistical (C) Task Force. The volunteer drafters were: Rich Piazza, Chair, (LA); Vanessa Darrah and Tom Zuppan (AZ); Sydney Sloan (CO); Sue Andrews, Wanchin Chou and George Bradner (CT); Sandra Darby (ME); Phil Vigliaturo (MN); Gennady Stolyarov (NV); Eric Hintikka (TX); and Rosemary Raszka (VT). Daniel Davis (AL) and Gordon Hay (NE) participated in the first stages of drafting.

3. Project Authorized by What Charge and Date First Given to the Group

At the request of the Big Data (EX) Working Group, on June 27, 2018, the Property and Casualty Insurance (C) Committee charged the Casualty Actuarial and Statistical (C) Task Force with the following:

1. Draft and propose changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.
2. Draft and propose state guidance (e.g., information, data) for rate filings based on complex predictive models.

The white paper was adopted by the Casualty Actuarial and Statistical (C) Task Force on Sept. 15, 2020, and by the Property and Casualty Insurance (C) Committee on Dec. 8, 2020.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated.

As directed by the Big Data (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force used the following principles in development of the white paper: 1) there should be no change to rate regulatory authority and autonomy of each individual state; 2) while maintaining such authority and autonomy, the states will share information and expertise and will discuss technical issues with each other; and 3) confidentiality in accordance with state laws should be maintained.

State insurance regulators drafted each version of the white paper, considered interest party comments and documented responses to each comment so all parties understood the reason for or against making changes to the paper. Interested parties provided rankings of the information elements, which were used along with the drafting group’s scores to arrive at the final rankings.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The Task Force exposed a first draft of the white paper in December 2018 for a 60-day public comment period. That exposure period was agreed to be extended an additional week. The second draft was exposed on May 14, 2019, for a 45-day public comment period. Additional sections of the paper were drafted to propose changes to the Product Filing Review Handbook and
add a short section on some proposed state guidance. On Aug. 3, 2019, these sections were released for a 45-day public comment period. On Oct. 15, 2019, the third draft of the white paper was exposed for a 38-day public comment period. On Aug. 5, 2020, the white paper was exposed for a 45-day public comment period. On Sept. 15, 2020, the Task Force adopted the final version.

The paper was discussed in almost every meeting throughout the period, and interested parties were allowed to provide oral comment in addition to written comment letters. The Task Force drafting group provided written comments on each of the interested party comments, so all were aware of the decision for or against making changes and why.

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)

The following are some key issues identified during the white paper’s development:

1) Scope—The scope of the paper was narrowed to GLM models for personal auto and home lines of business. There are other types of models, but the GLM is the most often used type of model. The lines of business were selected because those are the ones where models are most often used. The Task Force noted that much of the guidance could be extracted as applicable for other models and lines of business.

2) Disparate impact and proxies for protected classes—The issue posed was that the white paper did not address these topics thoroughly. The Task Force agreed that the subject of disparate impact is beyond the scope of the white paper, given that it is not current law. Proxies for protected classes is mentioned in the white paper but was also identified as an “other consideration” in the white paper. With the NAIC Special (EX) Committee on Race and Insurance, these subjects would be further discussed after completion of the white paper.

3) Causation vs. correlation and “rational explanation”—An item in the list of “other considerations” is the issue of causality vs. correlation when evaluating a rating variable’s relationship to risk. The white paper does not recommend a requirement to prove causality; however, some state insurance regulators already expect justification beyond strict correlation. Many variables might be correlated, but that does not necessarily mean that the particular variable should be used in rating property/casualty (P/C) insurance. Therefore, the white paper suggests that companies should be prepared to provide a rational explanation for why a variable should be used in rating. If such an explanation cannot be provided, greater regulatory scrutiny of the variable may be appropriate. Further guidance on this subject is left as an “other consideration” of the white paper.

4) State confidentiality laws and/or regulations—Confidentiality continues to be an issue, but the drafting group believes it is addressed sufficiently. The white paper does not change the requirement for state insurance regulators to abide by state confidentiality laws and/or regulations. Anyone, including consultants and NAIC reviewers, involved in the regulatory review of rates is held to contract provisions that require abidance with state laws.

5) Overly prescriptive—Interested parties said the white paper is overly prescriptive, burdensome and results in costly rate regulation. At the advice of the NAIC Legal Division, a paragraph was added to the introduction that summarily says this white paper is for guidance only and has no direct impact on any state unless the state chooses to use the guidance. Additionally, the list of information elements included in the white paper were graded from 1–4, with 1 being most important to be filed. Industry participated in the scoring surveys.

6) Actuarial Standards of Practice (ASOPs)—There was a request for the inclusion of ASOPs in the white paper. Given the white paper applies to any filing, whether from an actuary or not, the Task Force did not add a discussion of ASOPs to the white paper. The Task Force believed actuaries should be aware that they have to abide by their own professional standards. The white paper deals with the filing itself and whoever is trying to support the filing.

ANTIFRAUD PLAN GUIDELINE

Narrative

As insurance fraud costs insurers and consumers billions of dollars annually, and no line of insurance is immune to fraud, state departments of insurance (DOIs) believe it’s imperative that insurers make the detection, investigation and reporting of suspected fraud a priority in its overall operations. Failure to dedicate resources towards the fight against insurance fraud can tremendously affect an insurer’s financial stability, as well as rates charged to consumers. In light of the aforementioned, insurers are encouraged to proactively take measures to minimize the cost of fraud.

To encourage insurers to take a proactive approach to fighting fraud, and minimize organizational risk, many states require the preparation and/or submission of an antifraud plan. Such plans are often audited and inspected for compliance purposes and/or are reviewed in conjunction with market conduct and financial examinations conducted.

While the development and submission of an antifraud plan is currently not mandated in all states, most state DOIs and fraud fighting agencies believe it is a best practice for all insurers, whether state mandated or not, to develop an antifraud plan that which documents the antifraud efforts an insurer has put in place to prevent, detect investigate and report fraud. As such, this guideline is intended to serve as a guide for insurance company special investigation units (SIU) and other interested parties in the preparation of antifraud plans that meet state mandates.

In the spirit of promoting uniformity amongst the states, and providing insurers with added insight regarding key elements that should be considered when developing an antifraud plan, state fraud bureaus are encouraged to utilize this guideline to introduce new antifraud plan legislation or revise existing antifraud plan laws in their states.

To further uniformity in this area, and assist both insurers and state DOIs with compliance efforts, the NAIC Antifraud Task Force intends to utilize this revised guideline as a basis for developing an antifraud plan submission repository / system that will streamline insurer antifraud plan compliance nationwide. Until such a system is developed and implemented, insurers are encouraged to utilize this guideline, and incorporate all information outlined within the document when developing and/or updating company antifraud plans.

Important Note: Unless this guideline is adopted by a state, this guideline does not preempt existing state laws.
ANTIFRAUD PLAN GUIDELINE

Table of Contents
Section 1. Application

Section 3. Antifraud Plan Creation/Submission Requirement
Section 4. Antifraud Plan Requirements
Section 5. 18 USC 1033 & 1034 Compliance
Section 6. Regulatory Compliance
Section 7. Confidentiality of Antifraud Plan
Section 8. Required Antifraud Plan Submission

Section 1. Application

The purpose of this guideline/regulation is to establish standards for state fraud bureaus, insurance company special investigation units (SIU) and any other interested parties regarding the preparation of an Antifraud Plan that meets the mandated requirements for submitting a plan with a state Department of Insurance. Currently, twenty states require that fraud plans be prepared for inspection by the state Departments of Insurance. The concept of mandating the submission of an insurer fraud plan was developed to encourage those insurers with direct written premiums to fight insurance fraud proactively by drafting a plan to fight fraud. This plan, along with audits, inspections, or in conjunction with a market conduct examinations, ensures the insurer is following its submitted antifraud plan.

These guidelines are primarily intended for state fraud bureaus as a guide in the preparation of new antifraud plan legislation, revision of existing mandated antifraud plans and for insurer SIUs in the preparation of its antifraud plans. The intention of this guideline is to collate the current twenty states’ antifraud plan requirements into a guide for those states researching what should go into a plan. Most national fraud fighting agencies believe it is a good practice for all insurers, whether it is state mandated or not, to develop an internal insurance antifraud plan. Flexibility should be allowed for each insurer to develop a plan that meets its individual needs and still meets state compliance standards.

This guideline does not preempt other state laws. This guideline is not intended to preempt or amend any guidance previously published by the NAIC Antifraud Task Force or in the NAIC Fraud Prevention Law Model Act. This document is intended to provide a road map for state fraud bureaus, insurers’ SIUs or contracted SIU vendors for preparation of an antifraud plan.

Drafting Note: In lieu of an agency name, states may amend this statement to incorporate a reference to a state law / rule.

Section 2. Definitions reserved for state-specific information

A. “Insurance” means any of the lines of authority authorized by state law.
B. “Insurance commissioner” or “commissioner” means the insurance commissioner of this state.
C. “Insurer” means a company required to be licensed under the laws of this state to provide insurance products.
D. “Material or substantive change” means any change, modification or alteration of the operations, standards, methods, staffing or outsourcing utilized by the insurer to detect, investigate and report suspected insurance fraud.
E. “National Association of Insurance Commissioners” (NAIC) means the organization of state insurance regulators from the fifty (50) states, the District of Columbia and all participating U.S. territories.
F. “Report in a timely manner” means in accordance with all applicable laws and rules of the state.

Drafting Note: States are able to insert a reference to a state law / rule if they feel it is necessary.
G. “Respond in a reasonable time” means to respond in accordance with all applicable laws and rules of the state.

**Drafting Note:** States are able to insert a reference to a state law / rule if they feel it is necessary.

H. “Special Investigation Unit” (SIU) means an insurer’s unit or division that is established to investigate suspected insurance fraud. The SIU may be made up of insurer employees or by contracting with other entities.

I. "Suspected Insurance Fraud” means any misrepresentation of fact or omission of fact pertaining to a transaction of insurance including claims, premium and application fraud. These facts may include but are not limited to evidence of doctoring, altering or destroying forms, prior history of the claimant, policy holder, applicant or provider, receipts, estimates, explanations of benefits (EOB), medical evaluations or billings, medical provider notes, police and/or investigative reports, relevant discrepancies in written or oral statements and examinations under oath (EUO), unusual policy activity and falsified or untruthful application for insurance. An identifiable pattern in a claim history may also suggest the possibility of suspected fraudulent claims activity. A claim may contain evidence of suspected insurance fraud regardless of the payment status.

**Drafting Note:** States can insert, modify or delete definitions as needed and/or insert references to state law if necessary.

Section 3. Antifraud Plan Creation/Submission Requirement

A. An insurer, if required by a Department of Insurance, subject to [insert appropriate state code], shall submit to the Commissioner [or Fraud Bureau] a detailed description of the company’s create an antifraud plan. All that documents the insurer’s antifraud efforts plans submitted shall be subject to review by the Commissioner.

B. An insurer shall develop a written plan within [insert number of days based upon state law] days after obtaining its license to transact business within this state or within [insert number of days] days after beginning to engage in the business of insurance.

C. The DOI has the right to review an insurer’s antifraud plan in order to determine compliance with appropriate state laws.

D. An insurer shall submit their antifraud plan in accordance with all state laws, regulations and requirements.

**Drafting Note:** States are able to insert a reference to a state law / rule if they feel it is necessary.

E. If an insurer makes a material / substantive change in the manner in which they detect, investigate and/or report suspected insurance fraud, or there is a change in the person(s) responsible for the insurer’s antifraud efforts, the insurer will be required to amend [and submit] their antifraud plan within [insert number of days] days of the change(s) being made.

**Drafting Note:** States without mandatory submission requirements should adjust this section appropriately.

Section 4. Antifraud Plan Requirements

A. The following information should be included in the submitted An antifraud plan to satisfy this Section. The plan is an acknowledgment that the insurer and its SIU has established criteria that will be used to overview of the insurer’s efforts to prevent, detect suspicious or fraudulent investigate and report all aspects of suspected insurance activity relating fraud related to the different types of insurance offered by that insurer. All antifraud plans submitted shall be subject to review by the Commissioner.

B. One SIU antifraud plan may cover several insurer entities if one SIU has the fraud investigation mission for all entities.
The plan should include:

A. General Requirements

C. (1) The following information should be included in the submitted antifraud plan to satisfy this Section:

(1) The insurer’s name and NAIC individual and group code numbers;
   (a) A description of the insurer’s approved lines of authority.

Drafting Note: Upon exploring the creation of an electronic fraud plan submission system, the working group will explore the possibility of the above noted information auto-populating based upon NAIC carrier data maintained by individual / group codes.

(2) An acknowledgment that the insurer has established criteria that will be used for the investigation of acts of internal fraud and suspected insurance fraud relating to the different types of insurance offered by that insurer.

(2) An acknowledgement that the insurer or SIU shall record the date that suspected fraudulent activity is detected, and shall record the date that reports of such suspected insurance fraud were sent directly to the Fraud Bureau/Department within a specific time frame.

(3) A provision stating whether the SIU is an internal unit or an external or third party unit.

(3) A statement as to whether the insurer has implemented an internal and/or external fraud awareness and/or outreach program in order to educate employees, applicants, policy holders and/or members of the general public about insurance fraud.
   (a) A description of the insurer’s external fraud awareness or outreach program(s) geared towards applicants, policy holders and members of the general public.
   (b) A description of the insurer’s internal awareness / antifraud education and training initiatives of any personnel involved in antifraud related efforts. The description shall include:
      (i) An overview of antifraud training provided to new employees.
      (ii) The internal positions the insurer offers regular education and training to, such as underwriters, adjusters, claims representatives, appointed agents, attorneys, etc.
      (iii) A description of training topics covered with employees.
      (iv) The method(s) in which training is provided.
      (v) The frequency and minimum number of training hours provided.
      (vi) The method(s) in which employees, policyholders and members of the general public can report suspected fraud.

(4) A description of the insurer’s corporate policies for preventing, detecting and investigating suspected internal fraud committed by company employees, consultants or others, such as underwriters, claims representatives, appointed agents, etc.
   (a) The insurer shall include a description of their internal fraud reporting policy.
(b) The insurer shall identify the person and/or position within the organization who is ultimately responsible for the investigation of internal fraud.

(c) A description of the insurer’s standard operating procedures (SOP) for investigating internal fraud.

(d) The insurer shall include a description of the reporting procedures it will follow upon a criminal and/or insurance law violation being identified as the result of an internal investigation conducted (i.e. agent misconduct, referral to Fraud Unit or law enforcement, etc.).

(45) If the SIU is an internal unit, provide a description of whether the unit is part of the insurer’s claims or underwriting departments, or whether it is separate from such departments. A description of the insurer’s corporate policies for preventing fraudulent insurance acts committed by first- or third-party claimants, medical or service providers, attorneys, or any other party associated with a claim.

(a) A description of the technology and/or detection procedures the insurer has put in place to identify suspected fraud.

(b) The criteria used to report suspicious claims of insurance fraud for investigation to an insurer’s SIU.

(5) A written description or chart outlining the organizational arrangement of the insurer’s antifraud positions responsible for the investigation and reporting of possible fraudulent insurance acts.

(a) If SIU is an internal unit, the insurer shall provide general contact information for the company’s SIU.

(b) If SIU is an external unit, the insurer shall provide (1) the name of the company or companies used; (2) contact information for the company; and (3) a company organizational chart. The insurer shall specify the person or position at the insurer responsible for maintaining contact with the external SIU Company.

(c) If an external SIU is employed for purposes of surveillance, the insurer shall include a description of the policies and procedures implemented.

(6) A provision where the insurer provides the NAIC individual and group code numbers;

(6) A statement as to whether the insurer has established an internal SIU to investigate suspected insurance fraud.

(a) A description as to whether the unit is part of any other department within the organization.

(b) A description or chart outlining the organizational arrangement of all internal SIU positions/job titles.

(i) A general overview of each SIU position is required. In lieu of a general overview, insurers can provide a copy of all applicable position descriptions to the DOI.

Drafting Note: Upon exploring the creation of an electronic fraud plan submission system, the working group will explore the possibility insurers having the ability to upload an organization chart/list of SIU employees/position descriptions, etc.

(c) General contact information for the company’s SIU as well as contact information for the person/position(s) responsible for overseeing the insurer’s antifraud efforts.
(d) A description of the insurer’s SOPs for investigating suspected insurance fraud.

(7) A statement as to whether the insurer has implemented a fraud awareness or outreach program. If insurer has an awareness or outreach program, a brief description of the program shall be included;

(8) If the SIU is a third party unit, a description of the insurer’s policies and procedures for ensuring that the third party unit fulfills its contractual obligations to the insurer and a copy of the contract with the third party vendor.

(7) A statement as to whether the insurer utilizes an external/third party as their SIU or in conjunction with their internal SIU.

(a) If an external/third party is used to substantially perform the insurer’s SIU function, the insurer shall provide the name of the company(ies) used and contact information for the company(ies).

(b) The insurance shall specific the internal persons or position responsible for maintaining contact with the external company(ies) which will serve as the insurer’s SIU. The insurer shall provide a description how they will monitor and/or gauge the external/third party’s compliance with insurer antifraud mandates.

Drafting Note: If a state requires the disclosure of specific and/or all vendors for investigative activities conducted, this section can be modified accordingly.

(8) A description of the method(s) used to document SIU referrals received and investigations conducted.

(a) An overview of any case management system and/or computer program used to memorialize SIU referrals received and investigations conducted.

(b) The manner in which the insurer tracks SIU/investigative information for compliance purposes; i.e., the number of SIU referrals received, the number of investigations opened, the outcome of investigations conducted, etc.

Drafting Note: States that do not mandate fraud reporting should revise or remove inapplicable or have other requirements from should revise this section to reflect state requirements.

B. Prevention, Detection and Investigation of Fraud

(1) A description of the insurer’s corporate policies for preventing fraudulent insurance acts by its policy holders.

(2) A description of the insurer’s established fraud detection procedures (I.E. technology and other detection procedures).

(3) A description of the internal referral criteria used in reporting suspicious claims of insurance fraud for investigation by SIU.

(4) A description of SIU investigation program (I.E. by business line, external form claims adjustment, vendor management SOPs).

(5) A description of the insurer's policies and procedures for referring suspicious or fraudulent activity from the claims or underwriting departments to the SIU.

C. Reporting of Fraud
(1) A description of the insurer’s reporting procedures for the mandatory reporting of possible fraudulent insurance acts to the Commissioner/Bureau/Division pursuant to Section [Insert applicable State code].

(2) A description of the insurer’s criteria or threshold for reporting fraud to the Commissioner.

(3) A description of insurer’s means of submission of suspected fraud reports to the Commissioner (e.g. NAIC OFRS, NICB, NHCAA, electronic state system, or other).

(9) A description of the procedures the insurer has established to ensure that suspected insurance fraud is timely reported to [agency/division name] pursuant to [insert reference to state law].

   (a) A statement as to which individual(s) or group, within the organization is responsible for reporting suspected fraud on the insurer’s behalf.

   (i) When composing such a statement, companies may cite specific position descriptions in lieu of employee names.

   (ii) A description of the insurer’s criteria or threshold for reporting fraud to the Commissioner.

   (iii) A description of insurer’s means of submission of suspected fraud reports to the Commissioner (e.g. Online Fraud Reporting System (OFRS), National Insurance Crime Bureau (NICB), National Health Care Anti-Fraud Association (NHCAA), electronic state system, or other).

Drafting Note: States that do not mandate fraud reporting should revise or remove inapplicable requirements from this section.

Drafting Note: If a state has a mandatory reporting method, this section should be adjusted to reflect an acknowledgment of the reporting method.

D. Education and Training

(1) If applicable, a description of the insurer’s plan for antifraud education and training initiatives of any personnel involved in antifraud related efforts. This description shall include:

   (a) The internal positions the insurer offers regular education and training, such as underwriters, adjusters, claims representatives, appointment agents, attorneys, etc.

   (b) If the training will be internal and/or external.

   (c) Number of hours expected per year.

   (d) If training includes ethics, false claims or other legal-related issues.

E. Internal Fraud Detection and Prevention

(1) A description of insurer’s internal fraud detection policy for employees, consultants or others, such as underwriters, claims representatives, appointed agents, etc.

(2) A description of insurer’s internal fraud reporting system.

(10) An insurer shall incorporate within its antifraud plan the steps it will take to ensure all information they, or a contracted party possess with regard to a specific claim or incident of suspected insurance fraud is provided in a timely and complete manner when a formal written request from the [insert agency/division name] has been received.
Drafting Note: States who have a specific time period in which carriers must provide information can determine if a reference to a state statute or rule is warranted.

(b) Unless an insurer is able to cite legal grounds for withholding information, they must notredact or withhold any information that has been requested by the DOI.

(i) If an insurer has a reasonable belief that information cannot legally be provided to the DOI, the insurer will be required to provide, in writing, a description of any information being withheld, and cite the legal grounds for withholding such information.

Section 5. 18 USC 1033 & 1034 Compliance

The insurer shall include a description of its policies and procedures for candidates for employment and existing employees for compliance with 18 USC 1033 & 1034 [insert applicable State code if appropriate].

Section 65. Regulatory Compliance

A Department of Insurance has the right to review insurer antifraud plans in order to determine compliance with appropriate state laws. A Department further has the right, in accordance with Section [insert specific state code], to take appropriate administrative action against an insurer if it fails to comply with the mandated requirements and/or state laws.

Section 76. Confidentiality of Antifraud Plan

The submission of required information is not intended to constitute a waiver of an insurer’s privilege, trade secret, confidentiality or any proprietary interest in its antifraud plan or its antifraud related policies and procedures. The Commissioner shall maintain the antifraud plan as confidential. Submitted plans shall not be subject to the Freedom of Information Act (FOIA) if submitted properly under the state statutes or regulations which would afford protection of these materials [insert applicable state code].

Drafting Note: State will need to cite state specific privacy and protection authority.

Section 8. Required Antifraud Plan Submission

An insurer, if required by a Department of Insurance, shall submit its antifraud plan within ninety days of receiving a certificate of authority. Plans shall be submitted every 5 years thereafter. An insurer shall submit revisions to its plans within thirty days of a material change being made.

Drafting Note: States without mandatory submission requirements should adjust this section appropriately.
Project History

ANTIFRAUD PLAN GUIDELINE

1. Description of the Project, Issues Addressed, etc.
   In 2020, the Antifraud (D) Task Force discussed implementation of the revised Antifraud Plan Guideline (#1690). Currently, 23 states require their insurers to file an Antifraud Plan with their insurance commissioner. The purpose of an Antifraud Plan is to describe in detail how the company detects, addresses and prevents insurance fraud.

2. Name of Group Responsible for Drafting the Model and States Participating
   The Antifraud Technology (D) Working Group of the Antifraud (D) Task Force.
   Chair: Utah. Participating states: Arizona, Arkansas, California, Florida, Louisiana, New Mexico, Ohio, Texas and Virginia.

3. Project Authorized by What Charge and Date First Given to the Group
   On Dec. 10, 2019, the Antifraud Technology (D) Working Group was given the charge to “[r]each and provide recommendations for the development of an Antifraud Plan Repository to be used by insurers to centrally file their antifraud plan to all states/jurisdictions.” The revision of Guideline #1690 was determined to be the first step in completing this charge. The Working Group continues to discuss potential recommendations for an Antifraud Plan Repository.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated.
   The Antifraud Technology (D) Working Group initially sent a request for comments on Nov. 25, 2019, to the Antifraud (D) Task Force, interested state insurance regulators, and interested parties. The Working Group chair and the Ohio Working Group member drafted the initial revisions to Guideline #1690 that was exposed for comment in March 2020.

   The Working Group met again Sept. 17, 2020, to discuss additional comments received and review proposed revisions. The Working Group exposed a second draft for comment following the September call.

   The Working Group met Oct. 14, 2020, to review the final draft and Oct. 29, 2020, to adopt the revised Guideline #1690.

   Working Group members, state insurance regulators, and interested parties provided comments, and they were invited to participate in all Working Group calls. Revised drafts were released for comment following each Working Group call. The drafts were circulated via email and posted to the Task Force web page on the NAIC home page.

   Written comments were received by the following groups:

   Interested State Insurance Regulators

   Minnesota, Ohio and Utah.
Interested Parties
The Center for Economic Justice (CEJ), the Coalition Against Insurance Fraud (CAIF), the National Association of Mutual Insurance Companies (NAMIC), and the National Insurance Crime Bureau (NICB).

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The initial draft of Guideline #1690 was exposed in December 2019. Comments were received until Dec. 31, 2019. The Antifraud Technology (D) Working Group met in March 2020 to discuss the comments received.

A second draft was distributed following the call in March. Due to the COVID-19 pandemic, the activity of the Working Group was temporarily delayed, and the comment period was extended until September. The Working Group met in September and October to finalize and adopt the revisions to Guideline #1690.

In October 2020, the Antifraud (D) Task Force exposed the revised draft for comment. No comments were received on the revised draft. The Task Force met Nov. 16, 2020, to discuss the proposed revisions and adopt the revised Guideline #1690.

The Market Regulation and Consumer Affairs (D) Committee adopted the revised Guideline #1690 during the 2020 Fall National Meeting.

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)

The purpose of Guideline #1690 is to bring greater uniformity among the states in antifraud plan requirements and to be used as a template in creating the Antifraud Plan Repository. This Antifraud Plan Repository is intended to streamline the process used by industry to submit their Antifraud Plans to all appropriate insurance departments and streamline the process for state review.

Ohio suggested incorporating a comprehensive narrative at the beginning of Guideline #1690 to explain its purpose as a best practice because not all states mandate the reporting of Antifraud Plans. Antifraud Technology (D) Working Group members, state insurance regulators, and industry representatives unanimously agreed that the language suggested by Ohio was not necessary. The Working Group decided to reorganize the structure of the existing Guideline #1690 and keep the existing language.

The Working Group added and changed definitions within Guideline #1690. The Antifraud (D) Task Force decided to modify these changes by using certain definitions from existing NAIC model laws.

The first definition added was “insurance commissioner” or “commissioner.” The Working Group incorporated the definition used in the Insurance Data Security Model Law (#668).

The next definition added was for “insurer.” In the initial draft, the Working Group defined “insurer” as a business entity who is in the process of obtaining or has obtained a certificate of authority to enter into arrangements of contracts of insurance or reinsurance and who agrees to: 1) pay or indemnify another as to loss from certain contingencies called “risks,” including through reinsurance; 2) pay or grant a specified amount or determinable benefit to another in connection with ascertainable risk contingencies; 3) pay an annuity to another; or 4) act as surety. Except for using the language “including annuities,” the Task Force decided to use language found in the Suitability in Annuity Transactions Model Regulation (#275) definition for “insurer.” This language states that an “insurer is a company required to be licensed under the laws of this state to provide insurance products, including annuities.”

The last definition added was for the “NAIC” stating, “the NAIC is the organization of insurance regulators from 50 states, the District of Columbia and all participating U.S. territories.”
The Task Force members, state insurance regulators, and interested parties unanimously agreed that Guideline #1690 should not be considered a regulation but rather a guideline to assist states that currently require the submission of an Antifraud Plan and encourage the remaining jurisdictions to adopt a requirement for insurers’ submission of an Antifraud Plan.

7. **Any Other Important Information (e.g., amending an accreditation standard).**

None.

W:\National Meetings\2021\Spring\Plenary\Att 4 Antifraud Plan Guideline_FINALredline.doc
GUIDELINE FOR ADMINISTRATION OF LARGE DEDUCTIBLE POLICIES IN RECEIVERSHIP

Drafting Note: Having the necessary statutory authority specific to large deductible workers’ compensation products in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted: 1) Section 712 of the NAIC Insurer Receivership Model Act (#555—IRMA), Administration of Loss Reimbursement Policies; and 2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Large Deductible Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation. Generally, both approaches provide for the collection of reimbursements, resolve disputes over who gets the reimbursements and ensure that the claimants are paid. The provisions in each of the two options generally complement each other, except for conflicting provisions regarding the issue of the ultimate ownership of, and entitlement to, the deductible recoveries and large deductible collateral as between the estate and the guaranty association. The issue is whether the guaranty associations, on behalf of the claimants, are entitled to any deductible reimbursements or whether they are a general estate asset that is shared pro rata by the guaranty associations and the uncovered claimants.

As of the drafting of this Guideline, the NCIGF model approach has been adopted by several states using varying language. However, the NCIGF model has evolved over time based on additional experiences from insolvencies and the NCIGF continues to modify its model as warranted. The NAIC has developed the following Guideline based largely on the principles and structure of the NCIGF model with certain modifications made by the NAIC Large Deductible Workers’ Compensation (E) Working Group of the Receivership and Insolvency (E) Task Force. The following statutory language is not an amendment to the NAIC receivership models but is intended as a Guideline for use by states as an alternative to IRMA Section 712, Administration of Loss Reimbursement Policies.

Administration of Large Deductible Policies in Receivership

This Guideline shall apply to workers’ compensation large deductible policies issued by an insurer subject to delinquency proceedings under [insert cite to state’s receivership statute]. Large deductible policies shall be administered in accordance with their terms, except to the extent such terms conflict with this Guideline. This Guideline does not apply to policies where the insurer has no liability for the portion of a claim that is within the deductible or self-insured retention.

A. Definitions.

For purposes of this Guideline:

(1) “Large deductible policy” means any combination of one or more workers’ compensation policies and endorsements and contracts or security agreements entered into between an insurer and the insurer in which the insured has agreed with the insurer to:

(a) Pay directly the initial portion of any claim covered under the policy up to a specified dollar amount which the insurer would otherwise be obligated to pay, or the expenses related to any claim; or

(b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term “large deductible policy” includes policies which contain an aggregate limit on the insured’s liability for all deductible claims, a per-claim deductible limit or both. The primary purpose and distinguishing characteristic of a large deductible policy is the shifting of a portion of the ultimate financial responsibility under the large deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer, and the insurer remains liable to claimants in the event the insured fails to fulfill its payment or reimbursement obligations.

Drafting Note: States may wish to establish a minimum dollar deductible threshold for application of this statute based on local conditions. Because the payment of the entire amount of the claim remains the unconditional obligation of the insurer, the insured’s loss reimbursement obligation should not be treated as a “deductible” for the purpose of any applicable exclusion from guaranty association coverage, even though these policies are commonly referred to as “large deductible policies.”

Large deductible policies do not include policies, endorsements or agreements which provide that the initial portion of any covered claim shall be self-insured and further that the insurer shall have no payment obligation within the self-insured retention. Large deductible policies also do not include policies that provide for retrospectively rated premium payments by the insured or reinsurance arrangements or agreements,

© 2021 National Association of Insurance Commissioners
except to the extent such reinsurance arrangements or agreements are put in place as security for the policyholder’s large deductible obligations.

(2) “Deductible claim” means any allowed claim, including a claim for loss and defense and cost containment expense (unless such expenses are excluded), under a large deductible policy to the extent it is within the deductible.

(3) “Large deductible collateral” means any cash, letters of credit, surety bond, or any other form of security posted by the insured, or by a captive insurer or reinsurer, to secure the insured’s obligation under the large deductible policy to pay deductible claims or to reimburse the insurer for deductible claim payments. Large deductible collateral may also secure an insured’s obligation to reimburse or pay to the insurer as may be required for other secured obligations.

(4) “Commercially reasonable” means to act in good faith using prevailing industry practices and making all reasonable efforts considering the facts and circumstances of the matter.

(5) “Other secured obligations” means obligations of an insured to an insurer other than those under a large deductible policy, such as those under a reinsurance agreement or other agreement involving retrospective premium obligations the performance of which is secured by large deductible collateral that also secures an insured’s obligations under a large deductible policy.

B. Handling of Large Deductible Claims.

Unless otherwise agreed by the responsible guaranty association, all large deductible claims that are also “covered claims” as defined by the applicable guaranty association law, including those that may have been funded by an insured before liquidation, shall be turned over to the guaranty association for handling.

(1) If a deductible claim is not covered by any guaranty association, the receiver shall draw on available large deductible collateral to pay the claim; or make other arrangements with the insured to ensure the timely payment of the claim. The receiver shall pay the claim promptly from the large deductible collateral unless the insured pays the claim directly or there is no available large deductible collateral.

(2) Deductible claims paid by the insured or by the receiver in accordance with this Guideline shall not be treated as distributions of estate assets under [insert cite to state’s liquidation priority distribution statute]. To the extent the insured, or a third-party administrator on behalf of the insured, pays the deductible claim, pursuant to an agreement by the guaranty association or otherwise, the insured’s payment of a deductible claim in whole or in part will extinguish the obligations, if any, of the receiver and/or any guaranty association to pay that claim or that portion of the claim. No credit or charge for an imputed or constructive distribution of any kind shall be made against the receiver or a guaranty association on the basis of an insured’s payment of a deductible claim.

Drafting Note: This provision addresses so called “orphan claims,” which are situations where, because of variations in state law or for other reasons, claims generally covered by the guaranty fund system are not provided such protection. States should take steps, through statutory revision or otherwise, to avoid orphan claims, especially for workers’ compensation insurance. However, if such claims do exist, this provision permits the receiver to utilize available large deductible collateral, or other funds provided by the employer, to ensure that they continue to be paid. Alternative language that states may consider is as follows: “In cases where a deductible claim is not a guaranty association covered claim and the claimant has no other remedy either from the employer or other resources available in a state, the receiver may pay the claim to the extent of the deductible with available Large deductible collateral as described in subsection E(2) below.”

C. Deductible Claims Paid by a Guaranty Association.

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the amount of the reimbursement, and available large deductible collateral as provided for under subsection E to the extent necessary to reimburse the guaranty association. Such amounts shall be paid to the guaranty association net of any of the receiver’s collection costs as described in subsection F. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [insert cite to state’s liquidation priority distribution statute] or as early access payments under [insert cite to state’s early access statute].
To the extent that a guaranty association pays a deductible claim that is not reimbursed either from large deductible collateral or by an insured’s payments, or incurs expenses in connection with large deductible policies that are not reimbursed under this subsection, the guaranty association shall be entitled to assert a claim for those amounts in the delinquency proceeding, except as provided in subsection D(5).

Nothing in this subsection limits any rights of the receiver or a guaranty association that may otherwise exist under applicable law to obtain reimbursement from insureds for claims payments made by the guaranty association under policies of the insurer or for the guaranty association's related expenses, such as those provided for pursuant to [insert cite to state’s guaranty association net worth provision], or existing under similar laws of other states.

D. Collections

(1) The receiver shall take all commercially reasonable action to ensure that the large deductible collateral remains adequate to secure the insured’s obligations, and to collect reimbursements owed for deductible claims as provided for herein:

(a) Paid by the insurer prior to the commencement of delinquency proceedings;

(b) Paid by a guaranty association upon receipt by the receiver of notice from a guaranty association of reimbursable payments;

(c) Paid or allowed by the receiver; or

(d) Approved by the receiver for payment.

(2) If the insured does not make payment within the time specified in the large deductible policy, or within sixty (60) days after the date of billing if no time is specified, the receiver shall take all commercially reasonable actions to collect any reimbursements owed.

(3) Neither the insolvency of the insurer, nor the receiver’s or insurer’s inability to perform any of its obligations under the large deductible policy, shall be a defense to the insured’s reimbursement obligation under the large deductible policy.

(4) An allegation of improper handling or payment of a deductible claim by the insurer, the receiver and/or any guaranty association shall not be a defense to the insured’s reimbursement obligations under the large deductible policy.

(5) If the receiver declines to seek or is unsuccessful in obtaining reimbursement from the insured for a large deductible obligation and there is no available large deductible collateral, a guaranty association may, after notice to the receiver, seek to collect the reimbursement due from the insured on the same basis as the receiver, and with the same rights and remedies including without limitation the right to recover reasonable costs of collection from the insured. The guaranty association shall report any amounts so collected from each insured to the receiver. The receiver shall provide the guaranty association with available information needed to collect a reimbursement due from the insured. The receiver shall notify all other guaranty associations that have paid large deductible claims on behalf of the same insured. Amounts collected by a guaranty association pursuant to this paragraph shall be treated in accordance with subsection C. The expenses incurred by a guaranty association in pursuing reimbursement shall not be permitted as a claim in the delinquency proceeding at any priority, except as agreed by the receiver at or before the time the expenses are incurred; however, a guaranty association may net the expenses incurred in collecting any reimbursement against that reimbursement.

E. Large Deductible Collateral

(1) Subject to the provisions of this subsection, the receiver shall utilize large deductible collateral, when available, to secure the insured’s obligation to fund or reimburse deductible claims or other secured obligations or other payment obligations. A guaranty association shall be entitled to large deductible collateral as provided for in this subsection to the extent needed to reimburse a guaranty association for the payment of a deductible claim. Any payments made to a guaranty association pursuant to this subsection...
shall not be treated as distributions of estate assets under [Insert cite to state’s liquidation priority distribution statute] or as early access payments under [Insert cite to state’s early access statute]. Such payments shall extinguish the receiver’s obligations to the guaranty association with respect to any claim or portion of a claim that has been reimbursed from large deductible collateral.

(2) All claims against the large deductible collateral shall be paid first to reimburse claim payments made by the insurer, the receiver, or the guaranty associations to reimburse their deductible claim payments on large deductible policies. After these obligations are satisfied, remaining claims shall be paid in the order received and no claim of the receiver, except in accordance with this subsection, shall supersede any other claim against the large deductible collateral.

(3) Notwithstanding any agreement between the insured and the insurer, the receiver shall draw down large deductible collateral to the extent necessary in the event that the insured fails to:

(a) Perform its funding or payment obligations under any large deductible policy;
(b) Pay deductible claim reimbursements within the time specified in the large deductible policy or within sixty (60) days after the date of the billing if no time is specified;
(c) Pay amounts due the estate for pre-liquidation obligations;
(d) Timely fund any other secured obligation; or
(e) Timely pay expenses.

(4) Excess large deductible collateral may be returned to the insured when deemed appropriate by the receiver after a periodic review of claims paid, outstanding case reserves, and allowance for adverse development and claims incurred but not reported as determined by the receiver.”

F. Administrative Fees

(1) The receiver is entitled to recover through billings to the insured or from large deductible collateral all reasonable expenses that the receiver incurred in fulfilling its collection obligations under this Guideline. All such deductions or charges shall be in addition to the insured’s obligation to reimburse claims and related expenses and shall not diminish the rights of claimants or guaranty associations.

(2) To the extent the receiver cannot collect such expenses pursuant to paragraph (1), the receiver is entitled to deduct from the large deductible collateral or from the deductible reimbursements reasonable and actual expenses incurred in connection with the collection of the large deductible collateral and deductible reimbursements.

(3) To the extent such amounts are not available from reimbursements or large deductible collateral, the receiver, or guaranty associations if provided under an agreement with the receiver under subsection D(5), shall have a claim against the estate as provided pursuant to [insert cite to state’s liquidation priority distribution statute].

Drafting Note: State policymakers should decide whether this provision, when enacted, should apply to existing liquidations.
State Implementation Reporting of NAIC-Adopted Model Laws and Regulations

Life Insurance and Annuities (A) Committee

- Amendments to the *Suitability in Annuity Transactions Model Regulation (#275)*—These revisions were adopted by the Executive (EX) Committee and Plenary during the February 13, 2020 conference call. Seven states have enacted these revisions to the model.

- Amendments to the *Standard Nonforfeiture Law for Individual Deferred Annuities (#805)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

Health Insurance and Managed Care (B) Committee

- Amendments to the *Accident and Sickness Insurance Minimum Standards Model Act (#170)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2019 Spring National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Health Maintenance Organization Model Act (#430)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Insurance Holding Company System Regulatory Act (#440)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Adoption of the *Limited Long-Term Care Insurance Model Act (#642)*—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Adoption of the *Limited Long-Term Care Insurance Model Regulation (#643)*—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

Property and Casualty Insurance (C) Committee

- Adoption of the *Travel Insurance Model Act (#632)*—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. Six states have enacted this model.

Financial Condition (E) Committee

- Amendments to the *Life and Health Insurance Guaranty Association Model Act (#520)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2017 Fall National Meeting. 34 states have enacted these revisions to the model.
• Amendments to the *Credit for Reinsurance Model Law (#785)*—These revisions were adopted by the Executive (EX) Committee and Plenary during the June 26, 2019 conference call. 18 states have enacted this model.

• Amendments to the *Credit for Reinsurance Model Regulation (#786)*—These revisions were adopted by the Executive (EX) Committee and Plenary during its June 26, 2019 conference call. Five states have enacted this model.

Report of Requests for NAIC Model Law Development (Attachment Six) .......................................4-19
The Executive (EX) Committee met April 14, 2021. The following Committee members participated: David Altmaier, Chair (FL); Dean L. Cameron, Vice Chair (ID); Chlora Lindley-Myers, Vice President (MO); Andrew N. Mais, Secretary-Treasurer (CT); Raymond G. Farmer, Most Recent Past President (SC); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Michael Conway (CO); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Larry D. Deiter (SD). Also participating were: Vicki Schmidt (KS); Sharon P. Clark (KY); and Elizabeth Kelleher Dwyer (RI).

1. Adopted the April 7 Report of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee

Commissioner Altmaier reported the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee met April 7 in joint session. The meeting was held in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC) and paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings.

During this meeting, the Committee and Subcommittee took the following action: 1) adopted its March 16, 2021; Feb. 24, 2021; and 2020 Fall National Meeting minutes, which included the following action: a) approved the March 3 Internal Administration (EX) Subcommittee minutes, including investment reports and recommendation on the NAIC’s long-term investment portfolio; and b) approved next steps for the Long-Term Care Insurance (LTCI) Legal Restructuring fiscal, which includes: i) deferral of action by the Executive (EX) Committee until further deliberation can be completed; ii) appointment of the Long-Term Care Insurance Restructuring (E) Subgroup of the Restructuring Mechanisms (E) Working Group and its proposed charge; and iii) recommendation by the Subgroup to be provided to the Committee and Subcommittee by September 2021; c) approved the exposure of the System for Electronic Rate and Form Filing (SERFF) Modernization – Mobilization and Pilot Phase fiscal for public comment; d) approved the exposure of the State Based System (SBS) State Implementations 2021 fiscal for public comment; e) approved the exposure of the property/casualty (P/C) rate Model Review Staffing Resources fiscal for public comment; f) appointed a member to the National Insurance Producer Registry (NIPR) Board of Directors; g) ratified moving the Financial Stability (EX) Task Force to report to the Financial Condition (E) Committee; h) appointed non-regulator members to the SERFF Advisory Board; i) appointed members to the Consumer Participation Board of Trustees; j) approved an amendment to the NAIC Grant and Zone Fund Policy; and k) selected Las Vegas, NV, for the 2025 Fall National Meeting.

The Committee and Subcommittee adopted the report of the Audit Committee, which met April 1 and took the following action: 1) received an overview of the Dec. 31, 2020, financial statements, with an update for Feb. 28, 2021; 2) received the 2020 audit report from RSM; and 3) received an update on the 2020/2021 Service Organization Control (SOC) 1 and SOC 2 reviews.

The Committee and Subcommittee also adopted the report of the Information Systems (EX1) Task Force, which met March 24 and took the following action: 1) adopted its 2020 Fall National Meeting minutes; 2) received an update on the 2021 SERFF fiscal; and 3) received an operational report on the NAIC’s information technology (IT) activities.

The Committee and Subcommittee: 1) approved the exposure of the Solvency Workpaper Software Modernization – Implementation Preparation Phase fiscal; 2) approved the SERFF Modernization – Mobilization and Pilot Phase fiscal; 3) approved the SBS State Implementations 2021 fiscal; 4) approved the P/C Rate Model Review Staffing Resources fiscal; 5) received a joint chief executive officer (CEO)/chief operating officer (COO) report; and 6) discussed the development of the State Ahead 2.0 strategic plan.

Commissioner Conway made a motion, seconded by Director Wing-Heier, to adopt the April 7 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee. The motion passed.

2. Adopted its March 16 and Feb. 24 Interim Meeting Report

Commissioner Mais made a motion, seconded by Director Cameron, to adopt the Committee’s March 16 and Feb. 24 interim meeting report (Attachment One). The motion passed.
3. **Adopted the Reports of its Task Forces**

The Committee received reports from: the Climate and Resiliency (EX) Task Force; the Government Relations (EX) Leadership Council; the Innovation and Technology (EX) Task Force; the Long-Term Care Insurance (EX) Task Force; and the Special (EX) Committee on Race and Insurance.

Commissioner Altmaier reported that the Long-Term Care Insurance (EX) Task Force conducted an e-vote to consider adoption of the 2021 proposed charges for the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. The Subgroup will continue discussions that began in 2020 on specific issues related to reduced benefit options (RBOs) and to provide support and expertise to the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup.

Director Farmer made a motion, seconded by Commissioner Altman, to adopt the reports of: the Climate and Resiliency (EX) Task Force; the Government Relations (EX) Leadership Council; the Innovation and Technology (EX) Task Force; the Long-Term Care Insurance (EX) Task Force, including the charges for the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup; and the Special (EX) Committee on Race and Insurance (Attachment Two). The motion passed.

4. **Adopted a Request for NAIC Model Law Development Regarding Model #870**

Commissioner Schmidt reported that during the Dec. 8 meeting of the Property and Casualty Insurance (C) Committee, the Request for NAIC Model Law Development regarding the [Nonadmitted Insurance Model Act](#870) was discussed and approved by the Committee. Model #870 has been in place since 1994 and was last updated in 2002. Currently, 31 states have adopted the model. The federal Nonadmitted and Reinsurance Reform Act (NRRA) of 2010 addresses the following areas not currently included in Model #870: 1) the application of “Home State” provision for purposes of jurisdictional authority and paying premium tax; 2) licensure requirements for brokers; 3) diligent search requirements; and 4) eligibility requirements for nonadmitted insurers.

Commissioner Schmidt also reported that the proposed amendments to Model #870 would encompass not only updates to bring the model in alignment with the NRRA, but also would modernize the model. The work will be completed within one year.

Commissioner Donelon made a motion, seconded by Commissioner Birrane, to adopt the Request for NAIC Model Law Development to develop amendments to Model #870 (Attachment Three). The motion passed.

5. **Received the 2020 Annual Report of NAIC Designation Program Advisory Board Activities**

Commissioner Clark provided an update on the NAIC Designation Program Advisory Board’s activities and the 2020 achievements for the NAIC Insurance Regulator Professional Designation Program (Attachment Four). In 2020, there was an increase of more than 300 insurance regulator designation enrollments. At year-end, enrollment totaled 2,687 since its inception in 2006. State insurance regulators have earned 1,500 professional insurance regulation designations.

Commissioner Clark noted that the Advisory Board met virtually monthly in 2020 to discuss policy recommendations, renewal credits, and the future of the program and how to best promote awareness and support.

Commissioner Clark also reported that the Advisory Board completed some notable accomplishments in 2020, entering into a contract with Certemy to replace the existing enrollment site with Certemy’s program management system. The new enrollment site went live on March 23, 2021.

Commissioner Clark also reported that several changes to the program requested by members included: 1) waiving the first test retake fee; 2) removing tenure requirements for the Associate Professional in Insurance Regulation (APIR) and Professional in Insurance Regulation (PIR) designations; and 3) allowing courses to be taken “out of sequence.”

Commissioner Clark encouraged members to make additional recommendations that would enhance the program for use by the states. She said suggestions can be made to your state mentor, your zone representative to the Advisory Board, or the NAIC Education and Training Department. The State Mentor program provides a liaison between each state department and the NAIC’s Education and Training Department to help disseminate information and assist with candidates’ questions. The State Mentor list is on the Designation Program’s web page.

Commissioner Clark thanked the previous board chair, Superintendent Dwyer, for her hard work and dedication to the program.
6. Received a Status Report on the NAIC State Ahead Strategic Plan Implementation

Commissioner Altmaier provided an update on NAIC State Ahead implementation efforts. State Ahead is a three-year strategic plan for the organization intended to further advance the products, services and support the NAIC provides to state insurance regulators in order to better meet the changing regulatory landscape. NAIC staff continue to make good progress on the many State Ahead projects. Attachment Five contains the highlights of the State Ahead implementation at the operational level, as well as highlights in the NAIC 2020 Annual Report. In 2020, the NAIC paused on the development of State Ahead 2.0 to focus on COVID-19. The membership has now started the conversation on development of the next iteration of State Ahead.

7. Received a Report of Model Law Development Efforts

Commissioner Altmaier presented a written report on the progress of ongoing model law development efforts (Attachment Six).

8. Heard a Report from the NIPR Board of Directors

Director Deiter reported the NIPR Board of Directors had a busy and productive 2020. In 2020, NIPR processed 38 million credentialing and report transactions, a year-over-year increase of 5.2%. Despite the pandemic, NIPR earned $47.9 million in revenue, representing a 5.7% increase from 2019. NIPR also submitted $969 million in fees from NIPR to state departments of insurance (DOIs), which is a 14% increase over 2019. Visit www.NIPR.com to review the 2020 Annual Report.

The NIPR Board of Directors recently approved the 2021–2023 NIPR Strategic Plan – Our Bridge to the Future. NIPR’s new strategic plan sets the vision and guides its growth for the next three years and into the future. The strategic plan reflects NIPR’s success and lessons learned, which will enable NIPR to thrive and grow in a post-pandemic environment. The plan has three areas of focus or pillars, each with distinctive goals that are connected to NIPR’s values of teamwork, excellence, trust and innovation. The three pillars are: 1) Engaged and Empowered Team; 2) Customer-Focused Excellence; and 3) High-Quality and Reliable Technology. The strategic plan is posted at www.nipr.com.

Already this year, NIPR has been working to bring more products and services to state and industry customers. NIPR is excited to announce that contact change requests for business entities are available online through NIPR. The new capability enables business entities to utilize NIPR’s online product and eliminates the need for a separate state by state notification process for updating the entity’s contact information. Arizona, Nebraska, North Carolina, North Dakota and Rhode Island are live in production. NIPR plans a phased state rollout plan, and as other states are ready to go live, a separate state notification will be posted.

NIPR is also launching a chat feature for its customer call center to enhance the channels available to answer questions for the “walk-up” industry customers. Finally, NIPR has been busy working with California and Hawaii to implement adjuster licensing online through NIPR.

9. Heard a Report from the Compact

Superintendent Dwyer reported that the Interstate Insurance Product Regulation Commission (Compact) met March 23 and heard a report from then Director Bruce R. Ramee (NE), chair of the Compact’s Audit Committee, that the Compact received an unqualified opinion from its independent auditor RSM.

The Compact also appointed Commissioner Birrane to serve as chair of the Audit Committee for the remainder of the year.

The Compact released its 2020 Annual Report, and all Compacting states are encouraged to review the Compact’s activities and financial results for 2020. The Compact is required to send a copy of the Annual Report to all its members, as well as governors and legislatures in the Compacting states.

The Compact had a successful financial year, ending with positive revenue of $77,000 and the completion of two key strategic plan action items: 1) the independent governance review; and 2) the independent business assessment. With respect to these projects, the Compact has created a Governance Committee. The Governance Committee is reviewing the recommendations for good governance, as well as the implied congressional consent analysis, which may address a key issue from last year’s Colorado Supreme Court opinion.
The key item of business during its March 23 meeting was to receive a recommendation from the Compact’s Product Standards Committee on whether and how the amendment to change the minimum nonforfeiture rate in Section 4 of the Standard Nonforfeiture Law for Individual Deferred Annuities (#805) from 1% to 0.15%, which was adopted by the NAIC Executive (EX) Committee and Plenary in December 2020, should become effective in the Uniform Standards. The provision, which is the subject of the amendment, is incorporated by reference in the Uniform Standards for deferred annuities.

By operation of the Uniform Standards, the NAIC-adopted amendment would have been immediately effective and would be allowed for Compact-approved products, even though the model would likely require legislative change to be effective in state law.

In December 2020, the Compact issued its first-ever emergency rule to stay the effectiveness of the Model #805 amendment in the Uniform Standards and ask its Product Standards Committee to review and provide a recommendation back to the Compact.

During its March 23 meeting, the Product Standards Committee recommended amendments to the Uniform Standards to change the minimum nonforfeiture rate to follow state law. The proposed changes to the Uniform Standards must go through the rulemaking process, which requires notice, comment and a public hearing, and upon adoption, a 90-day period before such changes would be implemented.

The Compact also adopted its second emergency rule, which replaces the first emergency rule and adopts the proposed amendments being recommended by the Product Standards Committee for a period of 180 days. The emergency rule and the proposed amendments will require companies to follow the state law with respect to the minimum nonforfeiture rate, so it will allow companies to use the lower rate only if allowed by state law.

The Compact received other recommendations from its Product Standards Committee, including Guidelines for Uniform Standards Development, which would include a new system for annual identification and prioritization for Uniform Standards development. The Compact is also considering amendments to three draft Uniform Standards for waiver benefits.

Having no further business, the Executive (EX) Committee adjourned.
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

EXECUTIVE (EX) COMMITTEE
March 16, 2021 / February 24, 2021

Summary Report

The Executive (EX) Committee met March 16 and Feb. 24, 2021, in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee:

1. Adopted the Internal Administration (EX1) Subcommittee’s March 3 minutes, including investment reports and recommendations on the NAIC’s long-term investment portfolio.

2. Approved the next steps for the Long-Term Care Insurance (LTCI) Legal Restructuring Fiscal.

3. Approved the exposure of the System for Electronic Rate and Form Filing (SERFF) Modernization – Mobilization and Pilot Phase Fiscal for public comment.

4. Approved the State Based Systems (SBS) State Implementations 2021 Fiscal for public comment.

5. Approved the exposure of the Property/Casualty (P/C) Rate Model Review Staffing Resources Fiscal for public comment.

6. Appointed Commissioner Sharon P. Clark (KY) to serve on the National Insurance Producer Registry (NIPR) Board of Directors, effective April 9, 2021.

7. Received an update on 2020 year-end financial results.

8. Reviewed the NAIC Conflict of Interest Policy.

10. Approved the following non-regulator appointments to the SERFF Advisory Board (SAB): Birny Birnbaum (Center for Economic Justice—CEJ) as the Consumer Representative; Andrea Davey (Athene Annuity and Life Company) for Life Insurance and Vice Chair; Phyllis Hollerbach (Zurich North America) for Health Insurance; and Susan Gould (The Hanover Insurance Group) for P/C.

11. Appointed the following members to the 2021 Consumer Board of Trustees: Commissioner Michael Conway (CO) as Chair; Director Chlora Lindley-Myers (MO); Superintendent Russell Toal (NM); Commissioner John F. King (GA); Commissioner Marlene Caride (NJ); and Commissioner Jessica K. Altman (PA).

12. Reappointed the following Consumer Representatives to serve on the Board for 2021: Amy Bach (United Policyholders); Brendan Bridgeland (Center for Insurance Research—CIR); Bonnie Burns (California Health Advocates); Brenda J. Cude (University of Georgia); Katie Keith, (Out2Enroll); and Sarah Lueck (Center on Budget and Policy Priorities).

13. Approved an amendment to the NAIC Grant and Zone Fund Policy.

15. Selected Las Vegas, NV for the 2025 Fall National Meeting.
REPORT OF THE EXECUTIVE (EX) COMMITTEE TASK FORCES

Climate and Resiliency (EX) Task Force—The Climate and Resiliency (EX) Task Force met April 9 and took the following action: 1) heard reports from its workstreams; 2) received a recommendation from the Climate Risk Disclosure Workstream; 3) heard a presentation regarding the building code and mitigation workshop; 4) heard an update on NAIC Communications activities; 5) heard an update on federal activities; and 6) heard an update on international activities. The Task Force also met Feb. 16 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss strategic priorities related to climate risk and resiliency.

Government Relations (EX) Leadership Council—The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting. The Leadership Council meets weekly in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss federal legislative and regulatory developments affecting insurance regulation.

Innovation and Technology (EX) Task Force—The Innovation and Technology (EX) Task Force met April 9 and took the following action: 1) adopted minutes from the 2020 Fall National Meeting and reports of the Big Data and Artificial Intelligence (EX) Working Group and the Speed to Market (EX) Working Group. The Task Force also heard a report from the April 1 Innovation and Technology State Contacts Roundtable; 2) discussed and made assignments regarding prioritizing and taking action related to issues identified based on the requests for information (RFIs) related to continuing specific “regulatory relief” or “regulatory accommodations” offered by states as a result of the COVID-19 pandemic. The Task Force members voted to appoint a Working Group to examine e-commerce laws and regulations; survey states regarding federal Uniform Electronic Transactions Act (UETA) exceptions; and work toward meaningful, unified recommendations. The working group will also examine whether a model bulletin would be appropriate for addressing some of the identified issues and will draft a proposed bulletin if determined appropriate. The Task Force also referred identified issues related to allowing online processes to be used for producer licensing continuing education (CE) to the Producer Licensing (D) Task Force; referred surplus lines issues to the Surplus Lines (C) Task Force since it falls within its current workstream to amend the Nonadmitted Insurance Model Act (#870); and discussed possibly drafting a model bulletin related to the same issue; 3) heard InsurTech presentations from State Farm and USAA, Trellis, and Vero; 4) discussed issues related to consumer data ownership; 5) received an update from the various groups working on related workstreams, including the Special (EX) Committee on Race and Insurance, the Accelerated Underwriting (A) Working Group, the Property and Casualty Insurance (C) Committee and the Privacy Protections (D) Working Group; 6) heard an update on the predictive model review process; and 7) discussed the Coded Bias event held on March 31 and a possible follow-up meeting.

The Big Data and Artificial Intelligence (EX) Working Group met March 29 and took the following action: 1) reviewed the work of the Big Data (EX) Working Group and the Artificial Intelligence (EX) Working Group and why these Working Groups were merged; 2) reviewed the Working Group’s 2021 charges; 3) discussed developing an industry survey to research how insurance companies are using big data, algorithms and artificial intelligence (AI) while protecting the confidentiality of individual company responses to a survey; and 4) heard a presentation to introduce the development and components of a model governance framework based on other models (e.g., capital, catastrophe) used to manage risk associated with the use of data that factor into important business decisions for insurers.

The Speed to Market (EX) Working Group met March 10 and took the following action: 1) adopted its Nov. 10, 2020, minutes; 2) heard an update from the Interstate Insurance Product Regulation Commission (Compact); 3) discussed the results of the Product Requirement Locator (PRL) survey and next steps. The System for Electronic Rate and Form Filing (SERFF) team will be reaching out to states based on the survey responses provided to gather additional information as needed to assist states using the PRL. It is unlikely that the PRL tool will be available beyond the completion of the SERFF modernization project, which is anticipated in the next couple of years, and more likely that the SERFF modernization project will include ways for states to provide their filing requirements within SERFF, making it easier for states to keep their requirements up to date and to satisfy the need for those requirements to be easily accessible to SERFF users; 4) received updates on SERFF, including recent and upcoming releases and projects. The request for proposal (RFP) for the SERFF modernization project is in the final stage for the mobilization and pilot. A press release announcing vendor selection and kick-off of the project will be released soon; and 5) discussed the annual review of the product coding matrix (PCM) and uniform transmittal document (UTD) suggestions. Proposed revisions or changes can be submitted at any time throughout the year, but for suggestions to be considered to go in effect for next year, the deadline is May 31.
Long-Term Care Insurance (EX) Task Force—The Long-Term Care Insurance (EX) Task Force met April 9 and took the following action: 1) adopted its March 1 and 2020 Fall National Meeting minutes, which included adoption of the 2021 proposed charges of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup (Attachment Two-A). The Subgroup charges include:

A. Further evaluate and/or recommend options to help consumers manage the impact of rate increases. This includes:
   1. The potential development of a process to evaluate innovative options that allow for insurers to offer benefits that lessen the likelihood of an insured needing long-term care (LTC) services, including the evaluation of the suitability of and regulatory barriers to proposed options.
   2. The potential development of mechanisms to help state insurance regulators and consumers objectively compare reduced benefit options (RBOs), including the comparison of accepting a rate increase and retaining current benefits to electing offered RBOs.
   3. The further exploration of pursuing more uniformity in consumer notices for RBOs.
B. Support and provide expertise to the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup regarding the evaluation of RBOs.
C. Complete its charges by the 2021 Summer National Meeting.

During its April 9 meeting, the Task Force also received the reports of its subgroups: 1) the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup, which has drafted the operational section of a multistate rate review framework; 2) the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup, which plans to meet in May to begin addressing its charges; and 3) the Long-Term Care Insurance Financial Solvency (EX) Subgroup, which reported on industry trends and factors affecting reserve levels. The Task Force released the draft multistate rate review operational framework for a 45-day public comment period ending May 24.

Special (EX) Committee on Race and Insurance—The Special (EX) Committee on Race and Insurance met in regulator-to-regulator session on April 6 and March 24, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings and in open session on April 12. During its regulator-to-regulator sessions, the Special Committee took the following action: 1) received initial recommendations from its workstreams; 2) discussed where in the NAIC committee structure to place the necessary work to come; and 3) reviewed a set of proposed charges. The charges were exposed for a short public comment period. During its April 12 open meeting, the Special Committee took the following action: 1) heard reports from its five workstreams; and 2) heard comments from interested parties on the proposed charges. An additional exposure period ending May 14 was approved.

- Workstream One of Special Committee submitted an initial report to the Special (EX) Committee on Race and Insurance outlining its findings, as well as its recommendations to the Executive (EX) Committee and membership on next steps.
- Workstream Two of the Special Committee is directed at analyzing the level of diversity within the NAIC and the state insurance regulatory community. The workstream met Jan. 22 in regulator-to-regulator session. During that meeting, the NAIC presented its responses to a set of questions directed towards its efforts on diversity, equity and inclusion (DE&I). The workstream also discussed an information-gathering tool to examine, at the zone level, initiatives that state insurance departments can consider to promote DE&I in their offices.
- Workstream Three of the Special Committee is focused on property/casualty (P/C) insurance issues. The workstream has met four times to develop a list of issues that it wishes to focus on. The workstream leveraged the issues list to create a final report in January that it submitted to the Special Committee for its consideration. The report included potential charges related to affordability; availability and access; producer issues; education and outreach; and unfair discrimination.
- Workstream Four of the Special Committee met Nov. 16, 2020, and Oct. 30, 2020, in regulator-to-regulator session and Dec. 10, 2020, and Jan. 5, 2021, in open session. During its regulator-only meetings, the workstream discussed and prioritized issues. During its open meetings, it heard presentations from various stakeholders. The workstream drafted and adopted an initial report and recommendations via e-vote ending Feb. 5 and forwarded it to the Special Committee for its consideration.
- Workstream Five of the Special Committee held a member organization meeting Oct. 20, 2020. During this meeting, the workstream discussed its charge and reviewed its: 1) next steps and deliverables; 2) timeline; and 3) potential
issues for workstream focus related to health care disparities in health insurance access and affordability. The workstream held a stakeholder meeting Dec. 2, 2020, to discuss the potential issues identified. The workstream held additional regulator-to-regulator meetings following its Dec. 2, 2020, meeting to develop and finalize its initial report. The workstream finalized its report March 23 and has forwarded it to the Special Committee for its consideration.
Ongoing Support of NAIC Programs, Products or Services

1. The Long-Term Care Insurance (EX) Task Force will:
   A. Recognizing the gravity of the threat posed by the current long-term care insurance (LTCI) environment both to consumers and our state-based system of insurance regulation, this Task Force is charged to:
      1. Develop a consistent national approach for reviewing LTCI rates that results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization.
      2. Further evaluate and recommend options to provide consumers with choices regarding modifications to LTCI contract benefits where policies are no longer affordable due to rate increases.
      3. Deliver such a proposal to the Executive (EX) Committee by the 2021 Summer National Meeting.

2. The Long-Term Care Insurance Multistate Rate Review (EX) Subgroup will:
   A. Develop a consistent national approach for reviewing LTCI rates that results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization. The Subgroup should complete its charges by the 2021 Summer National Meeting.

3. The Long-Term Care Insurance Financial Solvency (EX) Subgroup will:
   A. Explore restructuring options and techniques to address potential inequities between policyholders in different states and techniques to mitigate policyholders’ risk to state guaranty fund benefit limits, including states’ pre-rehabilitation planning options. Evaluate the work of the consultant and report on the work to the Task Force.
   B. Monitor work performed by other NAIC solvency working groups and assist in the timely multi-state coordination/communication of the review of the financial condition of long-term care (LTC) insurers.
   C. Complete its charges by the 2021 Summer National Meeting.

4. The Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup will:
   A. Further evaluate and/or recommend options to help consumers manage the impact of rate increases. This includes:
      1. The potential development of a process to evaluate innovative options that allow for insurers to offer benefits that lessen the likelihood of an insured needing LTC services, including the evaluation of the suitability of and regulatory barriers to proposed options.
      2. The potential development of mechanisms to help state insurance regulators and consumers objectively compare reduced benefit options (RBOs), including the comparison of accepting a rate increase and retaining current benefits to electing offered RBOs.
      3. The further exploration of pursuing more uniformity in consumer notices for RBOs.
   B. Support and provide expertise to the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup regarding the evaluation of RBOs.
   C. Complete its charges by the 2021 Summer National Meeting.

NAIC Support Staff: Jeffrey C. Johnston

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is:  □ New Model Law  or  ☒ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Surplus Lines (C) Task Force

2. NAIC staff support contact information:

Andy Daleo, Senior Financial Analysis Manager (adaleo@naic.org)
Dan Schelp, Chief Counsel, Regulatory Affairs (dschelp@naic.org)

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

Nonadmitted Insurance Model Act (#870) – See Attached

On August 5, 2020, the Surplus Lines (C) Task Force discussed revisions to Model #870, and directed NAIC staff to form an informal Drafting Group composed of regulators from Louisiana, Oklahoma and Washington to produce a summary document that outlines the significant updates to modernize Model #870 and present a recommendation to the Task Force at a future national meeting. The attached Model #870 contains the Drafting Group’s recommendations with respect to modification of Model #870 to both bring it into compliance with the Nonadmitted and Reinsurance Reform Act (NRRA) as well as other amendments to modernize the model.

4. Does the model law meet the Model Law Criteria?  ☒ Yes  or  □ No  (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states?  ☒ Yes  or  □ No  (Check one)

If yes, please explain why

The Nonadmitted Insurance Model Act (#870) has been adopted in 31 states, with other states adopting older versions of the NAIC model, statutes or regulations addressing the same subject matter, or other administrative guidance such as bulletins and notices. Every state, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands have surplus lines guidance in place.

The NRRA was adopted July 21, 2011, and is contained within the Dodd-Frank Wall Street Reform and Consumer Protection Act (Act). The NRRA requirements and the mandate of the federal Act create uniformity for the collection of surplus lines tax payments through the implementation of the “Home State” requirement. All states comply with the NRRA’s home state tax approach.

Model 870 was not modified because of the implementation of the NRRA. However, on October 11, 2011, a Nonadmitted Insurance Reform Sample Bulletin (copy attached) was adopted by Executive/Plenary and
subsequently distributed to the state insurance departments. It is important to provide guidance for uniformity among the states in order to ensure compliance with the NRRA.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

☑ Yes  ☐ No  (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

☐ 1  ☐ 2  ☐ 3  ☐ 4  ☐ 5  (Check one)

High Likelihood  Low Likelihood

Explanation, if necessary: Due to the previous adoption of the Nonadmitted Insurance Reform Sample Bulletin by the NAIC, there is already uniformity of intent with respect to key areas addressed by the NRRA. The Surplus Lines (C) Task Force should be able to leverage that agreement to quickly and efficiently finish revisions to Model #870.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

☐ 1  ☐ 2  ☐ 3  ☐ 4  ☐ 5  (Check one)

High Likelihood  Low Likelihood

Explanation, if necessary: Surplus Lines is an important industry in every state and U.S. Territory, and it is important to provide uniform guidance to the NAIC members to ensure compliance with the federal NRRA.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1  ☐ 2  ☐ 3  ☐ 4  ☐ 5  (Check one)

High Likelihood  Low Likelihood

Explanation, if necessary: Model #870 is not an accreditation requirement, but as previously stated it is important to provide uniform guidance to the states to ensure compliance with the NRRA.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

Yes, the proposed revisions to Model #870 are in direct response to the federal NRRA, which would preempt inconsistent state law.
To: Members of the NAIC Executive Committee

From: Commissioner Sharon Clark, Kentucky Department of Insurance
Chair, NAIC Insurance Regulator Professional Designation Program Advisory Board

Date: April 14, 2021

Subject: 2020 Annual Report of NAIC Designation Program Advisory Board Activities

In October of 2006, the NAIC launched the Insurance Regulator Professional Designation Program (“Designation Program”), a formal credentialing program designed for regulators, by regulators to establish structured training and development paths for insurance department employees. In that same year, the Internal Administration (EX1) Subcommittee directed the program’s Advisory Board to present a brief annual report of program benchmarks and board activities. This memorandum, with its supplemental charts, sets forth an account of the program’s year in review.

Program Enrollments

We continued our outreach to states and have seen increased interest and enrollments across the board. In 2020, the NAIC Education & Training Department processed nearly 300 Designation Program enrollments, bringing the total number of enrollments since 2006 to 2,687.

We awarded 217 new designations in 2020. By year-end, earned designation totals were as follows: 1090 APIR designees, 386 PIR designees, 22 SPIR designees, and 2 IPIR designees.

The Designation Program Mentoring Network

States have been encouraged to appoint a “mentor” that can serve as a liaison between the Department and the NAIC’s Education & Training Department as a means of disseminating information about the program to interested regulators, and to assist candidates as they have questions. All but one territory has individuals active in this role. Most mentors have earned an NAIC Designation or are currently working toward one.

Designation Program Advisory Board Meetings

The Designation Program Advisory Board met monthly throughout 2020 via conference call to discuss policy matters and other issues. Discussion items included policy recommendations and promotion of the program to increase awareness and participation.

2020 Accomplishments

Several significant accomplishments occurred in 2020, including:

- Work to replace the program’s enrollment site with a new program management system (Certemy) to streamline and automate many of the processes done manually today, which will provide a better user experience for program participants. Work was completed with a soft rollout of the new system in February 2021, with a full rollout in late March 2021.
- Created and implemented a new course for the APIR level, “Introduction to Financial Regulation for Non-Financial Regulators.”
- Updated program policies in response to program participant needs and requests (waiving first retake fee, removing tenure requirements for APIR and PIR, and allowing courses to be taken “out of sequence”).
- Granted a 1-year extension on all Designation renewal dates.

**About the Insurance Regulator Professional Designation Program Advisory Board**

The 2020 Advisory Board was composed of Laura Arp (NE Department of Insurance), Rachel Chester (RI Insurance Division), Eric Fletcher (ID Department of Insurance) and Scott Sanders (GA Department of Insurance).

Rhode Island Superintendent Beth Dwyer chaired the 2020 Advisory Board.

In addition to overseeing Designation Program policy and advising NAIC Education Department staff on designation program policy administration, the board members work on outreach to regulators during NAIC Zone Meetings and other regulatory meetings. Additional information about the Designation Program can be found by visiting the NAIC website: [http://naic.org/education_designation.htm](http://naic.org/education_designation.htm)

Model Law Development Report

Amendments to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)—Amendments to Model #171 are required for consistency with the federal Affordable Care Act (ACA). Therefore, they did not require approval of a Request for NAIC Model Law Development by the Executive (EX) Committee. At the 2015 Fall National Meeting, the Regulatory Framework (B) Task Force discussed the proposed revisions to this model. The Task Force met Feb. 11, 2016, and appointed the Accident and Sickness Insurance Minimum Standards (B) Subgroup to work on revisions to this model. The Subgroup has been meeting on a regular basis since the 2016 Spring National Meeting, and it plans to continue meeting until it completes its work. During its meetings, the Subgroup has discussed several issues, including its approach for revising the model’s disability income insurance coverage provisions, and it decided preliminarily to review the Interstate Insurance Product Regulation Commission’s (Compact’s) approach. After pausing its work due to the ACA’s potential repeal, replacement or modification—and the possible impact on the provisions of this model, as well as the Subgroup’s preliminary proposed revisions to the model—the Subgroup began meeting again in May 2018. Revisions to the Unfair Trade Practices Act Amendments to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#170) were adopted by the full NAIC membership at the 2019 Spring National Meeting. The Subgroup has been meeting to consider revisions to Model #171 for consistency with the revised Model #170 since the 2019 Summer National Meeting discussion on comments received on Sections 1–5 of Model #171. In December 2019, the Subgroup set a public comment period ending Feb. 7 to receive comments on Section 6 and Section 7 of Model #171. Due to the COVID-19 health emergency, the Subgroup has not scheduled any meetings. Any future meetings will depend on when a new co-chair is appointed and the duration of the COVID-19 health emergency. As requested, the Subgroup received comments from stakeholders on Section 6 and Section 7 of Model #171. A new Subgroup co-chair has been appointed. It is anticipated that the Subgroup will resume meeting sometime in late April or early May to: 1) complete its discussion of the comments received on Sections 1–5 of Model #171; and 2) begin discussion of the comments received on Section 6 and Section 7 of Model #171.

Amendments to the Annuity Disclosure Model Regulation (#245)—The Executive (EX) Committee met June 19, 2017, and approved a Request for NAIC Model Law Development to amend Model #245. The amendments will revise Section 6—Standards for Illustrations. The purpose of the revision is to address issues identified by the Annuity Disclosure (A) Working Group of the Life Insurance and Annuities (A) Committee related to innovations in annuity products that are not addressed, or not addressed adequately, in the current standards. Revisions addressing participating income annuities were adopted by the Life Insurance and Annuities (A) Committee during its July 19, 2018, meeting and held pending the resolution of the Working Group’s discussions regarding illustrating indexes in existence for less than 10 years. The Working Group continues to discuss additional revisions on the index issue. The Working Group made progress during discussions in late 2019 and early 2020, and it received an extension from the Life Insurance and Annuities (A) Committee at the 2020 Summer National Meeting to finish its work. The Working Group is currently awaiting additional direction from the Committee before resuming its work.

Amendments to the Life Insurance Disclosure Model Regulation (#580)—The Executive (EX) Committee met June 19, 2017, and approved a Request for NAIC Model Law Development to incorporate a policy overview document requirement into Model #580 and the Life Insurance Illustrations Model Regulation (#582) in order to improve the understandability of the life insurance policy summary and narrative summary already required by Section 5A(2) of Model #580 and Section 7B of Model #582. While the Life Insurance Illustration Issues (A) Working Group of the Life Insurance and Annuities (A) Committee was originally planning to revise both Model #580 and Model #582, it will now revise only Model #580. The Working Group has been meeting to develop language to add a requirement for a one- to two-page consumer-oriented policy overview. The Working Group continued to make progress during meetings in late 2019 and early 2020, and it received an extension from the Life Insurance and Annuities (A) Committee at the 2020 Summer National Meeting to continue its work. The Working Group met Feb. 23 and March 10 and is close to completing alternative draft versions of a sample policy overview document for term life policies. One version shows the sample pre-under writing, and the other shows the sample post-underwriting. The Working Group is developing these alternative versions to aid the Committee in providing guidance to the Working Group with respect to the timing of the delivery of the policy overview document.

Amendments to the Unfair Trade Practices Act (#880)—The Executive (EX) Committee approved a Request for NAIC Model Law Development to amend Model #880 at the 2019 Fall National Meeting. The Innovation and Technology (EX) Task Force drafted amendments to Model #880, focusing on Section 4H, to clarify what is considered a “rebate” or “inducement.” A drafting group was formed, led by Superintendent Elizabeth Kelleher Dwyer (RI), to develop language for exposure. The drafting group held its first meeting on Jan. 27, 2020, followed by three more meetings. Five drafts were discussed, and the drafting group disbanded on June 17, 2020. The draft coming out of that work was distributed and posted to the NAIC website.
for comment. The Innovation and Technology (EX) Task Force discussed the draft language during its meeting at the Summer National Meeting. Three more drafts, followed by comment periods, were published. During a meeting on Nov. 30, oral presentations were made by various commenters on the draft dated Oct. 30. Based on comments submitted Nov. 18 and during the Nov. 30 meeting, an updated draft was published on Dec. 2. The Task Force adopted the draft during its meeting on Dec. 4, and the Executive (EX) Committee adopted it on Dec. 9. The revised model will be considered by Executive (EX) Committee and Plenary on April 14, 2021.

**Amendments to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)**—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #440 and Model #450 at the 2020 Summer National Meeting. The Receivership Law (E) Working Group met six times in 2020 and 2021 to develop revisions to Section 5 of Model #440 and Section 19 of Model #450 that address the issue of continuation of essential services by affiliates in receivership. The Working Group will consider adoption of the amendments following the exposure period ending April 9, 2021.

**New Model: Real Property Lender-Placed Insurance Model Act**—The Executive (EX) Committee approved a Request for NAIC Model Law Development, submitted by the Property and Casualty Insurance (C) Committee, at the 2017 Summer National Meeting to draft the new Real Property Lender-Placed Insurance Model Act. The Lender-Placed Insurance Model Act (C) Working Group of the Property and Casualty Insurance (C) Committee exposed a draft of this proposed new model on Oct. 19, 2020, and adopted the model during its Nov. 13 meeting. The Property and Casualty Insurance (C) Committee adopted the model on Dec. 8, 2020, and the model will be considered by Executive (EX) Committee and Plenary on April 14, 2021.

**New Model: Pet Insurance Model Law**—The Executive (EX) Committee approved a Request for NAIC Model Law Development at the 2019 Summer National Meeting. The Pet Insurance (C) Working Group is meeting to draft the model law to define a regulatory structure for pet insurance and address issues such as: producer licensing; policy terms; coverages; claims handling; premium taxes; disclosures; arbitration; and preexisting conditions. The Working Group will request an extension of time to continue drafting the model during the Spring National Meeting. The Working Group has received comments on all sections of the new model and is now moving through revisions for final comment. The Working Group plans to consider adoption of the model later in 2021.

**New Model: Pharmacy Benefit Manager (PBM) Model Law**—The Executive (EX) Committee approved a Request for NAIC Model Law Development at the 2019 Summer National Meeting to draft a new model law addressing the licensure or registration of PBMs. The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force is drafting the model as a result of discussions that began during the Health Insurance and Managed Care (B) Committee’s work to revise the Health Carrier Prescription Drug Benefit Management Model Act (#22). Following the 2019 Summer National Meeting, the Working Group held several information-gathering sessions to assist it in working on its charge. The Working Group met in regulator-to-regulator session to discuss its next steps. The Working Group formed an ad hoc drafting group to develop an initial draft regulating PBMs. The Subgroup met July 16, 2020, to discuss a draft of establishing a PBM licensing requirement and other PBM provisions, including a gag clause provision. The Subgroup exposed the draft for a public comment period ending Sept. 1. The Subgroup discussed the comments received on the proposed new model during a series of meetings in September and October. The Subgroup adopted the proposed new model on Oct. 29 and forwarded it to the Regulatory Framework (B) Task Force for consideration of adoption. The Regulatory Framework (B) Task Force discussed the proposed new model during its Nov. 19 meeting. The Task Force deferred adopting the proposed new model and exposed it for an additional 30-day public comment period. The Task Force discussed the comments received on the proposed new model March 1 and adopted it March 18. The Health Insurance and Managed Care (B) Committee is expected to receive the new model during its April 12 meeting and defer adoption until it meets after the Spring National Meeting.

CLIMATE AND RESILIENCY (EX) TASK FORCE

Climate and Resiliency (EX) Task Force April 9, 2021, Minutes .................................................................4-22
Climate Risk Disclosure Workstream Recommendation (Attachment One).........................................................4-26
The Climate and Resiliency (EX) Task Force met April 9, 2021. The following Task Force members participated: Ricardo Lara, Co-Chair (CA); Raymond G. Farmer, Co-Chair, and Kendall Buchanan (SC); Colin M. Hayashida, Co-Vice Chair (HI); James J. Donelon, Co-Vice Chair (LA); Kathleen A. Birrane, Co-Vice Chair (MD); Bruce R. Range, Co-Vice Chair (NE); Andrew R. Stolfi, Co-Vice Chair (OR); Lori K. Wing-Heier represented by Katie Hegland (AK); Jim L. Ridling (AL); Michael Conway represented by Peg Brown (CO); Trinidad Navarro represented by Frank Pyle (DE); David Altmair (FL); Stephen W. Robertson represented by Amy Beard (IN); Gary D. Anderson (MA); Eric A. Cioppa (ME); Anita G. Fox represented by Karen Dennis (MI); Grace Arnold (MN); Jon Godfrey represented by John Arnold (ND); Russel Toal represented by Anna Krylova (NY); Barbara D. Richardson (NV); Linda A. Lacewell represented by Nina Chen and Bob Kasinow (NY); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); Scott A. White represented by Thomas J. Sanford (VA); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler (WA); Mark Aflable (WI); James A. Dodrill (WV); and Jeff Rude (WY). Also participating was: Judith L. French (OH).

1. **Adopted its 2020 Fall National Meeting Minutes**

   Commissioner Stolfi made a motion, seconded by Commissioner Altman, to adopt the Task Force’s Dec. 4, 2020, minutes (see *NAIC Proceedings – Fall 2020, Climate and Resiliency (EX) Task Force*). The motion passed unanimously.

2. **Received Reports from its Workstreams**

   Commissioner Birrane said the Solvency Workstream plans to hold a series of open meetings throughout the year to inform its recommendations regarding solvency matters related to climate risk. She said the Workstream members met Feb. 23 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meeting, to create a workplan. The Workstream members also reviewed information compiled by the NAIC Capital Markets Bureau regarding climate-related investment data on U.S. insurers reporting to the NAIC. The information was compiled in response to a data request from the International Association of Insurance Supervisors (IAIS) as part of its 2021 Global Insurance Market Report (GIMAR). The NAIC Capital Markets Bureau compiled NAIC Annual Financial Statement data, including investment sectors prescribed by the IAIS. The data broke investments into six sectors, including energy, fossil fuels, housing, transportation, utilities and agriculture. The results show that the U.S. industry had approximately 13.8% of its total investments in stocks and bonds in all six sectors at year-end 2019. Investments in fossil fuels made up less than 3% of the industry’s total stocks and bonds at year-end 2019, a slight decrease from the prior year. The Workstream also sent a referral to the Catastrophe Risk (E) Subgroup to consider adding more perils to the Property/Casualty (P/C) Risk-Based Capital (RBC) formula. The formula currently includes hurricane and earthquake. The Subgroup is currently considering wildfire.

   Commissioner Hayashida said the Innovation Workstream is exploring the use of parametric insurance to fill coverage gaps related to natural catastrophe due to its growing popularity and interest both domestically and internationally. He said the Workstream met March 25 to hear two presentations. The first presenter, Carolyn Kousky (Wharton Risk Management and Decision Processes Center), described use cases for parametric insurance, including an upcoming study she is conducting to explore the use of parametric insurance for low-income households. Ms. Kousky described how parametric insurance could be stacked with a standard home or property policy to supplant excluded coverages or cover the cost of high deductibles or low limits. Ms. Kousky said macro-level parametric products could be used by the public sector to deter fiscal impacts to tax revenues and infrastructure or provide disaster assistance to citizens and businesses. The second presentation was provided by Emily Drake (NMCIC) and James West (NMCIC). They described a product developed by their company, Recoop Disaster Insurance. The product has been filed and approved in 33 states. The product is designed to offset high deductibles, actual cash value (ACV) provisions, expenses related to evacuation, and lost work time or job loss following a natural disaster. The policyholder must have a homeowners policy in place to obtain the coverage, and the triggering event is either a disaster declaration or a claim submission to their homeowners policy.

   Commissioner Donelon said the Technology Workstream met March 24 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. During the meeting, the Center for Insurance Policy and Research (CIPR) and Risk Management Solutions (RMS) presented about their joint effort to create an application paper with benefit-cost analysis demonstrating mitigation activities.
proven to reduce wildfire risk. They also described an educational summary provided to state insurance regulators to explain the components of wildfire models, inputs, outputs, validation methods, and the application of models within regulatory functions.

3. **Received a Recommendation from the Climate Risk Disclosure Workstream**

Commissioner Stolfi said the Climate Risk Disclosure Workstream met several times in the first quarter 2021 to become familiar with alternative climate-reporting frameworks and hear from insurers, rating agencies, and state insurance regulators participating in the **NAIC Climate Risk Disclosure Survey** (Climate Survey). He said it has been noted that federal and international regulatory agencies are also reviewing the need for climate-risk disclosures, and the Workstream is staying abreast of those developments to promote consistency in reporting, where practicable. The Workstream developed a memo to the Task Force (Attachment One) recommending that the 2021 reporting framework remain consistent with the prior year 2020 reporting requirements. Beginning in 2020, insurers could file either the Climate Survey or the Task Force for Climate-Related Financial Disclosures (TCFD). This interim step, remaining consistent with prior years, provides the industry with ample time to prepare for its annual reporting requirement and the Workstream additional time to work through its considerations for improvements to the information obtained in the climate disclosures. Furthermore, it allows the Workstream to continue working with external stakeholders to promote a consistent approach across agencies. Currently, six states are participating: California, Connecticut, Minnesota, New Mexico, New York and Washington. All licensed insurers writing more than $100 million in premium in the participating states are required to file a climate disclosure annually. For several years, the Climate Survey has captured more than 70% of the U.S. market. Commissioner Stolfi said the Oregon Department of Consumer and Business Services is considering participating in 2021, and he encouraged other states to do so as well.

David F. Snyder (American Property Casualty Insurance Association—APCIA) commended the work of the Workstream and the flexibility for insurers to report either the Climate Survey or the TCFD in 2021. He acknowledged the challenges ahead, including time horizons, the definition of transition risk, moving from qualitative to quantitative reporting, and confidentiality measures.

Dennis C. Burke (Reinsurance Association of America—RAA) also commended the work of the Workstream and urged the members to recognize insurers’ need for flexibility in underwriting, risk management and decision processing. A one-size-fits-all approach would not benefit the industry, as companies vary in size and operation. Mr. Burke also encouraged the members to continue tracking domestic and international regulatory actions in this area to avoid duplicative reporting requirements for insurers.

Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) encouraged state insurance regulators to take the preliminary step to create a clearly defined purpose for climate-risk disclosures, as well as the regulatory actions that drive the need for that information, such as solvency or consumer protection. She also encouraged the members to scope out and leverage existing reporting requirements to avoid duplicative requests for information from carriers, as well as ensure confidentiality, where appropriate. She urged any new states joining the disclosure initiative to consider the need for staggered deadlines or flexibility offered to new companies required to report in 2021.

Birny Birnbaum (Center for Economic Justice—CEJ) said there is opportunity for improvement of climate-related disclosures to include information for consumers and policymakers. He said more information is necessary for insureds and policymakers to be confident in the availability of coverage.

David Arkush (Public Citizen’s Climate Program) said he sent a letter to the Workstream leaders calling for more prompt action on climate-related disclosures. He said a greater sense of urgency is necessary, as domestic and international regulators are beginning to act on disclosures. He mentioned Connecticut Senate Bill 1047, which if enacted, would require that insurance companies disclose how much they receive annually in fossil fuel premiums and how much they invest in the fossil fuel industry, as well as the climate risk associated with those investments. He also said New York has already requested climate-related information from insurers and is demonstrating that it is possible to get started right away, learn and adjust, as necessary.

Commissioner Lara said the Task Force is seeking a strong and consistent climate-risk disclosure that positions the insurance sector as a leader. The Workstream has been working rapidly; holding public meetings every few weeks since January; hearing from experts in climate-risk disclosure, such as Principles for Responsible Investing and insurance companies that complete TCFD reports, such as Zurich; and thoroughly reviewing the existing Climate Survey. The goal is a robust and consistent disclosure across the insurance sector, and that will take continued work. This recommendation is initial, recognizing the need for insurers to start working on this year’s disclosure. The Workstream will continue meeting and working towards a robust and comprehensive recommendation on climate-risk disclosure.
4. **Heard a Presentation Regarding the Building Code and Mitigation Workshop**

Jennifer Gardner (NAIC) said under the leadership of Director Ramge, the Pre-Disaster Mitigation Workstream co-hosted a building code and mitigation workshop March 17–19 with the CIPR, as well as the Federal Alliance for Safe Homes Inc. (FLASH). Over 100 people attended, including staff from 17 departments of insurance (DOIs), federal and state emergency management agencies, industry representatives, and consumer advocates. The first day of the workshop was designed to provide a greater understanding of the framework for building code adoption and enforcement, how state DOIs can and do advocate for strong building codes, and how industry can support strong codes through incentives. Presentations included the International Code Council (ICC), the Insurance Institute for Building & Home Safety (IBHS), the Mississippi DOI, and the Insurance Services Office (ISO). Day two of the workshop focused on the science of mitigation; proven methods to reduce risk, state avenues for incentivizing mitigation, such as grant fund programs and insurance incentives, such as premium credits and discounts. Presentations included the Strengthen Alabama Homes program, the South Carolina Safe Home program, and Hawaii Senate Bill 1101. Additional presentations focused on the coordinated state management of risk reduction, such as the partnership between the California DOI and Governor Newsom’s office to reduce the risk of wildfire and Nebraska’s annual statewide emergency management agency report. The Federal Emergency Management Agency (FEMA) presented about its goal to align a FEMA federal and national strategy on building codes and resiliency. The final day of the workshop focused on pre- and post-disaster funding and included presentations from FEMA regarding federal grants, as well as its Federal Insurance and Mitigation Administration (FIMA) Strategic Plan. The purpose of FEMA’s plan is to show how mitigation investments reduce risk, coordinate mitigation investments to reduce risk, and make mitigation investment a standard practice. Bryan Koon presented on how IEM can work with states to submit grant applications for federal funding. Finally, Amy Bach (United Policyholders) presented on alternative funding mechanisms such as state, utility and forestry management resources. The meeting materials and recordings of the workshop are available on the Climate Risk and Resiliency Resource Center webpage at content.naic.org/climate-resiliency-resource.htm.

5. **Heard a Presentation on NAIC Communications Activities**

Laura Kane (NAIC) said the NAIC conducted a homeowners policyholder Climate Survey, capturing nearly 2,500 responses from March 9–16. The results show that 75% of respondents believe extreme weather events are happening more frequently because of climate change. 41% of respondents believe weather events have affected their risk of future losses to home or property, 40% do not believe weather events have affected their risk of future losses to home or property, and the final 19% are unsure. The NAIC Communications Department developed the #KnowYourRisks campaign to provide more information regarding flood and wildfire risks, including consumer toolkits and media communication. The Climate Survey results show that 56% of respondents believe flood is a covered peril under a standard homeowners policy. This assumption is untrue. Flood insurance is typically excluded under a standard homeowners policy unless added back by endorsement and showing a lack of understanding by most consumers. The NAIC designed an interactive #CoverYourRisks quiz, designed to help consumers better understand their risks, especially with respect to flooding. Ms. Kane said the NAIC also has a #ReduceYourRisk campaign to help guide consumers through the process of mitigating for losses from extreme weather, such as wildfire and severe winter weather. Acknowledging mitigation, the homeowners policyholder Climate Survey results showed that 71% of respondents would be willing to spend their own money to fortify their homes in exchange for a premium reduction of 1–10%. 99% of respondents would be willing to spend up to $500, 66% would be willing to spend up to $2,500, 24% would be willing to spend up to $5,000, and 8% would be willing to spend more than $5,000. Finally, Ms. Kane said the NAIC is revamping the home inventory mobile application this year to include additional functionality and consumer preparedness tools. The new tool will be released April 15.

6. **Heard an Update on Federal Activities**

Brooke Stringer (NAIC) said on Feb. 24, U.S. Securities Exchange Commissioner (SEC) Acting Chair Allison Herren Lee directed agency staff to begin work on revising 2010 guidance on climate-change disclosures by public companies. On March 15, the SEC solicited feedback on 15 questions intended to help develop a framework for climate-change disclosures. The request included 15 questions addressing issues, such as where and how climate-change disclosures should be provided, what information relating to climate risks can be quantified and measured, and whether there are any existing climate-disclosure frameworks that the SEC could rely on. Comments are due by June 13. The SEC is expected to develop rules that would require companies to disclose more information about their contributions to climate change and the related risks they face. The SEC also announced that it will be stepping up its focus on climate risk in its financial exams as one of its 2021 priorities.

The Federal Reserve has announced the creation of a new Financial Stability Climate Committee (FSCC) which will be tasked with identifying, assessing and addressing climate-related risks to financial stability. The FSCC is intended to complement the other recently created Supervision Climate Committee (SCC), which focuses on addressing risks at individual financial
institutions, and develop an appropriate program to ensure the resilience of supervised firms to those risks. Federal Reserve Governor Brainard in a speech at the Institute of International Finance endorsed moving toward mandatory climate-risk disclosures by financial institutions.

Financial Stability Oversight Council (FSOC) Treasury Secretary Janet Yellen presided over a FSOC meeting on March 31 that included an open session on climate change and its potential impact on financial stability. Superintendent Cioppa, an FSOC member, made remarks about state insurance regulators’ work in this area. Treasury Secretary Yellen said climate stress tests may be helpful for insurers and banks in terms of managing their risks. She noted that tests would be conducted by the Federal Reserve, and state insurance regulators might also consider a similar route.

Ms. Stringer said in March, the Commodity Futures Trading Commission (CFTC) announced the creation of a Climate Risk Unit to focus on the role of derivatives in understanding, pricing and addressing climate-related risk and transitioning to a low-carbon economy. She also said Senators Warren (D-MA), Van Hollen (D-MD), Whitehouse (D-RI) and Merkley (D-OR) wrote letters to eight insurers requesting information on how climate change will influence premiums and claims, what climate scenarios the insurers consider, what stress tests companies have conducted and what those exercises revealed about exposure to fossil fuel assets, and how companies’ fossil fuel underwriting and investing policies align with sustainability goals. The Senators requested responses from the insurers by April 16.

Finally, Ms. Stringer said Senator Feinstein (D-CA) and Rep. Casten (D-IL) have reintroduced the Addressing Climate Financial Risk Act (S. 588/ H.R.1549), which would direct the FSOC to create the Advisory Committee on Climate Risk, coordinate supervisory efforts, and direct the Federal Insurance Office (FIO) to develop a report on how to modernize and improve climate-risk insurance regulation.

7. Heard an Update on International Activities

Rashmi Sutton (NAIC) said the Sustainable Insurance Forum (SIF) met in March for the first time with its new chair, Anna Sweeney, of the United Kingdom (UK) Bank of England (BoE). Director Farmer represented the NAIC. California, New York and Washington also attended the meeting as SIF members. The FIO also recently joined the SIF. The SIF discussed the completion of the public consultation of the joint IAIS/SIF Application Paper on the Supervision of Climate-Related Risk and next steps for finalizing the paper (publication expected this summer) and providing capacity building to members relative to the guidance in the paper. Further, the SIF also discussed the start of the work of the three workstreams agreed to in its workplan: 1) impacts of climate-related risks on the insurability of assets; 2) broader sustainability issues beyond climate change; and 3) climate risks in the actuarial processes.

Ms. Sutton said the United Nations Environment Programme (UNEP) Finance Initiative (FI) Principles for Sustainable Insurance (PSI) produced a report developing comprehensive guidance for the insurance industry to identify and disclose the impact of climate change on its business. The Access to Insurance Initiative (A2ii), an implementation partner of the IAIS, will be hosting a series of dialogues focused on sustainability and managing climate-related risks. Information regarding those dialogues will be posted on the Climate Risk and Resiliency Resource Center webpage.

The Financial Stability Board (FSB) is building a report on the financial stability implications of climate change, which will assess the availability of data through which climate-related risks to financial stability could be monitored, as well as identify data gaps. The FSB will also coordinate with other standard-setting bodies to promote globally comparable, high-quality standards of disclosure and review state insurance regulator and supervisory approaches to addressing climate-related risks at financial institutions.

The NAIC International Insurance Forum will include a panel discussion on international climate-related risks. The panel will be moderated by Commissioner Mais, and panelists will discuss the evolution of how insurers and state insurance regulators consider climate risk; appropriate disclosures; the private sector’s role in resiliency; and preparatory strategies for addressing climate risk, such as through mitigation.

Finally, NAIC members continue to participate in international dialogues, which include issues related to climate risk and resiliency.

Having no further business, the Climate and Resiliency (EX) Task Force adjourned.
DRAFT MEMORANDUM

TO: Members of the Climate and Resiliency (EX) Task Force

FROM: Climate Risk Disclosure Workstream of the Climate and Resiliency (EX) Task Force

DATE: March 11, 2021

RE: Climate Risk Disclosure Workstream Update on Activities and Reporting Recommendations for 2021

The NAIC Climate and Resiliency (EX) Task Force charged the Climate Risk Disclosure Workstream to consider modifications to the NAIC Climate Risk Disclosure Survey (Appendix A) to align with the Recommendations of the Task Force on Climate-related Financial Disclosures (TCFD – Appendix B) and promote uniformity in reporting requirements. Appendix C shows the correlation between the NAIC Climate Risk Disclosure Survey and the TCFD.

This report serves as the workstream’s initial recommendation to the Climate and Resiliency (EX) Task Force. The initial recommendation does not complete the workstream’s charge. It provides an interim step to promote participation and provide direction for submitting the NAIC Climate Risk Disclosure Survey or the TCFD in 2021. It also provides direction for those involved in the reporting and aggregation process.

The workstream began holding weekly calls in January 2021 to gain information and perspectives around the NAIC Climate Risk Disclosure Survey and other climate disclosures. Most of the calls have been open to the industry and interested parties in order to ensure transparency of the process.

- On Jan. 27, the workstream heard from California about the history, administration, and collection process of the NAIC Climate Risk Disclosure Survey. It also heard from the NAIC Center for Insurance Policy and Research (CIPR) and the American Academy of Actuaries (Academy) on their analyses of the NAIC Climate Risk Disclosure Survey results.
- On Feb. 3, the Principles for Responsible Investment (PRI) and CDP North America each shared information on their climate reporting frameworks, including how they collect, manage, and store information.
- On Feb. 10, Ceres discussed its climate disclosure recommendations. Zurich Insurance Group and American International Group (AIG) also shared which climate disclosure frameworks they report to and their process of reporting to them.
- On Feb. 17, the workstream heard from RBC Global Asset Management and Sustainalytics—which provides environmental, social and governance (ESG) risk ratings—on how they each use climate disclosures, including the NAIC Climate Risk Disclosure Survey, in their risk assessments. The workstream also shared and asked for feedback on a list of questions it developed to help guide its work to define the objectives of the climate disclosures. At a high
level, these questions include: who the audience is for the disclosures; who should use the report; what framework should be used; how to design the questions; the timing of the report; the effective date of reporting; and where and how the results should be reported.

- On Feb. 24, the workstream met in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to hear from state insurance regulators who have analyzed the results of the information in the current survey and what they hope to improve in future versions.

- On March 3, the workstream met in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to draft its recommendations to the Task Force.

- On March 10, the workstream met to discuss its recommendations and hear feedback from the industry.

The workstream is also tracking what federal agencies and international organizations are doing relative to climate risk disclosure. On Feb. 24, the U.S. Securities and Exchange Commission (SEC) announced that it will begin reviewing the extent to which public companies are following its 2010 guidance on disclosure requirements related to climate change matters. The SEC will use insights from this work to begin updating the 2010 guidance to take into account developments in the past decade.

The United Kingdom will make the TCFD fully mandatory across the economy by 2025, with a significant portion of the mandatory requirements to be in place by 2023. New Zealand has announced its plans to mandate the TCFD by 2023. In January 2021, Switzerland officially became a supporter of the TCFD, calling on Swiss companies from all sectors of the economy to implement the disclosures on a voluntary basis. It also noted a bill should be drafted in the coming year to make the recommendations binding.

In response to growing interest and new disclosures from several large institutional investors, the Financial Stability Board (FSB), which created the TCFD, formed a working group to consider the benefits and challenges of disclosure of implied temperature rise. It will also consider implementing other forward-looking climate-related metrics and developing a set of questions for public consultation. The FSB task force will take consultation responses into consideration to determine whether further TCFD financial sector guidance on forward-looking metrics is needed. The FSB task force is expected to publish a status report in September 2021. Additionally, it is expected to do further analysis on the extent that companies describe the financial effect of climate-related risks and opportunities on their businesses and strategies.

Based on where most of the domestic and international groups are in their process of disclosure, we believe it is prudent to take a measured approach and allow additional time to determine a final recommendation. To support this process, the workstream developed a list of questions for state insurance regulators and interested parties. The workstream has invited comments from state insurance regulators and interested parties on the following questions:

1) Who is the audience and what do they wish to glean from the results?
   a) What qualitative and quantitative metrics do they need?
   b) How should the information in the survey be formatted to be useful?
2) Who should report?
   a) What is the threshold?
   b) Should it be compulsory?
   c) What states are participating?

3) What report framework should be used?
   a) TCFD?
   b) NAIC Climate Risk Disclosure Survey?
   c) Another framework (such as CDP)?
   d) Some combination?

4) How should the questions be designed?
   a) Multiple choice?
   b) Open-ended?
   c) Close-ended (rating scale, dropdown, ranking, etc.)?

5) When should the information be reported and what is the effective date of the changes?

6) Where should climate disclosures be reported?
   a) Continue to make it available through California’s website?
   b) Build an NAIC repository?
   c) Directed to the domestic state?

7) How should the results be made available?
   a) Only to regulators?
   b) Publicly available (as it is today)?

The workstream will consider the comments it received on these questions and revise them as appropriate before issuing them to state insurance regulators and interested parties for completion.

The workstream’s goal is to develop recommendations that address who should report, what will be reported, and how data will be collected and used in the future. Furthermore, the workstream plans to discuss how the survey results could be used within regulatory due process, for example, to encourage a discussion during company examinations.

After thoughtful deliberation, the workstream recommends maintaining the present disclosure reporting timing and structure for the 2021 reporting year, including which companies choose to submit either the NAIC Climate Risk Disclosure Survey or the TCFD. As shown in Appendix D, in 2020, 85 companies, including 9 insurer groups, submit the TCFD in lieu of the NAIC Climate Risk Disclosure Survey.

Revisions to the current disclosure reporting process is a multifaceted and complex project requiring sufficient depth of research and feedback from all parties affected or involved. The NAIC Climate Risk Disclosure Survey is administered in July. Given the proximity of this reporting date, there is insufficient time to make substantive changes to the questions or the California database that collects and houses the survey responses. The compressed time frame would also make it difficult for insurers to implement any more information-gathering processes and procedures.

The workstream also recommends that more states participate in the survey beginning in 2021. Inviting more companies to report will help capture a larger percentage of the market. Currently, six participating states require all their licensed companies writing more than $100 million in premium...
to report. As a result, approximately 70% of the U.S. market currently participates in the survey, meaning many of the domestic writers in nonparticipating states are already reporting or completing the NAIC Climate Risk Disclosure Survey or TCFD.

If more states agree to participate in 2021, it will increase the scope of the survey without making any changes to the survey questions or reporting framework. The workstream believes that more participation will be meaningful, even if the survey changes in 2022, as participating companies would benefit from the analysis the survey (or TCFD) requires and be better prepared for any future reporting.

Appendix D shows the list of companies currently reporting the NAIC Climate Risk Disclosure Survey, as well as those reporting the TCFD. More information about the TCFD will be added to the guidance provided to reporting companies (included in Appendix A) to encourage more insurers to report using the TCFD.

The workstream will continue to meet with stakeholders, including international and federal organizations, investors, consumer advocates, and the industry. This will provide the workstream time to make thoughtful recommendations and provide justification for any future changes to the NAIC Climate Risk Disclosure Survey and reporting framework to align with the TCFD as mandated. For example, the workstream will explore the use of multiple choice and open-ended questions, among other potential changes.
July 15, 2020

CLIMATE RISK DISCLOSURE SURVEY
REPORTING YEAR 2019

TO: Licensed Insurers in the State of California

In cooperation with the Connecticut Insurance Department, the Minnesota Department of Commerce, the New Mexico Office of Superintendent of Insurance, the New York Department of Financial Services, and the Washington State Office of the Insurance Commissioner, the California Department of Insurance is conducting the Climate Risk Disclosure Survey for Reporting Year 2019. The questions contained in the survey continue to be the same questions that were adopted by the National Association of Insurance Commissioners in 2009 and 2010. Survey responses for the current and prior years are available to the public and can be found on the Departments’ website.

All insurers who are licensed in the State of California and who collected direct written premium amounts of more than 100 million dollars nationwide during 2019 must respond to the survey for California; except for insurers required to respond to the survey by Connecticut, New Mexico, Minnesota, New York, or Washington. Insurers within the same group whose policies and practices are the same and whose answers would not be materially different from each other may submit uniform group responses.

We would like to highlight that the responses to the eight NAIC survey questions have substantial overlap with the guidelines and recommendations developed by the Task Force on Climate-related FinancialDisclosures (TCFD), which were approved by the G-20 Finance Ministers and created by an industry-led task force. The TCFD Guidelines are endorsed by many institutions and supported by the International Association of Insurance Supervisors. Please note that this year insurers will be given the option to submit a TCFD report in lieu of submitting a Climate Risk Disclosure Survey. To submit a TCFD report, click on the link below to register and follow the steps as if you are submitting a survey. You will then see the link to upload your TCFD report.

The NAIC annual climate survey and TCFD recommendations are similar, since they report on climate-related risks and opportunities, innovative products, such as premium reductions for risk mitigation efforts, green building insurance, renewable energy, natural infrastructure, or others. The TCFD recommendations also call on respondents to undertake a “scenario analysis” on effects of various climate outcomes on the company. More information on the TCFD recommendations can be found at the link below. We encourage you to refer to this information as you develop this year’s responses to the eight NAIC survey questions, even if you don’t have a TCFD report to submit. By doing so, U.S. insurers will assume a leadership position in applying this national standard.

© 2021 National Association of Insurance Commissioners
The completed survey is due August 31, 2020. Please register and submit your survey responses to the Department by going to the survey registration webpage at the following link: https://interactive.web.insurance.ca.gov/apex_extprd/f?p=416:1. Additional information concerning the survey is available on the survey registration webpage. Substantive and technical questions can be directed to: ClimateRiskSurvey@insurance.ca.gov.

Your cooperation is appreciated,

RICARDO LARA,
Insurance Commissioner

Attachment: Survey Questions and Guidelines
Climate Risk Disclosure Survey Guidance  
Reporting Year 2019

This document offers guidance to insurers responding to the annual mandatory Insurer Climate Risk Disclosure Survey (hereafter referred to as the “Survey”). Those questions contained in this guidance document which are not part of the official set of Survey questions are intended only to guide respondents as they craft their responses to the Survey and are not compulsory.

Guidance Notes

Survey Application and Instructions

i. Response Submissions

Mandatory disclosure will depend on the premium amounts reported for the most immediate prior financial reporting year. If an insurer reports over $100,000,000 on its Annual Schedule T filing with the NAIC, it must complete the survey. However, if an insurer reports less than that, it will not be required to complete and file the survey, but it may do so voluntarily. *Please note beginning this year if you would like to submit a TCFD (Task Force on Climate-related Financial Disclosures; https://www.fsb-tcfd.org/) report in lieu of submitting a survey you may do so.

ii. Quantitative and Forward-Looking Information

Insurers are not required to submit quantitative information but may do so without implying materiality. Insurers are encouraged to provide quantitative information where it offers additional clarity on trends in the intensity or attenuation of natural hazards, insured losses, investment portfolio composition, policyholder risk reduction or improvements in computer modeling. As climate science improves (i.e., when there is greater agreement between observed data and models or when there is integration of catastrophe and climate models), insurers should be able to provide quantitative information with less uncertainty.

Insurers are required to answer all questions in good faith and with meaningful responses. However, there is no requirement to provide information that is immaterial to an assessment of financial soundness (insurers may choose to disclose such information voluntarily, with no implication that such information is in fact material).

Insurers are encouraged but not required to provide forward-looking information that will indicate the risks and opportunities insurers may face in the future; when provided, insurers may disclaim any responsibility for the accuracy of such forward-looking information. Forward-looking information is assumed to have some degree of uncertainty; if provided, insurers should offer explanation on the degree and sources of uncertainty as well as assumptions employed.

iii. Response Required

Insurers in all segments of the industry are required to respond to all eight questions. An insurer may state that a question is not relevant to its business practice, operations or investments. However, if it does so, it must also explain why the question is not relevant. *Please note if you submit a TCFD report you will not be required to submit a survey.

Narrative responses are acceptable. Where an insurer’s response to other disclosure
Climate Risk Disclosure Survey Guidance
Reporting Year 2019

mechanisms, such as the Carbon Disclosure Project (CDP) or Global Reporting Initiative, explicitly addresses the subject matter of a question in this survey, the insurer may use their most recent response to that external mechanism.
Climate Risk Disclosure Survey Guidance
Reporting Year 2019

Survey Questions

Question One: Does the company have a plan to assess, reduce or mitigate its emissions in its operations or organizations?

Yes - The company has a plan to assess and reduce or mitigate emissions in our operations or organizations - Please summarize.
No - The company does not have a plan to assess and reduce or mitigate emissions in our operations or organizations - Please describe why not.

Insurers who are unfamiliar with frameworks for greenhouse gas emission measurement and management are encouraged to review the principles of “The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)” developed by the World Resources Institute and the World Business Council for Sustainable Development (“the GHG Protocol”).

Each insurer is encouraged to clarify whether its plan for measuring and management of its emissions in operations and/or its subsidiary organizations’ operations includes emissions related to energy use for data storage or other computing-intensive processes.1

Question Two: Does the company have a climate change policy with respect to risk management and investment management? If yes, please summarize. If no, how do you account for climate change in your risk management?

Yes - The company has a climate change policy with respect to risk management and investment management - Please summarize.
No - The company does not have a climate change policy with respect to risk management and investment management - Please describe how you account for climate change in your risk management, or why you do not account for climate change in your risk management.

Questions to consider include:

- Where in the structure of the company is climate risk addressed?
- Does the company approach climate change as an Enterprise Risk Management (ERM) issue?
- Does the company have a dedicated point-person or team within the company that is responsible for managing its climate change strategy?
- What is the role of the board of directors in governing climate risk management?
- Does the company consider potentially correlated risks affecting asset management and underwriting?
- Has the company issued a public statement on its climate policy

1 Data centers consume more energy than any other area of an organization because they contain both IT equipment and the infrastructure that is needed to cool that equipment. The Environmental Protection Agency found that data centers consumed about 60 billion kilowatt- hours (kWh) in 2006, roughly 1.5 percent of total U.S. electricity consumption. Nancy Feig, Insurance & Technology “The Greening of Data Centers” Mar 07, 2008. URL: https://www.insurancetech.com/data-and-analytics/the-greening-of-data-centers/d/d-id/1310251.html
Climate Risk Disclosure Survey Guidance  
Reporting Year 2019

**Question Three:** Describe your company's process for identifying climate change-related risks and assessing the degree that they could affect your business, including financial implications.

*Yes - The company has a process for identifying climate change-related risks and assessing the degree that it could affect our business including financial implications - Please summarize.*

*No - The company does not have a process for identifying climate change-related risks and assessing the degree that it could affect our business including financial implications - Please describe why not.*

Questions to consider include:

- How may climate change shift customer demand for products?
- What implications may climate change have on liquidity and capital needs?
- How might climate change affect limits, cost and terms of catastrophe reinsurance, including reinstatement provisions?
- Has the insurer considered creative methods of risk distribution such as contingency plans to reduce financial leverage and resolve any liquidity issues in the event of a sudden loss in surplus and cash outflows as a result of a catastrophic event?
- How are these impacts likely to evolve over time? Does the company have plans to regularly reassess climate change related risks and its responses to those risks?

**Question Four:** Summarize the current or anticipated risks that climate change poses to your company. Explain the ways that these risks could affect your business. Include identification of the geographical areas affected by these risks.

*Yes - The company has identified current or anticipated risks that climate change poses to our company - Explain the ways that these risks could affect your business - Include identification of the geographical areas affected by these risks.*

*No - The company has not identified current or anticipated risks that climate change will pose to our company - Please describe why not.*

Questions to consider include:

- Which business segments or products are most exposed to climate-related risks?
- Has the company considered its potential exposure to climate liability through its D&O or CGL policies?
- Are there geographic locations, perils or coverages for which the company has increased rates, limited sales, or limited or eliminated coverages because of catastrophic events? How do those actions relate to assessments of climate change impacts made by the company?
- Has the company examined the geographic spread of property exposures relative to the expected impacts of climate change, including a review of the controls in place to assure that the insurer is adequately addressing its net exposure to catastrophic risk?
Climate Risk Disclosure Survey Guidance
Reporting Year 2019

**Question Five**: Has the company considered the impact of climate change on its investment portfolio? Has it altered its investment strategy in response to these considerations? If so, please summarize steps you have taken.

Yes - The company has considered the impact of climate change on its investment portfolio - Please summarize.
No - The company has not considered the impact of climate change on its investment portfolio - Please describe why not.

Yes - The company has altered its investment strategy in response to these considerations - Please summarize steps you have taken.
No - The company has not altered its investment strategy in response to these considerations - Please describe why not.

Questions to consider include:

- Does the company consider regulatory, physical, litigation, and competitiveness-related climate risks, among others, when assessing investments?
- Has the company considered the implications of climate change for all of its investment classes, e.g. equities, fixed income, infrastructure, real estate?
- Does the insurer use a shadow price for carbon when considering investments in heavy emitting industries in markets where carbon is either currently regulated or is likely to be regulated in the future?
- Does the insurer factor the physical risks of climate change (water scarcity, extreme events, weather variability) into security analysis or portfolio construction? If so, for what asset classes and issuers (corporate, sovereign, municipal)?
- How does climate change rank compared to other risk drivers, given the insurer’s asset liability matching strategy and investment duration?
- Does the insurer have a system in place to manage correlated climate risks between its underwriting and investments?

**Question Six**: Summarize steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events.

Yes - The company has taken steps to encourage policyholders to reduce the losses caused by climate change-influenced events - Please summarize.
No - The company has not taken steps to encourage policyholders to reduce the losses caused by climate change-influenced events - Please describe why not.

Questions to consider include:

- How has the company employed price incentives, new products or financial assistance to promote policyholder loss mitigation? In what lines have these efforts been attempted, and can the outcome of such efforts be quantified in terms of properties retrofitted, losses avoided, etc.?
- For insurers underwriting D&O, CGL and professional liability policies, what steps has the company taken to educate clients on climate liability risks or to screen potential policyholders based on climate liability risk? How does the company define climate risk for these lines?
Climate Risk Disclosure Survey Guidance
Reporting Year 2019

Question Seven: Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change.

Yes - The company has taken steps to engage key constituencies on the topic of climate change - Please summarize.
No - The company has not taken steps to engage key constituencies on the topic of climate change - Please describe why not.

Questions to consider include:
• How has the company supported improved research and/or risk analysis on the impacts of climate change?
• What resources has it invested to improve climate awareness among its customers in regulated and unregulated lines?
• What steps has it taken to educate shareholders on potential climate change risks the company faces?

Question Eight: Describe actions the company is taking to manage the risks climate change poses to your business including, in general terms, the use of computer modeling.

Yes - The company is taking actions to manage the risks climate change poses to the business - Please summarize what actions the company is taking and in general terms the use if any of computer modeling.
No - The company is not taking actions to manage the risks climate change poses to the business - Please describe why.

Questions to consider include:
• For what perils does the company believe that future trends may deviate substantially from historical trends due to changes in the hazard? Similarly, for what perils, if any, does the company believe that a catastrophe model extrapolating observed trends would be insufficient to plan for maximum possible loss or yearly average loss? What steps has the company taken to model or analyze perils associated with non-stationary hazards?
• Has the company used catastrophe models to conduct hypothetical “stress tests” to determine the implications of a wide range of plausible climate change scenarios? If so, over what timescale, in what geographies and for what perils?
• Has the company conducted, commissioned or participated in scenario modeling for climate trends beyond the 1-5 year timescale? If so, what conclusions did the company reach on the potential implications for insurability under these scenarios?
Climate Change Resources for Insurers

There are many publications and websites that can provide insurers with a useful overview of the potential impacts of climate change on the insurance sector. The following resource list is not comprehensive but offers a good starting point for insurers seeking more information on the scientific basis of climate change, risks to insurers, catastrophe modeling, public policy, liability, risk management and impacts on insurer investments.

CLIMATE RISK DISCLOSURE SURVEY
REPORTING YEAR 2019

TO: Licensed Insurers in the State of California

In cooperation with the Connecticut Insurance Department, the Minnesota Department of Commerce, the New Mexico Office of Superintendent of Insurance, the New York Department of Financial Services, and the Washington State Office of the Insurance Commissioner, the California Department of Insurance is conducting the Climate Risk Disclosure Survey for Reporting Year 2019. The questions contained in the survey continue to be the same questions that were adopted by the National Association of Insurance Commissioners in 2009 and 2010. Survey responses for the current and prior years are available to the public and can be found on the Departments’ website.

All insurers who are licensed in the State of California and who collected direct written premium amounts of more than 100 million dollars nationwide during 2019 must respond to the survey for California; except for insurers required to respond to the survey by Connecticut, New Mexico, Minnesota, New York, or Washington. Insurers within the same group whose policies and practices are the same and whose answers would not be materially different from each other may submit uniform group responses.

We would like to highlight that the responses to the eight NAIC survey questions have substantial overlap with the guidelines and recommendations developed by the Task Force on Climate-related Financial Disclosures (TCFD), which were approved by the G-20 Finance Ministers and created by an industry-led task force. The TCFD Guidelines are endorsed by many institutions and supported by the International Association of Insurance Supervisors. Please note that this year insurers will be given the option to submit a TCFD report in lieu of submitting a Climate Risk Disclosure Survey. To submit a TCFD report, click on the link below to register and follow the steps as if you are submitting a survey. You will then see the link to upload your TCFD report.

The NAIC annual climate survey and TCFD recommendations are similar, since they report on climate-related risks and opportunities, innovative products, such as premium reductions for risk mitigation efforts, green building insurance, renewable energy, natural infrastructure, or others. The TCFD recommendations also call on respondents to undertake a “scenario analysis” on effects of various climate outcomes on the company. More information on the TCFD recommendations can be found at the link below. We encourage you to refer to this information as you develop this year’s responses to the eight NAIC survey questions, even if you don’t have a TCFD report to submit. By doing so, U.S. insurers will assume a leadership position in applying this national standard.

The completed survey is due **August 31, 2020**. Please register and submit your survey responses to the Department by going to the survey registration webpage at the following link: [https://interactive.web.insurance.ca.gov/apex_extprd/f?p=416:1](https://interactive.web.insurance.ca.gov/apex_extprd/f?p=416:1). Additional information concerning the survey is available on the survey registration webpage. Substantive and technical questions can be directed to: ClimateRiskSurvey@insurance.ca.gov.

Your cooperation is appreciated,

RICARDO LARA,
Insurance Commissioner

Climate Risk Disclosure Survey Guidance
Reporting Year 2019

*Question Seven:* Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change.

**Yes -** The company has taken steps to engage key constituencies on the topic of climate change - Please summarize.

**No -** The company has not taken steps to engage key constituencies on the topic of climate change - Please describe why not.

Questions to consider include:
- How has the company supported improved research and/or risk analysis on the impacts of climate change?
- What resources has it invested to improve climate awareness among its customers in regulated and unregulated lines?
- What steps has it taken to educate shareholders on potential climate change risks the company faces?

*Question Eight:* Describe actions the company is taking to manage the risks climate change poses to your business including, in general terms, the use of computer modeling.

**Yes -** The company is taking actions to manage the risks climate change poses to the business - Please summarize what actions the company is taking and in general terms the use if any of computer modeling.

**No -** The company is not taking actions to manage the risks climate change poses to the business - Please describe why.

Questions to consider include:
- For what perils does the company believe that future trends may deviate substantially from historical trends due to changes in the hazard? Similarly, for what perils, if any, does the company believe that a catastrophe model extrapolating observed trends would be insufficient to plan for maximum possible loss or yearly average loss? What steps has the company taken to model or analyze perils associated with non-stationary hazards?
- Has the company used catastrophe models to conduct hypothetical “stress tests” to determine the implications of a wide range of plausible climate change scenarios? If so, over what timescale, in what geographies and for what perils?
- Has the company conducted, commissioned or participated in scenario modeling for climate trends beyond the 1-5 year timescale? If so, what conclusions did the company reach on the potential implications for insurability under these scenarios?
Climate Change Resources for Insurers

There are many publications and websites that can provide insurers with a useful overview of the potential impacts of climate change on the insurance sector. The following resource list is not comprehensive but offers a good starting point for insurers seeking more information on the scientific basis of climate change, risks to insurers, catastrophe modeling, public policy, liability, risk management and impacts on insurer investments.

Recommendations of the Task Force on Climate-related Financial Disclosures

TCFD

Task Force on Climate-related Financial Disclosures

June 2017
June 15, 2017

Letter from Michael R. Bloomberg

Mr. Mark Carney
Chairman
Financial Stability Board
Bank for International Settlements
Centralbahnplatz 2
CH-4002 Basel
Switzerland

Dear Chairman Carney,

On behalf of the Task Force on Climate-related Financial Disclosures, I am pleased to present this final report setting out our recommendations for helping businesses disclose climate-related financial information.

As you know, warming of the planet caused by greenhouse gas emissions poses serious risks to the global economy and will have an impact across many economic sectors. It is difficult for investors to know which companies are most at risk from climate change, which are best prepared, and which are taking action.

The Task Force's report establishes recommendations for disclosing clear, comparable and consistent information about the risks and opportunities presented by climate change. Their widespread adoption will ensure that the effects of climate change become routinely considered in business and investment decisions. Adoption of these recommendations will also help companies better demonstrate responsibility and foresight in their consideration of climate issues. That will lead to smarter, more efficient allocation of capital, and help smooth the transition to a more sustainable, low-carbon economy.

The industry Task Force spent 18 months consulting with a wide range of business and financial leaders to hone its recommendations and consider how to help companies better communicate key climate-related information. The feedback we received in response to the Task Force's draft report confirmed broad support from industry and others, and involved productive dialogue among companies and banks, insurers, and investors. This was and remains a collaborative process, and as these recommendations are implemented, we hope that this dialogue and feedback continues.

Since the Task Force began its work, we have also seen a significant increase in demand from investors for improved climate-related financial disclosures. This comes amid unprecedented support among companies for action to tackle climate change.

I want to thank the Financial Stability Board for its leadership in promoting better disclosure of climate-related financial risks, and for its support of the Task Force's work. I am also grateful to the Task Force members and Secretariat for their extensive contributions and dedication to this effort.

The risk climate change poses to businesses and financial markets is real and already present. It is more important than ever that businesses lead in understanding and responding to these risks—and seizing the opportunities—to build a stronger, more resilient, and sustainable global economy.

Sincerely,

Michael R. Bloomberg
Executive Summary

Financial Markets and Transparency
One of the essential functions of financial markets is to price risk to support informed, efficient capital-allocation decisions. Accurate and timely disclosure of current and past operating and financial results is fundamental to this function, but it is increasingly important to understand the governance and risk management context in which financial results are achieved. The financial crisis of 2007-2008 was an important reminder of the repercussions that weak corporate governance and risk management practices can have on asset values. This has resulted in increased demand for transparency from organizations on their governance structures, strategies, and risk management practices. Without the right information, investors and others may incorrectly price or value assets, leading to a misallocation of capital.

Increasing transparency makes markets more efficient and economies more stable and resilient.
—Michael R. Bloomberg

Financial Implications of Climate Change
One of the most significant, and perhaps most misunderstood, risks that organizations face today relates to climate change. While it is widely recognized that continued emission of greenhouse gases will cause further warming of the planet and this warming could lead to damaging economic and social consequences, the exact timing and severity of physical effects are difficult to estimate. The large-scale and long-term nature of the problem makes it uniquely challenging, especially in the context of economic decision making. Accordingly, many organizations incorrectly perceive the implications of climate change to be long term and, therefore, not necessarily relevant to decisions made today.

The potential impacts of climate change on organizations, however, are not only physical and do not manifest only in the long term. To stem the disastrous effects of climate change within this century, nearly 200 countries agreed in December 2015 to reduce greenhouse gas emissions and accelerate the transition to a lower-carbon economy. The reduction in greenhouse gas emissions implies movement away from fossil fuel energy and related physical assets. This coupled with rapidly declining costs and increased deployment of clean and energy-efficient technologies could have significant, near-term financial implications for organizations dependent on extracting, producing, and using coal, oil, and natural gas. While such organizations may face significant climate-related risks, they are not alone. In fact, climate-related risks and the expected transition to a lower-carbon economy affect most economic sectors and industries. While changes associated with a transition to a lower-carbon economy present significant risk, they also create significant opportunities for organizations focused on climate change mitigation and adaptation solutions.

For many investors, climate change poses significant financial challenges and opportunities, now and in the future. The expected transition to a lower-carbon economy is estimated to require around $1 trillion of investments a year for the foreseeable future, generating new investment opportunities. At the same time, the risk-return profile of organizations exposed to climate-related risks may change significantly as such organizations may be more affected by physical impacts of climate change, climate policy, and new technologies. In fact, a 2015 study estimated the value at risk, as a result of climate change, to the total global stock of manageable assets as

---

ranging from $4.2 trillion to $43 trillion between now and the end of the century. The study highlights that “much of the impact on future assets will come through weaker growth and lower asset returns across the board.” This suggests investors may not be able to avoid climate-related risks by moving out of certain asset classes as a wide range of asset types could be affected. Both investors and the organizations in which they invest, therefore, should consider their longer-term strategies and most efficient allocation of capital. Organizations that invest in activities that may not be viable in the longer term may be less resilient to the transition to a lower-carbon economy, and their investors will likely experience lower returns. Compounding the effect on longer-term returns is the risk that present valuations do not adequately factor in climate-related risks because of insufficient information. As such, long-term investors need adequate information on how organizations are preparing for a lower-carbon economy.

Furthermore, because the transition to a lower-carbon economy requires significant and, in some cases, disruptive changes across economic sectors and industries in the near term, financial policymakers are interested in the implications for the global financial system, especially in terms of avoiding financial dislocations and sudden losses in asset values. Given such concerns and the potential impact on financial intermediaries and investors, the G20 Finance Ministers and Central Bank Governors asked the Financial Stability Board to review how the financial sector can take account of climate-related issues. As part of its review, the Financial Stability Board identified the need for better information to support informed investment, lending, and insurance underwriting decisions and improve understanding and analysis of climate-related risks and opportunities. Better information will also help investors engage with companies on the resilience of their strategies and capital spending, which should help promote a smooth rather than an abrupt transition to a lower-carbon economy.

Task Force on Climate-related Financial Disclosures

To help identify the information needed by investors, lenders, and insurance underwriters to appropriately assess and price climate-related risks and opportunities, the Financial Stability Board established an industry-led task force: the Task Force on Climate-related Financial Disclosures (Task Force). The Task Force was asked to develop voluntary, consistent climate-related financial disclosures that would be useful to investors, lenders, and insurance underwriters in understanding material risks. The 32-member Task Force is global; its members were selected by the Financial Stability Board and come from various organizations, including large banks, insurance companies, asset managers, pension funds, large non-financial companies, accounting and consulting firms, and credit rating agencies. In its work, the Task Force drew on member expertise, stakeholder engagement, and existing climate-related disclosure regimes to develop a singular, accessible framework for climate-related financial disclosure.

The Task Force developed four widely adoptable recommendations on climate-related financial disclosures that are applicable to organizations across sectors and jurisdictions (Figure 1). Importantly, the Task Force’s recommendations apply to financial-sector organizations, including banks, insurance companies, asset managers, and asset owners. Large asset owners and asset managers sit at the top of the investment chain and, therefore, have an

2 The Economist Intelligence Unit, “The Cost of Inaction: Recognising the Value at Risk from Climate Change,” 2015. Value at risk measures the loss a portfolio may experience, within a given time horizon, at a particular probability, and the stock of manageable assets is defined as the total stock of assets held by non-bank financial institutions. Bank assets were excluded as they are largely managed by banks themselves.

---

© 2021 National Association of Insurance Commissioners
important role to play in influencing the organizations in which they invest to provide better climate-related financial disclosures.

In developing and finalizing its recommendations, the Task Force solicited input throughout the process. First, in April 2016, the Task Force sought public comment on the scope and high-level objectives of its work. As the Task Force developed its disclosure recommendations, it continued to solicit feedback through hundreds of industry interviews, meetings, and other touchpoints. Then, in December 2016, the Task Force issued its draft recommendations and sought public comment on the recommendations as well as certain key issues, receiving over 300 responses. This final report reflects the Task Force’s consideration of industry and other public feedback received throughout 2016 and 2017. Section E contains a summary of key issues raised by the industry as well as substantive changes to the report since December.

Disclosure in Mainstream Financial Filings
The Task Force recommends that preparers of climate-related financial disclosures provide such disclosures in their mainstream (i.e., public) annual financial filings. In most G20 jurisdictions, companies with public debt or equity have a legal obligation to disclose material information in their financial filings—including material climate-related information. The Task Force believes climate-related issues are or could be material for many organizations, and its recommendations should be useful to organizations in complying more effectively with existing disclosure obligations. In addition, disclosure in mainstream financial filings should foster shareholder engagement and broader use of climate-related financial disclosures, thus promoting a more informed understanding of climate-related risks and opportunities by investors and others. The Task Force also believes that publication of climate-related financial information in mainstream annual financial filings will help ensure that appropriate controls govern the production and disclosure of the required information. More specifically, the Task Force expects the governance processes for these disclosures would be similar to those used for existing public financial disclosures and would likely involve review by the chief financial officer and audit committee, as appropriate.

Importantly, organizations should make financial disclosures in accordance with their national disclosure requirements. If certain elements of the recommendations are incompatible with national disclosure requirements for financial filings, the Task Force encourages organizations to disclose those elements in other official company reports that are issued at least annually, widely distributed and available to investors and others, and subject to internal governance processes that are the same or substantially similar to those used for financial reporting.

Core Elements of Climate-Related Financial Disclosures
The Task Force structured its recommendations around four thematic areas that represent core elements of how organizations operate: governance, strategy, risk management, and metrics and targets (Figure 2, p. v). The four overarching recommendations are supported by recommended disclosures that build out the framework with information that will help investors and others understand how reporting organizations assess climate-related risks and opportunities. In addition, there is guidance to support all organizations in developing climate-related financial disclosures consistent with the recommendations and recommended disclosures. The guidance assists preparers by providing context and suggestions for implementing the recommended disclosures. For the financial sector and certain non-financial sectors, supplemental guidance was developed to highlight important sector-specific considerations and provide a fuller picture of potential climate-related financial impacts in those sectors.

---

3 See Appendix 2: Task Force Objectives and Approach for more information.
4 The Task Force encourages organizations where climate-related issues could be material in the future to begin disclosing climate-related financial information outside financial filings to facilitate the incorporation of such information into financial filings once climate-related issues are determined to be material.
5 See Figure 4 on p. 14 for the Task Force’s recommendations and recommended disclosures.
Recommendations of the Task Force on Climate-related Financial Disclosures

Climate-Related Scenarios
One of the Task Force's key recommended disclosures focuses on the resilience of an organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario. An organization's disclosure of how its strategies might change to address potential climate-related risks and opportunities is a key step to better understanding the potential implications of climate change on the organization. The Task Force recognizes the use of scenarios in assessing climate-related issues and their potential financial implications is relatively recent and practices will evolve over time, but believes such analysis is important for improving the disclosure of decision-useful, climate-related financial information.

Conclusion
Recognizing that climate-related financial reporting is still evolving, the Task Force's recommendations provide a foundation to improve investors' and others' ability to appropriately assess and price climate-related risk and opportunities. The Task Force's recommendations aim to be ambitious, but also practical for near-term adoption. The Task Force expects to advance the quality of mainstream financial disclosures related to the potential effects of climate change on organizations today and in the future and to increase investor engagement with boards and senior management on climate-related issues.

Improving the quality of climate-related financial disclosures begins with organizations' willingness to adopt the Task Force's recommendations. Organizations already reporting climate-related information under other frameworks may be able to disclose under this framework immediately and are strongly encouraged to do so. Those organizations in early stages of evaluating the impact of climate change on their businesses and strategies can begin by disclosing climate-related issues as they relate to governance, strategy, and risk management practices. The Task Force recognizes the challenges associated with measuring the impact of climate change, but believes that by moving climate-related issues into mainstream annual financial filings, practices and techniques will evolve more rapidly. Improved practices and techniques, including data analytics, should further improve the quality of climate-related financial disclosures and, ultimately, support more appropriate pricing of risks and allocation of capital in the global economy.

6 A 2°C Celsius (2°C) scenario lays out an energy system deployment pathway and an emissions trajectory consistent with limiting the global average temperature increase to 2°C above the pre-industrial average. The Task Force is not recommending organizations use a specific 2°C scenario.

A Introduction
A Introduction

1. Background

It is widely recognized that continued emission of greenhouse gases will cause further warming of the Earth and that warming above 2°C Celsius (2°C), relative to the pre-industrial period, could lead to catastrophic economic and social consequences. As evidence of the growing recognition of the risks posed by climate change, in December 2015, nearly 200 governments agreed to strengthen the global response to the threat of climate change by “holding the increase in the global average temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels,” referred to as the Paris Agreement.

The large-scale and long-term nature of the problem makes it uniquely challenging, especially in the context of economic decision making. Moreover, the current understanding of the potential financial risks posed by climate change—to companies, investors, and the financial system as a whole—is still at an early stage.

There is a growing demand for decision-useful, climate-related information by a range of participants in the financial markets. Creditors and investors are increasingly demanding access to risk information that is consistent, comparable, reliable, and clear. There has also been increased focus, especially since the financial crisis of 2007-2008, on the negative impact that weak corporate governance can have on shareholder value, resulting in increased demand for transparency from organizations on their risks and risk management practices, including those related to climate change.

The growing demand for decision-useful, climate-related information has resulted in the development of several climate-related disclosure standards. Many of the existing standards, however, focus on disclosure of climate-related information, such as greenhouse gas (GHG) emissions and other sustainability metrics. Users of such climate-related disclosures commonly cite the lack of information on the financial implications around the climate-related aspects of an organization’s business as a key gap. Users also cite inconsistencies in disclosure practices, a lack of context for information, use of boilerplate, and non-comparable reporting as major obstacles to incorporating climate-related risks and opportunities (collectively referred to as climate-related issues) as considerations in their investment, lending, and insurance underwriting decisions over the medium and long term. In addition, evidence suggests that the lack of consistent information hinders investors and others from considering climate-related issues in their asset valuation and allocation processes.

In general, inadequate information about risks can lead to a mispricing of assets and misallocation of capital and can potentially give rise to concerns about financial stability since markets can be vulnerable to abrupt corrections. Recognizing these concerns, the G20 (Group of 20) Finance Ministers and Central Bank Governors requested that the Financial Stability Board (FSB) “convene public- and private-sector participants to review how the financial sector can take account of climate-related issues.” In response to the G20’s request, the FSB held a meeting of public- and private-sector representatives in September 2015 to consider the implications of climate-related issues for the financial sector. “Participants exchanged views on the existing work of the financial sector, authorities, and standard setters in this area and the challenges they face,

---

9 Avery Fellow, “*Investors Demand Climate Risk Disclosure*,” Bloomberg, February 2013.
areas for possible further work, and the possible roles the FSB and others could play in taking that work forward. The discussions continually returned to a common theme: the need for better information.”

In most G20 jurisdictions, companies with public debt or equity have a legal obligation to disclose material risks in their financial reports—including material climate-related risks. However, the absence of a standardized framework for disclosing climate-related financial risks makes it difficult for organizations to determine what information should be included in their filings and how it should be presented. Even when reporting similar climate-related information, disclosures are often difficult to compare due to variances in mandatory and voluntary frameworks. The resulting fragmentation in reporting practices and lack of focus on financial impacts have prevented investors, lenders, insurance underwriters, and other users of disclosures from accessing complete information that can inform their economic decisions. Furthermore, because financial-sector organizations’ disclosures depend, in part, on those from the companies in which they invest or lend, regulators face challenges in using financial-sector organizations’ existing disclosures to determine system-wide exposures to climate-related risks.

In response, the FSB established the industry-led Task Force on Climate-related Financial Disclosures (TCFD or Task Force) in December 2015 to design a set of recommendations for consistent “disclosures that will help financial market participants understand their climate-related risks.”

2. The Task Force’s Remit

The FSB called on the Task Force to develop climate-related disclosures that “could promote more informed investment, credit [or lending], and insurance underwriting decisions” and, in turn, “would enable stakeholders to understand better the concentrations of carbon-related assets in the financial sector and the financial system’s exposures to climate-related risks.” The FSB noted that disclosures by the financial sector in particular would “foster an early assessment of these risks” and “facilitate market discipline.” Such disclosures would also “provide a source of data that can be analyzed at a systemic level, to facilitate authorities’ assessments of the materiality of any risks posed by climate change to the financial sector, and the channels through which this is most likely to be transmitted.”

The FSB also emphasized that “any disclosure recommendations by the Task Force would be voluntary, would need to incorporate the principle of materiality and would need to weigh the balance of costs and benefits.” As a result, in devising a principle-based framework for voluntary disclosure, the Task Force sought to balance the needs of the users of disclosures with the challenges faced by the preparers. The FSB further stated that the Task Force’s climate-related financial disclosure recommendations should not “add to the already well developed body of existing disclosure schemes.” In response, the Task Force drew from existing disclosure frameworks where possible and appropriate.

The FSB also noted the Task Force should determine whether the target audience of users of climate-related financial disclosures should extend beyond investors, lenders, and insurance underwriters. Investors, lenders, and insurance underwriters (“primary users”) are the appropriate target audience. These primary users assume the financial risk and reward of the climate-related risks.
decisions they make. The Task Force recognizes that many other organizations, including credit rating agencies, equity analysts, stock exchanges, investment consultants, and proxy advisors also use climate-related financial disclosures, allowing them to push information through the credit and investment chain and contribute to the better pricing of risks by investors, lenders, and insurance underwriters. These organizations, in principle, depend on the same types of information as primary users.

This report presents the Task Force’s recommendations for climate-related financial disclosures and includes supporting information on climate-related risks and opportunities, scenario analysis, and industry feedback that the Task Force considered in developing and then finalizing its recommendations. In addition, the Task Force developed a “stand-alone” document—Implementing the Recommendations of the Task Force on Climate-related Financial Disclosures (Annex)—for organizations to use when preparing disclosures consistent with the recommendations. The Annex provides supplemental guidance for the financial sector as well as for non-financial groups potentially most affected by climate change and the transition to a lower-carbon economy. The supplemental guidance assists preparers by providing additional context and suggestions for implementing the recommended disclosures.

The Task Force’s recommendations provide a foundation for climate-related financial disclosures and aim to be ambitious, but also practical for near-term adoption. The Task Force expects that reporting of climate-related risks and opportunities will evolve over time as organizations, investors, and others contribute to the quality and consistency of the information disclosed.

**Box 1**

**Task Force on Climate-related Financial Disclosures**

The Task Force membership, first announced on January 21, 2016, has international representation and spans various types of organizations, including banks, insurance companies, asset managers, pension funds, large non-financial companies, accounting and consulting firms, and credit rating agencies—a unique collaborative partnership between the users and preparers of financial reports.

In its work, the Task Force drew on its members’ expertise, stakeholder engagement, and existing climate-related disclosure regimes to develop a singular, accessible framework for climate-related financial disclosure. See Appendix 1 for a list of the Task Force members and Appendix 2 for more information on the Task Force’s approach.

The Task Force is comprised of 32 global members representing a broad range of economic sectors and financial markets and a careful balance of users and preparers of climate-related financial disclosures.

B Climate-Related Risks, Opportunities, and Financial Impacts
B Climate-Related Risks, Opportunities, and Financial Impacts

Through its work, the Task Force identified a growing demand by investors, lenders, insurance underwriters, and other stakeholders for decision-useful, climate-related financial information. Improved disclosure of climate-related risks and opportunities will provide investors, lenders, insurance underwriters, and other stakeholders with the metrics and information needed to undertake robust and consistent analyses of the potential financial impacts of climate change.

The Task Force found that while several climate-related disclosure frameworks have emerged across different jurisdictions in an effort to meet the growing demand for such information, there is a need for a standardized framework to promote alignment across existing regimes and G20 jurisdictions and to provide a common framework for climate-related financial disclosures. An important element of such a framework is the consistent categorization of climate-related risks and opportunities. As a result, the Task Force defined categories for climate-related risks and climate-related opportunities. The Task Force's recommendations serve to encourage organizations to evaluate and disclose, as part of their annual financial filing preparation and reporting processes, the climate-related risks and opportunities that are most pertinent to their business activities. The main climate-related risks and opportunities that organizations should consider are described below and in Tables 1 and 2 (pp. 10-11).

1. Climate-Related Risks

   a. Transition Risks

   Transitioning to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, and focus of these changes, transition risks may pose varying levels of financial and reputational risk to organizations.

   Policy and Legal Risks

   Policy actions around climate change continue to evolve. Their objectives generally fall into two categories—policy actions that attempt to constrain actions that contribute to the adverse effects of climate change or policy actions that seek to promote adaptation to climate change. Some examples include implementing carbon-pricing mechanisms to reduce GHG emissions, shifting energy use toward lower emission sources, adopting energy-efficiency solutions, encouraging greater water efficiency measures, and promoting more sustainable land-use practices. The risk associated with and financial impact of policy changes depend on the nature and timing of the policy change.21

   Another important risk is litigation or legal risk. Recent years have seen an increase in climate-related litigation claims being brought before the courts by property owners, municipalities, states, insurers, shareholders, and public interest organizations.22 Reasons for such litigation include the failure of organizations to mitigate impacts of climate change, failure to adapt to climate change, and the insufficiency of disclosure around material financial risks. As the value of loss and damage arising from climate change grows, litigation risk is also likely to increase.

21 Organizations should assess not only the potential direct effects of policy actions on their operations, but also the potential second and third order effects on their supply and distribution chains.

Technology Risk
Technological improvements or innovations that support the transition to a lower-carbon, energy-efficient economic system can have a significant impact on organizations. For example, the development and use of emerging technologies such as renewable energy, battery storage, energy efficiency, and carbon capture and storage will affect the competitiveness of certain organizations, their production and distribution costs, and ultimately the demand for their products and services from end users. To the extent that new technology displaces old systems and disrupts some parts of the existing economic system, winners and losers will emerge from this “creative destruction” process. The timing of technology development and deployment, however, is a key uncertainty in assessing technology risk.

Market Risk
While the ways in which markets could be affected by climate change are varied and complex, one of the major ways is through shifts in supply and demand for certain commodities, products, and services as climate-related risks and opportunities are increasingly taken into account.

Reputation Risk
Climate change has been identified as a potential source of reputational risk tied to changing customer or community perceptions of an organization’s contribution to or detraction from the transition to a lower-carbon economy.

b. Physical Risks
Physical risks resulting from climate change can be event driven (acute) or longer-term shifts (chronic) in climate patterns. Physical risks may have financial implications for organizations, such as direct damage to assets and indirect impacts from supply chain disruption. Organizations’ financial performance may also be affected by changes in water availability, sourcing, and quality; food security; and extreme temperature changes affecting organizations’ premises, operations, supply chain, transport needs, and employee safety.

Acute Risk
Acute physical risks refer to those that are event-driven, including increased severity of extreme weather events, such as cyclones, hurricanes, or floods.

Chronic Risk
Chronic physical risks refer to longer-term shifts in climate patterns (e.g., sustained higher temperatures) that may cause sea level rise or chronic heat waves.

2. Climate-Related Opportunities
Efforts to mitigate and adapt to climate change also produce opportunities for organizations, for example, through resource efficiency and cost savings, the adoption of low-emission energy sources, the development of new products and services, access to new markets, and building resilience along the supply chain. Climate-related opportunities will vary depending on the region, market, and industry in which an organization operates. The Task Force identified several areas of opportunity as described below.

a. Resource Efficiency
There is growing evidence and examples of organizations that have successfully reduced operating costs by improving efficiency across their production and distribution processes, buildings, machinery/appliances, and transport/mobility—in particular in relation to energy efficiency but also including broader materials, water, and waste management.23 Such actions can

---

result in direct cost savings to organizations’ operations over the medium to long term and contribute to the global efforts to curb emissions. Innovation in technology is assisting this transition; such innovation includes developing efficient heating solutions and circular economy solutions, making advances in LED lighting technology and industrial motor technology, retrofitting buildings, employing geothermal power, offering water usage and treatment solutions, and developing electric vehicles.

b. Energy Source
According to the International Energy Agency (IEA), to meet global emission-reduction goals, countries will need to transition a major percentage of their energy generation to low emission alternatives such as wind, solar, wave, tidal, hydro, geothermal, nuclear, biofuels, and carbon capture and storage. For the fifth year in a row, investments in renewable energy capacity have exceeded investments in fossil fuel generation. The trend toward decentralized clean energy sources, rapidly declining costs, improved storage capabilities, and subsequent global adoption of these technologies are significant. Organizations that shift their energy usage toward low emission energy sources could potentially save on annual energy costs.

c. Products and Services
Organizations that innovate and develop new low-emission products and services may improve their competitive position and capitalize on shifting consumer and producer preferences. Some examples include consumer goods and services that place greater emphasis on a product’s carbon footprint in its marketing and labeling (e.g., travel, food, beverage and consumer staples, mobility, printing, fashion, and recycling services) and producer goods that place emphasis on reducing emissions (e.g., adoption of energy-efficiency measures along the supply chain).

d. Markets
Organizations that pro-actively seek opportunities in new markets or types of assets may be able to diversify their activities and better position themselves for the transition to a lower-carbon economy. In particular, opportunities exist for organizations to access new markets through collaborating with governments, development banks, small-scale local entrepreneurs, and community groups in developed and developing countries as they work to shift to a lower-carbon economy. New opportunities can also be captured through underwriting or financing green bonds and infrastructure (e.g., low-emission energy production, energy efficiency, grid connectivity, or transport networks).

e. Resilience
The concept of climate resilience involves organizations developing adaptive capacity to respond to climate change to better manage the associated risks and seize opportunities, including the ability to respond to transition risks and physical risks. Opportunities include improving efficiency, designing new production processes, and developing new products. Opportunities related to resilience may be especially relevant for organizations with long-lived fixed assets or extensive supply or distribution networks; those that depend critically on utility and infrastructure networks or natural resources in their value chain; and those that may require longer-term financing and investment.

25 As described by Pearce and Turner, circular economy refers to a system in which resource input and waste, emission, and energy leakage are minimized. This can be achieved through long-lasting design, maintenance, repair, reuse, remanufacturing, refurbishing, and recycling. This is in contrast to a linear economy which is a “take, make, dispose” model of production.
26 IEA, “Global energy investment down 8% in 2015 with flows signaling move towards cleaner energy.” September 14, 2016.
28 Ceres, “Power Forward 3.0: How the largest US companies are capturing business value while addressing climate change,” 2017.
3. Financial Impacts

Better disclosure of the financial impacts of climate-related risks and opportunities on an organization is a key goal of the Task Force's work. In order to make more informed financial decisions, investors, lenders, and insurance underwriters need to understand how climate-related risks and opportunities are likely to impact an organization's future financial position as reflected in its income statement, cash flow statement, and balance sheet as outlined in Figure 1. While climate change affects nearly all economic sectors, the level and type of exposure and the impact of climate-related risks differs by sector, industry, geography, and organization.30

Fundamentally, the financial impacts of climate-related issues on an organization are driven by the specific climate-related risks and opportunities to which the organization is exposed and its strategic and risk management decisions on managing those risks (i.e., mitigate, transfer, accept, or control) and seizing those opportunities. The Task Force has identified four major categories, described in Figure 2 (p. 9), through which climate-related risks and opportunities may affect an organization's current and future financial positions.

The financial impacts of climate-related issues on organizations are not always clear or direct, and, for many organizations, identifying the issues, assessing potential impacts, and ensuring material issues are reflected in financial filings may be challenging. Key reasons for this are likely because of (1) limited knowledge of climate-related issues within organizations; (2) the tendency to focus mainly on near-term risks without paying adequate attention to risks that may arise in the longer term; and (3) the difficulty in quantifying the financial effects of climate-related issues.31 To assist organizations in identifying climate-related issues and their impacts, the Task Force developed Table 1 (p. 10), which provides examples of climate-related risks and their potential financial impacts, and Table 2 (p. 11), which provides examples of climate-related opportunities and their potential financial impacts. In addition, Section A.4 in the Annex provides more information on the major categories of financial impacts—revenues, expenditures, assets and liabilities, and capital and financing—that are likely to be most relevant for specific industries.

---

30 SASB research demonstrates that 72 out of 79 Sustainable Industry Classification System (SICS™) industries are significantly affected in some way by climate-related risk.

The Task Force encourages organizations to undertake both historical and forward-looking analyses when considering the potential financial impacts of climate change, with greater focus on forward-looking analyses as the efforts to mitigate and adapt to climate change are without historical precedent. This is one of the reasons the Task Force believes scenario analysis is important for organizations to consider incorporating into their strategic planning or risk management practices.

C Recommendations and Guidance
C  Recommendations and Guidance

1. Overview of Recommendations and Guidance

To fulfill its remit, the Task Force developed four widely adoptable recommendations on climate-related financial disclosures applicable to organizations across sectors and jurisdictions. In developing its recommendations, the Task Force considered the challenges for preparers of disclosures as well as the benefits of such disclosures to investors, lenders, and insurance underwriters. To achieve this balance, the Task Force engaged in significant outreach and consultation with users and preparers of disclosures and drew upon existing climate-related disclosure regimes. The insights gained from the outreach and consultations directly informed the development of the recommendations.

The Task Force structured its recommendations around four thematic areas that represent core elements of how organizations operate—governance, strategy, risk management, and metrics and targets. The four overarching recommendations are supported by key climate-related financial disclosures—referred to as recommended disclosures—that build out the framework with information that will help investors and others understand how reporting organizations think about and assess climate-related risks and opportunities. In addition, there is guidance to support all organizations in developing climate-related financial disclosures consistent with the recommendations and recommended disclosures as well as supplemental guidance for specific sectors. The structure is depicted in Figure 3 below, and the Task Force’s recommendations and supporting recommended disclosures are presented in Figure 4 (p. 14).

The Task Force’s supplemental guidance is included in the Annex and covers the financial sector as well as non-financial industries potentially most affected by climate change and the transition to a lower-carbon economy (referred to as non-financial groups). The supplemental guidance provides these preparers with additional context and suggestions for implementing the recommended disclosures and should be used in conjunction with the guidance for all sectors.
## Recommendations and Supporting Recommended Disclosures

**Governance**

Disclose the organization’s governance around climate-related risks and opportunities.

<table>
<thead>
<tr>
<th>Recommended Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Describe the board’s oversight of climate-related risks and opportunities.</td>
</tr>
<tr>
<td>b) Describe management’s role in assessing and managing climate-related risks and opportunities.</td>
</tr>
<tr>
<td>c) Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.</td>
</tr>
</tbody>
</table>

**Strategy**

Disclose the actual and potential impacts of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning where such information is material.

<table>
<thead>
<tr>
<th>Recommended Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.</td>
</tr>
<tr>
<td>b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.</td>
</tr>
<tr>
<td>c) Describe how processes for identifying, assessing, and managing climate-related risks and opportunities are integrated into the organization’s overall risk management.</td>
</tr>
</tbody>
</table>

**Risk Management**

Disclose how the organization identifies, assesses, and manages climate-related risks.

<table>
<thead>
<tr>
<th>Recommended Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Describe the organization’s processes for identifying and assessing climate-related risks.</td>
</tr>
<tr>
<td>b) Describe the organization’s processes for managing climate-related risks.</td>
</tr>
<tr>
<td>c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.</td>
</tr>
</tbody>
</table>

**Metrics and Targets**

Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material.

<table>
<thead>
<tr>
<th>Recommended Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Disclose the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process.</td>
</tr>
<tr>
<td>b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.</td>
</tr>
<tr>
<td>c) Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets.</td>
</tr>
</tbody>
</table>
Figure 5 provides a mapping of the recommendations (governance, strategy, risk management, and metrics and targets) and recommended disclosures (a, b, c) for which supplemental guidance was developed for the financial sector and non-financial groups.

- **Financial Sector.** The Task Force developed supplemental guidance for the financial sector, which it organized into four major industries largely based on activities performed. The four industries are banks (lending), insurance companies (underwriting), asset managers (asset management), and asset owners, which include public- and private-sector pension plans, endowments, and foundations (investing). The Task Force believes that disclosures by the financial sector could foster an early assessment of climate-related risks and opportunities, improve pricing of climate-related risks, and lead to more informed capital allocation decisions.

- **Non-Financial Groups.** The Task Force developed supplemental guidance for non-financial industries that account for the largest proportion of GHG emissions, energy usage, and water usage. These industries were organized into four groups (i.e., non-financial groups)—Energy; Materials and Buildings; Transportation; and Agriculture, Food, and Forest Products—based on similarities in climate-related risks as shown in Box 2 (p. 16). While this supplemental guidance focuses on a subset of non-financial industries, organizations in other industries with similar business activities may wish to review and consider the issues and topics contained in the supplemental guidance.

---

34 The use of the term “insurance companies” in this report includes re-insurers.
Box 2

Determination of Non-Financial Groups

In an effort to focus supplemental guidance on those non-financial sectors and industries with the highest likelihood of climate-related financial impacts, the Task Force assessed three factors most likely to be affected by both transition risk (policy and legal, technology, market, and reputation) and physical risk (acute and chronic)—GHG emissions, energy usage, and water usage.

The underlying premise in using these three factors is that climate-related physical and transition risks will likely manifest themselves primarily and broadly in the form of constraints on GHG emissions, effects on energy production and usage, and effects on water availability, usage, and quality. Other factors, such as waste management and land use, are also important, but may not be as determinative across a wide range of industries or may be captured in one of the primary categories.

In taking this approach, the Task Force consulted a number of sources regarding the ranking of various sectors and industries according to these three factors. The various rankings were used to determine an overall set of sectors and industries that have significant exposure to transition or physical risks related to GHG emissions, energy, or water. The sectors and industries were grouped into four categories of industries that have similar economic activities and climate-related exposures.

These four groups and their associated industries are intended to be indicative of the economic activities associated with these industries rather than definitive industry categories. Other industries with similar activities and climate-related exposures should consider the supplemental guidance as well.

The Task Force validated its approach using a variety of sources, including:

1. The TCFD Phase I report public consultation, soliciting more than 200 responses which ranked Energy, Utilities, Materials, Industrials and Consumer Staples/Discretionary, in that order, as the Global Industry Classification Standard (GICS) sectors most important for disclosure guidelines to cover.

2. Numerous sector-specific disclosure guidance documents to understand various breakdowns by economic activity, sector, and industries, including from the following sources: CDP, GHG Protocol, Global Real Estate Sustainability Benchmark (GRESB), Global Reporting Initiative (GRI), Institutional Investors Group on Climate Change (IIGCC), IPIECA (the global oil and gas industry association for environmental and social issues), and the Sustainability Accounting Standards Board (SASB).

3. The Intergovernmental Panel on Climate Change (IPCC) report “Climate Change 2014 – Mitigation of Climate Change” that provides an analysis of global direct and indirect emissions by economic sector. The IPCC analysis highlights the dominant emissions-producing sectors as Energy; Industry; Agriculture, Forestry, and Other Land Use; and Transportation and Buildings (Commercial and Residential).

4. Research and documentation from non-governmental organizations (NGOs) and industry organizations that provide information on which industries have the highest exposures to climate change, including those from Cambridge Institute of Sustainability Leadership, China's National Development and Reform Commission (NDRC), Environmental Resources Management (ERM), IEA, Moody’s, S&P Global Ratings, and WRI/UNEPFI.

Based on its assessment, the Task Force identified the four groups and their associated industries, listed in the table below, as those that would most benefit from supplemental guidance.

**Recommendations of the Task Force on Climate-related Financial Disclosures**

© 2021 National Association of Insurance Commissioners
2. Implementing the Recommendations

a. Scope of Coverage
To promote more informed investing, lending, and insurance underwriting decisions, the Task Force recommends all organizations with public debt or equity implement its recommendations. Because climate-related issues are relevant for other types of organizations as well, the Task Force encourages all organizations to implement these recommendations. In particular, the Task Force believes that asset managers and asset owners, including public- and private-sector pension plans, endowments, and foundations, should implement its recommendations so that their clients and beneficiaries may better understand the performance of their assets, consider the risks of their investments, and make more informed investment choices.

b. Location of Disclosures and Materiality
The Task Force recommends that organizations provide climate-related financial disclosures in their mainstream (i.e., public) annual financial filings.35 In most G20 jurisdictions, public companies have a legal obligation to disclose material information in their financial filings—including material climate-related information; and the Task Force's recommendations are intended to help organizations meet existing disclosure obligations more effectively.36 The Task Force's recommendations were developed to apply broadly across sectors and jurisdictions and should not be seen as superseding national disclosure requirements. Importantly, organizations should make financial disclosures in accordance with their national disclosure requirements. If certain elements of the recommendations are incompatible with national disclosure requirements for financial filings, the Task Force encourages organizations to disclose those elements in other official company reports that are issued at least annually, widely distributed and available to investors and others, and subject to internal governance processes that are the same or substantially similar to those used for financial reporting.

The Task Force recognizes that most information included in financial filings is subject to a materiality assessment. However, because climate-related risk is a non-diversifiable risk that affects nearly all industries, many investors believe it requires special attention. For example, in assessing organizations’ financial and operating results, many investors want insight into the governance and risk management context in which such results are achieved. The Task Force believes disclosures related to its Governance and Risk Management recommendations directly address this need for context and should be included in annual financial filings.

For disclosures related to the Strategy and Metrics and Targets recommendations, the Task Force believes organizations should provide such information in annual financial filings when the information is deemed material. Certain organizations—those in the four non-financial groups that have more than one billion U.S. dollar equivalent (USDE) in annual revenue—should consider disclosing such information in other reports when the information is not deemed material and not included in financial filings.37 Because these organizations are more likely than others to be financially impacted over time, investors are interested in monitoring how these organizations’ strategies evolve.

35 Financial filings refer to the annual reporting packages in which organizations are required to deliver their audited financial results under the corporate, compliance, or securities laws of the jurisdictions in which they operate. While reporting requirements differ internationally, financial filings generally contain financial statements and other information such as governance statements and management commentary.
36 The Task Force encourages organizations where climate-related issues could be material in the future to begin disclosing climate-related financial information outside financial filings to facilitate the incorporation of such information into financial filings once climate-related issues are determined to be material.
37 The Task Force chose a one billion USDE annual revenue threshold because it captures organizations responsible for over 90 percent of Scope 1 and 2 GHG emissions in the industries represented by the four non-financial groups (about 2,250 organizations out of roughly 15,000).
The Task Force recognizes reporting by asset managers and asset owners is intended to satisfy the needs of clients, beneficiaries, regulators, and oversight bodies and follows a format that is generally different from corporate financial reporting. For purposes of adopting the Task Force's recommendations, asset managers and asset owners should use their existing means of financial reporting to their clients and beneficiaries where relevant and where feasible. Likewise, asset managers and asset owners should consider materiality in the context of their respective mandates and investment performance for clients and beneficiaries.

The Task Force believes that climate-related financial disclosures should be subject to appropriate internal governance processes. Since these disclosures should be included in annual financial filings, the governance processes should be similar to those used for existing financial reporting and would likely involve review by the chief financial officer and audit committee, as appropriate. The Task Force recognizes that some organizations may provide some or all of their climate-related financial disclosures in reports other than financial filings. This may occur because the organizations are not required to issue public financial reports (e.g., some asset managers and asset owners). In such situations, organizations should follow internal governance processes that are the same or substantially similar to those used for financial reporting.

c. Principles for Effective Disclosures
To underpin its recommendations and help guide current and future developments in climate-related financial reporting, the Task Force developed seven principles for effective disclosure (Figure 6), which are described more fully in Appendix 3. When used by organizations in preparing their climate-related financial disclosures, these principles can help achieve high-quality and decision-useful disclosures that enable users to understand the impact of climate change on organizations. The Task Force encourages organizations to consider these principles as they develop climate-related financial disclosures.

The Task Force's disclosure principles are largely consistent with internationally accepted frameworks for financial reporting and are generally applicable to most providers of financial disclosures. The principles are designed to assist organizations in making clear the linkages between climate-related issues and their governance, strategy, risk management, and metrics and targets.

---

38 The Task Force recommends asset managers and asset owners include carbon footprinting information in their reporting to clients and beneficiaries, as described in Section D of the Annex, to support the assessment and management of climate-related risks.
3. Guidance for All Sectors

The Task Force has developed guidance to support all organizations in developing climate-related financial disclosures consistent with its recommendations and recommended disclosures. The guidance assists preparers by providing context and suggestions for implementing the recommended disclosures. Recognizing organizations have differing levels of capacity to disclose under the recommendations, the guidance provides descriptions of the types of information that should be disclosed or considered.

a. Governance

Investors, lenders, insurance underwriters, and other users of climate-related financial disclosures (collectively referred to as “investors and other stakeholders”) are interested in understanding the role an organization’s board plays in overseeing climate-related issues as well as management’s role in assessing and managing those issues. Such information supports evaluations of whether climate-related issues receive appropriate board and management attention.

Governance

Disclose the organization’s governance around climate-related risks and opportunities.

<table>
<thead>
<tr>
<th>Recommended Disclosure a)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the board’s oversight of climate-related risks and opportunities.</td>
<td>In describing the board’s oversight of climate-related issues, organizations should consider including a discussion of the following:</td>
</tr>
<tr>
<td></td>
<td>– processes and frequency by which the board and/or board committees (e.g., audit, risk, or other committees) are informed about climate-related issues,</td>
</tr>
<tr>
<td></td>
<td>– whether the board and/or board committees consider climate-related issues when reviewing and guiding strategy, major plans of action, risk management policies, annual budgets, and business plans as well as setting the organization’s performance objectives, monitoring implementation and performance, and overseeing major capital expenditures, acquisitions, and divestitures, and</td>
</tr>
<tr>
<td></td>
<td>– how the board monitors and oversees progress against goals and targets for addressing climate-related issues.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Recommended Disclosure b)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe management’s role in assessing and managing climate-related risks and opportunities.</td>
<td>In describing management’s role related to the assessment and management of climate-related issues, organizations should consider including the following information:</td>
</tr>
<tr>
<td></td>
<td>– whether the organization has assigned climate-related responsibilities to management-level positions or committees; and, if so, whether such management positions or committees report to the board or a committee of the board and whether those responsibilities include assessing and/or managing climate-related issues,</td>
</tr>
<tr>
<td></td>
<td>– a description of the associated organizational structure(s),</td>
</tr>
<tr>
<td></td>
<td>– processes by which management is informed about climate-related issues, and</td>
</tr>
<tr>
<td></td>
<td>– how management (through specific positions and/or management committees) monitors climate-related issues.</td>
</tr>
</tbody>
</table>
b. Strategy
Investors and other stakeholders need to understand how climate-related issues may affect an organization's businesses, strategy, and financial planning over the short, medium, and long term. Such information is used to inform expectations about the future performance of an organization.

**Strategy**

Disclose the actual and potential impacts of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning where such information is material.

<table>
<thead>
<tr>
<th>Recommended Disclosure a)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.</td>
<td>Organizations should provide the following information:</td>
</tr>
<tr>
<td></td>
<td>– a description of what they consider to be the relevant short-, medium-, and long-term time horizons, taking into consideration the useful life of the organization's assets or infrastructure and the fact that climate-related issues often manifest themselves over the medium and longer terms,</td>
</tr>
<tr>
<td></td>
<td>– a description of the specific climate-related issues for each time horizon (short, medium, and long term) that could have a material financial impact on the organization, and</td>
</tr>
<tr>
<td></td>
<td>– a description of the process(es) used to determine which risks and opportunities could have a material financial impact on the organization.</td>
</tr>
</tbody>
</table>

Organizations should consider providing a description of their risks and opportunities by sector and/or geography, as appropriate. In describing climate-related issues, organizations should refer to Tables 1 and 2 (pp. 10-11).

<table>
<thead>
<tr>
<th>Recommended Disclosure b)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the impact of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning.</td>
<td>Building on recommended disclosure (a), organizations should discuss how identified climate-related issues have affected their businesses, strategy, and financial planning.</td>
</tr>
<tr>
<td></td>
<td>Organizations should consider including the impact on their businesses and strategy in the following areas:</td>
</tr>
<tr>
<td></td>
<td>– Products and services</td>
</tr>
<tr>
<td></td>
<td>– Supply chain and/or value chain</td>
</tr>
<tr>
<td></td>
<td>– Adaptation and mitigation activities</td>
</tr>
<tr>
<td></td>
<td>– Investment in research and development</td>
</tr>
<tr>
<td></td>
<td>– Operations (including types of operations and location of facilities)</td>
</tr>
</tbody>
</table>

Organizations should describe how climate-related issues serve as an input to their financial planning process, the time period(s) used, and how these risks and opportunities are prioritized. Organizations' disclosures should reflect a holistic picture of the interdependencies among the factors that affect their ability to create value over time. Organizations should also consider including in their disclosures the impact on financial planning in the following areas:

|                           | Operating costs and revenues |
|                           | Capital expenditures and capital allocation |
|                           | Acquisitions or divestments |
|                           | Access to capital |

If climate-related scenarios were used to inform the organization's strategy and financial planning, such scenarios should be described.
### Strategy

Disclose the actual and potential impacts of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning where such information is material.

<table>
<thead>
<tr>
<th>Recommended Disclosure c)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
</table>
| Describe the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario. | Organizations should describe how resilient their strategies are to climate-related risks and opportunities, taking into consideration a transition to a lower-carbon economy consistent with a 2°C or lower scenario and, where relevant to the organization, scenarios consistent with increased physical climate-related risks. Organizations should consider discussing:  
- where they believe their strategies may be affected by climate-related risks and opportunities;  
- how their strategies might change to address such potential risks and opportunities; and  
- the climate-related scenarios and associated time horizon(s) considered.  
Refer to Section D for information on applying scenarios to forward-looking analysis. |

### c. Risk Management

Investors and other stakeholders need to understand how an organization's climate-related risks are identified, assessed, and managed and whether those processes are integrated into existing risk management processes. Such information supports users of climate-related financial disclosures in evaluating the organization's overall risk profile and risk management activities.

<table>
<thead>
<tr>
<th>Recommended Disclosure a)</th>
<th>Guidance for All Sectors</th>
</tr>
</thead>
</table>
| Describe the organization's processes for identifying and assessing climate-related risks. | Organizations should describe their risk management processes for identifying and assessing climate-related risks. An important aspect of this description is how organizations determine the relative significance of climate-related risks in relation to other risks. Organizations should describe whether they consider existing and emerging regulatory requirements related to climate change (e.g., limits on emissions) as well as other relevant factors considered. Organizations should also consider disclosing the following:  
- processes for assessing the potential size and scope of identified climate-related risks and  
- definitions of risk terminology used or references to existing risk classification frameworks used. |

d. Metrics and Targets

Investors and other stakeholders need to understand how an organization measures and monitors its climate-related risks and opportunities. Access to the metrics and targets used by an organization allows investors and other stakeholders to better assess the organization's potential risk-adjusted returns, ability to meet financial obligations, general exposure to climate-related issues, and progress in managing or adapting to those issues. They also provide a basis upon which investors and other stakeholders can compare organizations within a sector or industry.

Metrics and Targets

Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material.

<td>Organizations should provide their Scope 1 and Scope 2 GHG emissions and, if appropriate, Scope 3 GHG emissions and the related risks. GHG emissions should be calculated in line with the GHG Protocol methodology to allow for aggregation and comparability across organizations and jurisdictions. As appropriate, organizations should consider providing related, generally accepted industry-specific GHG efficiency ratios. GHG emissions and associated metrics should be provided for historical periods to allow for trend analysis.</td>
</tr>
</tbody>
</table>

---

39 Emissions are a prime driver of rising global temperatures and, as such, are a key focal point of policy, regulatory, market, and technology responses to limit climate change. As a result, organizations with significant emissions are likely to be impacted more significantly by transition risk than other organizations. In addition, current or future constraints on emissions, either directly by emission restrictions or indirectly through carbon budgets, may impact organizations financially.

40 While challenges remain, the GHG Protocol methodology is the most widely recognized and used international standard for calculating GHG emissions. Organizations may use national reporting methodologies if they are consistent with the GHG Protocol methodology.

41 For industries with high energy consumption, metrics related to emission intensity are important to provide. For example, emissions per unit of economic output (e.g., unit of production, number of employees, or value-added) is widely used. See the Annex for examples of metrics.
## Metrics and Targets

Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material.

### Recommended Disclosure c)

Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets.

### Guidance for All Sectors

Organizations should describe their key climate-related targets such as those related to GHG emissions, water usage, energy usage, etc., in line with anticipated regulatory requirements or market constraints or other goals. Other goals may include efficiency or financial goals, financial loss tolerances, avoided GHG emissions through the entire product life cycle, or net revenue goals for products and services designed for a lower-carbon economy.

In describing their targets, organizations should consider including the following:

- whether the target is absolute or intensity based,
- time frames over which the target applies,
- base year from which progress is measured, and
- key performance indicators used to assess progress against targets.

Where not apparent, organizations should provide a description of the methodologies used to calculate targets and measures.
D Scenario Analysis and Climate-Related Issues
D Scenario Analysis and Climate-Related Issues

Some organizations are affected by risks associated with climate change today. However, for many organizations, the most significant effects of climate change are likely to emerge over the medium to longer term and their timing and magnitude are uncertain. This uncertainty presents challenges for individual organizations in understanding the potential effects of climate change on their businesses, strategies, and financial performance. To appropriately incorporate the potential effects in their planning processes, organizations need to consider how their climate-related risks and opportunities may evolve and the potential implications under different conditions. One way to do this is through scenario analysis.

Scenario analysis is a well-established method for developing strategic plans that are more flexible or robust to a range of plausible future states. The use of scenario analysis for assessing the potential business implications of climate-related risks and opportunities, however, is relatively recent. While several organizations use scenario analysis to assess the potential impact of climate change on their businesses, only a subset have disclosed their assessment of forward-looking implications publicly, either in sustainability reports or financial filings.42

The disclosure of organizations' forward-looking assessments of climate-related issues is important for investors and other stakeholders in understanding how vulnerable individual organizations are to transition and physical risks and how such vulnerabilities are or would be addressed. As a result, the Task Force believes that organizations should use scenario analysis to assess potential business, strategic, and financial implications of climate-related risks and opportunities and disclose those, as appropriate, in their annual financial filings.

Scenario analysis is an important and useful tool for understanding the strategic implications of climate-related risks and opportunities.

This section provides additional information on using scenario analysis as a tool to assess potential implications of climate-related risks and opportunities. In addition, a technical supplement, The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities, on the Task Force's website provides further information on the types of climate-related scenarios, the application of scenario analysis, and the key challenges in implementing scenario analysis.

1. Overview of Scenario Analysis

Scenario analysis is a process for identifying and assessing the potential implications of a range of plausible future states under conditions of uncertainty. Scenarios are hypothetical constructs and not designed to deliver precise outcomes or forecasts. Instead, scenarios provide a way for organizations to consider how the future might look if certain trends continue or certain conditions are met. In the case of climate change, for example, scenarios allow an organization to explore and develop an understanding of how various combinations of climate-related risks, both transition and physical risks, may affect its businesses, strategies, and financial performance over time.

Scenario analysis can be qualitative, relying on descriptive, written narratives, or quantitative, relying on numerical data and models, or some combination of both. Qualitative scenario analysis

42 Some organizations in the energy sector and some large investors have made public disclosures describing the results of their climate-related scenario analysis, including discussing how the transition might affect their current portfolios. In some instances, this information was published in financial filings.
explores relationships and trends for which little or no numerical data is available, while quantitative scenario analysis can be used to assess measurable trends and relationships using models and other analytical techniques.43 Both rely on scenarios that are internally consistent, logical, and based on explicit assumptions and constraints that result in plausible future development paths.

As summarized in Figure 7, there are several reasons why scenario analysis is a useful tool for organizations in assessing the potential implications of climate-related risks and opportunities.

**Figure 7**

**Reasons to Consider Using Scenario Analysis for Climate Change**

1. Scenario analysis can help organizations consider issues, like climate change, that have the following characteristics:
   - Possible outcomes that are highly uncertain (e.g., the physical response of the climate and ecosystems to higher levels of GHG emissions in the atmosphere)
   - Outcomes that will play out over the medium to longer term (e.g., timing, distribution, and mechanisms of the transition to a lower-carbon economy)
   - Potential disruptive effects that, due to uncertainty and complexity, are substantial

2. Scenario analysis can enhance organizations’ strategic conversations about the future by considering, in a more structured manner, what may unfold that is different from business-as-usual. Importantly, it broadens decision makers’ thinking across a range of plausible scenarios, including scenarios where climate-related impacts can be significant.

3. Scenario analysis can help organizations frame and assess the potential range of plausible business, strategic, and financial impacts from climate change and the associated management actions that may need to be considered in strategic and financial plans. This may lead to more robust strategies under a wider range of uncertain future conditions.

4. Scenario analysis can help organizations identify indicators to monitor the external environment and better recognize when the environment is moving toward a different scenario state (or to a different stage along a scenario path). This allows organizations the opportunity to reassess and adjust their strategies and financial plans accordingly.44

5. Scenario analysis can assist investors in understanding the robustness of organizations’ strategies and financial plans and in comparing risks and opportunities across organizations.

**2. Exposure to Climate-Related Risks**

The effects of climate change on specific sectors, industries, and individual organizations are highly variable. It is important, therefore, that all organizations consider applying a basic level of scenario analysis in their strategic planning and risk management processes. Organizations more significantly affected by transition risk (e.g., fossil fuel-based industries, energy-intensive manufacturers, and transportation activities) and/or physical risk (e.g., agriculture, transportation

---

44 J.N. Maack, Scenario analysis: a tool for task managers, Social Analysis: selected tools and techniques, Social Development Papers, Number 36, the World Bank, June 2001, Washington, DC.
and building infrastructure, insurance, and tourism) should consider a more in-depth application of scenario analysis.

**a. Exposure to Transition Risks**
Transition risk scenarios are particularly relevant for resource-intensive organizations with high GHG emissions within their value chains, where policy actions, technology, or market changes aimed at emissions reductions, energy efficiency, subsidies or taxes, or other constraints or incentives may have a particularly direct effect.

A key type of transition risk scenario is a so-called 2°C scenario, which lays out a pathway and an emissions trajectory consistent with holding the increase in the global average temperature to 2°C above pre-industrial levels. In December 2015, nearly 200 governments agreed to strengthen the global response to the threat of climate change by “holding the increase in the global average temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels,” referred to as the Paris Agreement. As a result, a 2°C scenario provides a common reference point that is generally aligned with the objectives of the Paris Agreement and will support investors’ evaluation of the potential magnitude and timing of transition-related implications for individual organizations; across different organizations within a sector; and across different sectors.

**b. Exposure to Physical Risks**
A wide range of organizations are exposed to climate-related physical risks. Physical climate-related scenarios are particularly relevant for organizations exposed to acute or chronic climate change, such as those with:

- long-lived, fixed assets;
- locations or operations in climate-sensitive regions (e.g., coastal and flood zones);
- reliance on availability of water; and
- value chains exposed to the above.

Physical risk scenarios generally identify extreme weather threats of moderate or higher risk before 2030 and a larger number and range of physical threats between 2030 and 2050. Although most climate models deliver scenario results for physical impacts beyond 2050, organizations typically focus on the consequences of physical risk scenarios over shorter time frames that reflect the lifetimes of their respective assets or liabilities, which vary across sectors and organizations.

### 3. Recommended Approach to Scenario Analysis

The Task Force believes that all organizations exposed to climate-related risks should consider (1) using scenario analysis to help inform their strategic and financial planning processes and (2) disclosing how resilient their strategies are to a range of plausible climate-related scenarios. The Task Force recognizes that, for many organizations, scenario analysis is or would be a largely qualitative exercise. However, organizations with more significant exposure to transition risk and/or physical risk should undertake more rigorous qualitative and, if relevant, quantitative scenario analysis with respect to key drivers and trends that affect their operations.

A critical aspect of scenario analysis is the selection of a set of scenarios (not just one) that covers a reasonable variety of future outcomes, both favorable and unfavorable. In this regard, the Task Force recommends organizations use a 2°C or lower scenario in addition to two or three other...
scenarios most relevant to their circumstances, such as scenarios related to Nationally Determined Contributions (NDCs), physical climate-related scenarios, or other challenging scenarios. In jurisdictions where NDCs are a commonly accepted guide for an energy and/or emissions pathway, NDCs may constitute particularly useful scenarios to include in an organization’s suite of scenarios for conducting climate-related scenario analysis.

For an organization in the initial stages of implementing scenario analysis or with limited exposure to climate-related issues, the Task Force recommends disclosing how resilient, qualitatively or directionally, the organization’s strategy and financial plans may be to a range of relevant climate change scenarios. This information helps investors, lenders, insurance underwriters, and other stakeholders understand the robustness of an organization’s forward-looking strategy and financial plans across a range of possible future states.

Organizations with more significant exposure to climate-related issues should consider disclosing key assumptions and pathways related to the scenarios they use to allow users to understand the analytical process and its limitations. In particular, it is important to understand the critical parameters and assumptions that materially affect the conclusions drawn. As a result, the Task Force believes that organizations with significant climate-related exposures should strive to disclose the elements described in Figure 8.

---

**Figure 8**

**Disclosure Considerations for Non-Financial Organizations**

Organizations with more significant exposure to climate-related issues should consider disclosing key aspects of their scenario analysis, such as the ones described below.

1. The scenarios used, including the 2°C or lower scenario[^47]

2. Critical input parameters, assumptions, and analytical choices for the scenarios used, including such factors as:
   - Assumptions about possible technology responses and timing (e.g., evolution of products/services, the technology used to produce them, and costs to implement)
   - Assumptions made around potential differences in input parameters across regions, countries, asset locations, and/or markets
   - Approximate sensitivities to key assumptions

3. Time frames used for scenarios, including short-, medium-, and long-term milestones (e.g., how organizations consider timing of potential future implications under the scenarios used)

4. Information about the resiliency of the organization’s strategy, including strategic performance implications under the various scenarios considered, potential qualitative or directional implications for the organization’s value chain, capital allocation decisions, research and development focus, and potential material financial implications for the organization’s operating results and/or financial position

[^46]: The Task Force’s technical supplement, *The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities* provides more information on scenario inputs, analytical assumptions and choices, and assessment and presentation of potential impacts.

[^47]: The objective of the Paris Agreement is to hold the increase in the global average temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C. The IEA is developing a 1.5°C scenario that organizations may find useful.
4. Applying Scenario Analysis

While the Task Force recognizes the complexities of scenario analysis and the potential resources needed to conduct it, organizations are encouraged to use scenario analysis to assess climate-related risks and opportunities. For organizations just beginning to use scenario analysis, a qualitative approach that progresses and deepens over time may be appropriate. Greater rigor and sophistication in the use of data and quantitative models and analysis may be warranted for organizations with more extensive experience in conducting scenario analysis. Organizations may decide to use existing external scenarios and models (e.g., those provided by third-party vendors) or develop their own, in-house modeling capabilities. The choice of approach will depend on an organization’s needs, resources, and capabilities.

In conducting scenario analysis, organizations should strive to achieve:

- transparency around parameters, assumptions, analytical approaches, and time frames;
- comparability of results across different scenarios and analytical approaches;
- adequate documentation for the methodology, assumptions, data sources, and analytics;
- consistency of methodology year over year;
- sound governance over scenario analysis conduct, validation, approval, and application; and
- effective disclosure of scenario analysis that will inform and promote a constructive dialogue between investors and organizations on the range of potential impacts and resilience of the organization’s strategy under various plausible climate-related scenarios.

In applying scenario analysis, organizations should consider general implications for their strategies, capital allocation, and costs and revenues, both at an enterprise-wide level and at the level of specific regions and markets where specific implications of climate change for the organization are likely to arise. Financial-sector organizations should consider using scenario analysis to evaluate the potential impact of climate-related scenarios on individual assets or investments, investments or assets in a particular sector or region, or underwriting activities.

The Task Force’s supplemental guidance recognizes that organizations will be at different levels of experience in using scenario analysis. However, it is important for organizations to use scenario analysis and develop the necessary organizational skills and capabilities to assess climate-related risks and opportunities, with the expectation that organizations will evolve and deepen their use of scenario analysis over time. The objective is to assist investors and other stakeholders in better understanding:

- the degree of robustness of the organization’s strategy and financial plans under different plausible future states of the world;
- how the organization may be positioning itself to take advantage of opportunities and plans to mitigate or adapt to climate-related risks; and
- how the organization is challenging itself to think strategically about longer-term climate-related risks and opportunities.

---

48 Organizations considering undertaking scenario analysis may wish to conduct various sensitivity analyses around key climate factors as a precursor to scenario analysis, recognizing that sensitivity analysis and scenario analysis are different, but complementary, processes.
5. Challenges and Benefits of Conducting Scenario Analysis

Scenario analysis is a well-established method for developing strategic plans that are more flexible and robust to a range of plausible future states. As previously discussed (Figure 7, p. 26) it is particularly useful for assessing issues with possible outcomes that are highly uncertain, that play out over the medium to longer term, and that are potentially disruptive. Scenario analysis can help to better frame strategic issues, assess the range of potential management actions that may be needed, engage more productively in strategic conversations, and identify indicators to monitor the external environment. Importantly, climate-related scenario analysis can provide the foundation for more effective engagement with investors on an organization’s strategic and business resiliency.

Conducting climate-related scenario analysis, however, is not without challenges. First, most scenarios have been developed for global and macro assessments of potential climate-related impacts that can inform policy makers. These climate-related scenarios do not always provide the ideal level of transparency, range of data outputs, and functionality of tools that would facilitate their use in a business or investment context.

Second, the availability and granularity of data can be a challenge for organizations attempting to assess various energy and technology pathways or carbon constraints in different jurisdictions and geographic locations.

Third, the use of climate-related scenario analysis to assess potential business implications is still at an early stage. Although a handful of the largest organizations and investors are using climate-related scenario analysis as part of their strategic planning and risk management processes, many organizations are just beginning to explore its use. Sharing experiences and approaches to climate-related scenario analysis across organizations, therefore, is critical to advancing the use of climate-related scenario analysis. Organizations may be able to play an important role in this regard by facilitating information and experience exchanges among themselves; collectively developing tools, data sets, and methodologies; and working to set standards. Organizations across many different sectors will inevitably need to learn by doing. Some may seek guidance from other industry participants and experts on how to apply climate-related scenarios to make forward-looking analyses of climate-related risks and opportunities.

Addressing these challenges and advancing the use of climate-related scenario analysis will require further work. These challenges, however, are not insurmountable and can be addressed. Organizations should undertake scenario analysis in the near term to capture the important benefits for assessing climate-related risks and opportunities and improve their capabilities as tools and data progress over time.
E Key Issues Considered and Areas for Further Work
E  Key Issues Considered and Areas for Further Work

The diverse perspectives of Task Force members as well as outreach efforts, including two public consultations, resulting in over 500 responses, hundreds of industry interviews, several focus groups, and multiple webinars, provided valuable insight into the challenges that different organizations—both financial and non-financial—may encounter in preparing disclosures consistent with the Task Force's recommendations. The Task Force considered these issues and others in developing and then finalizing its recommendations and sought to balance the burden of disclosure on preparers with the need for consistent and decision-useful information for users (i.e., investors, lenders, and insurance underwriters). This section describes the key issues considered by the Task Force, significant public feedback received by the Task Force related to those issues, the ultimate disposition of the issues, and, in some cases, areas where further work may be warranted. Figure 9 summarizes areas the Task Force identified, through its own analysis as well as through public feedback, as warranting further research and analysis or the development of methodologies and standards.

---

**Figure 9**

**Key Areas for Further Work**

| Relationship to Other Reporting Initiatives | Encourage standard setting organizations and others to actively work toward greater alignment of frameworks and to support adoption |
| Scenario Analysis | Further develop applicable 2°C or lower transition scenarios and supporting outputs, tools, and user interfaces |
| | Develop broadly accepted methodologies, datasets, and tools for scenario-based evaluation of physical risk by organizations |
| | Make datasets and tools publicly available and provide commonly available platforms for scenario analysis |
| Data Availability and Quality and Financial Impact | Undertake further research and analysis to better understand and measure how climate-related issues translate into potential financial impacts for organizations in financial and non-financial sectors |
| | Improve data quality and further develop standardized metrics for the financial sector, including better defining carbon-related assets and developing metrics that address a broader range of climate-related risks and opportunities |
| | Increase organizations’ understanding of climate-related risks and opportunities |
| Example Disclosures | Provide example disclosures to assist preparers in developing disclosures consistent with the Task Force’s recommendations |

---

*In response to the second consultation, organizations asked for example disclosures to gain a better understanding of how the recommended information may be disclosed. The Task Force acknowledges the development of these examples as an area of further work.*
1. Relationship to Other Reporting Initiatives

Through the Task Force’s outreach efforts, some organizations expressed concern that multiple disclosure frameworks and mandatory reporting requirements increase the administrative burden of disclosure efforts. Specifically, the additional time, cost, and effort required to analyze and disclose new climate-related information could penalize those with less capacity to respond.

The Task Force considered existing voluntary and mandatory climate-related reporting frameworks in developing its recommendations and provides information in the Annex on the alignment of existing frameworks, including those developed by the CDP (formerly the Carbon Disclosure Project), Climate Disclosure Standards Board (CDSB), the Global Reporting Initiative (GRI), the International Integrated Reporting Council (IIRC), and the Sustainability Accounting Standards Board (SASB), with the Task Force’s recommended disclosures. The Task Force expects preparers disclosing climate-related information under other regimes will be able to use existing processes and content when developing disclosures based on the Task Force’s recommendations.

The Task Force’s recommendations provide a common set of principles that should help existing disclosure regimes come into closer alignment over time. Preparers, users, and other stakeholders share a common interest in encouraging such alignment as it relieves a burden for reporting entities, reduces fragmented disclosure, and provides greater comparability for users. The Task Force also encourages standard setting bodies to support adoption of the recommendations and alignment with the recommended disclosures.

2. Location of Disclosures and Materiality

In considering possible reporting venues, the Task Force reviewed existing regimes for climate-related disclosures across G20 countries. While many G20 countries have rules or regulatory guidance that require climate-related disclosure for organizations, most are not explicitly focused on climate-related financial information.50 In addition, the locations of these disclosures vary significantly and range from surveys sent to regulators to sustainability reports to annual financial filings (see Appendix 4).

The Task Force also reviewed financial filing requirements applicable to public companies across G20 countries and found that in most G20 countries, issuers have a legal obligation to disclose material information in their financial reports—which includes material, climate-related information. Such reporting may take the form of a general disclosure of material information, but many jurisdictions require disclosure of material information in specific sections of the financial filing (e.g., in a discussion on risk factors).51

Based on its review, the Task Force determined that preparers of climate-related financial disclosures should provide such disclosures in their mainstream (i.e., public) annual financial filings.52 The Task Force believes publication of climate-related financial information in mainstream financial filings will foster broader utilization of such disclosures, promoting an informed understanding of climate-related issues by investors and others, and support shareholder engagement. Importantly, in determining whether information is material, the Task Force believes organizations should determine materiality for climate-related issues consistent with how they determine the materiality of other information included in their financial filings. In addition, the Task Force cautions organizations against prematurely concluding that climate-
related risks and opportunities are not material based on perceptions of the longer-term nature of some climate-related risks.

As part of the Task Force’s second public consultation, some organizations expressed concern about disclosing information in financial filings that is not clearly tied to an assessment of materiality. The Task Force recognizes organizations’ concerns about disclosing information in annual financial filings that is not clearly tied to an assessment of materiality. However, the Task Force believes disclosures related to the Governance and Risk Management recommendations should be provided in annual financial filings. Because climate-related risk is a non-diversifiable risk that affects nearly all sectors, many investors believe it requires special attention. For example, in assessing organizations’ financial and operating results, many investors want insight into the governance and risk management context in which such results are achieved. The Task Force believes disclosures related to its Governance and Risk Management recommendations directly address this need for context and should be included in annual financial filings.

For disclosures related to the Strategy and Metrics and Targets recommendations, the Task Force believes organizations should provide such information in annual financial filings when the information is deemed material. Certain organizations—those in the four non-financial groups that have more than one billion USDE in annual revenue—should consider disclosing information related to these recommendations in other reports when the information is not deemed material and not included in financial filings.53,54 Because these organizations are more likely than others to be affected financially over time due to their significant GHG emissions or energy or water dependencies, investors are interested in monitoring how the organizations’ strategies evolve.

In addition, the Task Force recognizes reporting by asset managers and asset owners to their clients and beneficiaries, respectively, generally occurs outside mainstream financial filings (Figure 10). For purposes of adopting the Task Force’s recommendations, asset managers and asset owners should use their existing channels of financial reporting to their clients and beneficiaries where relevant and feasible. Likewise, asset managers and asset owners should consider materiality in the context of their respective mandates and investment performance for clients and beneficiaries.

Figure 10
Reporting by Asset Owners
The financial reporting requirements and practices of asset owners vary widely and differ from what is required of organizations with public debt or equity. Some asset owners have no public reporting, while others provide extensive public reporting. For purposes of adopting the Task Force’s recommendations, asset owners should use their existing channels of financial reporting to their beneficiaries and others where relevant and feasible.

Reporting by Asset Managers
Reporting to clients by asset managers also takes different forms, depending on the requirements of the client and the types of investments made. For example, an investor in a mutual fund might receive quarterly, or download from the asset manager’s website, a “fund fact sheet” that reports, among other information, the top holdings by value, the top performers by returns, and the carbon footprint of the portfolio against a stated benchmark. An investor in a segregated account might receive more detailed reporting, including items such as the aggregate carbon intensity of the portfolio compared with a benchmark, the portfolio’s exposure to green revenue (and how this changes over time), or insight into portfolio positioning under different climate scenarios. The Task Force appreciates that climate-related risk reporting by asset managers is in the very early stages and encourages progress and innovation by the industry.

53 The Task Force chose a one billion USDE annual revenue threshold because it captures organizations responsible for over 90% of Scope 1 and 2 GHG emissions in the industries represented by the four non-financial groups (about 2,250 organizations out of roughly 15,000).
54 “Other reports” should be official company reports that are issued at least annually, widely distributed and available to investors and others, and subject to internal governance processes that are substantially similar to those used for financial reporting.
3. Scenario Analysis

As part of the Task Force’s second public consultation, many organizations said scenario analysis is a useful tool to help assess risks and understand potential implications of climate change; however, they also identified areas where the Task Force’s recommendations and guidance could be improved. In particular, organizations asked the Task Force to identify standardized climate-related scenarios for organizations to use and clarify the information related to scenarios that should be disclosed. They also noted expectations around disclosures and climate-related scenario analysis should be proportionate to the size of the reporting entity and not onerous for smaller organizations. In addition, some organizations noted that the disclosures related to strategy could put organizations at greater risk of litigation given the high degree of uncertainty around the future timing and magnitude of climate-related impacts.

In finalizing its recommendations and guidance, the Task Force clarified organizations should describe how resilient their strategies are to climate-related risks and opportunities, taking into consideration a transition to a lower-carbon economy consistent with a 2°C or lower scenario and, where relevant, scenarios consistent with more extreme physical risks. To address concerns about proportionality, the Task Force established a threshold for organizations in the four non-financial groups that should perform more robust scenario analysis and disclose additional information on the resiliency of their strategies.

On the issue of recommending specific standardized or reference climate-related scenarios for organizations to use, Task Force members agreed that while such an approach is intuitively appealing, it is not a practical solution at this time. Existing, publicly available climate-related scenarios are not structured or defined in such a way that they can be easily applied consistently across different industries or across organizations within an industry.

The Task Force recognizes that incorporating scenario analysis into strategic planning processes will improve over time as organizations “learn by doing.” To facilitate progress in this area, the Task Force encourages further work as follows:

- further developing 2°C or lower transition scenarios that can be applied to specific industries and geographies along with supporting outputs, tools, and user interfaces;
- developing broadly accepted methodologies, data sets, and tools for scenario-based evaluation of physical risk by organizations;
- making these data sets and tools publicly available to facilitate use by organizations, reduce organizational transaction costs, minimize gaps between jurisdictions in terms of technical expertise, enhance comparability of climate-related risk assessments by organizations, and help ensure comparability for investors; and
- creating more industry specific (financial and non-financial) guidance for preparers and users of climate-related scenarios.

4. Data Availability and Quality and Financial Impact

The Task Force developed supplemental guidance for the four non-financial groups that account for the largest proportion of GHG emissions, energy usage, and water usage; and, as part of that supplemental guidance, the Task Force included several illustrative metrics around factors that may be indicative of potential financial implications for climate-related risks and opportunities. As part of the second public consultation, several organizations provided feedback on the illustrative metrics, and common themes included (1) improving the comparability and consistency of the metrics, (2) clarifying the links among the metrics, climate-related risks and opportunities, and potential financial implications, (3) simplifying the metrics, and (4) providing additional guidance on the metrics, including how to calculate key metrics. Organizations also raised concerns about
the lack of standardized data and metrics in the financial sector, which complicates preparers' ability to develop decision-useful metrics and users' ability to compare metrics across organizations.

The Task Force recognizes these concerns as well as broader challenges related to data availability and quality, as described below.

- The gaps in emissions measurement methodologies, including Scope 3 emissions and product life-cycle emissions methodologies, make reliable and accurate estimates difficult.\textsuperscript{55,56}
- The lack of robust and cost-effective tools to quantify the potential impact of climate-related risks and opportunities at the asset and project level makes aggregation across an organization's activities or investment portfolios problematic and costly.
- The need to consider the variability of climate-related impacts across and within different sectors and markets further complicates the process (and magnifies the cost) of assessing potential climate-related financial impacts.
- The high degree of uncertainty around the timing and magnitude of climate-related risks makes it difficult to determine and disclose the potential impacts with precision.

In finalizing its supplemental guidance, the Task Force addressed the redundancy of the metrics; simplified the non-financial illustrative metrics tables; ensured consistent terminology was used; and clarified the links between the metrics, climate-related risks and opportunities, and potential financial implications. In addition, the Task Force encourages further research and analysis by sector and industry experts to (1) better understand and measure how climate-related issues translate into potential financial impacts; (2) develop standardized metrics for the financial sector, including better defining carbon-related assets; and (3) increase organizations' understanding of climate-related risks and opportunities. As it relates to the broader challenges with data quality and availability, the Task Force encourages preparers to include in their disclosures a description of gaps, limitations, and assumptions made as part of their assessment of climate-related issues.

5. GHG Emissions Associated with Investments

In its supplemental guidance for asset owners and asset managers issued on December 14, 2016, the Task Force asked such organizations to provide GHG emissions associated with each fund, product, or investment strategy normalized for every million of the reporting currency invested. As part of the Task Force's public consultation as well as in discussions with preparers, some asset owners and asset managers expressed concern about reporting on GHG emissions related to their own or their clients' investments given the current data challenges and existing accounting guidance on how to measure and report GHG emissions associated with investments. In particular, they voiced concerns about the accuracy and completeness of the reported data and limited application of the metric to asset classes beyond public equities. Organizations also highlighted that GHG emissions associated with investments cannot be used as a sole indicator for investment decisions (i.e., additional metrics are needed) and that the metric can fluctuate with share price movements since it uses investors' proportional share of total equity.\textsuperscript{57}

In consideration of the feedback received, the Task Force has replaced the GHG emissions associated with investments metric in the supplemental guidance for asset owners and asset managers with a weighted average carbon intensity metric. The Task Force believes the weighted

---

\textsuperscript{55} Scope 3 emissions are all indirect emissions that occur in the value chain of the reporting company, including both upstream and downstream emissions. See Greenhouse Gas Protocol, "Calculation Tools, FAQ."

\textsuperscript{56} Product life cycle emissions are all the emissions associated with the production and use of a specific product, including emissions from raw materials, manufacture, transport, storage, sale, use, and disposal. See Greenhouse Gas Protocol, "Calculation Tools, FAQ."

\textsuperscript{57} Because the metric uses investors' proportional share of total equity, increases in the underlying companies' share prices, all else equal, will result in a decrease in the carbon footprinting number even though GHG emissions are unchanged.
average carbon intensity metric, which measures exposure to carbon-intensive companies, addresses many of the concerns raised. For example, the metric can be applied across asset classes, is fairly simple to calculate, and does not use investors' proportional share of total equity and, therefore, is not sensitive to share price movements.

The Task Force acknowledges the challenges and limitations of current carbon footprinting metrics, including that such metrics should not necessarily be interpreted as risk metrics. Nevertheless, the Task Force views the reporting of weighted average carbon intensity as a first step and expects disclosure of this information to prompt important advancements in the development of decision-useful, climate-related risk metrics. In this regard, the Task Force encourages asset owners and asset managers to provide other metrics they believe are useful for decision making along with a description of the methodology used. The Task Force recognizes that some asset owners and asset managers may be able to report the weighted average carbon intensity and other metrics on only a portion of their investments given data availability and methodological issues. Nonetheless, increasing the number of organizations reporting this type of information should help speed the development of better climate-related risk metrics.

6. Remuneration

In the supplemental guidance for the Energy Group, the Task Force asked such organizations to consider disclosing whether and how performance metrics, including links to remuneration policies, take into consideration climate-related risks and opportunities. As part of its second public consultation, the Task Force asked whether the guidance should extend to organizations beyond those in the Energy group and, if so, to which types of organizations. The majority of organizations that commented on this issue responded that the guidance should be extended to other organizations; and many suggested that the guidance should apply to organizations more likely to be affected by climate-related risks. In consideration of the feedback received, the Task Force revised its guidance to ask organizations, where climate-related risks are material, to consider describing whether and how related performance metrics are incorporated into remuneration policies.

7. Accounting Considerations

As part of its work, the Task Force considered the interconnectivity of its recommendations with existing financial statement and disclosure requirements. The Task Force determined that the two primary accounting standard setting bodies, the International Accounting Standards Board (IASB) and the Financial Accounting Standards Board (FASB), have issued standards to address risks and uncertainties affecting companies. Both International Accounting Standard (IAS) 37 “Provisions, Contingent Liabilities and Contingent Assets” and Accounting Standards Codification (ASC) 450 “Contingencies” provide guidance on how to account for and disclose contingencies. Additionally, IAS 36 “Impairment of Assets” and ASC 360 “Long-lived Asset Impairment” provide guidance on assessing the impairment of long-lived assets. The disclosures of both contingencies and management’s assessment and evaluation of long-lived assets for potential impairment are critically important in assisting stakeholders in understanding an organization’s ability to meet future reported earnings and cash flow goals.

In most G20 countries, financial executives will likely recognize that the Task Force's disclosure recommendations should result in more quantitative financial disclosures, particularly disclosure of metrics, about the financial impact that climate-related risks have or could have on an organization. Specifically, asset impairments may result from assets adversely impacted by the effects of climate change and/or additional liabilities may need to be recorded to account for regulatory fines and penalties resulting from enhanced regulatory standards. Additionally, cash flows from operations, net income, and access to capital could all be impacted by the effects of...
climate-related risks (and opportunities). Therefore, financial executives (e.g., chief financial officers, chief accounting officers, and controllers) should be involved in the organization’s evaluation of climate-related risks and opportunities and the efforts undertaken to manage the risks and maximize the opportunities. Finally, careful consideration should be given to the linkage between scenario analyses performed to assess the resilience of an organization’s strategy to climate-related risks and opportunities (as suggested in the Task Force’s recommendations) and assumptions underlying cash flow analyses used to assess asset (e.g., goodwill, intangibles, and fixed assets) impairments.

8. Time Frames for Short, Medium, and Long Term
As part of the Task Force’s second public consultation, some organizations asked the Task Force to define specific ranges for short, medium, and long term. Because the timing of climate-related impacts on organizations will vary, the Task Force believes specifying time frames across sectors for short, medium, and long term could hinder organizations’ consideration of climate-related risks and opportunities specific to their businesses. The Task Force is, therefore, not defining time frames and encourages preparers to decide how to define their own time frames according to the life of their assets, the profile of the climate-related risks they face, and the sectors and geographies in which they operate.

In assessing climate-related issues, organizations should be sensitive to the time frames used to conduct their assessments. While many organizations conduct operational and financial planning over a 1-2 year time frame and strategic and capital planning over a 2-5 year time frame, climate-related risks may have implications for an organization over a longer period. It is, therefore, important for organizations to consider the appropriate time frames when assessing climate-related risks.

9. Scope of Coverage
To promote more informed investing, lending, and insurance underwriting decisions, the Task Force recommends all financial and non-financial organizations with public debt and/or equity adopt its recommendations. Because climate-related risks and opportunities are relevant for organizations across all sectors, the Task Force encourages all organizations to adopt these recommendations. In addition, the Task Force believes that asset managers and asset owners, including public- and private-sector pension plans, endowments, and foundations, should implement its recommendations. The Task Force believes climate-related financial information should be provided to asset managers’ clients and asset owners’ beneficiaries so that they may better understand the performance of their assets, consider the risks of their investments, and make more informed investment choices.

Consistent with existing global stewardship frameworks, asset owners should engage with the organizations in which they invest to encourage adoption of these recommendations. They should also ask their asset managers to adopt these recommendations. Asset owners’ expectations in relation to climate-related risk reporting from organizations and asset managers are likely to evolve as data availability and quality improves, understanding of climate-related risk increases, and risk measurement methodologies are further developed.

The Task Force recognizes that several asset owners expressed concern about being identified as the potential “policing body” charged with ensuring adoption of the Task Force’s recommendations by asset managers and underlying organizations. The Task Force appreciates that expectations must be reasonable and that asset owners have many competing priorities, but

---

58 Thresholds for climate-related financial disclosures should be aligned to the financial disclosure requirements more broadly in the jurisdictions where a preparer is incorporated and/or operates and is required to make financial disclosures.
encourages them to help drive adoption of the recommendations. Because asset owners and asset managers sit at the top of the investment chain, they have an important role to play in influencing the organizations in which they invest to provide better climate-related financial disclosures.

10. Organizational Ownership

Some organizations have not formalized responsibility for climate-related risk assessment and management. Even for organizations with clearly assigned responsibilities for climate-related issues, the relationship between those responsible for climate-related risk (e.g., “environmental, social and governance” experts, chief investment officers) and those in the finance function can range from regularly scheduled interactions and exchanges of information to minimal or no interaction. According to some preparers, lack of clarity around responsibility for climate-related risk assessments and management, compounded by a lack of integration into organizations’ financial reporting processes, could adversely affect implementation of the recommendations.

The Task Force believes that by encouraging disclosure of climate-related financial information in public financial filings, coordination between organizations’ climate-related risk experts and the finance function will improve. Similar to the way organizations are evolving to include cyber security issues in their strategic and financial planning efforts, so too should they evolve for climate-related issues.
F Conclusion
F. Conclusion

The Task Force's recommendations are a foundation for improved reporting of climate-related issues in mainstream financial filings with several resulting benefits (outlined in Figure 11). The recommendations aim to be ambitious, but also practical for near-term adoption. The Task Force expects that reporting of climate-related risks and opportunities will evolve over time as organizations, investors, and others contribute to the quality and consistency of the information disclosed.

1. Evolution of Climate-Related Financial Disclosures

The Task Force recognizes that challenges exist, but all types of organizations can develop disclosures consistent with its recommendations. The recommendations provide a foundation for immediate adoption and are flexible enough to accommodate evolving practices. As understanding, data analytics, and modeling of climate-related issues become more widespread, disclosures can mature accordingly.

Organizations already reporting climate-related financial information under other frameworks may be well positioned to disclose under this framework immediately and are encouraged to do so. For such organizations, significant effort has gone into developing processes and collecting information needed for disclosing under these regimes. The Task Force expects these organizations will be able to use existing processes when providing disclosures in annual financial filings based on the Task Force's recommendations.59,60 Those with less experience can begin by considering and disclosing how climate-related issues may be relevant in their current governance, strategy, and risk management practices. This initial level of disclosure will allow investors to review, recognize, and understand how organizations consider climate-related issues and their potential financial impact.

Importantly, the Task Force recognizes organizations need to make financial disclosures in accordance with their national disclosure requirements. To the extent certain elements of the recommendations are incompatible with national disclosure requirements for financial filings, the Task Force encourages organizations to disclose those elements through other reports. Such other reports should be official company reports that are issued at least annually, widely distributed and available to investors and others, and subject to internal governance processes that are the same or substantially similar to those used for financial reporting.

2. Widespread Adoption Critical

In the Task Force's view, the success of its recommendations depends on near-term, widespread adoption by organizations in the financial and non-financial sectors. Through widespread adoption, financial risks and opportunities related to climate change will become a natural part of

---

59 The Task Force recognizes the structure and content of financial filings differs across jurisdictions and, therefore, believes organizations are in the best position to determine where and how the recommended disclosures should be incorporated in financial filings.

60 The Task Force encourages organizations where climate-related issues could be material in the future to begin disclosing climate-related financial information outside financial filings to facilitate the incorporation of such information into financial filings once climate-related issues are determined to be material.
organizations’ risk management and strategic planning processes. As this occurs, organizations’ and investors’ understanding of the potential financial implications associated with transitioning to a lower-carbon economy and physical risks will grow, information will become more decision-useful, and risks and opportunities will be more accurately priced, allowing for the more efficient allocation of capital. Figure 12 outlines a possible path for implementation.

Widespread adoption of the recommendations will require ongoing leadership by the G20 and its member countries. Such leadership is essential to continue to make the link between these recommendations and the achievements of global climate objectives. Leadership from the FSB is also critical to underscore the importance of better climate-related financial disclosures for the functioning of the financial system.

The Task Force is not alone in its work. A variety of stakeholders, including stock exchanges, investment consultants, credit rating agencies, and others can provide valuable contributions toward adoption of the recommendations. The Task Force believes that advocacy for these standards will be necessary for widespread adoption, including educating organizations that will disclose climate-related financial information and those that will use those disclosures to make financial decisions. To this end, the Task Force notes that strong support by the FSB and G20 authorities would have a positive impact on implementation. With the FSB’s extension of the Task Force through September 2018, the Task Force will work to encourage adoption of the recommendations and support the FSB and G20 authorities in promoting the advancement of climate-related financial disclosures.

Appendix 2: Task Force Objectives and Approach

1. Objectives
The Task Force engaged with key stakeholders throughout the development of its recommendations to ensure that its work would (1) promote alignment across existing disclosure regimes, (2) consider the perspectives of users and the concerns of preparers of climate-related financial disclosures, and (3) be efficiently implemented by organizations in their financial reporting.

2. Approach
In addition to the expertise of its members, a broad range of external resources informed the Task Force's recommendations, including existing voluntary and mandatory climate-related reporting frameworks, governance and risk management standards, government reports and research, expert resources, and various other stakeholders such as industry participants, trade associations, and non-governmental organizations (NGOs).

a. Leveraging Expertise
Task Force members come from a range of companies, including large financial companies, large non-financial companies, accounting and consulting firms, and credit rating agencies, and brought a range of practical experience, expertise, and global perspectives on preparing and using climate-related financial disclosures. Through eight plenary meetings, Task Force members contributed significantly to developing a consensus-based, industry-led approach to climate-related financial disclosure.

Due to the technically challenging and broad focus of its work, the Task Force also sought input from experts in the field of climate change, particularly in relation to scenario analysis. The Task Force engaged Environmental Resources Management (ERM) to inform its work by developing a technical paper on scenario analysis—The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities. Several members of the Task Force, joined by representatives from 2° Investing Initiative (2°ii), Bloomberg New Energy Finance (BNEF), Bloomberg Quantitative Risk Experts, Carbon Tracker, CDP, and the London School of Economics and Political Science led a working group to oversee ERM's technical considerations. A workshop was also held with experts from Oxford Martin School. Additionally, the International Energy Agency (IEA) provided input regarding how scenario analysis can be conducted and used.

b. Research and Information Gathering
The Task Force's work drew on publications and research conducted by governments, NGOs, industry participants, as well as disclosure regimes with a focus on climate-related issues. The Task Force reviewed existing mandatory and voluntary reporting regimes for climate-related disclosure to identify commonalities and gaps across existing regimes and to determine areas meriting further research and analysis by the Task Force. The work of organizations regarded as standard setters, as well as several organizations active in developing reporting mechanisms for climate-related issues, served as the primary references for the Task Force in developing its recommendations and supporting guidance. The Task Force also considered resources related to sector-specific climate issues in the development of the supplemental guidance.
c. Outreach and Engagement

Engagement with users, preparers, and other stakeholders in relevant industries and sectors across G20 countries and other countries was important in developing the Task Force’s recommendations. The Task Force conducted five types of engagement to support this effort: public consultation, industry interviews, focus groups, outreach events, and webinars.

Such engagement served two primary purposes: (1) to raise the level of awareness and educate stakeholders on the Task Force’s work and (2) to solicit feedback from stakeholders on the Task Force’s proposed recommended disclosures and supplemental guidance for specific sectors. In total, more than 2,700 individuals in 43 countries were included in the Task Force’s outreach and engagement (Figure A2.1).

Public Consultations

The Task Force conducted two public consultations. The first followed the April 1, 2016 publication of the Task Force’s Phase I Report, which set out the scope and high-level objectives for the Task Force’s work. The Task Force solicited input to guide the development of its recommendations for voluntary climate-related financial disclosures. In total, 203 participants from 24 countries responded to the first public consultation. Respondents represented the financial sector, non-financial sectors, NGOs, and other organizations. Public consultation comments indicated support for disclosures on scenario analysis as well as disclosures tailored for specific sectors. Key themes from the first public consultation, which informed the Task Force’s recommendations and guidance, are included in Table A2.1 (p. 48).
A second public consultation followed the release of the Task Force's report in December 2016. The Task Force conducted the second consultation through an online questionnaire designed to gather feedback on the recommendations, guidance, and key issues identified by the Task Force. The Task Force received 306 responses to its online questionnaire and 59 comment letters on the recommendations and guidance from a variety of organizations in 30 countries. The majority of responses came from Europe (57 percent), followed by North America (20 percent), Asia Pacific (19 percent), South America (four percent), and the Middle East/Africa (less than one percent). Forty-five percent of respondents provided perspective as users of disclosure, 44 percent as preparers of disclosure, and 11 percent as "other." Respondents came from the financial sector (43 percent), non-financial sectors (18 percent), or other types of organizations (39 percent).

<td>74%</td>
</tr>
</tbody>
</table>

61 Of the 59 respondents that submitted comment letters, 45 also completed the online questionnaire, resulting in a total of 320 unique responses.

62 The other types of organizations included research and advocacy NGOs; standard setting NGOs; data analytics, consulting, and research organizations; academia; and accounting associations.
Overall, respondents were generally supportive of the Task Force's recommendations as shown in Table A2.2 (p. 48); however, several provided specific and constructive feedback on the report. The key themes from this feedback are included in Table A2.3. For additional information regarding the results of the second public consultation, please view the TCFD Public Consultation Summary 2017 on the Task Force's website.

**Industry Interviews and Focus Groups**

Prior to the December 2016 release of the Task Force's report for public consultation, the Task Force conducted 128 industry interviews with users and preparers of financial statements to gather feedback regarding the Task Force's draft recommendations, supplemental guidance for certain sectors, and other considerations. Industry interview participants included chief financial officers, investment officers, other finance and accounting officers, risk officers, sustainability officers, and others. Forty-three percent of the participants held finance, legal, or risk positions and 39 percent held environmental or sustainability roles.

Task Force representatives conducted two rounds of industry interviews. The initial round of interviews focused on the recommendations and guidance; the second round emphasized specific recommendations and sector-specific guidance. Organizations invited to participate in the interviews met two primary criteria: (1) represented industry and sector leaders likely to be impacted by climate-related risks and opportunities and (2) provided geographic diversity to ensure coverage from each G20 and Financial Stability Board (FSB) represented country.

The interviews provided valuable information that informed the Task Force's recommendations and guidance as reflected in the report issued for public consultation in December 2016. Industry interview themes were consistent with those identified in the second public consultation. Preparers raised concerns about the relationship of the Task Force's recommendations to other reporting initiatives and the accuracy and reliability of information requested. Users commented that establishing consistency in metrics would be beneficial, acknowledged data quality challenges, and provided thoughts on scenario analysis (e.g., would like preparers to use of a range of scenarios, interested in knowing how scenario analysis is used in the organization).

Subsequent to the December 2016 release of the Task Force's report for public consultation, the Task Force conducted five focus groups with 32 individuals from six countries representing organizations in specific sectors and industries to solicit feedback on scenario analysis and carbon footprinting metrics. In the two focus groups for the financial sector, participants expressed support for the Task Force's work, noting current challenges related to quality and consistency in
reported climate-related information. Asset owners and asset managers also provided feedback on the benefits and limitations of different carbon footprinting metrics. In the three focus groups for non-financial sectors, participants in oil and gas and utilities industries provided specific feedback on their use of scenario analysis and challenges related to disclosing certain information in financial filings.

**Outreach Events**

The Task Force sponsored 18 public outreach events in 13 countries, and Task Force members presented the recommendations at 91 other events including conferences, forums, and meetings sponsored by industry associations, NGOs, government agencies, corporations, and other organizations. The 18 Task Force-sponsored events informed stakeholders of the Task Force's work and recommendations and included panel discussions and keynote speeches by prominent climate-risk and financial experts. Attendees included representatives of financial and non-financial organizations who spanned a variety of corporate functions, including strategy, risk, accounting, portfolio and investment management, corporate sustainability, as well as representatives from industry associations, NGOs, government agencies, research providers, academia, accounting and consulting firms, and media.

**Webinars**

Prior to the release of the report in December 2016 for public consultation, the Task Force offered seven webinars to educate and increase awareness of the Task Force's efforts as well as to collect additional feedback. Of the seven webinars, the Task Force hosted four webinars and participated in three additional webinars by partnering with the following organizations: Business for Social Responsibility, Global Financial Markets Association, and the National Association of Corporate Directors. These webinars served to supplement the in-person outreach events and offered global stakeholders, regardless of location, an opportunity to engage with the Task Force. The webinars included 538 attendees representing 365 organizations across 23 countries. After the release of the report, the Task Force held three webinars to present its recommendations and to solicit additional feedback. The three webinars included 255 attendees representing 209 organizations across 25 countries. In total, the Task Force offered ten webinars, reaching 793 attendees across 30 countries.
Appendix 3: Fundamental Principles for Effective Disclosure

To underpin its recommendations and help guide current and future developments in climate-related financial reporting, the Task Force developed a set of principles for effective disclosure.\(^{63}\) As understanding of, and approaches to, climate-related issues evolve over time, so too will climate-related financial reporting. These principles can help achieve high-quality and decision-useful disclosures that enable users to understand the impact of climate change on organizations. The Task Force encourages organizations adopting its recommendations to consider these principles as they develop climate-related financial disclosures.

The Task Force’s disclosure principles are largely consistent with other mainstream, internationally accepted frameworks for financial reporting and are generally applicable to most providers of financial disclosures. They are informed by the qualitative and quantitative characteristics of financial information and further the overall goals of producing disclosures that are consistent, comparable, reliable, clear, and efficient, as highlighted by the FSB in establishing the Task Force. The principles, taken together, are designed to assist organizations in making clear the linkages and connections between climate-related issues and their governance, strategy, risk management, and metrics and targets.

Principle 1: Disclosures should present relevant information

The organization should provide information specific to the potential impact of climate-related risks and opportunities on its markets, businesses, corporate or investment strategy, financial statements, and future cash flows.

- Disclosures should be eliminated if they are immaterial or redundant to avoid obscuring relevant information. However, when a particular risk or issue attracts investor and market interest or attention, it may be helpful for the organization to include a statement that the risk or issue is not significant. This shows that the risk or issue has been considered and has not been overlooked.

- Disclosures should be presented in sufficient detail to enable users to assess the organization’s exposure and approach to addressing climate-related issues, while understanding that the type of information, the way in which it is presented, and the accompanying notes will differ between organizations and will be subject to change over time.

- Climate-related impacts can occur over the short, medium, and long term. Organizations can experience chronic, gradual impacts (such as impacts due to shifting temperature patterns), as well as acute, abrupt disruptive impacts (such as impacts from flooding, drought, or sudden regulatory actions). An organization should provide information from the perspective of the potential impact of climate-related issues on value creation, taking into account and addressing the different time frames and types of impacts.

- Organizations should avoid generic or boilerplate disclosures that do not add value to users’ understanding of issues. Furthermore, any proposed metrics should adequately describe or serve as a proxy for risk or performance and reflect how an organization manages the risk and opportunities.

\(^{63}\) These principles are adapted from those included in the Enhanced Disclosure Task Force’s “Enhancing the Risk Disclosures of Banks.”
Principle 2: Disclosures should be specific and complete

- An organization's reporting should provide a thorough overview of its exposure to potential climate-related impacts; the potential nature and size of such impacts; the organization's governance, strategy, processes for managing climate-related risks, and performance with respect to managing climate-related risks and opportunities.

- To be sufficiently comprehensive, disclosures should contain historical and future-oriented information in order to allow users to evaluate their previous expectations relative to actual performance and assess possible future financial implications.

- For quantitative information, the disclosure should include an explanation of the definition and scope applied. For future-oriented data, this includes clarification of the key assumptions used. Forward-looking quantitative disclosure should align with data used by the organization for investment decision making and risk management.

- Any scenario analyses should be based on data or other information used by the organization for investment decision making and risk management. Where appropriate, the organization should also demonstrate the effect on selected risk metrics or exposures to changes in the key underlying methodologies and assumptions, both in qualitative and quantitative terms.

Principle 3: Disclosures should be clear, balanced, and understandable

- Disclosures should be written with the objective of communicating financial information that serves the needs of a range of financial sector users (e.g., investors, lenders, insurers, and others). This requires reporting at a level beyond compliance with minimum requirements. The disclosures should be sufficiently granular to inform sophisticated users, but should also provide concise information for those who are less specialized. Clear communication will allow users to identify key information efficiently.

- Disclosures should show an appropriate balance between qualitative and quantitative information and use text, numbers, and graphical presentations as appropriate.

- Fair and balanced narrative explanations should provide insight into the meaning of quantitative disclosures, including the changes or developments they portray over time. Furthermore, balanced narrative explanations require that risks as well as opportunities be portrayed in a manner that is free from bias.

- Disclosures should provide straightforward explanations of issues. Terms used in the disclosures should be explained or defined for a proper understanding by the users.

Principle 4: Disclosures should be consistent over time

- Disclosures should be consistent over time to enable users to understand the development and/or evolution of the impact of climate-related issues on the organization's business. Disclosures should be presented using consistent formats, language, and metrics from period to period to allow for inter-period comparisons. Presenting comparative information is preferred; however, in some situations it may be preferable to include a new disclosure even if comparative information cannot be prepared or restated.

- Changes in disclosures and related approaches or formats (e.g., due to shifting climate-related issues and evolution of risk practices, governance, measurement methodologies, or accounting practices) can be expected due to the relative immaturity of climate-related disclosures. Any such changes should be explained.
Principle 5: Disclosures should be comparable among organizations within a sector, industry, or portfolio

- Disclosures should allow for meaningful comparisons of strategy, business activities, risks, and performance across organizations and within sectors and jurisdictions.
- The level of detail provided in disclosures should enable comparison and benchmarking of risks across sectors and at the portfolio level, where appropriate.
- The placement of reporting would ideally be consistent across organizations—i.e., in financial filings—in order to facilitate easy access to the relevant information.

Principle 6: Disclosures should be reliable, verifiable, and objective

- Disclosures should provide high-quality reliable information. They should be accurate and neutral—i.e., free from bias.
- Future-oriented disclosures will inherently involve the organization’s judgment (which should be adequately explained). To the extent possible, disclosures should be based on objective data and use best-in-class measurement methodologies, which would include common industry practice as it evolves.
- Disclosures should be defined, collected, recorded, and analyzed in such a way that the information reported is verifiable to ensure it is high quality. For future-oriented information, this means assumptions used can be traced back to their sources. This does not imply a requirement for independent external assurance; however, disclosures should be subject to internal governance processes that are the same or substantially similar to those used for financial reporting.

Principle 7: Disclosures should be provided on a timely basis

- Information should be delivered to users or updated in a timely manner using appropriate media on, at least, an annual basis within the mainstream financial report.
- Climate-related risks can result in disruptive events. In case of such events with a material financial impact, the organization should provide a timely update of climate-related disclosures as appropriate.

Reporters may encounter tension in the application of the fundamental principles set out above. For example, an organization may update a methodology to meet the comparability principle, which could then result in a conflict with the principle of consistency. Tension can also arise within a single principle. For example, Principle 6 states that disclosures should be verifiable, but assumptions made about future-oriented disclosures often require significant judgment by management that is difficult to verify. Such tensions are inevitable given the wide-ranging and sometimes competing needs of users and preparers of disclosures. Organizations should aim to find an appropriate balance of disclosures that reasonably satisfy the recommendations and principles while avoiding overwhelming users with unnecessary information.
Appendix 4: Select Disclosure Frameworks

To the extent there is corporate reporting of climate-related issues, it happens through a multitude of mandatory and voluntary schemes. Although a complete and comprehensive survey of existing schemes is beyond the scope of this report, the Task Force on Climate-related Financial Disclosures (TCFD or Task Force) considered a broad range of existing frameworks, both voluntary and mandatory. The tables in Appendix 4 outline select disclosure frameworks considered by the Task Force and describe a few key characteristics of each framework, including whether disclosures are mandatory or voluntary, what type of information is reported, who the target reporters and target audiences are, where the disclosed information is placed, and whether there are specified materiality standards. These disclosure frameworks were chosen to illustrate the broad range of disclosure regimes around the world; the tables are broken out into disclosure frameworks sponsored by governments, stock exchanges, and non-governmental organizations (NGOs).

---

These tables were originally included in the Task Force's Phase I Report and have been updated where appropriate.

Appendix 5: Glossary and Abbreviations

**Glossary**

**BOARD OF DIRECTORS (or BOARD)** refers to a body of elected or appointed members who jointly oversee the activities of a company or organization. Some countries use a two-tiered system where “board” refers to the “supervisory board” while “key executives” refers to the “management board.”

**CLIMATE-RELATED OPPORTUNITY** refers to the potential positive impacts related to climate change on an organization. Efforts to mitigate and adapt to climate change can produce opportunities for organizations, such as through resource efficiency and cost savings, the adoption and utilization of low-emission energy sources, the development of new products and services, and building resilience along the supply chain. Climate-related opportunities will vary depending on the region, market, and industry in which an organization operates.

**CLIMATE-RELATED RISK** refers to the potential negative impacts of climate change on an organization. Physical risks emanating from climate change can be event-driven (acute) such as increased severity of extreme weather events (e.g., cyclones, droughts, floods, and fires). They can also relate to longer-term shifts (chronic) in precipitation and temperature and increased variability in weather patterns (e.g., sea level rise). Climate-related risks can also be associated with the transition to a lower-carbon global economy, the most common of which relate to policy and legal actions, technology changes, market responses, and reputational considerations.

**FINANCIAL FILINGS** refer to the annual reporting packages in which organizations are required to deliver their audited financial results under the corporate, compliance, or securities laws of the jurisdictions in which they operate. While reporting requirements differ internationally, financial filings generally contain financial statements and other information such as governance statements and management commentary.

**FINANCIAL PLANNING** refers to an organization’s consideration of how it will achieve and fund its objectives and strategic goals. The process of financial planning allows organizations to assess future financial positions and determine how resources can be utilized in pursuit of short- and long-term objectives. As part of financial planning, organizations often create “financial plans” that outline the specific actions, assets, and resources (including capital) necessary to achieve these objectives over a 1-5 year period. However, financial planning is broader than the development of a financial plan as it includes long-term capital allocation and other considerations that may extend beyond the typical 3-5 year financial plan (e.g., investment, research and development, manufacturing, and markets).

**GOVERNANCE** refers to “the system by which an organization is directed and controlled in the interests of shareholders and other stakeholders.” Governance involves a set of relationships between an organization’s management, its board, its shareholders, and other stakeholders. Governance provides the structure and processes through which the objectives of the organization are set, progress against performance is monitored, and results are evaluated.

---

GREENHOUSE GAS (GHG) EMISSIONS SCOPE LEVELS

- **Scope 1** refers to all direct GHG emissions.
- **Scope 2** refers to indirect GHG emissions from consumption of purchased electricity, heat, or steam.
- **Scope 3** refers to other indirect emissions not covered in Scope 2 that occur in the value chain of the reporting company, including both upstream and downstream emissions. Scope 3 emissions could include: the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g., transmission and distribution losses), outsourced activities, and waste disposal.

**INTERNAL CARBON PRICE** is an internally developed estimated cost of carbon emissions. Internal carbon pricing can be used as a planning tool to help identify revenue opportunities and risks, as an incentive to drive energy efficiencies to reduce costs, and to guide capital investment decisions.

**MANAGEMENT** refers to those positions an organization views as executive or senior management positions and that are generally separate from the board.

**NATIONALLY DETERMINED CONTRIBUTION (NDC)** refers to the post-2020 actions that a country intends to take under the international climate agreement adopted in Paris.

**ORGANIZATION** refers to the group, company, or companies, and other entities for which consolidated financial statements are prepared, including subsidiaries and jointly controlled entities.

**PUBLICLY AVAILABLE 2°C SCENARIO** refers to a 2°C scenario that is (1) used/referenced and issued by an independent body; (2) wherever possible, supported by publicly available datasets; (3) updated on a regular basis; and (4) linked to functional tools (e.g., visualizers, calculators, and mapping tools) that can be applied by organizations. 2°C scenarios that presently meet these criteria include: IEA 2DS, IEA 450, Deep Decarbonization Pathways Project, and International Renewable Energy Agency.

**RISK MANAGEMENT** refers to a set of processes that are carried out by an organization's board and management to support the achievement of the organization's objectives by addressing its risks and managing the combined potential impact of those risks.

**SCENARIO ANALYSIS** is a process for identifying and assessing a potential range of outcomes of future events under conditions of uncertainty. In the case of climate change, for example, scenarios allow an organization to explore and develop an understanding of how the physical and transition risks of climate change may impact its businesses, strategies, and financial performance over time.

**SECTOR** refers to a segment of organizations performing similar business activities in an economy. A sector generally refers to a large segment of the economy or grouping of business types, while "industry" is used to describe more specific groupings of organizations within a sector.

**STRATEGY** refers to an organization's desired future state. An organization's strategy establishes a foundation against which it can monitor and measure its progress in reaching that desired state. Strategy formulation generally involves establishing the purpose and scope of the
organization's activities and the nature of its businesses, taking into account the risks and opportunities it faces and the environment in which it operates.

SUSTAINABILITY REPORT is an organizational report that gives information about economic, environmental, social, and governance performance and impacts. For companies and organizations, sustainability—the ability to be long-lasting or permanent—is based on performance and impacts in these four key areas.

VALUE CHAIN refers to the upstream and downstream life cycle of a product, process, or service, including material sourcing, production, consumption, and disposal/recycling. Upstream activities include operations that relate to the initial stages of producing a good or service (e.g., material sourcing, material processing, supplier activities). Downstream activities include operations that relate to processing the materials into a finished product and delivering it to the end user (e.g., transportation, distribution, and consumption).

NAIC Climate Risk Disclosure Survey / TCFD Comparison
Lisa Groshong, PhD, CIPR communication research scientist, and Tyler Gerson, CIPR intern
March 2021

Introduction
The following comparisons of the NAIC climate risk disclosure survey and TCFD guidelines are built upon a framework of the CERES Scoring Framework (Insurer Climate Risk Disclosure Survey Report & Scorecard: 2016 Findings & Recommendations, p. 76). The CERES framework organized each NAIC survey question into an overarching theme. These themes are:

1. Climate governance
2. Enterprise-wide climate risk management
3. Climate change modeling & analytics
4. Stakeholder engagement
5. Internal greenhouse gas management

This comparison document incorporates the TCFD questions and NAIC subquestions into the CERES framework on three levels. In each comparison table, NAIC survey question numbers are listed in the far left column, along with a descriptive keyword assigned by CIPR. The question numbers and text are highlighted in blue. The TCFD question theme names and numbers are listed in the far right column. The question numbers and text are highlighted in yellow.

First, we constructed a high-level comparison that shows the relationship of the main, top-level questions from each survey to the overall CERES themes. Currently, qualifying U.S. insurers are only required to answer the eight main NAIC risk disclosure survey questions.

Second, we took a closer look at the TCFD’s clarifying subquestions. For this section, we retained the organization of the main NAIC risk disclosure survey questions and layered in the TCFD subquestions where they matched thematically. Subquestion letter designations (e.g., a, b, c) were added for clarity.

Finally, in the third section, we retained the previous comparison and added in the NAIC risk disclosure survey subquestions, matching them with the most relevant CERES theme and TCFD question or subquestion. Subquestion letter designations (e.g., a, b, c) were added for clarity.

The final section contains the complete list of NAIC climate risk disclosure survey questions and the TCFD questions, including supplementary TCFD questions specific to the insurance industry. The insurance supplementary questions can also be found on the TCFD website. They were not included in the analysis above.
High-level comparison of NAIC disclosures with TCFD guidelines

NAIC Climate Risk Disclosure Survey Questions

Full question and guidance document available at the California DOI website.

1. Does the company have a plan to assess, reduce or mitigate its emissions in its operations or organizations? If yes, please summarize.
2. Does the company have a climate change policy with respect to risk management and investment management? If yes, please summarize. If no, how do you account for climate change in your risk management?
   - Where in the structure of the company is climate risk addressed?
   - Does the company approach climate change as an Enterprise Risk Management (ERM) issue?
   - Does the company have a dedicated point-person or team within the company that is responsible for managing its climate change strategy?
   - What is the role of the board of directors in governing climate risk management?
   - Does the company consider potentially correlated risks affecting asset management and underwriting?
   - Has the company issued a public statement on its climate policy?

3. Describe your company’s process for identifying climate change-related risks and assessing the degree that they could affect your business, including financial implications.
   - How may climate change shift customer demand for products?
   - What implications may climate change have on liquidity and capital needs?
   - How might climate change affect limits, cost and terms of catastrophe reinsurance, including reinstatement provisions?
   - Has the insurer considered creative methods of risk distribution such as contingency plans to reduce financial leverage and resolve any liquidity issues in the event of a sudden loss in surplus and cash outflows as a result of a catastrophic event?
   - How are these impacts likely to evolve over time? Does the company have plans to regularly reassess climate change related risks and its responses to those risks?

4. Summarize the current or anticipated risks that climate change poses to your company. Explain the ways that these risks could affect your business. Include identification of the geographical areas affected by these risks.
   - How may climate change shift customer demand for products?
   - What implications may climate change have on liquidity and capital needs?
   - How might climate change affect limits, cost and terms of catastrophe reinsurance, including reinstatement provisions?
   - Has the insurer considered creative methods of risk distribution such as contingency plans to reduce financial leverage and resolve any liquidity issues in the event of a sudden loss in surplus and cash outflows as a result of a catastrophic event?
   - How are these impacts likely to evolve over time? Does the company have plans to regularly reassess climate change related risks and its responses to those risks?

5. Part A: Has the company considered the impact of climate change on its investment portfolio? Part B: Has it altered its investment strategy in response to these considerations? If so, please summarize steps you have taken.
   - How may climate change shift customer demand for products?
   - What implications may climate change have on liquidity and capital needs?
   - How might climate change affect limits, cost and terms of catastrophe reinsurance, including reinstatement provisions?
6. Summarize steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events.
   - Has the insurer considered creative methods of risk distribution such as contingency plans to reduce financial leverage and resolve any liquidity issues in the event of a sudden loss in surplus and cash outflows as a result of a catastrophic event?
   - How are these impacts likely to evolve over time? Does the company have plans to regularly reassess climate change related risks and its responses to those risks?

7. Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change.
   - How has the company supported improved research and/or risk analysis on the impacts of climate change?
   - What resources has it invested to improve climate awareness among its customers in regulated and unregulated lines?
   - What steps has it taken to educate shareholders on potential climate change risks the company faces?

8. Describe actions the company is taking to manage the risks climate change poses to your business including, in general terms, the use of computer modeling. If Yes - Please summarize what actions the company is taking and in general terms the use if any of computer modeling in response text box.
   - For what perils does the company believe that future trends may deviate substantially from historical trends due to changes in the hazard? Similarly, for what perils, if any, does the company believe that a catastrophe model extrapolating observed trends would be insufficient to plan for maximum possible loss or yearly average loss? What steps has the company taken to model or analyze perils associated with non-stationary hazards?
   - Has the company used catastrophe models to conduct hypothetical “stress tests” to determine the implications of a wide range of plausible climate change scenarios? If so, over what timescale, in what geographies and for what perils?
   - Has the company conducted, commissioned or participated in scenario modeling for climate trends beyond the 1-5 year timescale? If so, what conclusions did the company reach on the potential implications for insurability under these scenarios?

**Supplemental TCFD Guidance for Insurance Companies**

**Strategy (link to source document):**

**Supplement for Strategy (B) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.**

Insurance companies should describe the potential impacts of climate-related risks and opportunities, as well as provide supporting quantitative information where available, on their core businesses, products, and services, including:

- information at the business division, sector, or geography levels;
- how the potential impacts influence client, cedent, or broker selection; and
- whether specific climate-related products or competencies are under development, such as insurance of green infrastructure, specialty climate-related risk advisory services, and climate-related client engagement.

**Supplement for Strategy (C) Describe the resilience of the organisation’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.**

Insurance companies that perform climate-related scenario analysis on their underwriting activities should provide the following information:

- description of the climate-related scenarios used, including the critical input parameters, assumptions and considerations, and analytical choices. In addition to a 2°C scenario, insurance companies with substantial exposure to weather-related perils should consider using a greater than 2°C scenario to account for physical effects of climate change and
- time frames used for the climate-related scenarios, including short-, medium-, and long-term milestones.

**Risk Management (link to source document):**

**Supplement for Strategy (A) Describe the organization’s processes for identifying and assessing climate-related risks.**

Insurance companies should describe the processes for identifying and assessing climate-related risks on re-/insurance portfolios by geography, business division, or product segments, including the following risks:

- physical risks from changing frequencies and intensities of weather-related perils,
- transition risks resulting from a reduction in insurable interest due to a decline in value, changing energy costs, or implementation of carbon regulation, and
- liability risks that could intensify due to a possible increase in litigation.

**Supplement for Strategy (B) Describe the organization’s processes for managing climate-related risks.**

Insurance companies should describe key tools or instruments, such as risk models, used to manage climate-related risks in relation to product development and pricing.

Insurance companies should also describe the range of climate-related events considered and how the risks generated by the rising propensity and severity of insurance companies should also describe the range of...
climate-related events considered and how the risks generated by the rising propensity and severity of such events are managed such events are managed.

**Metrics and Targets (link to source document):**

**Supplement for Strategy (A)** Disclose the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process.

Insurance companies should provide aggregated risk exposure to weather-related catastrophes of their property business (i.e., annual aggregated expected losses from weather-related catastrophes) by relevant jurisdiction.

W:\National Meetings\2021\Spring\TF\Climate\Disclosure\Spring Recommendation Report\Climate Disclosure Workstream Task Force Recommendations (reduced).pdf
GOVERNMENT RELATIONS (EX) LEADERSHIP COUNCIL

The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting.
INNOVATION AND TECHNOLOGY (EX) TASK FORCE

Innovation and Technology (EX) Task Force April 9, 2021, Minutes ................................................................. 4-163
Big Data and Artificial Intelligence (EX) Task Force March 29, 2021, Minutes (Attachment One) ..................... 4-169
Speed to Market (EX) Working Group March 10, 2021, Minutes (Attachment Two) ........................................... 4-172
Request for Information (RFI) – Spring Follow-Up Summary Related to Continuing Specific “Regulatory Relief” or “Regulatory Accommodations” Offered by the States Related to the COVID-19 Pandemic (Attachment Three) ..................................................................................................... 4-175
The Innovation and Technology (EX) Task Force met April 9, 2021. The following Task Force members participated: Jon Godfread, Chair, and Chris Aufenthie (ND); Elizabeth Kelleher Dwyer, Vice Chair, and Matt Gendron (RI); Lori K. Wing-Heier, Anna Latham and Chris Murray (AK); Jim L. Ridling represented by Dan Gates, Gina Hunt and Jimmy Gunn (AL); Alan McClain represented by Letty Hardee (AR); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Ken Allen and Lucy Jabourian (CA); Michael Conway represented by Peg Brown and Eric Unger (CO); Andrew N. Mais and George Bradner (CT); Trinidad Navarro represented by Tim Li (DE); David Altmayer (FL); Colin M. Hayashida represented by Martha Im and Kathleen Nakasone (HI); Doug Ommen and Travis Grassel (IA); Dean L. Cameron and Weston Trexler (ID); Dana Popish Severinghaus and C.J. Metcalf (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt and LeAnn Crow (KS); Sharon P. Clark (KY); James J. Donelon represented by Rich Piazza and Tom Travis (LA); Gary D. Anderson and Rachel M. Davison (MA); Kathleen A. Birrane (MD); Eric A. Cioppa (ME); Anita G. Fox represented by Karen Dennis (MI); Grace Arnold, Tammy Lohmann and Phil Vigliaturo (MN); Chlora Lindley-Myers and Cynthia Amann (MO); Mike Chaney and Andy Case (MS); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn (NC); Bruce R. Range and Martin Swanson (NE); Chris Nicolopoulos represented by David Bettencourt and Christian Citarella (NH); Marlene Caride represented by Randall Currier (NJ); Russel Toal, Leatrice Geckler and Anna Krylova (NM); Barbara D. Richardson and Gennady Stolyarov (NV); Judith L. French represented by Lori Barron (OH); Glen Mulready (OK); Andrew R. Stolfi and TK Keen (OR); Jessica K. Altman, Michael Humphreys and Michael McKenney (PA); Raymond G. Farmer and Michael Wise (SC); Larry D. Deiter and Maggie Dell (SD); Carter Lawrence represented by David Combs, Bill Huddleston and Patrick Merkel (TN); Doug Slape (TX); Jonathan T. Pike (UT); Scott A. White, Vicki Ayers and Rebecca Nichols (VA); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Molly Nollette (WA); Mark Afable, Nathan Houdek and Timothy Cornelius (WI); and James A. Dodrill and Joylynn Fix (WV).

1. Adopted its 2020 Fall National Meeting Minutes

Superintendent Toal made a motion, seconded by Ms. Biehn, to adopt the Task Force’s Dec. 4, 2020, minutes (see NAIC Proceedings – Fall 2020, Innovation and Technology (EX) Task Force). The motion passed unanimously.

2. Adopted its Working Group Reports

a. Big Data and Artificial Intelligence (EX) Working Group

Commissioner Ommen gave the report of the Big Data and Artificial Intelligence (EX) Working Group. He said it held its first meeting March 29. During this meeting, the Working Group: 1) reviewed the key accomplishments of the Big Data (EX) Working Group and the Artificial Intelligence (EX) Working Group; 2) noted the merging of these working groups into the new Big Data and Artificial Intelligence (EX) Working Group; 3) reviewed its 2021 charges; and 4) focused on its charge to research where the industry is applying the use of big data, algorithms and artificial intelligence (AI), while simultaneously studying model governance structures.

Commissioner Ommen said the Working Group had a more in-depth discussion about developing an industry survey to research how insurance companies are using big data, algorithms and AI, while protecting the confidentiality of individual company practices. He said the Working Group agreed to limit the scope and the initial research, with the likely focus being on private passenger automobile insurance, and it directed a small group of subject matter experts (SMEs) to coordinate with NAIC staff to draft an industry survey for further review by the Working Group. He said Superintendent Dwyer and Commissioner Afable will lead that effort with SMEs from Connecticut, Illinois, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island and Wisconsin.

Commissioner Ommen said the Working Group also heard a presentation introducing the components of a model governance framework based on other models, such as capital and catastrophe models, and how to minimize risks arising from models. He said the presentation explained the benefits of model governance and the key components, including oversight, controls and validation.
b. Speed to Market (EX) Working Group

Ms. Nichols gave the report from the Speed to Market (EX) Working Group. She said the Working Group met March 10 and discussed the results of the Product Requirements Locator (PRL) survey and next steps. She said this topic was part of a bigger study to determine what speed to market tools state insurance regulators find most useful. She said the results indicated that states fall into three categories. She said the first is a group of states who will have their PRL information removed as they are not using it and have no intention to going forward. She said the second group are states that are using the tool, and their support of it will continue until integration to System for Electronic Rate and Form Filing (SERFF) modernization is complete. She said the third group are undecided states, and the SERFF team will be reaching out to states based on the survey responses provided to gather additional information, as needed, to assist states using the PRL. She said it is unlikely that the PRL tool will be available beyond the completion of the SERFF modernization project, as the SERFF modernization project anticipates including ways for states to provide their filing requirements within SERFF, making it easier for states to keep their requirements up to date and satisfy the need for those requirements to be easily accessible to SERFF users.

Ms. Nichols said the Working Group received updates on SERFF, including recent and upcoming releases and projects and an update on the Interstate Insurance Product Regulation Commission (Compact). She said the Working Group discussed the annual review of the product coding matrix (PCM) and uniform transmittal document (UTD) suggestions, and proposed revisions or changes can be submitted at any time throughout the year. However, for suggestions to be considered to go in effect for next year, the deadline is May 31. Ms. Nichols said an alert will be sent out to remind users of that deadline, and a meeting set up to discuss those submissions will be arranged.

Commissioner Godfread asked if there were any questions regarding any of the Working Group reports. Hearing none, Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt the following reports: 1) Big Data and Artificial Intelligence (EX) Working Group, including its March 29 minutes (Attachment One); and 2) Speed to Market (EX) Working Group, including its March 10 minutes (Attachment Two). The motion passed unanimously.

3. Received an Update on the Innovation and Technology State Contacts Activity

Denise Matthews (NAIC) provided a report from the Innovation and Technology State Contacts Roundtable meeting that was held April 1. She said the roundtable is led by Mr. Aufenthie and Mr. Bradner. She said 43 state insurance regulators from 35 states participated in the roundtable. During the meeting, the co-leaders solicited interest regarding helping to lead the group. Ms. Matthews said the agenda included a discussion on strategies for improving state insurance regulators’ access to data from an insurer’s perspective and a discussion related to parametric products led by a presentation from Commissioner Hayashida. She said other topics were on the agenda, but these two generated a lot of discussion, so they will be put on a future agenda. She said guests from Travelers and Hartford presented on the open Insurance Data Link (openIDL) solution and discussed the benefits and challenges associated with getting more carriers to participate. She said the presenters talked about the pandemic having slowed the process to gain more participation. She said Commissioner Hayashida gave a presentation on parametric insurance products, discussing the pros and cons and where it can be helpful in filling insurance coverage gaps. She said the state insurance regulators suggested that there may be a need to draft principles and standards or guidelines around these types of products, particularly in the area of transparency and the provision of clear information to consumers.

4. Discussed RFIs Related to Continuing Specific “Regulatory Relief” or “Regulatory Accommodations” Offered by States Related to the COVID-19 Pandemic

Commissioner Godfread reminded the members of the Task Force that a Request for Information (RFI) was sent to interested parties in 2020, asking for information related to specific “regulatory relief” or “regulatory accommodations” offered by states as a result of the COVID-19 pandemic, that they would recommend be continued or made permanent, related to innovation and technology. He said the RFI asked whether there was some type of regulatory relief or accommodation offered or if there continues to be a law, regulation, regulatory guidance or established practice in place that prohibits or limits insurers or producers from implementing or using newer technologies, data, methods or processes that is now necessary in order to continue to serve customers and maintain operations. He said the responses to that RFI were compiled into a summary presented during the 2020 Fall National Meeting, and they were grouped into four categories, including which organizations offered a similar or the same suggestion. He said those categories were:

- Electronic Commerce
- Regulatory Capabilities
- Claims Facilitation
- Items Specific to Surplus Lines

© 2021 National Association of Insurance Commissioners
Commissioner Godfread said while most of the responses did not include the specific statutes or statutory language the American Council of Life Insurers (ACLI) recommended eliminating or revising, it did send a specific recommendation suggesting developing a bulletin or bulletins to address concerns related to existing issues with the state-by-state implementation of e-signature laws, including the Uniform Electronic Transactions Act (UETA) and existing obstacles to moving e-commerce forward. He said it was decided that more information is needed to move into specific actions, so another RFI was sent to the respondents of that initial RFI and a consumer representative, asking them to provide more specific information as to where the issues are more interpretative or lack a uniform interpretation, versus it being a legislative issue. He said the intention was to identify which should be a priority to address in 2021. He said a summary compilation of those responses (Attachment Three) are in the materials, showing that respondents prioritized e-commerce, including allowing for e-signatures, e-delivery of documentation and information, e-notary, and changing the paradigm from what is mostly an “opt-in” scenario today to an “opt-out,” where getting and exchanging information electronically or digitally would be the default, with consumers having the ability to “opt-out” of that option. He said the ACLI and the American Property Casualty Insurance Association (APCIA) suggested forming a working group to survey states about UETA exceptions to begin work on any laws and regulations that need to be changed to accommodate this and work on interpretive guidance where legislation changes are not needed.

Commissioner Godfread said the second category represents regulatory capabilities and covers a list of items related to allowing online continuing education (CE) and training, allowing electronic filings for regulatory filings, and eliminating wet signature requirements. He said there were no specific action suggestions for this category, but deferring the education and training item to the Producer Licensing (D) Task Force may be appropriate. He said claims facilitation was a category of responses from the first RFI, but it did not appear to “make the cut” when this second group of respondents was prioritizing. He said the last category is specific to surplus lines, and a couple of the respondents noted that the Surplus Lines (C) Task Force is currently working to amend the Nonadmitted Insurance Model Act (#870), and it may be appropriate to defer this to it as a part of that work. He said an interested party noted that some of the areas to address include home state taxation, insurer eligibility, exempt commercial purchaser, and diligent search.

Commissioner Godfread said three respondents—the ACLI, the APCIA, and the Professional Insurance Agents (PIA)—indicated support for the drafting of a model bulletin to cover some of the non-legislative issues. He said while not included in the summary document, a letter from the Center of Economic Justice (CEJ) was received. He said the letter notes the successes in terms of the response to the pandemic to continue services to consumers, but it also notes a few problems around a lack of tools to oversee and monitor these sudden changes and digital interactions. He said it covers the issues related to risk exposure changes, such as in personal auto insurance and the impact of credit-based insurance scores, and a lack of regulatory data collection should be noted. A lack of clear guidance related to consumer-generated data and ownership and consent to use issues needs to be considered.

5. Discussed an Approach to Drafting a Guidance Document/Bulletin

Commissioner Godfread said he heard several options for how to move forward with addressing these issues. He said he would be comfortable with a motion to look at creating a working group that would examine the issues identified; working on a bulletin; and referring specific issues, as appropriate, to the Producer Licensing (D) Task Force and the Surplus Lines (D) Task Force. Superintendent Dwyer made a motion, seconded by Commissioner Birrane, to form such a group. In response to a question in the chat, Commissioner Godfread said the group would be open to feedback, and regarding this topic, the Innovation and Technology (EX) Task Force has been very responsive to the stakeholders and would continue to be. He said whether it is a drafting, working or best practices group, that engagement will continue to be encouraged. The motion passed unanimously. Commissioner Godfread encouraged anyone interested in participating in the process to notify Ms. Matthews so it can get moving forward.

6. Heard InsurTech Presentations

a. State Farm/USAA Auto Subrogation Blockchain Solution

Commissioner Godfread introduced the first presenters from State Farm and the United States Automobile Association (USAA), saying these two legacy carriers and competitors have joined forces to create something using blockchain technology that makes sense for consumers. It demonstrates how it can make them more efficient and minimize cost through the development of a subrogation blockchain solution. He said Beth Carter, the Director of P&C Claims Business Technology at State Farm, and Luke Harris, Assistant Vice President and Senior Experience Owner in USAA’s Claims Organization, will present on this topic.
Ms. Carter said State Farm recognizes that the partnership with USAA on this blockchain solution is important to innovate and build for the future. She provided the background and history behind the project, and she said after extensive testing, it is now in full production and serving to settle claims between the companies using blockchain, representing the first of its kind. Mr. Harris said it provides data security and data control, as well as oversight and validation also leveraging Distributed Ledger Technology (DLT) to offer a secure and immutable record of transactions that can be validated and confirmed through consensus. He said there is no need to transmit Personally Identifiable Information (PII), and it removes a lot of cost from the process. Ms. Carter said it also makes processes more efficient and secure; eliminates manual steps, allowing them to get the deductible back to the consumer faster, reducing external disruptions with processing single check recoveries; and minimizes the amount of subrogation funds floating through the industry. Mr. Harris said State Farm and USAA have created something that can be adopted by the entire industry, and they are on a quest to bring in additional carriers to this platform, as the more that participate, the greater the benefit.

Commissioner Godfread said North Dakota is working on blockchain solutions, and he asked if there is anything state insurance regulators can do to encourage more companies to get involved. Mr. Harris said discussions like this are helpful, and providing forums to help and educate regarding this solution is beneficial.

b. Trellis Connect

Commissioner Godfread said Daniel Demetri, the Founder and Chief Executive Officer (CEO) of Trellis, will talk about what Trellis is, what it does, and the issue of consumer data ownership. Mr. Demetri said Trellis is a technology company in San Francisco operating nationally out of Arizona, Florida, Indiana, New York and Tennessee, offering in all 50 states and Washington, DC. He said it helps consumers navigate insurance as they move online using apps to allow their information to be shared with the advisor app they have selected. He said consumers need personalized insurance experiences online and digital experiences in the way they work with agents. He said Trellis provides consumers the ability to rely on and share data, allowing them to share their insurance information for many different purposes. He said it does not require any changes to producer licensing, and Trellis only allows licensed producers to get access to the information. He said state insurance regulators should determine what the parameters around this should be and what rights consumers should have to their insurance data in terms of who owns it and how they can access it. He said many insurers elect to block consumer access for security or competitive purposes, and he urged state insurance regulators to consider what the data access rights are in each state and how they translate to the online environment.

Commissioner Godfread said North Dakota took a run at this during the current legislative session, but it was unsuccessful. He said even so, this is interesting, important, and likely something the Innovation and Technology (EX) Task Force will need to consider.

c. Vero

Commissioner Godfread introduced the next presenter, Ali Safavi, Co-Founder and CEO of Vero. Mr. Safavi said the future of guidance and advice is exciting, and making insurance cheaper, faster, quicker, and with more focus on guiding and bringing the advice piece online is the goal of Vero. He said consumers need protection and guidance; risk is changing, and insurance products have traditionally been built around risks as opposed to people. He said Vero is investing in an AI risk and insurance advisor that would be unbiased with no incentive in terms of how the recommendation is given. He said it is holistic and automates making it easier to integrate online. He said it augments the agent channel, making products more affordable with better service and better risk management through risk mitigation. He said Vero is starting with the digitalization of the existing agent channel, but over time, it will likely move to full integration of agent and direct channels and then move to the consumer starting online with some human components. He demonstrated how the Vero product assists with this by providing a risk report and a recommendation based on a calculated protection score. He said the biggest challenge to being able to do this is not being able to get access to the consumer’s information, as mentioned during Mr. Demetri’s presentation. He said there are two big implications: 1) currently, state insurance regulators look at licensing as a way to protect consumers, ensuring that agents know what they are doing and know and understand the regulations; but Vero believes that if AI can provide guidance, present quotes, and do a better job than the agent—i.e., the agent is just doing marketing—the question would be if the licensing requirements need to be the same for that as for a traditional agent; and 2) while regulations can be a barrier, actually enforcing insurers through regulation to give better access to consumer data could boost innovation as opposed to being a barrier.

Ms. Jabourian asked how many and what the demographics were regarding the survey quoted. Mr. Safavi said it was in the thousands, but he would be happy to provide the actual report. Ms. Jabourian asked if Vero is licensed as a financial advisor, managing general agent (MGA), or something else in order to provide financial advice. Mr. Safavi said Vero is not providing financial advice at this time, but it does have both individual and company producer licenses. Ms. Jabourian asked what
information Vero is gathering to assess what additional coverage is needed and how much information a consumer must divulge to get a recommendation. Mr. Safavi said most agents do not have this type of data. He said the biggest factor is net worth, and Vero uses an actuarial model to determine risk, using data that agents do not have.

In responding to questions in the chat, Mr. Safavi said Vero has life, health and property/casualty (P/C) producer licenses, and while currently working on personal lines, small commercial will be next. He said Vero is proud of its Errors & Omissions risk product because that area has a lot of human error, and by automating it, it is much improved.

7. Heard Updates from Committees and Working Groups

Commissioner Godfread asked representatives from other committees whose charges involve related workstreams to those the Innovation and Technology (EX) Task Force is addressing to provide updates.

a. Special (EX) Committee on Race and Insurance

Commissioner Mais said five workstreams have been set up and are working under the Special (EX) Committee on Race and Insurance to look at issues concerning race and insurance. He said the first two workstreams deal with diversity in the industry and the regulatory community, and the other three workstreams deal with issues of unfair treatment as it relates to the three major lines of business; i.e., life, health and P/C. He said each of the workstreams issued a draft report to the Special Committee, and the Special Committee has exposed a summary report that will be discussed during its April 12 meeting. He said generally, the exposed report currently calls for continued research and analysis of insurance legal and regulatory approaches to addressing unfair discrimination, specifically proxy discrimination and disparate impact, by defining the terms and determining appropriate steps to address, including: 1) the impact of traditional life insurance underwriting on minority populations; 2) considering the relationship between mortality risk and disparate impact; and 3) developing analytical and regulatory tools to assist state insurance regulators in determining unfair discrimination. He said the report also calls for enhanced data reporting and record-keeping requirements across product lines to identify race and other socio-demographic factors of insureds, and a data call may be considered to identify resources and products sold in specific zip codes to identify barriers to access. He said finally, the report calls for coordinating with existing groups, specifically the Big Data and Artificial Intelligence (EX) Working Group and the Casualty Actuarial and Statistical (C) Task Force, and encouraging the Casualty Actuarial and Statistical (C) Task Force to continue its work in predictive modeling, price algorithms and AI, with a particular focus on how race is affected.

b. Accelerated Underwriting (A) Working Group

Commissioner Afable said the Accelerated Underwriting (A) Working Group last met March 19 in lieu of meeting at the Spring National Meeting. He said a drafting group made up of several state insurance regulators and led by Commissioner Arnold is coming up with a first draft of the Working Group’s work product, and the Working Group has agreed to develop an educational report, the primary purpose of which is to offer guidance to state insurance regulators, industry, consumer advocates, and other stakeholders. He said the report will be narrowly focused on accelerated underwriting in life insurance and consider the work of other NAIC groups like the Innovation and Technology (EX) Task Force, the Big Data and Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group, and a draft outline of the report has been circulated. The outline includes three major issues as they relate to accelerated underwriting in life insurance: 1) input data; 2) algorithms and machine learning; and 3) transparency and privacy.

c. Property and Casualty Insurance (C) Committee

Commissioner Schmidt said the Property and Casualty Insurance (C) Committee will be involved with issues related to the Special (EX) Committee on Race and Insurance. She said it appears that the charges being discussed will stay with the Special Committee and not be referred to the Property and Casualty Insurance (C) Committee. She said there is a charge to look at the development of analytical and state insurance regulator tools to assist in determining unfair discrimination, specifically the use of socio-economic variables and identifying proxy variables for race; correlation versus causation; disparate impact considerations; the use of third parties; and the appropriate use of certain data, such as criminal history information. She said to expect that the first step after new charges are adopted will be convening chairs and vice chairs of the various committees to come up with a workplan, identifying the right people to work on them and ensuring that there is no duplication of work as relevant terms and processes are defined.
d. Privacy Protections (D) Working Group

Ms. Amann said the Privacy Protections (D) Working Group is looking at the overlap between cybersecurity and data protection. She said they are interrelated but two completely different issues. Other major issues continuing to develop is the ownership of data. Ms. Aman said concerns about data privacy protections, as well as ownership and opting in and opting out, continue to be topics the Working Group is looking at. She said the Working Group received a report from NAIC staff on federal and state privacy legislation. She said the federal report indicated that the U.S. Congress (Congress) believes there is a need for federal data privacy legislation, but differences in approaches have thwarted efforts to enact comprehensive legislation thus far. The key points of contention include: 1) whether, and to what extent, federal legislation should preempt state laws; and 2) whether the legislation should include a private right of action. Ms. Amann said the NAIC continues to engage with Congress, oppose preemptive legislative proposals, and inform Congress of the Working Group’s efforts to update NAIC models. She said the NAIC continues to underscore the importance of not disregarding the existing state regulatory framework or inhibiting ongoing efforts in the states to develop laws and regulations in the best interest of insurance consumers.

Ms. Amann said the state report indicated that at least 30 states have introduced some form of data privacy legislation in 2020. Most of them were comprehensive and similar to the California Consumer Privacy Act (CCPA), but very few of them were enacted due to the COVID-19 disruption of legislative sessions. Ms. Aman said the Working Group continues to monitor this area. She said privacy bills have been introduced in 23 states that focus on business obligations stemming from consumer rights, but they vary in substance. Many of these bills apply to for-profit businesses, but all are over the board. She said no template has emerged yet, but some common issues have, such as: 1) a requirement that covered entities perform a risk assessment; 2) providing a private right of action; 3) addressing data security and data privacy; 4) resembling the General Data Protection Regulation (GDPR); and 5) exempting data collected in compliance with the Gramm-Leach-Bliley Act (GLBA), as well as entities subject to the GLBA.

Ms. Amann said the Working Group discussed comments received after the Working Group’s Nov. 20, 2020, meeting in lieu of the 2020 Fall National Meeting. She said there was a verbal gap analysis from the ACLI, the Coalition of Health Carriers, the National Association of Mutual Insurance Companies (NAMIC), and the APCIA. She said the Working Group announced the consumer privacy protections panel scheduled for the virtual NAIC Insurance Summit in June. She noted that this is an ever-changing topic for the Working Group as the development of the cyber and data ownership issues have shown, and the Working Group will be reaching out to coordinate with other committees on these topics.

8. Discussed Other Matters

Commissioner Godfread said the two agenda items the Innovation and Technology (EX) Task Force was unable to cover today, the discussion on consumer data ownership issues and potential guidance and the NAIC report on the Predictive Model Review Process, will be included in the agenda for the next meeting of the Task Force. He said the “Coded Bias” event hosted by the NAIC was an outstanding event, and he said it is an important film to see. He said 900 registered for the event, and 550 tuned in for the panel. He said it was a great panel session, and there was so much interest that there will be a follow-up of some kind to cover all the outstanding questions submitted. He said exactly what that will be has not yet been determined, but he said to stay tuned and any suggestions should be sent to himself or Ms. Matthews.

Having no further business, the Innovation and Technology (EX) Task Force adjourned.
Big Data and Artificial Intelligence (EX) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)
March 29, 2021

The Big Data and Artificial Intelligence (EX) Working Group met March 29, 2021. The following Working Group members participated: Doug Ommen, Chair, and Travis Grassel (IA); Elizabeth Keller Dwyer, Co-Vice Chair (RI); Mark Afable, Co-Vice Chair (WI); Katie Hegland (AK); Daniel Davis (AL); Ken Allen (CA); Peg Brown (CO); Andrew N. Mais, George Bradner and Wanchin Chou (CT); Frank Pyle (DE); Rebecca Smid (FL); Judy Mottar (IL); Satish Akula (KY); Tom Travis (LA); Kathleen A. Birrane (MD); Benjamin Yardley (ME); Matthew Vatter and Phil Vigliaturo (MN); Cynthia Amann (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Christian Citarella (NH); Barbara D. Richardson and Gennady Stolyarov (NV); Lori Barron (OH); Eli Snowbarger (OK); Shannen Logue and Mike McKenney (PA); Michael Wise (SC); David Combs (TN); J’ne Byckovski and Rachel Cloyd (TX); Kathy Stajduhar (UT); Eric Lowe (VA); Christina Rouleau (VT); and Eric Slavich and John Haworth (WA).

Commissioner Ommen said the Big Data (EX) Working Group and the Artificial Intelligence (EX) Working Group have been merged to form the Big Data and Artificial Intelligence (EX) Working Group. He provided an overview of the prior work of the Big Data (EX) Working Group and the Artificial Intelligence (EX) Working Group.

In 2018, Commissioner Ommen said the Big Data (EX) Working Group received a presentation from LIMRA on the use of data for the underwriting of life insurance products, and it was followed by the efforts of the Casualty Actuarial and Statistical (C) Task Force, which was developing guidance on best practices for the review of predictive models. He said the Big Data (EX) Working Group focused discussions on accelerated underwriting led to the appointment of an Accelerated Underwriting (A) Working Group. He said the NAIC moved forward with training in 2019, as recommended and encouraged by the Big Data (EX) Working Group. This training focused on rate filings using complex algorithms, and it included technical training for actuaries and non-technical training for rate filing reviewers. Commissioner Ommen said the Big Data (EX) Working Group discussed the use of data in fraud detection and claim settlements, which included two presentations from the Insurance Services Office (ISO) and a presentation from the National Insurance Crime Bureau (NICB). He said the Working Group discussed whether state insurance regulators have the appropriate regulatory authority under existing unfair trade laws and unfair claims settlement regulations to address marketplace practices. He said the NAIC, at the urging of the Big Data (EX) Working Group, implemented technical services in 2020 to assist state insurance regulators in the review of property/casualty (P/C) rate models.

Commissioner Ommen said the Artificial Intelligence (EX) Working Group was appointed in 2019, and it developed and approved Artificial Intelligence (AI) Principles for the insurance industry. The NAIC’s AI Principles outline five key tenets for AI actors, summarized with the acronym FACTS: Fair and ethical, Accountability, Compliance with existing laws, Transparency for consumers, and Safe and secure data systems. Commissioner Ommen said another important work product came from the Innovation and Technology (EX) Task Force, which adopted revisions to the NAIC’s Unfair Trade Practices Act (#880). These revisions clarify that value-add products and services using new technology are not considered rebates if the service or value-add product relates to risk being underwritten and primarily designed to provide loss mitigation or loss control or reduce claim settlement costs.

Commissioner Ommen said the charges of the new Big Data and Artificial Intelligence (EX) Working Group will require the Working Group to adopt a problem-solving approach. The Working Group will need to take a deeper dive with more granular-level research of where the industry is applying the use of big data, algorithms, and AI. Commissioner Ommen said this work will be completed while simultaneously studying governance structures that could be considered as best practices and guidance to state insurance regulators seeking to understand how the industry should be managing risks associated with the use of big data and AI. He said the charges that will require the Working Group to develop and prioritize solutions and set deliverables, while recognizing an intermediate deliverable, will not necessarily finish the Working Group’s charge.
2. **Discussed an Approach to Developing an Industry Survey for Research**

Commissioner Ommen said NAIC members have heard over the past two years public presentations on the use of big data and innovation. At the same time, he said he would receive requests from state insurance regulators to hear more about insurers’ electronic data variables, algorithms, and use of AI. Because of this, he said he would like to get a more accurate and objective measure of what is happening. He said individual insurers have expressed a desire to share information, but there is reluctance to do so without assurances around protecting trade secrets and intellectual property.

Superintendent Dwyer suggested that the Working Group conduct an anonymized survey in a specific line of insurance with one lead state that can provide confidentiality protections. She said the Working Group is not trying to scrutinize any individual company’s practices, but it is trying to understand broader market practices. Commissioner Afable said insurers are at different stages of using algorithms and models, and state insurance regulators need to understand how insurers are leveraging this technology. He agreed with the need to focus on a specific line of insurance, and he suggested that a small group of state insurance regulator subject matter experts (SMEs) work with NAIC staff to create an initial draft of a survey.

Mr. Vigliaturo said the survey should address insurers’ use of third-party vendors and the use of models supplied by these vendors. Mr. Grassel suggested focusing on commercial and personal auto due to the large amount of data being collected for these lines of insurance. In response to Mr. Haworth’s questions about the use of market conduct exam authority to collect information, Superintendent Dwyer said the Working Group would use this authority for the confidential collection of information, but it would not use this authority for market conduct enforcement or the issuance of a public market conduct report of a specific company. Mr. McKenney agreed with starting with commercial and personal auto, and he suggested looking into the use of telematics. Mr. Bradner suggested that the survey include the review of how data and algorithms are used for claims. Mr. Chou suggested that life and health underwriting might be a good line area of focus.

Mr. Vatter said the Working Group should coordinate with the Special (EX) Committee on Race and Insurance. Superintendent Dwyer said the Working Group will also coordinate with the Property and Casualty Insurance (C) Committee if the survey focused on automobile insurance. Commissioner Ommen said other groups may be informed by our research, and that is why the Working Group needs to narrow its focus and move quickly. Commissioner Afable said the Working Group would also coordinate with the Accelerated Underwriting (A) Working Group if more research is needed for life insurance.

Birny Birnbaum (Center for Economic Justice—CEJ) suggested that the Working Group focus on one line for P/C insurance and life insurance. He said the survey tool could be used for both lines of insurance, and a survey of life insurance would help inform the Accelerated Underwriting (A) Working Group. He said the survey should ask for data used, the source of data, algorithms used, and the application of use. He said the identification of third-party vendors is important. He said the survey should help identify what percentage of the marketplace is using a specific data element for a specific application, such as criminal history information.

John Lucker (Universal Fire and Casualty Insurance Company) said the survey should focus on models, algorithms and data sources. Mr. Lucker said the output of the models and algorithms is dependent on data, and the identification of third parties should include both data vendors and developers of algorithms.

Angela Gleason (American Property and Casualty Insurance Association—APCIA) said the APCIA would like to work with state insurance regulators, and confidentiality is very important. She said some insurers may not provide information from vendors because of confidentiality agreements with vendors.

Superintendent Dwyer suggested that a small group of state insurance regulator SMEs begin working on the survey for further review by the Working Group. Commissioner Ommen, Superintendent Dwyer and Commissioner Afable will lead this effort, and Commissioner Ommen suggested some state insurance regulators who are members of the Casualty Actuarial and Statistical (C) Task Force.
3. Heard a Presentation on a Model Governance Framework

In support of starting the Big Data and Artificial Intelligence (EX) Working Group’s discussions on model governance for the use of big data and AI, Commissioner Ommen said Elisabetta Russo (NAIC), the NAIC’s ERM Advisor and expert on model governance, will provide an overview of the components of a model governance framework.

Ms. Russo said the introduction of the Own Risk and Solvency Assessment (ORSA) requirements in 2012 for insurers and the expansion of the risk-based capital (RBC) formula to include catastrophe risks have brought capital models and catastrophe models onto the radar of state insurance regulators. She said these models are widely used to make important business decisions by insurers, and state insurance regulators have had to answer questions such as how the models are used, what risks are associated with the use of the models, whether state insurance regulators should examine the models, and if so, how this review should occur. She said the NAIC has been working with state insurance regulators, industry, and vendors in a collaborative manner for the past two years on answering these questions. Ms. Russo said state insurance regulators have engaged with industry and vendors to understand the models, developed review procedures for state insurance regulators, tested these procedures by conducting model walk-throughs with industry and vendors on a voluntary basis, and trained state insurance regulators. She said the next step is to enhance the regulatory requirements, such as the \textit{NAIC ORSA Guidance Manual}; operationalize the review procedures by incorporating them into the NAIC’s financial analysis and financial examination handbooks; develop tools for state insurance regulators; and consider not just solvency implications, but also rating review implications.

Ms. Russo said insurers that use capital models and catastrophe models have developed model governance frameworks to help their use of these models. She said this includes minimizing risks arising from models, supporting the business use of model outputs, providing assurance on model outputs to boards of directors, and providing assurance on output and use to the state insurance regulators. She said the models need to run for some time before a robust model governance framework can be in place. Ms. Russo said AI models are new compared to other models. She said it is important to start with the anatomy of the model. There is an input, calculation engine and output. Ms. Russo said there are also business drivers and key risks, and state insurance regulators should start by reviewing these steps and risks to understand how a model works. She said state insurance regulators need to understand the key risks, which include the model risk, data risk, third-party risk, technology risk, compliance risk, and business process risk. She said state insurance regulators can then determine the appropriate oversight once the risks are understood.

Ms. Russo suggested starting with model oversight and controls and leaving validation for later when models are more mature and documented. She also suggested developing baseline requirements for the following model components: the input, the calculation engine and output. She suggested organizing the set or principles, such as the AI Principles adopted in August 2020, under baseline requirements for each component. She said the Working Group should leverage existing model governance practices and then tailor a model governance framework for big data and AI models to reflect the risks that are unique.

Mr. Birnbaum said there is a difference between financial models for prudential supervision and consumer-facing models. He said consumer-facing models should be tested against marketplace outcomes, and suggested model governance may not lead to desired consumer outcomes. He said while financial models are required by state insurance regulators, consumer-facing models are used for a variety of reasons and at the discretion of insurers. He said financial model governance has practices that can be transferred to consumer-facing models, but model governance will be different for consumer-facing models.

Having no further business, the Big Data and Artificial Intelligence (EX) Working Group adjourned.
The Speed to Market (EX) Working Group of the Innovation and Technology (EX) Task Force met March 10, 2021. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Katie Hegland (AK); Jimmy Gunn (AL); Jimmy Harris (AR); Frank Pyle (DE); Heather Droge (KS); Jo LeDuc (MO); Tammy Lohmann (MN); Garlinda Taylor (NC); Chris Aufenthie (ND); Jimmy Harris (AR); Frank Pyle (DE); Heather Droge (KS); Jo LeDuc (MO); Tammy Lohmann (MN); Garlinda Taylor (NC); Chris Aufenthie (ND); Russell Toal (NM); Cuc Nguyen (OK); Mark Worman (TX); Tanji J. Northrup (UT); Lichiou Lee (WA); and Barry Haney (WI).

1. **Adopted its Nov. 10, 2020, Minutes**

The Working Group met Nov. 10, 2020, and took the following action: 1) adopted its Sept. 29, 2020, minutes; 2) discussed the Product Requirement Locator (PRL) tool; and 3) discussed communications plans for speed to market tools.

Ms. Droge made a motion, seconded by Mr. Toal, to adopt the Working Group’s Nov. 10, 2020, minutes (see NAIC Proceedings – Fall 2020, Innovation and Technology (EX) Task Force, Attachment Two). The motion passed unanimously.

2. **Received an Update from the Compact**

Susan Ezalarab (Interstate Insurance Product Regulation Commission—Compact) stated the full Compact plans to meet on March 23 to consider amendments to five uniform standards to change the definition of the “non-forfeiture rate” to follow state law, which relates to the recent model adoption by the NAIC. The Compact will also be considering amended standards for waiver of premium, waiver of monthly deductions and a new standard for waiver of surrender charges when the insured under a life insurance policy meets certain benefit triggers. She noted the Compact also established a governance committee to review recommendations resulting from a governance review and some business assessment reports. In addition, the committee will review questions raised by a Colorado Supreme Court case to determine if there needs to be changes to the Compact structure and processes that would provide more flexibility for states to deal with any conflicts between their state laws and the uniform standards of the Compact. The most active committee is the Product Standards Committee (PSC), and it is working on amendments to the minimum non-forfeiture law uniform standards. The PSC is also considering a request from South Carolina to amend the long-term care (LTC) uniform standards for rate review. She noted the PSC is also reviewing comments on group term life insurance standards as part of the five-year review process and that all uniform standards are reviewed every five years if updates are needed.

Ms. Ezalarab noted that meeting summaries are posted to the Compact website and that all state insurance regulator members can attend and participate in any of the committee meetings. She stated another active committee is the Rule Making Committee, which has held two public meetings to gather information about how states approve non-employer group types. The group standards in the Compact right now only apply to employer groups, and there has been a request to expand that to non-employer groups, such as associations and similar groups. The Committee will decide whether to recommend expanding the uniform standards to accommodate for non-employer groups.

3. **Discussed the Results of the PRL Survey and Next Steps**

Ms. Nichols stated earlier discussions regarding the PRL tool last year resulted in a survey being generated to get feedback from the states that have previously populated the PRL. The portable document format (PDF) version of these results was emailed with the meeting invitation and is also posted to the Speed to Market (EX) Working Group web page. She noted the responses showed that while several states still find the PRL to be a valuable tool for their state, most states are not using the tool. Based on the survey feedback, the states’ responses fall into one of three categories regarding the PRL right now: 1) the states that will have the PRL information removed since they are not using it and do not plan to; 2) the states that are using it and their support for the PRL tool will continue until integration to the System for Electronic Rate and Form Filing (SERFF) modernization is complete; and 3) the states that are undecided. She stated the SERFF team will be reaching out to the undecided states to assist them in determining the best way to proceed until the SERFF modernization project is complete. The SERFF team will also be working with any states that are currently using the PRL to make sure the assistance they need in transitioning from using it is provided.
Ms. Nichols stated that as SERFF continues to evolve, some of the speed to market tools will also evolve. With that in mind, even if the Working Group takes no action to discontinue the PRL at this time, it is unlikely that the PRL will be a permanent tool and equally unlikely that it will be available beyond the completion of the SERFF modernization project. She noted it is more likely that the SERFF modernization project will include ways for states to provide their filing requirements in SERFF, making it easier for states to keep their requirements up to date and to satisfy the need for the requirements to be easily accessible to SERFF users. The timeline for transitioning out of PRL use and into SERFF use is still unknown, but it looks like for the states still using the PRL, it is a couple of years down the road. Ms. Nichols reiterated that assistance will be provided to those states when the time comes to make the transition.

Mr. Toal stated that as a member of the SERFF team, he agrees with what has been stated on this topic and that he thinks the timeline for the new SERFF capabilities is a year and a half or so. Ms. Motter stated that in the interim, between now and when the SERFF modernization project is complete, by cleaning out the obsolete or incorrect information currently in the PRL for some states, it will make it a better tool for the industry to use for the states that do have current information in the PRL.

4. Received an Update on SERFF

Brandy Woltkamp (NAIC) stated the SERFF development team has been busy working on recent updates. Release number 7.54 was put into production on Nov. 5, 2021. This release completed the third phase of the billing project, and the updates included the ability for the NAIC transaction fees to be paid upon on submission with a new payment method of credit card if the instance is enabled for those credit card payments. The release also included a label change for all life, accident and health (A&H), annuity and credit filings from implementation date to effective date, which was at the direction of this Working Group.

Ms. Woltkamp stated the next release was 7.55, which went into production on Jan. 21, 2021. This release completed the final phase of the billing redesign work, which is moving all customers to pay NAIC transaction fees at submission with automated clearing house (ACH) debit, electronic funds transfer (EFT) or credit card, along with the previous release. The 7.55 release will go into place for any instance that does not have existing filing block units; if a filing block unit is in place, they would not be transitioned to paying at submission until the units have been fully used or they expire, at which time the instance will automatically be transitioned over to EFT or credit card. She noted two other enhancements and fixes included in the 7.55 release: 1) a hyperlink for the SERFF tracking number on the Form Schedule and the Rate/Rule schedule; and 2) hyperlinking was added to the form number on the Form Schedule. Those enhancements were completed on property/casualty (P/C) filings only because those enhancements were already completed on life, A&H, annuity, and credit filings.

Ms. Woltkamp stated the latest release is SERFF 7.56, which was released March 4, 2021. The first component revised the industry to an application programming interface (API) service. She encouraged anyone interested in the API service to reach out to the SERFF team. Additional updates in this release included the new state report, which was also at the direction of this Working Group; the State Rate Data report is available to all state users on the reports tab. Ms. Woltkamp noted another enhancement included is the ability for each user to set his or her own landing page upon initial log in, or the landing page when switching instances; an alert was sent out regarding the release that provided information on how to do that.

Ms. Woltkamp noted an upcoming project for this year is the Plan Management Project. This project involves working with the federal Centers for Medicare & Medicaid Services (CMS) to consolidate processes to make things easier for issuers, states and NAIC support staff. It will consist of two pieces: 1) federal reporting for state-based marketplaces (SBMs); and 2) the transfer of specific documents contained on rate filings. The first piece of work is on the specific pieces of information for SBMs that are submitted in the financial management (FM) data report and public use file (PUF) processes; these are processes where data was collected in the back end, or they had a slight administrative report and were sent over to the CMS in a bulk process. This process will be updated so that any state that is an SBM in SERFF will have a new view that will allow it to submit the template information on certified plans over to the CMS. The work is almost completed, and it is anticipated that this will be the federal reporting process for plan year 2022. The second half of the plan management process is a new process that will take place this year, which is working with the Unified Rate Review template (URRT). Specific templates are not currently submitted on binders but are submitted on rate filings; a new validation and transfer process for the template will be developed with CMS on rate filings. Upon submission, whether it is a filing submission, amendment letter or a response letter, any updates to the URRT and additional supporting items, such as the actuarial justification or the consumer justification narrative, will automatically be sent to CMS. This will delete a duplicate process for issuers and will be more seamless. This new process will be in place in 2023.
Ms. Motter stated that in the last few weeks, she has seen occasions where it appears the new filing fee process has caused some confusion and wondered if some additional communication could be provided as incorrect amounts are being paid. She also asked if the issue with SERFF system delays that were experienced last week had been resolved. Ms. Woltkamp noted her team will work on some communication alerts and language to assist with making sure the correct state filing fees are being paid and not just the NAIC transaction fee, which is automatically assessed. She also stated that SERFF is aware of the system performance issue and that they are working with the database team to isolate, identify and correct any issues as quickly as possible. Ms. Woltkamp stated that as of this morning, it appeared performance levels were back to normal. However, she asked that anyone with continued issues let the SERFF team know.

Bridget Kieras (NAIC) stated that regarding the SERFF modernization project, the request for proposal (RFP) is in the final stage for the mobilization and pilot (wrapping up the vendor selection process, drafting the fiscal for project funding and beginning the work on the contract with the selected vendor). A press release will be sent out in the next few weeks announcing the vendor selection, as well as the kick-off of the project. She suggested reading the mobilization and pilot RFP, in particular the section on business objectives and the appendix with some use cases as these will be demonstrated during the pilot phase to ensure a solid architecture. She said that good tools were chosen to integrate with SERFF. She noted that work will also be done during the pilot to gather and document the business requirements and the new and improved features that will be offered. Communication plans are being drafted for the mobilization pilot phase to make sure there are lots of forms for users to provide input and get updates. One-on-one calls have started with state insurance regulators to provide SERFF modernization updates and expectations, as well as to gather information. One-on-one calls like this will not be arranged for the industry, but some other forms to provide project updates and expectations will be provided.

Theresa Boyce (Chubb Group) asked for additional details on the document Ms. Kieras suggested for review. Ms. Kieras said that an online search of SERFF Modernization RFP 2071 should provide a search result for the document, but she also provided the link to review it: https://content.naic.org/article/news_release_naic_releases_serff_modernization_rfp.htm.

5. Discussed the Annual Review of the PCM and UTD Suggestions

Ms. Motter stated one of the charges of this Working Group is to review any suggestions that are received throughout the year for proposed revisions to the Product Coding Matrix (PCM) and Uniform Transmittal Document (UTD). She noted that proposed revisions or changes can be submitted at any time throughout the year, but that an alert will be sent soon in SERFF reminding everyone that the deadline is May 31 for considerations to go in to effect for next year. The necessary meetings will be set up to discuss the suggestions after they are all reviewed to determine which revisions will be incorporated and then passed along for approval and implementation, which would take place in January. This past January, there were very few changes to the PCM. However, many suggestions were discussed, and alternative solutions were able to be provided. Ms. Motter asked that everyone, including state insurance regulators and industry members, provide any suggestions for consideration.

Having no further business, the Speed to Market (EX) Working Group adjourned.
COVID-19 Regulatory Relief or Regulatory Accommodations Related to Innovation and Technology

Request for Information – Spring Follow-Up

Introduction:

This document summarizes comments received from interested parties related to a follow up to the Request for Information sent prior to the NAIC Fall National Meeting. Those responses covered the following areas:

- Electronic Commerce
- Regulatory Capabilities
- Claims Facilitation
- Specific to Surplus Lines

This follow-up summary includes those same sections but reflects updated information the respondents noted or prioritized for the Innovation and Technology (EX) Task Force consideration.

Responses were received from the following organizations:

- American Council of Life Insurers (ACLI)
- American Property Casualty Insurance Association (APCIA)
- Lloyd’s
- McDermott Will & Emery (mwe)
- National Association of Professional Insurance Agents (PIA)
- Wholesale & Specialty Insurance Association (WSIA)

The following entities submitted responses in the fall but did not submit a response to this request:

- BlueCross BlueShield Association (BCBSA)
- Insured Retirement Institute (IRI)
- National Association of Mutual Insurance Companies (NAMIC)

Follow-Up Request:

Sent: March 3, 2021

Request to solicit comments from any interested party related to specific “regulatory relief” or “regulatory accommodations” related to innovation and technology

On behalf of the Task Force chair, Commissioner Godfread, and Vice Chair, Superintendent Dwyer, we are requesting your input where you believe these issues are interpretative versus what changes will need to be done legislatively. We ask that if you believe change must be done at the legislative level, please identify the law (or model law) impacted so the Task Force can address it more expeditiously. I believe it was mentioned during the meeting that some of that information has already been gathered and compiled, noting that it does involve a mix of legislation and interpretation, as well as federal overlay.

The ask is to break down your previous suggestions, if you can, and provide more specific information as to where the issues are more interpretative or lack a uniform interpretation, versus it being a legislative issue. Further if you have suggestions regarding prioritization of these issues as summarized in this document, those would be welcome.

The Task Force may also be interested in drafting a bulletin or bulletins as a solution, as suggested during the meeting. Both discussing and targeting more specific areas for attention and the bulletin concept will be discussed during the Task Force’s Spring Meeting on April 9, 1:00 pm CT.
Response Summary – Priorities:

Electronic Commerce

<table>
<thead>
<tr>
<th>Issue</th>
<th>Commented on by:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Allow e-signatures</td>
<td>ACLI, mwe</td>
</tr>
<tr>
<td>2. Allow e-delivery</td>
<td>ACLI</td>
</tr>
<tr>
<td>3. Elimination notary requirements; allow e-notary</td>
<td>APCIA, mwe, PIA</td>
</tr>
<tr>
<td>4. Address “opt-in” requirements; change to “opt-out” for e-delivery</td>
<td>ACLI, APCIA</td>
</tr>
</tbody>
</table>

Specific Action Suggestions:
ACLI: 1) Create a Working Group to examine e-commerce laws and regulations and “work toward meaningful, unified recommendations that are actionable by the NAIC.” 2) Survey states regarding UETA exceptions and then prioritize getting those exceptions eliminated.

APCIA: 1) Insurance departments should provide information to companies electronically. 2) Supports NCOIL’s efforts to move to Remote Online Notarization (RON) and specific to vehicle titling in a total loss claim situation.

Regulatory Capabilities

<table>
<thead>
<tr>
<th>Issue</th>
<th>Commented on by:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Education/Continuing Education: Eliminate in person classroom licensing requirements replaced with virtual or online options and eliminate or allow remote fingerprinting.</td>
<td>APCIA, PIA</td>
</tr>
<tr>
<td>2. Modify or eliminate proctor/monitor requirements for continuing education.</td>
<td>PIA</td>
</tr>
<tr>
<td>3. Authorize remote Workers’ Compensation hearings.</td>
<td>PIA</td>
</tr>
<tr>
<td>4. e-filings: eliminate hard copy regulatory filings or eliminate the need for a wet signature or traditional notarization for those filings.</td>
<td>Lloyd’s</td>
</tr>
<tr>
<td>5. Allow e-payment for all required regulatory fees such as premium taxes.</td>
<td>Lloyd’s, mwe</td>
</tr>
<tr>
<td>6. Eliminate wet signature requirements for regulatory filings such as biographical affidavits and certified reinsurer filings.</td>
<td>Lloyd’s, mwe</td>
</tr>
<tr>
<td>7. Expedite rate and form filing review following a pre-filing meeting.</td>
<td>mwe</td>
</tr>
<tr>
<td>8. Implement bulletins that alleviate the need for in-person MGA/TPA audits and allow virtual audits of employers and other similar requirements.</td>
<td>APCIA</td>
</tr>
<tr>
<td>9. Eliminate requirement for in person visit of physical office.</td>
<td>mwe</td>
</tr>
</tbody>
</table>

Specific Action Suggestions:
### Claims Facilitation

#### Key Points – from Fall National Meeting Comment Letters

<table>
<thead>
<tr>
<th>Commented on by:</th>
<th>Key Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow digital adjudication of claims including photo inspection particularly around auto inspections and allow non-licensed adjusters to be able to the photos.</td>
<td></td>
</tr>
<tr>
<td>Drones: Allow drones in adjusting including relaxing “fly beyond their line of sight” requirements.</td>
<td></td>
</tr>
<tr>
<td>Possibly draft legislation that would resolve concerns over “paper trail” liability related to certified letters for reservation of rights and coverage denials. The letter noted that there is no existing regulatory requirement to do this, but still concerns.</td>
<td></td>
</tr>
<tr>
<td>Allow remote/virtual administrative hearings to take place as well as video depositions.</td>
<td></td>
</tr>
<tr>
<td>Consider timing of electronic payments happening “at the same time” – proof of loss must be sent through the mail.</td>
<td></td>
</tr>
</tbody>
</table>
| **Telemedicine:** Allow this and relax in-person requirements.  
  - BCBSA suggests leveraging their existing “Guiding Principles for Telehealth” and allowing private insurers establish appropriate rules. |

#### Specific Action Suggestions:

<table>
<thead>
<tr>
<th>Issue</th>
<th>Commented on by:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Diligent Search: “on demand” product pricing is difficult due to the three-declination process in the current environment. Particularly where it must be documented and filed with the state. Should relax and automate this process.</td>
<td>Lloyd’s, mwe, WSIA</td>
</tr>
<tr>
<td>2. Expand export lists for coverages typically unavailable in the admitted market.</td>
<td>WSIA</td>
</tr>
<tr>
<td>3. Allow electronic tax payment and reporting options.</td>
<td>WSIA</td>
</tr>
<tr>
<td>4. Eliminate wet signature and notarization requirements on surplus lines reports.</td>
<td>WSIA</td>
</tr>
</tbody>
</table>

#### Specific to Surplus Lines

<table>
<thead>
<tr>
<th>Issue</th>
<th>Commented on by:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Lloyd’s:</strong> 1) The Surplus Lines (C) Task Force is currently amending the relevant model law (Nonadmitted Insurance Model Act) pertaining to this issue so recommends this be deferred to that Task Force.</td>
<td></td>
</tr>
<tr>
<td><strong>WSIA:</strong> 1) WSIA provided a summary of related regulatory requirements by state.</td>
<td></td>
</tr>
</tbody>
</table>

Comments related to whether the recommended action is related to and interpretive, uniform interpretation or legislative type issue, were provided as were specific examples. The ACLI provided key purposes for a proposed bulletin that could address issues that do not appear to require a legislative change. Areas requiring a legislative change would either have to be taken up by the specific jurisdiction with the issue or addressed by an NAIC committee such as the Surplus Lines (C) Task Force.

Entities specifically noting it would support the drafting of a bulletin included:

- ACLI
- APCIA
- PIA

LONG-TERM CARE INSURANCE (EX) TASK FORCE

Long-Term Care Insurance (EX) Task Force April 9, 2021, Minutes.............................................................4-179

Long-Term Care Insurance (EX) Task Force March 1, 2021, Minutes (Attachment One).................................4-182
The Long-Term Care Insurance (EX) Task Force met April 9, 2021. The following Task Force members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, represented by Eric Unger (CO); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling (AL); Alan McClain represented by Jimmy Harris (AR); Evan G. Daniels represented by Jon Savary (AZ); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by John Reilly (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron (ID); Dana Popish Severingham represented by Leigh Strode (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt (KS); James J. Donelon (LA); Gary D. Anderson (MA); Eric A. Cioppa (ME); Anita G. Fox represented by Stephanie Francis (MI); Grace Arnold and Fred Andersen (MN); Chlora Lindley-Myers (MO); Mike Chaney (MS); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge and Rhonda Ahrens (NE); Marlene Caride represented by Dave Wolf (NJ); Russell Toal (NM); Barbara D. Richardson represented by Jack Childress (NV); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi represented by Tashia Sizemore (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer represented by Andrew Dvorine (SC); Larry D. Deiter (SD); Carter Lawrence (TN); Doug Slape (TX); Johnathan T. Pike (UT); Michael S. Pieciak represented by Emily Brown (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill (WV); and Jeff Rude (WY).

1. **Adopted its March 1, 2021, and 2020 Fall National Meeting Minutes**

Commissioner White said the Task Force conducted an e-vote that concluded March 1 to adopt the 2021 proposed charges of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup.

Superintendent Toal made a motion, seconded by Commissioner Altman, to adopt the Task Force’s March 1, 2021 (Attachment One) and Dec. 4, 2020(see NAIC Proceedings – Fall 2020, Long-Term Care Insurance (EX) Task Force) minutes. The motion passed unanimously.

2. **Received the Report of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup**

Commissioner White said the Subgroup met March 9 and Feb. 25 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to give direction on the plan to draft a long-term care insurance (LTCI) multistate rate review framework and form a drafting group.

Commissioner White said the draft of the framework is divided between operational and actuarial aspects. The first draft that has been completed is the operational section. The drafting group will work on drafting the actuarial sections following today’s meeting. Ms. Ahrens summarized the operational sections of the draft framework.

a. Section I describes the purpose of the framework document, which relates to the goals of the Task Force; describes the multistate actuarial (MSA) rate review process, which is not an official rate filing; outlines states’ participation in the MSA review process; identifies the benefits of participating for both insurers and state insurance departments; describes the role of the Task Force; and outlines disclaimers and legal limitations of the review process and the MSA advisory report to address states’ legal concerns.

b. Section II describes the composition, qualifications, duties and commitment expectations for participation of MSA team members, as well as the authority and confidentiality of team members.

c. Section III describes the scope and size limits on rate proposals to be reviewed, as well as the process for how an insurer would make a request for a review of a rate proposal.

d. Section IV describes the MSA review process, which will use the infrastructure and support staff of the Interstate Insurance Product Regulation Commission (Compact). The section also describes an expected timeline for the MSA team members to follow in preparing and distributing an MSA advisory report to states.

e. The appendices provide for a template of the MSA advisory report for state insurance department regulators and a list of information that would be provided by the insurer for a complete rate proposal request.

Ted Nickel asked if states hire outside consultants for rate review, would the consultant be allowed to participate in the MSA rate review process. Ms. Ahrens said that regarding participation as an MSA team member performing the review, the
framework currently contemplates the team to be comprised of state insurance department staff that hold a senior position. Mr. Andersen said that regarding participation by other states, the process is intended to be open to all states. Mr. Andersen recommended submitting the comment on the exposure of the framework so that participation by a state’s hired consultant can be addressed in the framework.

Birny Birnbaum (Center for Economic Justice—CEJ) asked why the Compact could not be used for all LTCI rate filings. Superintendent Dwyer said the Compact only reviews LTCI rate increase filings that were originally filed with the Compact, which would exclude older blocks of business. The Compact only began accepting LTCI rates in 2011. She said inclusion of these older blocks would require a change to the Compact. Commissioner White said this framework for an MSA review process provides a mechanism to work through issues at this time. He said consideration of changes to the Compact would require discussion at a future time.

Mr. Andersen said the Subgroup’s pilot program review team has completed the review of several rate proposals from volunteer insurers. The review team is nearing completion of its review of the remaining rate proposals under the pilot program. He said the review team has made improvements with each review, which will help to transition to an MSA rate review process. An example of improvements is that the pilot program review team is providing volunteer companies with templates and supplementary documents to assist in them making an initial, complete rate proposal, which enhances timeliness and efficiency. The improvements will be formalized within the framework. He said companies that have interest in participating in the MSA rate review process can reach out to him or Ms. Ahrens but should note that resources may be limited at this time because the current focus is on drafting the framework.

Commissioner Donelon made a motion, seconded by Director Cameron, to receive the report of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup. The motion passed unanimously.

3. Exposed the Operational Section of the Multistate Rate Review Framework

Commissioner White said the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup formed a drafting group to develop the multistate rate review framework. The drafting group includes actuarial and legal state insurance department regulators and NAIC staff. The drafting of the framework was divided into two sections: 1) operational; and 2) actuarial. The drafting group has completed a draft of the operational topics, which will be exposed for a 45-day public comment period ending May 24. The drafting group will continue work on the actuarial portion of the framework, which is anticipated to be exposed for public comment by June 1.

4. Received the Report of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup

Commissioner Altman said the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup met March 24 and March 11 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to discuss plans to address its charges for this year. Commissioner Altman summarized the 2021 charges of the Subgroup. She said the Subgroup plans to meet in open session in early May to hear from industry members on current innovative long-term care (LTC) wellness pilot programs and hear stakeholder views of related regulatory issues that need to be addressed. The Subgroup will consider any efforts to address potential issues later in the year.

Commissioner Altman said regarding the charge to explore more uniformity in consumer notices of reduced benefit options (RBOs), the Subgroup will reevaluate a draft checklist for notices to consumers as it relates to the RBO Consumer Notices Principles that the Subgroup adopted in 2020.

Bonnie Burns (California Health Advocates—CHA) asked if state insurance regulators have looked at the timing of notices to policyholders. She said policyholders receive two notices—one with the rate increase and a second with RBOs—at different times, which creates confusion and difficulty for a consumer to make decisions. Commissioner Altman said this topic can be brought to the Subgroup during a future meeting.

Commissioner Dodrill made a motion, seconded by Commissioner Afable, to receive the report of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. The motion passed unanimously.

Commissioner White said that with the exposure of the first draft of the multistate rate review framework and the expectation for the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup to begin addressing its charges in the near term, there will be more opportunity for input from interested parties.
5. **Heard a Presentation on LTCI Industry Trends**

Mr. Andersen said that through the work of the Valuation Analysis (E) Working Group and the review of *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) filings, industry trends have been identified that may affect LTCI reserve levels and rates. These factors include lower lapses, lower mortality, longer duration claims caused in part by a higher incidence of Alzheimer’s disease and dementia, as well as falling market interest rates, causing lower investment income opportunities on incoming premiums.

Mr. Andersen said some factors vary by company or are generally uncertain—for example, future benefit utilization. For companies with a lot of the 5% inflation protected business on the books, when cost of care inflation is lower than 5%, it tends to lead to benefit utilization less than 100% if the maximum daily benefit is increasing by 5%.

Mr. Andersen said another area that varies by company is morbidity incidents improvements. There are trends observed, or, in some cases, expectations that some of the aging at home, wellness activities and technology advances will create safer, healthier environments for seniors and lower claims. While an area of uncertainty, it may lead to lower morbidity incidents in the future.

Mr. Andersen said in the past, there has been a trend of past interest rates falling. The area of uncertainty is what is going to happen going forward. Last year, U.S. Treasury rates were in some cases below 1%, but the rates have increased, so there is a little more optimism. However, it is still uncertain how feature premiums and bond maturities will affect attainable investment yields.

Mr. Andersen said the Valuation Analysis (E) Working Group has engaged with domiciliary state insurance regulators and companies on uncertain areas that could affect their companies’ finances. He added that the Valuation Analysis (E) Working Group and the Financial Analysis (E) Working Group also coordinate on financial analysis.

6. **Discussed Other Matters**

Commissioner White reported that the Executive (EX) Committee referred the proposed project regarding the engagement of an outside legal consultant to assist the NAIC on matters relating to restructuring LTCI policies to the Restructuring Mechanisms (E) Working Group. The Restructuring Mechanisms (E) Working Group has been requested to report back to the Executive (EX) Committee in the fall, at which time it is anticipated that a decision will be made on the next steps for this project. Commissioners have expressed various concerns over the prospect of an LTC insurer seeking to separate blocks of business for any reason.

Commissioner White reported that the Task Force continues to work with the consultant that captured a special data call of insurers to quantify and evaluate the extent to which rates differ among states, because of state approval processes, to prepare a report suitable for the public.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.
The Long-Term Care Insurance (EX) Task Force conducted an e-vote that concluded March 1, 2021. The following Task Force members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair (CO); Lori K. Wing-Heier (AK); Jim L. Ridling represented by Steve Ostlund (AL); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Frank Pyle (DE); Colin M. Hayashida (HI); Dana Popish Severinghaus represented by Jeff Varga (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt (KS); Anita G. Fox represented by Karen Dennis (MI); Grace Arnold (MN); Chlora Lindley-Myers (MO); Mike Causey represented by David Yetter (NC); Bruce R. Ramge represented by Rhonda Ahrens (NE); Russell Toal (NM); Judith L. French (OH); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer represented by Michael Wise (SC); Larry D. Deiter (SD); Carter Lawrence (TN); Johnathan T. Pike represented by Tanji J. Northrup (UT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill represented by Joylynn Fix (WV); and Jeff Rude (WY).

1. **Adopted the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup’s 2021 Proposed Charges**

The Task Force conducted an e-vote to consider adoption of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup’s 2021 proposed charges. The motion passed with a majority of members voting in favor of adopting the charges. The Subgroup’s chair is Commissioner Jessica K. Altman (PA). The adopted charges are as follows:

The Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup will:

A. Further evaluate and/or recommend options to help consumers manage the impact of rate increases. This includes:
   1. The potential development of a process to evaluate innovative options that allow for insurers to offer benefits that lessen the likelihood of an insured needing LTC services, including the evaluation of the suitability of and regulatory barriers to proposed options.
   2. The potential development of mechanisms to help state insurance regulators and consumers objectively compare reduced benefit options (RBOs), including the comparison of accepting a rate increase and retaining current benefits to electing offered RBOs.
   3. The further exploration of pursuing more uniformity in consumer notices for RBOs.

B. Support and provide expertise to the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup regarding the evaluation of RBOs.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.
SPECIAL (EX) COMMITTEE ON RACE AND INSURANCE

Special (EX) Committee on Race and Insurance April 12, 2021, Minutes........................................................................................................4-184
2021 Proposed Charges (Attachment One) ..................................................................................................................4-194
Comment Letters from Interested Parties (Attachment Two)....................................................................................4-196
The Special (EX) Committee on Race and Insurance met April 12, 2021. The following members participated: David Altmaier, Co-Chair (FL); Dean L. Cameron, Co-Chair (ID); Raymond G. Farmer, Chair Emeritus (SC); Chlora Lindley-Myers, Co-Vice Chair (MO); Andrew N. Mais, Co-Vice Chair (CT); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Karima M. Woods (DC); Trinidad Navarro (DE); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severyinghaus (IL); Stephen W. Robertson (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Eric A. Cioppa (ME); Kathleen A. Birrane (MD); Anita G. Fox (MI); Grace Arnold (MN); Mike Chaney (MS); Mike Causey represented by Jackie Obusek (NC); Jon Godfread (ND); Bruce R. Range represented by Martin Swanson (NE); Russell Toal (NM); Barbara D. Richardson (NV); Linda A. Lacewell represented by My Chi To (NY); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Carter Lawrence (TN); Doug Slape (TX); Jonathan T. Pike (UT); Scott A. White (VA); Tregenza A. Roach (VI); Michael S. Picciak (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill (WV); and Jeff Rude (WY).

1. Received a Report on Special Committee Activities

Commissioner Altmaier reported that the Special (EX) Committee on Race and Insurance established five workstreams to develop initial recommendations, and most of the work of the Special Committee has been done at the workstream level. All the workstreams, except for Workstream Two, which is looking internally at the NAIC and state insurance departments, held at least one open meeting as it conducted its initial work. The Special Committee met April 6 and March 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to receive those initial recommendations and determine where to place the continued work in the NAIC committee structure. The 2021 proposed charges (Attachment One) exposed for comment are the result of those initial consultations with staff. The Special Committee recognizes the quick turnaround for comments, and as noted when the proposed charges were released, additional commentary and engagement will certainly be necessary. The Special Committee is eager to continue a public dialogue on these important issues and appreciates the initial comments it has received, and it will discuss a more extensive comment period at the end of the meeting.

2. Received a Status Report on Workstream One

Executive Deputy Superintendent of Insurance To reported that Workstream One of the Special Committee was formed in September 2020, and it is co-chaired by Superintendent Cioppa and herself. Workstream One is charged with researching and analyzing the level of diversity and inclusion within the insurance industry and making recommendations on action steps.

In late February, Workstream One submitted its initial findings and preliminary recommendations on next steps to the Special Committee. Based on the initial research and engagement conducted by Workstream One, the Workstream has concluded that the insurance industry can and should do more to improve diversity and inclusion at all levels of its organizations, from corporate boardrooms and C-suites to middle-management and entry-level positions. This conclusion is based on information that the Workstream gathered through the collection and review of publicly available data, articles and studies, as well as comments submitted by industry representatives and other interested stakeholders.

Studies show that diversity is good for business, and one of the primary responsibilities of state insurance regulators is to ensure the financial stability of the insurers they oversee. Given the positive correlation of diversity and profitability, supporting the insurance industry’s diversity and inclusion efforts is consistent with that core mission, as well as the broader duty of the insurance sector to address racial inequalities and discrimination.

Workstream One believes that more work is required to develop specific recommendations of action steps that state insurance regulators and companies can take to improve the level of diversity and inclusion in the industry. Additional engagement with stakeholders and industry representatives is necessary to learn more about the initiatives and programs that have been deployed by insurance companies to recruit, retain and develop diverse talent at all levels. The Workstream also recognizes the need to measure progress, and it wants to learn more about how state insurance regulators can support that effort. The Workstream plans to continue its work and hold at least two additional open meetings in 2021.
Regarding process, Workstream One recommends that it continue in its present form at this time, and it will determine how best to proceed within the NAIC framework as part of its specific recommendations of action steps for state insurance regulators and the industry.

3. **Received a Status Report on Workstream Two**

Commissioner Clark reported that Workstream Two has two major components to investigate; diversity and inclusion within the NAIC and diversity and inclusion within state insurance departments. The Workstream is happy to report progress on both fronts. Commissioner Clark leads the subgroup on diversity and inclusion within state insurance departments.

The Workstream spent time as a group talking about the best way to collect information from its colleagues, and it developed a zone-based information gathering tool to capture state and department level diversity and inclusion best practices for consideration and implementation by its membership. The Workstream’s plan, if approved by the Special Committee and the Executive (EX) Committee, is to start gathering information shortly after the Spring National Meeting.

As stated in the Special Committee’s 2021 proposed charges, the Workstream will continue its work researching best practices among state insurance departments, and once it has gathered state and department level diversity and inclusion best practice information, it will continue to move its work forward by developing a method and forum to share this information among the states. Commissioner Clark asks that when the Workstream does reach out to state insurance departments, that they take the time to respond so the Workstream can start building a usable catalog of best practices to share with each other.

Commissioner Clark went on to report on the efforts of the subgroup on diversity and inclusion within the NAIC. The Workstream sent questions to the NAIC about its diversity, equity and inclusion (DE&I) efforts. The questions were based on the industry questions developed by Workstream One. In response, the NAIC submitted a written report, and the Workstream’s January meeting was dedicated to hearing from the NAIC about its efforts, particularly its focus on recruiting and retention.

The Workstream has identified several ways the NAIC can help with the DE&I efforts of the state insurance departments. Specifically, as staff diversity training is developed at the NAIC, consideration will be given to offering similar training at the state and/or zone level. Also, Evelyn Boswell (NAIC), Director of Diversity and Inclusion, will be working to collect diversity contacts from the states so the Workstream can get a forum established to share ideas and information.

As its work continues, and as stated in proposed committee charge D, Workstream Two in coordination with the Executive (EX) Committee will continue to receive reports on NAIC DE&I efforts to ensure that DE&I remains a top priority for the NAIC. The Workstream will also serve as the coordinating body for state requests for assistance from the NAIC related to DE&I.

4. **Received a Status Report on Workstream Three**

Commissioner Mais reported that Workstream Three was tasked with the charge dealing with property/casualty (P/C) insurance. In late 2020, the Workstream held three regulator-only meetings and one open meeting to hear various viewpoints on P/C issues related to its charge of examining practices and barriers that potentially disadvantage people of color and/or historically underrepresented groups.

The Workstream first developed an issues list to begin to scope out the project and receive information from interested parties. On its open call, it heard from six speakers who had signed up to speak, as well as a couple others. Consumer groups requested that the Workstream streamline its issues list and not “re-examine” known issues but focus on solutions. The consumer groups called for the Workstream to develop guidance for testing for disparate impact and collect additional data for market regulation purposes. The Workstream heard about how to work with external third parties to look for hidden biases in external databases. The industry stressed that education of consumers should be a focal point, and risk must not be neglected as the Workstream looks at issues of race.

On its last two regulator-only calls, the Workstream streamlined its issues list and came up with some more specific actions and charges for next steps, which were then reported to the Special Committee.

Commissioner Schmidt reported that the Workstream developed several major recommendations with subheadings for each. Those have been incorporated within the proposed charges.
For affordability, availability and access, the Workstream is asking that the NAIC and the Center for Insurance Policy and Research (CIPR) provide a status of studies concerning the affordability of auto and homeowners insurance, including a gap analysis of what has not been studied.

As part of this work, the Workstream recommends that state insurance regulators should determine steps that can be taken to mitigate the impact of residual markets, premium financing and nonstandard markets on disadvantaged groups.

For education and outreach, the Workstream seeks to develop ways to use education, outreach and consumer partnerships to improve access to underrepresented groups.

For producer issues, the Workstream asks for the Producer Licensing (D) Task Force to receive a report from NAIC staff on:

- Availability of producer licensing exams in foreign languages.
- Steps exam vendors have taken to mitigate cultural bias.
- Number and location of producers by company compared to demographics in the same area.

The issue of unfair discrimination is critical, and the Workstream recommends the development of analytical and regulatory tools to assist state insurance regulators in determining unfair discrimination, including issues related to:

- Use of socio-economic variables.
- Identifying proxy variables for race.
- Correlation vs. causation.
- Disparate impact considerations.
- Use of third-party data.
- Appropriateness of data, such as criminal history.

The Workstream also suggested exploring the possibility of the industry collecting data by race in order to better measure outcomes.

The Workstream also noted that it should work closely with existing groups, such as the Big Data and Artificial Intelligence (EX) Working Group and the Casualty Actuarial and Statistical (C) Task Force, as those groups continue their work in predictive modeling, price algorithms and artificial intelligence (AI) with a particular focus on how race is affected.

5. Received a Status Report on Workstream Four

Commissioner Afable reported that Workstream Four adopted its initial report and recommendations by e-vote on Feb. 5. The Workstream met Nov. 16, 2020, and Oct. 30, 2020, in regulator-to-regulator session, and Dec. 10, 2020, and Jan. 5 in open session.

During its open meetings, the Workstream heard presentations from a producer association, industry associations, an actuarial association, a financial educational institution, an insurance company, and a consumer representative. Each presentation brought to light different aspects of the complexities surrounding race and insurance in life insurance.

The primary conclusion of the Workstream was that it has only just started to delve into the practices and barriers that potentially disadvantage minority and underserved populations in the life insurance and annuity lines of business.

The Workstream recommends that research and discussions continue to: 1) better determine the practices or barriers that disadvantage people of color and/or historically underrepresented groups; and 2) identify steps that can be taken to eliminate those barriers and disadvantages.

The Workstream is willing to undertake this work to continue to research and formulate specific recommendations, as necessary, to address issues involving race and life insurance, such as:

a) The marketing, distribution and access to life insurance products in minority communities, including the role that financial literacy plays.

b) The impact of traditional life insurance underwriting on minority populations, considering the relationship between mortality risk and disparate impact.
c) Disparities in the number of cancellations/rescissions among minority policyholders.

d) Whether there are other unresolved issues surrounding race and insurance in the life insurance industry that the Workstream should consider addressing.

The Workstream also recommended that the Accelerated Underwriting (A) Working Group, as part of its ongoing work to consider the use of external data and data analytics in accelerated life underwriting, include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations.

6. Received a Status Report on Workstream Five

Commissioner Lara reported that Workstream Five met Dec. 2, 2020, in open session and March 23, March 2 and Feb. 18 in regulator to-regulator session to prepare and finalize its initial report. Workstream Five finalized and adopted the report on March 23.

As its Dec. 2, 2020, meeting confirmed, and its initial report states, the Workstream believes access and network adequacy is an ongoing and persistent issue for people of color and/or historically underrepresented population groups. The Workstream also believes the other issues it has identified merit discussion and examination as well, including affordability. For these reasons, the Workstream plans to continue its work as its initial recommendations and the Special Committee’s 2021 proposed charges reflect.

Commissioner Altman highlighted a few of the Workstream’s initial recommendations. One recommendation it has is to conduct further research on measures to advance equity through lowering the cost of care and promoting access to care and coverage, with emphasis on people of color, low income and rural populations, and historically marginalized groups. The Workstream plans to focus this research on measures to remedy impacts on historically marginalized groups, as well as the examination of the use of network adequacy and provider directory measures to promote equitable access to culturally competent care.

The Workstream also recommends, in coordination with Workstreams One, Three and Four, developing a model data call to identify resources and products, including a product mix devoted or sold in specific zip codes.

The Workstream also recommends charging the Health Innovations (B) Working Group, consistent with its ongoing work, to evaluate mechanisms to resolve disparities and improve access to care, including: 1) the efficacy of telehealth as a mechanism for addressing access issues for people of color and low income and underrepresented groups; and 2) the use of advance payment models and the algorithms that power the underlying modeling and value-based payments and their impact on exacerbating or ameliorating disparities and social determinants of health.

Finally, another recommendation the Workstream has is for it to monitor opportunities and identify strategies for consumer education to address equity issues. The Workstream plans to make referrals, as appropriate, to the Consumer Information (B) Subgroup to develop educational materials after identifying areas and strategies it believes will help to increase awareness in communities of color and/or among other underrepresented groups.

7. Discussed its 2021 Proposed Charges and Heard Comments from Interested Parties

Commissioner Altmaier introduced the interested parties who submitted initial comments (Attachment Two) and requested to comment on the 2021 proposed charges of the Special Committee and other committee groups.

a. Thomas A. Campbell (American Academy of Actuaries—Academy) commented on behalf of the Academy and reiterated and reinforced the Academy’s previously stated commitment to work with the NAIC on the shared goal to address diversity and inclusion concerns pertaining to insurance coverages.

As communicated to the Special Committee upon its formation, the Academy is offering its ongoing assistance in the identification and exploration of areas where state insurance regulators can act in this regard and addressing practices that could create barriers, or conversely provide incentives, to the inclusion in insurance products. During the course of this work, Academy representatives have actively engaged the Special Committee, having made separate presentations to Workstreams Three, Four and Five on P/C, life, and health insurance issues, respectively. As the Special Committee moves forward on its newly proposed 2021 charges, the Academy stands ready to work with it on executing and implementing them. With the relatively recent posting of those charges, the Academy has not had the
full opportunity to assess them as yet, but it will provide input to the Special Committee, as appropriate, as its work progresses.

As the national actuarial association for public policy and professionalism in the U.S., the Academy is looking at issues surrounding the appropriateness of data and assumptions used in U.S. actuarial practice across all areas of practice and actively working with various stakeholders and within the actuarial profession to advance this objective. A sampling of the work the Academy is doing can be found on the Academy’s Diversity, Equity & Inclusion webpage. The Academy has formed task forces and work groups under its Casualty, Health, and Life Practice Councils that are dedicated to DE&I. The Academy also has an active process within its Risk Management and Financial Reporting Council on data analytics and algorithms, and it will be issuing papers on those topics shortly.

To further illustrate the emphasis of this work, Mr. Campbell would like to bring attention to a recent publication from the Academy with respect to health equity issues. The discussion brief, Health Equity from an Actuarial Perspective: Questions to Explore, issued by the Academy’s Health Equity Work Group, serves as an introduction to the Work Group’s approach to examining efforts to reduce health disparities and applying actuarial expertise to the following areas: health insurance benefit design, provider contracting and network development, premium pricing, and managing population health. As the Work Group’s chairperson, Annette James (Academy), has indicated, “[t]his foundational document on health equity issues begins by offering questions and topics for further exploration to help identify ways in which health benefit programs might affect health equity.” This is but the first offering from the Work Group; focused publications in each of the areas identified are expected to come forward in the near future. The Academy believes that charges relevant to the health workstream will relate to the ongoing work of the Work Group.

Finally, Mr. Campbell wanted to underscore the value the Academy places on the collaborative work with the NAIC that the Academy has enjoyed over the years on issues of mutual interest. On this initiative and the many other workstreams in which the Special Committee is actively working on at the NAIC, the Academy is committed to providing objective expert actuarial analysis on behalf of the U.S. actuarial profession.

b. Angela Gleason (American Property Casualty Insurance Association—APCIA) stated that the APCIA remains committed to constructive partnership with all stakeholders to advance meaningful solution-driven dialogue aimed at sustainable proposals that benefit all. The APCIA looks forward to providing specific recommendations to the Special Committee’s 2021 proposed charges, but it offers foundational observations into the deep thinking that it continues to exercise around race and insurance issues.

These are broad and complicated historical issues, so the solutions are not simple and will require time to craft meaningful change. In the letter the APCIA submitted, APCIA chief executive officer (CEO) Dr. David Sampson stresses that the core purpose of the insurance industry is to provide sustainable risk transfer and risk mitigation solutions for our customers at a price commensurate with their actual or expected losses. Doing so ensures an equitable cost to each customer while also protecting the solvency of the insurance industry.

In light of those fundamental principles, the APCIA identified two important areas where it believes there are omissions from the preliminary draft charges. First, there does not appear to be a reference to researching and analyzing underlying cost drivers and how the industry can assist in addressing these issues. Long-standing forward-thinking solutions to historical challenges necessitate consideration of the lost cost drivers. Second, the issue of economic empowerment has been a consistent and important consideration throughout the NAIC dialogue, and the APCIA would like to see that topic referenced more strongly.

The draft 2021 charges of the Special Committee reflect much of the broad thinking and wide analysis required for the insurance sector to meaningfully grapple with these issues. Promoting DE&I at every level of the company and throughout the supply chain is paramount, and the APCIA looks forward to partnering with and sharing information with state insurance regulators on this topic. However, the APCIA is concerned that the same approach to analysis is not carried through in some of the underlying tone and drafting in some of the Workstream Three, Four and Five changes. For instance, Special Committee charges include continuing research and analysis of the legal and regulatory approaches to addressing unfair discrimination, but they simultaneously presuppose the outcome of that research and analysis, directing the development of tools and definitions without any foundational consideration of the problem trying to be solved. To drive collaboration and consensus toward meaningful change, state insurance regulators and stakeholders must reach consensus on the current legal framework and where that framework presents opportunities for change. Without that threshold exercise, when reaching consensus, there is the risk of going down the wrong path and developing solutions that do not address the problem. The APCIA believes there could be a benefit to some
language about taking a sequenced approach to first prioritizing the analysis of the current legal and regulatory framework. Specific to research, the APCIA will have some recommendations consistent with utilizing data that is available and meaningful.

Ms. Gleason turned it over to Roosevelt Mosley, principal and consulting actuary with Pinnacle Actuarial Resources, to highlight why reaching consensus on the legal framework and next steps matters. She thanked the Special Committee for the opportunity to share these thoughts, and the APCIA looks forward to continuing this important partnership.

c. Roosevelt Mosley (Pinnacle Actuarial Resources) commented on the implication of the proposed charges as they relate to setting rates for P/C insurance. Pinnacle Actuarial Resources recognizes that this is a very important issue that must be addressed, and it is in full support of the work of the Special Committee and being involved in assisting in whatever way possible.

Ultimately, Pinnacle Actuarial Resources believes that the collaboration between insurance companies, legislators, state insurance regulators, and consumer representatives will develop a solution that maintains the right balance between cost-based pricing and equity and fairness in terms of rates.

Secondly, Pinnacle Actuarial Resources also supports the research-based approach that is being advocated and recommends that the Special Committee continue to focus on defining what the issues are and evaluating solutions that will potentially address the issue and lead to the intended desired results.

Pinnacle Actuarial Resources believes this will require taking a holistic approach to this issue; this is not an issue that is going to be necessarily addressed by eliminating one rating factor, or even particularly one potential group of rating factors because the issue is more nuanced than that. Therefore, Pinnacle Actuarial Resources would encourage the Special Committee to continue to focus on research to ensure that the issue is being defined properly and then continue that research to evaluate the effects of proposed solutions so that they do not create any unintended consequences.

The other issue Pinnacle Actuarial Resources would like to draw attention to is the issue of correlation versus causation, particularly from an actuarial perspective. The actuarial standards on the use of risk classification factors do not require causation, but they do state that a logical relationship to expected outcomes is desirable but is not necessarily required. Putting a requirement of causation on particular risk characteristics could be significantly challenging, and Pinnacle Actuarial Resources would respectfully request that the Special Committee carefully consider the idea of correlation versus causation.

Lastly, Pinnacle Actuarial Resources applauds and encourages the Special Committee's separate listing of affordability of insurance versus the fairness of rates and bias.

For the insurance process to work efficiently for the maximum benefits of customers and insurers, the fundamentals of cost-based insurance must be maintained and must be appropriately balanced with the fact that rates should be fair and unbiased.

d. Birny Birnbaum (Center for Economic Justice—CEJ) stated, “CEJ greatly appreciates the efforts of the Special (EX) Committee on Race and Insurance and the NAIC to fully engage and examine the insurance impacts of systemic racism on communities of color. The proposed charges reflect a serious and sustained commitment by the members of the NAIC to identify and eliminate racism in insurance and to improve diversity, equity and inclusion among regulators and insurers.”

The CEJ’s review of the proposed charges suggests that the charges can be significantly improved for clarity; coordination; reducing overlapping activities; and most importantly, a more systematic approach to the issue. The CEJ sees the following problems with the charges:

- The charges seem to be more of a wish list of activities than a systematic approach to examining and addressing issues of race and insurance.
- The charges range from specific tasks to broad investigations with no distinction about the breadth of the activity.
- The charges largely fail to specify deliverables or time frames for delivery.
The charges create structures through Special Committee workstreams that duplicate lettered committee responsibilities and that make coordination unnecessarily difficult.

The charges reflect an initial cut at identifying insurer policies and practices that may result in disparate impact or proxy discrimination, but they contain no provision for a comprehensive examination by the subject matter committees.

The charges do not include key components of a comprehensive and systematic approach to examining race in insurance, including the identification of public policies that unfairly disadvantage communities of color or improving diversity and inclusion by consumer stakeholders, generally, and communities of color, particularly in regulatory processes.

The CEJ’s comments of March 23 to the Special Committee discuss the need for and components of a comprehensive and systematic approach by the NAIC to examine the effects of systemic racism in insurance. The CEJ has summarized its review of the suggested revisions to the proposed charges into the chart included with its comment letter. The chart shows the major strategic components, the specific charges for specific NAIC committees, the specific deliverables, and the time frame for deliverables.

The CEJ also recommends significant streamlining of the many Special Committee workstreams into one working group for the DE&I efforts and the remaining activities either at the Special Committee level or in a Special Committee Legal and Regulatory Guidance working group combined with assignments to other NAIC committees. This streamlining will reduce unnecessary duplication, facilitate coordination, better engage subject matter experts (SMEs) within the letter committees and better allow consumer stakeholder participation. It is much more difficult for consumer stakeholders to meaningfully participate when the relevant activities are spread over so many different workstreams and committees because of the much more limited resources of consumer stakeholders compared to industry stakeholders.

The CEJ suggests that a comprehensive and systematic approach by the NAIC to addressing race in insurance has five major components:

1. **DE&I among insurers, state insurance regulators, and consumer stakeholders in NAIC and regulatory processes.** The proposed Special Committee charges address the first two groups, but there is no charge for DE&I for communities of color in regulatory processes. The CEJ suggests that the Special Committee efforts for DE&I be combined into a single working group of the Special Committee and that the NAIC/Consumer Liaison Committee be charged with developing recommendations for improving DE&I within regulatory processes.

2. **Analyze, affirm and develop, as necessary, the legal and policy framework for addressing race and insurance.** This set of activities is the foundation for identifying and addressing the structural and systemic causes of racial disparities in insurance. The main deliverable is definitions of disparate impact and proxy discrimination. These definitions will reflect the intent of state insurance regulators and provide the guiding principles for the remaining activities. This work should be the responsibility of the Special Committee.

3. **Develop the legal and regulatory guidance for implementing the policy framework for race and insurance and implementing the Principles for AI.** This component of the overall strategy includes:
   a. Guidance for insurers to test for disparate impact and proxy discrimination.
   b. Guidance for insurers to report test results and actions taken in response to test results.
   c. Guidance for safe harbors for insurers who follow regulatory guidance.
   d. Guidance for insurers to implement the NAIC Principles for AI.

   The first three charges should be assigned to Special Committee, while the last charge should be assigned to the Big Data and Artificial Intelligence (EX) Working Group.

4. **Develop tools and resources for regulatory oversight.** This is the component of the overall strategy that ensures that state insurance regulators have the resources, tools, data and skills to effectively implement the regulatory guidance. Key tasks within this component are:
   a. Develop market regulation data collection sufficient to monitor consumer market outcomes by prohibited class characteristics.
b. Identify gaps in regulatory skills and resources necessary for the analysis of disparate impact and proxy discrimination.

The CEJ suggests that these charges be assigned to the Market Regulation and Consumer Affairs (D) Committee for several reasons. First, the proposed charges have this activity assigned to three workstreams, creating repetitive efforts. This should be a unified activity because the types of data and analysis necessary to examine accelerated underwriting in life insurance for disparate impact and proxy discrimination are the same as those necessary to examine health insurance delivery outcomes, personal auto claim settlements, homeowners pricing, or marketing for small business owners insurance. Second, the D Committee is already where consumer market outcome data collection efforts are housed. Third, it is the market regulators who will likely be carrying the bulk of responsibility for analyzing policies and practices for disparate impact and proxy discrimination. While the CEJ has great respect for the actuaries who review rate filings, it is not actuarial expertise that is relevant for examining disparate impact and proxy discrimination.

5. **Identify industry practices and public policies that may produce disparate impact and proxy discrimination.** The proposed charges include many specific inquiries for Workstreams Three, Four and Five for the CIPR. It is unclear how this list of issues of concern was developed or what equity framework was used to prioritize the listed items. Further, the list fails to distinguish between industry practices (subject to regulatory oversight) versus public policies (outside of regulatory oversight) that may lead to disparate impact and proxy discrimination. This is a critical distinction, and both lines of inquiry are essential to address systemic racism in insurance.

The CEJ suggests that instead of assigning this effort to Special Committee workstreams, the assignment to identify and examine practices and policies that may disadvantage communities of color should be assigned to the subject matter committees. It makes no sense to have a Special Committee workstream look at these issues for P/C insurance when the NAIC has a P/C committee. Moreover, assigning just the proposed charges to the three workstreams produces both major gaps and duplication. It produces gaps because there is no workstream that tracks the work of the Market Regulation and Consumer Affairs (D) Committee or the Financial Condition (E) Committee.

The CEJ also recommends that the charge to identify industry practices and public policies that produce disparate impact and proxy discrimination be given to the Financial Condition (E) Committee. It is vital that state insurance regulators and insurers examine their investment practices to identify investments that encourage or support environmental racism or abusive racial practices. For example, if state insurance regulators and insurers are committed to addressing systemic racism in insurance, then insurers should not be investing in predatory lenders or other businesses that systematically rob.

In closing, the CEJ asks for the Special Committee’s consideration of its suggested changes to the charges. The CEJ’s changes will better organize your efforts and, more importantly, facilitate stakeholder engagement. The CEJ looks forward to constructive engagement with other stakeholders and NAIC members to achieve concrete outcomes that match the anti-racism statements of industry and state insurance regulators.

e. Tony Cotto (National Association of Mutual Insurance Companies—NAMIC) commented that although the NAIC and its members have faced unique operational challenges this year, those challenges should not be used as an all-encompassing shield to avoid transparency and establish open collaborative NAIC processes.

When the Special Committee was formed, NAMIC and its members pledged to be partners in good faith at the table for all the discussions of the important issues to be tackled at the intersection of race and insurance. NAMIC provided initial recommendations to focus on issues surrounding the talent pipeline, and it is very glad to see that as one of the new proposed charges.

At the same time, NAMIC is deeply concerned that while it is sitting at the table ready to work together, the Special Committee’s work to date has largely taken place behind closed doors, with minimal time and opportunity for meaningful input.

The lengthy proposed charges that NAMIC had less than 72 hours to respond to include several significant substantive presumptions that, at the very least, merit additional discussion prior to adoption.
In a number of places, problems are assumed as something needing to be addressed or mitigated. Instead, NAMIC believes that the Special Committee should first determine if there is enough proof to answer a threshold question; it is not how to address the problem, but it is whether the problem exists at all. The proposed charges further introduce concepts that are foreign to state insurance codes and regulatory authority because they are fundamentally incompatible with sound risk classification, risk-based pricing, and established principles of unfair discrimination, like disparate impact and causal requirements for rating factors. Additionally, suggesting enhanced data reporting and requiring insurers to collect race and other socio-demographic data that insurers are not interested in and consumers do not like to provide is also likely to run afoul of numerous state and federal laws.

NAMIC’s members know that, like its regulators and the communities it serves, they are all stronger when NAMIC leverages and includes diverse backgrounds, skills, knowledge and perspectives of its policyholders, vendors and employees. At the same time, NAMIC respectfully discourages the use of departments or insurance (DOIs) regulation as tools for social engineering to fix societal problems that have nothing to do with insurance.

As NAMIC considers what it can and should do together within the bounds of the insurance ecosystem and its governing laws, Mr. Cotto encouraged not elevating demographics over data. Instead, he suggested focusing on what can be accomplished by working together to improve access for all stakeholders to the insurance mechanism and all of the economic empowerment that comes with that access.

f. Sonja Larkin-Thorne (Consumer Advocate) thanked the NAIC for the work and commitment on this issue.

Ms. Larkin-Thorne stated that Dr. Rochelle Walensky, Director of the U.S. Centers for Disease Control and Prevention (CDC), described racism as a serious public health threat that directly affects the well-being of millions of Americans; as a result, it affects the health of the entire nation. Racism is not just the discrimination against one group based upon the color of their skin or their race or ethnicity, but the structural barriers that affect racial and ethnic groups differently to influence where a person lives, where they work, where their children play, and where they worship and gather in community. The social determinants have a long-term negative effect on the mental and physical health of individuals and their communities and on their ability to live beyond certain communities and categories in life.

Ms. Larkin-Thorne noted that as the NAIC struggles to talk about race and insurance, it must be acknowledged that the business of insurance is the very foundation and the stability of the American economic system, but she does question why this system excludes so many Americans just trying to achieve the American dream. Ms. Larkin-Thorne questions whether there is something that is inherent in the fabric of the insurance industry that it has not been able to attract and retain diverse talent.

Ms. Larkin-Thorne noted that now everybody is bringing a person of color to the table to represent them. She believes insurance company CEOs need to come to the table and talk instead of sending their talking heads. They need to come to the table and listen about what is being seen and heard and help develop a plan that addresses the concerns that consumers have brought to attention.

After the comments, Commissioner Altmaier responded to concerns that the Special Committee has not been transparent with this process; certainly some regulator-only discussions have occurred, as they do on many of its workstreams in the past. As the Special Committee has stated multiple times, it will continue being transparent with this process and engaging with all of its stakeholders across the spectrum of the insurance industry. The Special Committee looks forward to everyone's participation in this going forward.

Commissioner Lara noted his frustration with the comments made by some associations that represent the industry. Commissioner Lara said he finds it a little disheartening that the Special Committee is trying to work with the industry and all the parties involved, and some of these organizations are still not even acknowledging or taking responsibility for what the industry has done in the past. It remains impossible to get to a point of actually having fruitful and transparent discussions if these organizations are not fully ready to acknowledge that everyone has this responsibility and the insurance industry also has a responsibility moving forward.

Commissioner Conway echoed Commissioner Lara’s comments and thanked the NAIC leadership for leading the charge and ensuring that the Special Committee keeps focused on these issues.

Commissioner Ommen also thanked the NAIC for continuing to work on these really important issues, and he appreciates all of the comments that have been received and the information that is continuing to be gathered.
Commissioner Ommen also noted the Special Committee needs to continue to be honest and recognize the actual causes of the disparities that are in the marketplace. Government policies, educational and economic differences contribute to the underlying social, safety and health risks that affect communities of color, especially urban communities of color. The Special Committee must think about and to some degree contribute to the ongoing discussions that are occurring outside of our industry.

Commissioner Altman stated that many are at the table with statements about putting in the hard work and having the hard conversations. She agrees with the sentiments about the NAIC, the current leadership, the former leadership, and the regulatory community really stepping up. The 2021 proposed charges are indicative of that willingness for the regulatory community to put the work in. Commissioner Altman says she hopes the stakeholders will be the Special Committee’s partners and will do the work with it and have a willingness to have those hard conversations and not just push back on them because they are hard.

Commissioner Navarro echoed Commissioner Lara’s comment on his disappointment from the industry and comments. He would have loved to have heard them say they want to work with the state insurance regulators; agree that issues around credit score, lack of credit, marital status and education exist; and state that they are no longer going to use those because they know they are unfairly discriminatory. He said he did not hear anyone say that, and when the Special Committee tried locally to address those in both private auto and homeowners insurance, guests lined up against the state insurance regulators to fight this initiative in the legislature. The Special Committee asked to see the correlation between credit score and claims history, and the data just simply was not available. The Special Committee appreciates its interaction with the industry, but Commissioner Navarro believes they can do more.

Commissioner Altmaier noted that the Special Committee will expose its 2021 proposed charges for a 30-day public comment period ending May 14 to receive detailed commentary on the proposed charges, followed by a public meeting of the Special Committee to fully consider stakeholder comments and finalize the 2021 work plan and charges.

Director Cameron noted that he appreciates the comments made by his fellow commissioners and interested parties. It certainly leads to the understanding of how difficult this task is and how much work has to be done. Director Cameron said he wants to assure the industry that the Special Committee intends to be collaborative. He also cautioned that the Special Committee is going to ask everyone to step up, just as it is asking itself to step up and lead.

The Special Committee has to provide confidence to its consumers that it is not providing any sort of discrimination and that it is not participating either intentionally or unintentionally with any form of discrimination. Director Farmer knew when he started this process in 2020 that this would not be a short, rushed change in direction, but rather a change in direction that will take years to accomplish. The Special Committee intends to move in that direction to reach that consensus and urge others to work with it. The Special Committee looks forward to having those conversations and talking to others individually and collectively as we move forward.

Director Fox suggested that those interested parties who presented comments on the proposed charges provide specific language for consideration, specifically where there is discussion on correlation and causation and not just comments about what is inadequate.

Having no further business, the Special (EX) Committee on Race and Insurance adjourned.
Special (EX) Committee on Race and Insurance

The Special (EX) Committee on Race and Insurance will:

A. Serve as the NAIC’s coordinating body on issues related to (i) diversity and inclusion within the insurance sector; (ii) race, diversity, and inclusion in access to the insurance sector and insurance products; and (iii) practices within the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups.

B. Coordinate with existing groups such as the Big Data and Artificial Intelligence (EX) Working Group and the Casualty Actuarial and Statistical (C) Task Force and encourage those groups to continue their work in predictive modeling, price algorithms and artificial intelligence (AI), with a particular focus on how race is impacted.

C. (Workstream One) Continue research and analysis to develop specific recommendations on action steps that state insurance regulators and companies can take to improve the level of diversity and inclusion in the industry, including:
   1. Seek additional engagement from stakeholders to understand the efficacy of diversity-related programs, how companies measure their progress and what state insurance regulators can do to support these efforts.
   2. Collect input on existing gaps in available industry diversity-related data.

D. (Workstream Two) In coordination with the Executive (EX) Committee, receive reports on NAIC diversity, equity and inclusion (DE&I) efforts. Serve as the coordinating body for state requests for assistance from the NAIC related to DE&I efforts.

E. (Workstream Two) Research best practices among state insurance departments on DE&I efforts and develop forums for sharing relevant information among states.

F. Continue research and analysis of insurance, legal and regulatory approaches to addressing unfair discrimination, specifically proxy discrimination and disparate impact, by defining the terms and determining appropriate steps to address, including:
   1. (Workstream Four) The impact of traditional life insurance underwriting on minority populations, considering the relationship between mortality risk and disparate impact.
   2. (Workstream Three) Developing analytical and regulatory tools to assist state insurance regulators in determining unfair discrimination including issues related to:
      a. The use of socioeconomic variables.
      b. Identifying proxy variables for race.
      c. Correlation vs. causation.
      d. Disparate impact considerations.
      e. Use of third-party data.
      f. Appropriateness of data such as criminal history.

G. (Workstreams Three, Four and Five) Consider enhanced data reporting and record-keeping requirements across product lines to identify race and other sociodemographic factors of insureds. Consider a data call to identify resources and products sold in specific ZIP codes to identify barriers to access.

H. Continue research and analysis related to insurance access and affordability issues, including:
   1. (Workstream Four) The marketing, distribution and access to life insurance products in minority communities, including the role that financial literacy plays.
   2. (Workstream Four) Disparities in the number of cancellations/rescissions among minority policyholders.
   3. (Workstream Five) Measures to advance equity through lowering the cost of health care and promoting access to care and coverage, with specific focus on measures to remedy impacts on people of color, low income and rural populations, and historically marginalized groups, such as the LGBTQ+ community, individuals with disabilities, and Alaska Native and other Native and Indigenous people.
   4. (Workstream Five) Examination of the use of network adequacy and provider directory measures (such as provider diversity, language and cultural competence) to promote equitable access to culturally competent care.
   5. (Workstream Five) Conduct additional outreach to educate consumers and collect information on health and health care complaints related to discrimination and inequities in accessing care.
   6. (Workstream Three) Steps that can be taken to mitigate the impact of residual markets, premium financing and nonstandard markets on disadvantaged groups.
   7. Make referrals for the development of consumer education and outreach materials as appropriate.
I. Direct NAIC and Center for Insurance Policy and Research (CIPR) staff to conduct necessary research and analysis, including:
   1. (Workstream Three) The status of studies concerning the affordability of auto and homeowner’s insurance, including a gap analysis of what has not been studied.
   2. (Workstream Three) The availability of producer licensing exams in foreign languages, steps exam vendors have taken to mitigate cultural bias, and the number and locations of producers by company compared to demographics in the same area.
   3. (Workstream Five) Aggregation of existing research on health care disparities and collection of insurance responses to the COVID-19 pandemic and its impact across demographic populations.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE – NEW CHARGES

The Accelerated Underwriting (A) Working Group, as part of its ongoing work to consider the use of external data and data analytics in accelerated life underwriting, will include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations.

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE – NEW CHARGES

The Health Insurance and Managed Care (B) Committee will:
A. Respond to inquiries from the U.S. Congress (Congress), the White House and federal agencies; analyze policy implications and the effect on the states of proposed and enacted federal legislation and regulations, including, where appropriate, an emphasis on equity considerations and the differential impact on underserved populations; and communicate the NAIC’s position through letters and testimony, when requested.

The Mental Health Parity and Addition Equity Act (MHPAEA) (B) Working Group of the Regulatory Framework (B) Task Force will develop model educational material for state departments of insurance (DOIs) and research disparities in and interplay between mental health parity and access to culturally competent care for people of color and other underrepresented groups.

The Health Innovations (B) Working Group will evaluate mechanisms to resolve disparities through improving access to care, including the efficacy of telehealth as a mechanism for addressing access issues; the use of alternative payment models and value-based payments and their impact on exacerbating or ameliorating disparities and social determinants of health; and programs to improve access to historically underserved communities.

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE – NEW CHARGES

The Producer Licensing (D) Task Force will receive a report from on the availability of producer licensing exams in foreign languages, the steps exam vendors have taken to mitigate cultural bias, and the number and location of producers by company compared to demographics in the area.

April 9, 2021

Honorable David Altmaier, Co-Chair
Honorable Dean L. Cameron, Co-Chair
Special (EX) Committee on Race and Insurance
National Association of Insurance Commissioners

Dear Commissioner Altmaier and Director Cameron:

On behalf of the American Academy of Actuaries,¹ I wish to reiterate and reinforce our previously stated commitment to work with the National Association of Insurance Commissioners on our shared goal to address diversity and inclusion concerns pertaining to insurance coverages.

As communicated to the committee upon its formation, the Academy is offering its ongoing assistance to you in your identification and exploration of areas where regulators can act in this regard and to address practices that could create barriers, or conversely provide incentives, to inclusion in insurance products. During the course of this work, Academy representatives have actively engaged the special committee, having made separate presentations to its workstreams three, four and five, on property/casualty, life, and health insurance issues, respectively. As you move forward on your newly proposed 2021 charges, we stand ready to work with you on executing and implementing them. With the relatively recent posting of those charges we have not had full opportunity to assess them as yet, but will provide input to you as appropriate as your work progresses.

As the national actuarial association for public policy and professionalism in the United States, the Academy is looking at issues surrounding appropriateness of data and assumptions used in U.S. actuarial practice across all areas of practice and is actively working with various

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
stakeholders and within the actuarial profession to advance this objective. A sampling of the work the Academy is doing can be found on the Academy’s Diversity, Equity & Inclusion webpage. We have formed task forces and work groups under our Casualty, Health, and Life Practice Councils that are dedicated to diversity, equity, and inclusion. We also have an active process within our Risk Management and Financial Reporting Council on data analytics and algorithms and will be issuing papers on those topics shortly.

To further illustrate the emphasis of this work, I would like to bring to your attention a recent publication from the Academy with respect to health equity issues. The discussion brief, Health Equity From an Actuarial Perspective: Questions to Explore, issued by the Academy’s Health Equity Work Group, serves as an introduction to the work group’s approach to examining efforts to reduce health disparities and applying actuarial expertise to the following areas: health insurance benefit design, provider contracting and network development, premium pricing, and managing population health. As the work group’s chairperson, Annette James, has indicated, “This foundational document on health equity issues begins by offering questions and topics for further exploration to help identify ways in which health benefit programs might affect health equity.” This is but the first offering from this work group; focused publications in each of the areas identified are expected to come forward in the near future. We do think that charges relevant to the health workstream will relate to the ongoing work of our Health Equity Work Group.

Finally, I want to underscore the value the Academy places on the collaborative work with the NAIC that we have enjoyed over the years on issues of mutual interest. On this initiative and the many other workstreams in which we are actively working on at the NAIC, we are committed to providing objective expert actuarial analysis on behalf of the U.S. actuarial profession.

If you have any questions regarding these comments that you would like to discuss, please feel free to contact me or Craig Hanna, the Academy’s director of public policy, at hanna@actuary.org.

Sincerely,

Thomas A. Campbell
President
American Academy of Actuaries

RE: NAIC Special (EX) Committee on Race and Insurance 2021 Charges

Dear Commissioner Altmaier and Director Cameron:

On behalf of our member plans, we would like to thank you for the opportunity to review the 2021 Proposed Charges to the Special (EX) Committee on Race and Insurance in advance of the meeting in April 12.

AHIP continues to support this critically important work and we stand ready to partner with the Special Committee on Race and Insurance and Committees to develop frameworks for measurable action. Health insurance providers are committed to achieving health equity, and believe that every American deserves access to affordable, high-quality care and health coverage, regardless of race, color, national origin, gender, sex, sexual orientation, age, or disability. Members of minority communities have a long history of being underserved and under-represented, resulting in persistent discrimination and systemic racism, which have exacerbated inequality in our health care system and negatively impacted the health and wellbeing of the individual members of these minority communities.

In September 2020, AHIP provided detail on key actions AHIP member plans are taking to improve health equity across our communities and among the more than 200 million Americans they serve. As of April 8th, we have also launched a resource page devoted to this work highlighting that health insurance providers continue this fight with recent areas of focus which include:

- **Listening to Leaders.** Fighting for health equity begins with listening. As part of our Health Equity Spotlight, AHIP talked with a diverse group of health care leaders to better understand the challenges facing minority and underserved communities and how we can work together to effect change.

- **Serving Communities in Need.** Health insurance providers have been working with federal, state, and local leaders to ensure Americans can get vaccinated as quickly and equitably as possible. Through the Vaccine Community Connectors initiative, health insurance providers have committed to promote health equity by enabling the vaccination of 2 million seniors age 65+ in America’s communities that are most at-risk and underserved — such as African American and Hispanic communities.
Taking Decisive Action. Achieving health equity means addressing factors that go beyond “traditional” health care. In fact, many social barriers in everyday life play a large role in personal health and health outcomes. These factors include limited access to healthy foods, reliable transportation, or health care services, as well as unsafe or unstable housing. Health insurance providers are working hard every day to break down these barriers. Free dental care, grants to address systemic racism, and donations to help with housing stability are just a few of the many actions health insurance providers are taking to address social determinants of health.

Everyone in America has the right to live their best, healthiest life. Health insurance providers are committed to fighting for health equity and improving health outcomes for every Americans.

With respect to the 2021 proposed charges of the Special (EX) Committee on Race and Insurance, we look forward to a discussion and more thorough review of the proposed scope and focus of this year’s work both during and following the April 12 meeting. We will remain active and engaged on the following areas outlined in the proposed charges:

- predictive modeling, price algorithms and artificial intelligence (AI), with a particular focus on how race is impacted.
- insurance, legal and regulatory approaches to addressing unfair discrimination, specifically proxy discrimination and disparate impact, by defining the terms and determining appropriate steps to address.
- data reporting and record-keeping requirements across product lines to identify race and other sociodemographic factors of insureds.
- insurance access and affordability issues, including educating consumers and collecting information on health and health care complaints related to discrimination and inequities in accessing care; and
- aggregation of existing research on health care disparities and collection of insurance responses to the COVID-19 pandemic and its impact across demographic populations.

We express our ongoing appreciation for the NAIC’s willingness to undertake this effort, and we continue to look forward to working with you to address these issues in a meaningful and productive way.

Sincerely yours,

Miranda Motter

RE: 2021 Proposed Charges – Special (EX) Committee on Race and Insurance

Dear Commissioner Altmaier and Director Cameron:

The American Property Casualty Insurance Association (APCIA) remains committed to constructive partnership with all stakeholders to advance meaningful solution-driven dialogue aimed at sustainable proposals that benefit all. We look forward to providing specific recommendations to the Special Committee (EX) on Race and Insurance’s proposed charges in the coming days, but offer foundational observations into the deep thinking that we continue to exercise around race and insurance issues.

The societal issues of today are long-standing and have been with our nation in some form since the founding of our Republic. Mellody Hobson, Co-CEO and President of Ariel Investments and Chairperson of the Board for Starbucks describes this period of “time as ‘Civil Rights 3.0’ – 1.0 representing the time after enslaved people were freed by the Emancipation Proclamation, and 2.0 being the 1960s, when societal momentum helped pass the Civil Rights Act and the Voting Rights Act. ‘The difference between then and now, this problem, this issue is at the feet of corporate America,’ Hobson says. ‘Now, corporate America is being held accountable in a very different way than we’ve ever seen before, by people inside the companies, by customers, by the broader society.’” (Michael Ko, “New Starbucks board chair lives, leads with urgency,” March 19, 2021 (quoting Mellody Hobson), available at https://stories.starbucks.com/stories/2021/new-starbucks-board-chair-mellody-hobson-lives-leads-with-urgency/).

These are broad and complicated historical issues, so the solutions are not simple and will require time to craft meaningful change. Importantly, these conversations must remain grounded in the core purpose of the insurance industry, which is to enable economic empowerment through sustainable risk transfer and risk mitigation solutions for our customers at a price commensurate with their actual or expected losses. Doing so ensures an equitable cost to each customer while also protecting the solvency of the insurance industry.
That is our core competency as an industry and anything that undermines our ability to deliver that fundamental value proposition also undermines the purpose of insurance.

This means some challenges may not lend themselves to insurance-specific solutions but will require the business community, government partners, and consumer groups to collaborate on holistic approaches that allow all to reach their highest economic potential. It also means that stakeholders will need to thoroughly understand the specific societal problems that need to be addressed and the current applicable regulatory and legal standards before requirements are imposed that could undermine both the fundamental risk-based pricing foundation of insurance and the ability to address the specific problem at issue.

APCIA’s Board Working Group on Social Equity and Inclusion Issues meets regularly to discuss these broad societal issues and the role of the insurance industry as well as opportunities to enhance diversity in our own companies and supply chains. APCIA is a founding member of the Insurance Careers Movement, we just concluded another successful joint Diversity Equity and Inclusion conference with the American Council of Life Insurers (ACLI) and Life Insurance Council of New York (LICONY). APCIA worked with Aon’s Ward Group and Plus Ultre to develop a Diversity and Inclusion Catalog (DEI Catalog). The DEI Catalog is an anonymized census of DEI policies, programs, and practices of APCIA member companies that will be updated biannually to benchmark and inform our industry improvements. APCIA renews its offer to present the Catalog findings to regulators.

The Draft 2021 Charges of the NAIC’s Special Committee On Race and Insurance Reflect much of the broad thinking and wide analysis required for the insurance sector to meaningfully grapple with these issues. The draft would, however, benefit from a wider discussion of its contents with an eye on possible additions or improvements. Economic empowerment issues and strategies, impacting loss costs, and a recognition of the need to receive input from regulators, consumers, and the industry are just a few examples for inclusion.

Thank you for the opportunity to share these thoughts and we look forward to continuing our important partnership with you.

Sincerely,

David A. Sampson

Dear Commissioner Altmaier and Director Cameron:

The Blue Cross Blue Shield Association (BCBSA) appreciates the opportunity to provide preliminary comments on the proposed charges for 2021 to the Special (EX) Committee on Race and Insurance (Special Committee) and related charges to other committee groups. BCBSA supports the continued efforts of the Special Committee to advance diversity and inclusion and address racial disparities that disadvantage people of color and historically underrepresented communities.

BCBSA is a national federation of 35 independent, community-based and locally operated Blue Cross and Blue Shield (BCBS) companies (Plans) that collectively provide health care coverage for one in three Americans. For more than 90 years, Blue Cross and Blue Shield companies have offered quality health care coverage in all markets across America – serving those who purchase coverage on their own as well as those who obtain coverage through an employer, Medicare and Medicaid.

BCBSA believes everyone should have access to high-quality health care regardless of race, ethnicity, national origin, sex, gender identity, sexual orientation, religion, education level, age, geography or disability. We understand the need to recognize the impact of long-standing structures of racism and discrimination, underlying bias and social factors on the health and well-being of many Americans. To that end, every BCBS company across the country, including in Puerto Rico, has launched at least one local initiative to address health disparities.

Our Issue Brief, *Addressing Health Disparities and Inequities in Communities of Color*, identifies five essential steps to creating a more equitable health system:

- Use data to uncover the most critical opportunities to drive health equity
• Target interventions to specific conditions that are chronic and plague communities of color
• Improve access to health coverage
• Address social determinants of health
• Increase the number of racially and ethnically diverse clinicians and provide training to all physicians that enables them to deliver culturally appropriate care

Our policy recommendations align with the Special Committee’s proposed 2021 charges and efforts to promote improved access to coverage and affordable culturally competent care.

Data

We agree that quality and accurate data is a key element to improving health equity in all communities across the country. Consistent race, ethnicity and language (REL) data collection standards should be implemented across the industry to avoid inaccuracies and inconsistencies. Currently, there are many variances in federal and state laws governing REL data collection in the healthcare sector. REL data sets come from different sources (i.e., provider records, employer records, member-provided information and imputation algorithms) and are collected using varying standards, which has an impact on their accuracy, consistency and completeness. We encourage the Special Committee to keep this in mind when finalizing its charges and recognize that any initial data calls will be challenged by these inconsistencies until standards can be implemented across the industry.

Access to Coverage

Research shows that people of color are more likely to be uninsured. BCBSA recommends several key actions to reduce inequities in access to coverage, including making permanent the enhancements to the ACA subsidies recently included in the American Recovery Plan Act, continuing to incentivize Medicaid expansion, automatically enrolling individuals in available coverage and removing barriers preventing immigrants from accessing necessary care.

Behavioral Health

To improve behavioral health care for people of color, there is an urgent need for individuals to have access to high-quality mental health services. To meaningfully address existing barriers to access and quality we must focus on the root causes – the limited availability of providers in communities of color, the critical need to reduce underlying disparities exacerbated by the stigmatization of mental health in underserved communities, and institutional biases meeting patients’ needs. These issues are critical to improving the health of people of color and reducing disparities in care. We are committed to ensuring compliance with mental health parity laws, but these laws and regulations focus on parity across types of services rather than across communities and cultural barriers, and alone cannot address the need to address provider shortages and systemic issues that hinder access for communities of color.

COVID-19

To date, BCBS companies have collectively committed more than $7 billion to fight the COVID-19 pandemic. As part of this commitment, we believe that everyone deserves access to safe, effective COVID-19 vaccines to protect themselves, their families and their communities. That is why we joined America’s Health Insurance Plans (AHIP) in a new White House initiative to promote health equity by removing barriers to vaccinations for 2 million Americans most at risk of COVID-19. The Vaccine Community Connectors pilot initiative aims to enable the vaccination of 2 million seniors age 65+ in America’s most at-risk, vulnerable and underserved communities – such as African American and Hispanic communities.
BCBSA and a broad range of other stakeholders have provided input into the development of the workstream reports on race and insurance. We appreciate the NAIC’s thoughtful consideration of those previous comments in developing the reports. We look forward to partnering with the Special Committee as it seeks industry input and technical expertise on this important topic. If you have any questions or want additional information, please contact Randi Chapman at randi.chapman@bcbsa.com or 202.826.5156.

Sincerely,

[Signature]

Office of Policy and Representation
Comments from the Center for Economic Justice

To the NAIC (EX) Committee on Race and Insurance

April 10, 2021

The Center for Economic Justice (CEJ) submits the following comments on the 2021 Proposed Charges for the Special (EX) Committee on Race and Insurance (“SCoRI”) released on April 7, 2021. Our comments reference our March 23, 2021 comments to the SCoRI and our April 8, 2021 Consumer Liaison Committee presentation, both attached.

CEJ greatly appreciates the efforts of the SCoRI and the NAIC to fully engage and examine the insurance impacts of systemic racism on communities of color. The proposed charges reflect a serious and sustained commitment by the members of the NAIC to identify and eliminate racism in insurance and to improve diversity, equity and inclusion among regulators and insurers.

Our review of the proposed charges suggests that the charges can be significantly improved for clarity, coordination, reducing overlapping activities and, most importantly, a more systematic approach to the issue. We see the following problems with the charges.

- The charges seem to be more of a wish list of activities than a systematic approach to examining and addressing issues of race and insurance.
- The charges range from specific tasks to broad investigations with no distinction about the breadth of the activity.
- There charges largely fail to specify deliverables or time frames for delivery.
- The charges create structures through SCoRI work streams that duplicate lettered Committee responsibilities and that make coordination unnecessarily difficult.
- The charges reflect an initial cut at identifying insurer policies and practices that may result in disparate impact or proxy discrimination, but contain no provision for a comprehensive examination by the subject-matter committees.
- The charges do not include key components of a comprehensive and systematic approach to examining race in insurance, including identification of public policies that unfairly disadvantage communities of color or improving diversity and inclusion by consumer stakeholders, generally, and communities of color, particularly in regulatory processes.

Our comments of March 23, 2021 to the SCoRI discuss the need for and components of a comprehensive and systematic approach by the NAIC to examine the impacts of systemic racism in insurance. We have summarized our review of the proposed charges suggested revisions into the chart below. The chart shows the major strategic components, the specific charges for specific NAIC committees, the specific deliverables and the time frame for deliverables.
We also recommend significant streamlining of the many SCoRI work streams into one working group for the DE&I efforts and the remaining activities either at the SCoRI committee level or in a SCoRI Legal and Regulatory Guidance working group combined with assignments to other NAIC Committees. This streamlining will reduce unnecessary duplication, facilitate coordination, better engage subject-matter experts within the lettered committees and better allow consumer stakeholder participation. It is much more difficult to consumer stakeholder to meaningfully participate when the relevant activities are spread over so many different work streams and committees because of the much more limited resources of consumer stakeholders compared to industry stakeholders.

We suggest a comprehensive and systematic approach by the NAIC to addressing race in insurance has five major components. Please see the chart for a summary.

1. **Diversity, Equity and Inclusion (“DE&I”) among insurers, regulators and consumer stakeholders in NAIC and regulatory processes.** The proposed SCoRI charges C, D and E address the first two groups, but there is no charge for DE&I for communities of color in regulatory processes. We suggest the SCoRI efforts for DE&I be combined into a single working group of the SCoRI and that the Consumer Liaison Committee be charged with developing recommendations for improving DE&I within regulatory processes.

2. **Analyze, affirm and develop, as necessary, the legal and policy framework for addressing race and insurance.** This set of activities is the foundation for identifying and addressing the structural and systemic causes of racial disparities in insurance. The main deliverable is definitions of disparate impact and proxy discrimination. These definitions will reflect the intent of regulators and will provide the guiding principles for the remaining activities. This work should be the responsibility of the SCoRI.

3. **Develop the legal and regulatory guidance for implementing the policy framework for race and insurance and for implementing the Principles for AI.** This component of the overall strategy includes:
   
   a. Guidance for insurers to test for disparate impact and proxy discrimination;
   
   b. Guidance for insurers to report test results and actions taken in response to test results
   
   c. Guidance for safe harbors for insurers who follow regulatory guidance
   
   d. Guidance insurers to implement the NAIC Principles for AI

   Charges a, b and c should be assigned to SCoRI, while charge d should be assigned to the Big Data / AI working group.
4. **Develop tools and resources for regulatory oversight.** This is the component of the overall strategy that ensures that regulators have the resources, tools, data and skills to effectively implement the regulatory guidance. Key tasks within this component are:

   a. Develop market regulation data collection sufficient to monitor consumer market outcomes by prohibited class characteristics; and

   b. Identify gaps in regulatory skills and resources necessary analysis of disparate impact and proxy discrimination.

We suggest that these charges be assigned to the Market Regulation (D) Committee for several reasons. First, the proposed charges have this activity assigned to three work streams (in proposed charge G), creating repetitive efforts. This should be a unified activity because the types of data and analysis necessary to examine accelerated underwriting in life insurance for disparate impact and proxy discrimination are the same as those necessary to examine health insurance delivery outcomes or personal auto claim settlements or homeowners pricing or marketing for small business owners insurance. Second, the Market Regulation (D) Committee is already where consumer market outcome data collection efforts are housed. Third, it is the market regulators who will likely be carrying the bulk of responsibility for analyzing policies and practices for disparate impact and proxy discrimination. While we have great respect for the actuaries who review rate filings, it is not actuarial expertise that is relevant for examining disparate impact and proxy discrimination.

5. **Identify industry practices and public policies that may produce disparate impact and proxy discrimination.** The proposed charges include many specific inquiries for work streams 3, 4 and 5 for the CIPR. It is unclear how this list of issues of concern was developed or what equity framework was used to prioritize the listed items. Further, the list fails to distinguish between industry practices (subject to regulatory oversight) versus public policies (outside of regulatory oversight) that may lead to disparate impact and proxy discrimination. This is a critical distinction and both lines of inquiry are essential to address systemic racism in insurance.

For example, let’s look at uninsured motorist issues. Standard industry practice is to develop sub-state rating territories for uninsured motorist coverage rates. But, we know that the uninsured motorist rate is higher in communities of color for a variety of reasons tied to historic racial discrimination. By using sub-state rating territories for UM rates, consumers in communities of color who purchase UM are penalized because there is a higher percentage of community members unable to afford insurance. This is essentially a penalty for living in a community of color. Regulators currently have authority to identify such rating practices as unfairly discriminatory – an example of an industry practice that may result in disparate impact or proxy discrimination.
CEJ Comments to NAIC Special Committee on Race and Insurance  
April 10, 2021  
Page 4

For an example of public policy that likely creates disparate impact, the Property / Casualty C Committee could look at states’ efforts to enforce financial responsibility laws and identify and punish uninsured drivers. If these increasingly intensive and data-driven monitoring and enforce efforts disproportionately punish members of communities of color, insurance regulators should provide analysis and insight to policymakers to address the uninsured motorist problem without creating a debtors’ prison for communities of color.

We suggest that instead of assigning this effort to SCoRI work streams, the assignment to identify and examine practices and policies that may disadvantage communities of color be assigned to the subject matter committees. It makes no sense to have a SCoRI work stream look at these issues for property/casualty insurance when the NAIC has a property/casualty committee. Moreover, assigning just the proposed charges to the three work streams produces both major gaps and duplication. It produces gaps because there is no work stream that tracks the work of the Market Regulation D or Financial Condition E Committees.

Our attached March 23, 2021 comments to the SCoRI and attached April 8, 2021 presentation to the Consumer Liaison Committee show that insurer practices for marketing, claims settlement and antifraud raise as much or more concern regarding potential racial disparities and exclusion than pricing. Most of these non-pricing industry practices are part of the D Committee’s portfolio and, consequently, the D Committee should be just as much a “work stream” for the effort to examine racial disparities as the major lines of business – and that work should be done at the lettered committee and not in a parallel and duplicative “work stream” of SCoRI.

We also recommend that the charge to identify industry practices and public policies that produce disparate impact and proxy discrimination be given to the Financial Condition E Committee. It is vital that regulators and insurers examine their investment practices to identify investments that encourage or support environmental racism or abusive racial practices. For example, if regulators and insurers are committed to addressing systemic racism in insurance, then insurers should not be investing in predatory lenders or other businesses that systematically rob

In closing, we look forward to constructive engagement with other stakeholders and NAIC members to achieve concrete outcomes that match the anti-racism statements of industry and regulators. We also urge the SCoRI to provide a two-week comment period following your April 12, 2021 meeting for comments by interested parties, followed by a public meeting of the SCoRI by the end for April or beginning of May to fully consider stakeholder comments and finalize the 2021 work plan and charges..

**Summary**

- **Promote Diversity, Equity and Inclusion in Insurance**
  - Within Insurers, Producers and Suppliers
  - Within Insurers
  - Within Regulators
  - Within Regulatory Processes

- **Affirm the Legal and Policy Framework for Addressing Race and Insurance**

- **Develop Legal and Regulatory Guidance for Implementing Policy Framework for Race and Insurance and for Implementing Principles for AI**

- **Develop Tools and Resources for Regulatory Oversight**

- **Identify Industry Practices and Public Policies That May Produce Disparate Impact and Proxy Discrimination, Including Low-Value Products That Target Communities of Color**
  - Add Charge for A, B, C, D, E Committees
  - Life Insurance, Health B, Property/Casualty C, Market Regulation D, Financial Condition E, D Committee to focus on insurer marketing, claims settlement and antifraud. E Committee to focus on insurer investments that promote or discourage environmental racism, predatory lending and other business practices that disadvantage
Regulatory Modernization to Address Systemic Racism in Insurance

Presentation to NAIC Consumer Liaison Committee

April 8, 2021

Birny Birnbaum
Center for Economic Justice
The Center for Economic Justice

CEJ is a non-profit consumer advocacy organization dedicated to representing the interests of low-income and minority consumers as a class on economic justice issues. Most of our work is before administrative agencies on insurance, financial services and utility issues.

On the Web: www.cej-online.org
About Birny Birnbaum

Birny Birnbaum is the Director of the Center for Economic Justice, a non-profit organization whose mission is to advocate on behalf of low-income consumers on issues of availability, affordability, accessibility of basic goods and services, such as utilities, credit and insurance.

Birny, an economist and former insurance regulator, has worked on racial justice issues for 30 years. He performed the first insurance redlining studies in Texas in 1991 and since then has conducted numerous studies and analyses of racial bias in insurance for consumer and public organizations. He has served for many years as a designated Consumer Representative at the National Association of Insurance Commissioners and is a member of the U.S. Department of Treasury’s Federal Advisory Committee on Insurance, where he co-chairs the subcommittee on insurance availability. Birny is also a member of the U.S. Federal Reserve Board’s Insurance Policy Advisory Committee.

Birny served as Associate Commissioner for Policy and Research and the Chief Economist at the Texas Department of Insurance. At the Department, Birny developed and implemented a robust data collection program for market monitoring and surveillance.

Birny was educated at Bowdoin College and the Massachusetts Institute of Technology. He holds Master's Degrees from MIT in Management and in Urban Planning with concentrations is finance and applied economics. He holds the AMCM certification.
Why CEJ Works on Insurance Issues

CEJ works to ensure *fair access* and *fair treatment* for insurance consumers, particularly for low- and moderate-income consumers.

*Insurance is the Primary Institution to Promote Loss Prevention and Mitigation, Resiliency and Sustainability:*

CEJ works to ensure insurance institutions maximize their role in efforts to reduce loss of life and property from catastrophic events and to *promote resiliency and sustainability* of individuals, businesses and communities.

Systemic Racism\(^1\)

“Structural racism is the policies and practices that normalize and legalize racism in a way that creates differential access to goods, services, and opportunities based on race,” the report says. “Environmental racism refers to policies, practices, or directives that result in advantages or disadvantages to individuals or communities based on race.” Furthermore, environmental racism includes harm caused by infrastructures that determine access and quality of resources and services.

“To understand environmental racism in the United States, we must discuss the nation’s history of housing policies and the ways they have impacted Black people,” the report says. Those policies include zoning ordinances, restrictive covenants, blockbusting, steer ring and redlining. It defines redlining as a practice used by the Federal Housing Administration to outline Black neighborhoods with red, making them ineligible for federally insured loans, according to the rating system used by the Home Owners’ Loan Corporation.
How Can Systemic Racism Manifest Itself in Insurance – Whether for Marketing, Pricing or Claims Settlement?

1. Intentional Use of Race – Disparate Intent

2. Disproportionate Outcomes Tied to Historic Discrimination and Embedded in Insurance Outcomes – Disparate Impact

3. Disproportionate Outcomes Tied to Use of Proxies for Race, Not to Outcomes – Proxy Discrimination
The Evolution of Insurers’ Analytics: Univariate to Multivariate Analysis

In the past 30 years, insurers have moved away from univariate analysis to multivariate analysis – from analyzing the effects of one risk characteristic at a time to simultaneous analysis of many risk characteristics.

What the problem with univariate analysis?

If I analyze the relationship of age, gender and credit score – each individually – to the likelihood of a claim, the individual results for each risk characteristic are likely capturing some of the effects of the other risk characteristics – because age, gender and credit score (or other risk classifications) may be correlated to each other as well as to the outcome variable.

How does multi-variate analysis address this problem?
Testing for Disparate Impact and Proxy Discrimination:
A Natural Extension of Typical Insurer Practices

Here’s a simple illustration of a multivariate model. Let’s create a simple model to predict the likelihood of an auto claim:

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + e = y \]

\( X_1, X_2 + X_3 \) are the predictive variables trying to predict \( y \).

Say that \( X_1, X_2 + X_3 \) are age, gender and credit score and we are trying to predict \( y \) – the likelihood of an auto insurance claim.

Let’s assume that all three \( X \)s are statistically significant predictors of the likelihood of a claim and the \( b \) values are how much each \( X \) contributes to the explanation of claim. The \( b \) values can be tested for statistical significance – how reliable are these estimates of the contribution of each \( X \)?

**By analyzing these predictive variable simultaneously, the model removes the correlation among the predictive variables.**
Use of Control Variables in Multivariate Insurance Models

Suppose an insurer want to control for certain factors that might distort the analysis? For example, an insurer developing a national pricing model would might want to control for different state effects like different age distributions, different occupation mixes, different frequencies of accidents or differences in jurisprudence. An insurer would add one or more control variables.

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_4C_1 + e = y \]

\( C_1 \) is a control variable – let’s say for State. By including State as a control variable, the correlation of the Xs to State is statistically removed and the new b values are now the contribution of the Xs, independent of their correlation to State, to explaining the likelihood of a claim. When the insurer deploys the model, it still only uses the X variables, but now with more accurate b values.
Disparate Impact as Both a Standard and a Methodology

Let’s go back to multi-variate model, but now use Race as a control variable:

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_4R_1 + e = y \]

\( R_1 \) is a control variable – by including race in the model development, the correlation of the Xs to race is statistically removed and the new b values are now the contribution of the Xs, independent of their correlation to race, to explaining the likelihood of a claim.

What if \( X_1 \) is a perfect proxy for Race?

Then once we add the control variable for Race, \( X_1 \) no longer has any predictive value because all it was doing was predicting race, not the outcome \( y \).

What if \( X_1 \) is both predictive of mortality and correlated to Race? Then, the model still shows \( X_1 \)’s (now different) predictive value, but shorn of its correlation to Race, leaving the unique contribution of \( X_1 \) to explaining mortality.
How Do We Interpret the Disparate Impact Analysis?

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_4R_1 + e = y \]

Result: No Proxy Discrimination or Disparate Impact

Disparate Impact Analysis Improves Cost-Based Pricing

There is a long history and many approaches to identifying and minimizing disparate impact in employment, credit and insurance. But, the general principle is to identify and remove the correlations between the protected class characteristic and the predictive variables.

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_4R_1 + e = y \]

What if \(X_1, X_2\) and \(X_3\) are not perfect proxies for Race, but still have high correlation? Then, the disparate impact analysis – and our simple model – removes that correlation and the remaining values for \(b_1, b_2\) and \(b_3\) are the unique contributions of each predictive variable to explaining the outcome. The result is more – not less – accurate cost-based or risk-based analysis.
Why is it Reasonable and Necessary to Recognize Disparate Impact as Unfair Discrimination in Insurance?

1. It makes no sense to permit insurers to do indirectly what they are prohibited from doing directly. If we don’t want insurers to discriminate on the basis of race, why would we ignore practices that have the same effect?

2. It improves risk-based and cost-based practices.

3. In an era of Big Data, systemic racism means that there are no “facially-neutral” factors.
What Did We Learn from the Coded Bias Movie?

Advocates of algorithmic techniques like data mining argue that they eliminate human biases from the decision-making process. **But an algorithm is only as good as the data it works with.** Data mining can inherit the prejudices of prior decision-makers or reflect the widespread biases that persist in society at large. **Often, the “patterns” it discovers are simply preexisting societal patterns of inequality and exclusion. Unthinking reliance on data mining can deny members of vulnerable groups full participation in society.**

The fact that an insurer doesn’t use race in an algorithm does not logically or factually result in no discrimination on the basis of race.

In fact, the only way to identify and eliminate the impacts of structural racism in insurance is to measure that impact by explicit consideration of race and other protected class factors.
Defining Disparate Impact and Proxy Discrimination in Insurance

*Disparate Impact:* Use of a non-prohibited factor that causes disproportionate outcomes on the basis of prohibited class membership and that such disproportionate outcomes cannot be eliminated or reduced without compromising the risk-based framework of insurance.

*Proxy Discrimination:* Use of a non-prohibited factor that, due in whole or in part to a significant correlation with a prohibited class characteristic, causes unnecessary, disproportionate outcomes on the basis of prohibited class membership.
How Should These Definitions Be Implemented?

2. Create a Safe Harbor for Insurers Who Do This Using Methods Accepted by Regulators.

3. Establish Equity Standards for Minimizing Disparate Impact:
   a. Seek approaches that reduce disparate impact without compromising efficiency of the algorithm; and
   b. Establish an equity/efficiency trade off of 20 to 1: For example, reduce algorithmic efficiency by 2% if disparate impact can be reduced by 40% or more.
The Murder of George Floyd Raised Awareness of Systemic Racism
How Did Insurer CEOs React?

“In the coming days, I encourage each of us to step outside of our comfort zones, seek to understand, engage in productive conversations and hold ourselves accountable for being part of the solution. We must forever stamp out racism and discrimination.” Those are the words of Kirt Walker, Chief Executive Officer of Nationwide.

Floyd’s death in Minneapolis is the latest example of “a broken society, fueled by a variety of factors but all connected by inherent bias and systemic racism. Society must take action on multiple levels and in new ways. It also requires people of privilege—white people—to stand up for and stand with our communities like we never have before,” Those are the words of Jack Salzwedel, the CEO of American Family.
How Have the Insurer Trades – Particularly NAMIC and APCIA – Responded to the Insurer CEOs’ Calls?

- Opposed the inclusion of “Consistent with the risk-based foundation of insurance, AI actors should proactively . . . avoid proxy discrimination against protected classes.”

- Have opposed the application of disparate impact liability under the federal Fair Housing Act to home insurance.

- Supported the gutting of the U.S. Housing and Urban Development’s disparate impact rule – despite pleas from several insurers to leave the rule alone in the aftermath of the murder of Black Americans at the hands of police.

- Pushed NCOIL to adopt a resolution opposing the CASTF White Paper because it suggested that regulators could ask insurers to show a rational relationship between new data sources and insurance outcomes.
How Have the Insurer Trades – Particularly NAMIC and APCIA – Responded to the Insurer CEOs’ Calls? (con’t)

- Opposed state bills to limit the impacts of credit-based insurance scores during a pandemic, citing insurers’ need for “risk-based pricing,” while supporting efforts to permit such deviations when insurers find it convenient – price optimization, consumer lifetime value.

- Pushed NCOIL to adopt a definition of proxy discrimination that would block any efforts to identify and address disparate impact and proxy discrimination and shield insurers from any accountability for their practices.
NCOIL’s “Definition” of Proxy Discrimination Must Be Rejected

At the urging of the P/C Trades, NCOIL recently adopted the following:

For purposes of this Act, as well as for the purpose of any regulatory material adopted by this State, or incorporated by reference into the laws or regulations of this State, or regulatory guidance documents used by any official in or of this State, “Proxy Discrimination” means the intentional substitution of a neutral factor for a factor based on race, color, creed, national origin, or sexual orientation for the purpose of discriminating against a consumer to prevent that consumer from obtaining insurance or obtaining a preferred or more advantageous rate due to that consumer’s race, color, creed, national origin, or sexual orientation.

At best, this action represents a profound misunderstanding of how systemic racism affects insurance. At worst, it is a conscious act of stopping insurance regulators and states from even attempting to address racial justice. The language memorializes insurer practices that indirectly discriminate on the basis of race, discourages insurers from examining such racial impact and restricts current regulatory efforts.
Addressing Systemic Racism in Insurance –
A Comprehensive Approach Needed

CEJ applauds the efforts of the NAIC, individual states, insurance trades and individual insurers to examine, measure and improve racial diversity in leadership and throughout their organizations. While improving diversity is an important goal and strategy to address systemic racism in insurance, it is not nearly sufficient to address the structures that have caused insurer practices to reflect and perpetuate historic discrimination.

Concrete steps within a comprehensive framework are needed:

1. Explicit recognition of disparate impact and/or proxy discrimination against protected classes as unfair discrimination in insurance.

2. Develop guidance to require insurers to test for and minimize disparate impact in all aspects of their consumer-facing operations – marketing, underwriting, pricing, claims settlement, antifraud, payment plan eligibility, investments.
3 Develop guidance for regulators and insurers for acceptable methods of testing and reporting results of testing for disparate impact to regulators and the public.

4 Develop a data reporting framework to permit meaningful and timely analysis of availability and affordability of insurance, generally, and in communities of color.

5 Add a charge to all committees, task forces and working groups to examine their subject area for insurer and regulatory practices that may reflect and perpetuate historic racial discrimination.

6 Add a charge to relevant committees to identify public or regulatory policies that unfairly discriminate on the basis of race, including identification of low-value products targeted at communities of color.
7 Commit to significantly more consumer participation, generally, and consumers from communities of color, specifically, in NAIC proceedings and events. Efforts to improve consumer stakeholder participation should be measured with a concrete target of equal time with industry stakeholders.

8 Direct committees, task forces and working groups to be guided by and to implement the NAIC’s Principles on Artificial Intelligence. The massive increase in insurers’ use of big data and AI has increased the potential for proxy discrimination and disparate impact. Efforts to address systemic racism in insurance are inseparable from more effective oversight of insurers’ use of big data and AI.

9 Update model laws regarding advisory organization. Any effort to implement the NAIC’s AI principles and the address systemic racism in insurance must modernize and expand the reach of state advisory organization laws.
Why Test for Disparate Impact and Proxy Discrimination in All Aspects of Insurers’ Operations?

Among the various parts of the insurance life-cycle – marketing, underwriting, pricing, claims settlement, antifraud – new data sources and complex algorithms for pricing currently get the most attention from regulators because in most states most insurers file personal lines rates. Data and algorithms used for marketing, in contrast, get little or no attention. Yet, it is the marketing function – and the new data sources and algorithms used in micro-targeting consumers – that has become the true gatekeeper for access to insurance.

Consider the following quotes from 2005 to present. In 2005, in a meeting with investment analysts, the CEO of a major publicly-traded insurer was effusive about the benefits of the then relatively new use of consumer credit information – referred to as tiered pricing.
Tiered pricing helps us attract higher lifetime value customers who buy more products and stay with us for a longer period of time. That’s Nirvana for an insurance company.

This year, we’ve expanded from 7 basic price levels to 384 potential price levels in our auto business.

Tiered pricing has several very good, very positive effects on our business. It enables us to attract really high quality customers to our book of business.

The key, of course, is if 23% or 20% of the American public shops, some will shop every six months in order to save a buck on a six-month auto policy. **That’s not exactly the kind of customer that we want.** So, the key is to use our drawing mechanisms and our tiered pricing to find out of that 20% or 23%, to find those that are unhappy with their current carrier, are likely to stay with us longer, likely to buy multiple products and that’s where tiered pricing and a good advertising campaign comes in.
Now fast forward to 2017, when the new CEO of that insurer told investment analysts:

The insurer’s “universal consumer view” keeps track of information on 125 million households, or 300 million-plus people, Wilson said.

“When you call now they’ll know you and know you in some ways that they will surprise you, and give them the ability to provide more value added, so we call it the trusted adviser initiative”
And just recently, the telematics subsidiary of this insurer pitched its ability to identify the most valuable customers in real time:

Attract the most profitable drivers with telematics-based targeting

Traditionally, insurance marketing has relied on demographic and behavioral data to target potential customers. While useful at a high level, these proxies fall short when it comes to considering customer value and retention. Now, you can reach the most profitable customers from the outset using the nation’s first telematics-based marketing platform.

Company intelligently layers driving score onto insurer campaign targeting criteria to purchase the ideal audience based on quartiles of driving risk. [The] Scored user receives a targeted offer via awareness and performance channels.
Not to be outdone, another telematics data vendor announced a partnership with an auto manufacturer

Insurers can harness the power of connected Hyundai vehicles as a new marketing channel to support the profitable growth of their behavior- or mileage-based programs. Discount Alert allows insurers to deploy personalized marketing offers directly to drivers through Hyundai’s online owner portal and contains robust tools to anonymously segment ideal risk targets—ensuring your offers are only sent to qualified leads.

All of this begs the questions, what about consumers and businesses who don’t have the wealth to provide the value sought by insurers? How do these strategies line up with public policies against discrimination on the basis of race and promoting widespread availability of insurance?
Comments from the Center for Economic Justice

To the NAIC Committee on Race and Insurance

March 23, 2021

CEJ writes to supplement our prior comments to the Committee of November 10, 2020 and December 16, 2020.

Our comments today focus on the following:

1. Specific descriptions and definitions of unfair discrimination on the basis of race – disparate treatment, disparate impact and proxy discrimination – and the legislative and regulatory response to each type of unfair discrimination.

2. Rejection of the recent NCOIL action to define proxy discrimination only as intentional use of a proxy for a prohibited factor with the intent to discriminate on the basis of the prohibited factor.

3. The need for concrete actions to address the legislative and regulatory policies that permit structural racism to unfairly impact insurance consumers of color.

Unfair Insurance Discrimination on the Basis of Race

CEJ suggests that there are three types of unfair discrimination on the basis of race. The first is intentional discrimination on the basis of race – disparate treatment. While many states prohibit such explicit discrimination, such prohibitions are not universal across all states and all lines of insurance.¹

**Recommended NAIC Action:** Catalog state laws regarding unfair discrimination on the basis of race and other prohibited classes and encourage uniform application to all insurers and all lines of business and all aspects of insurers’ operations – marketing, sales, underwriting, pricing, claims settlement and anti-fraud.

¹ See Avraham, Logue and Schwrcz, “Understanding Insurance Anti-Discrimination Laws.” The authors find “contrary to the conventional wisdom, state insurance antidiscrimination laws vary a great deal: in substance and in the intensity of regulation, across lines of insurance, across policyholder characteristics, and across states.”

The second and third types of unfair insurance discrimination on the basis of race relate to the impacts of structural racism on insurers’ algorithms, products and processes – disparate impact and proxy discrimination.

For purposes of the NAIC’s efforts to address structural racism in insurance, CEJ identifies disparate impact at disproportionate outcomes tied to historic discrimination and embedded in insurance outcomes. One example is the disproportionate presence of certain health problems or shorter life expectancies in communities of color. Because the impacts of historic discrimination are embedded in insurance outcomes, it is a policy decision – and not a technical issue – to protect the groups experiencing the disproportionately poor insurance outcomes. As a policy issue, policymakers have addressed these outcomes prohibiting discrimination on the basis of certain facially-neutral factors in underwriting and pricing. So, regardless of actuarial indications, insurers cannot discriminate on the basis of race in health and life insurance.

For purposes of the NAIC’s efforts to address structural racism in insurance, CEJ identifies proxy discrimination as disproportionate outcomes tied to the use of proxies for the prohibited characteristic and not to the outcomes. We’ve previously described one such situation when insurers were using age and value of the home as underwriting factors for home insurance – with the result that communities of color were systematically denied home insurance because these communities were characterized by older, lower-value homes – a results directly tied to historic discrimination in housing and lending. When challenged, the insurers discovered that the factors they were using – age and value of the home – were more correlated with race than with insurance outcomes. As a result of the disparate impact challenge, the insurers moved to more relevant risk factors – such as the condition of the home and its systems – with the result that insurance became more available in communities of color as the insurers reduced the correlation between their risk classifications and race.

This second type of disparate impact involves intentional or unintentional unnecessary discrimination on the basis of race. It is unnecessary because the facially-neutral factor that is purportedly associated with the insurance outcome is, in whole or in part, a proxy for the protected class characteristic and predictive of that protective class characteristic. Stated differently, the facially-neutral factor has a spurious correlation to the insurance outcome and is really correlated to the protected class characteristic. Attached is a presentation I will be giving at the Casualty Actuarial Society’s Ratemaking and Product Management Seminar that provides a more technical explanation of these concepts.

It is this second type of disproportionate outcome on the basis of protected class membership that proxy discrimination analysis is intended to identify and minimize. It is this type of unnecessary racial discrimination that has been the concern of insurance regulators.
CEJ Comments to NAIC Committee on Race and Insurance
March 23, 2021
Page 3

**Recommended Actions:** Develop regulatory guidance that defines disparate impact and proxy discrimination in insurance.

For **disparate impact**, the definition should track that promulgated by the U.S. Department of Housing and Urban Development in 2013 and reaffirmed in 2016 (attached). The HUD rule defines “discriminatory effect” (i.e. disparate impact) as

> “discriminatory effect” occurs where a facially neutral practice actually or predictably results in a discriminatory effect on a group of persons protected by the Act (that is, has a disparate impact), or on the community as a whole on the basis of a protected characteristic (perpetuation of segregation). Any facially neutral action, e.g., laws, rules, decisions, standards, policies, practices, or procedures, including those that allow for discretion or the use of subjective criteria, may result in a discriminatory effect actionable under the Fair Housing Act and this rule.

The rule establishes a burden-shifting approach to establish disparate impact liability:

Under § 100.500(c), the charging party or plaintiff first bears the burden of proving its prima facie case: that is, that a practice caused, causes, or predictable will cause a discriminatory effect on a group of persons or a community on the basis of race, color, religion, sex, disability, familial status, or national origin. Once the charging party or the plaintiff has made its prima facie case, the burden of proof shifts to the respondent or defendant to prove that the practice is necessary to achieve one or more substantial, legitimate, nondiscriminatory interests of the respondent or defendant. If the respondent or defendant satisfies its burden, the charging party or plaintiff may still establish liability by proving that these substantial, legitimate, nondiscriminatory interests could be served by another practice that has a less discriminatory effect.

For **proxy discrimination**, CEJ suggests the following definition:

Proxy discrimination is the use of a non-prohibited factor that, due in whole or in part to a significant correlation with a prohibited class characteristic, causes unnecessary, disproportionate outcomes on the basis of prohibited class membership.

Coupled with this definition should be the regulatory guidance for insurers to test for and minimize proxy discrimination in all aspects of their consumer-facing operations – marketing, underwriting, pricing, claims settlement, antifraud, payment plan eligibility, investments – and to report the results of such testing to insurance regulators and the public.

In addition, the Committee on Race should develop regulatory guidance for insurers and regulators regarding acceptable methods of testing, sources of proxies for racial characteristics and methods of reporting results.
In prior comments and presentations, CEJ has explained the basic concept of proxy discrimination – where a facially-neutral factor is actually predicting race (or other prohibited class characteristic) instead of the insurance outcome. The general methodology to test for proxy discrimination is to use a multi-variate analysis to remove the correlation between race and other predictive factors.

A multi-variate analysis simply means analyzing multiple predictive variables simultaneously. By analyzing the predictive variable simultaneously, the correlation among the predictive variables is removed and the unique contribution of any particular predictive variable to explaining the outcome is better isolated. Using this general approach, we include a predictive variable for race in our multi-variate analysis, like so:

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + r_4R_1 + e = y \]

\( X_1, X_2 + X_3 \) are the predictive variables trying to predict \( y \). The coefficients \( b_1, b_2 \) and \( b_3 \) describe each of the predictive variable contribution to explaining \( y \). Say that \( X_1, X_2 + X_3 \) are age, gender and credit score and we are trying to predict \( y \) – likelihood of an auto claim.

Let’s assume that all three \( X \)s are statistically significant predictors of the likelihood of a claim and the \( b \) values are how much each \( X \) contributes to the explanation of claim. The \( b \) values can be tested for statistical significance – how reliable are these estimates of the contribution of each \( X \)?

When we add a predictive variable for race – \( R_1 \) – as a control variable in the model development, the correlation of the \( X \)s to race is statistically removed and the new \( b \) values are now the contribution of the \( X \)s, independent of the predictive variables correlation to race.

What might the results of such an analysis and resulting regulatory response be? The table below describes outcomes, interpretation of those outcomes and the indicated action.
<table>
<thead>
<tr>
<th>Outcome</th>
<th>Interpretation</th>
<th>Indicated Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>R is not statistically significant and there is little change to b1, b2 and b3.</td>
<td>There is little correlation between X1, X2 and X3 and race, little or no disparate impact or proxy discrimination</td>
<td>None, utilize the model.</td>
</tr>
<tr>
<td>R is statistically significant and b1 has lost its statistical significance</td>
<td>X1 was largely a proxy for race and the original predictive value of X1 was spurious. This is an example of proxy discrimination</td>
<td>Remove X1 from the marketing, pricing, claims settlement or anti-fraud model.</td>
</tr>
<tr>
<td>R is statistically significant, but b1, b2 and b3 remain statistically significant with different values from the original.</td>
<td>X1, X2 and X3 are correlated to race, but also predictive of the outcome, even after removing the variables’ correlation to race. This is an example of some proxy discrimination and some disparate impact.</td>
<td>Depending on the significance of the racial impact, utilize the model with the revised predictive variable coefficients, consider prohibiting a variable on the basis of equity or both.</td>
</tr>
<tr>
<td>R is statistically significant and has a large impact on the outcome, but b1, b2 and b3 remain largely unchanged and statistically significant</td>
<td>This is an example of disparate impact.</td>
<td>Are X1, X2 or X3 essential for the insurer’s business purposes? Are there less discriminatory approaches available? Would eliminating a predictive variable significantly reduce the disparate impact but not materially affect the efficiency or productiveness of the model?</td>
</tr>
</tbody>
</table>
Reject NCOIL’s Recent Action to Define Proxy Discrimination

NCOIL has recently adopted a change to its property/casualty modernization model act by defining and prohibiting proxy discrimination. Here is the adopted definition of proxy discrimination, with key parts highlighted, is:

For purposes of this Act, as well as for the purpose of any regulatory material adopted by this State, or incorporated by reference into the laws or regulations of this State, or regulatory guidance documents used by any official in or of this State, “Proxy Discrimination” means the intentional substitution of a neutral factor for a factor based on race, color, creed, national origin, or sexual orientation for the purpose of discriminating against a consumer to prevent that consumer from obtaining insurance or obtaining a preferred or more advantageous rate due to that consumer’s race, color, creed, national origin, or sexual orientation.

This action by NCOIL, at the urging of the property/casualty trade associations, reflects a profound misunderstanding of how systemic racism affects insurance. By defining proxy discrimination only as intentional use of a proxy characteristic for a protected class characteristic, the revisions, if adopted, would memorialize insurer practices that discriminate indirectly on the basis of race, discourage insurers from examining the racial impact of their practices and would restrict current regulatory efforts to address such unfair discrimination.

Further, by the industry’s own admission, the proposed revision do not enhance current regulatory authority. Rather, as industry is surely aware, the proposed revisions would hand cuff regulatory efforts to address proxy discrimination. The proposed revisions reflect such a misunderstanding of proxy discrimination and disparate impact that NCOIL will be inviting federal civil rights legislation aimed at insurance if the proposed revisions are adopted.

This definition misunderstands how systemic racism impacts society in general and insurance operations, specifically. Systemic racism involves institutional and personal biases that reflect and perpetuate historic discrimination. As Justice Kennedy wrote in the Inclusive Communities decision upholding disparate impact as unfair discrimination under the Fair Housing Act (which covers home insurance):

Recognition of disparate-impact claims is also consistent with the central purpose of the FHA, which, like Title VII and the ADEA, was enacted to eradicate discriminatory practices within a sector of the Nation’s economy.

Recognition of disparate-impact liability under the FHA plays an important role in uncovering discriminatory intent: it permits plaintiffs to counteract unconscious prejudices and disguised animus that escape easy classification as disparate treatment.
The proposed revisions would undermine the effort to address systemic racism in two ways. First, by defining proxy discrimination only as intentional use of a proxy for a prohibited class characteristic, the revisions set an impossible bar. Even if an insurer were using a perfect proxy for race, under the proposed NCOIL revisions, the regulator could take no action without proving an intent to discriminate and substitute on the basis of race. Were this requirement in effect, state regulators could never have taken action in the past on race-based pricing in life insurance.

Second, the requirement to prove intent reflects a profound misunderstanding of how systemic racism is reflected in and perpetuated by unconscious institutional, cultural and personal biases. The purpose of a proxy discrimination standard and methodology to address unnecessary disproportionate outcomes on the basis of race and other protected classes is to reveal the unnecessary and unintentional bias through rigorous and objective analysis. The proposed revisions move in the opposite direction by focusing on intent instead of on outcomes.

**Concrete and Measurable Actions to Address Systemic Racism in Insurance**

CEJ applauds the efforts of the NAIC, individual states, insurance trades and individual insurers to examine, measure and improve racial diversity in leadership and throughout their organizations. While improving diversity is an important goal and strategy to address systemic racism in insurance, it is not nearly sufficient to address the structures that have caused insurer practices to reflect and perpetuate historic discrimination.

Our comment letter of December 16, 2020 provides more detail, but we urge the following actions by the NAIC.

1. Explicit recognition of disparate impact and proxy discrimination against protected classes as unfair discrimination in insurance.

2. Develop guidance to require insurers to test for and minimize disparate impact in all aspects of their consumer-facing operations – marketing, underwriting, pricing, claims settlement, antifraud, payment plan eligibility, investments.

3. Develop guidance for regulators and insurers for acceptable methods of testing and reporting results of testing for disparate impact to regulators and the public.

4. Develop a data reporting framework to permit meaningful and timely analysis of availability and affordability of insurance, generally, and in communities of color, specifically – sales data showing products sold with price by specific type by granular geography area.
Add a charge to all committees, task forces and working groups to examine their subject area for insurer and regulatory practices that may reflect and perpetuate historic racial discrimination. Adding such charges is vitally important because many working groups have refused such analysis, arguing that other groups at the NAIC are looking at these issues. While there is certainly a role for the Committee on Race to provide broad guidance, it is essential that the subject matter experts – whether financial, producer licensing, antifraud, market regulation or lettered committees – examine these issues based on their in-depth knowledge of the particular subject area.

Add a charge to relevant committees – particularly the Life A, Health B, Property Casualty C and Market Regulation D Committees – to identify public or regulatory policies that unfairly discriminate on the basis of race, including identification of low-value products targeted at communities of color.

Commit to significantly more consumer participation, generally, and consumers from communities of color, specifically, in NAIC proceedings and events. Even following the NAIC’s stated commitment to address systemic racism in insurance last year, several NAIC events had minimal or no consumer participation. As we have noted in prior correspondence, it is the relative absence of consumer stakeholders from communities of color that has led to broad adoption of insurer trade association priorities that have, at best, ignored, systemic racism in insurance and, at worst, exacerbated the problem. Efforts to improve consumer stakeholder participation should be measured with a concrete target of equal time with industry stakeholders.

Direct committees, task forces and working groups to be guided by and to implement the NAIC’s Principles on Artificial Intelligence. The massive increase in insurers’ use of big data and AI has increased the potential for proxy discrimination and disparate impact. Efforts to address systemic racism in insurance are inseparable from more effective oversight of insurers’ use of big data and AI.

Update model laws regarding advisory organization. The purpose of advisory organization provisions in NAIC model laws and individual state laws is to provide necessary regulatory oversight of collaborative efforts by industry within the limited anti-trust carve-out of the McCarran Ferguson Act. It is only with oversight of advisory organizations that insurers are able to utilize an advisory organization for industry standard policy forms or rating assistance, like loss cost filings for overall loss trends and risk classification relativities. Yet, today, while a few organizations that have been licensed as advisory organizations for decades continue to maintain such license and, consequently, remain subject to regulatory oversight, many more organizations are engaged in the same type of collaborative or collusive activities but remain unlicensed as advisory organizations. Any effort to implement the NAIC’s AI principles and the address systemic racism in insurance must modernize and expand the reach of state advisory organization laws.
Comments of the Center for Economic Justice to the

NAIC Committee on Race and Insurance

December 16, 2020

CEJ submits these comments to the Committee on Race and Insurance to provide a comprehensive set of recommendations addressing all of the work streams. Our recommendations are most detailed for the line of business and regulatory diversity work streams. We have limited comments on the insurance industry diversity work stream.

As mentioned in earlier comments and presentations, it is relevant and necessary to determine why, despite CEJ or other consumer and civil rights advocates raising issues of racial discrimination in insurance for decades, it took the murder of George Floyd for the NAIC and industry to acknowledge the problem and commit to actions to address systemic racism in insurance.

We offered our analysis of the structural impediments to regulatory action to address systemic racism in insurance in the past in our August 14, 2020 presentation, attached:

- Lack of Minority Voices and Experience in Insurer and Regulator Leadership
- Imbalance Between Consumer and Insurer/Producer Access to Critical Regulatory and Legislative Processes
- Trade Associations Fighting to Protect Practices that Reflect and Perpetuate Systemic Racism in Insurance
- Regulatory Authorities and Infrastructure Failing to Keep Up With Seismic Changes in Insurer Practices.

We all know that the lack of diversity among insurers and regulators is a problem. But, what has led to this lack of minority participation? Improving diversity is a strategy and not the goal. It is a strategy to cause insurers and regulators to better consider the impacts of their practices on communities of color by having people making decisions better reflecting the people who are affected by those decisions. The goal is racial justice and improved diversity is one part of the strategy to attain that goal.
Our recommendations are informed by our 30 years of working on racial and economic justice in insurance at the NAIC, in the states and before Congress and the lessons we’ve learned about what’s necessary to create the changes to lead to racial justice.

Our recommendations are presented as follows:

- Recommendations Common to All Line of Business Work Streams
  - Recommendations for Actions by the Committee on Race and Insurance
  - Recommendations for Actions by Other NAIC Committees, Task Forces and Working Groups
- Recommendations for Improving Regulatory Diversity
- Recommendations for Improving Insurer and Producer Diversity

**Recommendations Common to All Line of Business Work Streams**

**Recommendations for Committee on Race and Insurance**

1. Explicit recognition of disparate impact / proxy discrimination against protected classes as unfair discrimination in insurance

2. Develop guidance to require insurers to test for and minimize disparate impact in all aspects of their consumer-facing operations – marketing, underwriting, pricing, claims settlement, antifraud, payment plan eligibility, investments

3. Develop guidance for regulators and insurers for acceptable methods of testing and reporting results of testing for disparate impact to regulators and the public

4. Develop a data reporting framework to permit meaningful and timely analysis of availability and affordability of insurance, generally, and in communities of color, specifically – sales data showing products sold with price by specific type by granular geography area.

**Discussion**

1. Explicit recognition of disparate impact / proxy discrimination against protected classes as unfair discrimination in insurance

   Regulators have made clear in a variety of discussions that you believe you have authority to stop proxy discrimination against protected classes or disparate impact as unfair discrimination in insurance. You memorialized this in the principles for Artificial Intelligence which included a requirement for insurers to pro-actively avoid proxy discrimination against protected classes.
Yet, industry has fought and continues to oppose the proposition that unfair discrimination on the basis of race means anything other than intentional discrimination. Industry has reiterated this position several times including most recently at the NCOIL annual conference in which they argued against and opposed any regulatory authority or insurer responsibility to address unintentional, unneeded proxy discrimination on the basis of race.

Clearly, any serious effort to address systemic racism in insurance must address practices that intentionally or unintentionally, reflect and perpetuate historic discrimination against protected classes. If the NAIC is to make any progress, it must avoid endless debates with industry about legislative intent or regulatory authority and start with the proposition that, whatever one thinks the current legislative intent or regulatory authority may be, the NAIC starts from the foundational premise that disparate impact is unfair discrimination in insurance. If changes are needed in legislative intent or regulatory authority, the NAIC will develop the model guidance necessary, but there should not be debate about the principle that is the foundation of racial justice.

2. Develop guidance to require insurers to test for and minimize disparate impact in all aspects of their consumer-facing operations—marketing, underwriting, pricing, claims settlement, antifraud, payment plan eligibility, investments

Simply stated, it should be part of the DNA of insurers to test all their practices, operations and algorithms for disparate impact and take steps to minimize that impact within the risk-based framework of insurance. The burden must be on insurers to employ practices that do not unnecessarily and unintentionally reflect and perpetuate systemic racism. It is unreasonable to place the burden on consumers or regulators to identify such practices and then challenge insurers, particularly when the vast majority of the practices are opaque to regulators or consumers and incorporated into black-box big data algorithms.

Lenders have had such a responsibility for decades and testing for and minimizing disparate impact is simply part of the development of lender underwriting, pricing and other practices.¹

It is also essential that insurers test for racial inequities in all aspects of their consumer-facing operations. It is far from sufficient to examine only underwriting and pricing. In an era of big data micro-targeting, insurers, like other businesses, have the ability to micro-target particular product marketing to individuals with the result that the underwriting process is effectively moved to the marketing program.

Slides 25 to 27 of the attached CEJ presentation to NCOIL cite insurer CEO statements to investment analysts in which the CEO explain not just their intent to attract “high-value” customers and repel low-value customers—labels which reflect racial bias—but the ability to use marketing tools and big data to micro-target those high-value customers. It is specifically the big data tools like price optimization, customer lifetime value and propensity for fraud that are use and which rely on data and algorithms that reflect and perpetuate systemic discrimination. The

¹ See for example, chapter 10 of Credit Scoring for Risk Managers: The Handbook for Lenders.
amount of personal consumer information available for micro-targeting is incomprehensibly large – just look at the websites of data brokers or vendors specializing in assisting insurers like Carpe Data or Journaya.

We’ve repeatedly raised the concern about claim settlement and antifraud algorithms that rely on biased data and biased modelers. In the case of antifraud, biased algorithms become self-fulfilling because an insurer will not find fraud if the claim isn’t investigated. So bias in deciding which claims are suspicious will lead to bias in the claims labeled as fraudulent.

Insurers should also examine their investments and investment practices for climate and environmental justice. Numerous studies have shown that historical racism in housing has led to more severe impacts of climate change on communities of color as well as more severe impacts of the pandemic. Further, racial justice must consider and incorporate environmental and economic justice. Insurers should be examining their investments and investment practices to ensure they are not, for example, supporting predatory lenders or racist housing and environmental policies.

It is essential that the approach taken to address racism in insurance be holistic and comprehensive. Attempting to prohibit one offensive rating factor or data source or algorithm is a fool’s errand. The same racial bias from that one prohibited factor will likely be replicated by another new data source or algorithm. Further, the goal should not be to eliminate data sources for insurers, but require the use of any data source in a manner that eliminates or minimizes the disparate impact.

The action needed here is for the Committee on Race and Insurance to develop the guidance for the requirement that insurers test for and minimize disparate impact in their practices. This will be universal guidance – and the guidance sought by many of the NAIC working groups – like the Casualty Actuarial and Statistical Task Force and the Anti-Fraud Task Force – who have punted on addressing issues of racial equity in algorithms.

3. Develop guidance for regulators and insurers for acceptable methods of testing and reporting results of testing for disparate impact to regulators and the public

Once the requirement for insurers to test for and minimize disparate impact is established, the next step is for the Committee on Race and Insurance to develop the guidance for how insurers should test, minimize and report the results of such disparate impact testing. This guidance should include data sources for protected class characteristics if the insurers does not collect those data, acceptable and unacceptable methods of testing, safe harbors for insurers who test for and minimize disparate impact and how and how often to test and report results to regulators and the public.
It is important to note that insurance regulators do not have to reinvent the wheel here. There is a rich history of disparate impact testing methodologies not just from here in the U.S. related to federal employment, lending and housing laws – and applications of disparate impact analysis to insurance under the Fair Housing Act – but experience from other nations about how to address disparate impact in insurance.

4. Develop a data reporting framework to permit meaningful and timely analysis of availability and affordability of insurance, generally, and in communities of color, specifically – sales data showing products sold with price by specific type by granular geography area.

The Committee on Race and Insurance must address another key structural impediment to racial justice in insurance – the absence of routine data reporting by insurers of granular consumer market outcomes sufficient to analyze the impact of insurer marketing, sales, claims and antifraud practices on communities of color.

The contrast between the lack of market outcome data in insurance and other financial services is stark. While public and private sources have reported the impact of the pandemic and federal relief (e.g. CARES Act) on all types of borrowers on a weekly and monthly basis – including changes in delinquencies, late payments, use of forbearance and much more – insurance regulators have had no information on consumers’ use of premium relief or real-time changes in claims during the pandemic.

More important, insurers have steadfastly opposed the publication of data by individual insurers by ZIP Code or Census Block that permits regulators, academics, consumer and civil rights groups from analyzing racial disparities in insurance. Regulators must overcome this opposition and develop a market regulation data reporting regime that matches the financial regulation data reporting regime in breadth and intensity.

**Taken together, these four common-to-all-work stream actions should be memorialized in two charges to the Committee on Race and Insurance – one regarding disparate impact and one regarding data collection.**

**Recommendation for Specific to Lines of Business**

In addition to certain racial justice actions that should be centralized at the Committee on Race and Insurance, there are also activities that should be assigned to other NAIC committees, task force and working groups. We mentioned above that some NAIC working groups have specifically rejected requests to examine racial bias in insurer practices that fall under that working group activity. For example, the CASTF white paper on predictive modeling explicitly rejected addressing racial bias in regulatory review of algorithms. The Antifraud Task Force explicitly rejected including a requirement for insurers to test for racial bias in antifraud practices and algorithms in the recent update the antifraud policy guideline. Both groups based their decision on the claim that other groups at the NAIC were working on the issue.
While the development the guidance on how to test for, minimize and reporting the findings of disparate impact analysis should be centralized at the Committee on Race and Insurance, there are several actions that individual committees, task forces and working groups can and should take to help achieve racial justice in insurance.

1. Add a charge to identify potential **insurer practices** that disadvantage or disproportionately discriminate against communities of color.

   Each committee, task force and working group should receive a charge for 2021 to identify insurer practices that may disadvantage or disproportionately discriminate against communities of color. Such a charge is vital for each of the subject matter groups to have ownership of the issue and to educate themselves about race and insurance. The outcome from this charge – a list of practices that insurers should prioritize for disparate impact testing – will complement the work of the Committee on Race and Insurance.

2. Add a charge examine **public policies** that disadvantage or disproportionately discrimination against communities of color.

   This second charge to all committees, task forces and working groups is directed at public policies that unfairly harm communities of color. This charge focuses more on laws and regulatory guidance, as opposed to practices under the discretion of insurers. The outcome from this charge – a list of public policies, laws, regulations and regulatory guidance that unfairly discriminate against communities of color – will also complement the work of the Committee on Race and Insurance. To illustrate, we list some public policies related to private passenger auto that disproportionately and unfairly impact communities of color.

   a. Property Casualty / PPA
      i. Pay to Play Laws Punishing Uninsured Drivers
      ii. Territorial Rating for Uninsured Motorists
      iii. High Minimum Limits
      iv. Criminal Penalties / Debtors Prison for Uninsured Motorists
      v. Oversight of Advisory Organizations / Data Brokers

3. Add a charge to **identify low-value products targeted to communities of color and new high-value products opportunities that better meet the needs of communities of color.**

   A third charge to all committees, task forces and working groups is directed at identifying current products that, because of their low-value, strip consumers of assets instead of protecting those assets. In our experience, these low-value products are disproportionately marketed to and sold in and to communities of color. In addition, some lines of business simply have no products designed for the needs of communities of color and there are opportunities to identify the unique needs of these communities and then develop high-value products targeted to meet those needs. As discussed below, this charge is also relevant for addressing diversity in insurers and producers.
Recommendations for Regulatory Diversity

We have a series of recommendations to improve diversity within the regulatory community. As set out in our earlier comments and presentations to the Committee, the lack of diversity among the regulatory community and the regulatory decisions which codify disparate impact are a result of a lack of consumer stakeholder participation, generally, and an even greater absence of stakeholders from communities of color, specifically. Our recommendations are:

1. Develop guidance for establishing a public agency dedicated to representing consumer before the Department of Insurance and the Legislature – a Bureau of the Insurance Consumer Advocate.

2. Measure consumer participation, generally, and minority participation, specifically in NAIC meetings and conferences and events.

3. Allocate speaking time, when there are time constraints, based on industry / consumer, not based on number of speakers.

4. Increase funding for NAIC consumer participation to permit consumer reps to retain experts for priority projects.

Discussion

1. Develop guidance for establishing a public agency dedicated to representing consumer before the Department of Insurance and the Legislature – a Bureau of the Insurance Consumer Advocate.

There is a great need to establish institutions to advocate on behalf of consumers before insurance departments and state legislatures to level the playing field versus the hundreds of millions of dollars of policyholder-supplied funds spent by insurers and trade associations to press their views.

The establishment of a Bureau of Insurance Consumer Advocate in each state would have an impact far beyond the advocacy for consumers performed by that agency. These BICAs create opportunities for employment, including minority employment, in insurance other than working for insurers or regulators. And they create employment opportunities outside of industry for regulators who want to leave the insurance department. BICAs are a strategy to increase diversity in insurance as well as addressing a core barrier to ending systemic racism in insurance.
2. Measure consumer participation, generally, and minority participation, specifically in NAIC meetings and conferences and events.

3. Allocate speaking time, when there are time constraints, based on industry / consumer, not based on number of speakers

    If you can’t measure it, you can’t fix it. Speaking about diversity in abstract terms cannot lead to assessment of failure or success of the strategies to improve diversity. Further, a requirement to measure diversity in NAIC events will raise awareness of the need to improve diversity.

    The need for such improvement is huge. We’ve pointed out that the CIPR events at the NAIC Summit not only failed to include any minority voices, but included one overtly racist presentation. We’ve pointed out that this year’s Insurance Regulatory Examiners’ Society Career Development Seminar failed to include any minority or consumer presenters. And these results occurred after the NAIC declared its commitment to racial justice. It gets worse. At the recent Fall National Meeting, the CIPR event on pandemic insurance featured eight white men. No members of the communities of color most impacted by the lack of pandemic insurance. No small businesses from communities of color. No consumer stakeholders who have been active in these debates from day 1.

    The two actions will help ensure that NAIC event planners, committees, task forces and working groups better understand the importance of consumer stakeholder participation, generally, and minority participation, specifically.

    As someone who is often the only consumer stakeholder among many industry stakeholders in NAIC meetings, I’m keenly aware of situations in which a half dozen industry trades each have the same amount of time as me – to repeat and agree with each other trade’s comments. To be clear, this is not always the case, but the larger point is that, when speakers’ time is limited, the allocation of that time should be based on the major positons/views and not on the sheer number of speakers.

4. Increase funding for NAIC consumer participation to permit consumer reps to retain experts for priority projects and engage with stakeholders from communities of color impacted by NAIC deliberations.

    As someone who has been involved in the NAIC Consumer Participation program from its beginning 30 years ago, I’m grateful for the NAIC’s commitment to consumer participation. The NAIC program stands in contrast to the absence of such a formal consumer participation program in most states and other organizations, like NCOIL.

    The NAIC consumer participation budget is about 0.1% of the total NAIC budget. It covers reimbursement of travel expenses for funded consumer representatives to attend NAIC national and interim meetings and some IAIS events. It also covers registration fees, publication costs and conference call costs for funded and unfunded consumer representatives. No consumer
representative is paid for their time out of NAIC funds. Most funded and unfunded consumer representatives volunteer their time – beyond their regulator work commitments – to advocate for consumers at the NAIC.

We are not asking for NAIC consumer representatives to be compensated for our time at NAIC events. Rather, we’re asking for additional funding to leverage our individual contributions to retain subject-matter experts or consultants or to fund participation from key stakeholders from communities of color to assist the consumer representatives on key issues. This assistance is particularly important in areas like consumer testing of information and disclosures and analyzing actuarial, reserving, accounting, investment or capital-related proposals.

The NAIC consumer representatives took responsibility for the lack of minority voices among our group in 2020 by recruiting heavily for applicants representing communities of color. We were successful in encouraging many new, exceptionally-qualified applicants of color and hope they will be accepted as NAIC consumer representatives. But, we want these new consumer representatives – if accepted by the Consumer Board of Trustees – to feel their time is well spent and to continue to participate for years to come while helping recruit new consumer stakeholders of color. For that to happen, the Consumer Participation program must be strengthened and one way is to increase NAIC funding for the consumer reps to use to retain experts and consultants and reach out to communities and stakeholders impacted by NAIC discussions.

**Recommendations for Insurer Diversity**

1. Identify products providing low-value to communities of color and develop new high-value products that better meet the needs of communities of color

We offer this action to improve insurer diversity based on the belief that someone will want to work for companies who provide products and services that that person and that person’s community values and likes. Why would members of community color want to work for an industry that the community perceives as ripping them off? We suggest that if communities of color value the products sold by insurers, members of those communities are more likely to seek out work with those insurers.

This recommendation is essentially the opposite of suggestions to improve financial or other education in communities of color. In our view, the improve-education argument blames the victim. Our approach suggests that people are not uneducated, but want to work for companies providing products that they and their community like and value.

2. Examine impact of criminal history in producer licensing qualifications

We raise this specific issue because of documented disparity and racial discrimination in policing and criminal complaints against members of communities of color.
April 9, 2021

Dear Committee Members:

The undersigned civil rights, consumer, and community organizations urge the National Association of Insurance Commissioners (NAIC) Committee on Race and Insurance to take urgent action to address the racially discriminatory use of credit-based insurance scores for underwriting and pricing auto insurance and other personal lines of coverage, such as renters’ and homeowners’ insurance. Consistent with NAIC’s mission to facilitate the fair and equitable treatment of insurance consumers, we call on the committee to issue a recommendation that credit information no longer be used to determine eligibility for, or the cost of, auto or home insurance.

Drawing on premium data from Quadrant Information Services, LLC, the Consumer Federation of America finds that drivers with poor credit can be charged as much as 283 percent more for auto insurance than those with excellent credit—regardless of their driving record. This translates into higher premium charges every month for a product that drivers are required by state law to purchase. Our greatest concern is that the use of credit-based insurance scores for auto insurance pricing perpetuates discrimination because credit data reflects racial disparities.

It’s true that credit data—including credit-based insurance scores—never formally takes race into account. Yet these metrics are not race-neutral, because they draw on data about personal borrowing and payment history that is shaped by generations of discriminatory public policies and corporate practices.

From the American economy’s earliest roots in chattel slavery that treated Black people as property to more recent policies like redlining, Black and brown families have been systematically excluded from wealth-building opportunities that benefited white families. Exclusion produced vast wealth disparities that persist to this day: according to an analysis by researchers at the Federal Reserve, for every dollar in wealth held by the median white household in 2019, the median Black household had less than 13 cents, and the median Latinx household had just 19 cents. This inequality is now being exacerbated by the uneven economic effects of the pandemic, including higher unemployment rates for Black and Latinx workers. With less wealth to draw on, the median Black and Latinx households facing economic hardship exhaust their limited resources more quickly than the median white household and are more likely to fall behind on bills and go into debt. And because consumers with poor credit are more likely to be denied loans, charged higher interest rates, and charged more for products like auto insurance, the cycle of disadvantage reinforces itself. One result is that Black and brown consumers disproportionately appear in the data as worse credit risks.

When auto insurers use credit information as a factor in determining prices, they reinforce historic discrimination. For example, a 2017 analysis by ProPublica found that major insurers in California, Illinois, Missouri, and Texas charge drivers living in predominantly Black and Latinx neighborhoods as much as 30 percent more than drivers living in other areas with similar accident costs. Drivers living in predominantly Black and Latinx zip codes in New Jersey pay 139 percent of the statewide premium average of $1,459.69 for a 35-year-old driver with a clean driving record and other standardized characteristics, according to data sourced from Quadrant Information Services, LLC and compiled by Consumer Federation of America.
The use of credit-based insurance scores is not the only way that systemic racism impacts insurance underwriting decisions, premiums, claims handling, and fraud investigation, but it is a clear source of bias in the industry. We urge the committee to recommend to state insurance commissioners and legislatures that credit information no longer be used in auto and home insurance pricing.

Thank you for your efforts, and we look forward to working with the NAIC to build a fairer system.

Sincerely,

Re: Notice of Meeting of Special (EX) Committee on Race and Insurance

Dear Co-Chairs and Committee Members:

On behalf of the National Association of Mutual Insurance Companies (NAMIC), thank you for the opportunity to provide initial comments on the Committee’s new draft charges released on April 7, 2021. Following a productive conversation with the NAIC officers and NAMIC’s board officers and executive leadership, we have anxiously anticipated the opportunity to partner with you on this very important work. Since the inaugural meeting on September 17, 2020, NAMIC has remained committed to constructive dialogue with the NAIC, regulators, and other interested parties on issues at the nexus of race and insurance.

NAMIC continues to have a strong desire to work with the NAIC in this space on behalf of our industry members. Mutual insurance companies are built on the notions of community and inclusivity; the mutual model has a long and proud history of service to minority communities. NAMIC and NAMIC’s members are adamantly opposed to discrimination on the basis of race and unfair discrimination in general. We have a long history of support for legislative and regulatory policies to prevent these practices. We strongly believe that the elimination of racism improves every aspect of our relationships, institutions, and business communities, and that treating all employees and policyholders with dignity and fairness is essential to the continued success of our industry.

It seems imperative to mention that NAMIC finds itself troubled that such opportunity for engagement and partnership has been so limited on such an important and large body of work. We can certainly appreciate the especially challenging operational year we have all had in the wake of COVID-19, however, we are concerned with the lack of transparency in the committee’s operations to-date, which have included dozens of regulator-only meetings involving the development of a substantive work product like the updated proposed charges. We respectfully request that appropriate time and attention is given to ensuring that future meetings are open and stakeholders are provided sufficient opportunity to provide insightful input, as we all work to find solutions that are “right” and “implementable.” Going forward, we strongly encourage the Committee to, at minimum, provide
adequate time to review proposals/exposures, as well as access to forums where these very important proposals are being discussed.

In light of the short time window provided to comment on the draft updated charges for 2021, the following non-exhaustive comments are framed as a series of questions we believe should be publicly considered and addressed before any additional substantive work takes place.

General Questions:

- Is it the Committee’s intention to develop a model law or regulation? If so, is it the NAIC’s intention that such a model would be an accreditation standard?
- Does the Committee intend to develop specific definitions for historically underrepresented and disadvantaged groups?
- How will “workstreams” be treated under the NAIC Open Meetings Policy? Will the open meetings policy be amended to include the term “workstream?”
- Is the Committee or the NAIC willing to make a commitment to risk-based pricing? Such a commitment, in writing or in public statements, could alleviate many industry concerns regarding the direction of some of the conversations around the Committee’s activity.

Charge Specific Questions and Comments:

A. Language is used in the charges regarding practices that “potentially” disadvantage people of color and/or historically underrepresented groups – how will the potential for disadvantage be defined and measured?

B. We appreciate the desire to avoid duplicative work – if issues of race are to be studied by other NAIC working groups and task forces, will instructions be added to their charges? Will stakeholders be provided adequate time to comment on those additional charges?

C. We commend the committee for proposing to continue research and development of recommendations on action steps to improve the level of diversity and inclusion across the industry. We look forward to continued partnership with state regulators interested in supporting these critical talent pipeline efforts.

D. Have State DOI’s requested the NAIC’s assistance regarding DE&I efforts? If so, what form have such requests taken, and were they approved by the corresponding state legislatures?

E. It appears the research envisioned regarding State DOI best practices on DE&I efforts would fit more appropriately within the scope of workstream two, not three. Will this change be made?

F. We would recommend the charge be “whether” unfair discrimination is present and “whether” additional appropriate steps are necessary.
F2. Is the contemplated development of analytical and regulatory tools to assist regulators in determining unfair discrimination going to be completed exclusively by NAIC staff? Will new agreements be put in place for the delegation of authority? Which NAIC staff would be involved, and how would that be determined? Would ongoing monitoring of these analytical and regulatory tools be the responsibility of a standing letter committee? Will industry be provided the opportunity to self-monitor with the same tools and participate in the development of those tools? What will happen if an NAIC standard for unfair discrimination is in conflict with state law?

F2 a-f. The additional study to evaluate the validity of the use of correlation rather than causation seems to suggest that a causation standard for underwriting factors is being contemplated; is this accurate? If so, in what ways does the Committee believe any underwriting factor can be said to “cause” a loss? Similarly, it is unclear what “disparate impact considerations” means – under some interpretations, “disparate impact” can mean a simple outcomes-based approach to analysis that is fundamentally incompatible with risk-based pricing.

G. Given that insurers do not currently collect data about policyholder race, would enhanced data reporting to identify the race of insureds be effective? If mandatory collection of racial information is being contemplated, has the committee considered how such a collection requirement may be at odds with state law in some instances and/or raise privacy concerns? How does the Committee envision handling mixed and multi-racial policyholders, or those policyholders that refuse to identify?

H. Charge H6 indicates that steps need to be taken to mitigate the impact of residual markets, premium financing, and nonstandard markets. Does the committee have specific evidence regarding these markets that interested parties may see? If not, we suggest the approach of first investigating “whether” this is the case.

Thank you for the opportunity to comment on the proposed charges. We look forward to continued discussions with the committee, its members, and NAIC staff on these issues in a transparent and constructive manner.

Sincerely,

Jonathan Bergner
Vice President – Public Policy and Federal Affairs

The Honorable David Altmaier  
Co-Chair  
National Association of Insurance Commissioners  
Special Committee (EX) on Race in Insurance

The Honorable Dean Cameron  
Co-Chair  
National Association of Insurance Commissioners  
Special Committee (EX) on Race in Insurance

Sent via e-mail to Kay Noonan (knoonan@naic.org)

Dear Commissioner Altmaier and Director Cameron –

On behalf of the National Council of Insurance Legislators (NCOIL), we are responding to the request for comments on the recently distributed charges for the National Association of Insurance Commissioners (NAIC) Special Committee (EX) on Race in Insurance (Committee).

Our comments do not delve into the substance of the charges. Rather, we think it is important to remind the Committee that any work product it produces stemming from the charges must operate under a grant of legislative authority. Further, if legislators choose to act on any of the issues dealt with by the Committee by enacting legislation, such legislation will supersede any of the Committee’s regulatory work product.

We also wish to note that it certainly seems discussions leading to the development of the Committee’s charges were heavily substantive and as such would not appear to fit within any of the NAIC’s stated reasons for holding a closed meeting¹.

¹ The NAIC’s stated reason for closing the March 24th meeting of the Committee to the public was: “This is a regulator only session because the discussion or action contemplated will include: Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder.”
We are hard pressed to see how substantive discussions, which surely took place in developing the Committee’s charges, would constitute mere “internal or administrative matters.” These problems are compounded by a remarkably short period of time for comments to be submitted on the charges, especially when the interested parties that the NAIC has requested comments from were locked out of the process.

We look forward to discussing these issues with your colleagues next week at the NCOIL Spring Meeting as this topic is included on the agenda for the NCOIL – NAIC Dialogue. Among the questions we would like you to consider for discussion include:

- Why did the NAIC choose to use a “special committee” structure for its handling of these highly sensitive, national, and indeed global issues, when “special committees” are not contemplated anywhere in either NAIC bylaws or the NAIC Policy Statement on Open Meetings?

- Is there any precedent for handling such a high-profile issue in this fashion?

- We also wonder about making a “special committee” with the issues attached to it a “coordinating body.” We can find no definition for “coordinating body” anywhere on the NAIC website or in any NAIC documents; does it exist?

- In light of the special importance of these issues, we do wish to discuss why the NAIC opted to hold so many of the discussions surrounding them in a largely non-public format.

With appreciation for your consideration and kind regards, we are,

Very truly yours,

Representative Matt Lehman (IN)  
NCOIL President

Assemblyman Ken Cooley (CA)  
NCOIL Vice President
INFORMATION SYSTEMS (EX1) TASK FORCE

Information Systems (EX1) Task Force March 24, 2021, Minutes
Date: 3/31/21

Information Systems (EX1) Task Force  
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)  
March 24, 2021

The Information Systems (EX1) Task Force met March 24, 2021. The following Task Force members participated: Ricardo Lara, Chair, represented by David Noronha (CA); Kathleen A. Birrane, Vice Chair, represented by Paula Keen (MD); Lori K. Wing-Heier represented by Chris Murray (AK); Alan McClain represented by Letty Hardee (AR); Michael Conway represented by Peg Brown, Damion Hughes and Rolf Kaumann (CO); Trinidad Navarro represented by Tim Li (DE); Sharon P. Clark represented by Satish Akula (KY); Chlora Lindley- Myers, Cynthia Amann and Jo LeDuc (MO); Barbara D. Richardson represented by Nick Stotic (NV); Judith L. French represented by Tynesia Dorsey (OH); Glen Mulready represented by Andrew Schallhorn (OK); Doug Slape represented by Nancy Clark (TX); and Scott A. White represented by Vicki Ayers and Trish Todd (VA). Also participating were: Rebecca Smid (FL); Linda Scott (KS); Larry Wertel (NY); Scott Kast (PA); Joseph Javier (SC); Sharmila Chalasani and Molly Nollette (WA); and Tom Jefferson (WI).

1. **Adopted its Nov. 20, 2020, Minutes**

Ms. Keen made a motion, seconded by Mr. Li, to adopt the Task Force’s Nov. 20, 2020, minutes (see NAIC Proceedings – Fall 2020, Information Systems (EX1) Task Force). The motion passed unanimously.

2. **Received an Update on the 2021 SERFF Fiscal**

Joy E. Morrison (NAIC) reported that the System for Electronic Rate and Form Filing (SERFF) Modernization team received 12 responses from the request for proposal (RFP) issued last fall. NAIC staff and the SERFF Modernization Oversight Group reviewed the responses, interviewed six vendors, and selected a final vendor. There are three goals of the RFP: 1) determining tools to be used; 2) validating that the tools can do what is needed with use cases; and 3) establishing a roadmap from pilot to production. The vendor selected will be announced after a contract is in place. A fiscal was released in March for public comment to fund the project, which is expected to begin in May.

3. **Received an IT Operational Summary Report**

Scott Morris (NAIC) highlighted several sections included in the Information Technology (IT) Operational Report received by the Task Force members. The report provides updates on technology initiatives at the NAIC, upcoming improvements, impacts to state technology, new offerings from the NAIC, and general updates on the activities of the NAIC technology team.

a. **Product Highlights**

The State Based Systems (SBS) team has completed transitions from the legacy system to the new platform for all states. All transitioned states are out of their warranty period, and work continues to decommission the legacy hardware and database. The SBS team is now focusing on new state implementations. Four states are currently licensed for SBS implementation, with three currently active: Vermont (August 2021), Connecticut (November 2021) and Massachusetts (February 2022). Hawaii is a future implementation.

Other key product highlights include:

- A multiphase project for SERFF Billing Enhancements concluded in January, positioning the NAIC and insurance companies to move from a billing model using prepaid blocks of filing transactions and invoices to a model supporting real-time payment of transaction fees at the time of filing submission. As existing prepaid transaction blocks are depleted, customers will automatically transition to payment via Automated Clearing House (ACH) Debit, and they will be assigned a fixed unit price according to a tiered structure long in place for SERFF. In 2021, each company will remain in the same tier as it did under the previous billing model.
- The Life Insurance Policy Locator application was enhanced on Feb. 5 to make it even more consumer-friendly, prevent duplicate requests, and increase validation. As of Jan. 30, consumers have submitted more than 262,726 requests, which have led to more than 99,532 matches of policies with claims of more than $1.29 billion.
b. Innovation and Technology

NAIC teams expand their leverage of Informatica PowerCenter, a data integration tool with automated source/target mapping capabilities. SBS eliminated 35 jobs by using Informatica PowerCenter to populate data marts used for various purposes in reducing operational support costs and technical debt.

The Tableau ecosystem at the NAIC continues to expand and improve. Currently, the PROD Tableau Server holds 167 workbooks and 259 data sources. The number of views of workbooks on the PROD server totaled 706,563 over the last six-month period.

The NAIC continues to work with two states to pilot the prototype solutions that use a Snowflake data warehouse as the access point to the financial and market conduct data currently accessed from the Oracle production database. A survey was sent to states in the fourth quarter of 2020 to gather information on the tools and technology used to access data, the tables accessed, and preferred migration time frames. Based on the information gathered, a migration road map was created.

c. Team Highlights

The NAIC leadership team and NAIC staff continue to learn about the Scaled Agile Framework (SAFe) and have earned numerous certifications. SAFe is the next step in the NAIC’s movement towards being more agile in its process and value delivery. SAFe provides a framework to apply Lean-Agile practices using proven methodologies, and it can positively influence:

- Alignment in process.
- A shared predictable cadence across the organization.
- Decentralized decision-making among the teams.
- Organization around customer value instead of silos.
- Transparency and communication of prioritized work.

4. Received a Portfolio Update and Project Status Reports

Sherry Stevens (NAIC) reported on the project portfolio. As of March, the NAIC’s technical project portfolio includes 22 active technical projects. Five projects have been completed since the last report.

Having no further business, the Information Systems (EX1) Task Force adjourned into regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.

© 2021 National Association of Insurance Commissioners
The Life Insurance and Annuities (A) Committee met April 12, 2021. The following Committee members participated: Marlene Caride, Chair, represented by Dave Wolf (NJ); Glen Mulready, Vice Chair (OK); Jim L. Ridling (AL); Trinidad Navarro (DE); Doug Ommen (IA); Dean L. Cameron (ID); Vicki Schmidt (KS); James J. Donelon (LA); Barbara D. Richardson represented by David Cassetty (NV); Linda A. Lacewell represented by Mona Bhalla (NY); Judith L. French (OH); Elizabeth Kelleher Dwyer and Sarah Neil (RI); Carter Lawrence represented by Brian Hoffmeister (TN); and Mark Afable and Richard Wicka (WI). Also participating was: Jodi Lerner (CA);

1. **Adopted its 2020 Fall National Meeting Minutes**

Commissioner Schmidt made a motion, seconded by Director Cameron, to adopt the Committee’s Dec. 7, 2020, minutes (see NAIC Proceedings – Fall 2020, Life Insurance and Annuities (A) Committee). The motion passed unanimously.

2. **Adopted the Reports of its Working Groups and Task Force**

Commissioner Donelon made a motion, seconded by Commissioner Schmidt, to adopt the following reports: the Accelerated Underwriting (A) Working Group, including its March 19 minutes (Attachment One); the Annuity Suitability (A) Working Group, including its March 9 and March 25 (Attachment Two), Feb. 22 (Attachment Two-A), and Dec. 14, 2020, (Attachment Two-B) minutes; the Life Insurance Illustration Issues (A) Working Group, including its March 10 (Attachment Three) and Feb. 23 (Attachment Four) minutes and an extension of the Request for NAIC Model Law Development; and the Life Actuarial (A) Task Force. The motion passed unanimously.

3. **Received an Update on the Special (EX) Committee on Race and Insurance Workstream Four’s Work**

Commissioner Afable, co-chair of the Special (EX) Committee on Race and Insurance (Special Committee) Workstream Four, provided an update to the Committee. He explained that the Special Committee met earlier in the day and received oral reports and recommendations from all its workstreams, including the Life Insurance and Annuities Workstream, Workstream Four. He said based on the recommendations of the workstreams, draft proposed charges from the Special Committee were distributed. He said the primary conclusion of Workstream Four, which was reflected in the proposed Special Committee charges, was that it had only just started to delve into the practices and barriers that potentially disadvantage minority and underserved populations in the life insurance and annuity lines of business. He said Workstream Four recommended that research and discussions continue to: 1) better determine the practices or barriers that disadvantage people of color and/or historically underrepresented groups; and 2) identify steps that can be taken to eliminate those barriers and disadvantages.

Commissioner Afable explained that the Special Committee proposed charges have Workstream Four continuing to research and formulate specific recommendations, as necessary, to address issues involving race and life insurance, such as: 1) the marketing, distribution and access to life insurance products in minority communities, including the role that financial literacy plays; 2) the impact of traditional life insurance underwriting on minority populations, considering the relationship between mortality risk and disparate impact; 3) disparities in the number of cancellations/rescissions among minority policyholders; and 4) whether there are other unresolved issues surrounding race and insurance in the life insurance industry that the Workstream should consider addressing. He said the Special Committee charges also recommend that the Accelerated Underwriting (A) Working Group, as part of its ongoing work to consider the use of external data and data analytics in accelerated life underwriting, include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations.

4. **Discussed and Adopted Modifications to its 2021 Charges**

Birny Birnbaum (Center for Economic Justice—CEJ) said he wrote a comment letter to the Committee recommending revisions to its 2021 charges. He said his suggested revisions: 1) offer revisions to make the charges better reflect the work actually being done by those groups; and 2) suggest the creation of a new working group, the Illustration Reengineering (A) Working Group, to take a fresh look at life insurance and annuity illustrations and advertising. He said this new working group would encompass the work of the current Annuity Disclosure (A) Working Group, but it would also conduct a thorough review, from a consumer perspective, of the entire life insurance annuity illustration regime. He said there are many problems with illustrations, not the
least of which is that illustrations are massive documents that mislead consumers as to product performance, while failing to adequately explain how products work. He said the regulatory guidance has been designed by actuaries, not by experts in consumer disclosures, with the result that product designs are developed to game the system. He also said guidance for annuities is very different from life insurance, even for products that are functionally similar, like indexed life and indexed annuities, which use the same accumulation approach, indexes and crediting features; but they have vastly different illustrations, even though they should perform similarly during the accumulation phase.

Mr. Birnbaum said the new Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020 (AG 49-A) is already being gamed by a company that is providing “showcase examples” of product accumulations, along with the required illustrations, in order to show an example based on assumptions prohibited in the actual illustration. He said life illustrations fail to show “sequence of returns risk” and show returns as if they are going to be the same every year, which is misleading. He said adding additional disclosures to what is already a 50-page to 80-page document is not a solution. He said illustrations are the key sales tool for investment-type life insurance and annuities, yet the current illustrations do not serve the intended purpose. He said there needs to be a coordinated review of life and annuity illustrations, including whether data-mined custom indices with little or no historical record should be permitted.

Mr. Birnbaum also suggested changing the name of the Life Insurance Illustration Issues (A) Working Group to the Life Insurance Policy Overview (A) Working Group to more accurately describe the limited scope of its work. He also suggested revising the Annuity Suitability (A) Working Group’s charge to reflect the fact that it completed revisions to the Suitability in Annuity Transactions Model Regulation (#275), and it is now working on a frequently asked questions (FAQ) document.

Commissioner Ommen said Mr. Birnbaum’s suggested Illustration Reengineering (A) Working Group appears to be a broader endeavor apart from the Annuity Disclosure (A) Working Group, which he agrees should be entertained by the Committee once it receives additional information and considers how such an endeavor might fit in to the larger work commitments and responsibilities of the Committee this year. He explained that before the Committee undertakes a new working group and charge, there should be discussion to ensure that there is sufficient state insurance regulator and commissioner support to avoid repeating the situation at hand with the Annuity Disclosure (A) Working Group. He reiterated that the revisions to Model #245 for participating income annuities that were adopted by the Committee in 2018 and held should be forwarded to the Executive (EX) Committee and Plenary for consideration during the Summer National Meeting.

Commissioner Ommen explained that the Annuity Disclosure (A) Working Group is charged to “review and revise, as necessary, Section 6-Standards for Annuity Illustrations in the Annuity Disclosure Model Regulation (#245) to take into account the disclosures necessary to inform consumers in light of the product innovations currently in the marketplace.” He said the Working Group is chaired by Mike Yanacheak (IA), chief actuary with the Iowa Department of Insurance (DOI). Commissioner Ommen said the Working Group has been in existence for more than four years. He explained that it revised the Annuity Disclosure Model Regulation (#245) to allow for participating income annuities, but it has been struggling to draft language to allow the illustration of indices that have been in existence for less than 10 years, under certain circumstances. He said the prohibition in Model #245 was intended to prevent gaming the creation of a combination of indices for the purposes of creating favorable illustrations. He said only five states have adopted the version of Model #245 prohibiting such illustrations. He said because the majority of states do not restrict these illustrations, there has not been the push and commissioner support necessary to achieve consensus on the revisions to Model #245. He said Iowa has adopted the most recent version of Model #245 and is moving forward with a rule to allow the illustrations. He said at this point, he would leave it to the states to draft their own language or do what they are doing in Iowa and promulgate a regulation on the matter.

Commissioner Ommen said Mr. Birnbaum’s suggested Illustration Reengineering (A) Working Group appears to be a broader endeavor apart from the Annuity Disclosure (A) Working Group, which he agrees should be entertained by the Committee once it receives additional information and considers how such an endeavor might fit in to the larger work commitments and responsibilities of the Committee this year. He explained that before the Committee undertakes a new working group and charge, there should be discussion to ensure that there is sufficient state insurance regulator and commissioner support to avoid repeating the situation at hand with the Annuity Disclosure (A) Working Group. He reiterated that the revisions to Model #245 for participating income annuities that were adopted by the Committee in 2018 and held should be forwarded to the Executive (EX) Committee and Plenary for consideration during the Summer National Meeting.

Ms. Lerner asked whether Commissioner Ommen would share the regulation in Iowa. Commissioner Ommen said it is still a work in progress, but he said he would share it as soon as it is available. Jason Berkowitz (Insured Retirement Institute—IRI) said the IRI did not have a position with respect to Mr. Birnbaum’s suggested new Illustration Reengineering (A) Working Group, but he asked that the Committee not presuppose any conclusions within any new charge, such as that life insurance and annuity products are identical, when they are in fact different products.
Commissioner Ommen made a motion, seconded by Commissioner Afable, to disband the Annuity Disclosure (A) Working Group once the Executive (EX) Committee and Plenary consider adoption of the participating income annuity revisions to Model #245 adopted and then held by the Life Insurance and Annuities (A) Committee at the 2018 Summer National Meeting. The motion passed unanimously.

Mr. Wicka spoke to Mr. Birnbaum’s suggested revisions to the Life Insurance Illustration Issues (A) Working Group. He explained that the Working Group has met twice over the past couple of months—March 10 and Feb. 23. He said the Working Group made a lot of progress, and it is very close to completing alternative draft versions of a sample policy overview document for term life policies. He said one version shows the sample pre-underwriting, the other post-underwriting. He said the Working Group has been developing these alternative versions to aid the Committee in providing guidance to the Working Group with respect to the timing of the delivery of this policy overview document the Committee has been working on. Although the Working Group agreed to revisions on the Committee’s last call, the Committee wants to have completed, revised versions of the policy overview and corresponding revised versions of the Life Insurance Disclosure Model Regulation (#580) for the Working Group to look at and vote to bring to the Committee to provide guidance to the Working Group on next steps. He suggested holding off on making revisions to the Working Group charges at this time and revisiting the issue when the Committee has the drafts before it to review. He pointed out that the Working Group has been working under this charge for a while, and he said he does not believe any changes are necessary for the Working Group to complete its charge.

Commissioner Ommen said the Retirement Security (A) Working Group has a charge to “explore ways to promote retirement security consistent with the NAIC’s continuing ‘Retirement Security Initiative.’” He said this has been a charge of the Committee for a number of years and an NAIC priority for years before that. He explained that Commissioner Stephen C. Taylor (DC) chaired the Working Group a couple of years ago; held a number of conference calls; heard presentations from groups who work on this issue, like the Children’s Financial Network (CFN) and the National Financial Educators Council (NFEC); and reached out to groups like the American Association of Retired Persons (AARP). The Working Group also heard from Funded Consumer Representative Brenda Cude (University of Georgia) and Karrol Kitt (University of Texas at Austin). Commissioner Ommen said the issue of retirement security permeates all that the NAIC does, including the most recent focus of the NAIC and the Special Committee. He said new charges coming to the Committee from the Special Committee encompass the spirit of this charge in an ongoing way. He said given the work undertaken by Commissioner Taylor and the new charges coming to the Committee under the race and diversity strategic priorities of the NAIC, it may be reasonable to conclude that the Working Group’s charge has been fulfilled.

Mr. Berkowitz commended the efforts of the Working Group over the years, and he said he does not want the NAIC to lose sight of this critical issue. He said there is a lot of good that can be done through the insurance regulatory community to help people prepare for their retirement. He said the IRI stands ready to support the NAIC in its efforts, whether it is through this Working Group or another mechanism.

Commissioner Ommen made a motion, seconded by Superintendent Dwyer, to disband the Retirement Security (A) Working Group, as having fulfilled its charge. The motion passed unanimously.

5. Discussed Life Insurer Practices Related to COVID-19

Commissioner Mulready said there are three issues he wants to raise with respect to insurer practices and COVID-19. The first is a letter from the Consumer Federation of America (CFA). This letter asks the NAIC to develop a model rule for life insurance underwriters who might delay or deny coverage for people who have or had COVID-19, and it also asks the industry to make COVID-19 underwriting rules public and reasonable. He said the second is an issue the Interstate Insurance Product Regulation Commission (Compact) has encountered; i.e., life insurance underwriting questions related to COVID-19 vaccinations. He said the third issue involves a rumor that has been brought to the attention of a few states that the Committee knows of, as well as the Compact, that life insurance claims have not been paid because the cause of death was the COVID-19 vaccination. The assertion is that the life insurance company claims the vaccine was not U.S. Food and Drug Administration (FDA)-approved, and the deceased signed a release before receiving the shot.

Bob Hunter (CFA) said the New York Times reported that over 31 million Americans have had or currently have COVID-19, and millions more than that probably have had it with mild or no symptoms. He said in short, this as an issue that touches many, many people. He said the CFA is simply asking for more transparency. He said the CFA is not asking for life insurers to stop reasonable underwriting practices, but consumers should be able to find out what those practices are. He said the pandemic is
causing an increasing number of people to realize their need for life insurance, and there should be some guidelines for consumers to understand what insurers are going to be looking for and whether they will need to have a COVID-19 vaccination or a negative COVID-19 test, instead of having to go blindly from company to company. He said the CFA has asked major insurance companies to be more transparent, but they have not responded, so that is why the CFA is asking the Committee to consider developing a model rule requiring transparency and reasonable standards for processing life insurance applications in the COVID-19 and post-COVID-19 era.

Superintendent Dwyer said when COVID-19 first emerged, there were several states that did not allow life insurance applications to ask questions about COVID-19. She said a significant percentage of life insurance is written through the Compact, and NAIC members should be aware of the position the Compact has taken with respect to COVID-19 related questions on life insurance applications.

Karen Schutter (Compact) explained that the Compact established a multi-state public entity, the Interstate Insurance Product Regulation Commission, which serves as an instrumentality of the 46 compacting states who come together to develop and adopt Uniform Standards to allow companies to submit forms to the Compact for review and approval under those Uniform Standards. She said it is front-end regulation promoting efficiency and uniform requirements for life insurance, annuities, long-term care insurance (LTCI), and disability income insurance. She said in March 2020, the Compact Office started to see life application forms that had questions related to COVID-19 testing and diagnosis. She explained that the Compact Office, through its monthly communication with its members, reported on the type of questions it was seeing, and more importantly the requirements for such questions under the Uniform Standards. She said the Compact also developed a COVID-19 resource page in its website insurancecompact.org with a detailed list of FAQ.

Ms. Schutter said at the start of the pandemic, there were questions about travel, and the ability to exclude certain travel was an emerging concern. She said the Uniform Standards permit questions about foreign travel and residency outside the U.S., provided that the question is limited to a two-year look back and forward. She said the Uniform Standards permit exclusion or limitation of foreign travel or residency only if permitted by state law in the state where the policy is delivered or issued. In other words, exclusions based on information in the underwriting follow state law.

Ms. Schutter said the Compact’s COVID-19 FAQ also provide detailed information regarding the types of medical questions that can be asked in application forms. She explained that open-ended questions requiring a self-diagnosis are prohibited. She said questions like whether you think you have COVID-19, whether you have had trouble breathing, and whether you have been exposed to someone with COVID-19 are not allowed. She said medical questions on an application must be in a prescribed format under the Uniform Standards, and must have specified look back periods, such as two, five or 10 years. She said diagnostic questions must be phrased in terms of whether an applicant has been “diagnosed, treated, tested positive for, or been given medical advice for” by a member of the medical profession regarding the specific condition.

Ms. Schutter said the Compact has also reported to its members the filings approved on their behalf, which include applications with COVID-19 questions. She said an approximate total of 60 filings with applications have been approved over the last year. She said under the Uniform Standards, a life insurance policy is prohibited from including an exclusion for death from a specified condition, such as COVID-19. She said the Compact has not seen such an objectionable provision in a form. She said another aspect of COVID-19 filing activity the Compact has seen is companies updating their filings to change the delivery format of their application from paper to electronic.

Ms. Schutter said an important point to remember is that there are many ways an insurer can elicit information about an applicant with respect to the testing or diagnosis of COVID-19 without asking the direct question. For example, the application can ask if the proposed insured received inpatient or outpatient treatment in a hospital, clinic or medical facility, and the insurer can also obtain medical records in addition to the medical questions on an application.

Ms. Schutter explained that concerns with how information is used in the underwriting process are outside the scope of the Compact. She said the Uniform Standards make it very clear that certain exclusions based on the underwriting process follow state law and apply to Compact-approved applications and policies. She said some of the most common exclusions are avocation, aviation, occupation, foreign travel and foreign residency.

Ms. Schutter said the Compact would appreciate guidance from the Committee as the policy experts with respect to the COVID-19 vaccination question. She said about a month ago, the Compact received an application with a question of whether the applicant received a COVID-19 vaccine, including asking for the dates of the first and second shot and the manufacturer.
Ms. Schutter said at this point, the Compact Office considers this question objectionable under its Fairness standard because this vaccine is not yet widely available and state insurance regulation has not set public policy regarding its use in underwriting. She said the Compact Office stands ready to provide further information.

Commissioner Mulready said in his interactions with media and consumers, he sticks to the fact that life insurance policies are contracts, there are no exclusions for medical conditions, and exclusions cannot be added later. Brendan Bridgeland (Center for Insurance Research—CIR) said he is a member of the advisory board for the Compact, and he has discussed these application questions with Ms. Schutter. He said he initially thought that some of the questions were problematic, but any concerns he had initially have been addressed. He said he agrees with Ms. Schutter with respect to the vaccination questions, and the situation is evolving. He said even if someone got vaccinated initially, there may be booster requirements in the future, and it is unclear how that issue could be handled with life insurance, which raises the question of the relationship between the question and the risk involved.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
Accelerated Underwriting (A) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Fall National Meeting)
March 19, 2021

The Accelerated Underwriting (A) Working Group met March 19, 2021. The following Working Group members participated: Mark Afable, Chair (WI); Grace Arnold, Vice Chair (MN); Jason Lapham (CO); Russ Gibson (IA); Rich Piazza (LA); Rhonda Ahrens and Laura Arp (NE); Chris Aufenthie (ND); Lori Barron (OH); Elizabeth Kellher Dwyer (RI); and Lichou Lee (WA). Also participating were: Jodi Lerner (CA); and Nour Benchaaboun (MD).

1. Received a Report from the Ad Hoc Drafting Group

Commissioner Afable reminded the Working Group that there were two groups of state insurance regulators that had volunteered to participate in two efforts: 1) a drafting group—to collect the information from the Working Group’s presentations and develop language for a work product for the larger Working Group and interested parties to react to; and 2) a liaison group—to monitor and apprise the drafting group of the activities of other NAIC groups that are touching on many of the same topics as the Accelerated Underwriting (A) Working Group. He explained that these two groups have combined efforts and now comprise a single drafting group led by Commissioner Arnold. He said the focus is to draft an educational report to explore accelerated underwriting (AU) in life insurance and offer guidance to state insurance regulators, industry, consumer advocates and other stakeholders.

Commissioner Arnold updated the Working Group on the newly merged drafting group’s progress. She said the drafting group last met on March 10 and is scheduled to meet every three weeks to continue working on drafting language for an educational report. She said the report will be narrowly focused on life insurance underwriting to avoid conflicting with the work of other NAIC groups, such as the Innovation and Technology (EX) Task Force, the Big Data and Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group.

Commissioner Arnold said the drafting group is working from the Nov. 17, 2020, outline (see NAIC Proceedings Fall 2020, Life Insurance and Annuities (A) Committee, Attachment Two) that was distributed to the Working Group during its Nov. 17, 2020, meeting. She said state insurance regulators have volunteered to work on language to fill in the outline. She said the goal is to transform the outline into more of a paper that can be exposed for comment. She said the drafting group hopes to have some sections of the outline ready to expose for comment shortly after its next meeting, scheduled for March 31.

Birny Birnbaum (Center for Economic Justice—CEJ) said he had submitted comments on March 18 suggesting revisions to the Nov. 16, 2020, outline. Ms. Arnold thanked Mr. Birnbaum for his comments and agreed to reach out with any questions once the drafting group has a chance to review his suggestions. Peter Kochenburger (University of Connecticut School of Law) said that the report should incorporate and build upon the NAIC Principles on Artificial Intelligence (AI Principles). He said one of the purposes of the AI Principles is to guide, which would be particularly useful in the context of this report. Commissioner Afable said he agrees that the AI Principles were intended to guide the work undertaken by other NAIC groups, like this Working Group, and that the AI Principles would be taken into account in the Working Group’s report.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met March 25 and March 9, 2021. The following Working Group members participated: Doug Ommen, Chair (IA); Amanda Baird, Vice Chair, and Michelle Brugh Rafeld (OH); Jimmy Gunn and Steve Ostlund (AL); Jodi Lerner (CA); Fleur McKendell (DE); Dean L. Cameron (ID); Shannon Lloyd and Tate Flott (KS); Renee Campbell (MI); Bruce R. Range, Martin Swanson and Tom Green (NE); Keith Nyhan and Denise Lamy (NH); Andrew Schallhorn and Cuc Nguyen (OK); Brian Hoffmeister (TN); Matt Gendron and Sarah Neil (RI); and Richard Wicka (WI). Also participating was: Robert Wake (ME).

The Working Group met Feb. 22, 2021, and Dec. 14, 2020. During these meetings, the Working Group discussed the draft Frequently Asked Questions (FAQ) guidance document (see NAIC Proceedings – Spring 2021, Life Insurance and Annuities Committee, Attachment Two-B1), which the Working Group developed as one way for it to complete the second part of its 2020 charge to “[c]onsider how to promote greater uniformity across NAIC member jurisdictions.” The Working Group also discussed the comments received on the draft and revisions to the draft based on the comments received.

Mr. Ostlund made a motion, seconded by Ms. Rafeld, to adopt the Working Group’s Feb. 22, 2021 (Attachment Two-A) and Dec. 14, 2020, minutes (Attachment Two-B). The motion passed unanimously.

2. **Discussed Comments on a Draft FAQ Guidance Document**

Commissioner Ommen said that during its Feb. 22 meeting, the Working Group began discussion, but did not finish, of revisions based on the comments received to the draft FAQ guidance document. The Working Group continued with the discussion of comments received on Question 9 in the conflict of interest section using the comment chart NAIC staff developed (see NAIC Proceedings – Spring 2021, Life Insurance and Annuities (A) Committee, Attachment Two-B2).

Commissioner Ommen directed the Working Group’s attention to the Joint Trades’—the American Council of Life Insurers (ACLI), the Committee of Annuity Insurers (CAI), the Financial Services Institute (FSI), the Indexed Annuity Leadership Council (IALC), the Insured Retirement Institute (IRI) and the National Association for Fixed Annuities (NAFA)—suggested revisions to Question 9. Jason Berkowitz (IRI) said the Joint Trades submitted a supplemental comment letter revising its suggested revisions to Question 9. Jason Berkowitz (IRI) said the Joint Trades submitted a supplemental comment letter revising its suggested revisions to Question 9. After considering this question, the Working Group should add a question describing why the Working Group decided to define “material conflict of interest” as not including cash or non-cash compensation. The Working Group discussed Mr. Birnbaum’s suggestion. After additional discussion, the Working Group decided to add a new question reflecting Mr. Birnbaum’s suggestion. The Working Group also decided to include the Joint Trades’ revised suggested revisions to Question 9 in the next FAQ draft for additional discussion during its next meeting.

The Working Group next discussed the suggested revisions to Question 10, which discusses what a producer must do to identify and avoid or reasonably manage a material conflict of interest as provided in Section 6A(3). The Federation of Americans for Consumer Choice’s (FACC’s) and the Joint Trades’ suggested revisions to this question. After discussion, the Working Group decided to accept the Joint Trades’ suggested revisions.

No comments were received on Question 11.
of such language of potentially narrowing the scope or intent the language in Section 6C(2)(h). In addition, for similar reasons, the Working Group decided not include language related to the intent of “limited period of time.”

The Working Group next discussed the Joint Trades’ suggestion to add a new FAQ under a new Safe Harbor section. The proposed question discusses whether insurers and producers are required to comply with the requirements of the revised Suitability in Annuity Transactions Model Regulation (#275) if they are acting in compliance with rules imposed by other regulators that meet or exceed the revised model’s requirements—so-called “comparable standards.” Mr. Berkowitz said that the Joint Trades suggest adding this question because there seems to be some differences of opinion in terms of what was intended by the safe harbor provision. This question is meant to clarify this for the states and based on their understanding of its intent, which is that recommendations and sales of annuities made in compliance with comparable standards shall satisfy the revised model’s requirements.

The Working Group discussed to what extent the comparable standards in the safe harbor apply to specific requirements in the revised model, such as producer training. Mr. Berkowitz acknowledged that for some of the comparable standards, those standards may not always have listed the explicit training requirements in Section 7 of the revised model. However, he said the Joint Trades believe that it would be difficult for a registered broker-dealer or a registered investment advisor to satisfy their U.S. Securities and Exchange Commission (SEC) best interest rule obligations or fiduciary obligations if they are not properly training on the products they are recommending.

Commissioner Ommen acknowledged Mr. Berkowitz’s comments, but he noted that one issue that remains unclear is whether training provided for variable annuities is going to be adequate in terms of comparability with training for fixed or fixed indexed annuities. Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) expressed his concern with the Joint Trades’ proposed new question and answer and their interpretation of the safe harbor provision. He said the IIABA interprets the safe harbor as applying to a financial professional’s recommendations and sales of annuities—not broadly as an exemption from all the supervisory obligations for insurers. Mr. Berkowitz disagreed with Mr. Bissett’s characterization that the Joint Trades’ interpretation of the safe harbor as an exemption from all supervisory obligations for insurers. He pointed out the language in the new question on the subject. He also explained how the Joint Trades view the safe harbor provision with respect to an insurer’s supervisory responsibilities. Commissioner Ommen explained his concerns with the Joint Trades’ question and answer, which appears to exempt financial professionals relying on the same harbor and its comparable standard provisions from the revised model’s requirements. The Working Group discussed his concerns. After additional discussion, the Working Group deferred deciding on the Joint Trades’ suggested new FAQ to allow the Joint Trades time to submit revised language addressing the Working Group’s concerns.

3. Discussed Producer Training Comments on a Draft FAQ Guidance Document

Commissioner Ommen said NAIC staff prepared a comment chart reflecting the comments and suggested revisions to the FAQ guidance document on the revised model’s producer training requirements (see NAIC Proceedings – Spring 2021, Life Insurance and Annuities Committee, Attachment Two-B3). He said he would like to use this chart to facilitate the Working Group’s discussion. There was no objection.

Commissioner Ommen explained that most of the comments received on the producer training section of the FAQ suggest adding new questions to identify and address issues the FAQ did not cover or were not fully developed. Mr. Berkowitz discussed the Joint Trades’ suggested new questions and answers on producer training completed prior to a state’s adoption of the model. He explained that the Joint Trades wanted to clarify this issue to assist producers and the states in understanding when and under what circumstances a producer would need to take the updated four-hour credit training or the one-hour credit alternative training. He said the intent of the Joint Trades’ suggested questions was to help ensure that a producer does not have to unnecessarily be required to take either the four-hour credit course or the one-hour credit course more than one time as the states move to adopt the revised model.

Commissioner Ommen acknowledged that this issue with training has arisen in some states that have adopted the revised model. The Working Group discussed the Joint Trades’ suggested revisions. Mr. Gendron suggested that the Joint Trades’ questions could be more concise. Mr. Berkowitz agreed that it could be possible, but he noted that there has been a lot of confusion related to these issues and that one goal of the Joint Trades’ questions was to provide additional context and background on the issue. Mr. Wicka suggested the Joint Trades’ answer for its first question could be revised to state: “Yes, the revised model allows for states to recognize courses taken in other states before the model is adopted in their state. The revised model is intended to provide for reciprocity so producers that operate in multiple jurisdictions would not have to retake the same training multiple times.” Mr. Birnbaum expressed support for Mr. Wicka’s suggested revisions, but he said the Joint Trades’ questions
also could be simplified. He provided suggested language. After additional discussion, the Working Group decided to try to simplify the Joint Trades’ suggested questions and answers. The Working Group also asked Mr. Birnbaum to submit his suggested language to NAIC staff for the Working Group’s consideration during its next meeting.

The Working Group next discussed the Joint Trades’ suggested revisions to Question 13 in the FAQ, which concerns whether a producer must complete the additional training on the best interest standard of conduct even if they have already completed the existing annuity training requirements with the prior suitability standard of conduct. The Joint Trades suggest revising Question 13 to have it apply only to producers who are not relying on the safe harbor in Section 6E.

Mr. Berkowitz said the Joint Trades’ suggested revision supports its belief that the safe harbor provision applies to producer training. He acknowledged that the Joint Trades’ position on that issue is still being debated and that additional discussion of the issue will most likely occur later during the meeting. The Working Group discussed the Joint Trades’ suggestion, specifically the Joint Trades’ interpretation that the safe harbor extends to producer training. Mr. Berkowitz discussed the Joint Trades’ reasoning for its interpretation. He said the Joint Trades submitted additional suggested revisions on the safe harbor issue for the Working Group’s consideration (Attachment Two-C). Some Working Group members discussed why they disagreed with this interpretation because those financial professionals using the safe harbor provision are still producers and would need to take the training described in Section 7 of the model. Mr. Bissett discussed the IIABA’s position on the issue and noted that the IIABA submitted written comments to the Working Group for its consideration on the issue (Attachment Two-D). After additional discussion, the Working Group requested that Mr. Berkowitz provide revised language for the Working Group’s consideration that would include the ability for state insurance regulators to review and approve a training course that a producer, who is a dual registrant, believes is substantially similar to the state’s training course and would satisfy the model’s training requirements. The Working Group also agreed that the Joint Trades should use some of the language offered by the IIABA to redraft its question and answer.

The Working Group next discussed the Joint Trades’ suggested new FAQ on the appropriateness of a producer taking the four-hour training course versus the one-hour training course. After discussion, the Working Group agreed that adding such a question would be beneficial. However, the Working Group agreed that it could be simplified and made clearer. Ms. Rafeld and Mr. Gendron agreed to work with Mr. Berkowitz to revise the FAQ for the Working Group’s consideration at its next meeting.

The Working Group discussed the Joint Trades’ suggested new FAQ to address situations when a producer fails to timely complete the updated four-hour training course or the one-hour training course. After discussion, the Working Group agreed that adding this FAQ would be helpful to provide clarification for producers. Ms. Rafeld agreed to work Mr. Berkowitz to simplify the FAQ for the Working Group’s consideration during its next meeting. Mr. Birnbaum offered suggested language to clarify the FAQ. Mr. Berkowitz and Ms. Rafeld agreed to take Mr. Birnbaum’s suggested language into consideration as they work to clarify and simplify the Joint Trades’ suggested new FAQ.

4. Discussed a New FAQ Conflict of Interest Question

Mr. Birnbaum discussed his suggested language for a new FAQ explaining why cash and non-cash compensation is not considered a material conflict of interest (Attachment Two-E). This new FAQ would precede Question 9. The Working Group discussed the suggested language. Ms. Baird suggested that the CEJ’s suggested language was a good beginning. However, she said she believes the Working Group should review for discussion later the several states’ suggested language because it provides more background and context on the issue. She explained why that was important. The Working Group deferred deciding on the FAQ language until the Working Group’s next meeting.

The Working Group decided its next meeting would be sometime in late April or early May, during which it hopes to complete its work.

Having no further business, the Annuity Suitability (A) Working Group adjourned.
The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met Feb. 22, 2021. The following Working Group members participated: Doug Ommen, Chair (IA); Amanda Baird, Vice Chair, represented by Michele Brugh Rafeld (OH); Jimmy Gunn and Steve Ostlund (AL); Jodi Lerner (CA); Tate Flott (KS); Renee Campbell (MI); Bruce R. Ramge (NE); Keith Nyhan (NH); Brian Hoffmeister (TN); Matt Gendron and Sarah Neil (RI); and Richard Wicka (WI).

1. Discussed Comments on a Draft FAQ Guidance Document

During the Working Group’s meeting at the 2020 Summer National Meeting, the Working Group agreed to distribute for a 30-day public comment period a draft Frequently Asked Questions (FAQ) guidance document (see NAIC Proceedings – Spring 2021, Life Insurance and Annuities (A) Committee, Attachment Two-B1), which the Working Group developed as one way for it to complete the second part of its 2020 charge to “[c]onsider how to promote greater uniformity across NAIC member jurisdictions.” The purpose of this guidance document is to assist the states as they move forward with adopting the revised Suitability in Annuity Transactions Model Regulation (#275), which added a best interest standard of conduct for insurers and producers, through either an administrative or a legislative process.

Commissioner Ommen said the Working Group received several comment letters in response to its request for comments and discussed the comments during its Dec. 14, 2020, meeting. He said NAIC staff incorporated the comments received into a chart (see NAIC Proceedings – Spring 2021, Life Insurance and Annuities (A) Committee, Attachment Two-B2), which he would like to use to facilitate the Working Group’s discussion of potential revisions to the guidance document. There was no objection to his suggestion.

Commissioner Ommen directed the Working Group to the Federation of Americans for Consumer Choice’s (FACC) suggestion for Question 1, which explains why the NAIC decided to revise Model #275 to add a best interest standard of conduct, to replace the word “harmonization” with “compatibility.” There was no objection to accepting the suggested revision.

The Working Group next discussed the FACC’s and the Joint Trades’—the American Council of Life Insurers (ACLI), the Committee of Annuity Insurers (CAI), the Financial Services Institute (FSI), the Indexed Annuity Leadership Council (IALC), the Insured Retirement Institute (IRI) and the National Association for Fixed Annuities (NAFA)—suggested revisions to Question 2. This question explains how Section 989J of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) applies to the revised model. Commissioner Ommen asked for comments from Working Group members. He said the suggested revisions are meant to be clarifying. After discussion, the Working Group agreed to accept the Joint Trades’ suggested revisions.

The Working Group next discussed the Joint Trades’ suggestion to add a question discussing the process the Working Group used to develop and adopt the Model #275 revisions. After discussion, the Working Group decided not to add the suggested question because such a question was unnecessary.

The Working Group next discussed Question 3, which relates to the provision in the revised model providing an exemption to for annuities purchased in response to a direct response solicitation. Commissioner Ommen said he believes the Joint Trades’ suggestion possibly would expand the exemption with addition of “telephone” communications. Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) noted the IIABA’s comments concerning the direct response solicitation exemption in Model #275. He also agreed that the Joint Trades’ suggested revisions appear to expand the exemption. Jason Berkowitz (IRI) said the intent of the Joint Trades’ suggested revisions were to align it with the definition of “direct response solicitation” in the Life Insurance and Annuities Replacement Model Regulation (#613). After discussion, the Working Group decided not to accept adding the word “telephone,” but it agreed to accept the Joint Trades’ suggestion to delete “a digital platform.”

The Working Group next discussed Question 4, which describes the best interest standard of conduct and how a producer or insurer would satisfy it. Commissioner Ommen said the FACC suggests a few revisions to more closely align the answer to the model’s language. The Working Group agreed to accept the FACC’s suggested revisions.
The Working Group next discussed Question 5, which describes what types of recommendations fall under the best interest standard of conduct. Commissioner Ommen said the FACC suggests additional language specifying that insurers are only expected to supervise recommendations that result in an application being submitted to the insurer. After discussion, the Working Group decided not to accept the suggested revision.

The Working Group next discussed Question 6, which concerns the application of the best interest standard of conduct to a producer who never meets the client but assists a producer in making a recommendation to that client. Commissioner Ommen noted the importance of this question given its potential application to independent marketing organizations (IMOs). He said the Joint Trades and the FACC submitted suggested revisions. Mr. Gendron expressed support for the FACC’s suggestion to add words “the standard applies, if.” The Working Group did not believe it was necessary to include a definition of “material control or influence.” After discussion, the Working Group agreed to add language from the model describing activities that, in and of themselves, would not constitute material control or influence instead of adding a definition of “material control or influence.” The Working Group also agreed to modify the FACC’s language to add “the standard can apply.”

The Working Group next discussed Question 7, which describes the provisions of Section 6A(1)(c) of the revised model requiring producers to be held to standards applicable to other producers with similar authority and licensure. Commissioner Ommen said the Joint Trades and the FACC suggest revisions to this question. The Working Group discussed what is meant by the language “similar authority and licensure” with respect to the care obligation, which is extensively outlined in the model. Mr. Gendron expressed concern with Joint Trades’ suggested language which appears to be limiting.

Duane Thompson (XY Planning Network) discussed the XY Planning Network’s comments on Question 7. The XY Planning Network suggests revisions to the question to include more information to remind and guide producers holding other licenses that require fiduciary accountability to the overlapping regulatory authorities with respect to market conduct standards. Mr. Thompson said it should be made clear that in one capacity, such as that of an investment adviser representative (IAR), an individual has a fiduciary obligation to consider reasonable products and alternative products or strategies that are best-suited, at the time of the recommendation, in meeting the client’s financial goals and objectives. In addition, the XY Planning Network suggests the question should disclose that, separately in the capacity of an insurance producer, product availability is limited to those insurance contracts for which the producer is licensed to sell.

The Working Group discussed the suggested revisions, including the XY Planning Network’s comments, and whether the current language needed to be clarified with respect to dual registrants. The Working Group decided not to accept the Joint Trades’ or the FACC’s suggested revisions. The Working Group asked Mr. Thompson and Mr. Gendron to work together to provide language for the Working Group’s consideration that would clarify the question’s application to dual registrants, who may be subject to a different standard of conduct, such as a fiduciary standard of conduct, than the best interest standard of conduct provided in the revised model.

The Working Group next discussed Question 8. Question 8 describes how a producer or insurer can use the “Insurance Agent (Producer) Disclosure for Annuities” form to satisfy the disclosure obligation by providing it during an initial client meeting and/or at later date when it requires updating. The Joint Trades and the FACC submitted comments. The Working Group agreed to accept the Joint Trades’ suggestion to add “or sale of an annuity” for consistency with the revised model’s language. Some Working Group expressed concern with the FACC’s suggested revisions related to the timing of providing the form. After additional discussion, the Working Group decided not to accept the FACC’s suggested revisions.

The Working Group discussed the Joint Trades’ suggestion to add a new question to the FAQ guidance document on the application of the safe harbor provision in Section 6E of the revised model with respect to providing the Insurance Agent (Producer) Disclosure for Annuities” form. The Working Group agreed that it was unnecessary to add such a question, particularly in this section of the FAQ guidance document.

The Working Group next discussed Question 9. Question 9 describes Section 5I(2) of the revised model concerning the definition of “material conflict of interest.” The Joint Trades and the FACC provided comments. Commissioner Ommen noted his concerns with providing examples and the possibility of stakeholders believing these examples are the only examples that meet the definition of “material conflict of interest.” Mr. Berkowitz directed the Working Group’s attention to the Joint Trades’ comments on this question it submitted following the Working Group’s previous meeting. He discussed the Joint Trades’ intent behind its comments. He also suggested that the Joint Trades would not object to not including examples.
Commissioner Ommen said the Working Group would need to schedule another meeting to continue its discussion of revisions to the FAQ guidance document beginning where it ended during this meeting with Question 9. He said the Working Group also needs to discuss the training piece. The Working Group requested NAIC staff to prepare a working draft of the FAQ guidance document for the Working Group’s consideration during its next meeting reflecting the discussion during this meeting.

Having no further business, the Annuity Suitability (A) Working Group adjourned.

W:\National Meetings\2021\Spring\Cmte\A\ASWG\ASWG 2-22-21min.docx
1. Discussed Comments on a Draft FAQ Guidance Document

Commissioner Ommen said during the Working Group’s meeting at the 2020 Summer National Meeting, the Working Group agreed to distribute for a 30-day public comment period a draft Frequently Asked Questions (FAQ) guidance document (Attachment Two-B1), which the Working Group developed as one way for it to complete the second part of its 2020 charge to “[c]onsider how to promote greater uniformity across NAIC member jurisdictions.” He explained that the purpose of this guidance document is to assist the states as they move forward with adopting the revised Suitability in Annuity Transactions Model Regulation (#275), which added a best interest standard of conduct for insurers and producers, through either an administrative or a legislative process.

Commissioner Ommen said the Working Group received several comment letters in response to its request for comments by Oct. 2, 2020. He said NAIC staff incorporated the comments received into a chart (Attachment Two-B2), which he would like to use to facilitate the Working Group’s discussion of the comments. There was no objection to his suggestion.

The Working Group discussed the comments received on Question 1, which explains why the NAIC decided to revise Model #275 to add a best interest standard of conduct. Kim O’Brien (Federation of Americans for Consumer Choice—FACC) said the FACC suggests replacing the word “harmonization” with “compatibility.” She said this change would clarify how the revised model should work with other regulatory authorities. The Working Group took this suggestion under advisement.

The Working Group discussed the comments received on Question 2. This question explains how Section 989J of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) applies to the revised model. Commissioner Ommen said the FACC and the Joint Trades—the American Council of Life Insurers (ACLI), the Committee of Annuity Insurers (CAI), the Financial Services Institute (FSI), the Indexed Annuity Leadership Council (I TLC), the Insured Retirement Institute (IRI), and the National Association for Fixed Annuities (NAFA)—submitted comments. Ms. O’Brien said the FACC’s comments are intended to ensure that the explanation of Section 989J is accurate. Jason Berkowitz (IRI) said the Joint Trades suggest revisions to Question 2 to also ensure its accuracy and emphasize state insurance regulatory authority over fixed and fixed indexed annuities. Wesley Bissett (Independent Insurance Agents and Brokers of America—IIABA) expressed concern with the suggested revisions because the IIABA believes the revisions could possibly expand the scope of the Section 989J exemption. Commissioner Ommen said the Working Group would take a closer look at Section 989J to make sure Question 2 is consistent.

The Working Group discussed the comments received on Question 3, which relates to the provision in the revised model on exemptions. Gary Sanders (National Association of Insurance and Financial Advisors—NAIFA) suggested that the proposed answer to the question does not actually answer the question. Mr. Berkowitz said the Joint Trades suggested revision to the question aligns with the actual language in the model. Ms. Meyers said the ACLI is concerned with the reference to a simulated voice; as such, she suggested...
the revisions. The Working Group discussed the meaning of a “direct response solicitation.” Mr. Birnbaum suggested that the Working Group focus on the idea of the meaning of a “solicitation without a recommendation” and try to clarify that instead of the medium used to make the solicitation. Mr. Sanders reiterated the NAIFA’s concern with the exemption in Section 4A because it exempts certain recommendations from having to comply with the revised model’s provisions. The Working Group did not make any decisions based on the discussion. It plans to revisit the question and potentially consider revisions reflecting the discussion later.

The Working Group next discussed Question 4, which describes the best interest standard of conduct and how a producer or insurer would satisfy it. Ms. O’Brien said the FACC recognizes that the purpose of the FAQ guidance document is not to restate what is in the revised model word-for-word, but the FACC believes it is important to add “sources and types of” in the next to last bullet to avoid confusion that the best interest standard of conduct requires the discussion of actual compensation. She said the FACC also requests replacing the word “justification” with “basis” in the last bullet to mirror the revised model’s language because the FACC believes there is a legal distinction between the two words. The Working Group took the suggestions under advisement.

Mr. Birnbaum suggested that the Working Group consider adding language to the FAQ guidance document that would illustrate the differences between the revised model’s best interest standard of conduct and the prior model’s suitability standard. The Working Group took this suggestion under advisement.

The Working Group next discussed Question 5, which discusses what types of recommendations fall under the best interest standard of conduct. Ms. O’Brien said the FACC requests additional language to clarify that insurers are only expected to supervise recommendations that result in an application being submitted to the insurer. The Working Group took this suggestion under advisement.

The Working Group next discussed Question 6, which concerns the application of the best interest standard of conduct to a producer who never meets the client but assists a producer in making a recommendation to that client. The Joint Trades and the FACC submitted comments. Mr. Berkowitz said the Joint Trades suggest revisions to this question to provide additional context and clarity related to the provision’s intent. He referenced the revisions related to the meaning of “direct compensation” as an example. Ms. O’Brien said the FACC suggests revisions to clarify the meaning of “material control and influence” because the FACC believes the term is ambiguous. She said the FACC also recommends that the question explicitly state that a producer exercising material control or influence is not required to provide a disclosure notice to the client because such a requirement could create unnecessary confusion. Mr. Birnbaum said the CEJ has concerns about the way the question is written. He suggested rewriting the question to highlight the circumstances when certain requirements of the best interest standard of conduct would not apply.

The Working Group next discussed Question 7, which describes the provisions of Section 6A(1)(c) of the revised model requiring producers to be held to standards applicable to other producers with similar authority and licensure. The FACC suggests revisions to align the language more closely with the revised model’s language. The Joint Trades suggest clarifying language. The Working Group took the suggested revisions under advisement.

The Working Group next discussed Question 8. Question 8 describes how a producer or insurer can use the “Insurance Agent (Producer) Disclosure for Annuities” form to satisfy the disclosure obligation. The Joint Trades and the FACC submitted comments. Mr. Berkowitz said the Joint Trades suggest changes to make the question more understandable. He said the Joint Trades also suggest deleting the word “yes” because the Joint Trades believe the answer is not absolute and is more nuanced. Mr. Gendron expressed support for removing the word “yes.” Mr. Berkowitz said the Joint Trades also suggest adding a question to clarify how the disclosure obligation applies to producers relying on the safe harbor in Section 6E of the revised model, particularly with respect to completing the “Insurance Agent (Producer) Disclosure for Annuities” form to satisfy the disclosure obligation. Ms. O’Brien said the FACC suggests several revisions and additional questions related to the “Insurance Agent (Producer) Disclosure for Annuities” form intended to clarify whether this form is a relationship document or a transactional document. The Working Group took the suggested revisions under advisement.

The Working Group next discussed Question 9. Question 9 describes Section 5I(2) of the revised model concerning the definition of “material conflict of interest.” The Joint Trades and the FACC provided comments. Mr. Berkowitz said the Joint Trades struggled with this proposed question and proposed answer. He said the Joint Trades’ suggested revisions revise the proposed answer to more closely align with the question and the Model #275 revisions. The Joint Trades also suggest additional examples of what could be considered a material conflict of interest. The Working Group discussed the suggested revisions and the proposed examples. Ms. O’Brien said the FACC supports the Joint Trades’ comments. However, the FACC would
have concerns with adding the example concerning a producer acting as an attorney for the client and any other similar examples, such as a financial advisor acting as an accountant for the client because of concerns about how an insurer would supervise such conduct. The Working Group discussed the FACC’s concerns regarding the potential additional examples the Joint Trades suggest and the FACC’s potential additional examples. The Working Group also discussed how an insurer could possibly supervise producer compliance.

Duane Thompson (XY Planning Network) discussed the XY Planning Network’s comments on this issue and other issues previously discussed and its support for additional clarity to this question, particularly for dual registrants. The Working Group discussed whether there should be separate questions included in the FAQ guidance document for dual registrants. Mr. Berkowitz suggested that the Working Group keep in mind that the FAQ guidance document concerns obligations imposed under the revised model that relate to the conduct of a financial professional as an insurance producer. As such, any conduct that such a producer engages in as a state licensed investment advisor most likely falls outside the scope of the FAQ guidance document. However, Mr. Berkowitz noted that there are most likely issues that could be addressed in the FAQ guidance document related to dual registrants to ensure that they are providing the appropriate information to consumers, but this question may not be the appropriate place to include such language.

The Working Group deferred discussion of Question 10, which discusses how a producer could satisfy the conflict of interest obligation required under Section 6A(3). No comments were received on Question 11.

The Working Group next discussed the comments received on Question 12, which describes the provisions of Section 6C(2)(h). The Joint Trades and the FACC submitted comments. Ms. O’Brien said the FACC would appreciate any additional clarity on sales contests with respect to Section 6C(2)(h).

The Working Group next discussed the Joint Trades’ suggestion to add a new question concerning the revised model’s safe harbor provision. The proposed new question concerns whether insurers and producers in compliance with rules imposed by other regulators that meet or exceed the requirements in the revised model must comply with the revised model’s requirements. Mr. Berkowitz said the Joint Trades suggest adding this question to clarify the Working Group’s intent related to the safe harbor provision. Mr. Bissett suggested that the Working Group provide more clarity on what specific provisions in the revised model still apply to financial professionals that fall under the safe harbor provision. The Working Group took the suggestions under advisement, recognizing the complexity of the regulatory scheme and the difficulty of reflecting that in a FAQ guidance document.

The Working Group next discussed the comments received related to the revised model’s training requirements. The new training requirements require producers, who have already completed the existing training requirements prior to a state’s effective date of adoption of the revised model within six months after that effective date, to complete either a four-credit training course or an additional one-credit training course on the appropriate sales practices, replacement and disclosure requirements under the revised model. NAIC staff incorporated those comments into a chart (Attachment Two-B3) that was distributed prior to the meeting.

Mr. Berkowitz discussed the Joint Trades’ comments and suggested revisions, which reflect discussions with the states that have already adopted the revised model. He explained that the Joint Trades’ suggested revisions, including additional questions on the topic, reflect their interpretation of the revised model’s training provisions. He said the Joint Trades believe it is critical to get clarity on these issues to ensure consistent interpretation and application amongst the states as they move forward with adopting the revised model. He discussed some of the issues, including the difference between the one-credit training versus the four-credit training, when it is appropriate for a producer to take the one-credit training versus the four-credit training, and any implications with respect to state reciprocity. He also discussed one state’s interpretation of the six-month grace period that appears to be contrary to the Working Group’s intent.

Mr. Sanders said the NAIFA also submitted comments on the training requirement and suggested revisions to the FAQ guidance document that it also received from the states and producers. Mr. Bissett expressed concern with the Joint Trades’ suggested revision that suggest that a financial professional using the safe harbor provision is not required to complete the four-credit training or the one-credit training. He said this would create an unlevel playing field. Commissioner Ommen asked Mr. Bissett if his concerns remained if the financial professional is in compliance with comparable standards, including the content of such standards. Mr. Bissett said in theory, it could address his concerns, but such comparable standards, including content, may not address specific annuity provisions in the revised model.
Mr. Berkowitz said the Joint Trades believe their suggested additional question and the other questions related to the safe harbor provision reflect their belief that, in including the safe harbor provision, the Working Group implicitly recognized that the provisions of the revised model as compared to the components and specific requirements from other comparable standards would be roughly equivalent, including those provisions related to the training requirement. He questioned the value of the safe harbor provision if financial professionals relying on comparable standards are required to comply with specific provisions in the revised model. He also noted that if an insurance commissioner determines that a producer has failed to comply with the requirements of the comparable standard that the producer is relying on for compliance with the revision model, the insurance commissioner can hold the producer responsible for compliance with the revised model’s provisions. Commissioner Ommen pointed out that in some respects, the Working Group is working in the dark with respect to the safe harbor provision, particularly with respect to the U.S. Securities and Exchange Commission’s (SEC’s) best interest regulation because the SEC is not that far ahead of the states in implementing its regulation. As such, it is hard to know what is comparable because the Working Group does not have that information yet.

Commissioner Ommen said as next steps, he believes that the Working Group should hold a regulator-to-regulator call to discuss any revisions to the FAQ guidance document based on the discussion during this meeting. There was no objection to this suggestion.

Having no further business, the Annuity Suitability (A) Working Group adjourned.
**SUITABILITY IN ANNUITY TRANSACTIONS MODEL REGULATION (#275)**

**BEST INTEREST STANDARD OF CONDUCT REVISIONS**

**FREQUENTLY ASKED QUESTIONS**

This Frequently Asked Questions (FAQ) document is intended to specifically address those questions that are likely to arise as the states work to adopt the revised *Suitability in Annuity Transactions Model Regulation (#275)* and to assist in the uniform implementation and enforcement of its provisions across all NAIC member jurisdictions. No provision of this FAQ document is intended to supersede the specific language in Model #275.

This FAQ document is offered to any state that chooses to use it. It is not intended to expand the content of the model regulation but provides interpretive guidance regarding certain aspects of its provisions.

**GENERAL**

**Q1.** Why did the NAIC decide to revise the model to include a best interest standard of conduct?

**A1.** The revised model was developed, in part, in response to the U.S. Department of Labor’s (DOL) fiduciary rule, which was finalized in April 2016 but vacated in its entirety in March 2018. The DOL fiduciary rule would have expanded the scope of who is considered a fiduciary to federal Employee Retirement Income Security Act of 1974 (ERISA) retirement plans and individual retirement accounts (IRAs) to include a broader set of insurance agents, insurance brokers and insurers. Separately, the U.S. Securities and Exchange Commission (SEC) released a proposed rule package in May 2018, which included Regulation Best Interest (Reg BI). The SEC finalized Reg BI in June 2019. The final Reg BI establishes a best interest standard of conduct for broker-dealers beyond the existing suitability obligation that applies to federally registered variable annuities. Recognizing the SEC’s and the DOL’s role in the regulatory landscape and believing that consumers are better protected when, to the extent possible, there is harmonization of the regulations enforced by the states, the SEC and the DOL, the NAIC revised the model to establish a framework for an enhanced standard of conduct that is more than the model’s current suitability standard but not a fiduciary standard.

**Q2.** How does the Harkin amendment, Section 989J of the Dodd-Frank Act apply to the revised model?

**A2.** Section 989J confirms state authority to regulate the sale of fixed indexed annuities and exemption from federal securities regulation when certain conditions are met, including when the state in which the contract is issued or the state in which the insurer issuing the contract is domiciled:1) has adopted requirements that “substantially meet or exceed the minimum requirements” established by the 2010 version of the NAIC’s *Suitability in Annuity Transactions Model Regulation (#275)*; and 2) “adopts rules that substantially meet or exceed the minimum requirements of any successor modifications to the model regulation[ ]” within 5 years of the adoption by the NAIC. The only exception to this requirement is if the product is issued by an insurance company that adopts and implements practices on a nationwide basis that meet or exceed the minimum requirements established by the NAIC’s Model #275, “and any successor thereto,” and is therefore subject to examination by the State of domicile or by any other State where the insurance company conducts sales of such products.

The NAIC considers the 2020 revisions to be a successor modification to the model that exceeds the requirements of the 2010 revisions, which is reflected in a drafting note to Section 1—Purpose:

“Section 989J of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (‘Dodd-Frank Act’) specifically refers to this model regulation as the ‘Suitability in Annuity Transactions Model Regulation.’ Section 989J of the Dodd-Frank Act confirmed this exemption of certain annuities from the Securities Act of 1933 and confirmed state regulatory authority. This regulation is a successor regulation that exceeds the requirements of the 2010 model regulation.”

As such, states need to work toward adopting the 2020 revisions within 5 years after its adoption by the full NAIC membership in February 2020 to maintain their authority to regulate the sale of fixed annuities.
EXEMPTIONS

Q3. What is the intent of the exemption to the revised model’s provisions under Section 4A to allow a consumer in response to a direct response solicitation to purchase an annuity product where no recommendation is made based on information collected from the consumer?

A3. This exception from the rule was in the 2010 model rule and was not changed in the 2020 version. A direct-response solicitation is a solicitation through a sponsoring or endorsing entity solely through mails, the Internet, a digital platform, or other mass communication media that does not involve a communication directed to a specific individual by a natural person, or by a simulated human voice.

BEST INTEREST STANDARD OF CONDUCT

Q4. What is the best interest standard of conduct and how would a producer or insurer satisfy it?

A4. To satisfy the best interest obligation, a producer or an insurer must satisfy the four obligations: 1) care; 2) disclosure; 3) conflict of interest; and 4) documentation.

To satisfy the four obligations, when making a recommendation, producers must:
- Know the consumer’s financial situation, insurance needs and financial objectives;
- Understand the available recommendation options;
- Have a reasonable basis to believe the recommended option effectively addresses the consumer’s financial situation, insurance needs and financial objectives;
- Communicate the basis of the recommendation to the consumer;
- Disclose their role in the transaction, their compensation, and any material conflicts of interest; and
- Document, in writing, any recommendation and the justification for such recommendation.

Q5. What types of recommendations fall under the best interest standard of conduct?

A5. All recommendations made by a producer or insurer to purchase, exchange or replace an annuity product must comply with the best interest standard of conduct. Specifically, as defined in Section 5M, a “recommendation” is advice provided by a producer to an individual consumer that was intended to result or does result in a purchase, an exchange or a replacement of an annuity in accordance with that advice. A recommendation does not include general communication to the public, generalized customer services assistance or administrative support, general educational information and tools, prospectuses, or other product and sales material.

Q6. Does the best interest standard of conduct apply to a producer who never meets the client, but assists a producer in making a recommendation to the client?

A6. Yes, under Section 6A(5), a producer who has exercised material control or influence in the making of a recommendation and has received direct compensation as a result of the recommendation or sale, regardless of whether the producer has had any direct contact with the consumer.

CARE OBLIGATION

Q7. What is the intent of language in Section 6A(1)(c), which states “Producers shall be held to standards applicable to producers with similar authority and licensure?”

A7. The intent of this language is to help to ensure that in any compliance or enforcement action, a producer’s recommendation is compared only to other producers as opposed to being compared to investment advisers or possibly
higher-level fiduciaries, such as trust officers or plan sponsors under the federal Employee Retirement Income Security Act of 1974 (ERISA) for compliance and enforcement purposes.

**DISCLOSURE OBLIGATION**

Q8. To satisfy the disclosure obligation, Section 6A(2)(a) requires a producer to provide the completed “Insurance Agent (Producer) Disclosure for Annuities” form in Appendix A prior to a recommendation, can a producer provide the form at the initial client meeting? Is the producer required to update the form and provide it again or can the producer provide it once and satisfy this obligation?

A8. Yes, a producer can satisfy the disclosure obligation by providing a completed form during the initial client meeting. However, if, after the completed form is provided to the client, the information on the completed form becomes out-of-date prior to a recommendation, the producer is expected to provide the consumer with an updated form.

**CONFLICT OF INTEREST OBLIGATION**

Q9. As defined in Section 5I(2), a material conflict of interest does not include cash compensation or non-cash compensation, what other type of financial interest would be considered a material conflict of interest? Is it only an ownership interest as referenced in Section 6A(3)?

A9. A producer who is also dually registered as an investment advisor under state securities law is required under Section 6A(3) to reasonably manage and disclose the related conflicts of interest. This management must commence when the producer first meets with a potential customer even before the dually licensed producer knows the ultimate capacity in which the producer will be acting. The actual capacity when the producer executes a specific transaction may not be known early in the relationship and the related professional or contractual obligations may not be determined based upon the specific facts and circumstances and the consumer profile information until later in the relationship, thus creating a conflict of interest for the producer. The dually licensed producer should assume that both Model #275 and the Investment Advisers Act apply, and that the producer must manage and disclose the conflict of interest.

Q10. Under Section 6A(3), to satisfy the conflict of interest obligation, what must a producer do to identify and avoid or reasonably manage a material conflict of interest? Examples?

A10. The differences in professional and contractual obligations between a producer acting in the consumer's best interest at the time of the transaction and an investment advisor acting in the consumer's best interest over the term of a professional advisory contract are substantial. Managing this conflict of interest will require more than simple disclosure. The dually licensed producer must ensure that the customer has a timely comprehension of the producer's varied interests in the relationship decisions and the producer must ultimately and before making a recommendation have a reasonable basis to believe the producer's recommended professional relationship or capacity along with any related annuity recommendation effectively addresses the consumer's financial situation, insurance needs and financial objectives.

**SUPERVISION SYSTEM**

Q11. Do these revisions require insurers to set up new supervision systems to ensure producer compliance with this new standard of conduct?

A11. No, but the revisions do add additional insurer supervision requirements by requiring insurers to establish and maintain reasonable procedures in three additional areas:

- To assess whether a producer has provided to the consumer the information required by the revised model.
- To identify and address suspicious consumer refusals to provide consumer profile information.
- To identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time.
Q12. Section 6C(2)(h) requires an insurer as part of its supervision system to identify and eliminate sales contests, quotas, bonuses, and non-cash compensation based on the sale of specific annuities within a limited period of time. What type of business practices is provision intended to address?

A12. The requirements of Section 6C(2)(h) are not intended to prohibit general incentives regarding sales of an insurance company’s products where there is no emphasis on a particular product. As the provisions states, insurer business practices involving sales contests, quotas, bonuses and non-cash compensation based on the sale of a specific annuity or annuities within a specified or limited period of time are prohibited and should be identified and eliminated.

TRAINING

Q13. Do producers complete additional training on the new standard of conduct even if they have already completed the existing annuity training requirements?

A13. Yes, Section 7 requires a producer who has already completed the existing annuity training requirements prior to a state’s effective date of the revised model to complete within 6 months of that date either a four credit training course or an additional one-time one credit training course on the appropriate sales practices, replacement and disclosure requirements under the revised model. In adopting this section, a state could choose a different timeframe for this requirement.

practices on a nationwide basis that meet or exceed the minimum requirements established by the NAIC’s Model #275, “and any successor thereto,” and is therefore subject to examination by the State of domicile or by any other State where the insurance company conducts sales of such products.

The NAIC considers the 2020 revisions to be a successor modification to the model that exceeds the requirements of the 2010 revisions, which is reflected in a drafting note to Section 1—Purpose:

“Section 989J of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act") specifically refers to this model regulation as the “Suitability in Annuity Transactions Model Regulation.” Section 989J of the Dodd-Frank Act confirmed this exemption of certain annuities from the Securities Act of 1933 and confirmed state regulatory authority. This regulation is a successor regulation that exceeds the requirements of the 2010 model regulation.”

As such, states need to work toward adopting the 2020 revisions within 5 years after its adoption by the full NAIC membership in February 2020 to maintain their authority to regulate the sale of fixed annuities.

---

1 Joint submission from the American Council of Life Insurers (ACLI), the Committee of Annuity Insurers (CAI), the Financial Services Institute (FSI), the Indexed Annuity Leadership Council (IALC), the Insured Retirement Institute (IRI) and the National Association for Fixed Annuities (NAFA).
A2. Section 989J confirms state authority to regulate the sale of fixed and fixed indexed annuities and provides an exemption for such annuities from federal securities regulation when certain conditions are met, including when the state in which the contract is issued or the state in which the insurer issuing the contract is domiciled: 1) has adopted requirements that “substantially meet or exceed the minimum requirements” established by the 2010 version of the NAIC’s Suitability in Annuity Transactions Model Regulation (#275); and 2) “adopts rules that substantially meet or exceed the minimum requirements of any successor modifications to the model regulation[1]” within 5 years of the adoption by the NAIC. The only exception to this requirement is if the product is issued by an insurance company that adopts and implements practices on a nationwide basis that meet or exceed the minimum requirements established by the NAIC’s Model #275, “and any successor thereto,” and is therefore subject to examination by the State of domicile or by any other State where the insurance company conducts sales of such products.

The NAIC considers the 2020 revisions to be a successor modification to the model that exceeds the requirements of the 2010 revisions, which is reflected in a drafting note to Section 1—Purpose:

“Section 989J of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act") specifically refers to this model regulation as the “Suitability in Annuity Transactions Model Regulation.” Section 989J of the Dodd-Frank Act confirmed this exemption of certain annuities from the Securities Act of 1933 and confirmed state regulatory authority. This regulation is a successor regulation that exceeds the requirements of the 2010 model regulation.”

As such, states need to work toward adopting the 2020 revisions within 5 years after its adoption by the full NAIC membership in February 2020 to maintain the status of fixed and fixed indexed annuities meeting the requirements of Section 989J as outside the scope of federal securities regulation.

**NEW QUESTION**

**Joint Trades**

**Q2. How did the NAIC develop and promulgate these revisions to the model?**

A2. The NAIC had a robust, collaborative and transparent process that included a wide array of stakeholders through the drafting and vetting processes. The NAIC’s Annuity Suitability (A) Working Group completed the revisions to the model with the input of consumer groups, regulators, academics, and industry trade associations in open deliberations. Ultimately, the revised model is a work product that will provide enhanced consumer protections and amend regulation of annuity transactions in a sensible way.

**EXEMPTIONS**
### Q3. What is the intent of the exemption to the revised model’s provisions under Section 4A to allow a consumer in response to a direct response solicitation to purchase an annuity product where no recommendation is made based on information collected from the consumer?

A3. This exception from the rule was in the 2010 model rule and was not changed in the 2020 version. A direct-response solicitation is a solicitation through a sponsoring or endorsing entity solely through mails, the Internet, a digital platform, or other mass communication media that does not involve a communication directed to a specific individual by a natural person, or by a simulated human voice.

### Q6. Does the best interest standard of conduct apply to a producer who never meets the client, but assists a producer in making a recommendation to the client?

#### Joint Trades

A6. Yes, under Section 6A(5), a producer who has exercised material control or influence in the making of a recommendation and has received direct compensation as a result of the recommendation or sale, regardless of whether the producer has had any direct contact with the consumer.

#### FACC

A6. Yes, under Section 6A(5), a producer who has exercised material control or influence in the making of a recommendation and has received direct compensation as a result of the recommendation or sale, has an obligation to comply with the revised model's best interest standard regardless of whether the producer has had any direct contact with the consumer. Compensation tied to overall sales volume of a firm or a producer would not be considered “direct compensation” for purposes of this section. A producer will not be treated as having exercised material control or influence merely because the producer provides or delivers marketing or educational materials, product wholesaling or other back office product support, or general supervision of another producer.

### CARE OBLIGATION

### Q7. What is the intent of language in Section 6A(1)(c), which states “Producers shall be held to standards applicable to producers with similar authority and licensure?”

#### Joint Trades

A7. The intent of this language is to help to ensure that in any compliance or enforcement action, a producer’s recommendation is compared only to other producers as opposed to being compared to investment advisers or possibly higher-level fiduciaries, such as trust officers or plan sponsors under the federal Employee Retirement Income Security Act of 1974 (ERISA) for compliance and enforcement purposes.

<td></td>
</tr>
</tbody>
</table>

Q. Do producers who are relying on the safe harbor in Section 6E have to provide the completed “Insurance Agent (Producer) Disclosure for Annuities” form in Appendix A?
A. No, a producer operating in compliance with business rules, controls and procedures that satisfy a “comparable standard” (as defined under the revised model) is not required to also provide disclosure on the form in Appendix A. Under such circumstances, the producer need only comply with the disclosure requirements imposed under the applicable comparable standard (e.g., the disclosures contemplated by Reg BI and Form CRS).

FACC

Q8. To satisfy the disclosure obligation, Section 6A(2)(a) requires a producer to provide the completed “Insurance Agent (Producer) Disclosure for Annuities” form in Appendix A prior to a recommendation, can a producer provide the form at the initial client meeting? Is the producer required to update the form and provide it again or can the producer provide it once and satisfy this obligation?

A8. A producer can satisfy the disclosure obligation by providing the completed form during the initial client meeting or at any time prior to the recommendation or sale. A separate completed form must be provided by the producer to the client for each recommendation or sale. A form substantially similar to Appendix A is deemed to satisfy the requirements set forth in Section 6A((2)(a). If, after the completed form is provided to the client, the information on the completed form becomes out-of-date prior to a recommendation or sale, the producer is expected to provide the consumer with an updated form prior to consummation of the transaction. For purposes of supervision, insurers may accept attestation from the producer that the completed form was presented to the client, and insurers are not responsible for content of the completed disclosure form except to the extent it applies to the relationship between the insurer and the producer or products offered by the insurer.

Q8a. On the Appendix A disclosure form where it asks “whose annuities can I sell to you,” how should producers differentiate between “two or more” and “two or more although I primarily sell annuities from” a specific insurer in cases where the producer sells mostly for one insurer but is not required to do so by contract?

A8a. When answering the question “whose annuities can I sell to you”, the response “two or more” is appropriate rather than “two or more although I primarily sell annuities from” a specific insurer if the agent has no contractual obligation to work exclusively or semi-exclusively with a single company or family of companies. The fact that an agent sells products mostly for a certain insurer in a given time period, absent a contractual obligation, should not affect how that item is completed on the disclosure form.

Q8b. For the Appendix A disclosure form section titled “How I’m Paid for My Work,” does that only apply to cash compensation paid to the producer for sale of the annuity that is being recommended, as opposed to any compensation paid to the producer for other kinds of financial services.

Q8b. Yes, the producer is expected to disclose information on the form concerning compensation paid to the producer that is directly related to purchase of the annuity which in most cases will either be commission paid by the insurance company or fees paid by the consumer in the case of fee-based annuities. However, to the extent the agent provides any other kinds of services (for example, investment advice, accounting, tax consulting, legal services), compensation for such services are not required to be disclosed on this form if unrelated to purchase of the annuity though in most cases other laws and regulations will require separate disclosure of such compensation and agreement to the same by the consumer.
Q8c. Is it permissible for a producer to use the Appendix A disclosure form to disclose any material conflicts of interest?

Q8c. Yes, producers are required to make disclosures required by the regulation using a form substantially similar to Appendix A. This means producers may modify the form to include additional information disclosing material conflicts of interest as required by Section 6(A)(3), or absence of any such conflicts, provided the additional information does not interfere with presentation of the required information described in Section 6(A)(2).

CONFLICT OF INTEREST OBLIGATION

Q9. As defined in Section 5I(2), a material conflict of interest does not include cash compensation or non-cash compensation, what other type of financial interest would be considered a material conflict of interest? Is it only an ownership interest as referenced in Section 6A(3)?

A9. A producer who is also dually registered as an investment advisor under state securities law is required under Section 6A(3) to reasonably manage and disclose the related conflicts of interest. This management must commence when the producer first meets with a potential customer even before the dually licensed producer knows the ultimate capacity in which the producer will be acting. The actual capacity when the producer executes a specific transaction may not be known early in the relationship and the related professional or contractual obligations may not be determined based upon the specific facts and circumstances and the consumer profile information until later in the relationship, thus creating a conflict of interest for the producer. The dually licensed producer should assume that both Model #275 and the Investment Advisers Act apply, and that the producer must manage and disclose the conflict of interest.

Joint Trades

Q9. As defined in Section 5I(2), a material conflict of interest does not include cash compensation or non-cash compensation. What other type of financial interest would be considered a material conflict of interest? Is it only an ownership interest as referenced in Section 6A(3)?

A9. The revised model defines material conflict of interest as “a financial interest of the producer in the sale of an annuity that a reasonable person would expect to influence the impartiality of a recommendation.” Cash and non-cash compensation are not considered to be material conflicts of interest, though the revised model does require disclosure about producer compensation and impose restrictions on certain types of non-cash compensation, as described in Q14/A14 below. An ownership interest (such as where a producer has a material ownership interest in an insurance company whose products the producer is authorized to recommend) is one example of a material conflict of interest that would be subject to the revised model’s conflict of interest obligation. Depending on the particular facts and circumstances, a producer could also be deemed to have a material conflict of interest if, for example, he or she, while acting as a producer: 1) Makes a personal loan of money or securities to a customer, or accepts such a loan from a customer; or 2) Acts as an attorney for the same customer.

FACC

Q9. As defined in Section 5I(2), a material conflict of interest does not include cash compensation or non-cash compensation. What other type of financial interest would be considered a material conflict of interest? Is it only an ownership interest as referenced in Section 6A(3)?
A9. The revised model defines material conflict of interest as “a financial interest of the producer in the sale of an annuity that a reasonable person would expect to influence the impartiality of a recommendation.” As stated in the model regulation, material conflict of interest could include ownership interest in the insurance company issuing the recommended annuity if that ownership interest is significant enough that a reasonable person would expect it to influence the producer’s impartiality in comparing annuity product options. Ownership interest is mentioned in the model regulation as an example and is not exclusive. Depending on facts and circumstances, other examples would include situations where a producer or the producer’s agency has borrowed funds from an insurance company or the producer’s relative such as spouse/partner or parent holds an executive position at an insurance company if in those situations a reasonable person would expect the producer’s impartiality to be affected when making a recommendation of an annuity.

Q10. Under Section 6A(3), to satisfy the conflict of interest obligation, what must a producer do to identify and avoid or reasonably manage a material conflict of interest? Examples?

A10. The differences in professional and contractual obligations between a producer acting in the consumer’s best interest at the time of the transaction and an investment advisor acting in the consumer’s best interest over the term of a professional advisory contract are substantial. Managing this conflict of interest will require more than simple disclosure. The dually licensed producer must ensure that the customer has a timely comprehension of the producer’s varied interests in the relationship decisions and the producer must ultimately and before making a recommendation have a reasonable basis to believe the producer’s recommended professional relationship or capacity along with any related annuity recommendation effectively addresses the consumer’s financial situation, insurance needs and financial objectives.

Joint Trades

Q10. Under Section 6A(3), to satisfy the conflict of interest obligation, what must a producer do to identify and avoid or reasonably manage and disclose a material conflict of interest? Examples?

A10. The appropriate steps to satisfy the obligation to identify and avoid or reasonably manage and disclose material conflicts of interest will depend on the specific facts and circumstances. In some cases, material conflicts of interest can be effectively managed by a producer by informing his or her client of the conflict, and answering any questions the client may have regarding the conflict and confirming that the client is willing to continue working with the producer. In other instances, informed disclosure alone may be insufficient and the producer will have to take additional steps to ensure that the conflict does not cause the producer to make a recommendation that is not in the client’s best interest or that puts the producer’s own financial interests ahead of the client’s. In such instances, a producer could, for example, consult with his or her manager, supervisor or agency principal to assess whether a conflict is inappropriately influencing the impartiality of the producer’s recommendations. Finally, there may be material conflicts of interest that cannot be effectively mitigated through informed disclosure and additional measures. In those situations, the producer would have to avoid engaging in the activity or relationship that would give rise to the conflict, or, alternatively, abstain from making the recommendation. In all cases, the producer must ultimately and before making a recommendation have a reasonable basis to believe the producer’s professional relationship or capacity along with any related annuity recommendation effectively addresses the consumer’s financial situation, insurance needs and financial objectives.
**FACC**

**Q10.** Under Section 6A(3), to satisfy the conflict of interest obligation, what must a producer do to identify and avoid or reasonably manage and disclose a material conflict of interest? Examples?

**A10.**

As noted above, a material conflict of interest for purposes of the model regulation means a “financial interest of the producer in the sale of an annuity that a reasonable person would expect to influence the impartiality of a recommendation.” The regulation is concerned with whether the producer is motivated by financial interests other than compensation in recommending one annuity over another that may conflict with the interests of the client. In all cases, the producer must identify such conflicts, and if they exist, the producer must either avoid the conflict or disclose and reasonably manage the conflict. For example, if the producer’s agency has borrowed money from an insurance company, the producer must identify whether that debt obligation rises to a material conflict of interest, and if it does, the producer must either avoid the conflict by refraining from recommending annuities issued by that insurer, or disclosing the conflict to the consumer and taking steps to ensure recommendations of an annuity issued by that insurance company would effectively address the needs and objectives of the consumer in accordance with the model regulation. It should be noted here that a producer who is also an investment advisor, lawyer, CPA, or other kind of professional who “wears more than one hat” would not have a material conflict of interest based solely on the fact the producer serves in that dual capacity based on the definition of material conflict of interest in this regulation but may have a conflict of interest under protocols pertaining to those other professions. From an insurance regulatory perspective, the obligation of the producer is to disclose that he or she is in the business of selling annuities and compensated for such sales which is accomplished by compliance with the disclosure obligation under Section 6(A)(2).

---

**SUPERVISION SYSTEM**

**Q11.** Do these revisions require insurers to set up new supervision systems to ensure producer compliance with this new standard of conduct?

**A11.** No, but the revisions do add additional insurer supervision requirements by requiring insurers to establish and maintain reasonable procedures in three additional areas:

- To assess whether a producer has provided to the consumer the information required by the revised model.
- To identify and address suspicious consumer refusals to provide consumer profile information.
- To identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time.

**No comments received**

**Q12.** Section 6C(2)(h) requires an insurer as part of its supervision system to identify and eliminate sales contests, quotas, bonuses, and non-cash compensation based on the sale of specific annuities within a limited period of time. What type of business practices is provision intended to address?
A12. The requirements of Section 6C(2)(h) are not intended to prohibit general incentives regarding sales of an insurance company’s products where there is no emphasis on a particular product. As the provisions states, insurer business practices involving sales contests, quotas, bonuses and non-cash compensation based on the sale of a specific annuity or annuities within a specified or limited period of time are prohibited and should be identified and eliminated.

<td>A12. The requirements of Section 6C(2)(h) are intended to prohibit sales contests, quotas, bonuses and non-cash compensation based on the sale of a particular product within a limited period of time. It is not intended to prohibit an insurance company from providing general incentives to producers with no emphasis on any particular product. The purpose of this provision is to prevent short-term targeted incentives that put undue pressure on producers to sell particular annuities in a manner that could be contrary to the best interest of the consumer. In general, this means incentives that reward sale of a particular annuity product (identified commonly by a product name) over a shorter period of time (for example a month or a quarter) should be identified and eliminated, because they put undue pressure on the producer to promote that product over other annuities that may more effectively address the consumer’s needs and objectives.</td>

interest standard under Reg BI, the fiduciary standard applicable to federally regulated investment advisers under the Investment Advisers Act of 1940, or the fiduciary standard imposed under ERISA. Under such circumstances, producers and insurers need not comply with any of the specific requirements included in the revised model, including the care, disclosure, conflict of interest, and documentation obligations, as well as the insurer supervision and producer training requirements. However, insurers do have important supervisory obligations with respect to annuity recommendations made by financial professionals relying on the safe harbor:

- Section 6E(2) specifies that, even where the safe harbor applies, insurers remain subject to the obligation under Section 6C(1) to “not issue an annuity recommended to a consumer unless there is a reasonable basis to believe the annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives based on the consumer’s consumer profile information.”
- Section 6E(3) provides that an insurer must monitor the conduct of the financial professional relying on the safe harbor or the entity responsible for supervising the financial professional based on information collected in the normal course of the insurer’s business.

<td><strong>Questions on Training Completed in a State Prior to State Adoption of the Revised Model</strong></td>
</tr>
</tbody>
</table>
| **Joint Trades**<sup>1</sup> | Q. Can producers satisfy their training obligations under the revised model by taking the new four credit training course or the new one credit training course before the revised model takes effect in a particular state?  
A. The revised model provides for reciprocity so producers that operate in multiple jurisdictions do not have to retake the same training multiple times. If a producer has completed a properly approved training course in a state where the revised model has been adopted (whether or not such revised model has become effective), the producer should not be required to complete the required training again in that same state after the effective date or in another state that subsequently adopts the revised model.  
Q. Can producers satisfy their training obligations under the prior version of the model in a state which has not yet adopted the revised model by taking the new four credit training course?  
A. The new four-credit training course includes all of the topics that were required to be covered under the prior version of the model (with information on the best interest standard of conduct now required under the revised model). As such, if a producer has completed a properly approved four credit training course in a state that has adopted the revised model, the producer should not be required to also complete a course that satisfies the requirements of the prior version of the model in a state that has not yet adopted the revised model. |
| **National Association of Insurance and Financial Advisors (NAIFA)** | Q. If a producer takes a new four credit and/or one credit training course—which complies with the requirements of Section 7 of the Amended Model and has been approved by the appropriate state authorities—prior to the effective date of a state’s amended annuity suitability regulation, would successful completion of that course i) count towards compliance with the state’s amended annuity suitability regulation once it becomes effective, and/or ii) count towards compliance with Section 7 B (9) of the Amended Model and be deemed to satisfy the training requirements of another state if/when that other state adopts the Amended Model?  
A. Yes—an approved training course taken prior to the effective date of a state’s amended regulation would count towards compliance with that state’s or another state’s amended regulation (including Section 7 B (9)) once it becomes effective.  
Q. If a producer takes an approved four credit training course in a state that has not adopted the Amended Model, would that producer be able to satisfy the training requirements in another state that has already adopted the Amended Model by taking the new one credit course specified in Section 7 B (6) (b) of the Amended Model? |

---

<sup>1</sup> Joint submission from the American Council of Life Insurers (ACLI), the Committee of Annuity Insurers (CAI), the Financial Services Institute (FSI), the Indexed Annuity Leadership Council (IALC), the Insured Retirement Institute (IRI) and the National Association for Fixed Annuities (NAFA).
A. Yes—completing both the old four credit course—at any time—and the new one credit course is “substantially similar” to completing the new four credit course provided for in Section 7 of the Amended Model, and would comply with the requirements of Section 7 B (6) of the Amended Model.

Q. If a producer takes the new four credit training course in a state that has adopted the Amended Model, would that producer be deemed to have satisfied the training requirement of a state that has not adopted the Amended Model?

A. Yes—the new four credit training course provided for in the Amended Model is “substantially similar” to the four credit training course required under the prior version of Model #275, and would meet the requirements of Section 7 B (9) of the prior version of Model #275.

Questions on Training and the Safe Harbor

Q13. Do producers complete additional training on the new standard of conduct even if they have already completed the existing annuity training requirements?

A13. Yes, Section 7 requires a producer who has already completed the existing annuity training requirements prior to a state’s effective date of the revised model to complete within 6 months of that date either a four credit training course or an additional one-time one credit training course on the appropriate sales practices, replacement and disclosure requirements under the revised model. In adopting this section, a state could choose a different timeframe for this requirement.

Joint Trades

Q13. Do producers who are not relying on the safe harbor in Section 6E have to complete additional training on the new standard of conduct even if they have already completed the existing annuity training requirements?

A13. Yes, Section 7 requires a producer who has already completed the existing annuity training requirements prior to a state’s effective date of the revised model to complete within 6 months of that date either a four credit training course or an additional one-time one credit training course on the appropriate sales practices, replacement and disclosure requirements under the revised model.

Q. Are producers who are relying on the safe harbor required to complete the 4-hour training course (or, if eligible, the optional 1-hour training course), which includes training on the new standard of conduct under the revised model?

A. No. Producers relying on the safe harbor are not required to take the training prescribed by the revised model; the training required under the appropriate “comparable standards” (as defined in the revised model) will suffice. Insurers should, however, ensure that producers operating under the safe harbor have nonetheless completed appropriate training on the specific annuity products they are authorized to recommend and sell.
Questions about the One-Hour Training Requirement versus the Four-Hour Training Requirement

Joint Trades

Q. Under what circumstances would a producer be permitted to take the additional one credit training course rather than the full four credit training course? What is the difference between the one credit and four credit training courses? For how long should the one credit training course be available as an option?

A. The one credit training course is available as an option only to producers who have previously completed a four-credit training course that met the requirements of the prior version of the model. The four-credit training course would include information on all of the topics listed in Section 7B(3) of the revised model, whereas the one credit training course would include only information on the appropriate standard of conduct, sales practices, replacement and disclosure requirements. The one credit option was included in the revised model because the NAIC recognized that adoption of the revised model would not cause any changes in the information provided on the other topics covered by the four credit training course required under the prior version of the model.

The option to complete the one credit training course should be left available for as long as the prior version of the model remains in effect in any jurisdiction. This will ensure that producers who satisfy the training requirements in states where the prior version is still in effect would not have to retake the entire four credit training course, and can instead take the one credit training course to ensure that they understand how the rules have changed.

In sum, producers who are not relying on the safe harbor should be permitted to satisfy their training obligations by completing either (a) the four credit training course under the revised model OR (b) a combination of the four credit training course under the prior version of the model AND the one credit training course under the revised model.

The preceding applies to situations where a producer has taken an approved four credit training course in a state that has not adopted the amended NAIC Model and then seeks to satisfy the training requirement by taking the new one credit course in a state that has adopted the amended NAIC Model.

Failure to Timely Complete the Updated Four-Hour or One-Hour Training Course

Joint Trades

Q. Under Section 7B(6), if a producer who was already qualified by taking the old four credit training course fails to take the updated four credit training course or the one hour training course within six months after the effective date of the amended regulation, what training must a producer take to become requalified to offer annuities again?

A. A producer who does not timely meet the requirements to take the training courses but has already taken the old 4 credit training course may satisfy such new requirements by taking either the one credit or the four credit training course (which shall remain available) at any point after the expiration of the six month time period. The producer should cease all annuity sales activities until the updated training courses have been completed.
Draft Revisions to Industry Coalition’s Proposed FAQ on NAIC Best Interest Model Safe Harbor Provision

Q. Are producers required to comply with the specific requirements of the revised model if they are acting in compliance with rules imposed by other regulators that meet or exceed the requirements of the revised model?

A. Section 6E of the revised model provides a safe harbor for recommendations and sales of annuities made by producers who meet the definition of “financial professional” and operate in compliance with business rules, controls and procedures that satisfy “comparable standards.” For purposes of the safe harbor, comparable standards include the best interest standard under Reg BI, the fiduciary standard applicable to federally regulated investment advisers under the Investment Advisers Act of 1940, and the fiduciary standard imposed on providers of investment advice to retirement plans and participants under federal law. When making recommendations and sales of annuities in compliance with comparable standards, financial professionals need not comply with the specific requirements included in the revised model, such as the care, disclosure, conflict of interest, and documentation obligations set forth in Section 6A and, as discussed further below, the supervision requirements included in Section 6C(2) and the producer training requirements set forth in Section 7.

Reliance on the safe harbor does not remove an annuity transaction from insurance regulatory oversight. State insurance regulators retain their full authority to investigate and enforce the requirements of the revised model against any financial professional that fails to fully satisfy the requirements of the relevant comparable standard. In other words, a financial professional cannot use the safe harbor to avoid their obligations under the revised model by simply asserting that they are a financial professional operating under a comparable standard – actual compliance with the comparable standard is required. As a drafting note in the revised model clearly indicates, non-compliance with comparable standards results in a recommendation or sale being subject to the requirements of the model.

This provision was included in the revised model to avoid the imposition of differing or duplicative requirements on financial professionals as they endeavor to achieve and maintain full compliance with multiple overlapping regulations that are aligned in terms of application and public policy objectives but are not fully identical in terms of specific regulatory requirements. The safe harbor recognizes and acknowledges that consumers will receive no greater level of protection against improper conduct by requiring financial professionals to separately comply with the particular requirements of multiple regulations that are designed to achieve the same objectives but take different approaches that are tailored to the different segments of the financial services industry to which they apply.

Q. Who is responsible for supervision of recommendations and sales of annuities made in reliance on and compliance with a comparable standard under the safe harbor, and what are their supervisory obligations?

A. Under Section 6.C of the revised model, insurers are generally responsible for supervising the conduct of producers who recommend and sell the insurer’s annuities. However, the safe harbor recognizes that the comparable standards establish their own supervisory obligations that are carefully tailored to the types of transactions covered by those rules. As such, insurers are not required to supervise safe harbor transactions in the same ways as non-safe harbor transactions as long as the supervising entity is meeting its obligations to supervise for compliance with the comparable standard.

For example, the revised model places responsibility for supervision on insurers whereas Regulation Best Interest puts that obligation on broker-dealer firms. While this distinction is necessary and appropriate based on the differences between the insurance and securities industries, the end result is the same in both cases – a highly regulated entity is responsible for supervising the conduct of individuals who make recommendations to consumers.

The safe harbor does not, however, fully relieve insurers of supervisory responsibility with respect to financial professionals who comply with comparable standards when recommending and selling annuities. Insurers are subject to the following important supervisory obligations with respect to annuity recommendations made by financial professionals relying on the safe harbor:

- Section 6E(2) specifies that, even where the safe harbor applies, the insurer remains subject to the obligation under Section 6C(1) to “not issue an annuity recommended to a consumer unless there is a reasonable basis to believe the
annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives based on the consumer’s consumer profile information.”

- Section 6E(3) requires that the insurer monitor the conduct of the financial professional relying on the safe harbor or the entity responsible for supervising the financial professional based on information collected in the normal course of the insurer’s business and must provide the supervising entity any information and reports that are appropriate to assist such entity to maintain its supervision system.

However, just as a financial professional would lose the benefit of the safe harbor if she fails to actually comply with the relevant comparable standard, the insurer would have to satisfy the supervisory obligations in Section 6C of the revised model if the entity responsible for oversight of the financial professional fails to satisfy its supervisory responsibilities under the comparable standard.

This framework ensures proper alignment between the regulatory standard under which the financial professional is operating and the supervisory system implemented by the entity with primary responsibility for oversight. The supervisory system contemplated by Section 6C(2) of the revised model is designed to ensure compliance with Section 6A of the revised model and therefore would not necessarily be an effective mechanism by which to ensure compliance with the requirements of a comparable standard. If an insurer applies its Section 6C(2) system to supervise a financial professional operating under the safe harbor, that financial professional could potentially be flagged for noncompliance even if she is in full compliance with the comparable standard. The safe harbor’s approach to supervision is intentionally designed to avoid this problem.

Q. Are producers who are relying on the safe harbor required to complete the 4-hour training course (or, if eligible, the optional 1-hour training course), which includes training on the new standard of conduct under the revised model?

A. Producers relying on the safe harbor are not required to take the training prescribed by the revised model as long as they are properly trained under the relevant comparable standard. The training requirement under the revised model is intended to ensure that producers understand general annuity principles, the specific annuity products they can recommend to their clients, and the rules under which they are required to operate. A training program designed to meet the specific requirements of the revised model would not achieve this objective in the context of a producer relying on the safe harbor as it would not cover the rules under which producer is actually operating (because, as noted above, the requirements of comparable standards may not be fully identical to those established under the revised model). By covering the training provision, the safe harbor ensures that producers will be required to complete the right training for their specific circumstances.
Proposed Additions to the Frequently Asked Questions Implementation Document  
Submitted by IIABA / March 23, 2021

Q_. Must producers that rely on the safe harbor comply with the requirements that are established by the model?

A_. No. There are differences and distinctions between the obligations established under the model and the duties imposed by the “comparable standards” identified in Section 6(E)(5). The model in some ways applies more robust consumer protections upon producers that recommend annuities than the “comparable standards.” The model, for example, establishes a duty to make a written record of any recommendation and the basis for that recommendation, but Regulation Best Interest includes no analogous obligation. States that are concerned with establishing uniformity in annuity transactions (and the market conduct regulatory implications of not doing so) and applying consistent obligations on producers who make such recommendations may wish to consider narrowing the scope of the safe harbor and/or expressly applying certain elements of the model to those producers who seek to rely on it.

States that are concerned the safe harbor might inadvertently relieve producers of other important duties – such as obligations under Section 6(D) (related to prohibited practices), Section 8 (related to enforcement), and Section 9 (related to recordkeeping) – may wish to further narrow the application of the safe harbor and make clear that it only applies to the core requirements set forth in Section 6(A).

Q_. When may a broker-dealer or registered representative rely on the safe harbor?

A_. The definition of “comparable standards” in Section 6(E)(5) provides that broker-dealers and registered representatives may only rely on the safe harbor when they comply with “applicable SEC and FINRA rules pertaining to best interest obligations and supervision of annuity recommendations and sales” (emphasis added). In other words, broker-dealers and registered representatives may only take advantage of the safe harbor when a SEC or FINRA rule applies on its own to a particular annuity recommendation. The safe harbor is not limited to investment advisors and plan fiduciaries or fiduciaries in the same way.

Q_. Does the safe harbor exempt insurers from any of the supervisory or other requirements established by the model?

A_. No. The safe harbor applies to the recommendations and sales activities of certain producers, and, regardless of whether one of its producers relies on the safe harbor, insurers remain responsible for complying with the supervisory requirements of Section 6(C), the prohibitions of Section 6(D), the enforcement provisions of Section 8, and the recordkeeping obligations of Section 9. While insurers are ultimately responsible for a producer’s actions and compliance with the regulation, they are permitted to enter into arrangements and contracts with other parties for the performance of supervisory functions.

Q_. Are all producers who recommend annuities required to satisfy the training requirements of Section 7(B)?

A_. Yes. The safe harbor does not eliminate any producer’s obligation to satisfy the training requirements of Section 7(B). Those training requirements provide basic instruction on the issues and considerations that any person selling an annuity should know, such as the types and uses of annuities, how annuity contract features affect consumers, and tax implications. Any person seeking to take advantage of the safe harbor must be licensed as a producer and in good standing (which includes satisfying the training requirements of Section 7(B)) and be appointed by the insurer where and as required by state law.
Questions: The model regulation defines "material conflict of interest" as a financial interest of the producer that a reasonable person would expect to influence the impartiality of the recommendation. The model regulation also specifically excludes "cash and non-cash compensation" from the requirement for material conflicts of interest. Why did the NAIC determine that "cash and non-cash compensation" is excluded from the requirement to "identify and avoid or reasonably manage and disclose" material conflicts of interest?

**CEJ Proposed Answer:** The NAIC determined that most forms of routine compensation do not create a material conflict of interest and that most conflicts of interest that might be created by compensation arrangements can be addressed through the Insurance Agent (Producer) Disclosure of Annuities, required by the model regulation to be provided to the consumer and which includes a section “How I’m Paid for My Work.” The NAIC determined that general incentives regarding the sales of a company’s products with no emphasis on any particular product do not create a material conflict of interest. The NAIC identified some types of compensation arrangements that likely create a material conflict of interest and requires the insurer to identify and eliminate sales contests, sales quotas, bonuses and non-cash compensation based on sales of specific annuities within a limited time frame.

**Several States’ Proposed Answer:** The NAIC determined that most forms of producer compensation do not present a material conflict of interest with the purchaser, and that purchasers expect producers to be compensated. The revisions to Model #275 make it clear that annuity recommendations by producers must be in the best interest of the consumer, and that producers may not place the producer’s financial interest ahead of the consumer’s interest. Therefore, the NAIC determined that the requirement to “identify and avoid or reasonably manage and disclose” should not apply to “cash and non-cash compensation”. Rather, disclosure of the producer relationship and related compensation is the appropriate management requirement.

Under the new disclosure requirement producers must prominently disclose to a consumer certain information about cash compensation and non-cash compensation to be received by the producer, and must prominently notify the consumer of the right to additional cash compensation information. For clarity, the NAIC developed a model disclosure form (Appendix A) which includes a section “How I’m Paid for My Work.” Producers must disclose cash and non-cash compensation on Appendix A or a substantially similar form.

The NAIC also determined that general incentives regarding production levels with no emphasis on any particular product do not create an unanticipated conflict of interest requiring avoidance or management.

However, the NAIC did conclude that sales contests, sales quotas, bonuses and non-cash compensation based on sales of specific annuities within a limited time frame should be avoided. Accordingly, the Model #275 revisions require insurers to identify and eliminate these arrangements.
The Life Insurance Illustration Issues (A) Working Group of the Life Insurance and Annuities (A) Committee met March 10, 2021. The following Working Group members participated: Richard Wicka, Chair (WI); Chris Struk (FL); Teresa Winer (GA); and Jana Jarrett (OH). Also participating were: Denise Lamy (NH); Sarah Neil (RI); John Carter (TX); James Young (VA); and David Hippen (WA).

1. Continued Review of the Sample Overview Post Underwriting Comment Chart

Mr. Wicka reminded the Working Group that the issue of timing for the delivery of the policy overview is an issue that the Working Group had not resolved. He said alternate versions of revisions to the Life Insurance Disclosure Model Regulation (#580), as well as sample policy overview documents reflecting the different timing for delivery, had been developed. He said draft samples of the policy overview reflecting delivery at the time of application and delivery post underwriting were developed. Comments were received and put in a chart for discussion by the Working Group. During its Feb. 23 meeting, the Working Group did not finish discussing the comments received on the policy overview delivered post underwriting. He said the Working Group planned to continue going through that comment chart during this meeting and move to comments received on the policy overview delivered at the time of application.

The Working Group continued to review the comment chart for the sample term life overview delivered post underwriting. Comments were received from the American Council of Life Insurers (ACLI), funded consumer representative Birny Birnbaum (Center for Economic Justice—CEJ) and funded consumer representative Brenda J. Cude (University of Georgia).

The Working Group discussed the policy information in the sample overview.

a. What is the name of this product?

Mr. Wicka suggested, and the Working Group agreed to, revising the language in the sample to reflect the more common group level term policy rather than the less common joint policy he had used initially.

b. Does the policy ever expire?

The Working Group discussed the section titled “Does the policy ever expire?” The section currently reads:

Does the policy ever expire?

Yes, you have chosen a 20-year term. Once the term expires, there is an option to renew this policy each year until both insureds reach 95 but the cost of this policy will increase every year after the initial term.

Mr. Wicka summarized comments received from Michael Lovendusky (ACLI), Mr. Birnbaum and Ms. Cude. He suggested, and the Working Group agreed to, the following revised language that combines the suggestions made:

Does the policy ever end? If so, what is the term of the policy?

Yes. The policy ends when the term you choose (20 years) ends, but you can choose to renew this policy each year until you are age 95.

c. What is the death benefit?

The Working Group discussed the section titled “What is the death benefit?” The section currently reads:

The death benefit is $500,000. The death benefit is paid upon the death of the first spouse.
Mr. Wicka suggested, and the Working Group agreed to, the following revisions based on the comments that Mr. Birnbaum and Ms. Cude submitted:

The death benefit is $500,000.

d. Can the death benefit change?

The Working Group discussed the section titled “Can the death benefit change?” The section currently reads:

No, the death benefit will not change unless you request additional coverage.

Mr. Wicka suggested, and the Working Group agreed to, the following revisions based on the suggestions of Mr. Birnbaum and Ms. Cude:

No. The death benefit will stay the same unless you ask, and the company agrees, to increase it.

e. Can I take a loan from my policy?

The Working Group discussed the section titled “Can I take a loan from my policy?” The section currently reads:

This policy does not have any loan options.

Mr. Wicka suggested, and the Working Group agreed to, the following simplified language that Mr. Birnbaum and Ms. Cude suggested:

No. You can’t borrow money from this policy.

f. Does the policy have a waiver of premium option?

The Working Group discussed the section titled “Does the policy have a waiver of premium option?” The section currently reads:

Yes, this policy includes a waiver of premium rider that allows you to not pay premiums if you have been totally disabled for at least 4 months. This rider has an additional cost.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that Mr. Birnbaum and Ms. Cude suggested:

Yes, you can buy a waiver of premium rider for an extra cost. A waiver of premium rider for this policy means you won’t have to pay premiums after you’ve been totally disabled for at least four months.

g. Can I convert this policy to another type of life insurance?

The Working Group discussed the section titled “Can I convert this policy to another type of life insurance?” The section currently reads:

Yes, this policy may be converted to a permanent life insurance policy prior to the end of the policy term and before you reach age 70.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that Ms. Cude suggested:

Yes, you can convert this policy to a whole life insurance policy before the policy term ends, as long as you’re younger than age 70.
h. Can I extend the term of coverage?

The Working Group discussed the section titled “Can I extend the term of coverage?” The section currently reads:

Yes, this policy may be renewed annually up to age 95 after the initial term expires. The cost of the policy will increase each year the policy is renewed.

Mr. Wicka suggested, and the Working Group agreed to, the following simplified language that Ms. Cude’s suggestion and relocation of this question to after the following revised questions: “Does the policy ever end? If so, what is the term of the policy?”

Yes. After the initial term ends, you can renew this policy until you are age 95. The premium will increase each year you renew the policy.

i. Are there optional riders available for this policy?

The Working Group discussed the section titled “Can I extend the term of coverage?” The section currently reads:

Are there optional riders available for this policy?

Yes, optional riders are available. To learn what riders are available and their cost, talk to your insurance agent or a company representative.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that combines language that Mr. Birnbaum and Ms. Cude suggested:

Are there other policy enhancements or optional riders available for this policy?

Yes, there are other policy enhancements – known as riders. Ask the agent, broker, advisor or a company representative offering this product about them.

j. Does this policy have any living benefit options?

The Working Group discussed the section titled “Does this policy have any living benefit options.” The section currently reads:

Does this policy have any living benefit options?

Yes, there is an optional living benefit rider available for an additional cost.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that combines language that Mr. Birnbaum and Ms. Cude suggested:

Is there a policy option that allows me to access my death benefit while I’m alive?

Yes, for additional premium, you can get part of your death benefit before you die if you are terminally ill.

k. Does this policy accumulate cash value?

The Working Group discussed the section titled “Does this policy accumulate cash value?” The section currently reads:

Does this policy accumulate cash value?

No.
Mr. Wicka suggested, and the Working Group agreed to, the following revised language that combines language that Mr. Birnbaum and Ms. Cude suggested:

No. This policy provides no cash benefits other than the death benefit.

2. Continued Review of the Sample Overview at Time of Application Comment Chart

The Working Group reviewed the comment chart for the sample term life policy overview to be delivered at the time of application. Mr. Wicka explained that the revisions that were agreed-upon for the sample policy overview to be delivered post underwriting would be incorporated into the sample overview to be delivered at the time of application. The summary chart includes comments on those sections where the language will differ based on the timing of the delivery.

a. What are the costs of this Life Insurance Policy?

The Working Group discussed the section titled “What are the costs of this Life Insurance Policy?” The current section reads:

What are the costs of this Life Insurance Policy?

Based on the death benefit selected and the quoted risk class, the premium is estimated to be – per month. The premium may be paid either monthly, quarterly, semi-annually or annually. If you pay premiums monthly, quarterly, or semi-annually, the total premium will be greater than if you pay annually.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that Ms. Cude suggested:

What does this life insurance policy cost?

Based on the death benefit selected and the quoted risk class, your premium is estimated to be – per year. You may pay the premium monthly, quarterly, semi-annually or annually. If you pay premiums monthly, quarterly or semi-annually, the total premium you pay will be greater than if you pay annually.

b. Does the policy ever expire?

The Working Group discussed the section titled “Does the policy ever expire?” The current section reads:

Does the policy ever expire?

Yes, you have chosen a 20-year term. Once the term expires, there is an option to renew this policy each year until both insureds reach 95, but the cost of this policy will increase every year after the initial term.

Mr. Wicka suggested, and the Working Group agreed to, making changes to this question that parallel the changes made to the sample policy overview delivered post underwriting, with some tweaks that take into account the delivery at the time of application. He explained that the reference to the cost of policy can be removed because that is covered elsewhere in the overview. The revised language reads:

Does the policy ever end? If so, what is the term of the policy?

Yes. The policy ends when the term you chose ends. You may choose a 10-, 20- or 30-year term. You can choose to renew this policy each year until you are age 95.

Mr. Birnbaum said he does not have a problem with the revised language but pointed out that this question seems to provide similar information to the later question: “Can I extend the term of coverage.” Mr. Wicka agreed that the Working Group should revisit this and whether to combine these two questions.

c. What is the death benefit?

The Working Group discussed the section titled “What is the death benefit?” The current section reads:
What is the death benefit?

You have selected a death benefit of $500,000 to generate this quote. You may select a death benefit between $250,000 and $2 million subject to underwriting approval.

Mr. Wicka suggested, and the Working Group agreed to, making changes to this question that parallel the changes made to the sample policy overview delivered post underwriting, with some tweaks that take into account the delivery at the time of application. The revised language reads:

You have chosen a $500,000 death benefit. That amount was used to generate this quote. You may choose a death benefit between $250,000 and $2 million.

d. What do I need to do to obtain this policy?

The Working Group discussed the section titled “What do I need to do to obtain this policy?” The current section reads:

You will need to fill out an application and go through the underwriting process to determine if you are eligible for this product, what the cost of the product will be and the amount of coverage you are eligible to receive.

In the course of considering an insured’s application, an insurer may request or collect health information about the insured in variety of ways. If you qualify, you may be able to obtain this policy without a health questionnaire or physical examination. If you do not qualify, you may still be eligible for this policy, but you will be required to fill out a health questionnaire and undergo a physical examination.

Mr. Wicka suggested, and the Working Group agreed to, the following revised language that included much of the language that Ms. Cude suggested:

You’ll need to fill out an application. You also must go through an underwriting process. Underwriters review your application and decide if you’re eligible to buy this policy, and, if you are, what your premium would be and how much coverage you could buy.

In the course of considering your application, an insurer may request or collect health information about you in a variety of ways.

You might be approved to buy a policy without any information about your health. If you aren’t, you may still be eligible for this policy, but you’ll be required to fill out a health questionnaire and undergo a physical examination.

Mr. Wicka said Mr. Birnbaum had suggested including the additional two questions: “Can I get a discount for a healthy lifestyle? Does the insurer offer products or services to help me stay healthy?” He explained that questions would yield meaningful information for a consumer comparing policies. Mr. Wicka wondered whether this was a benefit added to term life policies. He suggested, and the Working Group agreed, tabling this suggestion for a more fulsome discussion during a future meeting.

Mr. Wicka said he would make the changes to the two alternate versions of the sample overview that the Working Group agreed on during its last two meetings, as well as make corresponding changes to the two versions of Model #580 to post to the Working Group’s web page prior to its next meeting. He said he would like for the Working Group, during its next meeting, to consider a motion to send these preliminary drafts to the Life Insurance and Annuities (A) Committee to aid it in providing guidance to the Working Group on next steps.

Having no further business, the Life Insurance Illustration Issues (A) Working Group adjourned.
Life Insurance Illustration Issues (A) Working Group
Virtual Meeting
February 23, 2021

The Life Insurance Illustration Issues (A) Working Group of the Life Insurance and Annuities (A) Committee met
Feb. 23, 2021. The following Working Group members participated: Richard Wicka, Chair (WI); Jodi Lerner (CA); Chris Struk
(FL); Teresa Winer (GA); Bruce R. Ramge (NE); Jana Jarrett (OH); and John Carter (TX). Also participating were:
Denise Lamy (NH); Sarah Neil (RI); James Young (VA); and David Hippen (WA).

1. Reviewed Next Steps

Mr. Wicka reminded the Working Group of its charge to “explore how the narrative summary required by Section 7B of the
Life Insurance Illustrations Model Regulation (#582) and the policy summary required by Section 5A(2) of the Life Insurance
Disclosure Model Regulation (#580) can be enhanced to promote consumer readability and understandability of these life
insurance policy summaries, including how they are designed, formatted and accessed by consumers.”

Mr. Wicka reminded the Working Group that it had initially decided to add a requirement for a policy overview document in
both Model #580 and Model #582 to fulfill the Working Group’s charge. However, in September 2018, the Working Group
agreed to simplify its approach by revising Model #580 to include the requirement of a policy overview document to accompany
all life insurance policies for delivery with the Life Insurance Buyer’s Guide (Buyer’s Guide). This new approach eliminates
the need for revisions to Model #582.

Mr. Wicka reminded the Working Group that the issue of timing for the delivery of the policy overview was an issue that the
Working Group continues to discuss. He said alternative versions of revisions to Model #580, as well as sample policy overview
documents reflecting the different timing for delivery, had been developed. He said one version maintains the delivery
requirements set out in Model #582 that tie delivery of the policy overview to the delivery of the Buyer’s Guide, which, under
certain circumstances, can be delivered as late as the time of delivery of the policy. The other version requires delivery of the
policy overview at the time of application. He said draft samples for both versions of the policy overview document were
developed for term life insurance policies, noting that comments were requested by Aug. 28, 2020.

Mr. Wicka said comments were received and have been put in a chart for discussion by the Working Group during this meeting.
He said the American Council of Life Insurers (ACLI) wrote a letter to Commissioner Caride and members of the Life Insurance
and Annuities (A) Committee suggesting that the charge of the Working Group to “explore” had been achieved, and the
Working Group should be retired. Mr. Wicka explained that Commissioner Marlene Caride (NJ) would like for the work
product that the Working Group has achieved so far to be brought to the Life Insurance and Annuities (A) Committee so that
the Committee can see a preliminary draft of the work that has been done before it provides guidance.

Mr. Wicka explained that the Working Group will have additional opportunities to make changes to the sample policy overview
documents and Model #580. He reminded the Working Group that this process will need to be undertaken for whole life and
universal life policies. He said he would like to have a preliminary draft to reflect the term life product for the Life Insurance
and Annuities (A) Committee to react to. He reminded the Working Group that the answers in the sample policy overview
documents are based on a particular term life policy that he used in creating the sample. He explained that any necessary
responding changes will be made to Model #580 to reflect changes made to the sample policy overview documents.

2. Discussed Comments Submitted on Sample Policy Overview Documents

Mr. Wicka reviewed the comments that were received on the two versions of the sample policy overview. He said a chart of
the comments had been distributed to the Working Group, interested state insurance regulators and interested parties, and it
was posted on the NAIC website.

The Working Group started with reviewing comments on the sample term life overview delivered post underwriting. Comments
were received from Michael Lovendusky (American Council of Life Insurers—ACLI), funded consumer representative
Birny Birnbaum (Center for Economic Justice—CEJ) and funded consumer representative Brenda Cude (University
of Georgia).
a. Introduction

The Working Group discussed the introductory section. The current introduction states:

This document lists this product’s key features and benefits. You can get a similar summary of key product features from other insurance companies to help you compare similar products. If you have questions about this particular life insurance product, ask the agent, broker, advisor, or a company representative offering this product for clarification. If you have questions about life insurance products generally or about company or agent licensing, contact [insert reference to state department of insurance].

Mr. Birnbaum and Ms. Cude’s comments pointed out that the rest of the document talks about “policies,” not “products.” Mr. Birnbaum also suggested referencing the NAIC website. Ms. Cude suggested removing the reference to contacting a company representative for clarification. Mr. Wicka suggested, and the Working Group agreed, to the following revised introduction:

This document lists this insurance policy’s key features and benefits. You can get a similar summary of key policy features from other insurance companies to help you compare similar policies.

If you have questions about life insurance generally or other types of policies, the National Association of Insurance Commissioners has useful information at https://content.naic.org/consumer/life-insurance.htm/

If you have questions about this particular life insurance policy, ask the agent, broker, advisor, or a company representative.

If you have questions about company or agent licensing, contact [insert reference to state department of insurance].

b. Information About the Insured

The Working Group discussed comments received on the section titled “Information about the Insured.”

The ACLI pointed out that the sample says the overview is prepared for Mr. and Mrs. Smith, when most policies are owned by an individual, noting that the applicant should be named, along with the risk class.

Mr. Birnbaum suggested titling the section “Information We Use to Determine Your Annual Premium” and included a list of information beyond the age and sex provided for in the sample overview that is collected from the policy owner, including family history, tobacco usage, occupation and hobbies, as well as information obtained from third parties, such as motor vehicle registration, auto, home and other insurance claims, driving records, prescription history and criminal history. Mr. Birnbaum also suggested including the possible range of risk classes before naming the risk class to which the policy owner belongs.

Mr. Wicka said he would revise this portion of the overview for review by the Working Group. The Working Group agreed with this plan.

c. What Are the Costs of This Life Insurance Policy?

The Working Group discussed the comments received on the section titled “Cost Information.” The current section reads:

The premium is X per month.

The premium must be paid either monthly, quarterly, semi-annually or annually. If you pay premiums monthly, quarterly, or semi-annually the total premium will be greater than if you pay annually.

Mr. Wicka suggested, and the Working Group agreed, to make the following revision, which is a combination of suggested revisions from Mr. Birnbaum and Ms. Cude:

The premium is $AAA annually or $BBB quarterly or $CCC monthly.
You may pay the premium monthly, quarterly, semi-annually or annually. If you pay premiums monthly, quarterly or semi-annually, the total premium you pay will be more than if you pay annually.

d. Will My Premium Ever Change?

The Working Group discussed comments received on the section titled “Will my premium ever change?” The current section reads:

No, the premium is guaranteed to remain level for the term of the policy. After that term expires, the premium will increase annually if you chose to renew the policy.

The Working Group discussed language suggestions from Mr. Birnbaum and Ms. Cude.

Mr. Wicka pointed out that the answer “no” is followed by a description of the circumstances when the premium may increase, which is confusing. Mr. Wicka suggested, and the Working Group agreed, to the following language that eliminates the “no” and incorporates the simplified language suggested by Mr. Birnbaum and Ms. Cude:

The premium will stay the same for the initial term of the policy. After that term ends, the premium will increase each year if you choose to renew the policy.

e. Are There Any Costs if I Decide to Cancel the Policy?

The Working Group discussed the section titled “Are there any costs if I decide to cancel the policy?” The current section reads:

No, there are no costs to cancel this policy. However, this policy does not accumulate cash value and you will not receive any return of the amount of premiums paid.

Mr. Birnbaum and Ms. Cude submitted language suggestions to clarify the section.

Mr. Wicka suggested, and the Working Group agreed, to the following language that is a combination of Mr. Birnbaum’s and Ms. Cude’s suggestions:

Are there any costs if I decide to cancel the policy? Do I get any money back if I cancel the policy?

No, there are no costs to cancel this policy. However, if you do cancel this policy, you won’t get any money back.

f. Can I Lower the Death Benefit Amount to Reduce Premium?

The Working Group discussed the section titled “Can I lower the death benefit amount to reduce premium?” The section reads:

Can I lower the death benefit amount to reduce premium?

No.

Mr. Wicka said the ACLI comment letter pointed out that reducing benefits to reduce premium is not a practice for this type of policy and would likely not be permitted under state laws, because it alters the terms of the contract and would be tantamount to a new policy. Mr. Wicka and the Working Group agreed to eliminate this question.

The Working Group agreed to reconvene to finish going through the comments submitted.

Having no further business, the Life Insurance Illustration Issues (A) Working Group adjourned.

The Life Actuarial (A) Task Force met April 8, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Perry Kupferman, Thomas Reedy and Ted Chang (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

The Task Force met March 18, 2021; March 11, 2021; March 4, 2021; Feb. 25, 2021; Feb. 11, 2021; Feb. 4, 2021; Jan. 28, 2021; Jan. 21, 2021; and Dec. 17, 2020. During these meetings, the Task Force took the following action: 1) adopted its 2020 Fall National Meeting minutes; 2) adopted amendment proposal 2020-11, which allows exemption of policies from prior issue years when there is a change in the life principle-based reserving (PBR) exemption requirements; 3) exposed amendment proposal 2020-12, which creates consistency between clearly defined hedging strategy (CDHS) requirements in VM-20, Requirements for Principle-Based Reserves for Life Products, and VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and revises hedge modeling to only require CDHS if modeling future hedging reduces the reserves under VM-20 or total asset requirement (TAR) under VM-21; and 4) exposed amendment proposal 2020-13, which revises the asset collar language for negative modeled reserves.

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the Task Force’s March 18, 2021(Attachment One), March 11 and March 4, 2021 (Attachment Two), Feb. 25, 2021 (Attachment Three), Feb. 11, 2021 (Attachment Four), Feb. 4, 2021 (Attachment Five), Jan. 28, 2021 (Attachment Six); Jan. 21, 2021 (Attachment Seven); and Dec. 17, 2020 (Attachment Eight) minutes. The motion passed unanimously.

2. **Adopted the Report of the Longevity Risk (E/A) Subgroup**

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the report of the Longevity Risk (E/A) Subgroup (Attachment Nine). The motion passed unanimously.

3. **Adopted the Report of the Guaranteed Issue (GI) Life Valuation (A) Subgroup**

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the report of the Guaranteed Issue (GI) Life Valuation (A) Subgroup (Attachment Ten). The motion passed unanimously.

4. **Adopted the Report of the Experience Reporting (A) Subgroup**

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the report of the Experience Reporting (A) Subgroup (Attachment Eleven), including its March 2 minutes (Attachment Twelve). The motion passed unanimously.

5. **Adopted the Report of the Indexed Universal Life (IUL) Illustration (A) Subgroup**

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the report of the Indexed Universal Life (IUL) Illustration (A) Subgroup (Attachment Thirteen). The motion passed unanimously.
6. **Adopted the Report of the Variable Annuities Capital and Reserve (E/A) Subgroup**

Mr. Weber made a motion, seconded by Ms. Ahrens, to adopt the report of the Variable Annuities Capital and Reserve (E/A) Subgroup (Attachment Fourteen). The motion passed unanimously.

7. **Adopted the Report of the Valuation Manual (VM)-22 (A) Subgroup**

Mr. Sartain said that Subgroup meetings were focused on addressing comments on the American Academy of Actuaries’ (Academy) Annuity Reserves and Capital Work Group (ARCWG) preliminary framework. He said the Subgroup’s goal is to provide recommendations to the Task Force on the most important items proposed by the ARCWG. The ARCWG is expected to present a draft of requirements for non-variable annuities, which the Subgroup anticipates exposing for comment by mid-summer. He said the field test, initially planned for fall 2021, has been pushed to February 2022 through June 2022, which necessitates pushing the target effective date for the VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, revisions from January 2023 to January 2024.

Mr. Sartain made a motion, seconded by Mr. Chou, to adopt the report of the VM-22 (A) Subgroup, including its March 17 (Attachment Fifteen), March 3 (Attachment Sixteen), Feb. 24 (Attachment Seventeen), Feb. 10 (Attachment Eighteen), Feb. 3 (Attachment Nineteen), Jan. 27 (Attachment Twenty) and Jan. 20 (Attachment Twenty-One) minutes. The motion passed unanimously.

8. **Exposed Amendment Proposal 2020-10**

Marianne Purushotham (Academy Mortality Improvement Life Working Group [MILWG] and Society of Actuaries [SOA] Preferred Mortality Project Oversight Group [Joint Committee]) presented a recommendation (Attachment Twenty-Two) for applying a prudent level of future mortality improvement to the VM-20 reserve methodology for inclusion in the 2022 Valuation Manual. She said the first phase of the recommendation is the development of mortality improvement factors that will be reviewed annually in a process similar to what is used for the valuation basic table (VBT) scales. She noted that the scale will be initially based on the best estimate of recent historical mortality improvement. The rates will linearly grade to the long-term mortality improvement rates (LTMIR) over the first 10 years, remain level for five years and linearly grade to no improvement at year 20. The LTMIR is defined as the average of projection years 10–15 from the Social Security Administration (SSA) intermediate projection known as “Alt 2.”

Ms. Purushotham said the scale will be initially based on the best estimate of recent historical mortality improvement. The rates will linearly grade to the long-term mortality improvement rates (LTMIR) over the first 10 years, remain level for five years and linearly grade to no improvement at year 20. The LTMIR is defined as the average of projection years 10–15 from the Social Security Administration (SSA) intermediate projection known as “Alt 2.”

Ms. Purushotham said the recommendation proposes applying a flat margin to reduce the basic scale. The size of the margin will be determined through reserve model testing. She said other issues for immediate consideration are the short-term and long-term impacts of COVID-19, the impact of opioid addiction, the threshold for materiality and the socioeconomic-based mortality differences between the general and insured populations. She said consideration will also be given later to cohort effects on mortality improvement.

Ms. Hemphill said amendment proposal 2020-10 provides language for inclusion of the future mortality improvement proposal into the Valuation Manual that will reduce reserve redundancy. She said reflecting future mortality improvement will be beneficial to the yearly renewable term (YRT) field test discussions. Mr. Carmello asked if the application of the factors resulting in mortality deterioration should be mandatory. Ms. Hemphill said the proposal is intended to cover that issue. She agreed to amend the exposure to ask for comments on whether the changing language in VM-20 Section 9.C.7. from “may” to “shall” will clarify that intent. Mr. Robinson suggested that the term “prudent estimate mortality” be changed to “prudent estimate for mortality” to match the terms defined in the Valuation Manual. Mr. Chupp asked how the margin will be applied when there is mortality deterioration. Ms. Purushotham said the issue has not yet been decided. Mr. Chupp suggested that mortality improvement should be applied to anticipated experience assumption instead of the prudent estimate assumption.
Ms. Ahrens made a motion, seconded by Mr. Schallhorn, to expose amendment proposal 2020-10 (Attachment Twenty-Three), including the requests to change “may” to “shall” and “prudent estimate mortality” to “prudent estimate for mortality,” for a 45-day public comment period ending May 25. The motion passed, with Mr. Chupp dissenting.

9. Discussed the ESG Implementation Timeline and Overview of the Treasury Model

Mr. Boerner shared the Statement on Level of Documentation, Conning Intellectual Property (Attachment Twenty-Four) to help frame the discussion on economic scenario generator (ESG) documentation. Pat Allison (NAIC) and Scott O’Neal (NAIC) presented a slide deck (Attachment Twenty-Five) displaying the common themes in the ESG comment letters submitted by the Academy (Attachment Twenty-Six), the American Council of Life Insurers (ACLI) (Attachment Twenty-Seven), Equitable (Attachment Twenty-Eight), Mark Tenney (unaffiliated) and Ted Pedersen (unaffiliated) (Attachment Twenty-Nine), Steve Craighead (unaffiliated) and Mark Tenney (Attachment Thirty), Link Richardson (American General) (Attachment Thirty-One), and Matt Kaufmann (Moody’s Analytics) (Attachment Thirty-Two). The slide deck also displayed the responses provided by NAIC staff and Daniel Finn (Conning Inc.), and where applicable listed the decisions to be considered by the Task Force.

Connie Tang (Prudential) said that while it is a good idea to think about the targets to control the level of negative rates, it would be helpful to think about what the right scenario properties and behaviors are. She also raised concerns about targeting a steady state distribution. Jason Kehrberg (Academy) expressed an interest in seeing how adjusting one parameter may affect other parameters.

Mr. O’Neal said several comments on the complexity of the corporate model were received. He said the decision on the level of complexity desired for the corporate model is the purview of the Task Force. Mr. Finn said the key components are captured in the current version of the Conning ESG to reduce complexity. He noted the need for additional documentation. Mr. Robinson asked if a simpler model is possible. Mr. Finn responded affirmatively, noting that issues such as calibration and coverage would have to be considered.

Mr. O’Neal said commenters asked about the extreme equity returns provided in the ESG exposures. Mr. Finn said over long periods, cumulative returns will converge toward a distribution that is roughly lognormal. He said expected means and standard deviations of the annual returns must be adjusted to moderate the returns. He said the Task Force should decide whether to alter the targets for the mean and standard deviation of the equity model to limit the extremities of the tail scenarios.

Mr. Finn said the current calibration process considers that the equity model has a direct link to U.S. Treasury rates to attempt to recognize that the model should be arbitrage-free and work in different environments. He said the link also recognizes that investor decisions are based on the returns of all available investments. He said the Task Force should decide whether to continue using the link to Treasury rates. Randall McCumber (Lincoln Financial Group) said the equity model should consider that both the rate component and risk premium can vary. Ms. Tang said linking equity returns to changes in interest rates is preferable to a formulaic linkage of equities to interest rates in every period. Steve Tizzoni (Equitable) said the Equitable comment is supportive of the structural linkage between interest rates and equity returns. Mr. Tenney said the Cox-Ingersoll-Ross equilibrium paper shows that there is no formulaic relationship that provides a number that can be added to a short-term rate to estimate equity returns. Mr. Chang said the equity model is designed so that the level of the risk premium is more important than the interest rate.

Mr. Finn said a proposed model for international equities was recently released. The model uses regression equations for the pricing and income of international diversified equities and a separate regression, based on the emerging markets, for the aggressive equities. He said returns for the index for Europe, Australasia and Far East (EAFE) has historically tracked lower that the Standard & Poor’s (S&P) 500 and the Russell 2000 indices, despite being riskier. He said the Task Force will have to determine whether to maintain that relationship or to use a risk framework more like the S&P 500 or the Russell 2000.

Mr. O’Neal said the ACLI and the Academy expressed concern that the current timeline is insufficient to allow effective review of the ESG. He said the NAIC plans to continue with the current timeline but will adjust dates as needed to appropriately address industry concerns.

In response to comments on the data format, Mr. Finn said that Conning is amenable to providing data in whatever format the industry may require. Mr. Kehrberg said it would be preferable to have additional data related to evaluating scenarios. Mr. Finn said that he is happy to have discussions on the data companies feel are necessary. On the issue of documentation, Mr. O’Neal noted that an appropriate amount of additional documentation is being prepared for release. He said the recently updated ESG
question-and-answer (Q&A) document (Attachment Thirty-Three) is available on the related documents tab of the Task Force web page.

10. **Heard an Update on SOA Research and Education**

Dale Hall (SOA) gave a presentation (Attachment Thirty-Four) on 2020 group and individual life COVID-19 mortality experience by quarter for various demographic categories and geographic regions. He noted that in the general population, the highest actual to expected ratios occurred in the age range from 35 to 54. He noted that after seeing mortality continue to improve in 2019, the 2020 results showed a 16% negative improvement. Mr. Hall noted that the presentation included a listing of other studies completed by the SOA.

11. **Heard an Update from the Academy LPC on its Recent Activities and 2021 Priorities**

Laura Hanson (Academy Life Practice Council—LPC) gave a presentation (Attachment Thirty-Five) on the LPC’s recent activities and its 2021 priorities. She also noted that the C-1 Work Group has provided the Life Risk-Based Capital (E) Working Group updated C-1 bond factors that reflect the new corporate tax rates. She highlighted the ARCWG work on VM-22 and discussed the Academy webinars and boot camps planned for 2021. She listed a few of the Academy efforts supporting its promotion of diversity and inclusion within the actuarial profession and in the broader insurance industry.

12. **Adopted Amendment Proposal 2020-13**

Mr. Weber made a motion, seconded by Mr. Leung, to adopt amendment proposal 2020-13 (Attachment Thirty-Six). The motion passed unanimously.

13. **Exposed Amendment Proposal 2021-04**

Mr. Bayerle said amendment proposal 2021-04 clarifies the references to Internal Revenue Code Section 7702 in VM-02, Minimum Nonforfeiture Mortality and Interest.

Mr. Leung made a motion, seconded by Mr. Schallhorn, to expose amendment proposal 2021-04 (Attachment Thirty-Seven) for a 21-day public comment period ending April 28. The motion passed unanimously.

14. **Exposed Amendment Proposal 2021-03**

Ms. Tang said amendment proposal 2021-03 updates VM-21 Section 6 to reflect the increase of the required minimum distribution (RMD) age from 70½ to 72. She said the Task Force should consider revising the wording in VM-21 Section 6.C.5.n to clarify that changes in the RMD age may require recalculation of the cohort weighting. She agreed to add a sentence to the exposure cover page to call attention to the potential need for additional clarification.

Mr. Leung made a motion, seconded by Mr. Weber, to expose amendment proposal 2021-03 (Attachment Thirty-Eight) for a 21-day public comment period ending May 3. The motion passed unanimously.

15. **Re-Exposed Amendment Proposal 2020-12**

Ms. Hemphill said amendment proposal 2020-12, previously exposed for public comment through March 26, has been revised to reflect the comments received from Nationwide Financial (Attachment Thirty-Nine), the ACLI (Attachment Forty) and William Wilton (Attachment Forty-One).

Mr. Robinson made a motion, seconded by Mr. Schallhorn, to expose revised amendment proposal 2020-12 (Attachment Forty-Two) for a 21-day public comment period ending April 28. The motion passed unanimously.

16. **Discussed the Mortality Data Collection Project**

Ms. Allison said the VM-51, Experience Reporting Formats, mortality data collection will begin soon. She presented an update (Attachment Forty-Three) on the mortality data collection project.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met March 18, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li and Steve Ostlund (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Discussed the ACLI Proposal to Extend the Nonforfeiture Timing

Mr. Boerner said the passage of the federal Consolidated Appropriations Act, 2021 in December 2020 changed the calculated nonforfeiture interest rate for policies with guarantees of greater than 20 years to 3.75%. The American Council of Life Insurers’ (ACLI’s) amendment proposal 2021-02 (Attachment One-A) recommends allowing the use of the 2020 nonforfeiture rates through June 2022, instead of through December 2021 as allowed by the Standard Nonforfeiture Law for Life Insurance (#808). Mr. Boerner said that authority that Model #808 gives the Valuation Manual is limited to setting the nonforfeiture rate for the calendar year. He said that Model #808 allows companies the option of using the nonforfeiture rate in effect at the end of the previous calendar year. He noted that the option cannot be extended by the Valuation Manual, as the ACLI proposes. Several state insurance regulators concurred with Mr. Boerner’s interpretation of Model #808. Dan Schelp (NAIC) said while he understands the ACLI’s concerns, his reading of Model #808 and the Valuation Manual does not support the Valuation Manual changes proposed by the ACLI.

Mr. Carmello suggested that the Valuation Manual could be revised to set a fixed rate to be used for the 2022 calendar year instead of using the methodology currently in place. Mr. Serbinowski noted that Mr. Carmello’s suggestion will also allow for use of that fixed rate for 2023. Brian Bayerle (ACLI) said the ACLI understands the issues outlined by the state insurance regulators and will consider revising the amendment proposal to conform to the existing requirements. He said market issues will arise if companies are unable to get policy filings approved before the end of 2021. Paul Graham (ACLI) asked the state insurance regulators to consider the impact on small companies that had the nonforfeiture rate set at 4% for 2021 and anticipated using that rate for 2022. He said the small companies will experience resource constraints if required to change the rate to 3.75% for 2022.

Mr. Weber said the potential market disruptions is a policy issue and should not be addressed with technical solutions. He asked if the ACLI had raised the issue with the Life Insurance and Annuities (A) Committee. Mr. Graham said he had not discussed the matter with the Committee. Mr. Boerner said he would update the Committee chair on the issue. Mr. Graham agreed to withdraw the amendment proposal but said he believes a path to a solution may still be available through the Valuation Manual. He said the ACLI will consider potential next steps, including going to the Committee.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Life Actuarial (A) Task Force / Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Brian Bayerle, ACLI – Provides a six month deferral of 2021 nonforfeiture requirements and edits previously adopted changes to VM-02 for improved clarity and to remove potential circularity.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

Valuation Manual (January 1, 2021 edition), VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

For 2021, the calculated 20+ duration life nonforfeiture rate is 3.75%. The 2021 Valuation Manual sets a floor at the level of the Cash Value Accumulation Test rate within Section 7702 of the U.S. Internal Revenue Code. Given that the Internal Revenue Code, Section 7702 interest rate, and therefore the statutory nonforfeiture rate, was not known until the very end of December 2020, there is a 6-month reduction in the normal 18-month timeframe available to re-price and obtain state insurance department approval of policy forms. In light of the highly critical need for companies to redesign products, as well as state insurance departments to complete their review prior to 1/1/2022 (otherwise certain products would not be available in the marketplace), we suggest delaying the 1/1/2022 effective date for the standard nonforfeiture rate to 7/1/2022 through an amendment to VM-02 in the NAIC Valuation Manual. We have a concern that the large volume of new policy forms expected to be filed, coupled with the compressed timeframe resulting from the date of passage of Section 7702 reform, could lead to an especially challenging burden for state departments of insurance to complete review within this period of time. The proposal leaves open the possibility that, if delays do occur, certain products can remain available in the first six months of 2022. Further, the amendment would clarify the language in the previously adopted edits to VM-02 to avoid any potential circularity.
Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the Valuation Manual shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the Valuation Manual for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

1. Through June 30, 2022, companies may use the nonforfeiture life insurance interest rate in place during 2020 to determine the nonforfeiture interest rate for life insurance in this section.

   **Guidance Note:** This edit is to link with the change in the requirements in Section 7702 of the U.S. Internal Revenue Code. Companies may use the 2020 nonforfeiture life insurance interest rates in calendar year 2021 and the first six months of calendar year 2022.

2. Any option provided that allows companies to calculate minimum nonforfeiture values using a nonforfeiture interest rate not exceeding the nonforfeiture rate in the preceding calendar year shall refer to the nonforfeiture interest rate in effect on the last day of the preceding calendar year.

   **Guidance Note:** The intention of the above paragraph is to address language in Section (5c)(H)(1) of the NAIC Standard Nonforfeiture Law for Life Insurance (Model #808), such that the nonforfeiture interest rate in calendar year 2023 would only be permitted to refer to the nonforfeiture interest rate in effect at 12/31/2022.

   **Guidance Note:** For flexible premium universal life insurance policies as defined in Section 3.D of the Universal Life Insurance Model Regulation (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.
The Life Actuarial (A) Task Force met March 4 and March 11, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Judith L. French, Vice Chair, represented by Jason Wade (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li and Steve Oslund (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severingham represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV).

1. **Discussed the ESG Questions Received through March 4**

Dan Finn (Conning) discussed the economic scenario generator (ESG) questions (Attachment Two-A) received from interested parties and interested state insurance regulators through March 4. Responses were focused on treasury and equity model questions; corporate model and governance questions will be addressed later. The questions and responses will be added to the Question and Answer (Q&A) document (Attachment Two-B) on the Conning website. Mr. Finn said a free trial of the GEMS application programming interface (API) is available to companies interested in testing its functionality.

Connie Tang (Prudential) asked if documentation of the interrelationships of the treasury, equity and corporate models can be made available. Mr. Finn said Conning is currently working on that documentation.

2. **Discussed the ESG Questions Received through March 11**

On March 11, Scott O’Neal (NAIC) described the format of the Question Log (Attachment Two-C). Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI has identified a few challenges, including the availability of documentation. He discussed the ACLI questions included in the Q&A document. Mr. Finn said Conning has focused solely on the characteristics of the model and the calibration. He said Conning has made no effort to determine the model’s impact on reserves and capital. He said the current calibration is intended to provide a starting point that will be modified based on the feedback from state insurance regulators and companies. He said the information informing the calibration will not be limited to historical data. He said decisions about issues, such as volatility, will be made later. Mr. Bayerle said more documentation is needed before the ACLI is able to provide substantive comments. He said the totality of the model, including the interaction between its components, must be understood before making decisions on parameters. Mr. Finn said without calculating the reserve components, the types of information the ACLI is asking about is difficult to provide. Ms. Tang said there needs to be an understanding of the origination of the ESG components and their underlying dynamics. Mr. Finn said Conning is willing to provide more data, test more parameters and conduct more sensitivity tests if companies feel it will be helpful. He said Conning is also willing to test parameters over different time horizons.

Mr. Finn continued answering questions submitted by Chris Conrad (American Academy of Actuaries—Academy), Mr. Chupp, Link Richardson (American International Group—AIG), and Mark Tenney (Mathematical Finance Company).

The recordings of the virtual meeting are available on the Related Documents tab of the Task Force website.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Questions Received for Discussion on the March 4 LATF Call

Craig Chupp

1. How are the jump parameters determined and/or set? Does the model reflect recent jump data or long-term averages or a combination of both? Looking at historical data, how does the model determine when a jump has occurred and the magnitude of the jump? For example, considering the movement in the S&P 500 during the first couple of quarters of 2020, was this considered a jump or multiple jumps? If so, what was the criteria used to determine if a jump occurred? Over how many days was the jump considered to occur and what was the magnitude of the jump?

2. How is the value of the mean reversion speed parameter in the Variance Equation determined?

Vincent Tsang

1. In the graph “Equity Equation – Impact of Jumps” on page 10 of the ppt slides, the projected cumulative wealth factors from AIGR and GEMS at the end of the 30th year can be approximated by the line

\[ \text{AIGR cumulative wealth factor} = 1.3082 \times (\text{GEMS cumulative wealth factor}) + 1.4558 \]

For example, if GEMS cumulative factor is 4500%, the AIRG cumulative factor is approximately 6000%. Please explain the driver(s) which cause AIRG’s cumulative wealth factor being significantly higher than GEMS’s cumulative factor. Given that the title of the slide is “Equity Equation – Impact of Jumps,” is the difference in wealth factors attributable to the assumed jumps? If not, why?

2. In the first page of the ppt slides “Equity Equation,” the differential equation is listed as follow:

\[ \frac{dS(t)}{S(t)} = \left[ (r(t) - D(t)) + \mu_0 + \mu_1 V(t) - \lambda m V(t) \right] dt + \sqrt{V(t)} dW_1(t) + \gamma dN(t) \]

As the jump parameters \( \lambda \) and \( V(t) \) are positive and \( m \) is negative in page 8, the drifting factor due to the jump parameters is negative. Does it mean that the jump parameters would reduce the drifting factor for the equity return?

Connie Tang

1. [Describe] the mechanics of Conning’s calibration.

2. [Discuss] Conning’s model selection decision and recommended calibration, e.g.,
   a. How did they pick this type of equity / rate linkage over other approaches, especially given that the different types can produce very different reserve/capital sensitivities?
**Questions Received for Discussion on the March 4 LATF Call**

b. How did they get comfortable with the appropriateness of the changes in these sensitivities when certain LATF parameters were incorporated vs. their Standard Calibration?

3. [Describe the] out of the box capabilities in GEMS to allow different relationships (vs. just substituting different parameter values)?

4. [Are there] not out-of-the-box changes that Conning would be willing to consider / implement?

**Connie Tang Section G Questions**

1. What would actually change on a monthly basis?
   a. Is Conning only updating initial conditions (and any LATF-specified formulaic updates – e.g., MRP)?
   b. Are the updates purely mechanical, or are there any subjective tweaks or judgment calls?

2. What is the LATF exposure / testing / approval process for:
   a. Other regularly scheduled / routine updates beyond initial condition or formulaic updates (E.g., bringing an additional year of historical data into the calibration?)
   b. More fundamental model changes (e.g., structural changes, changes in calibration methodology / philosophy)

3. What is the process if something unexpected / unanticipated happens in the monthly updates – e.g., routine (business as usual) updates create scenarios that suddenly don’t make sense, or the calibration produces invalid parameters?
   a. What is the process for reviewing and detecting questionable or inappropriate scenario distribution properties before scenarios are posted? (There should be checks for reasonability of distribution properties and not just validation that specific targets were reproduced. The scenarios exposed in Dec. reproduced LATF’s / Conning’s intended targets, but the process should have identified the inappropriate distribution of yield curve shapes.)
   b. What is the escalation process if issues are detected? (Does Conning make judgments on their own? Are regulators and industry at risk of being surprised when unusual scenarios produce unusual reported results or changes in reported results that don’t align with prior sensitivities/dynamics?)

**Scott Schneider**

1. Will scenarios be consistent from month to month? In other words, will new scenario number 1 be comparable to old scenario number 1 or will the scenarios be an entirely new random set? We would like to see consistency from period to period.

2. When parameters are updated, will Conning provide scenarios as of the valuation date before and after changing each parameter? Before and after changing all parameters in aggregate? We would like to be able to assess the impact of the change of each parameter.
Questions Received for Discussion on the March 4 LATF Call

3. If 10,000 scenarios are not enough for convergence (particularly for CTE98), what do we do?

4. What time steps will be available (daily, weekly, monthly, quarterly, annual) within the scenarios? How many years of projection will be provided in each scenario? We would like the ability to get time steps of any frequency from daily to annual. We would also like 90 years’ worth of time steps.

5. Will individual states (e.g. New York) have different requirements? We would like the scenarios to be provided with and without individual state requirements.

6. We believe that Conning has stated that the interest rate generator (GEMS) is arbitrage-free, but the equity return generator appears to add a positive risk premium resulting in scenarios which are not arbitrage-free. Is our understanding correct? If so, will there also be an arbitrage-free version of the equity scenarios?

ACLI

1. Criteria / stylized facts / distribution properties
   a. What criteria or stylized facts did Conning apply and how did they assess the pros/cons when selecting / developing their ESG model?
   b. How does Conning assess the reasonability of scenario outputs (i.e., in the exposed scenarios and on an ongoing basis)?
   c. What adjustments have been made either in model development or during the generation of scenarios as a result of these considerations?
      (Comprehensive information on these items should also be included in Conning’s documentation.)

2. It seems like the selected model and proposed calibration approach may increase procyclicality (and/or create unintuitive relationships). How did that factor into the model decisions and recommendation?
Questions Received for Discussion on the March 4 LATF Call

Moody's Analytics

1. The model seems to support the fitting of the initial yield curve using a shift function. The limitation to 3 points seems to be a particular calibration choice. We are aware that this choice may benefit the stability of the long-term rate distribution, but it would be useful to be clear on the limitation of the model implementation and where calibration choices are chosen to mitigate these constraints in the model.

2. The mechanism to remove the discrepancies [between the actual and modeled starting yield curve] is not clear. Does this mechanism still preserve the arbitrage free properties of the model?

3. The choice of this value 3 [used in the process to fit the initial yield curve] seems to be without any motivation. What impact do these choices have on the scenario produced by the model and their robustness over short term or long-term projection horizons. The NAIC could consider not using this feature at all, i.e. accept the limitation in the model that it will not fit accurately curve or could look to motivate the choice of decay factor based on historical rate behavior/mean reversion speed etc....

4. The parametric fit of the yield curve could lead to very different long-term forward rates driving projected yields on different valuation dates i.e. from month to month. This could mean that analysis sensitive to long term projected rates could be unstable. It could be useful for the NAIC to consider the testing of the model on different valuation dates to understand the stability of the long-term scenarios and related distributions. In particular, looking at historical dates with very different starting curves and long-term forward rates (considering levels and perhaps also different gradients)

5. The model should produce a variety of yield curve shapes, and they should change over time. Is the NAIC setting targets for the correlation between different points on the yield curve or will there be alternative criteria to constrain the behavior of rates across the term-structure? A set of clear quantitative targets for correlation between different points on the yield curve can help validate the model performance objectively in this area.

6. Interest rates can be negative. Will the NAIC consider a test of the scenarios where the curve is initialized using the German or Swiss yield curve to get and understanding of how well the model will handle negative initial starting curves?

7. Is the NAIC constraining the forward expected level of the rates as part of the calibration? If so, it would be useful to understand how the model's distributions are impacted by rate levels that could be lower than current levels. Information from European, Swiss and Japanese yield curves and implied expectations can be a useful stress test to understand how the model might behave in the event the US yields move negative.

8. There are examples of negative rates and dynamics across several developed market. Have the NAIC consider extending the calibration data set beyond just US data to improve and broaden the historical information embedded in the calibrations?
Questions Received for Discussion on the March 4 LATF Call

9. Has the NAIC considered how to assess the impact of the frequency and magnitude of negative rates produced by the model?

10. The interest rate generator should be arbitrage free. There are a few variations of the classical CIR type model mentioned in the supplied documentation. It would be good to understand if these model adjustments (floor, decay scaling, term premium assumptions) can break or disrupt the arbitrage free properties of the model. Are the NAIC producing any test of validations to assess these properties in the model?

11. Returns should be provided for funds representative of those offered in U.S. insurance products. How should insurers approach the generation of additional fund returns if the provided return series are not representative of those offered in their particular insurance products?

12. Are the credit spread model and related bond fund returns arbitrage free?

13. The NAIC have not specified any modelling constraints on the credit spread or corporate bond return modelling. Are there any features that are needed from this model? e.g. ability to capture negative spreads, stability of return distributions over long time horizons, relationship between expected defaults and spread levels, nature of the volatility of spread and defaults, volatility of returns etc.

14. If a stochastic spread and ratings-based model is chosen, how should insurers running sensitivities or projections of reserves consider updating the initialization/features of this model?

15. How has the NAIC decided on the relevant number of [corporate bond] rating classes to be modelled?

16. The modelling mentions BB rated bonds, but the model specification only has a generic high yield asset. How will the NAIC ensure this calibration is appropriate and does not understate or overstate risk due to fact the model does not capture B or CCC rated spread/bonds?

17. Is the NAIC specifying any additional criteria on the correlation of transitions/defaults across issuers and how this impact the bonds in the portfolios that are being modelling as part of the bond fund universe?

Additional Moody’s Analytics Questions

Arbitrage Free Nature of the Models

1. The models discussed are generally considered arbitrage-free pricing models. Is this requirement something that the NAIC wants to be addressed by all risk factors: interest rate, equity returns and credit spread/returns?

2. Is this criterion met for the chosen models? If it is not met, what specific implementation/calibration/configuration decisions have been made to prevent the model from being arbitrage free?

3. If the models are not arbitrage free, what additional validations and testing is being considered to ensure the model produces appropriate behaviour, stable risk premium and reasonable outcomes within each stochastic trial?
Questions Received for Discussion on the March 4 LATF Call

Interest Rate Model
1. Is the NAIC expecting to produce alternative calibrations with changes to the starting rate levels to help insurers understand the impact of the initial curve on the projected distribution? It would be good to understand the stability of the model/distributions/risk-premia if the model was initialized at a lower (or significantly higher) level than today (e.g. for a realistic example you may consider the current level of German interest rates).

Corporate Bond and Spread Model
1. Will further technical documentation on the corporate bond model (including detailed formulas, parameters, and calibration methods) be provided?
2. Can you provide details on the “stochastic modulator µ(t)” process, its parameters and its calibration?
3. The use of the jump in the Equity model is interesting. It can be challenging to calibrate and constrain these types of jump models with historical data. How is this achieved?
This document provides a summary of questions and answers relating to the development of the new ESG to be used for statutory reporting purposes. This ESG will produce real-world interest and equity scenarios to be prescribed for use in calculations of life and annuity Statutory reserves according to the Valuation Manual (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2). This is a living document. As additional questions are received, this document will be expanded. Please email Reggie Mazyck, rmazyck@naic.org, with additional questions or any requests for clarification relating to this document.

Q7. Can you explain the process used to convert the Treasury targets into GEMS parameters? ............................................................................................................................................. 4

SECTION B: EQUITY MODEL .................................................................................................................................................. 6

Q1. How are the international fund returns expressed: hedged or unhedged? ............................................................................................................................................. 6
Q2: On the February 25th LATF call, it was mentioned that over longer projection periods the wealth factors for equity indices will be roughly lognormal despite the jump parameters (slide 13). Can you please explain the reason for this? ............................................................................................................................................. 6
Q3: In the Revised Baseline scenarios posted on February 24, 2021, the wealth factors for some of the equity returns are quite extreme. For example, the maximum return at the end of the 30-year projection period for the Large Cap asset is over 14,600% while the minimum is -97.6%. Is this something that could be controlled through the model parameterization? ............................................................................................................................................. 8

SECTION C: CORPORATE MODEL ............................................................................................................................................ 10

Q1. Why are bond funds assumed to only invest in industrials (not financials)? ............................................................................................................................................. 10
Q2. Do BBB bonds in the U.S. Investment Grade Corporate bond fund returns reflect a selected BBB bond, a universe of BBB+ / BBB / BBB- bonds, or some other blend of bonds? ............................................................................................................................................. 10

SECTION D: ESG ANCILLARY TOOLS ........................................................................................................................................ 10
Q1. What is the purpose of the Scenario Reduction Tool referenced in item #9 of the ESG Implementation Timeline?
Q2. What is the GEMS® API?

SECTION E: ESG FIELD TEST
Q1. Our company would like to volunteer to participate in the field test. How can we sign up?
Q2. What is the scope of the ESG field test?

SECTION F: SCENARIO FILE FORM AND FORMAT
Q1. Once the new ESG is in production, how will scenario files be accessed?
Q2. The scenario file is very large and doesn’t have the same format as the Academy scenarios. Can this be changed?
Q3. The 12/18/20 exposure only includes 30 projected years of economic scenario data. Is it possible to produce economic scenario files with a longer projection period?
Q4. The International Diversified Equity (MSCI EAFE) and Aggressive Foreign Equity (MSCI Emerging Market) do not have Income Returns in the sample data set. Will this be split between price and income in the future?
Q5. Is the scenario file labeled “Initial Exposure thru Jan 2021 GEMS Output for Dec 2019” considered to be the “Basic Data Set”?
Q6. There are 10,000 scenarios included in the 12/18/20 exposure. Is there a simple way to extract a smaller set of scenarios from this file?

SECTION G: CALIBRATION AND PARAMETER UPDATES
Q1. How often will the parameters of the model be updated?
Q2. What will the governance process be for monthly scenario releases, routine changes to the ESG calibration, and more structural changes to the ESG model?
Q3. Will calibrated parameters of the GEMs model be published?
Q4. Will the data used for each calibration be publicly available?
Q5. Will a spreadsheet tool be made public that replicates the new algorithms used to develop the scenarios?

SECTION H: DOCUMENTATION
Q1. What is the plan for releasing additional documentation on the Treasury, Equity, and Corporate models?

SECTION I: 12/17/20 LATF EQUITY AND CORPORATE MODEL PRESENTATION
Q1. On page 13, are the 2 year and 30 year “columns” annualized returns?
Q2. On page 18, are the 34 negative thirty year returns for GEMS, and 3 for the AIRG, out of 10,000 scenarios? One would expect about 50 negative returns for the AIRG, if it is for 10,000 scenarios.
Q3. How are the correlations on page 22 being computed?

SECTION J: 12/18/20 LATF EXPOSURE
Q1. Scenarios were provided as of 12/31/19. Can they be provided as of 9/30/20 or 12/31/20?
Q2. In the target formulas shown in the Targeting Example.xlsx file included in the 12/18/20 exposure, it looks like Theta and Lambda0 get added together in the targets. Why are there two separate parameters? ..............14

Q3. Do the mean reversion level and speed in the Risk-Neutral model impact the scenarios in the Real-World model? ...........................................................................................................................................15

SECTION K: GOVERNANCE .................................................................................................................................................................................. 15

Q1. What is the LATF ESG exposure, testing, and approval process? ..............................................................................................................15

Section A: Treasury Model

Q1. Does the GEMS Treasury model require the initial state variables to be non-negative? If so, what happens if the initial Yields produce a negative state variable?

A: Since the states’ volatility in the GEMS Treasury model is proportional to its level, the initial state variables must be non-negative. There are several components of the GEMS’ fitting procedure which ensure that the initial state variables will meet this condition. First, when performing the search algorithm for the best 3 Pivot Points (see slide 5 of the 12/3/20 Treasury Model Presentation), the process will reject any combination that produces one or more invalid state variables. Second, in the very unlikely case that the algorithm is unable to find a valid combination, the process will:

1. pick a combination of Pivot Points
2. convert the initial yield curve into the implied starting states using the inversion process*.
3. shift the invalid state variables to 0.0001
4. calculate the discrepancy curve of the resulting implied Yield curve

*Please see “Appendix II – Initial State Variable Calculation” of the Technical Interest Rate Documentation for more information.

Q2. Are there any boundary conditions on the projected state variables? If so, how does the GEMS model ensure that those boundaries are not violated?

A: Yes, there is a boundary condition requiring that each of the state variables must be non-negative.

There are several components of the formulation that ensure that this condition is met. First, as with the Cox-Ingersoll-Ross model that is the original basis of the GEMS Treasury Model, the projected volatility of each state variable is proportional to its square root. As a result, as a state gets closer to 0, its volatility will drop to zero, which makes it harder to breach zero. Second, a valid calibration of this model requires both the mean reversion level and the mean reversion speed to be positive. Mathematically, this means \( \Theta + \Lambda_0 > 0 \) and \( \kappa - \Lambda_1 > 0 \) for each of the state variables. These conditions ensure that any state variable which gets close to zero will have enough mean reversion so that the simulated values are very unlikely to breach zero. Finally, in the very unlikely scenario that the model does produce a negative state value in the simulation, the procedure will floor the actual value at 0.0001 similar to what the current Academy Interest Rate Generator does for Yields.

Q3. Why aren’t the Lambda parameters used in the Auxiliary functions in the Treasury Targets and Parameters.xlsx file?

A: In terms of the Auxiliary function, the lambda parameters are risk premium adjustments. So, they get used in the mean reversion speed and mean reversion level formulas. However, they do NOT get used in any pricing
formulas. These auxiliary functions are used to price zero coupon bonds (see section 2.2 of the Technical Interest Rate Documentation file).

Q4. What is the purpose of Rows 20-22 of the Auxiliary Functions tab of the Treasury Targets and Parameters.xlsx file?

A: Rows 20-22 are how the Spot Rates are converted into Par Yields. Since the model is arbitrage free, the price of a bond should equal the price of its cash flows. Specifically, for a semi-annual coupon par bond, this means $1 = \text{Price of Par Bond} = \text{Sum(PV of Cash Flows)} = (\text{Coupon} / 2) \times \text{Sum(PV of 1 every 6-months)} + \text{PV of Principal}$. The second component is what we're calculating in Row 21. Rearranging this formula, the Coupon $= 2 \times (1 - \text{PV of Principal}) / \text{Row 21 value}$, which is the formula in Row 22. Since the current Mean-reversion parameter (MRP) values are based on published Treasury Yields, which are expressed as semi-annual Par Yields, this procedure is used to match up the current values.

Q5. What is the foundation of the GEMS’ Treasury model? Is this the same as the current Academy generator?

A: Spot rates form the foundation of GEMS’ Treasury Yield curve construction. Specifically, if you look in the Technical Interest Rate Documentation, there is a formula for the Spot Rate at different tenors based on the current State values on page 5 (under section 2.3 “Initial Yield Curve Fitting”). For context, the 10-Year Spot Rate is based solely on the price of a single cash flow at the end of year 10 (i.e. a 10-Year zero coupon bond). On the other hand, the Academy model starts with Par Yields. In the US, these Yields reflect the semi-annual coupon that a bond would have to pay in order to be priced at Par. These Yields are consistent with the data published on the Federal Reserve’s website. These two methods are related, which is why both models can produce both Spot and Par Yields. Specifically, going from Spot Rates to Par Yields involves solving a series of equations of the form: $1 = \text{Par Value of Bond} = \text{Sum(PV of Fixed Coupons)} + \text{PV of Principal}$ for increasing tenors.

Q6. Which parameters in the GEMS® Treasury model influence the magnitude and frequency of negative interest rates in the projected scenarios?

A: The interaction of several parameters in the GEMS® Treasury model determine the magnitude and frequency of negative interest rates in the projection. First, the shift parameter extends the basic form of the GEMS® Treasury model to allow for the occurrence of negative interest rates. All else equal, the occurrence and magnitude of negative interest rates will increase with more negative values of the shift parameter. Negative interest rates are also influenced by the mean reversion level and the speed of mean reversion. Lower mean reversion targets with slower speeds of mean reversion will produce scenarios with more negative interest rates for longer periods of time in the projection. Additionally, greater volatility will lead to a wider dispersion of scenarios overall, again impacting negative interest rates in the projection.

Finally, although not employed in the 12/18/20 exposure of scenarios, a floor parameter could be added to the model to disallow interest rates below a specified level. Note that the introduction of a floor would cause the GEMS® Treasury model to no longer be arbitrage-free.

Q7. Can you explain the process used to convert the Treasury targets into GEMS parameters?

A: There are several key steps in this process. First, since the Academy model and GEMS are very different, Conning identified either a specific output of the simulations or a characteristic of the model which aligned with the impact that target has on the scenarios. For example, the MRP in the Academy model aligns very closely to the mean long-term 20-Year Par Yield in GEMS. Second, for each of these targets, Conning selected one or more parameters to
adjust which best aligns with this target and is likely to have minimal unanticipated impacts on the simulation. For example, as shown in the equation in section 2.1 of the Technical Interest Rate document, both Kappa and Lambda1 impact the mean reversion speed of the state variables. However, Kappa also affects the projected shape of the Yield curves because it is used in the Affine functions (section 2.2 of that same document). Therefore, Conning chose to adjust the Lambda1 parameters to meet the desired mean reversion speed targets. Finally, Conning developed either a method or a formula to convert the targets into GEMS model parameters. The final result of this process is this table:

<table>
<thead>
<tr>
<th>Target</th>
<th>Characteristic</th>
<th>Parameter(s)</th>
<th>Solution Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overnight Rate</td>
<td>Mean Ultimate 0-Month Spot Rate</td>
<td>Long-Term Target State Variables</td>
<td>Iterative Solution¹</td>
</tr>
<tr>
<td>1-Year Yield</td>
<td>Mean Ultimate 1-Year Par Yield</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MRP</td>
<td>Mean Ultimate 20-Year Par Yield</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Mean Reversion Strength for the Slope²</td>
<td>Mean Reversion Speed of the state variable with the largest Kappa³</td>
<td>Lambda1 for the associated state variable</td>
<td>Since the Mean Reversion speed is 1 / (Kappa – Lambda1) (see section 3), Lambda1 = Kappa – 1 / Mean Reversion Speed.</td>
</tr>
<tr>
<td>Mean Reversion Strength for the Log of the Long-Term Rate²</td>
<td>Mean Reversion Speed of the state variable with the smallest Kappa³</td>
<td></td>
<td></td>
</tr>
<tr>
<td>N/A</td>
<td>Mean Reversion Speed of the final state variable⁴</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Long-Term Target State Variables</td>
<td>N/A</td>
<td>Lambda0 for the associated state variable</td>
<td>Since the Mean Reversion level is (Theta + Lambda0) * Mean Reversion Speed (see section 3), Lambda0 = Target / Mean Reversion Speed - Theta.</td>
</tr>
</tbody>
</table>

¹ For the Long-Term Target State Variables, the nature of the problem ensures that there will be a unique solution: we have three equations with three unknowns. However, the math is too complicated to solve analytically since the Affine formulas give us Spot Yields while the longer targets are expressed as Par Yields. Therefore, Conning will simply use a search algorithm to find the unique solution.

² The Mean Reversion Strengths in the current Academy model are expressed on a monthly basis. To convert those into the speed targets GEMS needs (i.e., annual), Conning calculated 1 / (1 – (1 – Academy’s Mean Reversion Strength) ^ 12)).

³ Within GEMS, the Kappa value affects the shape of the B(T) function which get multiplied by the state variables to calculate the final Spot Yields (see section 2.2 of the Technical Interest Rate document). When Kappa is close to zero, this curve becomes essentially flat. In that case, a 1% movement in the corresponding state value will lead to a roughly 1% parallel shift in the Spot curve. This aligns very well with how the Long-Term Rate impacts the current Academy model’s simulations. With a higher Kappa, the B(T) curve becomes very steep. So, a 1% move in this associated state variable will move the short end of the curve about 1%, but have very little impact on the long end of the curve. This behavior aligns well with how the slope impacts the current Academy model’s simulations.

⁴ In the Baseline proposal, this target was set to the (Mean Reversion Speed for the first state variable) * (Mean Reversion Speed for second state variable / same quantity for the first state variable in GEMS standard calibration).

For an example of how this works, please refer to the Treasury Targets and Parameters Excel worksheet.
Section B: Equity Model

Q1. How are the international fund returns expressed: hedged or unhedged?

A: The international funds are in USD and are presented on an unhedged basis. The AAA ESG also expresses international fund returns on an unhedged basis.

Q2: On the February 25th LATF call, it was mentioned that over longer projection periods the wealth factors for equity indices will be roughly lognormal despite the jump parameters (slide 13). Can you please explain the reason for this?

A: This is a consequence of the Central Limit Theorem (CLT). Based on that Theorem, if \( X_i \) are independent samples from the identical distribution, then \( \sum X_i \) converges to a normal distribution regardless of the distribution of the \( X_i \). A corollary of that theorem is that if \( Y_i \) are independent samples from the identical strictly positive distribution, then \( \prod Y_i \) converges to a lognormal distribution. To see that, we use the transformation \( Y_i = \exp(X_i) \). Then, \( \prod Y_i = \prod \exp(X_i) = \exp(\sum X_i) \) since the \( X_i \) are independent if the \( Y_i \) are independent. Finally, if \( \sum X_i \) converges to a normal distribution, then \( \exp(\sum X_i) \) converges to a lognormal one.

Now the key question: how does that apply to the wealth factor for equity indices? First, the wealth factor at the end of a simulation is \( \prod (1 + \text{Return}_i) \) across the simulation. As long as the Return can’t be less than -100%, which is the case for the equity returns in GEMS, we can let \( Y_i = 1 + \text{Return}_i \) in the above discussion. Then, the only question is whether or not these \( Y_i \) meet the other conditions of this Theorem. In Figure 1, we can see that the standard deviation for the Large Cap index is fairly stable over the 30-year projection period. Plus, the volatility reverts to long-term levels very quickly. As a result, these equity returns are close enough to being identically distributed that they will meet one of the weak forms of the CLT.\(^1\) By comparison, the Money Market returns have dramatic shifts in their cross-sectional volatility (see the Revised Baseline Fan Charts for an example): the returns in year 30 are almost 5 times as volatile as the returns in year 1. Therefore, the Money Market returns will take longer to converge.
Second, we need to consider independence. Under the CLT under weak dependence extension, we really just need the returns to have very little serial correlation. From Figure 2, we can see that this is the case for the Large Cap returns coming out of the GEMS model across the entire simulation period: the year over year serial correlation is never beyond +/-5%. As a result, we can expect fairly rapid conversion of the Large Cap asset class’ wealth factor to a lognormal distribution. Money Market returns, on the other hand, have a serial correlation that approaches 1 in the later projection years. This is because the Money Market returns in later years are largely driven by the simulated short-term Treasury Yields. Since the 3-Month Treasury Yield at the end of the 28th simulation period is
highly correlated to the one at the beginning of the 29th, we see very high serial correlation in this asset class. Once again, this means the Money Market asset class’ wealth factor may never converge to a lognormal distribution.³

![Serial Correlation by Projection Year](image)

**Figure 2:** Serial correlation across time based on the Baseline calibration released on February 24, 2021 for selected Asset Classes

1 Since the GEMS model links equity returns to short-term Treasury Yields, the expected returns will change over the projection period as Treasury Yields revert to their long-term targets. However, differences in means have no impact on the conversion process.

3 Despite the many differences between GEMS and the current Academy models, all of these same results would apply to the current Academy model for both Large Cap and Money Market returns.

**Q3:** In the Revised Baseline scenarios posted on February 24, 2021, the wealth factors for some of the equity returns are quite extreme. For example, the maximum return at the end of the 30-year projection period for the Large Cap asset is over 14,600% while the minimum is -97.6%. Is this something that could be controlled through the model parameterization?

**A:** These values are almost entirely driven by the expected mean and standard deviation of the annual returns for this index. For comparison purposes, the corresponding values from the current Academy model for this index are about 19,400% and -53% based on the December, 2019 model. However, the Academy model has an average cumulative return that is roughly 47% higher, or roughly 1.3% per year¹. If we adjust the Academy returns by this difference, then the corresponding values would be roughly 13,200% and -68%. The majority of the remainder of the difference is due to the fact that the GEMS returns are about 1.5% more volatile (i.e. 17.5% vs 16% annual

---

¹ Since the GEMS model links equity returns to short-term Treasury Yields, the expected returns will change over the projection period as Treasury Yields revert to their long-term targets. However, differences in means have no impact on the conversion process.

³ Despite the many differences between GEMS and the current Academy models, all of these same results would apply to the current Academy model for both Large Cap and Money Market returns.

**Q3:** In the Revised Baseline scenarios posted on February 24, 2021, the wealth factors for some of the equity returns are quite extreme. For example, the maximum return at the end of the 30-year projection period for the Large Cap asset is over 14,600% while the minimum is -97.6%. Is this something that could be controlled through the model parameterization?

**A:** These values are almost entirely driven by the expected mean and standard deviation of the annual returns for this index. For comparison purposes, the corresponding values from the current Academy model for this index are about 19,400% and -53% based on the December, 2019 model. However, the Academy model has an average cumulative return that is roughly 47% higher, or roughly 1.3% per year¹. If we adjust the Academy returns by this difference, then the corresponding values would be roughly 13,200% and -68%. The majority of the remainder of the difference is due to the fact that the GEMS returns are about 1.5% more volatile (i.e. 17.5% vs 16% annual
standard deviation). As described in Q2 above, these returns end up being fairly close to lognormal, as can be seen in Figure 3.

![Cumulative 30-Year Total Return Q-Q Plot](image)

**Figure 3**: Comparison of simulated percentile distribution for the GEMS and Academy models’ Large Cap wealth factor and the corresponding values from a lognormal distribution (i.e. the dotted line).

So, what would have to change in the model structure to alter these extremes? As mentioned above, the returns at the extreme tails are largely influenced by the targets for the expected mean and standard deviation. About the only other items that could be tweaked would be to add negative serial correlation for these projections, at least of the magnitude of those seen for the Long Govt index in Figure 2. With that adjustment, the cumulative returns would grow slower than those in the Revised Baseline model. However, the historical data on which this index is built does not indicate that such an adjustment is in line with the data (see Figure 4).
Figure 4: Serial correlation of annual returns of different rolling 30-year calendar years. For example, the 2015 figure is based on the 30 annual S&P 500 total returns from December 1985 through December 2015.

1 The average annual Large Cap return from the AIRG is 8.3%. The corresponding value for the Revised Baseline GEMS Scenarios is 7.2%.

2 With no serial correlation, the cumulative return’s volatility grows with, roughly, the square root of time. With positive serial correlation, like those for Money Markets, they grow faster than that. With negative serial correlation, they will grow slower.

Section C: Corporate Model

Q1. Why are bond funds assumed to only invest in industrials (not financials)?

A: One of the goals of the bond funds was to make them consistent with the data being included in the Robust Data set. Since that data set is only going to include one set of Corporate Yields, which will be for industrials, we are suggesting only using these bonds for the bond fund returns.

Q2. Do BBB bonds in the U.S. Investment Grade Corporate bond fund returns reflect a selected BBB bond, a universe of BBB+ / BBB / BBB- bonds, or some other blend of bonds?

A: For any of the Corporate ratings, the bonds will be issued exactly at that rating (i.e. only BBB bonds in this case). The returns will reflect a broadly diversified set of bonds of the selected rating and maturity.
Q1. What is the purpose of the Scenario Reduction Tool referenced in item #9 of the ESG Implementation Timeline?

A: Conning will deliver a full set of 10,000 economic scenarios on a monthly basis along with scenario subsets produced using the Scenario Reduction Tool that is eventually adopted. The purpose of the Scenario Reduction Tool is to select subsets from the full set of 10,000 that are representative of the full set. A proposal to follow the American Academy of Actuaries’ scenario picking methodology has been exposed for public comment through March 7th, 2021. See the link below for more details.

ESG Scenario Picker Tool

Q2. What is the GEMS® API?

A: The GEMS® API (Application Programming Interface) will offer companies an alternative way to generate data in either the Basic or Robust Data Sets. The API code can be incorporated directly into third-party software to allow for faster processing of the data and a more tailored workflow. This will allow users more flexibility in the number of scenarios and projection length in their simulation process. The GEMS® API is available for a fee from Conning.

Q3. Does the API accept a starting Yield Curve or is it fed the initial state variables?

A: Right now, the API starts with the initial state variables. An enhancement to the API to accept the starting yield curve as input is planned.

Q4. Does the GEMS API support dynamic generation of forward-starting inner loop scenarios, based on a user-specified outer loop scenario Yield curve at that future projection period?

A: Yes, the GEMS API can be configured to produce inner loop scenarios based on a user-supplied outer loop scenario Yield curve.

Section E: ESG Field Test

Q1. Our company would like to volunteer to participate in the field test. How can we sign up?

A: Companies wishing to participate in the field test should contact Reggie Mazyck by March 1st, 2021 at rmazyck@naic.org and provide the following information:

- Company name
- NAIC company code
- Names and email addresses of company contacts
- A list of the product types the company intends to include in the field test

More information is provided in this document: ESG Field Test Request

Q2. What is the scope of the ESG field test?

For both Variable Annuity (VM-21 and C3P2) and Life (VM-20) business, it seems that the new ESG directly replaces the existing prescribed AirG parameterization. However, for fixed annuities (C3P1) there will be additional methodology considerations as the new ESG will not necessarily act as a direct substitute for the one that is currently prescribed. For example:
C3P1 currently uses a special 12 or 50 scenario subset designed to approximate 95%-tile interest rate risk. Would new subsets be developed, or would Conning’s 200 scenario set be used directly?

C3P1 currently prescribes only the interest rate scenarios. Would prescribing GEMS mean that equity scenarios also become prescribed? This would expand the scope of C3P1 to both interest rate and market risk.

- Some companies currently use a deterministic equity scenario with the prescribed C3P1 interest rates scenarios.
- If C3P1 were expanded to cover market and interest rate risk, it seems like we’d need to split the total, similarly to how C3P2 needs to be split.
- In addition, if stochastic equity returns were applied to inforce general account assets (e.g., alternative assets like hedge funds and private equity), would there be a double count with asset risks covered by C-1?

A: The scope is expected to include VA (VM-21 and C3P2), and Life (VM-20), with the new ESG directly replacing the existing prescribed AIRG parameterization. For C3P1, the methodology needs to be considered, along with field test timing, given the developments on VM-22. For now, please assume C3P1 is in scope for field testing. This will give regulators an indication of the level of participation for companies with products subject to C3P1.

Section F: Scenario File Form and Format

Q1. Once the new ESG is in production, how will scenario files be accessed?

A: Conning will produce scenarios from the Basic Data Set as of each month-end and post them to the ESG landing page on Conning’s website by 4:00 PM Central Time on the first business day of the following month. The ESG landing page on Conning’s website can be accessed by clicking the link in the “Economic Scenarios” section of the NAIC’s PBR webpage. This will be different than the prior process employed by the American Academy of Actuaries, where an excel tool was made available for users to generate scenarios on demand.

Q2. The scenario file is very large and doesn’t have the same format as the Academy scenarios. Can this be changed?

A: Yes. Please provide feedback with specifics on how you would like the output to be provided.

Q3. The 12/18/20 exposure only includes 30 projected years of economic scenario data. Is it possible to produce economic scenario files with a longer projection period?

A: Yes. Please provide feedback on the projection period desired for the scenario data. Please note that the GEMS software can generate an unlimited number of periods.

Q4. The International Diversified Equity (MSCI EAFE) and Aggressive Foreign Equity (MSCI Emerging Market) do not have Income Returns in the sample data set. Will this be split between price and income in the future?

A: The model only projected total returns for these indices. Conning is developing an alternative calibration for these two indices which will split their total returns into Price and Income.

Q5. Is the scenario file labeled “Initial Exposure thru Jan 2021 GEMS Output for Dec 2019” considered to be the “Basic Data Set”?

© 2021 National Association of Insurance Commissioners
A: Yes. The contents of the Basic Data Set are summarized in the “Basic Data Columns” file. The comment period for the exposure has been extended to March 7, 2021. The initial set of scenarios represent a first cut at the types of changes that may be desired for the ESG. Additional modifications are expected based on comments received.

Q6. There are 10,000 scenarios included in the 12/18/20 exposure. Is there a simple way to extract a smaller set of scenarios from this file?

A: If you would like to look at a smaller sample, you can just use a portion of the file (e.g. the first 1000 scenarios). The time periods for each scenario are in order, so 1,000 scenarios would be the first 36,000 rows of data. This is different from the scenario selection process exposed on 1/21/21, but it will allow you to look at a representative subset. If you are interested in just the characteristics of the scenarios, you may also be interested in the Initial Exposure Full GEMS Fan Charts on the site. That is a PDF summary for each of the columns across the full 10,000 scenarios and 360 months.

Section G: Calibration and Parameter Updates

Q1. How often will the parameters of the model be updated?

A: This is to be determined and is included as item #8 on the ESG timeline.

Q2. What will the governance process be for monthly scenario releases, routine changes to the ESG calibration, and more structural changes to the ESG model?

A: This is to be determined and will be addressed as part of items #8 and #25 on the ESG timeline.

Q3. Will calibrated parameters of the GEMs model be published?

A: The expectation is that the parameters will be published. There will also be formulas published which link the target parameters, such as the MRPs, to the GEMS’ model parameters.

Q4. Will the data used for each calibration be publicly available?

A: Every attempt will be made to use public information. However, when that is not possible, Conning will release the Bloomberg ticker, or other appropriate indicators, for the source of the data.

Q5. Will a spreadsheet tool be made public that replicates the new algorithms used to develop the scenarios?

A: No. While some components of the model will be documented via spreadsheets, such as the Treasury Targets and Parameters.xlsx file that was included in the Exposure Draft, those interested in generating the scenarios directly should contact Conning about either the GEMS API or software.

Section H: Documentation

Q1. What is the plan for releasing additional documentation on the Treasury, Equity, and Corporate models?

A: Conning has produced initial documentation for the Treasury, Equity, and Corporate models. This documentation can be accessed by clicking the link under the “Economic Scenarios” section of the NAIC’s PBR.
Webpage. More information will be added to the documentation throughout the project as it evolves. Specific requests for additional items to cover in the documentation can be made to Reggie Mazyck at the NAIC.

Section I: 12/17/20 LATF Equity and Corporate Model Presentation

Q1. On page 13, are the 2 year and 30 year “columns” annualized returns?

A: No, those are summaries of the total return over the associated year. For example, the values in the second column reflect a summary of the 10,000 total returns from Sept 2021 through Sept 2022 from the current AIRG model.

Q2. On page 18, are the 34 negative thirty year returns for GEMS, and 3 for the AIRG, out of 10,000 scenarios? One would expect about 50 negative returns for the AIRG, if it is for 10,000 scenarios.

There have been no negative 30-year periods for the S&P 500, even if you include the Great Depression. There are some good reasons to exclude the Great Depression from consideration for S&P 500 returns. The S&P did not become 500 stocks until 1957, being only 90 stocks from 1929 until 1957. SEC rules and other governance and advances in understanding of economics provide greater information and protection for investors than existed in the 1920’s and 1930’s. Comparisons to those periods might be more appropriate for some of the smaller and less well diversified indices in the scenarios.

A: Yes, both of those counts are out of 10,000 scenarios. These were scenarios selected where the cumulative return was below 0 for all 30 years of the simulation. So, it is a subset of the ones that end the simulation below zero.

Q3. How are the correlations on page 22 being computed?

A: For those correlations, we first sorted the relevant scenarios (i.e. rolling 12-month periods for the historical data, the 10,000 scenarios for the first year for the simulations) based on the US Large Cap (i.e. S&P 500) total return. Next, we broke that data down into 5 equal quintiles. So, for the GEMS scenarios, the ones in the 1st quintile reflect the 2000 scenarios with the smallest US Large Cap total returns. Finally, the bars reflect the correlation between the US Large Cap and US Small Cap (i.e. Russell 2000) within these quintiles.

Section J: 12/18/20 LATF Exposure

Q1. Scenarios were provided as of 12/31/19. Can they be provided as of 9/30/20 or 12/31/20?

This would be useful given lower starting rates than 12/31/19, and the scenarios could use the 3.25% 20-year mean reversion target for UST.

A: Yes. However, we expect to improve the model calibration and provide a new set of scenarios based on comments received on the 12/18/20 exposure. We propose to wait until then to provide scenarios as of different dates.

Q2. In the target formulas shown in the Targeting Example.xlsx file included in the 12/18/20 exposure, it looks like Theta and Lambda0 get added together in the targets. Why are there two separate parameters?
A: For the Long-Term State value targets (i.e. Column J of the Model Parameters tab of Targeting Example.xlsx file), the formula does add together Theta and Lambda0. A similar manipulation happens with the Kappa and Lambda1 parameters: those same formulas use the difference between these two parameters. Both Lambda0 and Lambda1 are risk premium parameters. Specifically, they are the ones which allow the long-term reversion levels for Yields to differ from those implied by the initial Yield curve. Whenever the model needs to price a set of cash flows (e.g. determining a particular Spot Rate), it does NOT use these risk premiums. That is why all of the formulas on the Auxiliary Functions tab of that spreadsheet, which are used to determine spot rates at different tenors, only reference parameters from the Theta, Kappa, and Sigma columns. This is also why there are two separate parameters: one that gets used for pricing (i.e. Theta and Kappa) and one that gets used as a risk premium (i.e. Lambda0 and Lambda1).

For more information, see the Treasury Model documentation.

Q3. Do the mean reversion level and speed in the Risk-Neutral model impact the scenarios in the Real-World model?

A: No, the Real-World model only relies on the mean reversion characteristics of the Real-World model, just like the current Academy generator.

Section K: Governance

Q1. What is the LATF ESG exposure, testing, and approval process?

Please explain the process for:

- Regularly scheduled / routine updates beyond initial condition or formulaic updates (E.g., bringing an additional year of historical data into the calibration), and
- More fundamental model changes (e.g., structural changes, changes in calibration methodology / philosophy).

A: The governance process is to be determined and will be addressed as part of items #8 and #25 on the ESG timeline.

**Conning Tang**

- **Question No 13**: [Describe the] out of the box capabilities in GEMS to allow different relationships (vs. just substituting different parameter values)?
  - **Question**: No

- **Question No 15**: What would actually change on a monthly basis?
  - a) Conning only updating initial conditions (and any LATF-specified formulaic updates – e.g., MRP)?
  - b) Are the updates purely mechanical, or are there any subjective tweaks or judgment calls?
  - **Question**: No

- **Question No 16**: What is the LATF exposure / testing / approval process for:
  - a) Other regularly scheduled / routine updates beyond initial condition or formulaic updates (e.g., bringing an additional year of historical data into the calibration)?
  - b) More fundamental model changes (e.g., structural changes, changes in calibration methodology / philosophy)?
  - **Question**: Yes

- **Question No 17**: What is the process for something unexpected / unanticipated happens in the monthly updates (e.g., routine business as usual) update/create scenarios that suddenly don’t make sense, or the calibration produces invalid parameters?
  - a) What is the process for reviewing and detecting questionable or inappropriate scenario distribution properties before scenarios are posted? (There should be checks for reasonability of distribution properties and not just validation that specific targets were reproduced. The scenarios exposed in Dec. reproduced LATF’s / Conning’s intended targets, but the process should have identified the inappropriate distribution of yield curve shapes.)
  - b) What is the escalation process if issues are detected? (Does Conning make judgments on their own? Are regulators and industry at risk of being surprised when unusual scenarios produce unusual reported results or changes in reported results that don’t align with prior sensitivities/dynamics?)
  - **Question**: To be addressed as part of item #8 in the ESG timeline.

- **Question No 18**: The International Diversified Equity (MSCI EAFE) and Aggressive Foreign Equity (MSCI Emerging Market) do not have Income Returns in the sample data set. Will this be adjusted to align with the historical results for these indices?
  - **Question**: No

- **Question No 19**: Why are bond funds assumed to only invest in industrials (not financials or industrials)?
  - **Question**: Yes

- **Question No 20**: Do BBB bonds reflect a selected BBB bond, a universe of BBB+ / BBB / BBB- bonds, etc.?
  - **Question**: Yes

- **Question No 21**: How are the international fund returns expressed: hedged or unhedged?
  - **Question**: Yes

- **Question No 22**: How often will the parameters of the model be updated?
  - **Question**: Yes

- **Question No 23**: See “Conning Tang” tab
  - **Question/Comment**: No

- **Question No 24**: How are the jump parameters determined and/or set? Does the model reflect recent jump data or long-term averages or a combination of both? Looking at historical data, how does the model determine when a jump has occurred and the magnitude of the jump? For example, considering the movement in the S&P 500 during the first couple of quarters of 2020, was this considered a jump or multiple jumps? If so, what was the criteria used to determine if a jump occurred? Over how many days was the jump considered to occur and what was the magnitude of the jump?
  - **Question**: Yes

- **Question No 25**: How is the value of the mean reversion speed parameter in the Variance Equation determined?
  - **Question**: Yes

- **Question No 26**: On page 13 [of the 12/17/20 LATF Equity and Corporate Model Presentation], are the 2 year and 30 year “columns” annualized returns?
  - **Question**: Yes

- **Question No 27**: On page 18 [of the 12/17/20 LATF Equity and Corporate Model Presentation], are the 34 negative thirty year returns for GEMS, and for the AIRG, out of 10,000 scenarios?
  - **Question**: Yes

- **Question No 28**: In the target formulas, it looks like Theta and Lambda0 get added together in the targets. Why are there two separate parameters?
  - **Question**: Yes

- **Question No 29**: Does that imply that the mean reversion speed and level of the embedded risk neutral model (i.e. the model without Lambda0 and Lambda1) doesn’t impact the scenarios?
  - **Question**: Yes

- **Question No 30**: Are there any boundary conditions on the state variables? If so, how does the GEMS model enforce that those boundaries are violated?
  - **Question**: Yes

- **Question No 31**: See “Mark Tenney 3.8.21” tab
  - **Question**: No

- **Question No 32**: Does the API accept a starting Yield Curve or is it fed the initial state variables?
  - **Question**: Yes

- **Question No 33**: Does the GEMS Treasury model require the initial state variables to be non-negative? If so, what happens if the initial yields produce a negative state variable?
  - **Question**: Yes

- **Question No 34**: See “Moody’s Analytics’ Questions” tab
  - **Question**: No

- **Question No 35**: Will scenarios be consistent from month to month? In other words, will new scenario number 1 be comparable to old scenario number 1 or will the scenarios be an entirely new random set? We would like to see consistency from period to period.
  - **Question**: Yes

- **Question No 36**: When parameters are updated, will Conning provide scenarios as of the valuation date before and after changing each parameter? Before and after changing all parameters in aggregate? We would like to be able to assess the impact of the change of each parameter.
  - **Question**: No

- **Question No 37**: If 10,000 scenarios are not enough for convergence (particularly for CTE98), what do we do?
  - **Question**: No

The Life Actuarial (A) Task Force met Feb. 25, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Judith L. French, Vice Chair, represented by Jason Wade (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li and Steve Ostlund (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV).

1. **Discussed General ESG Updates**

Pat Allison (NAIC) provided an update on the economic scenario generator (ESG) project. She said the landing page on the Conning & Company (Conning) website has been revised to facilitate access to ESG documentation. She said 23 companies have volunteered so far to participate in the ESG field test. She said participation requests will be accepted beyond the March 1 deadline. She said the question-and-answer (Q&A) document and technical documentation are available on the Conning website.

2. **Heard a Presentation on the Equity Model from Conning**

Daniel Finn (Conning) presented a slide deck (Attachment Three-A) on the GEMS equity model. He said the basic dataset provides equity indices for small cap, mid-cap, large and aggressive U.S equities. He discussed the following items related to equity returns: 1) risk premium parameters; 2) variance parameters; 3) jump parameters; and 4) dividend parameters. He noted that the calibration methodology looks at recent equity price changes over the period leading up to the model start date.

3. **Received an Overview of the Recent Exposures**

Scott O’Neal (NAIC) provided an overview of the list of ESG documents (Attachment Three-B) that the Task Force chair exposed on Feb. 24. The exposures are available on the Exposure tab of the Task Force website for public comment through March 22. The documents are also available on the Conning website.

The recording of the virtual meeting is available on the Related Documents tab of the Task Force website.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Overview of GEMS® Equity Model Formulae and Parameters
Feb. 25, 2021
Dan Finn, FCAS, ASA – Managing Director at Conning

Agenda

1. Equity Model Equations
2. Risk Premium Parameters
3. Variance Parameters
4. Jump Parameters
5. Dividend Parameters
Equity Equations

\[ \frac{dS(t)}{S(t)} = [(r(t) - D(t)) + \mu_0 + \mu_1 V(t) - \lambda_m V(t)]dt + \sqrt{V(t)}dW_1(t) + \gamma dN(t) \]

\[ dV(t) = (\alpha - \beta V(t))dt + \sigma \sqrt{V(t)}dW_2(t) \]

\[ dD(t) = \kappa (\beta D - \lambda D(t))dt + \sigma_D \sqrt{D(t)}dW_3(t) + D(t)\gamma dN(t) \]

Where:

- \( r(t) \) is the short rate simulated by the interest rate model
- \( D(t) \) is the stochastic dividend yield
- \( \mu_0 \) and \( \mu_1 \) are risk premia
- \( V(t) \) is the stochastic variance
- \( N(t) \) is a Poisson counting process with intensity \( \lambda_1 V(t) \) which is shared by the price and dividend processes
- \( \gamma \) is a variable jump size
- \( m \) is the average of the variable jump size \( \gamma \)
- \( \beta \) is a parameter controlling the mean reversion speed of the variance process
- \( \kappa \) is a parameter controlling the mean reversion speed of the variance process
- \( \sigma \) is the instantaneous variance of the variance process
- \( \sigma_D \) is the instantaneous variance of the dividend process
- \( \gamma_0 \) is the variable jump size of the dividend process

**ESG Comment Period Extensions**

Please note that the comment period for all previous ESG exposures has been extended to **March 22nd, 2021**. Comments received on all the ESG exposures will be discussed at the Spring NAIC National Meeting LATF session on April 8th, 2021.

**ESG Exposure 2/24/21: Alternative Treasury Calibrations**

The items listed below are exposed for a public comment period ending on **March 22nd, 2021**.

**LATF ESG Exposure 2.24.21 for Revised Baseline Calibration – exposed for comments through 3.22.2021**

Regulators and the NAIC have received feedback on the 12/18/20 exposure of an initial set of proposed ESG parameters and associated economic scenarios. One key comment on the treasury scenarios was that the prevalence of inverted Yield curves in the scenarios was much higher than would be expected considering relevant history. The parameterization of the treasury model was adjusted to correct for this issue, and a new set of scenarios was produced using this calibration. The specifics of the revised parameterization are explained in the “Outline of Revised Baseline Calibration” file, a “Treasury Parameters – Revised Baseline” excel document, and a series of fan charts. This set of scenarios will be referred to as the “Revised Baseline” and are included on the ESG landing page.

Exposted Items:
- Outline of Revised Baseline Calibration
- GEMS Output for Dec 2019 - Revised Baseline Calibration
- Treasury Parameters – Revised Baseline
- Fan Charts - Revised Parameters
- Average Yield Summary from Basic Data Set – Revised Baseline

**LATF ESG Exposure 2.24.21 for Alternative Calibrations – exposed for comments through 3.22.2021**

(Note: Fan charts shown for this exposure display the Revised Baseline Scenarios as of 2019 Q4 as shaded blue percentiles compared to the Alternative Scenarios described in each file name)

To help regulators and interested parties understand the impact to the scenarios of changing parameters, key targets in the treasury model were altered from their values in the “Revised Baseline” and statistics and graphs were developed from the resulting scenarios. Individual targets for the mean reversion level, mean reversion speed, volatility, and shift parameters were tested. Additionally, a set of scenarios that altered the volatility and shift parameters together was also produced. Finally, the initial conditions in the “Revised Baseline” were updated from 12/31/2019 to 12/31/2020 to illustrate the impact on the scenarios. Details on the altered calibrations described above are described in “Outline of Alternative Calibrations”, Treasury Parameters excel spreadsheets, and fan charts.

Exposed Items:
- Outline of Alternative Calibrations
- Treasury Parameters - Higher MRP
- Fan Charts - Higher MRP
Purpose of the Alternative Treasury Calibrations

The materials described above are being exposed in order to:

- Educate regulators and interested parties on how changing various targets impacts the parameters and corresponding scenarios produced by the ESG, and to
- Generate comments on the desired calibration or calibrations to be utilized in industry field testing.

Supplemental Materials to Prior ESG Exposures

The items listed below are supplemental to previously exposed materials.

LATF ESG Exposure 1.21.21 for ESG Scenario Statistics and Reports – exposed for comments through 3.22.2021

The 1/21/21 ESG Scenario Statistics and Reports exposure detailed reports and statistics that are planned to be delivered with the production scenario files. The files below have been added to give examples of the simulation summary report, the subset reports, and the average Yield summary reports. These reports are based off of the calibration exposed 12/18/2020.

Supplemental Materials:
1000 Path Subset Summary from Basic Data Set exposed 12.18.20
500 Path Subset Summary from Basic Data Set exposed 12.18.20
200 Path Subset Summary from Basic Data Set exposed 12.18.20
50 Path Subset Summary from Basic Data Set exposed 12.18.20
Average Yield Summary from Basic Data Set exposed 12.18.20
Simulation Summary from Basic Data Set exposed 12.18.20
LATF ESG Exposure 1.21.21 for Scenario Picker Tool – exposed for comments through 3.22.2021

The 1/21/21 ESG Scenario Picker Tool exposure detailed a methodology to produce representative subsets from the full set of 10,000 scenarios. The files listed below are the scenario subset files and are based off of the calibration exposed 12/18/2020. Additionally, the “Significance Values – Data” file illustrates how the chosen methodology was used to produce scenario subsets.

Supplemental Materials:
1000 Path Subset from Basic Data Set exposed 12.18.20.
500 Path Subset from Basic Data Set exposed 12.18.20
200 Path Subset from Basic Data Set exposed 12.18.20
50 Path Subset from Basic Data Set exposed 12.18.20
Significance Values – Data

LATF ESG Exposure 1.21.21 for SERT Scenarios – exposed for comments through 3.22.2021

The 1/21/21 Stochastic Exclusion Ratio Test (SERT) exposure described the proposed methodology to produce the VM-20 SERT scenarios using the new ESG. The SERT scenarios produced using the proposed methodology have been added to the website.

Supplemental Materials:
SERT Scenarios from Basic Data Set exposed 12.18.20

Directions on how to access the ESG landing page on Conning’s website

The ESG landing page on Conning’s website, containing all the documents described above, is accessed by navigating to the “Economic Scenarios” section of the NAIC’s PBR website. See below for more details.

Principle-Based Reserving (PBR) Section on the NAIC’s Website

Link: https://content.naic.org/pbr_data.htm

Navigation path: NAIC Home Page → Industry → click in the box for Principle-Based Reserving (PBR) → scroll down to the Economic Scenarios section

ECONOMIC SCENARIOS

Clicking on the link labeled “Economic Scenarios, Tools, Training Materials, and Documentation” will take you to the ESG landing page on Conning’s website. Related files, including files for the ESG Exposures, can be found on the landing page.
The Life Actuarial (A) Task Force met Feb. 11, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Judith L. French, Vice Chair, represented by Jason Wade (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li and Steve Ostlund (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV). Also attending was: Steve Boston (PA).

1. **Adopted Amendment Proposal 2020-11**

Mr. Robinson discussed his comments (Attachment Four-A) on amendment proposal 2020-11, which recommends revisions to the life principle-based reserving (PBR) exemption to modify the treatment of policies resulting from conversions. Ms. Hemphill said three editorial changes to the amendment proposal were made to reflect some of Mr. Robinson’s comments. The first change revises the language in the third paragraph of Subsection 1.D.1 from “company fails to meet either condition …” to “company does not meet either condition …”. The second and third changes revise Subsection 1.D.2 by respectively placing the words “that would otherwise be” in front of “subject to VM-20” and by deleting the phrase “that are being valued.”

Mr. Leung made a motion, seconded by Ms. Ahrens, to adopt amendment proposal 2020-11 (Attachment Four-B), including the editorial changes proposed by Ms. Hemphill. The motion passed unanimously.

2. **Discussed Amendment Proposal 2019-33**

Mr. Bock said the California Department of Insurance (DOI) comments (Attachment Four-C) on amendment proposal 2019-33 (Attachment Four-D) are largely editorial but specifically mention that the Subsection 1.B and Subsection 1.C references to Subsection 1.F should be revised to clarify whether they refer to Subsection 1.F.1 or Subsection 1.F.2. He said the proposal should also clarify whether retroactivity is permitted and for what years the premium for group business subject to individual underwriting will be included in the premium considered in the determination of eligibility for the PBR exemption. Mary Bahna-Nolan (American Academy of Actuaries—Academy) agreed to make the clarifications to the proposal based on the comments. Ms. Hemphill said the intent is to include all premiums for group business subject to individual underwriting regardless of the issue year. Ms. Allison said amendment proposal 2020-11 may also need clarification on that point.

Mr. Boston said his comment letter (Attachment Four-E) suggests the need for clarification of the transition language in Subsection 1.F.1. Ms. Bahna-Nolan said the intent was to have the language apply only to group life certificates, not to group master contracts. She said the Academy will review the language.

Mr. Robinson said the primary purpose of his comments (Attachment Four-F) is to redraft some of the language. He said his primary suggestion is to bring the footnote into the body of the text. Ms. Bahna-Nolan said the Academy agrees with the comments and will revise its proposal accordingly. Reggie Mazyck (NAIC) said that making a change to the annual statement blank to move the premium for group business subject to individual underwriting from the group column to the individual life column would alleviate the need for referencing group premiums in the footnote.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Rachel Hemphill, TDI – Allows exemption of policies from prior issue years when there is a change in the Life PBR Exemption requirements.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Valuation Manual Section II, Subsection 1.D

D. Life PBR Exemption

1. A company meeting the at least one of the conditions in D.2 below may file a statement of exemption for ordinary life insurance policies, except for policies in D.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. If a company has no business issued directly or assumed during the current calendar year that would otherwise be subject to VM-20, a statement of exemption is not required. For a filed statement of exemption, the statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that at least one of the two conditions in D.2 was met based on premiums from the prior calendar year annual statement and the statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

If a filed statement of exemption is not rejected by the domiciliary commissioner, the filing of subsequent statements of exemption is not required as long as the company continues to qualify for the exemption; rather, ongoing statements of exemption for each new calendar year will be deemed to not be rejected, unless: 1) the company fails to meet either condition in D.2 below, 2) the policies contain those in D.3 below, or 3) the domiciliary commissioner contacts the company prior to Sept. 1 and notifies them that the statement of exemption is rejected. If any of these three events occur, then the statement of exemption for the current calendar year is rejected and a new statement of exemption must be filed and not rejected in order for the company to exempt additional policies. In the case of an ongoing statement of exemption, rather than include a statement of exemption with the NAIC filing for the second quarter of that year, the company should enter “SEE
EXPLANATION™ in response to the Life PBR Exemption supplemental interrogatory and provide as an explanation that the company is utilizing an ongoing statement of exemption.

2. Conditions for Exemption:
   a. The company has less than $300 million of ordinary life premiums1, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums3 of less than $600 million; or
   b. The only new policies subject to VM-20 being issued or assumed by the company are due to election of policy benefits or features from existing policies that were not being valued under VM-A and VM-C and the company was exempted from, or otherwise not subject to, the requirements of VM-20 in the prior year.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, outlined in D.1 – D.3 above applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. However, if policies did not qualify for the Life PBR Exemption during the year of issue but would have qualified for the Life PBR Exemption if the current Valuation Manual requirements had been in effect during the year of issue, then the domiciliary commissioner may allow an exemption for such policies if such policies qualify for the exemption. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Valuation Manual Section II, Subsection 1.D - Footnote

1 Premiums are measured as total (first year, single, and renewal) direct plus total (first year, single, and renewal) reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance” excluding premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed is as defined in VM-01.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Addresses the exemption of policies issued in 2020 and 2021 (such as conversions) that may be exempted under the 2022 Valuation Manual requirements but did not qualify under the 2020 or 2021 Valuation Manual requirements.

Valuation Manual Section II, Subsection 1.D

D. Life PBR Exemption

1. A company meeting at least one of the conditions in D.2 below may file a statement of exemption for ordinary life insurance policies, except for policies in D.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. If a company has no business issued directly or assumed during the current calendar year that would otherwise be subject to VM-20, a statement of exemption is not required. For a filed statement of exemption, such the statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that at least one of the two conditions in D.2 was met based on premiums from the prior calendar year annual statement and the statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

If a filed statement of exemption is not rejected by the domiciliary commissioner, the filing of subsequent statements of exemption is not required as long as the company continues to qualify for the exemption; rather, ongoing statements of exemption for each new calendar year will be deemed to not be rejected, unless: 1) the company does not meet either condition in D.2 below, 2) the policies contain those in D.3 below, or 3) the domiciliary commissioner contacts the company prior to Sept. 1 and notifies them that the statement of exemption is rejected. If any of these three events occur, then the statement of exemption for the current calendar year is rejected and a new statement of exemption must be filed and not rejected in order for the company to exempt additional policies. In the case of an ongoing statement of exemption, rather than include a statement of exemption with the NAIC filing for the second quarter of that year, the company should enter “SEE
EXPLANATION™ in response to the Life PBR Exemption supplemental interrogatory and provide as an explanation that the company is utilizing an ongoing statement of exemption.

2. Conditions for Exemption:
   a. The company has less than $300 million of ordinary life premiums1, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums1 of less than $600 million; or
   b. The only new policies that would otherwise be subject to VM-20 being issued or assumed by the company are due to election of policy benefits or features from existing policies valued under VM-A and VM-C and the company was exempted from, or otherwise not subject to, the requirements of VM-20 in the prior year.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, outlined in D.1 – D.3 above applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. However, if policies did not qualify for the Life PBR Exemption during the year of issue but would have qualified for the Life PBR Exemption if the current Valuation Manual requirements had been in effect during the year of issue, then the domiciliary commissioner may allow an exemption for such policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Valuation Manual Section II, Subsection 1.D - Footnote

1 Premiums are measured as total (first year, single, and renewal) direct plus total (first year, single, and renewal) reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance” excluding premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed is as defined in VM-01.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Addresses the exemption of policies issued in 2020 and 2021 (such as conversions) that may be exempted under the 2022 Valuation Manual requirements but did not qualify under the 2020 or 2021 Valuation Manual requirements.
TO: Mr. Mike Boerner  
Chair, Life Actuarial Task Force  

SUBJECT: APF 2019-33  

DATE: August 18, 2020. December 7, 2020

California has a number of comments, largely editorial in nature, on APF 2019-33. These are as follows:

1. In multiple places, newly proposed language states “... subject to an individual risk selection process and meeting all the conditions in VM-20 Section 1.B”. We think it is redundant to state the first condition (“subject to an individual risk selection process”) since it is listed as a requirement in VM-20 Section 1.B, so we suggest deleting that first part.

2. In item 1.B of Section II, line 3, there is a section reference error. The words “paragraph D” should be changed to “subsection 1.G”. (The use of “subsection” in place of “paragraph” will bring about consistency with other verbiage on this same page.)

3. In subsection 1.B of Section II, we suggest changing “subsection 1.F” to “subsection 1.F.2” for maximum clarity. Similarly, in subsection 1.C of Section II, we suggest changing “subsection 1.F” to “subsection 1.F.1”.

4. In Section II, we suggest switching the ordering of Subsection 1.C and 1.D to improve the flow of the requirements.

5. We think it could be helpful if language were added somewhere to specifically state that there is to be no retroactivity to policies issued before the date of the company’s adoption of this new treatment of individually underwritten group. As worded, the APF is not wrong but there could be some potential for confusion.

7. The last paragraph of Subsection 1.F is a bit confusing, now that two transition periods are being discussed. The phrase “may elect to use the 2017 CSO Tables” is meant to refer only to the 2017-2019 transition period, but it does not quite come across that way. And the phrase “during the three years” may leave the reader wondering which three year period is being discussed.

8. We suggest changing the first 3+ lines of Subsection 1.G.1 to “A company meeting the condition in subsection 1.G.2 below may file a statement of exemption for individual life insurance policies and certificates, except for policies described in subsection 1.G.3. below, ...”

9. Also in subsection 1.G.1 there are some missing words, so we suggest replacing the phrase “that condition subsection G.2 was met” by “that the condition of subsection 1.G.2 was met”.

10. We suggest spelling out the word “September” in the last sentence of subsection 1.G.1.

11. The footnote 1 symbol in the first line of 1.G.2 needs to be turned into a superscript.

12. In the footnote, the parenthetical starts out with “For a statement of exemptions” and we suggest it be “For statements of exemption”.

© 2021 National Association of Insurance Commissioners
13. In VM-20 Section 1.B, we suggest replacing the current lead-in sentence with this: “Individual life certificates under a group life contract shall be subject to the requirements of VM-20 if all of the following are met:” to better conform to the language style of the VM.

14. In VM-20 Section 1.B, it would be more usual to use numbers 1 through 5 rather than Romanettes.

15. In VM-20 1.B.iv (or 1.B.4) we think “similar ... to” would sound better than “similar ... as”.

16. In VM-20 Section 1.B.v (or 1.B.5), we suggest deleting “with an NPR floor” after “principle-based valuation”, since it seems unnecessary.

17. The Guidance Note in VM-20 Section 2.A need not be italicized or bold.

18. The complete cross-out of VM-51 verbiage is a bit confusing. Since we presume there is no intent to delete VM—51, the pages of the APF concerning VM-51 should simply be removed, in our view.

19. Both this APF and the currently pending APF from Rachel Hemphill (# 2020-11) about the Company-wide Exemption propose wording changes in the same area of the Valuation Manual, so at some point someone will need to weave those two sets of wording changes together in a logical way.

Sincerely,

Ben Bock & Elaine Lam

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

American Academy of Actuaries, Life Reserves Work Group

Addition of language to clarify the definition of individually underwritten life insurance and the applicability of Principle-Based Reserve (PBR) requirements for group insurance contracts with individual risk selection issued under insurance certificates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 version of the Valuation Manual used.

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Individual insurance certificates issued under a group contract which utilize an individual risk selection process, pricing, premium rate structures and product features are similar to individual life insurance policies. They are currently excluded from VM-20 because they are filed under a group contract, but they should be subject to VM-20 due to this similarity. See Appendix.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2019-33
Certain contracts issued under a master group contract require individual risk selection in order to qualify for issuance of the group insurance certificate and do not require continued membership in the group in order to maintain coverage. The certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing and risk classification, and are managed in a similar manner as individual ordinary life insurance contracts. These individual certificates should follow the same reserve requirements as other individual life contracts of the same product type. Therefore, a change is needed within the Valuation Manual to bring these individual certificates into scope of VM-20.

Six changes are recommended:

1) Within the Reserve Requirements section (Section II), change the minimum reserve requirements to also apply to group life contracts which, other than the difference between issuing a policy and issuing a group certificate, have the same or mostly similar contract provisions, risk selection process and underwriting as individual ordinary life contracts;

2) Within the Reserve Requirements section (Section II), add a transition period for individual group certificates issued on or before 1/1/2024;

3) Within the Reserve Requirements section (Section II), add language to Subsection 1.D and the corresponding footnote to include premiums from group life contracts which have individual certificates that were issued using individual risk selection processes;

4) Add new paragraph, VM-20 Section 1.B (and reformat to make current paragraph Section 1.A) to clarify group life certificates issued using individual risk selection processes, including a definition and requirements to be met, are subject to the requirements of VM-20;

5) Add guidance note after first sentence in VM-20 Section 2.A.1 that group life certificates that meet the definition for individual risk selection process use the same VM-20 Reserving Categories as defined in Section 2;

6) Draft referral to the NAIC Blanks (E) Working Group, to revise the VM-20 Reserves Supplement, Part 2 to report premiums for total Group Life and Group Life with certificates subjected to an individual risk selection process and which meet all of the conditions as defined in VM-20 Section 1.B separately.
II. Reserve Requirements

This section provides the minimum reserve requirements by type of product, as set forth in the seven subsections below, as follows:

1. Life Insurance Products
2. Annuity Products
3. Deposit-Type Contracts
4. Health Insurance Products
5. Credit Life and Disability Products
6. Riders and Supplemental Benefits
7. Claim Reserves

All reserve requirements provided by this section relate to business issued on or after the operative date of the Valuation Manual. All reserves must be developed in a manner consistent with the requirements and concepts stated in the Overview of Reserve Concepts in Section I of the Valuation Manual.

Guidance Note: The terms “policies” and “contracts” are used interchangeably.

Subsection 1: Life Insurance Products

A. This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

B. Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in subsection 1.F below. For this purpose, joint life policies are considered individual life.

C. Minimum reserve requirements for group life contracts with individual certificates which meet all the requirements in VM-20 Section 1.B are provided by VM-20, except for election of the transition period in subsection 1.F below.

D. Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

E. Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.

F. A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for.
1. Business described in subsection 1.C above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.

2. Business not described in subsection 1.C otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

G. Life PBR Exemption

1. A company meeting the condition in subsection G.2 below may file a statement of exemption for ordinary life insurance policies including group life insurance certificates subject to an individual risk selection process and meeting all the conditions in VM-20 Section 1.B, except for policies in subsection G.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition subsection G.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:
   a. The company has less than $300 million of ordinary life premiums1, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums1 of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Footnote change
Premises are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. Premiums should also include the premiums from group life insurance certificates that were subject to an individual risk selection process and meet all the conditions as defined in VM-20 Section 1.B. For a statement of exemptions filed for calendar year 2022 and beyond, the premiums for these group life certificates were reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement, Part 2, if applicable. Premiums should exclude amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as guaranted life insurance premium. Preneed and guaranteed issue life insurance policies are as defined in VM-01.

Commented [A1]: This will need to be added to the PBR Supplement by the NAIC Blanks (E) Working Group.
Section 1: Purpose

A. These requirements establish the minimum reserve valuation standard for individual life insurance policies issued on or after the operative date of the Valuation Manual and subject to a principle-based valuation with an NPR floor under Model #820. These requirements constitute the Commissioners Reserve Valuation Method (CRVM) for policies of individual life insurance.

B. If all of the following requirements are met, individual life certificates under a group contract are included in the requirements of VM-20.

(i) An individual risk selection process, defined below, is used to obtain group life insurance coverage;

(ii) The individual certificates utilize premiums or cost of insurance schedules and charges based on the individual applicant’s issue age, duration from underwriting, coverage amount and risk classification and there is a stated or implied schedule of maximum gross premiums or net cash surrender value required in order to continue coverage in force for a period in excess of one year;

(iii) The group master contract is designed, priced, solicited, and managed similar to individual ordinary life insurance policies rather than specific to the group as a whole;

(iv) The individual certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing, and risk classification as individual ordinary life insurance contracts.

The group master contract and individual certificates are issued on or after the operative date of the Valuation Manual and subject to a principle-based valuation with an NPR floor under Model #820.

An individual risk selection process is based on characteristics of the insured(s) beyond sex, gender, age, tobacco usage, and membership in a particular group. This may include, but is not limited to, completion of an application (beyond acknowledgement of membership to the group, sex, gender and age), questionnaire(s), on-line health history or tele-interview to obtain non-medical and medical or health history information, prescription history information, avocations, usage of tobacco, family history, or submission of fluids such as blood, Home Office Specimens (HOS), or oral fluid. The resulting risk classification is determined based on the characteristics of the individual insured(s) rather than the group, if any, of which it is a member (e.g., employer, affinity, etc.). The individual certificate holder is charged a premium rate based solely on the individual risk selection process and not on membership in a specific group.
Guidance Note: The use of evidence of insurability does not by itself constitute an individual risk selection process. Use of information obtained from a census or question(s) regarding gender, occupation, age, income and/or tobacco usage solely for purposes of determining a rate classification does not by itself qualify a group as having used an individual risk selection process. Group insurance where the underwriting is based on the characteristics of the group and census data but where some individuals are subjected to individual risk selection as a result of compensation level, age, an existing medical condition or impairment, late entry into the group, failure of the group to meet minimum participation requirements or voluntary buy-up of increased coverage does not meet the definition of an individual risk selection process.
VM Change 5 - VM-20: Requirements for Principle-Based Reserves for Life Products

Section 2: Minimum Reserve

A. All policies subject to these requirements shall be included in one of the VM-20 Reserving Categories, as specified in Section 2.A.1, Section 2.A.2 and Section 2.A.3 below.

Guidance Note: Since Group Insurance subject to an individual risk selection process and meeting all the requirements, as defined by Section 1.B is subject to VM-20 requirements, Section 2.A shall apply meaning that any such contracts will be included in one of the VM-20 Reserving Categories defined by Section 2.A.1, Section 2.A.2, and 2.A.3. All requirements in VM-31 which apply to a VM-20 Reserving Category shall apply to any group insurance subject to Individual Underwriting Selection that has been included in that VM-20 Reserving Category.

The company may elect to exclude one or more groups of policies from the stochastic reserve calculation and/or the deterministic reserve calculation. When excluding a group of policies from a reserve calculation, the company must document that the applicable exclusion test defined in Section 6 is passed for that group of policies. The minimum reserve for each VM-20 Reserving Category is defined by Section 2.A.1, Section 2.A.2 and Section 2.A.3, and the total minimum reserve equals the sum of the Section 2.A.1, Section 2.A.2 and Section 2.A.3 results below, defined as:
VM Change 6 – VM-20 Reserves Supplement, Part 2: Life PBR Exemption

Refer to NAIC Blanks (E) Working Group, request for modification to the supplemental report for the Life PBR Exemption, to show the premiums for the group life that utilized an individual risk selection process and meets all of the requirements in VM-20 Section 1.B. as these premiums are currently grouped together with other Group Insurance in Exhibit 1. As there are other instances where the ordinary life premiums are not included in the determination of the Life PBR Exemption (e.g., for guaranteed issue policies), it may be useful to request addition of the breakdown of premiums used to determine the exemption:

Possible insertion between questions 1 and 2 for disclosure of premiums used in the determination of eligibility for the Life PBR exemption, split by ordinary life and group subject to an individual risk selection process and meeting all of the requirements in VM-20 Section 1.B.
