**IDENTIFICATION OF ITEM(S) TO CHANGE**

To replace the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation and the Adjustments to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibits with modernized exhibits as indicated below in order to promote consistent reporting of assessable premiums among industry members and to reflect changes in guaranty association laws adopted over the past two decades.

**DRAFTING NOTE LIFE, HEALTH and PROPERTY ANNUAL STATEMENT BLANK AND INSTRUCTIONS**

For the Life, Health and Annuity Guaranty Association Assessable Premium Exhibits Parts 1 and 2 - edit the blank and instructions as shown below. The Exhibits are to continue to be filed as stand-alone supplemental exhibits in each of the life, health and property blanks due April 1.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

To have all member companies of the life, health and annuity guaranty associations consistently file the revised referenced exhibits for purposes of collecting guaranty association assessable premium data.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: ________________

Other Comments: ________________

**This section must be completed on all forms.**
ANNUAL STATEMENT INSTRUCTIONS – LIFE, HEALTH AND PROPERTY

LIFE, HEALTH AND ANNUITY GUARANTY ASSOCIATION ASSESSABLE PREMIUM MODEL ACT

ASSESSMENT BASE RECONCILIATION EXHIBIT – PARTS 1 & 2

To be filed on or before April 1.

This 2-part exhibit must be completed for any state, District of Columbia, and Puerto Rico in which the company is licensed and should be submitted to the applicable jurisdictions that jurisdiction. In addition, an exhibit should be prepared for any state, District of Columbia, and Puerto Rico in which the company received any direct premiums or deposits. DO NOT SUBMIT exhibits for American Samoa, Guam, U.S. Virgin Islands, Canada, Northern Mariana Islands and other alien jurisdictions. A copy of the exhibit for each jurisdiction and a grand total page for both Parts 1 and 2 must be completed and the exhibits that are submitted should be sent to the state of domicile and the NAIC Support and Services Office.

Only companies that are members of the life, health and annuity guaranty associations should complete this exhibit. If a company is unsure if it is a member of a life, health and annuity guaranty association, it should contact the state life, health and annuity guaranty associations in its state of domicile or state(s) where it is licensed to write life, health and annuity business.

For the purpose of these instructions, references to Schedule T apply to the Life and Health blank and references to the Exhibit of Premiums and Losses apply to the Property blank.

Part 1 develops gross premiums that will be subject to further reduction in Part 2 for guaranty association coverage and/or assessment limitations. Attention should be focused on the deduction items in Part 2, in particular those associated with certain accident and health products and the various types of annuity classifications for allocated and unallocated products.

The columnar headings correspond to the annual statement, Schedule T (Life or Health blanks) or Exhibit of Premiums and Losses (Property blank) as follows:

<table>
<thead>
<tr>
<th>Health Blank Schedule T Column Reference</th>

</thead>
</table>

© 2021 National Association of Insurance Commissioners
In the event that this detailed information is not available in the reporting entity’s accounting records, recognized allocation to estimation processes for state allocations may be utilized if consistently applied.

Adjustments to the exhibit may be required by states that have not adopted the Life and Health Insurance Guaranty Association Model Act (#520).
PURPOSE OF THE LIFE, HEALTH AND ANNUITY GUARANTY ASSOCIATION
ASSESSABLE PREMIUM MODEL ACT ASSESSMENT BASE RECONCILIATION EXHIBIT – PARTS 1 and 2

It is desirable to display on one page the various types of annuity considerations, deposit-type contract funds and other considerations received directly by the reporting entity, separated by state, as is currently reported in the applicable Schedule T or Exhibit of Premiums and Losses; but, however, it is not possible to use such data for state guaranty association assessments without further modification. This is because of: (a) the limits placed on certain considerations for assessment purposes; (b) the variations by states in designation of “funds” for assessments; and (c) other factors that are interpreted differently by the individual states.

As a result, the NAIC and NOLHGA have developed a two-part specific exhibit, the Life, Health & Annuity Guaranty Association Assessable Premium Model Act Assessment Base Reconciliation Exhibit (the “Assessable Premium Base Reconciliation Exhibit”) that utilizes the state figures in Schedule T or Exhibit of Premiums and Losses as the starting point for development of the guaranty association assessment base and then allows for certain adjustments in order to arrive at the applicable assessable premium base for each state as defined in the NAIC Life and Health Insurance Guaranty Association Model Act (#520). States should not use Schedule T or Exhibit of Premiums and Losses as the basis for guaranty association assessments, but instead use the Assessable Premium Base Reconciliation Exhibit for the applicable assessment premium starting point.

Introduction

These instructions are intended to assist companies in completing the Assessable Premium Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibit-Parts 1 and 2 (the “AEP Pt. 1” (Base Reconciliation Exhibit) and “AEP Pt. 2”, respectively). Both AEP Parts 1 Adjustments to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibit (Adjustments Exhibit). The and 2 must be prepared Base Reconciliation Exhibit starts with the same carepremiums, deposit-type contract funds and accuracy that would be usedother considerations as reported in preparing the applicable Schedule T or Exhibit of Premiums and Losses and then makes necessary adjustments (both positive and negative) to establish the Annual Statement, sincepremium assessment base as defined by the information is being provided to the Guaranty Associations. COMPANIES MUST READ THESE INSTRUCTIONS CAREFULLY AND REFER TO THE RELEVANT GUARANTY ASSOCIATION ACTS, WHERE APPROPRIATE.

AEP Pt. 1 and AEP Pt. 2current Model #520. The Base Reconciliation Exhibit must be completed, along with a grand total page for both, for each state (as well as the District of Columbia and Puerto Rico) in which the company is licensed or does business.

The AEP Pt. 1 and Pt. 2 each have four columns. Column 1 is for all individual and group life insurance premiums. Column 2 is for all allocated annuity amounts (whether called premiums, deposit-type contract funds, or other considerations) and includes both allocated and unallocated annuity governmental retirement plans established under Sections 401, 403(b) or 457 of the U.S. Internal Revenue Code (“IRC”). Column 3 is for all individual and group accident and health premiums. Column 4 is for all unallocated annuity amounts (whether called premiums, deposit-type contract funds, or other considerations) other than amounts received in connection with governmental retirement plans established under IRC Sections 401, 403(b) or 457 (which should be in Column 2).

Should you have questions about how to fill out the Assessable Premium Base Reconciliation Exhibit, and the answers are not provided in the instructions below, you may wish to consult the Model #520, particular State Guaranty Association Acts, the Annual Statement Instructions manual, your company attorney, particular State Insurance Departments, or particular State Guaranty Association Administrators.
# Assessable Premium

The Base Reconciliation Exhibit - Part has four columns: Column 1 is for all individual and group life insurance premiums; Column 2 is for all individual and group allocated annuity amounts (whether called The APE Pt. 1 starts with premiums, deposit-type contract funds and/or other considerations as reported in the applicable Schedule T or the Exhibit of Premiums and Losses); Column 3 is for all individual and then makes necessary adjustments (both positive for group accident and negative) to establish the initial assessable premium base before certain annuity adjustments as defined by each states’ guaranty association act.

### Base Reconciliation Exhibit

### Premiums, Considerations and Deposits from Schedule T or the Exhibit of Premiums and Losses

**Line 1** - THESE AMOUNTS MUST EXACTLY MATCH THE AMOUNTS REPORTED BY YOUR COMPANY ON SCHEDULE T OR THE EXHIBIT OF PREMIUMS AND LOSSES FOR ALL LINES OF BUSINESS.

**Line 1** - THESE AMOUNTS MUST EXACTLY MATCH THE AMOUNTS REPORTED BY YOUR COMPANY ON SCHEDULE T OR THE EXHIBIT OF PREMIUMS AND LOSSES FOR ALL LINES OF BUSINESS.

### Modifications to Premiums, Considerations and Deposits

Lines 2 through 10 are required to adjust amounts reported on your company’s Annual Statement Schedule T or Exhibit of Premiums and Losses and are critical in transforming premium data prepared for Annual Statement purposes into data suitable for Guaranty Association assessment purposes.

**Line 2.1 - 2.99** - Enter any life, annuity or health premiums, deposit-type contract funds and other considerations, received by your company that were not reported by state on Schedule T or the Exhibit of Premiums and Losses and, therefore, not included in Line 1 above. The total of Line 2 should equal Line 2.1 + Line 2.2. Such amounts should be reported in the appropriate column based on whether such amounts relate to life insurance, annuity, accident and health, or annuity and deposit-type business. Include all amounts received for insurance contracts. Guaranteed investment contract receipts, universal life insurance deposits and any other amounts received by the company for covered contracts that were not reported on the company’s Schedule T or the Exhibit of Premiums and Losses (sometimes referred to as FASB 97 deposit reporting) must be reported on Line 2. Annuity amounts entered on Lines 1 and 2 must include, but are not limited to, amounts received for immediate or deferred annuity contracts, structured settlement agreements, lottery contracts, group annuity contracts, guaranteed interest or investment contracts, deposit administration contracts and allocated or unallocated funding obligations. In addition, allocate by state and include on Line 2 amounts reported on the applicable Schedule T or Company Contributions for Employee Benefit Plans (Line 60 (Health blank) or 90 (Life blank) of Schedule T), Dividends Applied to Purchase Paid-Up Additions and Annuities, Dividends Applied to Shorten Endowment or Premium-Paying Period, Premium or Annuity Considerations Waived Under Disability or Other Contract Provisions, and Aggregate Other Amounts Not Allocable by State.

**Line 2.1** - Enter fees and charges for investment management, administration and contract guarantees from the Separate Account associated with variable contracts, reduced by any contractholder dividends representing a return of such fees and charges. Specifically, in the case of variable annuity products, those portions of fees and charges paid to the general account with respect to living and death benefit guarantees, M&E charges and annual contract charges should be included on Line 2.1. In the case of variable life products with guaranteed death benefits, the portion of fees/charges paid to the general account that should be included on Line 2.1 would include the cost of insurance in addition to M&E charges and annual contract charges. Because the fees and charges are reportable by state, a reporting entity may use either a seriatim, i.e., specific contract identification by state, or an allocation method. An appropriate allocation method would be to calculate a ratio of fee income to total variable premium for the product line and multiply the ratio by the state specific variable premium.
Enter any other life, annuity or health premiums, deposit-type contract funds and other considerations, received by your company that were not reported by state on Schedule T or the Exhibit of Premiums and Losses, Guaranteed investment contract receipts, universal life insurance deposits and any other amounts received by the company for covered contracts that were not reported on the company’s Schedule T, Exhibit of Premiums and Losses, or Line 1 above, must be reported on Line 2.6.

Allocate by state and include on Lines 2.2 through 2.6 amounts reported on the corresponding line on Schedule T as Company Contributions for Employee Benefit Plans, Dividends Applied to Purchase Paid-Up Additions and Annuities, Dividends Applied to Shorten Endowment or Premium-Paying Period, Premium or Annuity Considerations Waived under Disability or Other Contract Provisions and Aggregate Other Amounts Not Allocable by State (such as FEGLI/SEGLI).

If by state information is not readily available, reasonable allocation methods may be used to estimate state amounts. “Data not available by state” or similar comments are not valid reasons to exclude these items.

The primary purpose of Lines 3.1 to 3.99 is to add back amounts that, as a result of statutory accounting practices, were deducted from the amounts reported on Line 1 or 2. For the most part, these deductions represent current year benefit payouts, transfers, surrenders or withdrawals.

Enter any amounts deducted prior to determining amounts included in Lines 1 and 2. Companies reporting net amounts on Lines 1 and 2 must complete Lines 3.1 through 3.99 in order to provide gross premiums and deposits. Amounts reported on these lines should include transfers to separate accounts, GIC rollovers to other companies, surrenders, excess interest, and any other amounts deducted from or not included in the company’s gross premium figures. Amounts that were reported as “Unallocated Annuity Deposit-Type Contract Funds and Other Unallocated Fund Deposits Considerations” (Column 4) in the year of receipt and transferred in the current year to “Allocated Annuity and Other Allocated Fund Deposits Considerations” (Column 2), as individuals are “annuitized,” are to be included on Line 3.3 of Column 4 if these amounts were deducted from the amounts reported on Lines 1 or 2. As illustrated below, adding these amounts back to Column 4 may be necessary as amounts over $5 million may have been deducted in prior years—Lines 1 or 2.

As an example, most pension plan unallocated annuities provide for the purchase of an annuity payout benefit (“annuitization”) for an individual. In the year of the receipt of the consideration for the unallocated annuity, that consideration, subject to limitations, is to be included in the total assessable premium assessment base reported in Line 1044, Column 4. In the year of annuitization, the amounts transferred to fund the annuity payout benefits are to be included in the total assessable premium assessment base reported in Line 1044, Column 2. There should be no corresponding reduction to the total assessment base reported in Line 1044, Column 4 for the amount transferred to fund the annuitization to the extent that such amounts would not have been included in an assessment base. When an annuity payout benefit is, pursuant to that contract, purchased for an individual from monies previously deposited with the Company, it is assumed that there is no new contract, rather, it is an internal rollover of funds, i.e., and no new funds have been received by the Company has received no new funds.

In order to correctly report amounts subject to assessment in Columns 2 and 4, companies should maintain transaction level detail for each deposit type contract. On a cumulative basis, the assessable premium can never be less than $0 on any given contract. For example, the following will illustrate the correct reporting of deposit-type contracts that partially or fully annuitize in a model act state (i.e., assessable premium up to $5 million per unallocated annuity contract). The amount reported on APE Pt. 2 Line 17.32.4 is a balancing amount such that the assessable premium for any unallocated contract never exceeds $5 million nor is less than $0 over the life of the contract. The same approach applies to any state that covers unallocated annuities, irrespective of the limits. In this example, there is a $50 million unallocated contract in Year 1 and the company reports $5 million in Column 4 ($50 million on Line 1 or 2, APE Pt. 1, and a reduction of $45 million via Line 17.3 of APE Pt. 2). If the contract is completely annuitized in year 2, the company must report $50 million in Column 2 as allocated premium (APE Pt. Line 1 or 2) and $50 million on Line 3.3, Part 1 (as an add—back) in the unallocated premium column. The Company should report a deduction of $5 million on APE Pt. 2 Line 17.32.4 in Column 4 in the second year. Since it has reported the full $50 million received in Column 2 by the end of the
second year. On a cumulative basis, $0 is reported in Column 4. The Company has not subjected to assessment more premium than it has received.

Four additional examples will further illustrate the correct reporting of deposit type contracts that partially or fully annuitize in a model act state. In these examples, it can be seen that at any point in time, the Company has never included more in the assessable premium base (Columns 2 and 4 combined) than what was received by the Company over that period of time. Also, the Company never included more than $5 million of assessable premium in Column 4 at any point in time.

© 2021 National Association of Insurance Commissioners
For Contract #3, the Company received $20 million of deposits and included $20 million in the assessable premium base ($15 million as annuity considerations and $5 million as deposit funds) over the five-year period.

For Contract #4, the Company received $25 million of deposits and included $220 million in the assessable premium base ($15 million as annuity considerations and $5 million as deposit funds) over the five-year period. Contract #4 is different from Contract #1 in that after Year 2, only $3 million has been included in Column 4 since $7 million of the $10 million of deposits received has annuitized. For Year 3, $2 million is included in Column 4, bringing the cumulative total to $5 million, since a total of $15 million has been received, but only $7 million has annuitized.

You must provide a clear explanation of any amounts listed within Lines 3.501, 3.502, 3.503, etc. Line 3.99 (Total) should represent the difference between gross and net premiums for each column.

**Lines 4.1 through 4.4 are intended to transfer allocated and unallocated premiums between Columns 2 and 4 due to reporting differences with how a company may reflect such premiums in Schedule T (and thus Line 1 since Schedule T is the starting point of the APE Pt. 1). If transfers are properly completed:**

</table>
- Column 2 should contain BOTH allocated and unallocated annuities associated with governmental retirement plans qualified under IRC Sections 401, 403(b) and 457 and all other allocated annuities.

- Column 4 should contain unallocated annuities associated with benefit plans protected by the Federal Pension Benefit Guaranty Corporation (“PBGC”), government lotteries, book value accounting guaranty for defined contribution benefit plan participants by reference to a portfolio of assets owned by the trustee (commonly referred to as “synthetic GICS”), and all other unallocated annuities including those that fund employee, union or association of natural persons benefit plans (other than those associated with governmental retirement plans qualified under IRC Sections 401, 403(b) or 457, which should be included in Column 2 as mentioned above).

Line 4.1 Transfer amounts received to fund annuity contracts qualified under Internal Revenue Code Section 403(b) (sometimes referred to as tax-sheltered annuities) from the Annuity Considerations column (Column 2) to the Deposit-Type Contract Funds and Other Considerations column (Column 4). This transfer line should be completed by companies that report 403(b) annuity amounts in the Life Contracts—Annuity Considerations column 3 (Life blank) or Life & Annuity Premiums & Other Considerations Column 6 in part (Health blank) of Schedule T. All 403(b) amounts in that column should be transferred to Column 4 of the Base Reconciliation Exhibit, whether the 403(b) contract was issued to a governmental or non-governmental policyholder. The amount entered as a negative in the Annuity Considerations column must exactly match the amount entered as a positive in the Deposit-Type Contract Funds and Other Considerations column.

NOTE: In 1995, the NAIC adopted changes to Section 6.A(1)(b) and 6.A(1)(c) of the Model #520 which effectively reclassified contracts issued under a governmental retirement plan established under Section 401, 403(b) or 457 of the U.S. Internal Revenue Code from the unallocated annuity to the allocated annuity account (Non-governmental 401 and 403(b) contracts funded by an unallocated annuity contract remain in the unallocated annuity account.) Although now inconsistent with the adopted change, Base Exhibit, Line 4.1 must continue to be completed in accordance with the instructions in the preceding paragraph since no state has yet adopted this change. Changes to future annual statement instructions, forms or formula charts will be considered at such future date if and when adopted by individual state(s).

Line 4.2 Transfer any allocated annuity amounts included in the Deposit-Type Contract Funds and Other Considerations column (Column 4) to the Annuity Considerations column (Column 2), except for amounts received to fund annuity contracts qualified under Internal Revenue Code Section 403(b) contracts. This includes all allocated annuity contracts, regardless of whether the annuity is in deferred or payout status, whether the annuity is group or individual, and whether the annuity is qualified or non-qualified for tax purposes.

According to Model #520, an “unallocated annuity contract means any annuity contract or group annuity certificate that is not issued to and owned by an individual, except to the extent of any annuity benefits guaranteed to an individual by an insurer or reporting entity under the such contract or certificate.” An annuity is considered allocated unless it is unallocated. Examples of unallocated annuity contracts might be guaranteed investment contracts, deposit administration contracts, and unallocated funding agreements where no contract or agreement issued by the reporting entity, nor any certificate issued by the reporting entity guarantees individual benefits to specifically identified individuals.

Annuity contracts issued by the reporting entity that are held or owned in an individual retirement account under IRC Section 408(a) (whether the account is a custodial account or a trust), or which qualify as individual retirement annuities under IRC Section 408(b), should be considered allocated.

Group annuities may be allocated or unallocated. (The term “unallocated” is not synonymous with the term “group”.) A group contract or certificate that guarantees annuity benefits to an individual (this is not the guarantee typically found in a guaranteed investment contract or deposit administration contract which allows the pension trustee or administrator to purchase an annuity for a plan participant at a guaranteed purchase rate) should be considered allocated. In addition to contracts under which periodic payments are being made to individuals, group annuity contracts should be considered allocated if the reporting entity is obligated under the contract upon the request of an individual (or his or her beneficiary) to make either partial or full cash withdrawal payments, which may be subject to plan or statutory restrictions, to the individual (or his or her beneficiary).
The reporting entity will be considered to be obligated upon the request of an individual to make either partial or full cash withdrawal payments if withdrawals or death benefit payments are made from that participant’s account maintained (by the reporting entity or its designee) under the terms of the group annuity contract and regardless of whether such requests are submitted to the reporting entity directly by the individual (or his or her beneficiary) or indirectly through the plan trustee, administrator, sponsor or contract holder at the direction of the individual. As discussed in Line 4.1, the NAIC adopted a change to Model #520 that reclassifies governmental retirement plans established under Section 401, 403(b) and 457 of the Internal Revenue Code to the allocated annuity account. However, until adopted by a state legislature, 403(b) annuities should remain in the Deposit-Type Contract Funds and Other Considerations column (Column 4) to be consistent with existing statutes that require that these contracts be included with unallocated annuities for assessment purposes where applicable. Note that the amount entered as a negative in the Deposit-Type Contract Funds and Other Considerations column must exactly match the amount entered as a positive in the Annuity Considerations column.

Line 4.1 – 3 Transfer any unallocated annuity amounts received to fund ALLOCATED contracts qualified under IRC Sections 401, 403(b) or 457 from included in the Unallocated Annuity Column (Column 4) to the Allocated Annuity Column Considerations column (Column 2). Companies that report these amounts in the Annuity Considerations Column 5 or 7 (Life blank) or Life & Annuity Premiums & Deposit-Type Contract Funds and Other Considerations Column 6 in part (Health blank) of Schedule T, should complete this transfer line.

All amounts received for allocated contracts qualified under IRC Sections 401, 403(b) or 457 should be transferred to Column 2 of the APE Pt. 1, whether the contracts were issued to a governmental or non-governmental policyholder column (Column 4). The amount entered as a negative in the Unallocated Annuity Column (Column 4) Considerations column must exactly match the amount entered as a positive in the Allocated Annuity Column (Column 2).

Line 4.2 – Transfer all amounts received to fund UNALLOCATED contracts for governmental plans (or its trustee) qualified under IRC Sections 401, 403(b) or 457 from the Unallocated Annuity Column (Column 4) to the Allocated Annuity Column (Column 2). Companies that report these amounts in the Annuity Considerations Column 5 or 7 (Life blank) or Life & Annuity Premiums & Deposit-Type Contract Funds and Other Considerations Column 6 in part (Health blank) of Schedule T, should complete this transfer line. The amount entered as a negative in the Unallocated Annuity Column (Column 4) must exactly match the amount entered as a positive in the Allocated Annuity Column (Column 2).

Line 4.3 – Transfer any allocated annuity amounts included in the Unallocated Annuity Column (Column 4) to the Allocated Annuity Column (Column 2), except for amounts received to fund allocated annuity contracts qualified under IRC Sections 401, 403(b) or 457, which are to be transferred on Line 4.1. This includes all allocated annuity contracts, regardless of whether the annuity is in deferred or payout status, whether the annuity is group or individual, whether the annuity is qualified or non-qualified for tax purposes and whether the annuity is held or owned in an individual retirement account under IRC Section 408(a) or an individual retirement annuity under IRC Section 408(b). The amount entered as a negative in the Unallocated Annuity Column (Column 4) must exactly match the amount entered as a positive in the Allocated Annuity Column (Column 2).

Line 4.4 – Transfer any unallocated annuity amounts included in the Allocated Annuity Column (Column 4) other than amounts that fund unallocated contracts owned by a governmental retirement plan (or its trustee) established under IRC Sections 401, 403(b) or 457. The amount entered as a negative in the Allocated Annuity Column must exactly match the amount entered as a positive in the Unallocated Annuity Column.

Line 4.99 – Total for Lines 4.1 through 4.4 Columns 2 and 4. The sum of Columns 2 and 4 on Lines 4.1 through 4.99 should equal zero (0) for each state.

Development of Amounts Included in Lines 1 through Through 5 That Should Be Deducted in Determining the Gross Premium Base

On both APE Part 1 and 2, companies Lines 6 through 9.99 are deductions from assessable premium based on the Life and Health Insurance Guaranty Association Model Act (#520) provisions. Companies must be careful not to deduct the same...
premium or deposits on more than one line. For example, amounts deducted on Line 6.1 as non-guaranteed separate account deposits should not be deducted a second time on APE Pt. 2. Lines 7.3 if those separate account deposits represent unallocated annuity deposits for a pension plan contract in excess of $5 million. Companies may only deduct amounts on Lines 6 through 9.99 (except for certain dividends allowed amounts on Line 98) to the extent those amounts have been included on Lines 1 through 5 of APE Pt. 1. Lines 6 through 9 are allowable exclusions prior to deductions on APE Pt. 2. the Base Reconciliation Exhibit.

Lines 6.01 – 6.99 Enter amounts received for any portion of a policy or contract not guaranteed by the reporting entity, or under which the investment risk is borne entirely by the policy or contract holder. These amounts are those specified at the time of deposit as intended for deposit in separate accounts. Amounts entered on this line are typically non-guaranteed separate account premiums. DO NOT INCLUDE on these lines amounts transferred to any guaranteed separate accounts.

**Two types of annuity contracts that should NOT be reported on Line 6 are:** (i) modified guaranteed annuities, market-adjusted annuities, or other contracts where the amounts payable on at least one future date do not (or may not) depend solely on the investment performance of assets in the separate accounts; and (ii) guaranteed investment contracts issued to fund pension plans, even if there are no mortality guarantees or only incidental mortality guarantees. Such contracts are not properly includable on Line 6 since the reporting entity retains an investment risk.

Amounts entered on Line 6 should correspond to amounts reported on the Annual Statement of Separate Accounts to the extent amounts are included on Lines 1 through 5 of the APE Pt. 1. Line 6 Base Reconciliation Exhibit. Specify deductions and indicate where such amounts were reported in the Annual Statement. Lines 6.1 – 6.99 should not include transfers to a separate account except to the extent such transfers represent current year premiums included on Lines 1 through 5 of the APE Pt. 1. Do NOT include such amounts in APE Pt. 2 line items. Base Reconciliation Exhibit. Companies must specifically identify deductions on Lines 6.01 through 6.99 and indicate where such amounts are reported in the Annual Statement and where they are reported on Lines 1 through 5 of the Base Reconciliation Exhibit.

Line 7 Enter amounts received during the current year for unallocated annuity contracts associated with the Federal Home Loan Bank Program BUT ONLY IF included in Line 5 above. Do NOT include such amounts in APE Pt. 2. line items.

Line 8 Enter amounts received during the current year only for supplemental contacts (with and without life contingencies) and contracts associated with retained asset programs BUT ONLY IF such amounts are included in APE Pt. 1 Line 5 AND the prior year amounts for the original contracts were reported as assessable premium. For example, if the original premiums were reported as life premiums but deducted as variable separate account business, then the supplemental contract funds would not be an allowable deduction since the original premiums were not reported as assessable premium in the prior years. Do NOT include such amounts in APE Pt. 2. line items.

Line 9 Enter dividends, but only if such amounts were not guaranteed in advance. Examples of items that might be reported on Line 9 include dividends applied to pay renewal premiums, paid in cash or left on deposit. Dividends applied to shorten the endowment or premium paying period or to provide paid-up additions or annuitants may also be included BUT ONLY IF such items are also reported on APE Pt. 1 Line 2.3 or 2.4. Lines 7.1 – 7.4 Enter unallocated amounts that meet the descriptions provided on Lines 7.1, 7.2 and 7.3.

Line 7.1 Allows a deduction for any. Excess interest should not be deducted as dividends.
Assessable Premium Base – Part 1

Line 10 – Assessable premium base before further adjustments.

Footnote 1 – Costs associated with long-term care business are now to be allocated among all accounts (historically they have been treated solely as health business) such that the costs are allocated between life and health companies as defined in the guaranty association statutes or plan of operations for long-term care cost allocation purposes only. In general, the allocation is designed to achieve a 50/50 split, although variances may occur by state. In order to determine if a member company is a life or health company, assessable health premiums for this purpose only are to exclude premiums associated with disability and long-term care business. Report in Footnote 1 (Parts a and b) the assessable premium for standalone business included on APE Pt. 1 Line 10 for these blocks. Include both short term and long-term disability premiums. Do NOT include disability or long-term care premiums that relate to coverage under a rider attached to a life or annuity product. Premiums for these riders should be reported with the original base policy designation (e.g. life or annuity).

Footnote 2 – Please provide for each state in which business is reported the primary contact information that a guaranty association may use to address assessment inquiries (billing, payment etc.).

Assessable Premium Exhibit – Part 2

The APE Pt. 2 has the same four columns used for APE Pt. 1. Column 1 is for all individual and group life insurance premiums. Column 2 is for all allocated annuity amounts (whether called premiums, deposits, or considerations), including annuities held or owned in an individual retirement account under IRC Section 408(a) (whether the account is a custodial account or a trust), or which qualify as individual retirement annuities under IRC Section 408(b) and both allocated and unallocated annuity governmental retirement plans established under IRC Sections 401, 403(b) or 457. Column 3 is for all individual and group accident and health premiums. Column 4 is for all unallocated annuity amounts (whether called premiums, deposits, or considerations) other than amounts received contract that is not issued to or in connection with governmental retirement benefit plans qualified under IRC Sections 401, 403(b) or 457 (which should be in Column 2). Companies are required to complete each line of the APE Pt. 2 for all states, District of Columbia and Puerto Rico in which they were licensed or had business during the reporting year along with a grand total page. DO NOT SUBMIT the APE Pt. 2 for American Samoa, Guam, U.S. Virgin Islands, Canada, Northern Mariana Islands and other alien jurisdictions.

APE Pt. 2 requires certain adjustments in all accounts to obtain the correct state level assessable premium with emphasis in both the allocated and unallocated annuity accounts. All lines for all columns must be completed for all states in which your company is licensed or had business during the survey year. Deductions related to unallocated annuity contracts MUST be detailed on Lines 14 through 21, where appropriate.

Certain line items pertain only to specific states (Iowa, Kansas, Louisiana, Minnesota and New Jersey) and must be completed accordingly.

Line 11 – Assessable Premium Base – Part 1

The amount from Line 10 of the APE Pt. 1 should be transferred to Line 11 of the APE Pt. 2.

Line 12.1-12.2 – Enter amounts received in excess of $1 million (Line 12.1) or $5 million (Line 12.2) for multiple non-group policies of life insurance owned by one owner (commonly referred to as “COLI/BOLI”) whether the policy or contract owner is an individual, firm, corporation or other person, and whether the persons insured are officers, managers, employees or other persons regardless of the number of policies and contracts held by the owner.

Line 13.1-13.99 – Enter amounts received for certain accident & health policies. Lines 13.5 (stop loss) and 13.6 (MEWA, ASO etc.) should only apply to the extent the plan or program is self-funded or uninsured.

Line 14 – All amounts related to annuities issued in connection with plans qualified under IRC Section 403(b) (“403(b) premiums”) (both allocated and unallocated) should be included in Column 2 (Allocated Annuity and Other Allocated Fund Deposits) on the APE Pt. 1 presuming your transfers on APE Pt. 1 Line 4.1 are done correctly. These amounts must be transferred to Column 4 (Unallocated Annuity and Other Unallocated Fund Deposits) in order to include the 403(b) premiums for allocated annuities in Column 4 for certain states that have not adopted the most recent account structure. The amount to be transferred from Column 2 to Column 4 represents the amount of 403(b) premiums for allocated annuity contracts ONLY to the extent included in Lines 10 of APE Pt. 1 and 11 of APE Pt. 2. Those companies that originally reported these 403(b) premiums in Column 2 of the APE Pt. 1 must transfer such amounts to Column 4 even though no original transfer was required on APE Pt. 1 Line 4.1. Enter in Column 2 a negative amount and Column 4 a corresponding positive amount (both amounts must be the same).

The total for Line 14 Columns 2 and 4 should equal zero (0) in all states.

Line 15.1-15.6 – Companies that have unallocated funding obligations to provide a book value accounting guaranty for defined contribution benefit plan participants by reference to a portfolio of assets that is owned by the benefit plan or its trustee, which in each case is not an affiliate of the member insurer (commonly referred to as “synthetic GICs”) must report such amounts on the applicable Line 15. Lines 15.1, 15.2 and 15.3 are mutually exclusive.

Lines 15.5 and 15.6 need to be completed (respectively) for Minnesota and New Jersey business only.
Line 15.3 should only include those amounts in excess of $5 million. For example, for a $15 million contract providing a book value accounting guaranty, the company should report $1 million on Line 15.1, $4 million on Line 15.2 and $10 million on Line 15.3.

Lines 16.1-16.3 – Companies that have unallocated funding obligations that are not issued to or in connection with a specific employee, union, or association of natural persons benefit plan or a government lottery must report such amounts on the applicable Line 16. An example of an appropriate Line 16 deduction would be amounts received to fund a municipal guaranteed investment contract (commonly referred to as “Muni-GICs”). Line 16.3 applies to New Jersey business only.

Lines 17.1-18.2 – Companies that have an annuity contract issued to fund government lotteries or in connection with a specific employee, union, or association of natural persons benefit plans that are NOT: (a) governmental retirement plans established under IRC Sections 401, 403(b) or 457, or (b) plan protected by the Federal Pension Benefit Guaranty Corporation must report such amounts on the applicable Lines 17 or 18. Lines 17.1, 17.2 and 17.3 are mutually exclusive.

Lines 17.5 to 18.2 need to be completed (respectively) for Minnesota (line 17.5), New Jersey (line 18.1) and Iowa (Line 18.2) business only. Like the example in Line 15, Line 17.3 should only include those amounts in excess of $5 million. As mentioned on APE Pt. 1 Line 3, for those contracts that have annuitized, the Company should report a deduction of $5 million on APE Pt. 2 Line 17.3 in Column 4 in the second or subsequent years. For additional details, please refer to the instructions for lines APE Pt. 1 Lines 3.1-3.99.

Lines 19.1-19.8 – Premium, funds or considerations related to unallocated annuities that fund governmental retirement benefit plans qualified under IRC Sections 401, 403(b) and 457 are included in APE Pt. 1 Line 10 and APE Pt. 2 Line 11, Column 2. They must be transferred to Column 4 before certain unallocated deductions can be taken. For all such premiums, funds or considerations enter in Column 2 a negative amount and in Column 4 a corresponding positive amount (both amounts must be the same). Lines 19.1, 19.2 and 19.3 are mutually exclusive. Like the example in Line 15, Line 19.3 should only include those amounts in excess of $5 million.

Lines 19.5 and 19.6 need to be completed (respectively) for Minnesota and New Jersey business only.

For Louisiana, Line 19.7 should include only amounts related to unallocated annuities issued in connection with governmental retirement benefit plans qualified under IRC Section 403(b). Report all such amounts as a positive in Column 4.

For Kansas, Line 19.8 should include only amounts related to unallocated annuities issued in connection with governmental deferred compensation plans qualified under IRC Section 457. Report all such amounts as a positive in Column 2.

Lines 20.1-20.2 – Companies that have unallocated annuity contracts issued to an employee benefit plan protected by the Federal Pension Benefit Guaranty Corporation must report such amounts on Lines 20.1 and 20.2. Employee benefit plans protected by the PBGC are defined benefit plans only and do not include defined contribution plans.
Line 7.3 Allows a deduction for unallocated annuity premiums in excess of $5 million for unallocated government lotteries and for any unallocated employee, union or association of natural persons benefit plans that is not: (a) governmental retirement plan established under Sections 401, 403(b) or 457 of the U.S. Internal Revenue Code or (b) protected under the Federal Pension Benefit Guaranty Corporation. Line 7.3 should only include those amounts in excess of $5 million. For example, for a $15 million guaranteed investment contract issued to an employee benefit plan, the company should report $10 million (i.e., amounts in excess of $5 million) on Line 7.3. Do not include on Lines 7.1, 7.2 or 7.3 amounts that have been reported as transfers or deductions on any other lines (e.g., Lines 4.2, 6, 7.1, 7.2 or 7.3).

Line 8 Enter dividends and experience rating credits, but only if such amounts were not guaranteed in advance. Examples of items that might be reported on Line 8 include: (i) non-guaranteed amounts that constitute a return of premiums collected in the current year and paid out of divisible surplus; and (ii) non-guaranteed experience rating credits that were not already deducted in determining Lines 1 and 2. Excess interest should not be deducted as dividends.

Line 21 – Lines 9.01 – 9.99 Enter any other deductible amounts with a clear explanation of the nature of such deduction on Lines 219.01, 219.02, 219.03, etc. An example of an appropriate deduction is experience rating refunds (Column 3 but only if reported as premium income) or annuitization activity to avoid double counting premiums (Column 2 or 4 of the premiums received for the Federal Employee Health Benefits Plan contracts in the Accident and Health column (Column 3). Deductions are not permitted for premiums received for the Federal Employee Group Life Insurance. Line 219 should not be used as a substitute for deductions that are to be reported on any of the above lines. Deductions are not permitted in the first three columns for amounts received in excess of coverage limits specified in the Guaranty Laws (i.e., a reporting entity cannot deduct amounts received or contract values in excess of $250/100,000 related to allocated annuity contracts).

Line 22 – Represents the assessable premium base for all states – see state specific formula.

NOTE: Cross check for APE Pt. 2 Column 4

The aggregate amounts on APE Pt. 2 Lines 15.4, 16.2, 17.4, and 20.2 should equal APE Pt. 2 Line 11, Column 4.

Model Act Base

Line 11 equals Line 5 minus Line 10.
ADJUSTMENTS TO THE
LIFE, HEALTH AND ANNUITY GUARANTY ASSOCIATION
MODEL ACT ASSESSMENT BASE RECONCILIATION EXHIBIT

Introduction

The purpose of the Adjustments to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibit (Adjustments Exhibit) is to collect premium information needed by State Guaranty Associations to make assessments. The Adjustments Exhibit must be prepared with the same care and accuracy that would be used in preparing the Annual Statement, since the information is being provided to the Guaranty Fund Associations.

These instructions are intended to assist companies in completing the Adjustments Exhibit. Represents the assessable premium base. If a company is unsure if it is a member of a life, health and annuity guaranty association, it should contact the state life, health and annuity guaranty associations in its state of domicile or state(s) where it is licensed to write life, health and annuity business.

The Adjustments Exhibit has four columns: Column 1 is for all individual and group life insurance premiums; Column 2 is for all individual and group allocated annuity amounts (whether called premiums, deposits, or considerations); Column 3 is for all individual and group accident and health premiums; and Column 4 is for all unallocated annuity amounts (whether called premiums, deposits or considerations). However, the Adjustments Exhibit requires annuity information only for states – see state that have not adopted the most recent Life and Health Insurance Guaranty Association Model Act (#520). Companies are required to complete each line of the Adjustments Exhibit for all states, District of Columbia and Puerto Rico in which they were licensed or had business during the reporting year, except for those states that use the Base Reconciliation Exhibit for their respective assessment premium base (these states may be identified by referring to the respective assessment premium base formulas). DO NOT SUBMIT the Adjustments Exhibit for American Samoa, Guam, U.S. Virgin Islands, Canada, Northern Mariana Islands and other alien jurisdictions. If your company writes only life and/or accident and health insurance, there is no need to submit the Adjustments Exhibit. If you enter any miscellaneous adjustment your company may have to life and accident and health business on Line 9 of the Base Exhibit pursuant to the applicable instructions.

Adjustments to the Base Reconciliation Exhibit

All Lines (except Lines 5.3, 6.4 and 9) of Column 4 (Unallocated Annuity Considerations and Other Unallocated Fund Deposits) and Line 2 of Column 2 (Allocated Annuity and Other Allocated Fund Deposits) must be completed for all states in which your company is licensed or did business during the survey year, except for those states that use the Base Reconciliation Exhibit for their respective assessment premium base. (These states may be identified by referring to the respective assessment premium base formulas.) DO NOT SUBMIT the Adjustments Exhibit for American Samoa, Guam, U.S. Virgin Islands, Canada, Northern Mariana Islands and other alien jurisdictions.

Deductions related to unallocated annuity contracts MUST be detailed on Lines 3 through 9, where appropriate. Deductions on Line 10 related to amounts received on unallocated annuity contracts WILL NOT be allowed.

Line 1 ———— Model Act Base

The amount from Line 11 of the Base Reconciliation Exhibit should be transferred to Line 1 of the Adjustments Exhibit.
Line 2 — All 403(b) annuities are included in Column 4 (Unallocated Annuity and Other Unallocated Fund Deposits) on the Base Reconciliation Exhibit and must be transferred to Column 2 (Allocated Annuity and Other Allocated Fund Deposits) for certain states that have not adopted the most recent Model #520 in its entirety. The amount to be transferred from Column 4 to Column 2 represents the amount of 403(b) annuity premiums included in Line 1 of the Adjustments Exhibit, regardless of whether it was originally reported in Column 2 or Column 4 of the Base Reconciliation Exhibit. Those companies that originally reported 403(b) premiums in Column 4 of the Base Reconciliation Exhibit must transfer such amounts to Column 2 even though no original transfer was required on Line 4.1 of the Base Reconciliation Exhibit.

Lines 3.1 and 3.2 — Companies that have unallocated funding obligations that are not issued to or in connection with a specific formula employee, union or association of natural persons benefit plan or government lottery (Line 7.1 of the Base Reconciliation Exhibit) must report such amounts on Lines 3.1 and 3.2. Line 3.2 should include any amounts reported on Line 3.1.

Lines 4.1, 4.2, 4.3 and 4.5 — Companies that have unallocated funding obligations issued to fund government lotteries or employee, union or association of natural persons benefit plans that are NOT: (a) governmental retirement plans established under Sections 401, 403(b) or 457 of the U.S. Internal Revenue Code, or (b) protected by the Federal Pension Benefit Guaranty Corporation must report such amounts on Lines 4.1, 4.2 and 4.3. Line 4.4 equals the sum of Lines 4.1, 4.2 and 4.3. Lines 4.1, 4.2 and 4.3 are mutually exclusive. Line 4.5 needs to be completed for Minnesota business only.

Lines 5.1, 5.2, 5.3 and 5.4 — Companies that have unallocated funding obligations issued to fund governmental retirement plans established under Sections 401 and 457 of the U.S. Internal Revenue Code must report such amounts on Lines 5.1, 5.2 and 5.3. Line 5.2 should include the amounts reported on Line 5.1. Line 5.3 needs to be completed for New Jersey business only. Line 5.4 needs to be completed for Minnesota business only.

Lines 6.1, 6.2, 6.4 and 6.5 — Companies that have unallocated funding obligations issued to fund governmental retirement plans established under Section 403(b) of the U.S. Internal Revenue Code must report such amounts on Lines 6.1 and 6.2. Line 6.3 equals the sum of Lines 6.1 and 6.2. Lines 6.1 and 6.2 are mutually exclusive. Line 6.4 needs to be completed for New Jersey business only. Line 6.5 needs to be completed for Minnesota business only.

Lines 7.1, 7.2, 7.3 and 7.2 — Companies that have unallocated annuity contracts issued to an employee benefit plan protected by the Federal Pension Benefit Guaranty Corporation (Line 7.2 of the Base Reconciliation Exhibit) must report such amounts on Lines 7.1 and 7.2. Line 7.2 should include the amounts reported on Line 7.1. Line 7.3 needs to be completed for New Jersey business only.

Line 8 — Companies that have unallocated funding obligations issued to fund government lotteries must report such amounts up to $5 million per contract holder. This line should be completed for New Jersey business only. Line 9 — Companies that have unallocated funding obligations that fund employee or association of natural persons benefit plans in New Jersey in excess of $2 million need to report receipts up to $5 million per contract. This line should be completed for New Jersey business only.
Line 10 ———— Aggregate Write-ins for Other Deductions

Enter the total of the write-ins listed in schedule "Details of Write-ins Aggregated at Line 10 for Other Deductions."

Line 11 ———— Represents the preliminary assessment base calculation for those states that have not adopted the most recent Model #520.

Details of Write-ins Aggregated at Line 10 for Other Deductions

The company must provide a clear explanation of the amounts included on Line 10. Amounts deducted on any other lines on the Base Reconciliation Exhibit or Adjustments Exhibit should not be reported here, since to do so would amount to a duplicate deduction. Line 10 should not be used as a substitute for deductions that are to be reported on any of the above lines. In addition, deductions are not permitted in the first three columns for amounts received in excess of coverage limitations specified in the Guaranty Laws (e.g., a reporting entity cannot deduct amounts received or contract values in excess of $100,000 related to allocated annuity contracts).

NOTE: ——— Cross check for Adjustments Exhibit Lines 3.2, 4.3 and 7.2, Column 4

The aggregate amounts on Adjustments Exhibit Lines 3.2, 4.3 and 7.2 should equal the aggregate of the amounts on Base Exhibit Lines 7.1, 7.2 and 7.3 less the amount reported on Base Exhibit Line 3.3.

## ANNUAL STATEMENT BLANK – LIFE

### SUPPLEMENTAL EXHIBITS AND SCHEDULES INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing unless specifically waived by the domiciliary state. However, in the event that your domiciliary state waives the filing requirement, your response of WAIVED to the specific interrogatory will be accepted in lieu of filing a "NONE" report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

**MARCH FILING**

---

## IDENTIFICATION OF ITEM(S) TO CHANGE

Add a new Health Care Receivables Supplement to the Life/Fraternal Annual Statement that adds Exhibits 3 and 3A from the Health Annual Statement to the to the Life/Fraternal annual filings. Add guidance document reference to Exhibit 3A of the Health Annual Statement.

---

## REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to allow for more consistency of reporting between the life and health blanks with regards to health care receivables. The addition is intended to provide regulators with detailed health care receivables information from life companies that write a large amount of health business to allow for analysis at the nationwide level.

---

## NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms.  
Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – HEALTH

EXHIBIT 3A – ANALYSIS OF HEALTH CARE RECEIVABLES

The purpose of this exhibit is to analyze health care receivables collected and accrued for the current year compared to the prior year.

This exhibit is based on the gross health care receivable, not just the admitted portion.

Report the total asset (health care receivable) in this exhibit not just the admitted portion. Amounts are gross of reinsurance.

Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance. [See reporting guidance at [**INSERT WEB ADDRESS WHEN GUIDANCE POSTED**].

In this exhibit, the term “accrued” is analogous to the term “incurred” on the U&I Exhibit, Part 2B. Accrued pertains to the health care receivable asset, whereas incurred pertains to the claim liability.

ANNUAL STATEMENT INSTRUCTIONS – LIFE\FRATERNAL

HEALTH CARE RECEIVABLES SUPPLEMENT

The Health Care Receivables Supplement shall be completed by those companies reporting accident and health business.

This supplement is required to be filed no later than March 1.

EXHIBIT 3 – HEALTH CARE RECEIVABLES

Individually list the greater of any account balances greater than $10,000 or those that are 10% of gross health care receivables. Use Lines 0100001 through 0699996, as needed. Report gross amounts for insured plans although these amounts may be offset against corresponding liabilities on the balance sheet. Report the aggregate of amounts not individually listed on Lines 0199998 through 0699998. The subtotal and grand total amounts should be reported on the following lines:

<table>
<thead>
<tr>
<th>Category</th>
<th>Line Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pharmaceutical Rebate Receivables</td>
<td>0199999</td>
</tr>
<tr>
<td>Claim Overpayment Receivables</td>

<td>0399999</td>
</tr>
<tr>
<td>Capitation Arrangement Receivables</td>
<td>0499999</td>
</tr>
<tr>
<td>Risk sharing Receivables</td>
<td>0599999</td>
</tr>
<tr>
<td>Other Receivables</td>
<td>0699999</td>
</tr>
<tr>
<td>Gross Health Care Receivables</td>
<td>0799999</td>
</tr>
</tbody>
</table>

Column 7 — Admitted

Total line should equal the inset amount on Line 24 of the Asset Page.
EXHIBIT 3A – ANALYSIS OF HEALTH CARE RECEIVABLES

The purpose of this exhibit is to analyze health care receivables collected and accrued for the current year compared to the prior year.

This exhibit is based on the gross health care receivable, not just the admitted portion.

Report the total asset (health care receivable) in this exhibit not just the admitted portion. Amounts are gross of reinsurance.

Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance. (See reporting guidance at [**INSERT WEB ADDRESS WHEN GUIDANCE POSTED**].

Columns 1 and 2:

Enter separately in Columns 1 and 2, Lines 1 through 6, all amounts collected or offset during the year accrued prior to the current year and accrued during the current year. Record only those amounts actually collected including offsets, that meet the offset conditions of SSAP No. 64—Offsetting and Netting of Assets and Liabilities.

Line 3 includes amounts charged against those gross health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider as the claims have not been paid as of the statement date.

All amounts collected, including offsets, related to prior year receivables accrued should be reported in Column 1. All amounts collected, including offsets, related to current year receivables accrued should be reported in Column 2.

Columns 3 and 4:

Enter separately in Columns 3 and 4 the gross health care receivables accrual amount between those accrued prior to the current year and those accrued during the year. All amounts accrued related to prior year receivables accrued should be reported in Column 3. All amounts accrued related to current year receivables accrued should be reported in Column 4.

For each of Lines 1 through 7, the sum of Columns 3 through 4 should agree to Exhibit 3 Health Care Receivables, sum of Columns 6 and 7, for each type of health care receivable and in total.

Column 5:

Enter the sum of Columns 1 and 3. This is the amount collected or offset during the current year on health care receivables that were accrued prior to the current year, plus amounts still accrued at the end of the current year, related to the health care receivable accrued at the end of the prior year.

Column 6:

Column 6 reports the amounts of prior year-end accounting accrual for gross health care receivables.

The comparison between Columns 5 and 6 is to the total receivables, not just the portion that is an admitted asset.

SUPPLEMENTAL EXHIBITS AND SCHEDULES
INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing unless specifically waived by the domiciliary state. However, in the event that your domiciliary state waives the filing requirement, your response of WAIVED to the specific interrogatory will be accepted in lieu of filing a "NONE" report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

MARCH FILING

25. Will the C-3 RBC Certifications required under C-3 Phase I be filed with the state of domicile and electronically with the NAIC by March 1?

36. Will the VM-20 Reserves Supplement be filed with the state of domicile and the NAIC by March 1?

37. Will the Health Care Receivables Supplement be filed with the state of domicile and the NAIC by March 1?

APRIL FILING

38. Will the confidential Regulatory Asset Adequacy Issues Summary (RAAIS) required by the Valuation Manual be filed with the state of domicile by April 1?

39. Will the Long-Term Care Experience Reporting Forms be filed with the state of domicile and the NAIC by April 1?

40. Will the Credit Insurance Experience Exhibit be filed with the state of domicile and the NAIC by April 1? (Not applicable to fraternal benefit societies)

41. Will the Accident and Health Policy Experience Exhibit be filed by April 1?

42. Will the Supplemental Health Care Exhibit (Parts 1, 2 and 3) be filed with the state of domicile and the NAIC by April 1?

43. Will the regulator only (non-public) Supplemental Health Care Exhibit’s Allocation Report be filed with the state of domicile and the NAIC by April 1?

44. Will the confidential Actuarial Memorandum required by Actuarial Guideline XXXVIII 8D be filed with the state of domicile by April 30?

45. Will the Supplemental Term and Universal Life Insurance Reinsurance Exhibit be filed with the state of domicile and the NAIC by April 1?

46. Will the Variable Annuities Supplement be filed with the state of domicile and the NAIC by April 1?

47. Will the confidential Executive Summary of the PBR Actuarial Report be filed with the state of domicile by April 1?

48. Will the confidential Life Summary of the PBR Actuarial Report be filed with the state of domicile by April 1?

49. Will the confidential Variable Annuities Summary of the PBR Actuarial Report be filed with the state of domicile by April 1?

AUGUST FILING

50. Will Management’s Report of Internal Control Over Financial Reporting be filed with the state of domicile by August 1?

Anticipated Effective Date: Annual 2021 1st Quarter 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify Annual Statement Lines (ASLs) used on Underwriting and Investment (U&I) Exhibits, State Page and Insurance Expense Exhibit (IEE). Change Health ASL categories used in Property to be consistent with other statement types. Update ASL references used in crosschecks. Update definitions used in the appendix for the Health ASLs. See next page for details.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to provide consistency in the granularity of reporting of ASLs on the U&I pages, IEE and State Page and consistency in Health ASLs used across statement types. See next page for details.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____________________________

Other Comments: _____________________________________________

** This section must be completed on all forms.

© 2021 National Association of Insurance Commissioners
IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the Annual Statement Line (ASL) numbers on the Underwriting and Investment Exhibits, State Page and Insurance Expense Exhibit to show the same ASL numbers. Make the same modification to the Quarterly Part 1 and Part 2.

Eliminate Interrogatory Questions 1 for the Insurance Expense Exhibit Interrogatories.

Change the Health ASL categories to match the Lines of Business (LOB) categories used in the Health and Life\Fraternal statements. Add the appropriate LOB definitions for those lines to the Lines of Business definitions in the appendix of the annual statement instructions.

Modify the ASL references in the State Page and Insurance Expense Exhibit instructions to reflect additions of ASL numbers to the Underwriting and Investment Exhibits, State Page and Insurance Expense Exhibit.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The differences in line titles and degree of granularity between schedules results in difficulty cross-comparing information from one schedule to another. For example, “Allied” is reported as a single line on the Underwriting and Investment Exhibit – Part 1B Premiums Written while the Exhibit of Premiums and Losses (EPL) reports, “Allied Lines,” “Multiple Peril Crop,” “Federal Flood,” “Private Crop,” and “Private Flood” all as separate components of “Allied.” The level of granularity on the EPL should be carried throughout the financial blank to ensure consistency in the review of the data across schedules.

Changing the Health ASL categories to match the Lines of Business (LOB) categories used in the Health and Life\Fraternal statements brings consistency of the LOB categories used in reporting in Health, Life\Fraternal and Property.

**ANNUAL STATEMENT INSTRUCTIONS – PROPERTY**

**EXHIBIT OF PREMIUMS AND LOSSES**

**DIRECT BUSINESS IN THE STATE OF...**

*(Statutory Page 14 Data)*

---

**Column 1 – Direct Premiums Written**

The amounts reported on the GT (Grand Total) Page for the lines in this column should agree with the amounts reported for the identical line in Column 1 of the Underwriting and Investment Exhibit, Part 1B, with the following exceptions:

- The sum of Lines 2.1, 2.2, 2.3, 2.4 and 2.5 should equal Underwriting and Investment Exhibit, Part 1B, Column 1, Line 2.
- The sum of Lines 5.1 and 5.2 should equal Underwriting and Investment Exhibit, Part 1B, Column 1, Line 5.
- Line 11 should equal the sum of Lines 11.1 and 11.2, Underwriting and Investment Exhibit, Part 1B, Column 1.
- The sum of Lines 15.1 through 15.8 should equal Underwriting and Investment Exhibit, Part 1B, Column 1, Line 15.
- Line 18 should equal the sum of Lines 18.1 and 18.2, Underwriting and Investment Exhibit, Part 1B, Column 1.
- The sum of Lines 19.1 and 19.2 should equal Underwriting and Investment Exhibit, Part 1B, Column 1, Line 19.1 and 19.2.
- The sum of Lines 19.3 and 19.4 should equal Underwriting and Investment Exhibit, Part 1B, Column 1, Line 19.3 and 19.4.

**Column 2 – Direct Premiums Earned**

May be estimated by formula on the basis of countrywide ratios for the respective lines of business except where adjustments are required to recognize special situations.

**Column 5 – Direct Losses Paid (Deducting Salvage)**

The amounts reported on the GT (Grand Total) Page for the lines in this column should agree with the amounts reported for the identical line in Column 1 of the Underwriting and Investment Exhibit, Part 2, Column 1, with the following exceptions:

- The sum of Lines 2.1, 2.2, 2.3, 2.4 and 2.5 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 2.
The sum of Lines 5.1 and 5.2 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 5.

Line 11 should equal the sum of Lines 11.1 and 11.2, Underwriting and Investment Exhibit, Part 2, Column 1.

The sum of Lines 15.1 through 15.8 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.

Line 18 should equal the sum of Lines 18.1 and 18.2, Underwriting and Investment Exhibit, Part 2, Column 1.

The sum of Lines 19.1 and 19.2 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 19.1 and 19.2.

The sum of Lines 19.3 and 19.4 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 19.3 and 19.4.

The sum of Lines 21.1 and 21.2 should equal Underwriting and Investment Exhibit, Part 2, Column 1, Line 21.

**Column 7 — Direct Losses Unpaid**

The amounts reported on the GT (Grand Total) Page for the lines in this column should agree with the amounts reported for the identical line in Column 1 plus Column 5 of the Underwriting and Investment Exhibit, Part 2A, with the following exceptions:

The sum of Lines 2.1, 2.2, 2.3, 2.4 and 2.5 should equal Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5, Line 2.

The sum of Lines 5.1 and 5.2 should equal Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5, Line 5.

Line 11 should equal the sum of Lines 11.1 and 11.2, Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5.

The sum of Lines 15.1 through 15.8 should equal Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5, Line 15.

Line 18 should equal the sum of Lines 18.1 and 18.2, Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5.

The sum of Lines 19.1 and 19.2 should equal Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5, Line 19.1 and 19.2.

The sum of Lines 19.3 and 19.4 should equal Underwriting and Investment Exhibit, Part 2A, Column 1 plus Column 5, Line 19.3 and 19.4.

Detail Eliminated to Conserve Space
INTERROGATORIES

Interrogatory 4-3 shall be used to explain any item or items requiring special comment or explanation. Disclose the method of allocation for any items in Parts II and III that are not allocated by means defined in the Uniform Classification of Expenses found in the Appendix of the Annual Statement Instructions.

Part II – Allocation to Lines of Business Net of Reinsurance

For Columns 1, 3, 7, 13 and 19, the amounts reported in these columns for the individual lines should equal the amounts reported in the identical lines of annual statement schedules as referenced parenthetically below each respective column heading in the exhibit, with the following exceptions:

- The sum of IEE Lines 2.1, 2.2, 2.3, 2.4 and 2.5 should equal Line 2 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.
- The sum of IEE Lines 5.1 and 5.2 should equal Line 5 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.
- IEE Line 11 should equal the sum of Lines 11.1 and 11.2 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.
- IEE Line 18 should equal the sum of Lines 18.1 and 18.2 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.
- The sum of IEE Lines 21.1 and 21.2 should equal Line 21 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.
- IEE Line 31, 32 and 33 should equal the sum of Lines 31, 32 and 33 of the annual statement schedules as referenced parenthetically below each respective column heading in the exhibit for Columns 1, 3, 7, 13 and 19.

Allocate by lines of business for Column 5, Dividends to Policyholders, Column 21, Agents’ Balances, Column 23, Commission and Brokerage Expenses Incurred, Column 25, Taxes, Licenses & Fees Incurred, Column 27, Other Acquisitions, Field Supervision, and Collection Expenses Incurred, Column 29, General Expenses Incurred, and Column 31, Other Income Less other Expenses.
Part III – Allocation to Lines of Direct Business Written

Detail Eliminated to Conserve Space

For Column 1, the amounts reported in the individual lines should agree with the identical lines on the Underwriting and Investment Schedule, Part 1B, Column 1, with the following exceptions:

- The sum of IEE Lines 2.1, 2.2, 2.3, 2.4 and 2.5 should equal the Underwriting and Investment Exhibit, Part 1B, Column 1, Line 2.

- The sum of IEE Lines 5.1 and 5.2 should equal the Underwriting and Investment Exhibit, Part 1B, Column 1, Line 5.

- IEE Line 11 should equal the sum of Lines 11.1 and 11.2, Underwriting and Investment Exhibit, Part 1B, Column 1.

- IEE Line 18 should equal the sum of Lines 18.1 and 18.2, Underwriting and Investment Exhibit, Part 1B, Column 1.

- The sum of IEE Lines 21.1 and 21.2 should equal the Underwriting and Investment Exhibit, Part 1B, Column 1, Line 21.
APPENDIX

PROPERTY AND CASUALTY LINES OF BUSINESS

These definitions should be applied when reporting all applicable amounts for the following schedules: Underwriting and Investment Exhibit Parts 1, 1A, 1B, 2, and 2A; Exhibit of Premiums and Losses (Statutory Page 14); and the Insurance Expense Exhibit. Policy fees, service charges or membership charges are to be included with the line of business or in Other Income, as determined by SSAP No. 53—Property Casualty Contracts – Premiums.

---

<table>
<thead>
<tr>
<th>Line 13 – Comprehensive (Hospital and Medical)</th>
<th>Policies that provide fully insured indemnity, HMO, PPO, or Fee for Service coverage for hospital, medical, and surgical expenses. This category excludes Short-Term Medical Insurance, the Federal Employees Health Benefit Program and non-comprehensive coverage such as basic hospital only, medical only, hospital confinement indemnity, surgical, outpatient indemnity, specified disease, intensive care, and organ and tissue transplant coverage as well as any other coverage described in the other categories of this exhibit.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Line 14 – Credit Accident and Health</td>
<td>Coverage provided to, or offered to, borrowers in connection with a consumer credit transaction where the proceeds are used to repay a debt or an installment loan in the event the consumer is disabled as the result of an accident, including business not exceeding 120 months duration (Group and Individual).</td>
</tr>
<tr>
<td>Line 15 – Other Accident and Health</td>
<td>Accident and health coverages not otherwise properly classified as Comprehensive (Hospital and Medical) and Health or Credit Accident and Health. Include all Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.</td>
</tr>
<tr>
<td>15.1 – Vision Only</td>
<td>Policies providing for vision only coverage issued as stand-alone vision or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. Does not include self-insured business, federal employees health benefit plans (FEHBP), or Medicare and Medicaid programs.</td>
</tr>
<tr>
<td>15.2 – Dental Only</td>
<td>Policies providing for dental only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employee’s health benefits plans (FEHBP), or Medicare and Medicaid programs.</td>
</tr>
</tbody>
</table>
15.3 – Disability Income

Include: Policies that provide a weekly or monthly income benefit for more than five years for individual coverage and more than one year for group coverage for full or partial disability arising from accident and/or sickness. Include policies that provide Overhead Expense Benefits. Does not include credit disability.

Policies that provide a weekly or monthly income benefit for up to five years for individual coverage and up to one year for group coverage for full or partial disability arising from accident and/or sickness. Include policies that provide Overhead Expense Benefits. Does not include credit disability.

15.4 – Medicare Supplement

Include: Policies that qualify as Medicare Supplement policy forms as defined in the NAIC Medicare Supplement Insurance Minimum Standards Model Act. This includes standardized plans, pre-standardized plans and Medicare select. Does not include Medicare (Title XVIII) or Medicaid (Title XIX) risk contracts.

15.5 – Medicaid title XIX

Include: Policies issued in association with the Federal/State entitlement program created by Title XIX of the Social Security Act of 1965 that pays for medical assistance for certain individuals and families with low incomes and resources.

15.6 – Medicare title XVIII

Include: Policies issued as Medicare Advantage Plans providing Medicare benefits to Medicare eligible beneficiaries created by title XVIII of the Social Security Act of 1965. This includes Medicare Managed Care Plans (i.e., HMO and PPO) and Medicare Private Fee-for-Service Plans. This also includes all Medicare Part D Prescription Drug Coverage through a Medicare Advantage product and whether sold directly to an individual or through a group.

15.7 – Long-Term Care

Include: Policies that provide coverage for not less than one year for diagnostic, preventive, therapeutic, rehabilitative, maintenance, or personal care services provided in a setting other than an acute care unit of a hospital, including policies that provide benefits for cognitive impairment or loss of functional capacity. This includes policies providing only nursing home care, home health care, community-based care, or any combination. Do not include coverage provided under comprehensive/major medical policies, Medicare Advantage, or for accelerated death benefit-type products.
15.8 – Federal Employees Health Benefits Plan Premium

Include: Business allocable to the Federal Employees Health Benefit Plan premium that are exempted from state taxes or other fees by Section 8909(f)(1) of Title 5 of the United States Code. Does not include Medicare and Medicaid programs.

15.9 – Other Health

Include: Stop loss/excess loss and any other accident and health coverages not specifically required in Annual Statement lines 13, 14, 15.1 through 15.8.

Line 13 – Group Accident and Health

Coverage written on a group basis (e.g., employees of a single employer and their dependents) that pays scheduled benefits or medical expenses caused by disease, accidental injury or accidental death. Excludes amounts attributable to uninsured accidents and health plans and the uninsured portion of partially insured accident and health plans. Coverage is usually provided in the following manner:

A single policy called a “master contract” is issued to the group policyholder to cover a group of individuals who have a defined relationship (other than insurance) to the policyholder, such as:

- employee/employer
- member/union
- debtor/creditor

The contract provides specified types of insurance coverage for the individuals in a group. Policies generally provide benefits for one or more of the following coverages: short- or long-term disability income benefits, accidental death or dismemberment coverage, major medical expense benefits, and dental expense benefits.

Line 14 – Credit Accident and Health (Group and Individual)

Coverage provided to, or offered to, borrowers in connection with a consumer credit transaction where the proceeds are used to repay a debt or an installment loan in the event the consumer is disabled as the result of an accident, including business not exceeding 120 months duration.

Line 15 – Other Accident and Health

Accident and health coverages not otherwise properly classified as Group Accident and Health or Credit Accident and Health (e.g., collectively renewable and individual non-cancelable, guaranteed renewable, non-renewable for stated reasons only, etc.). Include all Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.

Line 15.1 – Collectively Renewable A&H

Include: Amounts pertaining to policies that are made available to groups of persons under a plan sponsored by an employer, or an association or a union or affiliated associations or unions or a group of individuals supplying materials to a central point of collection or handling a common product or commodity, under which the reporting entity has agreed with respect to such policies that renewal will not be refused, subject to any specified age limit, while the insured remains a member of the group.
specified in the agreement unless the reporting entity simultaneously refuses renewal to all other policies in the same group. A sponsored plan shall not include any arrangement where a reporting entity’s customary individual policies are made available without special underwriting considerations and where the employer’s participation is limited to arranging for salary allotment premium payments with or without contribution by the employer. Such plans are sometimes referred to as payroll budget or salary allotment plans. A sponsored plan may be administered by an agent or trustee.

Amounts pertaining to policies issued by a company or group of companies under a plan, other than a group insurance plan, authorized by special legislation for the exclusive benefit of the aged through mass enrollment.

Amounts pertaining to policies issued under mass enrollment procedures to older people, such as those age 65 and over, in some geographic region or regions under which the reporting entity has agreed with respect to such policies that renewal will not be refused unless the reporting entity simultaneously refuses renewal to all other policies specified in the agreement.

Line 15.2 – Non-Cancelable A&H

Include: Amounts pertaining to policies, which are guaranteed renewable for life or to a specified age, such as 60 or 65, at guaranteed premium rates.

Line 15.3 – Guaranteed Renewable A&H

Include: Amounts pertaining to policies that are guaranteed renewable for life or to a specified age, such as 60 or 65, but under which the reporting entity reserves the right to change the scale of premium rates.

Line 15.4 – Non-Renewable for Stated Reasons Only

Include: Amounts pertaining to policies in which the reporting entity has reserved the right to cancel or refuse renewal for one or more stated reasons, but has agreed implicitly or explicitly that, prior to a specified time or age, it will not cancel or decline renewal solely because of deterioration of health after issue.

Line 15.5 – Other Accident Only

Include: Policies that provide coverage, singly or in combination, for death, dismemberment, disability, or hospital and medical care caused by, or necessitated as a result of, accident or specified kinds of accidents not included in Annual Statement lines 13, 14, 15.1 through 15.4, 15.6 and 15.8. Types of coverage include student accident, sports accident, travel accident, blanket accident, specific accident or accidental death and dismemberment (AD&D).

Line 15.6 – Medicare Title XVIII Exempt from State Taxes or Fees
Report Medicare Title XVIII premiums that are exempted from state taxes or other fees by Section 1854(g) of the federal Medicare Prescription Drug, Improvement, and Modernization Act of 2003. This includes, but is not limited to, premiums written under a Medicare Advantage product, a Medicare PPO product or a stand-alone Medicare Part D product.

Line 15.7—All Other A&H

Include: Any other accident and health coverages not specifically required in Annual Statement lines 13, 14, 15.1 through 15.6 and 15.8.

Line 15.8—Federal Employees Health Benefits Plan Premium

Include: Premiums, dividends and losses allocable to the Federal Employees Health Benefits Plan that are exempted from state taxes or other fees by Section 8909(f)(1) of Title 5 of the U.S. Code.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add definitions for the Occupational Accident, Fiduciary Liability, Premises and Operations (OL&T and M&C), Professional Errors and Omissions Liability, Kidnap & Ransom Liability and Tuition Reimbursement Plans products to the appropriate Line of Business in the appendix.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to modify definitions in the Property Lines of Business Definitions section of the appendix to new product definition included in the Property Uniform Product Matrix that are not included in the definitions in the Annual Statement Instructions.

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS - PROPERTY

APPENDIX

PROPERTY AND CASUALTY LINES OF BUSINESS

Line 10 – Financial Guaranty
A surety bond, insurance policy, or when issued by an insurer, an indemnity contract and any guaranty similar to the foregoing types, under which loss is payable upon proof of occurrence of financial loss to an insured claimant, obligee or indemnitee as a result of failure to perform a financial obligation (see Financial Guaranty Insurance Guideline (#1626)).

Line 11 – Medical Professional Liability
Insurance coverage protecting a licensed health care provider or health care facility against legal liability resulting from the death or injury of any person due to the insured’s misconduct, negligence, or incompetence in rendering professional services. Medical Professional Liability is also known as Medical Malpractice.

Include Medical Professional Liability for:

Line 12 – Earthquake
Property coverages for losses resulting from a sudden trembling or shaking of the earth, including that caused by volcanic eruption. Excluded are losses resulting from fire, explosion, flood or tidal wave following the covered event.

Line 16 – Workers’ Compensation
Insurance that covers an employer’s liability for injuries, disability or death to persons in their employment, without regard to fault, as prescribed by state or Federal workers’ compensation laws and other statutes. Includes employer’s liability coverage against the common law liability for injuries to employees (as distinguished from the liability imposed by Workers’ Compensation Laws). Excludes excess workers’ compensation.

Alternative Workers’ Compensation
Other than standard workers’ compensation coverage, employer’s liability and excess workers’ compensation (e.g., large deductible, managed care).
Employers’ Liability

Employers’ liability coverage for the legal liability of employers arising out of injuries to employees. This line of business should be used when coverage is issued as an endorsement, or as part of a statutory workers’ compensation policy. When coverage is issued as a stand-alone policy, or as an endorsement a package policy, the appropriate “Other Liability” line of business should be used.

Standard Workers’ Compensation

Insurance that covers an employer’s liability for injuries, disability or death to persons in their employment, without regard to fault, as prescribed by state or federal workers’ compensation laws and included within the basic policy employers’ liability coverage.

Occupational Accident

Insurance that covers occupational accident to include comparable workers’ compensation.

Line 17 – Other Liability

Insurance coverage protecting the insured against legal liability resulting from negligence, carelessness or a failure to act, causing property damage or personal injury to others. Typically, coverages include construction and alteration liability; contingent liability; contractual liability; elevators and escalators liability; errors and omissions liability, environmental pollution liability; excess stop loss, excess over insured or self-insured amounts and umbrella liability; liquor liability; personal injury liability; premises and operations liability; completed operations liability, nonmedical professional liability, etc. Also includes indemnification coverage provided to self-insured employers on an excess of loss basis (excess workers’ compensation).

Completed Operations Liability

Premiums attributable to policies covering the liability of contractors, plumbers, electricians, repair shops and similar firms to persons who have incurred bodily injury or property damage from defective work or operations completed or abandoned by or for the insured, away from the insured’s premises.

Construction and Alteration Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage from alterations involving demolition, new construction or change in size of a structure on the insured’s premises.

Contingent Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage from work done by an independent contractor hired by the insured to perform work that was illegal, inherently dangerous, supervised too closely; or it was a situation that does not permit delegation of responsibility.
Contractual Liability

Premiums attributable to policies covering the liability of an insured that has assumed the legal liability of another party by written or oral contract. Includes coverage that names the lender/lessor as beneficiary and indemnifies the borrower/lessee for the liability of the balance due on the automobile loan/lease for an automobile that has been destroyed in an accident.

Elevators and Escalators Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage from use of elevators or escalators operated, maintained or controlled by the insured.

Errors and Omissions Liability

Professional Liability Other Than Medical

Premiums attributable to policies covering the liability of a professional or quasi-professional insured to persons who have incurred bodily injury or property damage, or who have sustained any loss from omissions arising from the performance of services for others, errors in judgment, breaches of duty, or negligent or wrongful acts in business conduct.

Environmental Pollution Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage from acids, fumes, smoke, toxic chemicals, waste materials or other pollutants.

Excess and Umbrella Liability

Premiums attributable to policies covering the liability of an insured above a specific amount set forth in a basic policy issued by the primary insurer; or a self-insurer for losses over a stated amount; or an insured or self-insurer for known or unknown gaps in basic coverages or self-insured retentions.

Liquor Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage from an intoxicated person.

Personal Injury Liability

Premiums attributable to policies covering the liability of an insured to persons who have been discriminated against, falsely arrested, illegally detained, libeled, maliciously prosecuted, slandered, suffered mental anguish or alienation of affections, or have had their right of privacy violated. Includes identity theft.

Premises and Operations Liability

Premiums attributable to policies covering the liability of an insured to persons who have incurred bodily injury or property damage on an insured’s premises during normal operations or routine maintenance, or from an insured’s business operations either on or off of the insured’s premises.
Excess Workers’ Compensation

Either specific and/or aggregate excess workers’ compensation insurance written above an attachment point or self-insured retention.

Commercial General Liability

Flexible and broad commercial liability coverage with two major sub-lines: premises/operations sub-line and products/completed operations sub-line.

Comprehensive Personal Liability

Comprehensive liability coverage for exposures arising out of the residence premises and activities of individuals and family members. (Non-business liability exposure protection for individuals.)

Day Care Centers

Liability coverage for day care centers.

Directors and Officers Liability

Liability coverage protecting directors or officers of a corporation from liability arising out of the performance of their professional duties on behalf of the corporation.

Employee Benefit Liability

Liability protection for an employer for claims arising from provisions in an employee benefit insurance plan provided for the economic and social welfare of employees. Examples of items covered are pension plans, group life insurance, group health insurance, group disability income insurance, and accidental death and dismemberment.

Employers’ Liability

Employers’ liability coverage for the legal liability of employers arising out of injuries to employees. This line of business should be used when coverage is issued as a stand-alone policy, or as an endorsement to a package policy. When this coverage is issued as an endorsement to a statutory workers’ compensation policy, the “Workers’ Compensation” line of business should be used.

Employment Practices Liability

Liability protection for an employer providing personal injury coverage arising out of employment-related practices, personnel policies, acts or omissions. Examples of claims such policies respond to are refusal to employ, termination, coercion, demotion, evaluation, reassignment, discipline, defamation, harassment, humiliation and discrimination.

Fire Legal Liability

Coverage for property loss liability as the result of separate negligent acts and/or omissions of the insured that allows a spreading fire to cause bodily injury or property damage of others. An example is a tenant who, while occupying another party’s property, through negligence causes fire damage to the property.

Municipal Liability

Liability coverage for the acts of a municipality.
Nuclear Energy Liability

Coverage for bodily injury and property damage liability resulting from the nuclear energy material (whether or not radioactive) on the insured business’s premises or in transit.

Veterinarian

Liability coverage for the acts of a veterinarian.

Internet Liability

Liability arising out of claims for wrongful acts related to the content posted on a website by the insured or the insured’s failure to maintain the security of its computer systems.

Cyber Liability

Stand-alone comprehensive coverage for liability arising out of claims related to unauthorized access to or use of personally identifiable or sensitive information due to events including, but not limited to, viruses, malicious attacks, or system errors or omissions. This coverage could also include expense coverage for business interruption, breach management and/or mitigation services. When cyber liability is provided as an endorsement or as part of a multi-peril policy, as opposed to a stand-alone policy, use the appropriate annual statement line of business of the product to which the coverage will be attached.

Fiduciary Liability

This type of insurance provides protection for fiduciaries against legal liability for claims made against them for a wrongful act (defined as a breach of fiduciary duty imposed by ERISA or similar common or statutory law). It’ll respond to claims for damages arising out of improper investments, plan and employee advice, insufficient funding and failure of an insurer to perform.

Examples include failure to invest plan assets prudently or failure to select a qualified service provider for a covered plan. Some fiduciary liability policies may also provide coverage for negligent acts, as well as errors or omissions in the administration of employee benefit plans.

Premises and Operations (OL&T and M&C)

Policies covering the liability of an insured to persons who have incurred bodily injury or property damage on an insured’s premises during normal operations or routine maintenance, or from an insured’s business operations either on or off of the insured’s premises.

Professional Errors and Omissions Liability

Coverage available to pay for liability arising out of the performance of professional or business-related duties, with coverage being tailored to the needs of the specific profession. Examples include abstracters, accountants, insurance adjusters, architects, engineers, insurance agents and brokers, lawyers, real estate agents, stockbrokers.
Line 17.1 – Other Liability Occurrence

Exclude: Excess workers’ compensation included in Line 17.3.

Line 17.2 – Other Liability Claims Made

Exclude: Excess workers’ compensation included in Line 17.3.

Line 17.3 – Excess Workers’ Compensation

Include: Indemnification coverage provided to self-insured employers on an excess of loss basis.

Line 18 – Product Liability

Insurance coverage protecting the manufacturer, distributor, seller or lessor of a product against legal liability resulting from a defective condition causing personal injury, or damage, to any individual or entity, associated with the use of the product.

Line 25 – Glass

Coverage for the costs of replacement and incidental costs of building glass due to breakage or application of chemicals to glass. NOTE: This coverage should be included in Allied Lines.

Detail Eliminated to Conserve Space

Line 26 – Burglary and Theft

Coverage for property taken or destroyed by breaking and entering the insured’s premises, burglary or theft, forgery or counterfeiting, fraud, kidnap and ransom, and off-premises exposure.

Kidnap & Ransom Liability

Liability coverage up to specific limits for payments demanded by kidnappers for the release of an insured held against his or her will.

Line 27 – Boiler and Machinery

Coverage for the failure of boilers, machinery and electrical equipment. Benefits include:

(i) property of the insured that has been directly damaged by the accident.
(ii) Costs of temporary repairs and expediting expenses.
(iii) Liability for damage to the property of others.

Detail Eliminated to Conserve Space
Details for Write-ins

Coverages not generally described above.

Involuntary Unemployment Insurance

Space

Coverage of satellites, shuttles, hull, drones and other non-standard aircraft.

Political and Natural Disaster Evacuation

Coverage of specified costs for an insured person to return to their country of residence or nearest place of safety and specified reasonable accommodation costs (if the insured person is unable to return to their country of residence), as a direct result of a covered evacuation or if a natural disaster has occurred in the country the insured person is currently in requiring their immediate evacuation to avoid the risk of bodily injury or sickness, while the insured person is on a journey covered by the policy.

War Risk Insurance/War Terrorism and Political Violence

Mortgage Interest Insurance

Money Insurance

Tuition Reimbursement Plans

Product which reimburses for the tuition expenses of students who drop out, are expelled, leave for medical reasons, etc.

### FOR NAIC USE ONLY

- **Agenda Item #**: 2020-35BWG MOD
- **Year**: 2022
- **Changes to Existing Reporting**: [X]
- **New Reporting Requirement**: [ ]

### REVIEWED FOR ACCOUNTING PRACTICES AND PROCEDURES IMPACT

- **No Impact**: [X]
- **Modifies Required Disclosure**: [ ]

### DISPOSITION

- [ ] Rejected For Public Comment
- [ ] Referred To Another NAIC Group
- [ ] Received For Public Comment
- [X] Adopted Date: 03/16/2021
- [ ] Rejected Date
- [ ] Deferred Date
- [ ] Other (Specify)

### BLANK(S) TO WHICH PROPOSAL APPLIES

- [X] ANNUAL STATEMENT
- [X] QUARTERLY STATEMENT
- [X] Life, Accident & Health/Fraternal
- [X] Property/Casualty
- [X] Health
- [X] Separate Accounts
- [X] Protected Cell
- [X] Health (Life Supplement)

### IDENTIFICATION OF ITEM(S) TO CHANGE

Expand the number of characters used from seven to ten in the investment line categories for Schedules D, DA, DL and E excluding Schedule D, Part 6 (Sections 1 and 2) and Schedule E (Part 1 and 3). Add line categories for Unaffiliated Certificates of Deposit and Exchange Traded Funds. Split the line categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into lines indicating if the fund has been assigned a designation by the SVO or not. Make changed to Summary Investment Schedule, Summary by Country and Schedule D, Part 1A (Sections 1 and 2) to reflect the additional line categories.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to change the line number size to accommodate more line categories and to allow for room in the numbering scheme for Schedules D, DA, DL and E to add additional lines in the future without major disruption of line numbering. It also adds new lines to address crosscheck issues and reporting questions that have been received in the past.

### NAIC STAFF COMMENTS

<table>
<thead>
<tr>
<th>Column 3</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Enter “*” in this column for all SVO Identified Funds designated for systematic value.</td>
</tr>
<tr>
<td></td>
<td>Enter “@” in this column for all Principal STRIP Bonds or other zero-coupon bonds.</td>
</tr>
<tr>
<td></td>
<td>Enter “$” in this column for Certificates of Deposit under the FDIC limit.</td>
</tr>
<tr>
<td></td>
<td>Enter “&amp;” in this column for TBA (To Be Announced) securities.</td>
</tr>
<tr>
<td></td>
<td>Enter “^” in this column for all assets that are bifurcated between the insulated separate account filing and the non-insulated separate account filing.</td>
</tr>
</tbody>
</table>

If bonds are not under the exclusive control of the company as shown in the General Interrogatories, they are to be identified by placing one of the codes **identified in the Investment Schedules General Instructions** in this column.
If the security is an SVO Identified Fund designated for systematic value, Principal STRIP bond or other zero coupon bond, Certificates of Deposit under the FDIC limit or a TBA (To Be Announced) security and is not under the exclusive control of the company, the “*”, “@”, “$” or “&” should appear first, immediately followed by the appropriate code (identified in the Investment Schedules General Instructions).

Separate Account Filing Only:

If the asset is a bifurcated asset between the insulated separate account filing and the non-insulated separate account filing, the “^” should appear first and may be used simultaneously with the “*”, “@”, “$” or “&” with the “^” preceding the other characters (“*”, “@”, “$” or “&”) depending on the asset being reported, immediately followed by the appropriate code (identified in the Investment Schedules General Instructions).

Column 26 – Collateral Type

Use only for securities included in the following subtotal lines.

Industrial and Miscellaneous (Unaffiliated)

- Residential Mortgage-Backed/Securities ......................................................... 33999991029999999
- Commercial Mortgage-Backed Securities ........................................................ 34999991039999999
- Other Loan-Backed and Structured Securities .................................................. 35999991049999999

Enter one of the following codes to indicate collateral type. Pick exactly one collateral type for each reported security. For securities that fit in more than one type, pick the predominant one. Judgment may need to be used when making selections involving prime, Alt-A and subprime, as there are no uniform definitions for these collateral types. In the description field, use abbreviations like ABS, CDO or CLO to disclose the type of the loan-backed/structured security.

Note: Various investments below require SVO review and approval, please refer to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) for further description.

1 Residential Mortgage Loans/RMBS

Include all types of residential first lien mortgage loans as collateral (e.g., prime, subprime, Alt-A).

2 Commercial Mortgage Loans/CMBS

Include all types of commercial mortgage loans as collateral (e.g., conduits, single name, etc.).

3 Home Equity

Include all home equity loans and/or home equity lines of credit as collateral. These are not first liens and are deemed loans to individuals. Bonds that are collateralized by home equity loans/lines of credit are considered asset-backed securities (ABS) rather than RMBS.

4 Individual Obligations – Credit Card, Auto, Student Loans and Recreational Vehicles

Include bonds collateralized by individual obligations. Do not include individual obligations that have a real-estate aspect.

5 Corporate/Industrial Obligations – Tax Receivables, Utility Receivables, Trade Receivables, Small Business Loans, Commercial Paper
Include bonds collateralized by corporate or industrial obligations (sometimes referred to as commercial obligations).

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>Lease Transactions – Aircraft Leases, Equipment Leases and Equipment Trust Certificates</td>
</tr>
<tr>
<td></td>
<td>Include bonds collateralized by leases. Equipment leases are loans on heavy equipment. Equipment trust certificates are certificates that entitle the holder to the lease payments on the underlying assets.</td>
</tr>
<tr>
<td>7</td>
<td>CLO/CBO/CDO</td>
</tr>
<tr>
<td></td>
<td>Include bank loans, which securitize CLOs; investment grade and high-yield corporate bonds, which securitize CBOs; and corporate bonds and structured securities, which securitize CDOs.</td>
</tr>
<tr>
<td>8</td>
<td>Manufactured Housing and Mobile Home Loans</td>
</tr>
<tr>
<td></td>
<td>Include manufactured housing loans and mobile home loans as collateral. These are not typical residential mortgage loans, and when they securitize bonds, they are considered ABS.</td>
</tr>
<tr>
<td>9</td>
<td>Credit Tenant Loans</td>
</tr>
<tr>
<td></td>
<td>Real estate loans secured by the obligation of a single (usually investment grade) company to pay debt service by means of rental payments under a lease, where real estate is pledged as collateral also referred to as credit tenant lease, sale-leaseback or CTL.</td>

### Detail Eliminated to Conserve Space

**Column 20 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol**

Provide the appropriate combination of NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol for each security. The list of valid Administrative Symbols is shown below.

The listing of valid NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol combinations can be found on the NAIC’s website for the Securities Valuation Office ([www.naic.org/svo.htm](http://www.naic.org/svo.htm)).

Exchange Traded Funds should be reported as perpetual securities.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed schedule but will be three sub-columns in the data table.

- NAIC Designation Column 20A
- NAIC Designation Modifier Column 20B
- SVO Administrative Symbol Column 20C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).
Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on lines below if eligible to receive one, as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), otherwise, the field should be left blank.

- Industrial and Miscellaneous (Unaffiliated) Perpetual Preferred Line 84999994019999999
- Industrial and Miscellaneous (Unaffiliated) Redeemable Preferred Line 85999994029999999

The NAIC Designation Modifier should be left blank for securities reported on lines below.

- Parent, Subsidiaries and Affiliates Line 86999994319999999
- Parent, Subsidiaries and Affiliates Line 87999994329999999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should be left blank.

Refer to the P&P Manual for the application of these modifiers.

Following are valid administrative symbols for preferred stock. Refer to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for the application of these symbols.

- **S** Additional or other non-payment risk assigned by the SVO or SSG
- **SYE** Additional or other non-payment risk - Year-end carry over
- **FE** Filing Exempt assigned by the SVO
- **YE** Year-end carry over assigned by the SVO
- **IF** Initial filing - insurer reported designation with Admin Symbol assigned by the SVO
- **PL** Private Letter Rating assigned by the SVO
- **PLGI** Private Letter Rating – insurer assigned and reported on General Interrogatory
- **RT** Regulatory Transaction
- **RTS** Regulatory Transaction - SVO Reviewed
- **RTIF** Regulatory Transaction - Initial Filing Submitted to SVO
- **RTSYE** Regulatory Transaction - SVO Reviewed - Year-end carry over
- **GI** Insurer assigned and reported on General Interrogatory
- **F** Sub-paragraph D Company – insurer self-designated
- **Z** Insurer assigned and reported subject to limitation
- **Z** Limited to NAIC Designation 6 – insurer assigned
- **Z*** Regulatory review initiated by either the SVO Director, Financial Condition (E) Committee, Executive (EX) Committee or VOSTF.
- **ND*** Regulatory review for an assessment of regulatory policy for the investment or regulatory reporting instructions to implement applicable policy.
The NAIC Designation Category is the combination of NAIC Designation and NAIC Designation Modifier. Valid combinations of NAIC Designation and NAIC Designation Modifier for NAIC Designation Category are shown below:

© 2021 National Association of Insurance Commissioners
Column 18 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

For securities reported on Line 9499999 5319999999 (Mutual Funds), Line 9599999 5519999999 (Unit Investment Trusts) and Line 9699999 5719999999 (Closed-End Funds), provide the appropriate NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol combination as assigned by the Securities Valuation Office and published in AVS+ per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities. A list of these funds can be found on the Securities Valuation Office Web page (https://www.naic.org/svo.htm).

NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these line categories stated above that have not been assigned one by the Securities Valuation Office. For all other common stock line categories, the NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol should not be provided.

The listing of valid NAIC Designations, NAIC Designation Modifier and SVO Administrative Symbol combinations can be found on the NAIC’s website for the Securities Valuation Office (www.naic.org/svo.htm).

The NAIC Designation, Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed schedule but will be three sub-columns in the data table.

- NAIC Designation Column 18A
- NAIC Designation Modifier Column 18B
- SVO Administrative Symbol Column 18C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

NAIC Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on Line 9499999 5319999999 (Mutual Funds Designation Assigned by SVO), Line 9599999 5519999999 (Unit Investment Trusts Designation Assigned by SVO) and Line 9699999 5719999999 (Closed-End Funds Designation Assigned by SVO) if eligible to receive one, as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), otherwise, should not be provided.

The Designation Modifier should not be provided for securities reported on lines below.

- Industrial and Miscellaneous (Unaffiliated) Publicly Traded Line 9099999 5019999999
- Industrial and Miscellaneous (Unaffiliated) Other Line 9199999 5029999999
- Mutual Funds Designation Not Assigned by SVO Line 5329999999
- Unit Investment Trusts Designation Not Assigned by SVO Line 5529999999
- Closed-End Funds Designation Not Assigned by SVO Line 5729999999
- Exchange Traded Funds Line 5819999999
- Parent, Subsidiaries and Affiliates Publicly Traded
  Line 92999995919999999
- Parent, Subsidiaries and Affiliates Other
  Line 93999995929999999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier should not be provided.

Refer to the P&P Manual for the application of these modifiers.

**SVO Administrative Symbol:**

Following are valid SVO Administrative Symbols for common stock. Refer to the P&P Manual for the application of these symbols.

Column 22 – NAIC Designation Category

Provide the appropriate combination of NAIC Designation Equivalent (1 through 6) and NAIC Designation Modifier Equivalent (A through G) (see table below) for each security shown.

The NAIC Designation and NAIC Designation Modifier Equivalent should not be provided for the following lines:

- Parent, Subsidiaries and Affiliates – Mortgage Loans Line 84999997019999999
- Parent, Subsidiaries and Affiliates – Other Short-Term Invested Assets Line 85999997029999999
- Mortgage Loans Line 87999997309999999
- Other Short-Term Invested Assets Line 90999997509999999

Exchange Traded Funds – as Identified by the SVO should be reported as perpetual securities.

The NAIC Designation Category will be two sub-columns in the data table.

- NAIC Designation Equivalent Column 22A
- NAIC Designation Modifier Equivalent Column 22B

NAIC Designation Equivalent:

For the NAIC Designation Equivalent, use the NAIC designation that would have been used for the investment had it been reported on Schedule D, Part 1 if available. If no NAIC Designation is available, the reporting entity should use a NAIC Designation Equivalent most closely resembles their credit risk the investment.

NAIC Designation Modifier Equivalent:

Bonds (Lines 01999990019999999 through 65999920199999999)

Use the NAIC Designation Modifier that would have been used for the investment had it been reported on Schedule D, Part 1 if available.

If no NAIC Designation Modifier is available, the reporting entity should use a NAIC Designation Modifier Equivalent most closely resembles their credit risk the investment.

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should be left blank.

Refer to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for the application of these codes.
The NAIC Designation Category Equivalent is the combination of NAIC Designation Equivalent and NAIC Designation Modifier Equivalent. Valid combinations of NAIC Designation Equivalent and NAIC Designation Modifier Equivalent for NAIC Designation Category Equivalent are shown below:

NAIC Designation Category Equivalent Footnote:

Provide the total book/adjusted carrying value amount by NAIC Designation Category Equivalent that represents the amount reported in Column 7.

The sum of the amounts reported for each NAIC Designation Category Equivalent in the footnote should equal Line 83999999999999999999.

### Cash Equivalents (Schedule E, Part 2 type): 9,199,999,999
### Other Assets: 9,299,999,999

### Totals: 9,999,999,999
Column 1 — CUSIP Identification

CUSIP numbers for all purchased publicly issued securities are available from the broker’s confirmation or the certificate. For private placement securities, the NAIC has created a special number called a PPN to be assigned by the Standard & Poor’s CUSIP Bureau. For foreign securities, use a CINS that is assigned by the Standard & Poor’s CUSIP Bureau: www.cusip.com/cusip/index.htm.

For Lines 0019999999 through 22509999999, if no valid CUSIP, CINS or PPN number exists, then the CUSIP field should be zero-filled and a valid ISIN security number should be reported in (Column 11).

The CUSIP reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 0019999999 through 22509999999 .......... Schedule D, Part 1, Column 1
Lines 24401999999 through 24450999999 .......... Schedule D, Part 2, Section 1, Column 1
Lines 24501999999 through 24598999999 .......... Schedule D, Part 2, Section 2, Column 1
Line 88940999999 ................................................. Schedule BA, Part 1, Column 1
Line 91999999970999999 ..................................... Schedule E, Part 2, Column 1

The CUSIP number should be zero-filled for the following lines:

Real Estate (Schedule A type) ......................................................... 869209999999
Mortgage Loans on Real Estate (Schedule B type) .......................... 879309999999
Short-Term Invested Assets (Schedule DA, Part 1 type) ................ 899509999999
Cash (Schedule E, Part 1 type) .......................................................... 9609999999
Other Assets .................................................................................. 929809999999

--- Detail Eliminated to Conserve Space ---

Column 4 — NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 0019999999 through 22509999999 .... Schedule D, Part 1, Column 6
Lines 24401999999 through 24450999999 24 Schedule D, Part 2, Section 1, Column 20
Lines 24501999999 through 24598999999 20 Schedule D, Part 2, Section 2, Column 17
Line 88940999999 ................................................. Schedule BA, Part 1, Column 7
Line 88950999999 ................................................. Schedule DA, Part 1, Column 22 Line 91999999970999999 ..................................... Schedule E, Part 2, Column 11

For Lines 869209999999, 879309999999, 960999999999 and 929809999999, the column should be left blank.

The NAIC Designation, Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed but will be three sub-columns in the data table.
• NAIC Designation Column 4A
• NAIC Designation Modifier Column 4B
• SVO Administrative Symbol Column 4C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

Column 5 ─ Fair Value

The value reported for this column should be determined in a manner consistent with the fair value column instructions of other schedules for the lines shown below:

Lines 0019999999 through 225099999999 .... Schedule D, Part 1, Column 9
Lines 244019999999 through 244509999999 Schedule D, Part 2, Section 1, Column 10
Lines 244501999999 through 295989999999 Schedule D, Part 2, Section 2, Column 8
Line 889209999999 ...................................... Schedule A, Part 1, Column 10
Line 889309999999 ...................................... FV of the underlying collateral Schedule B, Part 1
Line 889409999999 ...................................... Schedule BA, Part 1, Column 11

For those lines where the same type of investment is reported on other schedules but do not have a fair value column, report the amount consistent with instructions for the following:

Line 899509999999 ...................................... Report BACV, Schedule DA, Part 1, Column 7
Line 960999999999 .......................................... Report Balance, Schedule E Part 1, Column 6
Line 91999999709999999 ............................ Schedule E, Part 2, Column 7

Column 6 ─ Book/Adjusted Carrying Value

The value reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 0019999999 through 225099999999 .... Schedule D, Part 1, Column 11
Lines 244019999999 through 244509999999 Schedule D, Part 2, Section 1, Column 8
Lines 244501999999 through 295989999999 Schedule D, Part 2, Section 2, Column 6
Line 889209999999 ...................................... Schedule A, Part 1, Column 9
Line 889309999999 ...................................... Schedule B, Part 1, Column 8
Line 889409999999 ...................................... Schedule BA, Part 1, Column 12
Line 889509999999 ...................................... Schedule DA, Part 1, Column 7
Line 960999999999 .......................................... Report Balance, Schedule E, Part 1, Column 6
Line 91999999709999999 ............................ Schedule E, Part 2, Column 7
**Column 7 – Maturity Date**

The maturity date reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 0019999999 through 7250999999999...... Schedule D, Part 1, Column 22
- Line 8995099999999............................. Schedule DA, Part 1, Column 6
- Line 91999999709999999...................... Schedule E, Part 2, Column 6

The following lines are considered assets with no maturity date and should be left blank:

- Lines 714019999999 through 7345099999999...... Preferred Stock (Schedule D, Part 2, Section 1 type)
- Lines 745019999999 through 7959899999999...... Common Stock (Schedule D, Part 2, Section 2 type)
- Line 7969209999999............................... Real Estate (Schedule A type)
- Line 8793099999999............................... Mortgage Loans on Real Estate (Schedule B type)
- Line 8994099999999............................... Other Invested Assets (Schedule BA type)
- Line 9298099999999............................... Other Assets

**Detail Eliminated to Conserve Space**

**Column 11 – ISIN Identification**

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

The ISIN reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 0019999999 through 225099999999...... Schedule D, Part 1, Column 1
- Lines 244019999999 through 245099999999...... Schedule D, Part 2, Section 1, Column 1
- Lines 245019999999 through 759899999999...... Schedule D, Part 2, Section 2, Column 1

The ISIN number should be zero-filled for the following lines:

- Real Estate (Schedule A type)................................................................. 8692099999999
- Mortgage Loans on Real Estate (Schedule B type).............................. 8793099999999
- Other Invested Assets (Schedule BA type).............................................. 8994099999999
- Short-Term Invested Assets (Schedule DA, Part 1 type)........................ 9095099999999
- Cash (Schedule E, Part 1 type)............................................................ 9692099999999
- Cash Equivalents (Schedule E, Part 2 type)........................................... 9197099999999
- Other Assets......................................................................................... 9997980999999
### SCHEDULE DL – PART 2
**SEcurities lending collateral assets**

Reinvested Collateral Assets Owned December 31 Current Year

(Securities lending collateral assets included on Schedules A, B, BA, D, DB and E and not reported in aggregate on Line 10 of the asset page.)

Column 1 – CUSIP Identification

CUSIP numbers for all purchased publicly issued securities are available from the broker’s confirmation or the certificate. For private placement securities, the NAIC has created a special number called a PPN to be assigned by the Standard & Poor’s CUSIP Bureau. For foreign securities, use a CINS that is assigned by the Standard & Poor’s CUSIP Bureau: www.cusip.com/cusip/index.htm.

For Lines 0019999999 through 2250999999, if no valid CUSIP, CINS or PPN number exists, then the CUSIP field should be zero-filled and a valid ISIN security number should be reported in (Column 11).

The CUSIP reported for this column should be same for the security as reported in other schedules for the lines shown below:

Lines 0019999999 through 2250999999 .............................. Schedule D, Part 1, Column 1
Lines 224019999999 through 224509999999 ................. Schedule D, Part 2, Section 1, Column 1
Lines 224501999999 through 225989999999 ................. Schedule D, Part 2, Section 2, Column 1
Line 889409999999 ......................................................... Schedule BA, Part 1, Column 1
Line 9199999990709999999 ........................................... Schedule E, Part 2, Column 1

The CUSIP number should be zero-filled for the following lines:

Real Estate (Schedule A) ................................................................. 869209999999
Mortgage Loans on Real Estate (Schedule B) .............................................. 879309999999
Short-Term Invested Assets (Schedule DA, Part 1) ........................................ 899509999999
Cash (Schedule E, Part 1) ........................................................................ 9609999999
Other Assets ............................................................................................... 929809999999

Detail Eliminated to Conserve Space

Column 4 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol reported for this column should be same for the security as reported in other schedules for the lines shown below:

Lines 0019999999 through 2250999999 .... Schedule D, Part 1, Column 6
Lines 224019999999 through 224509999999 Schedule D, Part 2, Section 1, Column 20
Lines 224501999999 through 225989999999 Schedule D, Part 2, Section 2, Column 17
Line 889409999999 Schedule BA, Part 1, Column 7
Line 879509999999 Schedule DA, Part 1, Column 22
Line 9199999990709999999 Schedule E, Part 2, Column 11

For Lines 869209999999, 879309999999, 960999999999 and 929809999999, the column should be left blank.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed but will be three sub-columns in the data table.

- NAIC Designation Column 4A
- NAIC Designation Modifier Column 4B
- SVO Administrative Symbol Column 4C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

Column 5 – Fair Value

The value reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 22509999999 ... Schedule D, Part 1, Column 9
- Lines 244019999999 through 245099999999 Schedule D, Part 2, Section 1, Column 10
- Lines 245019999999 through 295989999999 Schedule D, Part 2, Section 2, Column 8
- Line 869209999999 .................................. Schedule A, Part 1, Column 10
- Line 879309999999 .................................. FV of the underlying collateral Schedule B, Part 1
- Line 889409999999 .................................. Schedule BA, Part 1, Column 11

For those lines where the same investment is reported on other schedules but do not have a fair value column, report the amount in these columns in the other schedules for the lines shown below:

- Line 889509999999 ............................... Report BACV, Schedule DA, Part 1, Column 7
- Line 960999999999 ............................... Report Balance, Schedule E, Part 1, Column 6
- Line 91999999709999999 .......................... Report BACV, Schedule E, Part 2, Column 7

Column 6 – Book/Adjusted Carrying Value

The value reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 22509999999 ... Schedule D, Part 1, Column 11
- Lines 244019999999 through 245099999999 Schedule D, Part 2, Section 1, Column 8
- Lines 245019999999 through 295989999999 Schedule D, Part 2, Section 2, Column 6
- Line 869209999999 ............................... Schedule A, Part 1, Column 9
- Line 879309999999 ............................... Schedule B, Part 1, Column 8
- Line 889409999999 ............................... Schedule BA, Part 1, Column 12
- Line 889509999999 ............................... Schedule DA, Part 1, Column 7
- Line 960999999999 ............................... Report Balance, Schedule E, Part 1, Column 6
- Line 91999999709999999 .......................... Schedule E, Part 2, Column 7
Column 7 – Maturity Date

The maturity date reported for this column should be same for the security as reported in other schedules for the lines shown below:

Lines 0199999999 through 22509999999 .... Schedule D, Part 1, Column 22
Line 895009999999 ........................................ Schedule DA, Part 1, Column 6
Line 91999999709999999 ............................ Schedule E, Part 2, Column 6

The following lines are considered assets with no maturity date and should be left blank:

Preferred Stock (Schedule D, Part 2, Section 1 type) 714019999999 through 734509999999
Common Stock (Schedule D, Part 2, Section 2 type) 745019999999 through 795989999999
Real Estate (Schedule A type) 869209999999
Mortgage Loans on Real Estate (Schedule B type) 879309999999
Other Invested Assets (Schedule BA type) 889409999999
Other Assets 929809999999

Detail Eliminated to Conserve Space

Column 11 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

The ISIN reported for this column should be same for the security as reported in other schedules for the lines shown below:

Lines 0199999999 through 22509999999 .... Schedule D, Part 1, Column 1
Lines 714019999999 through 734509999999 .... Schedule D, Part 2, Section 1, Column 1
Lines 745019999999 through 795989999999 .... Schedule D, Part 2, Section 2, Column 1
Lines 745019999999 through 795989999999 .... Schedule D, Part 2, Section 2, Column 1

The ISIN number should be zero-filled for the following lines:

Real Estate (Schedule A) ................................................................. 869209999999
Mortgage Loans on Real Estate (Schedule B) 879309999999
Other Invested Assets (Schedule BA) 889409999999
Short-Term Invested Assets (Schedule BA, Part 1) 899509999999
Cash (Schedule E, Part 1) .......................................................... 9609999999
Cash Equivalents (Schedule E, Part 2) 91999999709999999
Other Assets 929809999999

</table>

A money market fund shall be reported in this schedule as an Exempt Money Market Mutual Fund if such money market fund is identified by the SVO as meeting the required conditions found in Part Six, Section 2(b)(i) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office. All money market mutual funds that are not identified by the SVO on the U.S. Direct Obligations/Full Faith and Credit Exempt List shall be reported in this schedule as an “all other money market mutual fund.”
Column 1 – CUSIP Identification

CUSIP identification is **required and valid only** for Exempt Money Market Mutual Funds – as Identified by SVO (Line 85999998209999999) and All Other Money Market Mutual Funds (Line 86999998309999999).

Column 11 – NAIC Designation Category

Provide the appropriate combination of NAIC Designation Equivalent (1 through 6) and NAIC Designation Modifier Equivalent (A through G) (see table below) for each security shown.

The NAIC Designation and NAIC Designation Modifier Equivalent should not be provided for the following lines:

- Sweep Accounts
- Exempt Money Market Mutual Funds – as Identified by the SVO
- All Other Money Market Mutual Funds
- Qualified Cash Pools Under SSAP No. 2R
- Other Cash Equivalents
- Exchange Traded Funds – as Identified by the SVO

The NAIC Designation Category will be two sub-columns in the data table.

- NAIC Designation Equivalent
- NAIC Designation Modifier Equivalent

NAIC Designation Equivalent:

For the NAIC Designation Equivalent, use the NAIC Designation that would have been used for the investment had it been reported on Schedule D, Part 1 if available. If no NAIC Designation is available, the reporting entity should use a Designation Equivalent most closely resembles their credit risk the investment.
NAIC Designation Modifier Equivalent:

Bonds (Lines 4100000001999999 through 6599991909999999)

Use the NAIC Designation Modifier that would have been used for the investment had it been reported on Schedule D, Part 1 if available.

If no NAIC Designation Modifier is available, the reporting entity should use a Designation Modifier Equivalent most closely resembles their credit risk the investment.

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should be left blank.

Refer to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for the application of these codes.

The NAIC Designation Category Equivalent is the combination of NAIC Designation Equivalent and NAIC Designation Modifier Equivalent. Valid combinations of NAIC Designation Equivalent and NAIC Designation Modifier Equivalent for NAIC Designation Category Equivalent are shown below:

</tbody>
</table>
Line 1.07 – Hybrid Securities

Include: The value of securities whose proceeds are accorded some degree of equity treatment by one or more of the nationally recognized statistical rating organizations and/or that are recognized as regulatory capital by the issuer’s primary regulatory authority.

Column 1 should equal the Schedule D, Part 1, Line 48999991309999999.

Line 1.08 – Parent, Subsidiaries and Affiliates

Include: The value of all affiliated debt securities as defined under SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

Column 1 should equal the Schedule D, Part 1, Line 55999991509999999.

Line 1.09 – SVO Identified Funds

Include: The value of all Bond Mutual Funds included on the “NAIC Bond Mutual Fund List” as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office and Exchange Traded Funds (ETF) included on the “SVO-Identified Bond ETF List” as published on the Securities Valuation Office Web page (https://www.naic.org/svo.htm) that the SVO has determined are in scope of SSAP No. 26R—Bonds and can be reported on Schedule D, Part 1 and the SVO assigned a NAIC Designation, NAIC Designation Category and SVO Administrative Symbol published in the NAIC’s AVS+ system per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities.

Column 1 should equal the Schedule D, Part 1, Line 60999991619999999.

Line 1.10 – Unaffiliated Bank Loans

Include: The value of all Unaffiliated Bank Loans that are within the scope of SSAP No. 26R—Bonds.

Column 1 should equal the Schedule D, Part 1, Line 66999991619999999.

Line 1.11 – Unaffiliated Certificates of Deposit

Include: The value of all Unaffiliated Certificates of Deposit that are within the scope of SSAP No. 26R—Bonds.

Column 1 should equal the Schedule D, Part 1, Line 2019999999.

Line 1.12 – Total Long-Term Bonds

Sum of Lines 1.1 to 1.11.

The amount reported in Column 1 should equal the amount reported in Line 1, Column 1, Page 2, Assets.

The amount reported in Column 3 should equal the amount reported in Line 1, Column 3, Page 2, Assets.
Line 2.01 – Preferred Stocks – Industrial and Miscellaneous (Unaffiliated)

Include: The value of all unaffiliated preferred stocks.

Column 1 should equal the Schedule D, Part 2, Section 1, Lines 8499999 plus 85999994109999999.

Line 2.02 – Preferred Stocks – Parent, Subsidiaries and Affiliates

Include: The value of all preferred stock securities as defined under SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

Column 1 should equal the Schedule D, Part 2, Section 1, Lines 8699999 plus 87999994409999999.

Line 2.03 – Total Preferred Stocks

Sum of Lines 2.01 to 2.02.

The amount reported in Column 1 should equal the amount reported in Line 2.1, Column 1, Page 2, Assets.

The amount reported in Column 3 should equal the amount reported in Line 2.1, Column 3, Page 2, Assets.

Line 3.01 – Common Stocks – Industrial and Miscellaneous (Unaffiliated) Publicly Traded

Include: The value of all investments in the common stock of unaffiliated entities. Publicly traded common stock includes, but is not limited to, equity securities traded on a public exchange, master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American or NASDAQ exchanges, and publicly traded common stock warrants.

Exclude: Mutual funds that should be reported on Line 3.05.

Column 1 should equal the Schedule D, Part 2, Section 2, Line 90999995019999999.

Line 3.02 – Common Stocks – Industrial and Miscellaneous (Unaffiliated) Other

Include: The value of all industrial and miscellaneous common stock of unaffiliated entities not reported in Line 3.1. Includes, but is not limited to:

1. Equity securities not traded on a public exchange (e.g., private equities).

2. Master limited partnership common stock not traded on the New York, American or NASDAQ exchanges.

Exclude: Mutual funds that should be reported on Line 3.05.

Column 1 should equal the Schedule D, Part 2, Section 2, Line 91999995029999999.

Line 3.03 – Common Stocks – Parent, Subsidiary and Affiliates Publicly Traded

Include: The value of all investments in the common stock of affiliated entities. Publicly traded common stock includes, but is not limited to, equity securities traded on a public exchange, master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American or NASDAQ exchanges, and publicly traded common stock warrants.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 92999995919999999.

Line 3.04  –  Common Stocks – Parent, Subsidiary and Affiliates Other
Include: The value of all unaffiliated entities not reported in Line 3.03.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 93999995929999999.

Line 3.05  –  Common Stocks – Mutual Funds
Include: The value of all investments in shares of funds regulated as mutual funds by the Securities and Exchange Commission reported on Schedule D, Part 2, Section 2.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 94999995409999999.

Line 3.06  –  Common Stocks – Unit Investment Trusts
Include: The value of all investments in shares of funds regulated as unit investment trusts by the Securities and Exchange Commission reported on Schedule D, Part 2, Section 2.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 95999995609999999.

Line 3.07  –  Common Stocks – Closed-End Funds
Include: The value of all investments in shares of funds regulated as closed-end funds by the Securities and Exchange Commission reported on Schedule D, Part 2, Section 2.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 96999995809999999.

Line 3.08  –  Common Stocks – Exchange Traded Funds
Include: The value of all investments in shares of funds regulated as exchange traded funds by the Securities and Exchange Commission reported on Schedule D, Part 2, Section 2.
Column 1 should equal the Schedule D, Part 2, Section 2, Line 5819999999.

Line 3.0809  –  Total Common Stocks
Sum of Lines 3.01 to 3.0808.
The amount reported in Column 1 should equal the amount reported in Line 2.2, Column 1, Page 2, Assets.
The amount reported in Column 3 should equal the amount reported in Line 2.2, Column 3, Page 2, Assets.

Detail Eliminated to Conserve Space
SCHEDULE D – SUMMARY BY COUNTRY
LONG-TERM BONDS AND STOCKS OWNED DECEMBER 31 OF CURRENT YEAR

Enter summarized amounts in the appropriate columns by the specified major classifications, subdividing into United States, Canada, and Other Countries where applicable. For purposes of this schedule, investments in Other Countries are considered Foreign Investments. For the definition of Foreign Investment, and Domestic Investment, see instructions to the Supplemental Investment Risk Interrogatories.

Column 2 – Fair Value

For certain bonds, values other than actual market may appear in this column. (See Schedule D, Part 1 instructions for details.)

Exclude: Accrued interest.

Column 3 – Actual Cost

Include: Brokerage and other related fees, to the extent they do not exceed the fair market value at the date of acquisition.

Exclude: Accrued interest.

Lines 8 through 11 – Bonds – Industrial and Miscellaneous, SVO Identified Funds, Unaffiliated Bank Loans, Unaffiliated Certificates of Deposit and Hybrid Securities (Unaffiliated)

Include: Exchange Traded Funds – as Identified by the SVO reported in Schedule D, Part 1.

Unaffiliated Bank Loans reported on Schedule D, Part 1.

Unaffiliated Certificates of Deposits reported on Schedule D, Part 1.

Line 13 – Total Bonds

Columns 1, 2, 3, and 4, should agree with Columns 11, 9, 7 and 10, respectively, in Schedule D, Part 1.

Column 1 should equal Column 1, Line 1 of the Assets page.

Lines 14 through 17 – Preferred Stocks – Industrial and Miscellaneous (Unaffiliated)

Include: Exchange Traded Funds (ETFs) reported in Schedule D, Part 2, Section 1.

Line 19 – Total Preferred Stocks

Columns 1, 2 and 3 should agree with Columns 8, 10 and 11, respectively, in Schedule D, Part 2, Section 1.

Column 1 should equal Column 1, Line 2.1 of the Assets page.
Lines 20 through 23 – Common Stocks – Industrial and Miscellaneous (Unaffiliated), Mutual Funds, Unit Investment Trusts, Closed-End Funds and Exchange Traded funds

Include: Mutual funds reported in Schedule D, Part 2, Section 2.

Exclude: Exchange Traded Funds (ETFs) reported in Schedule D, Part 2, Section 1.

Line 25 – Total Common Stocks

Columns 1, 2 and 3 should agree with Columns 6, 8 and 9, respectively, in Schedule D, Part 2, Section 2.

Column 1 should equal Column 1, Line 2.2 of the Assets page.
## SCHEDULE D – PART 1A – SECTION 1

### QUALITY AND MATURITY DISTRIBUTION OF ALL BONDS OWNED DECEMBER 31

**By Major Type and NAIC Designation**

---

**Detail Eliminated to Conserve Space**

---

There are 14-15 sections to this schedule: Sections 1 through 10-11 for each of the 10-11 bond categories, Section 12-13 for total bonds current year, Section 12-13 for total bonds prior year, Section 13-14 for total bonds publicly traded and Section 14-15 for total bonds privately placed. The 10-11 bond categories combine corresponding subtotals from Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 as follows, and for each of those 10-11 bond categories, the total line for Column 7 of each section should equal the sum of the subtotal lines shown below:

### Section 1. U.S. Governments

- Line 0599999-0109999999 from Schedule D, Part 1, Column 11; Line 0599999 from Schedule DA, Part 1, Column 7; and Line 0599999 from Schedule E, Part 2, Column 7.

### Section 2. All Other Governments

- Lines 1099999-0309999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

### Section 3. U.S. States, Territories and Possessions, Guaranteed

- Lines 1799999-0509999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

### Section 4. U.S. Political Subdivisions of States, Territories and Possessions, Guaranteed

- Lines 2499999-0709999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

### Section 5. U.S. Special Revenue & Special Assessment Obligations, etc., Non-Guaranteed

- Lines 3199999-0909999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

### Section 6. Industrial & Miscellaneous (Unaffiliated)

- Line 3899999-1109999999 from Schedule D, Part 1, Column 11; Line 3899999 from Schedule DA, Part 1, Column 7; and Line 3899999 from Schedule E, Part 2, Column 7.

### Section 7. Hybrid Securities

- Lines 4899999-1309999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

### Section 8. Parent, Subsidiaries and Affiliates

- Lines 5599999-1509999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.
Section 9. SVO Identified Funds

Lines 6099999, 1619999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

Section 10. Unaffiliated Bank Loans

Lines 6509999, 1909999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

Section 11. Unaffiliated Certificates of Deposit

Lines 2019999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

The quality designation used is the “NAIC Designation” that appears with each bond as listed in the Valuations of Securities. Include short-term and cash equivalent bonds in the category that most closely resembles their credit risk. For each Section 1 through 11, seven lines of information are shown, which are numbered in a format “X.Y” where the number “X” is the number of the section and the number “Y” is the order of the line within the section. The lines within each section are categorized as follows for Section “X”.

| X.1 | Highest Quality  (NAIC 1) |
| X.2 | High Quality  (NAIC 2) |
| X.3 | Medium Quality  (NAIC 3) |
| X.4 | Low Quality  (NAIC 4) |
| X.5 | Lower Quality  (NAIC 5) |
| X.6 | In or near default  (NAIC 6) |
| X.7 | Total for section |

Footnote (d)

Provide the total book/adjusted carrying value amount reported in Section 11, Column 1 by NAIC designation that represents the amount of securities reported in Schedule DA and Schedule E, Part 2.

The sum of the amounts by NAIC designation (NAIC 1, NAIC 2, NAIC 3, NAIC 4, NAIC 5 and NAIC 6) reported in the footnote should equal the sum of Schedule DA, Part 1, Column 7, Lines 8399999, 2509999999 plus Schedule E, Part 2, Column 7, Line 8399999, 2509999999.
There are 14-15 sections to this schedule: Sections 1 through 11 for each of the 14-11 bond categories, Section 12 for total bonds current year, Section 13-14 for total bonds prior year, Section 14-15 for total bonds publicly traded and Section 15 for total bonds privately placed. The 14-11 bond categories combine corresponding subtotals from Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 as follows, and for each of those 14-11 bond categories, the total line for Column 7 of each section should equal the sum of the subtotal lines shown below:

</table>
Section 10. Unaffiliated Bank Loans

Lines 65000000-190000000 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

Section 11. Unaffiliated Certificates of Deposit

Lines 2019999999 from Schedule D, Part 1, Column 11; Schedule DA, Part 1, Column 7; and Schedule E, Part 2, Column 7.

For each major section, the following subgroups, which are described in the Investment Schedules General Instructions, shall be presented by maturity category:

Sections 1 through 7:
- Issuer Obligations
- Residential Mortgage-Backed Securities
- Commercial Mortgage-Backed Securities
- Other Loan-Backed and Structured Securities

Sections 8:
- Issuer Obligations
- Residential Mortgage-Backed Securities
- Commercial Mortgage-Backed Securities
- Other Loan-Backed and Structured Securities
- Affiliated Bank Loans – Issued
- Affiliated Bank Loans – Acquired

Section 9:
- Exchange Traded Funds – as Identified by the SVO
- Bond Mutual Funds – as Identified by the SVO

Section 10:
- Unaffiliated Bank Loans – Issued
- Unaffiliated Bank Loans – Acquired

Section 11:
- Unaffiliated Certificates of Deposit

Sections 11 through 15:
- Issuer Obligations
- Residential Mortgage-Backed Securities
- Commercial Mortgage-Backed Securities
- Other Loan-Backed and Structured Securities
- SVO Identified Funds
- Affiliated Bank Loans
- Unaffiliated Bank Loans
- Unaffiliated Certificates of Deposit

Detail Eliminated to Conserve Space
### DEFAULT COMPONENT –
**BASIC CONTRIBUTION, RESERVE OBJECTIVE AND MAXIMUM RESERVE CALCULATIONS**

#### Line 9 — Total Long-Term Bonds

Column 1 should agree with Page 2, Line 1, Column 3 plus Schedule DL Part 1, Column 6, Line 70009999250999999.

#### Line 17 — Total Preferred Stocks

Column 1 should agree with Page 2, Line 2.1, Column 3 plus Schedule DL, Part 1, Column 6, Line 73099994509999999.

#### Lines 18 through 24 — Short-Term Bonds

Report the book/adjusted carrying value of all short-term bonds and other short-term fixed-income investments (Schedule DA, Part 1 (Lines 05999990109999999, 10999990309999999, 17999990509999999, 24999990709999999, 31999990909999999, 38999991109999999, 48999991309999999, 55999991509999999, 60999991609999999 and 65999992019999999) and short-term bonds included on Schedule DL, Part 1, Line 89999999309999999 owned in Columns 1 and 4. Categorize the short-term bonds and other fixed-income instruments listed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* into NAIC designations 1 through 6 as directed by the Securities Valuation Office instructions, except that exempt obligations listed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* should be reported separately. Multiply the amount in Column 4 for each designation by the reserve factors provided in Columns 5, 7 and 9, and report the products by designation in Columns 6, 8 and 10, respectively.

#### Line 58 — Total Schedule B Mortgage Loans on Real Estate

Column 1 should agree with Page 2, Line 3.1 + 3.2, Column 3 plus Schedule DL, Part 1, Column 6, Line 87999999309999999.

#### Line 59 — Total Schedule DA Mortgages

Report the book/adjusted carrying value of all Schedule DA mortgage loans (Lines 84999999701999999 and 87999999309999999) and any applicable investments from Schedule DL, Part 1, Line 89999999309999999 owned in Column 1. Any related encumbrances should be deducted in Column 2. Multiply the amount in Column 4 by the reserve factors for the Schedule B mortgages and report the products in Columns 6, 8 and 10.
BASIC CONTRIBUTION, RESERVE OBJECTIVE AND MAXIMUM RESERVE CALCULATIONS FOR UNRATED MULTI-CLASS SECURITIES ACQUIRED BY CONVERSION

Line 17 – Total Common Stocks

Column 1 should agree with Page 2, Line 2.2, Column 3 plus Schedule DL, Part 1, Column 6, Line 77999995989999999. The Columns 6, 8 and 10 amounts, respectively, must be reported on the Asset Valuation Reserve Page, Lines 7, 10 and 9, respectively, Column 4.

Lines 18 through 20 – Real Estate

Categorize the real estate as indicated on Lines 18 through 20. Real estate reported in Schedule DL, Part 1, Line 8699999 9209999999 would also be included in this section. Report the sum of Columns 1, 2 and 3 in Column 4. Multiply the amount in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

NOTE: Related party encumbrances are loans from the reporting entity and the amount reflected in Column 2 should be deducted in Column 2 in the corresponding section of the AVR worksheet. If the real estate entity to which the loan was made is not wholly owned by the reporting entity, the related party encumbrance amount reflected in Column 2 should be based on the reporting entity’s ownership percentage. The amount of the third party encumbrances without recourse to be reflected in Column 3 is limited to the extent that the maximum reserve (Column 6) should not exceed the sum of the book/adjusted carrying value (Column 1) plus related party encumbrances (Column 2) and third party encumbrances with recourse which are included in Column 3.

Line 83 – Other Invested Assets – Schedule BA

Report the book/adjusted carrying value of all other Schedule BA investments owned that cannot be classified into one of the above categories (Lines 0199999, 0299999, 0399999, 0499999, 0599999, 0699999, 0999999, 1099999, 1799999, 1899999, 2599999, 2699999, 2799999, 2899999, 3399999, 3499999, 3999999, 4699999 and 4799999) in Column 1 and any encumbrances on these assets in Column 3. Schedule DL, Part 1 investments reported on Line 8699999 9409999999 would be included in this total if not classified in one of the above categories. Collateral loans (Lines 2999999 and 3099999) have been intentionally excluded from this total. For surplus debentures and capital notes, the amount to report in Column 1 is to be calculated based upon the accounting prescribed in SSAP No. 41—Surplus Notes. Report the sum of Columns 1 and 3 in Column 4. Column 4 may not be less than zero. Note that ALL surplus debentures and capital notes should be included here in Line 83, EXCEPT those with a CRP rating equivalent to an NAIC 1 or NAIC 2 designation (which are reported in Lines 30 and 31 of this schedule). Multiply the amount in Column 4 by the reserve factors provided in Columns 5, 7 and 9, and report the products in Columns 6, 8 and 10, respectively.

Exclude: All surplus debentures and capital notes that possess a CRP rating equivalent to an NAIC 1 or NAIC 2 designation. These surplus debentures are to be reported in Line 30 and 31 (Other Invested Assets with Underlying Characteristics of Preferred Stocks) of this schedule.
Line 84 – Other Short-Term Invested Assets – Schedule DA

Report the book/adjusted carrying value of all other Schedule DA (Lines 8509999702999999 and 7029999999) and Schedule DL, Part 1 (Line 85099999509999999) assets owned that cannot be classified into one of the above categories in Column 1 and any encumbrances on these assets in Column 3. Report the sum of Columns 1 and 3 in Column 4. Multiply the amount on Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

**Detail Eliminated to Conserve Space**

Column 10 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

Provide the appropriate combination of NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol (see below) at the end of the quarter for each security shown. The list of valid SVO Administrative Symbols is shown below.

The listing of valid NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol combinations can be found on the NAIC’s website for the Securities Valuation Office (www.naic.org/svo.htm).

Exchange Traded Funds – as Identified by the SVO should be reported as perpetual securities.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed schedule but will be three sub-columns in the data table.

- NAIC Designation Column 10A
- NAIC Designation Modifier Column 10B
- SVO Administrative Symbol Column 10C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

**NAIC Designation Modifier:**

The NAIC Designation Modifier should only be used for securities reported on the lines below if eligible to receive one, as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), otherwise, should not be provided.

- Bonds Lines 0199999 0109999999 through 82999992019999999
- Preferred Stocks Lines 8499999 4019999999 and 85999994029999999

© 2021 National Association of Insurance Commissioners
Common Stocks Lines 0499999 5319999999, 5519999999 through and 0699999 5719999999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier should not be provided.

For securities reported on Line 0499999 5319999999 (Mutual Funds Designation Assigned by SVO), Line 0599999 5519999999 (Unit Investment Trusts Designation Assigned by SVO) and Line 0699999 5719999999 (Closed-End Funds Designation Assigned by SVO) provide the appropriate NAIC Designation and NAIC Modifier as assigned by the Securities Valuation Office. NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these lines that have not been assigned one by the Securities Valuation Office and published in AVS+ per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities. For all other common stock line categories, the NAIC designation and NAIC Modifier a should not be provided.

Refer to the P&P Manual for the application of these modifiers.

Column 22 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

Provide the appropriate combination of the NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol (see below) at date of disposal for each security shown. The list of valid SVO Administrative Symbols is shown below.

Where multiple disposal transactions occurred for the same CUSIP, and those transactions are summarized on one line, enter the appropriate combination of NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol for the last disposal using the last available designation.

The listing of valid NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol combinations can be found on the NAIC’s website for the Securities Valuation Office (www.naic.org/svo.htm).

Exchange Traded Funds – as Identified by the SVO should be reported as perpetual securities.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed but will be three sub-columns in the data table.

- NAIC Designation Column 22A
- NAIC Designation Modifier Column 22B
- SVO Administrative Symbol Column 22C

On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

NAIC Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on the lines below if eligible to receive one, as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), otherwise, should not be provided.

- Bonds Lines 01999999 through 02999999
- Preferred Stocks Lines 40099999 through 40299999
- Common Stocks Lines 04999999 through 57999999

© 2021 National Association of Insurance Commissioners
As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier should not be provided.

For securities reported on Line 9499999 5319999999 (Mutual Funds Designation Assigned by SVO), Line 9599999 5519999999 (Unit Investment Trusts Designation Assigned by SVO) and Line 9699999 5719999999 (Closed-End Funds Designation Assigned by SVO) provide the appropriate NAIC Designation and NAIC Modifier as assigned by the Securities Valuation Office. NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these lines that have not been assigned one by the Securities Valuation Office and published in AVS+ per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities. For all other common stock line categories, the NAIC designation and NAIC Modifier a should not be provided.

Refer to the P&P Manual for the application of these modifiers.

SVO Administrative Symbol:

- Designation Assigned by SVO: 5719999999
- Designation Not Assigned by SVO: 5729999999
- Subtotals – Closed-End Funds: 5809999999

### Parent, Subsidiaries and Affiliates
- Publicly Traded: 5919999999
- Other: 5929999999
- Subtotals – Parent, Subsidiaries and Affiliates: 5979999999

### Total Common Stocks: 7999999999

## Total Preferred and Common Stocks: 8099999999

## Real Estate (Schedule A type): 8699999999
- Mortgage Loans on Real Estate (Schedule B type): 8799999999
- Other Invested Assets (Schedule BA type): 8899999999
- Short-Term Invested Assets (Schedule DA type): 8999999999
- Cash (Schedule E, Part 1 type): 9099999999
- Cash Equivalents (Schedule E, Part 2 type): 9199999999
- Other Assets: 9299999999
- Totals: 9999999999
Column 1  —  CUSIP Identification

CUSIP numbers for all purchased publicly issued securities are available from the broker’s confirmation or the certificate. For private placement securities, the NAIC has created a special number called a PPN to be assigned by the Standard & Poor’s CUSIP Bureau. For foreign securities, use a CINS that is assigned by the Standard & Poor’s CUSIP Bureau: www.cusip.com/cusip/index.htm.

For Lines 00019999999 through 22509999999, if no valid CUSIP, CINS or PPN number exists, then the CUSIP field should be zero-filled and a valid ISIN security number should be reported in Column 11.

The CUSIP reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 00019999999 through 22509999999 ...................... Schedule D, Part 1, Column 1
Lines 224019999999 through 224509999999 .................. Schedule D, Part 2, Section 1, Column 1
Lines 225019999999 through 225989999999 .................. Schedule D, Part 2, Section 2, Column 1
Line 889409999999 ...................................................... Schedule BA, Part 1, Column 1
Line 01999999970999999 ............................................. Schedule E, Part 2, Column 1

The CUSIP number should be zero-filled for the following lines:

- Real Estate (Schedule A type) ................................................................. 869209999999
- Mortgage Loans on Real Estate (Schedule B type).............................. 879309999999
- Short-Term Invested Assets (Schedule DA, Part 1 type).......................... 899509999999
- Cash (Schedule E, Part 1 type).............................................................. 960999999999
- Other Assets ......................................................................................... 929809999999

---

Column 4  —  NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 00019999999 through 22509999999 .... Schedule D, Part 1, Column 6
Lines 224019999999 through 224509999999 Schedule D, Part 2, Section 1, Column 20
Lines 225019999999 through 225989999999 Schedule D, Part 2, Section 2, Column 17
Line 889409999999 Schedule BA, Part 1, Column 7
Line 899509999999 Schedule DA, Part 1, Column 22
Line 91999999709999999 Schedule E, Part 2, Column 11

For Lines 869209999999, 879309999999, 960999999999 and 929809999999, the column should be left blank.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed schedule but will be three sub-columns in the data table.

- NAIC Designation Column 4A
- NAIC Designation Modifier Column 4B
On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

Column 5 – Fair Value

The value reported for this column should be determined in a manner consistent with the fair value column instructions of other schedules for the lines shown below:

- Lines 0019999999 through 2509999999 – Schedule D, Part 1, Column 9
- Lines 74401999999 through 74450999999 – Schedule D, Part 2, Section 1, Column 10
- Lines 744501999999 through 74509899999 – Schedule D, Part 2, Section 2, Column 8
- Line 86209999999 – Schedule A, Part 1, Column 10
- Line 87309999999 – FV of the underlying collateral Schedule B, Part 1
- Line 88409999999 – Schedule BA, Part 1, Column 11

For those lines where the same type of investment is reported on other schedules but do not have a fair value column, report the amount consistent with instructions for the following:

- Line 89509999999 – Report BACV, Schedule DA, Column 7
- Line 96099999999 – Report Balance, Schedule E Part 1, Column 6
- Line 91999999709999999 – Report BACV, Schedule E Part 2, Column 7

Column 6 – Book/Adjusted Carrying Value

The value reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 0119999999 through 2509999999 – Schedule D, Part 1, Column 11
- Lines 74401999999 through 74450999999 – Schedule D, Part 2, Section 1, Column 11
- Lines 744501999999 through 74509899999 – Schedule D, Part 2, Section 2, Column 6
- Line 86209999999 – Schedule A, Part 1, Column 9
- Line 87309999999 – Schedule B, Part 1, Column 8
- Line 88409999999 – Schedule BA, Part 1, Column 12
- Line 89509999999 – Schedule DA, Part 1, Column 7
- Line 96099999999 – Report Balance, Schedule E Part 1, Column 6
- Line 91999999709999999 – Schedule E Part 2, Column 7

Column 7 – Maturity Date

The maturity date reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 0119999999 through 2509999999 – Schedule D, Part 1, Column 22
- Line 89509999999 – Schedule DA, Column 6
- Line 91999999709999999 – Schedule E Part 2, Column 6
The following lines are considered assets with no maturity date and should be left blank:

- Preferred Stock (Schedule D, Part 2, Section 1 type)
- Common Stock (Schedule D, Part 2, Section 2 type)
- Real Estate (Schedule A type)
- Mortgage Loans on Real Estate (Schedule B type)
- Other Invested Assets (Schedule BA type)

** Columns 8 and 9 will be electronic only. **

** Column 8 – Legal Entity Identifier (LEI) **

Provide the 20-character Legal Entity Identifier (LEI) for any mortgagor, issuer or counterparty as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

** Column 9 – ISIN Identification **

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

The ISIN reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Schedule D, Part 1, Column 1
- Schedule D, Part 2, Section 1, Column 1
- Schedule D, Part 2, Section 2, Column 1

The ISIN number should be zero-filled for the following lines:

- Real Estate (Schedule A type)
- Mortgage Loans on Real Estate (Schedule B type)
- Other Invested Assets (Schedule BA type)
- Short-Term Invested Assets (Schedule DA, Part 1 type)
- Cash (Schedule E, Part 1 type)
- Cash Equivalents (Schedule E, Part 2 type)
- Other Assets
# SCHEDULE DL – PART 2

## SECURITIES LENDING COLLATERAL ASSETS

Reinvested Collateral Assets Owned Current Statement Date  
(Securities lending collateral assets included on Schedules A, B, BA, D, DB and E  
and not reported in aggregate on Line 10 of the asset page.)

Column 1 – CUSIP Identification

CUSIP numbers for all purchased publicly issued securities are available from the broker’s confirmation or the certificate. For private placement securities, the NAIC has created a special number called a PPN to be assigned by the Standard & Poor’s CUSIP Bureau. For foreign securities, use a CINS that is assigned by the Standard & Poor’s CUSIP Bureau: [www.cusip.com/cusip/index.htm](http://www.cusip.com/cusip/index.htm).

For Lines 0019999999 through 22509999999, if no valid CUSIP, CINS or PPN number exists, then the CUSIP field should be zero-filled and a valid ISIN security number should be reported in Column 11.

The CUSIP reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 22509999999 — Schedule D, Part 1, Column 1
- Lines 24019999999 through 24450999999 — Schedule D, Part 2, Section 1, Column 1
- Lines 24501999999 through 24598999999 — Schedule D, Part 2, Section 2, Column 1
- Line 88409999999 — Schedule D, Part 2, Section 2, Column 1
- Line 91999999709999999 — Schedule E, Part 2, Column 1

The CUSIP number should be zero-filled for the following lines:

- Real Estate (Schedule A) — 86920999999
- Mortgage Loans on Real Estate (Schedule B) — 87930999999
- Short-Term Invested Assets (Schedule DA, Part 1) — 89950999999
- Cash (Schedule E, Part 1) — 9609999999
- Other Assets — 92980999999

---

Column 4 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 22509999999 — Schedule D, Part 1, Column 6
- Lines 24019999999 through 24450999999 — Schedule D, Part 2, Section 1, Column 20
- Lines 24501999999 through 24598999999 — Schedule D, Part 2, Section 2, Column 17
- Line 88409999999 — Schedule BA, Part 1, Column 1
- Line 89950999999 — Schedule DA, Part 1, Column 1
- Line 91999999709999999 — Schedule E, Part 2, Column 11

For Lines 86920999999, 87930999999, 9609999999 and 92980999999, the column should be left blank.

The NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol will be shown as one column on the printed schedule but will be three sub-columns in the data table.

- NAIC Designation Column 4A
- NAIC Designation Modifier Column 4B
- Administrative Symbol Column 4C
On the printed page the sub-columns should be displayed with a “.” between the NAIC Designation and the NAIC Designation Modifier with a space between the NAIC Designation Modifier and the SVO Administrative Symbol (e.g., “1.A YE”).

**Column 5 — Fair Value**

The value reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2250999999 .... Schedule D, Part 1, Column 9
- Lines 24019999999 through 24509999999 Schedule D, Part 2, Section 1, Column 10
- Lines 24501999999 through 29508999999 Schedule D, Part 2, Section 2, Column 8
- Line 869209999999 ...................................... Schedule A, Part 1, Column 10
- Line 879309999999 ...................................... FV of the underlying collateral Schedule B, Part 1
- Line 889409999999 ...................................... Schedule BA, Part 1, Column 11

For those lines where the same investment is reported on other schedules but do not have a fair value column, report the amount in these columns in the other schedules for the lines shown below:

- Line 899509999999 ...................................... Report BACV, Schedule DA, Column 7
- Line 9609999999 .......................................... Report Balance, Schedule E, Part 1, Column 6
- Line 91999999709999999 .................................. Report BACV, Schedule E, Part 2, Column 7

**Column 6 — Book/Adjusted Carrying Value**

The value reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2250999999 .... Schedule D, Part 1, Column 11
- Lines 24019999999 through 24509999999 Schedule D, Part 2, Section 1, Column 8
- Lines 24501999999 through 29508999999 Schedule D, Part 2, Section 2, Column 6
- Line 869209999999 ...................................... Schedule A, Part 1, Column 9
- Line 879309999999 ...................................... Schedule BA, Part 1, Column 8
- Line 889409999999 ...................................... Schedule BA, Part 1, Column 12
- Line 899509999999 ...................................... Schedule DA, Part 1, Column 7
- Line 9609999999 .......................................... Schedule E, Part 1, Column 12
- Line 91999999709999999 .................................. Schedule E, Part 2, Column 7

**Column 7 — Maturity Date**

The maturity date reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2250999999 .... Schedule D, Part 1, Column 22
- Line 899509999999 ...................................... Schedule DA, Part 1, Column 6
- Line 91999999709999999 .................................. Schedule E, Part 2, Column 6

The following lines are considered assets with no maturity date and should be left blank:

- 244019999999 through 24509999999 ... Preferred Stock (Schedule D, Part 2, Section 1 type)
- 245019999999 through 295089999999 .... Common Stock (Schedule D, Part 2, Section 2 type)
Columns 8 and 9 will be electronic only. **

Column 8 — Legal Entity Identifier (LEI)

Provide the 20-character Legal Entity Identifier (LEI) for any mortgagor, issuer or counterparty as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

Column 9 — ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

The ISIN reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 001999999999 through 225099999999 Schedule D, Part 1, Column 1
- Lines 214019999999 through 234509999999 Schedule D, Part 2, Section 1, Column 1
- Lines 245019999999 through 295989999999 Schedule D, Part 2, Section 2, Column 1

The ISIN number should be zero-filled for the following lines:

- Real Estate (Schedule A) ................................................................. 869209999999
- Mortgage Loans on Real Estate (Schedule B) ................................ 879309999999
- Other Invested Assets (Schedule BA) ............................................ 889409999999
- Short-Term Invested Assets (Schedule DA, Part 1) ......................... 889409999999
- Cash (Schedule E, Part 1) ............................................................ 909999999999
- Cash Equivalents (Schedule E, Part 2) ........................................... 919999999999
- Other Assets .................................................................................. 929809999999

A money market fund shall be reported in this schedule as an Exempt Money Market Mutual Fund if such money market fund is identified by the SVO as meeting the required conditions found in Part Six, Section 2(b)(i) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office. All money market mutual funds that are not identified by the SVO on the U.S. Direct Obligations/Full Faith and Credit Exempt List shall be reported in this schedule as an “all other money market mutual fund.”

---

### Column 1 — CUSIP Identification

CUSIP identification is **required and valid only** for Exempt Money Market Mutual Funds – as Identified by SVO (Line 85999999120999999 and All Other Money Market Mutual Funds (Line 8699999938099999999).

### IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the General Schedules Investment Instructions and Schedule DB General Instructions to reflect treatment of publicly traded stock warrants as being in the scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock and reporting as common and preferred stock.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect the treatment of publicly traded stock warrants as being in the scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock from changes to those SSAPs and SSAP No. 86—Derivatives adopted by the Statutory Accounting Principles (E) Working Group (Ref #2020-33).

ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

INVESTMENT SCHEDULES GENERAL INSTRUCTIONS
(Appplies to all investment schedules)

Detail Eliminated to Conserve Space

General Classifications Preferred Stock Only:

Refer to SSAP No. 32—Preferred Stock and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities for additional guidance.

Industrial and Miscellaneous (Unaffiliated):

All unaffiliated preferred stocks. Include Public Utilities, Banks, Trusts and Insurance Companies. This category includes Exchange Traded Funds included on the “List of Exchange Traded Funds Eligible for Reporting as a Schedule D Preferred Stock” as found on the Securities Valuation Office Web page (https://www.naic.org/svo.htm). Include publicly traded stock warrants captured in the scope of SSAP No. 32R—Preferred Stock.

Parent, Subsidiaries and Affiliates:

Defined by SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

General Classifications Common Stock Only:

Refer to SSAP No. 30R—Unaffiliated Common Stock and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

Industrial and Miscellaneous (Unaffiliated):

All unaffiliated common stocks that are not mutual funds or money market mutual funds. Include Public Utilities, Banks, Trusts and Insurance Companies. Include publicly traded stock warrants captured in the scope of SSAP No. 30R—Unaffiliated Common Stock

Mutual Funds:

All investments in shares of funds regulated as mutual funds by the U.S. Securities and Exchange Commission under the federal Investment Company Act of 1940. This definition does not include unit investments trusts, closed-end funds or hedge funds.

Foreign (non-SEC registered) open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction. Other foreign funds are excluded.

Detail Eliminated to Conserve Space
DEFINITIONS OF DERIVATIVE INSTRUMENTS

A hedge transaction is “Anticipatory” if it relates to:

a. A firm commitment to purchase assets or incur liabilities; or
b. An expectation (but not obligation) to purchase assets or incur liabilities in the normal course of business.

“Underlying Interest” means the asset(s), liability(ies) or other interest(s) underlying a derivative instrument, including, but not limited to, any one or more securities, currencies, rates, indices, commodities, derivative instruments, or other financial market instruments.

“Option” means an agreement giving the buyer the right to buy or receive, sell or deliver, enter into, extend or terminate, or effect a cash settlement based on the actual or expected price, level, performance or value of one or more Underlying Interests.

“Warrant” means an agreement that gives the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times according to a schedule or warrant agreement. Exclude publicly traded stock warrants are captured in scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock.

“Cap” means an agreement obligating the seller to make payments to the buyer, each payment under which is based on the amount, if any, that a reference price, level, performance or value of one or more Underlying Interests exceed a predetermined number, sometimes called the strike/cap rate or price.

GENERAL INSTRUCTIONS FOR SCHEDULE DB

Each derivative instrument should be reported in Parts A, B or C according to the nature of the instrument, as follows:

Part A: Positions in Options*, Caps, Floors, Collars, Swaps, and Forwards**
Part B: Positions in Futures Contracts
Part C: Positions in Replication (Synthetic Asset) Transaction

* Warrants acquired in conjunction with public or private debt or equity that are more appropriately reported in other schedules do not have to be reported in Schedule DB. Excludes publicly traded stock warrants captured in the scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock.

** Forward commitments that are not derivative instruments (for example, the commitment to purchase a GNMA security two months after the commitment date or a private placement six months after the commitment date) should be disclosed in the Notes to Financial Statements, rather than on Schedule DB.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE D – PART 2 – SECTION 1

PREFERRED STOCKS OWNED DECEMBER 31 OF CURRENT YEAR

Detail Eliminated to Conserve Space

Column 8 – Book/Adjusted Carrying Value

The chart below details the appropriate valuation method for this column. The *Purposes & Procedures Manual of the NAIC Investment Analysis Office* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* may allow other valuation methods for preferred stock investments in Subsidiary, Controlled or Affiliated (SCA) companies.

Deduct: Cash dividends paid on Payment In Kind stock during the stock dividend period.

A direct write-down for a decline in the fair value of a stock that is other-than-temporary.

For reporting entities maintaining an AVR:

Redeemable Preferred
- NAIC Designation 1 – 3 Enter book value.
- NAIC Designation 4 – 6 Enter the lower of book value or fair value.

Perpetual Preferred
- NAIC Designation 1 – 3 Enter book value.
- NAIC Designation 4 – 6 Enter the lower of book value or fair value.

For reporting entities not maintaining an AVR:

Redeemable Preferred
- NAIC Designation 1 – 2 Enter book value.
- NAIC Designation 3 – 6 Enter the lower of book value or fair value.

Perpetual Preferred
- NAIC Designations 1 – 2 Enter fair value.
- NAIC Designations 3 – 6 Enter the lower of book value or fair value.

The amount reported in this column should equal:

- Book/Adjusted Carrying Value reported in the Prior Year statement (or Actual Cost for newly acquired securities)
- plus “Total Change in Book/Adjusted Carrying Value”
- plus “Total Foreign Exchange Change in Book/Adjusted Carrying Value”
- plus Changes due to amounts reported in Schedule D, Parts 3, 4 and 5

Report publicly traded stock warrants captured in the scope of *SSAP No. 32R—Preferred Stock at Fair Value*.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add a new Schedule Y, Part 3 to capture all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect disclosure changes adopted by the Statutory Accounting Principles (E) Working Group for SSAP No. 25—Affiliates and Other Related Parties (Ref #2019-34) regarding disclosure of owner(s), its ultimate controlling party and other entities the ultimate controlling party controls.

Anticipated Effective Date: Annual 2021 except state level detailed which will be effective Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Make changes to the Accident and Health Policy Experience Exhibit by adding new columns, removing lines distinguishing with and without contract reserves, add some new product lines, eliminate summary tables, change the date that the exhibit is due and have it reported by state. See next page for details.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to provide regulators additional health data and greater consistency across the blanks. The proposal also gives state level detail which has been asked for in the past.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

NAIC Proceedings – Spring 2021

10-465
IDENTIFICATION OF ITEM(S) TO CHANGE

Make the following modifications to the Accident and Health Policy Experience Exhibit:

- Remove lines reporting individual business by “With Contract Reserves” and “Without Contract Reserves”. Report just the total of those lines.

- Add additional Columns to the Exhibit.
  - Direct Premiums Written
  - Assumed Premiums Earned
  - Ceded Premiums Earned
  - Net Premiums Earned
  - Assumed Incurred Claims Amount
  - Ceded Incurred Claims Amount
  - Net Incurred Claims Amount

- Split reporting of Short-Term Medical into “6 Months or Less” and “Over 6 Months”

- Add line for “Vision” in the group and individual sections

- Eliminate the summary tables (Parts 1 through 4) as reinsurance information captures in the main exhibit

- Report Exhibit by State

- Change due date of exhibit from April 1 to March 1

- Make the instructions uniform so just one set of instructions needs to be maintained
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT

This exhibit is required to be filed no later than April 1.

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has Written Premium (Direct), Earned Premium (Direct, Assumed and Ceded) or Incurred Claims (Direct, Assumed and Ceded). In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.

1. The name of the company must be clearly shown at the top of each page or pages.

2. The Exhibit will show information concerning direct business written on policy forms approved for use in the United States with a final total for all policy forms (including non-U.S. policy forms) on the bottom line of the Exhibit.

The Exhibit will show information for each listed product for Individual, Group, and Other business categories. Subtotals by product within the individual category are required for all columns.

3. A Summary Page shows a reconciliation with Schedule H for Individual, Group and Credit policies separately and in total for companies filing the Life, Accident and Health Companies/Fraternal Benefit Societies and Property/Casualty Annual Statement, and a reconciliation of these policies in total only with the specified exhibits of the Health Annual Statement for companies filing that statement.

4. This Exhibit should not include any data pertaining to double indemnity, waiver of premiums and other disability benefits embodied in life contracts.

5. Include membership charges, modal loadings, and policy fees, if any, with premiums earned (Column 1).

DEFINITIONS

Accident Only or AD&D

Policies that provide coverage, singly or in combination, for death, dismemberment, disability, or hospital and medical care caused by or necessitated as a result of accident or specified kinds of accidents. Types of coverage include student accident, sports accident, travel accident, blanket accident, specific accident or accidental death and dismemberment (AD&D).

Credit

Individual or group policies that provide benefits to a debtor for full or partial repayment of debt associated with a specific loan or other credit transaction upon disability or involuntary unemployment of debtor, except in connection with first mortgage loans. In some states, involuntary unemployment credit insurance is not included in health insurance. This category should not include that type of credit insurance in those states.

Dental

Policies providing only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employee’s health benefits plans (FEHBP), or Medicare and Medicaid programs.
Disability Income – Long-Term

Policies that provide a weekly or monthly income benefit for more than five years for individual coverage and more than one year for group coverage for full or partial disability arising from accident and/or sickness. Include policies that provide Overhead Expense Benefits. Does not include credit disability.

TRICARE

Policies issued in association with the Department of Defense’s health care program for active-duty military, active-duty service families, retirees and their families, and other beneficiaries.

The Policy Experience Exhibit requires that the Premiums Earned should be on a direct basis such that the grand total reported should equal:

| Life/Fraternal | Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10). |
|               | Plus Exhibit 1, Part 1, Lines (3.1+13.1), Columns (8+9+10). |
|               | Minus Exhibit 6, Line 1, Column 1 CY. |
|               | Plus Exhibit 6, Line 1, Column 1 PY. |
|               | Minus Exhibit 1, Part 1, Lines (4+14), Columns (8+9+10). |
|               | Minus Exhibit 6, Line 5, Column 1 CY. |
|               | Plus Exhibit 6, Line 5, Column 1 PY. |

| Health | Underwriting and Investment Exhibit, Part 1, Line 9, Column 1 |
|        | Less Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 CY |
|        | Less Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 CY |
|        | Plus Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 PY |
|        | Plus Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 PY |

| Property | Exhibit of Premiums and Losses, Column 2 sum of Lines 13 through 15. |
A. Premiums Collected During the Year

   Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10).

B. Plus the Change in Deferred and Uncollected

   Exhibit 1, Part 1, Lines (3.1+13.1), Columns (8+9+10).

C. Minus the Increase in Premium Reserves on Direct Business Only Included in:

   1. Unearned Premium Reserve

      Exhibit 6, Line 1, Column 1.

   2. Advance Premiums

      Exhibit 1, Part 1, Lines (4+14), Columns (8+9+10).

   3. Reserves for Rate Credits

      Exhibit 6, Line 5, Column 1.

The grand total reported should equal:

Property Schedule H, Part 1, Column 1, Line 2

Column 26 – Direct Incurred Claims Amount

This column does not include the “Increase in Policy Reserves.”

The Policy Experience Exhibit requires that the Incurred Claims should be on a direct basis such that the grand total reported should equal:

Life/Fratal

   Exhibit 8, Part 2, Line 6.1, Columns (9+10+11).

   Plus Exhibit 6, Line 14, Column 1.

Health

   Underwriting and Investment Exhibit, Part 2, Line 12.1, Column 1 minus Column 10.

   NOTE: This excludes payments for any administrative costs.

Property

   Exhibit of Premiums and Losses, Column 6 sum of Lines 13 through 15.

A. Incurred Claims

   Exhibit 8, Part 2, Line 6.1, Columns (9+10+11).

B. Plus the Change in Claim Reserves on Direct Business Only Included in:

   Exhibit 6, Line 14, Column 1.
### Column 7 – Assumed Incurred Claims Amount

The grand total reported should equal:

| Health | Underwriting and Investment Exhibit, Part 2, Line 12.2, Column 1 minus Column 10. |
| Property | Underwriting and Investment Exhibit, Part 2, Column 2 sum of Lines 13 through 15. |
| Plus | Underwriting and Investment Exhibit, Part 2A, Column 2 sum of Lines 13 through 15 – Current Year. |
| Minus | Underwriting and Investment Exhibit, Part 2A, Column 2 sum of Lines 13 through 15 – Prior Year. |
| Plus | Underwriting and Investment Exhibit, Part 2A, Column 6 sum of Lines 13 through 15 – Current Year. |
| Minus | Underwriting and Investment Exhibit, Part 2A, Column 6 sum of Lines 13 through 15 – Prior Year. |

### Column 8 – Ceded Incurred Claims Amount

The grand total reported should equal:

| Health | Underwriting and Investment Exhibit, Part 2, Line 12.3, Column 1 minus Column 10. |
| Property | Underwriting and Investment Exhibit, Part 2, Column 3 sum of Lines 13 through 15. |
| Plus | Underwriting and Investment Exhibit, Part 2A, Column 3 sum of Lines 13 through 15 – Current Year. |
| Minus | Underwriting and Investment Exhibit, Part 2A, Column 3 sum of Lines 13 through 15 – Prior Year. |
| Plus | Underwriting and Investment Exhibit, Part 2A, Column 7 sum of Lines 13 through 15 – Current Year. |
| Minus | Underwriting and Investment Exhibit, Part 2A, Column 7 sum of Lines 13 through 15 – Prior Year. |

### Column 9 – Net Incurred Claims Amount

The grand total reported should equal:

| Life\Fraternal | Schedule H, Part 1, Column 1, Line 3 |
| Health | Underwriting and Investment Exhibit, Part 2, Line 12.4, Column 1 minus Column 10. |
| Property | Schedule H, Part 1, Column 1, Line 3 |

### Column 310 – Change in Contract Reserves

The Policy Experience Exhibit requires that the change in contract reserves should be on a direct basis. This is the direct basis included in the sum of:

Line 2, Grand Total Individual, Group and Other Business of “D” Total Business should equal:

A. The Change in Additional Reserves

     Life\Fraternal: Exhibit 6, Lines 2 + 3, Column 1. Current year minus prior year.
B. Plus the Change in the Reserve for Future Contingent Benefits

C. Less the Change in the Premium Deficiency Reserve

Life/Fraternal and Property: Footnote (a) Schedule H Part 2. Current year minus prior year.

Health: Footnote (a) Underwriting and Investment Exhibit Part 2D. Current year minus prior year.

Column 411 – Loss Ratio

This is the ratio of the Direct Incurred Claims (Column 26) plus the Change in Contract Reserves (Column 310) to Direct Premiums Earned (Column 12).

Column 512 – Number of Policies or Certificates as of Dec. 31

This is the number of individual policies or group certificates issued to individuals covered under a group policy in force as of Dec. 31 of the reporting year. It is not the number of persons covered under individual policies or group certificates. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of persons covered. See SSAP No. 47—Uninsured Plans.

Column 613 – Number of Covered Lives

This is the total number of lives insured, including dependents, under individual policies and group certificates as of Dec. 31 of the reporting year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of lives covered. See SSAP No. 47—Uninsured Plans.

Column 714 – Member Months

The sum of total number of lives insured on a pre-specified day of each month of the reported year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of lives covered for each month of the reported year. See SSAP No. 47—Uninsured Plans.
Part 1

Columns 1 and 2 should agree to Schedule H – Part 1, Column 1 minus the sum of Columns 3 and 5, Lines 2 and 3, respectively.

Part 2

Columns 1 and 2 should agree to Schedule H – Part 1, Column 3, Lines 2 and 3, respectively.

Not applicable to Fraternal Benefit Societies.

Part 3

Columns 1 and 2 should agree to Schedule H – Part 1, Column 5, Lines 2 and 3, respectively.

Not applicable to Fraternal Benefit Societies.

Part 4

Columns 1 and 2 should agree to Schedule H – Part 1, Column 1, Lines 2 and 3, respectively. Column 3 should agree to Schedule H – Part 1 Line 6 less the change in premium deficiency reserve Footnote (a) Schedule H Part 2 current year minus prior year.

Not applicable to Fraternal Benefit Societies.
LINES OF BUSINESS – LIFE, ANNUITIES AND ACCIDENT AND HEALTH

DEFINITIONS OF LINES OF BUSINESS – LIFE

DEFINITIONS SPECIFICALLY RELATED TO ACCIDENT AND HEALTH

Riders/Endorsements/Floaters:

If a rider, endorsement or floater acts like a separate policy with separate premium, deductible and limit, then it is to be recorded on the same line of business as if it were a stand-alone policy regardless of whether it is referred to as a rider, endorsement or floater. If there is no additional premium, separate deductible or limit, the rider, endorsement or floater should be reported on the same line of business as the base policy.

Comprehensive (Hospital and Medical):

Business that provides for medical coverage including hospital, surgical, and major medical. Includes State Children’s Health Insurance Program (SCHIP) Medicaid Program (Title XXI) risk contracts. Also includes medical only programs that provide medical only benefits without hospital coverage. Does not include self-insured business as well as federal employees health benefit programs (FEHBP), Medicare and Medicaid programs, dental only business, indemnity and limited benefit plans that are included in Other Health.

Medicare Supplement:

Business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statements. Does not include Medicare (Title XVIII) or Medicaid (Title XIX) risk contracts.

Dental-Only:

Policies providing for dental only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employees health benefits plans (FEHBP), or Medicare and Medicaid programs.

Vision-Only:

Policies providing for vision only coverage issued as stand-alone vision or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. Does not include self-insured business, federal employees health benefit plans (FEHBP), or Medicare and Medicaid programs.
ANNUAL STATEMENT INSTRUCTIONS – HEALTH

ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT

This exhibit is required to be filed no later than March 1.

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has written Premium (Direct), Earned Premium (Direct, Assumed and Ceded) or Incurred Claims (Direct, Assumed and Ceded). In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.

1. The name of the company must be clearly shown at the top of each page or pages.

2. The Exhibit will show information concerning direct business written on policy forms approved for use in the United States with a final total for all policy forms (including non-U.S. policy forms) on the bottom line of the Exhibit.

The Exhibit will show information for each listed product for Individual, Group, and Other business categories. Subtotals by product within the individual category are required for all columns.

3. A Summary Page shows a reconciliation with Schedule H for Individual, Group and Credit policies separately and in total for companies filing the Life, Accident and Health Companies/Fraternal Benefit Societies and Property/Casualty Annual Statement, and a reconciliation of these policies in total only with the specified exhibits of the Health Annual Statement for companies filing that statement.

4. This Exhibit should not include any data pertaining to double indemnity, waiver of premiums and other disability benefits embodied in life contracts.

5. Include membership charges, modal loadings, and policy fees, if any, with premiums earned (Column 1).

DEFINITIONS

Accident Only or AD&D

Policies that provide coverage, singly or in combination, for death, dismemberment, disability, or hospital and medical care caused by or necessitated as a result of accident or specified kinds of accidents. Types of coverage include student accident, sports accident, travel accident, blanket accident, specific accident or accidental death and dismemberment (AD&D).

Administrative Services Only (ASO) and Administrative Services Contract (ASC)

An uninsured accident and health plan is where an administrator performs administrative services for a third party that is at risk, but has not issued an insurance policy. The health plan bears all of the insurance risk, and there is no possibility of loss or liability to the administrator caused by claims incurred related to the plan. Under an ASO plan, claims are paid from a bank account owned and funded directly by the uninsured plan sponsor; or, claims are paid from a bank account owned by the administrator, but only after receiving funds from the plan sponsor that are adequate to fully cover the claim payments. Under an ASC plan, the administrator pays claims from its own bank accounts, and only subsequently receives reimbursement from the plan sponsor.

Comprehensive/Major Medical

Policies that provide fully insured indemnity, HMO, PPO or Fee for Service coverage for hospital, medical, and surgical expenses. This category excludes Short Term Medical Insurance, the Federal Employees Health Benefit Program and non-comprehensive coverage such as basic hospital only, medical only, hospital confinement indemnity, surgical, outpatient indemnity, specified disease, intensive care, and organ and tissue transplant coverage as well as any other coverage described in the other categories of this exhibit.
Group business is further segmented under this category as follows (please note there is a separate category for Administrative Services Only/Administrative Services Contract business):

**Single Employer:**
Group policies issued to one employer for the benefit of its employees. This would include affiliated companies that have common ownership.

**Small Employer:** Group policies issued to single employers that are subject to the definition of Small Employer business, when so defined, in the group’s state of situs.

**Other Employer:** Group policies issued to single employers that are not defined as Small Employer business.

**Multiple Employer Associations and Trusts:**
Group policies that are issued to an association or to a trust. This category also includes policies issued to one or more trustees of a fund established or adopted by two or more employers, or by one or more labor unions or similar employee organizations. The organizations include those that are exempt and also those that are non-exempt from statewide community rating. This category does not exclude policies providing coverage to employees of small employers, as defined in the employer’s state of situs.

**Other Associations and Discretionary Trusts:**
Trusts: Group policies issued to associations and trusts that are not included in the Small Employer, Other Employer or Multiple Employer Associations and Trusts group categories. This category does not exclude insurance providing coverage to employees of small employers, as defined in the employer’s state of situs. This category does include blanket and franchise accident and sickness insurance, and insurance for any group that includes members other than employees, such as an association that has both employees of participating employers and also individuals as members.

**Other Comprehensive/Major Medical:**
Group policies providing comprehensive or major medical benefits that are not included in any of the categories listed above.

**Contract Reserves**
Reserves set up when, due to the gross premium structure, the future benefits exceed the future net premium. Contract reserves are in addition to claim and premium reserves.

**Credit**
Individual or group policies that provide benefits to a debtor for full or partial repayment of debt associated with a specific loan or other credit transaction upon disability or involuntary unemployment of debtor, except in connection with first mortgage loans. In some states, involuntary unemployment credit insurance is not included in health insurance. This category should not include that type of credit insurance in those states.

**Dental**
Policies providing for dental only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employee’s health benefits plans (FEHBP), or Medicare and Medicaid programs.
Disability Income – Long-Term

Policies that provide a weekly or monthly income benefit for more than five years for individual coverage and more than one year for group coverage for full or partial disability arising from accident and/or sickness. Include policies that provide Overhead Expense Benefits. Does not include credit disability.

TRICARE

Policies issued in association with the Department of Defense’s health care program for active-duty military, active-duty service families, retirees and their families, and other beneficiaries.

### Column 310 – Change in Contract Reserves

The Policy Experience Exhibit requires that the change in contract reserves should be on a direct basis. This is the direct basis included in the sum of:

Line 2, Grand Total Individual, Group and Other Business of “D” Total Business should equal:

A. The Change in Additional Reserves

   - **Life\Fraternal:** Exhibit 6, Lines 2 + 3, Column 1. Current year minus prior year.
   - **Health:** Underwriting and Investment Exhibit, Part 2D, Line 2, Column 1. Current year minus prior year.

B. Plus the Change in the Reserve for Future Contingent Benefits

   - **Life\Fraternal:** Exhibit 6, Line 4, Column 1. Current year minus prior year.
   - **Health:** Underwriting and Investment Exhibit, Part 2D, Line 3, Column 1. Current year minus prior year.

C. Less the Change in the Premium Deficiency Reserve

   - **Life\Fraternal and Property:** Footnote (a) Schedule H Part 2. Current year minus prior year.
Footnote (a) Underwriting and Investment Exhibit Part 2D. Current year minus prior year.

Column 411 – Loss Ratio

This is the ratio of the Direct Incurred Claims (Column 26) plus the Change in Contract Reserves (Column 310) to Direct Premiums Earned Premiums (Column 12).

Column 512 – Number of Policies or Certificates as of Dec. 31

This is the number of individual policies or group certificates issued to individuals covered under a group policy in force as of Dec. 31 of the reporting year. It is not the number of persons covered under individual policies or group certificates. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include number of persons covered. See SSAP No. 47—Uninsured Plans.

Column 613 – Number of Covered Lives

This is the total number of lives insured, including dependents, under individual policies and group certificates as of Dec. 31 of the reporting year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include number of lives covered. See SSAP No. 47—Uninsured Plans.

Column 714 – Member Months

The sum of total number of lives insured on a pre-specified day of each month of the reported year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include number of lives covered for each month of the reported year. See SSAP No. 47—Uninsured Plans.
Medicare Supplement:

Business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statements. Does not include Medicare (Title XVIII) or Medicaid (Title XIX) risk contracts.

Dental-Only:

Policies providing for dental only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through, premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employee’s health benefits plans (FEHBP), or Medicare and Medicaid programs.

Vision-Only:

Policies providing for vision only coverage issued as stand-alone vision or as a rider to a medical policy that is not related to the medical policy through, premiums, deductibles or out-of-pocket limits. Does not include self-insured business, federal employee’s health benefit plans (FEHBP), or Medicare and Medicaid programs.
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT

This exhibit is required to be filed no later than April 1.

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has Written Premium (Direct), Earned Premium (Direct, Assumed and Ceded) or Incurred Claims (Direct, Assumed and Ceded). In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.

1. The name of the company must be clearly shown at the top of each page or pages.

2. The Exhibit will show information concerning direct business written on policy forms approved for use in the United States with a final total for all policy forms (including non-U.S. policy forms) on the bottom line of the Exhibit.

The Exhibit will show information for each listed product for Individual, Group, and Other business categories. Subtotals by product within the individual category are required for all columns.

3. A Summary Page shows a reconciliation with Schedule H for Individual, Group and Credit policies separately and in total for companies filing the Life, Accident and Health Companies/Fraternal Benefit Societies and Property/Casualty Annual Statement, and a reconciliation of these policies in total only with the specified exhibits of the Health Annual Statement for companies filing that statement.

4. This Exhibit should not include any data pertaining to double indemnity, waiver of premiums and other disability benefits embodied in life contracts.

5. Include membership charges, modal loadings, and policy fees, if any, with premiums earned (Column 1).

DEFINITIONS

Accident Only or AD&D

Policies that provide coverage, singly or in combination, for death, dismemberment, disability, or hospital and medical care caused by or necessitated as a result of accident or specified kinds of accidents. Types of coverage include student accident, sports accident, travel accident, blanket accident, specific accident or accidental death and dismemberment (AD&D).

Detail Eliminated to Conserve Space

Contract Reserves

Reserves set up when, due to the gross premium structure, the future benefits exceed the future net premium. Contract reserves are in addition to claim and premium reserves.

Credit

Individual or group policies that provide benefits to a debtor for full or partial repayment of debt associated with a specific loan or other credit transaction upon disability or involuntary unemployment of debtor, except in connection with first mortgage loans. In some states, involuntary unemployment credit insurance is not included in health insurance. This category should not include that type of credit insurance in those states.
Dental

Policies providing for dental only coverage (dental treatment benefits such as routine dental examinations, preventive dental work, and dental procedures needed to treat tooth decay and diseases of the teeth and jaw) issued as stand-alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits. If dental benefits are part of a comprehensive medical plan, then include data under comprehensive/major medical category. Does not include self-insured business, as well as federal employee’s health benefits plans (FEHBP), or Medicare and Medicaid programs.

Disability Income – Long-Term

Policies that provide a weekly or monthly income benefit for more than five years for individual coverage and more than one year for group coverage for full or partial disability arising from accident and/or sickness. Include policies that provide Overhead Expense Benefits. Does not include credit disability.

TRICARE

Policies issued in association with the Department of Defense’s health care program for active-duty military, active-duty service families, retirees and their families, and other beneficiaries.

CROSS REFERENCES AND OTHER INSTRUCTIONS

The Exhibit

Column 1 – Direct Premiums Written

The grand total reported should equal:

Life/Fraternal  Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10),
Health Underwriting and Investment Exhibit, Part 1, Line 9, Column 1,
Property Exhibit of Premiums and Losses, Column 1 sum of Lines 13 through 15.

Column 12 – Direct Premiums Earned

Fractional premium loadings and policy fees must be included in the Earned Premiums.

The Policy Experience Exhibit requires that the Premiums Earned should be on a direct basis, grand total reported should equal:

Life/Fraternal  Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10),
Plus Exhibit 1, Part 1, Lines (3.1+13.1), Columns (8+9+10),
Minus Exhibit 6, Line 1, Column 1 CY,
Plus Exhibit 6, Line 1, Column 1 CY,
Minus Exhibit 1, Part 1, Lines (4+14), Columns (8+9+10),
Minus Exhibit 6, Line 5, Column 1 CY,
Plus Exhibit 6, Line 5, Column 1 CY,

Health Underwriting and Investment Exhibit, Part 1, Line 9, Column 1
Less Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 CY
Plus Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 PY
Less Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 CY
Plus Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 PY

Property Exhibit of Premiums and Losses, Column 2 sum of Lines 13 through 15.

</table>
Column 9 — Net Incurred Claims Amount

The grand total reported should equal:

Life\Fraternal: Schedule H, Part 1, Column 1, Line 3
Health: Underwriting and Investment Exhibit, Part 2, Line 12.4, Column 1 minus Column 10.
Property: Schedule H, Part 1, Column 1, Line 3

Column 310 — Change in Contract Reserves

The Policy Experience Exhibit requires that the change in contract reserves should be on a direct basis. This is the direct basis included in the sum of:

Line 2, Grand Total Individual, Group and Other Business of “D” Total Business should equal:

A. The Change in Additional Reserves

Life\Fraternal: Exhibit 6, Lines 2 + 3, Column 1. Current year minus prior year.

B. Plus the Change in the Reserve for Future Contingent Benefits

Life\Fraternal: Exhibit 6, Line 4, Column 1. Current year minus prior year.

C. Less the Change in the Premium Deficiency Reserve

Life\Fraternal and Property: Footnote (a) Schedule H Part 2. Current year minus prior year.
Health: Footnote (a) Underwriting and Investment Exhibit Part 2D. Current year minus prior year.

Column 411 — Loss Ratio

This is the ratio of the Direct Incurred Claims (Column 26) plus the Change in Contract Reserves (Column 310) to Direct Premiums Earned Premiums (Column 12).

Column 512 — Number of Policies or Certificates as of Dec. 31

This is the number of individual policies or group certificates issued to individuals covered under a group policy in force as of Dec. 31 of the reporting year. It is not the number of persons covered under individual policies or group certificates. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of persons covered. See SSAP No. 47—Uninsured Plans.
Column 613 – Number of Covered Lives

This is the total number of lives insured, including dependents, under individual policies and group certificates as of Dec. 31 of the reporting year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of lives covered. See SSAP No. 47—Uninsured Plans.

Column 714 – Member Months

The sum of total number of lives insured on a pre-specified day of each month of the reported year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity. For Administrative Services Only or Administrative Services Contracts, include the number of lives covered for each month of the reported year. See SSAP No. 47—Uninsured Plans.
SUMMARY

Part 1

Columns 1 and 2 should agree to Schedule H—Part 1, Column 1 minus the sum of Columns 3 and 5, Lines 2 and 3, respectively.

Part 2

Columns 1 and 2 should agree to Schedule H—Part 1, Column 3, Lines 2 and 3, respectively.

Part 3

Columns 1 and 2 should agree to Schedule H—Part 1, Column 5, Lines 2 and 3, respectively.

Part 4

Columns 1 and 2 should agree to Schedule H—Part 1, Column 1, Lines 2 and 3, respectively. Column 3 should agree to Schedule H—Part 1 Line 6 less the change in premium deficiency reserve Footnote (a) Schedule H Part 2 current year minus prior year.

MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
    Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

CC: Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

to Update the Financial Modeling Instructions for RMBS/CMBS Securities and Direct IAO Staff to Produce NAIC
Designation and NAIC Designations Categories for Non-Legacy Securities

DATE: February 03, 2021

1. Summary – On Oct. 11, 2018, the Valuation of Securities (E) Task Force adopted an amendment to delete the
Modified Filing Exempt (MFE) provisions from the P&P Manual and directed a referral to the Statutory Accounting Principles
(E) Working Group recommending the deletion of the MFE provisions from Statement of Statutory Accounting Principles
(SSAP) No. 43R—Loan-Backed and Structured Securities. The effect of these changes resulted in these securities coming
under the filing exempt instructions in the P&P Manual, if they have an Eligible NAIC CRP Credit Rating assigned to them.
This change eliminated using the book adjusted carrying value to determine the NAIC designation for these securities.

The IAO staff reported to the Task Force at the 2019 Summer National Meeting that at some point the NAIC should align the
RMBS/CMBS modeling to provide a single NAIC Designation for modeled RMBS/CMBS. This would have been a change
from the current practice of providing a series of book adjusted carrying value price breakpoints to companies to determine the
NAIC designation. The IAO staff submitted a proposal to the Task Force at the 2019 Fall National Meeting to eliminate the
book adjusted carrying value price breakpoint process but the Task Force decided at the Feb. 4, 2020 meeting to defer such a
change because industry expressed concerns there would be significant adverse risk-based capital (RBC) consequences from
making such a change at that time.

In March 2020, the impact from the pandemic was just beginning to become apparent in the U.S. The pandemic’s effect on
RMBS and CMBS securities became more observable during the 2020 year-end financial modeling process. The 2020 year-
end financial modeling identified several securities that no longer qualified as being zero-loss because more conservative
scenarios, necessary to reflect the economic impact of the pandemic, were applied. Once these securities no longer qualified as
being zero-loss, they became subject to the book adjusted carrying value price breakpoints process. Many of these securities
are owned at a significant premium because of the low interest rate environment and, once the price break points were applied,
securities that would otherwise be considered very high quality were required to be reported as an NAIC 2, 3, or 4 just because
of their book adjusted carrying value and not because of any credit concern.

At the Task Force’s Dec. 18, 2020 meeting, industry, represented by the ACLI, agreed with the IAO staff that the mechanics
of the price break points was causing insurer owned securities with otherwise strong credit to be reported as NAIC 2, NAIC 3
and NAIC 4 under the financial modeling price breakpoints process purely because they are owned at a premium and not
because of their credit risk. It was also discussed that the use of financial modeling price breakpoints process was possibly
disrupting the market for these otherwise high-quality investments. SSG staff at that meeting recommended getting rid of the price breakpoints process.

2. **Recommendation** – The IAO staff recommends that the NAIC move to a single NAIC designation and NAIC designation category for all non-Legacy Securities (those financially modelled RMBS/CMBS securities that closed on or after to Jan. 1, 2013). Moving away from financial modeling price breakpoints process for these non-Legacy Securities will avoid further and future market disruptions and permit a clearer assessment of the credit risk assessment for these securities that will not be impacted by the insurers book adjusted carrying value. Making this change for only non-Legacy Securities preserves their historical treatment. Given the potential impact to SSAP 43R - *Loan-Backed and Structured Securities*, staff recommends a referral to the Statutory Accounting Principles (E) Working Group.

3. **Proposed Amendment** – The following text shows the revisions in Part Four that would appear in the 2020 P&P Manual format.
PART FOUR
THE NAIC STRUCTURED SECURITIES GROUP
DEFINITIONS

1. The following terms used in this Part Four have the meaning ascribed to them below.

- **ABS** stands for asset-backed securities and means structured securities backed by consumer obligations originated in the United States.

- **CMBS** stands for commercial mortgage-backed securities and means structured securities backed by commercial real estate mortgage loans originated in the United States. The definition of CMBS may refer to securitizations backed by commercial mortgages, respectively, originated outside of the United States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the commercial mortgage and commercial mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.

- **Initial Information** means the documentation required to be filed with an Initial Filing of an RMBS or a CMBS CUSIP, pursuant to the section below and pertaining to Loan Information, Reps and Warranty Information and Structure and Formation Information for the transaction, where:
  - **Loan Information** means a review of the loan files by a third party to assess the sufficiency of legal title and other related issues.
  - **Reps and Warranty Information** means the actual representation and warranties in effect for the securitization given by the mortgage originator(s) to the Trust pertaining to loan origination processes and standards, compliance with applicable law, loan documentation and the process governing put backs of defective mortgages back to the originator(s).
  - **Structure and Formation Information** means the waterfall, as described in the definition of Ongoing Information, information and documentation in the form of legal opinions and documentation governing the formation of the securitization and its entities relative to issues such as bankruptcy remoteness, true sale characterization, the legal standards and procedures governing the securitization and other similar issues.

- **Intrinsic Price** is an output of financial modeling, defined as ‘1 - weighted average of discounted principal loss’ expressed as a percentage, reflecting the credit risk of the security.

- **Legacy Security**, for the purposes of this section shall mean any RMBS and any CMBS that closed prior to January 1, 2013.
- **Official Price Grids** means and refers to those generated by the SSG and provided to an insurance company or insurance companies that own the security for regulatory reporting purposes.

- **Ongoing Information** consists of: (a) tranche level data; such as principal balance, factors, principal and interest due and paid, interest shortfalls, allocated realized losses, appraisal reductions and other similar information for the specific tranche; (b) trust level data, such as aggregate interest and principal and other payments received, balances and payments to non-tranche accounts, aggregate pool performance data and other similar information; (c) loan level performance information; and (d) a computerized model of rules that govern the order and priority of the distribution of cash from the collateral pool (i.e., the “waterfall”) to the holders of the certificates/securities—provided in the format and modeling package used by the NAIC financial modeling vendor.

- **Original Source**, with respect to a specific set of data, means the Trustee, Servicer or similar entity that is contractually obligated under the agreement governing the RMBS or CMBS to generate and maintain the relevant data and information in accordance with standards specified in applicable agreements or an authorized re-distributor of the same.

- **NAIC Designation Intrinsic Price Mapping** is the mapping of the Intrinsic Price to a single NAIC Designation and Designation Category employing the midpoints between each adjoining AVR RBC charges (pre-tax). The midpoints are directly used as the minimum Intrinsic Prices (weighted average loss points) for corresponding NAIC Designations and Designation Categories.

- **Price Grids** means and refers to CUSIP-specific price matrices containing six price breakpoints; i.e., each price corresponding to a specific NAIC Designation category. Each breakpoint on a Price Grid is the price point that tips the NAIC Designation for the RMBS CUSIP into the next NAIC Designation (credit quality/credit risk) category. The plural is used because two Price Grids are generated for any CUSIP. This reflects the difference in RBC for those insurance companies that maintain an asset valuation reserve and for those insurance companies that do not.

- **Re-REMIC** is a securitization backed by: (a) otherwise eligible RMBS from one or two transactions; or (b) otherwise eligible CMBS from one or two transactions at closing. Re-REMICs cannot acquire any Underlying Securities after closing.
RMBS stands for residential mortgage-backed securities and means structured securities backed by non-agency residential mortgages originated in the United States, where the collateral consists of loans pertaining to non-multi-family homes. That includes prime, subprime and Alt-A mortgages, as well as home-equity loans, home-equity lines of credit and Re-REMICs of the above. Excluded from this definition is agency RMBS, where the mortgages are guaranteed by federal and federally sponsored agencies such as the Government National Mortgage Association (GNMA), Federal National Mortgage Association (FNMA) or Federal Home Loan Mortgage Corporation (FHLMC) and loans against manufactured or mobile homes or collateralized debt obligations backed by RMBS. The exclusion covers bonds issued and guaranteed by, or only guaranteed by, the respective agency. Also not included are loans guaranteed by the U.S. Department of Veteran Affairs or the U.S. Department of Agriculture’s Rural Development Housing and Community Facilities Programs. The definition of RMBS may refer to securitizations backed by residential mortgages, respectively, originated outside of the United States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the residential mortgage and residential mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.

Underlying Security means the RMBS or CMBS backing a Re-REMIC. A Re-REMIC cannot be an Underlying Security.

NOTE: The definitions of RMBS and CMBS reflect limitations associated with the financial modeling process, NAIC credit rating provider (CRP) internal naming conventions and SSG processes, as more fully discussed below and may, therefore, be subject to a narrower or a broader reading in any reporting period. Please call the SSG with any concerns or questions about the scope of the definitions for a given reporting period. Also note:

- It is possible that the scope of the RMBS and CMBS definitions may be broadened because the financial modeling vendors indicate other collateral or waterfall structures can be modeled.
- NAIC CRPs may adopt different internal conventions with respect to what market or asset segments are within their rated populations of RMBS, CMBS or ABS. This could affect the application of the adopted NAIC methodology or require the NAIC to select which naming process it wishes to adopt.
- It is possible that the SSG will acquire analytical assessment capabilities that permit the assessment of existing, additional or different structured securities that cannot now be modeled or that are not currently rated.
ADMINISTRATIVE AND OPERATIONAL MATTERS

Certain Administrative Symbols

2. The following administrative symbols are used in the Valuation of Securities (VOS) Products to identify RMBS and CMBS that the NAIC vendor has confirmed will be subject to the financial modeling methodology described in this Part.

- **FMR** – Indicates that the specific CUSIP identifies a Legacy Security RMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category.

- **FMC** – Indicates that the specific CUSIP identifies a Legacy Security CMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category.

- **FSR** – Indicates that the specific CUSIP identifies a non-Legacy Security RMBS that is subject to the financial modeling methodology and assignment of a NAIC Designation and Designation Category by the SSG.

- **FSC** – Indicates that the specific CUSIP identifies a non-Legacy Security CMBS that is subject to the financial modeling methodology and assignment of a NAIC Designation and Designation Category by the SSG.

**NOTE:** The administrative symbols **FMR**, **FMC**, **FSR** and **FSC** are related to symbols that insurers are required to use in the financial statement reporting process. Under applicable financial statement reporting rules, an insurer uses the symbol **FM** as a suffix to identify Legacy Security modeled RMBS and CMBS CUSIPs and **FS** as a suffix to identify non-Legacy Security modeled RMBS and CMBS CUSIPs. The symbol **FM** or **FS** is inserted by the insurer in the financial statement as a suffix following the NAIC Designation Category; e.g., **2.B FM**, **3.C FS**.

The use of these administrative symbols in the VOS Product means the insurer should not use the filing exempt process for the security so identified.
Quarterly Reporting of RMBS and CMBS

3. To determine the NAIC Designation to be used for quarterly financial statement reporting for an RMBS or CMBS purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) and follows the instructions in contained under the heading “Use of Net Present Value and Carrying Value for Financially Modelled Legacy Security RMBS and CMBS” below or follows the instructions in “Publication of Final Results: Use of Intrinsic Price for Financially Modeled non-Legacy Security RMBS and CMBS” below, subject to, and in accordance with, SSAP No. 43R—Loan-Backed and Structured Securities.
**FILING EXEMPTIONS**

**Limited Filing Exemption for RMBS and CMBS**

4. **RMBS and CMBS that Can be Financially Modeled** – RMBS and CMBS that can be financially modeled are exempt from filing with the SVO. NAIC Designations for RMBS and CMBS that can be financially modeled are determined by application of the methodology discussed in this Part, not by the use of credit ratings of CRPs.

5. **RMBS and CMBS securities that Cannot be Financially Modeled**
   - **But Are Rated by a CRP** – RMBS and CMBS that cannot be financially modeled but that are rated by a CRP are exempt from filing with the SSG. The NAIC Designations for these RMBS and CMBS are determined by application of the filing exemption procedures discussed in this Manual.
   - **But Are Not Rated by a CRP** – RMBS and CMBS that cannot be financially modeled and that are not rated by a CRP are not filing exempt and must be filed with the SSG or follow the procedures, as discussed below in this Part.

**Filing Exemption for ABS**

6. ABS rated by a CRP are exempt from filing with the SSG.

**Review of Decisions of the SSG**

7. Analytical decisions made through the application of financial modeling are not subject to the appeal process. In the absence of an appeal, the SSG shall provide whatever clarification as to the results of financial modeling is possible to any insurer who requests it and owns the security, provided that it is not unduly burdensome for the SSG to do so. Any decision made by the SSG that results in the assignment of an NAIC Designation and does not involve financial modeling methodology, whether developed by the SSG on its own or in collaboration with the SVO, is subject to the appeal process.
8. The policy statement set forth in this section shall be applicable generally to any transaction filed with the SSG for an analytical assessment, including, but not limited to, a Price Grid or for assignment of an NAIC Designation. Any filing with the SSG is deemed to be incomplete unless the insurer has provided the information, documentation, and data in quantity and quality sufficient to permit the SSG to conduct an analysis of the creditworthiness of the issuer and the terms of the security to determine the requested analytical value. It is the obligation of the reporting insurance company to provide the SSG with all necessary information. It is the responsibility of the SSG to determine whether the information provided is sufficient and reliable for its purposes and to communicate informational deficiencies to the reporting insurance company.

Documentation Standards

9. In order for an insurer-owned RMBS or CMBS to be eligible for the year-end modeling process, conducted pursuant to this section below, the analysis must be based on information, documentation and data of the utmost integrity. A Legacy Security must meet the Ongoing Information requirements. An RMBS, CMBS or Re-REMIC that is not a Legacy Security must meet the Initial Information and Ongoing Information requirements. For the purposes of determining a Re-REMIC’s status as a Legacy Security, the closing date of the Re-REMIC (not the Underlying Security) shall be used. The SSG may, in its sole discretion, determine that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the RMBS or CMBS CUSIP to be eligible for financial modeling. If the SSG determines that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the RMBS or CMBS CUSIP to be eligible for financial modeling, it will communicate this decision to the insurer and invite a dialogue to ascertain whether alternative information is available that would be deemed sufficient and/or reliable by the SSG.

Initial Information Requirements

10. An RMBS or CMBS meets the Initial Information Requirements if the security meets one of the following three conditions:

- **RTAS** – The RMBS or CMBS was assigned a preliminary price grid or designation as described in this Part;
- **Initial Sufficiency Filing** – The RMBS or CMBS was reviewed by SSG through an Initial Sufficiency Filing; or
- **Safe Harbor** – The RMBS or CMBS meets the Safe Harbor requirements.
Initial Sufficiency Information Filing

11. An insurance company may file Initial Sufficiency Information with the SSG for the purpose of obtaining a determination that an RMBS or CMBS CUSIP is eligible for financial modeling under the annual surveillance process discussed below. Initial Sufficiency Information is only filed once for any given RMBS or CMBS. Reporting insurance companies are solely responsible for providing the SSG with Initial Information. A determination by the SSG that a given RMBS or CMBS CUSIP is eligible for financial modeling after an Initial Sufficiency Filing assessment is subject to the further and continuing obligation that the SSG obtain or the insurer provide the SSG with updated Ongoing Information close to the date of the annual surveillance.

12. Required Documents for Initial Sufficiency Filing – An insurer that owns an RMBS or a CMBS for which Initial Information is not publicly available shall provide the SSG with the following documentation.

13. RMBS – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for an RMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

- Pooling and Servicing Agreement or similar
- Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
- If applicable, ISDA Schedules and Confirmations or similar
- Legal opinions given in connection with the transaction
- Any other documents referenced by the above
- Third-Party Due diligence scope document and raw results. If less than 100% due diligence, detailed description of the loan selection process
- If applicable, loan purchase agreements or similar. Loan Tape

14. CMBS – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for a CMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

- Pooling and Servicing Agreement or similar
- Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
- If applicable, ISDA Schedules and Confirmations or similar
- Legal opinion given in connection with the transaction
- Any other documents referenced in the above
- Asset Summaries
- Loan Tape
- Loan documents, including reliable information about the terms of the transaction; including, but not limited to, financial covenants, events of default, legal remedies and other information about financial, contractual or legal aspects of the transaction in form and substance consistent with industry best practices for CMBS issuance.
- In certain cases, additional documents below will enable the SSG to verify and validate initial underwriting information of the property securing the CMBS. These documents may be required in form and substance consistent with best practices for typical CMBS issuance.
- Historical operating statements and borrower’s budget
- Underwriter’s analysis of stabilized cash flow with footnotes of assumptions used
- Property type specific, rent roll information
- Appraisals and other data from recognized industry market sources
- Independent engineering report (Property Condition Assessment)
- Environmental Site Assessment (ESA) – Phase I/Phase II
- Documentation related to seismic, flood and windstorm risks
- Franchise agreements and ground leases, if applicable
- Management agreements

**SSG Modeling Alerts**

15. The SSG shall at all times have discretion to determine that differences in the structure, governing law, waterfall structure or any other aspect of a securitization or a class of securitization requires that insurance companies provide Initial Information and/or Ongoing Information additional to or different from that identified in this Part. The SSG shall communicate such additional or different documentation requirements to insurers by publishing a Modeling Alert on the NAIC website and scheduling a meeting of the VOS/TF to ensure public dissemination of the decision.

**Safe Harbor**

16. Safe Harbor options serve as proxies for the Initial Sufficiency filing. The options reflect publicly available information that a third party has analyzed the Initial Information. Because the structured securities market is quite dynamic, the list of Safe Harbor options may change frequently, with
notice and opportunity for comment, as described in this section. An RMBS or CMBS meets the Initial Information requirement if:

- At least two Section 17(g)-7 reports issued by different CRPs are publicly available; or
- A security that is publicly registered under the federal Securities Act of 1933.

Ongoing Information Requirements

17. An RMBS or CMBS meets the Ongoing Information Requirements if Ongoing Information is available to the SSG and the relevant third-party vendor from an Original Source. The SSG, in its sole discretion and in consultation with the relevant third-party vendor, may determine that the Ongoing Information is not sufficient or reliable to permit a given RMBS or CMBS CUSIP to be financially modeled. However, in making such a determination, the SSG shall take into account reasonable market practices and standards.

Special Rules for Certain Re-REMICs

18. Re-REMICs are generally simple restructurings of RMBS or CMBS. An Initial Sufficiency Filing for a Re-REMIC (a) which is not a Legacy Security itself but (b) where each Underlying Security is a Legacy Security shall not require submission of information regarding the Underlying Securities. In most cases, a prospectus for the Re-REMIC will be sufficient. If the SSG determines that additional information about the Re-REMIC structure or formation is required, it will communicate this decision to the insurer and invite a dialogue to ascertain whether additional information is available that would be deemed sufficient by the SSG.
ANALYTICAL ASSIGNMENTS

ANNUAL SURVEILLANCE OF RMBS AND CMBS – MODELED AND NON-MODELED SECURITIES

Scope

19. This section explains the financial modeling methodology applicable to all RMBS and CMBS (defined above) securitizations, and the book/adjusted carrying value methodology applicable to a modeled Legacy Security, the NAIC Designation Intrinsic Price Mapping applicable to a modeled non-Legacy Security, and non-modeled securities subject to SSAP No. 43R—Loan-Backed and Structured Securities. Please refer to SSAP No. 43R for a description of securities subject to its provisions. The VOS/TF does not formulate policy or administrative procedures for statutory accounting guidance. Reporting insurance companies are responsible for determining whether a security is subject to SSAP No. 43R and applying the appropriate guidance.

Important Limitation on the Definitions of RMBS and CMBS

20. The definitions of RMBS and CMBS above are intended solely to permit the SSG to communicate with financial modeling vendors, insurance company investors who own RMBS and CMBS subject to financial modeling and/or the book/adjusted carrying value methodology and their investment advisors to facilitate the performance by the SSG of the financial modeling methodology described below. The definitions contained in this section are not intended for use and should not be used as accounting or statutory statement reporting instructions or guidance.

NOTE: Please refer to SSAP No. 43R—Loan-Backed and Structured Securities for applicable accounting guidance and reporting instructions.

ANALYTICAL PROCEDURES APPLICABLE TO RMBS AND CMBS SECURITIZATIONS SUBJECT TO FINANCIAL MODELING METHODOLOGY

Filing Exemption Status of RMBS and CMBS

21. RMBS and CMBS are not eligible for the filing exemption because credit ratings of CRPs are no longer used to set risk-based capital (RBC) for RMBS or CMBS. However, RMBS and CMBS are not submitted to the SSG.

Use of Financial Modeling for Year-End Reporting for RMBS and CMBS

22. Beginning with year-end 2009 for RMBS and 2010 for CMBS, probability weighted net present values will be produced under NAIC staff supervision by an NAIC-selected vendor using its financial model with defined analytical inputs selected by the SSG. The vendor will provide the SSG with an Intrinsic Price and/or a range of net present values for each RMBS or CMBS.
corresponding to each NAIC Designation category. The NAIC Designation for a specific Legacy Security RMBS or CMBS is determined by the insurance company, based on book/adjusted carrying value ranges, and the NAIC Designation for a specific non-Legacy Security RMBS or CMBS is determined by the NAIC Designation Intrinsic Price Mapping by SSG.

NOTE: Please refer to SSAP No. 43R—Loan-Backed and Structured Securities for guidance on all accounting and related reporting issues.

Analytical Procedures for RMBS and CMBS

23. The SSG shall develop and implement all necessary processes to coordinate the engagement by the NAIC of a vendor who will perform loan-level analysis of insurer-owned RMBS and CMBS using the vendor’s proprietary models.

RMBS AND CMBS SUBJECT TO FINANCIAL MODELING

Setting Microeconomic Assumptions and Stress Scenarios

24. Not later than September of each year, the SSG shall begin working with the vendor to identify the assumptions, stress scenarios and probabilities (hereafter model criteria) the SSG intends to use at year-end to run the vendor’s financial model.

The Financial Modeling Process

25. Information about the financial modeling process can be found at www.naic.org/structured_securities/index_structured_securities.htm.

Use of Net Present Value and Carrying Value for Financially Modeled Legacy Security RMBS and CMBS

26. For each modeled Legacy Security RMBS and CMBS, the financial model determines the net present value at which the expected loss equals the midpoint between the RBC charges for each NAIC Designation; i.e., each price point, if exceeded, changes the NAIC Designation. Net present value is the net present value of principal losses, discounted using the security’s coupon rate (adjusted in case of original issue discount securities to book yield at original issue and in case of floating rate securities, discounted using LIBOR curve + Origination spread). Because of the difference in RBC charge, the deliverable is five values for each RMBS and CMBS security for companies required to maintain an asset valuation reserve (AVR) and five values for companies not required to maintain an AVR. This is illustrated in the chart below.
27. The NAIC Designation and NAIC Designation Category for a given modeled Legacy Security RMBS or CMBS CUSIP owned by a given insurance company depends on the insurer's book/adjusted carrying value of each RMBS or CMBS, whether that carrying value, in accordance with SSAP No. 43R—Loan-Backed and Structured Securities, paragraphs 25 through 26a, is the amortized cost or fair value, and where the book/adjusted carrying value matches the price ranges provided in the model output for each NAIC Designation and the mapped NAIC Designation Category, reflected in the table below, to be used for reporting an NAIC Designation Category until new Risk Based Capital factors are adopted for each NAIC Designation Category and new prices ranges developed; except that an RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios and that would be equivalent to an NAIC 1 Designation if the filing exempt process were used, would be assigned an NAIC 1 Designation and NAIC 1.D Designation Category regardless of the insurer's book/adjusted carrying value.

**NOTE:** Please refer to the detailed instructions provided in SSAP No. 43R.
Use of Intrinsic Price for Financially Modeled non-Legacy Security RMBS and CMBS

28. The NAIC Designation and NAIC Designation Category for a given modeled non-Legacy Security RMBS or CMBS CUSIP owned by a given insurance is assigned by SSG and does not depend on the insurer’s book/adjusted carrying value of each RMBS or CMBS. The NAIC Designation and Designation Category assigned will be determined by applying the Intrinsic Price to the NAIC Designation Intrinsic Price Mapping, as defined in this Part.

29. Securities subject to SSAP No. 43R—Loan-Backed and Structured Securities that cannot be modeled by the SSG and are not rated by an NAIC CRP or designated by the SVO are either: (a) assigned the NAIC administrative symbol ND (not designated), requiring subsequent filing with the SVO; or (b) assigned the NAIC Designation for Special Reporting Instruction [i.e., an NAIC 5GI, NAIC Designation Category NAIC 5.B GI or NAIC 6* (six-star)].
MORTGAGE REFERENCED SECURITIES

Definition

30. A Mortgage Referenced Security has the following characteristics: A Mortgage Referenced Security’s coupon and/or principal payments are linked, in whole or in part, to prices of, or payment streams from, real estate, index or indices related to real estate, or assets deriving their value from instruments related to real estate, including, but not limited to, mortgage loans.

Not Filing Exempt

31. A Mortgage Referenced Security is not eligible for filing exemption but is subject to the filing requirement.

NAIC Risk Assessment

32. In determining the NAIC Designation of a Mortgage Referenced Security, the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.

Quarterly Reporting for Mortgage Reference Securities

33. To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing status.

NOTE: Please refer to SSAP No. 26R and SSAP No. 43R for the definition of and guidance on Structured Notes and Mortgage Referenced Securities. Please also refer to Part Three of this Manual for guidance about the filing exempt status of Structured Notes.
GROUND LEASE FINANCING TRANSACTIONS

Definition

34. Ground Lease Financing (GLF) transactions are defined and explained in “Ground Lease Financing Transactions” in Part Three of this Manual.

SSG Role and Process

1. On occasion, the SVO may refer a GLF transaction to the SVO for financial modeling of the GLF space leases or business operation, as applicable, in accordance with the process set forth in “Ground Lease Financing Transactions” in Part Three of this Manual. Following an SVO referral the SSG and SVO will maintain open communication related to requests for additional data, analytical questions and analytical conclusions. Any GLF transaction NAIC Designation will be assigned by the SVO.
THE RTAS – EMERGING INVESTMENT VEHICLE

Purpose

2. Price grids and/or Designations and Designation Categories are generated for the exclusive use of insurance companies and the NAIC regulatory community. Insurance companies use official Price Grids and/or Designations and Designation Categories by following the instructions in SSAP No. 43R—Loan-Backed and Structured Securities to derive a final NAIC Designation for the RMBS or CMBS, which they use to derive the RBC applicable for the RMBS or CMBS.

NOTE: Please refer to SSAP No. 43R for a full explanation of the applicable procedure.

Extension of Authority

3. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure is extended to the SSG, and the SSG is authorized to determine probable regulatory treatment for RMBS and CMBS pursuant to this Part or for other securities, where, in the opinion of the SSG, financial modeling methodology would yield the necessary analytical insight to determine probable regulatory treatment or otherwise enable the SSG to make recommendations to the VOS/TF as to regulatory treatment for a security.

Interpretation

4. To facilitate this purpose, wherever in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure reference is made to the SVO, it shall be read to also refer to and apply to the SSG, adjusting for differences in the operational or methodological context. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure shall also be read as authority for collaboration between SVO and SSG staff functions so as to encompass RTAS assignments that require the use of SVO financial, corporate, municipal, legal, and structural analysis and related methodologies, as well as of financial modeling methodologies.

Translation of Preliminary into Official Price Grids and/or NAIC Designations and Designation Categories

5. Price Grids and/or Designations and Designation Categories (“PGD”) generated by the SSG pursuant to an RTAS are preliminary within the meaning of that term as used in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure and accordingly cannot be used for official NAIC regulatory purposes. Preliminary NAIC Designations are translated into official NAIC Designations by the SVO when an insurance company purchases and files the security and the SVO conducts an official assessment. However, this Manual does not require the filing of RMBS and CMBS subject to financial modeling methodology with the SSG. It is, therefore, necessary to specify a procedure for the translation of preliminary Price Grids and/or
Designations and Designation Categories (‘Preliminary PGD’) into official Price Grid PGD that can be used for NAIC regulatory purposes. Preliminary Price Grid PGDs generated by the SSG become an official Price Grid PGD within the meaning of this section when an insurance company has purchased the security for which the Price Grid PGD was generated and reported that security for quarterly reporting purposes using the SSG generated Price Grid PGD. A Price Grid PGD for a security reported by an insurance company for quarterly reporting is effective until the SSG conducts the next annual surveillance pursuant to this Part at which time the Price Grid PGDs generated by the SSG at year-end shall be the official Price Grid PGDs for that security.
## Blanks (E) Working Group

### Editorial Revisions to the Blanks and Instructions

*(presented at the March 16, 2021, Meeting)*

© 2021 National Association of Insurance Commissioners
The Capital Adequacy (E) Task Force met March 23, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Slape, Vice Chair, represented by Mike Boerner and Rachel Hemphill (TX); Lori K. Wing-Heier represented by Wally Thomas (AK); Jim L. Ridling represented by Richard Ford (AL); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Seervinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Grace Arnold represented by John Robinson (MN): Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented Lindsay Crawford (NE); Marlene Caride represented by Diana Carter (OK); Raymond G. Farmer represented Michael Shull (SC); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Amy Malm (WI).

1. **Adopted its Feb. 1, 2021, and 2020 Fall National Meeting Minutes**

The Task Force conducted an e-vote that concluded Feb. 1 to adopt the 2020 catastrophe event list.

Mr. Yanacheak made a motion, seconded by Mr. Chou, to adopt the Task Force’s Feb. 1, 2021 (Attachment One) and Nov. 19, 2020 (see NAIC Proceedings – Fall 2020, Capital Adequacy (E) Task Force) minutes. The motion passed unanimously.

2. **Adopt its Working Group Reports and Minutes**

   a. **Health Risk-Based Capital (E) Working Group**

   Mr. Drutz said the Health Risk-Based Capital (E) Working Group’s met March 17 and took the following action: 1) adopted its Feb. 10, 2021; Jan. 22, 2021; and Dec. 18, 2020, minutes; 2) adopted its 2021 working agenda; 3) referred proposal 2021-02-CA (Managed Care Credit – Incentives) to the Capital Adequacy (E) Task Force for exposure; 4) continued discussion of the impact analysis on the inclusion of investment income in underwriting risk; 5) exposed proposal 2021-04-CA for a 30-day public comment period; and 6) received an update on the bond factor analysis.

   b. **Life Risk-Based Capital (E) Working Group**

   Mr. Barlow said that the Life Risk-Based Capital (E) Working Group met March 12 and took the following action: 1) adopted its interim minutes; 2) discussed the Moody’s Analytics report on bonds; and 3) discussed the real estate proposal submitted by the American Council of Life Insurers (ACLI). He said the Working Group’s main focus has been on the real estate and bond factors for year-end 2021.

   c. **Catastrophe Risk (E) Subgroup**

   Mr. Chou noted that the Catastrophe Risk (E) Subgroup met March 8 and took the following action: 1) adopted its Jan. 27 minutes; 2) adopted proposal 2020-08-CR (Clarification to PR027 Interrogatories); 3) adopted proposal 2020-11-CR (Remove Operational Risk Factor from Contingent Credit Risk); 4) discussed the development progress of wildfire modeling and a risk-based capital (RBC) charge; 5) discussed its 2021 working agenda; 6) discussed the internal catastrophe model evaluation process; and 7) established an ad hoc group to conduct a more in-depth review on different wildfire models.

   d. **Property and Casualty Risk-Based Capital (E) Working Group**

   Mr. Botsko said that the Property and Casualty Risk-Based Capital (E) Working Group met March 15 and took the following action: 1) exposed a credit risk instruction modification; and 2) heard an update from its Runoff Ad Hoc Group.

Ms. Hemphill made a motion, seconded by Mr. Drutz, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Two), the Life Risk-Based Capital (E) Working Group (Attachment Three), and the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Four). The motion passed unanimously.
3. Received a Guaranty Fund Memorandum

Mr. Barlow said that the Life Risk-Based Capital (E) Working Group reviewed the referral regarding adopted amendments to the Life and Health Insurance Guaranty Association Model Act (#520) and determined that no action was necessary to change its current risk charge.

The Task Force accepted the memorandum (Attachment Five).

4. Adopted Proposal 2020-10-CA

Mr. Botsko said proposal 2020-10 (revised Bond Structure for Health and Property/Casualty) was exposed on Oct. 27 for a 45-day comment period ending Dec. 16, 2020, and no comments were received (Attachment Six). Mr. Botsko added that the Health, Life and Property and Casualty Risk-Based Capital (E) Working Groups are continuing to work on their factors and will expose by April 30 for consideration on June 30.

Mr. Chou made a motion, seconded by Mr. Boerner, to adopt proposal 2020-10-CA (Bond Structure-Health and P/C). The motion passed unanimously.

5. Exposed Proposal 2021-02-CA

Mr. Drutz said that the Working Group exposed proposal 2021-02-CA for a 30-day comment period ending March 12, and no comments were received. He said that the purpose of the proposal is to provide clarifying language for the inclusion of incentives in the managed care credit instructions and blank.

Mr. Botsko said the Task Force will expose proposal 2021-02-CA (Managed Care Credit Incentives) (Attachment Seven) for a 30-day comment period ending April 22.

6. Adopted Proposal 2020-08-CR

Mr. Botsko said proposal 2020-08-CR (Clarification to PR027 Interrogatories) is for those insurers that do not report earthquake or hurricane exposure. He said the purpose of this proposal is to clarify the instructions for reporting minimal to no exposure for these catastrophe risks.

Mr. Chou made a motion, seconded by Mr. Boerner, to adopt proposal 2020-08 CR (Clarification to PR027 Interrogatories) (Attachment Eight). The motion passed unanimously.

7. Adopted Proposal 2020-11-CR

Mr. Botsko said the operational risk is now separately addressed in the RBC formula as a stand-alone capital add-on. The purpose of this proposal is to remove the embedded 3% operational risk charge in the Rcat component to avoid double-counting of the charge. He also stated that the Subgroup received comment letters from the American Property Casualty Insurance Association (APCIA) and Reinsurance Association of America (RAA) during the exposure period. They both support this proposal to eliminate the duplicative application of operational risk charges for modeled reinsurance recoverable in the Rcat component.

Mr. Chou made a motion, seconded by Mr. Kupferman, to adopt proposal 2020-11-CR (Remove Operational Risk Factor from Rcat) (Attachment Nine). The motion passed unanimously.

8. Adopted its Working Agenda

Mr. Drutz summarized the changes to the 2021 health RBC working agenda, which included the following substantial changes: 1) the addition to review the managed care credit across the formulas; 2) the deletion of the MAX function as the proposal was adopted for 2021 reporting; and 3) moving the investment income and bond factor items from the New Items section to the Carry Over Items section.

Mr. Botsko summarized the changes to the Working Group’s 2021 working agenda: 1) changed “Evaluate other catastrophe risks for possible inclusion in the charge” item expected completion date to year-end 2022 or later; 2) removed “Evaluate the possibility of using the NAIC as a centralized location for reinsurer designations” and “Evaluate the RBC impact on two different retroactive reinsurance exception approaches”; 3) modified “Evaluate the possibility of allowing additional third-party...
models to calculate the cat model losses” to “Evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses,” and the expected completion date was changed to year-end 2021 or later; and 4) added “Implement Wildfire Peril in the Rcat component (For Informational Purpose Only)” in the new items section.

Mr. Botsko added that the Task Force continues to address the items on its working agenda as they are prioritized and will update the working agenda this summer.

Mr. Drutz made a motion, seconded by Mr. Chou, to adopt the Task Force’s working agenda (Attachment Ten). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\CapAdequacy\03_CapitalAdequacyTFmin
The Capital Adequacy (E) Task Force conducted an e-vote that concluded Feb. 1, 2021. The following Task Force members participated: Tynesia Dorsey, Chair, represented by Tom Botisko (OH); Doug Slape, Vice Chair, represented by Mike Boerner (TX); Lori K. Wing-Heir represented by Wally Thomas (AK); Jim L. Ridling (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Virginia Christy (FL); Doug Ommen represented by Mike Yanacheak (IA); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Chlora Lindley-Myers represented by John Rehagen (MO); Grace Arnold represented by John Robinson (MN); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Glen Mulfready represented by Andrew Schallhorn (OK); and Mike Kreidler represented by Steve Drutz (WA).

1. Adopted the Updated 2020 U.S. and Non-U.S. Catastrophe Risk Event Lists

The Task Force conducted an e-vote to consider adoption of the updated 2020 U.S. and non-U.S. catastrophe risk event lists.

Mr. Chou made a motion, seconded by Mr. Thomas, to adopt the lists (Attachment One-A). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
U.S. List of Catastrophes for Use in Reporting catastrophe Data in PR036 and PR100+

| Type of Event   | Name      | Date | Location                                           | Overall losses when occurred |
|----------------|-----------|------|***************************************************|------------------------------|
| Hurricane      | Irene     | 2011 |                                                   | $4,300,000,000               |
| Tropical Storm | Lee       | 2011 |                                                   | $315,000,000                 |
| Hurricane      | Sandy     | 2012 |                                                   | $50,000,000,000              |
| Hurricane      | Isaac     | 2012 |                                                   | $970,000,000                 |
| Tropical Storm | Debby     | 2012 |                                                   | $105,000,000                 |
| Earthquake     |           | 2014 | California                                        | 25+ million                  |
| Hurricane      | Patricia  | 2015 |                                                   | 25+ million                  |
| Hurricane      | Joaquin   | 2015 |                                                   | 25+ million                  |
| Hurricane      | Matthew   | 2016 | Florida, North Carolina, South Carolina, Georgia and Virginia | $2,698,400,000              |
| Hurricane      | Hermine   | 2016 | Florida, North Carolina, South Carolina, Georgia and Virginia | $245,640,000               |
| Hurricane      | Harvey    | 2017 | Texas, Louisiana                                  | 25+ million                  |
| Hurricane      | Jose      | 2017 | East Coast of the United States                   | 25+ million                  |
| Hurricane      | Irma      | 2017 | Eastern United States                             | 25+ million                  |

Source: Munich Re's NAT CAT Service, Swiss Re Sigma and Aon Benfield
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 17, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Jennifer Li (AL); Wanchin Chou (CT); Carolyn Morgan (FL); Tish Becker (KS); Rhonda Ahrens (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges (TX).

1. **Adopted its Feb. 10, 2021; Jan. 22, 2021; and Dec. 18, 2020 Minutes**

   The Working Group met Feb. 10, 2021; Jan. 22, 2021; and Dec. 18, 2020. During these meetings, the Working Group took the following action: 1) received, exposed and discussed the American Academy of Actuaries (Academy) report on the inclusion of investment income in the underwriting risk component and impact analysis; 2) discussed its March 5 regulator-to-regulator meeting; 3) referred the health care receivable proposal to the Blanks (E) Working Group for consideration in 2021 reporting; 4) exposed proposal 2021-02-CA (Managed Care Credit – Incentives); 4) received an update on the bond factor analysis; and 5) received a summary of the Blanks (E) Working Group’s proposal related to health business reporting and discussed next steps for the Health Test Ad Hoc Group.

   Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the Working Group’s Feb. 10, 2021 (Attachment Two-A); Jan. 22, 2021 (Attachment Two-B); and Dec. 18, 2020 minutes (Attachment Two-C). The motion passed unanimously.

2. **Adopted its 2021 Working Agenda**

   Mr. Drutz summarized the changes to the 2021 health risk-based capital (RBC) working agenda, which included the following substantial changes: 1) the addition to review the managed care credit across the formulas; 2) the deletion of the MAX function as the proposal was adopted for 2021 reporting; and 3) moving the investment income and bond factor items from the New Items section to the Carry Over Items section.

   Mr. Chou made a motion, seconded by Ms. Rankin, to adopt the 2021 health RBC working agenda (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Ten). The motion passed unanimously.

3. **Referred Proposal 2021-02-CA to the Capital Adequacy (E) Task Force for Exposure**

   Mr. Drutz said that the Working Group exposed proposal 2021-02-CA for a 30-day comment period ending March 12, and no comments were received. He said that the purpose of the proposal is to provide clarifying language for the inclusion of incentives in the managed care credit instructions and blank.

   Hearing no objections, the Working Group referred proposal 2021-02-CA to the Capital Adequacy (E) Task Force for exposure on all lines of business.

4. **Heard an Update from the Academy on Investment Income in the Underwriting Risk Component and Exposed Proposal 2021-04-CA**

   Mr. Drutz said the Working Group requested the Academy’s assistance in developing adjusted factors to include investment income for Columns 1–4 on the Experience Fluctuation Risk page. The Academy provided the adjusted factors in its letter dated Feb. 22, 2021 (Attachment Two-D). Derek Skoog (Academy) said that the Academy used the same methodology used in its previous letter where the Academy had deconstructed the current factors assuming that they currently have no investment income attributed to them based on its understanding of how they were developed. Then using a combination of the Academy’s knowledge of industry completion factors by product as well as industry loss ratios, the Academy developed a range of potential output risk factors that would correspond to those assumptions. Mr. Skoog said when it comes to determining the investment return rate, there are a number of factors worthy of consideration, and the Academy has included a range of potential results within its letter.

   Mr. Drutz said that a summary (Attachment Two-E) of the number of companies whose RBC ratio changed by both the percentage change and point change for the 0.5%, 1%, 1.5% and 2% investment returns was included in the impact analysis.
He said that a majority of companies had a 0% to 1.5% percent change with the 0.5% investment return, while a majority of companies had about a 0% to 2.5% change in the 1% investment return, a 0% to 3% change with the 1.5% investment return, and 0% to 3.5% change with the 2% investment return.

Mr. Drutz said that the Working Group will need to determine the frequency in which the factors will need to be reviewed and if a benchmark should be established in updating the factors, such as Treasury bonds. He said the five-year Treasury Bond yield for 2021 has ranged from 0.36 to 0.84%, and five years would seem to be the longest time frame to consider based on his understanding of the health portfolios with an average maturity around five years. Mr. Drutz said that proposal 2021-04-CA includes the 0.5% and 1% investment return adjustment to the underwriting risk factors as Option 1 and Option 2.

Hearing no objections, the Working Group agreed to expose proposal 2021-04-CA (Attachment Two-F) for a 30-day public comment period ending April 16. The exposure will include both the 0.5% and 1% investment return factors and the Academy’s Feb. 22 letter. Following the initial exposure, the proposal will then be referred to the Capital Adequacy (E) Task Force for a subsequent exposure for all lines of business.

5. Received an Update on the Bond Factor Impact Analysis

Mr. Drutz said NAIC staff are working on the impact analysis for the 20 designation bond factors based on year-end 2020 reporting. He said the Working Group expects to meet in early April to discuss the results for both the two- and five-year time horizon factors. He said the Working Group will need to determine which factors to move forward with and expose by no later than April 30.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 10, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Steve Ostlund and Jennifer Li (AL); Rolf Kaumann and Eric Unger (CO); Wanchin Chou, Kathy Belfi and Andrew Greenhalgh (CT); Kyle Collins (FL); Tish Becker (KS); Rhonda Ahrens and Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Matthew Richard, Aaron Hodges, Sean Fulton and Mike Boerner (TX).

1. Discussed Impact Analysis on Investment Income in Underwriting Risk

Mr. Drutz said the Working Group agreed start working on the impact analysis for the investment income adjustment in the underwriting risk factors for Comprehensive Medical, Medicare Supplement, Dental and Vision, and Stand-Alone Medicare Part D lines of business reported on page XR012. He said the Working Group will continue to work with the American Academy of Actuaries (Academy) to review the remaining lines of business once the initial lines of business have been addressed. He said the key assumptions to consider in determining the investment return are asset duration and spread. He noted that the Academy referenced one-month U.S. treasury yields, and these could be used as a reference point; UnitedHealth Group (UHG) suggested that the rate of investment return be consistent with the time horizon used for the bond risk modeling. He asked if the UHG’s reference to the rate of investment return was referencing the reference rate to be used, the period over which the return should be calculated, or both. Jim Braue (UHG) said it primarily referenced the reference rate, but it could be both because they are interconnected.

Mr. Drutz said the Working Group will be performing an impact analysis on the bond factors using a two- and five-year time horizon, and one of the key questions that the Working Group will have to address is if the duration between the bonds and investment income in the underwriting risk factors should be linked. Derek Skoog (Academy) said the Academy did not necessarily take a position as far as the duration of the assets, but rather the Academy modeled out a month of premiums and claims for simplicity; however, the investment income would be the same if you were modeling out a full contact year. He said the data point for consideration is the average length of time it took to pay out claims, which was approximately one month. The Academy then referenced the one-month treasury yield, which is fairly low, and that was a consideration for the investment return assumption. Mr. Skoog said the critical assumption is the investment return. How you get to that investment return is going to be the product of the duration of the asset and the risk of the asset that was assumed. Treasury yields would be lower than corporate bonds, which would be somewhat higher. Mr. Skoog said the Academy did not take a position on those two points, but that is what drives the investment return assumption. Mr. Drutz noted that the table in the Academy’s letter included the yield assumption and the adjustment that would be based on that yield. He said if the yield were based on a five-year treasury, yielding 0.5% versus a two-year corporate bond that was yielding 0.5%, the adjustments to the risk factors would not change based on the length of the duration of the bonds. Mr. Skoog agreed. Mr. Drutz said that adjustment to the factors is not based on duration.

Mr. Drutz asked the Working Group to consider what rate should be used. He said three-month Treasury yields are at 0.04% and five-year yields are at about 0.46%. He said there appears to be a linear relationship between the yield and the reduction in the risk factor. Mr. Boerner suggested a granular stair step approach using the 0.5%, 1%, 1.5% and 2% returns in the impact analysis. Mr. Dudek agreed with using the four points to show more of the stair step method. Lou Felice (NAIC) said the investment returns appear to be the outer markers, and the 0% is essentially a one-month Treasury yield up to something like a two- to three-year investment grade corporate bond. He asked if the 2–3% investment return is about where a two- to three-year corporate return is today. Edward Toy (Risk & Regulatory Consulting LLC) said corporate “A” rated yields are about 1.66%, and “BBB” corporates are just over 2%.

Mr. Drutz said the Working Group will also need to consider if there is a certain reference rate when making the assumptions on the investment yields. For example, should the Working Group look at “A” rated corporate bond yields over five- or two-year periods or should it be treasuries or a mix of both. Mr. Drutz said the Working Group will also need to consider the frequency of the adjustment, and he suggested setting a benchmark to determine what assumptions to use. He said as an example, if the adjustment was based on a corporate five-year yield, the Working Group could then review that number annually and adjust the risk charge based on whether that return is going up or down. He said if the benchmark linked to a particular rate of return, it would be helpful in making decisions on the adjustment to the factors in the coming years.
The Working Group agreed to run the impact analysis on a half point basis from 0.5% up to 2%.

2. Exposed Proposal 2021-02-CA

Mr. Drutz said NAIC staff drafted proposal 2021-02-CA, which clarifies and includes a reference for “incentives” where “withholds and bonuses” are referenced in the Managed Care Credit instructions. A definition was also included in Appendix 1 for “Incentives, Bonuses and Withholds.” Mr. Drutz said the following questions need to be considered: 1) whether there is a consistent use of incentives, where a set amount is paid; and 2) whether there are scenarios in which incentives could be classified or the payment is built into the claim payment. Mr. Felice said NAIC staff received a question related to what gets included in some of the managed care credit lines calculation for category 2. He said the question was focused on the line in that category, which says to report net of withholds; in other words, this means the full amount of the claim before adjustment for the withhold and also net of bonuses, which means that if there is a bonus that was paid out, it would show the amount of the claims that were paid without including the bonus. He asked what to do with incentives. In the past, incentives were normally paid out after the actual claim was paid, it would be included like a bonus or withhold, and the value of the claim would be reported without consideration of those items on that line. However, there are some items, mostly in government programs, that are called incentives where the incentive is built into the value of the claim. The claim is then paid at an increased value to encourage things like getting a doctor to participate in an underserved area or to help a doctor with the International Classification of Diseases (ICD) 10 in a small office to upgrade their abilities to share or report claims data and medical information. In most cases, these would be reported like a bonus and withhold arrangements because they were called incentive pools—pools of money set aside to, not dissimilar to a bonus arrangement and paid after the claim. However, if there are instances where the claim is enhanced and that is considered an incentive arrangement, we want to be sure that we instruct this to be reported properly. Mr. Felice asked industry users who see these arrangements every day whether there are arrangements with no distinction between the claim value and the incentive because it is paid under a contractual arrangement.

Hearing no objections, proposal 2021-02-CA (Attachment Two-A1) was exposed for a 30-day public comment period ending March 12. Following the initial exposure, the proposal will then be referred to the Capital Adequacy (E) Task Force for a subsequent exposure for all lines of business.

3. Discuss Bond Factor Analysis

Mr. Drutz said the Working Group agreed to perform an impact analysis on the two- and five-year time horizon factors for the 20 bond designations for year-end 2020; and while a majority of states have a March 1 annual statement filing deadline, there are a few states that have a March 31 or April 1 filing deadline. He recommended that the companies with a March 1 filing deadline be included in the impact analysis to ensure that the April 30 exposure deadline can be met. Mr. Ostlund asked how many companies do not have the March 1 filing deadline. Crystal Brown (NAIC) said she would identify the states with the March 31 and April 1 filing dates and the number of companies that would not file until that date, and she will bring this information back to the Working Group.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

**DESCRIPTION OF CHANGE(S)**

Incorporate references for “Incentives” under the managed care instructions and blank as “Bonuses/Incentives.”

**REASON OR JUSTIFICATION FOR CHANGE **

Currently the managed care instructions and blank only reference the bonuses, this change would clarify that both incentives and bonuses are to be included.

† This column is for a single result for the Comprehensive Medical & Hospital, Medicare Supplement and Dental managed care discount factor.
‡ This column is for the Stand-Alone Medicare Part D managed care discount factor.

Denotes items that must be manually entered on the filing software.
The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between health entities and pure indemnity carriers. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claim payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the formula, other than for Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase, or new arrangements may be added to the existing categories. The managed care categories are:

* Category 0 – Arrangements not Included in Other Categories
* Category 1 – Contractual Fee Payments
* Category 2 – Bonus and/or Incentives / Withhold Arrangements
* Category 3 – Capitation
* Category 4 – Non-Contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future, no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claim payments are allocated among these managed care categories based on the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claim payments may fit into more than one category. If that occurs, enter the claim payments into the highest applicable category. CLAIM PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claim payments reported in the Managed Care Credit Calculation page should equal the total year's paid claims.

**Line (1) – Category 0 – Arrangements not Included in Other Categories:** There is a zero managed care credit for claim payments in this category, which includes:

- Fee for service (charges).
- Discounted FFS (based upon charges).
- Usual Customary and Reasonable (UCR) Schedules.
- Relative Value Scales (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
- Stop loss payments by a health entity to its providers that are capitated or subject to withhold incentive programs.
- Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
- Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
This amount should equal Exhibit 7, Part 1, Column 1, Line 5 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

**Line (2) – Category 1 – Payments Made According to Contractual Arrangements.** There is a 15 percent managed care credit for payments included in this category:

- Hospital per diems, DRGs or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- RVS where the payment base and RV factor are fixed by contract for more than one year.
- Ambulatory payment classifications (APCs).

This amount should equal Exhibit 7, Part 1, Column 1, Line 6 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

**Line (3) - Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives With No Other Managed Care Arrangements.** This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentives/withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE – 2019 Reporting Year**

| 2018 withhold / bonus/incentive payments | 750,000 |
| 2018 withholds / bonuses/incentives available | 1,000,000 |
| A. MCC Factor Multiplier | 75% – Eligible for credit |
| 2018 withhold / bonuses/incentives available | 1,000,000 |
| 2018 claims subject to withhold - gross* | 5,000,000 |
| B. Average Withhold Rate | 20% |
| Category 2 Managed Care Credit Factor (A x B) | 15% |

The resulting factor is multiplied by claim payments subject to withhold - net** in the current year.

* These are amounts due before deducting withhold or paying bonuses and/or incentives.

** These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives, but otherwise had no managed care arrangements. This amount should equal Exhibit 7, Part 1, Column 1, Line 7 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).
Line (4) – Category 2b – Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentives/withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claim payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1. This amount should equal Exhibit 7, Part 1, Column 1, Line 8 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (5) – Category 3a – Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claim payments paid DIRECTLY to licensed providers on a capitated basis. This amount should equal Exhibit 7, Part 1, Column 1, Line 1 + Line 3 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (6) – Category 3b – Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries. An intermediary is a person, corporation or other business entity (not licensed as a medical provider) that arranges, by contracts with physicians and other licensed medical providers, to deliver health services for a health entity and its enrollees via a separate contract between the intermediary and the health entity. This includes affiliates of a health entity that are not subject to RBC, except in those cases where the health entity qualifies for a higher managed care credit because the capitated affiliate employs providers and pays them non-contingent salaries, and where the affiliated intermediary has a contract only with the affiliated health entity. A Regulated Intermediary is an intermediary (affiliated or not) subject to state regulation and files the Health RBC formula with the state.

Line (7) – Category 3c – Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0.)

Enter the amount of medical expense capitations paid to non-regulated intermediaries.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 1 for a provider, and for an intermediary at the greater of category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive revisions
either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 0 for both providers and intermediaries.

Line (8) – Category 4 – Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claim payments in this category. Once claim payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on line 7 in the Underwriting Risk section should be deducted before applying the managed care credit factor. This category includes:

- Non-contingent salaries to persons directly providing care.
- The portion of payments to affiliated entities, which is passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with its affiliated health entity.
- All facilities related medical expenses and other non-provider medical costs generated within a health facility that is owned and operated by the health entity.
- Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The "aggregate cost" method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services, and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, which put their respective capital and surplus at risk in guaranteeing each other.

This amount should equal Exhibit 7, Part 1, Column 1, Line 9 + Line 10 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (9) – Sub-Total Paid Claims. The total of paid claims for Comprehensive Medical, Medicare Supplement and Dental should equal the total claims paid for the year as reported in Exhibit 7, Part 1, Column 1, Line 13 less Line 11 of the annual statement and the sum of Lines (8.3), (12) and (13) on page XR017 – Underwriting Risk – Managed Care Credit.

Line (10) – Category 0 – No Federal Reinsurance or Risk Corridor Protection. Category 0 for Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

Line (11) – Category 1 – Federal Reinsurance but no Risk Corridor Protection. Category 1 for Medicare Part D Coverage would be all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

Line (12) – Category 2a – No Federal Reinsurance but Risk Corridor Protection. Category 2a for Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

Line (13) – Category 3a – Federal Reinsurance and Risk Corridor Protection. Category 3a for Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

Line (14) – Sub-Total Paid Claims. The total paid claims for Medicare Part D Coverage, excluding supplemental benefits.

Line (16) – Weighted Average Managed Care Discount. These amounts are calculated by dividing the total weighted claims by the comparable sub-total claim payments. For Column (3), this is Column (3), Line (9) divided by Column (2), Line (9). For Column (4), this is Column (4), Line (14) divided by Column (2), Line (14).
Line (17) – Weighted Average Managed Care Risk Adjustment Factor. These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount values in Line (16).

Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses. This table requires data from the PRIOR YEAR to compute the current year’s discount factor. These do not apply to Medicare Part D coverage.

Line (18) – Withhold & Bonus/Incentive Payments, prior year. Enter the prior year’s actual withhold and bonus/incentive payments.

Line (19) – Withhold & Bonuses/Incentives Available, prior year. Enter the prior year’s withhold and bonuses/incentives that were available for payment in the prior year.

Line (20) – MCC Multiplier – Average Withhold Returned. Divides Line (18) by Line (19) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

Line (21) – Withholds & Bonuses/Incentives Available, prior year. Equal to Line (19) and is automatically pulled forward.

Line (22) – Claims Payments Subject to Withhold, prior year. Claim payments that were subject to withholds and bonuses/incentives in the prior year. Equal to L(3) + L(4) of the managed care credit claims payment table FOR THE PRIOR YEAR.

Line (23) – Average Withhold Rate, prior year. Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

Line (24) – MCC Discount Factor, Category 2. Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the health entity’s withhold/bonus/incentive program in the prior year.
UNDERWRITING RISK - MANAGED CARE CREDIT
LR022

This worksheet LR022 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the comprehensive medical dental business, Stand-Alone Medicare Part D Coverage or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 - Arrangements not Included in Other Categories
- Category 1 - Contractual Fee Payments
- Category 2 – Bonus and/or incentives / Withhold Arrangements
- Category 3 - Capitation
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Stand-Alone Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care “buckets” to determine the weighted average discount, which is then used to reduce the Underwriting Risk-Experience Fluctuation RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claims payments may fit into more than one category. If that occurs, enter the claims payments into the highest applicable category. CLAIMS PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to insure that true risk transfer is accomplished.

Line (1)
Category 0 - Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:
- Fee for service (charges).
- Discounted fee for service (based upon charges).
- Usual customary and reasonable (UCR) schedules.
- Relative value scale (RVS), where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
- Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
- Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
- Claim payments not included in other categories.

**Line (2)**

**Category 1 - Payments Made According to Contractual Arrangements.** There is a 15 percent managed care credit for payments included in this category:
- Hospital per diems, diagnostic related groups (DRGs) or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- Relative value scale (RVS), where the payment base and RV factor are fixed by contract for more than one year.

**Line (3)**

**Category 2a - Payments Made Subject to Withholds or Bonuses / Incentives with No Other Managed Care Arrangements.** This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus /incentives /withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE - 1998 Reporting Year**

| 1997 withhold / bonus /incentives available | 1,000,000 |
| 1997 withhold / bonus /incentives paid | 75,000 |
| A. MCC Factor Multiplier | 0.75 - Eligible for credit |
| 1997 withholds / bonuses /incentives available | 1,000,000 |
| 1997 claims subject to withhold - gross† | 500,000 |
| B. Average Withhold Rate | 20% |
| Category 2 Managed Care Credit Factor (A x B) | 15% |

The resulting factor is multiplied by claims payments subject to withhold - net‡ in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses and incentives, but otherwise had no managed care arrangements.

**Line (4)**
Category 2b: Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5)
Category 3a: Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6)
Category 3b: Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments to regulated intermediaries that, in turn, pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 2 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7)
Category 3c: Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitated or percent of premium payments to non-affiliated intermediaries that, in turn, pay licensed providers (subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations that meet the definition in Appendix 2 for Intermediary but not regulated intermediary. In those cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater
of Category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive revisions either within or beyond a 12 month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 0 for both providers and intermediaries.

Line (8)
Category 4 - Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claims payments in this category. Once claims payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on Line (7) in the underwriting risk section should be deducted before applying the managed care credit factor.

- Non-contingent salaries to persons directly providing care.
- The portion of payments to affiliated entities passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with the company.
- All facilities-related medical expenses and other non-provider medical costs generated within health facility that is owned and operated by the insurer.
- Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The Aggregate Cost method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services; and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, which put their respective capital and surplus at risk in guaranteeing each other.

Line (9)
Subtotal Paid Claims – The total of Column (2) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1 and 2, Line A.4 of the annual statement.

Line (10)
Category 0 for Stand-Alone Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

Line (11)
Category 1 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

Line (12)
Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

Line (13)
Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

Line (16)
Weighted Average Managed Care Discount – The amounts in Column (3) and Column (4) are calculated by dividing the total weighted claims in Column (3) by the total claims paid in Column (2) for Lines (9) and (14) respectively.
Weighted Average Managed Care Risk Adjustment Factor – These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (16)).

Lines (18) through (24)
Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

Line (18)
Enter the prior year’s actual withhold and bonus payments.

Line (19)
Enter the prior year’s withholds and bonuses that were available for payment in the prior year.

Line (20)
Divides Line (18) by Line (19) to determine the portion of withholds and bonuses that were actually returned in the prior year.

Line (21)
Equal to Line (19) and is automatically pulled forward.

Line (22)
Claims payments that were subject to withholds and bonuses in the prior year. Equal to Line (3) + Line (4) of LR022 Underwriting Risk – Managed Care Credit FOR THE PRIOR YEAR.

Line (23)
Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

Line (24)
Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus program in the prior year.
This worksheet PR021 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the Comprehensive Medical, Stand-Alone Medicare Part D coverage, Dental business or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

1. Category 0 - Arrangements not Included in Other Categories
   - Fee for service (charges)
   - Discounted fee for service (based upon charges)
   - Usual customary and reasonable (UCR) schedules
   - Relative value scale (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.

2. Category 1 - Contractual Fee Payments
   - Arrangements classified as contractual payments (e.g., capped carve-outs)

3. Category 2 - Bonus and/or Incentives / Withhold Arrangements
   - Arrangements that involve a bonus or incentive payment
   - Arrangements that involve a withhold payment

4. Category 3 - Capitation
   - Arrangements where the payment is based on a fixed amount per member per month

5. Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements
   - Arrangements where the payment is based on a fixed amount per member per month
   - Arrangements that involve an aggregate cost arrangement
   - Arrangements that involve a participation agreement

For Stand-Alone Medicare Part D coverage, the reduction in uncertainty comes from two federal supports: the reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Line (11) will have the following three components:

- Category 0 - Arrangements not Included in Other Categories (Line (11.1))
- Category 1 - Contractual Fee Payments (Line (11.2))
- Category 2 - Bonus and/or Incentives / Withhold Arrangements (Line (11.3))
- Category 3 - Capitation (Line (11.4))
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements (Line (11.5))
- Category 5 - Other Managed Care Arrangements (Line (11.6))

The managed care credit is based on the percentage of paid claims that fit into each of these categories. Total claims payments are allocated among these managed care categories to determine the weighted average discount, which is then used to reduce the Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental RBC.

In some instances, claims payments may fit into more than one category. If that occurs, the claims payments are allocated among these managed care categories to determine the weighted average discount. Each managed care category is a “bucket” and each “bucket” is assigned a discount factor. The total claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to ensure that true risk transfer is accomplished.

The managed care credit is the result of a calculation that takes into account the variability of claims payments and the predictability of future claims payments. The managed care credit is then used to reduce the RBC requirement for experience fluctuations. The managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost.

The reduction in uncertainty is determined by the variability of claims payments and the predictability of future claims payments. The managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

For Stand-Alone Medicare Part D coverage, the reduction in uncertainty comes from two federal supports: the reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Line (11) will have the following three components:

- Category 0 - Arrangements not Included in Other Categories (Line (11.1))
- Category 1 - Contractual Fee Payments (Line (11.2))
- Category 2 - Bonus and/or Incentives / Withhold Arrangements (Line (11.3))
- Category 3 - Capitation (Line (11.4))
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements (Line (11.5))
- Category 5 - Other Managed Care Arrangements (Line (11.6))

The managed care credit is based on the percentage of paid claims that fit into each of these categories. Total claims payments are allocated among these managed care categories to determine the weighted average discount, which is then used to reduce the Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental RBC.

In some instances, claims payments may fit into more than one category. If that occurs, the claims payments are allocated among these managed care categories to determine the weighted average discount. Each managed care category is a “bucket” and each “bucket” is assigned a discount factor. The total claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to ensure that true risk transfer is accomplished.
Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider or retroactive payments made solely because of a correction to the number of members within the capitated agreement).

Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).

Claim payments not included in other categories.

**Line (2)**

Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:

- Hospital per diems, diagnostic related groups (DRGs) or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- Relative value scale (RVS) where the payment base and RV factor are fixed by contract for more than one year.

**Line (3)**

Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives with No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentive/withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and/or incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE - 1998 Reporting Year**

| 1997 withheld / bonus payments | $750,000 |
| 1997 withheld / bonuses available | $1,000,000 |
| A. MCC Factor Multiplier | 75% - Eligible for credit |
| 1997 withheld / bonuses available | $1,000,000 |
| 1997 claims subject to withhold - gross† | $5,000,000 |
| B. Average Withhold Rate | 20% |
| Category 2 Managed Care Credit Factor (A x B) | 15% |

The resulting factor is multiplied by claims payments subject to withhold - net‡ in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives, but otherwise had no managed care arrangements.

**Line (4)**

Category 2b - Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive/withhold arrangement with a provider who is reimbursed based on a provider fee schedule.
The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5)
Category 3a - Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments made directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6)
Category 3b - Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments to regulated intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 1 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7)
Category 3c - Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitated or percent of premium payments to non-affiliated intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries that are affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations which meet the definition of Intermediary but not regulated intermediary in Appendix 1. In cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater of Category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive
revisions either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 0 for providers and intermediaries.

**Line (8)**
Category 4 - Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claims payments in this category. Once claims payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on Line (7) in the underwriting risk section should be deducted before applying the managed care credit factor.

- Non-contingent salaries to persons directly providing care.
- The portion of payments to affiliated entities which is passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with the company.
- All facilities related medical expenses and other non-provider medical costs generated within health facility that is owned and operated by the insurer.
- Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The Aggregate Cost method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services; and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, that put their respective capital and surplus at risk in guaranteeing each other.

**Line (10.1)**
Category 0 for Stand-Alone Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

**Line (10.2)**
Category 1 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

**Line (10.3)**
Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

**Line (10.4)**
Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

**Line (10.6)**
Total Paid Claims – The total of Column (1) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1 and 2, Line D16 of the annual statement.

**Line (11)**
Weighted Average Managed Care Discount – This amount is calculated by dividing the total weighted claims (Line (9) Column (2)) by the total claim payments (Line (9) Column (1)).
Weighted Average Managed Care Risk Adjustment Factor - This is the credit factor that is carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (11)).

**Lines (13) through (19)**

Lines (13) through (19) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

**Line (13)**
Enter the prior year’s actual withhold and bonus/incentive payments.

**Line (14)**
Enter the prior year’s withholds and bonuses/incentives that were available for payment in the prior year.

**Line (15)**
Divides Line (13) by Line (14) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

**Line (16)**
Equal to Line (14) and is automatically pulled forward.

**Line (17)**
Claims payments that were subject to withholds and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of Underwriting Risk–Managed Care Credit FOR THE PRIOR YEAR.

**Line (18)**
Divides Line (16) by Line (17) to determine the average withhold rate for the prior year.

**Line (19)**
Multiplies Line (15) by Line (18) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus/incentive program in the prior year.
Incentives, Withhold and Bonus Amounts – Are amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. An incentive arrangement may involve paying an agreed-on amount for each claim, e.g., provider agrees practice in an underserved area. While a bonus arrangement may be paid at the end of the contract period after specific goals have been met. Withhold arrangements can involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.
1. Discussed the Academy’s Report on Investment Income in Underwriting Risk

Mr. Drutz said the American Academy of Actuaries (Academy) report that was exposed in December 2020 discussed the incorporation of investment income into the underwriting risk component and that additional information was requested regarding the proposed adjustment for investment income. Derek Skoog (Academy) summarized the Academy’s response (Attachment Two-B1) and said that the investment income adjustment to the underwriting factors was similar to how it is contemplated in the property/casualty (P/C) formula. He said that the Academy analyzed the comprehensive medical factors that are currently in the underwriting risk component of the health formula and assumed there was not an investment income adjustment included in the current factors. The Academy developed a set of underlying factors that would correspond to the P/C formula and then developed an investment income adjustment based on investment income that is earned on premium collected less claims paid. This considers the development and payment pattern of claims for a typical major medical policy. Then using that investment income assumption, the Academy applied that to the risk factors to develop an alternative set of experience volatility risk factors within each of the tiered factors. Mr. Skoog said that the follow-up letter laid out more detail for the arithmetic for how the investment income adjustment factor gets applied within the P/C construct and shows how the output or the resulting risk factors would result from that approach.

Mr. Chou asked if the Academy was able to look at the P/C on page PR017 for the adjustment of investment income as a factor by line for consistency between the formulas. Mr. Skoog said that served as a basis for the Academy’s analysis and said that exact approach was taken. However, rather than expanding the reporting structure in H2 of the health formula for experience volatility risk, the Academy was able to get a similar result by using industry factors. He said that the Academy opted for a simpler and higher-level approach in which the same logic was used. Mr. Chou asked if the 87.5% confidence level was used. Mr. Skoog said no. He said the original request was to consider investment income without adjusting other components of the formula. He said that if the 9% risk factor within the health risk-based capital (RBC) formula were decomposed into the P/C construct, it would basically imply an administrative expense ratio of about 9%. He said there was no investment income adjustment within the current construct, and that would imply a safety or confidence level of about a 100% loss ratio. Mr. Skoog said this would be the corresponding loss ratio in the P/C formula if the same construct was used. He said the Academy did not change those assumptions as this would have led to a more significant study of loss ratios and safety levels that would require more significant changes to the H2 component. He said that the Academy simply applied an investment income adjustment to the factors as they are currently constructed using the P/C construct.

Mr. Drutz said the letter indicated that a 0.5% return would have about a 0.07 percentage point decrease in the 9% factor for comprehensive medical. He asked if this same percentage decrease could be applied to the other tiers and lines of business on page XR012. Mr. Skoog said a similar approach could be applied to the other lines of business by looking at particular claim’s payment patterns for those lines to the extent that they may differ from comprehensive major medical. For example, Medicare Supplement paid claims are substantially slower than comprehensive major medical, so it may merit a different adjustment. However, in terms of magnitude, the adjustments would be very similar to that of the comprehensive major medical.

Jim Braue (UnitedHealth Group—UHG) summarized the UHG’s comment letter (Attachment Two-B2). He said that UHG supports making an adjustment for investment income in the formula. He said that the Academy letter noted that the amount of the adjustment is highly sensitive to the rate of investment return that is assumed, and it was also noted that statutory financial results would suggest a rate of 2% to 3%, but an amount lower may be justified by the short-term nature of the liabilities. He said that UHG believes that something consistent with a slightly longer maturity such as two to three years is more appropriate. Mr. Braue said since there is a charge applied for the risk of the bond, there should be some recognition for the income and revenue produced by those bonds. Therefore, it seems appropriate to have the revenue assumption sync up with risk assumption for the bond factors. He said the run-out period of the liabilities are not reflected in the underwriting risk factors. If it were, it would be a reserve risk and not an underwriting risk, and the risk being looked at here is the risk for future incurred claims.
being higher than future payments. He asked if current interest rates or longer-term averages should be used, as this ties into the frequency of updating the factors. If current rates are used, it implies that every time the current rate changes appreciably, the factors would need to be adjusted. If the factors were to be updated less frequently, a longer-term average rate would be more appropriate. Mr. Braue said that it is probably not appropriate to apply the adjustment to the factors for long-term disability and long-term care insurance (LTC) due to the nature of those coverages and because there is a risk charge applied to the claim reserves. However, an adjustment could be considered for those shorter-tailed coverages that behave like comprehensive medical and where the risk charges are determined in a similar fashion. He said where there are tiered factors, both tiers should be adjusted.

Mr. Drutz said there are several decision points that the Working Group will need to address prior to implementation of a factor adjustment: 1) whether the issue of bond default risk and investment revenue should be based on the same duration of assumptions; 2) the appropriate duration for applying the underwriting credit; and 3) the appropriate interest rate of return to be used in adjusting the underwriting factor.

Lou Felice (NAIC) said that from a health perspective and based on the Academy’s review, the duration of the asset holding is longer, which seems to be an appropriate measure in determining default risk because the length of time that the bond is held is related to whether there is a potential for default over that time. However, the crediting of investment income could use a one-year underwriting cycle due to the short duration of claims. He said that a one-year underwriting cycle could be a little longer as the run out is longer. However, given the short run out, given that premium changes are usually limited to once a year, and given that product design and selection changes once a year, a one-year time period could be used as an under-investment risk duration. He said that for health specifically, bond default risk and investment return risk are not as well connected as they are for P/C, so different durations could be considered for default risk on bonds versus underwriting risk benefit from investment income. Mr. Felice said that the frequency of review is tied to the rate selected, so if a smaller return percentage is used, then the factors would need to be reviewed more frequently and a larger return percentage could be reviewed less frequently. He said if a risk-free or pegged rate were used, the factors would need to be reviewed very frequently. However, if portfolio rates were used, they would need to be reviewed less frequently. There are two items to consider with portfolio rates: 1) whether perverse incentives are created to get more credit by investing in risky assets to raise their portfolio rates of return; and 2) changes to the bond factors or asset risk factors may not have as robust of changes to the underwriting risk factors in the formula. Therefore, a small change to the underwriting risk factors may have more of an impact on RBC after covariance than a larger change to a bond factor or asset factor.

Mr. Drutz said that if there is no structural change, the factor updates could be relatively simple. He said there are a couple of methods that could be considered for updating: 1) if a five-year duration were used, the adjustment could be tied to a five-year Treasury bond or some other bond that was published, which could then be used to adjust the factors on an annual basis; or 2) it could be tied to the average investment income of companies. Mr. Drutz suggested that the Working Group run an analysis on the 2019 health RBC data to determine the impact of incorporating the investment income adjustment in the underwriting risk factors and the impact that it would have on RBC ratios. Mr. Muldoon agreed that an impact analysis was a good idea to see what kind of impacts these changes would have.

Mr. Muldoon also asked what lines of business on page XR012 would be considered under the adjusted factors. Crystal Brown (NAIC) asked if the Academy would be able to provide the Working Group with adjusted factors for each line of business in which the investment income would be incorporated into. Mr. Skoog said that the Academy could provide updated factors by line of business, but it would be easier to isolate the lines of business that the adjustment should be applied to because premium collection relative to claims payout patterns would need to be considered.

Mr. Drutz said that the Working Group would like to come to a conclusion on both the bond factors and investment income adjustment projects at the same time and implement for year-end 2021 if possible. Therefore, the Working Group will need to look at the materiality and impact of the investment income adjustment and determine which lines of business the adjustment would apply to. Ms. Brown asked how long it would take the Academy to provide factors for the additional lines of business. Mr. Skoog said that some lines of business will be more challenging than others to get a good view of claim payment patterns. He said that comprehensive medical, Medicare Supplement, dental and vision, and stand-alone Medicare Part D coverage are the most straightforward lines of business, while other health and other non-health may be more challenging because of the number of products that fall under these categories. He said page XR012 would be the most straightforward page and said that the Academy could provide updated factors to the Working Group within a few weeks. Mr. Felice asked if it was necessary to incorporate the investment income adjustment across all the lines of business this year or could the most straightforward lines of business include the adjustment this year and then continue working on the other lines of business. Mr. Felice also asked for clarification on including the adjustment across the tiers and what the Academy thinks about this. Mr. Skoog said that it was
not originally included but that it should apply to all tiers. He said the Academy could provide this. Mr. Braue said that the majority of business is going to be included in Columns 1–4 on page XR012. He suggested that the Academy work on providing adjusted factors for just those four lines of business for year-end 2021 and then over the longer term look at the other lines of business that are more difficult to analyze to determine if any of them are material enough to make any difference. Mr. Skoog said that the Columns 1–4 lines of business are the most straightforward and that the Academy could work on those for this year.

The Working Group agreed and requested that the Academy look at the lines of business in Columns 1–4 on page XR012 and provide an updated analysis like the comprehensive medical and incorporate the tier breakdowns.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Re: Request for Analysis to Incorporate Investment Income into the Underwriting Risk Component of the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries (Academy)¹ Health Solvency Subcommittee, I am pleased to provide this response letter to the NAIC Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the request from the HRBC Working Group to provide additional detail regarding the potential investment income adjustment factor for Health H2 Experience Fluctuation Risk.

**Incorporation of Investment Income into H2 Risk Factors**

As described in our letter dated December 15, 2020, the property and casualty (P&C) framework with respect to the Investment Income Adjustment (IIA) within the P&C Net Written Premium Risk (akin to the Health H2 Experience Fluctuation Risk), the base RBC charge amounts to:

\[
\text{Premium} \times (\text{IIA} \times \text{Risk\_Factor} + \text{Expense\_Ratio} - 1)
\]

The IIA*Risk\_Factor expression is the discounted loss ratio at the target safety margin (87.5th percentile for P&C). Then, the IIA*Risk\_Factor + Expense\_Ratio -1 is the discounted operating loss at the target safety margin.

For Comprehensive Major Medical, if a 9% expense ratio (based on high-level industry benchmarking of health plan administrative expenses, excluding loss adjustment expense) is assumed and no IIA (i.e., an IIA of 1.0), then the underlying Risk Factor is 100%. This is essentially the loss plus loss adjustment expense ratio at the target safety margin implied by the Health RBC formula.

Re: American Academy of Actuaries letters regarding an investment income adjustment to Health RBC underwriting risk factors.

Dear Mr. Drutz:

I am writing on behalf of UnitedHealth Group, to supplement our January 6, 2021 letter to you regarding the incorporation of investment income into the Risk-Based Capital (RBC) charges for health underwriting risk. As we noted in that letter, the American Academy of Actuaries was expected to provide additional details of the calculations shown in their December 15, 2020 letter, and we stated that we might have further comments when those details became available. The Academy submitted that additional information in a letter dated January 11, 2021. Our comments in response to that letter follow.

The Academy has explained that they have calculated “discounted risk factors” using the following formula:

\[
\text{Discounted risk factor} = \text{IIA} \times (\text{Loss ratio at safety margin}) + (\text{Expense ratio}) - 1
\]

where “IIA” is an Investment Income Adjustment. As we understand it, the IIA represents a discount factor at the indicated rate of investment return, discounted over a period of slightly more than 1.5 months. (Although the exact discounting period is not stated in either of the Academy’s letters, from the calculated values it appears that the period is approximately 0.1339 years, or 1.607 months.)

The underwriting risk factors were originally based on modeling over a multiyear period, and from that standpoint it seems that the discounting should occur continuously over that period (or, more approximately, back from the midpoint of the modeling period). However, in that case, the premiums would also have to be discounted, which would result in the constant term in the
above equation being less than 1. The IAA, then, can be interpreted as an approximation of the difference between the impact of discounting on the loss ratio and the impact of discounting on the premium, as the 1.6-month period approximates the difference in timing between the receipt of the premium and the payment of the corresponding claims. Considered in that light, the adjustment seems reasonable.

We will note that, potentially, a similar adjustment should be made to the expense ratio. However, because the expense ratio used by the Academy is so much lower than the loss ratio that they used (9% vs. 100%), there would be much less impact on the final result. Therefore, the lack of an adjustment on the expense ratio could be viewed as providing a small degree of conservatism.

Given the interpretation of the IIA that we’ve presented above, it is important to note that the 1.6-month discounting period has no relevance to the question of what rate of investment return should be assumed. The 1.6-month discounting period really should be thought of as the difference between two amounts discounted over a longer period. As we explained in our January 6 letter, the assumed rate of investment return should be consistent with investments held for a period of two to three years. The information in this latest letter from the Academy does not alter that position in any way.

We would be happy to discuss these comments with you and the Working Group.

Re: American Academy of Actuaries letter regarding an investment income adjustment to Health RBC underwriting risk factors.

Dear Mr. Drutz:

I am writing on behalf of UnitedHealth Group in regard to the December 15, 2020 letter to you from the American Academy of Actuaries (the “Academy”), exposed for comment on December 18, 2020. The letter presented the Academy’s analysis of incorporating investment income into the Risk-Based Capital (RBC) charges for health underwriting risk.

We greatly appreciate your Working Group’s willingness to address this subject. We hope that our comments on the Academy’s letter will assist the Working Group in its further consideration of the matter. We have comments on several distinct aspects of the letter, as shown under separate headings below.

During the Working Group’s December 18, 2020 conference call, we requested additional details of the calculations shown in the Academy’s letter. We understand that the Academy is preparing to provide those details. As of this writing, we have not yet seen that additional material, and our comments below should be considered in that context. When that material becomes available, we may have additional comments regarding it.

Our support for an adjustment.

It is definitely appropriate for an adjustment to be made. We understand the Academy’s remark that, “making this change in the RBC formula may be an exercise in false precision because the baseline factors are not well understood.” However, that is not a reason to forgo the adjustment. The current underwriting risk factors are what they are, whether they are well understood or not; they are the baseline we all must work from. The adjustment for investment income should
therefore not be thought of as one element of the development of those factors, which might be offset by other elements that are currently unidentified. Instead, the adjustment should be viewed simply as the introduction of an investment income component into the formula, by means of adjusting the existing underwriting risk factors. Conceptually, the adjustment could be a stand-alone negative component of underwriting risk; the fact that it is instead being added to the existing underwriting risk factors does not somehow invalidate its appropriateness.

Accordingly, we strongly recommend that the Working Group adopt an adjustment to the underwriting risk factors as discussed in the Academy’s letter. As we noted at the Working Group’s July 30, 2020 virtual meeting, and reiterated in our August 31 comment letter, if for some reason the Working Group does not consider it feasible to implement this adjustment as part of the underwriting risk portion of the RBC formula, then it will be necessary to return to the subject of incorporating investment income into the bond risk factors.

Rate of investment return.

The Academy’s letter notes that the amount of the adjustment is highly sensitive to the rate of investment return that is assumed in the calculation. The Academy states that statutory financial results would suggest a rate of 2-3%, but also suggests that the short-term nature of the liabilities (about 1.5 months on average, the letter indicates) might justify a much lower rate.

The run-out period of a single incurral date’s claims should not be the determinative consideration, for several reasons. First of all, while the Working Group’s deliberations on the bond risk factors are not complete, most recently the Working Group has been contemplating using a 3-year average maturity assumption for that purpose. As we have noted previously, if the risk associated with health entities’ bond holdings is to be reflected in the RBC formula, it is important that the corresponding returns likewise be reflected. If (as we had originally recommended) the investment return were being incorporated into the bond risk factors themselves, that linkage would be readily apparent. Merely because the investment returns are instead being incorporated into the underwriting risk factors, that linkage is not somehow broken.

Also, we suggest that the run-out period of a single incurral date’s claims is not really relevant from an investment standpoint. As a going concern, a health entity does not repeatedly run its assets down to zero as claims are paid; there is a continual inflow of cash from premiums and other revenues, and investments are held for a longer term (approximating the 3-year average maturity referred to above). Even in a run-out situation, it is unlikely that all payments would run out as quickly as the 1.5-month average cited by the Academy would suggest. We will point out that the Academy, in its August 2018 update on bond risk factors, said, “To estimate the liability runoff duration, we review (a) the duration of unpaid claim liabilities and (b) the duration of claim liabilities and related premium from an additional year of policies.” As a result of that review, the Academy selected a 2-year horizon for the bond risk modeling.

In summary, the rate of investment return should be consistent with the time horizon used for the bond risk modeling, whatever that is eventually determined to be. In light of the most recent discussions regarding the bond factors, we would expect that to be either 2 or 3 years.
Another consideration is whether the assumed rate of return should be based on current interest rate levels, or on longer-term averages. This consideration is tied in with the question of how frequently the investment income adjustment should be updated, which we address below.

**Scope of application.**

During the December 18 call, you raised the question of which Health RBC underwriting risk factors should be subject to the investment income adjustment. Because the pricing and reserving characteristics of long-term disability income and long-term care coverages are so different from those of the majority of the business subject to the Health formula, it makes sense to us that those categories would be excluded. For the other, shorter-tailed lines of business subject to the formula, it seems reasonable to apply the investment income adjustment. Also, where a particular product’s underwriting risk factor is tiered by premium volume, the adjustment should be applied to all tiers.

**Frequency of updates.**

Also during the December 18 call, NAIC staff raised the question of how frequently the investment income adjustment should be updated. As we noted above, we believe that this question is closely related to the question of whether the adjustment should be based on current interest rates or on a longer-term average. If the adjustment is based on current rates, it should be updated whenever market interest rates change significantly. If less frequent updates are desired by the Working Group, then it would be appropriate to use a longer-term average of rates to determine the adjustment.

* * * * *

We appreciate your consideration of these comments. We would be happy to discuss this matter further with the Working Group.

James R. Braue

Draft: 1/29/21

Health Risk-Based Capital (E) Working Group
Virtual Meeting
December 18, 2020

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Dec. 18, 2020. The following Working Group members participated: Steve Drutz, Chair (WA); Steve Ostlund (AL); Eric Unger (CO); Wanchin Chou and Andrew Greenhalgh (CT); Kyle Collins (FL); Brenda Johnson and Chut Tee (KS); Rhonda Ahrens and Michael Muldoon (NE); Kelsey Barlow (NV); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges and Mike Boerner (TX).

1. Referred the Health Care Receivable Proposal to the Blanks (E) Working Group

Mr. Drutz said the health care receivable proposal provides additional clarification on the annual statement instructions as a result of feedback in the drafting of the health care receivable guidance. The recommended changes include: 1) adding a reference to “Other Health Care Receivables” in Line 24 of the Assets page; 2) adding “Health Care” to the “Other Receivables” line on Exhibit 3 for consistency across the schedules and risk-based capital (RBC); and 3) modifying the headers of Exhibit 3A to provide additional clarification. No comments were received during the 30-day public comment period.

Mr. Boerner made a motion, seconded by Mr. Dudek, to refer the Health Care Receivable Proposal to the Blanks (E) Working Group for consideration in 2021 reporting (Attachment Two-C1). The motion passed unanimously.

2. Exposed the Academy’s Report on Investment Income in Underwriting Risk

Mr. Drutz said the incorporation of investment income into the health RBC formula was brought forward by industry participants through the bond factor discussion. Including investment income within the bond factors would require several considerations; therefore, the Working Group agreed to instead look at incorporating investment income into the Underwriting Risk component. The Working Group asked the American Academy of Actuaries (Academy) to review and analyze incorporating investment income into Underwriting Risk component of the health RBC formula.

Derek Skoog (Academy) said the Academy studied the background of the underwriting risk factors, and given their age, the task was somewhat challenging. The Academy was able to refer to an old Academy report, and it found that the calibration of the factors was different than the property and casualty formula; however, it was still able to decompose the factors into a construct similar to the property and casualty formula for the purposes of the investment income adjustment. Mr. Skoog said the Academy went through that exercise with the major medical base risk charge of 9% in a range of investment income return assumptions. He said depending on the investment return, the underwriting risk factor could go from 9% to 8.6% with an investment return of 3% and then graded between the 8.6% and 9% for lower investment returns.

Mr. Skoog said one of the challenges is determining what the investment return should be due to sensitivity. He said given the low interest rate environment—something between 0–1% range—may make the most sense; but ultimately, that is a decision of the Working Group. He said the other item tested was the speed of which claims are completed because you are essentially earning investment income under this approach based on whatever residual premium you have after you have paid claims. To the extent that it takes longer to pay claims, you get more of an investment income benefit. Mr. Skoog said the Academy used a normal working claims completion rate so that the results are not overly sensitive to that as they are to the actual investment return. However, there is still some sensitivity; therefore, a range of outcomes was presented. Mr. Skoog said one of the fundamental challenges is in the underlying factors themselves because the base risk charges that are presented within the health RBC formula are a bit dated and do not necessarily tie to quantitative results as they do in the property and casualty formula, which can make any analysis somewhat challenging.

Jim Braue (UnitedHealth Group—UHG) asked if the investment return assumption was the 2–3% return on invested assets. Mr. Skoog said that was correct; it was from the statutory schedules by looking at the return on invested assets relative to invested assets on the balance sheet. Mr. Braue said one month treasury rates may not be relevant to this discussion because for the purposes of the bond factors, the Working Group is looking at a two- to three-year maturity range. He said it would seem appropriate that if the regulated legal entity is being charged for the risk of those longer investments, then it should likewise receive the benefit of those longer investments. Therefore, the return assumption should be consistent with the maturity assumption used for the bond factors to maintain consistency of the risk and return throughout the formula.
Mr. Braue asked for further clarification on how to get from Column 1 to Column 2 and then to Column 3 on the Risk Factor table within the report. He suggested that an example would be helpful to follow the development. He said there was a note in the final paragraph that making a change to the formula could be an exercise in false precision. He said there is a lot of rounding in the existing underwriting risk factors, and had this been incorporated into the original factors, that rounding may have eliminated this effect anyway; but what we have today is a 9% factor, so we should not necessarily be concerned about whether the net of the 9% and this adjustment has a reasonable degree of precision but instead think about whether the adjustments to the 9% factor are appropriate.

Mr. Skoog said the Academy could provide an update on the formulas and description used to move from Columns 1 through 3 on the Risk Factor table. Mr. Chou asked how the 87.5th percentile translated into the adjusted factor. Mr. Skoog said this is how property and casualty developed the risk factor. He said it is essentially the loss ratio at that level of confidence. He said health does not have that same level of construct, but if you were to reconstruct the health risk factor the same as property and casualty risk factors were constructed, it would imply that the risk factor was about a 100% loss ratio. However, because the factor is dated and the Academy does not have the work papers on how it was built, it would be the implied health loss ratio at that same confidence level. Mr. Chou asked if the loss ratio would be at 100% if the confidence level was at the 87.5th percentile. Mr. Skoog agreed and said if you assume that today the health formula does not have an investment income adjustment, and we assume that an expense ratio for a typical health plan is about 9%, excluding claims adjustment expenses, the implied loss ratio at that confidence level is 100%.

Mr. Ostlund said duration is considered in determining the appropriate rate. He said there are times when RBC has looked at long durations for longer duration bonds; however, in this instance, we have a claim payment on major medical claims that have a very short duration, and the Academy appropriately chose the short duration and interest rate to use. He said he agrees with the Academy’s recommendation to use a short duration rather than a longer duration.

Mr. Drutz asked if an investment return of 1% was used, would the factors be reduced by 0.13 percentage point across all tiers and lines of business. Mr. Skoog said you could essentially use the 1% as a scaler for other similar lines of business, so it would then be the 0.9854 factor. Mr. Drutz asked if there was a contemplation about applying the adjustment to only the Experience Fluctuation Risk page or whether it would be applied to other lines, such as federal employee health benefits or disability lines. Mr. Skoog said the Academy did think about this; the same logic holds across the lines within your experience fluctuation risk, and a similar scaler makes sense. However, the one thing to be mindful of is that there is some sensitivity to claim payment pattern, so a proposed scaler may not appropriate for something that does not look like comprehensive major medical when looking at the longer tailed items. Mr. Skoog said a higher investment income adjustment may need to be considered, but the Academy would need to look at the claims payments for each of those lines of business. Lou Felice (NAIC) asked if it is more likely that the factors would have to be updated more frequently if a shorter duration is used since you would need to be more conservative and adhere closer to a treasury note, whereas with a longer duration you could maybe be less conservative in anticipation of loosening over time. He also asked if the report discussed how frequently the factors would need to be adjusted. Mr. Skoog said the Academy did not consider the frequency for updating; however, in the prevailing interest rate environment, it is the most impactful reason to adjust going forward, to the extent that the interest rate environment moves past the near zero amount. He agreed that it is something worth looking at.

Hearing no objections, the Working Group agreed to expose the Academy’s report to include Investment Income in the Underwriting Risk with the additional follow-up and clarification on Columns 1 through 3 on the Risk Factor table (Attachment Two-C) for a 30-day public comment period ending Jan. 18, 2021.

3. Received a Summary of Blanks Proposals and Discussed Next Steps for the Health Test Ad Hoc Group

Mary Caswell (NAIC) provided a summary of proposals 2020-32BWG, 2020-33BWG and 2020-38BWG for the Working Group. She said proposal 2020-32BWG adds Exhibits 3 and 3A as supplements to the life blank to allow for the data capture of health care receivable information. She said the Blanks (E) Working Group also approved the posting of the health care receivable guidance that the Working Group previously referred to them, and a link to this guidance was also incorporated into the instructions of this proposal. She said proposal 2020-33BWG is a change to the references used for the health annual statement lines used within the property and casualty annual statement blank to be more consistent with the terms used in the health blank. She said the purpose of proposal 2020-38BWG is to modify the Accident and Health Policy Experience Exhibit to provide state insurance regulators additional health data and greater consistency across the blanks.
Mr. Drutz said the Health Test Ad Hoc Group had taken a pause in meeting during the development of the Blanks proposals, and he suggested that the group resume meeting to determine if they would like to provide comments on the proposals and later discuss the health test language.

4. Discussed Other Matters

Mr. Drutz said the Excessive Growth Ad Hoc Group will meet Jan. 8 and begin reviewing the data for the analysis.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

ASSETS

Detail deleted

Line 24 – Health Care and Other Amounts Receivable

Include: Bills Receivable – Report any unsecured amounts due from outside sources or receivables secured by assets that do not qualify as investments.

Amounts due resulting from advances to agents or brokers – Refer to SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers for accounting guidance.

Health Care Receivables – Include pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers, capitation arrangement receivables, and risk sharing receivables, and other health care receivables, from affiliated and non-affiliated entities. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Other amounts receivable that originate from the government under government insured plans, including undisputed amounts over 90 days due that qualify as accident and health contracts are admitted assets. Refer to SSAP No. 84—Health Care and Government Insured Plans Receivables and SSAP No. 50—Classifications of Insurance or Managed Care Contracts for accounting guidance.

Exclude: Pharmaceutical rebates relating to uninsured plans that represent an administrative fee and that are retained by the reporting entity and earned in excess of the amounts to be remitted to the uninsured plan. These amounts should be reported on Line 17.

Premiums receivable for government insured plans reported on Lines 15.1, 15.2 or 15.3.

EXHIBIT 3 – HEALTH CARE RECEIVABLES

Individually list the greater of any account balances greater than $10,000 or those that are 10% of gross health care receivables. Use Lines 010001 through 0699996, as needed. Report gross amounts for insured plans although these amounts may be offset against corresponding liabilities on the balance sheet. Report the aggregate of amounts not individually listed on Lines 0199998 through 0699998. The subtotal and grand total amounts should be reported on the following lines:

<table>
<thead>
<tr>
<th>Category</th>
<th>Line Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pharmaceutical Rebate Receivables</td>
<td>0199999</td>
</tr>
<tr>

Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Re: Request for Analysis to Incorporate Investment Income into the Underwriting Risk Component of the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries (Academy) Health Solvency Subcommittee, I am pleased to provide this response letter to the NAIC Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the request from the HRBC Working Group to provide analysis to incorporate investment income into the existing underwriting risk factors within the HRBC formula.

**Incorporation of Investment Income into H2 Risk Factors**

The H2 risk factors were based on a 5% probability of ruin over a 3- to 5-year period for each line. There is a fair degree of uncertainty with respect to the development of these factors, though it is likely they were developed without consideration of offsetting investment income. To reflect investment income into these factors, we studied the property and casualty (P&C) underwriting risk factor approach, which explicitly includes investment income via an Investment Income Adjustment (IIA).

To summarize the P&C framework with respect to the IIA within the P&C Net Written Premium Risk (akin to the Health H2 Experience Fluctuation Risk), the base RBC charge amounts to:

\[ \text{Premium} \ast (\text{IIA} \ast \text{Risk}\_\text{Factor} + \text{Expense}\_\text{Ratio} - 1) \]

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
The IIA*Risk_Factor expression is the discounted loss ratio at the target safety margin (87.5th percentile for P&C). Then, the IIA*Risk_Factor + Expense_Ratio -1 is the discounted operating loss at the target safety margin.

This level of clarity around the components of the risk charges does not exist for the Health risk factors, but, using certain assumptions the P&C framework can be translated into the current Health factors. For example, the base Comprehensive Major Medical risk factor is 9%; if a 9% expense ratio (based on high-level industry benchmarking of health plan administrative expenses, excluding claims adjustment expense) is assumed and no IIA (i.e., an IIA of 1.0), then the underlying Risk Factor is 100%. To estimate the IIA for a typical health product, the subcommittee used the following claims payment completion pattern and assumed that premium is collected at policy onset and investment income is earned on any premium collected less claims paid.

The results are sensitive to the assumed claim payment pattern. For example, if all claims are paid at the end of the year, a full year of investment income could be earned; if all claims were paid immediately, then no investment income could be earned. Under this illustration, the average claim is paid approximately 1.5 months after incurral—largely consistent with health product payment patterns. To the extent actual claims take longer to develop, more investment income will be earned and the Investment Income Adjustment will be larger.

The other key assumption is the investment return. Investment yields based on a high-level analysis of health plan statutory financial statements over the past several years might indicate that a 2-3% assumption would be reasonable, though that may be overstating investment income on written premiums, as approximately half of the claims are paid in about one month and the
One-month Treasury rates are near zero today. Additionally, most investment income is likely earned from surplus funds. Given this uncertainty, the subcommittee performed sensitivity testing to understand the impact returns would have on the Risk Factor, as shown below:

<table>
<thead>
<tr>
<th>Investment Return</th>
<th>Investment Income Adj.</th>
<th>Risk Charge Adj. Factor</th>
<th>Base Risk Factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.0%</td>
<td>1.0000</td>
<td>1.0000</td>
<td>9.00%</td>
</tr>
<tr>
<td>0.1%</td>
<td>0.9999</td>
<td>0.9985</td>
<td>8.99%</td>
</tr>
<tr>
<td>0.5%</td>
<td>0.9993</td>
<td>0.9927</td>
<td>8.93%</td>
</tr>
<tr>
<td>1.0%</td>
<td>0.9987</td>
<td>0.9854</td>
<td>8.87%</td>
</tr>
<tr>
<td>1.5%</td>
<td>0.9980</td>
<td>0.9780</td>
<td>8.80%</td>
</tr>
<tr>
<td>2.0%</td>
<td>0.9974</td>
<td>0.9707</td>
<td>8.74%</td>
</tr>
<tr>
<td>3.0%</td>
<td>0.9960</td>
<td>0.9558</td>
<td>8.60%</td>
</tr>
</tbody>
</table>

One concern raised by the Academy’s Solvency Subcommittee is that investment income is not generally considered with respect to the underwriting of short-term health care policies. While this is true, the related claims payable reserves and corresponding assets do generate investment returns. Because reserving risk is not considered within the HRBC formula, inclusion of investment income in Experience Fluctuation Risk may be reasonable.

There is considerably more uncertainty around the development of the Health Experience Fluctuation Risk factors than P&C Net Written Premium risk factors, as it has been some time since they were materially changed. As a result, making this change in the RBC formula may be an exercise in false precision because the baseline factors are not well understood. Ultimately, the regulatory usefulness of changes to the RBC formula will depend on both a strong understanding of the starting point and the suggested change. Given the importance of Underwriting Risk factors within the HRBC formula, it may be worth revisiting their development more broadly in the future.

*****

If you have any questions or would like to discuss further, please contact Matthew Williams, the Academy’s senior health policy analyst, at williams@actuary.org.

Sincerely,

Derek Skoog, MAAA, FSA

National Association of Insurance Commissioners (NAIC)

Re: Request for Analysis to Incorporate Investment Income into the Underwriting Risk Component of the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries (Academy) Health Solvency Subcommittee, I am pleased to provide this response letter to the Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the request from the HRBC Working Group to provide additional analysis regarding the potential investment income adjustment factor for Health H2 Experience Fluctuation Risk.

Incorporation of Investment Income into H2 Risk Factors

As per the HRBC Working Group’s request to further analyze the impact of incorporating investment income into Columns 1-4 from page XR012 – Underwriting Experience Fluctuation Risk, we have analyzed expense ratios and claims payment patterns for each type of health coverage.

The table below summarizes the assumed expense ratio for each product, the current base RBC factors, and the implied Risk Factors (i.e., loss ratios at the desired safety margins). The expense ratio assumptions were generated based on a high-level analysis of General Administrative expenses from Page 7 of the annual statement. Additionally, since stand-alone Medicare Part D coverage has effectively no claims lag, the investment income adjustment would be negligible and the RBC factors would not be impacted.

</tbody>
</table>

Implied Risk Factor (loss ratio)

| $0 - $3 Million | 106% | 97% | 99% |
| $3 - $25 Million | 106% | 93% | 95% |
| Over $25 Million | 100% | 93% | 95% |

Also, in order to calculate the investment income impact, the following cumulative claims payment patterns were utilized. Since Dental and Vision share a column within the RBC formula, we used a blended completion factor assuming 75% weighting for dental and 25% weighting for vision. The Comprehensive Medical (CM) completion pattern is consistent with our prior analyses.

</tbody>
</table>

We note that the CM RBC factor changed from 8.60% to 8.61% due to a change in the rounding detail utilized within the calculation. Otherwise, the CM column is unchanged.

**DESCRIPTION OF CHANGE(S)**

Incorporate investment income into the Underwriting Risk – Experience Fluctuation Risk factors for columns 1-3. The base underwriting factors would be adjusted for Comprehensive Medical, Medicare Supplement and Dental and Vision.

**REASON OR JUSTIFICATION FOR CHANGE **

Incorporated investment income into Columns 1-3 on the Underwriting Risk – Experience Fluctuation Risk page. The American Academy of Actuaries provided recommended factors to the Working Group. The Academy found that due to no claims lag in Stand-Alone Medicare Part D coverage, the investment income adjustment would be negligible and the RBC factors would not be impacted.

The Working Group will continue to work with the Academy to look at the potential to incorporate an investment income adjustment to the factors for the other health lines of business for 2022 or later.

**Additional Staff Comments:**

These changes will also need to be incorporated into the Life and P/C formula.

**DISPOSITION**

- [ ] ADOPTED
- [ ] REJECTED
- [ ] DEFERRED TO
- [ ] REFERRED TO OTHER NAIC GROUP
- [ ] EXPOSED
- [ ] OTHER (SPECIFY)
Underwriting Risk is the largest portion of the risk-based capital charge for most reporting entities. The Underwriting Risk page generates the RBC requirement for the risk of fluctuations in underwriting experience. The credit that is allowed for managed care in this page comes from the Managed Care Credit Calculation page.

Underwriting risk is present when the next dollar of unexpected claim payments comes directly out of the reporting entity’s capital and surplus. It represents the risk that the portion of premiums intended to cover medical expenses will be insufficient to pay such expense. For example, a reporting entity may charge an individual $100 in premium in exchange for a guaranty that all medical costs will be paid by that reporting entity. If the individual incurs $101 in claims costs, the reporting entity’s surplus will decline because it did not charge a sufficient premium to pick up the additional risk for that individual.

There are other arrangements where the reporting entity is not at risk for excessive claims payments, such as when an HMO agrees to serve as a third-party administrator for a self-insured employer. The self-insured employer pays for actual claim costs, so the risk of excessive claims experience is borne by the self-insured employer, not the reporting entity. The underwriting risk section of the formula, therefore, requires some adjustments to remove non-underwriting risk business (both premiums and claims) before the RBC requirement is calculated. Appendix 1 contains commonly used terms for general types of health insurance. Refer to INT 05-05: Accounting for Revenue under Medicare Part D Cover for terms specifically used with respect to Medicare Part D coverage of prescription drugs.

Claims Experience Fluctuation

The RBC requirement for claims experience fluctuation is based on the greater of the following calculations:

A. Underwriting risk revenue, times the underwriting risk claims ratio, times a set of tiered factors. The tiered factors are determined by the underwriting risk revenue volume.

or

B. An alternative risk charge that addresses the risk of catastrophic claims on any single individual. The alternative risk charge is equal to multiple of the maximum retained risk on any single individual in a claims year. The maximum retained risk (level of potential claim exposure) is capped at $750,000 per individual and $1,500,000 total for medical coverage; $25,000 per individual and $50,000 total for all other coverage except Medicare Part D coverage and $25,000 per individual and $150,000 total for Medicare Part D coverage. Additionally, for multi-line organizations (e.g., writing more than one coverage type), the alternative risk charge for each subsequent line of business is reduced by the amount of the highest cap. For example, if an organization is writing both comprehensive medical (with a cap of $1,500,000) and dental (with a cap of $50,000), then only the larger alternative risk charge is considered when calculating the RBC requirement (i.e., the alternative risk charges for each line of business are not cumulative).

For RBC reports to be filed by a health organization commencing operations in this reporting year, the health organization shall estimate the initial RBC levels using operating (revenue and expense) projections (considering managed care arrangements) for its first full year (12 months) of managed care operations. The projections, including the risk-based capital requirement, should be the same as those filed as part of a comprehensive business plan that is submitted as part of the application for licensure. The Underwriting, Credit (capitation risk only), and Business Risk sections of the first RBC report submitted shall be completed using
the health organization’s actual operating data for the period from the commencement of operations until year-end, plus projections for the number of months necessary to provide 12 months of data. The affiliate, asset and portions of the credit risk section that are based on balance sheet information shall be reported using actual data. For subsequent years’ reports, the RBC results for all of the formula components shall be calculated using actual data.

**L(1) through L(21)**

There are six lines of business used in the formula for calculating the RBC requirement for this risk: (1) Comprehensive Medical and Hospital; (2) Medicare Supplement; (3) Dental/Vision; (4) Stand-Alone Medicare Part D Coverage; and (5) Other Health; and (6) Other Non-Health. Each of these lines of business has its own column in the Underwriting Risk – Experience Fluctuation Risk table. The categories listed in the columns of this page include all risk revenue and risk revenue that is received from another reporting entity in exchange for medical services provided to its members. The descriptions of the items are described as follows:

**Column (1) - Comprehensive Medical & Hospital.** Includes policies providing for medical coverages including hospital, surgical, major medical, Medicare risk coverage (but NOT Medicare Supplement), and Medicaid risk coverage. This category DOES NOT include administrative services contracts (ASC), administrative services only (ASO) contracts, or any non-underwritten business. These programs are reported in the Business Risk section of the formula. Neither does it include Federal Employees Health Benefit Plan (FEHBP) or TRICARE, which are handled in Line 24 of this section. Medicaid Pass-Through Payments reported as premiums should also be excluded from this category and should be reported in Line 25.2 of this section. The alternative risk charge, which is twice the maximum retained risk after reinsurance on any single individual, cannot exceed $1,500,000. Prescription drug benefits included in major medical insurance plans (including Medicare Advantage plans with prescription drug coverage) should be reported in this line. These benefits should also be included in the Managed Care Credit calculation.

**Column (2) - Medicare Supplement.** This is business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement and includes Medicare Select. Medicare risk business is reported under comprehensive medical and hospital.

**Column (3) - Dental & Vision.** This is limited to policies providing for dental-only or vision-only coverage issued as a stand-alone policy or as a rider to a medical policy, which is not related to the medical policy through deductibles or out-of-pocket limits.

**Column (4) - Stand-Alone Medicare Part D Coverage.** This includes both individual coverage and group coverage of Medicare Part D coverage where the plan sponsor has risk corridor protection. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. Medicare drug benefits included in major medical plans or benefits that do not meet the above criteria are not to be included in this line. Supplemental benefits within Medicare Part D (benefits in excess of the standard benefit design) are addressed separately on page XR014. Employer-based Part D coverage that is in an uninsured plan as defined in SSAP No. 47—Uninsured Plans is not to be included here.

**Column (5) – Other Health Coverages.** This includes other health coverages such as other stand-alone prescription drug benefit plans, NOT INCLUDED ABOVE that have not been specifically addressed in the other columns listed above.

**Column (6) - Other Non-Health Coverages.** This includes life and property and casualty coverages.

The following paragraphs explain the meaning of each line of the table for computing the experience fluctuation underwriting risk RBC.
**Line (1) Premium.** This is the amount of money charged by the reporting entity for the specified benefit plan. It is the earned amount of prepayments (usually on a per member per month basis) made by a covered group or individual to the reporting entity in exchange for services to be provided or offered by such organization. However, it does not include receipts under administrative services only (ASO) contracts; or administrative services contracts (ASC); or any non-underwritten business. Nor does it include federal employees health benefit programs (FEHBP) and TRICARE. Report premium net of payments for stop-loss or other reinsurance. The amounts reported in the individual columns should come directly from Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. For Stand-Alone Medicare Part D Coverage the premium includes beneficiary premium (standard coverage portion), direct subsidy, low-income subsidy (premium portion), Part D payment demonstration amounts and risk corridor payment adjustments. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. It does not include revenue received for reinsurance payments or low-income subsidy (cost-sharing portion), which are considered funds received for uninsured plans in accordance with Emerging Accounting Issues Working Group (EAIWG) INT. No. 05-05. Also exclude the beneficiary premium (supplemental benefit portion) for Stand-Alone Medicare Part D coverage.

**NOTE:** Where premiums are paid on a monthly basis, they are generally fully earned at the end of the month for which coverage is provided. In cases where the mode of payment is less frequent than monthly, a portion of the premium payment will be unearned at the end of any given reporting period.

**Line (2) Title XVIII Medicare.** This is the earned amount of money charged by the reporting entity (net of reinsurance) for Medicare risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicare subscribers. This includes the beneficiary premium and federal government’s direct subsidy for prescription drug coverage under MA-PD plans. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement.

**Line (3) Title XIX Medicaid.** This is the earned amount of money charged by the reporting entity for Medicaid risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicaid subscribers. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. Stand-Alone Medicare Part D coverage of low-income enrollees is not included in this line.

**Line (4) Other Health Risk Revenue.** This is earned amounts charged by the reporting entity as a provider or intermediary for specified medical (e.g., full professional, dental, radiology, etc.) services provided to the policyholders, or members of another insurer or health entity. Unlike premiums, which are collected from an employer group or individual member, risk revenue is the prepaid (usually on a capitated basis) payments, made by another insurer or health entity to the reporting entity in exchange for services to be provided or offered by such organization. Payments to providers under risk revenue arrangements are included in the RBC calculation as underwriting risk revenue and are included in the calculation of managed care credits. Exclude fee-for-service revenue received by the reporting entity from another reporting entity. This revenue is reported in the Business Risk section of the formula as non-underwritten and limited risk revenue. The amounts reported in the individual columns will come directly from Page 7, Line 4 of the annual statement.

**Line (5) Medicaid Pass-Through Payments Reported as Premiums.** Medicaid Pass-Through Payments that are included as premiums in the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 should be reported in this line.

**Line (6) Underwriting Risk Revenue.** The sum of Lines (1) through (4) minus Line (5).

**Line (7) Net Incurred Claims.** Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the reporting entity. Paid claims include capitation and all other payments to providers for services to members of the reporting entity, as well as reimbursement directly to members for covered services. Paid claims also include salaries paid to reporting entity employees that provide medical services to
members and related expenses. Do not include ASC payments or federal employees health benefit program (FEHBP) and TRICARE claims. These amounts are found on Page 7, Line 17 of the annual statement.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in INT 05-05: Accounting for Revenue under Medicare Part D Coverage). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claims liabilities should reflect expected recoveries from the reinsurance coverage, for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS. Exclude the beneficiary incurred claims (supplemental benefit portion) for Stand-Alone Medicare Part D coverage and report the incurred claims amount (supplemental benefit portion) on Line (25.1) of page XR014.

Line (8) Medicaid Pass-Through Payments Reported as Claims. Medicaid Pass-Through Payments that are included as claims in the Analysis of Operations by Lines of Business, Page 7, Line 17 should be reported in this line.

Line (9) Total Net Incurred Claims Less Medicaid Pass-Through Payments Reported as Claims. Line (7) minus Line (8).

Line (10) Fee-for-Service Offset. Report fee for service revenue that is directly related to medical expense payments. The fee for service line does not include revenue where there is no associated claim payment (e.g., fees from non-member patients where the provider receives no additional compensation from the reporting entity) and when such revenue was excluded from the pricing of medical benefits. The amounts reported in the individual columns should come directly from Page 7, Line 3 of the annual statement.

Line (11) Underwriting Risk Incurred Claims. Line (9) minus Line (10).

Line (12) Underwriting Risk Incurred Claims Ratio. For Columns (1) through (5), Line (11) / Line (6). If either Line (6) or Line (11) is zero or negative, Line (12) is zero.

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column 1-3 have incorporated investment income. The factors for the highlighted items to the left will be updated based on either Option 1 or Option 2.

Line (14) Base Underwriting Risk RBC. Line (6) x Line (12) x Line (13).

Line (15) Managed Care Discount. For Comprehensive Medical & Hospital, Medicare Supplement (including Medicare Select) and Dental/Vision, a managed care discount, based on the type of managed care arrangements an organization has with its providers, is included to reflect the reduction in the uncertainty about future

© 2021 National Association of Insurance Commissioners
claim payments attributable to the managed care arrangements. The discount factor is from Column (3), Line (17) of the Managed Care Credit Calculation page. An average factor based on the combined results of these three categories is used for all three.

For Stand-Alone Medicare Part D Coverage, a separate managed care discount (or federal program credit) is included to reflect only the reduction in uncertainty about future claims payments attributable to federal risk arrangements. The discount factor is from Column (4), Line (17) of the Managed Care Credit Calculation page.

There is no discount given for the Other Health and Other Non-Health lines of business.

Line (16) RBC After Managed Care Discount = Line (14) x Line (15).

Line (17) Maximum Per-Individual Risk After Reinsurance. This is the maximum after-reinsurance loss for any single individual. Where specific stop-loss reinsurance protection is in place, the maximum per-individual risk after reinsurance is equal to the highest attachment point on such stop-loss reinsurance, subject to the following:

- Where coverage under the stop-loss protection (plus retention) with the highest attachment point is capped at less than $750,000 per member, the maximum retained loss will be equal to such attachment point plus the difference between the coverage (plus retention) and $750,000.

- Where the stop-loss layer is subject to participation by the reporting entity, the maximum retained risk as calculated above will be increased by the reporting entity’s participation in the stop-loss layer (up to $750,000 less retention).

Examples of the calculation are presented below:

**EXAMPLE 1 (Reporting entity provides Comprehensive Care):**

<table>
<thead>
<tr>
<th>Highest Attachment Point (Retention)</th>
<th>$100,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reinsurance Coverage</td>
<td>90% of $500,000 in excess of $100,000</td>
</tr>
<tr>
<td>Maximum reinsured coverage</td>
<td>$600,000 ($100,000 + $500,000)</td>
</tr>
</tbody>
</table>

\[
\text{Maximum Ret. Risk} = $100,000 \text{ deductible} \\
+ $150,000 \ (600,000 - 500,000) \\
+ $50,000 \ (10\% \ of \ (600,000 - 100,000) \ coverage \ layer) \\
= $300,000
\]

**EXAMPLE 2 (Reporting entity provides Comprehensive Care):**

<table>
<thead>
<tr>
<th>Highest Attachment Point (Retention)</th>
<th>$75,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reinsurance Coverage</td>
<td>90% of $1,000,000 in excess of $75,000</td>
</tr>
</tbody>
</table>
Maximum reinsured coverage $1,075,000 ($75,000 + $1,000,000)

Maximum Ret. Risk =

$ 75,000 deductible
+ 0 ($750,000 – $1,075,000)
+$ 67,500 (10% of ($750,000 – $75,000)) coverage layer)

= $142,500

Line (18) Alternate Risk Charge. This is twice the amount in Line (17) for columns (1), (2), (3) and (5) and Column (4) is six times the amount in Line (17), subject to a maximum of $1,500,000 for Column (1), $50,000 for Columns (2), (3) and (5) and $150,000 for Column (4). Column (6) is excluded from this calculation.

Line (19) Alternate Risk Adjustment. This line shows the largest value in Line (18) for the column and all columns left of the column. Column (6) is excluded from this calculation.

Line (20) Net Alternate Risk Charge. This is the amount in Line (18), less the amount in the previous column of Line (19), but not less than zero. Column (6) is excluded from this calculation.

Line (21) Net Underwriting Risk RBC. This is the maximum of Line (16) and Line (20) for each of columns (1) through (5). This is the amount in Line (14), Column (6). The amount in Column (7) is the sum of the values in Columns (1) through (6).

Life Risk-Based Capital (E) Working Group
Virtual Meeting
March 12, 2021

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 12, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Vincent Tsang (IL); Mike Yanacheak and Carrie Mears (IA); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

The Working Group met Feb. 26, 2021; Feb. 11, 2021; Jan. 21, 2021; Dec. 17, 2020; and Nov. 10, 2020. During its Feb. 26, 2021, meeting, the Working Group took the following action: 1) adopted an update to the mortgage reporting guidance; and 2) discussed the American Council of Life Insurers (ACLI) real estate proposal. During its Feb. 11, 2021, meeting, the Working Group took the following action: 1) discussed the Moody’s Analytics report on bonds; and 2) exposed the alternatives for the requested modification to the mortgage reporting guidance for a 10-day public comment period ending Feb. 22. During its Jan. 21, 2021, meeting, the Working Group took the following action: 1) exposed the ACLI’s real estate proposal for a public comment period ending March 8; and 2) agreed to forward the guaranty fund memorandum to the Capital Adequacy (E) Task Force. During its Dec. 17, 2020, meeting, the Working Group took the following action: 1) heard an update on economic scenario generators (ESGs); and 2) discussed the ACLI’s real estate proposal.

Mr. Boerner made a motion, seconded by Mr. Chou, to adopt the Working Group’s Feb. 26, 2021 (Attachment Three-A); Feb. 11, 2021 (Attachment Three-B); Jan. 21, 2021 (Attachment Three-C); Dec. 17, 2020 (Attachment Three-D); and Nov. 10, 2020 (see NAIC Proceedings – Fall 2020, Capital Adequacy (E) Task Force, Attachment Four) minutes. The motion passed unanimously.

2. **Discussed the ACLI’s Real Estate Proposal**

Mr. Barlow said there was one comment letter received on the ACLI’s real estate proposal. Jerry Holman (American Academy of Actuaries—Academy) presented the Academy’s comments and, while the Academy generally supports a different approach for calculating capital requirements for real estate as 30 years have passed since the current real estate factors were set, he discussed the Academy’s four areas of concern with the ACLI proposal as presented in its comment letter (Attachment Three-E).

Mr. Barlow said in the discussions of this proposal, there were several requests from the Working Group for more information. John Bruins (ACLI) said that as risk-based capital (RBC) is developed, there are two fundamental issues. The first is how much is at risk, which he said is typically the amount being held in the statutory balance sheet. In the case of real estate, he said this is depreciated cost, while for common stock it is market value. However, in both cases, the asset values are defined within the balance sheet, and this is what drives the amount at risk. He said the second issue is the determination of an appropriate factor for that risk, and this is where a lot of the analysis has been done. He presented each of the ACLI’s responses as detailed in its March 9 letter (Attachment Three-F). Mr. Barlow suggested it would be helpful for the April 6 discussion for the Working Group to focus, and for the ACLI to provide any possible additional information, on four main areas: 1) whether there should be different factors for different real estate types; 2) whether there should be an adjustment for the fair value given the concerns about the appropriateness and the amounts reported in the annual statement; 3) whether there should be different factors for Schedule A versus Schedule BA real estate; and 4) the proposed underlying base factors.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 26, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Deborah Batista (CO); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. **Adopted an Update to the Mortgage Reporting Guidance**

Mr. Barlow said the proposed update to the mortgage reporting guidance was exposed for comment with two options: 1) updating the previous guidance; and 2) adding new guidance. One joint comment letter was received from the American Council of Life Insurers (ACLI) and the Mortgage Bankers Association (MBA).

Mike Monahan (ACLI) said the ACLI and the MBA support the alignment of the periods covered by the risk-based capital (RBC) and troubled debt restructuring (TDR) guidance. He said, operationally, either approach would accomplish the objective of aligning accounting and RBC guidance on TDR. He the ACLI and the MBA prefer option one, with the language from the Origination Date, Valuation Date, Property Value and 90 Days Past Due paragraph in option two that includes the accounting interpretations.

Mr. Barlow said incorporating the language from option two into the option one guidance would alleviate the need for potential updates in the future.

Mr. Boerner agreed and made a motion, seconded by Mr. Tsang, to adopt option one, with the modification to replace the language on Origination Date, Valuation Date, Property Value and 90 Days Past Due with the language from option two (Attachment Three-A1). The motion passed unanimously.

2. **Discussed the ACLI Real Estate Proposal**

John Bruins (ACLI) provided a PowerPoint presentation (Attachment Three-A2) of the ACLI’s real estate proposal (Attachment Three-A3). He said the structural changes of the proposal were presented to the Working Group during its Jan. 21 meeting and were exposed for public comment.

Mr. Bruins said that version of the proposal had actually been presented to the Investment Risk-Based Capital (E) Working Group four years ago. He said the proposal has been updated, and what is now included is new material. He noted the proposal is fundamentally the same. However, the data period now includes an additional four years since the proposal was originally drafted in 2015. As a result of a review of the modeling and the larger data period, the recommended factors were changed from 10% to 11%.

Mr. Bruins said, in discussions with both state insurance regulators and other interested parties, concerns were raised about having the same factor on Schedule BA real estate as for Schedule A real estate and the updated proposal increases that factor from 10% to 12%. He presented the recommended changes to Schedule A; the proposed adjustment for unrealized gains; updates to the RBC encumbrance factor; and the recommended approach for Schedule BA, which are detailed on pages 3–11 of the PowerPoint presentation.

With respect to Schedule A real estate, Mr. Bruins said the modeling was based on historical experience of the real estate portfolio, and the ACLI used two databases. The first was the NCREIF database, which begins in 1977. It is the most robust database that exists on real estate and has been in continuous existence from 1977. He said this was supplemented with another study and allowed for the study done in 1997 to be extended back to 1961, which provided essentially 60 years’ worth of experience in the commercial real estate marketplace. The modeling largely parallels that done for the July 2013 report on common stock to the Investment Risk-Based Capital (E) Working Group and looks at a portfolio of real estate over time given various historical data starting points.
In looking at that and using a two-year time horizon, Mr. Bruins said the factor comes to about 9.5%. However, if it is extended two years out to time, the worst it would result in is a factor of about 10.2%. He also said that the adjustment for unrealized gains and losses are integrated with the modeling of the base factor, so these items will need to be looked at together.

Considering that the proposal is changing factors that were put in place in the early 1990s, Mr. Robinson asked if it would be part of the ACLI’s recommendation to revisit these factors and, if so, what would the recommended time frame be.

Mr. Bruins said it would be up to the Working Group to make that determination, but he noted that one comment made in the bond modeling was that an economic cycle was typically 10 years and suggested that might be guidance on what timeline to consider.

Mr. Barlow said how often factors are updated is something to be considered at the Task Force level—not just for real estate but for all factors—and there is a plan to do it more periodically.

With respect to the 1.5% margin providing for still unknowns due to post-COVID and other impacts, Ms. Hemphill said in the March 2017 proposal, it was an estimated 8% with 2% for unknowns for a final 10% factor, and now it is at 9.5% base with a 1.5% for unknowns. She asked how the Working Group can know that is the right amount and how it evolved from the previous proposal.

Mr. Bruins said this is a decision that the state insurance regulators have made, and the margin was more backed into than derived. He said the ACLI looked at what a reasonable rounded factor would be and that the margin is the difference but is in response to state insurance regulator concerns.

Mr. Tsang said the 9.5% factor is at the 95th percentile and asked what percentile it would be if the 1.5% were added. Ms. Hemphill said it would be 96.8th percentile.

Mr. Tsang asked if the interest rate would have an impact. Mr. Bruins said it would raise it slightly.

Mr. Tsang asked if the 11% is a pre-tax number. Mr. Bruins said it is and that it is the same as the current 15%.

Mr. Schallhorn said the foreclosed real estate changed from 23% to 11% and asked if that was appropriate.

Mr. Bruins said the recommended change on foreclosed real estate is from the perspective that when a company acquires real estate through foreclosure, it is required to mark it down to market value. Because it is starting at market value, that puts it on the same basis of other real estate. He said the ACLI did not understand why there was an additional margin in the first place on foreclosed real estate and thinks the way that it is treated in Schedule A and tracked through is a reasonable recommendation to make them the same.

Mr. Reedy asked if Mr. Bruins knew what proportion of life companies’ assets would actually be in these real estate equity investments and if that proportion increased in recent years.

Mr. Bruins said that for the industry in total, it is about 1% to 1.5% of the total general account assets, and it has been increasing but not by a lot. He said part of the reason is that companies look at the 15% RBC charge, and that becomes a detriment to investment. He said he could get the statistics for the Working Group.

Mr. Chou said the real estate and the volatility due to the economic downturn could be different from one region to another and asked if the ACLI has this level of detail in its analysis that it could share with the Working Group. Mr. Bruins said he would see what the ACLI could provide.

With respect to the proposed adjustment for unrealized gains and losses, Mr. Tsang expressed concern with the possibility of double-counting because the RBC factors are applied to book value. Mr. Barlow suggested the ACLI look at this question further. Mr. Bruins said they would.

Birny Birnbaum (Center for Economic Justice—CEJ) said the life insurance industry, among other sectors of the U.S. insurance industry, is opposed to the international capital standard, which is based in large part on market valuations, with the argument being that using these abuses the matching of assets and liabilities, introduces volatility and creates a pro-cyclical situation. He asked how those positions align with this proposal.
Mr. Bruins said the ACLI is not recommending a change to statutory accounting that reflects the value of real estate, but is trying to define a risk profile that reflects varying circumstances of a property for real estate. Unlike bonds, there are not rating agencies, and one of the key factors that can be recognized is the relationship of the market as an indicator of the level of risk. With respect to volatility, he said when bonds get downgraded, the RBC goes up, and there is volatility, which he does not believe is any different. He said RBC is based on the risk profile that exists on the date of the financial statement and, if risks change because of future circumstances, then both the financial statements and the risk profiles will change. He said keeping everything stable at the worst possible point is not necessarily good for either industry or state insurance regulators.

Mr. Barlow said more discussion will take place during the Working Group’s March 12 meeting and subsequently as needed.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
To: All Insurers  
From: Life Risk-Based Capital (E) Working Group  
RE: Guidance for Troubled Debt Restructurings for December 31, 2020 and Interim Risk-Based Capital Filings (where required)  
Date: October 9, 2020, Revised February 11, 2021

Additional Guidance Adopted by the Life Risk-Based Capital Working Group

The Financial Condition (E) Committee delegated to the Life Risk-Based Capital (E) Working Group certain questions that arose as part of its June 12 memorandum. Under that delegation, the Working Group adopted the following guidance.

Construction Loans
For purposes of Note 4 to the Risk-Based Capital Reporting Instructions, government-mandated construction delays due to COVID-19 that occur at any time during 2020 are not “construction issues.” This guidance would apply to all mortgages and not just those mortgages where a COVID-19 modification occurred.

Origination Date, Valuation Date, Property Value, and 90 Days Past Due
For purposes of the Description/explanation of item in the Risk-Based Capital Reporting Instructions for Date of Origination (2), Property Value (20), Year of Valuation (21 and by reference Quarter of Valuation - 22), and 90 Days Past Due? (29), no changes to these values are required for any COVID-19 related modifications that are captured within INT 20-03: Troubled Debt Restructuring Due to COVID-19 or INT 20-07: Troubled Debt Restructuring of Certain Debt Instruments Due to COVID-19.

Contemporaneous Property Values
For purposes of computing the Contemporaneous Property Value (40) for any period ending in 2020, an insurer may use the average of the NCREIF Price Index as of 12/31/2019 and the 2020 NCREIF Price Index for the Price Index current value. This guidance applies to all mortgages and not just those mortgages where a COVID-19 modification occurred, and it applies for the filings for any period ending in 2020 only and not subsequent years.

Net Operating Income
For purposes of the NOI inputs at (14), (15), (16), and the computation of a Rolling Average NOI at (36), an insurer may report 2020 NOI (i.e., NOI for any 12-month fiscal period ending after June 30, 2020 but not later than June 30, 2021) as the greater of: (1) actual NOI as determined under the CREF-C IRP Standards or (2) 85% of NOI determined for the immediate preceding fiscal year’s annual report. This guidance with respect to 2020 NOI applies to the application of the 2020 NOI in risk-based capital reporting for 2021, 2022, and 2023. In cases where an insurer reports 85% of 2019 NOI as the 2020 NOI input, the insurer should retain information about actual 2020 NOI in its workpapers so that the information can be readily available to regulators.

Related Accounting Guidance & Updates
Please see the following for both related accounting guidance and updates to this guidance via Q&A.

Any questions on this guidance should be directed to Dave Fleming by e-mail at dfleming@naic.org.
Real Estate Equity RBC Proposal
February 26, 2021
Focus Areas to Achieve Consensus

- Schedule A: Factor for Real Estate Equity investments
- Proposed Adjustment for Unrealized Capital Gains
- Update factor for RBC Adjustment for Real Estate Encumbrances
- Schedule BA: Proposed treatment consistent with Schedule A
Schedule A: Equity investments in real estate

Current status: C-1 factor of 15%
- Rationale: Article from 1991 proposed that real estate volatility is about 60 percent of that for common stock, suggesting a factor in the range of 18 percent. If one assumes full tax credit for losses, this converts to a factor of about 10% after tax.

Proposal: C-1 factor of 11%
- Rationale: Analyses of real estate performance data conducted or sponsored by ACLI/NAIC/Industry specialists suggest that the base C-1 RBC factor applicable to Schedule A real estate (including company occupied, investment, acquired by foreclosure and held for sale) should be set at 9.5%. Proposed factor increased to 11% to add conservatism.
Schedule A: Factor for Real Estate Equity investments

- Modeling based on historical experience indicates a factor of 9.5% for wholly owned real estate.

- Concerns raised by regulators and other interested parties indicate some margin for prudence in light of unknown COVID-19 impacts on economy.

- Proposal modified to recommend a base factor of 11%.

- This will be applied to Real Estate reported on Schedule A, including company occupied, investment real estate, and real estate acquired by foreclosure.

- This includes a 1.50% margin over modeled values at 95% confidence.
## Schedule A: Factor for Real Estate Equity investments

Adjustment for Unrealized Capital Gains/Losses

RBC measures the risk of loss of statutory capital

Factor Development: While the analysis and proposed factors are based on market value, Statutory Accounting sets value of real estate at depreciated cost.

- When statutory value is less than fair value, risk to statutory capital is much lower. e.g., if fair value is 150 and depreciated cost is 100, the property can lose 1/3 of its value with no impact on statutory capital. Fair value is a key component of the risk profile.
- Fair value of real estate assets held by life companies is reported in Schedule A for each individual property.

Proposal: Adjust the RBC factor to recognize the difference between fair value and statutory value when applying it to the statutory value

Rationale: The excess of fair value over the statutory value is a cushion against loss of statutory capital that is not currently recognized for risk-based capital purposes. Over time, the difference between depreciated cost and fair value can become substantial. This will reduce the need to sell appreciated properties to raise statutory capital.
Adjustment for Unrealized Capital Gains/Losses

- The formula for the adjusted factor would be:

\[ \text{Adj Factor} = \text{RE Factor} \times (1 - [2/3] \times (\text{MV-BVg})/\text{BVg}) \]

**Why use market value in RBC for Real Estate but not for Bonds?**

- **Risk to stat capital is affected by change in market value**
RBC Adjustment for Real Estate Encumbrances

- **Current status**: RBC is based on the total value of the real estate, with an adjustment for any encumbrance based on the RBC factor for Commercial Mortgage Loans.

- The proposed change is to update this adjustment to reflect the new RBC factors for commercial mortgage loans adopted in 2012:
  - Original average Commercial Mortgage factor: 3.00%
  - Updated average Commercial Mortgage average factor: 1.75%

- Since this is an offset to the RE factor, the lower factor produces an increase to RBC.

- The presentation is changed, but algebraically equal for the same factor.
Schedule BA: Indirect equity investments in real estate

- **Current status**: C-1 factor of 23%
  - Rationale: C-1 factor for Schedule BA is 50% more than the C-1 factor for Schedule A real estate assets to account for presumed additional risk associated with potentially lower information transparency and control within the structures as well as unknown leverage.

- **Proposal**: Factor of 12%, factor for Schedule A real estate assets (11%) plus 1% premium (10% of base factor)
  - Rationale: Data availability and industry experience has provided evidence that this premium is overly conservative, if not altogether unnecessary for the assets classified as real estate within Schedule BA. A study showed that, since 1983, real estate held through joint ventures has performed consistently with and perhaps even slightly better than, wholly-owned real estate.
  - An ACLI survey of member companies showed characteristics of Schedule BA real estate to be similar to Schedule A.
RBC for Real Estate Decisions

- What base factor should be used for company owned real estate? Proposed to be 11%.
- How much of the impact on the risk profile from the unrealized gains be reflected in the RBC? Propose a ratio of 2/3 of the gain to the BACV.
- Should the recognition of encumbrances be updated from the original CML factor of 3% to an average of the current CML of 1.75%?
- Should real estate held through a joint venture or fund receive the same factor as directly owned? If not, how adjusted? Propose to use a factor of 12%.

**DESCRIPTION OF CHANGE(S)**

To update the RBC calculation for Real Estate to reflect updated experience and analysis since RBC was first developed.

**REASON OR JUSTIFICATION FOR CHANGE **

When RBC was developed, there was limited experience on the default and loss for commercial real estate. Since then data sources have been compiled and tracked in the industry, and can now be accessed to provide more meaningful analysis and information for development of capital standards.

**Additional Staff Comments:**

** This section must be completed on all forms.  
Revised 2-2019

1. **REAL ESTATE**

**Basis of Factors**

Companies that have developed their own risk-based capital factors for real estate have used a range of factors from 5 percent to 20 percent. One study indicated real estate volatility is about 60 percent of common stock, suggesting a factor in the range of 18 percent. Assuming a full tax effect for losses, a pre-tax factor of 15 percent was chosen. Foreclosed real estate would carry a somewhat higher risk at 23 percent pre-tax. Schedule BA real estate also has a 23 percent factor pre-tax because of the additional risks inherent in owning real estate through a partnership. The pre-tax factors were developed by dividing the post-tax factor by 0.65 (0.65 is calculated by taking 1.0 less 0.35). The pre-tax factors are not changing for 2018 due to tax reform. The base factor for equity real estate of 11% was developed by adding a margin for conservatism to the results of an analysis of real estate performance over the period of 1978 – 2020. The analysis was conducted by a group of life insurance company real estate investment professionals coordinated by the ACLI. The data used was a national database of real property owned by investment fiduciaries and supplemented by data on real estate backing mortgage securities. The analysis is documented in a report to the NAIC dated February 26, 2021. In addition to modifying the factor for company owned and investment real estate, this updated factor will also be used for real estate acquired in satisfaction of debt (Foreclosed real estate). For assets with the characteristics of real held estate (partnership or other structure) reported on Schedule BA, a higher factor is used to account for the lower transparency involved with these structures. Foreclosed real estate is recognized in the statutory statements as having acquisition cost equal to market value at time of foreclosure. Schedule BA real estate was originally given a higher factor under a presumption that it was more highly levered. Analysis has shown these assets to have experience very similar to directly held and will therefore use a modestly higher factor.

While the experience analysis was done based on analysis of fair value impacts, Real Estate is reported at depreciated cost in the Statutory statements. The difference in values impacts the risk to statutory surplus. Therefore, an adjustment is made to the factor based on the difference between fair value and statutory carrying value on a property by property basis. The adjustment is defined as

\[
\text{Adj Factor} = \text{RE Factor} \times (1 - \text{factor} \times \frac{\text{MV} - \text{BVg}}{\text{BVg}})
\]

Factor is \(\frac{2}{3}\)

The resulting adjusted RBC factor is subject to a minimum of zero. In the RBC calculation, see Figure 7, fair value is taken from Schedule A Column 10 plus encumbrances, or from Schedule BA column 11 plus encumbrances, respectively, while BVg is the net Book Adjusted Carrying Value plus the encumbrance.

Encumbrances have been included in the real estate base since the value of the property is held net of the encumbrance, but the entire value is subject to loss would include encumbrances. Encumbrances receive a base real estate factor of 11% reduced by the average factor for commercial mortgages of 1.752 percent pre-tax. In the past this was computed as a base factor applied to the net real estate value plus a separate factor applied to the amount of the encumbrance. Beginning in 2021, the equivalent result will be obtained by applying a base factor to the gross statutory value of the property, and a credit provided for the amount of the encumbrance for real estate encumbrances not in foreclosure and 20 percent pre-tax for real estate encumbrances in foreclosure and encumbrances on Schedule BA real estate.

The final RBC amount is subject to a minimum of the Baa bond factor (1.30%) applied to the BACV, and a maximum of 45% of the BACV.

All references to involuntary reserves as it relates to real estate were removed to comply with the codification of statutory accounting principles.

**Specific Instructions for Application of the Formula**

Column (1)

Calculations are done on an individual property or joint venture basis in the worksheets and then the summary amounts are entered in this column for each class of real estate investment. Refer to the real estate calculation worksheet (Figure 7) for how the individual property or joint venture calculations are completed.
Line (1) should equal Page 2, Column 3, Line 4.1.
Line (2) should equal Page 2, inside amount, Line 4.1.
Line (4) should equal AVR Equity Component Column 1 Line 20.
Line (5) should equal AVR Equity Component Column 3 Line 20.
Line (7) should equal AVR Equity Component Column 1 Line 19.
Line (8) should equal AVR Equity Component Column 3 Line 19.
Line (14) should equal Schedule BA, Part 1, Column 12, Line 1299999, 2199999 plus Line 1899999, 2299999, in part.
Line (15) should equal Schedule BA, Part 1, Column 12, Line 1799999 plus Line 1899999, in part.
Line (17) should equal AVR Equity Component Column 1 Line 75.
Line (18) should equal AVR Equity Component Column 1 Line 76.
Line (19) should equal AVR Equity Component Column 1 Line 77.
Line (20) should equal AVR Equity Component Column 1 Line 78.
Line (21) should equal AVR Equity Component Column 1 Line 79.

Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93—Low Income Housing Tax Credit Property Investments.

Column (2)
The average factor column is calculated as Column (3) divided by Column (1).

Column (3)
Summary amounts are entered for Column (3) based on calculations done on an individual property or joint venture basis. Refer to Column (8) of the real estate calculation worksheet (Figure 7).

Line (17)
Guaranteed federal low-income housing tax credit (LIHTC) investments are to be included in Line (17). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.

Line (18)
Non-guaranteed federal LIHTC investments with the following risk mitigation factors are to be included in Line (18):
   a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
   b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.

Line (19)
State LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments.

Line (20)
State LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments.

Line (21)
State and federal LIHTC investments that do not meet the requirements of lines (17) through (20) would be reported on Line (21).

§ Column (97) is calculated as Column (3) multiplied by Column (65).

* Column (108) is calculated as the sum of Column (86) minus Column (97), but not less than zero or more than Column (2), 1.3% nor more than 45% of Column (2), and not less than zero.
Proposal
Risk Based Capital for Real Estate Assets
February 26, 2021

Executive Summary

The following recommendations are the product of analyses conducted or sponsored by the ACLI, the NAIC, and industry real estate specialists. These recommendations represent the final product of discussions and deliberations that began in 2012 and are inclusive of changes meant to address questions and recommendations posed by members of the Investments Risk Based Capital (IRBC) and Life Risk Based Capital (LRBC) NAIC working groups, the American Academy of Actuaries (AAA) and other interested parties.

The objective of the recommendations described below is to ensure that the RBC assessment methodology and charges for the real estate sector more accurately reflect the sector’s underlying risks and to promote consistency with the methodology used in other asset sectors.

A. Schedule A Real Estate Factor. Update the C-1 factor for real estate assets held on Schedule A to be a base factor of 11%. This recommended factor is based on an estimated worst cumulative loss at a 95th – 96th percentile confidence level based on historical experience, which suggested a base factor of 9.5%. As was done with common stock, we used values at 2 years loss horizon. An additional 1.5% charge is recommended to account for potential disparity in individual life company real estate portfolio composition and uncertainty surrounding the longer-term implications of the COVID-19 pandemic on the commercial real estate sector. The proposed factor would be applicable for all categories of real estate reported in Schedule A of the Life and Health Annual Statement. (See Section A)

B. Unrealized Capital Gains/Losses. Adjust the based RBC factor using a ratio of 2/3 of the percentage difference between the reported fair value and statutory book value to the statutory book value. This adjustment would account for the cushion against statutory losses that is often created in real estate assets as they are held through time. The recommended RBC factor for Section A is calibrated based on volatility of market values through time. In contrast, real estate assets are reported for statutory accounting using depreciated cost. Real estate assets depreciate annually, so each year the asset’s statutory value will be adjusted downward, even though the actual market value of the asset is more likely to be increasing. This creates an “unrealized gain” that serves as a cushion that must be completely eroded as market values fall before there would be any risk of loss of statutory capital. (See Section B)

C. Encumbrances. Revise the RBC factor for real estate encumbrances following the principles of the current RBC with factors to be consistent with the commercial mortgage RBC framework adopted in 2013. (See Section C)

D. Schedule BA Real Estate Factor. Update the factor for Schedule BA real estate to 12% on a look-through basis, equivalent to the proposed factor for Schedule A (11%) plus a premium of about 10% of the amount, to more accurately reflect the risk of real estate assets reported on Schedule BA. All other mechanics would parallel the proposal for Schedule A Real Estate. (See Section D)
Scope

This proposal is developed for the Life and Fraternal Risk Based Capital formulas. This proposal does not address possible adjustment to the Asset Valuation Reserve (AVR) or tax adjustments for these assets. Finally, this proposal does not directly address the factors for the Health Risk Based Capital or for the Property & Casualty Risk Based Capital.

Background

RBC is used to measure potential future excess losses and their effect on statutory capital. The goal is to help regulators identify weakly capitalized companies, given risks that individual companies are taking. This proposal is consistent in methodology with recent RBC development work for common stock and bonds in areas such as the confidence levels for statistical analyses, while recognizing real estate’s unique characteristics.

There is limited historical perspective available on the original construction methodology supporting the currently applied RBC factors for real estate investments. The following general description is taken from a 1991 report covering RBC C-1 (default) factors:

“There is little data upon which to base requirements for this asset group. Company practice, as shown by the 1990 intercompany survey, indicates factors in the range of 5 percent to 20 percent. An article in the May-June 1991 Financial Analysts Journal (Ennis and Burk) proposes that real estate volatility is about 60 percent of that for common stock, suggesting a factor in the range of 18 percent. If one assumes full tax credit for losses, this converts to a factor of about 10 percent which is the Subcommittee’s recommendation for all real estate subcategories, except real estate acquired by foreclosure for which the factor is 15 percent. This is one of several asset groups which deserve continuing study to assure that risk-based capital requirements are adequate and appropriate.”

Since the original real estate factor estimation, which was based on the somewhat rudimentary analysis described above, there has been a very significant improvement in the availability of performance data for the sector. While there have been additional analyses conducted for this sector since the initial methodology and factor adoption (i.e., AAA proposals in September and December 2000), to date there have been no significant changes made to the C-1 factor for real estate.

Since 2000, the pre-tax base C-1 factor for real estate applied in the sector has been 15%. The derivation of this factor, as described above, was based on 60% of the common stock factor, adjusted for taxes. The logic at the time was that the volatility of real estate was assumed to be around 60% of common stock volatility. This assumption was reportedly based on inferences made from historical real estate investment trust (REIT) performance, as a robust private market performance history was not available at that time. REITs are companies that use debt in owning and managing properties and have performance characteristics different from that of the underlying commercial real estate. The same 15% C-1 factor currently applies to virtually all directly held real estate, including company occupied properties, investment properties for long-term hold, and properties held for sale, but excludes properties acquired through foreclosure which were perceived to be riskier.

It is also important to note, that while real estate is considered an equity asset, statutory accounting requires it to be valued at depreciated cost. Any capital improvements are added to the statutory book value, and then

---

1 Various studies have since shown that equity real estate in general has volatility well less than 60% of that of the S&P 500.
2 The volatility of REIT performance is higher than the volatility of direct property performance primarily because REITs are leveraged investments, which results in greater volatility of results. Further, privately held property is not marked-to-market daily, trades infrequently, and tends to exhibit price changes rather slowly.
depreciated from that time. If and when there is an other-than-temporary impairment, the book value is revised down to then market value, if lower, and depreciated going forward. Throughout this document this is referred to as depreciated cost.

The real estate sector has matured significantly in the last 30 plus years, as institutional investment has become prevalent and public capital markets have become more developed. Information transparency has increased materially and the market has become much more “efficient”. Valuation and accounting policies and standards, and increased regulation, have also increased standardization and invest ability. Ownership of commercial real estate is now much more widespread across institutions, including pension funds, than in the earlier period.

A. Review of Base C-1 RBC Factor – Support for Change to 11%

Analyses conducted or sponsored by the ACLI, the NAIC, and industry specialists suggest that the base C-1 RBC factor applicable to Schedule A real estate (including investment, foreclosed and held for sale real estate) should be set at 9.5%. An additional 1.5% cushion is recommended to account for potential disparities between the composition of the index used and individual life insurance company real estate portfolios and uncertainty surrounding the impact of COVID-19 on the longer term performance of commercial real estate. This recommendation is based primarily upon the NCREIF National Property Index (NPI) Price Variation Analysis presented below.3

Note that the support presented in this Section A represents an updated methodology meant to address certain concerns expressed by the American Academy of Actuaries regarding representation of the Global Financial Crisis in the data set. The original supporting methodology and support can be found in Appendix 3, for reference only.

The primary methodology employed to determine the recommended charge is analyses based on actual historical real estate investment performance data from the NCREIF Property Index (NPI), appended by data from FRC/Kelleher to extend the series through earlier years of 1961-1977.4 This data set is collectively referred to as “NPI” in this analysis.

<table>
<thead>
<tr>
<th>Results of Price Variation Model of NCREIF Property Index (“NPI”)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td>1 YR HP Cumulative Loss</td>
</tr>
<tr>
<td>95-PCT</td>
</tr>
<tr>
<td>96-PCT</td>
</tr>
</tbody>
</table>

The above table presents the results of analyses of historical NPI total return data. The table presents the results of analyses based on both 95th percentile (PCT) and 96th PCT worst results in the historical data set. Further, the table presents cumulative losses at varying periods ranging from 1 to 4 years. Historically, downturns in real estate tend to last no longer than 3 years, so this period also represents the worst cumulative decline that would be observed even if the assumed period was extended further. The “cumulative” observations represent the largest cumulative loss experienced at any point in the period.

The recommendation of 9.5% is based on consideration of the maximum cumulative losses at both the 95th and 96th percentiles (“PCT”) during the observed period. This assumed period of loss is consistent with the assumption used for common stock. Importantly, based on historical performance data for the sector, the 11% recommended base factor would cover cumulative losses during a 2-year period at a 96.8% confidence level.

---

3 See Appendix 1 for a detailed description of NCREIF and the NPI.
We also note that in using cumulative losses over time, there is no discounting for time value of money, and all analysis are conducted without any consideration of the federal income tax impact of the losses.

The use of actual historic quarterly returns across 60 years of industry experience provides for the incorporation of the impact of several economic cycles on supply and demand for commercial real estate and the impact on market values. This lengthy period also allows for incorporation of the effects from earlier governmental impact on prices, such as from changes in the tax code in the 1980s.

Considerations

1. Applicability of Index to Individual Life Company Portfolios

The recommended decrease in the RBC factor for Real Estate is based on the performance of a large and well diversified commercial real estate benchmark performance index (i.e., NCREIF-National Property Index, NPI). The index includes quarterly data from all the major property types (office, retail, industrial, multifamily and hotel) across all regions of the US, which makes it broadly applicable to all of these major property types nationwide. Additionally, we compared the distribution of properties by type and by geographical region in the NCREIF database to the distribution of those held by the life insurance companies and found the distributions to be quite similar.

The question of the potential need for increased granularity for the RBC factor was considered thoroughly. In particular, we considered a different factor for company occupied as a class with lower risk than investment properties. However, granularity beyond the single factor representative of all US commercial real estate was deemed inappropriate due to 1) the relatively small size of the asset class, 2) the alignment of composition between the NPI and the life industry portfolio, and 3) regulations separate from RBC factors that address concentration risks and assure diversification of life company real estate portfolios.

Additionally, segmenting the NPI dataset into smaller granularities can be problematic. The NPI as of 2nd Quarter 2013 consisted of just over 7,000 properties but roughly 30,000 properties have been in the index at some point during its 30+ year history. Over that history, the geographic and property type distribution of NPI has been constantly evolving. While the database of properties is large in total, segmenting it into more granular levels can produce sample sizes too small to be statistically sound. Beyond this, segmenting can add only limited additional value. The primary driver of real estate property performance is the national real estate cycle as portrayed in the NPI. The pattern of real estate losses for both the industry and for individual companies is aligned with that cycle. In other words, the overall real estate cycle tends to dominate other effects including geography and property type. The strength of that national real estate cycle has been found in academic research to explain roughly 50% of the variation in property performance across all properties in the index.

2. Impact of Select Key Assumptions

- **Loss Horizon:** The period of time assumed for the accumulation of losses in the analysis (loss horizon) plays an important role in determining the appropriate amount of required capital. In this updated proposal, we suggest an 11% RBC factor, which is based on cumulative losses over 3 years. Real estate assets are typically held longer-term, often five years or greater. As the assets are more illiquid than publicly traded bonds or other securities, they are often used to back surplus, or longer-term liabilities. Liquidity is managed such that the timing of sale of real estate assets can often be strategically determined, thus

---

avoiding realization of the larger maximum potential losses. The key focus is the length of economic cycles with losses. In past real estate cycles, the duration of losses typically spans a 2 to 3-year period, with the majority of losses during past downturns being materially concentrated within one year. Average holding periods for real estate assets are typically much longer than one year, averaging 10 years or longer, based on analysis periods and investment targets for most institutional investors. As such, and given the statutory accounting for the asset class with declining book value and rigorous impairment requirements, it is normal for the actual recognized impairment rates by insurance companies to be lower in both frequency and severity than market averages. This is primarily related to the existence of unrealized gains that must be exhausted prior to any recognition of losses.

- **Confidence Level:** The confidence level also plays an important role in determining the appropriate amount of required capital. The 9.5% suggested base factor generally corresponds to the losses modeled at between the 95th and 96th percentiles (PCT) over a worst cumulative period. The recommended 11% factor covers losses at a 96.8% confidence level, assuming maximum cumulative losses during a 2-year period.

- **Reserve Offset:** The development of the bond factors includes an offset for expected losses based on the principle that expected losses are covered by reserves. Real estate and common stock are both treated as equity assets which are generally to support surplus and not reserve, and for which expected loss is not considered. The current RBC methodology for real estate equity does not include an offset for the expected loss, as the basic contribution to AVR used as a proxy for expected loss is zero. Similarly, this proposal does not include an offset for expected loss.\(^6\) The rationale for excluding the mitigating effects of the expected loss include:
  - There is no basic contribution to AVR for real estate investments.
  - Real estate is a small asset class, and analyses required to develop appropriate offsets for expected loss are deemed unnecessary.
  - Discussions around the appropriate relationship between expected loss, AVR, and RBC are ongoing. In the future, as precedent is set in the other larger asset classes where the effects are likely even more important, the potential integration of an offset in the real estate equity sector should be reconsidered.

- **Income:** In the development of RBC factors for bonds, income in excess of the expected loss offset discussed above is not included in the modeling and is assumed to be used for policyholder liabilities and not available as a loss offset. For common stock, and for real estate as equity investments, the total return is used. First, since the equity assets are generally presumed to back surplus and not policyholder reserves, the policyholder does not have claim to the income. Consistent with the lack of offset for expected loss, the income is available. When bonds default there is no subsequent income available to the investor. Real estate does not default, and even if subject to impairment, continues to produce income. The real estate values were therefore developed consistent with common stock using a total return view of the assets.

- **Taxes:** All of the modeling discussed in this project was done on a “cash” basis. No consideration has been given to the effect of these losses on the tax liability of the investor. Since losses reduce taxes that otherwise would be paid by the investor, this will result in a lower post-tax RBC factor than the recommended level.

- **Property acquired through foreclosure:** Property acquired through foreclosure should be treated the same as any other real estate. If the insurer forecloses on a mortgage and obtains the property, statutory

\(^6\) There are currently discussions at the NAIC regarding whether RBC assessments should be adjusted to remove the expected losses for sectors. In real estate equity’s case, we are uncertain as to the materiality of adjusting for expected losses. The same could be said for common stock, as expected loss is a fixed income concept and would be difficult to apply to equities.
accounting requires the property to be brought onto the company’s books at then current market value. As a result, the value is no different than any other property purchased in the course of business. If the property has low income potential, that will be reflected in its market value.

3. Application of Stochastic Approaches

While we considered stochastic approaches, a fully stochastic model was deemed inappropriate by the working group due in large part to the limited amount of quarterly historical observations (limited when compared to the amount of daily transaction data available for public stocks and bonds). It is possible that a stochastic analysis could be performed wherein an algorithm would be built and calibrated to actual history.

However, if the algorithm is calibrated to historical performance, we believe that the results of such an analysis would be consistent with our work, which includes periods of very significant market stress in the sector. Note that the work performed in both common stocks and bonds excluded significant periods of stress in those markets, given changes in the economy from the advent of the creation of the Federal Reserve. Both asset classes have public data going back to early in the 19th century, though of varying quality. We used the full historic track record for Commercial Real Estate (CRE) that is available and includes the downturn in CRE from the S&L crisis in the 1990s, the effects of the dot-com bubble, the global financial crisis and the most recent effects of COVID-19 pandemic in 2020.

B. Adjust RBC to recognize risk impact of unrealized gains and losses

We also recommend implementation of an adjustment to individual property RBC that will account for the cushion against statutory losses that is often created in real estate assets as they are held through time. The RBC factor that is recommended in Section A is calibrated based on volatility of market values through time. However, real estate assets are reported for statutory accounting using depreciated cost. In real estate, the assets depreciate annually, so each year the asset’s statutory value will be adjusted downward, even though the actual market value of the asset is more likely to be increasing. Annual depreciation rates in real estate are often 2% or higher. This creates an “unrealized gain” that serves as a cushion that must be completely eroded as market values fall before there would be any risk of loss of statutory capital.

Fair value of real estate assets held by life companies is reported in Schedule A for each individual property. This fair value includes the changing market value of the asset and the impact of any improvements that have been capitalized. This excess of market value over the statutory value is a cushion against loss of statutory capital.

We propose that the applied base RBC factor be adjusted using a ratio of 2/3 of the percentage difference between the reported fair value and statutory book value to the statutory book value. That value applied to the gross book value and after being reduced for any encumbrance would be floored to the RBC using the NAIC bond factor for a Baa equivalent (currently 1.30%) applied to the BACV. Note that in situations where fair value is less than statutory, the RBC factor will be increased.

Examples of the application of the adjustment are presented in the below table and are hypothetical. If a market value were lower than book value, that property would be reviewed for possible impairment. If the value were down temporarily, this adjustment would provide a short-term increase in RBC. If the value is down on a permanent basis, this may provide an early increase in RBC prior to taking an impairment.

---

7 See Appendix 2 for sample calculation.
The specific formula including adjustment would be: 

$$RBC\% = \max \left[ NAIC2\%, 11.0\% \times \left( 1 - \frac{2}{3} \times (MV - BVg) / BVg \right) \right]$$

<table>

BVg is the book value gross (prior to netting the encumbrances); NAIC2 is the NAIC2 corporate bond RBC charge.

In an effort to assess the effects of statutory accounting on actual life insurance company experience, a simulation was constructed to analyze hypothetical life company portfolio performance given statutory accounting. The results of this study demonstrate the materially lower statutory losses as compared to market value losses during downturns, and thus provide support for the proposed adjustment.

In 2013 the ACLI, NAIC, and Industry real estate specialists engaged Jeff Fisher (Academic Consultant), who is a special academic consultant to NCREIF, to use the historical property level performance data in the NPI to construct simulated historical performance under statutory accounting rules. The analysis leveraged all available NPI data history at the required level of granularity at that time, which included the period of 1978Q2 through 2013Q1. This analysis was performed to provide additional insight around the impact of statutory accounting (recognition of depreciation, impairment rules, etc.) on the historical performance and risk to capital for insurance companies.

The simulation used the actual historical market experience of the NPI at the individual property level, wherein estimates of statutory accounting were applied. This hypothetical exercise was not intended to serve as the primary basis for determination of an appropriate RBC factor. Rather, the results of this hypothetical exercise illustrate the effect that statutory accounting (i.e., with depreciating book values and impairment rules/requirements) can have on the timing and severity of loss recognition relative to market value changes and provide additional evidence that the primary analysis is reasonable, if not conservative, given the effect of statutory accounting.

The simulation made the following assumptions:

1. Beginning Book Value for statutory accounting when properties enter the data set is set equal to then current market value.
2. For Book Value projections, depreciation is over 20 years (5% per year) for all properties.
3. Properties are tested for impairment quarterly, with impaired properties removed from index after recognizing the loss from the impairment. Any income received to that point is retained in the modeling.
4. As in statutory accounting, there is no accounting for property value increases, only losses are recognized in the analysis.
5. There is no offset related to expected loss (i.e., there is no accounting for AVR).

**Example of Simulated Statutory Property Performance:** In the simulation, individual asset market values are recorded in the quarter a property enters the index. At this beginning quarter, book value is set equal to market value, which is assumed to be the cost to acquire and is therefore consistent with statutory accounting. Every
quarter forward, NCREIF has updated estimates of market value for the asset.\(^8\) Future statutory carrying value of the asset (depreciated book value) is estimated using the generic depreciation assumptions listed above. In every quarter, we estimate whether an impairment would have been recognized using statutory accounting rules, the then current market value, anticipated future property cash flows as implied from that market value, and then current statutory carrying value. Aggregate impairment rates by quarter are tracked through time, which are useful for comparison to actual market value losses reported for the index.

Using the above assumptions in the simulation model and including all properties over the entire history of the NPI, the following chart presents quarterly total losses as a percent of market value. As the chart below illustrates, the largest quarterly loss rate for the simulated index performance was just slightly over 2% during the recent Great Recession. Further, over this entire simulated history there are only a few quarters with significant simulated statutory losses. Losses were concentrated in the real estate market downturns of the early 1990s and in 2009 following the Great Recession.

The largest one-year loss for the full history of the simulated data occurred during the Great Recession, when the simulated one-year cumulative statutory loss was approximately 7% during the year 2009.\(^9\) During 2009, the actual recorded total return for properties in the NPI was a cumulative loss of 17%. This decline occurred amid the most severe downturn in history, based on its intensity. However, the value decline during this period was relatively short-lived, as the negative quarterly total returns persisted for only six quarters.

Given the event was an extreme outlier in the history of real estate performance, the probability of it reoccurring is extremely low within the modeled random sampling. In simple terms, since the 17% decline in one year occurred once in the 36-year exposure, the implied frequency is 2.8% probability (i.e., one year out of 36) while RBC is set to a 5% (or 95% confidence) level. In addition, this temporary reduction in market value would not necessarily have led to equal statutory impairments both since market value is typically in excess of book value, and requirements for statutory impairments do not immediately recognize all changes to market price. Thus, statutory accounting can lessen the severity of recognized losses during market downturns.

\(^8\) The NCREIF database relies on appraisals to establish value where there has not been a transaction. The simulation projected MV could be viewed as projected appraised value. Various studies of CRE appraisals have been performed and show that the appraisals are good estimates of MV, though they may lag actual market changes. This assumption does not affect the validity or applicability of the results.

\(^9\) While the 7% maximum simulated loss should provide a degree of comfort in the reasonableness of the proposed factor, it is not directly comparable in concept to either the proposed factor or the cited actual historic market value based index returns.
As further evidence of the impact of statutory accounting, we examined actual losses incurred during the Global Financial Crisis, which is the most severe real estate market downturn within the 60-year data analysis period. The ACLI conducted an analysis of the life insurance industry’s actual performance during 2008 through 2012. The analysis examined all impairments of real estate investments, along with recognized losses on sale of real estate investments, during the period using data from Annual Statement exhibits Schedule A Parts 1 and 2. The industry reported cumulative losses of about 3.5% over that 5-year period, significantly lower than the 9.5% recommended factor. These reported industry losses include Other-Than-Temporary Impairments and losses on sale as reported in the Annual Statement schedule. Note that the analyses did not account for the declines in value of assets that are reported at fair value for statutory purposes.

C. Update RBC charge on real estate encumbrances

Under Statutory Accounting rules, real estate is held at depreciated cost net of encumbrances. Under the current proposal, RBC will be assessed by estimating the risk on the total property, then providing a credit for the value of the encumbrance based on the equivalent risk of the mortgage. The rationale for this is that the total underlying risk of loss on the property is the same whether or not there is an encumbrance, but the holder of the encumbrance bears part of the risk and the holder of the property bears the balance. Therefore, the risk is split effectively by developing the risk for the entire real estate value, then subtracting the amount of risk ascribed to the mortgage. We chose the approach of a reduced factor based on the average factor for mortgages in light of the small size of the real estate asset class, and the even smaller amount of encumbrances. For implementation, we recommend changing the RBC worksheet to show the RBC for the entire real estate, then a credit for the amount of the encumbrance. The final RBC will be subject to a minimum of the NAIC factor for a Baa bond (currently 1.30%) of the net book adjusted carrying value of the real estate, and not more than 45% of the net book adjusted carrying value.

The current encumbrance factors were based on the current RE factor of 15% reduced by the average RBC for commercial mortgages, which was 3.00% under the prior RBC formula. The proposed factor for Real Estate is 11.0%, and the average commercial mortgage factor that was developed as part of the Commercial Mortgage proposal in 2013 was 1.75%. As an example, consider the following:

<table>
<thead>
<tr>
<th>Property Value</th>
<th>Amount</th>
<th>RBC factor</th>
<th>RBC</th>
</tr>
</thead>
<tbody>
<tr>
<td>No encumbrance</td>

<td>11.0</td>
</tr>
</tbody>
</table>

* Equals the RBC value (9.95) divided by the real estate equity value (40).
** This is an estimate of the value of the risk attributable to the mortgage by assuming that the mortgage was held by a life insurance company and estimating the resulting RBC.

This table illustrates our suggestion that the same amount of total capital be held whether a property is held with no encumbrance, or if it has an encumbrance, to reflect the constant level of risk of loss at the property irrespective of the capital stack. The RBC calculated on the encumbrance derives from the price risk of the
property. It is to reflect that there is more risk as a percent of the equity investment, though not in total risk, to the equity investment of an investor in a property when leverage is used compared to when there is no leverage and a property is owned outright. In the case of having an encumbrance, the RBC held by the lender, when added to the RBC held by the owner on its equity and its encumbrance, sum to the same amount as if the property was held with no encumbrance.

In the current RBC, the result of this formula on encumbrances includes a maximum amount equal to 100% of the book adjusted carrying value of the real estate. While recognizing the loss is generally limited to 100% of the carrying value, we believe that an RBC factor of 100% is excessive, and that the limit should be set at 45% of the carrying value. We note that for common stock, the combined factor at the maximum Beta is 45%.

D. Update Schedule BA Real Estate Factor

Real Estate held in joint ventures (JVs), limited liability companies (LLCs) or similar structures are recorded in Schedule BA, on lines 2199999 and 2299999. Currently, these assets are assessed RBC with a factor (23%) that is 50% higher than the factor for wholly owned real estate reported in Schedule A. The documentation for Schedule BA assets from the original RBC development articulates a premium over the RBC for Schedule A assets to account for additional risk associated with potentially lower transparency and control within the structures. However, since that time, data availability and industry experience has provided evidence that this premium is overly conservative, if not altogether unnecessary for the assets classified as real estate. We propose that the factor for Schedule BA real estate be adjusted to 12%, equivalent to the proposed factor for Real Estate recorded on Schedule A (11%) plus a premium of about 10% of that amount for conservatism. All of the other mechanics and components described above for Schedule A real estate would also apply consistently for the real estate recorded on Schedule BA. This proposal is supported by the following:

- Real estate investments today are very often executed through corporate structures such as LLCs simply to mitigate risks. Institutional investors regularly use these structures to reduce the risk of loss from contingent liabilities. Contingent liabilities could be associated with the operations of the property (e.g., slip-and-falls), disputes with vendors or tenants, or debt. LLCs insulate investors from losses above the value of the net equity in an individual investment. Institutional investors also often use LLCs as holding companies for a series of single-asset LLCs, in order to better organize a portfolio in a manner that limits liabilities along each level of the corporate ownership structure.

- The NAIC recently approved the reclassification of certain wholly owned single owner, single asset LLCs to be reported on Schedule A. This was due to the recognition that the LLC structure itself did not produce additional risk. In this approval, the NAIC also agreed that additional reclassification could be proposed and approved when additional supporting materials were submitted. Rather than seeking a change in the accounting, we are proposing to adjust the RBC to reflect the risk.

- Partnership structures are often used to align interests between the life insurance company and local partners who have superior access to the market and property development, asset management and property management skills, while still maintaining control of significant investment decisions, especially around liquidity. This better execution and alignment of interest can result in better investment performance and even lower market risk.

- Partnership structures reduce the capital commitment of the life insurance company to an individual transaction, and thus can add portfolio diversification.
A study was performed to compare the actual realized risk of institutional real estate investments held through JV’s to those of directly-held real estate investments. Jeffrey Fisher, Ph.D. and consultant for NCREIF, broke down all properties in the NCREIF Property Index into joint venture and wholly owned properties to compare the performance since 1983. Mr. Fisher’s analysis found as follows:

- Since 1983, the average quarterly return for JV properties was 2.35% versus wholly owned properties at 1.97%. This performance gap widened over time.
- The standard deviation of returns for JV properties (2.4%) was only modestly higher than the standard deviation of wholly owned properties (2.2%).
- Values of the wholly owned properties fell more than the values of JV properties from peak-to-trough during the Global Financial Crisis (GFC).
- In terms of return dispersion during the GFC’s worst quarter, wholly owned properties had the largest negative return and JV properties had the highest positive return.
- JV properties were found to have shorter average holding periods than wholly owned properties, suggesting potentially higher liquidity in JV structures.

In summary, real estate held through joint ventures has performed consistently with and perhaps even slightly better than, wholly owned real estate. Based on this research, and in recognition of the several legitimate risk/return benefits of ownership through structures, we propose that real estate held on schedule BA use the Schedule A factor (11%) plus a premium of 10% of that amount, totaling approximately 12%.
Appendix 1

The historical National Council of Real Estate Investment Fiduciaries (NCREIF) database goes back to December 31, 1977, and as of 2nd Quarter 2013 consisted of approximately 7,000 properties. NCREIF collects 67 data fields each quarter that consist of financial information such as Market Value, NOI, Debt, and Cap Ex, as well as descriptor data such as Property Type and Subtype, Number of Floors, Square Footage, Number of Units, and Location.

The flagship index of NCREIF is the NCREIF Property Index (NPI), which is a quarterly index tracking the performance of core institutional property markets in the U.S. The objective of the NPI is to provide a historical measurement of property-level returns to increase the understanding of, and lend credibility to, real estate as an institutional investment asset class. The NPI is comprised exclusively of operating properties acquired, at least in part, on behalf of tax-exempt institutions and held in a fiduciary environment. Each property’s return is weighted by its market value. The NPI includes properties with leverage, but all returns are reported on an unleveraged basis. The NPI includes Apartment, Hotel, Industrial, Office and Retail properties, and sub-types within each type. The index covers all regions of the US, which makes it broadly applicable to all of these major property types nationwide. Additionally, we have also done a comparison of the distribution of properties by type and by geographical region between those in the NCREIF database and those held by the life insurance companies and found them to be quite similar.

Over the history of the NPI data, there have been two severe downturns, in the 1990s and the recent GFC; as well as a shallow recession corresponding to the 2001 economic recession that did not produce negative total returns for real estate. Given the time series of the data, the index does reflect ‘tail events’ such as the Great Recession thus appropriately capturing the downturn in the employed primary methodology for estimation of the appropriate RBC charge.

Additional information on NCREIF and the NCREIF Property Index (NPI) can be found here: https://www.ncreif.org/public_files/NCREIF_Data_and_Products_Guide.pdf
Appendix 2

The difference between market value and statutory value (depreciated cost) is not included in surplus within statutory accounting. As a result, the risk of future impairments of statutory value would be much less for a company where the current market value of its portfolio of properties is well in excess of statutory carrying value, especially compared to one where market value is much closer to statutory carrying value.

Our primary analysis was based on market values, and therefore overstates the risk relative to statutory accounting. We are not proposing that statutory accounting for commercial real estate should change, but rather partially leveling the playing field for properties that have been held for extended periods with market value well in excess of statutory carrying value, versus recent acquisitions with no such unrealized gains. And we are proposing a floor charge equal to that for an NAIC 2 bond (currently 1.30%) so that capital will never be lower.

The following provides a numerical example. Assume a property held at a book value of $100 with a market value of $150. The NCREIF data measures changes in market value, and the 11% proposed factor would make provision for a loss of value to a value down to $133.50. Under the RBC process, factors are applied to the book value and normally do not recognize that unrealized gain. Since real estate is held at book value which in this case is $100, and is below this market value, effectively there an increased margin against the loss of statutory capital in excess of the amount of RBC.

For an asset with a market value well in excess of the carrying value, the reduction in RBC is minimal compared to the large-implied reserve. Similarly, in those relatively few circumstances where an asset will have a market value less than book value, the RBC amount would increase, to reflect the increased likelihood of a loss to carrying value. This increase in RBC would likely be in advance of an actual impairment, which would provide earlier visibility and recognition of weakening market conditions.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 11, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Thomas Reedy (CA); Deborah Batista (CO); Wanchin Chou (CT); Sean Collins (FL); Vincent Tsang (IL); Mike Yanacheak (IA); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Discussed the Moody’s Analytics Report on Bonds

Amnon Levy (Moody’s Analytics) presented Moody’s Analytics’ report on the proposed revisions to the risk-based capital (RBC) C-1 bond factors (Attachment Three-B1) and as summarized in the accompanying PowerPoint presentation (Attachment Three-B2).

Mr. Levy discussed the background of the project and why Moody’s Analytics was chosen as detailed on Page 5 of the PowerPoint presentation. He discussed the request for proposal (RFP) requirements, which were to assess the proposed required capital factors for the default risk on bonds, Moody’s Analytics’ objective opinion and its practical recommendations. He then discussed the factors that the American Academy of Actuaries (Academy) proposed.

Mr. Levy noted the defined scope of the project the Academy was given from the NAIC, which was limited to updating the data given that the bond factors were estimated some time back along with an expansion to 20 designations, recognizing that the six designations were too course and maintaining the modeling structure that was designed 30 years ago. He said the report is not limited to that defined scope but takes a much broader view, recognizing that the markets, techniques and data have evolved with capital markets. He presented Moody’s Analytics’ key findings, which include areas of concern with regard to best practices with data and modeling choices, as well as model documentation both within the defined scope and outside of the defined scope. These are detailed in Pages 9–11 of the presentation.

Mr. Levy discussed the next steps Moody’s Analytics is proposing, which include: 1) the phase 1 delivery of factors for exposure before April 30; and 2) a longer-term phase 2, which addresses modeling and data updates outside the defined scope.

As a reminder, Mr. Barlow said the Working Group was given direction by the Financial Condition (E) Committee to have new bond factors for 2021 and to take into consideration analysis prepared by the consultant for the American Council of Life Insurers (ACLI). He said his plan is to have new factors proposed for 2021 while providing as much support as possible to the consultant on their work to try to provide factors for the Working Group to consider within the necessary time frame. However, he said he believes it is an incredibly aggressive time frame for producing something as significant as new alternative bond factors, exposing them for comment, getting consensus and considering them for adoption.

Given that, Mr. Barlow proposes moving ahead with the work from Moody’s Analytics to see what it develops but also move forward with the proposed factors from the Academy so that the Working Group can expose both before the end of April. He said the Investment Risk-Based Capital (E) Working Group discussed the Academy’s factors before the tax law change, so they will need to be updated. He said he would also propose a state insurance regulator modification to the portfolio adjustment to address concerns that it could be onerous to small insurers.

2. Exposed the Alternatives for the Requested Modification to the Mortgage Reporting Guidance

Mr. Barlow said a request was received from the ACLI and the Mortgage Bankers Association (MBA) (Attachment Three-B3) to extend the guidance that the Working Group issued in 2020. He said two alternatives have been drafted, one modifying the original guidance document and one presenting the change as a new document.

The Working Group agreed to expose both alternatives for a 10-day public comment period ending Feb. 22.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Assessment of the Proposed Revisions to the RBC C1 Bond Factors

1 Executive Summary

This report follows in response to the awarded request for proposal (RFP) put forth on October 22, 2020 by the American Council of Life Insurers (ACLI) in conjunction with the National Association of Insurance Commissioners (NAIC). We document Moody’s Analytics objective assessment of the proposal for updating RBC C1 bond factors (the C1 Factor Proposal), including the modeling process, the development of assumptions from underlying experience, and related adjustments to reflect the diversification of individual company portfolios used in investment risk factors for fixed income assets, as documented in the Model Construction and Development of RBC Factors for Fixed Income Securities for the NAIC’s Life Risk-Based Capital (RBC) Formula, by the American Academy of Actuaries (the Academy) C1 Work Group (American Academy of Actuaries, 2015), under the instruction of the NAIC’s Life RBC Work Group.1

In addition to providing a comprehensive review of the underlying data, assumptions, methodologies, their resulting potential biases, and their materiality, this report provides a set of practical recommendations to better quantify the identified risks intended to be captured by the RBC C1 bond factors (C1 factors). We recognize that the C1 factors, and thus the models that underpin those factors, can impact business decisions, which ultimately impact solvency. Recommendations will be based on data and modeling approaches recognized as best practice, demonstrate past performance, and rest on sound model risk management guidelines, specifically model validation that includes back-testing and performance benchmarking.2

Before proceeding with our recommendations, Moody’s Analytics recognizes that the scope of the Academy’s work was defined by the NAIC RBC Working Group (the Defined Scope). This report does not, generally, consider the “time, budget and complexity constraints” faced by the Academy in their referenced report (American Academy of Actuaries, 2015). We also recognize that this report does not generally consider the direct or indirect costs of adopting any of the recommendations into the RBC framework and related practicalities. These costs include devoting resources to develop and implement models, data collection, model maintenance, and costs encompassing expertise, governance, and control mechanisms, such as policies and procedures, controls and compliance to ensure proper model use, and implications for organizational structure — at life insurance companies or the NAIC.3 Rather, as specified in the RFP, this report focuses on the considerations, assumptions, and methodologies used by the C1 Factor Proposal and the extent to which the C1 factors capture the risks outlined above.

With these observations in mind, this report identifies two areas of potential concern that make us question the effectiveness of the proposed C1 factors, considering the possible impact on business decisions and solvency that are further discussed in Table 1, Table 2, and Table 3.

1. The use of best practices with data and modeling choices. This includes items within the Defined Scope, as well as items outside of the Defined Scope, that Moody’s feels are relevant and material. In particular:
   a. The C1 RBC base factors were estimated using an economic state model that does not lend itself to capturing properties and overcoming limitations associated with the default and recovery rate data.
   b. The lack of differentiation across asset classes (corporate, structured, and municipal credit, for example), maturity, and investment income offsets.
   c. Overly conservative assumption for the risk premium, as well as dated discount rate and tax assumptions.
   d. The use of construction of representative portfolios and the separate analysis of each rating category.
   e. The use of multiple NRSROs given their comparability.
   f. Lack of consideration of climate hazards or emerging risks (e.g., pandemic or cyber) that may not be explicitly incorporated into NRSRO ratings and may not be reflected in the historical data used in estimating C1 factors.

2. Model documentation, including model validation and limitations and general prudent model risk management. This is critical for ongoing model monitoring and model updates. With limited articulation of model limitations, the potential for distorted business use and implications for solvency warrants further investigation into the proposed factors. The lack

1 In addition, this report relies on supporting documentation of the development of assumptions and modeling processes, updated recommendations (American Academy of Actuaries, 2017), and stakeholder feedback.
2 While (American Academy of Actuaries, 2015) contains Appendix G – Model Validation, Moody’s Analytics is not aware of a report that provides a comprehensive assessments of model performance against historic losses or benchmarks.
3 For guidance on sound model risk management, please see (Board of Governors of the Federal Reserve System and Office of the Comptroller of the Currency, 2011) and references therein.
of documentation and validation related to the portfolio adjustment function and its material impact on C1 factors stands out in particular.

Moody’s Analytics is aware of the significant effort involved in creating a broader redesign of the C1 factors. Thus, we suggest phasing-in model development and implementation, data collection, model maintenance, and governance processes. Given the tight April 2021 deadline, Moody’s Analytics suggests a Phase 1 redesign that focuses on the portfolio adjustment function and the “slope” of charges across credit ratings (addressing a number of the inputs and elements of the modeling discussed in this report), adhering to the model risk management practices referenced in this report. In addition, Phase 1 should include an articulation of model limitations related to the other items referenced in this document at a level of detail and adhering to a timeline to be determined jointly with stakeholders. Phase 2 would address items that require a longer timeline and would be determined jointly with stakeholders. While we do not expect completion of Phase 2 in 2021, Moody’s suggests starting Phase 2 as soon as practical, prior to completion of Phase 1, recognizing the lead time needed for data collection and research. We discuss further details at the end of this document.

Table 1 and Table 2 present the Summary of Moody’s Analytics Significant Areas of Review and Recommendations of Key Inputs and of the modeling framework that cover Moody’s Analytics understanding of the Defined Scope. The recommendations reflect the evolution of new data and techniques that can better describe credit risk since the original C1 factors released in 1992. The recommendations also reflect the increase in size and complexity of life insurance exposure to credit and, therefore, credit risk — in lock-step with credit markets themselves. 4 The recommendations are also influenced by how other regulators, globally, have continued adopting new guidelines to better manage the risks related to growth in credit markets, with an eye toward regulatory arbitrage that is recognized to potentially distort business decisions and solvency. 5 The recommendations recognize constraints that are cited in the C1 Proposal (American Academy of Actuaries, 2015): (1) RBC must be an auditable value, calculated from published financial statements; (2) the C1 component must be based on the credit ratings reported in the NAIC Annual Statement; and (3) the C1 component must represent the statistical safety level prescribed by the NAIC. Essentially, the recommended C1 factors have been developed using a similar methodology to the current factors. Moreover, no single improvement should be made in isolation without consideration of the overall implications of the change, recognizing the overall objectives of C1 factors and potential implications for business decisions that can ultimately impact solvency. Moody’s arrives at these conclusions objectively and independently.

Table 3: Summary of Moody's Analytics Significant Areas of Review and Recommendations of Key Inputs

| Default Rates | The methodologies used by the C1 Factor Proposal to construct default rates across ratings, as well as methodologies used in differentiating default rates across expansion and contraction states, face data limitation challenges. Moody’s recommends updating the methodologies and using additional data referenced in the review that have been demonstrated to better capture credit dynamics. |
| Recovery Rates | The C1 Factor Proposal’s method used to recognize the recovery date does not align with the date of default. This deviation can result in bias with recovery rate levels, as well as their relationships with default rates. Moody’s recommends exploring the use of more accurate data and groups when describing recovery distributions and utilizing more current techniques that link recovery with the credit environment. |
| Discount Rate | Since the modeling work was conducted by Academy in 2015, the discount rate used in the model is calculated using historic data that does not reflect the current low-interest environment, nor the expected continuation of a low interest rate environment. Moody’s Analytics recommends updating the discount rate to include December 31, 2013 – December 31, 2020 data to better reflect the current and expected interest rate environment, in conjunction with updated tax assumptions that reflect the 2017 Tax Act. |
| Construction of the Representative Portfolio | The segmentation and filtering of the sample portfolios used to construct the representative portfolio lack economic justification or sensitivity analysis. For example, for reasons not explained, only NAIC1 and NAIC2 rated issuers are used to determine the number of bonds in the representative portfolio for all rating categories. In addition, each representative portfolio ultimately used in the simulation contains one rating category, which makes the final C1 factors heavily dependent on portfolio adjustment factors. Given the importance of the representative portfolio, we recommend more comprehensive documentation and |
In reviewing the C1 Proposal, Moody’s Analytics found several aspects to the underlying modeling and data that were outside of the Defined Scope worth incorporating into this report, included in Table 3.

### Table 3: Summary of Moody’s Analytics Significant Areas of Review and Recommendations of Modeling Framework

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tax Assumptions</strong></td>
<td>The U.S. corporate tax rate was lowered from 35% to 21% in accordance with the 2017 Tax Reconciliation Act (Deloitte, 2018). Net capital gains included in the taxable income are subject to the 21% rule (CCH Group, 2019). While the model was developed based on historical data before the tax cut, the RBC factors, if adopted, will be applied to insurers, which will pay the updated tax rate. It will be worthy to consider updating the assumed 35% tax rate to 21%. Moody’s recommends analysis reflecting the current tax environment.</td>
</tr>
<tr>
<td><strong>Portfolio Adjustment Factors</strong></td>
<td>The portfolio adjustment factor is one of the most important elements of the model, as it ultimately determines the general RBC level for individual insurers. Unfortunately, documentation is limited, making it difficult to access the materiality of some of the modeling choices. In addition, the limited documentation available suggests a potential material gap between the calculated C1 factor and its target level for individual insurers, especially smaller ones. Moody’s recommends: (1) more detailed documentation of the adjustment factor and the underlying economic justification, in conjunction with the doubling of C1 factors for the top-10 largest issuers; (2) further exploring the data and methods used to estimate the portfolio adjustment factors, to ensure they are effective for corporate as well as non-corporate issuers. (3) design the factors to align incentives with the economic risks, and (4) design a structure that brings together the portfolio adjustment factors along with the doubling of C1 of the 10 largest issuers.</td>
</tr>
<tr>
<td><strong>Risk Premium</strong></td>
<td>The current assumption of setting the Risk Premium equal to expected loss appears to be overly conservative. While the C1 Factor Proposal recognizes the inconsistency, they point out that the 1992 guidelines defined the Risk Premium in this way and, in conjunction with other parameters, some of which (e.g., AVR) are beyond the scope of this report. While Moody’s appreciates the desire to incorporate conservativeness into assumptions, inputs for which accurate proxies are available should be directly used, and rather incorporate the conservative overlay into the final steps to facilitate model transparency. Moody’s recommends a broader evaluation of the various interconnected modeling decisions that lead to setting the Risk Premium at the expected loss level, and aligning the models with a general consensus across the actuarial community, including setting the Risk Premium at a one standard deviation loss.</td>
</tr>
<tr>
<td><strong>Applicability of Moody’s Rated Corporate Data to Other Asset Classes</strong></td>
<td>C1 RBC base factors were developed using Moody’s default rate data on Moody’s rated public corporate bonds (this report, as well as references herein, uses public corporate and Moody’s rated corporate interchangeably) supplemented with S&amp;P’s recovery data. After controlling for ratings, we find material differences in observed default, migration, and recovery dynamics across asset classes. These differences question the effectiveness of using public corporate bond data for all asset classes. Moody’s Analytics recommends evaluating the possibility of estimating distinct C1 factors using asset-class specific data. For private placements, in particular, Moody’s recommends exploring a centralized collection of default, migration, and recovery data that can later be used in further estimating distinct C1 factors and for other purposes.</td>
</tr>
<tr>
<td><strong>Simulation and Correlation</strong></td>
<td>The current C1 factor model does not account for variation in cross-industry and cross-asset class concentration risks nor diversification that may be different across life companies’ portfolios. These variations can be material, and we recommend additional analysis that assesses the materiality of abstracting from cross-industry and cross-asset class differentiation.</td>
</tr>
</tbody>
</table>
Maturity Effect on Capital Factors

The C1 factors do not differentiate risk across maturity. This can create a material distorted incentive to hold longer-dated bonds whose credit risk is more sensitive to the credit environment. Moody’s recommends exploring a maturity adjustment to the C1 factors.

Investment Income Offsets

While investment income can be used to offset loss and support statutory surplus, the C1 factors are modeled with the implicit assumption that all investment profits are fully distributed to policyholders or used to absorb product or operational losses. This introduces a potential bias in differentiating investment income across assets, across rating categories, and across asset classes. Accounting for such heterogeneity in investment income can potentially lead to substantial differences in RBC factors across ratings and asset classes. Moody’s recommends more accurately differentiating investment income across assets in the C1 factors.

Comparability Across NRSROs

The model is developed using Moody’s rating only. However, NAIC rating designations are often determined by a set of NRSROs ratings. NRSROs have unique differences in credit rating methodologies and do not provide correspondence because they base their credit ratings on a range of qualitative, as well as quantitative, factors. This creates a challenge when mapping ratings across NRSROs to the various NAIC rating designations. It is plausible that the properties (such as default rate, recovery, etc.) of the NAIC rating in practice are substantially different from those of Moody’s rating used in the model development. With this in mind, we recommend an assessment of variation across NRSROs rating migration, default, and recovery rates, and across the credit cycle. If this is not possible because of, say, lack of historical data, Moody’s Analytics recommends revisiting the use of the second-lowest NRSROs rating in assigning the NAIC designation.

Climate Hazards and Emerging Risks

The C1 factors do not explicitly consider climate hazards or emerging risks (e.g., pandemic or cyber). These risks may not be explicitly incorporated into NRSRO ratings and may not be reflected in the historical data used in estimating the C1 factors. While climate hazards are particularly relevant for the likes of real estate and municipal credit, growing evidence suggests climate hazards and other emerging risks can be material for corporate credit. Moody’s Analytics recommends exploring the potential impact of climate hazards and emerging risks on C1 factors across asset classes.

The remainder of this report is organized as follows:

» Section 2 provides Moody’s Analytics’ general understanding of the C1 factor proposed model.
» Section 3 reviews the key model inputs.
» Section 4 reviews the different model components.
» Section 5 reviews model elements outside the Defined Scope.
» Section 6 concludes and suggests next steps.

It is important to note that Moody’s Analytics does not have access to the C1 Factor Proposal’s model, data, or final comprehensive technical documentation. Moreover, there have been multiple revisions to the proposed C1 factors. Moody’s Analytics has obtained the ACLI model rebuild, which closely replicates the published C1 factors. This rebuild does not include key elements such as the portfolio concentration adjustment or the model that assigns RMBS/CMBS NAIC ratings. While structured asset rating designations are out of scope in this report, we do opine on the effectiveness of corporate factor use. The ACLI’s replicated model and the C1 Factor Proposal’s methodology papers, along with written communications between the two institutions, were used to review and assess the modeling approach and assumptions. The recommendations and proposals that follow are based on Moody’s Analytics’ best understanding of the current proposal.
2 General Description of the C1 RBC Proposed Model

The NAIC establishes RBC formulas used to identify potentially weakly capitalized insurance companies. RBC establishes a de facto minimum amount of capital to be held by insurers in order to avoid regulatory intervention. This minimum capital amount protects statutory surplus from the fluctuations that reduce statutory surplus, including credit risk, deferral risk, subordination risk, and event risk.6

C1 capital provides protection from statutory insolvency due to losses in statutory asset value resulting from bond defaults, common stock depreciation, and other changes associated with investment activity flowing through statutory surplus.

The prevailing C1 factors were implemented and reported in 1994 with reference to 1970–1990 default experiences. The C1 Factor Proposal was revised multiple times during the 2015–2019 period in response to stakeholder feedback. While the proposed C1 factors were developed based on the loss experience of public U.S. corporate bonds, the same set of factors were recommended for all fixed income securities in NAIC’s Schedule D, which is used to report long-term bonds and stocks owned, acquired, sold, redeemed, or otherwise disposed of by insurers during a year. RMBS/CMBS securities are generally filed to NAIC Securities Valuation Office (SVO) and assigned NAIC designations through a financial modeling process conducted by the NAIC Structured Securities Group (SSG), subject to limited filing exemptions (NAIC Securities Valuation Office and NAIC Structured Securities Group, 2019). C1 factors are applied to RMBS/CMBS securities based on the NAIC designations. Based on discussions with the ACLI, other structured securities are treated identically as bonds and are not required to go through the NAIC designation process.

C1 capital charges are intended to cover the 96th percentile portfolio loss in excess of those anticipated in the statutory reserve over a 10-year horizon. Statutory reserve is reflected in the capital fund as Risk Premium, which is currently modeled as the level of annual mean loss from default (after tax and considering recoverable tax on default loss) derived from baseline default and recovery rate assumptions. Risk Premiums are assumed to earn 5% pre-tax interest per annum.

Key inputs to the framework are as follows:

1. Baseline default rates are estimated using 1983–2012 default data, sourced from Moody’s (Moody’s Investors Service, 2013) as referenced in (American Academy of Actuaries, 2015). For each rating, the marginal default rates in Years 1 through 10 are smoothed using a 4th degree polynomial regression to remove noise. Default rates are differentiated across economic states (e.g., expansion or contraction) using a set of estimated scalars.

2. Baseline recovery rates are estimated using recovery data of senior unsecured bonds provided by Standard & Poor’s, covering 1987–2012.

3. Representative portfolios for the seven size categories are constructed based on the corporate bond holdings of life insurers provided by NAIC to the Academy. The final representative portfolio size is set as $10−25 billion USD. Issuers’ holding amounts are estimated from a sample of actual life insurers’ portfolios (see Section 3.4 for details). Note, only the holding amounts of NAIC-1 and NAIC-2 issuers (824 total) in this portfolio are used to determine the holding amount for each bond in the portfolio, for every rating category in the simulation model. In other words, the representative portfolio for each rating category only differs by issuer rating.

With key inputs in hand, the C1 factor for each rating category is calculated separately through simulation methods. It represents the amount of initial funds needed to cover the 96th percentile greatest default loss over 10 years, offset by statutory reserve, proxied through each rating’s Risk Premium. The modeling framework relies on the following calculation steps:

1. Simulate annual economic state for 10 years.

2. The default rate for each rating category in each year is determined by applying a leveled economic state scalar to the baseline default rate, adjusting it up or down according to the simulated economic state.

3. Based on the simulated economic state, simulate a random loss given default (LGD) value for each year, from one of the two distributions (from Step 1) corresponding to the economic state.

4. Simulate representative portfolio loss in each year for each rating category based on the default rate, recovery rate, and the assumptions on Risk Premium and tax, etc. Determine the maximum cumulative portfolio loss with consideration of recoverable tax on default loss in the 10-year period.

---

5. Set the base C1 factor for each rating category as the initial fund required on top of Risk Premium to cover the maximum loss at 96th percentile safety level. The values of these factors in the latest proposal are presented in the last column of Table 4.

6. Double the C1 factor of the ten largest issuers held across all debt-related asset classes. The initial filter excludes bonds with C1 RBC equal to zero and NAIC-1 bonds. As applicable after the first filter, if a top-ten issuer has NAIC-1 bonds, they are added back. Up to ten bond issuers of a bond portfolio can be subject to the top-ten doubling rule for concentration risk.

7. Apply the base C1 factors on 677 actual life-insurer portfolios to examine the expected capital coverage for a portfolio with different sizes and to determine the corresponding portfolio adjustment factor that results in enough capital for the portfolio at the 96th percentile safety level. Table 5 presents the final proposed adjustment factors.

---

1. Note, the target percentile for base RBC factors for individual exposure before portfolio adjustment factor has been updated from the 92nd to the 96th percentile. See correspondence by American Academy of Actuaries (2017) for details.
2. The factor for Caal3 should be capped at the 30% factor for unaffiliated common stock. Under the current RBC scheme, the factor for NAIC 6 bonds in or near default is set equal to the base factor for unaffiliated common stock (American Academy of Actuaries, 2017).
The following sections examine the various input and methodology steps, exploring the underlying assumptions, potential biases, and materiality, along with recommendations. Section 3 focuses on key inputs. Section 4 explores the modeling framework.

3 Key Inputs to the Framework

This section reviews the key inputs used in the C1 RBC proposed model. We explore the underlying data, along with the assumptions and methodologies, potential biases, and materiality, along with recommendations. This section is organized as follows: Section 3.1 explores the baseline default rates, Section 3.2 explores LGD, Section 3.3 explores the discount rate, Section 3.4 explores the construction of the representative portfolio, and Section 3.5 explores the tax assumptions.

3.1 Default Rates

This section explores the cohort methodology and data used in estimating baseline default rates, as well as the path-dependent behavior of ratings and associated default rates.9

3.1.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The methodologies used in the C1 Factor Proposal to construct default rates across ratings, as well as methodologies used in differentiating default rates across expansion and contraction states, face data limitation challenges. Moody’s recommends updating the methodologies and using additional data referenced in the review that have been demonstrated to better capture credit dynamics.

3.1.2 Review and Analysis Performed by Moody’s Analytics

The C1 Factor Proposal takes a cohort approach, whereby all bonds of a given rating, as of a given start date, are kept track of over time. For example, all A2-rated bonds on January 1, 1995 make up a cohort. Experience for each cohort is measured over the following calendar years without considering any rating change subsequent to the cohort start date.

For each rating, the C1 Factor Proposal smoothed the recommended default rate using a 4th degree polynomial regression to remove noise as presented in Table 6. The C1 Factor Proposal noted, “In analyzing the raw Moody’s cohort data, issues with data credibility were observed in cells with scarce data. Therefore, a smoothing technique was applied to create smooth probability of default curves across ratings and experience years.”

Two aspects of the approach warrant further exploration. First, the fundamental limitations of the data, as it relates to the framework, i.e., statistical properties of the data (e.g., path-dependent behavior) and the number of observations per rating category. Second, the use of the cohort approach.

We begin with an observation (Moody’s Investors Service, 2020 (1)): Moody’s credit ratings are opinions of ordinal, horizon-free credit risk and, as such, do not target specific default rates or expected loss rates. Moody’s believes the needs of market

9 The term “path-dependent,” recognizes the history of a bond’s rating as well as its current rating affects the bond’s future rating state and migration. For example, a bond that has experienced a recent rating action may be less likely to experience an additional rating action in the immediate future, when compared to an otherwise identical bond. An equivalent term, non-Markovian, is often also used in references herein.
participants are best served by ratings that are assessments of relative credit risk rather than cardinal risk measures. Indeed, rating transitions are path-dependent. By the same logic, neither are migrations implicit in the cohort default rates term structures. Thus, one should recognize that using ratings data in this way does not consider potentially material time-series dynamics.

While the use of a cohort approach is legitimate in principle, limitations must be understood. Limitations cited by authors of the C1 Factor Proposal with the number of observations per rating category and noted challenges with subsets of data, such as the change in ratings methodology in the financial sector after the financial crisis in 2008–2009, are well recognized (Moody’s Investors Service, 2020 (1)). While the C1 Factor Proposal recommends the smoothing method that best fits the original data, it is not clear if this chosen performance criteria makes sense in light of the data limitations (i.e., statistical properties and number of observations). Fitting a smoothing function on noisy data can often lead to a poor description of reality. This issue is exacerbated by poor statistical properties, including the path-dependent nature of default rates.

The C1 Factor Proposal recognizes this point when considering combining transition tables with default rates while incorporating credit migration. However, they also cited the observed and legitimate challenge that the progression of ratings transition for a bond is path-dependent. This challenge is prevalent in the cohort approach as well. We return to path-dependency related issues later in this section.

While challenges abound, we transition to an alternative point of reference. Moody’s Idealized Default Rates, presented in Table 7, provide a benchmark for default rates across ratings. This was independently suggested by ACLI technical experts based on interviews.10

Before proceeding, it is important to understand the purpose and use of Moody’s Idealized Default Rates that have remained unchanged since 1989. Per the most recent Rating Symbols and Definition (Moody’s Investors Service, 2020 (1)):

To rate some obligations in some asset classes, however, Moody’s uses models and tools that require ratings to be associated with cardinal default rates, expected loss rates, and internal rates of return in order for those models and tools to generate outputs that can be considered in the rating process. For these purposes, Moody’s has established a fixed common set of default rates, expected loss rates, and internal rates of return that vary by rating category and/or investment horizon (Moody’s Idealized

---

10 The question of applicability of the corporate data for other asset classes is discussed in Section 5.1.
Default and Expected Loss Rates, hereafter called “Moody’s idealized rates”). By using a common fixed set of benchmark parameters, rating models are more likely to provide consistency with respect to the estimation of relative risk across rating levels and investment horizons and can be more easily compared to one another. Moody’s idealized rates are used with other tools and assumptions that have a combined effect on model outcomes. While cardinal measures are used as inputs to models, the performance of ratings is benchmarked against other metrics. Although Moody’s idealized rates bore some degree of relationship to corporate default and loss experience at the time they were created, that relationship has varied over time, and Moody’s continuing use of the idealized rates for modeling purposes does not depend on the strength of that relationship over any particular time horizon. When we perceive changes in risk that necessitate changes in our credit analysis, we make revisions to key assumptions and other aspects of models and tools rather than changing this fixed common set of benchmark parameters. This approach enables us to make adjustments that only affect the particular sectors and asset classes we expect will experience significant changes in risk at a given time.

A casual comparison across the two-term structures highlights important differences. For example, monotonically increasing spot rates for the high-grade universe is commonly recognized as high-quality credit that is more likely to deteriorate than improve; this condition is not met with the recommended baseline term structure. With this, we do recognize that the idealized default rates are not intended to match historical or future ratings performance.

Next, we consider modeling default rates across contraction and expansion economic states, closely related to path-dependency issues with the data. We apply a distinct, single multiplier to each rating baseline default rate. While, in spirit, the approach makes sense, practicalities do not lend themselves in describing the tendencies for the default rate term structure to tilt and become upward (or less downward) sloping during a benign environment and more downward (or less upward sloping) during a deteriorated environment (Beygi, Makarov, Zhao, & Dwyer, 2016). Section 4.1 further discusses the challenges associated with the economic state framework.

With these factors in mind, material improvements in techniques and data availability have been made, allowing more accurate capturing of nuanced time series dynamics for rating migration and default across credit environments that address the observed path-dependent behavior of ratings. These approaches are used in practice by a wide range of institutions, as documented in a number of methodology papers by Moody’s (Moody’s Analytics, 2020) and others, such as (Lando & Skadedberg, 2002) and (Aguais, Forest, & Wong). Moody’s Analytics recommends exploring these approaches. Section 4.1 further discusses the economic state model.

### 3.2 Recovery Rates

#### 3.2.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The method used by the C1 Factor Proposal to recognize the recovery date does not align with the date of default. This deviation can result in bias with recovery rate levels, as well as their relationships with default rates. Moody’s Analytics recommends exploring the use of more accurate data and groups when describing LGD distributions and utilizing more current techniques that link recovery with the credit environment.

#### 3.2.2 Review and Analysis Performed by Moody’s Analytics

The C1 Factor Proposal estimates two empirical distributions of LGD, for economic contraction and expansion, respectively, using historical data. Each LGD distribution consists of 11 buckets, <0, 0-10%, 10-20%, etc., each with an average LGD and probability of occurrence. Negative LGD corresponds to recovery greater than par value (American Academy of Actuaries, 2015). For example, to construct the LGD distribution for a contraction state, the bond-level LGD data in the contraction period 1983–2012 are grouped into the aforementioned 11 buckets first. Then, the relative frequencies of LGD data points are used as the probability of

---

11 These tables are highly stylized and are not intended to match historical or future ratings performance. The tables were constructed in 1989 with reference to corporate default and loss experience over four historical data points. In particular, the 10-year idealized default rates for A2, Baa2, Ba2, and B2 were set equal to the 10-year historical default rates for corporate issuers with single A, Baa, Ba, and single B ratings, as observed between 1970 and 1989. In contrast, the 10-year idealized default rates for Aa3 and Aa2 were set lower than their historical default rates. All the other idealized default rates— for different alphabetic ratings and at different rating horizons—were derived through interpolation, rather than being matched to historical data. The idealized expected loss table was then derived by multiplying each element of the idealized default table by an average loss severity assumption, set equal to the approximate historical recovery rate of senior unsecured debt observed between 1970 and 1989. Moody’s has not published a revised version of these tables since the 1989 version and has no plans to revise them at the time of this writing.

12 Moody’s approach to measuring ratings performance is discussed in “Measuring the Performance of Credit Ratings” (Moody’s Special Comment, November 2011).
each bucket. For each simulation trial, the proposed model randomly chooses an LGD bucket using the probability of occurrence for each bucket, and then uses the average LGD of the selected bucket to compute loss.

Data used to develop the LGD distribution is based on senior unsecured bond data provided by Standard & Poor’s, covering 1987–2012. The average LGD is 53.1% among 1,260 bonds. The detailed LGD data collected from S&P has not been disclosed to either ACLI or Moody’s Analytics. ACLI attempted to re-construct the LGD distributions using Moody’s recovery data and managed to obtain similar, average LGD (53.1%) and sample size (1,257 bonds). Furthermore, the LGD distributions replicated by ACLI were used in the portfolio loss simulation and resulted in nearly-identical RBC factors for all ratings except Caa3. Therefore, we use ACLI’s replication methods for evaluation.

We make three observations regarding the data and the methods by which the data are used to parameterize the economic state model.

First, the C1 Factor Proposal used bond-level recovery data to estimate the empirical LGD distribution. The C1 Factor Proposal recognized that “recovery rates are provided by the issuer, not by issue” but argued that “because the LGD by issuer rating are stable, it is reasonable to assume that the variability in recovery would be observed at the issue level” (American Academy of Actuaries, 2015). Based on empirical observations, this data may be influenced by issuers with a large number of bond defaults. The underlying risk factors are largely the same for bonds linked to the same issuers. For example, 49 senior unsecured bonds from Pacific Gas & Electric (PG&E) defaulted, all with zero LGD in 2001, one of the four contraction years. The estimated LGD distribution for economic contraction will, therefore, be influenced heavily by PG&E bond defaults. We can address this issue using principal-weighted LGD by issuers first and then using the average of issuer LGDs.

Second, Moody’s Analytics’ recovery data provides up to three alternative methods for deriving LGD, depending on data availability. For each defaulted bond, the LGDs from the three methods can differ. Moody’s Ultimate Recovery Database includes a field with Moody’s recommended method for each default, based on Moody’s extensive experience with recovery data (Moody’s Analytics, 2016). While the C1 Factor Proposal used LGD data provided by S&P, it does not clearly define from which method(s) LGD is derived:

- Settlement Method — value of the settlement instruments is taken at or close to default
- Liquidity Method — value of the settlement instruments is taken at the time of a liquidity event
- Trading Price Method — value of the settlement instruments is based on the trading prices of the defaulted instruments at post-emergence

Third, based on the electronic communications between ACLI and the Academy, recovery rate seems to have been categorized by the date of emergence from default rather than the default date (American Council of Life Insurers, 2019). It is not uncommon for the recovery process to take years to complete. The year of emergence is likely to be in a different economic state from the year of default. As a result, the empirical LGD distribution for a contraction economic state may be estimated from defaults that occurred primarily during expansion years. This process is contradictory to the loss simulation model in the C1 Factor Proposal, where loss is realized on the year of default.

With these issues in mind, Moody’s Analytics recommends using issuer-level LGD data derived from the more commonly used recovery method and grouped by the year of default to estimate the empirical LGD distributions. More broadly, there have been advances in techniques that allow more accurately linking recovery with the credit environment ((Moody’s Analytics, 2011), (Moody’s Analytics, 2010 (2)), and that account for correlation between the firm’s underlying credit quality and recovery, used in practice that should be considered when modeling LGD dynamics.

3.3 Discount Rate

3.3.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

Since the modeling work was conducted by Academy in 2015, the discount rate used in the model is calculated using historic data that does not reflect the current low-interest environment, nor the expected continuation of a low interest rate environment. Moody’s Analytics recommends updating the discount rate to include December 31, 2013 to December 31, 2020 data to better reflect the current and expected interest rate environment in conjunction with updated tax assumptions that reflect the 2017 Tax Act (see Section 3.5 for details).
3.3.2 Review and Analysis Performed by Moody’s Analytics

This section evaluates data and methods used in estimating the discount rate. The discount rate used in the C1 Factor Proposal is assumed to be the average ten-year LIBOR swap rate from December 31, 1993 to December 31, 2013, which is 5.02% pre-tax/3.26% after-tax. The numbers are then rounded to 5% pre-tax/3.25% after-tax (American Academy of Actuaries, 2015). If the discount rate is updated through April 30, 2017, the pre-tax rate drops to 4.2%, as documented in the Academy’s letter on February 14, 2018 (American Academy of Actuaries, 2018). It is recognized that this time window for the discount rate is chosen since the modeling work was conducted in 2015.

While Moody’s Analytics does not have access to the data used in the C1 Factor Proposal, or information about the exact data source, we use the 10-year USD swap rate from the Federal Reserve H.15 Daily Selected Interest Rates Release and Intercontinental Exchange (ICE) in our analysis. ICE data was used starting August 1, 2014, when the Federal Reserve System data series was discontinued.

Figure 1 shows the downward trend in the 10-year USD swap rate over the most recent two decades. The rate is below 3% for most of the 2011−2021 period. Since the Federal Reserve took extensive measures to support the economy during the global pandemic (Federal Reserve, 2020), the rate decreased further, often to under 1%. The November Minutes of the Federal Open Market Committee quotes, "The Committee decided to keep the target range for the federal funds rate at 0−¼% and expects it will be appropriate to maintain this target range until labor market conditions have reached levels consistent with the Committee's assessments of maximum employment and inflation has risen to 2% and is on track to moderately exceed 2% for some time" (the Federal Open Market Committee, 2020). Therefore, it is reasonable to assume that the current low interest rate environment will likely remain for an extended period, considering the 30-year treasury rate sat under 2% at the time we wrote this report.

With these observations in mind, Moody’s Analytics recommends updating the discount rate to include December 31, 2013 to December 31, 2020 data to better reflect the current and expected interest rate environment. Please note, the 2017 Tax Act took effect during this time window. Section 3.5 discusses the update to tax assumptions.

Source: Federal Reserve System (data prior to August 1, 2014) and Intercontinental Exchange (data on or after August 1, 2014).
3.4 Construction of the Representative Portfolio

3.4.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The segmentation and filtering of the sample portfolios used to construct the representative portfolio are not accompanied by economic justification or sensitivity analysis. For example, for reasons not explained, only NAIC1 and NAIC2 rated issuers are used to determine the number of bonds in the representative portfolio for all rating categories. In addition, each representative portfolio ultimately used in the simulation contains one rating category, which makes the final C1 factors heavily dependent on portfolio adjustment factors. Given the importance of the representative portfolio, we recommend more comprehensive documentation and robustness tests that can show whether the segmentation and filtering method has material impact on the C1 factors and explore the option of constructing a representative portfolio that contains all rating categories.

3.4.2 Review and Analysis Performed by Moody’s Analytics

Base C1 factors are intended to cover 96th percentile portfolio loss in excess of those anticipated in the statutory reserve over a 10-year horizon. The C1 factors are estimated using simulation methods described in Section 5.2. This section describes the representative portfolio analyzed in the simulation.

The representative portfolio for each rating category consists of bonds with the same initial rating. The number of bonds, as well as the holding amount of each bond in the portfolio, is determined according to the corporate bond holdings as of December 31, 2011, of the entire universe of 782 life insurers (portfolio size range from under $0.5 billion to $80 billion) provided by NAIC to the authors of the C1 Factor Proposal; Moody’s Analytics did not have access to these portfolios. In total, seven representative portfolios are created from life insurers in different size categories; only the portfolio created based on 24 insurers with portfolio size between $10−$25 billion is used in the end.

The C1 Factor Proposal constructs the reference portfolio by placing each credit portfolio into seven size categories, shown in Table 8. Under the argument that Category 6 contains the 50% cumulative Book Adjusted Carrying Value (BACV) point with a range of 33%−56% of industry BACV, the C1 Factor Proposal chose the 24 life companies’ portfolios in this category to form the basis of the representative portfolio.

Table 8: Life Company Size Categories

</tbody>
</table>

Bonds from these 24 portfolios are then ranked by BACV and segmented into 18 groups. Group 1, 2, 17, and 18 each hold 1/32 of the total BACV, while the remaining 14 groups hold 1/16 of BACV. In the final representative portfolio, the initial holding amount of bonds in each group is set to be the average BACV of the corresponding group from the 24 life insurer’s portfolio (last column of Table 9). The number of bonds in each group, on the other hand, is set to be the average (across 24 insurer’s bond portfolios) number of issuers in each group with rating NAIC-1 or NAIC-2. This results in a final representative portfolio with a total of 824 bonds across 18 groups, with each group’s total holding amount determined by the last column of Table 9.

---

13 Bonds guaranteed by the full faith and credit (FFC) of the U.S. government, affiliate bonds and zero value bonds are removed from the sample.

14 In total, seven representative portfolios are created from life insurers in different size categories; only the portfolio created based on 24 insurers with portfolio size between $10−$25 billion is used in the end.

While Moody’s Analytics understands the objectives and the need to construct a representative portfolio, given the spirit of the framework justifications for various modeling choices and implications were not included in the documents. A few that stand out:

1. It is not clear how the initial seven size categories used to segment life insurers are determined. Given that the definition of the size categories ultimately determines which life insurers’ portfolios are used to construct the representative portfolio, there may be a material impact on base C1 factors. It is unclear whether any robustness test was done to examine to what extent the definition of size categories affects the C1 factor.

2. Ultimately, only 24 out of 782 life companies’ portfolios are used to construct the representative portfolio. As recognized in the C1 factor Proposal, these 24 portfolios are much larger in size than the industry average. The implication is that the base C1 factors calculated based on the representative portfolio are only applicable to large life companies’ portfolios. For smaller insurers, the effectiveness of the C1 factors is almost entirely dependent on the model of portfolio adjustment factors, which lack model documentation and backtesting. Section 4.2 provides a detailed review of the portfolio adjustment factors.

3. It is not clear why the exercise used to count the number of issuers is limited to NAIC-1 and NAIC-2, given representative portfolios are ultimately assigned the same number of bonds across all rating categories. If we include the count of issuers with NAIC-3 and below ratings from the 24 insurers’ portfolios, the number of bonds in the final representative portfolio will increase accordingly, which will add diversification and lower the base C1 factor.

4. Each representative portfolio ultimately used in the simulation contains one rating category, which again makes the final C1 factors heavily dependent on portfolio adjustment factors, which we review in Section 4.2.

With these observations in mind, Moody’s Analytics recommends providing economic justification for and conducting robustness tests on the definition of life insurers’ size categories. Moody’s Analytics also recommends exploring a revision to the representative portfolio’s construction to include all ratings and possibly asset classes in a single representative portfolio.
3.5 Tax Assumptions

The U.S. corporate tax rate was lowered from 35% to 21%, in accordance with the 2017 Tax Reconciliation Act (Deloitte, 2018). Net capital gains included in the taxable income are subject to the 21% rule (CCH Group, 2019). While the model was developed based on historical data before the tax cut, the RBC factors, if adopted, will be applied to insurers, which will pay the updated tax rate. It will be worthy to consider updating the assumed 35% tax rate to 21%. Moody’s recommends analysis reflecting the current tax environment. 15

4 Modeling Framework

This section reviews the assumptions and methodologies that underpin the modeling framework. Section 4.1 reviews the economic state model, Section 4.2 explores portfolio adjustment factors, and Section 4.3 explores the Risk Premium.

4.1 Economic State Model

4.1.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

We have three main concerns regarding the economic state model, which are closely related to the discussion in Section 3.1. First, the two-state model does not accurately capture persistency in default and recovery rates across the credit cycle. Second, the economic state of LGD appears to be mistakenly disconnected from that of the default rate for ratings Baa-Caa. Third, the scaling factor used in differentiating default rates across expansions and contractions appears to be overly punitive for the investment-grade segment compared with historical patterns. Moody’s recommends a more holistic review for the choice of a framework that can address broader sets of issues, including more precise differentiation across asset classes, as discussed in other sections.

4.1.2 Review and Analysis Performed by Moody’s Analytics

To differentiate default rate and recovery rate during economic booms and downturns, the C1 Factor Proposal defines economic states according to the National Bureau of Economic Research’s (NBER) economic state classifications across the 1983–2012 period. Years 1991, 2001, 2008, and 2009 are classified as “contraction” years, while the remaining years are classified as “expansion” years. The baseline default rate is scaled up or down using an economic scalar for the economic state.

There are two models in the simulation process, as summarized in Table 10:

- The two-state model is used for recovery rates, and Aaa-A default rates, with the economic state in years one through ten drawn independently according to the probability summarized in Table 12.
- The four-state model is used for Baa-Caa default rates. It includes continuing expansion and continuing contraction states in addition to expansion and contraction states. The economic state in the first year is drawn from the probability distribution shown in Table 13. The states in subsequent years are dependent on the previous year’s state and follow the transition probabilities summarized in Table 14.

LGD is drawn from two different distributions corresponding to expansion and contraction state, respectively. Section 3.2.2 describes details.

---

15 The 2017 Tax Act repeals the 3-year carryback, 15-year carryforward period for life insurance companies’ operations losses. The Act provides that all corporations (including life companies) may carry NOLs forward indefinitely, but limits utilization of NOLs to 80 percent of a given year’s taxable income with no loss carryback capacity (Deloitte, 2018).

There are several data treatment and modeling assumptions that may be introducing bias and should be understood. First, the economic state model does not seem to capture serial correlations in defaults. The two-state model assumes the independence of economic states across years. Since default rate is calculated as the baseline default rate multiplied by an economic scalar, default rate is also assumed implicitly to be independent across the years. This assumption does not align with empirical patterns. For example, Figure 2 demonstrates the persistence in global corporate default rates of years before and after a peak.
While the dependence of economic states across years is established in the four-state model, the model may not be adequately capturing the default rate autocorrelation. The business cycle and the credit cycle do not perfectly overlap. As seen in Figure 3, multiple peaks in the U.S. high-yield default rate occurred outside the recession periods (Altman & Kuehne, 2016). It takes time for corporate fundamentals to weaken and reach the default point during a downturn.

Second, the default rate and recoveries for some ratings are modeled using different economic state scenarios. For Baa1-Caa3, default rate is modeled in the four-state model, while LGD is modeled using a separate two-state model. The ACLI’s replicated model is used to simulate the economic scenarios and test this modeling choice. Even if the four-state scenarios are mapped to two-state (for example, map continuing expansion to expansion), 23% of trials have different values from the separate two-state scenarios for LGD modeling. As a result, the default rate may be scaled up by the contraction economic scalar, while LGD is drawn from the distribution for expansion in any simulation trial.

Third, economic scalars used to scale the default rate across states are not adjusted for the remaining time to maturity (Years 1–10), referenced as leveled economic scalars. This approach fails to account for the default rate term structure effect. Specifically, Table 15 (American Academy of Actuaries, 2015) reports the original economic scalars directly calculated from the empirical data. We can see that the values of these scalar vary significantly across tenors. However, due to data noises, the pattern of these scalars is not always intuitive. Consequently, the C1 Factor Proposal compresses these economic scalars across tenors into a single
scalar for each economic state and rating, shown in Table 16 (American Academy of Actuaries, 2015). Taking Baa rating, for example, the leveled economic scalar for the contraction state is around 215%. This percentage is lower than the empirical scalar in Years 9–10 and higher than the empirical scalar in Years 1–8.

The use of leveled economic scalars seems to be, in general, overly punitive for investment-grade issues in early years when the default rates tend to be lower, and not sufficiently punitive in later years when default rates tend to be higher. We expect this will dampen concentrated losses overall, but need to assess the dynamics, along with a review of the base default rate term structure.

</table>

Given the fundamental nature of the economic state model in generating the factors, as well as potential limitations referenced in prior sections (Section 3.1, Default Rates, in particular, and subsequent sections, Section 5.2, Correlation, in particular), we recommend a more holistic review for a framework choice that can address a broader set of issues and would allow for more precise differentiation across asset classes and also more accurately capture issues related to the time-series dynamics discussed here.

In particular, and, as discussed in Section 3.1 and references therein, there have been material improvements in techniques and data availability to more accurately capture nuanced time series dynamics for rating migration and default across credit environments that address the observed path-dependency behavior of ratings, and more accurately model correlated recovery dynamics. These approaches are used in practice for a wide range of related applications and at a wide range of organization types. Moody’s Analytics recommends exploring these approaches.
4.2 Portfolio Adjustment Factors

4.2.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The portfolio adjustment factor is one of the most important elements of the model, as it ultimately determines the general RBC level for individual insurers. Unfortunately, documentation is limited, making it difficult to assess the materiality of some of the modeling choices. In addition, the limited documentation available suggests a potential material gap between the calculated C1 factor and its target level for individual insurers, especially smaller ones. Moody’s recommends: (1) more detailed documentation of the adjustment factor and the underlying economic justification, in conjunction with the doubling of C1 factors for the top-10 largest issuers; (2) further exploring the data and methods used to estimate the portfolio adjustment factors, to ensure they are effective for corporate as well as non-corporate issuers, (3) design the factors to align incentives with the economic risks, and (4) design a structure that brings together the portfolio adjustment factors along with the doubling of C1 of the 10 largest issuers.

4.2.2 Review and Analysis Performed by Moody’s Analytics

The base C1 factors reported in Table 4 represent the capital required for the representative portfolio described in Section 3.4 for each rating category. As recognized in the C1 Factor Proposal, an individual insurer’s portfolio can differ significantly from the representative portfolio in rating composition, number of bonds, and holding amount of each bond. Hence, adjustment to the base C1 factor according to the individual insurer’s portfolio characteristics is needed to avoid significant over/under capitalization. There are two proposed adjustments.

First, the C1 factors of the 10 largest issuers held across all debt related asset classes are doubled. The initial filter excludes bonds with C1 RBC equal to 0 and NAIC 1 bonds. As applicable after the first filter, if a top-10 issuer has NAIC 1 bonds, they are added back. Up to 10 bond issuers of a bond portfolio can be subject to the top-10 doubling rule for concentration risk.

Second, the proposed guidelines also include updated base C1 factor adjustment in the form of a scaling factor that is a function of the number of unique issuers in an individual insurer’s portfolio (see Table 5 for details). Regrettably, there is very limited documentation on exactly how these adjustment factors are calculated. To supplement our knowledge, we conducted several interviews with the ACLI and its members. Our best understanding is that the adjustment factors are calibrated roughly according to the following steps:

1. Collect the bond portfolios from 677 actual life insurers.
2. Run the simulation model described in Section 5.2 on these portfolios to determine the capital required to cover 96th percentile statistical safety level for each portfolio.
3. Determine the RBC for each bond in a portfolio using the base C1 factor reported in Table 4, multiplied by the scaling factor, which is tiered according to the number of issuers. Solve a set of optimal scaling factors, one for each portfolio size bucket (i.e., unique issuers in the portfolio), so that the scaled portfolio RBC matches the capital required from the simulation in Step 2 as closely as possible across all 677 portfolios.

While Moody’s Analytics recognizes the importance of these adjustments, we are left questioning the economic justifications of the modeling choices and their materiality:

1. Doubling of capital for the top-10 issuers:
   a. The treatment to double the base C1 factors for top-10 issuers seems arbitrary, why “10”, and not, say “20”? why “double”, and not, say, “triple”. In addition, it is also not clear why this treatment is needed on top of the portfolio adjustment factors.

2. The portfolio adjustment formula:
   a. “Issuer count” is a relatively coarse measure of diversification. While the portfolios used in estimating the relationships between the number of issuers and the cited adjustment factors may have exhibited the cited relationship, there is an incentive to manipulate portfolio composition by holding a small amount in many issuers, which can impact solvency risks. Ideally, the adjustment should align incentives with the economic risks. In this case, concentration is impacted by the total exposure to an issuer, as well as issuer characteristics, including default probability and terms and conditions, including maturity and expected recovery.
   b. The criteria determining the portfolio adjustment factor algorithm are not documented clearly, even though the factors have been updated multiple times. (American Academy of Actuaries, 2016), in June 2017 (American Academy of Actuaries, 2017) and in October 2017 (American Academy of Actuaries, 2017). The final portfolio RBC using the portfolio adjustment factor may deviate substantially from the actual capital needed for some insurer’s portfolio, even though, on average, the gap may be small. We note, that in a presentation deck.
prepared by Academy (Bennett & Owens, 2016), analysis is done comparing the C1 factors after the adjustment against the target level for all 677 portfolios based on an early version of the model. Figure 4 presents analysis results. Due to scaling issues, it is difficult for us to discern from the figure the exact magnitude of the gaps. It appears to be the case though that the gap, on a percentage scale, is larger for smaller sized portfolios, given that the dollar amount of the gap seems relatively flat across different portfolio sizes.

**Figure 4: Difference to Portfolio Target C1 Factor**

With no access to the underlying portfolios, and limited access to validation and backtesting that examines the appropriateness of doubling capital for the top-10 issuers, or the adjustment factors, especially for smaller portfolios, it is difficult for us to weigh in on the materiality of this issue directly. Rather, we conduct a set of stylized case studies described below.

The stylized case studies assess materiality of issuer diversification on portfolio risk. While the exercise quantifies issuer diversification effects, the simplifying assumptions are broad and provide indicative guidance for additional analysis — worth noting, the exercise abstracts from heterogeneity in notional (holding amount), maturity effects, as well as diversification across industry and asset class discussed elsewhere in this report. If the intent of the portfolio adjustment factors is to capture a more comprehensive set of diversification factors beyond issuer, then this exercise should be redesigned.

Table 17 presents portfolio adjustment formula calibrated to highly stylized Moody’s data and based on the standard deviation of losses for hypothetical A2 and Ba1 rated credit portfolios, with the adjustment normalized to the portfolio with 500 issuers. Each portfolio is analyzed separately, and all issuers are homogeneous with equal notional (weight) and with the following characteristics:

- Moody’s Idealized Default Probabilities, as specified in Table 7
- 0% recovery
- Moody’s Analytics GCcorr-implied one-step average pairwise default correlations for a sample of Moody’s corporate rated issuers, noting that other asset classes can exhibit very different pairwise correlation patterns.\(^{16}\)
  - A2 One-Year 0.6%
  - A2 Ten-Year 6.2%
  - Ba1 One-Year 3.1%
  - Ba1 Ten-Year 9.9%

We now compare how the factor adjustments relate to the number of issuers. Exploring the doubling the C1 for the 10 largest issuers, we can see the first 10 issuers of the One-Year A1 portfolio exhibits a risk level 3.13 times the level of the normalized 501\(^{16}\).

---

16 See Moody’s Analytics, 2008 for detailed methodology and validation.
Moving on to the portfolio adjustment factors, we see that for the aforementioned stylized homogeneous portfolios, most of the diversification is achieved with 200 issuers; increasing the number of issuers from 200 to 500 reduces the A2 One-Year adjustment by 2%, with limited diversification beyond 500.

Given the stylized nature of our exercise, as well as the limited access we had to the model and underlying data, we will not draw hard conclusions from comparing Table 17 against Table 5 that would suggest the proposed portfolio adjustment factors do appear to overly penalize insurers with smaller portfolios, a concern that has been echoed by the insurance industry. Rather, we interpret the stylized portfolio results in Table 17 as providing indicative guidance for needed additional analysis.

### Table 17: Portfolio Adjustment Formula Calibrated to Stylized Moody's Data for One- and Ten-Year Horizons

With these observations in hand, Moody’s recommends: (1) more detailed documentation of the portfolio adjustment factors, the underlying economic justification in conjunction with the doubling of C1 factors for the top-10 largest issuers; (2) further exploring the data and methods used to estimate the portfolio adjustment factors, and ensuring they are effective for corporate as well as non-corporate issuers; (3) designing the factors to align incentives with the economic risks; and (4) designing a structure that brings together the portfolio adjustment factors along with the doubling of C1 of the ‘10 largest issuers.

### 4.3 Risk Premium

#### 4.3.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The current assumption of setting the Risk Premium equal to expected loss appears to be overly conservative. While the C1 Factor Proposal recognizes the inconsistency, it points out that the 1992 guidelines defined the Risk Premium in this way, and in conjunction with other parameters, some of which (e.g., AVR) are beyond the scope of this report. While Moody’s appreciates the desire to incorporate conservativeness into assumptions, inputs for which accurate proxies are available should be directly used, and rather incorporate the conservative overlay into the final steps to facilitate model transparency. Moody’s recommends a broader evaluation of the various interconnected modeling decisions that lead to setting the Risk Premium at the expected loss level, and aligning the models with a general consensus across the actuarial community, including setting the Risk Premium at a one standard deviation loss.

#### 4.3.2 Review and Analysis Performed by Moody’s Analytics

The level of Risk Premium is an important assumption in the calculation of C1 factors. All else equal, the higher the Risk Premium, the lower C1 factors. While the C1 Factor Proposal recognizes the general consensus within the actuarial community that statutory reserves should at least cover moderately adverse loss, which is proxied as a one standard deviation loss [American Academy of Actuaries, 2015], the Risk Premium is set at expected credit loss, calculated as the sum of the product of baseline marginal default rate and average LGD from Years 1–10, with consideration of discounting, tax, and recoverable tax from loss.

While the authors of the C1 Factor Proposal recognize the inconsistency, they point out that the 1992 guidelines defined the Risk Premium in this way and in conjunction with other parameters, some of which (e.g., AVR) are beyond the scope of this report.
Moody’s recommends a broader evaluation of the various interconnected modeling decisions that lead to setting the Risk Premium at the expected loss level, and aligning the models with general consensus across the actuarial community, including setting the Risk Premium at a one standard deviation loss. This change should allow for better model transparency and consistency. This issue may be worth considering, along with the pending update to Statutory Accounting Principles that will likely be more aligned with CECL.

5 Key Elements Outside of the Defined Scope

This section reviews the assumptions and methodologies that were out of the Defined Scope. Section 5.1 reviews the applicability of using data based on Moody’s rated corporate bonds on all asset classes. Section 5.2 explores the simulation and correlation assumptions. Section 5.3 examines the maturity effect. Section 5.4 reviews the need to more explicitly account for interest income offsets. Section 5.5 discusses the impact of the difference in NRSRO ratings.

5.1 Applicability of Moody’s Rated Corporate Data to Other Asset Classes

5.1.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

C1 RBC base factors were developed using Moody’s default rate data on public corporate bond supplemented with S&P’s recovery data. After controlling for ratings, we find material differences in observed default, migration, and recovery dynamics across asset classes. These differences question the effectiveness of using Moody’s rated public corporate bond data for all asset classes. In the following subsections, we report in more detail our findings related to municipal bonds, structured assets, and private placements.

5.1.2 Municipal Bonds

This section assesses default and recovery dynamics and their comparability to corporate bonds. We first explore differences in default and recovery patterns and later explore data nuances. The authors of the C1 Factor Proposal explained the decision of not developing separate C1 factors for municipal bonds by citing "not able to locate any credible or reliable default or recovery studies (of municipals)". The authors also noted that the rating agencies did not update default studies based on calibrated ratings referencing the recalibration of municipal ratings to the global rating scale by Moody’s Investors Service in 2010 (American Academy of Actuaries, 2018). However, there have been material developments in the research of municipal bonds referencing the recalibrated ratings. As a starting point, we cite the observations from a recent study that explores all types of Moody’s rated municipal bonds between 1970 and 2019, and bases its findings on re-calibrated historical ratings of municipal bonds to the global rating scale for comparability with corporates (Moody's Investors Service, 2020). The study finds municipal bonds have: (1) experienced lower default rates, (2) lower rates of rating transitions, and (3) higher recovery rates, than corporate bonds. These observations may not be completely surprising, given municipal and corporate entities are driven by different key rating factors, which are attributed to the different fundamental strengths, weaknesses, and the inherent nature of each sector (Moody’s Investors Service, 2010), as demonstrated by their default patterns, which diverge from corporate borrowers, as seen in Table 18.

Delving into the differences:

First, after controlling for rating, historically municipal credits experienced significantly lower cumulative default rates (CDRs), on average, than corporates. These CDRs are calculated by grouping credits by their rating on a particular date into cohorts and then tracking their performance over time, similar to the cohort approach used in the C1 Factor Proposal. Cohorts are formed at monthly frequencies and then averaged over a year. For example, if a credit is rated Aaa on January 1, 2014, it would be grouped into a cohort of other credits rated Aaa on that date, regardless of its original rating (Moody’s Investors Service, 2020). Municipal bonds have lower or equal CDRs than global corporate across all horizons and rating categories, as shown in Table 18. Using the ten-year CDR, relevant when comparing with the C1 RBC factor model, investment-grade global corporate (2.25%) is significantly higher than that of municipal credits (0.1%). For speculative-grade, the CDR of global corporate (28.68%) is about four times the value of municipal credits (7.29%).
Second, the rating migration of municipal credits differs remarkably from corporate. Municipal ratings are more stable than corporate ratings over the one-year horizon, 1970–2019, as shown in Table 19. For example, on average, 94.63% of Aa rated municipal credit, where most reside, remain in the same rating category over one-year intervals, while only 85.3% of corporate credit does so.

Third, Average issuer-weighted recoveries on Moody’s-rated municipal bonds since 1970 have been about 68%, significantly higher than the issuer-weighted average 47.7% ultimate recovery rate for senior unsecured bonds of North American corporate issuers since 1987 (Moody’s Investors Service, 2020 (2)).

We now discuss nuances with the data (referenced in the Moody’s study) that should be recognized if used in estimating distinct municipal C1 factors.

First, municipal credits are concentrated heavily in investment-grade (see Figure 5). The average proportion of investment-grade for municipal bonds 1970–2019 is 98.9%, while only 62.2% of corporate bonds are rated investment-grade during the same period. Since there is a limited number of speculative-grade municipal bonds, data from other asset classes may be needed, should a separate model be developed for munipals.

Figure 5: Distribution of Moody’s Investors Service Ratings for Municipal Credits (1969–2019)

Source: (Moody’s Investors Service, 2020 (2))
Second, prior to 2010, municipal bonds were rated using the municipal rating scale, different from the corporate rating scale. Moody’s municipal ratings were recalibrated to the global rating scale in May 2010, in order to enhance the comparability of ratings across Moody’s rated asset classes. Historical municipal ratings have been adjusted to the global rating scale to ensure comparability of ratings before and after the 2010 rating recalibration exercise. The historical municipal ratings before mid-2010 were first shifted by the average notch of rating shift, by municipal rating scale and sector. If a credit’s adjusted rating immediately before the recalibration in mid-2010 differs from its realized recalibrated rating, then the realized recalibrated rating will be extended back to the last rating action date before April 2010. Appendix G of the referenced study (Moody’s Investors Service, 2020 (2)) provides a detailed adjustment methodology for historical municipal ratings.

With these observations in mind, Moody’s Analytics recommends using municipal default, migration, and recovery data in estimating distinct C1 factors for municipal credit.

5.1.3 Structured Assets

This section assesses the default and recovery dynamics of structured assets and their comparability to corporate bonds. We also evaluate the variations among structured sectors, before and after the Great Recession. As a starting point, we cite the observations from recent studies that explore Moody’s rated structured assets between 1993 and 2020 and the underlying data. The studies find marked differences in risk dynamics for structured assets issued on or after January 1, 2009. For the entire study period 1993–2020, structured assets have: (1) experienced higher impairment rates,17 (2) higher net rating downgrade rates,18 and (2) lower recovery rates than corporate bonds. For post-2009 issuance,19 structured assets have (1) close-to-zero impairment rates and (2) high net rating upgrade rates. These observations may not be completely surprising, given that structured assets experienced severe loss during the Great Recession, and regulations and market surveillance have strengthened over the past decade. We note that structured assets and corporate entities are driven by different key rating factors, which are attributed to the different fundamental strengths, weaknesses, and the inherent nature of each sector (Moody’s Investors Service, 2020 (3)). Moody’s differentiates structured finance ratings from fundamental ratings (i.e., ratings on nonfinancial corporate, financial institution, and public sector entities) on the global long-term scale by adding (sf) to all structured finance ratings. The addition of (sf) to structured finance ratings should eliminate any presumption that such ratings and fundamental ratings at the same letter grade level will behave the same. The (sf) indicator for structured finance security ratings indicates that otherwise similarly rated structured finance and fundamental securities may have different risk characteristics. Through its current methodologies, however, Moody’s aspires to achieve broad, expected equivalence in structured finance and fundamental rating performance when measured over a long period of time.

Delving into the differences:

First, structured assets have remarkably higher impairment rates than the global corporate, based on historical experiences 1993–2020 (see Table 20). For U.S. RMBS/CMBS/ABS, the impairment rates are at least multiple times higher than the corporate default rate, with U.S. RMBS on average comprising more than half of structured tranches 1993–2020h1. Only Global CLOs have lower impairment rates than corporate.

---

17 Due to the unique nature of structured assets, impairment is commonly used to describe the financial loss events. A security is impaired when investors receive — or expect to receive with near certainty — less value than would be expected if the obligor were not experiencing financial distress or otherwise prevented from making payments by a third party, even if the indenture or contractual agreement does not provide the investor with a natural remedy for such events, such as the right to press for bankruptcy (Moody’s Investors Service, 2020 (1)). There are two types of impairments — principal impairments and interest impairments. Securities with principal impairments are those that have not yet experienced an interest shortfall or principal write-downs or losses greater than 50 basis points (bps) of the tranche original balance or securities currently carrying C or C ratings, even if they have not yet experienced an interest shortfall or principal write-down. Securities with interest impairments, or interest-impaired securities, are those that are not principal impaired but have outstanding interest shortfalls greater than 50 bps of the tranche original balance. Because interest shortfalls are cured at fairly high frequency within a short period, we record an interest impairment only if the 50 bps shortfall has been outstanding for 12 months or longer (Moody’s Investors Service, 2020 (1)). The vast majority of impairments are principal impairments.

18 Net rating downgrade rate refers to the difference between 12-month average rating downgrade rate and upgrade rate.

19 Post-2009 issuance refers to structured asset securities issued on or after January 1, 2009.

Source: Moody’s Investors Service

In contrast, for post-2009 issuance, impairments become rare. The average one-year impairment is only 0.04% 2009–2019. U.S. RMBS, U.S. ABS, and Global CLOs even have zero impairment (see Table 21). There have been notable changes that may contribute to this strong performance (S&P Global, 2019).

» Regulation
  - Increased disclosure requirements, for instance, the simple, transparent, and standardized (STS) designation.
  - New risk retention rules for certain sectors, such as the 5% risk retention requirement for originators, and increased regulatory capital charges for some investors.
  - Limits to the origination of certain products, such as self-certified mortgages in the U.K., and increased focus on loan affordability, such as the ability-to-repay (ATR)/qualified mortgage (QM) rule in the U.S.

» Market structure
  - Shift toward nonbank sponsors and emergence of private portfolio lenders.
  - Less use of leverage by investors and more "buy and hold" investments.
  - Decreased rated issuance compared to pre-crisis levels.

» Securitization structures
  - More sequential pay structures which, all else equal, provide more protection to senior bondholders.
  - Generally, more seasoned and less leveraged structures.
  - Certain structures, such as subprime RMBS and CDOs of ABS, have broadly disappeared.

20 The default/impairment rates are the fractions of default/impairment from the empirical one-year rating transition matrices for global corporate and structured asset classes provided by Moody’s Investors Service.
21 CDOs of ABS are securities backed by a collateral pool made of other structured tranches. This is different from conventional ABS, such as ABS backed by student loans.
Second, the rating transition rates differ between structured assets and corporate, as well as among structured sectors. Given the relatively large number of structured sectors, Table 22 presents and summarizes the 12-month downgrade and upgrade rates for all structured securities issued in 1993–2020. Table 23 shows structured securities issued since 2009. We include Global Corporate's Corporate statistics 1984–2020 for comparison. As seen in Table 22, Global Structured Finance, overall, have a higher downgrade rate and a lower upgrade rate than Global Corporate (Hist avg. column). This appears to be driven by the performance of U.S. RMBS and Global CDOs. Excluding both sectors, Global Structured Finance has net downgrade rates of approximately 1.02% lower than Global Corporate (4.2%). Understandably, U.S. RMBS and Global CDOs were the most severely impacted sectors during the Great Recession.

In contrast, for structured securities issued since 2009 (see Table 23), Global Structured Finance has significantly lower downgrade rates (2.09%) 2009–2020 than Global Corporate (13.63%), while upgrade rates of both sectors are not very different. Remarkably, more Global Structured Finance ratings are upgraded than downgraded. On average, Global Structured Finance ratings have a net upgrade rate of 6.3%, while Global Corporate has a net downgrade rate of 4.2%.

Finally, the recovery rates of structured assets are notably different from corporate bonds. Given the scarcity of recovery data for the post-2009 issuance, we present recovery statistics 1993–2019. Moody’s Investors Service examined LGDs for the 24,714 global impairments, for which final resolved loss data is available.

During 1993–2019, the average LGD rate for all resolved principal impaired securities was 84% of the original balance. As seen in Table 24, realized final LGD rates by sector for resolved principal impairments 1993–2019. U.S. RMBS accounts for the vast majority of impairments among all structured asset classes, with U.S. CMBS a distant second. For investment-grade tranches by rating at issuance, U.S. RMBS and CMBS have significantly higher LGDs than U.S. ABS and Global CLOs, with Global CDOs having the highest LGD. For speculative-grade tranches, U.S. ABS and Global CLOs still have lower LGDs than U.S. CMBS.

In comparison, the issuer-weighted average ultimate recovery rate is 47.7% for North American senior unsecured corporate bonds issued since 1987, implying LGD of 52.3% (Moody’s Investors Service, 2020 (2)). U.S. RMBS/CMBS/ABS (both investment-grade and speculative-grade) all have higher LGDs than corporate. The investment-grade Global CLOs have lower LGD than corporate, while the speculative-grade CLOs have higher LGD than corporate.

While Moody’s Analytics recognizes the data challenges and model complexities of modeling the various structured asset classes across historic periods, the observations above are sufficiently stark enough that we recommend assessing the use of structured data on default/impairment, migration, and recovery when estimating distinct C1 factors for structured assets.

5.1.4 Private Placement Credits

This section assesses default and recovery dynamics of private placement credits and their comparability with Moody’s rated corporate bonds. Private placements refer to instruments, issued in reliance on a statutory or rule-based exemption from the registration requirements imposed by the Securities Act of 1933. Broker-dealers that recommend or sell private placements have additional requirements under FINRA and SEC rules, which include filing certain offering documents and ensuring the suitability of
any recommended investments (FINRA, 2021). Private placements are usually unrated by NRSRO but can have equivalent credit
designations from NAIC.

As a starting point, we cite the observations from a recent study that explores the default and recovery experiences of private
placement credits in 2003–2015 (Society of Actuaries, 2019). The study is based on data contributed by 20 insurers over the
2003–2015 period that covers 14,142 CUSIPs. The study finds that, when compared with comparable Moody’s rated corporates:

- Investment-grade private placement credits have experienced similar default rates
- Speculative-grade private placement credits have experienced higher default rates
- Placement credits have different rates of rating transitions
- Placement credits have higher recovery rates

Delving into the differences:

First, investment-grade default rates are low for both private placements issuers (0.15%) and public corporates (0.12%)
respectively (see Figure 6, the investment-grade column). Private issuers have higher default rates for all ratings Baa and lower.
Since the private placement data from the participating companies are heavily skewed towards investment-grade, the overall
default rate for rated bonds is lower for private issuers (0.51%) than Moody’s rated issuers (1.50%). The quality mix difference also
explains why private issuers have lower, overall speculative-grade default rates. The ratings of speculative-grade private issuers are
more concentrated in Ba, while Moody’s rated corporates are more concentrated in B and below.

Figure 6: Average one-year issuer default rates of public versus private issuer25

![Figure 6: Average one-year issuer default rates of public versus private issuer](source)

Source for public bonds: (Moody’s Investors Service, 2018)
Source for private bonds: (Society of Actuaries, 2019)

Second, the rating transition patterns differ between private placements and Moody’s rated corporates. As seen in Table 25,
constructed using the internal ratings of investors, private placements have a significantly higher probability of Withdrawn Rating

24 The default rates of private placement issuers are measured by incident rate of Credit Risk Events (CRE). CRE is parallel to default referenced by rating agencies
except for two other types of events:
- the sale of a private placement bond at a price less than or equal to 70 cents on the dollar
- any other credit event that a contributor substantiated as a default-like credit deterioration but, due to the nuances of the private placement market,
does not fit the definitions above. The purpose of including these types of events as CREs is to avoid understatement of the incidence of CREs for
situations that, in similar circumstances with public bonds, would have most likely resulted in a default.

25 The chart was constructed by the Society of Actuaries, with reference to data from Moody’s Investors Service.
(WR)\textsuperscript{26} than Moody's rated corporates (see Table 26) especially for Aaa and speculative grades. With the exception of Aaa, private placements have similar or lower rating transition rates than Moody's rated corporates for investment grade. For speculative grades, especially B and below, private placements have a higher rate of rating transition than Moody's rated corporates.

Third, the recovery rate of senior unsecured private placements 2003–2015 (62.2%) is higher than the issuer-weighted, average 47.7% ultimate recovery rate for senior unsecured bonds of North American corporate issuers since 1987 (Moody’s Investors Service, 2020 (2)). It is recognized that private placement credits have customized covenant protections to investors (Society of Actuaries, 2019). This could contribute to higher recovery rates for private placement credits than public corporate.

It is noted that the private placements data may be subject to challenges, such as change in asset IDs and miscoded ratings. While the Private Placement Experience Committee at the Society of Actuaries has reviewed and detected the data issues, some errors may remain and affect the rating transition matrices. In addition, the experience data was provided by 20 insurers and may not fully reflect the whole universe.

Since private placement credits have higher default rates for Baa and below ratings and higher recovery rate than what is observed for Moody’s rated corporates, additional data and analysis may be needed to assess whether C1 factors will be larger or smaller than currently proposed if private placement credits data is used for C1 factors development. While recognizing the data challenges and scarcity of references, Moody’s recommends exploring a centralized collection of default, migration, and recovery data that can later be used in further estimating distinct C1 factors and for other purposes.

\textsuperscript{26} Withdrawn Rating (WR) includes the events where assets have matured, been sold, or called. This classification also includes a very small proportion of assets that migrated from a letter rating to no rating submitted by the participating companies in the following year.
5.2 Simulation and Correlation

5.2.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations
The current C1 factor model does not account for variation in cross-industry and cross-asset class concentration risks nor diversification that may be different across life companies’ portfolios. These variations can be material, and we recommend additional analysis that assesses the materiality of abstracting from cross-industry and cross-asset class differentiation.

5.2.2 Review and Analysis Performed by Moody’s Analytics
The representative portfolio is simulated for each alphanumeric rating when computing C1 factors. For example, the C1 RBC factor for Aaa rated bonds is computed independently of the C1 factor for A or Baa ratings. The simulated economic state determines the leveled economic scalar that adjusts baseline default rates for each counterparty. If a bond defaults in any year $t$ before Year 10, then the full principal is assumed to be reinvested with the same initial rating and maturity $(10-t)$ years. For example, if an Aa1 bond defaults at Year 3, then the full principal is assumed to be reinvested in an Aa1 bond with 7 years maturity. The cashflows are discounted to present value by 5% pre-tax/3.25% after-tax per annum, approximately the average 10-year LIBOR swap rates 1994–2013. The tax rate for assets carried at market value is assumed to be 35%. 80% of tax is assumed to be recoverable when default occurs.

The approach of separately simulating each rating makes sense in the context of stylized sub-portfolios that exhibit no diversification benefits when combined. This is generally not the case with credit portfolios, which often have a range of industry, country, and asset-class (e.g., Muni, corporate) exposures. In addition, setting the representative portfolio as having the same level of counterparty concentration and its impact on portfolio risk is worth exploring further.

To better understand the materiality of cross-asset class diversification benefits, we explore their historical default rates and the extent to which they are correlated.

Figure 7 demonstrates historical default rates of speculative-grade municipal bonds and global corporates are not strongly correlated — if they were, the two series would move in lockstep. For example, during the 2001 dot-com bubble, when the speculative-grade corporate default rate skyrocketed, default of similar-rated municipal bonds remained rare. This follows, as municipal and corporate bonds are driven by different underlying risk factors.

Figure 7: Historical default rate of speculative-grade municipal bonds and global corporates

In a similar vein, Figure 8 presents the average annualized default probability, using the Moody’s Analytics EDF™ (Expected Default Frequency) credit measure, across all U.S. Financial and Non-financial publicly listed firms. We can see the Tech and Telecom companies deteriorated in credit quality during the early 2000s, with financial institutions weathering reasonably well. Financials’ default probabilities increased in a more pronounced manner at the onslaught of the Great Recession, and they have weathered the current COVID-19 crisis reasonably well.
Figure 8: Average One-Year Default Probabilities for Financials and Non-Financial Firms in the United States (normalized so that 2000 probabilities = 1%)

Source: Moody’s Analytics

The desire to model these correlations is recognized in (American Academy of Actuaries, 2015); the methodology and data did not lend to segmentation:

While credit recognized as we considered the use of default rates that varied by industry sector, however, there was limited data available. In addition, there are practical considerations with how to classify bonds by industry. Hypothetically, if sufficient data were available, a model with industry correlation factors could be built. As such data is not available, we assume correlations are implicit in the default data.

We recognize the challenges of using default data for rated corporate borrowers — in particular, the dearth of data limits segmentation. There, however, is a wide range of data and modeling approaches that have been developed to overcome this challenge. Moody’s Analytics GCorr™ global correlation model, for example, contains over 1,000 credit factors, with coverage including corporate credit (61 industries across over 100 countries) also relevant for CLOs, retail credit in the U.S. (with 6 retail asset types across 51 states/district) that is relevant for ABS and RMBS, over 100 sovereigns, and commercial real estate (with 5 property types across 73 MSAs) relevant for CMBS. When used in conjunction with Moody’s Analytics rating transition model we can obtain a granular representation of portfolio risk that accounts for correlated deterioration in credit and default. When used in assessing diversification, we find corporate industry credit factors within each country are, on average, in the order of 85% correlated, but can exhibit correlations as low as 70%. Meanwhile, cross-asset class diversification can be material, with retail, corporate, and commercial real estate factors often having correlations below 50%. While the impact on portfolio risk measures can be substantial, with reductions of in excess of 30%, when imperfect correlations are accounted for, Moody’s recognizes the impact is portfolio-specific and dependent upon the specific nature of the risk measures of interest (e.g., greatest default loss, standard deviation).

We further highlight the unique correlation behavior of structured assets, recognizing the underlying collateral often contains a large diversified pool of issuers. The diversified idiosyncratic risk often results in observed, higher level of correlations for structured assets when compared to, say, corporate credit of similar rating (Yahalom, Levy, & Kaplin, 2010).

Thus, our recommendation for additional analysis to assess the materiality of abstracting from cross-industry and cross-asset class differentiation.

5.3 Maturity Effect on Capital Factors

5.3.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The C1 factors do not differentiate risk across maturity. This can create a material distorted incentive to hold longer-dated bonds whose credit risk is more sensitive to the credit environment. Moody’s recommends exploring a maturity adjustment to the C1 factors.

27 For details, see (Moody’s Analytics, 2012), (Moody’s Analytics, 2020), and references therein.
5.3.2 Review and Analysis Performed by Moody's Analytics

RBC factors are calculated for a ten-year horizon and implicitly assume a maturity of 10 years for all bonds (American Academy of Actuaries, 2015). While the assumption provides simplicity, and the 10-year maturity is recognized as in-line with a modified duration of life insurance portfolios, the sensitivity of risk to maturity is material and can distort the desired composition of asset holdings. There are two aspects to this point:

- **Lifetime loss** — All else equal, including counterparty and recovery, the lifetime loss of a 10-year bond is greater than that of a seven-year or a one-year bond. A flat default probability term-structure would have lifetime loss increasing linearly with time to maturity; the 10-year bond faces roughly 10 times the expected lifetime loss as the one-year bond.

- **Correlated losses** — All else equal, including the expected default probability to maturity, default correlation across two counterparties will be lower if the maturity of one is shorter than the other. Events will impact the longer-dated bond after the maturity of the shorter-dated bond. To further intuit this dynamic, consider the extreme case of a consol bond with no maturity date and a one-year bond to the same counterparty. The events that lead to a default on the consol bond are likely to materialize well after the one-year bond matures.

With these observations, it is clear the proposed RBC factors should consider instrument-level maturity. It is worth exploring the assumptions along with the dynamics that are desired to be captured by the model. If the model is intended to measure capital over a 10-year horizon that includes future investments, assuming matured assets are rolled over, there is some (flawed) justification for treating all bonds as having a 10-year maturity. If, say, the one-year bond is rolled over for 10 years with the same counterparty, its lifetime loss will equate to that of the 10-year bond. Let's explore the two sources of maturity effects listed above:

- **Lifetime loss** — In general, insurance companies invest in high-quality credit, generally facing upward sloping default probability term structures; the 10-year default probability can often be many multiples larger than the 1-year default probability. After all, high credit quality names can only deteriorate in credit over time. Thus, the lifetime loss of the 10-year bond will be substantially higher than the lifetime loss of a strategy involving one-year bonds rolled over into high credit quality counterparties. Table 7 presents investment-grade Moody’s idealized cumulative expected default rates.28 For AAA, the one-year spot default rate is 0.0001%, while the 10-year spot rate is 0.0018% ((0.0100% - 0.0082%)/(1-0.0082%)), almost 20 times larger.

- **Correlated losses** — The issue outlined above continues to prevail. Default correlations will be lower across two counterparties if the maturity of one bond is shorter than that of the other.

With these observations in mind, we suggest exploring a maturity adjustment similar in spirit to the one found in regulatory capital guidelines for banks put forth by the Bank of International Settlements and described in (Basel Committee on Banking Supervision, 2005).

5.4 Investment Income Offsets

5.4.1 Summary of Moody's Analytics Significant Areas of Review and Recommendations

While investment income can be used to offset loss and support statutory surplus, the C1 factors are modeled with the implicit assumption that all investment profits are fully distributed to policyholders or used to absorb product or operational losses. This introduces a potential bias in differentiating investment income across assets, across rating categories, and across asset classes. Accounting for such heterogeneity in investment income can potentially lead to substantial differences in RBC factors across ratings and asset classes. Moody’s recommends more accurately differentiating investment income across assets in the C1 factors.

5.4.2 Review and Analysis Performed by Moody’s Analytics

C1 factors are intended to capture the minimum capital amount that protects statutory surplus from the fluctuations that reduce statutory surplus. While investment income can be used to offset loss and support statutory surplus, it is not explicitly modeled in the current framework under the implicit assumption that all investment profits are fully distributed to policyholders or used to absorb product or operational losses.29

---

28 For a detailed discussion of Idealized Default Rates and their use, see (Moody’s Investors Service, 2020 [1]).

29 There are two exceptions: the investment income generated by the Risk Premium portion of the fund (assumed to be 5%) and the risk-free income on capital included in the model.
This introduces a potential bias in differentiating investment income across assets, across rating categories, and across asset classes. Accounting for such heterogeneity in investment income can potentially lead to substantial differences in RBC factor across ratings and asset classes.

Per the [American Academy of Actuaries, 2015], the current C1 factors were last analyzed in 2002. While the methodology was changed, no changes were made to the original C1 factors first reported in 1994 as a result of this 2002 analysis. Since 1994, there has been a wide range of developments in the credit securities markets, and the sorts of credit that insurance companies are exposed to. Specifically, with the prevalence of increasingly complex credit securities, the relevance and variation in interest income have increased. In some cases, interest income plays a material role in the risk profile of a credit security that is not well approximated through the Risk Premium method. For example, according to [Wells Fargo Securities, 2020], structured instruments offer higher interest income compared to corporate bonds of the same rating. As of October 2020, the average investment-grade corporate bond OAS was 122bps, while the average CLO OAS for different investment-grade ratings ranged from 138-415bps, and the average non-agency CMBS OAS for different investment-grade ratings ranged from 103-892bps.

Moody’s recommends more accurately differentiating investment income across assets in the C1 factors.

### 5.5 Comparability Across NRSROs Ratings

#### 5.5.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The model is developed based on Moody’s ratings only. However, NAIC rating designations are typically determined by a set of NRSROs ratings. NRSROs have unique differences in credit rating methodologies and do not provide correspondence because they base their credit ratings on a range of qualitative, as well as quantitative, factors. This creates a challenge when mapping ratings across NRSROs to the various NAIC rating designations. It is plausible that the properties (such as default rate, recovery, etc.) of the NAIC rating in practice are substantially different from those of Moody’s rating used in the model development. With this in mind, we recommend an assessment of variation across NRSROs rating migration, default, and recovery rates, and across the credit cycle. If this is not possible because of, say, lack of historical data, Moody’s Analytics recommends revisiting the use of the second-lowest NRSROs rating in assigning the NAIC designation.

#### 5.5.2 Review Performed by Moody’s Analytics

The Credit Rating Agency Reform Act (CRARA) of 2006 requires that entities that meet defined criteria register with the SEC as a condition of being designated as NRSROs. As a result, as of the beginning of 2019, there were ten rating agencies certified as NRSROs by the SEC. The NAIC adopted the Filing Exempt (FE) rule, granting any NRSRO that has registered with the SEC and has been designated an NRSRO the right to apply and provide credit rating services to the NAIC. Per [National Association of Insurance Commissioners, 2017] the NAIC SVO provides equivalent NAIC designation for nine NRSROs. Per [National Association of Insurance Commissioners, 2007] the FE process will calculate the second-lowest NRSROs rating in assigning the NAIC designation.

The use of multiple NRSROs in the context of model development requires a quantitative correspondence between credit ratings and a range of migration, default probabilities, and loss expectations, that needs to be better understood, recognizing NRSROs assess different aspects of credit risk. For example, Standard & Poor’s recognizes that when, "assess[ing] the creditworthiness of an issuer, S&P Global Ratings evaluates the issuer’s ability and willingness to repay its obligations in accordance with the terms of those obligations... Credit rating agencies may also assess recovery, which is the likelihood that investors will recoup the unpaid portion of their principal in the event of default. Some agencies incorporate recovery as a rating factor in evaluating the credit quality of an issue, particularly in the case of non-investment-grade debt. Other agencies, such as S&P Global Ratings, issue recovery ratings in addition to rating specific debt issues. S&P Global Ratings may also consider recovery ratings in adjusting the credit rating of a debt issue up or down in relation to the credit rating assigned to the issuer (Standard & Poor’s, 2019)." Meanwhile, Moody’s Investor Service, the rating agency arm of Moody’s, takes the position that its “… ratings reflect both the likelihood of a default and the expected loss suffered in the event of default. Ratings are assigned based on a rating committee’s assessment of a security’s expected loss rate (default probability multiplied by expected loss severity)” (Moody’s Investors Service, 2020 (3)).

The Dodd-Frank Act required the SEC to review the feasibility and desirability of NRSROs credit rating standardization, including quantitative correspondence between credit ratings and a range of default probabilities and loss expectations under standardized conditions of economic stress. In their report to congress, [Securities and Exchange Commission, 2012], the Commission recognized the number and uniqueness of rating scales and differences in credit rating methodologies used by credit rating agencies, and that NRSROs do not provide such a correspondence, because they base their credit ratings on a range of qualitative, as well as
quantitative factors. With this in mind, we recommend an assessment of variation across NRSROs rating migration, default, and recovery rates, and across the credit cycle. If this is not possible because of, say, lack of historical data, Moody’s Analytics recommends revisiting the use of the second-lowest NRSROs rating in assigning the NAIC designation.

5.6 Climate Hazards and Emerging Risks

5.6.1 Summary of Moody’s Analytics Significant Areas of Review and Recommendations

The C1 factors do not explicitly consider climate hazards or emerging risks (e.g., pandemic or cyber). These risks may not be explicitly incorporated into NRSRO ratings and may not be reflected in the historical data used in estimating the C1 factors. While climate hazards are particularly relevant for the likes of real estate and municipal credit, growing evidence suggests climate hazards and other emerging risks can be material for corporate credit. Moody’s Analytics recommends exploring the potential impact of climate hazards and emerging risks on C1 factors across asset classes.

5.6.2 Review Performed by Moody’s Analytics

Climate hazards and emerging risks are drawing growing concerns from credit investors, financial regulators, and rating agencies. COVID-19 has demonstrated the rapid and cascading impacts of a global catastrophic risk that may not be explicitly considered in the NRSRO ratings and that may not be reflected in historical data. Pandemics — as well as climate hazards, debt crises, cyberattacks, and other events — are high-likelihood, high-impact risks (World Economic Forum, 2021).

Climate hazards have been recognized to impact municipal and commercial real estate credit. Climate hazards can be categorized into chronic and acute hazards. The impacts of the acute climate hazards, typically low-frequency and high-damage, may be worth special attention. Hurricane Harvey, for example, had Moody’s downgrade Port Authority (Steinberg, 2018). Climate hazards are increasingly recognized as a risk for longer-dated corporate credit (Levy & Freitas, 2019). One study finds that eighteen sectors with $7.2 trillion issues have high inherent exposure to physical climate risks (Moody’s Investors Service, 2020 (4)). The largest sectors in terms of rated debt include emerging market governments, regulated electric and gas utilities with generation, and integrated oil and gas companies. Moody’s Investors Service has put efforts to include environment, social, and governance (ESG) risk assessment in the rating issuance and monitoring process. Moody’s Investors Service launched a specialized ESG analytical team in March 2017 and published General Principles for Assessing Environment, Social and Governance Risks in January 2019. ESG factors were cited in half of public-sector rating actions taken in the 15 months through the first quarter of 2020 (Moody’s Investors Service, 2020 (5)). Likewise, S&P and Fitch have also been incorporating the ESG considerations into their ratings methodologies. For S&P, environmental and climate (E&C) concerns affected corporate ratings in 717 cases, or approximately 10% of corporate ratings assessments and resulted in a rating impact (an upgrade, downgrade, outlook revision, or CreditWatch placement) in 106 cases between July 2015 and August 2017 (S&P Global Ratings, 2017). Fitch Ratings developed an integrated scoring system, ESG Relevance Scores, which clearly displays how ESG factors impact individual rating decisions (Fitch Ratings, 2020).

Many regulators have been increasingly recognizing these risks. The European Central Bank (ECB), for example, speaks to “the number of catastrophes caused by natural hazards… Adjusting for inflation, overall economic losses… of USD 350 billion in 2018” (Lagarde, 2020). Governor Lael Brainard of the Federal Reserve speaks “we are already seeing elevated financial losses associated with… the frequency and intensity of extreme weather events” and cites the example of climate-related bankruptcy of Pacific Gas & Electric. She also points out “mortgages in coastal areas are vulnerable to hurricanes…” (Brainard, 2020). “Extreme weather…” is highlighted as one of the highest impact risks of the next decade in the Global Risks Report (World Economic Forum, 2020).

While being increasingly important considerations in NRSRO ratings, climate hazards and emerging risks may not be explicitly incorporated into historical NRSRO ratings nor reflected in the historical data used in estimating C1 factors. Moody’s Analytics recommends exploring the potential impact of climate hazards and emerging risks on C1 factors across asset classes.

30 See Moody’s Analytics Research Paper for an empirical assessment of financial impacts of climate-related hazard events (Cukanoglu, Milonas, Zhao, & Brizhatyuk, 2020)
31 Other factors such as changes in economic growth, budget deficits or leverage metrics are also considered. When a rating action cites an ESG issue as a material credit consideration, it does not necessarily mean that the issue was a key driver of the rating action.
6  Suggested Next Steps

As discussed in the Executive Summary, this report documents Moody’s Analytics objective assessment of the modeling process, the development of assumptions from underlying experience, and the adjustments to reflect diversification of individual company portfolios used in investment risk factors for fixed income assets. The report recognizes that C1 factors have potential implications for business decisions that can ultimately impact solvency. Moreover, Moody’s Analytics is aware of the significant effort involved in a broader redesign of C1 factors and understands the original scope was limited to model parameter updates and increased C1 factor granularity in the C1 Factor Proposal. Moody’s Analytics appreciates that since the original C1 factors were released in 1992, life insurance exposure to credit has increased in size and complexity, and that new data and techniques are now available that can better describe credit risk.

With these aspects in mind, we suggest a phased-in approach, whereby, targeted aspects of the model development are addressed immediately, recognizing that a broader redesign of C1 factors is also in order. Both the immediate changes, as well as the broader redesign, should have stakeholders prioritize items from Table 1, Table 2, and Table 3, along with potential items outside the scope of this report, recognizing that: (1) changing only one aspect must be done cautiously, given the interconnectedness of portfolio models, and that (2) the objective of allowing C1 factors and their impact on business decisions is to align with prudential management of solvency.

As discussed, the tight April deadline limits the possible items that can be revised during the first phase, focusing on the “slope” of charges across credit ratings and the portfolio adjustment function. The revisions should be approached in conjunction with stakeholders iteratively, as follows:

- Review and prioritize modifications to the proposed rules, along with the current rules as a point of reference.
- Assess and agree on performance criteria, along with possible data sources and methodologies.
- Propose updated model parameters and C1 factors, recognizing benchmarking and validation concerns including model limitations, and adhering to sound model risk management guidelines (Board of Governors of the Federal Reserve System and Office of the Comptroller of the Currency, 2011).
- Assess implications for solvency across the life insurance industry.

In addition, Phase 1 should include an articulation of model limitations related to the other items referenced in this document at a level of detail and adhering to a timeline to be determined jointly with stakeholders.

The Phase 2 broader redesign should start as soon as practical, prior to completion of Phase 1. It would not be completed in 2021, recognizing the lead time needed for data collection and research. It should be approached in conjunction with stakeholders in an iterative manner, as follows:

- Obtain clarity on the desired level of:
  - Model complexity (e.g., issuer concentration)
  - Granularity (e.g., differentiating across asset risks)
- Assess cost implications
  - Resources, including personnel, to develop and implement models within a sound model risk management framework
  - Data collection
  - Model monitoring and model re-development
- Articulate governance — potentially impacting organizational structure at insurance companies and NAIC
  - Control mechanisms through policies and procedures associated with model development, validation, implementation, and use
- Propose redesigned C1 factors
  - Assess and agree on performance criteria, along with possible data sources and methodologies
  - Propose updated model and C1 factors, recognizing benchmarking and validation concerns, including model limitations, and adhering to sound model risk management guidelines (Board of Governors of the Federal Reserve System and Office of the Comptroller of the Currency, 2011)
  - Assess implications for solvency across the life insurance industry

registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies that are registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

MOODY’S and its affiliates are engaged in various lines of business, and certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody’s Investors Service and have also publicly represented to MOODY’S in any form or manner.

MJKK and MSFJ hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by Moody’s Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody’s Corporation, a fee ranging from $1,000 to approximately $2,700,000.

Additional terms for Japan only: Moody’s Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody’s Corporation. MJKK hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK have, prior to assignment of any credit rating, agreed to pay to MJKK for credit ratings opinions and services rendered by Moody’s Investors Service, Inc., a wholly-owned subsidiary of Moody’s Corporation, a fee ranging from JPY125,000 to approximately JPY250,000,000. MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.
Assessment of Proposed Revisions to the RBC C1 Bond Factors
Moody’s (NYSE:MCO) is a global integrated risk assessment firm that empowers organizations to make better decisions. Its data, analytical solutions and insights help decision-makers identify opportunities and manage the risks of doing business with others. We believe that greater transparency, more informed decisions, and fair access to information open the door to shared progress. With over 11,400 employees in more than 40 countries, Moody’s combines international presence with local expertise and over a century of experience in financial markets. Learn more at moodys.com/about.

Moody’s Corporation is comprised of two separate companies: Moody's Investors Service and Moody's Analytics.

Moody’s Investors Service (MIS) provides investors with a comprehensive view of global debt markets through credit ratings and research. Moody's Analytics provides data, analytics, and insights to equip leaders of financial, non-financial, and government organizations with effective tools to understand a range of risks.

Throughout this document, “Moody’s” rating refers to an MIS rating. And while references to MIS are made, the views and opinions in this document are solely of Moody’s Analytics.
Agenda

1. Project Overview
2. Key Findings
3. Recommended Next Steps

Appendix I. Detailed Phase 1 Scope
Appendix II. Detailed Significant Areas of Review and Recommendations
Project Overview
Background

Timeline

» On October 22, 2020, the ACLI, in conjunction with the NAIC, put forth a public RFP to assess the proposed RBC C1 Bond Factors.
» On December 4, 2020 Moody’s Analytics was awarded the RFP.
» Moody’s Analytics delivered the final report and recommendations for public comment on February 1, 2021.

Why Moody’s Analytics?

» Objective reputation
» Credit portfolio risk thought leader;
   RiskFrontier used by 9 of 12 largest North American life insurers for tail risk
» Comprehensive and granular asset correlations, built using decades of data and default risk experience
» Proprietary default datasets, across multiple asset classes, that can be used to inform our analysis
» Fixed income market data, sourced from multiple authorities, including Moody’s Investors Service, with access to underlying data across asset classes, including Corporates, Municipals, Structured, and CRE
» Decades of experience with regulatory initiatives, including IFRS 17, CECL, IFRS 9, Basel, CCAR.
» Experience directly supporting regulators in defining capital guidelines
RFP Requirements

Assess the proposed required capital factors for the default risk on bonds.
Review the proposed revisions to the RBC C-1 bond capital factors, including supporting documentation of the development of assumptions and modeling process, and stakeholder feedback on the proposed revisions, focused on concerns with the modeling process, the development of assumptions from underlying experience, and the adjustments to reflect diversification of individual company portfolios.

Moody’s Analytics objective opinion based on access to supporting documentation and stakeholder feedback, including the NAIC, ACLI and its members

Practical recommendations

» Quantifying identified risks intended to be captured by C1 factors
» Using data and modeling approaches recognized as best practice and that meet financial industry standards (documentation, model validation, back-testing, performance benchmarking…)
» Acknowledging impact on business decisions through regulatory capital arbitrage incentives, shifting asset holdings, effecting solvency, macroprudential resiliency, and capital markets
Proposed C1 Factors: Context

The Academy's Defined Scope was dictated by the NAIC RBC Working Group and limited to:

» Updated data
» Expansion to 20 designations
» Maintaining the modeling structure designed ~30 years ago (cutting edge for the early 90s)

The report is not limited to the Defined Scope, rather it takes a broader view, recognizing:

» Modeling techniques and data availability have evolved with capital markets (e.g., structured assets)
» Life insurance asset holdings have changed along with capital markets
Key Findings

2
Proposed C1 Factors: Areas of Concern

Not using best practice with data and modeling choices
» This includes items within the Defined Scope, as well as items outside of the Defined Scope, that Moody’s feels are relevant and material.

Model documentation, does not generally meet financial industry standards. Critical for ongoing model monitoring and model updates. With limited articulation of model limitations, the potential for distorted business use has implications for solvency.
» Incomplete documentation
» Incomplete model validation, back-testing, and performance benchmarking
» Incomplete articulation of model limitations
**Modeling and Data Concerns Within Defined Scope**

Methodologies used in estimating default rates and recovery rates do not lend themselves to statistical properties of the data, including:

- Appropriately capturing the risks across ratings when applying the methodology across the granular 20 designations, considering limited data availability and the statistical properties of ratings and default.
- Calibration of the portfolio adjustment function to accurately capture the benefits of diversification. The current proposal may be overly punitive to holdings of smaller life insurance companies. The rational for doubling of C1 factors of the 10 largest issuers is also unclear.

**Overly conservative assumption for the risk premium**

- Inputs for which accurate proxies are available, as in the case with the risk premium, should be directly used to facilitate transparency and avoid inadvertent risk shifting across categories. Conservatism can be added in the final stage (i.e., when setting percentile loss).

**Dated discount rate and tax assumptions**
Modeling and Data Concerns Outside the Defined Scope

Lack of differentiation across asset classes (e.g., corporate, structured, municipal credit), maturity, and investment income offsets

» Rating agencies recognize that the fundamental risk drivers differ across asset classes.

» The report finds material differences in observed default, migration, and recovery dynamics across asset classes.

The use of multiple NRSROs given their potential lack of comparability

» NRSROs have unique differences in credit rating methodologies and do not provide correspondence, because they base their credit ratings on a range of qualitative, as well as quantitative, factors.

The economic state modeling framework does not lend itself to statistical properties of default and recovery dynamics

Lack of consideration for climate hazards or emerging risks (e.g., pandemic or cyber)

» These risks may not be explicitly incorporated into NRSRO ratings and may not be reflected in the historical data used in estimating the C1 factors.
Recommended Next Steps
A Phased-In Approach is Recommended

**Phase 1: Moody’s to Propose C1 Factors**

Delivered to the LRBCWG and exposed on or before April 30 for comment

Final factors to be approved by both LRBCWG and CADTF by June 30

*Model development within Defined Scope and aligning with current Official NAIC Annual Statement Blank*

Consensus-driven approach on methodologies and data across the NAIC, ACLI and its members. Documentation includes model validation and limitations that meet financial industry standards.

**Phase 2: Long-term partnership through 2022+**

*Modeling and data updates outside the Defined Scope*, providing NAIC data and tools to better understand and articulate life insurance companies’ credit portfolio risks, recognizing range of holdings have changed materially since C1 factors were introduced.

» **Broader model development**, including cross-asset class differentiation, prioritized with stakeholders, with methodologies and data that meet financial industry standards.

» **Overall model documentation**, that meets financial industry standards, in particular covering elements of the model not modified in Phase 1.

» **Data consortium**, covering private placements and possibly other asset classes.
Phase 1 Timeline
Scope defined jointly with stakeholders while recognizing timeline constraints

By March 31
- V1 proposed factors, iterating with NAIC and ACLI
  - Consensus on methodology, data, and performance criteria
  - Consensus on target probability
- V1 light documentation
- V1 initial industry impact analysis

By April 30
- Delivered to the LRBCWG and exposed for comment
- Initial documentation and validation
- Impact analysis, iterating with NAIC and ACLI
  - Consensus on methodology, data, and limitations
  - Consensus on target probability
- Initial focus group discussions and training

By June 30 (Iterating with NAIC/ACLI as needed)
- Final factors to be approved by both LRBCWG and CADTF
- Final documentation and validation of factors that meet financial industry standards
- Final focus group discussions and training
Phase 2 Broader Model Development

Approached in conjunction with stakeholders iteratively

**Obtain clarity** on the desired level of:
- Model complexity (e.g., issuer concentration)
- Granularity (e.g., differentiating across asset risks)

**Assess cost implications**
- Resources, including personnel, to develop and implement models
- Data collection
- Articulate governance — potentially impacting organizational structure at insurance companies and NAIC

**Propose redesigned C1 factors**
- Assess and agree on performance criteria, along with possible data sources and methodologies
- Propose updated model, and C1 factors that meet financial industry standards
- Assess implications for solvency across the life insurance industry
Appendix I

Detailed Phase 1 Scope
Phase 1: Final scope to be agreed on by stakeholders

**Base factors**

- Risk Premium: Use 1 standard deviation loss (rather than mean)
- Updated discount and tax rate assumptions
- PD and LGDs
  - Use Idealized Default Rates
  - Re-estimate LGD with date errors fixed
  - Fix LGD error in economic state model
  - Limitation - economic state scalar would remain unchanged
- Obtain a representative set of corporate bond holdings and ratings across life insurance companies
- OPTIONAL - Portfolio construction requires an additional [uncertainty has no guarantee of delivery for Phase 1, but will be usable for Phase 2]
  - Explore alternative portfolio construction methods
- Iterate with NAIC on target probability to ensure “average” level, in-line with NAIC risk tolerance
- Iterate with industry on slope and impact

**Portfolio adjustment Function**

- Integrate the doubling of 10 largest holdings requirement with portfolio adjustment function
- Explore alternative regression approaches such as equal weighted error minimization rather than dollar weighted, to allow for better description for small insurance companies
- Assessment of concentration risk using Moody’s Analytics internal benchmarks, which would be made public
- Iterate with NAIC on target probability to ensure “average” level, in-line with NAIC risk tolerance
- Iterate with industry on impact
Appendix II

Detailed Significant Areas of Review and Recommendations
# Review of Key Inputs

Summary of significant areas of review and recommendations

| Default Rates | The methodologies used by the C1 Factor Proposal to construct default rates across ratings, as well as methodologies used in differentiating default rates across expansion and contraction states, face data limitation challenges. Moody’s Analytics recommends updating the methodologies and using additional data referenced in the review that have been demonstrated to better capture credit dynamics. |
| Recovery Rates | The C1 Factor Proposal’s method used to recognize the recovery date does not align with the date of default. This deviation can result in bias with recovery rate levels, as well as their relationships with default rates. Moody’s Analytics recommends exploring the use of more accurate data and groups when describing recovery distributions and utilizing more current techniques that link recovery with the credit environment. |
| Discount Rate | Since the modeling work was conducted by Academy in 2015, the discount rate used in the model is calculated using historic data that does not reflect the current low-interest environment, nor the expected continuation of a low interest rate environment. Moody’s Analytics recommends updating the discount rate to include December 31, 2013 – December 31, 2020 data to better reflect the current and expected interest rate environment, in conjunction with updated tax assumptions that reflect the 2017 Tax Act. |
| Construction of the Representative Portfolio | The segmentation and filtering of the sample portfolios used to construct the representative portfolio lack economic justification or sensitivity analysis. For example, for reasons not explained, only NAIC1 and NAIC2 rated issuers are used to determine the number of bonds in the representative portfolio for all rating categories. In addition, each representative portfolio ultimately used in the simulation contains one rating category, which makes the final C1 factors heavily dependent on portfolio adjustment factors. Given the importance of the representative portfolio, we recommend more comprehensive documentation and robustness tests that can show whether the segmentation and filtering method has material impact on the C1 factors and explore the option of constructing a representative portfolio that contains all rating categories. |
| Tax Assumptions | The U.S. corporate tax rate was lowered from 35% to 21% in accordance with the 2017 Tax Reconciliation Act (Deloitte, 2018). Net capital gains included in the taxable income are subject to the 21% rule (CCH Group, 2019). While the model was developed based on historical data before the tax cut, the RBC factors, if adopted, will be applied to insurers, which will pay the updated tax rate. It will be worthy to consider updating the assumed 35% tax rate to 21%. Moody’s Analytics recommends analysis reflecting the current tax environment. |

Assessment of the Proposed Revisions to the RBC C1 Bond Factors, February 2021

The current assumption of setting the Risk Premium equal to expected loss appears to be overly conservative. While the C1 Fac tor
Proposal recognizes the inconsistency, they point out that the 1992 guidelines defined the Risk Premium in this way and, in
conjunction with other parameters, some of which (e.g., AVR) are beyond the scope of this report. While Moody’s Analytics
appreciates the desire to incorporate conservativeness into assumptions, inputs for which accurate proxies are available shou ld be
directly used, and rather incorporate the conservative overlay into the final steps to facilitate model transparency. Moody’s Analytics
recommends a broader evaluation of the various interconnected modeling decisions that lead to setting the Risk Premium at the
expected loss level, and aligning the models with a general consensus across the actuarial community, including setting the R isk
Premium at a one standard deviation loss.

The portfolio adjustment factor is one of the most important elements of the model, as it ultimately determines the general R BC level
for individual insurers. Unfortunately, documentation is limited, making it difficult to access the materiality of some of th e modeling
choices. In addition, the limited documentation available suggests a potential material gap between the calculated C1 factor and its
target level for individual insurers, especially smaller ones. Moody’s Analytics recommends: (1) more detailed documentation of the
adjustment factor and the underlying economic justification, in conjunction with the doubling of C1 factors for the top -10 largest
issuers; (2) further exploring the data and methods used to estimate the portfolio adjustment factors, to ensure they are eff ective for
corporate as well as non-corporate issuers, (3) design the factors to align incentives with the economic risks, and (4) design a
structure that brings together the portfolio adjustment factors along with the doubling of C1 of the 10 largest issuers.

Portfolio
Adjustment
Factors

Risk Premium

We have three main concerns regarding the economic state model, which are closely related to the discussion in Section 3.1. F irst,
the two-state model does not accurately capture persistency in default and recovery rates across the credit cycle. Second, the
economic state of Loss Given Default (LGD) appears to be mistakenly disconnected from that of default rate for ratings Baa -Caa.
Third, the scaling factor used in differentiating default rates across expansions and contractions appears to be overly punit ive for the
investment-grade segment compared with historical patterns. Moody’s Analytics recommends a more holistic review of the choice of a
framework that can address broader sets of issues, including more precise differentiation across asset classes, as discussed in other
sections.

Review of Elements Outside of the Defined Scope

Summary of significant areas of review and recommendations

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Applicability of Moody’s Rated Corporate Data to Other Asset Classes</strong></td>
<td>C1 RBC base factors were developed using Moody’s default rate data on Moody’s rated public corporate bonds (this report, as well as references herein, uses public corporate and Moody’s rated corporate interchangeably) supplemented with S&amp;P’s recovery data. After controlling for ratings, we find material differences in observed default, migration, and recovery dynamics across asset classes. These differences question the effectiveness of using public corporate bond data for all asset classes. Moody’s Analytics recommends evaluating the possibility of estimating distinct C1 factors using asset-class specific data. For private placements, in particular, Moody’s Analytics recommends exploring a centralized collection of default, migration, and recovery data that can later be used in further estimating distinct C1 factors and for other purposes.</td>
</tr>
<tr>
<td><strong>Simulation and Correlation</strong></td>
<td>The current C1 factor model does not account for variation in cross-industry and cross-asset class concentration risks nor diversification that may be different across life companies' portfolios. These variations can be material, and we recommend additional analysis that assesses the materiality of abstracting from cross-industry and cross-asset class diversification.</td>
</tr>
<tr>
<td><strong>Maturity Effect on Capital Factors</strong></td>
<td>The C1 factors do not differentiate risk across maturity. This can create a material distorted incentive to hold longer-dated bonds whose credit risk is more sensitive to the credit environment. Moody’s Analytics recommends exploring a maturity adjustment to the C1 factors.</td>
</tr>
<tr>
<td><strong>Investment Income Offsets</strong></td>
<td>While investment income can be used to offset loss and support statutory surplus, the C1 factors are modeled with the implicit assumption that all investment profits are fully distributed to policyholders or used to absorb product or operational losses. This introduces a potential bias in differentiating investment income across assets, across rating categories, and across asset classes. Accounting for such heterogeneity in investment income can potentially lead to substantial differences in RBC factors across ratings and asset classes. Moody's Analytics recommends more accurately differentiating investment income across assets in the C1 factors.</td>
</tr>
<tr>
<td><strong>Comparability Across NRSROs</strong></td>
<td>The model is developed using Moody’s rating only. However, NAIC rating designations are often determined by a set of NRSROs ratings. NRSROs have unique differences in credit rating methodologies and do not provide correspondence because they base their credit ratings on a range of qualitative, as well as quantitative, factors. This creates a challenge when mapping ratings across NRSROs to the various NAIC rating designations. It is plausible that the properties (such as default rate, recovery, etc.) of the NAIC rating in practice are substantially different from those of Moody’s rating used in the model development. With this in mind, we recommend an assessment of variation across NRSROs rating migration, default, and recovery rates, and across the credit cycle. If this is not possible because of, say, lack of historical data, Moody’s Analytics recommends revisiting the use of the second-lowest NRSROs rating in assigning the NAIC designation.</td>
</tr>
<tr>
<td><strong>Climate Hazards and Emerging Risks</strong></td>
<td>The C1 factors do not explicitly consider climate hazards or emerging risks (e.g., pandemic or cyber). These risks may not be explicitly incorporated into NRSRO ratings and may not be reflected in the historical data used in estimating the C1 factors. While climate hazards are particularly relevant for the likes of real estate and municipal credit, growing evidence suggests climate hazards and other emerging risks can be material for corporate credit. Moody’s Analytics recommends exploring the potential impact of climate hazards and emerging risks on C1 factors across asset classes.</td>

Philip A. Barlow, FSA, MAAA
Chair, Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Re-alignment of RBC Guidance and INT 20-03 Modification Dates

Dear Mr. Barlow and Working Group Members:

The Mortgage Bankers Association and the American Council of Life Insurers respectfully recommend that the Life Risk-Based Capital Working Group (LRBCWG) modify its Additional Guidance on the Financial Condition (E) Committee’s Guidance for Troubled Debt Restructurings (RBC Guidance) to align the modification period with revised INT 20-03, Restructuring Due to COVID-19.

Troubled debt restructurings (TDR) relief under both the RBC Guidance and INT 20-03 was issued in furtherance of the E Committee’s statement of support for “the use of prudent loan modifications that can mitigate the impact of COVID-19.” Accordingly, the E Committee, Statutory Accounting

---

1 The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 280,000 people in virtually every community in the country. Its membership of over 2,300 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, 70 life insurance companies engaged in real estate finance, and others in the mortgage lending field. For additional information, visit MBA’s website: www.mba.org.

2 The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 95 percent of industry assets in the United States. Learn more at www.acli.com.

3 See RBC Guidance, p. 1 ("This guidance is being issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. The Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-...")
Principles Working Group (SAPWG), and LRBCWG have taken actions necessary to align the RBC Guidance and INT 20-03 modification periods for the reporting periods ending June 30, September 30, and December 31, 2020.

On January 25, 2021, SAPWG revised the modification period under INT 20-03 to conform to the TDR provision of the CARES Act, as amended by the Consolidated Appropriations Act, 2021, which was signed into law on December 27, 2020. As a result, INT 20-03 now applies to modifications that occur during “the period ending on the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19), outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates.” In contrast, the modification period under the RBC Guidance ended December 31, 2020.

To re-align modification periods under RBC Guidance with INT 20-03, we recommend that the LRBCWG revise its Additional Guidance dated October 9, 2020, as follows:

**Origination Date, Valuation Date, Property Value, and 90 Days Past Due**

For purposes of the Description/explanation of item in the Risk-Based Capital Reporting Instructions for Date of Origination (2), Property Value (20), Year of Valuation (21 and by reference Quarter of Valuation - 22), and 90 Days Past Due? (29), no changes to these values are required for any COVID-19 related modifications that occur during the period ending on the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19), outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates. This guidance is consistent with the Financial Condition (E) Committee Guidance for Troubled Debt Restructurings for March 31 - September 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings (where required) (June 12, 2020) and Question and Answer issued by the NAIC but extended for COVID19 modifications that occur through the end of the period described above.

To facilitate insurer’s planning and reporting activity, we urge LRBCWG to make such a revision as early as possible during the reporting period ending March 31, 2021.

Respectfully,

Mike Flood  Paul S. Graham, III

Attachment: INT 20-03. Troubled Debt Restructuring Due to COVID-19 (revised January 25, 2021)

Life Risk-Based Capital (E) Working Group
Virtual Meeting
January 21, 2021

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Jan. 21, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Thomas Reedy (CA); Deborah Batista (CO); Wanchin Chou (CT); Sean Collins (FL); Vincent Tsang (IL); Mike Yanacheak (IA); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Exposed the ACLI’s Real Estate Proposal

Mr. Barlow reminded the Working Group that this proposal was originally presented to the Investment Risk-Based Capital (E) Working Group and is now for this Working Group’s consideration. He said work on this was done a few years ago but was delayed while work on the bond proposal was done, and now the goal is to implement this proposal at the same time as the proposal for bonds.

John Bruins (American Council of Life Insurers—ACLI) said he believes the focus of this meeting is to review and, hopefully, expose the structural changes with a more robust discussion of the proposal and the factors during a subsequent meeting. Mr. Barlow concurred.

Mr. Bruins said a brief overview of the proposal was provided during the Dec. 17, 2020, meeting. He said Rich McLemore (MetLife), representing the ACLI, would continue that discussion, but that he would discuss the two parts of the proposal that require structural changes in more detail after that.

Mr. McLemore said the proposed changes are important to industry and that the ACLI’s analysis shows that they are warranted. He said the current methodology unduly limits life insurance companies’ access to a large and important higher returning asset class during today’s low-rate environment when stable and consistent income is already difficult to source. He said the current framework keeps life insurance company capital largely on the sidelines of a market that can provide good portfolio diversification and aid in effective asset-liability management.

The current real estate equity risk-based capital (RBC) framework assesses a 15% base RBC charge on wholly owned directly held real estate investments that are reported on Schedule A, except for foreclosures, and a higher 23% charge on foreclosures and all other real estate investments that are held through fund, joint ventures or other structures and reported on Schedule BA. This framework and charges were implemented years ago at a time when private real estate investment performance history was limited. At that time, the factor was estimated based on an assumed relationship between private real estate and common stocks.

Mr. McLemore said that 30 years ago, the recommendation was for ongoing study, and to date, no subsequent complete study has been done. He said that today, the actual sector performance data depth and history required to assess an appropriate charge more accurately is available, and the appropriate charge is much lower than was originally estimated. He said this is the component of the proposal that recommends lowering the factor applied to real estate.

The current real estate equity risk-based capital (RBC) framework assesses a 15% base RBC charge on wholly owned directly held real estate investments that are reported on Schedule A, except for foreclosures, and a higher 23% charge on foreclosures and all other real estate investments that are held through fund, joint ventures or other structures and reported on Schedule BA. This framework and charges were implemented years ago at a time when private real estate investment performance history was limited. At that time, the factor was estimated based on an assumed relationship between private real estate and common stocks.

Mr. McLemore said that 30 years ago, the recommendation was for ongoing study, and to date, no subsequent complete study has been done. He said that today, the actual sector performance data depth and history required to assess an appropriate charge more accurately is available, and the appropriate charge is much lower than was originally estimated. He said this is the component of the proposal that recommends lowering the factor applied to real estate.

Mr. McLemore said in the original estimation of RBC charges for real estate, a risk premium was assessed on assets that were held in fund, joint venture or other structures, as the lower levels of investment control by the life company, and the overall lower transparency of the investments, was thought to substantially increase the potential risk. He said a subjective 50% premium was assessed in order to account for this perceived increased risk, which brought the factor for these investments up to 23%. He said that today, in many cases, real estate investments can be held in structures mostly to reduce risk.

In the simplest case, Mr. McLemore said one only has to look at limited liability companies, which is a structure implemented almost solely to protect the insurance company from the risks associated with claims at the properties, like accidents or joint ventures, which are often structures used by insurance companies to align interests with local expert investors and managers of real estate investment assets. In the proposal, he said the ACLI is asking for reconsideration of the assumed higher risk level, and higher RBC charge, associated with these Schedule BA real estate assets.
Mr. McLemore said the final key aspect of the proposal is a proposed adjustment to required individual property RBC that will account for the cushion against RBC losses that is often created in real estate assets as they are held over time. He said the RBC factors that exist today, and even the new lower factors that are proposed, are based on market value volatility in our sector. However, he said the real estate assets are reported for statutory accounting using depreciated cost, and each year the asset’s statutory value declines, even though the actual market value of the asset is more likely to be increasing. He said this creates an unrealized gain, and this unrealized gain is, in effect, a cushion that must be completely eroded before there is any risk of loss of statutory capital. He said this is a critically important concept to understand, and the ACLI believes it must be accounted for in an accurate and fair RBC methodology.

With respect to a depreciation cushion, Birny Birnbaum (Center for Economic Justice—CEJ) said that in the aftermath of the savings-and-loan experience, what was seen was some leveraging of loans or buildings that did not add value and that the value of the buildings declined over time with, in some instances, new commercial building from the 1980s until the early 2000s. He asked if the assessment of the depreciation cushion is based on a particular time frame as opposed to a longer time series. He said there are also questions about the value of commercial real estate going forward, with a number of companies moving to work-from-home situations and the resulting demand for office space, along with the number of shopping malls closing. He asked how this longer-term impact is being considered in the proposal.

In terms of the longer-term, Mr. McLemore said the effects of the savings and loan crisis and the global financial crisis are both incorporated in the estimation of the proposed factors. If the concern is that there is going to be a reduction in RBC for assets where the values are falling dramatically and the capital that should be held on these higher leveraged investments could be understated, he said the opposite would be the effect of the implementation of the proposed change because RBC would be allowed to go up beyond the base factor in the case of a situation where the market value was below the depreciated cost. He said those types of environments would be short-lived because that will typically trigger a real estate impairment based on the impairment testing done on an annual basis.

Mr. McLemore said the question on the larger structural changes in the economy about how real estate is held in the future is a good one but is difficult to answer right now. However, he indicated that MetLife’s view is that the impact is going to be more transitory. He said MetLife is seeing an acceleration of pressures that were already in place, as an example in certain segments of the retail market and the long-term sustainability of business models that are going to be more affected by online retailing and e-commerce. For hotels, he said MetLife is less convinced that the impacts are going to be more longer-term but that they will persist over the next couple of years. He said with the introduction of vaccines, the market will return to more of a stabilized demand base to pre-pandemic levels by 2023 or 2024.

Mr. McLemore said the question about office space is probably one of the bigger questions, but MetLife’s research does not see the increasing work-from-home environment having as large a long-term structural change as some might suggest because it is not as effective for companies over a longer period of time as they hire new people and experience turnover. He said MetLife has seen companies that have tried to fully outsource through time, and many of those have made the decision to revert back to a more office-based employment. He said the discussion of how these structural changes should influence the calibration of RBC is a larger question and not restricted to real estate.

Mr. Bruins added that RBC is not structured to look at today’s particular environment and consider that the results over the next year or two might be worse. He said factors are established looking historically at what the variations have been and take into account the worst of what the modeling shows. He said that is what the analysis for this real estate proposal has done.

Mr. Barlow asked if data can be provided that illustrates the impact of how a decline in the market value of a property, and they are marked down as Mr. McLemore indicated, is reflected in the financial statements. Mr. Bruins said the ACLI would work to provide this.

Mr. Tsang said, in general, he agrees with the proposal updating the factor for real estate by looking at the more emerging statistics but expressed concern with the inclusion of unrealized gains and losses in the RBC calculation. He said real estate does not have a deep secondary market like bonds and mortgages, which probably makes the fair value less transparent. He expressed concern with real estate reported on Schedule BA because of the inability to get out of these commitments. He said bonds and mortgages do not have the unrealized gains and losses being reflected in their RBC requirements and questioned why real estate should have this element introduced.

Mr. Bruins said he may partially address Mr. Tsang’s comments while going through the structural changes, but these may need more fuller discussion during future meetings.
Mr. Barlow said that is fine as this proposal is going to require more discussions as these and other questions are addressed. However, he asked Mr. Bruins to address, to the extent possible, flexibility in light of these questions with respect to the final RBC charges based on the structural changes being proposed.

As background, Mr. Bruins said the proposal and all the documents were put together to be a unified proposal even though they are being addressed in pieces, with today’s focus being on the structural changes. As such, all the documents and examples use the factors that are in the proposal, and this is not a presumption that these will be the final factors but a matter of consistency in the presentation. Thus, he asked Working Group members to focus on what the formulas and relationships are. He said real estate is an equity asset but is held in statutory accounting at book value, which is a depreciated cost. RBC looks at the risk of loss of statutory capital, which is based on the statutory value. If the market value is greater than the depreciated cost, Mr. Bruins said this has no effect on the statutory values, unless it gets to the point where the market value is less than the statutory value and there is a need to review for impairment. As long as the market value is above the statutory value, he said it will never affect the statutory value.

Mr. Bruins said this is where the margin Mr. McLemore alluded to comes in. He said the proposal is to recognize two-thirds of that margin and to reduce the factor proportionally on a property-by-property basis. With regard to Mr. Barlow’s question on flexibility, this would be something that could be changed easily if done as a factor input.

To Mr. Tsang’s point, Mr. McLemore said there is some uncertainty because real estate values are not valued on a daily basis, and two-thirds is in the proposal as opposed to a 100% offset to address that concern.

Mr. Bruins discussed the examples as included on Page 5 of the ACLI’s presentation (Attachment Three-C1). The other area of structural change is for encumbrances as included on Page 6 of the presentation. Mr. Bruins said this is simply a redesign of the calculation, which does not affect the final result as explained and illustrated on the next two pages of the presentation. Rather, it facilitates for the inclusion of the excess of market value over book value, which would include bringing in the fair value from Schedule A and Schedule BA.

Mr. Barlow asked if these fair value amounts are for informational purposes or whether they are used for something in the investment schedules.

Mr. Bruins said he is not sure. He said the base real estate schedule in life RBC, LR007, will have no changes but is fed from four supporting worksheets in the forecasting file, which are identical but address different categories of real estate. He said the changes are detailed in the following pages of the presentation.

To Mr. Barlow’s question and based on his time as NAIC staff support for the Investment Risk-Based Capital (E) Working Group and exam work that he has done, Ed Toy (Risk & Regulatory Consulting—RRC) said he is confident that the fair values are not actually used for anything in the investment schedules for real estate. He said what he has seen in these fields ranges anywhere from being blank to being something that probably is related to the fair value of the property or being a fair value of the mortgage, so even though there are instructions for these fields, how companies are using and populating it ranges all over the place. He expressed a similar concern with the amount of encumbrances companies are reporting.

Mr. Barlow asked Dave Fleming (NAIC) to look into any review or analysis of these fields by the NAIC.

The Working Group agreed to expose the structural changes proposed for real estate by the ACLI, with a modification to make the fair value adjustment a stand-alone factor and not an embedded amount, for a public comment period ending March 8, noting that the proposal includes factors and instructions that are not final.

2. **Agreed to Forward the Guaranty Fund Memorandum to the Capital Adequacy (E) Task Force**

Mr. Barlow said this item has been discussed during previous meetings, and the consensus was that there was no action by the Working Group required in response to the changes to the *Life and Health Insurance Guaranty Association Model Act* (#520). He said a memorandum to that effect has been drafted and addressed to the Capital Adequacy (E) Task Force.

He asked if there were any concerns before forwarding the recommendation to the Task Force (Attachment Three-C2). The Working Group directed NAIC staff to forward the memorandum to the Task Force.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Real Estate RBC: Structural Changes

January 2021
Agenda

- Brief overview of proposal
- Overview of adjustment for unrealized gain/loss
- Overview of encumbrance calculation
- Review of the Real Estate worksheets and specific changes
- Questions
Proposal

- Schedule A: Factor for Real Estate Equity investments
- Schedule BA: Proposed treatment consistent with Schedule A
- Adjustment for Unrealized Gain/Loss
- Update factor for RBC Adjustment for Real Estate Encumbrances
Unrealized Gain/Loss

- Statutory value for real estate is depreciated cost
- RBC looks at risk of loss of statutory capital
- If market value increases while depreciated cost decreases, there is typically a growing unrealized gain. That gain provides a margin before any statutory capital is lost.
- The proposal is to modify the base factor proportional to 2/3 of the unrealized gain, on a property by property basis
Unrealized Gain/Loss

The formula for the adjusted factor would be:

\[ \text{Adj Factor} = \text{RE Factor} \times (1 - \frac{2}{3} \times \frac{\text{MV} - \text{BV_g}}{\text{BV_g}}) \]

<td>3.3%</td>
</tr>
</tbody>
</table>
Encumbrances

- Encumbrances are most commonly a mortgage on the property
- Real Estate is held on balance sheet at net value, i.e., depreciated cost less encumbrance
- Since the mortgage holder has the risk of the mortgage, risk is split between RE owner and the mortgage holder
- Encumbrance factor is RE factor minus commercial mortgage RBC factor
Encumbrances

- Currently addressed by having RBC as the sum of:
  - RE factor times net value, plus
  - Encumb. factor times encumbrance
- Proposal is to rearrange the terms of the algebra to be:
  - RE factor times gross RE value minus avg Comm. Mort factor times encumbrance
- With no change in factors, the RBC is the same. The formula change enables the adjustment for unrealized gain/loss.
## Encumbrances

Real Estate Worksheets

- LR007 is the Life RBC page for RE, and will have no changes
- All changes are in the worksheets, which are tabs:
  - Real1: Company Occupied Real Estate
  - Real2: Real Estate acquired by Foreclosure
  - Real3: Investment real estate
  - Real4: Schedule BA real estate
- These 4 sheets are identical, separated only by the types of properties that are reported on each.
- The proposed modifications are also identical to each
- For discussion today, we will look at real3 – investment real estate
Real Estate Worksheets

- Column 1 –
  - While generally the same, please look down to the line for Properties without encumbrances
  - Currently and in the past, all such properties were aggregated to a single line
  - The proposal will have the properties entered individually, each on a separate line. This is to accommodate the unrealized gain adjustment which is determined property by property.

- Column 2 is unchanged
- Column 3 is unchanged
Real Estate Worksheets

- Column 4 is a new column showing the fair value from Schedule A column 10 or Schedule BA column 12 as appropriate
- Column 5 is the base real estate RBC factor
- Column 6 is the encumbrance credit rather than the encumbrance factor
- Column 7 is a new column and is the adjusted RBC factor. This is where the adjustment is made for the unrealized capital gains.
Real Estate Worksheets

- Column 8 is the Gross RBC value, which is the adjusted factor times the gross value of columns 2 plus 3
- Column 9 is the encumbrance adjustment which is column 3 times column 6
- Column 10 is column 8 minus column 9.
  - Floor of BACV times NAIC2 bond factor
  - Cap of BACV times 45%
MEMORANDUM

TO: Tom Bostko (OH), Chair, Capital Adequacy (E) Task Force

FROM: Philip Barlow (DC), Chair, Life Risk-Based Capital (E) Working Group

DATE: January 21, 2021

RE: Recommendation Regarding Risk-Based Capital Charge for Guaranty Association Assessment Risk

The Life Risk-Based Capital (E) Working Group received a request from the Capital Adequacy (E) Task Force to review the referral letter regarding adopted amendments to the Life and Health Insurance Guaranty Association Model Act, Model #520. The referral outlined significant amendments to Model #520, including: 1) broadening the assessment base for long-term care insurance (LTCI) insolvencies to include both life and health insurers and splitting the assessment 50%/50% between the life and health insurers; 2) clarifying the guaranty associations’ coverage of LTCI; and 3) including health maintenance organizations (HMOs) as members of the guaranty association, similar to other health insurers. The referral letter requested that the Task Force consider if changes were warranted to the life RBC formula in light of the changes made to Model #520.

The reason for this item being referred to the Working Group was concern with the fact that the C-4a risk component is based on the amount of guaranty fund assessments. The risk charge is based on the maximum amount of assessments in any one year for a life company, and that is not affected by the changes to Model #520.

Based on the current instructions and reporting, the Working Group does not believe that modifications to the life RBC formula are required for the change to Model #520.

The recommendation above does not preclude the Working Group from potential changes to long-term care or the business risk component charge in the future.

If you have any questions regarding this memorandum, please contact me at philip.barlow@dc.gov or Dave Fleming (NAIC) at dfleming@naic.org.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Dec. 17, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Thomas Reedy (CA); Deborah Batista (CO); Wanchin Chou (CT); Sean Collins (FL); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. **Received an Update on ESGs**

Mr. Barlow reminded the Working Group that work is being done on economic scenario generators (ESGs). While this will affect both reserves and capital, he said the work is being done primarily at the Life Actuarial (A) Task Force.

Pat Allison (NAIC) said there will be a meeting of the Task Force later today that will be focused on the new ESG. She said there was a discussion on Dec. 3, 2020, about the interest rate generator, noting that today’s discussion will be on the equity and corporate bond models and the potential exposure of a variety of materials for comment. She said these discussions also present goals for the ESG, along with the decisions that state insurance regulators will need to make. The work includes the development of a set of recommendations for each of those decisions for exposure.

Ms. Allison said the NAIC’s selected vendor, Conning, has calibrated its model to reflect those recommendations, so a full set of what is being referred to as the basic data set, which is what is intended to be prescribed, will be exposed. She said this is not what is intended for a field test, and it is certainly not final, as numerous comments are expected.

2. **Discussed the ACLI’s Real Estate Proposal**

Mr. Barlow reminded the Working Group that the American Council of Life Insurers (ACLI) developed a real estate proposal as part of the work of the Investment Risk-Based Capital (E) Working Group. He said this has now been moved to the Life Risk-Based Capital (E) Working Group, along with the work on the bond factors, and the intention is to address both at the same time to have them in place for year-end 2021, but it has been some time since this proposal was reviewed.

Steven Clayburn (ACLI) presented an overview of the proposal to assist the Working Group in determining the next steps to be taken. As Mr. Barlow indicated, he said this proposal was presented to the Investment Risk-Based Capital (E) Working Group in 2015, and it was exposed for comment on two occasions. He said there was some, although not universal, consensus at the time that the factors were too high, but what to do to lower those factors remained outstanding. With feedback from state insurance regulators and industry, he said the proposal was revised in 2017, but it was put on hold in 2018 to focus on the proposed revision to bond factors.

Mr. Clayburn provided a recap of the most recent discussions and the concerns expressed, as shown on Page 4 of the presentation. The proposal has four parts, as included on Page 5 of the presentation, and he discussed these in more detail, as provided in the remaining pages of the presentation. He said there are structural changes associated with the proposal, and he thanked the Life Risk-Based Capital (E) Working Group for making time for this presentation.

Dave Fleming (NAIC) said the structural change is actually to underlying worksheets that are included in the forecasting file, and the deadline for exposure of those is the end of January 2021.

Mr. Barlow said the analysis behind the proposal is a few years old, and he asked if the ACLI has any updates to that information. Mr. Clayburn said he believed there had been updates to the modeling in response to previously raised items, but he said he would verify that.

Mr. Barlow asked if there is some analysis or commentary that can be provided to address the current situation. Mr. Clayburn said he would take this back to the ACLI membership.

With respect to additional analysis, Mr. Chou asked about the analysis used in the derivation of the current factors.
Mr. Clayburn said he believes this information is included in the original proposal document, but he said he believes the current factor for Schedule A real estate is based on 60% of the common stock factor and Schedule BA was then 150% of that result. He said this was not based on true analysis, but because there was not much data at the time, it was a conservative approach.

Paul S. Graham (ACLI) said there was data from two companies used back in the 1980s that resulted in the use of a percentage of the stock equity factor for real estate. At the time, he said it was not that material because there was not a lot of industry invested in it, but in the current environment of lower interest rates where companies are trying to back their promises to policyholders with assets that have a little higher return, it is becoming more important.

Mr. Graham said the original study the ACLI did in 2015 showed factors below the 8% that was recommended, and the fact that there may be more current experience that is not as good because of COVID-19, coupled with the factor now being discussed at 10%, it is likely covered.

Mr. Barlow asked if the growth is in real estate or items reported on Schedule BA. Mr. Graham said he believes it is both, but he noted that the proposal is to look not only at the book value but also the market value so investments, other than those done at the beginning of 2020, would have that buffer.

Mr. Tsang asked if the ACLI could include information with respect to the materiality of these investments to its member’s portfolios and the impact of the proposed factors on its capital requirements. Mr. Clayburn said the ACLI would work with the members on impact.

Mr. Barlow asked if the exposure would be something captured in the NAIC’s database. Mr. Fleming said it is and he would work on providing that information.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
March 8, 2021

Philip Barlow
Chair
Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Dear Philip,

On behalf of the American Academy of Actuaries\(^1\) C-1 Work Group (C1WG), we appreciate the opportunity to provide comments on the exposed January 21, 2021, proposal to restate the capital requirements for real estate in the Life Risk-Based Capital (LRBC) formula. The C1WG is generally supportive of a different approach for calculating capital requirements for real estate. As 30 years have passed since the current real estate factors were set, a review of the capital requirements is a prudent exercise. The C1WG has reviewed the proposal and is unable to find agreement with the proposal without additional justification/explanation. In reviewing the proposal, we have the following conceptual concerns:

1. Market Value vs. Statutory Value Issues

   Establishing capital requirements based on market value inputs when real estate is carried at amortized cost in statutory financial statements is a departure from RBC precedents. Clearly, changing statutory accounting to a market value basis and determining capital requirements directly on those market values would be a more direct approach. With a restatement to market value, both total adjusted capital and the required capital calculation would be different (i.e., both the numerator and the denominator of the RBC ratio would change).

   It appears that the proposed structure is an attempt to fix the current LRBC approach that overstates capital requirements by applying a market risk measure to depreciated book value by inserting an adjustment involving unrealized capital gains. Taken together, this approach is intended to reflect the likely lower risk of loss to statutory surplus.

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
While the work group agrees there should be work to refine the capital charge to recognize the likely lower risk to statutory surplus than the current approach has produced, the use of a market basis risk measure combined with the offset of a portion of unrealized gains to state the risk to capital of an asset valued under statutory rules on a book value basis is unsupported by either fact or theory. Statutory accounting holds real estate at cost less accumulated depreciation unless there is an impairment. At impairment, a restated holding value at market incurs a loss (if less than current book value). Assuming real estate generally increases in value over time, losses measured on a book value basis will be less than those determined on a market value basis.

The use of an arbitrary portion of unrealized gains to convert the market risk measure to the actual book value measure of this asset class is not a supportable approach in the determination of statutory capital requirements. Simply stated, the proposed 2/3 adjustment is not supported by a factual analysis. The capital requirements should be derived based on the likelihood of the occurrence of loss measured as the amounts of future book loss amounts over an appropriate horizon and stated degree of statistical confidence. Developing the adjustment directly from a statutory-based model would provide support for the proposed 2/3 adjustment. A more direct approach could involve a factor for a specific market to book value combination applied directly to depreciated book without further adjustments.

Because of these issues, we have concerns over the reliability of using market measures and unrealized gains to replicate the actual risk of loss on a statutory book basis. As noted above, we suspect the risk is lower than a pure market risk, but do not know how much lower it might be. If this recommended approach were used, is the 2/3 adjustment too high or too low, and could it vary depending on specific conditions? Without more information shared about how the adjustment converts the market measure to a book value, we are unable to come to disposition on the proposed approach. Further, we are concerned that using one scalar applied to the difference between market value and book value would achieve the desired result. If there is a linear relationship between the unrealized loss and the 95th percentile of book value impairments, a scalar might be appropriate, but the C1WG is not convinced of this linear relationship.

We also would question the minimum condition of the NAIC 2 bond factor because there is no clear rationale provided for the relationship between the bond factor used to capture credit risk and real estate capital requirements.

Lastly, we too would raise the question from the February 26, 2021, Life RBC Working Group meeting as to whether it is appropriate to use a market determined risk measure,
the base factor, in combination with unrealized gains where gains (and losses) are already implicit in the statutory base measure itself.

2. Implementation Issues with the Use of a Market Value Measure

If the capital requirements are amended to include a market value measure, specific instructions are needed to define how market value is to be calculated. The LRBC formula needs to be calculated using a consistent definition of the market value calculation, as was done in establishing capital requirements for commercial mortgages.

3. Recommended Statistical Safety Level

The proposal is based on a Statistical Safety Level at the 95th percentile over a 2.5-year time period; what is the basis for the recommended time horizon? The time horizon for bonds was set at 10 years, the typical credit cycle for bonds; what does the 2.5-year period represent? This recommendation moves away from current capital requirements determined relative to those for common stock (i.e., based on a 60% correlation); as such, a time horizon based on the volatility of market returns for an asset carried at amortized cost does not seem consistent with the principles of statutory RBC.

4. Assuming Same Risk Profile for All Types of Real Estate

a. The proposal is recommending nearly identical treatment for all types of real estate. The C1WG would need to see the data that supports the conclusion that the risk profiles for real estate reported on Schedule A are similar to the risk profiles for real estate reported on Schedule BA; our understanding is that the difference in risk drives different reporting. In particular, we would need to better understand how encumbrances can be determined and reported on a look-through basis on Schedule BA so that the implementation of the proposal will reflect the spirit of accurately identifying risk on a look-through basis.

b. While real estate is a relatively small asset class for the life insurance industry (approximately 1% of invested assets), using one factor for all types of real estate may not be an appropriate representation of the various risks within the real estate sector. We note that commercial mortgages on hotel properties receive different LRBC treatment, establishing a precedent for different experience for hotel properties. Further, as noted during the February 26, 2021, Life RBC Working Group meeting, using the same factor for distressed properties raises additional concerns.
c. Properties in development are riskier than properties that are producing income. While there may be materiality and other practical considerations, should different capital requirements be established?

We recognize the importance of this asset class for life insurers and support the review of the capital requirements. However, we continue to have concerns with several aspects of the proposal. We acknowledge that the current LRBC capital requirements may be overstated for certain real estate investments (e.g., where the market value exceeds statutory value by a large amount). Fundamentally, the risk to statutory surplus is less for real estate properties whose statutory value is less than the market value. Consequently, a reduction to the capital requirements has merit, but the proposal’s approach to start with market value returns and then adjust statutory values is complex and may not achieve the desired level of required capital that a more direct calculation could produce.

Again, thank you for the opportunity to provide the C1WG comments and should you have any questions or wish to discuss anything in these comments, please contact Khloe Greenwood, the Academy’s life policy analyst (greenwood@actuary.org).

Sincerely,

Nancy Bennett, MAAA, FSA, CERA—Co-Chairperson, C1WG
Jerry Holman, MAAA, FSA, CFA—Co-Chairperson, C1WG

RE: Review of Proposals from the PFML Federal Strategies Working Group

On Life RBC Working Group’s conference call of February 26, 2021, several questions were raised during ACLI’s presentation and discussion of the proposed changes to the RBC for Real Estate. The questions follow, and responses are provided on the following pages. We can further discuss these on an upcoming call of the Working Group.

1) Please provide additional detail and documentation of the modeling.

2) Please provide documentation of volumes of Real Estate.

3) Given that you apply the RBC charge to the smaller depreciated cost, and not to the full fair value, aren’t you somewhat double-counting by then adjusting the RBC rate based on the unrealized gain?

4) What is the confidence that the adjustment to the risk factors based on the relation of market and statutory book value does not result in an appropriately low RBC factor?

5) What happens when the market value declines to be less than the book value?
1) Please provide additional detail and documentation of the modeling.

This recommendation is based on analyses of actual historical performance of the National Council of Real Estate Investment Fiduciaries (NCREIF) Property Index, appended by data from a couple of other similar studies to extend our historical data back to 1961. The NCREIF Property Index (NPI) is the premier industry benchmark for measurement of institutional commercial real estate investment performance in the US. The NPI data begins in 4Q 1977 and is comprised of quarterly market value-based investment performance of assets acquired and held for investment purposes in a fiduciary environment. There is no minimum property size, and the asset can be held as wholly owned or through a joint venture. It includes a wide array of the primary institutional investment property types, including Office, Retail, Industrial, Apartment and Hotels. As of 4Q 2020, this index included more than 9,000 properties with over $700 billion in real estate market value. It is a robust and directly applicable index for measurement of the market value performance of life insurance company investment real estate, and it is the same data that is currently being used for updating of market values of Commercial Mortgage LTVs in support of the reporting of Commercial Mortgage Loan RBC.

We analyzed the historical sector performance and present the results in Section A of the proposal. We present results across 1, 2, 3 and 4 year analysis periods. In each of these four assumed analysis periods, we examine the historical data and calculate the largest cumulative losses that were observed at any time during the analysis period. The process was to take the index value as of a quarter, e.g., Q1-1961, and track the performance in each subsequent quarter of the respective analysis period. We started with index values at the beginning of the period and found the lowest index value at any quarter during the analysis period and calculated the change from the beginning. For example, for the 2-year analyses, we examined every potential 2-year period within the full data history, which resulted in 232 data points in the full data history. Our analysis found that for a 2-year analysis period, the 95% worst cumulative loss was 9.2% and the 96% worst cumulative loss was 9.7%. We thus recommend adoption of a 9.5% factor.

Lastly, we recommend a 1.5% cushion be added to the 9.5% factor that was estimated using the actual real estate performance history. This cushion is meant to address two primary areas of concern that surfaced in our individual outreach discussions: 1) that individual life insurance company portfolios may not be as diversified as the index used in estimation of the factor; and 2) that future real estate performance may not be similar to the past, especially in light of COVID-19. We believe the 1.5% is a reasonable cushion, and is supported by the following:

- The 1.5% cushion represents an additional 15% conservatism built in on top of the data-supported 9.5% factor. In effect, this means that market downturns can be 15% more severe than in the past, and the factor will still be sufficient to cover losses over two years at a 95% confidence level.
- At 11%, the applied factor would cover historical actual 2-year cumulative losses at an almost 97% confidence level.
- Thus far, the impact of COVID-19 on commercial real estate investments has been significant but have been concentrated in a relatively small segment of the market. The most impacted segments have been hotels and select lower quality regional malls. Overall, the NCREIF Property Index reports around a 1% return on real estate investments in 2020, which is meaningfully below the returns over the last few years, but still positive. Most industry experts do not expect COVID-19 to result in as rapid or severe deterioration as happened in the GFC.
As we cite in our proposal, we examined the distribution of properties by type and geographic region within life insurance company portfolios and found it to be similar in mix to that of the NCREIF Property Index. This suggests that the distribution of life insurance company investments in real estate are similar in composition to the index. However, given the risk that individual life insurance company portfolios’ composition could deviate meaningfully from the diversity of the overall life insurance company space, we believe that the 1.5% cushion is sufficient to cover this risk. Also, we note in our proposal that there are regulations separate from RBC factors that address concentration risks and assure diversification of life company real estate portfolios.

2) Please provide documentation of volumes of Real Estate.

- Real estate investments are a very small component of most life insurance portfolios. The following information is taken from 2019 Annual Statement data.
- Real estate investments represent only 1.29% of Life Company GA assets.
  - Total General Account is $4,812,938 million
  - Total Real Estate $61,972 million
    - Schedule A $23,358 million
    - Schedule BA $38,613 million
- Life company real estate investments are spread across both Schedule A and Schedule BA, with Schedule A accounting for 0.49% and Schedule BA accounting for 0.80%.
- Of 761 life insurance companies, 587 (77%) have less than 0.25% of assets in Schedule A real estate, and 677 (89%) have less than 0.25% of assets in Schedule A real estate.
- Company occupied real estate accounts for a meaningful component of Schedule A real estate exposures in many companies.
  - Of the 174 companies with 0.25% or greater of their assets in Schedule A real estate, 64 (36.8%) of these companies are solely invested in company occupied properties.
  - The remaining 110 companies account for 96.7% of Sch. A real estate, and it constitutes 1.14% of their General Account assets.
    - Approx. 20% of this real estate is company occupied.
  - 59 of these 110 companies have less than $1B in assets. 3.3% of their GA assets are in RE, split 40% company occupied and 60% investment.
- For Schedule BA, ACLI conducted a survey in 2018 in response to similar questions from the Investments RBC Working Group. Appendix A is the memo that summarizes the results of that survey.

3) Given that you apply the RBC charge to the smaller depreciated cost, and not to the full fair value, aren’t you somewhat double-counting by then adjusting the RBC rate based on the unrealized gain?

- We do not believe there is “double-counting”, as that implies making two adjustments based on the same reason.
- When determining RBC generally, there are two facets to consider: 1) how much is at risk; and 2) what is the level of risk. Statutory Book Value is the amount that is included as the value of the company’s assets, and therefore determines the amount of surplus. A factor is applied to this book value, because that is the amount of surplus that is at risk. In statutory accounting, that value is a decreasing value as it is defined to be the depreciated cost.
• The factor that is used should reflect the likelihood of a loss. In the case of real estate, the relation of market and book values is a proxy to determine the amount of risk, where the greater the excess of market value over book value, the lower the risk to statutory surplus.

• Thus, that statutory values use a depreciated value, and that the factor adjustment uses the difference between market and book, are addressing two separate issues even though they appear to be making adjustments that are directionally the same.

4) What is the confidence that the adjustment to the risk factors based on the relation of market and statutory book value does not result in an appropriately low RBC factor?

We start with the premise of RBC - If a company holds assets equal to the existing book assets plus an amount of surplus equal to the RBC, then historically there have not been more than 5% of instances where the value declines by more than the RBC amount, and therefore assets do not fall below the book value. Thus, with an RBC factor of 11%, if market value provides unrecognized gain of more than 11% compared to book value, then 95% of the time the book value will not be reduced. In theory, any gain in excess of that creates a situation of zero risk relative to the 95% standard.

<td>0.5%</td>
<td>10.05%</td>
</tr>
<tr>
<td>100</td>
<td>120</td>
<td>11.4</td>
<td>-</td>
<td>0.0%</td>
<td>9.53%</td>
</tr>
</tbody>
</table>

As you can see from the table above, the loss to book value in the event of a 95% level of certainty loss of market value is in all cases less than the adjusted RBC percentage, which is applied to book value. So we are more than 95% certain that the adjusted RBC factor is sufficient.

5) What happens when the market value declines to be less than the book value?

• Market value dropping below book is a trigger for review for impairment. However, all circumstances around property performance should be considered, for example loss of a major tenant in a specialized asset.
• There is robust statutory guidance (SSAP 90) around recognizing impairment of wholly-owned real estate. Joint ventures are accounted for under the equity method, and as such are financial assets.

• A write-down is taken if an impairment is present and is not temporary.

• Impairment review is based on modeling of cash flows and not on market values. There is a recoverability test that is based on comparing the expected undiscounted cash flow to the carrying value of the real estate. If cash flows are greater than carrying value, then there may not be an impairment. If the sum of the undiscounted cash flows are less than the carrying value, then the real estate would most likely be impaired. The actual impairment is measured as the difference between the carrying value and fair value of the real estate.

• Rules exist to distinguish temporary vs other than temporary. This a mechanical process so once carrying value is greater than the undiscounted cashflows, life companies are required to recognize a permanent (other than temporary) impairment.

• Thus, capital markets may indicate a lower current market value even when there is not a need to recognize a permanent Impairment.

• In our proposal, the MV/BV adjustment increases the RBC charge in this case, reflecting the possibility of a write down.
APPENDIX A – 2018 Memorandum on Schedule BA Real Estate

FROM:  Steve Clayburn
RE:  Real estate RBC proposal to the NAIC
      Schedule BA Characteristics – summary of survey results
DATE:  August 8, 2018

BACKGROUND
Since the inception of RBC, Schedule BA real estate has used a factor that is 150% of Schedule A’s factor. This premium was intended to account for the potential of additional risk associated with Schedule BA assets. The ACLI\(^1\) conducted a survey of its member companies on the characteristics of these assets, to provide transparency and support for its recommendation of equivalent factors for both Schedule A and Schedule BA assets.

SCHEDULE BA SURVEY RESULTS
Survey respondents represented approximately 70% of all real estate (Schedule A) reported by life insurance companies and nearly 50% of total general account assets. Of these real estate portfolios, approximately 40% is reported on Schedule A and 60% on Schedule BA.

The following is a summary of the real estate characteristics as reported on Schedule BA based on reported book value as of December 2017:

Ownership
- 80% Affiliated and 20% Unaffiliated
- 50% controlling interest that’s either wholly-owned or held in a joint venture with control, and 50% non-controlling interest held in a joint venture

Jeffrey Fisher, Ph.D., a consultant for NCREIF, found that real estate held in joint ventures performed consistently with, and perhaps slightly better than, wholly-owned real estate. For reference, based on assets in the NCREIF index, approximately 60% are wholly-owned and 40% are joint ventures by market value.

Risk Profile
- 71% Core – at least 80% leased and less than 10% under construction
- 16% Value-Add – less than 80% leased with less than 25% under construction

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of approximately 290 member companies dedicated to providing products and services that contribute to consumers’ financial and retirement security. ACLI members represent 95 percent of industry assets, 93 percent of life insurance premiums, and 98 percent of annuity considerations in the United States. 75 million families depend on our members’ life insurance, annuities, retirement plans, long-term care insurance, disability income insurance and reinsurance products. Taking into account additional products including dental, vision and other supplemental benefits, ACLI members provide financial protection to 90 million American families.
- 13% Opportunistic – greater than 25% under construction

Diversification
- Property Type
  - 22% Office
  - 20% Multi-family
  - 11% Retail
  - 5% Industrial
  - 3% Lodging
  - 2% Mixed-Use
  - 37% Diversified – diversified real estate fund investments allocated to various property types, and also land, timber, parking garages and golf courses

- Geography
  - 26% Western U.S. (AS, AK, AZ, CA, CO, GU, HI, ID, MT, NMI, NV, NM, OR, TX, UT, WA, WY)
  - 23% Northeast U.S. (CT, DC, DE, ME, MA, MD, NH, NJ, NY, PA, RI, VT)
  - 11% Southeast U.S. (AL, AR, FL, GA, KY, LA, MS, NC, PR, SC, TN, VA, VI, WV)
  - 5% Midwest U.S. (IL, IN, IA, KS, MI, MN, MO, NE, ND, OH, OK, WI)
  - 12% International (mostly South American agricultural land/timber)
  - 23% Diversified with less than 50% of an asset(s) in a specific zone

CONCLUSION

ACLI believes that these results provide more detail and allow one to assess Schedule BA asset characteristics and therefore risk.

Life insurance companies use local partners to source real estate investments and execute asset business plans, which leads to placement on Schedule BA. Jeffery Fisher’s study found use of joint venture partners can be beneficial to performance.

Over 70% of assets on Schedule BA are well-leased, long-term hold investments. Only 13% of assets are undergoing meaningful construction activity.

Similar to the NCREIF National Property Index, Schedule BA assets are diversified by both property type and geography.

The ACLI’s proposal to the NAIC adjusts real estate RBC factors for leverage as appropriate for both Schedule A and Schedule BA assets.

In conclusion, our survey demonstrates Schedule BA real estate is similar in ownership, risk and diversification to the properties underlying the NCREIF index which we used in developing our proposed real estate factors for Schedule A. Therefore, these results support our recommendation to equate Schedule A real estate factors to Schedule BA real estate factors.
The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 15, 2021. The following Working Group members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Miriam Fisk (TX); and Randy Milquet (WI).

1) **Adopted the Minutes of the Catastrophe Risk (E) Subgroup and the Property and Casualty Risk-Based Capital (E) Working Group**

   a) **Catastrophe Risk (E) Subgroup**

   Mr. Chou said the Catastrophe Risk (E) Subgroup met March 8 and took the following action: 1) adopted its Jan. 27 minutes; 2) adopted proposal 2020-08-CR (Clarification to PR027 Interrogatories); 3) adopted proposal 2020-11-CR (Remove Operational Risk Factor from Contingent Credit Risk); 4) discussed the development progress of wildfire modeling and a risk-based capital (RBC) charge; 5) discussed its 2021 working agenda; 6) discussed the internal catastrophe model evaluation process; and 7) established an ad hoc group to conduct a more in-depth review on different wildfire models.

   Steve Brodie (American Property Casualty Insurance Association—APCIA) recommended the Subgroup take appropriate time to decide: 1) whether wildfire peril needs to be added to the Rcat component; and 2) how to implement the wildfire in the Rcat component if decision is made.

   b) **Joint Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup**

   Mr. Chou said the Property and Casualty Risk-Based (E) Working Group met in joint session with the Catastrophe Risk (E) Subgroup to conduct an e-vote that concluded Jan. 27 to adopt the updated 2020 U.S. and non-U.S. catastrophe risk event lists.

   Mr. Chou made a motion, seconded by Ms. Krylova, to adopt the Catastrophe Risk (E) Subgroup’s March 8 minutes (Attachment Four-A) and the joint Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup’s Jan. 27 minutes (Attachment Four-B). The motion passed unanimously.

2. **Adopted Proposal 2020-08-CR (Clarification to PR027 Interrogatories)**

   Mr. Chou said some insurers with minimal or no gross earthquake and/or hurricane exposure did not file PR027A or PR027B, and the Interrogatories on PR027 will create some validation issues in the catastrophe risk component. He said the purpose of this proposal is to add instructions to PR027 Interrogatories that clarify how insurers with minimal or no gross exposure to the catastrophe risk should complete the interrogatories. Mr. Chou also stated that the Subgroup received no comments during the exposure period.

   Mr. Chou made a motion, seconded by Mr. Luk, to adopt proposal 2020-08-CR (see *NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Eight*). The motion passed unanimously.

3. **Adopted Proposal 2020-11-CR (Remove Operational Risk Factor from Rcat)**

   Mr. Chou said the operational risk is now separately addressed in the RBC formula as a stand-alone capital add-on. The purpose of this proposal is to remove the embedded 3% operational risk charge in the Rcat component to avoid double-counting of the charge. He also stated that the Subgroup received comment letters from the APCIA and Reinsurance Association of America (RAA) during the exposure period. They both support this proposal to eliminate the duplicative application of operational risk charges for modeled reinsurance recoverable in the Rcat component.

   Mr. Chou made a motion, seconded by Ms. Krylova, to adopt proposal 2020-11-CR (see *NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Nine*). The motion passed unanimously.
4. **Received an Update from its Subgroup on the Development Process of Wildfire Modeling and an RBC Charge**

Mr. Chou said understanding the wildfire model and engaging the state insurance regulators and industry to get involved in the development of the RBC charge are the two key elements of implementing the RBC charge properly. He stated that the Subgroup met three times since the 2020 Fall National Meeting in regulator-to-regulator session to discuss wildfire models. He said the Subgroup planned to continue with more in-depth technical reviews of different model assumptions, limitations and impact studies in the upcoming months. Also, Mr. Chou urged the interested parties to provide thoughts regarding the wildfire peril during Subgroup’s next meeting on: 1) other key items to be considered during the RBC charge development phases; 2) using the worst year in 100 in the calculation of the RBC charge; and 3) expected actual implementation reporting year.

5. **Exposed Proposal 2021-03-P (Credit Risk Instruction Modification)**

Mr. Botsko said the purpose of this proposal is to provide examples to clarify how the reporting companies should select the designation in the Annual Statement Schedule F, Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies. He also stated that since the accurate reporting on reinsurer designation equivalent rating in the Schedule F, Part 3 is crucial to calculate the R3 charge appropriately, NAIC staff will conduct a more in-depth review on Schedule F, Part 3 in the near future. The Working Group agreed to expose proposal 2021-03-P for a 30-day public comment period ending April 14.

6. **Heard an Update from its Runoff Ad Hoc Group**

Mr. Botsko said an ad hoc group was formed to determine the best course of treatment of run-off companies during the 2020 Fall National Meeting. Mr. Botsko stated that the ad hoc group identified those companies that: 1) stopped renewing policies for at least 12 months; 2) are closed to new business; 3) are large on reserves to premium written ratio; and 4) have zero premium written on the reserves to premium written ratio. He also stated that the ad hoc group is reviewing: 1) the possibility of adding an identifier in the annual statement; and 2) the current RBC calculation, including R5 and the operational risk components. Since different lines of business may have their own definition of runoff, Mr. Botsko said the ad hoc group will share its progress and findings with not only the Working Group and the Restructuring Mechanisms (E) Subgroup, but also the Life Risk-Based Capital (E) Working Group and Health Risk-Based Capital (E) Working Group for their consideration.

7. **Adopted its 2021 Working Agenda**

Mr. Botsko summarized the changes to the Working Group’s 2021 working agenda: 1) changed “Evaluate other catastrophe risks for possible inclusion in the charge” item expected completion date to year-end 2022 or later; 2) removed “Evaluate the possibility of using the NAIC as a centralized location for reinsurer designations” and “Evaluate the RBC impact on two different retroactive reinsurance exception approaches”; 3) modified “Evaluate the possibility of allowing additional third-party models to calculate the cat model losses” to “Evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses,” and the expected completion date was changed to year-end 2021 or later; and 4) added “Implement Wildfire Peril in the Rcat component (For Informational Purpose Only)” in the new items section.

Mr. Chou made a motion, seconded by Mr. Luk, to adopt the Working Group’s 2021 working agenda (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Ten). The motion passed unanimously.

8. **Heard Updates on Property/Casualty RBC Underwriting Risk Factors from the Academy**

David Traugott (American Academy of Actuaries—Academy) said the Academy report Update to Property and Casualty Risk-Based Capital Underwriting Factors Experience Through December 31, 2017 (Attachment Four-C) was based on data from annual statements reporting between 1989 and 2017 and RBC filings between 1997 and 2017. He stated that the approach in this report is broadly the same as the approach in the 2016 report, with some refinements. Mr. Traugott also said the Academy planned to devote more time to discuss this report in the upcoming Working Group meeting to allow state insurance regulators and interested parties to have chance to review it. In addition, he stated that the investment income adjustment factors and the loss/premium concentration factor reports will be provided to the Working Group later. Mr. Botsko said he planned to schedule another meeting to discuss this report and other Working Group outstanding items in April.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 8, 2021. The following Subgroup members participated: Wanchin Chou, Chair (CT); Robert Ridenour, Vice Chair (FL); Laura Clements (CA); Gordon Hay (NE); Anna Krylova (NM); Halina Smosna and Sak-man Luk (NY); Tom Botsko (OH); Andrew Schallhorn (OK), Will Davis (SC); and Miriam Fisk (TX).

1. **Adopted its Jan. 27 Minutes**

Mr. Chou said the Subgroup conducted an e-vote that concluded Jan. 27 to adopt the updated proposal 2020-12-CR (2020 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Mr. Botsko made a motion, seconded by Ms. Clements, to adopt the Subgroup’s Jan. 27 minutes (Attachment Four-B). The motion passed unanimously.

2. **Adopted Proposal 2020-08-CR (Clarification to PR027 Interrogatories)**

Mr. Luk said some insurers with minimal or no gross earthquake and/or hurricane exposure did not file PR027A or PR027B, and the Interrogatories on PR027 will create some validation issues in the catastrophe risk component. He said the purpose of this proposal is to add instructions to PR027 Interrogatories that clarify how insurers with minimal or no gross exposure to the catastrophe risk should complete the interrogatories.

Mr. Chou stated that the Subgroup received no comments during the exposure period.

Mr. Luk made a motion, seconded by Mr. Botsko, to adopt proposal 2020-08-CR (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Eight). The motion passed unanimously.

3. **Adopted Proposal 2020-11-CR (Remove Operational Risk Factor from Rcat)**

Mr. Botsko said the operational risk is now separately addressed in the risk-based capital (RBC) formula as a stand-alone capital add-on. The purpose of this proposal is to remove the embedded 3% operational risk charge in the Rcat component to avoid double-counting of the charge. He also stated that the Subgroup received two comment letters during the exposure period.

Stephen W. Broadie (American Property Casualty Insurance Association—APCIA) and Scott Williamson (Reinsurance Association of America—RAA) support this proposal to eliminate the duplicative application of operational risk charges for modeled reinsurance recoverable in Rcat component.

Mr. Botsko made a motion, seconded by Mr. Davis, to adopt proposal 2020-11-CR (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Nine). The motion passed unanimously.

4. **Discussed Wildfire Modeling and RBC Charge Development Progress**

Mr. Chou said understanding the wildfire model and engaging the state insurance regulators and industry to get involved in the development of the RBC charge are the two key elements of implementing the RBC charge properly. He stated that the Subgroup met three times since the 2020 Fall National Meeting in regulator-to-regulator session to discuss wildfire models. He said the Subgroup planned to continue with more in-depth technical reviews of different model assumptions, limitations and impact studies in the upcoming months.

Also, Mr. Chou urged the Subgroup to provide thoughts regarding the wildfire peril during its next meeting on: 1) other key items to be considered during the RBC charge development phases; 2) using the worst year in 100 in the calculation of the RBC charge; and 3) expected actual implementation reporting year. He stated that a meeting will be scheduled in the near future to continue discussing this issue.
Mr. Broadie said developing an appropriate charge for the wildfire peril is crucial; he recommended that the Subgroup should consider taking time on the development progress. Mr. Chou agreed.

5. **Adopted its 2021 Working Agenda**

Mr. Chou summarized the changes to the Subgroup’s 2021 working agenda: 1) changed “Evaluate other catastrophe risks for possible inclusion in the charge” item expected completion date to year-end 2022 or later; 2) modified “Evaluate the possibility of allowing additional third-party models to calculate the cat model losses” to “Evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses,” and the expected completion date was changed to year-end 2021 or later; and 3) added “Implement Wildfire Peril in the Rcat component (For Informational Purpose Only)” in the new items section.

Ralph Blanchard (Travelers) asked the Subgroup to consider changing the expected completion date of implementing wildfire peril in the Rcat component for informational purpose only to after the 2022 Spring National Meeting.

Mr. Botsko made a motion, seconded by Mr. Schallhorn, to adopt the Subgroup’s 2021 working agenda (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Ten), with the change of the expected completion date for “Implement Wildfire Peril in the Rcat component (For Informational Purpose Only).” The motion passed unanimously.

6. **Discussed the Internal Catastrophe Model Evaluation Process**

Mr. Chou said there are three different kinds of CAT models that deviate from the vendor models: 1) internal CAT models; 2) vendor CAT models with adjustments or different weights; and 3) derivative models based on the vendor models. He stated that detailed instructions in evaluating the internal CAT models have been included in the RBC instructions. However, he said he thinks more in-depth instructions on the derivative model and the vendor models with adjustments may be necessary.

Mr. Botsko recommended that the Subgroup should take wildfire peril into consideration as it continues discussing this issue.

Mr. Blanchard said a different level of evaluation and validation process should be applied to vendor CAT models with adjustments or different weights. He said he believes that a more simplified instructions is worthy of consideration for this type of model.

Mr. Chou asked all the interested parties to share thoughts during the Subgroup’s upcoming meeting.

7. **Created an Ad Hoc Group to Review Wildfire Models**

Mr. Chou said he believes that creating a technical review ad hoc group to conduct a more in-depth review on different wildfire models would speed up the entire wildfire charge development progress. He said encourages interested parties to join the ad hoc group so this project will be completed in time.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force that concluded Jan. 27, 2021. The following Working Group members participated: Tom Botsko, Chair (OH); Richard Ford (AL); Laura Clements (CA); Mitchell Bronson (CO); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Will Davis (SC); Miriam Fisk (TX); and Randy Milquet (WI). The following Subgroup members participated: Wanchin Chou, Chair (CT); Robert Ridenour, Vice Chair (FL); Mitchell Bronson (CO); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Sak-man Luk (NY); Tom Botsko (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk (TX).

1. **Adopted the Updated 2020 U.S. and Non-U.S. Catastrophe Risk Event Lists**

The Working Group and the Subgroup conducted an e-vote to consider adoption of the updated 2020 U.S. and non-U.S. catastrophe risk event lists.

Ms. Krylova made a motion, seconded by Mr. Bronson, to adopt the lists *(see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment One-A)*. The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

Update to
Property and Casualty Risk-Based Capital
Underwriting Factors
Experience Through December 31, 2017

Presented by the American Academy of Actuaries¹
Property and Casualty Risk-Based Capital Committee
March 2021

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policy makers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

1. INTRODUCTION

The American Academy of Actuaries Property and Casualty Risk-Based Capital Committee ("Committee" or "We") prepared this Report ("Report") at the request of the National Association of Insurance Commissioners’ ("NAIC") Property and Casualty (P&C) Risk-Based Capital (RBC) Working Group ("NAIC Working Group" or "Working Group").

In this Report, we present indicated Line of Business ("LOB") Underwriting ("UW") Risk Factors for the P&C RBC Formula ("RBC Formula" or "Formula"), specifically, RBC Line 4 on pages PR017 and PR018 for the Formula. We refer to these LOB UW Risk Factors as the “Reserve Risk Factor” ("RRF") and the “Premium Risk Factor” ("PRF"), respectively, or “Risk Factors,” generically.

This is the first in a series of three reports. The results of this review will be input to subsequent Reports 2 and 3 that will address the following:

- Report 2—Investment Income Adjustment ("IIA")—RBC Line 8 on page PR017 (R4 UW Risk - Reserves) and Line 7 on page PR018 (R5 – UW Risk – Net Written Premium), by LOB.
- Report 3—Loss Concentration Factor ("LCF") and Premium Concentration Factor ("PCF")—RBC Line 14 on PR017 and PR018 respectively.

We describe the full scope of this three-part project in a letter to the NAIC Working Group dated May 9, 2019, that is attached as Appendix 15 in this Report. We plan to issue Reports 2 and 3 later this year.

We provide these indicated Risk Factors for the information of the NAIC Working Group. Report 2—Investment Income Adjustment, to be provided later this year, may also be useful in informing NAIC Working Group action related to the indicated UW Risk Factors in this Report.2

This work by the Committee builds on prior American Academy of Actuaries reports on UW Risk Factors, most recently in 2010 and 2016, which we refer to as the 2010 Report and the 2016 Report, respectively. We also use Casualty Actuarial Society (CAS) RBC research prepared by the CAS Dependency and Calibration Working Party (DCWP). We list this American Academy of Actuaries and CAS material in the Reference Section, Appendix 14.

The analysis presented in this Report is based on data evaluated through December 31, 2017. The analysis in the 2016 report was based on data evaluated through December 31, 2014.

---

2 The IIA Report will address the fact that the current IIA’s are based on a 5% interest rate, even though current interest rates are much lower. It is likely that the effect of reflecting lower interest rates will increase the overall risk charges.
2. FINDINGS

Indicated Risk Factors
Using the data and methodology described in this Report, we calculate the indicated Risk Factors. We compare the indicated factors to (a) indicated Risk Factors from the 2016 Report and (b) the Risk Factors in the 2020 RBC Formula in tables below:

- In Tables 1a and 1b we compare the Risk Factors indicated by the current analysis to the Risk Factors indicated in the 2016 Report. This comparison shows us the effects of changes in methodology and additional data for this Report compared to the 2016 Report.

- In Tables 1c-1e we show the effect on RBC values of moving from the Risk Factors in the 2020 RBC Formula to the Risk Factors indicated by this analysis. Appendix 13 provides further details on the effect of that change, and also the effects of “capping” the changes, using the capping rules the NAIC Working Group considered in evaluating the 2016 Report.  

Table 1a shows the following information:

- Columns 2 and 5—The factors in the “2020 RBC Formula” column are those used in the 2020 RBC Formula, except that, for catastrophe exposed LOBs, we increase the 2020 Risk Factors to their values before the NAIC catastrophe risk adjustments. 

- Columns 4 and 7—The Risk Factors in the “Indicated (2017 Data)” columns are the indicated Risk Factors from this study, using data evaluated through December 31, 2017.

The all-lines average indicated Risk Factors in the analysis are relatively close to the all-lines average indicated Risk Factors from the 2016 analysis. Nonetheless, there are some notable changes in Risk Factors by LOB.

---

3 While we provide this detailed information, as noted in the Introduction, the results of our IAA Report may provide more context for any changes in Line 4 Risk Factors.

4 Beginning in 2016, the RBC Formula includes a new risk component, RCat, covering earthquake and hurricane components of the total premium risk. The indicated PRFs in this Report and in the 2016 Report have been calibrated with data that included earthquake and hurricane losses. Therefore, to avoid double counting of catastrophe risk, the NAIC developed a procedure to reduce the otherwise applicable Risk Factors for the affected LOBs. The factors that reduce the indicated PRFs to an ex-cat basis by LOB are as follows: Homeowners (0.971), CMP (0.980), Special Liability (0.983), Special Property (0.982), and Reinsurance: Nonproportional Assumed Financial, collectively called (“Reinsurance Property”) (0.944).

5 The indicated Risk Factors do not reflect the transition rules, often referred to as ‘capping’, that the NAIC requested.

6 The NAIC has adopted a portion of the indicated Risk Factors from the 2016 Report in several steps from 2016 to 2019. The remaining differences between the 2019 Risk Factors and the indicated Risk Factors contained in the 2016 Report are due to NAIC capping for those LOBs that has not yet been removed.

7 These indicated Risk Factors do not reflect any transition rules, often referred to as “capping,” that the NAIC might request.
If the NAIC Working Group decides to update the current factors based on this research, we can provide "capping" alternatives if so requested.

</table>

Note 1: Average Risk Factors are based on 2017 industry total net written premium and net unpaid loss and loss adjustment expense reserves, by LOB, for PRFs and RRFs, respectively.

Note 2: The company risk charge depends on not only the Risk Factors, above, but also depends on adjustments for company experience, investment income, loss sensitive contracts, company expenses (for premium risk) and a concentration adjustment. The change in Risk Factor is not representative of the change in RBC value for any particular company, as the Risk Factor does not include all elements of the RBC Formula and as distribution of premium/reserves by LOB differs widely among companies. Tables 1c-1e provide further details on the effect of the indicted Risk Factors on overall RBC values.
Note 3: Our indications are based on data from 1989–2017 Annual Statements, Schedule P Parts 1, 2 and 3 for “Ten-Year LOBs” and from 1997–2017 confidential RBC Filings for Two-Year LOBs. The NAIC compiled the data from the RBC Filings so that the available experience reflected 10 years for all LOBs.

Note 4: The shaded lines represent factors which are based on a limited amount of data.

As our data sources and methods somewhat different between Two-Year LOBs and Ten-Year LOBs, the table shows the average indicated Risk Factors for all-lines combined and, also, separately for Two-Year LOBs and Ten-Year LOBs. Ten-Year LOBs are the LOBs for which Schedule P shows 10 accident years (AYs) of data. Two-Year LOBs are those for which Schedule P shows only two AYs of data.

Table 1b, below, supplements Table 1a, showing the premium risk charges assuming industry average expenses and showing the percentage change in Premium Risk Charge percentage (PRC%) and Reserve Risk Charge percentage (RRC%). Note that the percentage change in RBC charge is higher than the change in Risk Factor as a percentage of premium or reserves.

---

8 Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.
9 The Two-Year LOBs include Special Property, Automobile Physical Damage, Fidelity/Surety, Other (Including Credit, Accident and Health), Financial/Mortgage Guaranty, and Warranty.
10 The analysis uses less than $50 billion in 2017 NEP or less than $50 billion in 2017 reserves after filtering, using Annual Statement data for all LOBs.
11 $RC% = PRF + 2017 industry average expense ratio by LOB -100%. $RRC% = RRF. Column (4) = column (3)/column (2). Column (7) = column (6)/column (5).

See Notes 1-4 on Table 1a

**Effect of Indicated Risk Factors on RBC by Company**

The NAIC has provided the information in Appendix 13, which summarizes the company-by-company changes in RBC values implied by the indicated RBC factors, for all companies with RBC Filings in 2019. These calculations include the effect of all elements of the RBC Formula.

Tables 1c – 1e, below, compare the RBC values based on the indicated Risk Factors with the 2017 data, in this Report, to the RBC values based on the indicated Risk Factors with the 2014 data, in the 2016 Report.

Table 1c shows that, overall, the 2017 indicated Risk Factors produce very little change in UW RBC Values for reserve risk, premium risk, or total Authorized Control Level (ACL) RBC. The average effect is a change of -0.6% for ACL.

Table 1e shows the effect on RBC value by Type of Company.12

The largest change is for the Type of Company “NOC”. The LOBs that predominate for that Type of Company are Fidelity/Surety, Special Liability,13 and Other Liability. The variation in changes by Type of Company are larger for reserve risk than for premium risk. Appendix 13 contains more details on Type of Company and the distribution of LOBs within each Type of Company.

In the next section, we discuss the changes in data and methodology that influence those observations.

12 Each LOB is categorized as being typical of a particular Type of Company, e.g., Private Passenger Automobile Liability is typical of Personal Lines companies. For each company, the category with the largest amount of premium determines the Type for that company. For example, a company with more of its premium in Private Passenger Automobile Liability, Homeowners, or Automobile Physical Damage than in any of the other groups of LOBs is categorized as Personal. Appendix 13, Part 4 provides the complete definition.

13 For example, Boiler and Machinery and Ocean Marine LOBs.

Elements Driving Differences Between 2017 Indicated Risk Factors and 2014 Indicated Risk Factors
The changes in indicated Risk Factors from the 2016 Report to the current Report result from additional data and from some refinements in methodology. The sections below discuss the factors driving the major changes by Type of Company.

1. Zero Interior Anomaly—RRFs
We find that in the RBC Filings, there are companies that do not complete the interior of loss triangles, perhaps because these values are not required in the RBC calculation. For these companies, in the incurred and paid development triangle of the RBC Filing, all points are zero or blank, other than (a) initial evaluations by AY on the diagonal of the triangle, and (b) current evaluations of each AY, on the last column. We refer to these as “Zero Interior” triangles. Appendix 4, Table A-5b, contains an illustration of a zero interior triangle.

For Two-Year LOBs, in this Report, we remove Zero Interior triangle data from our analysis. That is a change compared to the 2016 Report, and that is the largest source of change in indicated RRFs for Two-Year LOBs. Four of those Two-Year LOBs are typical lines for the Type of Company “NOC” which shows the largest change in reserve risk RBC value as follows: Fidelity/Surety, “Other,” Financial/Mortgage Guaranty, and Warranty.

In the 2016 Report we addressed the potential for zero interior data by excluding Reserve Runoff Ratios (RRR) with absolute value greater than 5. In this report we applied the zero interior filter in addition to excluding RRRs with absolute value greater than 5. Appendix 11, Table A-8a shows the effect of zero interior filter, by LOB.

2. Refined Minor Lines Definition—RRFs
We exclude risk data points where the premium for the LOB represents a small portion of a company’s all lines premium as defined below. We call these data points “Minor Lines.”
For Reserve Risk, the Minor Lines filter compares the NEP for the LOB for a period of years to the corresponding all-lines premium. To the extent the appropriate data are available, we use a rolling Ten-Year period for this calculation. As there are variations in the data available from year-to-year, the “window” varies by LOB. Appendix 5 provides further details on this approach.

The use of Ten-Year “windows” differs from the approach in 2016 Report, where the reserve risk Minor Lines definition was based on all-years premium. With the increase in the number of years of premium in our data set, we determined that a change in procedure should be considered, and we adopted this approach.

This change in methodology reduces RRFs by about 1% overall, but by larger amounts for the reinsurance LOBs, for Financial/Mortgage Guaranty, for Other, and for Special Property LOBs. The change drives much of the change for the reserve risk RBC values for the Reinsurance Type of Company. Appendix 11, Table A-8a shows the effect of the revised minor lines definition, by LOB.

3. Absolute (RRR)>5—RRFs—Two-Year LOBs Based on RBC Data
In the 2016 Report, we excluded RRR values greater than 5 for both Ten-Year LOBs and Two-Year LOBs from Annual Statement and RBC data, respectively, because we were concerned that the ratios reflected data quality issues.

We have reviewed this issue, and for the Two-Year LOBs from confidential RBC data, we continue to exclude data if the absolute value of RRR is greater than 5, as many such values appear to be due to data anomalies. For the Ten-Year LOBs, however, in this review, we use RRR values, regardless of size.

If large RRR values were data errors, then we might expect an impact across all LOBs. However, for Ten-Year LOBs, to the contrary, we find a wide range of impacts, as a percentage of reserves, from a low 0.000 to a high of 0.195. There are nine of thirteen Ten-Year LOBs affected by less than 1% of reserves and only two affected by more than 5% of reserves. As such, we see no need for an all-lines exclusion.

Table A-5a, in Appendix 4, below, shows the effect of removing this filter by LOB. It shows that the weighted average effect on the RRFs for Ten-Year LOBs is an increase of 0.9% of reserves. It shows the Ten-Year LOBs most affected by removing the exclusion are as follows: Products Liability (19% of reserves) and International (20% of reserves). The LOB effects are not apparent in the Type of Company summary because Products Liability is usually a small part of business for a Commercial Type of Company and International is a relatively small LOB.

The change tends to increase the indicated RRF for reinsurance liability, which mitigates the effect of other changes in RRF for that LOB, e.g., the change in the Minor Lines procedure.

4. Other Changes
We describe the nature of the changes in more detail in the remainder of the Report, and we show all the components of change in the following Appendices:

- PRFs (Ten-Year LOBs): Appendix 10, Table A-7
• RRFs (all LOBs): Appendix 11, Table A-8

Issues Related to Certain LOBs
Various considerations that might affect the selection of Risk Factors for certain LOBs are as follows:

- Low Credibility LOBs—The International, Financial/Mortgage Guaranty, and Warranty LOBs have relatively few data points for our analysis—900, 200, and 100 respectively—after filtering for reserve risk and similar amounts for premium risk. That compares to over 10,000 data points for the Private Passenger Liability, Homeowners, and Workers’ Compensation LOBs. As such, indicated Risk Factors are more subject to variation from year-to-year because of even small changes in methodology and because of random variations in emerging data, than is the case for other LOBs.

- Financial/Mortgage Guaranty—There are many single state/monoline companies that provide data in the Annual Statements, but that are exempt from RBC requirement. The data for the single state/monoline mortgage/financial guaranty companies are not included in the data used to develop the indicated Risk Factors in Table 1.14

- Warranty—This LOB was separated from the Fidelity/Surety LOB in 2008. Some companies provided a complete history for Accident Year (“AY”) including prior AYs. Other companies provided the separate data only for AYs 2008 and subsequent. As such, RBC data for the Warranty LOB in Annual Statements prior to 2017 is very limited.

- International—As noted in the first bullet, the volume of data in this LOB is relatively low. Moreover, proportionally more of the historical experience for this LOB arises from earlier Annual Statements than from more recent Annual Statements. As such, the relevance of indicated Risks Factors for current LOB M business is less certain than for other LOBs.

- Products—Asbestos and Environmental claim emergence affects reserve development from each of the over 30 years of Annual Statements in our analysis. It is possible that this ongoing emergence results in over-stated indicated RRFs.15,16

- Minimum Risk Charges—For some LOBs, the indicated risk charges will be negative, after the investment income adjustment, for a company with industry average expenses and with average loss ratio/reserve development experience (Medical Professional Claims Made and Financial/Mortgage Guaranty RRFs). Also, for one LOB, the indicated risk charge will be zero or above, but below 5%, (Automobile Physical Damage-PRF). The NAIC Working Group may want to consider the use minimum risk factors.

---

14 This RBC Risk Factor analysis does not consider the solvency risk aspects of Statutory Contingency Reserves that might be provided for Financial/Mortgage Guaranty LOBs or the implications of large unearned premium reserves (viewed as a percentage of written premium) for longer duration policies in Warranty, Financial/Mortgage, and health (included in “Other”) LOBs.

15 It is less obvious in the PRF indicated Risk Factors, but asbestos and environmental claim emergence might also affect Reinsurance Liability, Other Liability, and (to a lesser degree) Commercial Multi peril LOBs.

16 To the extent that the NAIC Working Group implements changes in risk factors with caps, as it has done in the past, this risk of over-stated Product Liability RRFs is mitigated.
Effect of 2017 Risk Factors Compared to Risk Factors in 2020 RBC Formula

If the NAIC Working Group were to implement Risk Factor changes based on the indicated Risk Factors, Table 1f, below, shows the percentage change in reserve Risk Charge, premium Risk Charge and ACL that would result, using capped and uncapped scenarios shown.

</table>

Table 1f shows the following:

- Row 2—The change in risk charges that would result from implementing the 2014 indicated Risk Factors in the 2016 Report is not zero, because those factors have been partially, but not fully implemented.
- Row 3—The change in Risk Factors that would result from implementing the 2017 indicated Risk Factors are lower than from implementing the 2014 indicated Risk Factors, because, as shown in Table 1c, the 2017 indicated Risk Factors are lower than the 2014 indicated Risk Factors.
- Row 4—If we apply a minimum risk charge, after investment income adjustments, of 5%, the change in risk charges is slightly higher than if that were not applied, i.e., 2.5% of ACL rather than 2.2% of ACL.
- Rows 5-7—If we apply the 2017 indicated Risk Factors, but capped to produce a maximum change in risk charge by LOB, after investment income adjustment, the changes in ACL are 0.0%, 0.4%, and 0.9% for caps of 10%, 20%, and 35% respectively. The caps are applied to the absolute value of the risk charge change, i.e., no more than 10% upward or 10% downward. The 5% minimum is applied in each of the examples.

### 3. METHODOLOGY

We determine the indicated Risk Factors as outlined below in Appendices 1-9. In Appendices 10 and 11, we analyze the movement in indicated Risk Factors from the values in the 2016 Report to the values in this Report.
Risk Factor Overview
We describe the basis for the PRF and RRF indications below.

PRF Indications
The PRF for a LOB is a component of the premium risk charge, which reflects the risk that a subsequent year of company premium, net of reinsurance, will produce an adverse UW result.

The indicated PRF for each LOB is derived from loss and loss adjustment expense (“LAE”) ratios, for each LOB/company/year in the selected experience period. We refer to the net earned premium (“NEP”) and the loss ratio (“LR”) for an AY/company/LOB as a premium risk data point.

The indicated PRF is the 87.5th percentile of the LRs after the filtering described in the Data Selection section below.

RRF Indications
The RRF for a LOB is a component of the reserve risk charge, which reflects the risk that currently reported reserves for loss and all loss adjustment expense, net of reinsurance, will develop adversely from the initial reserve date to ultimate.\(^\text{17, 18}\)

The indicated RRF for each LOB is derived from RRRs by company/year in the selected experience period. The denominator of that ratio is the company carried loss reserve, for all AYs combined, at the initial reserve date.\(^\text{19}\) The numerator of the ratio is the increase/decrease in the company estimated incurred losses for all AYs combined from that initial reserve date to the latest available evaluation date. Appendix 12—Examples 1, 2, and 3 illustrate the RRR calculation. We refer to the initial reserve amount and the RRR for an initial reserve date/company/LOB as a reserve risk data point. We refer to premium and reserve risk data points, generically, as risk data points.

The indicated RRF is the 87.5th percentile of the RRRs after the filtering described below.

Data
We obtain our data from:

- Annual Statements, Schedule P, Parts 1, 2, and 3, for all LOBs, for years 1989–2017, and
- Confidential RBC Filings,\(^\text{21}\) for Two-Year LOBs, for years 1994–2017.\(^\text{22}\)

\(^\text{17}\) The development to ultimate is often referred to as a “runoff” time horizon, in contrast to a “one year” time horizon that considers adverse development over a one-year period. This is intended to be the development to ultimate, but implementation of that intention is limited by the available data.

\(^\text{18}\) The RRF does not measure the adequacy of a company’s carried reserves. The company experience adjustment, not part of this analysis, partially reflects company historical reserve adequacy, relative to the industry.

\(^\text{19}\) The amounts in this calculation are gross of nontabular discount.

\(^\text{20}\) Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.

\(^\text{21}\) RBC Forms PC111-114 and 121-122 for premium and RBC Forms 211-214, 221-222, and 301-304, for reserves.

\(^\text{22}\) RBC Filing data compiled by regulators who provide summary results to this Committee.
Compared to the 2016 Report, the data available for this Report include three “new” Annual Statement and RBC Filings (2015–2017), and eight “older” Annual Statements (1989–1996). These additional data are desirable because they include more data points, contain more developed data for recent years, reflect a wider range of UW and economic conditions, include more recent data, and provide some data for AY 1988 and subsequent that were not available in the data used for the 2016 Report.23

Data Filtering
Consistent with the 2016 Report methodology, our indicated Risk Factors use the data described above and filtering rules itemized below. The filtering rules address the following features of the data:

1. Experience period
2. Pooling
3. Anomalous data, including Zero Interior filter
4. Minor lines
5. Age
6. Size
7. Maturity

In this analysis we refine the use of filters compared to the 2016 Report, as follows:

For both Premium and Reserve Risk:
- Enhanced the size threshold calculation (Appendix 7)
- Age based on “pool” age rather than “oldest company” age (Appendix 6)
- In the 2016 Report we selected the most mature LR and RRR after we consolidated company data into pools, as appropriate, (“Pooling First”). In this Report, we select the most mature LRs and RRRs by company, before consolidation into pools, as appropriate (“Maturity First”). (Appendix 3).

For Reserve Risk Factors:
- Revise the treatment of RRRs with absolute value greater than 5 for Ten-Year LOBs (Appendix 4)
- Revised definition of “Minor Lines” (Appendix 5)
- Zero Interior filter for reserve risk data for confidential RBC Filings, used for Two-Year LOBs, and from Annual Statement, for all LOBs (Appendix 4)
- Minor lines categorization and LOB-age for RBC RRRs based on Annual Statement data (Appendix 5—Minor Lines and Appendix 6—LOB-age)

23 For example, there are companies with 1996 Annual Statements that include data on AY 1988, or reserve year ending December 31, 1988, that did not file Annual Statements after 1996. In this case, the 1988 experience of these companies are not part of the 2016 Report analysis, because data from 1996 and prior Annual Statements were not available.
We identify the changes with the largest effects, by Type of Company, in the Findings section above.

We outline the nature of these filters, and the impact of the changes, in the sections immediately below, and we further describe them in Appendices 1-9. Except as noted, we applied the same methods in our analysis of Annual Statement data and confidential RBC data.

### 1. Experience Period (Appendix 2)

In this Report, we use LRs for AYs 1988–2017 and RRRs for initial reserve years ending 1988–2016. For Ten-Year LOBs, we obtain this data from Annual Statements. For Two-Year LOBs, we obtain the data from confidential RBC Filings. For the 2016 Report, the data covered LRs and RRRs from AY 1988–2014 and initial reserve years ending December 31, 1988–2013.

**Exclude AYs and Initial Reserve Years Prior to 1988**

For this Report, we have experience for AYs/Reserve Years 1980 to 1987 that was not available for the 2016 Report. Looking at indicated Risk Factors by decade, we find that for nearly all the liability LOBs, this oldest block of years shows the highest indicated PRFs and RRFs.

This pattern may be due to factors that might not be applicable to current conditions. For example, the 1993 Report on Reserve and Underwriting Risk Factors by the American Academy of Actuaries Property/Casualty Risk-Based Capital Task Force (page 4) identified four reasons why the experience of the 1980’s might not be suitable for projection of the future. These are:

- **The tort liability explosion, particularly in respect to asbestos and environmental liabilities.**
- **A great deal of naïve capacity, focused especially on general liability and reinsurance lines.**
- **High interest rates, creating intense pressures to engage in cash flow underwriting**
- **High inflation rates**

Other considerations include:

- Company loss reserving practices may have improved because of required actuarial opinions and increased regulatory, rating agency and management attention to reserving.
- The adverse experience in these years triggered expansion in the use of claims-made policies, pollution exclusions, asbestos exclusions, and other policy changes.
- Company pricing discipline and pricing methodology may have improved since the 1980’s.

Therefore, in this Report, we do not use the experience prior to 1988, because these early years may not be sufficiently relevant to the present conditions.

---

24 Note that the most recent AY is 2017, but the most recent initial reserve date is December 2016. The most recent initial reserve year is always one year older than the most recent AY, as for the latest year, the reserve development is zero and not useful for our analysis.

2. Pooling (Appendix 3)

We combine risk data points from intercompany pool participants into a single pool-wide risk data point. Two features of the pooling process are new in this Report.

- First, in the 2016 Report we selected the most mature LR and RRR after we consolidated company data into pools, as appropriate, (“Pooling First”). In this Report, we select the most mature LRs and RRRs by company, before consolidation into pools, as appropriate (“Maturity First”). We example the reasons for this change in Appendix 3.

- Second, while we generally apply the filter to the pooled data points, we apply the new zero interior filter before pooling.

3. Anomalous values (Appendix 4)

Premium Risk

For PRFs, we exclude risk data points with anomalous values, i.e., negative values for premiums, incurred losses. We exclude zero incurred losses, as these can represent unusual financial transactions or other data anomalies.

Reserve Risk

For RRFs, we exclude the entire company/LOB/statement year data triangle, before pooling, if:

- Any calendar year\(^{26}\) has negative cumulative incurred losses, all AYs combined
- Any calendar year has negative total cumulative paid losses, all AYs combined
- Any calendar year has a negative total reserve, all AYs combined
- The interior of the development triangle is entirely zero values

Also, for both Annual Statement and RBC data, we exclude risk data points where the initial reserve is zero. In the Pooling First approach, this can have has the effect of excluding the entire company/LOB/statement year. In the Maturity First approach, even if there is a zero initial reserve at one valuation date, we might construct RRR values from data points in the statement year for other maturities that have non-zero initial reserves.

Absolute (RRR)>5

As discussed in the Findings section, we exclude RBC risk data with absolute values of RRR>5 for Two-Year LOBs. In the 2016 Report, we excluded RRR values greater than 5 for both Ten-Year LOBs and Two-Year LOBs because we were concerned that the ratios reflected data quality issues.

\(^{26}\) A calendar year in the Annual Statement or RBC development triangle is the sum of values for all AYs within a column of the data triangle. The test means examining the sum of the incurred losses over all AYs plus the prior year row, for a development column in Schedule P, Part 2, or the corresponding amounts for RBC incurred loss schedules, and similarly for paid losses in Schedule P Part 3.
4. Minor Lines (Appendix 5)

We exclude risk data points where the premium for the LOB represents a small portion of a company’s all lines premium as defined below. (“Minor Lines”)

For premium risk, the Minor Lines filter compares the LOB premium to the all-lines NEP for each AY separately. This is the same method that was used in the 2016 Report. As described in the Findings section above, for Reserve Risk, the Minor Lines filter compares the NEP for the LOB for a period of years—10 years where practical—to the corresponding all-lines premium.

For both reserve risk and premium risk, the threshold boundary for Minor Lines is as follows:

<table>
<thead>
<tr>
<th>LOBs (NAIC Code)</th>
<th>Minor Lines Threshold</th>
</tr>
</thead>
<tbody>
<tr>
<td>All lines other than those listed below</td>
<td>5.0%</td>
</tr>
<tr>
<td>Other Liability and Products Liability combined</td>
<td>5.0%</td>
</tr>
<tr>
<td>Special Liability, Fidelity/Surety, Warranty</td>
<td>2.5%</td>
</tr>
<tr>
<td>International, Financial/Mortgage Guaranty</td>
<td>No Filter</td>
</tr>
</tbody>
</table>

These thresholds in Table 2 are the same as in the 2016 Report.

We determine the Minor Line status of each reserve risk data point using Annual Statement data. We apply that status to the corresponding RBC reserve risk data point.27

5. Age—Years of LOB NEP > 0 (Appendix 6)

We exclude premium and reserve risk data points where, for a particular company/LOB, there are less than five years28 of NEP greater than zero.

This is the same filter that we used in the 2016 Report, although (1) with additional years of experience, there are some “young” LOBs excluded by this age filter in the 2016 Report that are not excluded in this Report, and (2) in this Report we determined age by pool while in the 2016 Report pool age equaled the age of the oldest company within the pool. This change may have excluded some data points that had been included in the 2016 Report.

6. LOB Size (Appendix 7)

We exclude risk data points where, for a LOB, NEP (or initial reserve) is less than the 15th percentile for the AY or initial reserve year. We smooth the 15th percentile size threshold in one of several ways that we discuss in Appendix 7.

---

27 This simplifies the calculation effort required of the regulatory working with the confidential RBC data.
28 Consecutive or non-consecutive years.
7. Maturity (Appendix 8)
We exclude the least mature risk data points, as we did in the 2016 Report. We exclude risk data points with maturity less than the number of years shown in Table 3 below.

8. Overall Effect of Filtering
Table 4 below shows the volume of NEP/reserve used in the filtered data set compared to the total volume. This table shows that the proposed filtered data set uses most of the NEP and reserve volume available in the data, after removing anomalous data.

</table>

29 Data from 1988–2017, reflecting the effect of all filtering (items 1-7).
In the 2016 Report, these ratios had similar values. For premium and reserve amounts, the all-lines ratios were 93% and 80% for premium and reserves, respectively. For number of data points, the ratios were 53% and 43% for premium and reserves, respectively.
9. Safety Level
Consistent with prior Committee reports and NAIC Working Group, decisions, the indicated Risk Factors are based on an 87.5th percentile of reserve risk data points and premium risk data points for Reserve Risk and Premium Risk, respectively, subject to the filtering discussed previously.  

4. OTHER CONSIDERATIONS AND FUTURE RESEARCH

This Report does not address the following issues:

1. Catastrophe Loss Adjustment—The indicated PRFs shown in this Report reflect the inclusion of earthquake and hurricane catastrophe losses. We have not separated the Risk Factors into the non-catastrophe and catastrophe components used in the RBC Formula.

2. Workers’ Compensation Discount—Our scope does not include estimating the effect that unwinding Workers’ Compensation tabular reserves might have on the indicated Risk Factors.

3. Line 3 Company Experience Adjustment—The RBC formula includes an adjustment for the company loss ratio for premium risk (or runoff ratio for reserve risk) in relation to the corresponding industry ratios in pages PR0017 and PR0018, lines 1, 2, and 3.

   Consistent with the proposed calibration of PRFs and RRFs, the NAIC P&C RBC Working Group should consider changes to the calculation of the industry loss ratio and/or reserve ratio (Line 1 on PR0017 and PR0018) to reflect the filtering of the Risk Factor calibration discussed above. This could include:

   ▪ Excluding risk data points when premiums (reserves) are below the 15th percentile for that AY/LOB ("Size").
   ▪ Combining risk data points from intercompany pool participants into a single pool-wide risk data point ("Pooling").
   ▪ Excluding risk data points where the NEP for the LOB represents a small portion of a company’s total NEP ("Minor Lines").
   ▪ Excluding LOB/company risk data points if there are less than five years of NEP for that LOB ("Age").
   ▪ Assess the need for change to reflect that calibration data exclude certain immature risk data points.

4. The current RBC formula structure—Our indicated Risk Factors assume the current structure of the RBC Formula. For example, while indicated UW Risk Factors vary by line of business volume, the Committee provides a single factor for each LOB.

---

30 In the next report, we plan to further discuss the safety level reflecting both Line 4 safety level and the effect of the investment income offset.

31 We believe the NAIC method of developing the factors excludes anomalous data, i.e., unexpected zero or negative values.

32 Adjustment possibilities include (a) revising own-company calculation to use only the more mature risk data points, or (b) making no adjustment because the company data and industry data are at the same maturity.

33 This is one example. There are other variations in the RBC Formula.
5. As discussed earlier in the report, in the Findings section, for several LOBs, there are particular issues that might affect selected Risk Factors and/or might be the subject of future analysis.

6. The zero interior aspect of the RBC Filing data\textsuperscript{34} that we use for our calibration indicates that additional data quality assessment for past data, and/or clarification of RBC Filing requirements, might be useful. Assessment of data quality is problematic because the RBC data is confidential, and not available in detail to this Committee.

7. As we were completing this analysis, we realized that it is possible to obtain two data points from the loss triangles provided for two-year lines of business in the Annual Statement. Because it contains a reserve valued one year prior to two individual accident years provided in the triangle, it is possible to calculate a reserve risk ratio from solely the prior year row and this would provide one additional year of development.

\section{APPENDIX 1—DATA}

We obtain our data from 1989\textsuperscript{35}–2017 Annual Statements, Parts 1, 2, and 3 for all LOBs, and from 1994–2017 confidential RBC Filings for Two-Year LOBs.

Compared to the 2016 Report, the following additional data is available for this Report:

- The 2015–2017 Annual Statements and RBC Filings add three additional AYs and three initial reserve dates: AYs 2015, 2016, and 2017, and initial reserve dates December 31, 2014, 2015, and 2016. These Filings also increase the maturity of data for AYs and reserve runoff on initial reserves for 2007–2014.\textsuperscript{36}
- The eight older Annual Statements (1989–1996) provide data for additional older AYs, and initial reserve dates, i.e.:
  - AYs 1980–1987 and December 31, 1980–1987 initial reserve dates for Ten-Year LOBs, and
  - AY 1988 and December 31, 1987, initial reserve dates for Two-Year LOBs, from Annual Statements.

These additional data are desirable, because they include more data points, contain more developed data for recent years, and reflect the effects of a wider range of UW and economic conditions. Moreover, the Annual Statement Filings for years prior to 1997 provide additional data for initial

\textsuperscript{34} This issue does not relate to the quality of RBC Filing data used for RBC calculations. Rather, because our calibrations use RBC Filing data that is not used for RBC Filing calculations, some data submission

\textsuperscript{35} Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.

\textsuperscript{36} LRs for AYs 2006–2014 in the 2016 Report were valued at ages 9, 8, …, 1, respectively. In the current report, LRs for AYs 2006–2008 are valued as of 10 years, and LRs for AYs 2009–2014 are valued at ages 9, 8, …, 4, respectively. Reserve development data are similarly more mature.
reserve years ending 1988 and subsequent, for those companies with 1988 and subsequent experience that did not file Annual Statements after 1996.  

Lines of Business  
Schedule P currently contains information on 22 LOBs.

For the RBC Formula, and in our analysis, those 22 LOBs are combined into 19 LOBs. Other Liability Claims-Made is combined with Other Liability: Occurrence, (collectively “Other Liability”) Products Liability: Claims Made is combined with Products Liability: Occurrence, (collectively “Products Liability”) and Reinsurance: Nonproportional Assumed Property is combined with Reinsurance Nonproportional Assumed Financial (collectively “Reinsurance Property”).

Two-Year and Ten-Year LOBs  
For six of the 19 LOB combinations, Schedule P contains premium and claim information on the most recent two AYs and reserve development information on prior years combined. We refer to these as “Two-Year LOBs.” These six lines are Special Property, Automobile Physical Damage, Fidelity/Surety, Other (Including Credit, Accident and Health), Financial/Mortgage Guaranty, and Warranty.

For the remaining LOBs, Schedule P contains information on the most recent 10 AYs and reserve development on prior years. We refer to these as “Ten-Year LOBs.”

Thus, in our Annual Statement data, for Ten-Year LOBs, we have AY LRs and RRRs evaluated at maturities up to 10 years, and for Two-Year LOBs, we have AY LRs and RRRs evaluated at maturities up to two years. The RRRs from Two-Year LOBs cover the development of only the most recent two calendar years, for all accident years, including those prior to the most recent two accident years.

Premium and Reserve Risk Data  
For the analysis of premium risk, for each LOB, we obtain (a) earned premium net of reinsurance, (b) incurred loss and loss adjustment expenses net of reinsurance, and (c) the related LR, for each LOB, AY, company, and annual statement year.

For the analysis of reserve risk, we obtain (a) loss and defense and cost containment expense (“DCCE”) reserves at each year end, for all AYs combined, net of reinsurance (b) the increase/decrease in reserve estimate to the latest available maturity, for all AYs combined, net of reinsurance, and (c) the ratio of (a) and (b) that we call the RRR.  

---

37 For example, there are companies with 1996 Annual Statements that include data on AY 1988, or reserve year ending December 31, 1988, that did not file Annual Statements after 1996. In this case, the 1988 experience of these companies are not part of the 2016 Report analysis, because data from 1996 and prior Annual Statements were not available.

38 The LOB definitions had a major revision in the 1989 Annual Statement. There have been some changes in LOB definitions in the years from 1989 to present. As needed, in the section below, we note those that affect analysis.

39 All values gross of non-tabular discount. Reserves and payments are net of salvage and subrogation, as reported in the Annual Statement.
Note that the calibration is based on runoff of loss + DCCE, but the resulting Risk Factor is applied to loss + all LAE. This assumes that development for adjusting and other expenses follows the same pattern as loss + DCCE.

Appendix 12, Examples 1, 2, and 3 below illustrate how we calculate RRRs for Ten-Year LOBs and Two-Year LOBs, from Annual Statement data and RRRs for Two-Year LOBs from RBC Filings.

Confidential Information in RBC Filings
The RBC Filings provide incurred loss and DCCE development draw from Schedule P Part 2, for all LOBs, and paid loss and DCCE development drawn from Schedule P Part 3, for Two-Year LOBs.

The differences between Annual Statement data and confidential RBC Filing data for reserve risk, for Two-Year LOBs, include the following:

- Annual Statement Schedule P Parts 2 and 3 contains the latest two calendar years of development data. For example, the 2017 Annual Statement shows the incurred and paid values for the following:
  - AY 2017 evaluated at December 31, 2017,
  - AY 2016 evaluated at December 31, 2016, and December 31, 2016, and
  - The reserve at December 31, 2015, for accident years 2015 and prior and the change in incurred and paid values for AYs 2015 and prior (combined) in calendar year 2016 and in calendar year 2017.

- RBC data includes up to 10 individual AYs of development, over 10 calendar years, but it does not include any development information on AYs prior to those 10.
  Because RBC data does not include development information on AYs prior to year 10, the most mature runoff ratio from RBC data includes only one AY, i.e., the most mature AY, which provides maturities from one to 10.

Thus, for the most mature RRRs from Annual Statement data we have two calendar years of development for all AYs, while for RBC data we have up to 10 calendar years of development, but for only one AY. Neither type of data is as complete as the development history available for Ten-Year LOBs from the Annual Statement, which provides ten calendar years of development for all AYs.

AY Indicated Risk Factors—Annual Statement Data Compared to RBC Data
For Two-Year LOBs, we have data from Annual Statements and from RBC Filings. We calculate indicated PRFs and RRFs from each source.

---

40 RBC Forms PC111-114 and 121-122 for premium and RBC Forms 211-214, 221-222, and 301-304, for reserves.
Table A-1 below shows the differences between PRF indications using Annual Statement data and PRFs indications using RBC Filing data, and the differences between RRF indications using Annual Statement data and RRF indications using RBC Filing data.

</table>

In interpreting the differences indicated Risk Factors between the Annual Statement data and RBC data, we note the following, with respect to both PRFs and RRFs:

- Warranty—This LOB was separated from the Fidelity/Surety LOB in 2008. Some companies provided a complete history for all AYs, including AYs prior to 2008. Other companies provided the separate data only for AYs 2008 and subsequent. As such, only Annual Statement 2017 and RBC Filing 2017 contains complete development and reserve runoff data, and, overall, there are too few points, i.e., under 100, to provide reliable indicated Risk Factors. Hence, variations between Annual Statement and RBC indicated Risk Factors are not surprising.

- Financial/Mortgage Guaranty—There are many single state/monoline companies that provide data in the Annual Statements, but who are exempt from RBC requirement. As they do not make RBC Filings, the experience for the single state/monoline
mortgage/financial guaranty companies is not included in the data used to develop the indicated Risk Factors in Table 1. Hence there is substantially more data in the Annual Statement data than the RBC data, and differences between Annual Statement and RBC indicated Risk Factors are not surprising.

With respect to PRFs, for the other four Two-Year LOBs, the RBC data produces lower indicated Risk Factors. We interpret this to be the effect of favorable AY LR development that is reflected in the 10-year development in the RBC Filing data but is not reflected in the two-year development in the Annual Statement data.

With respect to RRFs, the direction of the differences between the RRFs based on Annual Statement data and RRFs based on RBC data vary by LOB, and we note the following:

- The RBC data includes both favorable and unfavorable reserve development that may not reflected in the two-calendar year window reflected in the Annual Statement data.
  - For Automobile Physical Damage, it appears that the balance of favorable and unfavorable produces a lower RRF from the RBC data than from the Annual Statement data.
  - For Fidelity and Surety, it appears that adverse economic environments in the 1999–2002 period and the 2008–2009 period generate adverse development on initial reserves established at year-ends prior to those dates, but not reflected for several years after those periods.

- RBC reserve risk data includes fewer data points for all the Two-Year LOBs, and the differences are proportionally larger for some LOBs than for others. As the company-by-company RBC data is confidential, and not available to us, we have not explored that in detail.

6. APPENDIX 2—EXPERIENCE PERIOD

We have Annual Statements premium risk data for AYs 1980–2017, for most Ten-Year LOBs and 1985–2017 from RBC Filings for most Two-Year LOBs.

We have RRRs for the same starting dates, but ending in 2016.\textsuperscript{41} Because Annual Statement LOB definitions change over time, there are fewer years of experience for the Medical Professional Liability, Warranty, and Financial/Mortgage Guaranty LOBs. Table A-2, below, shows the LRs and RRRs available to us by year.

\textsuperscript{41}The most recent initial reserve year is always one year older than the most recent AY, as, for the latest year, we only have an initial estimate and no information on subsequent development.

</tbody>
</table>

Note 1: Earliest Annual Statement or RBC Filing for the MPL LOBs – 1993
Note 2: Earliest Annual Statement for the Financial/Mortgage LOB – 1994
Note 3: Earliest Annual Statement or RBC Filing for Warranty LOB – 2008, when the Warranty LOB was separated from the Fidelity/Surety LOB. RBC Filings for some companies show the new Warranty LOB for AYs 2008 and subsequent only, while some companies show RBC data for prior AYs as well.
Note 4: We did not use data from RBC filing years 1994-1996, as data for those years was collected for information purposes only, and might be subject to learning-curve errors.

Treatment of 1980–1987 AYs/RRRs
The current data set includes 1980–1987 AYs and RRRs that were not available for prior Committee reports, nor for the DCWP for its work.

Table A-3 below shows the indicated Risk Factors by decade, 1980–1989, 1990–1999, 2000–2009, and 2010–2017. We see that, for nearly all the liability LOBs, the oldest block of years, 1980–1989, shows the highest indicated PRFs and RRFs.

Table A-4, below, shows that including the oldest years (1980–1987) in the indicated Risk Factors produces significantly higher indicated RRFs and a somewhat higher PRFs, compared to the indicated Risk Factors excluding the oldest years. RRFs increase by more than 20% for many of the larger volume lines.

Therefore, for the reasons we discuss above, in the “1. Experience Period” subsection in the Methodology section, we believe the experience prior to 1988 may not be applicable to current conditions, and we do not include it in our indicated Risk Factors.

We plan to revisit this assumption when we review Investment Income Adjustments in our next report, where we will consider the effect of interest rate changes on risk charges over the entire period.

7. APPENDIX 3—POOLING METHODOLOGY

Pool Mapping
In determining the indicated UW Risk Factors, we combine the data from intercompany pool participants into a single pool-wide risk data point. Alternatively, if we were to treat these interrelated risk data points as independent, the same loss ratio value (or reserve runoff ratio) would appear multiple times, reducing the apparent variability in the LR (or RRR) across companies, and distorting the indicated 87.5th percentile LR/RRR value.\(^{42}\)

\(^{42}\) See DCWP Report 6 pages 10-12, 16, and 77-80 for more details.

[https://www.casact.org/pubs/forum/13fforum/01-Report-6-RBC.pdf](https://www.casact.org/pubs/forum/13fforum/01-Report-6-RBC.pdf)
We identify intercompany pools by annual statement year using the following information, to the extent available, for each company and annual statement year:43

- NAIC group code from 2010, 2014, and 2017 analyses to identify member companies,
- Schedule P Intercompany Pooling Participation Percentage (Schedule P Part 1 Column 34),
- Schedule F Part 9 Note, and
- Notes to Financial Statements, Note 2644 (on Intercompany Pooling Arrangements).

Our current analysis includes 1984–1996 and 2015–2017 Annual Statements, which were not part of prior Academy or DCWP analysis. For the early years, 1984–1996, as we do not have the NAIC group assignments by company, we identify pool members as companies with identical or similar loss ratios across companies in combination with the oldest known NAIC group code. For the most recent years, 2015–2017, we had the 2017 NAIC group code to guide us. For 1997–2014 we make a few changes to the pool mapping based on an improved perspective on pooling, arising from the longer history of Annual Statements available to us.

Note that due to the limitations of the data and information available, our methodology is approximate, and might not necessarily identify all intercompany pooling arrangements and/or may combine some companies that are not actually pooled.45 Group identification becomes more approximate for older annual statement years. However, we believe that the elimination of multiple identical records from the data set through this adjustment, even with the approximations, improves the quality of the Risk Factor analysis.

Selection of Most Mature Data Point—Maturity First vis-à-vis Pooling First

We have multiple evaluations of each initial reserve date-RRR and AY-LR for a given LOB/company. We remove data triangles that we classify as anomalous (see Appendix 4). Then, for each LOB, for each AY/Initial reserve year, before pooling, we determine the Annual Statement that had the most mature evaluation of the AY/initial reserve year. We calculate the LR/RRR from that Annual Statement. We pooled the resulting LRs/RRRs, using the pool associated with the annual statement year from which we calculated the LR/RRR. We refer to this approach as “Maturity First.”

In prior reviews, after removing company data triangles that we classified as anomalous, we then pooled Annual Statements, where appropriate, based on the annual statement year from which the data was derived.46 After pooling, for each LOB, we determined the most recent annual statement

---

43 The pool is defined separately for each statement year. For example, if two companies are in an intercompany pool for annual statement year 2013, then all data points from that annual statement year will be pooled. If the same two companies are no longer subject to intercompany pooling in 2014, the data points will not be pooled.

44 Currently Note 26. This information was in different Notes at different years in the past.

45 The pooling structure can also affect “LOB age” as we measure age based on number of years of NEP>0 for the pooled data.

46 This change is the latest in a series of refinements to the pooling calculation in the course of studies over the past 10 years, as described below.
year for each company or pool. We obtained up to 10 LRs or RRRs from that Annual Statement. We used earlier Annual Statements to obtained one LR/RRR using the most mature AY for LR and both the most mature AY and prior AYs for RRRs. We refer to this approach as “Pooling First.”

In the normal course, the Maturity First and Pooling First methods are the same. However, we find that there are companies where the most mature reading for an LR/RRR for a LOB does not appear in the expected Annual Statement. That might be because of new pool assignments, perhaps because the company was sold, the company ceased filing Annual Statements, reinsurance transactions reduced the LR/RRR data to zero, or for other reasons.

For a company subject to pooling, with the Pooling First approach, changes in pool assignment during the experience period can result in using of the same company data multiple times. Consider two companies, A and B, each with two statements (2016 and 2017) with data for each of the 10 AYs and for the prior years combined. Also suppose that A and B became part of Pool X in 2017. In the Pooling First approach, the 2017 statements for A and B are combined into a single statement for Pool X. We calculate 30 LRs (27 RRRs) for each LOB: 10 LRs (9 RRRs) for each of A, plus 10 LRs (9 RRRs) for B from statement year 2016, plus 10 LRs (9 RRRs) for Pool X from statement year 2017.

In the Maturity First approach, prior to pooling, we calculate 10 LRs (9 RRRs) for each of Companies A and B (for AYs 2008–2017, and for initial reserve years 2008–2016) from the 2017 Annual Statement and one LR/RRR from the 2016 Annual Statement (for LR/RRR 2007). These values are then pooled, resulting in 12AY LRs (11 RRRs). The 20 LRs (18 RRRs) from the 2017 Annual Statement from Company A and Company B are pooled into Pool X and the remaining two LRs/RRRs from the 2016 Annual Statement remain unpooled. Hence, the total number of data points in the final dataset is reduced from 30/27 in the Pooling First Approach to 12/11 in the current Maturity First Approach.

The difference arises because, in the Pooling First approach, Pool X is considered a new company which results in some duplication of LR/RRRs. Hence, as expected, using the Maturity First approach somewhat reduces the number of data points.

**8. APPENDIX 4—ANOMALOUS DATA**

We describe the anomalous data treatment in the Methodology Section. In this Appendix we show Tables supporting the discussion of Absolute (RRR)≥5 and Zero Interior anomalous data filters.

Prior to 2010, the pooling issue was identified, but there was no adjustment. DCWP introduced a pooling adjustment. The pooling adjustment assumed the pooling status was constant over the 1997–2010 Annual Statements available for its work. Based on that assumption, Pooling First or Maturity First were equivalent. The 2016 Report, with a longer Annual Statement history, examined the pooling history in more detail and reflected the changes in pooling from annual statement year to annual statement year. However, that analysis continued to calculate based on Pooling First approach. In this Report, with a still longer history of Annual Statements, we revised the Pooling First approach and modified the calculation as described.
**Absolute (RRR)>5**

Table A-5a, below, shows the effect, by LOB, of removing the Absolute (RRR)>5 filter. Table A-5a shows that the weighted average effect on the RRFs for Ten-Year LOBs is an increase of 2.4% of reserves, in RRFs, and there are important variations by LOB within the Ten-Year LOBs. The effect on indicated RRRs is most apparent in International (23% of reserves) and Products Liability (15% of reserves).

**“Zero Interior” Reserve Risk Data Anomalies**

As noted in the Methodology section, in our current review we exclude a LOB/Statement year if the interior of the development triangle is zero. Table A-5b below is an illustration of such data. We also observe some cases where some of, but not the entire interior of the data triangle has unexpected zero values.
With data of this type, we can calculate RRRs for individual AYs, for example, the 10-year development, for AY 2008. However, we cannot calculate RRRs for any full initial reserve year.

In the 2016 Report, we addressed this data anomaly in two ways. First, wherever possible we used the RRR based on development of the single most mature AY, row 2 that is not affected by the zero interior values. Second, we limited the impact of zero values by excluding data points where the absolute value of the RRR was greater than 500%.

In this Report, we exclude any data point where the entire interior is blank, which partly address the need for the Absolute (RRR)>500% limitation. However, we continue to exclude any data point with RRR >500%. We believe our current process has improved the identification of valid RBC data. However, there may be further steps we and/or NAIC could take to improve the data further, in future reviews.\(^\text{47}\)

The Zero Interior issue predominately relates to RBC data for Two-Year LOBs, which are discussed above. There are also a small number of companies with Ten-Year LOB Annual Statement data that present zero interiors, typically showing non-zero values in the latest diagonal but having zero/blank data for all other values, including zero/blank in the latest evaluation column. We exclude that Ten-Year LOB data.

### 9. APPENDIX 5—MINOR LINES

We exclude risk data points where the volume for a LOB represents a small portion of a company’s volume as defined below (“Minor Lines”). The DWCP research\(^\text{48}\) reported, and the 2016 Report

\(^{47}\) As the detailed data is confidential, there are limits on the extent to which this Committee can address this issue alone.

\(^{48}\) DCWP Reports 6 and 7.
agreed, that “For certain [specialty] LOBs failure to exclude the Minor Lines risk data points appears to result in PRFs that are not representative of the risks for companies writing the bulk of the industry LOB premium.”

For premium risk, similar to the 2016 Report, the Minor Lines filter calculation compares the LOB NEP to the all-lines NEP for each AY separately.

For reserve risk, the Minor Lines filter compares the LOB NEP to the all-lines NEP for a range of years, usually 10 years ending at the initial reserve date. Because the Annual Statement LOB definitions vary over time, a 10-year range is not possible for all LOBs for all initial reserve data. Hence, our approach varies somewhat by LOB. Table A-6 shows our approach for all years.

Table A-6
Reserve Risk Minor Lines Definition: Net Earned Premium Year-Ranges

<td>2007-2016</td>
<td>Rolling 10-year window ending at the initial reserve date</td>
</tr>
</tbody>
</table>

Note 1: We use a relatively long period because, in the early part of this time period, the all-lines total does not include Two-Year LOBs and overstates the ratio of LOB premium to all-lines premium.

Note 2: This table shows the methods we would apply to initial reserve years 1980-1987, but for the reasons discussed previously, we do not use those initial reserve dates in our indicated Risk Factors.

Note 3: These are the only years of available data for the Warranty LOB.

This Minor Lines approach differs from the approach in the 2016 Report, where the reserve risk Minor Lines definition was based on all-years premium. With the increase in the number of years of premium in our data set, we adopt the approach described above.

The thresholds for the LOB Minor Lines filters for both PRFs and RRFs are the same as those we used in the 2016 Report, and are as follows:

- Apply 5.0% filter for most lines with exceptions described below.

---

49 DCWP Report 6, Page 5.
50 This is determined after pooling, so changes in pooling can affect Minor Line status.
- Apply no Minor Lines exclusion for the International and Financial/Mortgage Guaranty lines of business due to the low volume in these lines.
- Apply 2.5% filter for the Special Liability, Fidelity/Surety, and Warranty lines of business, because a 5% filter for either PRFs or RRFs would exclude most premiums or initial reserves.\(^{51}\)
- Exclude risk data points where the combined Other Liability and Products Liability NEP is less than 5.0% of total NEP to avoid exclusion of too much Products Liability volume.\(^{52}\)

For RRFs, which require multiple years of premium data, we determine Minor Line status using Annual Statement data, and we apply that categorization to the RBC data. To the extent that the LOB/Company/Initial Reserve Date in the RBC data do not have a corresponding data point in the Annual Statement data,\(^{53}\) the data point is treated as a Minor Line. For PRFs, which require a single year of data, we determine Minor Line by comparing the RBC NEP by LOB/company/year to the all-lines total NEP from the Annual Statement data.

We find that the change in Minor Lines definition, from the all-year basis to the 10-year basis, decreases the indicated RRFs for nearly all LOBs. That result is consistent with (a) Minor Lines tend to have higher RRRs than non-Minor Lines, and (b) the new method better distinguishes between Minor Lines data and non-Minor Lines data.

**10. APPENDIX 6—YEARS OF LOB NEP > 0 (“LOB Age” or “Age”)**

The 2016 Report\(^{54}\) concluded that for most LOBs, PRFs and RRFs are smallest for companies with the longest experience period for a particular LOB. The 2016 Report presented an analysis of Risk Factors, by LOB by Age. The analysis in the 2016 report shows that the differential in Risk Factors by Age is most pronounced when comparing Risk Factors with a filter of Age equal to 5+ years\(^{55}\) when compared to companies with age less than 5 years. In addition, few risk data points are removed with a filter that removes Ages less than 5.

In this Report we calculate the age of the pool as the number of years of NEP>0 for the pool. In the 2016 Report, we calculated age as the maximum of the number of years of NEP>0 for any of the companies in the pool. This change somewhat reduces the number of data points after filtering.

---

\(^{51}\) In addition to the other considerations, for Warranty, a 2.5% filter was chosen due limited volume of warranty experience.

\(^{52}\) Correlation between NEP for PL and OL lines, for baseline PRF data with no Minor Lines exclusion, was 0.66.

\(^{53}\) Such mismatches can occur because, there are pooling changes by Annual Statement year and the data point might derive from one Annual Statement year in the RBC data and a different Annual Statement year in the Two-Year Annual Statement data.

\(^{54}\) This conclusion is consistent with the conclusion in DCWP, in Report 6, Section 7 and DCWP Report 7, Section 7.

\(^{55}\) Consecutive or nonconsecutive years.
11. APPENDIX 7—LOB-SIZE THRESHOLDS

Our indicated Risk Factors exclude risk data points with small premium/reserve LOB size, defined as the 15th percentile of size. We exclude the risk data points with small size because the experience of these companies/pools is not representative of the experience derived from the majority of risk data points.56 We apply the size threshold analysis to the data after filtering for Minor Lines and Age, as described in the earlier Appendices.

We consider four smoothing approaches to calculating the 15th percentile, as follows: (1) 15th percentile by year without adjustment, (2) smoothed 15th percentile by year, (3) detrended 15th percentile by year, and (4) all-year 15th percentile.

**Raw and Smoothed 15th Percentile by Year**
In method 1, we select the 15th percentile by each LOB and accident/reserve year, for each company/pool as appropriate.

In method 2, to remove large discontinuities by year, we limit each point to be within 10% of the prior and subsequent years. For the first accident/reserve year (1988), we limit each point to be within 10% of the three-year average (1989–1991) and the subsequent year (1989). For the last accident/reserve year (2017/2016), we limit each point to be within 10% of the three-year average (2014–2016/2013–2015) and the prior year (2016/2015).

**Detrended 15th Percentile by Year**
We developed the third approach listed above in response to a suggestion for future research in the 2016 Report. For some LOBs, the 15th percentile size varies randomly up and down so much that even the smoothed 15th percentile had large variations in size threshold from year to year. To address that feature, we use regression to calculate the annual trend in the 15th percentile company size by year. We use this trend to adjust the LOB premium for each company for each year to a common date, 1999 for premium and 1998 for reserves. We call the result of that calculation the “Adjusted LOB Size.”

We then determine the all-year LOB 15th percentile of the Adjusted LOB Size values across all data points. We use the regression trend rate to detrend the all-year LOB 15th percentile to the historical level for each year to determine the smoothed LOB 15th percentile by year.

**Selected LOB Size Approaches**
For all RRF calculations and for PRF calculations with Annual Statement data, we select the smoothed 15th percentile method for Homeowners, Private Passenger Auto Liability, Workers’ Compensation, Special Property, and Auto Physical Damage. For Warranty, we select the all-year overall 15th percentile. For the other 13 LOBs, we select the detrended 15th percentile method.

For PRF calculations with RBC data we select the smoothed 15th percentile method for five of the six Two-Year LOBs, and for Warranty, we select the all-year overall 15th percentile.

---

56 DCWP Reports 6 and 7 shows the extent to which indicated Risk Factors vary by LOB-size.
12. APPENDIX 8—MATURITY

The 2016 Report found that Risk Factors based on data grouped by age of development can increase as the age of development increases; the effect varies by LOB but is especially pronounced for LOBs such as WC and MPL-Occurrence.

The 2016 Report considered: (a) ways to adjust risk data points so that they reflected a 10 years maturity; and (b) the alternative of excluding risk data points that are not sufficiently mature. The 2016 Report used method (b). Our indicated Risk Factors are based on the same approach that was used in the 2016 Report.

Table 3, in the Methodology section, shows the maturity filters we use.

13. APPENDIX 9—ORDER OF POOLING, ANOMALIES, AND OTHER FILTERS

In this section we summarize the order in which we apply the filtering rules discussed above.

PRF Analysis from Annual Statement Data
1. Exclude AY/LOB/Company data points with negative premium or with zero or negative incurred loss amounts
2. Calculate LRs for each AY/company/LOB remaining in the data
3. Identify the data point with greatest maturity for each AY/company/LOB
4. Apply Pooling rules to combine AY/company/LOB data points, where appropriate
5. For each AY/company-pool/LOB data point we determine, and apply filters, for the following, on a pool basis:
   a. Minor Line status
   b. LOB Age
6. With the pool data, after the prior filtering, calculate size threshold by LOB/AY and identify whether the company size exceeds that threshold.
7. Apply Maturity filter.

RRF Analysis from Annual Statement or RBC Data
1. Exclude all company Annual Statement triangles with negative calendar year values or zero interior values. Also exclude potential data points with zero calendar reserves prior to the current valuation year of each Annual Statement.
2. Calculate RRRs for each initial reserve year/company/LOB from the remaining data.
3. Identify the RRR with the greatest maturity for each initial reserve year/company/LOB.
4. Apply pooling rules to company initial reserve year/company/LOB data points, where appropriate.

5. For each RRR/company-pool/LOB data point, we determine and apply filters, for the following, on pool basis:
   a. Minor Line status
   b. LOB Age

6. With the pool data, after the prior filtering, calculate size threshold by LOB/initial reserve year and identify whether the company size exceeds that threshold.

7. Apply Maturity filter.

For Two-Year LOBs, for indicated PRFs from RBC data, we determine age, maturity, and size thresholds from RBC data. We determine Minor Line status using RBC data by LOB combined with Annual Statement for all lines combined.

For Two-Year LOBs, for indicated RRFs from RBC data, we determine size thresholds from RBC data. We determine age and Minor Line status, which require matching premium information, from Annual Statement premium data. There is no maturity filter applicable to RRFs for Two-Year LOBs.

For pooled data risk data points, for both Two-Year and Ten-Year LOBs, we determine age and maturity on a pooled basis, rather than using maximum or average values by company. We also determine Minor Lines status on a pooled basis.

14. APPENDIX 10—ANALYSIS OF CHANGE IN PRFs 2014 TO 2017 FOR TEN-YEAR LOBs

In this section we show our analysis of the change in PRFs, from the results of the 2016 Report to the results in this Report, for Ten-Year LOBs. In this analysis of change, for each LOB, we begin with the results in the 2016 Report. We then calculate a series of indicated PRFs, each step applies additional changes in methodology/data from the 2016 Report to this Report. The change in indicated PRFs between steps constitutes our measure of the effect of the methodology/data change.

We believe this provides useful information on the relative effects of each change. However, the effects interact, so that if we calculate effects in a different order, then we might measure a different effect for each change. Hence, the changes should be interpreted as informative, but not definitive.

For Two-Year LOBs, developed from confidential RBC data, we did not have the detail data from the 2016 Report needed to perform a change analysis.57

57 We note that changes are small for the larger LOBs and that when the number of data points is small—e.g., Financial/Mortgage and Warranty—the movements from year to year are not unexpected.
In the subsections below we identify which of the methodology/data changes, each of which was discussed earlier in the report, is placed in each of the categories.

**Data and Maturity First**
This category covers the following:

- As we now have older Annual Statements, we have data points for AYs and initial reserve years 1988 and subsequent that were not included in our 2016 Report.
- As we discussed in the Appendix 3—Pooling Methodology, we now select the most mature data points and then combine individual companies into pools, rather than performing the calculation in the reverse order.
- Finally, with respect to data, in the normal course of an analysis update, there are changes in the NAIC database, which contains company reports as of the date that the information was extracted. In our current work, we use data extracted from the NAIC database as of the first quarter of 2019, which updates our entire data set. The 2016 Report used data extracted in 2015–2016.

**Filters**
This category covers the following:

- We implemented some changes in the way we calculate the Size filtering (Appendix 7).
- While we apply the same five-year age filter, as we have added older and newer AYs to our database, some companies that were “new” (age under five years) in the 2016 Report are not “new” in this Report.
- We based age on the pool age. In the 2016 Report age equaled the maximum age of any company in the pool. As a result, we may have excluded some data points that were included in the 2016 Report.

**Development and Recent Years**
As in every re-evaluation, there are changes due to increasing maturity of data for AYs and initial reserve years that have not yet reached maximum maturity available in our data and the addition of new AYs and initial reserve years.

**Effect of Changes**
Table A-7a—PRFs, below, shows the effect of these factors, by LOB. Table A-7b, below, shows the changes in the number of data points after each step of the analysis.

---

58 For example, we see more data from Annual Statement years and RBC years 2013 and 2014, in the 2017 data than in the 2014 data. We understand this to be because Annual Statements and RBC Filings for some companies were not included in the NAIC data when the 2014 data was downloaded.

Notes: Recent Years for MPL Occ., International, Reins. Liab., and PL are zero because the maturity filter excludes accident years 2015-2017 in the analysis of change.

For all Ten-Year LOBs combined, the change in indicated PRFs from 2014 to 2017 is relatively small, -0.1% of premium.

However, there some LOBs with larger changes in indicated Risk Factors. The two Ten-Year LOBs with indicated PRF changes greater than ±5% of premium are the following:

- International PRF is increased due to the data changes.
- Reinsurance Liability PRF is reduced due to both data changes and the filter changes.
- Financial/Mortgage and Warranty LOB PRFs change by more than 5% of premium, but these are lines with limited data and the therefore more subject to variation in indicated Risk Factors due to random effects of new information and/or even small changes in methodology.
15. APPENDIX 11—ANALYSIS OF CHANGE IN RRFs 2014 TO 2017

In this section we show our analysis of the change in RRFs, for Ten-Year LOBs and Two-Year\textsuperscript{59} LOBs, comparing from the results of the 2016 Report to the results in this Report. We described the approach in Appendix 10, above.

We categorize the changes in indicated RRFs, from those in the 2016 Report to those in this Report, as follows:

1. New Minor Lines approach for reserves described in Appendix 5 (“Minor Line Filter”).
2. Other Filters including Age, LOB Size, and Maturity (“Other Filters”).
3. Updates in NAIC database\textsuperscript{60} (“New data”) and increased maturity of initial reserve years 1998-2013 (“New Data (< 2014), Development”).
5. New quality control test to remove triangles whose entire interior is blank, Zero Interior filter.
6. Calculate RRR values by company, and select the most mature company data point, before pooling (“Maturity First”).
7. Allow $|RRR|>500\%$ for Ten-Year LOBs (“Allow $|RRR|>500\%$”).

Table A-8a—RRFs shows the effects of each of these factors, by LOB. Table A-8b, below, shows the changes in the number of data points after each step of the analysis.

\textsuperscript{59} We were able to analyze the drivers of change in RRFs from RBC data, as the regulator working with our committee recreated, under our direction, the 2016 analysis, which enabled us to analyze the drivers of change for both Ten-Year and Two-Year LOBs.

\textsuperscript{60} As expected, we see additional data for Annual Statement Years 2013 and 2014. Also, for LOB “Other,” in addition to the expected changes due to updates, we observed a significant reduction in the number of data points in the 2001 Annual Statement Year. That might have been an error in the prior analysis.

#### Change in Number of Filtered Data Points Resulting From:

<table>
<thead>
<tr>
<th>Change</th>
<th>2014 Indicated RRF</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Recent Years for CMP and MPL C-M are zero due because the maturity filter excludes initial reserve years 2014–2016 in the analysis of change.</td>
<td></td>
</tr>
<tr>
<td>(2) The effect shown in this column is the net result of several filters. First, prior to the impact of other filters, applying the zero interior filter caused data points to reduce in all lines. However, some number of RRRs from RBC triangles with zero interiors, have already been removed due to RRR&gt;5 filter, so the net decrease in number of RRRs is less than the decrease due to the zero interior filter alone. Moreover, when we remove the RBC triangles with zero interior values, then to the extent that there are RBC triangles from later, less mature, valuations, unaffected by zero interior values, we use those triangles. The combined effect of those factors can produce an increase in RRRs.</td>
<td></td>
</tr>
</tbody>
</table>

For all Ten-Year LOBs combined, the change in indicated RRFs from 2014 to 2017 is 0.4% of reserves. However, there some Ten-Year LOBs with larger changes in indicated Risk Factors. The three LOBs with indicated RRF changes greater than ±5% of reserves are the following:

- The International indicated RRF increased by 34.9% overall due to Other Filters (company age) and allowing RRRs greater than 500%. International is one of the three smallest lines of business both in terms of company data points included in the analysis and reserve volume. Its sensitivity to the changes is not surprising.
- The Reinsurance Prop./Fin. indicated RRF decreased 7.2% of reserves, due primarily to changes in the Minor Line filter and the addition of recent years.
- The Products Liability indicated RRF increased 12.8% of reserves due primarily to the impact of allowing RRRs greater than 500%.
For all Two-Year LOBs combined, the change in indicated RRFs from 2014 to 2017 is more significant than the Ten-Year LOBs, at -12.6%. This was driven by the new zero interior filter. With the exception of automobile physical damage, all of the Two-Year LOBs had changes greater than ±5% of reserves.

16. APPENDIX 12—EXAMPLES

Example 1: Reserve Runoff Ratio—Ten-Year LOBs—Annual Statement Data

In this section, we show how the RRRs are calculated from Annual Statement data for Ten-Year LOBs.

To illustrate the runoff ratio calculation based on Annual Statement data, consider the following simulated example, Company XYZ’s Schedule P, Part 2 and 3 for a particular LOB for Annual Statement Year 2017.

Table A-9a
Simulated Company XYZ Schedule P—Part 2

© 2021 National Association of Insurance Commissioners
We calculate nine RRRs from these data. The most mature is the RRR for the 2008 initial reserve year. The numerator of the Reserve Runoff Ratio is the incurred development for 2008 and prior AYs, combined, from the 2008 evaluation year to the 2017 evaluation year. These data come from Schedule P, Part 2 and we calculate this from the numbers in bold above as follows:

\[(440 + 3,620) - (730 + 4,890) = -1,560\]

The denominator of this ratio is the carried loss reserves at the 2008 evaluation date. We calculate this for all AYs combined using Schedule P, Parts 2 and 3, from the cells that are shaded above as follows:

\[(730 + 4,890) - (0 + 2,100) = 3,520\]

The value for Prior AYs in calendar year 2008 is zero because the Prior rows in Parts 2 and 3 of Schedule P are the amounts excluding the amounts paid through December 31, 2008, on AYs 2008 and prior.

The reserve runoff ratio is then simply the numerator divided by the denominator:

\[-1,560 \div 3,520 = -44.3\%\]

The reserve runoff ratios for reserve years 2009 through 2016 are calculated in the same manner.

Example 2: Reserve Runoff Ratio—Two-Year LOBs—Annual Statement Data

While our indicated RRFs for Two-Years LOBs is based on data from confidential RBC Filings, for comparison purposes, we also calculate indicated RRFs based on Annual Statement data.

The RRR calculation for Two-Year LOBs from Annual Statement data is similar to the calculation for Ten-Year LOBs, but the calculation includes only two AY and the prior year data. The following example from a 2017 Annual Statement illustrates the runoff ratio calculation based on Annual Statement data for sample Company XYZ Schedule P, Part 2 and 3.

<table>
<thead>
<tr>
<th>Table A10a</th>
<th>Simulated Company XYZ Schedule P—Part 2—Two-Year LOBs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior</td>
<td>XXX</td>
</tr>
<tr>
<td>2016</td>
<td>XXX</td>
</tr>
<tr>
<td>2017</td>
<td>XXX</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Table A10b</th>
<th>Simulated Company XYZ Schedule P—Part 3—Two-Year LOBs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior</td>
<td>XXX</td>
</tr>
<tr>
<td>2016</td>
<td>XXX</td>
</tr>
<tr>
<td>2017</td>
<td>XXX</td>
</tr>
</tbody>
</table>

We calculate only one runoff ratio from these data, the runoff ratio for the 2016 reserve year. For this ratio, the numerator of the Reserve Runoff Ratio is the incurred development for 2016 and prior AYs, combined, from 2016 evaluation year to the 2017 evaluation year. These data come from Schedule P, Part 2 and we calculate this as follows:

\[(18,326 + 24,070) – (17,703 + 23,314) = 1,379\]

The denominator is the carried loss reserves at the 2016 evaluation date. We calculate this for all AYs combined using Schedule P, Parts 2 and 3, as follows:

\[(17,703+23,314) – (9,253 + 4,060) = 27,704\]
The reserve runoff ratio is then simply the numerator divided by the denominator:

$$\frac{1,379}{27,704} = 5.0\%.$$ 

**Example 3: Reserve Runoff Ratio—Two-Year LOBs—RBC Data**

The tables below show an example of RBC data. This data is the RBC data that is consistent with the Two-Year Annual Statement data shown in Example 2, above.

</tbody>
</table>
We calculate RRRs using the most mature runoff data available. Often that was age 10, corresponding to 2008 and prior. One feature of that calculation is that the runoff contains only one AY.

For example, the runoff for initial reserve year 2008 would be calculated as follows:

Inurred Movement = 1,231 – 1,875 = -645, using the “2008 row”.
The initial reserve = 1,875 – 92 = 1,783
The runoff ratio equals -645 ÷ 1,783 = -36.1%

Because there is no prior row, this constitutes the development of 2008 only.

### Notes
- Amounts in Billions
- Excluding Zero and Negative Size Companies
- “NOC,” standing for Not Otherwise Classified, means companies whose major line is one of the following: Special Liability, Fidelity/Surety, “Other,” International, Financial/Mortgage Guaranty, Warranty.
- Risk factors for “2014 Data” and “2017 Data” for catastrophe exposed LOBs, are reduced to reflect the fact that catastrophe risk is incorporated separately in the RBC Formula. We apply the multiplicative adjustment used by the NAIC. See footnote 4.

Part 4: Type of Company Definition
For each company, the company is assigned to one of six categories—Personal Lines, Commercial Lines, Medical Professional Liability, Reinsurance, Workers’ Compensation, or Other—by determining the amount of premium plus reserves (net written premium, plus net loss and LAE unpaid) for each of the six categories (using the table shown below), and then determining the category with the highest amount of premium plus reserves.

19. APPENDIX 15—May 2019 Letter to NAIC
May 8, 2019

Tom Botsko, Chair
Property and Casualty Risk-Based Capital Working Group
National Association of Insurance Commissioners
(via email to Eva Yeung)

Dear Tom:

The American Academy of Actuaries1 Property and Casualty Risk-Based Capital (RBC) Committee plans to support the National Association of Insurance Commissioners’ efforts to update the calibration of factors used to calculate underwriting (UW) risk. This letter describes our plans. We appreciate this opportunity to describe those plans and solicit input from the NAIC Property and Casualty RBC Working Group.

1. Overview

We plan to analyze the following:

- Investment Income Adjustment (IIA)—RBC Line 8 on page PR017 (R4 Reserve risk) and Line 7 on page PR018 (R5 Premium risk), by Line of Business (LOB);

- Loss Concentration Factor (LCF) and Premium Concentration Factor (PCF)—RBC Line 14 on PR017 and PR018 respectively, which are used to calculate diversification credit in the RBC Formula; and

- LOB UW risk factors—RBC Line 4 on PR017 and PR018. We will use the results of this review as a starting point for the IIA and LCF/PCF analysis. This review will include the use of data not available to this Academy committee at the time the 2016 Academy Report2 was provided.

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policy makers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

The remainder of this letter provides more details regarding our proposed analyses.

2. IIA Analysis (Line 8/7)

The IIA reduces the amount of UW risk charge to recognize that future investment income will be available to offset the cost of adverse UW (premium risk) or reserve development (reserve risk).

Evaluation approach
The IIAs are based on a 5% per annum interest rate assumption, which is not consistent with recent experience.

We will consider two ways to update the IIAs. First, the Line 4 risk factor and the IIA on Lines 8/7 are currently calibrated as independent parameters. We use the term Nominal Value Approach (NVA) to describe an approach that does not consider possible interactions between interest rates underlying the IIA and loss experience underlying the Line 4 risk factors.

Implementing NVA requires changing the IIAs to reflect changing interest rates over time. We will consider how that might be done in a manner that provides reasonable stability but remains responsive to current conditions.

Second, we note that there are reasons to expect that loss ratios (LRs) and reserve runoff ratios (RRRs) are higher when interest rates are higher.3 An alternative to NVA, which considers a possible interaction between UW risk and interest rates, is to calibrate UW risk factors (Line 4) using data discounted to present value based on historical interest rates. Risk factors and IIAs can be developed from that analysis. We refer to that alternative as the Present Value Approach (PVA).

With PVA, we would establish the combined effect of the underwriting risk factors (Line 4) and the IIA (Line 8/7). We would produce a single indicated risk factor that reflects both UW risk, Line 4, and IIA, Lines 8/7. If desired, for consistency with the current format of the RBC Formula, that combined risk factor can be split into its two components. However, future changes in interest rates will not necessarily require changes in the IIA values.

We plan to prepare indicated risk factors for IIAs based on both NVA and PVA.

Interaction with UW risk safety level
Consistent with prior calibrations, UW risk factor Line 4 calibrations prepared for the NAIC in the 2016 Report are based on an 87.5th percentile safety level. We understand

the 87.5th percentile is used because it appeared to be consistent with the UW risk safety level selected when the RBC Formula was first calibrated in the early 1990s.

The 5% interest rate was also selected in the initial RBC calibration in the early 1990s. At that time actual interest rates were higher than 5%. Therefore, the initial IIA calibration can be viewed as including an implicit interest rate safety margin—that being the difference between actual interest rates at the time and the 5% interest rate selected.

In the IIA analysis, we will use interest rates with and without the kind of implicit safety margin that was part of the RBC calibration in the early 1990s. In using interest rates with no implicit safety margin, we will consider the extent to which the UW risk safety level should be increased to a value above 87.5%, to reflect the combination of the current 87.5th percentile on UW risk and any implicit interest rate safety margin. We will provide the NAIC with alternative treatments on this issue.

3. LCF/PCF Analysis (Line 14)

The LCF/PCF uses the ratio of the reserve/premium amount for the company’s largest RBC LOB to the company’s all-lines total reserve/premium amount. This ratio is used to measure the spread of business by LOB, commonly called diversification. We refer to that ratio as the Company Line of Business Maximum% (CoMaxLine%).

The LCF/PCF equals CoMaxLine% times 0.3 plus 0.7. This produces a discount for diversification, up to a maximum somewhat less than 30%.

Evaluation of 30% Maximum Diversification Credit

The proposed work will review the extent to which the 30% maximum should be revised based on experience.

---

4 The maximum credit would be 30% if the number of LOBs were infinite. If premium/reserves were divided equally among the 19 LOBs, CoMaxLine% is 1/19, 5.26%, and the maximum credit is 28.4%.
Evaluation of other approaches

There are alternatives to the CoMaxLine% Approach in the RBC formula. One alternative approach is to use the largest LOB risk amount, rather than the largest reserve/premium amount. We refer to this as the CoMaxLine%-Risk approach. 5,6

Another alternative approach to evaluating diversification could be based on the Herfendahl-Hirschman Index (HHI). HHI is widely used by economists to measure concentration. The HHI index considers the relative proportions of all LOBs (largest, second-largest, third-largest, etc.) 7, whereas the CoMaxLine% approach only considers the relative proportion of the largest LOB.

We will evaluate these alternatives.

4. Update to UW factors

The UW factors presented in the 2016 Report are based on data for Annual Statement years 1997–2014. For this work, the NAIC has provided data for Annual Statement years 1984–2017. We plan to update UW factors to include the additional new years (2015–2017), and we will potentially use data from Annual Statement years prior to 1997 for specific LOBs.

Our indicated risk factors will include the effect of catastrophe events, net of reinsurance. We expect that the NAIC will continue to apply its current catastrophe adjustment

---

5 As an example of the difference between the risk maximum and the premium/reserve (volume) maximum, consider a hypothetical company that had $1 million of private passenger liability premium and $1 million of occurrence medical malpractice premium.

   The private passenger automobile risk premium charge is about 15% and malpractice occurrence premium risk charge is about 60%, producing $150,000 of automobile premium risk, $600,000 of medical malpractice premium risk, and $750,000 in total premium risk (before diversification).

   Using the CoMaxLine% approach in the RBC Formula, the CoMaxLine% is 0.50, and the credit for spread of business is 15%, half of the 30% maximum credit.

   Based on risk, the maximum risk is the $600,000 for occurrence medical malpractice and the CoMaxLine%-Risk is 0.80 (600,000/750,000). The CoMaxLine%-Risk is much higher than CoMaxLine% because from the risk perspective the company is much less diversified. Measured this way, the credit for spread of business is reduced to 6%.

6 Using risk by LOB suggests the use of expenses by LOB. Expenses by LOB for the current year are in the Insurance Expense Exhibit, which is not filed until a month after the Annual Statement is filed. We will test options that use data that is available when the Annual Statement is filed, e.g., current year total expenses allocated by LOB based on prior year expenses by LOB, prior year expense by LOB with no adjustment to the current year, and current year company-wide expenses that does not vary by LOB.

7 HHI equals the sum of the squares of the relative proportions of each LOB compared to the total.

   For example, if there is only one LOB, HHI is 1.0, as is the case for the CoMaxLine%. With two lines split 50% and 50% HHI and the CoMaxLine% are still the same, both 0.5.

   With two lines split 25% and 75% HHI is 0.25\(^2\) plus 0.75\(^2\) or 0.625 compared to the CoMaxLine% of 0.750, i.e., HHI shows more diversification. With three lines split 50%, 25% and 25% HHI is 0.50\(^2\) plus 0.25\(^2\) plus 0.25\(^2\) or 0.375, more diversification than the CoMaxLine% of 0.5.

   The HHI is sometimes applied to only the n-th largest segments, e.g., the degree of diversification among the top five or 10 LOBs.

8 Annual Statements 1989 and subsequent for reserve risk data.
process to any updated UW risk factors it may choose to implement based on the results of our analysis. 9

5. Timeline

NAIC staff have provided us with much of the necessary data. We greatly appreciate that assistance, without which this project would not be possible.

We are currently reviewing the data and organizing it for our analyses.

We will provide a timeline and milestones at future meetings and calls.

6. Directional Impacts of These Analyses on RBC Formula Values

While we currently have no results, based on the nature of the changes, we expect that:

- The IIA revision will indicate an increase in amount of UW risk charges for all companies; and
- The LCF/PCF analysis will generally indicate a decrease in amount of UW risk charges for diversified companies.

We expect to provide possible transition rules for implementation, consistent with past practice and/or if such rules appear warranted by features in the data.

Also, as we have in the past, we will ask NAIC to do an impact review of indicated changes.

* * * *

We appreciate this opportunity to assist the NAIC.

Regards,

Lauren Cavanaugh
Chairperson
Academy Property & Casualty
Risk-Based Capital Committee

---

9 The Academy P&C RBC Committee would be happy to discuss how we might assist the NAIC in calibration of the risk factors on a net-of-catastrophe basis, but we believe that should be a separate project, after we complete the projects we describe in this letter.

TO: Tom Bostko (OH), Chair, Capital Adequacy (E) Task Force  
FROM: Philip Barlow (DC), Chair, Life Risk-Based Capital (E) Working Group  
DATE: January 21, 2021  
RE: Recommendation Regarding Risk-Based Capital Charge for Guaranty Association Assessment Risk

The Life Risk-Based Capital (E) Working Group received a request from the Capital Adequacy (E) Task Force to review the referral letter regarding adopted amendments to the *Life and Health Insurance Guaranty Association Model Act*, Model #520. The referral outlined significant amendments to Model #520, including: 1) broadening the assessment base for long-term care insurance (LTCI) insolvencies to include both life and health insurers and splitting the assessment 50%/50% between the life and health insurers; 2) clarifying the guaranty associations’ coverage of LTCI; and 3) including health maintenance organizations (HMOs) as members of the guaranty association, similar to other health insurers. The referral letter requested that the Task Force consider if changes were warranted to the life RBC formula in light of the changes made to Model #520. The reason for this item being referred to the Working Group was concern with the fact that the C-4a risk component is based on the amount of guaranty fund assessments. The risk charge is based on the maximum amount of assessments in any one year for a life company, and that is not affected by the changes to Model #520.

Based on the current instructions and reporting, the Working Group does not believe that modifications to the life RBC formula are required for the change to Model #520.

The recommendation above does not preclude the Working Group from potential changes to long-term care or the business risk component charge in the future.

If you have any questions regarding this memorandum, please contact me at philip.barlow@dc.gov or Dave Fleming (NAIC) at dfleming@naic.org.

IDENTIFICATION OF SOURCE AND FORM(S)/INSTRUCTIONS TO BE CHANGED
[ X ] Health RBC Blanks  [ X ] Property/Casualty RBC Blanks  [ ] Life and Fraternal RBC Instructions
[ X ] Health RBC Instructions  [ X ] Property/Casualty RBC Instructions  [ ] Life and Fraternal RBC Blanks
[ ] OTHER ____________________________

DESCRIPTION OF CHANGE(S)
Modified the structure for the bonds to pull directly from Schedule D, Schedule DA and Schedule E footnotes for the 20 RBC bond designations. Exempt bonds (Line 1) is pulled direct from Schedule D, Part 1, Col. 11, Line 0599999; Schedule DA, Part 1, Col. 7, Line 0599999; and Schedule E, Part 2, Col. 7, Line 0599999 + 8599999.

Hybrid securities will be incorporated into the bonds.

P/C blanks and instruction pages impacted: PR006, PR007, PR011, PR015, PR030, PR031 and PR032.

Health blanks and instruction pages impacted: XR006, XR007.1, XR007.2, XR009, XR011, XR023 and XR024.

REASON OR JUSTIFICATION FOR CHANGE **
The structure of the bonds reported in the health and P/C RBC formulas will be modified to pull from the footnotes of Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 for greater consistency and transparency in the RBC reporting. Hybrid securities reported as in Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 will be reported as a bond in on the Bonds pages and removed as a separate section in the health and P/C RBC blanks (XR009 and PR007).

Once the factors have been finalized, they will be incorporated into the proposal.

Additional Staff Comments:
10/27/20 jdb Exposed for a 45-day comment period.
01/12/21 cgb Editorial change made to page XR008 to strike-through the “Schedule E, Part 2” in line description and “in part” reference in the Annual Statement Source column for Line (30).
OFF-BALANCE SHEET SECURITY LENDING COLLATERAL AND SCHEDULE DL, PART 1 ASSETS
XR006

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements and incur the related risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

The collateral in these accounts is maintained by a third party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/adjusted carrying value, and maturity date.

The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Off-balance sheet collateral included in General Interrogatories Part 1, Lines 24.05 and 24.06 of the annual statement should agree with Line (40), Column (1).

Lines (1) through (27) – Bonds – Bond factors described on page XR007 – Fixed Income Assets.

Line (28) through (34) – Preferred Stock – Preferred stock factors described on page XR010 – Equity Assets.

Line (35) – Common Stock – Common stock factors described on page XR010 – Equity Assets.

Line (37) – Other Invested Assets – Other invested assets factor described on page XR008 – Fixed Income Assets.

Line (38) – Mortgage Loans on Real Estate – Mortgage Loans on Real Estate factors described on page XR008 – Fixed Income Assets.

Line (39) – Cash, Cash Equivalents and Short-Term Investments – Cash, Cash Equivalents and Short-Term Investments factors described on page XR008 – Fixed Income Assets.

FIXED INCOME ASSETS
XR007 AND XR008

The RBC requirement for fixed income assets is largely driven by the default risk on those assets. There are two major subcategories: Bonds and Miscellaneous. Bonds include item that meet the definition of a bond, regardless if the bond is long-term (reported on Schedule D-1), short-term (reported on schedule DA) or a cash equivalent...
Collateral Loans reported on Line (40) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.

Bonds (XR007)

The bond factors for investment grade bonds (NAIC Designation Category 1.A-2.C) are based on cash flow modeling. Each bond of a portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by NAIC Designation Category and that year’s economic environment. The default probabilities were based on historical data intended to reflect a complete business cycle of favorable and unfavorable credit environments. The risk of default was measured over a___-year time horizon, based on the duration of assets or liabilities held for health companies.

The factors for NAIC Designation Category 3.A to 6 recognize that these non-investment grade bonds are reported at the lower of amortized cost or fair value. These bond risk factors are based on the market value fluctuation for each of the NAIC designation category compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

While the life and property/casualty formulas have a separate calculation for the bond size factor (based on the number of issuers in the RBC filer's portfolio), the health formula does not include a separate calculation, instead a bond size component was incorporated into the bond factors. A representative portfolio of 382 issuers was used in calculating the bond risk factors.

There is no RBC requirement for bonds guaranteed by the full faith and credit of the United States, Other U.S. Government Obligations, and securities on the NAIC U.S. Government Money Market Fund List because it is assumed that there is no default risk associated with U.S. Government issued securities.

The book/adjusted carrying value of all bonds should be reported in Columns (1), (2) or (3). The bonds are split into twenty-one different risk classifications. These risk classifications are based on the NAIC Designation Category as defined and permitted in the Purposes and Procedures Manual of the NAIC Investment Analysis Office. The subtotal of Columns (1), (2) and (3) will be calculated in Column (4). The RBC requirement will be automatically calculated in Column (5).

Miscellaneous Fixed Income Assets (XR008)

The factor for cash is 0.3 percent. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held. This factor was based on the original unaffiliated NAIC 01 bond risk factor prior to the increased granularity of the NAIC Designation Categories in 2021, and reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company’s cash position is negative.

The Short-Term Investments to be included in this section are those short-term investments not reflected elsewhere in the formula. The 0.3 percent factor is equal to the factor for cash. The amount reported in Line (35) reflects the total from Schedule DA: Short-Term Investments (Line 33), less the short-term bonds (Line 34). (The short-term bonds reported in Line (34) should equal Schedule DA, Part 1, Column 7, Line ___.)

Mortgage loans (reported on Schedule B) and Derivatives (reported on Schedule DB) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.

The following investment types are captured on Schedule BA: Other Long-Term Invested Assets. Specific factors have been established for certain Schedule BA assets based on the nature of the investment. Those Schedule BA assets not specifically identified below receive a 20 percent factor (Line (43)).

- Collateral Loans reported on Line (40) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.
Working Capital Finance Investments: The book adjusted carrying value of NAIC 01 and 02 Working Capital Finance Investments, Lines (41) and (42), should equal the Notes to Financial Statement, Lines 5M(01a) and 5M(01b), Column 3 of the annual statement.

Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93—Low Income Housing Tax Credit Property Investments.

- Federal Guaranteed Low-Income Housing Tax Credit (LIHTC) investments are to be included in Line (44). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.

- Federal Non-Guaranteed LIHTC investments with the following risk mitigation factors are to be included in Line (45):
  - A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
  - A tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.

- State Guaranteed LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments are to be included in Line (46).

- State Non-Guaranteed LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments are to be included on Line (47).

- All Other LIHTC investments, state and federal LIHTC investments that do not meet the requirements of Lines (44) through (47) would be reported on Line (48).

**EQUITY ASSETS**

**XR010**

Unaffiliated Preferred Stocks

Experience data to develop preferred stock factors is not readily available; however, it is believed that preferred stocks are somewhat more likely to default than bonds. The loss on default would be somewhat higher than that experienced on bonds; however, formula factors are equal to bond factors.

The RBC requirements for unaffiliated preferred stocks are based on the NAIC designation. Column (1) amounts are from Schedule D, Part 2, Section 1 not including affiliated preferred stock. The preferred stocks must be broken out by asset designation (NAIC 01 through NAIC 06) and these individual groups are to be entered in the appropriate lines. The total amount of unaffiliated preferred stock reported should equal annual statement Page 2, Column 3, Line 2.1, less any affiliated preferred stock in Schedule D Summary by Country, Column 1, Line 18.

Unaffiliated Common Stock

Federal Home Loan Bank Stock has characteristics more like a fixed income instrument rather than common stock. A 2.3 percent factor was chosen. The factor for other unaffiliated common stock is based on studies which indicate that a 10 percent to 12 percent factor is needed to provide capital to cover approximately 95 percent of the greatest losses in common stock over a one-year future period. The higher factor of 15 percent contained in the formula reflects the increased risk when testing a period in excess of one year. This factor assumes capital losses are unrealized and not subject to favorable tax treatment at the time of loss in market value.
The purpose of the asset concentration calculation is to reflect the additional risk of high concentrations of certain types of assets in single exposures, termed “issuers.” An issuer is a single entity, such as IBM or the Ford Motor Company. When the reporting entity has a large portion of its asset portfolio concentrated in only a few issuers, there is a heightened risk of insolvency if one of those issuers should default. An issuer may be represented in the reporting entity’s investment portfolio by a single security designation, such as a large block of NAIC Designation Category 2.A bonds, or a combination of various securities, such as common stocks, preferred stocks, and bonds. The additional RBC for asset concentration is applied to the ten largest issuers.

Concentrated investments in certain types of assets are not expected to represent an additional risk over and above the general risk of the asset itself. Therefore, prior to determining the ten largest issuers, you should exclude those assets that are exempt from the asset concentration factor. Asset types that are excluded from the calculation include: NAIC 06 bonds and unaffiliated preferred stock; affiliated common stock; affiliated preferred stock; property and equipment; U.S. government full faith and credit, other U.S. government obligations, and NAIC U.S. government money market fund list securities; NAIC 01 bonds and unaffiliated preferred stock; any other asset categories with risk-based capital factors less than 1 percent, and investment companies (mutual funds) and common trust funds that are diversified within the meaning of the federal Investment Company Act of 1940 [Section 5(b) (1)]. The pro rata share of individual securities within an investment company (mutual fund) or common trust fund are to be included in the determination of concentrated investments, subject to the exclusions identified.

With respect to investment companies (mutual funds) and common trust funds, the reporting entity is responsible for maintaining the appropriate documentation as evidence that such is diversified within the meaning of the federal Investment Company Act and providing this information upon request of the Commissioner, Director or Superintendent of the Department of Insurance. The reporting entity is also responsible for maintaining a listing of the individual securities and corresponding book/adjusted carrying values making up its investment companies (mutual funds) and common trust funds portfolio, in order to determine whether a concentration charge is necessary. This information should be provided to the Commissioner, Director or Superintendent upon request.

The assets that ARE INCLUDED in the calculation when determining the 10 largest issuers are as follows:

- NAIC Designation Category 2.A – 2.C Bonds
- NAIC Designation Category 5.A – 5.C Bonds
- Collateral Loans
- Mortgage Loans
- NAIC 02 Unaffiliated Preferred Stock
- NAIC 03 Unaffiliated Preferred Stock
- NAIC 04 Unaffiliated Preferred Stock
- NAIC 05 Unaffiliated Preferred Stock
- Other Long-Term Assets
- NAIC 02 Working Capital Finance Investments
- Federal Guaranteed Low Income Housing Tax Credits
- Federal Non-Guaranteed Low Income Housing Tax Credits
- State Guaranteed Low Income Housing Tax Credits
- State Non-Guaranteed Low Income Housing Tax Credits
All Other Low Income Housing Tax Credits
Unaffiliated Common Stock

The concentration factor basically doubles the risk-based capital factor (up to a maximum of 30 percent) for assets held in the 10 largest issuers. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, this factor itself only serves to add an additional risk-based capital requirement on these assets.

The name of each of the largest 10 issuers is entered at the top of the table and the appropriate statement amounts are entered in Column (2), Lines (1) through (26). Aggregate all similar asset types before entering the amount in Column (2). To determine the 10 largest issuers, first pool all of the assets subject to the concentration factor. From this pool, aggregate the various securities by issuer. The aggregate book/adjusted carrying values for the assets are computed, and the 10 largest are subject to the concentration factor. For example, an organization might own $6,000,000 in NAIC Designation Category 2.A bonds of IBM, plus $4,000,000 in NAIC Designation Category 2.C plus $5,000,000 of common stock. The total investment in that issuer is $15,000,000. If that is the largest issuer, then the identifier (“IBM Corporation”) would be entered in the space allowed for the first Issuer Name, and the $6,000,000 would be entered under the book/adjusted carrying value column for Line (1) (NAIC Designation Category 2.A Bonds) $4,000,000 would be entered on Line (3) (NAIC Designation Category 2.C Bonds) and the $5,000,000 would be entered on Line (22) (Unaffiliated Common Stock).

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

ASSETS
PR006 – PR014

PR006 - Bonds and Bond Size Factor Adjustment

Basis of General Bond Factors

The bond risk factors for investment grade bonds (NAIC Designation Category 1.A – 2.C) are based on cash flow modeling. Each bond of a portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by NAIC Designation category and that year’s economic environment. The default probabilities were based on historical data intended to reflect a complete cycle of favorable and unfavorable credit environments. The risk of default was measured over a 5-year time horizon, selected considering the duration of property/casualty assets and liabilities.

The factors for NAIC Designation Category 3.A to 6 recognize that these non-investment grade bonds are reported at the lower of amortized cost or fair value. These bond risk factors are based on the market value fluctuation for each of the NAIC designation category compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

The bond risk factors are selected with consideration of the effect of the bond size factors.

Bond Size Factor

The bond factors assume a portfolio of 802 issuers. The size factor reflects that the risk increases as the number of bond issuers decreases. The bond size factor adjusts the computed RBC for those bonds that are subject to the size factor to more accurately reflect the risk.

The bond size factor is to be multiplied by the risk-based capital of the bonds subject to the size factor. This calculation produces the additional RBC required for a portfolio that has 801 or less bonds in it. Portfolios with 803 or more issuers will receive a discount. The bond size factor was developed as a step factor (as in a tax table) so that the overall factor decreases as the portfolio size increases. The bond size factors are the same for property/casualty and life insurance RBC Formulas.

Bonds should be aggregated by issuer (the first six digits of the CUSIP number should be used for aggregation). In determining the total number of issuers, do not count:

- U.S. government bonds that are direct and guaranteed and backed by the full faith and credit of the U.S. government, other U.S. Government Obligations, and NAIC U.S. Government Money Market Fund List which receive a zero factor (Definitions of these categories are in the Annual Statement Instructions).

The calculation shown below will not appear in the software but will be calculated automatically. However, you must enter the total number of issuers in the appropriate field on the RBC filing software. If you leave this field blank, the program will assume that there are less than 10 issuers and will default to the maximum bond size factor adjustment. The calculation to derive the bond size factor is:

<table>
<thead>
<tr>
<th>Source</th>
<th>No of Issuers</th>
<th>Wgtd Issuers</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 10</td>
<td>Co Records</td>
<td>X 7.8=</td>
</tr>
<tr>
<td>Next 90</td>
<td>Co Records</td>
<td>X 1.75=</td>
</tr>
<tr>
<td>Next 100</td>
<td>Co Records</td>
<td>X 1.0 =</td>
</tr>
<tr>
<td>Next 300</td>
<td>Co Records</td>
<td>X 0.8 =</td>
</tr>
<tr>
<td>Over 500</td>
<td>Co Records</td>
<td>X 0.75 =</td>
</tr>
<tr>
<td>Total</td>
<td>Co Records</td>
<td></td>
</tr>
</tbody>
</table>

Size Factor = Total Weighted Issuers/Total No of Issuers less 1
PR007 - Unaffiliated Preferred and Common Stock

Unaffiliated Preferred Stock

Detailed information on unaffiliated preferred stocks is found in Schedule D Part 2 Section 1 of the annual statement. The preferred stocks must be broken out by NAIC Designation (NAIC 01 through NAIC 06) and these individual groups are to be entered in the appropriate lines of the RBC software. The total amount of unaffiliated preferred stock reported should equal annual statement P2 L2.1 C3 less any affiliated preferred stock in Schedule D-Summary by Country C1 L18.

Unaffiliated Common Stock

The factor for other unaffiliated common stock is based on studies that indicate a 10 percent to 12 percent factor is needed to provide capital to cover approximately 95 percent of the greatest losses in common stock value over a one-year future period. The higher factor of 15 percent contained in the formula reflects the increased risk when testing a period in excess of one year. This factor assumes capital losses are unrealized and not subject to favorable tax treatment at the time loss in fair value occurs.

The total of all unaffiliated common stock reported should be equal to the total value of common stock in Schedule D-Summary by Country C1 L25 less the sum of Schedule D-Summary by Country C1 L24 and PR007, Column 1, Line 18.

PR009 - Miscellaneous Assets

Collateral loans and write-ins for invested assets are generally a small proportion of total portfolio value. A factor of 5 percent is consistent with other risk-based capital formulas studied by the working group.

The factor for cash is 0.3%. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held. This factor was based on the original unaffiliated NAIC 01 bond risk factor prior to the increased granularity of the NAIC Designation Categories in 2021, and reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company’s cash position is negative.

If the book/adjusted carrying value of Aggregate Write-ins for Invested Assets (Page 2, Line 11, Column 3 of the annual statement) is less than zero, the RBC amount will be zero.

The Short-Term Investments to be included in this section are those short-term investments not reflected elsewhere in the formula. The 0.3% factor is equal to the factor for cash. The amount entered for short-term bonds should equal the total short-term investments found in Schedule DA Part 1 C7 L8399999. This amount is subtracted from the total of short-term investments, as they are captured with bonds on PR006.

PR011 - Asset Concentration

The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an issuer of a security or a mortgage borrower, etc.). The concentration factor basically doubles the risk-based capital factor (up to a maximum of 30 percent) of the 10 largest asset exposures excluding various low-risk categories or categories which already have a 30 percent factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, this factor itself only serves to add an additional risk-based capital requirement on these assets.

Concentrated investments in certain types of assets are not expected to represent an additional risk over and above the general risk of the asset itself. Therefore, prior to determining the 10 largest issuers, you should exclude those assets that are exempt from the asset concentration factor. Asset types that are excluded from the calculation include: NAIC 06 bonds and preferred stock, affiliated common stock, affiliated preferred stock, property and equipment, U.S. government guaranteed bonds, NAIC 01 bonds or preferred stock, any other asset categories with risk-based capital factors less that 1 percent, and investment companies (mutual funds) and common trust funds that are diversified within the meaning of the Investment Company Act of 1940 [Section 5(b) (1)]. The pro rata share of individual securities within an investment company (mutual fund) or common trust fund are to be included in the determination of concentrated investments, subject to the exclusions identified.
With respect to investment companies (mutual funds) and common trust funds, the reporting company is responsible for maintaining the appropriate documentation as evidence that such is diversified within the meaning of the Investment Company Act and provide this information upon request of the commissioner, director or superintendent of the department of insurance. The reporting company is also responsible for maintaining a listing of the individual securities and corresponding book/adjusted carrying values making up its investment companies (mutual funds) and common trust funds portfolio, in order to determine whether a concentration charge is necessary. This information should be provided to the commissioner, director or superintendent upon request.

The assets that ARE INCLUDED in the calculation are divided into two categories – Fixed Income Assets and Equity Assets. The following asset types should be aggregated to determine the 10 largest issuers:

**FIXED INCOME ASSETS**
- Bonds – NAIC Designation Category 2.A
- Bonds – NAIC Designation Category 2.B
- Bonds – NAIC Designation Category 2.C
- Bonds – NAIC Designation Category 3.A
- Bonds – NAIC Designation Category 3.B
- Bonds – NAIC Designation Category 3.C
- Bonds – NAIC Designation Category 4.A
- Bonds – NAIC Designation Category 4.B
- Bonds – NAIC Designation Category 4.C
- Bonds – NAIC Designation Category 5.A
- Bonds – NAIC Designation Category 5.B
- Bonds – NAIC Designation Category 5.C
- Collateral Loans
- Mortgage Loans
- Working Capital Finance Investments – NAIC 02
- Federal Guaranteed Low Income Housing Tax Credits
- Federal Non-Guaranteed Low Income Housing Tax Credits
- State Guaranteed Low Income Housing Tax Credits
- State Non-Guaranteed Low Income Housing Tax Credits
- All Other Low Income Housing Tax Credits

**EQUITY ASSETS**
- Unaffiliated Preferred Stock – NAIC 02
- Unaffiliated Preferred Stock – NAIC 03
- Unaffiliated Preferred Stock – NAIC 04
- Unaffiliated Preferred Stock – NAIC 05
- Unaffiliated Common Stock
- Investment Real Estate
- Encumbrances on Inv. Real Estate
- Schedule BA Assets (excluding Collateral Loans)
- Receivable for Securities
- Aggregate Write-Ins for Invested Assets
- Derivatives

The name of each of the largest 10 issuers is entered at the top of the table and the appropriate statement amounts are entered in C(2) Ls (01) through (20) for fixed income assets and C(2), Ls (22) through (32) for equity assets. Aggregate all similar asset types before entering the amount in C(2). For instance, if you own five separate $1,000,000 NAIC 03.A bonds from Issuer #1, enter $5,000,000 in C(2) L(02) – NAIC 03.A Unaffiliated Bonds.

**OFF-BALANCE SHEET COLLATERAL AND SCHEDULE DL, PART 1 ASSETS**

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements, and incur the related risk charges on those assets. Other entities have collateral that is not reported on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.
The collateral in these accounts is maintained by a third party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/carrying value, and maturity date.

The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

**Specific Instructions for Application of the Formula**

Off-balance sheet collateral included in General Interrogatories Part 1, Lines 24.05 and 24.06 of the Annual Statement should agree with Line (41), Column (1).

**Lines (1) through (26) – Bonds**
Bond factors described on PR006 – Bonds and Bond Size Factor Adjustment

**Line (28) through (33) – Preferred Stocks**
Preferred stock factors described on PR007 – Unaffiliated Preferred and Common Stock

**Lines (35) – Common Stock**
Common stock factors described on PR007 – Unaffiliated Preferred and Common Stock

**Line (36) – Real Estate and Schedule BA - Other Invested Assets**
Real Estate and other invested asset factors described on PR008 – Other Long-Term Assets

**Line (37) – Other Invested Assets**
Other invested assets factors described on PR009 – Miscellaneous Assets

**Line (38) – Mortgage Loans on Real Estate**
Mortgage Loans on Real Estate factor described on PR009 – Miscellaneous Assets

**Line (39) – Cash, Cash Equivalents and Short-Term Investments**
Cash, Cash Equivalents and Short-Term Investments factors described on PR007 – Unaffiliated Preferred, Common Stock and Hybrid Securities and PR009 – Miscellaneous Assets

DESCRIPTION OF CHANGE(S)

Incorporate references for “Incentives” under the managed care instructions and blank as “Bonuses/Incentives.”

REASON OR JUSTIFICATION FOR CHANGE **

Currently the managed care instructions and blank only reference the bonuses, this change would clarify that both incentives and bonuses are to be included.

Additional Staff Comments:

02-10-21 cgb The Proposal was exposed to the Health Risk-Based Capital (E) Working Group for a 30-day comment period that ends on Mar. 12, 2021.
03-17-21 cgb No comments were received during the comment period. The Working Group referred the proposal to the Capital Adequacy (E) Task Force for a 30-day comment period for all lines of business, with any comments to come back to the Working Group.

** This section must be completed on all forms. Revised 2-2019
The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between health entities and pure indemnity carriers. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claim payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the formula, other than for Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase, or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 – Arrangements not Included in Other Categories
- Category 1 – Contractual Fee Payments
- Category 2 – Bonus and/or Incentive / Withhold Arrangements
- Category 3 – Capitation
- Category 4 – Non-Contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future, no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care “buckets” to determine the weighted average discount, which is then used to reduce the Underwriting Risk-Experience Fluctuation RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claim payments may fit into more than one category. If that occurs, enter the claim payments into the highest applicable category. CLAIM PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claim payments reported in the Managed Care Credit Calculation page should equal the total year’s paid claims.

Line (1) – Category 0 – Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:

* Fee for service (charges).
* Discounted FFS (based upon charges).
* Usual Customary and Reasonable (UCR) Schedules.
* Relative Value Scales (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
* Stop-loss payments by a health entity to its providers that are capitated or subject to withhold incentive programs.
* Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withhold later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
* Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
This amount should equal Exhibit 7, Part 1, Column 1, Line 5 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (2) - Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:

- Hospital per diems, DRGs or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- RVS where the payment base and RV factor are fixed by contract for more than one year.
- Ambulatory payment classifications (APCs).

This amount should equal Exhibit 7, Part 1, Column 1, Line 6 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (3) - Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives With No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentives withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE – 2019 Reporting Year**

<table>
<thead>
<tr>
<th>Calculation</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>2018 withhold / bonus incentive payments</td>
<td>750,000</td>
</tr>
<tr>
<td>2018 withhold / bonuses / incentives available</td>
<td>1,000,000</td>
</tr>
<tr>
<td>A. MCC Factor Multiplier</td>
<td>75% – Eligible for credit</td>
</tr>
<tr>
<td>2018 withholds / bonuses / incentives available</td>
<td>1,000,000</td>
</tr>
<tr>
<td>2018 claims subject to withhold - gross*</td>
<td>5,000,000</td>
</tr>
<tr>
<td>B. Average Withhold Rate</td>
<td>20%</td>
</tr>
<tr>
<td>Category 2 Managed Care Credit Factor (A x B)</td>
<td>15%</td>
</tr>
</tbody>
</table>

The resulting factor is multiplied by claim payments subject to withhold - net** in the current year.

* These are amounts due before deducting withhold or paying bonuses and/or incentives.
** These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives, but otherwise had no managed care arrangements.

This amount should equal Exhibit 7, Part 1, Column 1, Line 7 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).
Line (4) – Category 2b – Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1, Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive/withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claim payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1. This amount should equal Exhibit 7, Part 1, Column 1, Line 8 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (5) – Category 3a – Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claim payments paid DIRECTLY to licensed providers on a capitated basis. This amount should equal Exhibit 7, Part 1, Column 1, Line 1 + Line 3 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (6) – Category 3b – Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries. An intermediary is a person, corporation or other business entity (not licensed as a medical provider) that arranges, by contracts with physicians and other licensed medical providers, to deliver health services for a health entity and its enrollees via a separate contract between the intermediary and the health entity. This includes affiliates of a health entity that are not subject to RBC, except in those cases where the health entity qualifies for a higher managed care credit because the capitated affiliate employs providers and pays them non-contingent salaries, and where the affiliated intermediary has a contract only with the affiliated health entity. A Regulated Intermediary is an intermediary (affiliated or not) subject to state regulation and files the Health RBC formula with the state.

Line (7) – Category 3c – Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0.)

Enter the amount of medical expense capitations paid to non-regulated intermediaries. IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 1 for a provider, and for an intermediary at the greater of category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive revisions
either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 0 for both providers and intermediaries.

**Line (9) – Sub-Total Paid Claims.** The total of paid claims for Comprehensive Medical, Medicare Supplement and Dental [should equal the total claims paid for the year as reported in Exhibit 7, Part 1, Line 9 + Line 10 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).]

**Line (10) – Category 0 – No Federal Reinsurance or Risk Corridor Protection.** Category 0 for Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

**Line (11) – Category 1 – Federal Reinsurance but no Risk Corridor Protection.** Category 1 for Medicare Part D Coverage would be all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

**Line (12) – Category 2a – No Federal Reinsurance but Risk Corridor Protection.** Category 2a for Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

**Line (13) – Category 3a – Federal Reinsurance and Risk Corridor Protection.** Category 3a for Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

**Line (14) – Sub-Total Paid Claims.** The total paid claims for Medicare Part D Coverage, excluding supplemental benefits.

**Line (16) – Weighted Average Managed Care Discount.** These amounts are calculated by dividing the total weighted claims by the comparable sub-total claim payments. For Column (3), this is Column (3), Line (9) divided by Column (2), Line (9). For Column (4), this is Column (4) Line (14) divided by Column (2), Line (14).
Line (17) – Weighted Average Managed Care Risk Adjustment Factor. These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount values in Line (16).

Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor. These do not apply to Medicare Part D coverage.

Line (18) – Withhold & Bonus Incentive Payments, prior year. Enter the prior year’s actual withhold and bonus/incentive payments.

Line (19) – Withhold & Bonuses Incentives Available, prior year. Enter the prior year’s withhold and bonuses/incentives that were available for payment in the prior year.

Line (20) – MCC Multiplier – Average Withhold Returned. Divides Line (18) by Line (19) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

Line (21) – Withholds & Bonuses Incentives Available, prior year. Equal to Line (19) and is automatically pulled forward.

Line (22) – Claims Payments Subject to Withhold, prior year. Claim payments that were subject to withholds and bonuses/incentives in the prior year. Equal to L(3) + L(4) of the managed care credit claims payment table FOR THE PRIOR YEAR.

Line (23) – Average Withhold Rate, prior year. Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

Line (24) – MCC Discount Factor, Category 2. Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the health entities with hold/bonus/incentive program in the prior year.
LIFE

UNDERWRITING RISK - MANAGED CARE CREDIT
LR022

This worksheet LR022 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the comprehensive medical dental business, Stand-Alone Medicare Part D Coverage or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 - Arrangements not Included in Other Categories
- Category 1 - Contractual Fee Payments
- Category 2 - Bonus and/or Incentives / Withhold Arrangements
- Category 3 - Capitation
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Stand-Alone Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care "buckets" to determine the weighted average discount, which is then used to reduce the Underwriting Risk-Experience Fluctuation RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claims payments may fit into more than one category. If that occurs, enter the claims payments into the highest applicable category. CLAIMS PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to insure that true risk transfer is accomplished.

Line (1)
Category 0 - Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:
- Fee for service (charges).
- Discounted fee for service (based upon charges).
• Usual customary and reasonable (UCR) schedules.
• Relative value scale (RVS), where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
• Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withhold later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
• Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
• Claim payments not included in other categories.

**Line (2)**

Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:

- Hospital per diems, diagnostic related groups (DRGs) or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- Relative value scale (RVS), where the payment base and RV factor are fixed by contract for more than one year.

**Line (3)**

Category 2a - Payments Made Subject to Withholds or Bonuses / Incentives with No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus / incentives / withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE - 1998 Reporting Year**

<table>
<thead>
<tr>
<th>Description</th>
<th>1997 Withholds / Bonuses</th>
<th>1997 Claims Subject to Withhold - Gross†</th>
<th>Category 2 Managed Care Credit Factor (A x B)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1997 Withholds / Bonuses Available</td>
<td>1,000,000</td>
<td>5,000,000</td>
<td>15%</td>
</tr>
</tbody>
</table>

The resulting factor is multiplied by claims payments subject to withhold - net‡ in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses / incentives, but otherwise had no managed care arrangements.

**Line (4)**
Category 2b - Payments Made Subject to Withholds or Bonuses / Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus / incentive / withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses / incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5)
Category 3a - Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6)
Category 3b - Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments to regulated intermediaries that, in turn, pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 2 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7)
Category 3c - Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitated or percent of premium payments to non-affiliated intermediaries that, in turn, pay licensed providers (subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations that meet the definition in Appendix 2 for Intermediary but not regulated intermediary. In those cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater
of Category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive revisions either within or beyond a 12 month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 0 for both providers and intermediaries.

**Line (8)**
Category 4 - Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claims payments in this category. Once claims payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on Line (7) in the underwriting risk section should be deducted before applying the managed care credit factor.

- Non-contingent salaries to persons directly providing care.
- The portion of payments to affiliated entities passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with the company.
- All facilities-related medical expenses and other non-provider medical costs generated within health facility that is owned and operated by the insurer.
- Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The Aggregate Cost method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services; and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, which put their respective capital and surplus at risk in guaranteeing each other.

**Line (9)**
Subtotal Paid Claims – The total of Column (2) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1 and 2, Line A.4 of the annual statement.

**Line (10)**
Category 0 for Stand-Alone Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

**Line (11)**
Category 1 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

**Line (12)**
Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

**Line (13)**
Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

**Line (16)**
Weighted Average Managed Care Discount – The amounts in Column (3) and Column (4) are calculated by dividing the total weighted claims in Column (3) by the total claims paid in Column (2) for Lines (9) and (14) respectively.

**Line (17)**
Weighted Average Managed Care Risk Adjustment Factor – These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (16)).

Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withhold and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

**Line (18)**
Enter the prior year’s actual withhold and bonus/incentive payments.

**Line (19)**
Enter the prior year’s withhold and bonuses/incentives that were available for payment in the prior year.

**Line (20)**
Divides Line (18) by Line (19) to determine the portion of withhold and bonuses/incentives that were actually returned in the prior year.

**Line (21)**
Equal to Line (19) and is automatically pulled forward.

**Line (22)**
Claims payments that were subject to withhold and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of LR022 Underwriting Risk – Managed Care Credit FOR THE PRIOR YEAR.

**Line (23)**
Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

**Line (24)**
Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus/incentive program in the prior year.
### PR021 - Underwriting Risk – Managed Care Credit

This worksheet PR021 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the Comprehensive Medical, Stand-Alone Medicare Part D Coverage, Dental business or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less of an effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

<table>
<thead>
<tr>
<th>Category 0</th>
<th>Arrangements Not Included in Other Categories</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Category 1</strong></td>
<td>Contractual Fee Payments</td>
</tr>
<tr>
<td><strong>Category 2</strong></td>
<td>Bonus and/or Incentives / Withhold Arrangements</td>
</tr>
<tr>
<td><strong>Category 3</strong></td>
<td>Capitation</td>
</tr>
<tr>
<td><strong>Category 4</strong></td>
<td>Non-contingent Expenses and Aggregate Cost Arrangements</td>
</tr>
<tr>
<td><strong>Category 5</strong></td>
<td>PSA Capitated Arrangements and Certain PSA Capitated Arrangements</td>
</tr>
</tbody>
</table>

For Stand-Alone Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10.1) through (10.4) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care "buckets" to determine the weighted average discount, which is then used to reduce the Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claims payments may fit into more than one category. If that occurs, enter the claims payments into the highest applicable category. CLAIMS PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES!

Category 0: Arrangements not included in other categories. There is zero managed care credit for claim payments in this category, which includes:

- Fee for service charges
- MIIP/OS
- Usual customary and reasonable (UCR) charges
- **Relative value scale (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less**.
* Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
* Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
* Claim payments not included in other categories.

Line (2)
Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:
* Hospital per diems, diagnosis related groups (DRGs) or other hospital case rates.
* Non-adjustable professional case and global rates.
* Provider fee schedules.
* Relative value scale (RVS) where the payment base and RV factor are fixed by contract for more than one year.

Line (3)
Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives with No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentive withholds arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and/or incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE - 1998 Reporting Year**

<table>
<thead>
<tr>
<th>1997 withhold / bonus payments</th>
<th>$750,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>1997 withholds / bonuses available</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>A. MCC Factor Multiplier</td>
<td>75% - Eligible for credit</td>
</tr>
<tr>
<td>1997 withholds / bonuses available</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>1997 claims subject to withhold - gross †</td>
<td>$5,000,000</td>
</tr>
<tr>
<td>B. Average Withhold Rate</td>
<td>20%</td>
</tr>
<tr>
<td>Category 2 Managed Care Credit Factor (A x B)</td>
<td>15%</td>
</tr>
</tbody>
</table>

The resulting factor is multiplied by claims payments subject to withhold - net‡ in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives, but otherwise had no managed care arrangements.

Line (4)
Category 2b - Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive withholds arrangement with a provider who is reimbursed based on a provider fee schedule.
(Category 1). The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5)
Category 3a - Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments made directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6)
Category 3b - Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments to regulated intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 1 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7)
Category 3c - Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitated or percent of premium payments to non-affiliated intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries that are affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations which meet the definition of Intermediary but not regulated intermediary in Appendix 1. In cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater of Category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive
revisions either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 0 for providers and intermediaries.

**Line (8)**
Category 4 - Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claims payments in this category. Once claims payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on Line (7) in the underwriting risk section should be deducted before applying the managed care credit factor.

* Non-contingent salaries to persons directly providing care.
* The portion of payments to affiliated entities which is passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with the company.
* All facilities related medical expenses and other non-provider medical costs generated within health facility that is owned and operated by the insurer.
* Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The Aggregate Cost method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services; and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, that put their respective capital and surplus at risk in guaranteeing each other.

**Line (10.1)**
Category 0 for Stand-Alone Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

**Line (10.2)**
Category 1 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

**Line (10.3)**
Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

**Line (10.4)**
Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

**Line (10.6)**
Total Paid Claims – The total of Column (1) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1 and 2, Line D16 of the annual statement.

**Line (11)**
Weighted Average Managed Care Discount – This amount is calculated by dividing the total weighted claims (Line (9) Column (2)) by the total claim payments (Line (9) Column (1)).

**Line (12)**
Weighted Average Managed Care Risk Adjustment Factor - This is the credit factor that is carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (11)).

Lines (13) through (19)
Lines (13) through (19) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

Line (13)
Enter the prior year’s actual withhold and bonus/incentive payments.

Line (14)
Enter the prior year’s withholds and bonuses/incentives that were available for payment in the prior year.

Line (15)
Divides Line (13) by Line (14) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

Line (16)
Equal to Line (14) and is automatically pulled forward.

Line (17)
Claims payments that were subject to withholds and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of Underwriting Risk Managed Care Credit FOR THE PRIOR YEAR.

Line (18)
Divides Line (16) by Line (17) to determine the average withhold rate for the prior year.

Line (19)
Multiplies Line (15) by Line (18) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus incentive program in the prior year.
HEALTH, LIFE AND PROPERTY AND CASUALTY

APPENDIX 1 – COMMONLY USED TERMS

The Definitions of Commonly Used Terms are frequently duplicates from the main body of the text. If there are any inconsistencies between the definitions in this section and the definitions in the main body of the instructions, the main body definition should be used.

Incentives, Withhold and Bonus Amounts — Are amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. An incentive arrangement may involve paying an agreed-on amount for each claim (e.g., provider agrees practice in an underserved area). While a bonus arrangement may be paid at the end of a contract period after specific goals have been met. Withhold arrangements can involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

Incentive pool, withhold, and bonus amounts are defined as: amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. Some arrangements involve paying an agreed-on amount for each claim, and then paying a bonus at the end of the contract period. Other arrangements involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

Commented [BC1]: This could also be worded as “(e.g., provider pays on a per-claim basis for practicing in an underserved area.)”

Commented [BC2]: This is directly from the A/S instructions. It used as a basis for the definition drafted above.

**Category 2 Managed Care Factor calculated on Line (19) with a minimum factor of 15 percent.
†† This column is for the Stand-Alone Medicare Part D managed care discount factor.

Denotes items that must be manually entered on the filing software.
Add instructions to PR027 Interrogatories that clarify how insurers with no gross exposure to earthquake or hurricane should complete the Interrogatories.

**REASON OR JUSTIFICATION FOR CHANGE**

Some insurers with no earthquake and/or hurricane exposure did not file PR027A, PR027B and the Interrogatories on PR027. This results with situation that it is not clear if the insurers fail to complete the exhibits or they simply have no gross exposure, thus creating cross-check problem. The clarification wording will reduce the cross-check problems experienced by NAIC.

**Additional Staff Comments:**

10/19/20 – The Cat Risk SG exposed the proposal for a thirty-day public comment period ending Nov. 18.
03/08/21 – The Cat Risk SG adopted the proposal.
03/15/21 – The P/C RBC WG adopted the proposal.

**This section must be completed on all forms.**

Revised 2-2019
CALCULATION OF CATASTROPHE RISK CHARGE RCAT
PR027

The catastrophe risk charge for earthquake (PR027A) and hurricane (PR027B) risks is calculated by multiplying the RBC factors by the corresponding modeled losses and reinsurance recoverables. The risk applies on a net basis with a corresponding contingent credit risk charge for certain categories of reinsurers. Data must be provided for the worst year in 50, 100, 250, and 500; however, only the worst year in 100 will be used in the calculation of the catastrophe risk charge. While projected losses modeled on an Aggregate Exceedance Probability basis is preferred, companies are permitted to report on an Occurrence Exceedance Probability basis if that is consistent with the company’s internal risk management process.

The Grand Total (PR027) page includes an interrogatory to support an exemption from filing the catastrophe risk charge. Any company qualifying for exemption from the earthquake risk charge must identify the particular criteria from among (1a), (1b), (2) and (3) that provides its qualification for exemption, and may leave the other three items from this group of four possible qualifications for exemption blank; except identification of criteria (3) as the basis for the exemption requires a further answer to (3a) and (3b). If an insurer does not write or assume earthquake risks leaving no gross exposure, enter an “X” in interrogatory 3, with no need to fill in (3a) and (3b). Any company qualifying for exemption from the hurricane risk charge must identify the particular criteria from among (4a), (4b), (5) and (6) that provides its qualification for exemption, and may leave the other three items from this second group of four possible qualifications for exemption blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an “X” in interrogatory 6.

If the company qualifies for exemption from the earthquake risk charge, page PR027A and line (1) on this page may be left blank. If the company qualifies for exemption from the hurricane risk charge, page PR027B and line (2) on this page may be left blank.

In general, the following conditions will qualify a company for exemption: if it uses an intercompany pooling arrangement or quota share arrangement with U.S. affiliates covering 100% of its earthquake and hurricane risks such that there is no exposure for these risks; if it has a ratio of Insured Value – Property to surplus as regards policyholders of less than 50%; or if it writes Insured Value – Property that includes hurricane and/or earthquake coverage in catastrophe-prone areas representing less than 10% of its surplus as regards policyholders.

“Insured Value – Property” includes aggregate policy limits for structures and contents for policies written and assumed in the following annual statement lines – Fire, Allied Lines, Earthquake, Farmowners, Homeowners, and Commercial Multi-Peril.

“This group of possible qualifications for exemption: if it uses an intercompany pooling arrangement or quota share arrangement with U.S. affiliates covering 100% of its earthquake and hurricane risks such that there is no exposure for these risks; if it has a ratio of Insured Value – Property to surplus as regards policyholders of less than 50%; or if it writes Insured Value – Property that includes hurricane and/or earthquake coverage in catastrophe-prone areas representing less than 10% of its surplus as regards policyholders.

“Catastrophe-Prone Areas in the U.S.” include:

i. For hurricane risks, Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean and/or the Gulf of Mexico including Puerto Rico.

ii. For earthquake risk or for fire following earthquake, any of the following commonwealth or states: Alaska, Hawaii, Washington, Oregon, California, Idaho, Nevada, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, Puerto Rico, and geographic areas in the following states that are in the New Madrid Seismic Zone - Missouri, Arkansas, Mississippi, Tennessee, Illinois and Kentucky.
The proposed change would remove the embedded 3% operational risk component contained in the reinsurance contingent credit risk factor of $R_{cat}$.

**REASON OR JUSTIFICATION FOR CHANGE **

Operational risk is now separately addressed in RBC as a stand-alone capital add-on. When this factor was implemented, it borrowed from the credit risk factors in R3 that included a load for operational risk. This is assessment of operational risk is duplicative and is inadvertently being applied in $R_{cat}$. The gross modeled $R_{cat}$ risk does not apply this duplicative assessment of operational risk to $R_{cat}$, and it follows that it should not be applied to ceded modeled $R_{cat}$ risk either.

**Additional Staff Comments:**

10/27/20 – The PCRBC WG exposed this proposal for a 35-day public comment period ending Dec. 1.
03/08/21 – The Cat Risk SG adopted the proposal.
03/15/21 – The P/C RBC WG adopted the proposal.

**This section must be completed on all forms.**
Specific Instructions for Application of the Formula

**Column (1) – Direct and Assumed Modeled Losses**
These are the direct and assumed modeled losses per the first footnote. Include losses only; no loss adjustment expenses. For companies that are part of an inter-company pooling arrangement, the losses in this column should be consistent with those reported in Schedule P, i.e. losses reported in this column should be the gross losses for the pool multiplied by the company’s share of the pool.

**Column (2) – Net Modeled Losses**
These are the net modeled losses per the footnote. Include losses only; no loss adjustment expenses.

**Column (3) – Ceded Amounts Recoverable**
These are the modeled losses ceded under any reinsurance contract. Include losses only, no loss adjustment expenses, and should be associated with the Net Modeled Losses.

**Column (4) – Ceded Amounts with Zero Credit Risk Charge**
Per the footnote, modeled catastrophe losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified).

**Column (5) – Amount**
These are automatically calculated based on the previous columns.

**Column (6) – RBC Requirement**
A factor of 1.000 is applied to the reported modeled catastrophe losses calculated on both AEP and OEP basis, and a factor of **0.018** is applied to the reinsurance recoverables. The RBC Requirement is based on either AEP reported results or OEP reported results (not both), consistent with the way the company internally evaluates and manages its modeled net catastrophe risk.

**Column (5) – Y/N**
Please indicate “Y” for OEP basis and “N” for AEP basis. This column should not be blank.

† Has the company reported above, its modeled earthquake losses using an occurrence exceedance probability (OEP) basis?

†† Column (4) is modeled catastrophe losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified).

Denotes items that must be manually entered on the filing software.

---

Lines (1)-(4): Modeled losses to be entered on these lines are to be calculated using one of the following NAIC approved third party commercial vendor catastrophe models - AIR, EQECAT, RMS, the ARA HurLoss Model, or the Florida Public Model for hurricanes or a catastrophe model that is internally developed by the insurer and has received permission of use by the lead or domestic state. The insurance company’s own insured property exposure information should be used as inputs to the model(s). The insurance company may elect to use the modeled results from any one of the models, or any combination of the results of two or more of the models. Each insurer will not be required to utilize any prescribed set of modeling assumptions, but will be expected to use the same data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. An attestation to this effect and an explanation of the company’s key assumptions and model selection may be required, and the company’s catastrophe data, assumptions, model and results may be subject to examination.

† Column (3) is modeled catastrophe losses that would be ceded under reinsurance contracts. This should be associated with the Net Modeled Losses shown in Column (2).

†† Column (4) is modeled catastrophe losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified).

| 13 | CADTF | 1 2020 | Consideration given to 20 designations for bonds in all RBC formulas so that an impact analysis can be provided on 2020 year-end data to determine the bond RBC factors. The Task Force will need to discuss and determine whether Hybrids are included with the new bond's structure. 

**History**

In 2012/13 as part of the Solvency Modernization Initiative “roadmap” and subsequent White Paper roadmap, the Capital Adequacy (E) Task Force identified increased granularity in the asset and investment risk charges as a priority area. It was originally targeted at the Life RBC formula and was referred to as the “C1 factor review”. The project was assigned to a newly formed Investment RBC (E) Working Group in 2013. Work was conducted by the Life C-1 Work Group of American Academy of Actuaries (Academy) at the instructions of the working group using defined criteria for the analysis. The C1 bond factors are defined as the amount needed to pre-fund losses at the 96th percentile minus the amount assumed to be funded in statutory policy reserves. The credit loss distribution is skewed with the mean occurring at approximately the 60th percentile. The RP does not vary by economic scenario. | RBCWG - Dec 2019 | An Academy report issued in 2015 and updated 2017 report recommended an increase in the number of designations. Ultimately, the WG members agreed that the number of designations should be increased to 20. 

In 2017/2018, the PRBC and HRBC (E) Working Groups began discussion of the change to 20 designations. In 2019 both working groups concurred with the LRBC WG position that the number of designations should be increased to 19 in their respective formulas Proposal # 2019 – 16CA | |

EXAMINATION OVERSIGHT (E) TASK FORCE

Examination Oversight (E) Task Force March 25, 2021, Minutes .........................................................................................................................10-847
The Examination Oversight (E) Task Force met March 25, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Dwight Radel (OH); Carter Lawrence, Vice Chair, represented by Joy Little (TN); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain represented by Mel Anderson (AR); Jon Savary represented by David Lee (AZ); Ricardo Lara represented by Susan Bernard (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by N. Kevin Brown (DC); Doug Ommen represented by Daniel Mathis (IA); Dean L. Cameron represented by Eric Fletcher (ID); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by James A. McCarthy (MA); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Justin Schrader (NE); Chris Nicolopoulos represented by Patricia Gosselin (NH); Russell Toal represented by Beatrice Geickler (NM); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Doug Slape represented by Shawn Frederick (TX); Jonathan T. Pike represented by Malis Rasmussen (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Mark Afable represented by Amy Malm (WI); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its Nov. 17, 2020, Minutes**

Ms. Malm made a motion, seconded by Mr. Kaumann, to adopt the Task Force’s Nov. 17, 2020, minutes (see NAIC Proceedings – Fall 2020, Examination Oversight (E) Task Force). The motion passed unanimously.

2. **Adopted the Reports of its Working Groups**

   a. **Electronic Workpaper (E) Working Group**

Ms. Bernard provided the report of the Electronic Workpaper (E) Working Group. She stated that the Working Group met March 15 and Jan. 27 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue discussions on evaluating replacement options for TeamMate AM, which will be reaching its end of life in 2023.

   b. **Financial Examiners Coordination (E) Working Group**

Mr. Arfanis provided the report of the Financial Examiners Coordination (E) Working Group. He stated that the Working Group met March 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exam coordination efforts from selected states.

Having no further business, the Examination Oversight (E) Task Force adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exams open past 22 months.
FINANCIAL STABILITY (E) TASK FORCE

Liquidity Assessment (E) Subgroup 2021 Membership and Charges (Attachment One) ......................... 10-851
Receivership and Insolvency (E) Task Force Report (Attachment Two) ............................................... 10-852
Insurance Holding Company System Regulatory Act (#440) Accreditation Recommendations to the Financial Condition (E) Committee (Attachment Three) ................................................................. 10-855
The Financial Stability (E) Task Force met Feb. 22, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Eric A. Cioppa, Vice Chair (ME); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane (MD); Chlora Lindley-Myers and also representative John Rehagen (MO); Bruce R. Ramge represented by Justin Schrader (NE); Linda A. Lacewell represented by Bill Carmello (NY); Jessica K. Altman (PA); Raymond G. Farmer represented by Daniel Morris (SC); Carter Lawrence (TN); Doug Slape represented by Mike Boerner (TX); and Scott A. White represented by Don Beatty (VA).

1. **Heard Opening Remarks**

Commissioner Caride said that materials for consideration and discussion for this meeting were sent by email to the member, interested state insurance regulator and interested party distribution lists for the Task Force and the Liquidity Assessment (E) Subgroup, but are also available on the Task Force’s web page at www.naic.org. She added that the Task Force now reports to the Financial Condition (E) Committee.

2. **Adopted its Oct. 13, 2020, Minutes**

The Task Force met Oct.13, 2020, and took the following action: 1) adopted its 2020 Summer National Meeting Minutes; 2) adopted its 2021 proposed charges; 3) adopted proposed Liquidity Stress Test (LST) revisions to the Insurance Holding Company System Regulatory Act (#440); and 4) received an update from the Liquidity Assessment (E) Subgroup on progress in achieving its deliverables related to liquidity stress testing.

3. **Announced the Membership of the 2021 Liquidity Assessment (E) Subgroup and its Charges**

Commissioner Caride announced the membership of the Liquidity Assessment (E) Subgroup and the Subgroup’s charges (Attachment One). She asked new member states to consider membership and participation in the Subgroup and its unofficial study group dedicated to the LST. She also thanked Mr. Schrader for his continued leadership of the Subgroup, the unofficial Study Group, and the significant work related to establishing and maintaining the LST framework.

4. **Received the Report of the Receivership and Insolvency (E) Task Force Regarding its Disposition of Referrals from the Financial Stability (E) Task Force**

Commissioner Caride said that a copy of the final report of the Receivership and Insolvency (E) Task Force on its work to address the Financial Stability (E) Task Force’s referral letter to undertake analysis relevant to recovery and resolution concerns within the Macroprudential Initiative (MPI) was included in the information distributed for this meeting.

She noted that the Financial Stability (E) Task Force asked the Receivership and Insolvency (E) Task Force to evaluate:

- Recovery and resolution laws, guidance, and tools, and determine whether they incorporate best practices with respect to financial stability;
- Recovery and resolution planning tools for systemically important cross-border U.S. groups; and
- Whether there are misalignments between federal and state laws that could be an obstacle to effective and orderly recovery and resolutions for U.S. insurance groups.

Commissioner Caride said that the report describes the completed recommendations but also indicates where further work will occur. She thanked the Receivership and Insolvency (E) Task Force for its work and James Kennedy (TX) for his role as its representative to the Financial Stability (E) Task Force.
Commissioner Altman made a motion, seconded by Mr. Carmello, to receive a copy of the final report of the Receivership and Insolvency (E) Task Force on its work to address the Financial Stability (E) Task Force’s referral letter (Attachment Two). The motion passed unanimously.

5. **Adopted the Accreditation Recommendations to the Financial Condition (E) Committee regarding the LST changes to Model #440**

Commissioner Caride referenced the draft recommendation to the Financial Condition (E) Committee regarding LST changes to Model #440 included in the materials and said that the draft recommends the LST revisions to Model #440 be included as required for accreditation purposes. She noted that the Task Force supports having states, particularly the lead states of insurers in scope, adopt the LST revisions to the Model #440 quickly but concluded that the Financial Regulation Standards and Accreditation (F) Committee will decide the timing. While no member disagreed with this conclusion, Mr. Boerner noted the Texas DOI has concerns about the accreditation timing considerations which will be discussed at the Financial Condition (E) Committee.

Commissioner Caride said that the American Council of Life Insurers (ACLI) requested that each detailed confidentiality provision included in the LST revisions to Model #440 be given the designation as “significant elements” to ensure the same levels of confidentiality associated with the Risk Management and Own Risk and Solvency Assessment Model Act (#505) be preserved when the revisions to Model #440 are adopted by the states. She concluded that providing the same confidentiality protection makes sense and proposed a revision to consider for the Attachment A language within the Task Force’s draft recommendation to the Financial Condition (E) Committee. She said that adding the yellow highlighted paragraph with the underscored additions to this Attachment A language would align the language with the equivalent significant elements in the Own Risk and Solvency Assessment (ORSA) accreditation standard. Commissioner Caride stressed the need to balance the desire for exact language with the practicality of obtaining such language due to implementation concerns in the different legislatures across the country. She concluded that the language provides good confidentiality protections while avoiding implementation issues. David Leifer (ACLI) said that the new language looks reasonable at an initial glance, but he said he will need to seek industry feedback during the comment periods at the Financial Condition (E) Committee and/or Financial Regulation Standards and Accreditation (F) Committee.

Mr. Rehagen made a motion, seconded by Mr. Schrader, to adopt the previously exposed recommendations to the Financial Condition (E) Committee with the addition of the yellow highlighted paragraph, including the underscored items, to its Attachment A and to send it to the Financial Condition (E) Committee for consideration (Attachment Three). The motion passed unanimously.

Having no further business, the Financial Stability (E) Task Force adjourned.
2021 Adopted Charges

LIQUIDITY ASSESSMENT (E) SUBGROUP

Ongoing Support of NAIC Program, Products or Services

The Liquidity Assessment (EX) Subgroup will:

A. Continue to consider regulatory needs for data related to liquidity risk, and develop recommendations as needed.
B. Refine and implement a liquidity stress testing framework proposal for consideration by the Financial Condition (E) Committee.
C. Continue to develop and administer data collection tools, leveraging existing data where feasible, to provide the Financial Stability (EX) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating market conditions affected by the COVID-19 pandemic.

The following report summarizes the conclusions of the Receivership and Insolvency (E) Task Force (RITF) in response to the Macroprudential Initiative (MPI) referral on recovery and resolution. While the RITF has completed its recommendations, the RITF will conduct further work on the issues as described below.

1. Evaluate recovery and resolution laws, guidance, and tools, and determine whether they incorporate best practices with respect to financial stability

The Receiver’s powers under laws based on the Insurer Receivership Model Act Model #555 (IRMA) and its predecessor, the Insurer Rehabilitation and Liquidation Model Act (IRLMA), in conjunction with the authority granted to the Receiver by court orders, generally provide the powers described in:

- International Association of Insurance Supervisors (IAIS) Insurance Core Principle (ICP) 12, Exit from the Market and Resolution;
- Common Framework for the supervision of Internationally Active Insurance Groups (ComFrame) material integrated into ICP 12; and
- Financial Stability Board (FSB) Key Attributes of Effective Resolution Regimes for Financial Institutions (KAs).

While powers under state laws comport with the ICPs, ComFrame, and the KAs, in some cases the powers are implicit rather than explicit. The RITF reviewed current laws with respect the following issues:

a. Bridge Institutions

State receivership laws do not expressly provide for the establishment of a bridge institution (Bridge), but the Receiver may establish a Bridge under those laws. While a Bridge is typically not needed in a receivership, it could have the benefit of addressing an early termination on qualified financial contracts (QFCs). However, implementing a Bridge for this purpose would require a temporary stay on termination rights. As noted in Item 3 below, the current misalignments with Federal rules on the termination of master netting agreements for QFCs effectively precludes temporary stays on termination of QFCs in a receivership, thereby preventing the use of a Bridge for this purpose.

Conclusion: The Receivership Law (E) Working Group reviewed guidance in the Receiver’s Handbook for Insurance Company Insolvencies (Receivers Handbook) and developed revisions to guidance regarding the use of bridge institutions and administration of QFCs in receivership and pre-receivership planning.

b. Providing Continuity of Essential Services and Functions

KA 3.2 states that a resolution authority should have the power to ensure the continuity of essential services and functions by requiring companies in the group to continue providing services. Under ComFrame (CF) 12.7a, a resolution authority may take steps to provide continuity of essential services by requiring other entities within the IAIG (including non-regulated entities) to continue services. The following authority and tools were identified:
• The Insurance Holding Company System Model Act (#440) requires approval of affiliated transactions, allowing a regulator to identify agreements that could create obstacles in a receivership. The Insurance Holding Company System Model Regulation (#450), Section 19, provides that cost sharing and management agreements specify if the insurer is placed in receivership that an affiliate has no automatic right to terminate the agreement.

• The Receiver can take action against a provider that refuses to continue services under a contract, or seek an order requiring it to turn over records. In some circumstances, such as a situation where an affiliate providing services is inextricably intertwined with the insurer, action can be taken to place the affiliate into receivership.

It was noted that some of these remedies might not address the immediate need to continue services in some cases. Therefore, the Task Force delegated further work on this topic to the Receivership Law (E) Working Group.

Conclusion: The Receivership Law (E) Working Group is developing, among other solutions, revisions to Models 440 and 450 to address remedies to ensure continuity of essential services and functions to an insurer in receivership by other affiliated entities in a holding company group, including non-regulated entities. The Model Law Request to develop revisions to Models 440 and 450 was adopted by Executive (EX) Committee in August 2020. The Working Group expects to finalize its work in this area in 2021.

c. Variations in States’ Receivership Laws

The RITF recognized that few states have adopted IRMA, and most have laws based on IRLMA or prior models. In 2017, the Financial Condition (E) Committee issued a memorandum to states to consider adoption of certain provisions of IRMA.1 The RITF further identified eight key areas within receivership and guaranty fund law that it encourages states to adopt. The key areas include: conflicts of law; continuation of coverage; priority of distribution; stays and injunctions; ancillary conservation of foreign insurers; domiciliary receivers in other states; treatment of large deductible workers compensation policies; and the 2017 revisions to the Life and Health Insurance Guaranty Association Model Act (#520). The RITF also determined that some states may require an alternative solution to revise their laws for stays, injunctions and “full faith and credit” provisions. Therefore, the RITF recommends redefining “reciprocal state” in states’ receivership law as an optional solution. The RITF concluded the following:

Conclusion:
• The RITF developed a Model Guideline defining “reciprocal state” that was released for exposure at the Nov. 19, 2020, virtual meeting, and which will be considered for adoption in 2021.
• The RITF will work towards educating states on key areas of receivership and guaranty fund laws that enhance efficiencies and effectiveness of the receivership process, as identified through this workstream, including related new Model Guidelines adopted by the NAIC, outreach to states’ legal staff and other educational opportunities.
• The RITF formed an ad hoc group to discuss Financial Regulation Standards and Accreditation Program Part A standards for receivership and guaranty fund laws and will take any recommendations from the ad hoc group under consideration in the future.

2. Evaluate recovery and resolution planning tools for systemically important cross-border U.S. groups

The RITF determined that many recovery and resolution planning topics in the KAs and ComFrame are generally covered in the guidance for pre-receivership planning in the Receiver’s Handbook. Additionally, some topics were identified that may be captured elsewhere within the US solvency monitoring frameworks (e.g., ORSA, Supervisory Colleges, Crisis Management Groups, Examinations, etc.). The RITF found that:
• The Dodd Frank Act’s provisions for resolution planning address the requirements of the KAs and ComFrame for an insurer designated as a Systemically Important Financial Institution (SIFI). Other jurisdictions may have similar planning requirements for international groups.
• The requirements in state laws for corrective action plans under risk-based capital (RBC) laws and hazardous financial condition laws may satisfy this requirement for insurers that fall short of the applicable RBC solvency benchmarks, or otherwise trigger a corrective action requirement.

- Regarding crisis management groups and crisis management planning, the NAIC *Insurance Holding Company System Model Act* (#440) Section 7 provides the commissioner with the authority to develop crisis management plans as part of supervisory colleges. Further, Model 440 Section 7.1, provides for authority for the commissioner to act as the group-wide supervisor of internationally active insurance groups (IAIG) and engage in group-wide supervision activities as outlined in the model, though not explicit to recovery and resolution plans. Additionally, the NAIC *Financial Analysis Handbook* contains guidance and a template for a crisis management plan. This authority and guidance provide states with the flexibility to discuss the necessity for crisis management plans within supervisory colleges and/or crisis management groups and to make the determination to develop such plans on a case-by-case basis.

**Conclusion:**
- The RITF agreed that consideration of imposing recovery plan reporting requirements on insurers that are not in financial distress is outside the scope of the RITF and may require consideration by U.S. group-wide supervisors of IAIGs.
- The Group Solvency Issues (E) Working Group is undertaking a project to update insurance regulatory guidance as it pertains to supervision of IAIGs under ComFrame, including guidance on crisis management groups. The RITF will provide input at the appropriate time to this work stream. The Working Group’s project is expected to be completed in 2021.
- The RITF will continue to review and provide input to the IAIS on recovery and resolution topics including the upcoming Application Paper on Resolution Powers and Planning.

3. **Evaluate whether there are misalignments between federal and state laws that could be an obstacle to effective and orderly recovery and resolutions for U.S. insurance groups**

a. **Temporarily Stay Early Termination Rights**

The Task Force evaluated the impact of the federal rule recognizing temporary stays on terminating master netting agreements for qualified financial contracts (QFCs), which does not recognize stays in a state receivership proceeding. The regulators held discussions with federal banking authorities regarding the handling of QFCs and bridge institutions in banking resolutions. This information will be used to assess the utility of a stay on QFC terminations in an insurance receivership.

**Conclusion:**
- In 2019, the NAIC adopted amendments to the Guideline for Stay on Termination of Netting Agreements and Qualified Financial Contracts (#1556) to highlight the conflict with the federal rule to state insurance regulators who may be considering adoption of Guideline #1556.
- The Task Force adopted revisions to existing guidance for receiverships involving qualified financial contracts at the Nov. 19, 2020 virtual meeting.

b. **Taxes in Receivership and Federal Releases**

The Task Force identified topics where guidance for taxes in receivership and federal releases should be drafted in the Receiver’s Handbook.

**Conclusion:** The RITF adopted revisions to the Receiver’s Handbook for guidance on taxes in receivership and federal releases at the 2020 Summer National Meeting.
The confidentiality of the LST (and the Group Capital Calculation (GCC)) calculation, including information shared with the Federal Reserve or international regulators, is highly important to our members. The memo’s proposed list of “significant elements” of the 2020 revisions to the Model Act and Regulation includes one confidentiality-related element, item “m”, which prohibits insurers from sharing information about the LST or GCC to advertise. ACLI supports the inclusion of this section in the standards, but we believe additional significant elements are warranted.

ACLI strongly prefers that the significant elements for accreditation incorporate all of the substantive revisions made to section 8. At a minimum, the significant elements should also include these items:

- provisions for maintaining the confidentiality of LST (or Group Capital Calculation) materials submitted to the Department (section 8(A)(1) and (2));
- deem section 8(A)(2) a “significant element”, as section 8(A)(2) protects the confidentiality of liquidity stress test results and data;
- provisions for information sharing agreements that maintain the confidential and privileged status of the documents (section 8(C)(4)(a));
- provisions exclude materials or information collected through the liquidity stress test from being stored in a permanent database once the initial analysis is completed (8(C)(4)(c)); and
- provisions requiring notification and identification of third-party consultants who will receive LST materials (8(C)(4)(f))

Similar confidentiality protections, such as the from the Own Risk Solvency Act (#550) are already afforded status as “significant elements” of the “substantially similar” accreditation status. Given that most states have already enacted similar confidentiality provisions for ORSA materials – it is reasonable to expect the same levels of confidentiality for the LST and GCC related materials.

Conclusion
Thank you for the opportunity to share our comments on the exposed Financial Stability Task Force memo. ACLI always appreciates the chance to engage with the NAIC on this important issue. If you have any questions or concerns about our comments, please feel free to contact us. We look forward to continuing to work together in the future.

Sincerely,

David Leifer
Vice President & Senior Associate General Counsel
DavidLeifer@acli.com

Gabrielle Griffith
Senior Policy Analyst, Policy Development
gabriellegriffith@acli.com
202-624-2371

1 The significant elements from the Own Risk Solvency Assessment (#505) accreditation standard require states to: “Include substantially similar provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators. If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.”

https://content.naic.org/sites/default/files/inline-files/committees_f_orsa_significant_elements.
6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar.

Insurance Holding Company Systems – continued

Changes to Existing

k. Additions to the filing requirements for the enterprise risk filing specified in Section 4L(1) of the Model #440 (see next item).

New

c. Define “NAIC Liquidity Stress Test Framework” similar to that in Section 1K?

d. Define “Scope Criteria” similar to that in Section 1M?

l. Filing requirements for the liquidity stress test filing similar to those specified in Section 4L(3) of Model #440:

i. The ultimate controlling person of every insurer subject to registration and also scoped into the NAIC Liquidity Stress Test Framework shall file the results of a specific year’s Liquidity Stress Test to the lead state insurance commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook similar to Section 4L(3)?

ii. Insurers meeting at least one threshold of the Scope Criteria for a specific data year are scoped into that year’s NAIC Liquidity Stress Test Framework unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should not be scoped into the Framework for that data year similar to Section 4L(3)(a)? Insurers that do not trigger at least one threshold of the Scope Criteria are considered scoped out of the NAIC Liquidity Stress Test Framework for the specified data year, unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should be scoped into the Framework for that data year?

iii. Provision requiring compliance with the NAIC Liquidity Stress Test Framework’s instructions and reporting templates for the specific data year and any lead state insurance commissioner determinations in consultation with the Financial Stability Task Force or its successor, provided within the Framework similar to Section 4L(3)(b)?

Changes to Existing

c. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?
RECEIVERSHIP AND INSOLVENCY (E) TASK FORCE

National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and National Conference of Insurance Guaranty Funds (NCIGF) Amendments to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) (Attachment One-A1a) ............ 10-869
Exposure for Model #440 and Model #450 (Attachment One-A1b)................................................................. 10-871
Comment Summary and Comments Regarding Model #440 and Model #450 (Attachment One-A2)......... 10-933
Letters to the Receivership Law (E) Working Group (Attachment One-B)...................................................... 10-950
Guideline for Definition of Reciprocal State in Receivership Laws (Attachment Two)..................................... 10-961
The Receivership and Insolvency (E) Task Force met March 12, 2021. The following Task Force members participated: Doug Slape, Chair, represented by James Kennedy (TX); James J. Donelon, Vice Chair (LA); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by James Gerber (MI); Chlora Lindley-Myers (MO); Mike Causey represented by Jeff Trendel (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Russell Toal (NM); Glen Mulready and Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer (RI); and Raymond G. Farmer represented by Michael Shull (SC).

1. **Adopted its Nov. 19, 2020, Minutes**

Superintendent Toal made a motion, seconded by Commissioner Donelon, to adopt the Task Force’s Nov. 19, 2020, minutes (see NAIC Proceedings – Fall 2020, Receivership and Insolvency (E) Task Force). The motion passed unanimously.

Ms. Wilson said the Receivership Financial Analysis (E) Working Group met Feb. 1 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss experiences and the need for best practices for data transfer from insurance companies in liquidation to guaranty funds. The Working Group will draft a referral to the Information Technology (IT) Examination (E) Working Group to review and consider enhancements to the *Financial Condition Examiner’s Handbook* IT workplan. If the Task Force forms a subgroup to update the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook), these topics could be considered by that subgroup. The Receivership Financial Analysis (E) Working Group plans to meet March 22 in lieu of the Spring National Meeting in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.

Ms. Wilson made a motion, seconded by Commissioner Donelon, to adopt the Working Group’s report. The motion passed unanimously.

Mr. Baldwin said the Receivership Law (E) Working Group met Feb. 4, 2021; Dec. 17, 2020; and Dec. 17, 2020. The Working Group also met Feb. 18, 2021, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. During these meetings, the Working Group exposed draft amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) for public comment and received comments. On its March 4 meeting, the Working Group agreed to make further revisions to one section of Model #440. Those revisions have been released for a 30-day public comment period ending April 9.

Mr. Baldwin made a motion, seconded by Mr. Wake, to adopt the Working Group’s report (Attachment One). The motion passed unanimously.

4. **Adopted the Guideline for Definition of Reciprocal State in Receivership Laws**

Mr. Kennedy said the draft Guideline provides an optional definition of “reciprocal state” for receivership laws that is intended to effectuate the recognition of stays and injunctions in a receivership impacting multiple states. He noted that while some states have updated the reciprocity provisions in their receivership laws, many state laws have a definition based on a prior NAIC receivership model that is inconsistent with newer models. The Guideline’s definition is consistent with the Part A Accreditation Standards for receivership laws; if a state has a receivership scheme, it would be considered a reciprocal state. As it is a Guideline, it is optional and is not required to be adopted in all states.
Mr. Kennedy said the Task Force drafted the *Guideline for Definition of Reciprocal State in Receivership Laws* (Guideline) in November and exposed it for a 42-day public comment period ending Dec. 31, 2020. He said no comments were received.

Superintendent Toal made a motion, seconded by Mr. Wake, to adopt the Guideline (Attachment Two). The motion passed unanimously.

5. **Appointed the Receiver’s Handbook (E) Subgroup and Adopt its 2021 Proposed Charges**

Mr. Kennedy said that it has been over 10 years since the last comprehensive update of the Receiver's Handbook for Insurance Company Insolvencies Handbook. The Task Force made edits and additions to the Handbook since then, and in that process found that there was outdated information in the Handbook. He said that an update of the Handbook would require commitment from Task Force members, as well as the expertise of regulators and others with experience in handling receiverships. Mr. Kennedy asked if there was any discussion on the proposal to create the Receiver’s Handbook (E) Subgroup to review and update the Handbook, and several Task Force members expressed support for the project. He proposed the following charges for the Subgroup:

   The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force will:
   
   1. Review the *Receiver's Handbook for Insurance Company Insolvencies* (Handbook) to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft recommended edits to the Handbook.
   2. Complete by the 2022 Fall National Meeting.

Mr. Gerber made a motion, seconded by Ms. Wilson, to appoint the Receiver’s Handbook (E) Subgroup and adopt its 2021 proposed charges. The motion passed unanimously.

Mr. Kennedy asked for volunteers to participate on the Receiver’s Handbook (E) Subgroup. Florida, Illinois, Michigan and Oklahoma volunteered to participate. Others who wish to volunteer should notify NAIC staff.

6. **Heard an Update on the Status of MPI Recommendations**

   a. **Part A: Accreditation Standards for Receivership and Guaranty Fund Laws**

   Mr. Kennedy said the Task Force reported at its Nov. 19, 2020 meeting that an ad hoc group had discussed the possibility of developing additional interpretive guidance in the accreditation interlineations to clarify the Part A accreditation standards for receivership and guaranty fund laws. Since then, regulators and NAIC staff identified potential concerns that guidance could be misinterpreted or have unintended consequences. Therefore, the Task Force will not be considering any proposals to clarify the accreditation interlineations or the standards at this time.

   b. **Training and Outreach to State Insurance Departments**

   Mr. Kennedy said the Task Force should consider pursuing more training and outreach to better inform state insurance departments of receivership matters. He suggested possible options, including outreach to state insurance departments’ legislative liaisons, providing legal training webinars, and encouraging that Task Force members highlight receivership matters at zone meetings. He said Task Force members will be asked to assist in developing training and other materials.

   c. **Monitor the Work of Other NAIC Groups**

   Mr. Kennedy said the Group Solvency Issues (E) Working Group is making progress drafting updates to financial analysis guidance regarding crisis management groups, recovery planning, and resolution planning. When available, the guidance will be circulated to the Task Force for feedback.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\RCVR\RITF_Minutes031221.docx
The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met March 4, 2021. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynowycz (AR); Jack Hom (CA); Jared Kosky (CT); Toma Wilkerson (FL); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Lindsay Crawford (NE); James Kennedy (TX); and Melanie Anderson (WA).

1. **Adopted its Feb. 4 Minutes**

   The Working Group met Feb. 4 to receive comments and re-expose draft amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) for a 14-day public comment period ending Feb. 26.

   Mr. Uhrynowycz made a motion, seconded by Ms. Wilkinson, to adopt the Working Group’s Feb. 4 minutes (Attachment One-A). The motion passed unanimously.

2. **Discussed Comments Received on Amendments to Model #440 and Model #450**

   Mr. Baldwin said during its Feb. 4 meeting, the Working Group discussed comments received on the exposed draft amendments to Model #440 and Model #450. The Working Group agreed to draft additional edits and re-expose the amendments for an additional 14-day public comment period ending Feb. 26. The amendments are intended to ensure the continuity of essential services and functions by affiliates in receivership. Comments on Model #440 were received from America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA); the American Property Casualty Insurance Association (APCIA); Arbor Strategies LLC; and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF) (Attachment One-B).

   a. **Model #440, Section 5(A)(1)(g) and Section 11(D)**

      Mr. Baldwin said the commentors offered revised language for Section 5A(1)(g). The drafting group reviewed these suggestions and agreed to limit the requirement to insurers that are deemed to be in hazardous financial condition or a condition that would be grounds for supervision, conservation or delinquency proceedings. However, the drafting group recognized that once a company is in a hazardous financial condition, it may be difficult or impossible to secure a bond. The drafting group recommended changing the requirement to a deposit held by the commissioner. Bob Ridgeway (AHIP) expressed several concerns with a deposit rather than a bond, such as who holds the deposit, how the deposit is protected, who receives interest on the deposit, accounting treatment, tax treatment, and when the deposit would be returned. Chris Petersen (Arbor Strategies LLC) said the requirement should be on the insurer, rather than the affiliate, to avoid enforcement issues. Mr. Kennedy suggested replacing the deposit with the original bond. Mr. Wake suggested a bond or deposit requirement. Mr. Wake and Mr. Kosky agreed that the Working Group should redraft the paragraph rather than move forward with adopting the models on this call. Mr. Baldwin said the drafting group would redraft language for Section 5A(1)(g).

      Mr. Baldwin said given the changes to Section 5A(1)(g), the drafting group recommended deleting the proposed Section 11(D), which would have imposed a bond requirement as a sanction. Hearing no objection, the deletion was accepted.

   b. **Model #440, Section 5(A)(1)(h)**

      Mr. Baldwin said the sentence on “commingling of premium and funds” in Section 5A(1)(i) was removed since on the last call, it was recognized that all the interested parties were opposed; instead, “offset” language had been added with the previous exposure draft. Hearing no objection, the deletion was accepted.
c. Model #440, Section 5(A)(6)

Ms. Slaymaker said the NOLHGA and the NCIGF’s comment letter recommended clarifying language as to how this provision would work with respect to conflicts with other regulatory authorities and jurisdictions. Bill O’Sullivan (NOLHGA) said the recommended edits clarify that the intent of the section is to narrowly address essential services by affiliates and clarify that the requirement for consent to the jurisdiction be discretionary. Hearing no objection, the additions were accepted.

Having no further business, the Receivership Law (E) Working Group adjourned.
The Receivership Law (E) Working Group met Feb. 4, 2021. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynnowycz (AR); Joe Holloway and Jack Hom (CA); Jared Kosky (CT); Toma Wilkerson (FL); Robert Koppin (IA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Lindsay Crawford (NE); James Kennedy (TX); and Melanie Anderson (WA).

1. **Adopted its Dec. 17, 2020, Minutes**

The Working Group met Dec. 17, 2020, and exposed draft amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) for a 42-day public comment period ending Jan. 29.

Ms. Crawford made a motion, seconded by Ms. Forrest, to adopt the Working Group’s Dec. 17, 2020, minutes (Attachment One-A1). The motion passed unanimously.

2. **Discussed Comments Received on Amendments to Model #440 and Model #450**

Ms. Slaymaker said during its Dec. 17, 2020, meeting, the Working Group exposed draft amendments to Model #440 and Model #450 for a 42-day public comment period ending Jan. 29. The amendments are intended to ensure the continuity of essential services and functions by affiliates in receivership. Comments were received from Florida; the American Council of Life Insurers (ACLI); America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA); Arbor Strategies LLC; Morgan, Lewis & Bockius LLP; and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF) (Attachment One-A2).

   a. **Model #440, Section 5(A)(1)(g) and Section 11(D)**

Ms. Slaymaker said the proposed addition of Section 5(A)(1)(g) places a bond requirement on affiliated transactions, the amount of which would be at the discretion of the commissioner. The consensus of interested party comments opposes the amendment, as it places the requirement on all insurers, most of which are not financially troubled and would not result in receivership; it may create competitive disadvantages; it implies bias; and it creates an additional cost to insurers.

Chris Petersen (Arbor Strategies LLC) said he does not understand why affiliated contracts are differentiated from contracts with other companies. He said health care groups are very integrated, and performance bonds could be very expensive; i.e., 1–3% of the cost. He suggested that there may be a better place to regulate this issue.

Joseph E. Zolecki (BCBSA) said the number of receiverships has declined over the years, and it represents a very small percentage of companies, which highlights that the solvency monitoring regime is working. He said solvency initiatives over the years have built up tools for financial solvency regulation and the identification of troubled companies. Risk-based capital (RBC) allows for early intervention and the authority to take corrective measures, thereby minimizing the adverse impact on solvency. Mr. Zolecki said he has questions about affiliate versus non-affiliate. He said if the cost of a performance bond is offset by the value to receivers, then he believes the bond requirement should be applicable only to those insurers that pose an imminent risk of insolvency. He said strong carriers should be exempt from bond requirements, and they should not be penalized because there might be a misunderstanding that all organizations with vertical integration pose a greater risk. He said consumers should be shielded from additional costs. He said the BCBSA might propose that the Working Group consider a separate company action level RBC threshold for performance bonds with direction from the Capital Adequacy (E) Task Force. He said a lot of qualitative and quantitative triggers have been added besides RBC for state insurance regulators’ use with more information on groups and insurers as part of the risk-focused analysis and examination processes. He recommends a separate trigger for bond requirements that is supported by the solvency monitoring process, which is tailored to the insurers with the highest level of insolvency, and does not unduly penalize ongoing strong carriers because of their level of vertical integration. He asked why this issue is not being addressed in the *Insurer Receivership Model Act* (#555).
Mr. Gerber said the bond should be at the commissioner’s discretion based on the solvency items, just as the BCBSA mentioned. He agreed that it should not be placed on all insurers. He said some states currently require third-party administrators (TPAs) to have performance bonds be licensed. He explained his experience as a receiver performing work in a receivership that a TPA would perform, where he had to get licensed as a TPA. Some states required him to put up a performance bond to be licensed as a TPA. Mr. Petersen asked if the bond requirement was a one-time bond or a bond for each contract. Mr. Gerber said it was on a state-by-state basis; the bond was not on each contract, and it was renewable annually when the license was renewed. He said if the commissioner has discretion, based on analysis or RBC as mentioned, he does not believe it would result in financially stable companies having to put up a bond for their affiliated contracts. Mr. Petersen said the proposed amendments require a bond for each contract. He said some of the suggestions seem reasonable, and he suggested clarification for the difference between a bond to get a license versus a bond on every new contract. Mr. Gerber said one size does not fit all, so if the commissioner has discretion, then the bond requirement could be limited to one contract or one affiliate and the commissioner could determine the type of bond. Mr. Petersen said that would be an improvement over the current proposed language.

Mr. Kennedy suggested expanding the drafting note for this paragraph to explain the circumstances in which a commissioner may decide to require a bond to address these concerns.

Mr. Baldwin said he agrees with Mr. Kennedy that we can address the comments with some redrafting.

Mr. Wake agreed, and he said the language should not create too much disparity between intra-group transactions and outside contractors, such that it would push companies to use outside contractors. He said it might be worth considering in some cases if we need to tighten up the standards for outside contractors.

Ms. Wilkerson said the paragraph was not intended to punish entities that use affiliates; but if it is a third-party agreement, there is due diligence performed to determine the financial status of that third party. She said it is not typical that the insurer is an outside party’s only revenue stream. She said where the insurer is the affiliate’s only revenue stream, once the insurer is in liquidation and the revenue stream is gone, which is usually a percentage of premium, there is no way to run-off that business. She said at the point that there is a solvency issue, the commissioner may be discouraged from adding the burden of obtaining the bond, which is why it was drafted to have the bond up front. She said the trigger for the bond could be if the affiliate is a single revenue stream.

Ms. Slaymaker suggested that NAIC staff draft some revisions to tighten up the provision.

1. **Model #440, Section 11(D)**

Ms. Slaymaker said one comment was received from the ACLI on the related bond provision in Section 11(D). She said the ACLI believes that the remedy is unlikely to be used because an insurer would simply seek regulatory approval of the transaction after the fact. Lauren Sarper (Prudential) said she does not oppose the provision in Section 11(D), but to have a bond for an agreement that is not properly approved might be punitive. She said insurers pursue regulatory approval on these items after the fact. Andrew Hughes (Prudential) said a commissioner has the authority to disapprove an agreement if it is not within the interest of policyholders and the bond requirement is therefore not necessary. Ms. Slaymaker suggested that NAIC staff draft some revisions to tighten up the provision like Section 5(A)(1)(g).

2. **Model #440, Section 5(A)(1)(h)**

Ms. Slaymaker said the proposed addition of Section 5(A)(1)(h) states that records and data held by the affiliate is the property of the insurer. She said comments were received from the ACLI questioning the last two sentences of the provision. A comment from Florida suggests that additional wording relates to separating records and data “at no cost to the insurer.” She said Morgan, Lewis & Bockius LLP suggests alternative language.

Harold S. Horwich (Morgan, Lewis & Bockius LLP) said just saying the data is property of the insurer and that the data will be made available is not enough. The paragraph needs to say the state insurance regulator should be able to get a complete set of data and that at the point when the affiliate is no longer performing services, the affiliate should be unable to use that data for its own purposes. He said the draft is not wrong, but it does not reflect how the data is maintained in an affiliate’s system.

Ms. Slaymaker said Florida suggested adding “at no cost to the insurer” to the proposed paragraph. Ms. Wilkerson explained an example where the affiliate did business with multiple insurers. At the point of liquidation, it was important that the receiver
have access to see the claims, coverage and policyholder records of the insurer even while the data was being extracted. If the data was not segregated, the receiver could see other insurers’ data, which was not the intent, but it was an issue.

Patrick Cantilo (Cantilo & Bennett LLP) said once it is qualified, all the records and data are the property of the insurer; other tools will accomplish the purpose being discussed. The typical receivership order will grant the receiver complete access to all the company’s records and property. The order typically authorizes the commissioner to exercise exclusive or shared control, if appropriate. Characterizing the records as property of the insurer triggers other available tools, so additional language may not be required.

Ms. Sarper said it is unlikely that the insurer would be able to access the affiliate’s systems. There may be conflicting legal rights. It is reasonable as Mr. Horwich suggested, that the receiver can get a complete set of data. She said regarding the “at no cost” language suggested by Florida, those costs would be passed on to the insurer directly or indirectly.

Ms. Slaymaker requested that NAIC staff draft some revisions to this section based on the discussion.

d. **Model #440, Section 5(A)(1)(i)**

Mr. Baldwin said the proposed addition of Section 5(A)(1)(i) addresses premiums or other funds belonging to the insurer, and it specifies that the affiliate shall not commingle the insurer’s premium and funds with other accounts. He said comments from interested parties on this section oppose the commingling provision. He said the ACLI’s comment indicates that it is unlikely and impractical. He said AHIP and the BCBSA opposed the commingling language, and they suggested instead that there should be an ability to identify the various funds’ ownership rights, which may already be covered in the previous section. He said Arbor Strategies LLC opposes the language, and he asked for clarity on what is included in “other funds.” He said the comments from Morgan, Lewis & Bockius LLP encompass several concepts, including that the amendments related to commingling are not clear as to whether the rights being established eliminate the contractual offset rights. He said one commentor said the term “other funds” may be vague.

Mr. Horwich said if what is meant in this paragraph is that when a group gets into financial trouble, the state insurance regulator can step in and take the premium regardless of rights of the affiliate, the provision should state that. However, he said he is not advocating for that. He said for example, bank accounts and homes may be the exclusive property of a person, but the bank has the right to offset and a valid interest in the mortgage. Mr. Baldwin asked if regarding what Mr. Horwich is referring to, this provision is a general requirement and the precision is in the state’s receivership act. Also, the provisions within the receivership order address the precision. He said language in the receivership act would not eliminate another party’s lien or offset rights. He suggested more clarity in this language.

Mr. Cantilo said characterizing the premiums and funds as exclusive property does not address either way the applicability of offsets. Calling it exclusive property gives the receiver some right to the premium and other funds. The counterparty may also have contractual rights, and whether those rights are eligible for offset is then governed by the provisions of the liquidation act, which promulgates several requirements before credits and debits may be offset.

Mr. Baldwin said we will consider some revisions to this section.

e. **Model #440, Section 5(A)(6)**

Mr. Baldwin said Section 5(A)(6) is the new language that addresses that the affiliated agreement specifies that the affiliates consent to the receivership court. He said the ACLI had a comment on this section. Ms. Sarper said she supports the goals of the section and especially to consolidate court proceedings in a single jurisdiction, but she asked how this section might handle certain situations where affiliates may not recognize the jurisdiction even though they sign the agreements and how this might work with certain assets management affiliates and any regulatory conflicts with the asset manager’s state insurance regulators (e.g., Financial Industry Regulatory Authority (FINRA) or the U.S. Securities and Exchange Commission [SEC]). The state insurance regulators might want to give some additional consideration to that point. The goal is to reduce potential delays and concentrate everything in a single court jurisdiction, so we want to avoid potential conflicts that could make the process more complicated.

Bill O’Sullivan (NOLHGA) said the NOLHGA has been thinking about these issues, and he offered his assistance to address these issues.
f. **Model #450, Section 19(B), Paragraphs 6, 7, 11(b) and 13**

Mr. Baldwin said Section 19 addresses the provisions that should be included in an affiliated transaction agreement. He said the comments on several paragraphs in this section relate to providing the records and data “at no cost to the insurer.” The commentors ask if this is an unreasonable or impractical expectation. Ms. Wilkerson said the receiver should not be charged a fee to separate comingled records that should be segregated or identifiable. The receiver needs to have immediate access to the data. Mr. Baldwin agrees that a receiver does not want to be told by an affiliate that before the receiver can have access, there must be an expansive and expensive process to separate the comingled records. Ms. Slaymaker said fair and reasonable costs associated with the work of transferring the data are acceptable. Mr. Kennedy agreed that receivers should not have to pay to separate comingled data and records.

Mr. Cantilo said in a conventional way, the insurer’s data and records would be separated automatically and be immediately available to the receiver at no cost. The decision by the company to consolidate records with an affiliate may be economically advantageous to the company. He said he believes that the company derives the benefit from that comingling during the operating period, and it should not serve as justification for imposing on the receiver a cost that the receiver would not face if the data had not been comingled. He said he has had experiences where gaining access to comingled records was extremely expensive and time consuming and required legal proceedings.

Mr. Baldwin said we will consider some revisions to this section to address Florida’s concern and make sure it is more precise and reasonable.

g. **Model #450, Section 19(B)(15)**

Mr. Baldwin said the proposed amendments to this paragraph were added to address cooperation prior to triggering a guaranty association. The NOLHGA and the NCIGF offered technical edits in their comment, primarily to replace “covered” with “eligible for coverage.” Mr. Baldwin said he agrees that the technical edits are reasonable. Ms. Slaymaker and Ms. Wilkerson agreed.

3. **Exposed Amendments to Model #440 and Model #450**

Mr. Baldwin said NAIC staff and members of the Working Group will draft revisions to the amendments based on the discussion on this call. The revisions will be exposed for a 14-day public comment period beginning on the date that staff distributes the updated amendments to members, interested state insurance regulators, and interested parties.

Having no further business, the Receivership Law (E) Working Group adjourned.

W:\National Meetings\2021\Spring\TF\RCVR\020421_RLWGmin.docx
The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met Dec. 17, 2020. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhlrynowycz (AR); Jack Hom (CA); Rolf Kaumann (CO); Jared Kosky (CT); Toma Wilkerson (FL); Robert Koppin (IA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Justin Schrader (NE); James Kennedy (TX); and Melanie Anderson (WA).

1. **Exposed Amendments to Model #440 and Model #450**

Ms. Slaymaker said during its Oct. 29 meeting, the Working Group agreed to draft amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). The amendments are intended to ensure continuity of essential services and functions by affiliates to an insurer in receivership. A small group of state insurance regulators—including Illinois, Pennsylvania, Maine, Michigan, Oklahoma and Texas—developed a first draft of amendments that focus on three sections of Model #440 and Model #450.

a. **Model #440, Section 5(A) Standards and Management of an Insurer Within an Insurance Holding Company**

Ms. Slaymaker said the proposed addition of Section 5(A)(1)(g) provides for a bond from the affiliate for the performance of services. The provision for the bond and the amount of the bond are at the commissioner’s discretion. Mr. Kaumann suggested including a drafting note to explain the intent of the bond as a performance bond.

Ms. Slaymaker said the proposed addition of Section 5(A)(1)(h) includes a definition of records and data that is similar to the definition on the *Insurer Receivership Model Act* (#555). The purpose of this section is to make it clear that the transaction must define records and data of the insurer as the property of the insurer, and the affiliate must provide access to the insurer to all of these records and data. The Working Group agreed the intent for electronic data is that it should be in a format that can be extracted from other data.

Mr. Kennedy said most issues with records and data that is not segregated relate to electronic data, rather than paper files. Regarding the use of information technology (IT) references, such as “silo” or “partition,” the Working Group suggested members’ IT staff could review the language. After discussion, the Working Group agreed to edit the first sentence to read, “All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation from all other persons’ records and data.”

Ms. Slaymaker said the proposed addition of Section 5(A)(1)(i) aims to define that premium and other funds of the insurer are the property of the insurer and should not be commingled. She said a receiver’s right to suspend rights of offset agreements during a receivership can be addressed through a review of guidance in the *Receiver’s Handbook for Insurance Company Insolvencies*.

Peter Gallanis (National Organization of Life and Health Guaranty Association—NOLHGA) summarized the joint comment letter from NOLHGA and the National Conference of Insurance Guaranty Funds (NCIGF) for the proposed new Section 5(A)(6) and Section 5(A)(7) (Attachment One-A1a). He said the direction of the draft language is right and that the comment letter proposes friendly amendments. After discussion, the Working Group agreed to accept NOLHGA and the NCIGF’s proposed edits, remove the phrase “and that the agreement or contract is governed by the law of this state” in the last paragraph, and renumber the paragraphs.

b. **Model #440, Section 11 Sanctions**

Ms. Slaymaker said the addition of Section 11(D) is similar to Section 5(A)(1)(g) but in this instance included a possible sanction the commissioner could consider if the commissioner determines that Section 5A of the Model #440 has been violated or if the agreement had not been properly reported and approved.
c. **Model #450, Section 19 Transactions Subject to Prior Notice—Notice Filing (Form D)**

Mr. Baldwin said the proposed amendments to Section 19B(6) include the same definition of records and data as proposed in Model #440 Section 5(A)(1)(h). The amendment expands upon the requirement that the affiliated agreement include language that defines records and data of the insurer. Mr. Baldwin instructed NAIC staff to make edits consistent with Model #440 Section 5(A)(1)(h).

Mr. Baldwin said the proposed amendments to Section 19B(7) address segregating records and data of the insurer. Mr. Baldwin instructed NAIC staff to make edits consistent with Model #440 Section 5(A)(1)(h).

Mr. Baldwin said the proposed amendments to Section 19B(10) were proposed by America’s Health Insurance Plans (AHIP). The proposal will be edited to include additional paragraphs added to Subsection B.

Mr. Baldwin said the proposed amendments to Section 19B(11) and 19B(11) refer to “supervision, seizure, conservation, or receivership” to account for the variations in states laws. Harold Horwich (Morgan Lewis & Bockius LLP) suggested the addition of “supervision” to this subsection would require edits to Section 19B(11)(a). The Working Group agreed to add the phrase “to the extent permitted by [law of the state]” to the end of Section 19B(11)(a).

Mr. Baldwin said the proposed amendments to Section 19B(11)(b) require that the agreement state records and data are provided in a usable format and at no cost. The intent of the amendments is to address issues that were raised where affiliates do not maintain or provide the insurer’s data in a format that is necessary to operate the insurer and be able to pay claims, as well as the issue that affiliates demand high fees to receive the insurer’s data. Mr. Horwich recommending adding “of the insurer” to the reference to records and data. The Working Group agreed.

Mr. Baldwin said the proposed amendments to Section 19B(11)(c) require that the agreement provides that the employees of the affiliate that have been essential to the operations of the insurer will be made available to the receiver to ensure the services continue to be provided.

Mr. Baldwin said the proposed addition of Section 19B(13) specifies that essential services will be provided for a specified time, which can be defined in the agreement. It also specifies that this is without regard to pre-receivership unpaid fees, but so long as the payment for post-receivership services are made.

Mr. Baldwin said the proposed amendments to Section 19B(14) include changes for consistency in terminology with other amendments and clarify that timely payment refers to payment for post-receivership services.

Mr. Baldwin said NOLHGA and the NCIGF proposed the addition of Section 19B(15), which he believes is within the scope and that it is intended that continuation of essential services extend to guaranty associations to perform their role in the policyholder protection scheme.

Mr. Gallanis said the direction of the changes proposed today are all intended to address the seamless uninterrupted protection of policyholders. In insolvencies where blocks of business are covered by guaranty associations, the intent of this proposed section is to clarify that the continuity provisions addressed also serve the objectives of the guaranty associations in protecting consumers. Mr. Kennedy asked if supervision, seizure or conservatorship should be included. Mr. Horwich said the guaranty funds need to be able to prepare for an eventual receivership.

Mr. Gallanis said in drafting this section, he focused on what guaranty associations do to service claims and transfer or assume blocks of business. He agreed with Mr. Horwich that guaranty funds work with receivers on analysis of company data and records, specifically policy files, in advance of the transition to the guaranty association. If there is a likelihood for receivership, the ability to do the analysis prior to guaranty associations being triggered is important to policyholder protection. Roger Schmelzer (NCIGF) said he agrees with Mr. Gallanis. He said it is important for guaranty funds to have the option to be able to look at digital information of a company that would likely be placed into receivership.

Mr. Kennedy said that as this is referring not just to guaranty funds currently providing coverage but that may be providing coverage on a receivership in the near future, he suggests moving the phrase “in furtherance of the cooperation between the receiver and the affected guaranty association(s) and subject to the receiver's authority over the insurer” to the beginning of the paragraph. After further discussion, the Working Group agreed to include the proposed Section 19B(15) with the suggested reorganization.
Mr. Baldwin said the draft amendments would be exposed for a 35-day public comment period ending Jan. 22, 2021. The comment period was later extended to Jan. 29, 2021 (Attachment One-A1b).

Having no further business, the Receivership Law (E) Working Group adjourned.
JOINT SUBMISSION TO RECEIVERSHIP LAW (E) WORKING GROUP
REVIEW AND CONSIDERATION OF EXPOSURE OF
DRAFT AMENDMENTS TO MODELS #440 & #450

December 16, 2020

NOLHGA and NCIGF provide the following comments in advance of the Working Group's review and consideration of the exposure of draft amendments to Models #440 and #450 ("Draft Amendments") on December 17. The Draft Amendments offer constructive solutions to address the issue of continuity in the provision of essential services by affiliates in the event of the receivership of an insurer. The following comments are intended to provide clarity on two points as you consider the exposure.

Model #440 Sections 5A(6)&(7)

We suggest merging the concepts in these two sections to further ensure consistency. Section 5A(6) refers to the "jurisdiction of the receivership court" while Section 5A(7) refers to the "jurisdiction of any supervision, seizure, conservatorship, or receivership proceedings against the insurer, and to the authority of any supervisor, conservator, rehabilitator, or liquidator...." We suggest combining these sections into a new Section 5A(6) as follows:

Any affiliate that is party to an agreement or contract pursuant to Subsection A(2)(d), shall be subject to the jurisdiction of any supervision, seizure, conservatorship, or receivership proceedings against the insurer, and to the authority of any supervisor, conservator, rehabilitator, or liquidator for the insurer appointed pursuant to [supervision and receivership acts] for the purpose of interpreting, enforcing, and overseeing the affiliate’s agreements, relationship, and dealings with the insurer, if the services provided by the affiliate to the insurer:

(a) are an integral part of the insurer’s operations, including but not limited to management, administrative, accounting, data processing, marketing, underwriting, claims handling, investment, or any other similar functions; or

(b) are essential to the insurer’s ability to fulfil its obligations under insurance policies.

Any agreement or contract pursuant to Subsection A(2)(d) for the provision of services described in (a) and (b) above must specify that the affiliate consents to the jurisdiction as set forth in this Section 5A(6), and that the agreement or contract is governed by the law of this state.
Model #450 Section 19B

To further advance the goals of the proposal, we suggest adding a new Section 19B(15) to address continuity of services in the event the insurer is placed in receivership and guaranty associations are triggered:

Specify that, if the insurer is placed into supervision, seizure, conservatorship, or receivership pursuant to [supervision and receivership acts], and portions of the insurer's policies or contracts are covered by one or more guaranty associations, the affiliate's commitments under Sections 19B(11)-(14) will extend to the guaranty association(s) providing such coverage, in furtherance of the cooperation between the receiver and the affected guaranty association(s) and subject to the receiver's authority over the insurer.

****

We appreciate your consideration of these proposed changes, and we look forward to contributing to the Working Group's continued discussions. To that end, Peter Gallanis and Roger Schmelzer will be available to discuss these comments during the Working Group's call on December 17.

Section 1. Definitions note

As used in this Act, the following terms shall have these meanings unless the context shall otherwise require:

A. “Affiliate.” An “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

B. “Commissioner.” The term “commissioner” shall mean the insurance commissioner, the commissioner’s deputies, or the Insurance Department, as appropriate.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the word “commissioner” appears.

C. “Control.” The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

D. “Group-wide supervisor.” The regulatory official authorized to engage in conducting and coordinating group-wide supervision activities who is determined or acknowledged by the commissioner under Section 7.1 to have sufficient significant contacts with the internationally active insurance group.
Insurance Holding Company System Regulatory Act

E. "Group Capital Calculation instructions" means the group capital calculation instructions as adopted by the NAIC and as amended by the NAIC from time to time in accordance with the procedures adopted by the NAIC.

F. “Insurance Holding Company System.” An “insurance holding company system” consists of two (2) or more affiliated persons, one or more of which is an insurer.

G. “Insurer.” The term “insurer” shall have the same meaning as set forth in Section [insert applicable section] of this Chapter, except that it shall not include agencies, authorities or instrumentalities of the United States, its possessions and territories, the Commonwealth of Puerto Rico, the District of Columbia, or a state or political subdivision of a state.

Drafting Note: References in this model act to “Chapter” are references to the entire state insurance code.

Drafting Note: States should consider applicability of this model act to fraternal societies and captives.

H. “Internationally active insurance group.” An insurance holding company system that (1) includes an insurer registered under Section 4; and (2) meets the following criteria: (a) premiums written in at least three countries, (b) the percentage of gross premiums written outside the United States is at least ten percent (10%) of the insurance holding company system’s total gross written premiums, and (c) based on a three-year rolling average, the total assets of the insurance holding company system are at least fifty billion dollars ($50,000,000,000) or the total gross written premiums of the insurance holding company system are at least ten billion dollars ($10,000,000,000).

I. “Enterprise Risk.” “Enterprise risk” shall mean any activity, circumstance, event or series of events involving one or more affiliates of an insurer that, if not remedied promptly, is likely to have a material adverse effect upon the financial condition or liquidity of the insurer or its insurance holding company system as a whole, including, but not limited to, anything that would cause the insurer’s Risk-Based Capital to fall into company action level as set forth in [insert cross reference to appropriate section of Risk-Based Capital (RBC) Model Act] or would cause the insurer to be in hazardous financial condition [insert cross reference to appropriate section of Model Regulation to define standards and commissioner’s authority over companies deemed to be in hazardous financial condition].

J. “NAIC” means the National Association of Insurance Commissioners.

K. “NAIC Liquidity Stress Test Framework.” The “NAIC Liquidity Stress Test Framework” is a separate NAIC publication which includes a history of the NAIC’s development of regulatory liquidity stress testing, the Scope Criteria applicable for a specific data year, and the Liquidity Stress Test instructions and reporting templates for a specific data year, such Scope Criteria, instructions and reporting template being as adopted by the NAIC and as amended by the NAIC from time to time in accordance with the procedures adopted by the NAIC.

L. “Person.” A “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert, but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

M. “Scope Criteria.” The “Scope Criteria,” as detailed in the NAIC Liquidity Stress Test Framework, are the designated exposure bases along with minimum magnitudes thereof for the specified data year, used to establish a preliminary list of insurers considered scoped into the NAIC Liquidity Stress Test Framework for that data year.

N. “Securityholder.” A “securityholder” of a specified person is one who owns any security of such person, including common stock, preferred stock, debt obligations and any other security convertible into or evidencing the right to acquire any of the foregoing.

O. “Subsidiary.” A “subsidiary” of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries.
P. “Voting Security.” The term “voting security” shall include any security convertible into or evidencing a right to acquire a voting security.

Section 2. Subsidiaries of Insurers

A. Authorization. A domestic insurer, either by itself or in cooperation with one or more persons, may organize or acquire one or more subsidiaries. The subsidiaries may conduct any kind of business or businesses and their authority to do so shall not be limited by reason of the fact that they are subsidiaries of a domestic insurer.

Drafting Note: This bill neither expressly authorizes noninsurance subsidiaries nor restricts subsidiaries to insurance related activities. It is believed that this is a policy decision which should be made by each individual state. Attached as an appendix are alternative provisions which would authorize the formation or acquisition of subsidiaries to engage in diversified business activity.

B. Additional Investment Authority. In addition to investments in common stock, preferred stock, debt obligations and other securities permitted under all other sections of this Chapter, a domestic insurer may also:

(1) Invest, in common stock, preferred stock, debt obligations, and other securities of one or more subsidiaries, amounts which do not exceed the lesser of ten percent (10%) of the insurer’s assets or fifty percent (50%) of the insurer’s surplus as regards policyholders, provided that after such investments, the insurer’s surplus as regards policyholders will be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs. In calculating the amount of such investments, investments in domestic or foreign insurance subsidiaries and health maintenance organizations shall be excluded, and there shall be included:

(a) Total net monies or other consideration expended and obligations assumed in the acquisition or formation of a subsidiary, including all organizational expenses and contributions to capital and surplus of the subsidiary whether or not represented by the purchase of capital stock or issuance of other securities, and

(b) All amounts expended in acquiring additional common stock, preferred stock, debt obligations, and other securities; and all contributions to the capital or surplus of a subsidiary subsequent to its acquisition or formation;

Drafting Note: When considering whether to amend its Holding Company Act to exempt health maintenance organizations and other similar entities from certain investment limitations, a state should consider whether the solvency and general operations of the entities are regulated by the insurance department. In addition to, or in place of, the term “health maintenance organizations” in Paragraph (1) above, a state may include any other entity which provides or arranges for the financing or provision of health care services or coverage over which the commissioner possesses financial solvency and regulatory oversight authority.

(2) Invest any amount in common stock, preferred stock, debt obligations and other securities of one or more subsidiaries engaged or organized to engage exclusively in the ownership and management of assets authorized as investments for the insurer provided that each subsidiary agrees to limit its investments in any asset so that such investments will not cause the amount of the total investment of the insurer to exceed any of the investment limitations specified in Paragraph (1) or in Sections [insert applicable section] through [insert applicable section] of this Chapter applicable to the insurer. For the purpose of this paragraph, “the total investment of the insurer” shall include:

(a) Any direct investment by the insurer in an asset, and

(b) The insurer’s proportionate share of any investment in an asset by any subsidiary of the insurer, which shall be calculated by multiplying the amount of the subsidiary’s investment by the percentage of the ownership of the subsidiary;
(3) With the approval of the commissioner, invest any greater amount in common stock, preferred stock, debt obligations, or other securities of one or more subsidiaries; provided that after the investment the insurer’s surplus as regards policyholders will be reasonable in relation to the insurer’s outstanding liabilities and adequate to its financial needs.

C. Exemption from Investment Restrictions. Investments in common stock, preferred stock, debt obligations or other securities of subsidiaries made pursuant to Subsection B shall not be subject to any of the otherwise applicable restrictions or prohibitions contained in this Chapter applicable to such investments of insurers [except the following: ].

Drafting Note: The last phrase is optional in those states having certain special qualitative limitations, such as prohibitions on investments in stock of mining companies, which the state may wish to retain as a matter of public policy.

D. Qualification of Investment; When Determined. Whether any investment made pursuant to Subsection B meets the applicable requirements of that subsection is to be determined before the investment is made, by calculating the applicable investment limitations as though the investment had already been made, taking into account the then outstanding principal balance on all previous investments in debt obligations, and the value of all previous investments in equity securities as of the day they were made, net of any return of capital invested, not including dividends.

E. Cessation of Control. If an insurer ceases to control a subsidiary, it shall dispose of any investment therein made pursuant to this section within three (3) years from the time of the cessation of control or within such further time as the commissioner may prescribe, unless at any time after the investment shall have been made, the investment shall have met the requirements for investment under any other section of this Chapter, and the insurer has so notified the commissioner.

Section 3. Acquisition of Control of or Merger with Domestic Insurer

A. Filing Requirements.

(1) No person other than the issuer shall make a tender offer for or a request or invitation for tenders of, or enter into any agreement to exchange securities for, seek to acquire, or acquire, in the open market or otherwise, any voting security of a domestic insurer if, after the consummation thereof, such person would, directly or indirectly (or by conversion or by exercise of any right to acquire) be in control of the insurer, and no person shall enter into an agreement to merge with or otherwise to acquire control of a domestic insurer or any person controlling a domestic insurer unless, at the time the offer, request or invitation is made or the agreement is entered into, or prior to the acquisition of the securities if no offer or agreement is involved, such person has filed with the commissioner and has sent to the insurer, a statement containing the information required by this section and the offer, request, invitation, agreement or acquisition has been approved by the commissioner in the manner prescribed in this Act.

(2) For purposes of this section, any controlling person of a domestic insurer seeking to divest its controlling interest in the domestic insurer, in any manner, shall file with the commissioner, with a copy to the insurer, confidential notice of its proposed divestiture at least 30 days prior to the cessation of control. The commissioner shall determine those instances in which the party(ies) seeking to divest or to acquire a controlling interest in an insurer, will be required to file for and obtain approval of the transaction. The information shall remain confidential until the conclusion of the transaction unless the commissioner, in his or her discretion determines that confidential treatment will interfere with enforcement of this section. If the statement referred to in Paragraph (1) is otherwise filed, this paragraph shall not apply.

(3) With respect to a transaction subject to this section, the acquiring person must also file a pre-acquisition notification with the commissioner, which shall contain the information set forth in Section 3.1C(1). A failure to file the notification may be subject to penalties specified in Section 3.1E(3).
(4) For purposes of this section a domestic insurer shall include any person controlling a domestic insurer unless the person, as determined by the commissioner, is either directly or through its affiliates primarily engaged in business other than the business of insurance. For the purposes of this section, “person” shall not include any securities broker holding, in the usual and customary broker’s function, less than twenty percent (20%) of the voting securities of an insurance company or of any person which controls an insurance company.

B. Content of Statement. The statement to be filed with the commissioner shall be made under oath or affirmation and shall contain the following:

(1) The name and address of each person by whom or on whose behalf the merger or other acquisition of control referred to in Subsection A is to be effected (hereinafter called the “acquiring party”), and

(a) If the person is an individual, his or her principal occupation and all offices and positions held during the past five (5) years, and any conviction of crimes other than minor traffic violations during the past ten (10) years;

(b) If the person is not an individual, a report of the nature of its business operations during the past five (5) years or for the lesser period as the person and any predecessors shall have been in existence; an informative description of the business intended to be done by the person and the person’s subsidiaries; and a list of all individuals who are or who have been selected to become directors or executive officers of the person, or who perform or will perform functions appropriate to such positions. The list shall include for each individual the information required by Subparagraph (a) of this paragraph;

(2) The source, nature and amount of the consideration used or to be used in effecting the merger or other acquisition of control, a description of any transaction where funds were or are to be obtained for any such purpose (including any pledge of the insurer’s stock, or the stock of any of its subsidiaries or controlling affiliates), and the identity of persons furnishing consideration; provided, however, that where a source of consideration is a loan made in the lender’s ordinary course of business, the identity of the lender shall remain confidential, if the person filing the statement so requests;

(3) Fully audited financial information as to the earnings and financial condition of each acquiring party for the preceding five (5) fiscal years of each acquiring party (or for such lesser period as the acquiring party and any predecessors shall have been in existence), and similar unaudited information as of a date not earlier than ninety (90) days prior to the filing of the statement;

(4) Any plans or proposals which each acquiring party may have to liquidate the insurer, to sell its assets or merge or consolidate it with any person, or to make any other material change in its business or corporate structure or management;

(5) The number of shares of any security referred to in Subsection A which each acquiring party proposes to acquire, and the terms of the offer, request, invitation, agreement or acquisition referred to in Subsection A, and a statement as to the method by which the fairness of the proposal was arrived at;

(6) The amount of each class of any security referred to in Subsection A which is beneficially owned or concerning which there is a right to acquire beneficial ownership by each acquiring party;

(7) A full description of any contracts, arrangements or understandings with respect to any security referred to in Subsection A in which any acquiring party is involved, including but not limited to transfer of any of the securities, joint ventures, loan or option arrangements, puts or calls, guarantees of loans, guarantees against loss or guarantees of profits, division of losses or profits, or the giving or withholding of proxies. The description shall identify the persons with whom the contracts, arrangements or understandings have been entered into;
Insurance Holding Company System Regulatory Act

(8) A description of the purchase of any security referred to in Subsection A during the twelve (12) calendar months preceding the filing of the statement by any acquiring party, including the dates of purchase, names of the purchasers and consideration paid or agreed to be paid;

(9) A description of any recommendations to purchase any security referred to in Subsection A made during the twelve (12) calendar months preceding the filing of the statement by any acquiring party, or by anyone based upon interviews or at the suggestion of the acquiring party;

(10) Copies of all tender offers for, requests, or invitations for tenders of, exchange offers for, and agreements to acquire or exchange any securities referred to in Subsection A, and (if distributed) of additional soliciting material relating to them;

(11) The term of any agreement, contract or understanding made with or proposed to be made with any broker-dealer as to solicitation of securities referred to in Subsection A for tender, and the amount of any fees, commissions or other compensation to be paid to broker-dealers with regard thereto;

Drafting Note: An insurer required to file information pursuant to sub-sections 3B(12) and 3B(13) may satisfy the requirement by providing the commissioner with the most recently filed parent corporation reports that have been filed with the SEC, if appropriate.

(12) An agreement by the person required to file the statement referred to in Subsection A that it will provide the annual report, specified in Section 4L(1), for so long as control exists;

(13) An acknowledgement by the person required to file the statement referred to in Subsection A that the person and all subsidiaries within its control in the insurance holding company system will provide information to the commissioner upon request as necessary to evaluate enterprise risk to the insurer; and

(14) Such additional information as the commissioner may by rule or regulation prescribe as necessary or appropriate for the protection of policyholders of the insurer or in the public interest.

If the person required to file the statement referred to in Subsection A is a partnership, limited partnership, syndicate or other group, the commissioner may require that the information called for by Paragraphs (1) through (14) shall be given with respect to each partner of the partnership or member of the syndicate or group, and each person who controls the partner or member. If any partner, member or person is a corporation or the person required to file the statement referred to in Subsection A is a corporation, the commissioner may require that the information called for by Paragraphs (1) through (14) shall be given with respect to the corporation, each officer and director of the corporation, and each person who is directly or indirectly the beneficial owner of more than ten percent (10%) of the outstanding voting securities of the corporation.

If any material change occurs in the facts set forth in the statement filed with the commissioner and sent to the insurer pursuant to this section, an amendment setting forth the change, together with copies of all documents and other material relevant to the change, shall be filed with the commissioner and sent to the insurer within two (2) business days after the person learns of the change.

C. Alternative Filing Materials.

If any offer, request, invitation, agreement or acquisition referred to in Subsection A is proposed to be made by means of a registration statement under the Securities Act of 1933 or in circumstances requiring the disclosure of similar information under the Securities Exchange Act of 1934, or under a state law requiring similar registration or disclosure, the person required to file the statement referred to in Subsection A may utilize the documents in furnishing the information called for by that statement.
D. Approval by Commissioner: Hearings.

(1) The commissioner shall approve any merger or other acquisition of control referred to in Subsection A unless, after a public hearing, the commissioner finds that:

(a) After the change of control, the domestic insurer referred to in Subsection A would not be able to satisfy the requirements for the issuance of a license to write the line or lines of insurance for which it is presently licensed;

(b) The effect of the merger or other acquisition of control would be substantially to lessen competition in insurance in this state or tend to create a monopoly. In applying the competitive standard in this subparagraph:

(i) The informational requirements of Section 3.1C(1) and the standards of Section 3.1D(2) shall apply;

(ii) The merger or other acquisition shall not be disapproved if the commissioner finds that any of the situations meeting the criteria provided by Section 3.1D(3) exist; and

(iii) The commissioner may condition the approval of the merger or other acquisition on the removal of the basis of disapproval within a specified period of time;

(c) The financial condition of any acquiring party is such as might jeopardize the financial stability of the insurer, or prejudice the interest of its policyholders;

(d) The plans or proposals which the acquiring party has to liquidate the insurer, sell its assets or consolidate or merge it with any person, or to make any other material change in its business or corporate structure or management, are unfair and unreasonable to policyholders of the insurer and not in the public interest;

(e) The competence, experience and integrity of those persons who would control the operation of the insurer are such that it would not be in the interest of policyholders of the insurer and of the public to permit the merger or other acquisition of control; or

(f) The acquisition is likely to be hazardous or prejudicial to the insurance-buying public.

(2) The public hearing referred to in Paragraph (1) shall be held within thirty (30) days after the statement required by Subsection A is filed, and at least twenty (20) days notice shall be given by the commissioner to the person filing the statement. Not less than seven (7) days notice of the public hearing shall be given by the person filing the statement to the insurer and to such other persons as may be designated by the commissioner. The commissioner shall make a determination within the sixty (60) day period preceding the effective date of the proposed transaction. At the hearing, the person filing the statement, the insurer, any person to whom notice of hearing was sent, and any other person whose interest may be affected shall have the right to present evidence, examine and cross-examine witnesses, and offer oral and written arguments and in connection therewith shall be entitled to conduct discovery proceedings in the same manner as is presently allowed in the [insert title] Court of this state. All discovery proceedings shall be concluded not later than three (3) days prior to the commencement of the public hearing.

(3) If the proposed acquisition of control will require the approval of more than one commissioner, the public hearing referred to in Paragraph (2) may be held on a consolidated basis upon request of the person filing the statement referred to in Subsection A. Such person shall file the statement referred to in Subsection A with the National Association of Insurance Commissioners (NAIC) within five (5) days of making the request for a public hearing. A commissioner may opt out of a consolidated hearing, and shall provide notice to the applicant of the opt-out within ten (10) days of the receipt of the statement referred to in Subsection A. A hearing conducted on a consolidated basis shall be public and shall be held within the United States before the commissioners of the states in which the insurers are domiciled. Such commissioners shall hear and receive evidence. A
Insurance Holding Company System Regulatory Act

commissioner may attend such hearing, in person or by telecommunication.

(4) In connection with a change of control of a domestic insurer, any determination by the commissioner that the person acquiring control of the insurer shall be required to maintain or restore the capital of the insurer to the level required by the laws and regulations of this state shall be made not later than sixty (60) days after the date of notification of the change in control submitted pursuant to Section 3A(1) of this Act.

(5) The commissioner may retain at the acquiring person’s expense any attorneys, actuaries, accountants and other experts not otherwise a part of the commissioner’s staff as may be reasonably necessary to assist the commissioner in reviewing the proposed acquisition of control.

E. Exemptions. The provisions of this section shall not apply to:

(1) [Any transaction which is subject to the provisions of Sections [insert applicable section] and [insert applicable section] of the laws of this state, dealing with the merger or consolidation of two or more insurers].

Drafting Note: Optional for use in those states where existing law adequately governs standards and procedures for the merger or consolidation of two or more insurers.

(2) Any offer, request, invitation, agreement or acquisition which the commissioner by order shall exempt as not having been made or entered into for the purpose and not having the effect of changing or influencing the control of a domestic insurer, or as otherwise not comprehended within the purposes of this section.

F. Violations. The following shall be violations of this section:

(1) The failure to file any statement, amendment or other material required to be filed pursuant to Subsection A or B; or

(2) The effectuation or any attempt to effectuate an acquisition of control of, divestiture of, or merger with, a domestic insurer unless the commissioner has given approval.

G. Jurisdiction, Consent to Service of Process. The courts of this state are hereby vested with jurisdiction over every person not resident, domiciled or authorized to do business in this state who files a statement with the commissioner under this section, and overall actions involving such person arising out of violations of this section, and each such person shall be deemed to have performed acts equivalent to and constituting an appointment by the person of the commissioner to be his true and lawful attorney upon whom may be served all lawful process in any action, suit or proceeding arising out of violations of this section. Copies of all lawful process shall be served on the commissioner and transmitted by registered or certified mail by the commissioner to the person at his last known address.

Section 3.1 Acquisitions Involving Insurers Not Otherwise Covered

A. Definitions. The following definitions shall apply for the purposes of this section only:

(1) “Acquisition” means any agreement, arrangement or activity the consummation of which results in a person acquiring directly or indirectly the control of another person, and includes but is not limited to the acquisition of voting securities, the acquisition of assets, bulk reinsurance and mergers.

(2) An “involved insurer” includes an insurer which either acquires or is acquired, is affiliated with an acquirer or acquired, or is the result of a merger.

B. Scope

(1) Except as exempted in Paragraph (2) of this subsection, this section applies to any acquisition in which there is a change in control of an insurer authorized to do business in this state.
This section shall not apply to the following:

(a) A purchase of securities solely for investment purposes so long as the securities are not used by voting or otherwise to cause or attempt to cause the substantial lessening of competition in any insurance market in this state. If a purchase of securities results in a presumption of control under Section 1C, it is not solely for investment purposes unless the commissioner of the insurer’s state of domicile accepts a disclaimer of control or affirmatively finds that control does not exist and the disclaimer action or affirmative finding is communicated by the domiciliary commissioner to the commissioner of this state;

(b) The acquisition of a person by another person when both persons are neither directly nor through affiliates primarily engaged in the business of insurance, if pre-acquisition notification is filed with the commissioner in accordance with Section 3.1C(1) thirty (30) days prior to the proposed effective date of the acquisition. However, such pre-acquisition notification is not required for exclusion from this section if the acquisition would otherwise be excluded from this section by any other subparagraph of Section 3.1B(2);

(c) The acquisition of already affiliated persons;

(d) An acquisition if, as an immediate result of the acquisition,

   (i) In no market would the combined market share of the involved insurers exceed five percent (5%) of the total market,

   (ii) There would be no increase in any market share, or

   (iii) In no market would

      (I) The combined market share of the involved insurers exceeds twelve percent (12%) of the total market, and

      (II) The market share increase by more than two percent (2%) of the total market.

For the purpose of this Paragraph (2)(d), a market means direct written insurance premium in this state for a line of business as contained in the annual statement required to be filed by insurers licensed to do business in this state;

(e) An acquisition for which a pre-acquisition notification would be required pursuant to this section due solely to the resulting effect on the ocean marine insurance line of business;

(f) An acquisition of an insurer whose domiciliary commissioner affirmatively finds that the insurer is in failing condition; there is a lack of feasible alternative to improving such condition; the public benefits of improving the insurer’s condition through the acquisition exceed the public benefits that would arise from not lessening competition; and the findings are communicated by the domiciliary commissioner to the commissioner of this state.

C. Pre-acquisition Notification; Waiting Period. An acquisition covered by Section 3.1B may be subject to an order pursuant to Section 3.1E unless the acquiring person files a pre-acquisition notification and the waiting period has expired. The acquired person may file a pre-acquisition notification. The commissioner shall give confidential treatment to information submitted under this subsection in the same manner as provided in Section 8 of this Act.

(1) The pre-acquisition notification shall be in such form and contain such information as prescribed by the National Association of Insurance Commissioners (NAIC) relating to those markets which, under Section 3.1B(2)(d), cause the acquisition not to be exempted from the provisions of this
section. The commissioner may require such additional material and information as deemed necessary to determine whether the proposed acquisition, if consummated, would violate the competitive standard of Section 3.1D. The required information may include an opinion of an economist as to the competitive impact of the acquisition in this state accompanied by a summary of the education and experience of such person indicating his or her ability to render an informed opinion.

(2) The waiting period required shall begin on the date of receipt of the commissioner of a pre-acquisition notification and shall end on the earlier of the thirtieth day after the date of receipt, or termination of the waiting period by the commissioner. Prior to the end of the waiting period, the commissioner on a one-time basis may require the submission of additional needed information relevant to the proposed acquisition, in which event the waiting period shall end on the earlier of the thirtieth day after receipt of the additional information by the commissioner or termination of the waiting period by the commissioner.

D. Competitive Standard

(1) The commissioner may enter an order under Section 3.1E(1) with respect to an acquisition if there is substantial evidence that the effect of the acquisition may be substantially to lessen competition in any line of insurance in this state or tend to create a monopoly or if the insurer fails to file adequate information in compliance with Section 3.1C.

(2) In determining whether a proposed acquisition would violate the competitive standard of Paragraph (1) of this subsection, the commissioner shall consider the following:

(a) Any acquisition covered under Section 3.1B involving two (2) or more insurers competing in the same market is *prima facie* evidence of violation of the competitive standards.

(i) If the market is highly concentrated and the involved insurers possess the following shares of the market:

<table>
<thead>
<tr>
<th>Insurer</th>
<th>Shares</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4%</td>
</tr>
<tr>
<td>B</td>
<td>4% or more</td>
</tr>
<tr>
<td>A</td>
<td>10%</td>
</tr>
<tr>
<td>B</td>
<td>2% or more</td>
</tr>
<tr>
<td>A</td>
<td>15%</td>
</tr>
<tr>
<td>B</td>
<td>1% or more</td>
</tr>
</tbody>
</table>

(ii) Or, if the market is not highly concentrated and the involved insurers possess the following shares of the market:

<table>
<thead>
<tr>
<th>Insurer</th>
<th>Shares</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>5%</td>
</tr>
<tr>
<td>B</td>
<td>5% or more</td>
</tr>
<tr>
<td>A</td>
<td>10%</td>
</tr>
<tr>
<td>B</td>
<td>4% or more</td>
</tr>
<tr>
<td>A</td>
<td>15%</td>
</tr>
<tr>
<td>B</td>
<td>3% or more</td>
</tr>
<tr>
<td>A</td>
<td>19%</td>
</tr>
<tr>
<td>B</td>
<td>1% or more</td>
</tr>
</tbody>
</table>

A highly concentrated market is one in which the share of the four (4) largest insurers is seventy-five percent (75%) or more of the market. Percentages not shown in the tables are interpolated proportionately to the percentages that are shown. If more than two (2) insurers are involved, exceeding the total of the two columns in the table is *prima facie* evidence of violation of the competitive standard in Paragraph (1) of this subsection. For the purpose of this item, the insurer with the largest share of the market shall be deemed to be Insurer A.
(b) There is a significant trend toward increased concentration when the aggregate market share of any grouping of the largest insurers in the market, from the two (2) largest to the eight (8) largest, has increased by seven percent (7%) or more of the market over a period of time extending from any base year five (5) to ten (10) years prior to the acquisition up to the time of the acquisition. Any acquisition or merger covered under Section 3.1B involving two (2) or more insurers competing in the same market is prima facie evidence of violation of the competitive standard in Paragraph (1) of this subsection if:

(i) There is a significant trend toward increased concentration in the market;

(ii) One of the insurers involved is one of the insurers in a grouping of large insurers showing the requisite increase in the market share; and

(iii) Another involved insurer’s market is two percent (2%) or more.

c) For the purposes of Section 3.1D(2):

(i) The term “insurer” includes any company or group of companies under common management, ownership or control;

(ii) The term “market” means the relevant product and geographical markets. In determining the relevant product and geographical markets, the commissioner shall give due consideration to, among other things, the definitions or guidelines, if any, promulgated by the NAIC and to information, if any, submitted by parties to the acquisition. In the absence of sufficient information to the contrary, the relevant product market is assumed to be the direct written insurance premium for a line of business, such line being that used in the annual statement required to be filed by insurers doing business in this state, and the relevant geographical market is assumed to be this state;

(iii) The burden of showing prima facie evidence of violation of the competitive standard rests upon the commissioner.

d) Even though an acquisition is not prima facie violative of the competitive standard under Paragraphs (2)(a) and (2)(b) of this subsection, the commissioner may establish the requisite anticompetitive effect based upon other substantial evidence. Even though an acquisition is prima facie violative of the competitive standard under Paragraphs (2)(a) and (2)(b) of this subsection, a party may establish the absence of the requisite anticompetitive effect based upon other substantial evidence. Relevant factors in making a determination under this subparagraph include, but are not limited to, the following: market shares, volatility of ranking of market leaders, number of competitors, concentration, trend of concentration in the industry, and ease of entry and exit into the market.

(3) An order may not be entered under Section 3.1E(1) if:

(a) The acquisition will yield substantial economies of scale or economies in resource utilization that cannot be feasibly achieved in any other way, and the public benefits which would arise from such economies exceed the public benefits which would arise from not lessening competition; or

(b) The acquisition will substantially increase the availability of insurance, and the public benefits of the increase exceed the public benefits which would arise from not lessening competition.

E. Orders and Penalties

(1) If an acquisition violates the standards of this section, the commissioner may enter an order:
Insurance Holding Company System Regulatory Act

(i) Requiring an involved insurer to cease and desist from doing business in this state with respect to the line or lines of insurance involved in the violation; or

(ii) Denying the application of an acquired or acquiring insurer for a license to do business in this state.

(b) Such an order shall not be entered unless:

(i) There is a hearing;

(ii) Notice of the hearing is issued prior to the end of the waiting period and not less than fifteen (15) days prior to the hearing; and

(iii) The hearing is concluded and the order is issued no later than sixty (60) days after the date of the filing of the pre-acquisition notification with the commissioner.

Every order shall be accompanied by a written decision of the commissioner setting forth findings of fact and conclusions of law.

(c) An order pursuant to this paragraph shall not apply if the acquisition is not consummated.

(2) Any person who violates a cease and desist order of the commissioner under Paragraph (1) and while the order is in effect may, after notice and hearing and upon order of the commissioner, be subject at the discretion of the commissioner to one or more of the following:

(a) A monetary penalty of not more than $10,000 for every day of violation; or

(b) Suspension or revocation of the person’s license.

(3) Any insurer or other person who fails to make any filing required by this section, and who also fails to demonstrate a good faith effort to comply with any filing requirement, shall be subject to a fine of not more than $50,000.

F. Inapplicable Provisions. Sections 10B, 10C, and 12 do not apply to acquisitions covered under Section 3.1B.

Section 4. Registration of Insurers

A. Registration. Every insurer which is authorized to do business in this state and which is a member of an insurance holding company system shall register with the commissioner, except a foreign insurer subject to registration requirements and standards adopted by statute or regulation in the jurisdiction of its domicile which are substantially similar to those contained in:

(1) Section 4;

(2) Section 5A(1), 5B, 5D; and

(3) Either Section 5A(2) or a provision such as the following: Each registered insurer shall keep current the information required to be disclosed in its registration statement by reporting all material changes or additions within fifteen (15) days after the end of the month in which it learns of each change or addition.

Any insurer which is subject to registration under this section shall register within fifteen (15) days after it becomes subject to registration, and annually thereafter by [insert date] of each year for the previous calendar year, unless the commissioner for good cause shown extends the time for registration, and then within the extended time. The commissioner may require any insurer authorized to do business in the state which is a member of an insurance holding company system,
and which is not subject to registration under this section, to furnish a copy of the registration statement, the summary specified in Section 4C or other information filed by the insurance company with the insurance regulatory authority of its domiciliary jurisdiction.

B. Information and Form Required. Every insurer subject to registration shall file the registration statement with the commissioner on a form and in a format prescribed by the NAIC, which shall contain the following current information:

(1) The capital structure, general financial condition, ownership and management of the insurer and any person controlling the insurer;

(2) The identity and relationship of every member of the insurance holding company system;

(3) The following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the insurer and its affiliates:

(a) Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the insurer or of the insurer by its affiliates;

(b) Purchases, sales or exchange of assets;

(c) Transactions not in the ordinary course of business;

(d) Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the insurer’s assets to liability, other than insurance contracts entered into in the ordinary course of the insurer’s business;

(e) All management agreements, service contracts and all cost-sharing arrangements;

(f) Reinsurance agreements;

(g) Dividends and other distributions to shareholders; and

(h) Consolidated tax allocation agreements;

(4) Any pledge of the insurer’s stock, including stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system;

(5) If requested by the commissioner, the insurer shall include financial statements of or within an insurance holding company system, including all affiliates. Financial statements may include but are not limited to annual audited financial statements filed with the U.S. Securities and Exchange Commission (SEC) pursuant to the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended. An insurer required to file financial statements pursuant to this paragraph may satisfy the request by providing the commissioner with the most recently filed parent corporation financial statements that have been filed with the SEC;

(6) Other matters concerning transactions between registered insurers and any affiliates as may be included from time to time in any registration forms adopted or approved by the commissioner;

Drafting Note: Neither option below is intended to modify applicable state insurance and/or corporate law requirements.

(7) Statements that the insurer’s board of directors oversees corporate governance and internal controls and that the insurer’s officers or senior management have approved, implemented, and continue to maintain and monitor corporate governance and internal control procedures; and
Insurance Holding Company System Regulatory Act

Alternative Section 4B(7):

(7) Statements that the insurer’s board of directors is responsible for and oversees corporate governance and internal controls and that the insurer’s officers or senior management have approved, implemented, and continue to maintain and monitor corporate governance and internal control procedures; and

(8) Any other information required by the commissioner by rule or regulation.

C. Summary of Changes to Registration Statement. All registration statements shall contain a summary outlining all items in the current registration statement representing changes from the prior registration statement.

D. Materiality. No information need be disclosed on the registration statement filed pursuant to Subsection B if the information is not material for the purposes of this section. Unless the commissioner by rule, regulation or order provides otherwise; sales, purchases, exchanges, loans or extensions of credit, investments, or guarantees involving one-half of one percent (.5%) or less of an insurer’s admitted assets as of the 31st day of December next preceding shall not be deemed material for purposes of this section. The definition of materiality provided in this subsection shall not apply for purposes of the Group Capital Calculation or the Liquidity Stress Test Framework.

E. Reporting of Dividends to Shareholders. Subject to Section 5B, each registered insurer shall report to the commissioner all dividends and other distributions to shareholders within fifteen (15) business days following the declaration thereof.

F. Information of Insurers. Any person within an insurance holding company system subject to registration shall be required to provide complete and accurate information to an insurer, where the information is reasonably necessary to enable the insurer to comply with the provisions of this Act.

G. Termination of Registration. The commissioner shall terminate the registration of any insurer which demonstrates that it no longer is a member of an insurance holding company system.

H. Consolidated Filing. The commissioner may require or allow two (2) or more affiliated insurers subject to registration to file a consolidated registration statement.

I. Alternative Registration. The commissioner may allow an insurer which is authorized to do business in this state and which is part of an insurance holding company system to register on behalf of any affiliated insurer which is required to register under Subsection A and to file all information and material required to be filed under this section.

J. Exemptions. The provisions of this section shall not apply to any insurer, information or transaction if and to the extent that the commissioner by rule, regulation or order shall exempt the same from the provisions of this section.

K. Disclaimer. Any person may file with the commissioner a disclaimer of affiliation with any authorized insurer or a disclaimer may be filed by the insurer or any member of an insurance holding company system. The disclaimer shall fully disclose all material relationships and bases for affiliation between the person and the insurer as well as the basis for disclaiming the affiliation. A disclaimer of affiliation shall be deemed to have been granted unless the commissioner, within thirty (30) days following receipt of a complete disclaimer, notifies the filing party the disclaimer is disallowed. In the event of disallowance, the disclaiming party may request an administrative hearing, which shall be granted. The disclaiming party shall be relieved of its duty to register under this section if approval of the disclaimer has been granted by the commissioner, or if the disclaimer is deemed to have been approved.
L. Enterprise Risk Filings.

(1) The ultimate controlling person of every insurer subject to registration shall also file an annual enterprise risk report. The report shall, to the best of the ultimate controlling person’s knowledge and belief, identify the material risks within the insurance holding company system that could pose enterprise risk to the insurer. The report shall be filed with the lead state commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook adopted by the National Association of Insurance Commissioners;

(2) Group Capital Calculation. Except as provided below, the ultimate controlling person of every insurer subject to registration shall concurrently file with the registration an annual group capital calculation as directed by the lead state commissioner. The report shall be completed in accordance with the NAIC Group Capital Calculation Instructions, which may permit the lead state commissioner to allow a controlling person that is not the ultimate controlling person to file the group capital calculation. The report shall be filed with the lead state commissioner of the insurance holding company system as determined by the commissioner in accordance with the procedures within the Financial Analysis Handbook adopted by the NAIC. Insurance holding company systems described below are exempt from filing the group capital calculation:

(a) An insurance holding company system that has only one insurer within its holding company structure, that only writes business [and is only licensed] in its domestic state, and assumes no business from any other insurer;

(b) An insurance holding company system that is required to perform a group capital calculation specified by the United States Federal Reserve Board. The lead state commissioner shall request the calculation from the Federal Reserve Board under the terms of information sharing agreements in effect. If the Federal Reserve Board cannot share the calculation with the lead state commissioner, the insurance holding company system is not exempt from the group capital calculation filing;

(c) An insurance holding company system whose non-U.S. group-wide supervisor is located within a Reciprocal Jurisdiction as described in [insert cross-reference to appropriate section of Credit for Reinsurance Law] that recognizes the U.S. state regulatory approach to group supervision and group capital;

(d) An insurance holding company system:

(i) That provides information to the lead state that meets the requirements for accreditation under the NAIC financial standards and accreditation program, either directly or indirectly through the group-wide supervisor, who has determined such information is satisfactory to allow the lead state to comply with the NAIC group supervision approach, as detailed in the NAIC Financial Analysis Handbook, and

(ii) Whose non-U.S. group-wide supervisor that is not in a Reciprocal Jurisdiction recognizes and accepts, as specified by the commissioner in regulation, the group capital calculation as the world-wide group capital assessment for U.S. insurance groups who operate in that jurisdiction.

Drafting Note: On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements are considered to be a “covered agreement” entered into pursuant to Dodd-Frank Wall Street Reform and Consumer Protection Act, 31 U.S.C. §§ 313 and 314, that addresses the U.S. state regulatory approach to group supervision and group capital, and provides that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the commissioner or the commissioner of the domiciliary state and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group. Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to the EU and UK Covered Agreements treated as Reciprocal Jurisdictions, but any other Qualified Jurisdiction can also qualify as Reciprocal Jurisdiction if they provide written confirmation that they recognize and accept the U.S. state regulatory approach to group supervision and group capital.
Insurance Holding Company System Regulatory Act

Drafting Note: The phrase “Recognizes and accepts” does not require the non-U.S. group-wide supervisor to require the U.S. insurance groups to actually file the group capital calculation with the non-U.S. supervisor but rather does not apply its own version of a group capital filing to U.S. insurance groups.

(e) Notwithstanding the provisions of Sections 4L(2)(c) and 4L(2)(d), a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.

(f) Notwithstanding the exemptions from filing the group capital calculation stated in Section 4L(2)(a) through Section 4L(2)(d), the lead state commissioner has the discretion to exempt the ultimate controlling person from filing the annual group capital calculation or to accept a limited group capital filing or report in accordance with criteria as specified by the commissioner in regulation.

(g) If the lead state commissioner determines that an insurance holding company system no longer meets one or more of the requirements for an exemption from filing the group capital calculation under this section, the insurance holding company system shall file the group capital calculation at the next annual filing date unless given an extension by the lead state commissioner based on reasonable grounds shown.

(3) Liquidity Stress Test. The ultimate controlling person of every insurer subject to registration and also scoped into the NAIC Liquidity Stress Test Framework shall file the results of a specific year’s Liquidity Stress Test. The filing shall be made to the lead state insurance commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook adopted by the National Association of Insurance Commissioners:

(a) The NAIC Liquidity Stress Test Framework includes Scope Criteria applicable to a specific data year. These Scope Criteria are reviewed at least annually by the Financial Stability Task Force or its successor. Any change to the NAIC Liquidity Stress Test Framework or to the data year for which the Scope Criteria are to be measured shall be effective on January 1 of the year following the calendar year when such changes are adopted. Insurers meeting at least one threshold of the Scope Criteria are considered scoped into the NAIC Liquidity Stress Test Framework for the specified data year unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should not be scoped into the Framework for that data year. Similarly, insurers that do not trigger at least one threshold of the Scope Criteria are considered scoped out of the NAIC Liquidity Stress Test Framework for that data year.

(i) Regulators wish to avoid having insurers scoped in and out of the NAIC Liquidity Stress Test Framework on a frequent basis. The lead state insurance commissioner, in consultation with the Financial Stability Task Force or its successor, will assess this concern as part of the determination for an insurer.

(b) The performance of, and filing of the results from, a specific year’s Liquidity Stress Test shall comply with the NAIC Liquidity Stress Test Framework’s instructions and reporting templates for that year and any lead state insurance commissioner determinations, in conjunction with the Financial Stability Task Force or its successor, provided within the Framework.

Drafting Note: The delay included in the change to the NAIC Liquidity Stress Test Framework or to the data year for which the Scope Criteria are to be measured being effective on January 1 of the year following the calendar year when such changes are adopted is present to: 1) allow sufficient time for states needing to adopt by rule the NAIC Liquidity Stress Test Framework for a given data year and 2) to ensure scoped in insurers have adequate time to comply with the requirements for a given data year.
M. Violations. The failure to file a registration statement or any summary of the registration statement or enterprise risk filing required by this section within the time specified for filing shall be a violation of this section.

Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System

A. Transactions Within an Insurance Holding Company System

(1) Transactions within an insurance holding company system to which an insurer subject to registration is a party shall be subject to the following standards:

(a) The terms shall be fair and reasonable;

(b) Agreements for cost sharing services and management shall include such provisions as required by rule and regulation issued by the commissioner;

(c) Charges or fees for services performed shall be reasonable;

(d) Expenses incurred and payment received shall be allocated to the insurer in conformity with customary insurance accounting practices consistently applied;

(e) The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties;

(f) The insurer’s surplus as regards policyholders following any dividends or distributions to shareholder affiliates shall be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs;

(g) The insurer shall require the affiliated person(s) to obtain and maintain a bond for the protection of the insurer for the duration of the contract or agreement as required by the commissioner at any time. The bond amount should be no less than the amount specified by the commissioner;

Drafting Note: The intent of the bond is to ensure the affiliated services provided under the contract are fulfilled, which may be referred to as a “performance bond”.

(h) All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation from all other persons’ records and data. This includes all records and data that are otherwise the property of the insurer, in whatever form maintained, including, but not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate. At the request of the insurer, the affiliate shall make all records and data related to the insurer available for inspection, and shall provide the insurer with any login instructions, passwords, software or other information necessary to obtain access to the records and data. The affiliate shall provide a waiver of any landlord lien or other encumbrance to giving the insurer access to all records and data in the event of the affiliate’s default under a lease or other agreement; and,

(i) Premiums or other funds belonging to the insurer that are collected by or held by an affiliate are the exclusive property of the insurer and are subject to the control of the insurer. An affiliate shall not commingle any premiums or other funds belonging to the insurer with any other accounts.

(2) The following transactions involving a domestic insurer and any person in its insurance holding company system, including amendments or modifications of affiliate agreements previously filed...
pursuant to this section, which are subject to any materiality standards contained in subparagraphs (a) through (g), may not be entered into unless the insurer has notified the commissioner in writing of its intention to enter into the transaction at least thirty (30) days prior thereto, or such shorter period as the commissioner may permit, and the commissioner has not disapproved it within that period. The notice for amendments or modifications shall include the reasons for the change and the financial impact on the domestic insurer. Informal notice shall be reported, within thirty (30) days after a termination of a previously filed agreement, to the commissioner for determination of the type of filing required, if any.

(a) Sales, purchases, exchanges, loans, extensions of credit, or investments, provided the transactions are equal to or exceed:

(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer’s admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer’s admitted assets as of the 31st day of December next preceding;

(b) Loans or extensions of credit to any person who is not an affiliate, where the insurer makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the insurer making the loans or extensions of credit provided the transactions are equal to or exceed:

(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer’s admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer’s admitted assets as of the 31st day of December next preceding;

(c) Reinsurance agreements or modifications thereto, including:

(i) All reinsurance pooling agreements;

(ii) Agreements in which the reinsurance premium or a change in the insurer’s liabilities, or the projected reinsurance premium or a change in the insurer’s liabilities in any of the next three years, equals or exceeds five percent (5%) of the insurer’s surplus as regards policyholders, as of the 31st day of December next preceding, including those agreements which may require as consideration the transfer of assets from an insurer to a non-affiliate, if an agreement or understanding exists between the insurer and non-affiliate that any portion of the assets will be transferred to one or more affiliates of the insurer;

(d) All management agreements, service contracts, tax allocation agreements, guarantees and all cost-sharing arrangements;

(e) Guarantees when made by a domestic insurer; provided, however, that a guarantee which is quantifiable as to amount is not subject to the notice requirements of this paragraph unless it exceeds the lesser of one-half of one percent (.5%) of the insurer’s admitted assets or ten percent (10%) of surplus as regards policyholders as of the 31st day of December next preceding. Further, all guarantees which are not quantifiable as to amount are subject to the notice requirements of this paragraph;

(f) Direct or indirect acquisitions or investments in a person that controls the insurer or in an affiliate of the insurer in an amount which, together with its present holdings in such
investments, exceeds two and one-half percent (2.5%) of the insurer’s surplus to policyholders. Direct or indirect acquisitions or investments in subsidiaries acquired pursuant to Section 2 of this Act (or authorized under any other section of this Chapter), or in non-subsidiary insurance affiliates that are subject to the provisions of this Act, are exempt from this requirement; and

Drafting Note: When reviewing the notification required to be submitted pursuant to Section 5A(2)(f), the commissioner should examine prior and existing investments of this type to establish that these investments separately or together with other transactions, are not being made to contravene the dividend limitations set forth in Section 5B. However, an investment in a controlling person or in an affiliate shall not be considered a dividend or distribution to shareholders when applying Section 5B of this Act.

(g) Any material transactions, specified by regulation, which the commissioner determines may adversely affect the interests of the insurer’s policyholders.

Nothing in this paragraph shall be deemed to authorize or permit any transactions which, in the case of an insurer not a member of the same insurance holding company system, would be otherwise contrary to law.

(3) A domestic insurer may not enter into transactions which are part of a plan or series of like transactions with persons within the insurance holding company system if the purpose of those separate transactions is to avoid the statutory threshold amount and thus avoid the review that would occur otherwise. If the commissioner determines that separate transactions were entered into over any twelve-month period for that purpose, the commissioner may exercise his or her authority under Section 11.

(4) The commissioner, in reviewing transactions pursuant to Subsection A(2), shall consider whether the transactions comply with the standards set forth in Subsection A(1) and whether they may adversely affect the interests of policyholders.

(5) The commissioner shall be notified within thirty (30) days of any investment of the domestic insurer in any one corporation if the total investment in the corporation by the insurance holding company system exceeds ten percent (10%) of the corporation’s voting securities.

(6) Supervision, seizure, conservatorship, or receivership proceedings.

(a) Any affiliate that is party to an agreement or contract pursuant to Subsection A(2)(d), shall be subject to the jurisdiction of any supervision, seizure, conservatorship, or receivership proceedings against the insurer, and to the authority of any supervisor, conservator, rehabilitator, or liquidator for the insurer appointed pursuant to [supervision and receivership acts] for the purpose of interpreting, enforcing, and overseeing the affiliate’s agreements, relationship, and dealings with the insurer, if the services provided by the affiliate to the insurer:

(i) are an integral part of the insurer’s operations, including but not limited to management, administrative, accounting, data processing, marketing, underwriting, claims handling, investment, or any other similar functions; or

(ii) are essential to the insurer’s ability to fulfil its obligations under insurance policies.

(b) Any agreement or contract pursuant to Subsection A(2)(d) for the provision of services described in (i) and (ii) above must specify that the affiliate consents to the jurisdiction as set forth in this Section 5A(6).

B. Dividends and other Distributions

No domestic insurer shall pay any extraordinary dividend or make any other extraordinary distribution to its shareholders until thirty (30) days after the commissioner has received notice of the declaration thereof and has not within that period disapproved the payment, or until the commissioner has approved the payment within the thirty-day period.
For purposes of this section, an extraordinary dividend or distribution includes any dividend or distribution of cash or other property, whose fair market value together with that of other dividends or distributions made within the preceding twelve (12) months exceeds the lesser of:

1. Ten percent (10%) of the insurer’s surplus as regards policyholders as of the 31st day of December next preceding; or

2. The net gain from operations of the insurer, if the insurer is a life insurer, or the net income, if the insurer is not a life insurer, not including realized capital gains, for the twelve-month period ending the 31st day of December next preceding, but shall not include pro rata distributions of any class of the insurer’s own securities.

In determining whether a dividend or distribution is extraordinary, an insurer other than a life insurer may carry forward net income from the previous two (2) calendar years that has not already been paid out as dividends. This carry-forward shall be computed by taking the net income from the second and third preceding calendar years, not including realized capital gains, less dividends paid in the second and immediate preceding calendar years.

Notwithstanding any other provision of law, an insurer may declare an extraordinary dividend or distribution which is conditional upon the commissioner’s approval, and the declaration shall confer no rights upon shareholders until (1) the commissioner has approved the payment of the dividend or distribution or (2) the commissioner has not disapproved payment within the thirty-day period referred to above.

Drafting Note: The following Subsection C entitled “Management of Domestic Insurers Subject To Registration” is optional and is to be adopted according to the needs of the individual jurisdiction.

C. Management of Domestic Insurers Subject To Registration.

1. Notwithstanding the control of a domestic insurer by any person, the officers and directors of the insurer shall not thereby be relieved of any obligation or liability to which they would otherwise be subject by law, and the insurer shall be managed so as to assure its separate operating identity consistent with this Act.

2. Nothing in this section shall preclude a domestic insurer from having or sharing a common management or cooperative or joint use of personnel, property or services with one or more other persons under arrangements meeting the standards of Section 5A(1).

3. Not less than one-third of the directors of a domestic insurer, and not less than one-third of the members of each committee of the board of directors of any domestic insurer shall be persons who are not officers or employees of the insurer or of any entity controlling, controlled by, or under common control with the insurer and who are not beneficial owners of a controlling interest in the voting stock of the insurer or entity. At least one such person must be included in any quorum for the transaction of business at any meeting of the board of directors or any committee thereof.

4. The board of directors of a domestic insurer shall establish one or more committees comprised solely of directors who are not officers or employees of the insurer or of any entity controlling, controlled by, or under common control with the insurer and who are not beneficial owners of a controlling interest in the voting stock of the insurer or any such entity. The committee or committees shall have responsibility for nominating candidates for director for election by shareholders or policyholders, evaluating the performance of officers deemed to be principal officers of the insurer and recommending to the board of directors the selection and compensation of the principal officers.

5. The provisions of Paragraphs (3) and (4) shall not apply to a domestic insurer if the person controlling the insurer, such as an insurer, a mutual insurance holding company, or a publicly held corporation, has a board of directors and committees thereof that meet the requirements of Paragraphs (3) and (4) with respect to such controlling entity.
An insurer may make application to the commissioner for a waiver from the requirements of this subsection, if the insurer’s annual direct written and assumed premium, excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, is less than $300,000,000. An insurer may also make application to the commissioner for a waiver from the requirements of this subsection based upon unique circumstances. The commissioner may consider various factors including, but not limited to, the type of business entity, volume of business written, availability of qualified board members, or the ownership or organizational structure of the entity.

D. Adequacy of Surplus. For purposes of this Act, in determining whether an insurer’s surplus as regards policyholders is reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs, the following factors, among others, shall be considered:

1. The size of the insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force and other appropriate criteria;

2. The extent to which the insurer’s business is diversified among several lines of insurance;

3. The number and size of risks insured in each line of business;

4. The extent of the geographical dispersion of the insurer’s insured risks;

5. The nature and extent of the insurer’s reinsurance program;

6. The quality, diversification and liquidity of the insurer’s investment portfolio;

7. The recent past and projected future trend in the size of the insurer’s investment portfolio;

8. The surplus as regards policyholders maintained by other comparable insurers;

9. The adequacy of the insurer’s reserves; and

10. The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a disallowed asset for purposes of determining the adequacy of surplus as regards policyholders whenever in the judgment of the commissioner the investment so warrants.

Section 6. Examination

A. Power of Commissioner. Subject to the limitation contained in this section and in addition to the powers which the commissioner has under Sections [insert applicable sections] relating to the examination of insurers, the commissioner shall have the power to examine any insurer registered under Section 4 and its affiliates to ascertain the financial condition of the insurer, including the enterprise risk to the insurer by the ultimate controlling party, or by any entity or combination of entities within the insurance holding company system, or by the insurance holding company system on a consolidated basis.

B. Access to Books and Records.

1. The commissioner may order any insurer registered under Section 4 to produce such records, books, or other information papers in the possession of the insurer or its affiliates as are reasonably necessary to determine compliance with this Chapter.

2. To determine compliance with this Chapter, the commissioner may order any insurer registered under Section 4 to produce information not in the possession of the insurer if the insurer can obtain access to such information pursuant to contractual relationships, statutory obligations, or other method. In the event the insurer cannot obtain the information requested by the commissioner, the insurer shall provide the commissioner a detailed explanation of the reason that the insurer cannot obtain the information and the identity of the holder of information. Whenever it appears to the commissioner that the detailed explanation is without merit, the commissioner...
may require, after notice and hearing, the insurer to pay a penalty of $[insert amount] for each
day’s delay, or may suspend or revoke the insurer’s license.

C. Use of Consultants. The commissioner may retain at the registered insurer’s expense such attorneys,
actuaries, accountants and other experts not otherwise a part of the commissioner’s staff as shall be
reasonably necessary to assist in the conduct of the examination under Subsection A above. Any persons so
retained shall be under the direction and control of the commissioner and shall act in a purely advisory
capacity.

D. Expenses. Each registered insurer producing for examination records, books and papers pursuant to
Subsection A above shall be liable for and shall pay the expense of examination in accordance with Section
[insert applicable section].

E. Compelling Production. In the event the insurer fails to comply with an order, the commissioner shall have
the power to examine the affiliates to obtain the information. The commissioner shall also have the power
to issue subpoenas, to administer oaths, and to examine under oath any person for purposes of determining
compliance with this section. Upon the failure or refusal of any person to obey a subpoena, the
commissioner may petition a court of competent jurisdiction, and upon proper showing, the court may enter
an order compelling the witness to appear and testify or produce documentary evidence. Failure to obey the
court order shall be punishable as contempt of court. Every person shall be obliged to attend as a witness at
the place specified in the subpoena, when subpoenaed, anywhere within the state. He or she shall be
entitled to the same fees and mileage, if claimed, as a witness in [insert appropriate statutory reference to
trial-level court in that state], which fees, mileage, and actual expense, if any, necessarily incurred in
securing the attendance of witnesses, and their testimony, shall be itemized and charged against, and be
paid by, the company being examined.

Section 7. Supervisory Colleges

A. Power of Commissioner. With respect to any insurer registered under Section 4, and in accordance with
Subsection C below, the commissioner shall also have the power to participate in a supervisory college for
any domestic insurer that is part of an insurance holding company system with international operations in
order to determine compliance by the insurer with this Chapter. The powers of the commissioner with
respect to supervisory colleges include, but are not limited to, the following:

(1) Initiating the establishment of a supervisory college;

(2) Clarifying the membership and participation of other supervisors in the supervisory college;

(3) Clarifying the functions of the supervisory college and the role of other regulators, including the
establishment of a group-wide supervisor;

(4) Coordinating the ongoing activities of the supervisory college, including planning meetings,
supervisory activities, and processes for information sharing; and

(5) Establishing a crisis management plan.

B. Expenses. Each registered insurer subject to this section shall be liable for and shall pay the reasonable
expenses of the commissioner’s participation in a supervisory college in accordance with Subsection C
below, including reasonable travel expenses. For purposes of this section, a supervisory college may be
convened as either a temporary or permanent forum for communication and cooperation between the
regulators charged with the supervision of the insurer or its affiliates, and the commissioner may establish a
regular assessment to the insurer for the payment of these expenses.

C. Supervisory College. In order to assess the business strategy, financial position, legal and regulatory
position, risk exposure, risk management and governance processes, and as part of the examination of
individual insurers in accordance with Section 6, the commissioner may participate in a supervisory college
with other regulators charged with supervision of the insurer or its affiliates, including other state, federal
and international regulatory agencies. The commissioner may enter into agreements in accordance with
Section 8C providing the basis for cooperation between the commissioner and the other regulatory agencies, and the activities of the supervisory college. Nothing in this section shall delegate to the supervisory college the authority of the commissioner to regulate or supervise the insurer or its affiliates within its jurisdiction.

Section 7.1. Group-wide Supervision of Internationally Active Insurance Groups

A. The commissioner is authorized to act as the group-wide supervisor for any internationally active insurance group in accordance with the provisions of this section. However, the commissioner may otherwise acknowledge another regulatory official as the group-wide supervisor where the internationally active insurance group:

(1) Does not have substantial insurance operations in the United States;

(2) Has substantial insurance operations in the United States, but not in this state; or

(3) Has substantial insurance operations in the United States and this state, but the commissioner has determined pursuant to the factors set forth in Subsections B and F that the other regulatory official is the appropriate group-wide supervisor.

An insurance holding company system that does not otherwise qualify as an internationally active insurance group may request that the commissioner make a determination or acknowledgment as to a group-wide supervisor pursuant to this section.

B. In cooperation with other state, federal and international regulatory agencies, the commissioner will identify a single group-wide supervisor for an internationally active insurance group. The commissioner may determine that the commissioner is the appropriate group-wide supervisor for an internationally active insurance group that conducts substantial insurance operations concentrated in this state. However, the commissioner may acknowledge that a regulatory official from another jurisdiction is the appropriate group-wide supervisor for the internationally active insurance group. The commissioner shall consider the following factors when making a determination or acknowledgment under this subsection:

(1) The place of domicile of the insurers within the internationally active insurance group that hold the largest share of the group’s written premiums, assets or liabilities;

(2) The place of domicile of the top-tiered insurer(s) in the insurance holding company system of the internationally active insurance group;

(3) The location of the executive offices or largest operational offices of the internationally active insurance group;

(4) Whether another regulatory official is acting or is seeking to act as the group-wide supervisor under a regulatory system that the commissioner determines to be:

   (a) Substantially similar to the system of regulation provided under the laws of this state, or otherwise sufficient in terms of providing for group-wide supervision, enterprise risk analysis, and cooperation with other regulatory officials; and

(5) Whether another regulatory official acting or seeking to act as the group-wide supervisor provides the commissioner with reasonably reciprocal recognition and cooperation.

However, a commissioner identified under this section as the group-wide supervisor may determine that it is appropriate to acknowledge another supervisor to serve as the group-wide supervisor. The acknowledgment of the group-wide supervisor shall be made after consideration of the factors listed in Paragraphs (1) through (5) above, and shall be made in cooperation with and subject to the acknowledgment of other regulatory officials involved with supervision of members of the internationally active insurance group, and in consultation with the internationally active insurance group.
C. Notwithstanding any other provision of law, when another regulatory official is acting as the group-wide supervisor of an internationally active insurance group, the commissioner shall acknowledge that regulatory official as the group-wide supervisor. However, in the event of a material change in the internationally active insurance group that results in:

(1) The internationally active insurance group’s insurers domiciled in this state holding the largest share of the group’s premiums, assets or liabilities; or

(2) This state being the place of domicile of the top-tiered insurer(s) in the insurance holding company system of the internationally active insurance group, the commissioner shall make a determination or acknowledgment as to the appropriate group-wide supervisor for such an internationally active insurance group pursuant to Subsection B.

D. Pursuant to Section 6, the commissioner is authorized to collect from any insurer registered pursuant to Section 4 all information necessary to determine whether the commissioner may act as the group-wide supervisor of an internationally active insurance group or if the commissioner may acknowledge another regulatory official to act as the group-wide supervisor. Prior to issuing a determination that an internationally active insurance group is subject to group-wide supervision by the commissioner, the commissioner shall notify the insurer registered pursuant to Section 4 and the ultimate controlling person within the internationally active insurance group. The internationally active insurance group shall have not less than thirty (30) days to provide the commissioner with additional information pertinent to the pending determination. The commissioner shall publish in the [insert name of state administrative record] and on its Internet website the identity of internationally active insurance groups that the commissioner has determined are subject to group-wide supervision by the commissioner.

E. If the commissioner is the group-wide supervisor for an internationally active insurance group, the commissioner is authorized to engage in any of the following group-wide supervision activities:

(1) Assess the enterprise risks within the internationally active insurance group to ensure that:

   (a) The material financial condition and liquidity risks to the members of the internationally active insurance group that are engaged in the business of insurance are identified by management, and

   (b) Reasonable and effective mitigation measures are in place;

(2) Request, from any member of an internationally active insurance group subject to the commissioner’s supervision, information necessary and appropriate to assess enterprise risk, including, but not limited to, information about the members of the internationally active insurance group regarding:

   (a) Governance, risk assessment and management,

   (b) Capital adequacy, and

   (c) Material intercompany transactions;

(3) Coordinate and, through the authority of the regulatory officials of the jurisdictions where members of the internationally active insurance group are domiciled, compel development and implementation of reasonable measures designed to ensure that the internationally active insurance group is able to timely recognize and mitigate enterprise risks to members of such internationally active insurance group that are engaged in the business of insurance;

(4) Communicate with other state, federal and international regulatory agencies for members within the internationally active insurance group and share relevant information subject to the confidentiality provisions of Section 8, through supervisory colleges as set forth in Section 7 or otherwise;
(5) Enter into agreements with or obtain documentation from any insurer registered under Section 4, any member of the internationally active insurance group, and any other state, federal and international regulatory agencies for members of the internationally active insurance group, providing the basis for or otherwise clarifying the commissioner's role as group-wide supervisor, including provisions for resolving disputes with other regulatory officials. Such agreements or documentation shall not serve as evidence in any proceeding that any insurer or person within an insurance holding company system not domiciled or incorporated in this state is doing business in this state or is otherwise subject to jurisdiction in this state; and

(6) Other group-wide supervision activities, consistent with the authorities and purposes enumerated above, as considered necessary by the commissioner.

F. If the commissioner acknowledges that another regulatory official from a jurisdiction that is not accredited by the NAIC is the group-wide supervisor, the commissioner is authorized to reasonably cooperate, through supervisory colleges or otherwise, with group-wide supervision undertaken by the group-wide supervisor, provided that:

(1) The commissioner's cooperation is in compliance with the laws of this state; and

(2) The regulatory official acknowledged as the group-wide supervisor also recognizes and cooperates with the commissioner's activities as a group-wide supervisor for other internationally active insurance groups where applicable. Where such recognition and cooperation is not reasonably reciprocal, the commissioner is authorized to refuse recognition and cooperation.

G. The commissioner is authorized to enter into agreements with or obtain documentation from any insurer registered under Section 4, any affiliate of the insurer, and other state, federal and international regulatory agencies for members of the internationally active insurance group, that provide the basis for or otherwise clarify a regulatory official's role as group-wide supervisor.

H. The commissioner may promulgate regulations necessary for the administration of this section.

I. A registered insurer subject to this section shall be liable for and shall pay the reasonable expenses of the commissioner's participation in the administration of this section, including the engagement of attorneys, actuaries and any other professionals and all reasonable travel expenses.

Section 8. Confidential Treatment

A. Documents, materials or other information in the possession or control of the Department of Insurance that are obtained by or disclosed to the commissioner or any other person in the course of an examination or investigation made pursuant to Section 6 and all information reported or provided to the Department of Insurance pursuant to Section 3B(12) and (13), Section 4, Section 5 and Section 7.1 are recognized by this state as being proprietary and to contain trade secrets, and shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner’s official duties. The commissioner shall not otherwise make the documents, materials or other information public without the prior written consent of the insurer to which it pertains unless the commissioner, after giving the insurer and its affiliates who would be affected thereby notice and opportunity to be heard, determines that the interest of policyholders, shareholders or the public will be served by the publication thereof, in which event the commissioner may publish all or any part in such manner as may be deemed appropriate.

(1) For purposes of the information reported and provided to the Department of Insurance pursuant to Section 4L(2), the commissioner shall maintain the confidentiality of the group capital calculation and group capital ratio produced within the calculation and any group capital information received from an insurance holding company supervised by the Federal Reserve Board or any U.S. group wide supervisor.

(2) For purposes of the information reported and provided to the [Department of Insurance] pursuant
to Section 4L(3), the commissioner shall maintain the confidentiality of the liquidity stress test results and supporting disclosures and any liquidity stress test information received from an insurance holding company supervised by the Federal Reserve Board and non-U.S. group wide supervisors.

Drafting note: This group capital calculation and group capital ratio includes confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. Similarly, the liquidity stress test may include confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. The confidential treatment afforded to group capital calculation filings includes any Federal Reserve Board group capital filings and information.

B. Neither the commissioner nor any person who received documents, materials or other information while acting under the authority of the commissioner or with whom such documents, materials or other information are shared pursuant to this Act shall be permitted or required to testify in any private civil action concerning any confidential documents, materials, or information subject to Subsection A.

C. In order to assist in the performance of the commissioner’s duties, the commissioner:

(1) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Subsection A, including proprietary and trade secret documents and materials with other state, federal and international regulatory agencies, with the NAIC, and with any third-party consultants designated by the commissioner, with state, federal, and international law enforcement authorities, including members of any supervisory college described in Section 7, provided that the recipient agrees in writing to maintain the confidentiality and privileged status of the document, material or other information, and has verified in writing the legal authority to maintain confidentiality.

(2) Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) with commissioners of states having statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.

(3) May receive documents, materials or information, including otherwise confidential and privileged documents, materials or information, including proprietary and trade-secret information from the NAIC and its affiliates and subsidiaries and from regulatory and law enforcement officials of other foreign or domestic jurisdictions, and shall maintain as confidential or privileged any document, material or information received with notice or the understanding that it is confidential or privileged under the laws of the jurisdiction that is the source of the document, material or information; and

(4) Shall enter into written agreements with the NAIC and any third-party consultant designated by the commissioner governing sharing and use of information provided pursuant to this Act consistent with this subsection that shall:

   (a) Specify procedures and protocols regarding the confidentiality and security of information shared with the NAIC or a third-party consultant designated by the commissioner pursuant to this Act, including procedures and protocols for sharing by the NAIC with other state, federal or international regulators. The agreement shall provide that the recipient agrees in writing to maintain the confidentiality and privileged status of the documents, materials or other information and has verified in writing the legal authority to maintain such confidentiality;

   (b) Specify that ownership of information shared with the NAIC or a third party consultant pursuant to this Act remains with the commissioner and the NAIC’s or a third-party consultant’s, as designated by the commissioner, use of the information is subject to the direction of the commissioner;

   (c) Excluding documents, material or information reported pursuant to Section 4L(3), prohibit the NAIC or third-party consultant designated by the commissioner from storing the information shared pursuant to this Act in a permanent database after the underlying

MO-440-26

© 2021 National Association of Insurance Commissioners 26
(d) Require prompt notice to be given to an insurer whose confidential information in the possession of the NAIC or a third-party consultant designated by the commissioner pursuant to this Act is subject to a request or subpoena to the NAIC or a third-party consultant designated by the commissioner for disclosure or production; and

(e) Require the NAIC or a third-party consultant designated by the commissioner to consent to intervention by an insurer in any judicial or administrative action in which the NAIC or a third-party consultant designated by the commissioner may be required to disclose confidential information about the insurer shared with the NAIC or a third-party consultant designated by the commissioner pursuant to this Act.

(f) For documents, material or information reporting pursuant to Section 4L(3), in the case of an agreement involving a third-party consultant, provide for notification of the identity of the consultant to the applicable insurers.

D. The sharing of information by the commissioner pursuant to this Act shall not constitute a delegation of regulatory authority or rulemaking, and the commissioner is solely responsible for the administration, execution and enforcement of the provisions of this Act.

E. No waiver of any applicable privilege or claim of confidentiality in the documents, materials or information shall occur as a result of disclosure to the commissioner under this section or as a result of sharing as authorized in Subsection C.

F. Documents, materials or other information in the possession or control of the NAIC or a third-party consultant designated by the commissioner pursuant to this Act shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action.

G. The group capital calculation and resulting group capital ratio required under Section 4L(2) and the liquidity stress test along with its results and supporting disclosures required under Section 4L(3) are regulatory tools for assessing group risks and capital adequacy and group liquidity risks, respectively, and are not intended as a means to rank insurers or insurance holding company systems generally. Therefore, except as otherwise may be required under the provisions of this Act, the making, publishing, disseminating, circulating or placing before the public, or causing directly or indirectly to be made, published, disseminated, circulated or placed before the public in a newspaper, magazine or other publication, or in the form of a notice, circular, pamphlet, letter or poster, or over any radio or television station or any electronic means of communication available to the public, or in any other way as an advertisement, announcement or statement containing a representation or statement with regard to the group capital calculation, group capital ratio, the liquidity stress test results, or supporting disclosures for the liquidity stress test of any insurer or any insurer group, or of any component derived in the calculation by any insurer, broker, or other person engaged in any manner in the insurance business would be misleading and is therefore prohibited; provided, however, that if any materially false statement with respect to the group capital calculation, resulting group capital ratio, an inappropriate comparison of any amount to an insurer’s or insurance group’s group capital calculation or resulting group capital ratio, liquidity stress test result, supporting disclosures for the liquidity stress test, or an inappropriate comparison of any amount to an insurer’s or insurance group’s liquidity stress test result or supporting disclosures is published in any written publication and the insurer is able to demonstrate to the commissioner with substantial proof the falsity of such statement or the inappropriateness, as the case may be, then the insurer may publish announcements in a written publication if the sole purpose of the announcement is to rebut the materially false statement.

Drafting Note: In Section 8C(4) above, the exclusions in sub-items (ii), (iii) and (vi) are the result of the Liquidity Stress Test primary purpose, which is to be used as a tool for assessing macroprudential risks by the NAIC Financial Stability Task Force assisted by NAIC staff, including trend analysis over time. Provisions against the NAIC owning the information, databasing the results and disclosures, and obtaining written consent from the insurer when a consultant is involved were deemed inappropriate.

Section 9. Rules and Regulations

© 2021 National Association of Insurance Commissioners
The commissioner may, upon notice and opportunity for all interested persons to be heard, issue such rules, regulations and orders as shall be necessary to carry out the provisions of this Act.

Section 10. Injunctions, Prohibitions Against Voting Securities, Sequestration of Voting Securities

A. Injunctions. Whenever it appears to the commissioner that any insurer or any director, officer, employee or agent thereof has committed or is about to commit a violation of this Act or of any rule, regulation or order issued by the commissioner hereunder, the commissioner may apply to the [insert title] Court for the county in which the principal officer of the insurer is located or if the insurer has no office in this state then to the [insert title] Court for [insert county] County for an order enjoining the insurer or director, officer, employee or agent thereof from violating or continuing to violate this Act or any rule, regulation or order, and for such other equitable relief as the nature of the case and the interest of the insurer’s policyholders, creditors and shareholders or the public may require.

B. Voting of Securities; When Prohibited. No security which is the subject of any agreement or arrangement regarding acquisition, or which is acquired or to be acquired, in contravention of the provisions of this Act or of any rule, regulation or order issued by the commissioner hereunder may be voted at any shareholder’s meeting, or may be counted for quorum purposes, and any action of shareholders requiring the affirmative vote of a percentage of shares may be taken as though the securities were not issued and outstanding; but no action taken at any such meeting shall be invalidated by the voting of the securities, unless the action would materially affect control of the insurer or unless the courts of this state have so ordered. If an insurer or the commissioner has reason to believe that any security of the insurer has been or is about to be acquired in contravention of the provisions of this Act or of any rule, regulation or order issued by the commissioner hereunder; the insurer or the commissioner may apply to the [insert title] Court for the county in which the insurer has its principle place of business to enjoin any offer, request, invitation, agreement or acquisition made in contravention of Section 3 or any rule, regulation or order issued by the commissioner thereunder to enjoin the voting of any security so acquired, to void any vote of the security already cast at any meeting of shareholders and for such other equitable relief as the nature of the case and the interest of the insurer’s policyholders, creditor and shareholders or the public may require.

C. Sequestration of Voting Securities. In any case where a person has acquired or is proposing to acquire any voting securities in violation of this Act or any rule, regulation or order issued by the commissioner hereunder, the [insert title] Court for [insert county] County or the [insert title] Court for the county in which the insurer has its principal place of business may, on such notice as the court deems appropriate, upon the application of the insurer or the commissioner, seize or sequester any voting securities of the insurer owned directly or indirectly by the person, and issue such order as may be appropriate to effectuate the provisions of this Act.

Notwithstanding any other provisions of law, for the purposes of this Act the situs of the ownership of the securities of domestic insurers shall be deemed to be in this state.

Section 11. Sanctions

A. Any insurer failing, without just cause, to file any registration statement as required in this Act shall be required, after notice and hearing, to pay a penalty of $[insert amount] for each day’s delay, to be recovered by the commissioner of Insurance and the penalty so recovered shall be paid into the General Revenue Fund of this state. The maximum penalty under this section is $[insert amount]. The commissioner may reduce the penalty if the insurer demonstrates to the commissioner that the imposition of the penalty would constitute a financial hardship to the insurer.

B. Every director or officer of an insurance holding company system who knowingly violates, participates in, or assents to, or who knowingly shall permit any of the officers or agents of the insurer to engage in transactions or make investments which have not been properly reported or submitted pursuant to Section 4A, 5A(2), or 5B, or which violate this Act, shall pay, in their individual capacity, a civil forfeiture of not more than $[insert amount] per violation, after notice and hearing before the commissioner. In determining the amount of the civil forfeiture, the commissioner shall take into account the appropriateness of the forfeiture with respect to the gravity of the violation, the history of previous violations, and such other
matters as justice may require.

C. Whenever it appears to the commissioner that any insurer subject to this Act or any director, officer, employee or agent thereof has engaged in any transaction or entered into a contract which is subject to Section 5 of this Act and which would not have been approved had the approval been requested, the commissioner may order the insurer to cease and desist immediately any further activity under that transaction or contract. After notice and hearing the commissioner may also order the insurer to void any contracts and restore the status quo if the action is in the best interest of the policyholders, creditors or the public.

D. Whenever it appears to the commissioner that any insurer subject to this Act or any director, officer, employee or agent thereof has engaged in any transaction or entered into a contract or agreement which is subject to Section 5 of this Act and which have not been properly reported or submitted pursuant to Section 4A, 5A(2), or 5B, or which violate Section 5(A) of this Act, the commissioner has the power to order the insurer to require the affiliated person(s) to the transaction to obtain and maintain a bond for the protection of the insurer for the duration of the contract or agreement, as required by the commissioner at any time. The bond amount should be no less than the amount specified by the commissioner.

Drafting Note: The intent of the bond is to ensure the affiliated services provided under the contract are fulfilled, which may be referred to as a "performance bond".

E. Whenever it appears to the commissioner that any insurer or any director, officer, employee or agent thereof has committed a willful violation of this Act, the commissioner may cause criminal proceedings to be instituted by the [insert title] Court for the county in which the principal office of the insurer is located or if the insurer has no office in this state, then by the [insert county] Court for [insert title] County against the insurer or the responsible director, officer, employee or agent thereof. Any insurer which willfully violates this Act may be fined not more than $[insert amount]. Any individual who willfully violates this Act may be fined in his or her individual capacity not more than $[insert amount] or be imprisoned for not more than one to three (3) years or both.

F. Any officer, director or employee of an insurance holding company system who willfully and knowingly subscribes to or makes or causes to be made any false statements or false reports or false filings with the intent to deceive the commissioner in the performance of his or her duties under this Act, upon conviction shall be imprisoned for not more than [insert amount] years or fined $[insert amount] or both. Any fines imposed shall be paid by the officer, director or employee in his or her individual capacity.

G. Whenever it appears to the commissioner that any person has committed a violation of Section 3 of this Act and which prevents the full understanding of the enterprise risk to the insurer by affiliates or by the insurance holding company system, the violation may serve as an independent basis for disapproving dividends or distributions and for placing the insurer under an order of supervision in accordance with [insert appropriate statutory reference related to orders of supervision].

Section 12. Receivership

Whenever it appears to the commissioner that any person has committed a violation of this Act which so impairs the financial condition of a domestic insurer as to threaten insolvency or make the further transaction of business by it hazardous to its policyholders, creditors, shareholders or the public, then the commissioner may proceed as provided in Section [insert applicable section] of this Chapter to take possessions of the property of the domestic insurer and to conduct its business.

Section 13. Recovery

A. If an order for liquidation or rehabilitation of a domestic insurer has been entered, the receiver appointed under the order shall have a right to recover on behalf of the insurer, (i) from any parent corporation or holding company or person or affiliate who otherwise controlled the insurer, the amount of distributions (other than distributions of shares of the same class of stock) paid by the insurer on its capital stock, or (ii) any payment in the form of a bonus, termination settlement or extraordinary lump sum salary adjustment made by the insurer or its subsidiary to a director, officer or employee, where the distribution or payment pursuant to (i) or (ii) is made at any time during the one year preceding the petition for liquidation, conservation or rehabilitation, as the case may be, subject to the limitations of Subsections B, C, and D of
this section.

B. No distribution shall be recoverable if the parent or affiliate shows that when paid the distribution was lawful and reasonable, and that the insurer did not know and could not reasonably have known that the distribution might adversely affect the ability of the insurer to fulfill its contractual obligations.

C. Any person who was a parent corporation or holding company or a person who otherwise controlled the insurer or affiliate at the time the distributions were paid shall be liable up to the amount of distributions or payments under Subsection A which the person received. Any person who otherwise controlled the insurer at the time the distributions were declared shall be liable up to the amount of distributions that would have been received if they had been paid immediately. If two (2) or more persons are liable with respect to the same distributions, they shall be jointly and severally liable.

D. The maximum amount recoverable under this section shall be the amount needed in excess of all other available assets of the impaired or insolvent insurer to pay the contractual obligations of the impaired or insolvent insurer and to reimburse any guaranty funds.

E. To the extent that any person liable under Subsection C of this section is insolvent or otherwise fails to pay claims due from it, its parent corporation or holding company or person who otherwise controlled it at the time the distribution was paid, shall be jointly and severally liable for any resulting deficiency in the amount recovered from the parent corporation or holding company or person who otherwise controlled it.

Section 14. Revocation, Suspension, or Nonrenewal of Insurer’s License

Whenever it appears to the commissioner that any person has committed a violation of this Act which makes the continued operation of an insurer contrary to the interests of policyholders or the public, the commissioner may, after giving notice and an opportunity to be heard, suspend, revoke or refuse to renew the insurer’s license or authority to do business in this state for such period as the commissioner finds is required for the protection of policyholders or the public. Any such determination shall be accompanied by specific findings of fact and conclusions of law.

Section 15. Judicial Review, Mandamus

A. Any person aggrieved by any act, determination, rule, regulation or order or any other action of the commissioner pursuant to this Act may appeal to the [insert title] Court for [insert county] County. The court shall conduct its review without a jury and by trial de novo, except that if all parties, including the commissioner, so stipulate, the review shall be confined to the record. Portions of the record may be introduced by stipulation into evidence in a trial de novo as to those parties so stipulating.

B. The filing of an appeal pursuant to this section shall stay the application of any rule, regulation, order or other action of the commissioner to the appealing party unless the court, after giving the party notice and an opportunity to be heard, determines that a stay would be detrimental to the interest of policyholders, shareholders, creditors or the public.

C. Any person aggrieved by any failure of the commissioner to act or make a determination required by this Act may petition the [insert title] Court for [insert county] County for a writ in the nature of a mandamus or a peremptory mandamus directing the commissioner to act or make a determination.

Section 16. Conflict with Other Laws

All laws and parts of laws of this state inconsistent with this Act are hereby superseded with respect to matters covered by this Act.

Section 17. Separability of Provisions

If any provision of this Act or the application thereof to any person or circumstances is held invalid, the invalidity shall not affect other provisions or applications of this Act which can be given effect without the invalid provisions or application, and for this purpose the provisions of this Act are separable.
Section 18. Effective Date

This Act shall take effect thirty (30) days from its passage.
Alternative Section 1. Findings

A. It is hereby found and declared that it may not be inconsistent with the public interest and the interest of policyholders and shareholders to permit insurers to:

(1) Engage in activities which would enable them to make better use of management skills and facilities;

(2) Diversify into new lines of business through acquisition or organization of subsidiaries;

(3) Have free access to capital markets which could provide funds for insurers to use in diversification programs;

(4) Implement sound tax planning conclusions; and

(5) Serve the changing needs of the public and adapt to changing conditions of the social, economic and political environment, so that insurers are able to compete effectively and to meet the growing public demand for institutions capable of providing a comprehensive range of financial services.

B. It is further found and declared that the public interest and the interests of policyholders and shareholders are or may be adversely affected when:

(1) Control of an insurer is sought by persons who would utilize such control adversely to the interests of policyholders or shareholders;

(2) Acquisition of control of an insurer would substantially lessen competition or create a monopoly in the insurance business in this state;

(3) An insurer which is part of an insurance holding company system is caused to enter into transactions or relationships with affiliated companies on terms which are not fair and reasonable; or

(4) An insurer pays dividends to shareholders which jeopardize the financial condition of such insurers.

C. It is hereby declared that the policies and purposes of this Act are to promote the public interest by:

(1) Facilitating the achievement of the objectives enumerated in Subsection A;

(2) Requiring disclosure of pertinent information relating to changes in control of an insurer;

(3) Requiring disclosure by an insurer of material transactions and relationships between the insurer and its affiliates, including certain dividends to shareholders paid by the insurer; and

(4) Providing standards governing material transactions between the insurer and its affiliates.

D. It is further declared that it is desirable to prevent unnecessary multiple and conflicting regulation of insurers. Therefore, this state shall exercise regulatory authority over domestic insurers and unless otherwise provided in this Act, not over nondomestic insurers, with respect to the matters contained herein.
Alternative Section 2. Subsidiaries of Insurers

A. Authorization. Any domestic insurer, either by itself or in cooperation with one or more persons, may organize or acquire one or more subsidiaries engaged in the following kinds of business:

1. Any kind of insurance business authorized by the jurisdiction in which it is incorporated;

2. Acting as an insurance broker or as an insurance agent for its parent or for any of its parent’s insurer subsidiaries;

3. Investing, reinvesting or trading in securities for its own account, that of its parent, a subsidiary of its parent, or an affiliate or subsidiary;

4. Management of an investment company subject to or registered pursuant to the Investment Company Act of 1940, as amended, including related sales and services;

5. Acting as a broker-dealer subject to or registered pursuant to the Securities Exchange Act of 1934, as amended;

6. Rendering investment advice to governments, government agencies, corporations or other organizations or groups;

7. Rendering other services related to the operations of an insurance business, such as actuarial, loss prevention, safety engineering, data processing, accounting, claims, appraisal and collection services;

8. Ownership and management of assets which the parent corporation could itself own or manage;

Drafting Note: The aggregate investment by the insurer and its subsidiaries acquired or organized pursuant to this paragraph should not exceed the limitations applicable to such investments by the insurer.

9. Acting as administrative agent for a governmental instrumentality that is performing an insurance function;

10. Financing of insurance premiums, agents and other forms of consumer financing;

11. Any other business activity determined by the commissioner to be reasonably ancillary to an insurance business; and

12. Owning a corporation or corporations engaged or organized to engage exclusively in one or more of the businesses specified in this section.

Section 1. Authority

These regulations are promulgated pursuant to the authority granted by Sections [insert applicable sections] and [insert applicable section] of the Insurance Law.

Note: Optional for those states in which similar provisions are normally used.

Section 2. Purpose

The purpose of these regulations is to set forth rules and procedural requirements which the Commissioner deems necessary to carry out the provisions of the NAIC Insurance Holding Company System Regulatory Act [insert applicable sections] of the Insurance Code hereinafter referred to as “the Act.” The information called for by these regulations is hereby declared to be necessary and appropriate in the public interest and for the protection of the policyholders in this State.

Editor’s Note: Insert the title of the chief insurance regulatory official wherever the term “commissioner” appears.

Drafting Note: Optional for those states in which similar provisions are normally used.
Section 3. Severability Clause

If any provision of these regulations, or the application thereof to any person or circumstance, is held invalid, such determination shall not affect other provisions or applications of these regulations which can be given effect without the invalid provision or application, and to that end the provisions of these regulations are severable.

Drafting Note: Optional for those states in which similar provisions are normally used.

Section 4. Forms - General Requirements

A. Forms A, B, C, D, E and F are intended to be guides in the preparation of the statements required by Sections 3, 3.1, 4, and 5 of the Act. They are not intended to be blank forms which are to be filled in. The statements filed shall contain the numbers and captions of all items, but the text of the items may be omitted provided the answers thereto are prepared in such a manner as to indicate clearly the scope and coverage of the items. All instructions, whether appearing under the items of the form or elsewhere therein, are to be omitted. Unless expressly provided otherwise, if any item is inapplicable or the answer thereto is in the negative, an appropriate statement to that effect shall be made.

B. [Insert number] complete copies of each statement including exhibits and all other papers and documents filed as a part thereof, shall be filed with the Commissioner by personal delivery or mail addressed to: Insurance Commissioner of the State of [insert state and address], Attention: [insert name - title]. At least one of the copies shall be signed in the manner prescribed on the form. Unsigned copies shall be conformed. If the signature of any person is affixed pursuant to a power of attorney or other similar authority, a copy of the power of attorney or other authority shall also be filed with the statement.

C. If an applicant requests a hearing on a consolidated basis under Section 3D(3) of the Act, in addition to filing the Form A with the commissioner, the applicant shall file a copy of Form A with the National Association of Insurance Commissioners (NAIC) in electronic form.

D. Statements should be prepared electronically. Statements shall be easily readable and suitable for review and reproduction. Debits in credit categories and credits in debit categories shall be designated so as to be clearly distinguishable as such on photocopies. Statements shall be in the English language and monetary values shall be stated in United States currency. If any exhibit or other paper or document filed with the statement is in a foreign language, it shall be accompanied by a translation into the English language and any monetary value shown in a foreign currency normally shall be converted into United States currency.

Drafting Note: Section 4 may be omitted if it is included as instructions on Forms A, B, C, D, E and F.

Section 5. Forms - Incorporation by Reference, Summaries and Omissions

A. Information required by any item of Form A, Form B, Form D, Form E or Form F may be incorporated by reference in answer or partial answer to any other item. Information contained in any financial statement, annual report, proxy statement, statement filed with a governmental authority, or any other document may be incorporated by reference in answer or partial answer to any item of Form A, Form B, Form D, Form E or Form F provided the document is filed as an exhibit to the statement. Excerpts of documents may be filed as exhibits if the documents are extensive. Documents currently on file with the Commissioner which were filed within three (3) years need not be attached as exhibits. References to information contained in exhibits or in documents already on file shall clearly identify the material and shall specifically indicate that such material is to be incorporated by reference in answer to the item. Matter shall not be incorporated by reference in any case where the incorporation would render the statement incomplete, unclear or confusing.
B. Where an item requires a summary or outline of the provisions of any document, only a brief statement shall be made as to the pertinent provisions of the document. In addition to the statement, the summary or outline may incorporate by reference particular parts of any exhibit or document currently on file with the Commissioner which was filed within three (3) years and may be qualified in its entirety by such reference. In any case where two (2) or more documents required to be filed as exhibits are substantially identical in all material respects except as to the parties thereto, the dates of execution, or other details, a copy of only one of the documents need be filed with a schedule identifying the omitted documents and setting forth the material details in which the documents differ from the documents, a copy of which is filed.

Drafting Note: Section 5 may be omitted if it is included as instructions on Forms A, B, D, E and F.

Section 6. Forms-Information Unknown or Unavailable and Extension of Time to Furnish

If it is impractical to furnish any required information, document or report at the time it is required to be filed, there shall be filed with the Commissioner a separate document:

A. Identifying the information, document or report in question;
B. Stating why the filing thereof at the time required is impractical; and
C. Requesting an extension of time for filing the information, document or report to a specified date. The request for extension shall be deemed granted unless the Commissioner within [XX] days after receipt thereof enters an order denying the request.

Drafting Note: Section 6 may be omitted if it is included as instruction on Forms A, B, C, D, E and F.

Section 7. Forms - Additional Information and Exhibits

In addition to the information expressly required to be included in Form A, Form B, Form C, Form D, Form E and Form F, the Commissioner may request such further material information, if any, as may be necessary to make the information contained therein not misleading. The person filing may also file such exhibits as it may desire in addition to those expressly required by the statement. The exhibits shall be so marked as to indicate clearly the subject matters to which they refer. Changes to Forms A, B, C, D, E or F shall include on the top of the cover page the phrase: “Change No. [insert number] to” and shall indicate the date of the change and not the date of the original filing.

Drafting Note: Section 7 may be omitted if it included as instructions on Forms A, B, C, D, E and F.

Section 8. Definitions

A. “Executive officer” means chief executive officer, chief operating officer, chief financial officer, treasurer, secretary, controller, and any other individual performing functions corresponding to those performed by the foregoing officers under whatever title.
B. “Ultimate controlling person” means that person which is not controlled by any other person.
C. Unless the context otherwise requires, other terms found in these regulations and in Section 1 of the Act are used as defined in the Act. Other nomenclature or terminology is according to the Insurance Code, or industry usage if not defined by the Code.

Drafting Note: If regulation Section 2 is not adopted by the state, the following definition should be added to this section:
““The Act” means the Insurance Holding Company System Regulatory Act [insert applicable sections of the Insurance Code].
Section 9. Subsidiaries of Domestic Insurers

The authority to invest in subsidiaries under Section 2B of the Act is in addition to any authority to invest in subsidiaries which may be contained in any other provision of the Insurance Code.

Section 10. Acquisition of Control - Statement Filing

A person required to file a statement pursuant to Section 3 of the Act shall furnish the required information on Form A, hereby made a part of this regulation. Such person shall also furnish the required information on Form E, hereby made a part of this regulation and described in Section 13 of this regulation.

Section 11. Amendments to Form A

The applicant shall promptly advise the Commissioner of any changes in the information furnished on Form A arising subsequent to the date upon which the information was furnished but prior to the Commissioner’s disposition of the application.

Section 12. Acquisition of Section 3A(4) Insurers

A. If the person being acquired is deemed to be a “domestic insurer” solely because of the provisions of Section 3A(4) of the Act, the name of the domestic insurer on the cover page should be indicated as follows:

“ABC Insurance Company, a subsidiary of XYZ Holding Company.”

B. Where a Section 3A(4) insurer is being acquired, references to “the insurer” contained in Form A shall refer to both the domestic subsidiary insurer and the person being acquired.

Section 13. Pre-Acquisition Notification

If a domestic insurer, including any person controlling a domestic insurer, is proposing a merger or acquisition pursuant to Section 3A(1) of the Act, that person shall file a pre-acquisition notification form, Form E, which was developed pursuant to Section 3.1C(1) of the Act.

Additionally, if a non-domiciliary insurer licensed to do business in this state is proposing a merger or acquisition pursuant to Section 3.1 of the Act, that person shall file a pre-acquisition notification form, Form E. No pre-acquisition notification form need be filed if the acquisition is beyond the scope of Section 3.1 as set forth in Section 3.1B(2).

In addition to the information required by Form E, the Commissioner may wish to require an expert opinion as to the competitive impact of the proposed acquisition.

Section 14. Annual Registration of Insurers - Statement Filing

An insurer required to file an annual registration statement pursuant to Section 4 of the Act shall furnish the required information on Form B, hereby made a part of these regulations.

Section 15. Summary of Registration - Statement Filing

An insurer required to file an annual registration statement pursuant to Section 4 of the Act is also required to furnish information required on Form C, hereby made a part of these regulations.
Section 16. Amendments to Form B

A. An amendment to Form B shall be filed within fifteen (15) days after the end of any month in which there is a material change to the information provided in the annual registration statement.

B. Amendments shall be filed in the Form B format with only those items which are being amended reported. Each amendment shall include at the top of the cover page “Amendment No. [insert number] to Form B for [insert year]” and shall indicate the date of the change and not the date of the original filings.

Drafting Note: Section 16 may be omitted if Section 5A(2) of the Model Act has been adopted and amendments to the registration statement are therefore not required by the Act.

Section 17. Alternative and Consolidated Registrations

A. Any authorized insurer may file a registration statement on behalf of any affiliated insurer or insurers which are required to register under Section 4 of the Act. A registration statement may include information not required by the Act regarding any insurer in the insurance holding company system even if the insurer is not authorized to do business in this State. In lieu of filing a registration statement on Form B, the authorized insurer may file a copy of the registration statement or similar report which it is required to file in its State of domicile, provided:

1. The statement or report contains substantially similar information required to be furnished on Form B; and

2. The filing insurer is the principal insurance company in the insurance holding company system.

B. The question of whether the filing insurer is the principal insurance company in the insurance holding company system is a question of fact and an insurer filing a registration statement or report in lieu of Form B on behalf of an affiliated insurer, shall set forth a brief statement of facts which will substantiate the filing insurer’s claim that it, in fact, is the principal insurer in the insurance holding company system.

C. With the prior approval of the Commissioner, an unauthorized insurer may follow any of the procedures which could be done by an authorized insurer under Subsection A above.

D. Any insurer may take advantage of the provisions of Section 4H or 4I of the Act without obtaining the prior approval of the Commissioner. The Commissioner, however, reserves the right to require individual filings if he or she deems such filings necessary in the interest of clarity, ease of administration or the public good.

Section 18. Disclaimers and Termination of Registration

A. A disclaimer of affiliation or a request for termination of registration claiming that a person does not, or will not upon the taking of some proposed action, control another person (hereinafter referred to as the “subject”) shall contain the following information:

1. The number of authorized, issued and outstanding voting securities of the subject;

2. With respect to the person whose control is denied and all affiliates of such person, the number and percentage of shares of the subject’s voting securities which are held of record or known to be beneficially owned, and the number of shares concerning which there is a right to acquire, directly or indirectly;

3. All material relationships and bases for affiliation between the subject and the person whose control is denied and all affiliates of such person;

4. A statement explaining why the person should not be considered to control the subject.
Insurance Holding Company System Model Regulation
With Reporting Forms and Instructions

B. A request for termination of registration shall be deemed to have been granted unless the Commissioner, within thirty (30) days after receipt of the request, notifies the registrant otherwise.

Section 19. Transactions Subject to Prior Notice - Notice Filing

A. An insurer required to give notice of a proposed transaction pursuant to Section 5 of the Act shall furnish the required information on Form D, hereby made a part of these regulations.

B. Agreements for cost sharing services and management services shall at a minimum and as applicable:

1. Identify the person providing services and the nature of such services;
2. Set forth the methods to allocate costs;
3. Require timely settlement, not less frequently than on a quarterly basis, and compliance with the requirements in the Accounting Practices and Procedures Manual;
4. Prohibit advancement of funds by the insurer to the affiliate except to pay for services defined in the agreement;
5. State that the insurer will maintain oversight for functions provided to the insurer by the affiliate and that the insurer will monitor services annually for quality assurance;
6. Define books and records and data of the insurer to include all books and records and data developed or maintained under or related to the agreement, that are otherwise the property of the insurer, in whatever form maintained, including, but not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate;
7. Specify that all books and records and data of the insurer are and remain the property of the insurer, and are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation from all other persons records and data;
8. State that all funds and invested assets of the insurer are the exclusive property of the insurer, held for the benefit of the insurer and are subject to the control of the insurer;
9. Include standards for termination of the agreement with and without cause;
10. Include provisions for indemnification of the insurer in the event of gross negligence or willful misconduct on the part of the affiliate providing the services, and for any actions by the affiliate which violate provisions of the agreement required in Subsections 19B(11), 19B(12), 19B(13), 19B(14) and 19B(15) of this regulation;
11. Specify that, if the insurer is placed in supervision, seizure, conservatorship, or receivership pursuant to [supervision and receivership acts], a receivership or seized by the commissioner under the State Receivership Act:
   (a) all of the rights of the insurer under the agreement extend to the receiver or commissioner to the extent permitted by [law of the state];
   (b) all books and records and data of the insurer will immediately be made available to the receiver or the commissioner, shall be made available in a usable format, and shall be turned over to the receiver or commissioner immediately upon the receiver or the commissioner’s request, at no cost to the receiver or the commissioner; and,
   (c) The affiliated person(s) will make available all employees essential to the operations of the insurer and the services associated therewith for the immediate continued
Section 20. Enterprise Risk Report

The ultimate controlling person of an insurer required to file an enterprise risk report pursuant to Section 4L(1) of the Act shall furnish the required information on Form F, hereby made a part of these regulations.

Section 21. Group Capital Calculation

A. Where an insurance holding company system has previously filed the annual group capital calculation at least once, the lead state commissioner has the discretion to exempt the ultimate controlling person from filing the annual group capital calculation if the lead state commissioner makes a determination based upon that filing that the insurance holding company system meets all of the following criteria:

1. Has annual direct written and unaffiliated assumed premium (including international direct and assumed premium), but excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, of less than $1,000,000,000;

2. Has no insurers within its holding company structure that are domiciled outside of the United States or one of its territories;

3. Has no banking, depository or other financial entity that is subject to an identified regulatory capital framework within its holding company structure;

4. The holding company system attests that there are no material changes in the transactions between insurers and non-insurers in the group that have occurred since the last filing of the annual group capital; and

5. The non-insurers within the holding company system do not pose a material financial risk to the insurer’s ability to honor policyholder obligations.

NAIC Model Laws, Regulations, Guidelines and Other Resources—Fall 2020

performance of the essential services ordered or directed by the receiver or commissioner.

(12) Specify that the affiliate has no automatic right to terminate the agreement if the insurer is placed into supervision, seizure, conservatorship, or receivership pursuant to supervision and receivership acts; the State Receivership Act; and

(13) Specify that the affiliate will provide the essential services for a minimum period of time after termination of the agreement, if the insurer is placed into supervision, seizure, conservatorship, or receivership pursuant to supervision and receivership acts, as ordered or directed by the receiver or commissioner. Performance of the essential services will continue to be provided without regard to pre-receivership unpaid fees, so long as the affiliate continues to receive timely payment for post-receivership services rendered, and unless released by the receiver, commissioner or supervising court.

(14) Specify that the affiliate will continue to maintain any systems, programs, or other infrastructure notwithstanding supervision, seizure, conservatorship, or receivership pursuant to supervision and receivership acts; a seizure by the commissioner under the State Receivership Act, and will make them available to the receiver or commissioner as ordered or directed by the receiver or commissioner, for so long as the affiliate continues to receive timely payment for post-receivership services rendered, and unless released by the receiver, commissioner or supervising court.

(15) Specify that, in furtherance of the cooperation between the receiver and the affected guaranty association(s) and subject to the receiver's authority over the insurer, if the insurer is placed into supervision, seizure, conservatorship, or receivership pursuant to supervision and receivership acts, and portions of the insurer's policies or contracts are covered by one or more guaranty associations, the affiliate's commitments under Subsections 19B(11), 19B(12), 19B(13) and 19B(14) of this regulation will extend to the guaranty association(s) providing such coverage.
Insurance Holding Company System Model Regulation
With Reporting Forms and Instructions

B. Where an insurance holding company system has previously filed the annual group capital calculation at least once, the lead state commissioner has the discretion to accept in lieu of the group capital calculation a limited group capital filing if:

(1) The insurance holding company system has annual direct written and unaffiliated assumed premium (including international direct and assumed premium), but excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, of less than $1,000,000,000; and all of the following additional criteria are met:

(a) Has no insurers within its holding company structure that are domiciled outside of the United States or one of its territories;

(b) Does not include a banking, depository or other financial entity that is subject to an identified regulatory capital framework; and

(c) The holding company system attests that there are no material changes in transactions between insurers and non-insurers in the group that have occurred since the last filing of the report to the lead state commissioner and the non-insurers within the holding company system do not pose a material financial risk to the insurers ability to honor policyholder obligations.

C. For an insurance holding company that has previously met an exemption with respect to the group capital calculation pursuant Section 21A or 21B of this regulation, the lead state commissioner may require at any time the ultimate controlling person to file an annual group capital calculation, completed in accordance with the NAIC Group Capital Calculation Instructions, if any of the following criteria are met:

(1) Any insurer within the insurance holding company system is in a Risk-Based Capital action level event as set forth in [insert cross-reference to appropriate section of Risk-Based Capital (RBC) Model Act] or a similar standard for a non-U.S. insurer; or

(2) Any insurer within the insurance holding company system meets one or more of the standards of an insurer deemed to be in hazardous financial condition as defined in [insert cross-reference to appropriate section of Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition]; or

(3) Any insurer within the insurance holding company system otherwise exhibits qualities of a troubled insurer as determined by the lead state commissioner based on unique circumstances including, but not limited to, the type and volume of business written, ownership and organizational structure, federal agency requests, and international supervisor requests.

D. A non-U.S. jurisdiction is considered to “recognize and accept” the group capital calculation if it satisfies the following criteria:

(1) With respect to the [insert cross-reference to Section 4L(2)(d) of the Model Act]

(a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such jurisdiction, that insurers and insurance groups whose lead state is accredited under the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction; or

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable
international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a).

(2) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force.

E. A list of non-U.S. jurisdictions that “recognize and accept” the group capital calculation will be published through the NAIC Committee Process:

(1) A list of jurisdictions that “recognize and accept” the group capital calculation pursuant to [insert cross-reference to Sections 4L(2)(d)], is published through the NAIC Committee Process to assist the lead state commissioner in determining which insurers shall file an annual group capital calculation. The list will clarify those situations in which a jurisdiction is exempted from filing under [insert cross-reference to Sections 4L(2)(d)]. To assist with a determination under 4L(2)(e), the list will also identify whether a jurisdiction that is exempted under either [insert cross-reference to Sections 4L(2)(c) and 4L(2)(d)] requires a group capital filing for any U.S. based insurance group’s operations in that non-U.S. jurisdiction.

(2) For a non-U.S. jurisdiction where no U.S. insurance groups operate, the confirmation provided to meet the requirement of Section 21D(1)(b) will serve as support for recommendation to be published as a jurisdiction that “recognizes and accepts” the group capital calculation through the NAIC Committee Process.

(3) If the lead state commissioner makes a determination pursuant to Section 4L(2)(d) that differs from the NAIC List, the lead state commissioner shall provide thoroughly documented justification to the NAIC and other states.

(4) Upon determination by the lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the group capital calculation, the lead state commissioner may provide a recommendation to the NAIC that the non-U.S. jurisdiction be removed from the list of jurisdictions that “recognize and accepts” the group capital calculation.

Section 22. Extraordinary Dividends and Other Distributions

A. Requests for approval of extraordinary dividends or any other extraordinary distribution to shareholders shall include the following:

(1) The amount of the proposed dividend;

(2) The date established for payment of the dividend;

(3) A statement as to whether the dividend is to be in cash or other property and, if in property, a description thereof, its cost, and its fair market value together with an explanation of the basis for valuation;

(4) A copy of the calculations determining that the proposed dividend is extraordinary. The work paper shall include the following information:

(a) The amounts, dates and form of payment of all dividends or distributions (including regular dividends but excluding distributions of the insurer’s own securities) paid within the period of twelve (12) consecutive months ending on the date fixed for payment of the proposed dividend for which approval is sought and commencing on the day after the same day of the same month in the last preceding year;
Insurance Holding Company System Model Regulation
With Reporting Forms and Instructions

(b) Surplus as regards policyholders (total capital and surplus) as of the 31st day of December next preceding;

(c) If the insurer is a life insurer, the net gain from operations for the 12-month period ending the 31st day of December next preceding;

(d) If the insurer is not a life insurer, the net income less realized capital gains for the 12-month period ending the 31st day of December next preceding and the two preceding 12-month periods; and

(e) If the insurer is not a life insurer, the dividends paid to stockholders excluding distributions of the insurer's own securities in the preceding two (2) calendar years;

(5) A balance sheet and statement of income for the period intervening from the last annual statement filed with the Commissioner and the end of the month preceding the month in which the request for dividend approval is submitted; and

(6) A brief statement as to the effect of the proposed dividend upon the insurer's surplus and the reasonableness of surplus in relation to the insurer's outstanding liabilities and the adequacy of surplus relative to the insurer's financial needs.

B. Subject to Section 5B of the Act, each registered insurer shall report to the Commissioner all dividends and other distributions to shareholders within fifteen (15) business days following the declaration thereof, including the same information required by Subsection A(4).

Section 23. Adequacy of Surplus

The factors set forth in Section 5D of the Act are not intended to be an exhaustive list. In determining the adequacy and reasonableness of an insurer's surplus no single factor is necessarily controlling. The Commissioner instead will consider the net effect of all of these factors plus other factors bearing on the financial condition of the insurer. In comparing the surplus maintained by other insurers, the Commissioner will consider the extent to which each of these factors varies from company to company and in determining the quality and liquidity of investments in subsidiaries, the Commissioner will consider the individual subsidiary and may discount or disallow its valuation to the extent that the individual investments so warrant.
FORM A

STATEMENT REGARDING THE
ACQUISITION OF CONTROL OF OR MERGER WITH A DOMESTIC INSURER

Name of Domestic Insurer

BY

Name of Acquiring Person (Applicant)

Filed with the Insurance Department of

(State of domicile of insurer being acquired)

Dated: ______________________ , 20____

Name, Title, address and telephone number of Individual to Whom Notices and Correspondence Concerning this Statement Should be Addressed:

ITEM 1. METHOD OF ACQUISITION

State the name and address of the domestic insurer to which this application relates and a brief description of how control is to be acquired.

ITEM 2. IDENTITY AND BACKGROUND OF THE APPLICANT

(a) State the name and address of the applicant seeking to acquire control over the insurer.

(b) If the applicant is not an individual, state the nature of its business operations for the past 5 years or for such lesser period as such person and any predecessors thereof shall have been in existence. Briefly describe the business intended to be done by the applicant and the applicant’s subsidiaries.

(c) Furnish a chart or listing clearly presenting the identities of the interrelationships among the applicant and all affiliates of the applicant. Indicate in such chart or listing the percentage of voting securities of each such person which is owned or controlled by the applicant or by any other such person. If control of any person is maintained other than by the ownership or control of voting securities, indicate the basis of such control. As to each person specified in such chart or listing indicate the type of organization (e.g. corporation, trust, partnership) and the state or other jurisdiction of domicile. If court proceedings involving a reorganization or liquidation are pending with respect to any such person, indicate which person, and set forth the title of the court, nature of proceedings and the date when commenced.

© 2021 National Association of Insurance Commissioners 44
ITEM 3. IDENTITY AND BACKGROUND OF INDIVIDUALS ASSOCIATED WITH THE APPLICANT

On the biographical affidavit, include a third party background check, and state the following with respect to (1) the applicant if (s)he is an individual or (2) all persons who are directors, executive officers or owners of 10% or more of the voting securities of the applicant if the applicant is not an individual.

(a) Name and business address.

(b) Present principal business activity, occupation or employment including position and office held and the name, principal business and address of any corporation or other organization in which such employment is carried on.

(c) Material occupations, positions, offices or employment during the last 5 years, giving the starting and ending dates of each and the name, principal business and address of any business corporation or other organization in which each such occupation, position, office or employment was carried on; if any such occupation, position, office or employment required licensing by or registration with any federal, state or municipal governmental agency, indicate such fact, the current status of such licensing or registration, and an explanation of any surrender, revocation, suspension or disciplinary proceedings in connection therewith.

(d) Whether or not such person has ever been convicted in a criminal proceeding (excluding minor traffic violations) during the last 10 years and, if so, give the date, nature of conviction, name and location of court, and penalty imposed or other disposition of the case.

ITEM 4. NATURE, SOURCE AND AMOUNT OF CONSIDERATION

(a) Describe the nature, source and amount of funds or other considerations used or to be used in effecting the merger or other acquisition of control. If any part of the same is represented or is to be represented by funds or other consideration borrowed or otherwise obtained for the purpose of acquiring, holding or trading securities, furnish a description of the transaction, the names of the parties thereto, the relationship, if any, between the borrower and the lender, the amounts borrowed or to be borrowed, and copies of all agreements, promissory notes and security arrangements relating thereto.

(b) Explain the criteria used in determining the nature and amount of such consideration.

(c) If the source of the consideration is a loan made in the lender’s ordinary course of business and if the applicant wishes the identity of the lender to remain confidential, he must specifically request that the identity be kept confidential.

ITEM 5. FUTURE PLANS OF INSURER

Describe any plans or proposals which the applicant may have to declare an extraordinary dividend, to liquidate the insurer, to sell its assets to or merge it with any person or persons or to make any other material change in its business operations or corporate structure or management.

ITEM 6. VOTING SECURITIES TO BE ACQUIRED

State the number of shares of the insurer’s voting securities which the applicant, its affiliates and any person listed in Item 3 plan to acquire, and the terms of the offer, request, invitation, agreement or acquisition, and a statement as to the method by which the fairness of the proposal was arrived at.

ITEM 7. OWNERSHIP OF VOTING SECURITIES

State the amount of each class of any voting security of the insurer which is beneficially owned or concerning which there is a right to acquire beneficial ownership by the applicant, its affiliates or any person listed in Item 3.
ITEM 8. CONTRACTS, ARRANGEMENTS, OR UNDERSTANDINGS WITH RESPECT TO VOTING SECURITIES OF THE INSURER

Give a full description of any contracts, arrangements or understandings with respect to any voting security of the insurer in which the applicant, its affiliates or any person listed in Item 3 is involved, including but not limited to transfer of any of the securities, joint ventures, loan or option arrangements, puts or calls, guarantees of loans, guarantees against loss or guarantees of profits, division of losses or profits, or the giving or withholding of proxies. Such description shall identify the persons with whom the contracts, arrangements or understandings have been entered into.

ITEM 9. RECENT PURCHASES OF VOTING SECURITIES

Describe any purchases of any voting securities of the insurer by the applicant, its affiliates or any person listed in Item 3 during the 12 calendar months preceding the filing of this statement. Include in the description the dates of purchase, the names of the purchasers, and the consideration paid or agreed to be paid therefor. State whether any shares so purchased are hypothecated.

ITEM 10. RECENT RECOMMENDATIONS TO PURCHASE

Describe any recommendations to purchase any voting security of the insurer made by the applicant, its affiliates or any person listed in Item 3, or by anyone based upon interviews or at the suggestion of the applicant, its affiliates or any person listed in Item 3 during the 12 calendar months preceding the filing of this statement.

ITEM 11. AGREEMENTS WITH BROKER-DEALERS

Describe the terms of any agreement, contract or understanding made with any broker-dealer as to solicitation of voting securities of the insurer for tender and the amount of any fees, commissions or other compensation to be paid to broker-dealers with regard thereto.

ITEM 12. FINANCIAL STATEMENTS AND EXHIBITS

(a) Financial statements, exhibits, and three-year financial projections of the insurer(s) shall be attached to this statement as an appendix, but list under this item the financial statements and exhibits so attached.

(b) The financial statements shall include the annual financial statements of the persons identified in Item 2(c) for the preceding 5 fiscal years (or for such lesser period as such applicant and its affiliates and any predecessors thereof shall have been in existence), and similar information covering the period from the end of such person’s last fiscal year, if the information is available. The statements may be prepared on either an individual basis, or, unless the Commissioner otherwise requires, on a consolidated basis if consolidated statements are prepared in the usual course of business.

The annual financial statements of the applicant shall be accompanied by the certificate of an independent public accountant to the effect that such statements present fairly the financial position of the applicant and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the applicant is an insurer which is actively engaged in the business of insurance, the financial statements need not be certified, provided they are based on the Annual Statement of the person filed with the insurance department of the person’s domiciliary state and are in accordance with the requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of the state.

(c) File as exhibits copies of all tender offers for, requests or invitations for, tenders of, exchange offers for, and agreements to acquire or exchange any voting securities of the insurer and (if distributed) of additional soliciting material relating thereto, any proposed employment, consultation, advisory or management contracts concerning the insurer, annual reports to the stockholders of the insurer and the applicant for the last two fiscal years, and any additional documents or papers required by Form A or regulation Sections 4 and 6.
ITEM 13. AGREEMENT REQUIREMENTS FOR ENTERPRISE RISK MANAGEMENT

Applicant agrees to provide, to the best of its knowledge and belief, the information required by Form F within fifteen (15) days after the end of the month in which the acquisition of control occurs.

ITEM 14. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:

SIGNATURE

Pursuant to the requirements of Section 3 of the Act ________________ has caused this application to be duly signed on its behalf in the City of ________________ and State of on the __________ day of __________, 20_____.

FORM B

INSURANCE HOLDING COMPANY SYSTEM ANNUAL REGISTRATION STATEMENT

Filed with the Insurance Department of the State of____________________

By

__________________________
Name of Registrant

On Behalf of Following Insurance Companies

Name  Address

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

Date:____________________, 20____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

ITEM 1.  IDENTITY AND CONTROL OF REGISTRANT

Furnish the exact name of each insurer registering or being registered (hereinafter called “the Registrant”), the home office address and principal executive offices of each; the date on which each registrant became part of the insurance holding company system; and the method(s) by which control of each registrant was acquired and is maintained.

ITEM 2.  ORGANIZATIONAL CHART

Furnish a chart or listing clearly presenting the identities of and interrelationships among all affiliated persons within the insurance holding company system. The chart or listing should show the percentage of each class of voting securities of each affiliate which is owned, directly or indirectly, by another affiliate. If control of any person within the system is maintained other than by the ownership or control of voting securities, indicate the basis of control. As to each person specified in the chart or listing indicate the type of organization (e.g., corporation, trust, partnership) and the state or other jurisdiction of domicile.
ITEM 3. THE ULTIMATE CONTROLLING PERSON

As to the ultimate controlling person in the insurance holding company system furnish the following information:

(a) Name;

(b) Home office address;

(c) Principal executive office address;

(d) The organizational structure of the person, i.e., corporation, partnership, individual, trust, etc.;

(e) The principal business of the person;

(f) The name and address of any person who holds or owns 10% or more of any class of voting security, the class of such security, the number of shares held of record or known to be beneficially owned, and the percentage of class so held or owned; and

(g) If court proceedings involving a reorganization or liquidation are pending, indicate the title and location of the court, the nature of proceedings and the date when commenced.

ITEM 4. BIOGRAPHICAL INFORMATION

If the ultimate controlling person is a corporation, an organization, a limited liability company, or other legal entity, furnish the following information for the directors and executive officers of the ultimate controlling person: the individual’s name and address, his or her principal occupation and all offices and positions held during the past 5 years, and any conviction of crimes other than minor traffic violations. If the ultimate controlling person is an individual, furnish the individual’s name and address, his or her principal occupation and all offices and positions held during the past 5 years, and any conviction of crimes other than minor traffic violations.

ITEM 5. TRANSACTIONS AND AGREEMENTS

Briefly describe the following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the registrant and its affiliates:

(a) Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the Registrant or of the Registrant by its affiliates;

(b) Purchases, sales or exchanges of assets;

(c) Transactions not in the ordinary course of business;

(d) Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the Registrant’s assets to liability, other than insurance contracts entered into in the ordinary course of the registrant’s business;

(e) All management agreements, service contracts and all cost-sharing arrangements;

(f) Reinsurance agreements;

(g) Dividends and other distributions to shareholders;

(h) Consolidated tax allocation agreements; and
(i) Any pledge of the registrant’s stock and/or of the stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system.

No information need be disclosed if such information is not material for purposes of Section 4 of the Act.

Sales, purchases, exchanges, loans or extensions of credit, investments or guarantees involving one-half of 1% or less of the registrant’s admitted assets as of the 31st day of December next preceding shall not be deemed material.

Drafting Note: Commissioner may by rule, regulation or order provide otherwise.

The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include at least the following: the nature and purpose of the transaction, the nature and amounts of any payments or transfers of assets between the parties, the identity of all parties to the transaction, and relationship of the affiliated parties to the registrant.

ITEM 6. LITIGATION OR ADMINISTRATIVE PROCEEDINGS

A brief description of any litigation or administrative proceedings of the following types, either then pending or concluded within the preceding fiscal year, to which the ultimate controlling person or any of its directors or executive officers was a party or of which the property of any such person is or was the subject; give the names of the parties and the court or agency in which the litigation or proceeding is or was pending:

(a) Criminal prosecutions or administrative proceedings by any government agency or authority which may be relevant to the trustworthiness of any party thereto; and

(b) Proceedings which may have a material effect upon the solvency or capital structure of the ultimate holding company including, but not necessarily limited to, bankruptcy, receivership or other corporate reorganizations.

ITEM 7. STATEMENT REGARDING PLAN OR SERIES OF TRANSACTIONS

The insurer shall furnish a statement that transactions entered into since the filing of the prior year’s annual registration statement are not part of a plan or series of like transactions, the purpose of which is to avoid statutory threshold amounts and the review that might otherwise occur.

ITEM 8. FINANCIAL STATEMENTS AND EXHIBITS

(a) Financial statements and exhibits should be attached to this statement as an appendix, but list under this item the financial statements and exhibits so attached.

(b) If the ultimate controlling person is a corporation, an organization, a limited liability company, or other legal entity, the financial statements shall include the annual financial statements of the ultimate controlling person in the insurance holding company system as of the end of the person’s latest fiscal year.

If at the time of the initial registration, the annual financial statements for the latest fiscal year are not available, annual statements for the previous fiscal year may be filed and similar financial information shall be filed for any subsequent period to the extent such information is available. Such financial statements may be prepared on either an individual basis; or, unless the Commissioner otherwise requires, on a consolidated basis if consolidated statements are prepared in the usual course of business.

Other than with respect to the foregoing, such financial statement shall be filed in a standard form and format adopted by the National Association of Insurance Commissioners, unless an alternative form is accepted by the Commissioner. Documentation and financial statements filed with the Securities and Exchange Commission or audited GAAP financial statements shall be deemed to be an appropriate form and format.
Unless the Commissioner otherwise permits, the annual financial statements shall be accompanied by the certificate of an independent public accountant to the effect that the statements present fairly the financial position of the ultimate controlling person and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the ultimate controlling person is an insurer which is actively engaged in the business of insurance, the annual financial statements need not be certified, provided they are based on the Annual Statement of the insurer’s domiciliary state and are in accordance with requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of that state.

Any ultimate controlling person who is an individual may file personal financial statements that are reviewed rather than audited by an independent public accountant. The review shall be conducted in accordance with standards for review of personal financial statements published in the Personal Financial Statements Guide by the American Institute of Certified Public Accountants. Personal financial statements shall be accompanied by the independent public accountant's Standard Review Report stating that the accountant is not aware of any material modifications that should be made to the financial statements in order for the statements to be in conformity with generally accepted accounting principles.

(c) Exhibits shall include copies of the latest annual reports to shareholders of the ultimate controlling person and proxy material used by the ultimate controlling person; and any additional documents or papers required by Form B or regulation Sections 4 and 6.

ITEM 9. FORM C REQUIRED

A Form C, Summary of Changes to Registration Statement, must be prepared and filed with this Form B.

ITEM 10. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:

SIGNATURE

Pursuant to the requirements of Section 4 of the Act, Registrant has caused this annual registration statement to be duly signed on its behalf of the City of _____________ and State of _____________ on the _____________ day of _____________, 20 ___.

SUMMARY OF CHANGES TO REGISTRATION STATEMENT

Filed with the Insurance Department of the State of ________________

By

____________________________________

Name of Registrant

On Behalf of Following Insurance Companies

Name  Address

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

Date: ___________________________, 20____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

____________________________________________________________________________________________

____________________________________________________________________________________________

Furnish a brief description of all items in the current annual registration statement which represent changes from the prior year’s annual registration statement. The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include specific references to Item numbers in the annual registration statement and to the terms contained therein.

Changes occurring under Item 2 of Form B insofar as changes in the percentage of each class of voting securities held by each affiliate is concerned, need only be included where such changes are ones which result in ownership or holdings of 10% or more of voting securities, loss or transfer of control, or acquisition or loss of partnership interest.

Changes occurring under Item 4 of Form B need only be included where an individual is, for the first time, made a director or executive officer of the ultimate controlling person; a director or executive officer terminates his or her responsibilities with the ultimate controlling person; or in the event an individual is named president of the ultimate controlling person.

If a transaction disclosed on the prior year’s annual registration statement has been changed, the nature of such change shall be included. If a transaction disclosed on the prior year’s annual registration statement has been effectuated, furnish the mode of completion and any flow of funds between affiliates resulting from the transaction.

The insurer shall furnish a statement that transactions entered into since the filing of the prior year’s annual registration statement are not part of a plan or series of like transactions whose purpose it is to avoid statutory threshold amounts and the review that might otherwise occur.
SIGNATURE AND CERTIFICATION

Pursuant to the requirements of Section 4 of the Act, Registrant has caused this annual registration statement to be duly signed on its behalf of the City of _________________ and State of ______________ on the ____________ day of _____________, 20 ___.

PRIOR NOTICE OF A TRANSACTION

Filed with the Insurance Department of the State of ______________________

By

_____________________________________

Name of Registrant

On Behalf of Following Insurance Companies

Name  Address

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

Date: __________________________, 20____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

ITEM 1.    IDENTITY OF PARTIES TO TRANSACTION

Furnish the following information for each of the parties to the transaction:

(a)    Name;

(b)    Home office address;

(c)    Principal executive office address;

(d)    The organizational structure, i.e. corporation, partnership, individual, trust, etc.;

(e)    A description of the nature of the parties’ business operations;

(f)    Relationship, if any, of other parties to the transaction to the insurer filing the notice, including any ownership or debtor/creditor interest by any other parties to the transaction in the insurer seeking approval, or by the insurer filing the notice in the affiliated parties;

(g)    Where the transaction is with a non-affiliate, the name(s) of the affiliate(s) which will receive, in whole or in substantial part, the proceeds of the transaction.
ITEM 2. DESCRIPTION OF THE TRANSACTION

Furnish the following information for each transaction for which notice is being given:

(a) A statement as to whether notice is being given under Section 5A(2)(a), (b), (c), (d), or (e) of the Act;

(b) A statement of the nature of the transaction;

(c) A statement of how the transaction meets the 'fair and reasonable' standard of Section 5A(1)(a) of the Act; and

(d) The proposed effective date of the transaction.

ITEM 3. SALES, PURCHASES, EXCHANGES, LOANS, EXTENSIONS OF CREDIT, GUARANTEES OR INVESTMENTS

Furnish a brief description of the amount and source of funds, securities, property or other consideration for the sale, purchase, exchange, loan, extension of credit, guarantee, or investment, whether any provision exists for purchase by the insurer filing notice, by any party to the transaction, or by any affiliate of the insurer filing notice, a description of the terms of any securities being received, if any, and a description of any other agreements relating to the transaction such as contracts or agreements for services, consulting agreements and the like. If the transaction involves other than cash, furnish a description of the consideration, its cost and its fair market value, together with an explanation of the basis for evaluation.

If the transaction involves a loan, extension of credit or a guarantee, furnish a description of the maximum amount which the insurer will be obligated to make available under such loan, extension of credit or guarantee, the date on which the credit or guarantee will terminate, and any provisions for the accrual of or deferral of interest.

If the transaction involves an investment, guarantee or other arrangement, state the time period during which the investment, guarantee or other arrangement will remain in effect, together with any provisions for extensions or renewals of such investments, guarantees or arrangements. Furnish a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given if the maximum amount which can at any time be outstanding or for which the insurer can be legally obligated under the loan, extension of credit or guarantee is less than (a) in the case of non-life insurers, the lesser of 3% of the insurer’s admitted assets or 25% of surplus as regards policyholders, or (b) in the case of life insurers, 3% of the insurer’s admitted assets, each as of the 31st day of December next preceding.

ITEM 4. LOANS OR EXTENSIONS OF CREDIT TO A NON-AFFILIATE

If the transaction involves a loan or extension of credit to any person who is not an affiliate, furnish a brief description of the agreement or understanding whereby the proceeds of the proposed transaction, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase the assets of, or to make investments in, any affiliate of the insurer making such loans or extensions of credit, and specify in what manner the proceeds are to be used to loan to, extend credit to, purchase assets of or make investments in any affiliate. Describe the amount and source of funds, securities, property or other consideration for the loan or extension of credit and, if the transaction is one involving consideration other than cash, a description of its cost and its fair market value together with an explanation of the basis for evaluation. Furnish a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given if the loan or extension of credit is one which equals less than, in the case of non-life insurers, the lesser of 3% of the insurer’s admitted assets or 25% of surplus as regards policyholders or, with respect to life insurers, 3% of the insurer’s admitted assets, each as of the 31st day of December next preceding.
ITEM 5. REINSURANCE

If the transaction is a reinsurance agreement or modification thereto, as described by Section 5A(2)(c)(ii) of the Act, or a reinsurance pooling agreement or modification thereto as described by Section 5A(2)(c)(i) of the Act, furnish a description of the known and/or estimated amount of liability to be ceded and/or assumed in each calendar year, the period of time during which the agreement will be in effect, and a statement whether an agreement or understanding exists between the insurer and non-affiliate to the effect that any portion of the assets constituting the consideration for the agreement will be transferred to one or more of the insurer’s affiliates. Furnish a brief description of the consideration involved in the transaction, and a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given for reinsurance agreements or modifications thereto if the reinsurance premium or a change in the insurer’s liabilities, or the projected reinsurance premium or change in the insurer’s liabilities in any of the next three years, in connection with the reinsurance agreement or modification thereto is less than 5% of the insurer’s surplus as of the 31st day of December next preceding. Notice shall be given for all reinsurance pooling agreements including modifications thereto.

ITEM 6. MANAGEMENT AGREEMENTS, SERVICE AGREEMENTS AND COST-SHARING ARRANGEMENTS.

For management and service agreements, furnish:

(a) A brief description of the managerial responsibilities, or services to be performed;
(b) A brief description of the agreement, including a statement of its duration, together with brief descriptions of the basis for compensation and the terms under which payment or compensation is to be made.

For cost-sharing arrangements, furnish:

(a) A brief description of the purpose of the agreement;
(b) A description of the period of time during which the agreement is to be in effect;
(c) A brief description of each party’s expenses or costs covered by the agreement;
(d) A brief description of the accounting basis to be used in calculating each party’s costs under the agreement;
(e) A brief statement as to the effect of the transaction upon the insurer’s policyholder surplus;
(f) A statement regarding the cost allocation methods that specifies whether proposed charges are based on “cost or market.” If market based, rationale for using market instead of cost, including justification for the company’s determination that amounts are fair and reasonable; and
(g) A statement regarding compliance with the NAIC Accounting Practices and Procedure Manual regarding expense allocation.

ITEM 7. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:
SIGNATURE

Pursuant to the requirements of Section 5 of the Act, __________ has caused this application to be duly signed on its behalf in the City of __________ and State of __________ on the __________ day of __________, 20 ___.

Name of Other Person
Involved in Merger or
Acquisition

Filed with the Insurance Department of

__________________________

Dated:__________________________, 20__________

Name, title, address and telephone number of person completing this statement:

__________________________

__________________________

__________________________

__________________________

ITEM 1. NAME AND ADDRESS

State the names and addresses of the persons who hereby provide notice of their involvement in a pending acquisition or change in corporate control.

ITEM 2. NAME AND ADDRESSES OF AFFILIATED COMPANIES

State the names and addresses of the persons affiliated with those listed in Item 1. Describe their affiliations.

ITEM 3. NATURE AND PURPOSE OF THE PROPOSED MERGER OR ACQUISITION

State the nature and purpose of the proposed merger or acquisition.

ITEM 4. NATURE OF BUSINESS

State the nature of the business performed by each of the persons identified in response to Item 1 and Item 2.
ITEM 5. MARKET AND MARKET SHARE

State specifically what market and market share in each relevant insurance market the persons identified in Item 1 and Item 2 currently enjoy in this state. Provide historical market and market share data for each person identified in Item 1 and Item 2 for the past five years and identify the source of such data. Provide a determination as to whether the proposed acquisition or merger, if consummated, would violate the competitive standards of the state as stated in Section 3.1D of the Act. If the proposed acquisition or merger would violate competitive standards, provide justification of why the acquisition or merger would not substantially lessen competition or create a monopoly in the state.

For purposes of this question, market means direct written insurance premium in this state for a line of business as contained in the annual statement required to be filed by insurers licensed to do business in this state.

Drafting Note: State Insurance Departments may additionally choose to make these calculations using their own data or data provided by the National Association of Insurance Commissioners.
FORM F

ENTERPRISE RISK REPORT

Filed with the Insurance Department of the State of ________________________

By

____________________________________

Name of Registrant/Applicant

On Behalf of/Related to Following Insurance Companies

Name  Address

______________________________________________________________________________________

______________________________________________________________________________________

______________________________________________________________________________________

______________________________________________________________________________________

Date: ______________________, 20____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

______________________________________________________________________________________

______________________________________________________________________________________

ITEM 1. ENTERPRISE RISK

The Registrant/Applicant, to the best of its knowledge and belief, shall provide information regarding the following areas that could produce enterprise risk as defined in [insert cross reference to definition of Enterprise Risk in Section 1F of the Act], provided such information is not disclosed in the Insurance Holding Company System Annual Registration Statement filed on behalf of itself or another insurer for which it is the ultimate controlling person:

- Any material developments regarding strategy, internal audit findings, compliance or risk management affecting the insurance holding company system;
- Acquisition or disposal of insurance entities and reallocating of existing financial or insurance entities within the insurance holding company system;
- Any changes of shareholders of the insurance holding company system exceeding ten percent (10%) or more of voting securities;
- Developments in various investigations, regulatory activities or litigation that may have a significant bearing or impact on the insurance holding company system;
- Business plan of the insurance holding company system and summarized strategies for the next 12 months;
- Identification of material concerns of the insurance holding company system raised by supervisory college, if any, in the last year;

MO-450-28
NAIC Model Laws, Regulations, Guidelines and Other Resources—Fall 2020

- Identification of insurance holding company system capital resources and material distribution patterns;

- Identification of any negative movement, or discussions with rating agencies which may have caused, or may cause, potential negative movement in the credit ratings and individual insurer financial strength ratings assessment of the insurance holding company system (including both the rating score and outlook);

- Information on corporate or parental guarantees throughout the holding company and the expected source of liquidity should such guarantees be called upon; and

- Identification of any material activity or development of the insurance holding company system that, in the opinion of senior management, could adversely affect the insurance holding company system.

The Registrant/Applicant may attach the appropriate form most recently filed with the U.S. Securities and Exchange Commission, provided the Registrant/Applicant includes specific references to those areas listed in Item 1 for which the form provides responsive information. If the Registrant/Applicant is not domiciled in the U.S., it may attach its most recent public audited financial statement filed in its country of domicile, provided the Registrant/Applicant includes specific references to those areas listed in Item 1 for which the financial statement provides responsive information.

ITEM 2: OBLIGATION TO REPORT.

If the Registrant/Applicant has not disclosed any information pursuant to Item 1, the Registrant/Applicant shall include a statement affirming that, to the best of its knowledge and belief, it has not identified enterprise risk subject to disclosure pursuant to Item 1.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

2013 3rd Quarter (editorial revision).
Fall 2020 (amended).
Receivership Law (E) Working Group

Summary of Comments Received January 29, 2021 on Proposed Revisions to:
Insurance Holding Company System Regulatory Act, Model #440 and Regulation, Model #450

<table>
<thead>
<tr>
<th>Model #440</th>
<th>Section 5.A(1)(g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACLI</td>
<td>The bond requirement provision would place U.S. insurers at a competitive disadvantage, especially in case of an insolvency. Some may consider turning from affiliates to third parties, which would likely frustrate regulators and make resolution more complex. Furthermore, this is not a standard industry practice. In addition, we do not believe the Drafting Note adequately addresses this issue.</td>
</tr>
<tr>
<td>AHIP &amp; BCBSA</td>
<td>As we review the proposed changes to Model #440, we note with concern the potential solution expressed in Section 5.A(1)(g) which would require all holding companies to post bonds for all affiliate contracts or agreements. There is no mention of any determination of whether the holding company itself or any of its affiliates are in danger of insolvency or otherwise unable to perform their contractual obligations. In the vast majority of cases, insurance holding companies are responsibly regulated and well managed, and neither they nor their affiliates are in jeopardy. This means the practical effect of this broadly applied measure would be to needlessly increase the costs of operation of the holding company without, in most cases, any discernable benefit to the company, the affiliates, or consumers. These resources could be better utilized to provide services which more directly serve the needs of policyholders. This provision also has an implied bias, i.e., that a contract with an affiliate is somehow riskier than the same contract would be with a non-affiliate, or that in the event of an insolvency, a company in receivership is less likely to get cooperation from an affiliate than a non-affiliate. Although we’ve not conducted any in-depth review of historical insolvencies, we submit these premises are unproven, and in fact, that the contrary may well be true. An approach of this nature should certainly include a method for commissioners to clearly delineate those carriers that pose a greater risk of insolvency necessitating bonds for all affiliate contracts or agreements. The NAIC has made significant strides in developing and successfully implementing solvency monitoring tools including, but not limited to, Risk-Focused Financial Analysis and Examination Frameworks and Risk-Based and Group Capital calculations. We believe that regulators have the necessary and essential tools to identify specific carriers who demonstrate hazardous trends and pose a solvency risk which could indicate posting bonds for all affiliate contracts or agreements. We suggest a better approach would be to limit the bonding requirement to a more targeted application, to companies in which there is some objective basis for financial concern. This might be some sort of triggering event or circumstance, perhaps related to periodic financial analysis, risk-based capital submissions, or other similar review. We must oppose any indiscriminately applied bonding requirement that directly penalizes the majority of carriers which are considered well-capitalized, well-governed, and at low risk of insolvency.</td>
</tr>
</tbody>
</table>
Coalition  As we noted in our earlier comment letter of September 24, 2020, the coalition members agree that it is important to protect consumers in the event of a rehabilitation or receivership. We recognize the challenges that face receivers in these instances and support amendments that would bolster a receiver’s ability to protect the public. It is important, however, that these amendments do not, at the same time, harm consumers who are members of financially stable, ongoing concerns.

The proposed amendments to Model #440, *Insurance Holding Company System Regulatory Act*, will make far-reaching changes to the operations of holding companies, far beyond the receivership or rehabilitation arena. Every holding company, whether it is deemed to be at risk or not, will be required to post a bond for *all* affiliate contracts or agreements of an unknown, and unknowable, amount (Sec. 5.A.(a)(g)), they will be required to maintain separate accounts under certain circumstances (Sec. 5.A.(a)(i)), and are required to subject themselves to a potentially unknown and unknowable state court jurisdiction.

We suggest that these provisions, in particular the bonding requirement, are unwise for a number of reasons. First, in the health insurance arena, the environmental trend has long been toward health and wellness integration. Health insurers of any size that are part of a holding company system have and will continue to move toward a more integrated business model that provides not only better health and wellness but also synergies and centralized functions. Centralized functions not only provide policyholders, clients and owners a benefit of scale but streamline insurer operations. Suggesting that every affiliate contract, regardless whether it is material, whether it is critical to the continued operations of the legal entity, or whether it is more or less likely to be necessary to the operations of a receiver, be subject to a bond is a blunt instrument that creates barriers for health carriers to provide services to their members and policyholders, and raises costs and complexity. Health carriers by their very nature have multiple subsidiaries and affiliates. There is a very real chilling effect that the financial burden of a potentially unlimited bonding requirement will have on health insurance operations. Simply the cost of monitoring and maintaining appropriate bonding requirements is a significant cost to companies for very little return and will provide no health or wellness benefits to our consumers to justify such a significant operational cost.

Second, the bonding requirement is unknown and unknowable, and bears no relation to the importance of the services to the operation, the riskiness of the business or the insurer, and ultimately, provides no benefits to policyholders or consumers. There is no reason to place this potentially unlimited and burdensome requirement on a solvent, ongoing operation and the consumers that it serves. Receivers have access to many tools during the course of an insolvency. This one is overly draconian and unnecessary. If a bond is necessary, then it should be necessary for all contracts, not just those with affiliates. We suggest that non-affiliate, third-party contracts are significantly more risky than those within an insurance holding company system.

Third, the requirement that every affiliate contract be subject to a bond is, in effect, an economic tax on integration. A regulatory scheme that favors non-integrated, free-standing licenses that outsource all relevant operations to external contracts is misguided. Those non-integrated services provided by non-integrated contracts are more, not less risky to the operations of an enterprise, yet this provision penalizes insurers for developing the more rational, Safe business model. If a health insurer uses an affiliate to provide payment integrity services, there is less, not more risk to the insurer and its consumers than if those
Services were provided by an outside contractor with no affiliation to the holding company system. The purpose of creating integrated groups is precisely to have better control, and better economics for the enterprise. There is no reason the regulatory community should attempt to disincentivize these operations that provide significant savings and benefits to members and policyholders.

Florida

(g) The insurer shall require the affiliated person(s) to obtain and maintain a bond for the protection of the insurer for the duration of the contract or agreement as required by the commissioner at any time. The bond amount should be no less than the amount specified by the commissioner and noncancelable or terminated by supervision, seizure, conservatorship, or receivership pursuant to [supervision and receivership acts].

Section 5.A.(1)(h)

ACLI Our initial concerns on the segregation provision were properly addressed in the proposed revisions. However, we believe the last two sentences of the subsection may be impractical as counterparties are unlikely to give insurers access to their systems; affiliates are unlikely to waive legal rights on a prospective basis; and affiliates may not be able to waive their rights if they are acting on behalf of a client.

Florida

(h) All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation, at no cost to the insurer, from all other persons’ records and data.

Morgan Lewis

The Act Amendments and the Regulation Amendment proceed on the basis that the books, records and data held by the affiliate are property of the insurer, with the apparent expectation that the receiver can simply take possession and control of them to the exclusion of the affiliates and thereby conduct the affairs of the insurer. Using the term “property” would suggest that the affiliate would need to surrender possession and control of all the data, which is likely infeasible and probably undesirable. Instead, a more detailed approach should be considered. Moreover, the notion that data could and should be readily capable of segregation and that passwords, software and other information” must be available to the insurer is likely to defeat the legitimate business purposes served by locating certain operations in affiliates and put the affiliate, insurer, third-parties and regulators at risk of violating data privacy laws. Changes to the model act and regulation should provide that the receiver can obtain a complete set of all records of any type that pertain to the insurer’s business; obtain access to the operating systems on which the data is maintained; obtain the software that runs those systems either through assumption of licensing agreements or otherwise; and restrict the use of the data by the affiliate if it is not operating the insurer’s business.

Section 5.A.(1)(i)

ACLI This subsection appears to expand upon existing regulations related to an insurer’s funds. The prohibition on comingling is unlikely impractical (e.g., if the affiliate is managing a joint venture on behalf of the insurer).

AHIP & BCBSA Additionally, we share the concerns expressed in the Coalition of Health Insurers’ comment letter pertaining to Section 5.A(1)(i)’s requirement that the insurer’s funds not be commingled with any other accounts. We agree that any such funds, premiums or otherwise, should be clearly and easily identified in the books, accounts, and records of the
affiliate, as required in Section 5.A(1)(e), but we believe clarification would be helpful in 
what else should be done to increase the clarity and ability to identify the various funds’ 
ownership.

| Coalition | In addition to objections to the bonding requirements, we question the language in Sec. 
| 5.A.(1)(i) that “premiums or other funds belonging to the insurer” in the hands of an 
affiliate may not be commingled. It is unclear what “other funds belonging to the insurer” 
may include. While we agree that premiums collected by a third party, whether affiliated or 
not, should be clearly identified as belonging to the insurer on whose behalf they are 
collected, we request clarification about what other “funds” are included in this provision. 
We also suggest that Section 5 already requires that “the books, accounts and records of 
each party...shall be so maintained as to clearly and accurately disclosure the nature and 
details of the transactions...” We question whether this new language in paragraph (i) is 
necessary. |

| Morgan Lewis | The Act Amendments and the Regulation Amendment establish ownership of premiums in 
the hands of the affiliate and in most circumstances require the affiliate to perform services 
without being paid for prior services, at least for a limited period. While this may seem 
desirable from the perspective of the regulator, it is likely not. The affiliates are often 
highly dependent on the revenues from the operation of the insurer, in order to carry out 
the business of the insurer. In particular, the affiliate may be responsible for the payment 
of an insurer’s claims. As the amendments are currently drafted, it is not clear that the 
regulator is required to perform the insurer’s obligation as provided by the agreements. 
There have been recent instances in which regulators have refused to honor agreements 
with the affiliates after taking control of the insurer (and even in supervision), and 
unilaterally imposed alternative arrangements that ultimately resulted in the failure of the 
affiliates. If it is not clear that the regulator is required to follow the agreements with 
affiliates, affiliates will need to seek bankruptcy protection to reject the agreements, which 
in turn will lead to an unproductive standoff with the regulators. 

Additionally, due consideration should be given to the impact of this proposal on other 
laws, particularly those relating to producers’ obligations. 

The same applies to premium. If the contracts provide that the affiliate collects premium 
and sets off its fees prior to remitting the premium to the insurer, disturbing that 
arrangement guaranties that the affiliate will fail and the regulator will wind up with no 
services. The amendments are not clear as to whether the rights being established eliminate 
the contractual setoff rights. If it is going to overturn setoff rights, that should be made 
explicit since it changes the law in receivership, which in most cases expressly recognizes 
set off rights. At a minimum, this should be made clear one way or the other so that all 
parties understand what to expect. However, if the rights are eliminated, the regulatory 
community should expect that holding company systems will seek bankruptcy protection 
very early in the process so that they are protected from unilateral action by regulators. |

| ACLI | We question how this subsection might handle certain situations where affiliates 
agreements are governed by multiple supervisors or jurisdictions, or the affiliates do not 
accept the selected jurisdiction for supervision, seizure, conservatorship, or receivership 
proceedings. Often, insurers and affiliates select specific jurisdictions based on the 
agreement (e.g., investment agreements are often done in New York because their law and |

Kansas City, MO 64108  

RE: Proposed Amendments to the Insurance Holding Company System Regulatory Act (#440)  
and the Insurance Holding Company System Model Regulation (#450)  

Dear Co-Chairs Baldwin and Slaymaker:  

The American Council of Life Insurers (“ACLI”) appreciates this opportunity to provide comments  
to the Receivership Law Working Group on proposed amendments to Models #440 and #450 relating  
to the continuity of essential services and functions through affiliated intercompany agreements  
during an insurer receivership.  

While we support most of the proposed amendments, we believe that some of them would either be  
extremely burdensome for insurers and their affiliates, or simply impractical.  

Below are the concerns we have with regard to Model #440:  

Section 5.A.(1)(g) - The bond requirement provision would place U.S. insurers at a competitive  
disadvantage, especially in case of an insolvency. Some may consider turning from affiliates to third-  
parties, which would likely frustrate regulators and make resolution more complex. Furthermore, this  
is not a standard industry practice. In addition, we do not believe the Drafting Note adequately  
dresses this issue.  

Section 5.A.(1)(h) - Our initial concerns on the segregation provision were properly addressed in the  
proposed revisions. However, we believe the last two sentences of the subsection may be impractical  
as counterparties are unlikely to give insurers access to their systems; affiliates are unlikely to waive  
legal rights on a prospective basis; and affiliates may not be able to waive their rights if they are  
acting on behalf of a client.  

1 The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and  
avocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance  
industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting  
consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance,  
disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280  
member companies represent 95 percent of industry assets in the United States. Learn more at www.acli.com.

© 2021 National Association of Insurance Commissioners
Section 5.A.(1)(i) - This subsection appears to expand upon existing regulations related to an insurer’s funds. The prohibition on comingling is unlikely impractical (e.g., if the affiliate is managing a joint venture on behalf of the insurer.

Section 5.A.(6) – We question how this subsection might handle certain situations where affiliates agreements are governed by multiple supervisors or jurisdictions, or the affiliates do not accept the selected jurisdiction for supervision, seizure, conservatorship, or receivership proceedings. Often, insurers and affiliates select specific jurisdictions based on the agreement (e.g., investment agreements are often done in New York because their law and courts are most developed). How would this subsection address service agreements between two affiliated insurers with different supervisors and jurisdictions? What about foreign affiliates who are outside the jurisdiction of the U.S.?

Section 11.D. – We believe that having to put in place a bond for any agreement found not to have been properly approved would be very punitive. Insurers usually just seek regulatory approval after the fact.

Below are the concerns we have with regard to Model #450:

Section 19.B.(6), Section 19.B.(11)(b) and (c), Section 19.B.(13): It is not reasonable to ask the affiliate to do work for at no cost, and the requirements will be problematic for regulated entities and those in bankruptcy.

Thanks again for this opportunity to comment. If you have any questions, feel free to contact me at waynemehlman@aci.com or 202-624-2135.

Sincerely,

Wayne Mehlman

Re: “Essential Services” and Models #440 and #450

Dear Ms. Slaymaker and Mr. Baldwin;

America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA) appreciate this opportunity to comment on the Receivership Law (E) Working Group’s proposed revisions to the Insurance Holding Company System Regulatory Act, Model #440 and the companion Regulation, Model #450.

As we review the proposed changes to Model #440, we note with concern the potential solution expressed in Section 5.A(1)(g) which would require all holding companies to post bonds for all affiliate contracts or agreements. There is no mention of any determination of whether the holding company itself or any of its affiliates are in danger of insolvency or otherwise unable to perform their contractual obligations. In the vast majority of cases, insurance holding companies are responsibly regulated and well managed, and neither they nor their affiliates are in jeopardy. This means the practical effect of this broadly applied measure would be to needlessly increase the costs of operation of the holding company without, in most cases, any discernable benefit to the company, the affiliates, or consumers. These resources could be better utilized to provide services which more directly serve the needs of policyholders.

This provision also has an implied bias, i.e., that a contract with an affiliate is somehow riskier than the same contract would be with a non-affiliate, or that in the event of an insolvency, a company in receivership is less likely to get cooperation from an affiliate than a non-affiliate.
Although we’ve not conducted any in-depth review of historical insolvencies, we submit these premises are unproven, and in fact, that the contrary may well be true.

An approach of this nature should certainly include a method for commissioners to clearly delineate those carriers that pose a greater risk of insolvency necessitating bonds for all affiliate contracts or agreements. The NAIC has made significant strides in developing and successfully implementing solvency monitoring tools including, but not limited to, Risk-Focused Financial Analysis and Examination Frameworks and Risk-Based and Group Capital calculations. We believe that regulators have the necessary and essential tools to identify specific carriers who demonstrate hazardous trends and pose a solvency risk which could indicate posting bonds for all affiliate contracts or agreements.

We suggest a better approach would be to limit the bonding requirement to a more targeted application, to companies in which there is some objective basis for financial concern. This might be some sort of triggering event or circumstance, perhaps related to periodic financial analysis, risk-based capital submissions, or other similar review. We must oppose any indiscriminately applied bonding requirement that directly penalizes the majority of carriers which are considered well-capitalized, well-governed, and at low risk of insolvency.

Additionally, we share the concerns expressed in the Coalition of Health Insurers’ comment letter pertaining to Section 5.A(1)(i)’s requirement that the insurer’s funds not be commingled with any other accounts. We agree that any such funds, premiums or otherwise, should be clearly and easily identified in the books, accounts, and records of the affiliate, as required in Section 5.A(1)(e), but we believe clarification would be helpful in what else should be done to increase the clarity and ability to identify the various funds’ ownership.

Again, AHIP and BCBSA appreciate this opportunity to offer comments on this issue, and we look forward to working with you to find the most productive way forward.

Re: Amendments to Models #440/450

Dear Mr. Baldwin and Ms. Slaymaker:

I write on behalf of a coalition of health insurance companies, including Anthem, Cigna, CVS Health and UnitedHealth Group, who thank you for the opportunity to provide additional comments regarding the continuation of essential services through affiliated intercompany agreements for insurers in receivership. As we noted in our earlier comment letter of September 24, 2020, the coalition members agree that it is important to protect consumers in the event of a rehabilitation or receivership. We recognize the challenges that face receivers in these instances and support amendments that would bolster a receiver’s ability to protect the public. It is important, however, that these amendments do not, at the same time, harm consumers who are members of financially stable, ongoing concerns.

The proposed amendments to Model #440, the Insurance Holding Company System Regulatory Act, will make far-reaching changes to the operations of holding companies, far beyond the receivership or rehabilitation arena. Every holding company, whether it is deemed to be at risk or not, will be required to post a bond for all affiliate contracts or agreements of an unknown, and unknowable, amount (Sec. 5.A.(a)(g)), they will be required to maintain separate accounts under...
certain circumstances (Sec. 5.A.(a)(i)), and are required to subject themselves to a potentially unknown and unknowable state court jurisdiction.

We suggest that these provisions, in particular the bonding requirement, are unwise for a number of reasons. First, in the health insurance arena, the environmental trend has long been toward health and wellness integration. Health insurers of any size that are part of a holding company system have and will continue to move toward a more integrated business model that provides not only better health and wellness but also synergies and centralized functions. Centralized functions not only provide policyholders, clients and owners a benefit of scale but streamline insurer operations. Suggesting that every affiliate contract, regardless whether it is material, whether it is critical to the continued operations of the legal entity, or whether it is more or less likely to be necessary to the operations of a receiver, be subject to a bond is a blunt instrument that creates barriers for health carriers to provide services to their members and policyholders, and raises costs and complexity. Health carriers by their very nature have multiple subsidiaries and affiliates. There is a very real chilling effect that the financial burden of a potentially unlimited bonding requirement will have on health insurance operations. Simply the cost of monitoring and maintaining appropriate bonding requirements is a significant cost to companies for very little return and will provide no health or wellness benefits to our consumers to justify such a significant operational cost.

Second, the bonding requirement is unknown and unknowable, and bears no relation to the importance of the services to the operation, the riskiness of the business or the insurer, and ultimately, provides no benefits to policyholders or consumers. There is no reason to place this potentially unlimited and burdensome requirement on a solvent, ongoing operation and the consumers that it serves. Receivers have access to many tools during the course of an insolvency. This one is overly draconian and unnecessary. If a bond is necessary, then it should be necessary for all contracts, not just those with affiliates. We suggest that non-affiliate, third-party contracts are significantly more risky than those within an insurance holding company system.

Third, the requirement that every affiliate contract be subject to a bond is, in effect, an economic tax on integration. A regulatory scheme that favors non-integrated, free-standing licenses that outsource all relevant operations to external contracts is misguided. Those non-integrated services provided by non-integrated contracts are more, not less risky to the operations of an enterprise, yet this provision penalizes insurers for developing the more rational, safe business model. If a health insurer uses an affiliate to provide payment integrity services, there is less, not more risk to the insurer and its consumers than if those services were provided by an outside contractor with no affiliation to the holding company system. The purpose of creating integrated groups is precisely to have better control, and better economics for the enterprise. There is no reason the regulatory community should attempt to disincentivize these operations that provide significant savings and benefits to members and policyholders.

In addition to objections to the bonding requirements, we question the language in Sec. 5.A.(1)(i) that “premiums or other funds belonging to the insurer” in the hands of an affiliate may not be commingled. It is unclear what “other funds belonging to the insurer” may include. While we agree that premiums collected by a third party, whether affiliated or not, should be clearly
Arbor Strategies, LLC  
January 29, 2021  
Page | 3

identified as belonging to the insurer on whose behalf they are collected, we request clarification about what other “funds” are included in this provision. We also suggest that Section 5 already requires that “the books, accounts and records of each party…shall be so maintained as to clearly and accurately disclose the nature and details of the transactions…” We question whether this new language in paragraph (i) is necessary.

We thank you for the opportunity to provide our comments on these amendments and look forward to continued discussions with the Working Group.

Sincerely yours,

Chris Petersen

Re: Comments on Amendments to Holding Company Acts

Dear Jane:

We write to comment on the attached amendments to Sections 5 and 11 of the Insurance Holding Company System Regulatory Act (#440) and Section 19 of the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The proposed amendments strengthen the regulator's hand in dealing with the now common situation where an insurance company's operating functions are distributed around the members of a holding company group.

1. The Act Amendments and the Regulation Amendment proceed on the basis that the books, records and data held by an affiliate are property of the insurer, with the apparent expectation that the receiver can simply take possession and control of them to the exclusion of the affiliates and thereby conduct the affairs of the insurer. Using the term "property" would suggest that the affiliate would need to surrender possession and control of all the data, which is likely infeasible, and probably undesirable. Instead, a more detailed approach should be considered. Moreover, the notion that data could or should be "readily capable of segregation" and that "passwords, software or other information" must be available to the insurer is likely to defeat the legitimate business purposes served by locating certain operations in affiliates and put the affiliate, insurer, third-parties and regulators at risk of violating data privacy laws. Changes to the model act and regulation should provide that the receiver can obtain a complete set of all records of any type that pertain to the insurer's business; obtain access to the operating systems on which the data is maintained; obtain the software that runs those systems either through assumption of licensing agreements or otherwise; and restrict the use of the data by the affiliate if it is not operating the insurer's business.

2. The Act Amendments and the Regulation Amendment establish ownership of premiums in the hands of the affiliate and in most circumstances require the affiliate to perform services without being paid for prior services, at least for a limited period. While this may seem desirable from the perspective of the regulator, it is likely not. The affiliates are often highly dependent on
the revenues from the operation of the insurer, in order to carry out the business of the insurer. In particular, the affiliate may be responsible for the payment of an insurer’s claims. As the amendments are currently drafted, it is not clear that the regulator is required to perform the insurer's obligation as provided by the agreements. There have been recent instances in which regulators have refused to honor agreements with the affiliates after taking control of the insurer (and even in supervision), and unilaterally imposed alternative arrangements that ultimately resulted in the failure of the affiliates. If it is not clear that the regulator is required to follow the agreements with affiliates, affiliates will need to seek bankruptcy protection to reject the agreements, which in turn will lead to an unproductive standoff with the regulators.

Additionally, due consideration should be given to the impact of this proposal on other laws, particularly those relating to producers’ obligations.

3. The same applies to premium. If the contracts provide that the affiliate collects premium and sets off its fees prior to remitting the premium to the insurer, disturbing that arrangement guaranties that the affiliate will fail and the regulator will wind up with no services. The amendments are not clear as to whether the rights being established eliminate the contractual setoff rights. If it is going to over turn setoff rights, that should be made explicit since it changes the law in receivership, which in most cases expressly recognizes set off rights. At a minimum, this should be made clear one way or the other so that all parties understand what to expect. However, if the rights are eliminated, the regulatory community should expect that holding company systems will seek bankruptcy protection very early in the process so that they are protected from unilateral action by regulators.

Sincerely,

Harold S. Horwich

HSH/vgd
Enclosures
NOLHGA and NCIGF provide the following comments in response to the exposure of draft amendments to Models #440 and #450 ("Draft Amendments") for public comment on December 18, 2020. NOLHGA and NCIGF appreciate the Working Group's consideration of their comments submitted on December 16, 2020, and believe the Draft Amendments as presented for public comment reflect those comments.

NOLHGA and NCIGF offer technical suggestions for the Working Group's consideration.

Model #450 Section 19B(15)

During its call on December 17, 2020, the Working Group discussed the importance of early coordination between the receiver and the affected guaranty association(s) and noted that such coordination is necessary even before a guaranty association is triggered (e.g., during supervision or conservatorship). The Working Group decided to include the new Section 19B(15) suggested by NOLHGA and NCIGF. In response to a question from an interested party and discussion among the Working Group, the proposed language was modified to reflect the concept of early coordination between the receiver and the affected guaranty association(s).

NOLHGA and NCIGF generally agree with the modifications made to the new Section 19B(15). We offer the following technical changes for consistency. Since this Section contemplates cooperation prior to guaranty association triggering, we recommend referring to policies or contracts that are "eligible for coverage." Referring to policies or contracts that are "covered" could imply that coverage determinations have been made, which would not be the case in supervision, conservation, or otherwise before a guaranty association is triggered.

Specify that, in furtherance of the cooperation between the receiver and the affected guaranty association(s) and subject to the receiver's authority over the insurer, if the insurer is placed into supervision, seizure, conservatorship, or receivership pursuant to [supervision and receivership acts], and portions of the insurer's policies or contracts are covered eligible for coverage by one or more guaranty associations, the affiliate's commitments under Subsections 19B(11), 19B(12), 19B(13) and 19B(14) of this regulation will extend to the such guaranty association(s) providing such coverage.

****

We appreciate your consideration of this proposed change, and we look forward to contributing to the Working Group's continued discussions.

Dear Co-Chairs Baldwin and Slaymaker:

The American Property Casualty Insurance Association (APCIA) takes this opportunity to offer comments on the proposed amendments to Model #440 relating to the continuity of essential services and functions through affiliated intercompany agreements during an insurer receivership.

Section 5A(g) gives the commissioner the discretion to direct an insurer to require a bond of an affiliated service provider but places no limits whatsoever on the commissioner’s discretion. The Working Group has proposed some new language in the drafting note setting forth the types of things the commissioner should consider in deciding whether and how to exercise the discretion to require a bond. APCIA believes the proposed drafting note language is helpful and we support its inclusion. However, APCIA believes that an additional amendment is needed to the text of Section 5A(g) itself to clarify that the amount of the bond required may not exceed the value of the contract(s) or agreement(s) in any one year. We therefore propose that the language be amended as follows:

(g) The insurer shall require the affiliated person(s) to obtain and maintain a bond for the protection of the insurer for the duration of the contract(s) or agreement(s) if required at the discretion of the commissioner at any time. The bond amount should be no less than the amount specified by the commissioner, which amount shall not exceed the value of the contract(s) or agreement(s) in any one year.

APCIA believes this should provide adequate protection to the insurer or receiver while ensuring that the bond requirement will not be excessive and unreasonably burdensome.

APCIA appreciates the Working Group’s consideration of this proposed addition and we would be pleased to respond to any questions or concerns Working Group members may have.

Sincerely,

Robert W. Woody

Re: Amendments to Model 440

Dear Mr. Baldwin and Ms Slaymaker:

I write on behalf of a coalition of health insurance companies, including Anthem, Cigna, CVS Health and UnitedHealth Group, who thank you for the opportunity to provide comments regarding the revised amendments to the Insurance Holding Company System Regulatory Act (“Model 440”) that the Receivership Law Working Group (“Working Group”) recently exposed. As noted in our earlier comment letters, the coalition members agree that it is important to protect consumers in the event of a rehabilitation or receivership. We recognize the challenges receivers face in these instances and support amendments that would bolster a receiver’s ability to protect the public. It is important, however, that these amendments do not, at the same time, harm consumers who are members of financially stable, ongoing concerns. Unfortunately, the revised language regarding bonding requirements do exactly that.

As we noted in greater detail in our letter dated January 29, 2021 (attached) imposing bonding requirements on stable, solvent health insurance groups places unnecessary financial burdens on the insurers and their members through increased premiums to finance these
unnecessary bonding requirements. The provisions of the latest draft, which grant the state the unfettered discretion to impose any bond requirement at any time, in any amount, for any reason or for no reason, are unwise for a number of reasons. First, they do not recognize that the environment in the health insurance arena has long been toward health and wellness integration. Allowing the state to impose a bond requirement on internally integrated health care systems creates a perverse incentive for carriers to unwind their integration and avoid the potentially extreme bond cost requirements. This is, in effect, a regulatory tax on integration in the health care system.

Second, the bond requirement is unknown and unknowable, and bears no relation to the importance of the services to the operation, the riskiness of the business or the insurer, and ultimately, for the vast majority of insurers subject to these provisions, provides no benefits to policyholders or consumers. It will, however, create layers of costs that will ultimately be borne by those policyholders. As the U.S. regulatory system attempts to move toward a more risk-based solvency oversight system, it makes no sense to create a potentially massive financial requirement that has no rational basis in the risk posed by an enterprise. In addition, leaving the requirement completely to the discretion of insurance commissioners will necessarily result in uneven application and politicize the bonding requirements. Finally, the proposed amendment does not address the central issue of how to ensure that there are proper tools in place for receivers to address concerns with financially distress companies.

To the extent that bonding requirements remain in Model 440, we believe that the discretion to impose these requirements should be based on solvency triggers. The use of a solvency trigger ensures that the bonding requirements are only imposed on those insurers where additional protections are needed. Additionally, the use of solvency triggers also ensures that the bonding requirements are imposed at the point in time when additional protections are warranted. We recommend the following language as a better alternative as to when bonding requirements should be implemented:

(g) If an insurer subject to this Act is deemed to be in a hazardous financial condition as defined by [insert citation for Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition] or a condition that would be grounds for supervision, conservation, or a delinquency proceeding, then the Commissioner may require the insurer or the affiliated person(s) to obtain and maintain a bond for the protection of the insurer for the duration of the contract(s) or agreement(s). The bond amount should be no less than the amount specified by the commissioner;

We also recommend that the NAIC amend the proposed draft noting at page 440-17 regarding the bonding requirements as follows:

**Drafting Note:** The bond requirement is at the discretion of the commissioner. The intent of the bond is to ensure the affiliated services provided under the contract(s) are fulfilled, which may be referred to as a “performance bond”. In determining appropriate circumstances when a commissioner may require a bond and in specifying an amount, the
Arbor Strategies, LLC  
February 26, 2021  
Page 3

commissioner should evaluate and consider whether an insurer subject to this act is in a hazardous financial condition or a condition that would be grounds for substantial regulatory action including supervision, conservation, or a delinquency proceeding. If it is, the bond requirement would be available as an additional regulatory remedy at the discretion of the commissioner, their review of the contract and the affiliated person, analysis of the holding company system, and examination or investigation of the insurer to determine whether concerns exist currently or prospectively that warrant such a bond. For example, the commissioner may consider whether concerns exist with respect to the affiliated person’s ability to fulfill the contract or agreement if the insurer is placed into liquidation.

The commissioner also has discretion to determine if a bond is necessary and if so, if it should be required for a single contract, multiple contracts, or contracts with a specific affiliated person rather than requiring bonds for each contract or agreement. Note that bonds under Section 5A(g) may not be needed in states that already require bonds for licensure of third-party administrators.

We thank you for the opportunity to provide our comments and look forward to continued discussions with the Working Group.

Sincerely,

Chris Petersen

Re: Amendments to Models #440/450

Dear Mr. Baldwin and Ms. Slaymaker:

I write on behalf of a coalition of health insurance companies, including Anthem, Cigna, CVS Health and UnitedHealth Group, who thank you for the opportunity to provide additional comments regarding the continuation of essential services through affiliated intercompany agreements for insurers in receivership. As we noted in our earlier comment letter of September 24, 2020, the coalition members agree that it is important to protect consumers in the event of a rehabilitation or receivership. We recognize the challenges that face receivers in these instances and support amendments that would bolster a receiver’s ability to protect the public. It is important, however, that these amendments do not, at the same time, harm consumers who are members of financially stable, ongoing concerns.

The proposed amendments to Model #440, the Insurance Holding Company System Regulatory Act, will make far-reaching changes to the operations of holding companies, far beyond the receivership or rehabilitation arena. Every holding company, whether it is deemed to be at risk or not, will be required to post a bond for all affiliate contracts or agreements of an unknown, and unknowable, amount (Sec. 5.A.(a)(g)), they will be required to maintain separate accounts under

919 E. Main Street | Suite 1000 | Richmond, VA 23219

P a g e | 2

certain circumstances (Sec. 5.A.(a)(i)), and are required to subject themselves to a potentially unknown and unknowable state court jurisdiction.

We suggest that these provisions, in particular the bonding requirement, are unwise for a number of reasons. First, in the health insurance arena, the environmental trend has long been toward health and wellness integration. Health insurers of any size that are part of a holding company system have and will continue to move toward a more integrated business model that provides not only better health and wellness but also synergies and centralized functions. Centralized functions not only provide policyholders, clients and owners a benefit of scale but streamline insurer operations. Suggesting that every affiliate contract, regardless whether it is material, whether it is critical to the continued operations of the legal entity, or whether it is more or less likely to be necessary to the operations of a receiver, be subject to a bond is a blunt instrument that creates barriers for health carriers to provide services to their members and policyholders, and raises costs and complexity. Health carriers by their very nature have multiple subsidiaries and affiliates. There is a very real chilling effect that the financial burden of a potentially unlimited bonding requirement will have on health insurance operations. Simply the cost of monitoring and maintaining appropriate bonding requirements is a significant cost to companies for very little return and will provide no health or wellness benefits to our consumers to justify such a significant operational cost.

Second, the bonding requirement is unknown and unknowable, and bears no relation to the importance of the services to the operation, the riskiness of the business or the insurer, and ultimately, provides no benefits to policyholders or consumers. There is no reason to place this potentially unlimited and burdensome requirement on a solvent, ongoing operation and the consumers that it serves. Receivers have access to many tools during the course of an insolvency. This one is overly draconian and unnecessary. If a bond is necessary, then it should be necessary for all contracts, not just those with affiliates. We suggest that non-affiliate, third-party contracts are significantly more risky than those within an insurance holding company system.

Third, the requirement that every affiliate contract be subject to a bond is, in effect, an economic tax on integration. A regulatory scheme that favors non-integrated, free-standing licenses that outsource all relevant operations to external contracts is misguided. Those non-integrated services provided by non-integrated contracts are more, not less risky to the operations of an enterprise, yet this provision penalizes insurers for developing the more rational, safe business model. If a health insurer uses an affiliate to provide payment integrity services, there is less, not more risk to the insurer and its consumers than if those services were provided by an outside contractor with no affiliation to the holding company system. The purpose of creating integrated groups is precisely to have better control, and better economics for the enterprise. There is no reason the regulatory community should attempt to disincentivize these operations that provide significant savings and benefits to members and policyholders.

In addition to objections to the bonding requirements, we question the language in Sec. 5.A.(1)(i) that “premiums or other funds belonging to the insurer” in the hands of an affiliate may not be commingled. It is unclear what “other funds belonging to the insurer” may include. While we agree that premiums collected by a third party, whether affiliated or not, should be clearly
Arbor Strategies, LLC
January 29, 2021

identified as belonging to the insurer on whose behalf they are collected, we request clarification about what other “funds” are included in this provision. We also suggest that Section 5 already requires that “the books, accounts and records of each party...shall be so maintained as to clearly and accurately disclosure the nature and details of the transactions...” We question whether this new language in paragraph (i) is necessary.

We thank you for the opportunity to provide our comments on these amendments and look forward to continued discussions with the Working Group.

Sincerely yours,

Chris Petersen

Re: “Essential Services” and Models #440 and #450

Dear Mr. Baldwin and Ms. Slaymaker;

America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA)
welcome the opportunity to comment on the Receivership Law (E) Working Group’s revised and
proposed revisions to the Insurance Holding Company System Regulatory Act, Model #440, re-exposed
for comments on Feb. 4.

We appreciate the Working Group’s continued efforts and deliberative process to find feasible solutions
that are satisfactory to all interested stakeholders. Our comments are focused on the proposed revisions in
Section 5.A(1)(g), that would “require the affiliated person(s) to obtain and maintain a bond for the
protection of the insurer for the duration of the contract(s) or agreement(s) if required at the discretion of
the commissioner at any time.”

As noted in our Jan. 29 comment letter, we recommend that a better approach would be to limit the bonding
requirement to a more targeted application, specifically for insurers in which there is some objective basis
for receivership concern and a triggering event or circumstance. Following is suggested language that we
propose for the working group’s consideration.

If an insurer subject to this Act is deemed to be in a hazardous financial condition as defined by [insert
citation for Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed
to be in Hazardous Financial Condition] then the Commissioner may require the insurer or the affiliated
person(s) to obtain and maintain a bond for the protection of the insurer for the duration of the contract(s)
or agreement(s).

The Commissioner’s review should consider, for example, whether concerns exist with respect to the
affiliated person’s ability to fulfill the contract or agreement if the insurer were to be put into
liquidation. Once the insurer is deemed to be in a hazardous financial condition and a bond is necessary, the Commissioner has discretion to determine the bond amount and whether a bond should be required for a single contract, multiple contracts, or contracts only with a specific person(s).

Again, AHIP and BCBSA appreciate this opportunity to offer comments on this issue, and we look forward to working with you to find the most productive way forward.

Sincerely,

Bob Ridgeway
Senior Government Relations Counsel
Bridgeway@AHIP.org

NOLHGA and NCIGF previously provided comments in response to the exposure of draft amendments to Models #440 and #450. During the Working Group's call on February 4, 2021, an interested party raised concerns about Section 5A(6) of Model #440, a section on which NOLHGA and NCIGF previously commented. As a proposed response to those concerns, NOLHGA and NCIGF offer the following edits to the text of Section 5A(6) and propose an accompanying drafting note.

Model #440 Section 5A(6)

(6) Supervision, seizure, conservatorship, or receivership proceedings.

(a) Any affiliate that is party to an agreement or contract with a domestic insurer pursuant to Subsection A(2)(d), shall be subject to the jurisdiction of any supervision, seizure, conservatorship, or receivership proceedings against the insurer, and to the authority of any supervisor, conservator, rehabilitator, or liquidator for the insurer appointed pursuant to [supervision and receivership acts] for the purpose of interpreting, enforcing, and overseeing the affiliate’s obligations under the agreement or contract to perform services for the insurer that agreements, relationship, and dealings with the insurer, if the services provided by the affiliate to the insurer:

(i) are an integral part of the insurer’s operations, including but not limited to management, administrative, accounting, data processing, marketing, underwriting, claims handling, investment, or any other similar functions; or

(ii) are essential to the insurer’s ability to fulfill its obligations under insurance policies.

(b) The Commissioner may require that an Any agreement or contract pursuant to Subsection A(2)(d) for the provision of services described in (i) and (ii) above must specify that the affiliate consents to the jurisdiction as set forth in this Section 5A(6).

DRAFTING NOTE: Section 5A(6) is not intended to subject affiliates, in particular those that may be subject to regulation in other jurisdictions, to the general jurisdiction of pending supervision, seizure, conservation or receivership court proceedings in this state, or the general authority of a supervisor, conservator or receiver for a domestic
insurer. Rather, the jurisdiction and authority conferred by this provision is limited to ensuring that a domestic insurer continues to receive essential services from an affiliate that it has contracted with to provide such services, in accordance with the terms of the contract and applicable law, during the aforementioned proceedings. Section 5A(6)(b) gives the Commissioner discretion to require documentation of an affiliate's consent to this jurisdiction in the agreement or contract. In determining appropriate circumstances when a Commissioner may require such provision, the Commissioner should consider the scope and materiality to the domestic insurer of the contract, the nature of the holding company system, and whether examination or investigation of the domestic insurer warrant requirement of such a provision.

****

We appreciate your consideration of these proposed changes, and we look forward to contributing to the Working Group's continued discussions.

GUIDELINE FOR DEFINITION OF RECIPROCAL STATE IN RECEIVERSHIP LAWS

Drafting Note: The receivership laws of most states address the coordination of receiverships involving multiple states. Typically, these laws provide that a domiciliary receiver appointed in another state has certain rights and protections, such as the following:

- The domiciliary receiver is vested with the title to the insurer’s assets in the state;
- Attachments, garnishments, or levies against the insurer or its assets are prohibited; and
- Actions against the insurer and its insureds are stayed for a specified period of time.

In many states’ laws, these provisions may apply only if the domiciliary state is a “reciprocal state.” Frequently, the definition of a reciprocal state is based on NAIC model laws adopted more than twenty years ago. These definitions may be inconsistent with laws in other states, and more prescriptive than the Part A standards of the NAIC Financial Regulation Standards and Accreditation Program for state receivership laws. As a result, the assets of a receivership estate might not be protected outside of the domiciliary state, and the Receiver may be forced to defend litigation in multiple forums.

The provisions described above are intended to promote judicial economy, which benefits all participants in the receivership process. This Guideline provides a statutory definition that may be used by states with a reciprocity requirement to effectuate the purposes of these provisions. Under this definition, any state meeting the applicable NAIC Part A accreditation standards for receivership laws will be treated as a reciprocal state. The definition recognizes the diversity of existing state receivership laws, and should avoid unnecessary litigation regarding the recognition of a state as a reciprocal state.

Definition of Reciprocal State for Receivership

“Reciprocal State” means a state that has enacted a law that sets forth a scheme for the administration of an insurer in receivership by the state’s insurance commissioner [or substitute the equivalent title used by the state, such as superintendent or director], or comparable insurance regulatory official.
REINSURANCE (E) TASK FORCE

Reinsurance (E) Task Force March 23, 2021, Minutes ...................................................................................................................... 10-963
Memorandum to the Financial Condition (E) Committee from the Group Capital Calculation (E) Working
Group Dated Feb. 25, 2021, Regarding Proposed New Charge for the Recognize and Accept Process

the Credit for Reinsurance Model Regulation (#786); Status as of March 17, 2021 (Attachment Three) ...........10-996
The Reinsurance (E) Task Force met March 23, 2021. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Richard Ford (AL); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Dave Lonchar (DE); David Altmaier represented by Carolyn Morgan and Virginia Christy (FL); Doug Ommen (IA); Dana Popish Severinghaus represented by Eric Moser and Susan Berry (IL); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy and Vicki Lloyd (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Troy Downing represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by John Tirado (NJ); Russell Toal represented by Leatrice Geckler (NM); Linda A. Lacewell represented by Michael Campanelli (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Doug Slap represented by Jamie Walker (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Michael S. Pieciak represented by David Provost (VT).

1. **Adopted its 2020 Fall National Meeting Minutes**

Mr. Eft made a motion, seconded by Ms. Geckler, to adopt the Task Force’s Nov. 17, 2020, minutes (see NAIC Proceedings – Fall 2020, Reinsurance (E) Task Force). The motion passed unanimously.

Mr. Kaumann provided the report of the Reinsurance Financial Analysis (E) Working Group. He stated that the Working Group met Jan. 28 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the application of one new certified reinsurer. Mr. Kaumann stated that the Working Group would meet several more times during 2021 to complete the remaining reviews of certified reinsurers and to discuss any new applications. He noted that the Working Group intends to update the Reinsurance Financial Analysis (E) Working Group Procedures Manual (ReFAWG Manual) to include procedures for the review and approval of reciprocal jurisdiction reinsurers and to implement a passporting process similar to the process used for certified reinsurers.

Mr. Kaumann made a motion, seconded by Ms. Macaluso, to adopt the Working Group’s report. The motion passed unanimously.

3. **Adopted the Report of the Qualified Jurisdiction (E) Working Group**

Mr. Wake provided the report of the Qualified Jurisdiction (E) Working Group. He stated that the Working Group met March 17 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to: 1) discuss the initial review of a country being evaluated as a qualified jurisdiction; 2) provide updates on a previous initial review; and 3) conduct ongoing business.

Mr. Wake stated that in December 2020, the NAIC adopted revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), which adopted a group capital calculation (GCC) for the states. These revisions specifically include provisions that allow a commissioner to exempt groups that have a group-wide supervisor that recognize and accept the GCC for U.S. groups in their jurisdiction. Model #450 provides a general framework for how the recognition and acceptance process will work and specifically contemplates the development of a list of such jurisdictions.

Mr. Wake stated that the Financial Condition (E) Committee met March 8 and adopted a recommendation from the Group Capital Calculation (E) Working Group (Attachment One) to: 1) reposition the Qualified Jurisdiction (E) Working Group to
report directly to the Committee; 2) modify the 2021 charges to include developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the NAIC GCC; and 3) revise the title of the group to be the Mutual Recognition of Jurisdictions (E) Working Group.

Mr. Wake noted that the Qualified Jurisdiction (E) Working Group was chosen to implement this charge because of the experience with reviewing qualified jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital for reciprocal jurisdiction purposes. He stated that issues related to the GCC will be communicated to the Committee while issues related to qualified and reciprocal jurisdictions will continue to be reported to the Task Force, in compliance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.

Mr. Wake stated that the Working Group also discussed revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions (Attachment Two) during its March 17 meeting. He noted that the revisions would incorporate provisions for terminating the status of a qualified or reciprocal jurisdiction and would create a passporting process for reciprocal jurisdictions.

Karalee C. Morell (Reinsurance Association of America—RAA) requested that states that have adopted the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) would communicate that there is a process in place to accept applications from reciprocal jurisdiction reinsurers. She noted that while both the certified reinsurer and reciprocal jurisdiction reinsurer programs are in place, there will be some administrative synergies. She asked if there had been consideration to using a streamlined process that relies on information gathered from certified reinsurer reviews that could be used for reciprocal jurisdiction reinsurers.

Mr. Wake noted that these concepts had been considered and would be discussed further when the ReFAWG Manual is updated. Mr. Kaumann agreed that this will be considered by the Reinsurance Financial Analysis (E) Working Group.

Dan Schelp (NAIC) stated that he had contacted the eight states that have adopted the 2019 revisions to Model #785 and Model #786 and noted that Iowa was only state that had received a formal application. He noted that for some states, the 2019 revisions are not effective yet. Mr. Schelp stated that he has been providing the state insurance regulators with the Uniform Checklist for Reciprocal Jurisdiction Reinsurers as a tool to assist in reviewing and approving reciprocal jurisdiction reinsurers.

Sabrina Miesowitz (Lloyd’s America) stated that she agrees with Ms. Morell’s comments and asked if additional guidance could be provided for how the process will work for current certified reinsurers that will become reciprocal jurisdiction reinsurers.

Mr. Schelp stated that additional guidance will be considered when the ReFAWG Manual is revised. He added that NAIC staff will work with state insurance regulators to ensure that the Task Force is aware of which states are ready to recognize reciprocal jurisdiction reinsurers and that the Mutual Recognition of Jurisdictions (E) Working Group could also address.

Mr. Wake made a motion, seconded by Mr. Bruggeman, to adopt the Working Group’s report and for the Task Force to expose the revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions for a 30-day comment period ending April 23. The motion passed unanimously.

4. Received a Status Report on the States’ Implementation of the 2019 Revisions to Model #785 and Model #786

Mr. Rehagen stated that as of March 18, 23 U.S. jurisdictions have adopted the 2019 revisions to Model #785, while 21 jurisdictions have action under consideration. He noted that eight states have adopted the revisions to Model #786, and six jurisdictions currently have action under consideration. He stated that the maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Three).

Mr. Rehagen stated that the 2019 revisions to the models must be adopted by the states prior to Sept. 1, 2022, which is when the revisions become an accreditation standard. He noted that Sept. 1, 2022, is also the date at which the Federal Insurance Office (FIO) must complete its federal preemption reviews under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement). He noted that the COVID-19 pandemic has slowed the adoption process, as several state legislatures have temporarily closed or have primarly focused on the pandemic. He stated that the Task Force will provide support to the states to meet this deadline, and it will communicate with the U.S. Department of the Treasury (Treasury Department) and the FIO as necessary. He noted that there have not been any specific conversations with either the FIO or the European Union (EU) about extending this deadline, but there have been some preliminary discussions with the FIO on the status of state adoptions.
Mr. Rehagen stated that the current adoption maps can be found on the Task Force’s web page. He noted that Mr. Schelp and Jake Stultz (NAIC) can answer any technical questions during the legislative process, and Holly Weatherford (NAIC) is working directly with the states on the adoption of the 2019 revisions to Model #785 and Model #786.

Having no further business, the Reinsurance (E) Task Force adjourned.
MEMORANDUM

To: Financial Condition (E) Committee

From: Group Capital Calculation (E) Working Group

Date: February 25, 2021

Re: Proposed New Charge for the Recognize and Accept Process

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions will enable the Group Capital Calculation (GCC) once adopted by the states. The revisions specifically include provisions that allow the Commissioner to exempt groups that has a group-wide supervisor that “recognize and accept” the GCC for U.S. groups in their jurisdiction; thereby embracing the concepts of mutual recognition and one group/one group wide supervisor. Model #450 provides a general framework for how the “recognize and accept” process will work and specifically contemplates the development of “a list” of such jurisdictions. This concept of a list in the context of mutual recognition is not a new one and is already used by the Qualified Jurisdiction (E) Working Group of the Reinsurance (E) Task Force. To that end, the Working Group recommends the Financial Condition (E) Committee reposition the group to report directly to the Committee, modify the charges of the Qualified Jurisdiction (E) Working Group as shown below, and revise the title of the group to be more encompassing, as also shown in the following:

2021 Charges

The Qualified Mutual Recognition of Jurisdictions (E) Working Group will:

1. Develop a process for evaluating jurisdictions that meets the NAIC requirements for recognizing and accepting the NAIC Group Capital Calculation (GCC).
2. Maintain the NAIC List of Qualified Jurisdictions and the NAIC List of Reciprocal Jurisdictions in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.
3. Perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions.
4. Consider evaluations of any additional jurisdictions for inclusion on the NAIC List of Qualified Jurisdictions.

If you have any questions, please contact NAIC staff support Dan Daveline (ddaveline@naic.org).

I. Preamble

Purpose

The revised *Credit for Reinsurance Model Law (#785)* and *Credit for Reinsurance Model Regulation (#786)* (collectively, the Credit for Reinsurance Models) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes. In 2012, the NAIC Reinsurance (E) Task Force was charged to develop an NAIC process to evaluate the reinsurance supervisory systems of non-U.S. jurisdictions, for the purposes of developing and maintaining a list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. This charge was extended in 2019 to encompass the recognition of Reciprocal Jurisdictions in accordance with the 2019 amendments to the Credit for Reinsurance Models, including the maintenance of a list of recommended Reciprocal Jurisdictions. The purpose of the *Process for Evaluating Qualified and Reciprocal Jurisdictions* is to provide a documented evaluation process for creating and maintaining these NAIC lists.

Background

On November 6, 2011, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions serve to reduce reinsurance collateral requirements for certified reinsurers that are licensed and domiciled in Qualified Jurisdictions. Under the previous version of the Credit for Reinsurance Models, in order for U.S. ceding insurers to receive reinsurance credit, the reinsurance was required to be ceded to U.S.-licensed reinsurers or secured by collateral representing 100% of U.S. liabilities for which the credit is recorded. When considering revisions to the Credit for Reinsurance Models, the Reinsurance (E) Task Force contemplated establishing an accreditation-like process, modeled on the current NAIC Financial Regulation Standards and Accreditation Program, to review the reinsurance supervisory systems of non-U.S. jurisdictions. Under the revised Credit for Reinsurance Models, the approval of Qualified Jurisdictions is left to the authority of the states; however, the models provide that a list of Qualified Jurisdictions will be created through the NAIC committee process, and that individual states must consider this list when approving jurisdictions.

The enactment in 2010 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), enacted in 2010. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into “covered agreements” on behalf of the United States. These are bilateral or multilateral agreements with foreign governments, authorities or regulators relating to insurance prudential measures, which can preempt contrary state insurance laws or regulatory measures. The Dodd-Frank Act also created the Federal Insurance Office (FIO), which has the following authority: (1) coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters; (2) assist the Secretary of the U.S. Department of the Treasury in negotiating covered agreements (as defined in the Dodd-Frank Act); (3) determine whether the states’ insurance measures are preempted by covered agreements; and (4) consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into covered agreements on behalf of the United States. It is the NAIC’s intention to communicate and coordinate with the FIO and related federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

**Reciprocal Jurisdictions**

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions were intended to conform the Models to the relevant provisions of the Covered Agreements. The Covered Agreements would eliminate reinsurance collateral requirements for EU and UK reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II, among other conditions. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or UK or post reinsurance collateral. Under the revised Credit for Reinsurance Models, jurisdictions that are subject to in-force Covered Agreements are considered to be Reciprocal Jurisdictions, and reinsurers that have their head office or are domiciled in a Reciprocal Jurisdiction are not required to post reinsurance collateral if they meet all of the requirements of the Credit for Reinsurance Models.

Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to Covered Agreements treated as Reciprocal Jurisdictions for reinsurance collateral purposes, but any other Qualified Jurisdictions can also qualify for collateral elimination as Reciprocal Jurisdictions. States that meet the requirements of the NAIC Financial Standards and Accreditation Program are also considered to be Reciprocal Jurisdictions.

The NAIC has updated and revised this Process for Evaluating Qualified and Reciprocal Jurisdictions to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.
II. Principles for the Evaluation of Non-U.S. Jurisdictions

1. The NAIC model revisions applicable to certified reinsurers are intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. To be eligible for certification, a reinsurer must be domiciled and licensed in a Qualified Jurisdiction as determined by the domestic regulator of the ceding insurer. A Qualified Jurisdiction not subject to an in-force Covered Agreement under the Dodd-Frank Act may also be determined to be a Reciprocal Jurisdiction, and reinsurers that have their head office or are domiciled in any such Reciprocal Jurisdiction will not be required to post reinsurance collateral, provided they meet the minimum capital and financial strength requirements and comply with the other requirements of the Credit for Reinsurance Models.

2. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions and Reciprocal Jurisdictions will be conducted in accordance with the provisions of the Credit for Reinsurance Models and any other relevant guidance developed by the NAIC.

3. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program (Accreditation Program), adherence to international supervisory standards, and relevant international guidance for recognition of reinsurance supervision. It is not intended as a prescriptive comparison to the NAIC Accreditation Program. In order for a Qualified Jurisdiction that is not subject to an in-force Covered Agreement to be evaluated as a Reciprocal Jurisdiction, that Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, and other such requirements as provided under the Credit for Reinsurance Models.

4. The states shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the Qualified Jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of Qualified Jurisdiction status is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

5. Each state may evaluate a non-U.S. jurisdiction to determine if it is a Qualified Jurisdiction. A list of Qualified Jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of Qualified Jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Qualified Jurisdictions contained in the Credit for Reinsurance Models. The creation of this list does not constitute a delegation of regulatory authority to the NAIC. The regulatory authority to recognize a Qualified Jurisdiction resides solely in each state and the NAIC List of Qualified Jurisdictions is not binding on the states.

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.
7. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting,” as discussed more fully below in paragraph 15 of Section III, under which the commissioner has the discretion to defer to another state’s determination that a jurisdiction is a Qualified or Reciprocal Jurisdiction. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings. The NAIC Lists of Qualified and Reciprocal Jurisdictions are intended to facilitate the passporting process.

8. Both Qualified Jurisdictions and Reciprocal Jurisdictions must agree to share information and cooperate with the state with respect to all applicable reinsurers domiciled within that jurisdiction. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

9. The determination of Qualified Jurisdiction status can only be made with respect to the reinsurance supervisory system in existence and applied by a non-U.S. jurisdiction at the time of the evaluation.

10. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
III. Procedure for Evaluation of Non-U.S. Jurisdictions

   a. Priority will be given to requests from the states and from those jurisdictions specifically requesting an evaluation by the NAIC.
   b. Formal notification of the NAIC’s intent to initiate the evaluation process will be sent by the NAIC to the reinsurance supervisory authority in the jurisdiction selected, with copies to the FIO and other relevant federal authorities as appropriate. The NAIC will issue public notice on the NAIC website upon confirmation that the jurisdiction is willing to participate in the evaluation process. The NAIC will at this time request public comments with respect to consideration of the jurisdiction as a Qualified Jurisdiction. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document, subject to a preliminary confidentiality and information sharing agreement between the NAIC, relevant states and the applicant jurisdiction.
   c. Relevant U.S. state and federal authorities will be notified of the NAIC’s decision to evaluate a jurisdiction.

2. Evaluation of Jurisdiction
   a. Evaluation Materials. The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Qualified Jurisdiction Working Group will begin by undertaking a review of the most recent Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), including the Technical Note on Insurance Sector Supervision, and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will also invite each jurisdiction or its designee to provide information relative to Section A through Section G of the Evaluation Methodology in order to update, complete or supplement publicly available information. The Qualified Jurisdiction Working Group may also request or accept relevant information from reinsurers domiciled in the jurisdiction under review.
   b. The Qualified Jurisdiction Working Group will notify the jurisdiction of any information upon which the Working Group is relying. In that communication, the NAIC will invite the supervisory authority to compare the materials identified by the NAIC to the materials described in Appendix A and Appendix B, and provide information required to update the identified public information or supplement the public information, as required, to address the topics identified in Section A through Section G of the Evaluation Methodology. The use of publicly available information (e.g., the FSAP Report and/or the Insurance Sector Technical Note) is intended to lessen the burden on applicant jurisdictions by requiring the production of information that is readily available, while still addressing substantive areas of inquiry detailed in the Evaluation Methodology. The Qualified Jurisdiction Working Group’s review at this stage will be focused on how the jurisdiction’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial solvency of its domestic reinsurers in comparison to key principles.
underlying the U.S. financial solvency framework\(^1\) and other factors set forth in the Evaluation Methodology.

c. After reviewing the Evaluation Materials, the Qualified Jurisdiction Working Group may request that the applicant jurisdiction submit supplemental information as necessary to determine whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. The Working Group will address specific questions directly with the jurisdiction related to items detailed in the Evaluation Methodology that are not otherwise addressed in the Evaluation Materials.

d. The NAIC will request that all responses from the jurisdiction being evaluated be provided in English. Any responses submitted with respect to a jurisdiction’s laws and regulations should be provided by a person qualified in that jurisdiction to provide such analyses and, in the case of statutory analysis, qualified to provide such legal interpretations, to ensure that the jurisdiction is providing an accurate description.

e. The NAIC does not intend to review confidential company-specific information in this process, and has focused the procedure on reviewing publicly available information. No confidential company-specific information shall be disclosed or disseminated during the course of the jurisdiction’s evaluation unless specifically requested, subject to appropriate confidentiality safeguards addressed in a preliminary confidentiality and information-sharing agreement. If no such agreement is executed or the jurisdiction is unable to enter into such an agreement under its regulatory authority, the NAIC will not accept any confidential company-specific information.

3. NAIC Review of Evaluation Materials

a. NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise will review the jurisdiction’s Evaluation Materials.

b. Expenses with respect to the evaluations will be absorbed within the NAIC budget. This will be periodically reviewed.

c. Timeline for review. A project management approach will be developed with respect to the overall timeline applicable to each evaluation.

d. Upon completing its review of the Evaluation Materials, the internal reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to FIO and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

4. Discretionary On-site Review

a. The NAIC may ask the jurisdiction under consideration for the opportunity to perform an on-site review of the jurisdiction’s reinsurance supervisory system. Factors that the Qualified Jurisdiction Working Group will consider in determining whether an on-site review is appropriate include the completeness of the information provided by the jurisdiction under review, the general familiarity of the jurisdiction by the NAIC staff or other state regulators participating in the review based on prior conduct or dealings with the jurisdiction.

\(^1\) The U.S. financial solvency framework is understood to refer to the key elements provided in the NAIC Financial Regulation Standards and Accreditation Program. Appendix A and Appendix B are derived from this framework.
jurisdiction, and the results of other evaluations performed by other regulatory or supervisory organizations. If the review is performed, it will be coordinated through the NAIC, utilizing personnel with the appropriate knowledge, experience and expertise. Individual states may also request that representatives from their state be added to the review team.

b. The review team will communicate with the supervisory authority in advance of the on-site visit to clearly identify the objectives, expectations and procedures with respect to the review, as well as any significant issues or concerns identified within the review of the Evaluation Materials. Information to be considered during the on-site review includes, but is not limited to, the following:

   i. Interviews with supervisory authority personnel.
   ii. Review of organizational and personnel practices.
   iii. Any additional information beneficial to gaining an understanding of document and communication flows.

c. Upon completing the on-site review, the reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation.

5. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

6. Additional Information to be Considered as Part of Evaluation

The NAIC may also consider information from sources other than the jurisdiction under review. This information includes:

a. Documents, reports and information from appropriate international, U.S. federal and U.S. state authorities.

b. Public comments from interested parties.

c. Rating agency information.

d. Any other relevant information.

7. Preliminary Evaluation Report

a. NAIC staff and/or outside consultants will prepare a Preliminary Evaluation Report for review by the Qualified Jurisdiction Working Group. This preliminary report will be private and confidential (i.e., may only be reviewed by Working Group members, designated NAIC staff, consultants, the states, the FIO and
other relevant federal authorities that specifically request to be kept apprised of this information, provided that such entities have entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction. Any outside consultants retained by the NAIC will be required to enter into a confidentiality and nondisclosure agreement.

b. The report will be prepared in a consistent style and format to be developed by NAIC staff. It will contain detailed advisory information and recommendations with respect to the evaluation of the jurisdiction’s reinsurance supervisory system and the documented practices and procedures thereunder. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a Qualified Jurisdiction.

c. All workpapers and reports, including supporting documentation and data, produced as part of the evaluation process are the property of the NAIC and shall be maintained at the NAIC Central Office. In the event that the NAIC shall come into possession of any confidential information, the information shall be held subject to a confidentiality and information-sharing agreement, which will outline the appropriate actions necessary to protect the confidentiality of such information.

a. The Qualified Jurisdiction Working Group’s review of the Preliminary Evaluation Report will be held in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings.

b. The Qualified Jurisdiction Working Group will make a preliminary determination as to whether the jurisdiction under consideration satisfies the Standard of Review and is deemed acceptable to be included on the NAIC List of Qualified Jurisdictions. If the preliminary determination is that the jurisdiction should not be included on the NAIC List of Qualified Jurisdictions, the Qualified Jurisdiction Working Group will set forth its specific findings and identify those areas of concern with respect to this determination.

c. The results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review.

a. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. This is not intended to be a formal appeals process that would initiate U.S. state administrative due process requirements.

b. The Qualified Jurisdiction Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Qualified Jurisdiction Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings. This report will be approved upon an affirmative vote of a majority of the members in attendance at this meeting.

c. Upon approval of the Final Evaluation Report, the Qualified Jurisdiction Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the summary for public comment. The detailed report will be a confidential, regulator-only document. The report may be shared with any state indicating that it is considering relying on the NAIC List of Qualified Jurisdictions and has entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction.
10. NAIC Determination Regarding List of Qualified Jurisdictions

a. Once the Qualified Jurisdiction Working Group has adopted its Final Evaluation Report, it will submit the summary of its findings and its recommendation to the Reinsurance (E) Task Force at an open meeting. Upon approval by the Reinsurance (E) Task Force, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the FIO, USTR and other relevant federal authorities for consultation purposes. Upon approval as a Qualified Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Qualified Jurisdictions. The NAIC will maintain the List of Qualified Jurisdictions on its public website and in other appropriate NAIC publications.

b. In the event that a jurisdiction is not approved as a Qualified Jurisdiction, the supervisory authority will be eligible for reapplication at the discretion of the NAIC.

c. Upon final adoption of the Qualified Jurisdiction Working Group’s determination with respect to a jurisdiction, the Final Evaluation Report will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential.

11. Memorandum of Understanding (MOU)

a. A Qualified Jurisdiction must agree to share information and cooperate on a confidential basis with the U.S. state insurance regulatory authority with respect to all certified reinsurers domiciled within that jurisdiction.

b. The International Association of Insurance Supervisors (IAIS) Multilateral Memorandum of Understanding (MMoU) is the recommended method under which a Qualified Jurisdiction will agree to share information and cooperate with U.S. state insurance regulatory authorities. However, until such time as a state has been approved as a signatory to the MMoU by the IAIS, the state may rely on an MOU entered into by a “Lead State” designated by the NAIC. This Lead State will act as a conduit for information between the Qualified Jurisdiction and other states that have certified a reinsurer domiciled and licensed in that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the NAIC Master Information Sharing and Confidentiality Agreement, and, as applicable, in the applicable IAIS MMoU, or or in a bilateral MOU between the Lead State and the Qualified Jurisdiction and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this Lead State to act as the contact for purposes of obtaining information concerning its certified reinsurers, provided the that Lead State share that information with the other states requesting the information only in a manner consistent with the terms governing the further sharing of information included, as in the applicable, in the IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction.

c. If a Qualified Jurisdiction has not been approved by the IAIS for use as a party to the MMoU, it must enter into an MOU with a Lead State. The MOU must provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

d. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.
12. Process for Evaluation after Initial Approval

   a. The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review. The Qualified Jurisdiction Working Group will perform a yearly review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group to be appropriate.

   b. Qualified Jurisdictions must provide the Qualified Jurisdiction Working Group with notice of any material change in the applicable reinsurance supervisory system that may affect the status of the Qualified Jurisdiction. A U.S. jurisdiction should also notify the Qualified Jurisdiction Working Group if it receives notice of any material change in the applicable reinsurance supervisory system, or any adverse developments with respect to enforcement of final U.S. judgments, that may affect the status of the Qualified Jurisdiction. U.S. ceding insurers may also initiate notice to the Qualified Jurisdiction Working Group if they receive notice of any material change in the applicable reinsurance supervisory system or any adverse developments with respect to enforcement of final U.S. judgments. Upon receipt of any such notice, the Qualified Jurisdiction Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction. Any review will be conducted in accordance with the procedure set forth in paragraph 14.

   c. If the Qualified Jurisdiction Working Group finds the jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked.

   d. The Qualified Jurisdiction Working Group will monitor those jurisdictions that have been approved as Qualified Jurisdictions by individual states, but are not included on the NAIC List of Qualified Jurisdictions.

13. Review of Qualified Jurisdictions as Potential Reciprocal Jurisdictions

   a. In undertaking the evaluation of whether to designate a Qualified Jurisdiction as a Reciprocal Jurisdiction, the Qualified Jurisdiction Working Group shall utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section III. Procedure for Evaluation of Non-U.S. Jurisdictions such as the Qualified Jurisdiction Working Group deems is appropriate. Specifically, the Qualified Jurisdiction Working Group will use processes and procedures outlined in paragraph 1 (Initiation of Evaluation of the Reinsurance Supervisory System of an Individual Jurisdiction), paragraph 3 (NAIC Review of Evaluation Materials), paragraph 7 (Preliminary Evaluation Report), paragraph 8 (Review of Preliminary Evaluation Report), paragraph 9 (Opportunity to Respond to Preliminary Evaluation Report), paragraph 10 (NAIC Determination regarding List of Qualified Jurisdictions), paragraph 11 (Memorandum of Understanding) and paragraph 12 (Process for Evaluation after Initial Approval), as modified for use with applicants for Reciprocal Jurisdiction status.

   b. A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions unless it has undergone the Evaluation Methodology outlined in Section IV, and remains in good standing with the NAIC as a Qualified Jurisdiction. The Qualified Jurisdiction Working Group may, if it determines
an extended review period to be appropriate after its initial approval of a new Qualified Jurisdiction, defer consideration of that jurisdiction as a possible Reciprocal Jurisdiction until there has been sufficient United States experience with that jurisdiction and its Certified Reinsurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination. Nothing in this process requires a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group may base such recommendation on all relevant information, which may include factors not specifically included in this Process for Evaluating Qualified and Reciprocal Jurisdictions.

c. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the NAIC List of Reciprocal Jurisdictions. In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group shall undertake the following analysis in making its evaluation:

i. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as the same insurer would receive credit for reinsurance assumed by an assuming insurers domiciled in that jurisdiction is received by United States ceding insurers;

ii. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

iii. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision by the Qualified Jurisdiction at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

iv. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information...
shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

v. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain, on an ongoing basis, minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

d. In order to satisfy the requirements of subsection (c) above, the chief insurance supervisor of the Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction may provide the NAIC with a written letter confirming, as follows:

[Jurisdiction] is a Qualified Jurisdiction under the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), and is currently in good standing on the NAIC List of Qualified Jurisdictions. As the lead insurance regulatory supervisor for [Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

• An insurer which has its head office or is domiciled in [Jurisdiction] shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit would be granted for reinsurance assumed by insurers domiciled in [Jurisdiction] is received by United States ceding insurers. [Jurisdiction] does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by [Jurisdiction] or as a condition to allow the ceding insurer to recognize credit for such reinsurance.

• [Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurance groups that are domiciled or maintain their worldwide headquarters in jurisdictions accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].

• [Jurisdiction] confirms that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the [Jurisdiction].

• [Jurisdiction] will annually provide to the states confirmation that applicable assuming insurers domiciled in [Jurisdiction] maintain minimum capital and surplus of no less than $250,000,000, and maintain on an ongoing basis the required minimum solvency or capital ratio, as applicable.
Finally, I confirm that [Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

e. The Qualified Jurisdiction Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate, and will prepare for the review by the Reinsurance Task Force a Summary of Findings and Determination recommending that the Qualified Jurisdiction be recognized as a Reciprocal Jurisdiction. Upon approval by the Task Force, the Summary of Findings and Determination must be adopted by will be submitted for a vote of the NAIC Executive (EX) Committee and Plenary for inclusion on the List of Reciprocal Jurisdictions.

f. The Qualified Jurisdiction Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

14. Termination of Status as Qualified and/or Reciprocal Jurisdiction

a. If the Qualified Jurisdiction Working Group finds a Qualified Jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review. The Qualified Jurisdiction Working Group would then report any concerns to its parent Task Force for further discussion and communication with appropriate federal and/or international authorities, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked by the NAIC.

b. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions under paragraph 12. If cause is found to question the fitness of a Reciprocal Jurisdiction that is subject to an in-force Covered Agreement, or its compliance with applicable requirements of the covered agreement, the Qualified Jurisdiction Working Group would report any concerns to its parent Task Force for further discussion and communication with appropriate federal and/or international authorities. It is intended that compliance with the covered agreement will ultimately be determined by the Joint Committee established under the covered agreement, or through termination of the covered agreement by the parties to the covered agreement.

c. Both Qualified Jurisdictions and Reciprocal Jurisdictions that are not subject to a covered agreement are obligated to provide notice to the Qualified Jurisdiction Working Group of any applicable changes to their
reinsurance supervisory system or changes to the assurances provided in the letter set forth in paragraph 13. States and U.S. ceding insurers may also provide notice of such changes to the Working Group. Upon notice of any such material changes, the Working Group will meet in regulator-only session to determine if these changes are in fact material to continuing recognition by the NAIC as either a Qualified or Reciprocal Jurisdiction. The Working Group will work directly with the jurisdiction to address any issues that have been identified. If these issues cannot be resolved through this regulator-only dialogue, then the Working Group will report its recommendation to the Reinsurance Task Force, which will consider a suspension of the jurisdiction’s status as a Qualified or Reciprocal Jurisdiction in open session. The Task Force will then make a recommendation to the NAIC Plenary on the action, if any, to be taken, which may include placing the Qualified or Reciprocal Jurisdiction’s status on probation, or suspending or revoking its status.

d. If a Qualified or Reciprocal Jurisdiction’s status is placed on probation by the NAIC, the material change will be noted in an update to its Summary of Finding and Determination in order to provide notice to the states and U.S. ceding insurers of this material change. If the NAIC decides to suspend or revoke its status, the jurisdiction may be given a reasonable time period, no more than 18 months, to rectify its noncompliance with the standards and return it to good standing. Once the NAIC’s suspension or revocation takes effect, it is expected that the same action will be taken by the respective states that have recognized the jurisdiction as a Qualified or Reciprocal Jurisdiction.

e. There is no administrative right to appeal the decision of the NAIC with respect to the revocation of status as a Qualified or Reciprocal Jurisdiction, but the jurisdiction can apply for reinstatement after a one-year period.

b.f. During the period in which a Qualified or Reciprocal Jurisdiction’s status has been suspended by a state, any new reinsurance assumed by a reinsurer domiciled in that jurisdiction from a ceding insurer domiciled in that state will not be eligible for credit unless the transaction qualifies for credit on the basis of security posted by the ceding insurer or some other basis that does not depend on recognition of the jurisdiction as a Qualified or Reciprocal Jurisdiction. However, suspension does not affect credit for reinsurance that was already in force.

g. If a Qualified or Reciprocal Jurisdiction’s status is revoked by a state, then those Certified Reinsurers and/or Reciprocal Jurisdiction Reinsurers domiciled in that jurisdiction must post within three months of this determination one hundred percent (100%) collateral on all their liabilities assumed from ceding insurers domiciled in that state.

h. The factors used in the evaluation of Reciprocal Jurisdictions are not the same as are utilized in the evaluation of Qualified Jurisdictions. A Qualified Jurisdiction that has been approved by the NAIC as a Reciprocal Jurisdiction may have its status as a Reciprocal Jurisdiction either suspended or revoked but still meet the requirements to be a Qualified Jurisdiction. However, if a Reciprocal Jurisdiction that is not subject to a covered agreement has its status as a Qualified Jurisdiction revoked, it cannot maintain its status as a Reciprocal Jurisdiction, because it must be a Qualified Jurisdiction to meet the requirements of a Reciprocal Jurisdiction.
15. Passorting Process for Reciprocal Jurisdictions

a. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passorting” under which the commissioner has the discretion to defer to another state’s determination with respect to the requirements for both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers. Passorting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passorting process. States are also encouraged to utilize the passorting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

b. The passorting process is facilitated through the Reinsurance Financial Analysis (E) Working Group (ReFAWG). It is intended that ReFAWG will help facilitate multi-state recognition of Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and address issues of uniformity among the states, both with respect to initial application and subsequent changes in rating or status. The ReFAWG Review Process is set forth in the ReFAWG Procedures Manual.

c. Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) provides that the “assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the requirements set forth in Paragraphs (2) [i.e., minimum capital and surplus of no less than $250] and (3) [i.e., minimum solvency or capital ratio] of this subsection.” Section 9E(1) of Model #786 then provides that “The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of the requirements of Subsection C.” A Reciprocal Jurisdiction may satisfy the requirements of Section 9C(7) of Model #786 by annually filing the required information with each state in which it is doing business, or with either its Lead State or the NAIC, which will share this documentation with the other states through the ReFAWG Review Process. Each state may accept financial documentation filed with the Lead State or with the NAIC.
IV. Evaluation Methodology

The Evaluation Methodology was developed to be consistent with the provisions of the NAIC Credit for Reinsurance Models. It is intended to provide an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. Although the methodology includes a comparison of the jurisdiction’s supervisory system to a number of key elements from the NAIC Accreditation Program, it is not intended as a prescriptive assessment under the NAIC Accreditation Program. Rather, the NAIC Accreditation Program simply provide the framework for the outcomes-based analysis. The NAIC will evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the jurisdiction and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of a Qualified Jurisdiction is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

The Evaluation Methodology consists of the following:

- Section A: Laws and Regulations
- Section B: Regulatory Practices and Procedures
- Section C: Jurisdiction’s Requirements Applicable to U.S.-Domiciled Reinsurers
- Section D: Regulatory Cooperation and Information Sharing
- Section E: History of Performance of Domestic Reinsurers
- Section F: Enforcement of Final U.S. Judgments
- Section G: Solvent Schemes of Arrangement

This information will be the basis for the Final Evaluation Report and the determination of whether the jurisdiction will be included on the NAIC List of Qualified Jurisdictions.
Section A: Laws and Regulations

The NAIC will review publicly available information, as well as information provided by an applicant jurisdiction with respect to its laws and regulations, in an effort to evaluate whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. This will include a review of elements believed to be basic building blocks for sound insurance/reinsurance regulation. A jurisdiction’s effectiveness under Section A may be demonstrated through law, regulation or established practice that implements the general authority granted to the jurisdiction, or any combination of laws, regulations or practices that meet the objective.

The Qualified Jurisdiction Working Group will initiate evaluation of a jurisdiction’s regulatory system by gathering and undertaking a review of the most recent FSAP Report, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group will simultaneously invite each jurisdiction (or its designee) to provide information relative to Section A (and other sections, as relevant) to assist the NAIC in evaluating its laws and regulations. The NAIC will review this information in conjunction with Appendix A, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix A is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction is requested to address the following information, which the NAIC will consider, at a minimum, in determining whether the outcomes achieved by the jurisdiction’s laws and regulations meet an acceptable level of effectiveness for the jurisdiction to be included on the NAIC List of Qualified Jurisdictions:

1. Confirmation of the jurisdiction’s most recent FSAP Report, including relevant updates with respect to descriptions or elements of the FSAP Report in which changes have occurred since the assessment or where information might otherwise be outdated.

2. Confirmation of the jurisdiction’s ROSC, including relevant updates with respect to descriptions or elements of the ROSC in which changes have occurred since the report was completed or where information might otherwise be outdated.

3. If materials responsive to the topics under review have been provided in response to information exchanges between the jurisdiction under review and the NAIC, such prior responses may be cross-referenced provided updates are submitted, if required to address changes in laws or procedures.

4. Any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix A.

The NAIC will review the information provided by the applicant jurisdiction and determine whether it is adequate to reasonably conclude whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. After reviewing the initial submission, the NAIC may request that the applicant jurisdiction

---

2 The basic considerations under this section are derived from Model #786, Section 8C(2), which include: (a) the framework under which the assuming reinsurer is regulated; (b) the structure and authority of the jurisdiction’s reinsurance supervisory authority with regard to solvency regulation requirements and financial surveillance; (c) the substance of financial and operating standards for reinsurers domiciled in the jurisdiction; and (d) the form and substance of financial reports required to be filed or made publicly available by reinsurers domiciled in the jurisdiction and the accounting principles used.
submit supplemental information as necessary in order to make this determination. An applicant jurisdiction is strongly encouraged to provide thorough, detailed and current information in its initial submission in order to minimize the number and extent of supplemental information requests from the NAIC with respect to Section A of this Evaluation Methodology. The NAIC will provide a complete description in the Final Evaluation Report of the information provided in the Evaluation Materials, and any updates or other information that have been provided by the applicant jurisdiction.

Section B: Regulatory Practices and Procedures

Section B is intended to facilitate an evaluation of whether the jurisdiction effectively employs baseline regulatory practices and procedures to supplement and support enforcement of the jurisdiction’s financial solvency laws and regulations described in Section A. This evaluation methodology recognizes that variation may exist in practices and procedures across jurisdictions due to the unique situations each jurisdiction faces. Jurisdictions differ with respect to staff and technology resources that are available, as well as the characteristics of the domestic industry regulated. A determination of effectiveness may be achieved using various financial solvency oversight practices and procedures. This evaluation is not intended to be prescriptive in nature.

The NAIC will utilize the information provided by the jurisdiction as outlined under Section A in completing this section of the evaluation. The NAIC will review this information in conjunction with Appendix B, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix B is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction should also provide any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix B.

Section C: Jurisdiction’s Requirements Applicable to U.S. Domiciled Reinsurers

The jurisdiction is requested to describe and explain the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. supervisory authority to reinsurers licensed and domiciled in the U.S.

Section D: Regulatory Cooperation and Information-Sharing

The Credit for Reinsurance Models require the supervisory authority to share information and cooperate with the U.S. state insurance regulators with respect to all certified reinsurers domiciled within their jurisdiction. The jurisdiction is requested to provide an explanation of the supervisory authority’s ability to cooperate, share information and enter into an MOU with U.S. state insurance regulators and confirm that they are willing to enter into an MOU. This should include information with respect to any existing MOU with U.S. state and/or federal authorities that pertain to reinsurance. Both the jurisdiction and the states may rely on the IAIS MMoU to satisfy this requirement, and any states that have not yet been approved by the IAIS as a signatory to the MMoU may rely on an MOU entered into by a Lead State with the jurisdiction until such time that the state has been approved as a signatory to the IAIS MMoU. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.
Section E: History of Performance of Domestic Reinsurers

The jurisdiction is requested to provide a general description with respect to the historical performance of reinsurers domiciled in the jurisdiction. The NAIC does not intend to review confidential company-specific information under this section. Rather, it is intended that any information provided would be publicly available, unless specifically addressed with the jurisdiction under review. This discussion should address, at a minimum, the following information:

a. Number of reinsurers domiciled in the jurisdiction, and a list of any reinsurers domiciled in the jurisdiction that have and maintain, on an ongoing basis, minimum capital and surplus, or its equivalent, of no less than $250,000,000.

b. Up to a 10-year history of any regulatory actions taken against specific reinsurers.

c. Up to a 10-year history listing any reinsurers that have gone through insolvency proceedings, including the size of each insolvency and a description of the related outcomes (e.g., reinsurer rehabilitated or liquidated, payout percentage of claims to priority classes, payout percentage of claims to domestic and foreign claimants).

d. Up to a 10-year history of any significant industry-wide fluctuations in capital or profitability with respect to domestic reinsurers.

Drafting Note: The NAIC will determine the appropriate time period for review on a case-by-case basis with respect to this information.

Section F: Enforcement of Final U.S. Judgments

The NAIC has previously collected information from a number of jurisdictions with respect to enforcement of final U.S. judgments. The jurisdiction is also requested to provide a current description or explanation of any restrictions with respect to the enforcement of final foreign judgments in the jurisdiction. Based on the foregoing information, the NAIC will make an assessment of the effectiveness of the ability to enforce final U.S. judgments in the jurisdiction. This will include a review of the status, interpretations, application and enforcement of various treaties, conventions and international agreements with respect to final judgments, arbitration and choice of law. The Qualified Jurisdiction Working Group will monitor the enforcement of final U.S. judgments and the Qualified Jurisdiction is requested to notify the NAIC of any developments in this area.

Section G: Solvent Schemes of Arrangement

The jurisdiction is requested to provide a description of any legal framework that allows reinsurers domiciled in the jurisdiction to propose or participate in any solvent scheme of arrangement or similar procedure. In addition, the jurisdiction is requested to provide a description of any solvent scheme of arrangement or similar procedure that a domestic reinsurer has proposed or participated in and the outcome of such procedure.
V. Appendices: Specific Guidance with Respect to Section A and Section B

It is important to note that Part IV, Section A: Laws and Regulations, and Part IV, Section B: Regulatory Practices and Procedures, are derived from the NAIC Financial Regulation Standards and Accreditation Program, which is intended to establish and maintain standards to promote sound insurance company financial solvency regulation among the U.S. states. As such, the NAIC Accreditation Program requires the states to employ laws, regulations and administrative policies and procedures substantially similar to the NAIC accreditation standards in order to be considered an accredited state.

However, it is not the intent of the Evaluation Methodology to require applicant jurisdictions to meet the standards required by the NAIC for accreditation. Instead, Section A and Section B (and their corresponding appendices) are intended to provide a framework to facilitate an outcomes-based evaluation by the NAIC and state insurance regulators of the effectiveness of the jurisdiction’s supervisory authority. This framework consists of a description of the jurisdiction’s laws, regulations, practices and procedures applicable to the supervision of its domestic reinsurers. The amount of detail provided within these appendices should not be interpreted as specific requirements that must be met by the applicant jurisdiction. Rather, the information is intended to provide direction to the applicant jurisdiction in an effort to facilitate a complete response and increase the efficiency and timeliness of the evaluation process.
Appendix A: Laws and Regulations

1. Examination Authority

Does the jurisdiction have the authority to examine its domestic reinsurers? This description should address the following:

   a. Frequency and timing of examinations and reports.
   b. Guidelines for examination.
   c. Whether the jurisdiction has the authority to examine reinsurers whenever it is deemed necessary.
   d. Whether the jurisdiction has the authority to have complete access to the reinsurer’s books and records and, if necessary, the records of any affiliated company.
   e. Whether the jurisdiction has the authority to examine officers, employees and agents of the reinsurer when necessary with respect to transactions directly or indirectly related to the reinsurer under examination.
   f. Whether the jurisdiction has the authority to share confidential information with U.S. state insurance regulatory authorities, provided that the recipients are required, under their law, to maintain its confidentiality.

2. Capital and Surplus Requirement

Does the jurisdiction have the authority to require domestic reinsurers to maintain a minimum level of capital and surplus to transact business? This description should address the following:

   a. Whether the jurisdiction has the authority to require reinsurers to maintain minimum capital and surplus, including a description of such minimum amounts.
   b. Whether the jurisdiction has the authority to require additional capital and surplus based on the type, volume and nature of reinsurance business transacted.
   c. Capital requirements for reinsurers, including reports and a description of any specific levels of regulatory intervention.

3. Accounting Practices and Procedures

Does the jurisdiction have the authority to require domestic reinsurers to file appropriate financial statements and other financial information? This description should address the following:

   a. Description of the accounting and reporting practices and procedures.
   b. Description of any standard financial statement blank/reporting template, including description of content/disclosure requirements and corresponding instructions.

4. Corrective Action

Does the jurisdiction have the authority to order a reinsurer to take corrective action or cease and desist certain practices that, if not corrected or terminated, could place the reinsurer in a hazardous financial condition? This description should address the following:

   a. Identification of specific standards which may be considered to determine whether the continued operation of the reinsurer might be hazardous to the general public.
   b. Whether the jurisdiction has the authority to issue an order requiring the reinsurer to take corrective action when it has been determined to be in hazardous financial condition.
5. **Regulation and Valuation of Investments**

What authority does the jurisdiction have with respect to regulation and valuation of investments? This description should address the following:

a. Whether the jurisdiction has the authority to require a diversified investment portfolio for all domestic reinsurers as to type, issue and liquidity.

b. Whether the jurisdiction has the authority to establish acceptable practices and procedures under which investments owned by reinsurers must be valued, including standards under which reinsurers are required to value securities/investments.

6. **Holding Company Systems**

Does the jurisdiction have laws or regulations with respect to supervision of the group holding company systems of reinsurers? This description should address the following:

a. Whether the jurisdiction has access to information via the parent or other regulated group entities about activities or transactions within the group involving other regulated or non-regulated entities that could have a material impact on the operations of the reinsurer.

b. Whether the jurisdiction has access to consolidated financial information of a reinsurer’s ultimate controlling person.

c. Whether the jurisdiction has the authority to review integrity and competency of management.

b. Whether the jurisdiction has approval and intervention powers for material transactions and events involving reinsurers.

e. Whether the jurisdiction has authority to monitor, or has prior approval authority over:
   i. Change in control of domestic reinsurers.
   ii. Dividends and other distributions to shareholders of the reinsurer.
   iii. Material transactions with affiliates.

7. **Risk Management**

Does the jurisdiction have the authority to require its domestic reinsurers to maintain an effective risk-management function and practices? This description should address the following:

a. Whether the jurisdiction has Own Risk and Solvency Assessment (ORSA) requirements and reporting.

b. Any requirements regarding the maximum net amount of risk to be retained by a reinsurer for an individual risk based on the reinsurer’s capital and surplus.

c. Whether the jurisdiction has authority to monitor enterprise risk, including any activity, circumstance, event (or series of events) involving one or more affiliates of a reinsurer that, if not remedied promptly, is likely to have a material adverse effect on the financial condition or liquidity of the reinsurer or its insurance holding company system as a whole.

d. Whether the jurisdiction has corporate governance requirements for reinsurers.
8. **Liabilities and Reserves**

Does the jurisdiction have standards for the establishment of liabilities and reserves (technical provisions) resulting from reinsurance contracts? This description should address the following:

a. Liabilities incurred under reinsurance contracts for policy reserves, unearned premium, claims and losses unpaid, and incurred but not reported (IBNR) claims (including whether discounting is allowed for reserve calculation/reporting).

b. Liabilities related to catastrophic occurrences.

c. Whether the jurisdiction requires an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist for all domestic reinsurers, and the frequency of such reports.

9. **Reinsurance Ceded**

What are the jurisdiction’s requirements with respect to the financial statement credit allowed for reinsurance retroceded by its domestic reinsurers? This description should address the following:

a. Credit for reinsurance requirements applicable to reinsurance retroceded to domestic and non-domestic reinsurers.

b. Collateral requirements applicable to reinsurance contracts.

c. Whether the jurisdiction requires a reinsurance agreement to provide for insurance risk transfer (i.e., transfer of both underwriting and timing risk).

d. Requirements applicable to special purpose reinsurance vehicles and insurance securitizations.

e. Affiliated reinsurance transactions and concentration risk.

f. Disclosure requirements specific to reinsurance transactions, agreements and counterparties, if such information is not provided under another item.

10. **Independent Audits**

Does the jurisdiction require annual audits of domestic reinsurers by independent certified public accountants or similar accounting/auditing professional recognized in the applicant jurisdiction? This description should address the following:

a. Requirements for the filing of audited financial statements prepared in conformity with accounting practices prescribed or permitted by the supervisory authority.

b. Contents of annual audited financial reports.

c. Requirements for selection of auditor.

d. Allowance of audited consolidated or combined financial statements.

e. Notification of material misstatements of financial condition.

f. Supervisor’s access to auditor’s workpapers.

g. Audit committee requirements.

h. Requirements for reporting of internal control-related matters.

11. **Receivership**

Does the jurisdiction have a receivership scheme for the administration of reinsurers found to be insolvent? This should include a description of any liquidation priority afforded to policyholders and the liquidation priority of
reinsurance obligations to domestic and non-domestic ceding insurers in the context of an insolvency proceeding of a reinsurer.

12. Filings with Supervisory Authority

Does the jurisdiction require the filing of annual and interim financial statements with the supervisory authority? This description should address the following:

a. The use of standardized financial reporting in the financial statements, and the frequency of relevant updates.

b. The use of supplemental data to address concerns with specific companies or issues.

c. Filing format (e.g., electronic data capture).

d. The extent to which financial reports and information are public records.

13. Reinsurance Intermediaries

Does the jurisdiction have a regulatory framework for the regulation of reinsurance intermediaries?

14. Other Regulatory Requirements with respect to Reinsurers

Any other information necessary to adequately describe the effectiveness of the jurisdiction’s laws and regulations with respect to its reinsurance supervisory system.
Appendix B: Regulatory Practices and Procedures

1. Financial Analysis

What are the jurisdiction’s practices and procedures with respect to the financial analysis of its domestic reinsurers? Such description should address the following:

a. Qualified Staff and Resources
   The resources employed to effectively review the financial condition of all domestic reinsurers, including a description of the educational and experience requirements for staff responsible for financial analysis.

b. Communication of Relevant Information to/from Financial Analysis Staff
   The process under which relevant information and data received by the supervisory authority are provided to the financial analysis staff and the process under which the findings of the financial analysis staff are communicated to the appropriate person(s).

c. Supervisory Review
   How the jurisdiction’s internal financial analysis process provides for supervisory review and comment.

d. Priority-Based Analysis
   How the jurisdiction’s financial analysis procedures are prioritized in order to ensure that potential problem reinsurers are reviewed promptly.

e. Depth of Review
   How the jurisdiction’s financial analysis procedures ensure that domestic reinsurers receive an appropriate level or depth of review commensurate with their financial strength and position.

f. Analysis Procedures
   How the jurisdiction has documented its financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic reinsurer.

g. Reporting of Material Adverse Findings
   The process for reporting material adverse indications, including the determination and implementation of appropriate regulatory action.

h. Early Warning System/Stress Testing
   Whether the jurisdiction has an early warning system and/or stress testing methodology that is utilized with respect to its domestic reinsurers.
2. Financial Examinations

What are the jurisdiction’s practices and procedures with respect to the financial examinations of its domestic reinsurers? Such description should address the following:

a. **Qualified Staff and Resources**
   The resources employed to effectively examine all domestic reinsurers. This should include whether the jurisdiction prioritizes examination scheduling and resource allocation commensurate with the financial strength and position of each reinsurer, and a description of the educational and experience requirements for staff responsible for financial examinations.

b. **Communication of Relevant Information to/from Examination Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the examination staff and the process under which the findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**
   Whether the supervisory authority’s examination staff includes specialists with appropriate training and/or experience or whether the supervisory authority otherwise has available qualified specialists that will permit the supervisory authority to effectively examine any reinsurer.

d. **Supervisory Review**
   Whether the supervisory authority’s procedures for examinations provide for supervisory review.

e. **Examination Guidelines and Procedures**
   Description of the policies and procedures the supervisory authority employs for the conduct of examinations, including whether variations in methods and scope are commensurate with the financial strength and position of the reinsurer.

f. **Risk-Focused Examinations**
   Does the supervisory authority perform and document risk-focused examinations and, if so, what guidance is utilized in conducting the examinations? Are variations in method and scope commensurate with the financial strength and position of the reinsurer?

g. **Scheduling of Examinations**
   Whether the supervisory authority’s procedures provide for the periodic examination of all domestic reinsurers, including how the system prioritizes reinsurers that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**
   Description of the format in which the supervisory authority’s reports of examinations are prepared, and how the reports are shared with other jurisdictions under information-sharing agreements.

i. **Action on Material Adverse Findings**
   What are the jurisdiction’s procedures regarding supervisory action in response to the reporting of any material adverse findings.
3. **Information Sharing**

Does the jurisdiction have a process for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with U.S. state regulatory officials, provided that the recipients are required, under their law, to maintain its confidentiality?

4. **Procedures for Troubled Reinsurers**

What procedures does the jurisdiction follow with respect to troubled reinsurers?

5. **Organization, Licensing and Change of Control of Reinsurers**

What processes does the supervisory authority use to identify unlicensed or fraudulent activities? The description should address the following:

a. **Licensing Procedure**
   Whether the supervisory authority has documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

b. **Staff and Resources**
   The educational and experience requirements for staff responsible for evaluating company licensing.

c. **Change in Control of a Domestic Reinsurer**
   Procedures for the review of key pieces of information included in filings with respect to a change in control of a domestic reinsurer.
Implementation of the 2019 Revisions to the Credit for Reinsurance Model Law #785
[status as of March 18, 2021]

Disclaimer: This map represents state action or pending state action regarding NAIC amendments to the model(s). This map does not reflect a determination as to whether the pending or enacted legislation contains all elements of NAIC amendments to the model(s) or whether a state meets any applicable accreditation standards.

RISK RETENTION GROUP (E) TASK FORCE

Risk Retention Group (E) Task Force Feb. 24, 2021, Minutes.................................................................10-999
Risk Retention Group (E) Task Force Feb. 5, 2021, Minutes (Attachment One).................................10-1001
Survey for Non-Domiciliary and Domiciliary Risk Retention Group (RRG) Regulators
(Attachment One-A)..............................................................................................................................10-1002
The Risk Retention Group (E) Task Force met Feb. 24, 2021. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Karima M. Woods, Vice Chair, represented by Sean O’Donnell (DC); Sharon P. Clark represented by Jeff Gaither (KY); Troy Downing represented by Steve Matthews (MT); and Raymond G. Farmer represented by Daniel Morris (SC).

1. **Adopted its Feb. 5, 2021, and 2020 Fall National Meeting Minutes**

The Task Force conducted an e-vote that concluded Feb. 5, 2021, to approve the distribution of a survey to state insurance regulators with the purpose to provide the Task Force with insight into future improvements and priorities in the areas of risk retention group (RRG) regulation, registration and training.

Mr. O’Donnell made a motion, seconded by Mr. Matthews, to adopt the Task Force’s Feb. 5, 2021 (Attachment One) and Nov. 18, 2020 (see NAIC Proceedings – Fall 2020, Risk Retention Group (E) Task Force) minutes. The motion passed unanimously.

2. **Discussed the Applicability of Revisions to Model #440 and Model #450 Related to the GCC as an Accreditation Standard for RRGs**

Ms. Bigglestone stated that in 2020, the NAIC adopted revisions to the *Insurance Holding Company Systems Regulatory Act* (#440) and the *Insurance Holding Company Systems Model Regulation* (#450). The changes relate to applying a group capital calculation (GCC) to groups with at least one insurer and one affiliate. She also stated there were revisions related to liquidity stress testing. However, she said these sections only apply to life insurers and, therefore, are not applicable to RRGs, which can only write property/casualty (P/C) business.

Ms. Bigglestone noted that the Task Force typically considers applicability of accreditation standards to RRGs after a recommended change to the standards is referred to the Financial Regulation Standards and Accreditation (F) Committee and the recommendation is exposed. At the time of this meeting, the referral still resides with the Group Capital Calculation (E) Working Group. However, the current referral suggests accelerating the timeline for adoption of the revisions and an accelerated effective date for accreditation. Therefore, today’s Task Force discussion will not result in a decision, but rather will help provide a foundation for future considerations on applicability to RRGs in the event adoption of the revised accreditation standard moves quickly.

Dan Daveline (NAIC) said that the initial instructions given to the Group Capital Calculation (E) Working Group, tasked with the development of a GCC, were to develop an aggregation method for group capital that builds on risk-based-capital (RBC). The aggregation method developed is essentially a miniature consolidation using eliminations to avoid double counting. With this methodology, the calculation is only as complex as the group itself, and even if there are a lot of affiliates, there are options to combine multiple entities into a single line of reporting. The GCC is intended to be a valuable tool for group oversight that will be incorporated into the Group Profile Summary (GPS). The combination of value and simplicity allows broad application, and the intention is that the GCC applies to all insurance holding company groups. Mr. Daveline noted, however, that it is not uncommon for RRGs to file a disclaimer of affiliation and in those instances when an insurer is not part of a group subject to other holding company filings, the GCC filing would also not apply. The only complete exemption from the GCC (or similar federal or international capital standard) set forth in Model #440 is for groups with only one insurer, which writes only in the state of domicile. There was some discussion about exempting groups under a certain dollar threshold, but the decision was made to subject all groups to the GCC, with the option to seek a waiver after the first year.

Mr. Daveline stated that the GCC has strong confidentiality provisions. The filing is to go to the lead state and only the lead state. In regard to public availability of the GCC, the revisions to Model #440 prevent the insurer from making the calculation public in any way. The calculation is intended as a regulatory tool, not a standard for public comparison of groups.

Becky Meyer (NAIC) provided a summary of the typical adoption process for a new or revised Part A: Laws and Regulations accreditation standard as outlined in the *Accreditation Program Manual*. If adopted through the normal timeline, the effective date for accreditation would be Jan. 1, 2026. However, the referral suggests obtaining a waiver and implementing an effective
date as early as Nov. 7, 2022. Ms. Meyer stated that one potential outcome of the waiver and related bifurcation of effective dates suggested in the referral is expedited adoption of the standard, but an effective date that provides adequate time for adoption by all states. The Financial Regulation Standards and Accreditation (F) Committee is expected to receive a referral from the Group Capital Calculation (E) Working Group at the Spring National Meeting and begin discussion of the topic upon receipt.

Ms. Bigglestone stated that the Task Force expects to consider the issue further when the standard is exposed by the Financial Regulation Standards and Accreditation (F) Committee. States are encouraged to begin considering the potential implications on their domestic RRGs, including any concerns in applying the GCC, as well as potential benefits of obtaining the GCC for ongoing analysis.

3. **Discussed the Financial Analysis Non-Troubled Insurer Procedures**

Ms. Bigglestone stated that revisions to the NAIC *Financial Analysis Handbook* (Handbook) were adopted in 2020 to better incorporate RRG-specific procedures within the risk assessment worksheet and to remove outdated guidance that RBC is not applicable for RRGs. Following these changes, further review of the Handbook identified the Quarterly Quantitative Assessment of Non-Troubled Insurers as another area to consider updates related to RRGs. These procedures generate a set of indicators for any company not considered troubled by the domestic regulator. The results of these indicators help the analyst determine the depth of procedures necessary to perform in the first, second and third quarters. Two indicators, prior year RBC less than 250% and prior year triggered the RBC Trend Test, exclude RRGs from use of these indicators. However, since RBC is calculated for RRGs, this exclusion is likely not necessary. Ms. Bigglestone stated that insurance regulators of RRGs have certain flexibility in applying actions related to RBC. However, she said RBC is still calculated and is a useful indicator when looking at the overall financial position of an RRG. She also noted that the indicators in the non-troubled worksheet are used as a tool for analysts to help determine the extent of analysis necessary. If they are not triggered, the analyst can choose not to perform additional review in that quarter. If they are triggered, the analyst can choose between performing a full quarterly review or providing an explanation of what caused the trigger and why a full quarterly review is not considered necessary. Therefore, the impact of removing the RRG exception appears to provide additional information without unwarranted additional work and aligns with current regulatory practices.

Mr. O'Donnell and Mr. Matthews stated they did not have concerns and agreed the update aligns with current regulatory practices. Ms. Bigglestone asked NAIC staff to draft a referral to the Financial Analysis Solvency Tools (E) Working Group for the Task Force to consider during its next meeting.

4. **Discussed the RRG Survey**

Ms. Bigglestone stated that last fall, the Task Force drafted and exposed survey questions that are intended to help inform the future direction of the Task Force. Minor edits were incorporated as a result of the exposure period, and the survey was sent to state insurance regulators in February. The survey is currently outstanding with a due date of March 1. Ms. Bigglestone stated that the results of the survey will be aggregated, with the details or state-identifying information kept confidential. The Task Force will then consider the aggregated results to help determine next steps.

5. **Discussed Training Initiatives**

Ms. Bigglestone stated that one element of the Task Force’s charges is to consider educational opportunities that relate to RRG resources for both domiciliary and non-domiciliary states. One way the Task Force is pursuing to satisfy this element of the charges is to conduct a training session during the NAIC’s Insurance Summit. She recommended both domiciliary and non-domiciliary state insurance regulators be alert to the schedule when it is announced and register if they are able.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
The Risk Retention Group (E) Task Force conducted an e-vote that concluded Feb. 5, 2021. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Karima M. Woods, Vice Chair, represented by Sean O’Donnell (DC); Andrew N. Mais represented by Fenhua Liu (CT); Sharon P. Clark (KY); Troy Downing represented by Steve Matthews (MT); and Russell Toal (NM).

1. **Approved the Distribution of a Survey for Non-Domiciliary and Domiciliary RRG Regulators**

The Task Force conducted an e-vote to approve the distribution of a survey to state insurance regulators with the purpose to provide the Task Force with insight into future improvements and priorities in the areas of risk retention group (RRG) regulation, registration and training. Mr. O’Donnell made a motion, seconded by Commissioner Clark, to distribute the survey (Attachment One-A). The motion passed unanimously.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
NAIC Risk Retention (E) Task Force
Proposed Survey Questions
Updated February 1, 2021

Purpose: Identify what is working well and what areas the Task Force can improve related to both non-domiciliary and domiciliary regulation of risk retention groups.

Instructions:
Domiciliary states – Please complete both the domiciliary regulator questions and non-domiciliary regulator questions. If different people are responsible for each function, please coordinate internally and two separate submissions may be made. All states should also complete questions not specifically designated as domiciliary or non-domiciliary.

Non-domiciliary states – Please complete questions designated for non-domiciliary states. All states should also complete questions not specifically designated as domiciliary or non-domiciliary.

Note: Individual responses will be kept confidential by NAIC staff. Aggregate information regarding the survey will be compiled, with state specific information and identifying details eliminated for sharing with regulators and/or industry.

1) Name
2) State
3) Email

4) Does your state license domestic risk retention groups?
   a. Yes, as captive insurers
   b. Yes, as traditional insurers
   c. Yes, as both captive and traditional insurers
   d. No
   Comment box: Please provide additional comments.

5) Has your state implemented and provided access to the Best Practices and FAQs for Risk Retention Groups to: 1) - employees in your state responsible for registering or licensing RRGs; 2) - RRGs licensed or registered in your state; 3) - the general public? (referenced documents can be found on the RRGTF webpage under Related Documents https://content.naic.org/cmte_e_risk_retention_group_tf.htm)
   a. No
   b. No, we believe further revisions are required
   c. Yes, via the state website
   d. Yes, via reference to the NAIC website
   e. Yes, via other means
   f. Yes, internally only
   g. Unsure
   Comment box: Please provide additional comments.

6) (Non-Domiciliary Regulators) Has your state implemented the NAIC’s revised Uniform Risk Retention Group Registration Form adopted in 2020 by the C Committee?
   a. No, I was not aware of the revised form
   b. No, but we intend to implement the revised form
c. No, we believe the form requires further revision
d. No, we don’t intend to implement the revised form
e. Yes, and we have received a registration notification
f. Yes, but we have not yet received a registration notification
g. NA
Comment box: Please provide additional comments.

7) (Non-Domiciliary Regulators) Describe your state’s requirements and procedures/processes for the registration of a non-domiciliary RRG in your state.
   a. Comment box

8) (Non-Domiciliary Regulators) As a result of the NAIC’s revised Uniform Risk Retention Group Registration Form, and the Best Practices and FAQ documents, has your state implemented new or additional means of communicating/making inquiries with RRG domiciliary regulators as part of the registration process or annual review process?
   a. Yes
   b. No
   c. NA
   Comment box: Please provide additional comments on new or additional means of communication.

9) (Non-Domiciliary Regulators) Do you believe RRGs applying for registration in your state are properly completing the registration form and providing all required information?
   a. Yes
   b. No
   c. NA
   Comment box: If no, please provide additional comments.

10) (Non-Domiciliary Regulators) When communicating with a domiciliary regulator, did you receive timely responses and were the responses satisfactory?
    a. No, responses were not timely or satisfactory
    b. Responses were timely, but not satisfactory
    c. Responses were satisfactory, but not timely
    d. Yes, responses were both timely and satisfactory
    e. NA
    Comment box: Please comment on what could be improved, if anything?

11) (Domiciliary Regulators) Have you seen an increase in communication received from non-domiciliary states regarding RRGs?
    a. No, unchanged
    b. Yes, minimal increase
    c. Yes, moderate increase
    d. Yes, significant change
    e. NA
    Comment box: Please provide additional comments.

12) (Domiciliary Regulators) If an RRG becomes troubled or potentially troubled do you notify the states it is registered in?
    a. Yes
    b. No
c. Unsure  
d. NA  
Comment box: Please provide additional comments.

13) (Domiciliary Regulators) If an RRG is no longer eligible to write in other states (voluntary or involuntary liquidation, regulatory action, etc.) do you notify the states it is registered in?  
a. Yes  
b. No  
c. Unsure  
d. NA  
Comment box: If yes, please describe the notification/communication process with other states.

14) What areas of the updated tools (NAIC’s revised Uniform Risk Retention Group Registration Form, and the Best Practices and FAQ documents) do you find most beneficial in your regulatory role (what is working well)?

15) What parts of the registration process for non-domestic RRGs do you feel need further clarification, improvement, expanded guidance (what is not working well)?

16) Do you have suggestions for the NAIC RRG Task Force to consider focusing on to keep moving forward with improvements or additional tools and resources (for example – communication considerations, common problem areas, information gaps with other states or the industry, etc.)?

17) What other topics should the NAIC RRG Task Force focus on to further improve and bring more uniformity to the licensing and registration processes, improve the ongoing regulation of RRGs, and/or further improve the understanding of RRGs?

18) Would individuals from your state participate if a webinar or other training is offered covering RRG registration, licensing or other RRG hot topics?  
a. No  
b. Yes, from a non-domiciliary regulator perspective  
c. Yes, from a domiciliary regulator perspective  
d. Yes, from both a non-domiciliary and domiciliary regulator perspective  
Comment box: Please comment on what topics would be helpful.

19) What suggestions do you have to best disseminate information on RRG regulation to state regulators (both domiciliary and non-domiciliary)?

20) Do you utilize the NAIC Risk Retention and Purchasing Group Handbook?  
a. Yes  
b. No

21) Do you have suggestions for updating and improving the NAIC Risk Retention and Purchasing Group Handbook?  
a. Yes  
b. No  
Comment box: If yes, please provide suggestions.
22) (Domiciliary Regulators) Do you utilize the UCAA for licensing new Risk Retention Groups?
   a. Yes
   b. No
   c. NA

23) (Domiciliary Regulators) If you use a process other than UCAA for licensing new Risk Retention Groups, please check all the following elements that are part of the process to charter/license a new RRG.
   a. Background checks and use of biographical affidavit forms
   b. Use of a consulting actuary to review the plan of operation, feasibility analysis and financial projections
   c. Review and evaluation of management personnel
   d. Review of related parties, MGUs and service providers
   e. Review of corporate documents
   f. Review of corporate governance procedures and guidelines
   g. Review of plan of operation, including risks to be insured, limits and maximum retained risk
   h. Review of feasibility study, including financial projections
   i. Require the RRG to list the states the RRG proposes to register in
   j. Require the RRG to include a description of any permitted practice requests
   k. Review of the reinsurance program and creditworthiness of proposed reinsurers
   l. Review of the investment policy and custodial arrangement/agreement
   m. Review of the capital structure, and if applicable, form of surplus note or letter of credit
   n. Review of ownership (including financial information of owners/members) and form of shareholder/subscriber agreements
   o. Review of rates, policy forms and underwriting guidelines, and if applicable, comparison of rates in states proposed to operate in
   p. Review of risk mitigation and loss prevention measures
   q. Review of prospective risks
   r. Review for compliance with the Federal Liability Risk Retention Act
   s. Review for compliance with holding company regulations
   t. Review of marketing materials
   u. NA

Comment box: Please provide a discussion of other key elements or relevant timelines of the licensing process not identified above.
VALUATION OF SECURITIES (E) TASK FORCE

Valuation of Securities (E) Task Force March 22, 2021, Minutes .......................................................... 10-1007

Valuation of Securities (E) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)
March 22, 2021

The Valuation of Securities (E) Task Force met March 22, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan and Ray Spudeck (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by Nakia Reid and John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Doug Slape represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Mike Kreidler represented by John Jacobson (WA); and Mark Afable represented by Randy Milquet (WI). Also participating was: Dale Bruggeman (OH).

1. **Adopted its Feb. 18, 2021; Dec. 18, 2020; and 2020 Fall National Meeting Minutes**

The Task Force met Feb. 18, 2021; Dec. 18, 2020; and Nov. 18, 2020. During its Feb. 18, 2021, meeting, the Task Force took the following action: 1) received a proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to update the financial modeling instructions for residential mortgage-based securities (RMBS)/commercial mortgage-based securities (CMBS); 2) discussed comments received and adopted a proposed amendment to the P&P Manual to update the list of NAIC credit rating providers (CRPs) to reflect nationally recognized statistical rating organization (NRSRO) changes; and 3) received a referral from the Statutory Accounting Principles (E) Working Group on nonconforming credit tenant loans (CTLs); 4) received a proposal to the P&P Manual to update the list of NAIC credit rating providers (CRPs) to reflect nationally recognized statistical rating organization (NRSRO) changes; and 5) discussed U.S. Securities and Exchange Commission (SEC) Rule 18f-4 under the federal Investment Company Act of 1940 related to the use of derivatives by registered investment companies. During its Dec. 18, 2020, meeting, the Task Force took the following action: 1) exposed an updated amendment to the P&P Manual to include instructions for financially modeled RMBS/CMBS to map NAIC designation categories for a three-day public comment period ending Dec. 22, 2020; and 2) discussed financially modeled RMBS/CMBS price breakpoints and other issues surrounding securities that have a zero-loss in 2020.

Mr. Thomas made a motion, seconded by Ms. Clements, to adopt the Task Force’s Feb. 18, 2021 (Attachment One); Dec. 18, 2020 (Attachment Two); and Nov. 18, 2020 (see NAIC Proceedings – Fall 2020, Valuation of Securities (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted an Amendment to the P&P Manual to Update the Financial Modeling Instructions for RMBS/CMBS Securities**

Mr. Fry said at the end of last year, there were some unusual results through the financial modeling process due to the economic scenarios. It produced more securities with losses that were previously zero loss securities that now needed to use the price breakpoint methodology. Coupled with lower interest rates, these securities also traded at a premium. The Task Force did some work last year to temporarily fix the issues with the price breakpoint methodology for year-end 2020, and it was agreed that a longer-term fix was necessary. In front of the Task Force now is that fix to the price breakpoint methodology for securities prior to 2013 and for securities after 2013—move away from price breakpoints and use more of a single-designation process.

Eric Kolchinsky (NAIC) said the proposed amendment P&P Manual is to move to two types of information. For legacy securities, those prior to 2013, the Task Force will continue to provide breakpoints for more post-crisis securities. The process of calculating the expected losses would be the same, except now, instead of converting the intrinsic price into breakpoints, it would be converted into a designation for non-legacy securities—those after 2013. The Structured Securities Group (SSG) believes it to be a good approach to minimize the convexity experienced in the zero loss securities and standardize reporting. The SSG would like to implement this for year-end but realizes that there may be some technical issues for the NAIC and application vendors. Therefore, it is open to a potential 2022 implementation.

Mr. Fry said the Task Force will be in a better position later this year to know whether it can implement by year-end 2021 or if a 2022 implementation is needed, which will give more than enough time.
Discussed Comments Received for an Updated Proposed Amendment to the P&P Manual to Require the Filing of Private Rating Letter Rationale Reports

Mr. Fry said the next item on the agenda is to discuss comments received on a proposed amendment to require the filing of private rating letter rationale reports. The Securities Valuation Office (SVO) worked with the ACLI, NASVA and the Private Placement Investors Association (PPIA) to update the amendment and resolve some of the operational issues that were raised during the Task Force’s Feb. 18 meeting. Mr. Fry asked Mr. Therriault to review the updated amendment.

Mr. Therriault said this proposed amendment would require the rating rationale report to be filed with the SVO for privately rated securities. The rating rationale report should provide a more in-depth analysis of the transaction structure, the methodology used to arrive at the private rating, and, as appropriate, a discussion of the transaction’s credit, legal and operational risks and mitigants. With both the private rating letter and the private rating letter rationale report, the SVO will be able to better understand the security.

During the Task Force’s Feb. 18 meeting, interested parties raised several issues. The SVO staff held a follow-up meeting with the ACLI, NASVA and the PPIA on Feb. 22 to discuss the issues and revise the amendment based on that discussion. They
also met March 4, March 18 and March 19 to review the changes and receive further feedback. The updated amendment reflects many, but not all, of the changes. Summarizing the changes that are in in the revised amendment, the first change was to the transition language in paragraph 11 to permit an option to companies that cannot provide the ratings rationale due to confidentiality or contractual reasons. The next issue, which was an extended discussion during the the Task Force’s Feb. 18 meeting, related to the disclosure as to why something was ineligible. An update was made to paragraph 21 for a new brief disclosure visible to all filers in VISION for two specific situations: 1) the security type is ineligible for filing exemption (FE) according to the P&P Manual list of “Specific Populations of Securities Not Eligible for Filing Exemption”; or 2) the security is of a type outside the scope of Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds, SSAP No. 32R—Preferred Stock or SSAP No. 43R—Loan Backed and Structured Securities, which would also make it ineligible for FE. This requires a VISION technology change, and it has already been added to the development queue. The last update was to paragraph 22 to provide a reporting option if the private rating rationale report cannot be provided for reasons other than confidentiality or contractual limitations after Jan. 1, 2022.

Another issue raised during the Task Force’s Feb. 18 meeting but is not in the updated amendment relates to the required content of the rating rationale report. Rating agencies are in the business of publishing credit analysis opinions and should be familiar with what they typically publish for a specific asset type. The SVO is expecting something comparable to their public reports. Rating agencies often mention that their private ratings are equivalent to their public ratings in terms of the analysis performed. The SVO is looking for something comparable to the publicly rated securities. It was mentioned possibly using the SVO’s regulatory treatment analysis service (RTAS) letter as a benchmark. That is not a good comparison because it is just a summary of what the reporting treatment would be for the security, but it does not go into an in-depth analysis of the credit or methodology. There are few changes that still need to be made to the amendment and worked through with the ACLI, NASVA and the PPiA, specifically to the transition period and confidentiality provisions. With the Task Force’s permission, the SVO would like to continue working with industry and expose a clean version of the amendment with those revisions and expose it for a short public comment period.

Sasha Kamper (PPiA) said there have been multiple meetings to discuss this amendment and agreed in concept during March 19’s meeting to a workable solution. There are a few more changes needed to the amendment that will lay out some of those details.

Mr. Fry directed the SVO to continue working with industry on the amendment to require the filing of private rating letter rationale reports with the SVO and expose a clean version of the amendment, when it is ready, for a 30-day public comment period.

4. Adopted an Amendment to the P&P Manual to Update the List of NAIC CRPs to Reflect NRSRO Changes

Mr. Fry said this agenda item is to discuss comments received and consider for adoption a proposed amendment to update the list of CRPs to reflect NRSRO changes. The proposed amendment reflects the merger of Morningstar and DBRS, and the name update for the Kroll Bond Rating Agency LLC.

Ms. Kamper asked for clarification. She asked if this amendment is to recognize the merger of DBRS and Morningstar or the Kroll Bond Rating Agency name change. Mr. Therriault said on the original exposure, there was a different name for Kroll Bond Rating Agency, which was what was reflected on SEC’s Office of Credit Rating (OCR) website. The amendment was revised to correct Kroll’s name to reflect what is on their Form NRSRO. The rest of the amendment relates to the DBRS/Morningstar merger and a few other minor CRP name changes. Kroll was only highlighted because it was a change from the last time this amendment was discussed by the Task Force.

Mr. Thomas made a motion, seconded by Ms. Mears, to adopt the amendment to the P&P Manual to update the list of NAIC CRPs to reflect NRSRO changes (Attachment Four). The motion passed unanimously.

5. Received a Request from the ACLI to Study the National Financial Presentation Standard for Spanish GAAP.

Mr. Fry said the next agenda item is to receive a request from the ACLI to study the national financial presentation standard for Spanish generally accepted accounting principles (GAAP). The ACLI submitted a letter dated March 1 initiating this formal request for a review by the SVO as required in Part Two of the P&P Manual. In discussions with the SVO staff, the ACLI letter satisfies the pre-condition necessary to conduct the requested study, and the SVO is ready to begin.

Mr. Monahan said that two large multinational companies have asked to have the SVO study Spain as a national financial reporting standard. The SVO has a great process in place for such a review. The ACLI is close to signing the contract with an
accounting firm to assist with the study, and it just needed the Task Force’s approval to undertake the study. The accounting partners will not be flying to the U.S. to meet at the SVO office and instead will be meeting virtually via Zoom or RingCentral.

Mr. Fry said this is informational only; no action is required by the Task Force at this time. When the SVO concludes the study, the SVO will report back to the Task Force with their findings, recommendation and, if appropriate, a possible amendment.

6. Discussed and Received a Proposed Amendment to the P&P Manual to Clarify Guidance for Fund Leverage

Mr. Fry said the next agenda item is to discuss and receive a proposed amendment to the P&P Manual to clarify guidance for fund leverage. Mr. Fry asked Marc Perlman (NAIC) to provide a summary.

Mr. Perlman said the P&P Manual currently grants the SVO discretion when determining whether a fund’s use of derivatives is consistent with a fixed income like security, meaning it will generate predictable and periodic cash flows and is, therefore, eligible for an NAIC designation. Recognizing that this discretion regarding the use of derivatives by funds can lead to a possible lack of predictability when a fund is submitted to the SVO for potential inclusion on its fund lists, some members of the Task Force requested the SVO propose a P&P Manual amendment that would create a more predictable bright line test.

As explained during the Task Force’s Feb. 18 meeting, the SEC adopted a final version of Rule 18f-4 last year, which allows funds to enter into derivative transactions, notwithstanding the federal Investment Company Act’s restrictions of them, so long as funds meet certain conditions. The SVO focuses most closely on the exception to these requirements for limited users of derivatives, meaning funds that limit their exposure to derivatives with potential risk of future payment or loss (call it downside risk) to 10% or less of net assets, exclusive of certain derivatives used to hedge certain currency and interest rate risks. The SEC recognized the risk that derivative transactions pose to funds because they involve leverage or the potential for leverage, which can magnify gains and losses compared to the fund’s investment, while also obligating the fund to make a payment or deliver assets to a counterparty under specified future conditions. The SVO contends that such leverage is inconsistent with the predictable and periodic standard in the P&P Manual. As such, the SVOs recommend using Rule 18f-4’s limited user standards as a kind of guidepost for creating the requested bright line test in the P&P Manual.

Specifically, the SVO is proposing two new tests. Test No. 1: For funds on the SVO-identified Bond ETF List, the SVO-identified Preferred Stock ETF List and the NAIC List of Schedule BA Non-Registered Private Funds with Underlying Assets Having Characteristics of Bonds or Preferred Stock (each of which is granted bond treatment on their respective reporting schedules), the SVO proposes a similar, but not identical, threshold to the limited user exception in Rule 18f-4, whereby the gross notional amount of derivatives that impose no future payment or margin posting obligation on the fund (meaning there is no future “downside” risk), cannot exceed 10% of the net asset value of the fund, except for (and these are the exclusions from the 10% calculation) derivatives that are either used by funds to create more bond-like cash flows or that are common for maintenance of fund portfolios. These acceptable exemptions would include: 1) certain currency and interest rate hedges on fixed-income or preferred stock in the fund portfolio; 2) certain futures or forwards on fixed-income or preferred stock to be held in the fund’s portfolio and for which money for the future purchase have been set aside; 3) reserve-repurchase agreements associated with specific fixed income or preferred stock investments held by the fund; and 4) non-margin borrowing for purposes other than investment. While this first test, like the SEC’s, caps derivatives at 10% of net asset value (NAV), the SEC only caps derivatives with future payment or downside risk. The SVO proposes not permitting any derivatives with future payment or downside risk, other than the exempt derivatives just listed, and capping derivatives with only upside potential at 10%. The reason for capping derivatives with only potential gain for the fund is that they are speculative and, therefore, do not meet the periodic and predictable standard.

Test No. 2: Funds on the NAIC Fixed Income-Like SEC Registered Funds List are in scope of SSAP No. 30R—Unaffiliated Common Stock and reported on Schedule D, Part 2, Section 2. Based on such reporting, if the Task Force deems it appropriate, NAIC designations assigned to those funds could be permitted to include assessments of risk other than credit risk, including market and liquidity risk—both risks introduced by derivatives. This also addresses requests by several Task Force members that a wider range of funds be eligible to receive an NAIC designation. Therefore, if the Task Force thinks it appropriate, these funds could be permitted a larger derivative threshold of up to 20% of the NAV of the fund, but, unlike the first test, with no exempt derivatives. This threshold would also prevent violation of the P&P Manual fund methodology’s predominantly hold requirement that a fund will hold at least 80% of its assets in bonds or preferred stock, depending on the type of fund. For both tests, the SVO recommends incorporating an assessment of counterparty risk into its credit risk assessment. It should also be noted that these increased thresholds for derivatives might not be acceptable under certain state laws. For example, a bill under consideration in New York would cap funds’ non-reserve investments at 10%, meaning derivatives would likely be capped at that amount.

© 2021 National Association of Insurance Commissioners
The SVO thinks the two tests would achieve the goal of greater clarity and predictability to fund sponsors and investors regarding the SVO’s fund reviews while still maintaining the P&P Manual’s predictable and periodic standard. Though, it should be noted, the two tests would be more generous than the current approach in that some speculative derivatives would be permitted. While the second test may permit additional funds on the NAIC Fixed Income-Like SEC Registered Funds List, the inconsistent, and possibly punitive, RBC treatment of funds on this list versus other funds with NAIC designations is not something that the Task Force can address directly. For example, exchange-traded funds (ETFs) on the NAIC Fixed Income-Like SEC Registered Funds List would have a different RBC treatment from ETFs on the SVO Identified Bond or Preferred Stock ETF Lists. For this reason, the Task Force might consider a referral to the Capital Adequacy (E) Task Force and the Financial Condition (E) Committee requesting the assignment of bond RBC factors for all funds whose credit risk has been assessed by the SVO and assigned an NAIC designation pursuant to the Task Force’s policies, including the NAIC Fixed Income-Like SEC Registered Funds List. This would be similar to the referral the Task Force made to the Capital Adequacy (E) Task Force in 2018. Equalizing the RBC treatment for assets with similar credit risk, represented by the SVO assigned NAIC designation, would provide a consistent and uniform NAIC process consistent with regulatory needs for funds. With these amendments the Task Force would be redefining what goes on the NAIC fund lists and, therefore, redefining the fund asset. Therefore, it would be appropriate to refer the proposed amendment to the Statutory Accounting Principles (E) Working Group.

Additionally, the SVO is proposing to add an assessment of a fund’s management to the fund methodology. Under this assessment, the SVO would have the ability to consider a fund’s management and organization, including: 1) key-man risk; 2) its risk management and compliance infrastructure; 3) its credit management standards and credit research capabilities; and 4) its derivatives risk management program for funds required to have one under Rule 18f-4. Based on the management assessment, the SVO would be able to notch down from its credit risk assessment or choose not to assign an NAIC designation.

Mr. Everett asked states have defined their bond treatment by NAIC treatment. “Speculative” was mentioned regarding certain funds. Does the SVO know what funds those are? And if states permit these to be used for surplus, that would seem to be a departure. What is being defined as “speculative”? Mr. Perlman said “speculative” is anything with leverage where a fund can have outsized gains or losses. What the SVO is proposing—except for the exempt derivatives discussed, which are derivatives hedging certain risks on assets within the fund portfolio, but other than those preventing risks—where there is potential loss or future payment obligations, capping those with the potentially unlimited upside gain because the P&P Manual has the predictable and periodic standard to be bond-like.

Mr. Everett asked how many states that permit bond ETFs for primary capital surplus may be affected. Mr. Therriault said given the definition change, putting a 10% speculative threshold for those that are on the bond or preferred stock ETF lists, the change is not expected to have any impact for those lists. The threshold is generally consistent with the ETF list today. The other test is a little more generous for the SEC registered fund list, which is reported on the common stock schedule.

Mr. Everett asked if it would it be the Statutory Accounting Principles (E) Working Group or this Task Force that would be looking at standards for the management assessment. Mr. Perlman said the SVO would do that. Mr. Fry said this would be just another thing the SVO assesses in the whole package of things assessed with funds.

Mr. Fry directed the SVO to expose this amendment to the P&P Manual to clarify Guidance for Fund Leverage for a 45-day public comment period ending May 6, 2021, and make a referral to the Statutory Accounting Principles (E) Working Group requesting their approval of the proposed changes to these definitions.

7. Received a Staff Report on Projects Before the Statutory Accounting Principles (E) Working Group

Mr. Fry said the next agenda item is to hear a report on projects before the Statutory Accounting Principles (E) Working Group. Mr. Fry asked Julie Gann (NAIC) to provide that report.

Ms. Gann said there were a few things to highlight from the Statutory Accounting Principles (E) Working Group’s March 15 meeting. She said that while the Working Group adopted several items and exposed several items, this update will only highlight four adoptions and two exposures. For the adoptions, the Working Group:

- Incorporated revisions to clarify that publicly traded preferred stock warrants should be treated as preferred stock. This is something similar to what was already in place for publicly traded common stock warrants to be treated as common stock. The reason it is required to be specified is all other warrants are captured as derivatives in the scope of SSAP No.86—Derivatives. The Working Group had not seen those preferred stock publicly traded warrants before, but they are out there, so the guidance was clarified accordingly.
- Adopted revisions to indicate the changes to the Freddie Mac Structured Agency Credit Risk (STACR) and Fannie Mae Connecticut Avenue Securities (CAS) programs, which will be issued through REMIC, which is a REMIC trust, will still be in scope of SSAP No. 43R, and those revisions align the financial model guidance to match the P&P Manual.
- Clarified that perpetual bonds with an effective call option shall be amortized, using the yield to worst method with all other perpetual bonds that do not have an effective call option to be reported at fair value.
- Incorporated guidance and new disclosures to ensure that all related parties, including those with over a 10% ownership that may have disclaimed affiliation, are still reported as related parties in the financial statements. There is also a new schedule Y Part 3 to detail age-related parties.

Regarding exposures, Ms. Gann said comments are due April 30. She reiterated that while the Working Group exposed a long list of items, she will highlight only two of them. The Working Group exposed:

- Exposed revisions to data capture and expanded disclosures in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities to make it easier to identify when an insurer has transferred an asset and maintains continuing involvement, such as with a self-securitization. There are existing disclosures in SSAP No. 103R, but they are currently in the narrative. It is not possible to aggregate and assess those transactions or to see problems. That is one of the main goals of this new disclosure.
- Exposed a proposed interpretation to clarify that cryptocurrency such as Bitcoin does not meet the definition of cash and is a non-admitted asset under statutory accounting. With that exposure, the Working Group requested for industry to provide information regarding the extent that insurers hold cryptocurrency.

Ms. Gann said the Working Group plans to meet May 20 to hear comments on those exposed items and take action, particularly with regards to those that have blanks-related revisions.

Ms. Gann said the Working Group also discussed the SSAP No. 43R project. She said there has been a small group of industry that has been meeting with Iowa and NAIC staff weekly since Fall 2020. The initiative is to draft a definition of what should be captured as a bond on Schedule D-1. The project was undertaken as an initial first step in the 43R substantive project as it was identified that some investments that caused regulator concern are not necessarily limited to SSAP No. 43R, and they could have been either captured or reclassified to SSAP No. 26R. By identifying what should be captured as a bond first, the project removes the concern of potential reclassification for those investments. The small group has made significant progress in drafting this definition, and it is anticipated that this preliminary definition will be publicly exposed by the end of May, possibly in accordance with the Working Group’s May 20 meeting.

Ms. Gann added that the draft definition currently focuses on investments that reflect issuer credit obligations and asset backed securities. It establishes definitions and criteria of what should be captured within both classifications. Once the definition has been publicly discussed, it is anticipated that SSAP revisions will occur to incorporate the definitional concepts. Those are currently anticipated to occur within SSAP No. 26R and SSAP No. 43R; future discussions will determine the best approach. She said it is also anticipated the investments that no longer qualify for D-1 will move to Schedule BA. It is anticipated that the discussions will include accounting and reporting concepts for those investments and that referrals will be sent to the Capital Adequacy (E) Task Force to determine RBC.

Ms. Gann said the Working Group has received questions regarding CTLs and how the current project for D-1 assessment will affect that specific investment. These questions also asked about the purpose of the prior referral that the Working Group sent to the Task Force. To provide some clarity on this situation, there are two workstreams: 1) the Statutory Accounting Principles (E) Working Group project on the D-1 bond definition; and 2) the Valuation of Securities (E) Task Force project to revisit the structural requirements that are in the P&P Manual. It is anticipated that these will ultimately converge. However, with the specific discussion on CTLs last fall, specific focus is being given to these investments concurrently with the bond project. The determination of whether an investment qualifies within an SSAP and a particular reporting schedule is a decision of the Statutory Accounting Principles (E) Working Group. However, in certain cases, such as with CTLs, a structural analysis by the SVO under the requirements of the P&P Manual is necessary to satisfy this requirement. The original determination of residual risk allowing the reporting on Schedule D was made by the Invested Asset (E) Working Group, which has since been disbanded. Since that residual risk threshold is currently housed in the P&P Manual and information on the CTLs filed with the NAIC is reviewed by the Task Force, the prior referral intends to solicit the expertise of the Task Force and the NAIC SVO staff from their knowledge of those filed CTLs, which includes an assessment of whether that residual risk threshold should be revised. Both the structural parameters and the ultimate role of the structural analysis in relation to the principles developed through the Statutory Accounting Principles (E) Working Group bond project will require coordination between both groups as these
projects progress. Statutory Accounting Principles (E) Working Group staff will continue to work closely with the Valuation of Securities (E) Task Force staff regarding those investments.

8. Heard an Update on CTLs

Mr. Fry said he would cover the CTL update next. The Statutory Accounting Principles (E) Working Group recently did an interpretation on CTLs that are called nonconforming CTLs and have a rating agency rating. These could be reported on Schedule D for year-end 2020 as long as they were filed with the SVO before Feb. 15, 2021. These securities were also required to be listed in the notes of the financial statement for year-end 2020. It was agreed that if the SVO assigns a designation to these securities, they would be allowed to be reported on Schedule D through the third quarter of 2021. The reason why the Working Group selected that date was that it was anticipated by then that the SSAP No. 43R project would provide a framework that would address these securities. If that framework has not been provided by that time, it might be possible for an extension of that policy until the SSAP No. 43R project matures. The SVO is committed to applying its methodology for CTLs or any other securities that have a residual risk up to 50%. If that residual risk is over 50%, on a case-by-case basis, the SVO would assess whether there are enough mitigating factors to designate these securities. The SVO is looking at the securities that were filed for last year-end. If there are any new securities in the market, the SVO will look at those it can designate. A designation does not mean that it goes on a specific schedule; that is the Statutory Accounting Principles (E) Working Group’s responsibility. If the SVO designates one of these and Statutory Accounting Principles (E) Working Group decides that it is not eligible for bond treatment on Schedule D, there may still be a Schedule BA home for these with fixed income like RBC, provided the Capital Adequacy (E) Task Force and everyone else signs off on this treatment.

Ms. Belfi said there was a lot of confusion on direction from some of the interested parties and Task Force members. Hopefully, there will be a resolution. Mr. Everett said if this unfreezes the market, then the Task Force is moving in the right direction.

Tom Sargent (Waterway Capital), representing the Lease-Backed Securities Industry Group, asked how Mr. Fry sees this moving forward. He asked, “If there is a CTL with a residual in the neighborhood of 20% to 50%, do we proceed in placing that in front of the SVO to get a designation?” Mr. Fry said it should be filed with the SVO as it has been looking at the ones that came in last at the end of last year, and the SVO will use that same methodology. This is a new area, looking at ones where there is a greater that 5% residual. The SVO is in a position where it is looking at them through 50%, verifying the structure and then looking through to the lessor. The SVO is going to look at those that will need mitigating factors. There is the project before the Statutory Accounting Principles (E) Working Group, and as that framework becomes more mature, everything will come together by the end of the year.

Mr. Sargent asked if they should be submitted as an RTAS. Mr. Theriault said insurers can be submit them to the SVO as a regular filing. The SVO did receive 21 filings that were identified as nonconforming by the Feb. 15 deadline. There were an additional 27 filings that have not been reviewed but were submitted by the deadline. Any direction the SVO receives from the Task Force, including accepting additional residual risk, will be taken into consideration during the SVO’s assessment, but the rest of the CTL criteria would still apply.

Mr. Sargent asked if the definition of “residual risk” was using the original loan balance or the appraised loan to value. Mr. Perlman said it would be the loan balance.

Mr. Bruggeman asked that since the Statutory Accounting Principles (E) Working Group sent over the letter to evaluate the old 5% threshold, is 50% the new standard or is that still ongoing, and is the SVO still evaluating it. Mr. Fry said the SVO can safely go to 50% in this interim period and can look at ones higher, but they will need other mitigating factors. The Task Force will formally change it in the P&P Manual up to the 50% mark once the interim solution becomes permanent. Mr. Bruggeman asked if the 50% is temporary just as the SVO is going through the process for the year-end files and then the Task Force will evaluate whether to make it permanent. Mr. Fry said that is right and probably any new securities so that the market is not frozen. They will still be at the mercy of the Statutory Accounting Principles (E) Working Group ruling and if they do not belong on the bond schedule, they will likely end up with a Schedule BA and will still need to go through the Capital Adequacy (E) Task Force to get RBC certainty.

Mr. KozakMD asked if there was a potential that some of this would go on Schedule B as opposed to Schedule BA. Mr. Fry said that is not completely off the table. As the SSAP No. 43R project plays out, there will be some things that are in or out. If they are not in scope of SSAP No. 43R, it is possible one could consider those going on Schedule B. Some people may also see them on Schedule BA with a designation for fixed income, but that is only available to life insurers and fraternal insurers. That would not be available to the property/casualty (P/C) insurers. Ms. Gann said it really depends on the structure of the investment. If it is not a security, then technically it would go on the mortgage loan schedule, which is Schedule B. The ones
that are securities are where there may be a gray area, whether they should be SSAP No. 43R or Schedule BA. All of this is expected to be discussed further as part of the bond project.

Mr. Therriault said as the SVO receives filings with increasing amounts of residual exposure, the SVO will need additional documentation on the property because that additional component will now need to be assessed. This will be additional documentation beyond what is currently identified in the P&P Manual now.

9. Received a Report from SVO on Year-End Carry-Over Filings

Mr. Fry said once a year, the SVO gives the Task Force an update on its backlog and how that is looking. Mr. Fry asked Mr. Therriault for a quick update on that.

Mr. Therriault said for 2020, the SVO reviewed 12,696 filings comprised of: 3,092 initial filings; 7,866 annual updates; 1,209 additional issuances; and 529 other filing types. The total filing numbers included 2,027 manually processed private rating letters. For year-end 2020, there were 795 carry-over filings, 351 that received an “IF” for an accepted initial filing and 444 that received a “YE” for an accepted annual update. This was a carry-over rate of 6.3% for 2020, well below the rate of 10% or higher that the SVO considers concerning or reflective of a resource constraint.

As of March 16, there were only 70 remaining carry-over filings, 45 accepted initial filings and 25 accepted annual update filings. The remaining carry-over rate was 0.6% as of that date and has only gotten lower since then. This was an impressive performance by the SVO staff and managers given the significant disruptions introduced by working 100% remotely starting March 10, 2020, along with the team absorbing the new analytical work related to ground lease financing (GLF) transactions. At this time, Mr. Therriault said he is not seeing any SVO analyst resource constraint issues, but there are significant resource limitations with technology support for the office that have affected the SVO’s ability to improve the core systems, VISION, Automated Valuation Service+ (AVS+) and Structured Securities (STS), or fully use the SVO’s investment data. Also, if additional analytical tasks are assigned to the SVO, which the SVO is happy to take on for the Task Force, additional resources may be needed.

Mr. Monahan said a suggestion for the future is to add the report as an attachment, and he thanked and congratulated the SVO for their hard work.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
Valuation of Securities (E) Task Force
Virtual Meeting
February 18, 2021

The Valuation of Securities (E) Task Force met Feb. 18, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmayer represented by Carolyn Morgan and Ray Spudeck (FL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by John Strovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Jessica K. Altman represented by Kimberly Rankin (PA); Texas represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Edward Buyalos (VA); Mike Kreidler represented by John Jacobson (WA); and Mark Afable represented by Randy Milquet (WI).

1. Received a Proposed Amendment to the P&P Manual to Update the Financial Modeling Instructions for RMBS/CMBS and Direct IAO Staff to Produce NAIC Designation and NAIC Designation Categories for Non-Legacy Securities

Mr. Fry said the first item on the agenda is an amendment to update the Financial Modeling Instructions of the Purpose and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to move away from using price break points for securities issued after Jan. 1, 2013. The Task Force, through the Structured Securities Group (SSG), will still model everything and use break points up to the cutoff date. Any security issued after that cutoff date would use modeling to produce a single NAIC designation that all insurers would use regardless of their carrying value. This amendment was driven by problems experienced last year with the price break point methodology. During the year-end modeling process, there were more non-zero loss securities because of the modeling scenarios, which then subjected those securities to the price break point process. Given the very low interest rate environment, many of these securities trade at a premium. The combination of all these factors caused some illogical results in securities that were more highly rated than the final results going through the break point methodology. The SSG was able to fix this for year-end by changing its criteria for a non-zero loss security. This was a temporary fix; by year-end, there were still some securities with illogical results, but there were less of them than there would have been. The Task Force agreed at that time that it needed to relook at this process, and the Investment Analysis Office (IAO) staff came back with this amendment. Ideally, it would be good to have this for year-end 2021. The proposed amendment may produce a couple of new symbols that would need to work through with Blanks (E) Working Group.

Eric Kolchinsky (NAIC) said the first thing is that the proposal is separating securities into legacy and non-legacy. The legacy date was chosen just to conform what was already used in the past for securities in Part Four of the P&P Manual. The thinking behind it was the same, and it is better not to have multiple dates for this. Legacy securities will continue to receive the price break points. Those are the securities that were affected by the global financial crisis, and they are far more affected by this process. For newer securities, the proposal would map from the intrinsic price, similar to what is done to the Structured Agency Credit Risk (STACR)/Connecticut Avenue Securities (CAS) type securities, which are issuer obligations. What is being proposed is mapping the non-legacy intrinsic price to the five break point levels currently used for the mortgage reference securities, CAS, and STACR, and providing the NAIC designation for those mapped securities. The proposal is attached, and as things develop in terms of broader risk-based capital (RBC) factors, there will be adjustments. A short comment period is recommended for this proposal so that it can be implemented for year-end 2021 and referred to the Blanks (E) Working Group, if need be. NAIC staff have been working with industry participants on the proposal, as this was a fairly known issue.

Michael M. Monahan (American Council of Life Insurers—ACLI) said the ACLI is very supportive of the 30-day exposure, and it committed to getting this done as efficiently and effectively as possible. There was an ACLI call on Feb. 11 to see where ACLI members were, and the ACLI members are solidly in the camp of Mr. Kolchinsky and the Task Force. Another call is scheduled for tomorrow.

Mr. Fry directed IAO staff to expose this amendment to update the financial modeling instructions for residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) to produce NAIC designation and NAIC designation categories for non-legacy securities for a 30-day public comment period.
2. Discussed Comments Received and Considered for Adoption of a Proposed Amendment to the P&P Manual to Require the Filing of Private Rating Letter Rationale Report

Mr. Fry said the next item is a proposed amendment to require the filing of private rating letter rationale reports along with the private letter ratings. Given industry feedback on this item, it may best to update the amendment and consider it again at the Spring National Meeting. This amendment goes along with the bespoke effort started last year to gain transparency. Getting the rating rationale reports would be a big part of that transparency. Comments were received from industry, and the Securities Valuation Office (SVO) staff has reviewed them.

Charles A. Therriault (NAIC) said this proposal would require the rating rationale report to be filed with the SVO for privately rated securities. The rating rationale report should include a more in-depth analysis of the transaction structure; the methodology used to arrive at the private rating; and, as appropriate, the transaction’s credit, legal and operational risks. With both the private rating letter and the private rating letter rationale report, the SVO will be able to determine whether the private credit rating is an Eligible NAIC Credit Rating Provider (CRP) Rating, meaning the security type is eligible to be reported on Schedule D, and it is appropriate for a nationally recognized statistical rating organization (NRSRO) credit rating to determine the NAIC designation.

A joint comment letter was received from the ACLI, the North American Securities Valuation Association (NASVA), and the Private Placement Investors Association (PPIA). There were several constructive suggestions. The first suggestion relates to the creation of a transition period between when private rating letters were first required for securities issued after Jan. 1, 2018, and the effective date for this new provision, Jan. 1, 2022. SVO staff agree with the recommendations, and the text they proposed to paragraph 11 and 22 in the comment letter, highlighted in blue, provides for a transition period or for a situation where the rating rationale is not submitted.

The joint comment letter also asked for clarification on providing the rating rationale reports for only the initial issuance by the CRP and whether it is required annually. The amendment was structured as an ongoing filing requirement, including any material changes. Many things can happen to an investment after issuance, and the SVO still recommends that this be an ongoing requirement, but that is a decision for the Task Force.

The next recommendation in the comment letter, highlighted in green, introduces a new definition of a security that is ineligible for an NAIC designation. There are extensive definitions already in the P&P Manual devoted to Filing Exemption (FE) eligibility and NAIC designation eligibility. Adding an additional section for only privately rated securities is unnecessary, and it will potentially create confusion and inconsistency in our guidance. The SVO does not recommend including that suggested change. There was also a request for a new appeal process specific to private rating securities. The existing instructions in the P&P Manual already provide for an insurer to request clarifications from an SVO analyst, appeal an SVO opinion, and escalate to the Task Force chair. Given the robust existing instructions to address this issue, the SVO believes there is no reason to create an alternate process. Likewise, the only entities that should be permitted to appeal an SVO opinion are insurers, as NAIC designations are only intended for NAIC members and are not for the issuers of securities. This recommendation had an option for issuers of securities to also appeal SVO decisions, which is not consistent with the rest of the P&P Manual. The SVO recommends that the suggested changes in green not be adopted by the Task Force.

Michael Reis (Northwestern Mutual Life Insurance Company) said he was unable to follow all of what Mr. Therriault said, but he understood that he did not recommend the changes in green. Mr. Reis said industry was not looking for a new appeals process, but they would like to know why a security is being rejected. If it is being rejected because it is not FE per the P&P Manual or because NAIC staff does not believe it is a bond for the Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities, industry is asking that they be told why a security is rejected.

Mr. Therriault said there are extensive instructions in Part One of the P&P Manual, so if any insurer has a question about a filing, they can ask and the SVO analyst will respond. He encouraged companies to take advantage of that process if there is a question about anything the SVO is doing.

Mr. Reis said if a security is rejected, there should automatically be a disclosure without having to request that information. Mr. Therriault said if there is a concern about our opinion, a filer can submit a quick email to the SVO analyst. Requiring a formal detailed response on every filing would create an extra burden on SVO staff. Linda Phelps (NAIC) said the analysts include a very brief rejection reason, and if anybody wants additional information beyond that, they should reach out to the analyst.
Mr. Reis suggested that the topic be taken offline because there are a number of companies requesting this update, and he would like the opportunity to discuss it further. Tracey Lindsey (NASVA) said filers are looking for transparency. If someone else files a security, it gets rejected for the rest of the holders who do not know what the reason is for the rejection. This could be a dropdown option in VISION to indicate why something was not accepted by the NAIC. Mr. Therriault said it might be worth taking this offline because it does not sound like the procedure in the amendment or an appeal process but more of an enhancement to the VISION system.

Sasha Kamper (PPIA) said Mr. Therriault recommended that the ratings rationale be an ongoing filing requirement as opposed to a one-time filing requirement. The reason industry asked for the one-time requirement is because the output received from the rating agencies is very deal dependent, even by the same rating agency. Some deals may have ongoing rationales that are updated annually. Others may have an in-depth rationale report that is done at time of issue; thereafter, they only get a private rating letter. An update to the rating letter and any comments related to the why might be somewhat cursory from the rating agency and particularly for those deals, especially again issued before 2022. The work product that the borrower gets is a result of a commercial negotiation and a legal agreement between the rating agency and the borrower. Industry may have difficulty getting those borrowers that only paid for a one-time rationale to go back and amend their agreements with the rating agencies to produce rationales every year. If you have the rationale that describes the deal in full, then you can at least understand the nature of the deal and what the rating agency was looking at when they first rated it, then you get updates and the ratings thereafter. Unless there has been a major amendment or structural change to the transaction, that should at least provide the analysts at the NAIC with enough clarity to understand the deal. Industry would not have any problem with the extent that rationales are available. It is really an issue of the fact that sometimes it will not be available and all that was receives was the letter.

Mr. Fry said that can be discussed a little bit more before Mr. Therriault puts out his final version, and if we have two versions to consider, the Task Force can decide on its next call.

Mr. Reis said there is broad agreement for the proposal and moving forward with it. Industry had a call with Mr. Therriault and narrowed the gap to around the edges for some items. Some of the rating agencies have reached out to us and expressed their confusion as to what should be included in our meeting rationale report; they could be 500 pages or five sentences. One thought that they could use the rating rationale that the SVO provides in the Regulatory Treatment Analysis Service (RTAS) Letter, but that probably does not have the level of data that Mr. Therriault is looking for. Industry stands ready to work to make that process as efficient and beneficial as possible.

Ms. Mears said the question for Ms. Camper, just as a follow up to her comments, especially when you are talking about the potential that some of those updates may not include the rationale, is whether that is the main concern or whether it is feasible that some of these private letters are not updated, there is only the initial rating provided and then nothing subsequent to that. Ms. Kamper said it is not clear whether the rationales are updated or not. The rules in the P&P Manual make it very clear that for a private ratings letter to be valid and for security to be FE, it has to be reviewed no less than annually. If there is no updated ratings letter to prove that it was at least reviewed, then it cannot be FE and would need to be filed.

Mr. Fry advised that anyone who has any concerns around these issues reach out to Mr. Therriault. Mr. Therriault will rework a new version and expose it.

3. Received a Referral from the Statutory Accounting Principles (E) Working Group on Non-Conforming CTLs

Mr. Fry said the next item on the agenda is informational for now. The Task Force has received a referral from the Statutory Accounting Principles (E) Working Group about credit tenant loan (CTL) investments and more specifically about the residual risk threshold. SVO staff are going to put together a memorandum that will address whether, in their opinion, it is appropriate to revisit the 5% residual risk threshold that we are currently operating under for CTLs. Then if applicable, the memorandum will address what would be an appropriate residual risk threshold, if there is one. The Task Force will also be considering whether other mechanisms or compensating controls could be incorporated as a mitigating factor. SVO staff will be putting together this response, and they will let the Task Force look at that response.

Mr. Everett stated that he is a little confused looking at the memorandum where it says that we are looking at these like their mortgage loans; they are basically securities. If it were a mortgage loan, then the lender would end up with the property at the end of the day; that does not happen here. Mr. Everett asked what the considerations are, because generally when looking at tenant credit quality, the lease obligation, the structure of the transaction, and real estate considerations really come in only when the property goes dark. He also asked what the broader picture is here.
Mr. Therriault said the purpose of the CTL structure, which evolved sometime in the 90s, is that the credit risk should be to a corporate obligor. Some of these transactions have a residual risk, which means the bond continues beyond the lease term so there is a residual threshold, which then has exposure to the property without a lease payment associated with it. When that original decision was made to permit these on Schedule D reporting, that was a requirement both in the P&P Manual and the Accounting Practices & Procedures Manual (AP&P Manual) for guidance to be allowed and recorded on Schedule D. This is a long-standing instruction that the Statutory Accounting Principles (E) Working Group is looking at as part of its project to consider whether the classification of this asset should still be allowed to be reported as a Schedule D bond. The referral is a question coming from the Working Group to SVO staff that reviews these transactions asking if, in its opinion, this threshold is still appropriate and whether there might be anything out there to prevent that kind of residual exposure underlying the asset.

Mr. Everett asked if the Statutory Accounting Principles (E) Working Group is setting the investment standards. Mr. Therriault said the Working Group sets the classification of assets and what schedules they are reported on. The Task Force sets the risk assessment of those assets. Mr. Everett said it looks like there is a shift from the P&P Manual of the residual risk to the AP&P Manual. Mr. Therriault said this referral is to guidance that is in the P&P Manual now that says there cannot be more than a 5% residual risk for a CTL to be conforming to the P&P Manual. SVO staff are aware that there are CTLs that are not conforming.

John Garrison (Lease-Backed Securities Working Group) said the Working Group welcomes the referral from the Statutory Accounting Principles (E) Working Group to this Task Force to reconsider the appropriate residual percentages for CTLs; it is a reconsideration that is long overdue. The 5% current threshold that is in the P&P Manual was put in place 27 years ago when CTLs were first introduced. It was originally intended by all parties to be a sort of provisional number that would be reconsidered in several years, as more information on the performance of these securities became available. The number has not changed over the 27 years since it was first introduced, even as the markets continued to evolve and the strong performance of these securities was well documented. Repeated studies have shown that CTLs have the best performance of any insurance company investment asset. As the Task Force considers this referral, there are a couple of factors to consider. First, under the code of federal regulations, a 50% residual balance is the percentage that is already set forth as the allowable standard by the U.S. Securities and Exchange Commission (SEC) for asset-backed and lease-backed securities. This regulation specifically states that securities backed by leases, and that is clearly the case with CTLs, may rely on up to 50% “on the cash proceeds from the disposition of the physical property underlying such leases.” Second, in other asset classes, a residual balance of 50% is generally consistent with an asset quality of AA. Third, the 50% standard that is set forth in the federal regulations is an across-the-board standard, and it includes many leased assets which are depreciating: equipment, rail, cars, airplanes, etc. Leased automobiles are subject to a higher standard, which is 65% for residual. Real estate is widely accepted to be a non-depreciating asset, so it seems nonsensical to us to submit it to a lower standard than it is currently allowed for other lease depreciating assets. Especially in the light of this 50% federal rule, a 5% threshold seems unreasonable and unnecessarily restrictive for insurance companies.

Mr. Garrison continued that, a change, as the Task Force considers this, from the 5% threshold to a standard of 50%, which we recommend, could be accomplished with a simple revision to the P&P Manual. It would resolve once and for all the whole issue of nonconforming CTL deals that were historically filed with rating letters from CRPs, all CTLs would be filed with the SVO, as they currently are. The CTLs are under the manual for an SVO-determined designation, which would create total transparency for the state insurance regulators. Second, it would bring outdated regulations in line with current industry practice. The referenced studies by the American Academy of Actuaries (Academy) document that CTLs are the best performing of any insurance company investment. So far, no evidence has been provided, and our Lease-Backed Securities Working Group is not aware of any deals with larger residual percentages that were submitted with filing letters; and FE have not performed any worse than CTLs with the 5% threshold or resulted in any significant losses, credit issues, or solvency issues for insurance company investors. A revision such as this would unfreeze these markets. Mr. Garrison said he has heard from many insurance company investors who have shied away from this market and have stated they are reluctantly accepting lower yielding investments rather than dealing with the cloud that is hanging over this market due to the regulatory uncertainty.

Mr. Fry said one interesting feature is the transparency part of that effort. If the threshold was raised these securities would require an SVO designation and would not be eligible for FE. The Task Force would have better control over the policy of these securities than it would with private letter ratings.
4. Received a Proposed Amendment to the P&P Manual to Update the List of NAIC CRPs to Reflect NRSRO Changes

Mr. Fry said agenda item four is to receive a proposed amendment to update the list of any CRPs to reflect recent NRSRO changes. The CRPs, Morningstar, and Dominion Bond Rating Service (DBRS) merged in 2019 to become a single NRSRO. Mr. Fry asked Mr. Therriault to provide an overview of the amendment.

Mr. Therriault said the catalyst for this amendment was the merger of Morningstar and DBRS. Because of that merger, there is now a single set of rating agency symbols. The P&P Manual currently has symbols for both Morningstar and DBRS. With the alignment under the DBRS symbol set, the proposal removes the Morningstar symbol set. In the process of going through the SEC’s Office of Credit Ratings (OCR) website, several other minor name changes were identified. It made sense to make all these updates to the P&P Manual to reflect these minor changes. There is a minor inconsistency on the OCR website related to the Kroll Bond Rating Agency (KBRA). It is referred to as the “Kroll Bond Rating Agency Inc.” but its Form NRSRO has “Kroll Bond Rating Agency LLC”; the LLC is the correct title. With the Task Force’s permission, the amendment would be modified for that correction. This is a non-substantive amendment to make some corrections and updates to this section of the P&P Manual.

Mr. Fry directed SVO staff to expose this amendment to update the list of NAIC CRPs to reflect NRSRO changes for a 30-day public comment period.

5. Discussed SEC Rule 18f-4 Under the Investment Company Act of 1940 Related to the Use of Derivatives by Registered Investment Companies

Mr. Fry said there is an update on the regulation of derivatives used by funds. When the Task Force met last July, Marc Perlman (NAIC) provided an update on the SEC’s proposed Rule 18f-4. Last October, the SEC adopted the final rule, a new framework for derivatives used by registered funds. Mr. Fry asked Mr. Perlman to provide an update to the Task Force on the new rule, specifically the parts that the SVO thinks might be pertinent to potential updates to the P&P Manual.

Mr. Perlman said the SEC adopted a final version of Rule 18f-4 in October 2020. The rule will allow funds to enter into derivative transactions, notwithstanding the Investment Company Act of 1940’s restrictions on derivatives, so long as funds meet certain conditions. Much of the final rule is substantially the same as the proposed rule described in July 2020. Funds will need to institute a derivatives risk management program, which would include stress testing, back testing and internal reporting. Funds would need to abide by a limit on fund leverage risk by instituting an outer limit on leverage, which would be based on a value at risk (VaR) calculation. Fund boards will need to approve of a derivative risk manager who will oversee the derivatives risk management program and report to the board. The SVO is focusing most closely on the exception to these requirements for limited users of derivatives, meaning funds that limit their derivative exposure to 10% or less of net assets. The final limited user exception differs from that in the proposal, and for the purposes of calculating the 10% exposure, funds can exclude certain derivative use to hedge currency and interest rate risks.

Pursuant to the P&P Manual, the SVO is required to determine if a fund is fixed income-like, meaning the SVO must determine whether a fund will generate predictable and periodic cash flows in a manner broadly similar to a situation where the holding of bonds or preferred stock of unknown credit quality were held individually. Under this test, the SVO is by extension granted discretion when determining whether funds’ use of derivatives is consistent with a fixed income-like security and is therefore eligible for an NAIC designation. The SVO recognizes that this discretion regarding the use of derivatives by funds can lead to a possible lack of predictability when a fund is submitted to us for potential inclusion on one of the SVO fund lists; therefore, the Task Force may want to consider a possible amendment to the P&P Manual to create a more predictable bright line test. One possible solution for the Task Force to consider would be to use Rule 18f-4 as a kind of guidepost for updated P&P Manual guidance on the use of derivatives by funds by adapting the rules and limited user standards to guide the SVO determination of what is an acceptable use of derivatives by a fund so that the fund payments can be considered fixed income.

For example, a more definitive limitation on the use of derivatives in funds consistent with the limited user exception and the rule could be established whereby the gross notional amount of derivatives cannot exceed 10% of the net asset value of the fund except for currency and interest rate swaps matched to securities in the fund portfolios and reverse repurchase agreements. The SVO believes that such a change would benefit the market by providing greater clarity to fund sponsors and investors while maintaining the limit on the use of leverage by funds. Additionally, the SVO recognizes that based on a 10% test, certain funds may not qualify as fixed income-like and would not be eligible for reporting as bonds on Schedule D, Part One. If the Task Force members believe there is interest by the Capital Adequacy (E) Task Force and RBC working groups, a separate risk assessment process for funds can be proposed, which would not qualify as fixed income-like, but it could be permitted to
receive NAIC designations, or modified version thereof, for reporting as common stock and Schedule D, Part 2 Section 2 but with an NAIC designation adjusted to reflect market risk in addition to credit risk, and a separate RBC factor might be necessary for such funds.

Mr. Fry said the SVO will soon produce some sort of an amendment that will be exposed through the Task Force’s normal process. If anyone has any ideas during this drafting phase, their comments will be taken into consideration.

Mr. Fry directed the SVO to prepare a P&P Manual amendment on the use of derivatives by funds for the Task Force to consider.

6. Discussed Other Matters

Mr. Fry said the Task Force is scheduling a call for the Spring National Meeting on March 22, 2021. A number of these items will be discussed on that call.

Mr. Kolchinsky said the NAIC has a policy of periodically re-submitting the vendor contracts. In 2015, the NAIC signed Blackrock to a three-year plus two one-year extension contract that was set to run out in 2020. Given the COVID-19 pandemic, this was pushed out one year, but now the Executive (EX) Committee of the NAIC has asked this request for proposal (RFP) as our usual business practice. The press release for the RFP was just released during this meeting, and it can be found on the front page of the NAIC website for anyone who is interested or curious to see.

Mr. Monahan asked if there is enough time to work through the comments assuming that the comment deadline is March 15, and the Spring National Meeting is the week of March 22. Mr. Kolchinsky said yes, and if there are any technical things, information should keep flowing. While we typically publish two weeks before a meeting, Mr. Therriault asked if the Task Force is fine with some of the materials being posted after that deadline. No concerns were expressed by the Task Force members.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
1. Exposed an Updated Amendment to the P&P Manual to Include Instructions for the Financially Modeled RMBS/CMBS Securities to Map NAIC Designations Categories

Mr. Fry said there are two issues to address for the financially modeled NAIC designation for year-end 2020. He said the issues were not the fault of NAIC staff and were largely attributable to the use of price breakpoints. Sometimes there are shortcomings in that approach, and it produces results that do not seem logical. If a security is financially modeled and shows no losses in any of the modeling scenarios that the Securities Valuation Office runs and under the filing exempt (FE) process, it would be an NAIC 1 designation. If it had both of those characteristics, the security is automatically considered an NAIC 1 and does not need to go through the price breakpoint process. In May 2019, because the NAIC is moving towards 20 NAIC designations, at least for informational purposes, the Task Force had to map to the NAIC designations categories. These financially modeled no loss securities were originally going to be mapped to a NAIC 1.D for this year-end but ended up instead being mapping to an NAIC 1.A. As companies got ready to apply the new process, they realized that you would need to be both a zero loss security and be rated “AAA” and, if not, the security would need to go through the breakpoints. This was not the intent of the mapping change, and even though it has been exposed for some time, it should be fixed. There is updated language that would fix this unintended consequence and clarify that if an insurer has a financially modeled zero loss security that would also be an NAIC 1 under FE, it would now be mapped to an NAIC 1.D—the middle of the NAIC 1 scale. The Task Force could expose this for a very short time, maybe three days. If positive comments are received, then the Task Force could conduct an e-vote on the amendment to adopt it before year-end.

Mike Monahan (American Council of Life Insurers—ACLI) said the ACLI supports the expedited time frame and appreciates the Task Force’s and NAIC staff’s efforts to fix this issue. He said if the blame lies anywhere, it is on the mechanics of the price break points. He said the ACLI will be fully committed to working with NAIC staff and state insurance regulators in 2021 to solve that problem.

Francisco Paez (MetLife) said the solution that the NAIC staff are proposing here really addresses the issue. It basically leaves things in the same place that they had been in the past and the way that zero loss securities have been treated from a risk-based capital (RBC) standpoint. From that perspective, it resolves what was going to be a potential issue where there would have been a significant drift in NAIC designations in securities that are otherwise some of the top-quality securities insurance companies own.

Tracey Lindsey (North American Securities Valuation Association—NASVA) asked if perhaps the Task Force, as it considers the mapping to NAIC 1.D, could permit the mapping to NAIC 1.A for just this year-end because that is how insurer systems have been built with the existing mapping instruction in place today. There would be no impact to RBC for this year-end. Mr. Fry said there should not be an RBC effect for this yearend; the 20 NAIC designation categories are just informational, and he said he does not see a problem with that request. Charles A. Therriault (NAIC) said he is sympathetic to insurers’ system concerns. There is a fairly broad rating distribution for no loss securities that goes from AAA into the non-investment grade ratings. The thinking behind the original recommendation was to try to find a midpoint to give the overall estimation of risk. Mr. Therriault said the NAIC 1.A mapping could be an option for insurers that cannot change their systems to accommodate the NAIC 1.D correction.
Mr. Fry said the Task Force will need to look at this whole process and the price breakpoints next year. He said that permitting insurers that cannot make the change in mapping from an NAIC 1.A to NAIC 1.D will be captured in the minutes as an instruction if it is not operationally possible to make this update. Ms. Mears said she supports the plan to keep it as NAIC 1.D in the exposure with the allowance in the minutes of an NAIC 1.A, to at least ensure that companies that are able to use the NAIC 1.D in their systems can do so. There was no objection from the Task Force members to this instruction for year-end 2020.

Mr. Fry directed SVO staff to expose the updated *Purpose and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) instructions for the financial modeled residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) mapping to NAIC designations categories for a three-day public comment period ending Dec. 22, 2020. He also directed SVO staff to conduct an e-vote immediately after the exposure period ends and include in the minutes permitting insurers that cannot make the system change in mapping from an NAIC 1.A to NAIC 1.D to report the NAIC 1.A for 2020.

Mr. Fry said in 2019, there were around 3,900 no loss securities. For 2020, the modeling has 500–600 fewer no loss securities. This means that if the security is no longer no loss, it must now go through the price breakpoints. A lot of these securities trade based on the interest rate environment. Because the security is now no longer no loss, the security must use the price breakpoints which could take a security, for example, that has a very small loss in the most draconian of the five scenarios, to now be an NAIC 3, NAIC 4 or NAIC 5. It might be rated AA by the rating agencies, but the price breakpoints would turn it into a below investment grade. That is the problem with the rules as they are now.

Mr. Paez said there are two things happening. On the one hand, there is the modeling results that this year are more conservative than they had been in the past, and rightly so, given the economic environment. Combined with the low interest rate environment that has existed for some time now, the fixed rate and long duration nature of CMBS implies, from a pricing standpoint, that a lot of companies have been purchasing premium price CMBS securities that, up to last year, would have been a zero loss security. Because these securities had been zero loss, they did not need to go through the price breakpoints. But now, with the more conservative scenarios, that are appropriate given the market, those securities need to go through the price breakpoints because they no longer qualify as zero loss. Because they are owned at a significant premium, once put through the price breakpoints, there is a cliff effect that is very dramatic with securities that are otherwise very high-quality securities.

He said, to give a little bit of context, an analysis that was put out by Bank of America estimated that approximately half of securities that are AA-rated today that were zero loss last year are no longer a zero loss this year. Similarly, 75% of securities that were A-rated this year and were zero loss last year are no longer zero loss. That is a pretty substantial percentage of those two classes of CMBS securities that, when combined with premium pricing, is causing them to drift down significantly in terms NAIC designations. From the rating agency standpoint, the rating agencies are doing a fine job in terms of determining the risks. These continue to be some of the highest quality securities out there. From a pricing standpoint, the market generally perceives those securities as being of very high quality as well. From an NAIC designation standpoint, and by extension from an RBC standpoint, those securities are starting to drift down to NAIC 2, NAIC 3 and NAIC 4 under these new modeling results in 2020.

This is starting to cause some significant issues in the market. On the one hand, insurance companies looked at what that was going to mean in terms of impact to their RBC and started thinking that it may be preferable to sell those securities. There was a significant amount of activity a couple of weeks after the modeling interim results came out where insurance companies were the sellers of these types of securities. The buyers were other type of institutions, generally, that would not be subject to the same rules. Insurance companies were selling very high-quality securities that have a very attractive cash-flow profile for prudent asset-liability management, and they were getting picked up by other types of entities that were taking advantage of this opportunity. For that same reason, the appetite from insurance companies for these types of securities started to come down. The likely implication was that the number of potential providers of liquidity for those securities that continue to be owned by insurance companies, in many cases, was coming down and, therefore, had the potential of reducing the liquidity of these holdings. There was a real impact to the market. And again, the issue here is not really with the quality of these securities. These securities continue to be rated today in a very high rating category by the rating agencies. They continue from a pricing standpoint to be priced by the market as very high-quality securities. But from an NAIC designation perspective, they were going to suffer and have a potential meaningful impact on companies’ RBC.
Eric Kolchinsky (NAIC) said the breakpoint approach greatly penalizes fixed rate securities without any real reason. Using a real bond example from a spreadsheet from the midyear file or the interim file, it has a book adjusted carrying value (BACV) price of 102.7 but has an intrinsic price of 99.25. That is not a huge loss, at 75 basis points (bps), but it still would be in the range of NAIC 1 or NAIC 2 in terms of risk. However, it would be held at NAIC 3 because of the breakpoint analysis and only because of the BACV price of 102.7. That price reflects that interest rates have been steadily moving down, and these are fixed rate bonds. As interest rates move down and you get a wider coupon in the bond, the price goes up and has no aspect of quality. Unlike RMBS, where they are floaters, and if there is a credit issue, they will move down as a result of price. Here you had bond move up in price because of rates and nothing to do with credit. It is not a bad bond, but it would be held at NAIC 3 under the breakpoint analysis.

Mr. Kolchinsky said one of the things that was put in place was what is called the “no loss exception.” This was done around 2010 because of this very issue with CMBS bonds. Basically, an insurer could hold something at NAIC 1 under one of two conditions. First, there was no loss or zero losses in any of the scenarios that were run by the NAIC. Second, if it had gone through the NAIC FE rules, it would still be NAIC 1. This covers the first part of the discussion today, which is the change in the language.

Mr. Kolchinsky said he took a look at the effect of the new framework and about $8 billion of bonds for 2019 that have a rating between AA or A, and they have zero loss. In this case, one of the things that was discovered was that in the past, the flag sent in the Structured Securities Group (SSG) files only addressed the scenarios and did not take into account any ratings. These securities have zero loss in our scenarios, they have original ratings of AA or A, and they are held at a premium because that is what happens in a low rate environment. As rates go down, these bonds would be penalized. In the example bond, which is held by a number of insurers with BACV pricing from 101.1 to 101.6, there were no losses in any scenario, it had an original rating of AA, and it seems to be doing fine. However, it would still have to be held at NAIC 2, which makes no sense.

SSG staff recommend the Task Force accept the proposed editorial changes to the mapping framework and for 2021 look at getting rid of the price breakpoints. The ACLI proposal came in late, and SSG staff have been trying to figure out what can be done, as staff are sympathetic to the effects of the price breakpoints. The proposal from the ACLI would be very difficult to implement operationally. However, it is possible to lower the threshold as to where the flag for something to be considered zero loss is set. SSG staff propose lowering that threshold to 99.5, so that means it would take about 50 bps of discounted loss before it is flagged as having some losses. These are bonds that are still held as NAIC 1 and will still have capital held against them, just 40 bps for asset valuation reserve (AVR) companies and 60 bps for non-AVR companies. SSG staff thought that giving them some leeway in the allowance to be held at NAIC 1 through this framework makes sense. SSG staff provided a quick analysis of securities that were modeled in 2020 and 2019. For the ones that had no losses, the basis of their analysis in giving them some leeway in the allowance to be held at NAIC 1 through this framework makes sense. SSG staff provided a quick analysis of securities that were modeled in 2020 and 2019. For the ones that had no losses, the basis of their analysis in giving them some leeway in the allowance to be held at NAIC 1 through this framework makes sense.

This is the serial effect of the nonlinearities. If the nonlinearities that are built into the capital level already, as into this nonlinearity of the breakpoint approach and the nonlinearity of the no loss, when you line them up, you can have these really convex results. And that is what we are seeing here, and SSG staff do not think those results are the correct result. This would only be a temporary solution until further changes can be made next year, as Mr. Kolchinsky discussed, to get rid of the breakpoints.

Mr. Fry said the Task Force is exposing some language changes to fix one issue. With this issue, he said that SSG has the discretion to use these parameters and change them without the Task Force necessarily being required to approve them. Mr. Kolchinsky said that is correct, but he does not want to do it without letting the Task Force know. He said he wants to make sure that people understand what is being done and that there are no issues with the approach.

Mr. Fry said normally the SSG would have run the results, but it has held off to discuss this change and will be a few days late. Mr. Kolchinsky said they can make the change quickly and may only be a day or two late.

Mr. Monahan thanked Mr. Kolchinsky for the presentation, the quick response, the simplified solution to this issue for year-end, and fully engaging with state insurance regulators and NAIC staff in 2021 to develop a long-term solution.
Rakesh Kansara (New England Asset Management) said the last slide states that this is for year-end 2020 CMBS only. He asked if this applies also to the post-crisis fixed rate RMBS. Mr. Kolchinsky said they did not analyze RMBS and just focused on CMBS. He said that it would generally apply to post-crisis security, theoretically, but in terms of procedurally trying to find that with this time left might be difficult. Mr. Kansara agreed that the pre-financial crisis RMBS years were all floater and that it is a different deal, but just to draw some distinctions on the post-financial crises RMBS securities, they are fixed-rate securities. In most cases, but not all, because of their duration, they will trade at premium prices in the current low-rate environment. And it may have a similar impact on the NAIC designation change from last year to this year because of purely interest rates. Mr. Kolchinsky said he does not have an issue making this threshold change; the same thing applies for RMBS as well, but he asked if the Task Force members had a concern. Mr. Fry said the SSG can study it and see that it does the same and make the change without compromising the rest of the process. Ms. Mears agreed.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
MEMORANDUM

TO:  Kevin Fry, Chair, Valuation of Securities (E) Task Force
     Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
       Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

CC:     Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

RE:     Proposed Amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to Update the Financial Modeling Instructions for RMBS/CMBS Securities and Direct IAO Staff to Produce NAIC Designation and NAIC Designations Categories for Non-Legacy Securities

DATE:  February 03, 2021

1. **Summary** – On Oct. 11, 2018, the Valuation of Securities (E) Task Force adopted an amendment to delete the Modified Filing Exempt (MFE) provisions from the P&P Manual and directed a referral to the Statutory Accounting Principles (E) Working Group recommending the deletion of the MFE provisions from Statement of Statutory Accounting Principles (SSAP) No. 43R—Loan-Backed and Structured Securities. The effect of these changes resulted in these securities coming under the filing exempt instructions in the P&P Manual, if they have an Eligible NAIC CRP Credit Rating assigned to them. This change eliminated using the book adjusted carrying value to determine the NAIC designation for these securities.

The IAO staff reported to the Task Force at the 2019 Summer National Meeting that at some point the NAIC should align the RMBS/CMBS modeling to provide a single NAIC Designation for modeled RMBS/CMBS. This would have been a change from the current practice of providing a series of book adjusted carrying value price breakpoints to companies to determine the NAIC designation. The IAO staff submitted a proposal to the Task Force at the 2019 Fall National Meeting to eliminate the book adjusted carrying value price breakpoint process but the Task Force decided at the Feb. 4, 2020 meeting to defer such a change because industry expressed concerns there would be significant adverse risk-based capital (RBC) consequences from making such a change at that time.

In March 2020, the impact from the pandemic was just beginning to become apparent in the U.S. The pandemic’s effect on RMBS and CMBS securities became more observable during the 2020 year-end financial modeling process. The 2020 year-end financial modeling identified several securities that no longer qualified as being zero-loss because more conservative scenarios, necessary to reflect the economic impact of the pandemic, were applied. Once these securities no longer qualified as being zero-loss, they became subject to the book adjusted carrying value price breakpoints process. Many of these securities are owned at a significant premium because of the low interest rate environment and, once the price breakpoints were applied, securities that would otherwise be considered very high...
quality were required to be reported as an NAIC 2, 3, or 4 just because of their book adjusted carrying value and not because of any credit concern.

At the Task Force’s Dec. 18, 2020 meeting, industry, represented by the ACLI, agreed with the IAO staff that the mechanics of the price break points was causing insurer owned securities with otherwise strong credit to be reported as NAIC 2, NAIC 3 and NAIC 4 under the financial modeling price breakpoints process purely because they are owned at a premium and not because of their credit risk. It was also discussed that the use of financial modeling price breakpoints process was possibly disrupting the market for these otherwise high-quality investments. SSG staff at that meeting recommended getting rid of the price breakpoints process.

2. Recommendation – The IAO staff recommends that the NAIC move to a single NAIC designation and NAIC designation category for all non-Legacy Securities (those financially modelled RMBS/CMBS securities that closed on or after to Jan. 1, 2013). Moving away from financial modeling price breakpoints process for these non-Legacy Securities will avoid further and future market disruptions and permit a clearer assessment of the credit risk assessment for these securities that will not be impacted by the insurers book adjusted carrying value. Making this change for only non-Legacy Securities preserves their historical treatment. Given the potential impact to SSAP 43R - Loan-Backed and Structured Securities, staff recommends a referral to the Statutory Accounting Principles (E) Working Group.

3. Proposed Amendment – The following text shows the revisions in Part Four that would appear in the 2020 P&P Manual format.
PART FOUR
THE NAIC STRUCTURED SECURITIES GROUP
DEFINITIONS

1. The following terms used in this Part Four have the meaning ascribed to them below.

- **ABS** stands for asset-backed securities and means structured securities backed by consumer obligations originated in the United States.

- **CMBS** stands for commercial mortgage-backed securities and means structured securities backed by commercial real estate mortgage loans originated in the United States. The definition of CMBS may refer to securitizations backed by commercial mortgages, respectively, originated outside of the United States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the commercial mortgage and commercial mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.

- **Initial Information** means the documentation required to be filed with an Initial Filing of an RMBS or a CMBS CUSIP, pursuant to the section below and pertaining to Loan Information, Reps and Warranty Information and Structure and Formation Information for the transaction, where:
  
  - **Loan Information** means a review of the loan files by a third party to assess the sufficiency of legal title and other related issues.
  
  - **Reps and Warranty Information** means the actual representation and warranties in effect for the securitization given by the mortgage originator(s) to the Trust pertaining to loan origination processes and standards, compliance with applicable law, loan documentation and the process governing put backs of defective mortgages back to the originator(s).
  
  - **Structure and Formation Information** means the waterfall, as described in the definition of Ongoing Information, information and documentation in the form of legal opinions and documentation governing the formation of the securitization and its entities relative to issues such as bankruptcy remoteness, true sale characterization, the legal standards and procedures governing the securitization and other similar issues.

- **Intrinsic Price** is an output of financial modeling, defined as ‘1 - weighted average of discounted principal loss’ expressed as a percentage, reflecting the credit risk of the security.
• **Legacy Security**, for the purposes of this section shall mean any RMBS and any CMBS that closed prior to January 1, 2013.

• **Official Price Grids** means and refers to those generated by the SSG and provided to an insurance company or insurance companies that own the security for regulatory reporting purposes.

• **Ongoing Information** consists of: (a) tranche level data; such as principal balance, factors, principal and interest due and paid, interest shortfalls, allocated realized losses, appraisal reductions and other similar information for the specific tranche; (b) trust level data, such as aggregate interest and principal and other payments received, balances and payments to non-tranche accounts, aggregate pool performance data and other similar information; (c) loan level performance information; and (d) a computerized model of rules that govern the order and priority of the distribution of cash from the collateral pool (i.e., the “waterfall”) to the holders of the certificates/securities—provided in the format and modeling package used by the NAIC financial modeling vendor.

• **Original Source**, with respect to a specific set of data, means the Trustee, Servicer or similar entity that is contractually obligated under the agreement governing the RMBS or CMBS to generate and maintain the relevant data and information in accordance with standards specified in applicable agreements or an authorized re-distributor of the same.

• **NAIC Designation Intrinsic Price Mapping** is the mapping of the Intrinsic Price to a single NAIC Designation and Designation Category employing the midpoints between each adjoining AVR RBC charges (pre-tax). The midpoints are directly used as the minimum Intrinsic Prices (weighted average loss points) for corresponding NAIC Designations and Designation Categories.

• **Price Grids** means and refers to CUSIP-specific price matrices containing six price breakpoints; i.e., each price corresponding to a specific NAIC Designation category. Each breakpoint on a Price Grid is the price point that tips the NAIC Designation for the RMBS CUSIP into the next NAIC Designation (credit quality/credit risk) category. The plural is used because two Price Grids are generated for any CUSIP. This reflects the difference in RBC for those insurance companies that maintain an asset valuation reserve and for those insurance companies that do not.
• **Re-REMIC** is a securitization backed by: (a) otherwise eligible RMBS from one or two transactions; or (b) otherwise eligible CMBS from one or two transactions at closing. Re-REMICs cannot acquire any Underlying Securities after closing.

• **RMBS** stands for residential mortgage-backed securities and means structured securities backed by non-agency residential mortgages originated in the United States, where the collateral consists of loans pertaining to non-multi-family homes. That includes prime, subprime and Alt-A mortgages, as well as home-equity loans, home-equity lines of credit and Re-REMICs of the above. Excluded from this definition is agency RMBS, where the mortgages are guaranteed by federal and federally sponsored agencies such as the Government National Mortgage Association (GNMA), Federal National Mortgage Association (FNMA) or Federal Home Loan Mortgage Corporation (FHLMC) and loans against manufactured or mobile homes or collateralized debt obligations backed by RMBS. The exclusion covers bonds issued and guaranteed by, or only guaranteed by, the respective agency. Also not included are loans guaranteed by the U.S. Department of Veteran Affairs or the U.S. Department of Agriculture’s Rural Development Housing and Community Facilities Programs. The definition of RMBS may refer to securitizations backed by residential mortgages, respectively, originated outside of the Unites States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the residential mortgage and residential mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.

• **Underlying Security** means the RMBS or CMBS backing a Re-REMIC. A Re-REMIC cannot be an Underlying Security.

**NOTE:** The definitions of RMBS and CMBS reflect limitations associated with the financial modeling process, NAIC credit rating provider (CRP) internal naming conventions and SSG processes, as more fully discussed below and may, therefore, be subject to a narrower or a broader reading in any reporting period. Please call the SSG with any concerns or questions about the scope of the definitions for a given reporting period. Also note:

• It is possible that the scope of the RMBS and CMBS definitions may be broadened because the financial modeling vendors indicate other collateral or waterfall structures can be modeled.
NAIC CRPs may adopt different internal conventions with respect to what market or asset segments are within their rated populations of RMBS, CMBS or ABS. This could affect the application of the adopted NAIC methodology or require the NAIC to select which naming process it wishes to adopt.

It is possible that the SSG will acquire analytical assessment capabilities that permit the assessment of existing, additional or different structured securities that cannot now be modeled or that are not currently rated.
ADMINISTRATIVE AND OPERATIONAL MATTERS

Certain Administrative Symbols

2. The following administrative symbols are used in the Valuation of Securities (VOS) Products to identify RMBS and CMBS that the NAIC vendor has confirmed will be subject to the financial modeling methodology described in this Part.

- **FMR** – Indicates that the specific CUSIP identifies a Legacy Security RMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category.

- **FMC** – Indicates that the specific CUSIP identifies a Legacy Security CMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category.

- **FSR** – Indicates that the specific CUSIP identifies a non-Legacy Security RMBS that is subject to the financial modeling methodology and assignment of a NAIC Designation and Designation Category by the SSG.

- **FSC** – Indicates that the specific CUSIP identifies a non-Legacy Security CMBS that is subject to the financial modeling methodology and assignment of a NAIC Designation and Designation Category by the SSG.

**NOTE:** The administrative symbols **FMR**, **FMC**, **FSR** and **FSC** are related to symbols that insurers are required to use in the financial statement reporting process. Under applicable financial statement reporting rules, an insurer uses the symbol **FM** as a suffix to identify Legacy Security modeled RMBS and CMBS CUSIPs and **FS** as a suffix to identify non-Legacy Security modeled RMBS and CMBS CUSIPs. The symbol **FM** or **FS** is inserted by the insurer in the financial statement as a suffix following the NAIC Designation Category; e.g., **2.B FM**, **3.C FS**.

The use of these administrative symbols in the VOS Product means the insurer should not use the filing exempt process for the security so identified.
Quarterly Reporting of RMBS and CMBS

3. To determine the NAIC Designation to be used for quarterly financial statement reporting for an RMBS or CMBS purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) and follows the instructions in contained under the heading “Use of Net Present Value and Carrying Value for Financially Modelled Legacy Security RMBS and CMBS” below or follows the instructions in “Publication of Final Results Use of Intrinsic Price for Financially Modeled non-Legacy Security RMBS and CMBS” below, subject to, and in accordance with, SSAP No. 43R—Loan-Backed and Structured Securities.
FILING EXEMPTIONS

Limited Filing Exemption for RMBS and CMBS

4. **RMBS and CMBS that Can be Financially Modeled** – RMBS and CMBS that can be financially modeled are exempt from filing with the SVO. NAIC Designations for RMBS and CMBS that can be financially modeled are determined by application of the methodology discussed in this Part, not by the use of credit ratings of CRPs.

5. **RMBS and CMBS securities that Cannot be Financially Modeled**
   - **But Are Rated by a CRP** – RMBS and CMBS that cannot be financially modeled but that are rated by a CRP are exempt from filing with the SSG. The NAIC Designations for these RMBS and CMBS are determined by application of the filing exemption procedures discussed in this Manual.
   - **But Are Not Rated by a CRP** – RMBS and CMBS that cannot be financially modeled and that are not rated by a CRP are not filing exempt and must be filed with the SSG or follow the procedures, as discussed below in this Part.

Filing Exemption for ABS

6. ABS rated by a CRP are exempt from filing with the SSG.

Review of Decisions of the SSG

7. Analytical decisions made through the application of financial modeling are not subject to the appeal process. In the absence of an appeal, the SSG shall provide whatever clarification as to the results of financial modeling is possible to any insurer who requests it and owns the security, provided that it is not unduly burdensome for the SSG to do so. Any decision made by the SSG that results in the assignment of an NAIC Designation and does not involve financial modeling methodology, whether developed by the SSG on its own or in collaboration with the SVO, is subject to the appeal process.
REQUIRED DATA AND DOCUMENTS FOR TRANSACTIONS SUBMITTED TO THE SSG

8. The policy statement set forth in this section shall be applicable generally to any transaction filed with the SSG for an analytical assessment, including, but not limited to, a Price Grid or for assignment of an NAIC Designation. Any filing with the SSG is deemed to be incomplete unless the insurer has provided the information, documentation, and data in quantity and quality sufficient to permit the SSG to conduct an analysis of the creditworthiness of the issuer and the terms of the security to determine the requested analytical value. It is the obligation of the reporting insurance company to provide the SSG with all necessary information. It is the responsibility of the SSG to determine whether the information provided is sufficient and reliable for its purposes and to communicate informational deficiencies to the reporting insurance company.

Documentation Standards

9. In order for an insurer-owned RMBS or CMBS to be eligible for the year-end modeling process, conducted pursuant to this section below, the analysis must be based on information, documentation and data of the utmost integrity. A Legacy Security must meet the Ongoing Information requirements. An RMBS, CMBS or Re-REMIC that is not a Legacy Security must meet the Initial Information and Ongoing Information requirements. For the purposes of determining a Re-REMIC’s status as a Legacy Security, the closing date of the Re-REMIC (not the Underlying Security) shall be used. The SSG may, in its sole discretion, determine that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the RMBS or CMBS CUSIP to be eligible for financial modeling. If the SSG determines that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the RMBS or CMBS CUSIP to be eligible for financial modeling, it will communicate this decision to the insurer and invite a dialogue to ascertain whether alternative information is available that would be deemed sufficient and/or reliable by the SSG.

Initial Information Requirements

10. An RMBS or CMBS meets the Initial Information Requirements if the security meets one of the following three conditions:

- **RTAS** – The RMBS or CMBS was assigned a preliminary price grid or designation as described in this Part;

- **Initial Sufficiency Filing** – The RMBS or CMBS was reviewed by SSG through an Initial Sufficiency Filing; or
Safe Harbor – The RMBS or CMBS meets the Safe Harbor requirements.

Initial Sufficiency Information Filing

11. An insurance company may file Initial Sufficiency Information with the SSG for the purpose of obtaining a determination that an RMBS or CMBS CUSIP is eligible for financial modeling under the annual surveillance process discussed below. Initial Sufficiency Information is only filed once for any given RMBS or CMBS. Reporting insurance companies are solely responsible for providing the SSG with Initial Information. A determination by the SSG that a given RMBS or CMBS CUSIP is eligible for financial modeling after an Initial Sufficiency Filing assessment is subject to the further and continuing obligation that the SSG obtain or the insurer provide the SSG with updated Ongoing Information close to the date of the annual surveillance.

12. **Required Documents for Initial Sufficiency Filing** – An insurer that owns an RMBS or a CMBS for which Initial Information is not publicly available shall provide the SSG with the following documentation.

13. **RMBS** – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for an RMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

   - Pooling and Servicing Agreement or similar
   - Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
   - If applicable, ISDA Schedules and Confirmations or similar
   - Legal opinions given in connection with the transaction
   - Any other documents referenced by the above
   - Third-Party Due diligence scope document and raw results. If less than 100% due diligence, detailed description of the loan selection process
   - If applicable, loan purchase agreements or similar. Loan Tape

14. **CMBS** – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for a CMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

   - Pooling and Servicing Agreement or similar
   - Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
   - If applicable, ISDA Schedules and Confirmations or similar
Legal opinion given in connection with the transaction
Any other documents referenced in the above
Asset Summaries
Loan Tape
Loan documents, including reliable information about the terms of the transaction; including, but not limited to, financial covenants, events of default, legal remedies and other information about financial, contractual or legal aspects of the transaction in form and substance consistent with industry best practices for CMBS issuance.
In certain cases, additional documents below will enable the SSG to verify and validate initial underwriting information of the property securing the CMBS. These documents may be required in form and substance consistent with best practices for typical CMBS issuance.
Historical operating statements and borrower’s budget
Underwriter’s analysis of stabilized cash flow with footnotes of assumptions used
Property type specific, rent roll information
Appraisals and other data from recognized industry market sources
Independent engineering report (Property Condition Assessment)
Environmental Site Assessment (ESA) – Phase I/Phase II
Documentation related to seismic, flood and windstorm risks
Franchise agreements and ground leases, if applicable
Management agreements

SSG Modeling Alerts
15. The SSG shall at all times have discretion to determine that differences in the structure, governing law, waterfall structure or any other aspect of a securitization or a class of securitization requires that insurance companies provide Initial Information and/or Ongoing Information additional to or different from that identified in this Part. The SSG shall communicate such additional or different documentation requirements to insurers by publishing a Modeling Alert on the NAIC website and scheduling a meeting of the VOS/TF to ensure public dissemination of the decision.
Safe Harbor

16. Safe Harbor options serve as proxies for the Initial Sufficiency filing. The options reflect publicly available information that a third party has analyzed the Initial Information. Because the structured securities market is quite dynamic, the list of Safe Harbor options may change frequently, with notice and opportunity for comment, as described in this section. An RMBS or CMBS meets the Initial Information requirement if:

- At least two Section 17(g)-7 reports issued by different CRPs are publicly available;
- A security that is publicly registered under the federal Securities Act of 1933.

Ongoing Information Requirements

17. An RMBS or CMBS meets the Ongoing Information Requirements if Ongoing Information is available to the SSG and the relevant third-party vendor from an Original Source. The SSG, in its sole discretion and in consultation with the relevant third-party vendor, may determine that the Ongoing Information is not sufficient or reliable to permit a given RMBS or CMBS CUSIP to be financially modeled. However, in making such a determination, the SSG shall take into account reasonable market practices and standards.

Special Rules for Certain Re-REMICs

18. Re-REMICs are generally simple restructurings of RMBS or CMBS. An Initial Sufficiency Filing for a Re-REMIC (a) which is not a Legacy Security itself but (b) where each Underlying Security is a Legacy Security shall not require submission of information regarding the Underlying Securities. In most cases, a prospectus for the Re-REMIC will be sufficient. If the SSG determines that additional information about the Re-REMIC structure or formation is required, it will communicate this decision to the insurer and invite a dialogue to ascertain whether additional information is available that would be deemed sufficient by the SSG.
ANALYTICAL ASSIGNMENTS

ANNUAL SURVEILLANCE OF RMBS AND CMBS – MODELED AND NON-MODELED SECURITIES

Scope

19. This section explains the financial modeling methodology applicable to all RMBS and CMBS (defined above) securitizations, and the book/adjusted carrying value methodology applicable to a modeled Legacy Security, the NAIC Designation Intrinsic Price Mapping applicable to a modeled non-Legacy Security, and non-modeled securities subject to SSAP No. 43R—Loan-Backed and Structured Securities. Please refer to SSAP No. 43R for a description of securities subject to its provisions. The VOS/TF does not formulate policy or administrative procedures for statutory accounting guidance. Reporting insurance companies are responsible for determining whether a security is subject to SSAP No. 43R and applying the appropriate guidance.

Important Limitation on the Definitions of RMBS and CMBS

20. The definitions of RMBS and CMBS above are intended solely to permit the SSG to communicate with financial modeling vendors, insurance company investors who own RMBS and CMBS subject to financial modeling and/or the book/adjusted carrying value methodology and their investment advisors to facilitate the performance by the SSG of the financial modeling methodology described below. The definitions contained in this section are not intended for use and should not be used as accounting or statutory statement reporting instructions or guidance.

NOTE: Please refer to SSAP No. 43R—Loan-Backed and Structured Securities for applicable accounting guidance and reporting instructions.

ANALYTICAL PROCEDURES APPLICABLE TO RMBS AND CMBS SECURITIZATIONS SUBJECT TO FINANCIAL MODELING METHODOLOGY

Filing Exemption Status of RMBS and CMBS

21. RMBS and CMBS are not eligible for the filing exemption because credit ratings of CRPs are no longer used to set risk-based capital (RBC) for RMBS or CMBS. However, RMBS and CMBS are not submitted to the SSG.
Use of Financial Modeling for Year-End Reporting for RMBS and CMBS

22. Beginning with year-end 2009 for RMBS and 2010 for CMBS, probability weighted net present values will be produced under NAIC staff supervision by an NAIC-selected vendor using its financial model with defined analytical inputs selected by the SSG. The vendor will provide the SSG with an Intrinsic Price and/or a range of net present values for each RMBS or CMBS corresponding to each NAIC Designation category. The NAIC Designation for a specific Legacy Security RMBS or CMBS is determined by the insurance company, based on book/adjusted carrying value ranges, and the NAIC Designation for a specific non-Legacy Security RMBS or CMBS is determined by the NAIC Designation Intrinsic Price Mapping by SSG.

**NOTE:** Please refer to SSAP No. 43R—Loan-Backed and Structured Securities for guidance on all accounting and related reporting issues.

Analytical Procedures for RMBS and CMBS

23. The SSG shall develop and implement all necessary processes to coordinate the engagement by the NAIC of a vendor who will perform loan-level analysis of insurer-owned RMBS and CMBS using the vendor’s proprietary models.

### RMBS AND CMBS SUBJECT TO FINANCIAL MODELING

Setting Microeconomic Assumptions and Stress Scenarios

24. Not later than September of each year, the SSG shall begin working with the vendor to identify the assumptions, stress scenarios and probabilities (hereafter model criteria) the SSG intends to use at year-end to run the vendor’s financial model.

The Financial Modeling Process

25. Information about the financial modeling process can be found at [www.naic.org/structured_securities/index_structured_securities.htm](http://www.naic.org/structured_securities/index_structured_securities.htm).
Use of Net Present Value and Carrying Value for Financially Modeled Legacy Security RMBS and CMBS

26. For each modeled Legacy Security RMBS and CMBS, the financial model determines the net present value at which the expected loss equals the midpoint between the RBC charges for each NAIC Designation; i.e., each price point, if exceeded, changes the NAIC Designation. Net present value is the net present value of principal losses, discounted using the security’s coupon rate (adjusted in case of original issue discount securities to book yield at original issue and in case of floating rate securities, discounted using LIBOR curve + Origination spread). Because of the difference in RBC charge, the deliverable is five values for each RMBS and CMBS security for companies required to maintain an asset valuation reserve (AVR) and five values for companies not required to maintain an AVR. This is illustrated in the chart below.

27. The NAIC Designation and NAIC Designation Category for a given modeled Legacy Security RMBS or CMBS CUSIP owned by a given insurance company depends on the insurer’s book/adjusted carrying value of each RMBS or CMBS, whether that carrying value, in accordance with SSAP No. 43R—Loan-Backed and Structured Securities, paragraphs 25 through 26a, is the amortized cost or fair value, and where the book/adjusted carrying value matches the price ranges provided in the model output for each NAIC Designation and the mapped NAIC Designation Category, reflected in the table below, to be used for reporting an NAIC Designation Category until new Risk Based Capital factors are adopted for each NAIC Designation Category and new prices ranges developed; except that an RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios and that would be equivalent to an NAIC 1 Designation if the filing exempt process were used, would be assigned an NAIC 1 Designation and NAIC 1.D Designation Category regardless of the insurer’s book/adjusted carrying value.

**NOTE:** Please refer to the detailed instructions provided in SSAP No. 43R.

Use of Intrinsic Price for Financially Modeled non-Legacy Security RMBS and CMBS

28. The NAIC Designation and NAIC Designation Category for a given modeled non-Legacy Security RMBS or CMBS CUSIP owned by a given insurance is assigned by SSG and **does not** depend on the insurer’s book/adjusted carrying value of each RMBS or CMBS. The NAIC Designation and Designation Category assigned will be determined by applying the Intrinsic Price to the NAIC Designation Intrinsic Price Mapping, as defined in this Part.
29. Securities subject to *SSAP No. 43R—Loan-Backed and Structured Securities* that cannot be modeled by the SSG and are not rated by an NAIC CRP or designated by the SVO are either: (a) assigned the NAIC administrative symbol ND (not designated), requiring subsequent filing with the SVO; or (b) assigned the NAIC Designation for Special Reporting Instruction [i.e., an NAIC 5GI, NAIC Designation Category **NAIC 5.B GI** or NAIC 6* (six-star)].
MORTGAGE REFERENCED SECURITIES

Definition

30. A Mortgage Referenced Security has the following characteristics: A Mortgage Referenced Security’s coupon and/or principal payments are linked, in whole or in part, to prices of, or payment streams from, real estate, index or indices related to real estate, or assets deriving their value from instruments related to real estate, including, but not limited to, mortgage loans.

Not Filing Exempt

31. A Mortgage Referenced Security is not eligible for filing exemption but is subject to the filing requirement.

NAIC Risk Assessment

32. In determining the NAIC Designation of a Mortgage Referenced Security, the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.

Quarterly Reporting for Mortgage Reference Securities

33. To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing status.

NOTE: Please refer to SSAP No. 26R and SSAP No. 43R for the definition of and guidance on Structured Notes and Mortgage Referenced Securities. Please also refer to Part Three of this Manual for guidance about the filing exempt status of Structured Notes.
GROUND LEASE FINANCING TRANSACTIONS

Definition

34. Ground Lease Financing (GLF) transactions are defined and explained in “Ground Lease Financing Transactions” in Part Three of this Manual.

SSG Role and Process

1. On occasion, the SVO may refer a GLF transaction to the SVO for financial modeling of the GLF space leases or business operation, as applicable, in accordance with the process set forth in “Ground Lease Financing Transactions” in Part Three of this Manual. Following an SVO referral the SSG and SVO will maintain open communication related to requests for additional data, analytical questions and analytical conclusions. Any GLF transaction NAIC Designation will be assigned by the SVO.
THE RTAS – EMERGING INVESTMENT VEHICLE

Purpose

2. Price grids and/or Designations and Designation Categories are generated for the exclusive use of insurance companies and the NAIC regulatory community. Insurance companies use official Price Grids and/or Designations and Designation Categories by following the instructions in SSAP No. 43R—Loan-Backed and Structured Securities to derive a final NAIC Designation for the RMBS or CMBS, which they use to derive the RBC applicable for the RMBS or CMBS.

NOTE: Please refer to SSAP No. 43R for a full explanation of the applicable procedure.

Extension of Authority

3. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure is extended to the SSG, and the SSG is authorized to determine probable regulatory treatment for RMBS and CMBS pursuant to this Part or for other securities, where, in the opinion of the SSG, financial modeling methodology would yield the necessary analytical insight to determine probable regulatory treatment or otherwise enable the SSG to make recommendations to the VOS/TF as to regulatory treatment for a security.

Interpretation

4. To facilitate this purpose, wherever in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure reference is made to the SVO, it shall be read to also refer to and apply to the SSG, adjusting for differences in the operational or methodological context. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure shall also be read as authority for collaboration between SVO and SSG staff functions so as to encompass RTAS assignments that require the use of SVO financial, corporate, municipal, legal, and structural analysis and related methodologies, as well as of financial modeling methodologies.
Translation of Preliminary into Official Price Grids and/or NAIC Designations and Designation Categories

5. Price Grids and/or Designations and Designation Categories (“PGD”) generated by the SSG pursuant to an RTAS are preliminary within the meaning of that term as used in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure and accordingly cannot be used for official NAIC regulatory purposes. Preliminary NAIC Designations are translated into official NAIC Designations by the SVO when an insurance company purchases and files the security and the SVO conducts an official assessment. However, this Manual does not require the filing of RMBS and CMBS subject to financial modeling methodology with the SSG. It is, therefore, necessary to specify a procedure for the translation of preliminary Price Grids and/or Designations and Designation Categories (“Preliminary PGD”) into official Price Grids PGD that can be used for NAIC regulatory purposes. Preliminary Price Grids PGDs generated by the SSG become an official Price Grid PGD within the meaning of this section when an insurance company has purchased the security for which the Price Grid PGD was generated and reported that security for quarterly reporting purposes using the SSG generated Price Grid PGD. A Price Grid PGD for a security reported by an insurance company for quarterly reporting is effective until the SSG conducts the next annual surveillance pursuant to this Part at which time the Price Grid PGDs generated by the SSG at year-end shall be the official Price Grid PGDs for that security.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)

CC: Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office (SVO)
    Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office
    (P&P Manual) to Update the List of NAIC CRPs

DATE: February 2, 2021

1. **Summary** – On July 2, 2019, Morningstar, Inc. completed its acquisition of DBRS. The merger was announced on May 29, 2019. DBRS Morningstar reported that they are now the fourth largest credit ratings agency and a market leader in Canada, the U.S. and Europe in multiple asset classes and rate more than 3,000 issuers and 60,000 securities worldwide. The merger resulted in the credit ratings symbols of the two previous entities being combined into a single set of symbols.

2. **Recommendation** – The SVO recommend adoption of this non-substantive amendment removing references to the legacy entities and instead referring to the new combined national recognized statistical ratings organization (NRSRO) entity, DBRS, Inc., doing business as “DBRS Morningstar Credit Ratings” or “DBRS Morningstar.” This proposed change updates the rating agency names on the List of NAIC Credit Rating Providers to match those on the U.S. Securities and Exchange’s Office of Credit Ratings list of Current NRSROs and the CRP Credit Rating Equivalents to NAIC Designations and NAIC Designation Categories.

3. **Proposed Amendment** – The text containing the updates to the List of NAIC CRPs is shown below, edits in red, as it would appear in the 2020 P&P Manual format.
PART THREE
SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION
OF NAIC DESIGNATIONS
The CRPs that provide Credit Rating Services to the NAIC are:

- **Moody’s Investor’s Service, Inc.** for credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **S&P Global Ratings Standard and Poor’s**, for credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **Fitch Ratings, Inc.** – For credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **Dominion Bond Rating Service (DBRS)** – For credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **A.M. Best Rating Services, Inc. Company (A.M. Best)** – For credit ratings issued to insurance companies; corporate issuers and issuers of asset-backed securities.

- **Morningstar Credit Ratings, LLC** – For credit ratings issued to financial institutions, brokers, or dealers; corporate issuers and issuers of asset-backed securities.

- **DBRS, Inc. (DBRS Morningstar)** - For credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **Kroll Bond Rating Agency, LLC.** – For credit ratings issued to financial institutions, brokers, or dealers; insurance companies; corporate issuers; issuers of asset-backed securities and issuers of government securities, municipal securities, or securities issued by a foreign government.

- **Egan-Jones Ratings Company** – For credit ratings issued to financial institutions, brokers, or dealers; insurance companies and corporate issuers.

- **HR Ratings de Mexico, S.A. de C.V.** – For credit ratings issued to financial institutions, brokers, or dealers; corporate issuers and issuers of government securities, municipal securities, or securities issued by a foreign government.
Please note that the existence of a rating does not eliminate the requirement to file on SAR on any insurer-owned security not currently listed in this Manual unless exempted from filing.

**CRP Credit Rating Equivalent to NAIC Designations and NAIC Designation Categories**

Note: This is a listing of only the “generic” Credit Rating Provider (CRP) rating symbols. CRPs use a variety of symbols, including combinations of prefixes and suffixes that provide additional information about the rating symbol which are described in the CRP’s documentation. There are over 2,000+ unique rating symbols used by CRPs to describe long-term securities. The SVO maintains a master list of Credit Ratings Eligible for Translation to NAIC Designations. The SVO does not currently translate short-term security ratings as part of its Compilation and Publication of the SVO List of Investment Securities incorporated into the NAIC’s AVS+ product.

Financial Regulation Standards and Accreditation (F) Committee
Virtual 2021 Spring National Meeting
April 12, 2021

The Financial Regulation Standards and Accreditation (F) Committee met April 12, 2021. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Lori K. Wing-Heier, Vice Chair (AK); Alan McClain (AR); Andrew N. Mais (CT); Colin M. Hayashida (HI); Sharon P. Clark (KY); Gary D. Anderson (MA); Eric A Cioppa (ME); Mike Causey represented by Jackie Obusek (NC); Bruce R. Range represented by Justin Schrader (NE); Larry D. Deiter (SD); Doug Slape (TX); Scott A. White (VA); and Jeff Rude (WY). Also participating were: Kathy Belfi (CT); John Rehagen (MO); and Dave Wolf (NJ).

1. **Adopted its 2020 Fall National Meeting Minutes**

Commissioner Clark made a motion, seconded by Director Wing-Heier, to adopt the Committee’s Dec. 7, 2020, minutes (see NAIC Proceedings – Fall 2020, Financial Regulation Standards and Accreditation (F) Committee). The motion passed unanimously.

Superintendent Dwyer said the Committee met April 8 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee voted to award continued accreditation to New Mexico and Tennessee.

2. **Adopted Revisions to the 2020 NAIC Publications Referenced in the Accreditation Standards**

Superintendent Dwyer said there are several NAIC publications currently included in the accreditation standards by reference. At each Spring National Meeting, the Committee is to review revisions made to these publications in the prior year. Each of the applicable groups that developed revisions to the publications in 2020 have provided the Committee with a memorandum discussing the revisions, and they indicated whether the revisions should be considered significant or insignificant for accreditation purposes. This included the following publications: the Accounting Practices and Procedures Manual (AP&P Manual) (Attachment One); the Annual and Quarterly Statement Blanks and Instructions (Attachment Two); the Financial Condition Examiners Handbook (Attachment Three); Risk-Based Capital (RBC) Formulas and Instructions for Life and Property/Casualty (P/C) Insurers (Attachment Four); the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) (Attachment Five); and the Valuation Manual (Attachment Six). The working group or task force responsible for each of these publications has deemed their 2020 changes as insignificant to the accreditation process.

Chief Deputy Commissioner Slape made a motion, seconded by Superintendent Cioppa, to adopt the revisions to each of the publications immediately by reference to the accreditation standards. The motion passed unanimously.

3. **Exposed Revisions to the Part A Preamble to Account for Inclusion of Model #787 as a New Accreditation Standard**

Superintendent Dwyer stated that at the 2019 Fall National Meeting, the Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787), more commonly referred to as the XXX/AXXX Model Regulation, as a new accreditation standard. This decision was confirmed by the Executive (EX) Committee and Plenary at the 2020 Summer National Meeting. The model establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees. Model #787 also includes provisions to ensure that funds backing these captive reinsurance transactions, which consist of primary security and other security, are held in the forms and amounts that are appropriate. Model development was prompted by concerns regarding the security held under these transactions; and an interim solution, outlined by the XXX/AXXX Captive Reinsurance Framework, was included in the accreditation program through the Part A Preamble. The Part A Preamble must now be updated to reference Model #787 as the standard for applicable transactions. This change is not seen as a substantive change. It does not change the scope of the Preamble, but rather it is a straightforward update to reflect the codification in the form of Model #787. At this time, there are no proposed changes to applicability of captives reinsuring variable annuities (VA) or long-term care (LTC), but they will continue to be included within the Preamble with an effective date to be determined based upon regulatory needs.

Superintendent Cioppa stated that he wants to ensure that the references to captives reinsuring VA and LTC business are not forgotten. He suggested that the Financial Regulation Standards and Accreditation (F) Committee may consider referring the...
topic to the Financial Condition (E) Committee to get an update on the companies’ utilization of captives for VA and LTC. Superintendent Dwyer stated that an inquiry would be made to the Financial Condition (E) Committee.

Director Wing-Heier made a motion, seconded by Superintendent Cioppa, to expose revisions to the Part A Preamble to account for inclusion of Model #787 as a new accreditation standard for a 30-day public comment period (Attachment Seven). The motion passed unanimously.

4. Exposed the 2020 Revisions to Model #440 and Model #450 as an Update to the Accreditation Standards

Superintendent Dwyer stated that in December 2020, the NAIC adopted revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implement a group capital calculation (GCC) for the purpose of group solvency supervision and a liquidity stress test (LST) for macroprudential surveillance. The revisions are independent of each other and followed two separate workstreams when developed. However, they affect the same sections of the models; therefore, they benefit from joint consideration when discussing if and how to include each in the accreditation standards. In the materials, there are two separate referrals, one from each workstream, which have been combined under one referral from the Financial Condition (E) Committee.

Commissioner White summarized the March 8 referral from the Financial Condition (E) Committee (Attachment Eight). He stated that the GCC and LST were two of the NAIC’s top priorities before being adopted by the Financial Condition (E) Committee; therefore, adoption of them as an accreditation standard is appropriate. The recommendation is that the models be adopted as closely as possible with one exception related to subgroup reporting, as reflected in the proposed significant elements.

Commissioner White stated there are two issues the Financial Regulation Standards and Accreditation (F) Committee should be aware of, and the first relates to the recommended timing under which the GCC and LST should become standards. The referral recommends that the Committee waive its procedures and expeditiously adopt the GCC standards to ensure that the GCC is in place for those states that are a group wide supervisor of a U.S. group that has operations in the European Union (EU) or the United Kingdom (UK). He noted that this list of groups covers a broader spectrum than just internationally active insurance groups (IAIGs); it also includes any groups with operations in the EU or the UK. The reason for making this recommendation for expedited adoption is the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreements) that contemplate that such states should have the GCC in place for such groups prior to Nov. 7, 2022. The result of not meeting the deadline is the potential for U.S. insurers to be subject to Solvency II requirements. For groups not subject to the Covered Agreements, the referral recommends following the normal accreditation timeline for adoption. While the same urgency does not exist with these other states, the calculation itself is just as important as a tool for state insurance regulators assessing risk at the group level and enhancing policy owner protections.

Turning to the LST, Commissioner White stated that the Financial Stability (E) Task Force recommended a timing concurrent with the GCC, but it did not modify its suggestion of a Jan. 1, 2023, effective date for states not currently the lead state of a group subject to the LST. Their basis for this earlier effective date was not the Covered Agreements, but rather they believe timely adoption is important since the LST is intended to help the collective states ensure that a large liquidity event of the life industry could not materially disrupt the bond markets and thus cause federal regulators and members of the U.S. Congress (Congress) to question the oversight of state insurance regulators.

The LST currently only applies to 23 life insurance groups. However, it is common for legal entity insurers to move from one group to another, and that can affect the group dynamics, including the lead state determination. Therefore, it makes sense that each state has recorded the LST in their statutes to ensure that they will be prepared for any future appointments as the lead state.

Commissioner White stated that another key issue discussed in the development of the accreditation recommendation is the issue of confidentiality. Everyone agrees that the GCC and LST should be confidential, but there was some discussion about how specific the accreditation standard should be.

The American Council of Life Insurers (ACLI) strongly encouraged that more explicit language consistent with the models be included in the accreditation standard itself. However, the proposed language recommended for the accreditation standard
retains the more general language consistent with other accreditation standards that require a high standard of confidentiality. However, Commissioner White emphasized that the intent is for states to adopt legislation that has substantially the same force.

Superintendent Dwyer stated that as a reminder, the Accreditation Program Manual (Manual) sets forth a clear process and timeline when considering new or revised Part A standards. The first step in that process, upon receipt of a referral, is to expose the referral for a preliminary comment period of 30 days. After the initial comment period, if the Committee determines that it will proceed with considering the update to the standards, it will expose the standard for a one-year comment period, which would eventually result in an effective date, in this case, of Jan. 1, 2026. Alternatively, as Commissioner White noted, the referral from the Financial Condition (E) Committee includes a request to waive procedure, as allowed by the Manual, and expedite adoption for both the GCC and LST. Regardless of how the Financial Regulation Standards and Accreditation (F) Committee proceeds for accreditation purposes, both initiatives are important regulatory tools. For states with a group that has operations in the EU or UK, the Committee cannot emphasize enough the importance of implementing the GCC prior to Nov. 7, 2022, for those groups. Similarly, states with a life insurer affected by the LST requirements are encouraged to implement the model revisions and therefore the use of this important tool as soon as possible.

Chief Deputy Commissioner Slape stated that Texas has no issues with the LST; and while Texas does support the GCC, it does not agree with a broad application of the GCC to all U.S. insurance holding company systems. Texas favors a more limited application to just those groups that have international operations subject to the Covered Agreements. For years, the states have debated the merits of group capital.

Chief Deputy Commissioner Slape stated that the focus was on the window and wall approach, while solidifying our windows into groups by enhancing Form B, implementing group supervision and supervisory colleges, enhancing Schedule Y reporting, enhancing or editing holding company examinations, requiring the filing of an Enterprise Risk Report (Form F) and the Own Risk and Solvency Assessment (ORSA), and requiring corporate governance annual disclosures. These tools, if used correctly, already give state insurance regulators great insight into U.S. groups. Only after it was clear that the state's approach would not protect U.S. companies operating internationally from the imposition of international capital standards did state insurance regulators pivot to developing the GCC. Chief Deputy Commissioner Slape stated that the need for the GCC was cemented in the Cover Agreements and is the real reason for the GCC. Many states, if not most, have no groups with international operations.

Chief Deputy Commissioner Slape stated that some states will have challenges trying to get this model through their state legislature when the primary justification for group capital has no relevance to any groups in the state. He stated that this is bad public policy forced upon all states, our staffs, and all U.S. groups, and it is yet another regulatory burden. The working group that developed the GCC recognized the potential limits to the benefits of the tool and built in an exemption process, but unlike ORSA filings that exempt carriers unless the commissioner finds a reason to need the filing, the GCC model exemption process requires all groups to make one, and only one, filing and then seek an exemption from further filings. Texas believes this to be an unnecessarily costly and bureaucratic jumping through the hoops for most groups, particularly in light of all the tools it already has. For those reasons, Texas does not support exposing this current document to make GCC an accreditation standard. Chief Deputy Commissioner Slape stated that it should be an accreditation standard, but only for those groups with international operations and without requiring states to implement a file then exemption process.

Commissioner Clark, Superintendent Toal, Ms. Obusek, Commissioner Rude and Director Deiter stated that they support the Texas position.

Superintendent Cioppa stated that consideration of the federal perspective is part of the discussion, but the real issue is understanding if there is inherent risk to an insurer just for being part of a certain holding company group. The GCC is an analytical tool, and the calculation lets state insurance regulators assess what risks are out there that may not be captured by all the tools that are currently available. It is a tool that will help evaluate not only the group capital on a consistent basis, but it will let state insurance regulators drill down to see what is going on in the group and what poses a risk to the group. It is very important, and state insurance regulators should not lose sight of the fact that, noninsurance entities may pose a risk on the insurance entities, and even a one-time calculation can help provide this insight.

Superintendent Cioppa stated that he respectfully disagrees with those who think this is just a bureaucratic exercise. He said it is a valuable tool that will give state insurance regulators critical insights into the rest of the insurance company group, which, in effect, helps state insurance regulators better protect policyholders. State insurance regulators should not lose sight of this important fact.

Commissioner Mais echoed Superintendent Cioppa and stated that Connecticut supports the GCC. With all the work that has been done on holding company assessments since 2008, this seems like a logical next step. It is not the genesis that some may
think. It gives state insurance regulators insight on group risk that they need. It gives the Lead State a chance to review if there are material risks that have not been identified. If there are none, then it is clear that an exemption is appropriate; but if there are risks, state insurance regulators are one step ahead of the game. This is not a bureaucratic exercise, but something that provides a more quantitative understanding and is a valuable tool to state insurance regulators.

Commissioner Anderson stated that Massachusetts supports the adoption of the GCC for all states. He stated that the list of groups applicable under the Covered Agreements is broader than just IAIGs, but in addition to those groups subject to the Covered Agreements, Commissioner Anderson agrees that the GCC is important to all groups, even if it is just a one-time filing for some. It is important to understand how the non-insurance entities support the operations of the group and how capital is distributed across the entire group. He stated that he appreciates the windows and walls approach that Chief Deputy Commissioner Slape noted, as there are important tools that have been developed previously, but the GCC is the logical extension to group oversight that formalizes and makes consistent how these group tools, along with the GCC as an analytical tool, can be used.

Ms. Belfi stated that the GCC was not developed solely to appease international regulators. If the purpose is solely to appease the international regulators, it would only apply to international business. Early on, the Group Capital Calculation (E) Working Group, made a conscious decision that this was an important tool to be added to the current arsenal of tools for group oversight. The reason the perspective of group capital is so important is that all the current tools referenced, such as Form F or Form B filings, do not contain a lot of aggregated quantitative data, which is the step that the group thought was missing. Filling this gap and creating a more comprehensive view of the group is the reason for the GCC.

Mr. Schrader stated that the GCC is an important tool that was developed as a quantitative tool to pair with many of the qualitative tools at the group level. The need for the tool is not only for groups with international business, but domestic business as well, as it can be useful for all companies. There is an exemption option after the first filing if the state insurance regulator has a good understanding of the risks and does not believe they are significant enough to continue to receive the filing. However, it is important for all groups to complete the calculation at least once to make sure there is a level playing field and that state insurance regulators are treating insurers in groups consistently. Also, whether an insurer is a small part of a large group or a large part of a small group or anywhere in between, each part of the group has a potential risk, and the GCC adds value as a key tool for the state insurance regulators to help assess risk.

Commissioner Anderson commented that it is important to steer away from the premise that the GCC was a response to the Covered Agreements. The GCC discussions began prior to the Covered Agreement discussions, which did not occur until late 2015. The GCC was developed because state insurance regulators, as the leaders of groups, see the value in understanding the entities within the groups that they oversee.

Mr. Rehagen stated that during the development of the GCC there was extensive discussion around exempting certain companies. However, all groups are different, and the Group Capital Calculation (E) Working Group concluded that there is not a way to provide a blanket exemption because of the many differences between each group. Therefore, Model #440 and Model #450 require one filing for all groups prior to allowing an exemption. Once state insurance regulators get the first filing, they can determine whether the filing is needed going forward or an exemption can be granted.

Mr. Wolf agreed that the GCC is a natural building block of the NAIC macroprudential initiative (MPI), and it was not just developed for international reasons. Quantifying the risks within a holding company is important because the risks can emanate anywhere within that holding company structure and can come from any part of the holding company, not just an international entity. In the initial development of the GCC, there were several discussions with federal regulators, who viewed a group capital tool as a national initiative. From the very beginning of development, the GCC was created not just for international purposes, but as a tool to assess the risk of U.S. holding companies as well.

Commissioner Anderson made a motion, seconded by Superintendent Cioppa, to expose the March 8 referral from the Financial Condition (E) Committee regarding the GCC and LST as additions to the accreditation standard for a 30-day public comment period, with the expectation that the normal timeline for adoption of a Part A accreditation standard will be followed, and the effective date for all states will be Jan. 1, 2026. Commissioner Anderson stated that in conjunction with the motion, the Financial Regulation Standards and Accreditation (F) Committee should strongly encourage all states with a group affected by the Covered Agreements to adopt the GCC revisions to Model #440 and Model #450 for those groups effective Nov. 7, 2022. He also stated that the Committee should strongly encourage states with a group affected by the LST to adopt the relevant revisions to Model #440 and Model #450 as soon as possible. The motion passed with Alaska, Arkansas, Connecticut, Hawaii, Maine, Massachusetts, Nebraska and Virginia voting in favor and Kentucky, North Carolina, South Dakota, Texas and Wyoming opposed.
Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.
MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer (RI), Chair, Financial Regulations Standards and Accreditation (F) Committee and Commissioner Lori K. Wing-Heier, (AK), Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
       Carrie Mears (IA), Co-Vice Chair, Statutory Accounting Principles (E) Working Group
       Kevin Clark (IA), Co-Vice Chair, Statutory Accounting Principles (E) Working Group

DATE: February 8, 2021

In 2001, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the Accounting Practices and Procedures Manual – Effective January 1, 2001, Version 1999 (AP&P Manual) as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Statutory Accounting Principles (E) Working Group has made to the AP&P Manual in 2020 through 2021 submission for publication. This memo is to provide the customary annual update regarding changes to the AP&P Manual.

Attachment A to this memo includes a detailed listing of the changes made to the AP&P Manual in 2020. On behalf of the Working Group, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards. Although some of the changes have been categorized as “substantive” by the Working Group, this is not meant to suggest the modifications are synonymous with the term “significant” within the Committee’s context.

As outlined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (SAP Policy Statement), modifications will be made to the AP&P Manual each year. As such, it will be reprinted with an “as of” date associated with it. For example, the next printing of the AP&P Manual, which encompasses the attached modifications, will be titled Accounting Practices and Procedures Manual – as of March 2021. This process allows for an efficient way to update the AP&P Manual and virtually guarantees that users have the latest version. Reprints and updates are necessary because of the evolutionary nature of accounting—in both the statutory accounting principles and the generally accepted accounting principles arenas—and are positive for users of the AP&P Manual.

The Working Group sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the AP&P Manual. We will continue to notify the Committee of any changes to the AP&P Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

cc Becky Meyer, Sara Franson, Sherry Shull, Robin Marcotte, Julie Gann, Jim Pinegar, Fatima Sediqzad and Jake Stultz
Summary of Changes to the

As of March 2020 Accounting Practices and Procedures Manual

included in the As of March 2021 Manual

The following summarizes changes made to the As of March 2020 Accounting Practices and Procedures Manual (Manual) to create the As of March 2021 version.

Section 1 summarizes substantive revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles and can be reflected in an existing or new SSAP. When substantive revisions are made to an existing SSAP, the effective date is identified in the Status section, and the revised text within is depicted by underlines (new language) and strikethroughs (removed language). This tracking will not be shown in subsequent manuals. New and substantively revised SSAPs are commonly accompanied by a corresponding issue paper that reflects the revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or substantively revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

Section 2 summarizes the nonsubstantive revisions to statutory accounting principles. Nonsubstantive revisions are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Nonsubstantive revisions are effective when adopted unless a specific effective date is noted.

Section 3 summarizes revisions to the Manual appendices.

1. Substantive Revisions – Statutory Accounting Principles

TO: Honorable Elizabeth Kelleher Dwyer, Chair
   Financial Regulation Standards & Accreditation (F) Committee

FROM: Jake Garn, Utah Chief Financial Examiner, Chair Blanks (E) Working Group

DATE: March 23, 2021

RE: Items Impacting Current Accreditation Standard

Please find attached a list of items adopted by the Blanks (E) Working Group during 2020. The Blanks Working Group adopts numerous changes to the Annual Statement Blanks and Instructions each year. Most of the changes are made to clarify current requirements or are considered enhancements to existing reporting. The changes adopted in 2020 do not represent a substantive change to any reporting requirements.

I am planning to be present when the Financial Regulation Standards & Accreditation (F) Committee meets in the event any member of the committee wishes to discuss these issues.
Changes to blanks and instructions adopted during 2020

3. Modify the instruction and blank for Supplemental Investment Risk Interrogatories question 14.01 to clarify that interrogatories 14.06 through 14.15 are to be completed regardless of the answer to Supplemental Investment Risk Interrogatories question 14.01 (2019-29BWG) Effective Dec. 31, 2020.

5. Add crosschecks to lines 13 and 14 of the Exhibit of Premiums Enrollment and Utilization (State Page) to lines 10 and 11 of the Underwriting and Investment Exhibit, Part 1. Add crosschecks to lines 9, 10 and 11 of the Underwriting and Investment Exhibit, Part 1 and Schedule T, line 61 (2020-01BWG) Effective Dec. 31, 2020.

10. Add a disclosure instruction for 10C to the Notes to the Financial Statement for related party transactions not captured on Schedule Y to reflect the disclosure addition for SSAP No. 25—Affiliates and Other Related Parties adopted by the Statutory Accounting Principles (E) Working Group. Combine existing 10C into 1B instructions and illustration narrative (2020-08BWG) Effective Dec. 31, 2020.

11. Modify the Annual Statement Instructions for Schedule F, Part 3 to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurance (2020-09BWG) Effective Dec. 31, 2020.

12. Revise the column 10 header in the Variables Annuities Supplement blank to be contract level reserves less cash surrender value. Revise the line descriptions in lines 1 through 3 in the footer and add a Line for the reserve credit from other reinsurance and for post-reinsurance ceded aggregate reserve. Adjust the instructions to correspond with changes made to the blanks as well as changes in the 2020 Valuation Manual for the new variable annuities framework (2020-10BWG) Effective Dec. 31, 2020.

13. For the VM-20 Reserves Supplement Blank, split Part 1 into Part 1A and Part 1B. For Part 1A: change the description header for column 3 to be “Due and Deferred Premium Asset” to match the instructions. Add “XXX” in the two places needed to indicate that a due and deferred premium asset does not need to be reported in the lines shown for Total Reserves. Change the reporting units for all columns to be in dollars rather than in thousands. Expand all columns to allow room for a number as large as 999,999,999,999. Change the product labels for clarity. For Part 1B: change the reporting units for the reserve columns to be in dollars rather than in thousands. Expand the reserve columns to allow room for a number as large as 999,999,999,999. Expand the face amount columns to allow...
room for a number as large as 9,999,999,999. Change the product labels for clarity. Remove Part 2 and renumbering the remaining parts. Adjust the instructions according to the changes made to the banks. Clarify instructions and add examples for Parts 1A and 1B (2020-11BWG) Effective Dec. 31, 2020.

16. Modify the columns and rows on the blank pages for the Long-Term Care Experience Reporting Forms 1 through 5 and make appropriate changes to the instructions for those forms (2020-14BWG) Effective Dec. 31, 2020.

17. Add a new private flood insurance supplement collecting residential and commercial private flood insurance data and revisions to the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages (2020-15BWG) Effective Dec. 31, 2020.

19. Adjust the Asset Valuation Reserve (AVR) presentation to include separate lines for each of the expanded bond designation categories (2020-17BWG) Effective Dec. 31, 2020.

20. Clarify the instructions to indicate which funds reported on Schedule D, Part 2, Section 2 (Annual Filing) and Schedules D, Part 3 and 4 (Quarterly Filing) must have NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol. Modify the reference to the Purposes and Procedures Manual of the NAIC Investment Analysis Office found in the investment instructions (2020-18BWG) Effective Dec. 31, 2020.

21. Add a code of “%” to the Code Column for all investments which have been reported Schedule DA, Part 1 and Schedule E, Part 2 for more than one consecutive year. Add certification to the General Interrogatories, Part 1 inclusion of these investments on Schedule DA, Part 1 and Schedule E, Part 2 (2020-19BWG) Effective Dec. 31, 2020.

23. Add new line 4.05 for valuation allowance for mortgage loans to the Summary Investment Schedule and renumber existing line 4.05 to 4.06. Modify the instructions to include a crosscheck for new line 4.05 back to Schedule B – Verification Between Years. Clarify the instructions for 4.01-4.04 to explicitly show crosschecking to column 8 of Schedule B, Part 1 (2020-21BWG) Effective Dec. 31, 2020.

24. Modify the instructions and illustration for Note 3A and a new Note 3E with instructions and illustrations to be data captured. Modify the blank and instructions for Schedule D, Part 6, Sections 1 and 2 (2020-22BWG) Effective Dec. 31, 2020.

25. Add a footnote to Exhibit 5 (life/fraternal & health – life supplement) and Exhibit 3 (Separate Accounts) to disclose cases when a mortality risk is no longer present or a significant factor – i.e. due to a policyholder electing a payout benefit (2020-23BWG) Effective Dec. 31, 2020.

26. Remove questions 29, 30, 31 and 32 from the Supplemental Exhibits and Schedules Interrogatories. Renumber the remaining questions. Remove the instructions related to these actuarial filings (2020-24BWG) Effective 12/31/2021.

27. Add a new column 5 to the blank for Schedule T with instructions to specifically capture the Children’s Health Insurance Program (CHIP) premium. Existing columns after the new column 5 will be renumbered (2020-25BWG) Effective 1/1/2021.

28. Add a new column 5 to Schedule DB, Part D, Section 1 and renumber the remaining columns. Add instructions for the new column 5, add the column reference to column 7 and adjust other column references in crosschecks. Correct column references for this schedule on the Liability Page, Asset Page and Schedule DB Verification. Modify instruction language for the disclosure Note 8A(8) (2020-26BWG) Effective 1/1/2021.

30. Remove the disclosure for the Federal Affordable Care Act (ACA) Section 9010 Assessment from Note 22 – Events Subsequent (SAPWG Ref #2020-05) (2020-28BWG) Effective 12/31/2021.
31. Remove the line category and reference to the NAIC Bond Fund List (Bond List) from the investment schedule instructions and blank (SAPWG 2020-01) (2020-29BWG) Effective 12/31/2021.

32. Move the interrogatory question regarding Communication of Internal Control Related Matters Noted in Audit from the Annual Supplemental Exhibits and Schedules Interrogatories to the Quarterly Supplemental Exhibits and Schedules Interrogatories to be answered for the second quarter. For title, a new page in the quarterly statement will be added for the Supplemental Exhibits and Schedules Interrogatories (2020-30BWG) Effective 12/31/2021.

From: Susan Bernard, Chair, Financial Examiners Handbook (E) Technical Group  
Date: February 26, 2021  
Subject: Consideration for Financial Accreditation Standards  

2021 Financial Condition Examiners Handbook

The Accreditation Program Manual includes Review Team Guidelines to be used for financial examinations performed using the risk-focused surveillance approach that is found in the NAIC Financial Condition Examiners Handbook (the Handbook). This memorandum is to update the FRSAC on changes that the Financial Examiners Handbook Technical Group (FEHTG) has made to the Handbook during 2020.

Modifications are made to the Handbook each year, and a new edition is published annually. This process allows for an efficient way to update the Handbook and ensures that users have the latest version. The FEHTG made several changes to the Handbook in 2020. It is the FEHTG’s opinion that none of these changes should be considered “significant” for accreditation purposes. FEHTG defined “significant” as a change that may immediately warrant a change to at least one accreditation standard or the Review Team Guideline(s) for said standard. Although some changes may be categorized as “significant” by the FEHTG, this is not meant to suggest the modifications are synonymous with the term “significant” within the FRSAC context.

During 2020, the FEHTG made the following changes:

- Revised the reinsurance guidance to include a definition of a reciprocal jurisdiction reinsurer and describe the related requirements for obtaining credit for reinsurance. These revisions were made in accordance with the updates to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), which extend the ability for U.S ceding insurers to obtain credit for reinsurance ceded to reinsurers from Reciprocal Jurisdictions with no collateral requirements.

- Revised guidance to incorporate the following Long-Term Care Insurance (LTCI) considerations:
  - Additional narrative background guidance to the life insurance reserves review chapter of the Handbook, covering actuarial asset adequacy and reserve increase factors, which includes morbidity assumptions and rate increases.
  - New risks and related procedures added into the Reserves/Claims Handling (Life) and Underwriting exam repositories for LTCI policies. These related to assumptions utilized when calculating the policy’s reserves for and establishing appropriate policy rates.
  - Additional possible questions added to Exhibit Y – Examination Interviews, which the examiner may consider asking when interviewing the Chief Actuary.
• Revised the definition of a qualified actuary per the P/C Statement of Actuarial Opinion. Additionally, the Reserves/Claims Handling (P/C) exam repository was updated to add clarity to certain risk statements and procedures and Exhibit M – Corporate Governance was updated to add considerations when assessing management oversight of the actuarial function.

• Revisions to the Own Risk and Solvency Assessment (ORSA) related guidance within the Handbook, which included the following:
  
  o Possible procedures the exam team could perform to verify and validate the information in the ORSA.
  o Updates to Exhibit M – Corporate Governance to clarify the link between the ORSA information and Exhibit AA – Summary Review Memorandum (SRM).
  o Updates to the SRM to include details on how the exam team should conclude on the maturity of the insurer’s ORSA/ERM function.
  o Updates to the SRM to include new guidance describing the expectation that the exam team should include the results of the ORSA/ERM review in the branded risk assessments, where applicable.

• Revisions to the Reserves/Claims Handling Repositories (Life, Health and P/C) as part of the annual repository maintenance to ensure the repositories contain appropriate and relevant risks and procedures. As part of this project, some minor revisions were also added to the narrative guidance related to life insurance reserves reviews.

• Revised guidance related to Information Technology (IT) with the addition of “cyber self-assessment tools” to the list of items requested at the beginning of an IT examination within the Information Technology Planning Questionnaire (ITPQ).

The FEHTG sincerely requests that the FRSAC consider the items listed above as insignificant changes to the Handbook. We will continue to notify the FRSAC of any changes to the Handbook and advise if, in our opinion, those changes are “significant” by accreditation expectations.
MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer, Chair
   Financial Regulation Standards and Accreditation (F) Committee

FROM: Tom Botsko, Chair
   Capital Adequacy (E) Task Force

DATE: February 1, 2021

RE: Accreditation Standards – Changes to the RBC Formulas and Instructions for Health, Life and P/C

Attached please find a brief description of changes to the 2020 Risk-Based Capital Report Including Overview and Instructions for health, life and property/casualty (P/C). These changes were adopted by the Capital Adequacy (E) Task Force and Executive (EX) Committee and Plenary in 2020. Significance of these changes was viewed as it relates to the overall risk-based capital (RBC) standard.

No changes to the RBC formulas or instructions were deemed to be significant for health, life or P/C.

Any questions can be directed to NAIC staff:
P/C – Eva Yeung
Life – Dave Fleming
Health — Crystal Brown

Health RBC Formula

Not Significant Capitation tables included in the forecasting spreadsheet will be captured electronically through the annual filing submission of the health RBC formula.

Not Significant The Risk-Based Capital Preamble was added to the Health RBC instructions to clarify the purpose and goals of RBC as the Task Force and Working Groups review referrals and proposals.

Not Significant The 20 designation bond categories were incorporated into the health RBC formula for year-end 2020 reporting. The information captured through the 2020 reporting will be used to conduct an impact analysis that will assist in determining the final bond factors. The 20 bond designation categories were incorporated on an informational only basis on the Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets Page (XR006), Fixed Income Assets page (XR007) and the Asset Concentration page (XR011).

Not Significant The instructions were modified on page iv to insert the word “Overview” in the page heading and the Table of Contents was modified to include only the page heading and delete references to the individual sections of the Overview page.

Life RBC Formula

Not Significant Capitation tables included in the forecasting spreadsheet will be captured electronically through the annual filing submission of the life RBC formula.
Not Significant  The Risk-Based Capital Preamble was added to the life RBC instructions to clarify the purpose and goals of RBC as the Task Force and Working Groups review referrals and proposals.

Not Significant  The 20 designation bond categories were incorporated into the life RBC formula for year-end 2020 reporting. The information captured through the 2020 reporting will be used to conduct an impact analysis that will assist in determining the final bond factors.

Not Significant  The instructions were modified on page iv to insert the word “Overview” in the page heading and the Table of Contents was modified to include only the page heading and delete references to the individual sections of the Overview page.

Not Significant  The structure for a longevity risk charge was incorporated into the life RBC formula along with the instructions which include factors of zero for 2020. The structure adopted will provide information to be used in the ultimate determination of factors for 2021.

P/C RBC Formula

Not Significant  Capitation tables included in the forecasting spreadsheet will be captured electronically through the annual filing submission of the P/C RBC formula.

Not Significant  Modify the instruction to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurance.

Not Significant  The Risk-Based Capital Preamble was added to the P/C RBC instructions to clarify the purpose and goals of RBC as the Task Force and Working Groups review referrals and proposals.

Not Significant  Clarify the instructions for the reinsurance recoverable from individual syndicates of Lloyds’ of London that are covered under the Lloyd’s Central Fund may utilize the lowest financial strength group rating received from an approved rating agency.

Not Significant  Eliminate PR038 Adjustment for Reinsurance Penalty for Affiliates Applicable to Schedule F section.

Not Significant  The 20 designation bond categories were incorporated into the P/C RBC formula for year-end 2020 reporting. The information captured through the 2020 reporting will be used to conduct an impact analysis that will assist in determining the final bond factors. The 20 bond designation categories were incorporated on an informational only basis on the Bonds Page (PR006), the Asset Concentration page (PR011) and Off-Balance Sheet Collateral and Schedule DL, Part 1 Assets Page (PR015).

Not Significant  The PR017 and PR018 Line 1 industry average development factors were updated.

Not Significant  The instructions were modified on page iv to insert the word “Overview” in the page heading and the Table of Contents was modified to include only the page heading and delete references to the individual sections of the Overview page.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee
FROM: Kevin Fry (Ill), Chair Valuation of Securities (E) Task Force
Charles Therriault, Director, NAIC Securities Valuation Office

CC: Dan Daveline, Director, NAIC Financial Regulatory Services
Mark Perlman, Managing Investment Counsel, NAIC Securities Valuation Office

DATE: February 16, 2021

RE: Report of the Valuation of Securities (E) Task Force

A. Purpose – This report is presented to assist the Financial Regulation Standards and Accreditation (F) Committee to determine if amendments to the Purposes and Procedures Manual of the NAIC Investment Analysis Office adopted by the Valuation of Securities (E) Task Force in 2020 require corresponding changes in either the Financial Regulation Standards (defined below) or state laws or regulations adopted in conformity with Part A: Laws and Regulations of the Financial Regulation Standards.

B. Financial Regulation Standards – The NAIC Policy Statement on Financial Regulation Standards (SFRS) in the 2021 Accreditation Program Manual consists of four parts: Part A identifies laws and regulations deemed necessary to financial solvency regulation; Part B identifies regulatory practices and procedures that supplement and support enforcement of the financial solvency laws and regulations discussed in Part A; Part C contains three standards related to an insurance department’s organizational and personnel policies; and Part D focuses on Organization, licensing and change of control of domestic insurers. This report is concerned with the financial solvency standards in Part A. Those standards relevant to this report are shown immediately below and can be characterized as NAIC model legislation, codified NAIC guidance (i.e., the Accounting Practices and Procedures Manual): analytical work product of the NAIC staff (including the NAIC Investment Analysis Office) and state laws and regulations that contain substantially the same standards as NAIC model legislation or guidance. A review indicates that the work product of the NAIC Investment Analysis Office is directly or indirectly incorporated into the following Part A standards. For example:

- **Standard 5** requires that insurer owned securities be valued in accordance with the standards promulgated by the NAIC Investment Analysis Office;
- **Standard 2**, the Risk-Based Capital (RBC) for Insurers Model Act assigns RBC factors for securities based on their credit risk as measured by NAIC Designations;
- **Standard 3**, the Accounting Practices and Procedures Manual uses NAIC Designations produced by the SVO or by insurers through the filing exempt process and or Price Grids produced by the SSG to identify valuation rules applicable to an investment and the reserved capital amount the insurer must report;
Standard 8, pertaining to state investment regulations often incorporate NAIC mechanisms that relate asset allocations to credit risk expressed in the form of NAIC Designations; and

Standard 10, the Credit for Reinsurance Model Act (¶785) identifies insurer owned securities compiled by the SVO into a List of Investment Securities published quarterly in the NAIC AVS + Plus product, and letters of credits issued by the banks on the NAIC Bank List administered by the SVO, as eligible for use as collateral in reinsurance transactions.

C. Investment Analysis Office Standards Identified in the Purposes and Procedures Manual – All SVO and SSG standards related to the assessment of credit risk in insurer owned securities, identification of additional non-payment risk in securities, classification of certain assets as bonds or as bond-like for reporting purposes, the valuation of insurer owned securities, and other activities conducted by the SVO or the SSG in support of state insurance regulatory objectives, are determined and promulgated by the Valuation of Securities (E) Task Force and published in the Purposes and Procedures Manual. In 2020, the Purposes and Procedures Manual was revised once, in December, with all policies, analytical procedures and instructions adopted during 2020 effective for year-end financial reporting. Amendments to the Purposes and Procedures Manual would automatically be reflected in the SFRS if any or all of the SFRS Standards identified in paragraph A of this memorandum have been adopted by an accredited state or incorporated by reference into the laws or regulations of an accredited state. For example, amendments to the Purposes and Procedures Manual would be directly incorporated by reference if the laws or regulations of an accredited state refer to or incorporate Standard 5 on valuation. Amendments to the Purposes and Procedures Manual would be indirectly incorporated by reference if the law or regulations of a state refers to or incorporates any other Standard that itself uses NAIC Designations or other analytical products of the Investment Analysis Office as a component; for example, Standard 2 in the case of RBC and/or Standard 3 in the case of statutory accounting.

D. Conclusion – In our opinion, reasoning as discussed above, amendments to the Purposes and Procedures Manual adopted by the Valuation of Securities (E) Task Force in 2020 can be characterized as maintenance items consistent with the existing regulatory framework and automatically incorporated into the Part A Standards identified above. The amendments identified in Attachments One did not create processes or practices external to the Purposes and Procedures Manual or other NAIC model legislation, guidance or analysis of NAIC staff that would suggest the need to consider an amendment to NAIC model legislation or guidance or legislative action on the part of an accredited state.

We hope this is responsive to the issues and concerns before the Committee.
Attachment One

RECENT CHANGES TO THE PURPOSES AND PROCEDURES MANUAL
Published in the December 31, 2020 Publication

- Adopted updates following a new SEC rule affecting exchange-traded funds – On Sep. 26, 2019, the SEC adopted rule 6c-11 (the “Rule”) under the Investment Company Act of 1940 (the “Act”) which will permit exchange-traded funds (“ETFs”) that satisfy certain conditions to operate without first obtaining an exemptive order from the SEC under the Act. The SEC has stated that the intent of the rule is to modernize the regulatory framework for ETFs by reducing expenses and delays in creating new ETFs, to promote greater consistency, transparency and efficiency for ETFs and to facilitate greater competition among ETFs. The Rule becomes effective Dec. 23, 2019, followed by a one year transition period for compliance. The amendment removed references to SEC exemptive orders from descriptions of ETFs and clarify that Regulatory Treatment Analysis Service application filers only need to provide SEC exemptive orders to the SVO when applicable.

The Valuation of Securities (E) Task Force adopted this amendment on Feb. 4, 2020

- Updated instructions for financial modeled RMBS/CMBS securities to map NAIC Designations to NAIC Designations Categories – Financial Modeled RMBS/CMBS securities use their book/adjusted carrying value price ranges to determine an NAIC Designation. The resulting NAIC Designation from financial modeling process will be now be mapped to an NAIC Designation Category; except that an RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios and that would be equivalent to an NAIC 1 Designation and NAIC 1.A Designation Category if the filing exempt process were used, would be assigned an NAIC 1 Designation and NAIC 1.A Designation Category regardless of the insurer’s book/adjusted carrying value.

The Valuation of Securities (E) Task Force adopted this amendment on May 14, 2020

- Updated several technical corrections for policy-based assignments of NAIC Designation Categories – With the introduction of NAIC Designation Categories, the 20 granular delineations of credit risks adopted by the Task Force on Jun. 11, 2018, several policy-based assignments of NAIC Designations did not receive a mapping to an NAIC Designation Category. This amendment identifies the appropriate NAIC Designation Category to be assigned for these policy-based assignments.

The Valuation of Securities (E) Task Force adopted this amendment on Jul. 1, 2020.
- Rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S. Government Money Market Fund List and Discontinue the NAIC Bond Fund List – The SVO maintains the NAIC U.S. Direct Obligations/Full Faith and Credit Exempt Money Market Funds List. This list of Money Market Funds (MMF) gets special treatment because they can be reported as a cash equivalent on Schedule E, Part 2. The title of this list has been shortened to “NAIC U.S. Government Money Market Fund List.” This is only a title change to simplify it, no criteria was changed.

The SVO also maintains the NAIC Bond Fund List that contains funds that maintain the highest credit quality rating, maintains the highest market risk rating (this rating type that is no longer assigned), and invests 100% of its total assets in U.S. Government securities along with several other restrictive criteria. No funds qualify for this list and the list has been eliminated.

*The Valuation of Securities (E) Task Force adopted this amendment on Jul. 1, 2020.*

- Permit Supranational Entities Filed with the SVO to be Added to the Sovereign NAIC Designation Equivalent List – The SVO maintains the Sovereign NAIC Designation Equivalent list and publishes it on its webpage ([https://www.naic.org/svo.htm](https://www.naic.org/svo.htm)). Insurers must report supranational entities on the Supplemental Investment Risks Interrogatories (SIRI) with a Sovereign NAIC Designation Equivalent. This amendment permits the SVO to include supranational entities on the Sovereign NAIC Designation Equivalent list if an insurer files a request with the SVO and the SVO is able to determine an appropriate NAIC designation equivalent.

*The Valuation of Securities (E) Task Force adopted this amendment on Aug. 7, 2020.*

- Update to the General Mapping of Credit Rating Provider Ratings, Long and Short-term, to NAIC Designations and NAIC Designation Categories – The Task Force approved an update to the tables reflecting the general mapping of Credit Rating Provider (CRP) ratings to NAIC Designations and NAIC Designation Categories. Short-term investments were mapped to the mid-point of the range of long-term ratings covered by each short-term rating. The update included a note highlighting that the mappings for both long-term and short-term rating symbols are for “Generic Rating Symbols.” CRPs use a variety of symbols; including, combinations of prefixes and suffixes that provide additional information about the rating symbol which are described in the CRP’s documentation. There are over 2,000+ unique rating symbols used by CRPs to describe long-term securities. The SVO webpage ([https://www.naic.org/svo.htm](https://www.naic.org/svo.htm)) maintains a master list of Credit Ratings Eligible for Translation to NAIC Designations.

*The Valuation of Securities (E) Task Force adopted this amendment on Aug. 7, 2020.*
Add Instructions for ETFs that Contain a Combination of Preferred Stocks and Bonds – The Task Force authorized the SVO to review and determine that a fund’s cash flow can be appropriately characterized as fixed income for regulatory purposes, and if so, assign an NAIC Designation to reflect the credit risk associated with the fund’s cash flow and include the name of the fund on the appropriate NAIC List. For inclusion on the SVO-Identified Bond or Preferred Stock ETF list, the ETF must predominantly hold either a portfolio of bonds or preferred stock. This amendment authorizes the SVO to review ETFs that hold both bonds and preferred stock for possible inclusion on the SVO-Identified Preferred Stock ETF list.

*The Valuation of Securities (E) Task Force adopted this amendment on Sep. 29, 2020.*

Update Guidance on Initial and Subsequent Annual Filings, Methodologies and Documentation – The Task Force adopted updated guidance in the P&P Manual for initial and subsequent annual filings and affirmed the SVO’s authority to use reasonable analytical discretion in its assessments including methodologies to utilize and additional documentation or information it may deem necessary for its analysis. The amendment reinforces the Task Force’s expectation that insurance companies will provide the necessary documentation in a timely manner to the SVO and further outlines the types of information the SVO may require. The SVO webpage (https://www.naic.org/svo.htm) also maintains general Guidance on Documentation, Applications and Forms.

*The Valuation of Securities (E) Task Force adopted this amendment on Nov. 18, 2020.*

Revised the Previously Adopted (May 14, 2020) Instructions for Financial Modeled RMBS/CMBS Securities mapping to NAIC Designations to NAIC Designation Categories – The Task Force adopted updated instructions for financially modeled zero-loss RMBS/CMBS securities. The revision eliminates the potential for regulatory capital to be impacted and calibrates the reported NAIC Designation Category for these securities to be consistent with their overall equivalent CRP rating risk level that would be applied under Filing Exemption (FE). Financially modeled zero-loss RMBS/CMBS securities that have the equivalent of an NAIC Designation 1 if the filing exempt process was used and will be mapped to an NAIC Designation NAIC 1 and NAIC Designation Category of NAIC 1.D.

*The Valuation of Securities (E) Task Force adopted this amendment on Dec. 23, 2020.*
 Adopted an updated definition and instructions for Principal Protected Securities – these securities mix a traditional bond or bonds with additional assets that may possess any characteristic. The additional assets are intended to generate an excess return, “performance assets,” and may be any asset, such as derivatives, common stock, commodities, equity indices, etc. The performance assets may include undisclosed assets and are typically not securities that would otherwise be permitted on Schedule D, Part 1 as a bond. The adopted amendment for principal protected securities (PPS) includes an updated description, definition and instructions; it removes these securities from Filing Exemption (FE) eligibility; and requires all PPS, including those currently designated under the FE process, to be submitted to the Securities Valuation Office (SVO) for review under their Subscript S authority beginning January 1, 2021, and filed with the SVO by July 1, 2021, if previously owned.

The Valuation of Securities (E) Task Force adopted this amendment on May 14, 2020

(Note: This change is effective as of Jan. 1, 2021. PPS acquired prior to Jan. 1, 2021 must be filed with the SVO by Jul. 1, 2021, all others follow existing filing guidance.)
adopted by states

letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law. The SVO maintains a list of banks that meet defined eligibility criteria to issue

Reinsurance Agreement Model Regulation

insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by

specific adoption of the

NAIC

Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…This standard does not articulate a threshold level for minimum capital and surplus required for insurers to transact business ... Risk-based capital will, however, effectively require minimums when adopted by states.” Accreditation Interlineations - Financial Regulation Standards

5 The SFRS requires the use of the codified version of the Accounting Practices and Procedures Manual. Valuation procedures applicable to long-term invested assets are determined by the nature of the insurer (life or property/casualty) and the NAIC designation assigned to the security by the SVO or SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…To satisfy this standard, ... specific adoption of the NAIC Annual Statement Blank, NAIC Annual Statement Instructions, and the NAIC Accounting Practices and Procedures Manual [is required]. ... Accreditation Interlineations - Financial Regulation Standards

6 The SFRS requires a diversified investment portfolio. Although the Investment of Insurers Model Act (Defined Limits or Defined Standards) is not specifically identified, portions of one or the other model acts have been adopted by many of the states and these relate specific asset allocations to NAIC designations provided by the SVO or in some cases by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No., 43R. “ ... This standard ... [will require] that statutes, together with related regulations and administrative practices, provide adequate basis ... to prevent, or correct, undue concentration of investment by type and issue and unreasonable mismatching of maturities of assets and liabilities. The standard is not interpreted to require an investment statute that automatically leads to a fully diversified portfolio of investments. Accreditation Interlineations - Financial Regulation Standards

The NAIC Investment of Insurers Model Act (Defined Limits Version) (# 280) imposes a 3% limit on the amount an insurer can invest in a single person (the threshold diversification limit) and also imposes a percentage limit on total investments of a defined credit quality, expressed by reference to NAIC Designation categories (the threshold credit quality limit). An additional percentage limit is then assigned to specific asset categories, which may or may not be subject to adjustment with the two threshold requirements. The limits identified in the Model Act are what would guide portfolio allocation decisions. Once made the insurer would shift to monitoring changes in the portfolio and rebalancing the allocations accordingly. Assuming a process for the identification of concentrations caused by indirect exposures, the insurer would aggregate such exposures with similar risks across all activities.

7 The SFRS requires the adoption of the Credit for Reinsurance Model Act (#785), Credit for Reinsurance Model Regulation (#786) and Life and Health Reinsurance Agreement Model Regulation (#791) or substantially similar laws. The SVO maintains a list of banks that meet defined eligibility criteria to issue letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law.

END NOTES

1 “…The purpose of the Part A: Laws and Regulations standards are to assure that an accredited state has sufficient authority to regulate the solvency of its multi-state domestic insurance industry in an effective manner. … A state may demonstrate compliance with a Part A standard through a law, a regulation, an established practice, which implements the general authority granted to the state or any combination of laws, regulations or practices, which achieves the objective of the standard …” 2014 Accreditation Program Manual. “…For those standards included in the Part A … where the term "substantially similar" is included, a state must have a law, regulation, administrative practice or a combination of the above that addresses the significant elements included in the NAIC model laws or regulations. ... Accreditation Interlineations (Substantially Similar)

20 ...Part B sets out standards required to ensure adequate solvency regulation of multi-state insurers ... In addition to a domestic state’s examination and analysis activities, other checks and balances exist in the regulatory environment. These include ... analyses by NAIC’s staff, ... and to some extent the evaluation by private rating agencies.” 2014 Accreditation Program Manual

4 The SFRS requires the adoption of the Risk Based Capital (RBC) for Insurers Model Act (#312) or a substantially similar law or regulation. RBC factors are tied to NAIC designations assigned by the SVO or in certain cases, for example in the case of Mortgage Referenced Securities, by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. "...This standard does not articulate a threshold level for minimum capital and surplus required for insurers to transact business ... Risk-based capital will, however, effectively require minimums when adopted by states.” Accreditation Interlineations - Financial Regulation Standards

5 The SFRS requires the use of the codified version of the Accounting Practices and Procedures Manual. Valuation procedures applicable to long-term invested assets are determined by the nature of the insurer (life or property/casualty) and the NAIC designation assigned to the security by the SVO or SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “...To satisfy this standard, ... specific adoption of the NAIC Annual Statement Blank, NAIC Annual Statement Instructions, and the NAIC Accounting Practices and Procedures Manual [is required]. ... Accreditation Interlineations - Financial Regulation Standards

6 The SFRS requires a diversified investment portfolio. Although the Investment of Insurers Model Act (Defined Limits or Defined Standards) is not specifically identified, portions of one or the other model acts have been adopted by many of the states and these relate specific asset allocations to NAIC designations provided by the SVO or in some cases by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No., 43R. “ ... This standard ... [will require] that statutes, together with related regulations and administrative practices, provide adequate basis ... to prevent, or correct, undue concentration of investment by type and issue and unreasonable mismatching of maturities of assets and liabilities. The standard is not interpreted to require an investment statute that automatically leads to a fully diversified portfolio of investments. Accreditation Interlineations - Financial Regulation Standards

The NAIC Investment of Insurers Model Act (Defined Limits Version) (# 280) imposes a 3% limit on the amount an insurer can invest in a single person (the threshold diversification limit) and also imposes a percentage limit on total investments of a defined credit quality, expressed by reference to NAIC Designation categories (the threshold credit quality limit). An additional percentage limit is then assigned to specific asset categories, which may or may not be subject to adjustment with the two threshold requirements. The limits identified in the Model Act are what would guide portfolio allocation decisions. Once made the insurer would shift to monitoring changes in the portfolio and rebalancing the allocations accordingly. Assuming a process for the identification of concentrations caused by indirect exposures, the insurer would aggregate such exposures with similar risks across all activities.

7 The SFRS requires the adoption of the Credit for Reinsurance Model Act (#785), Credit for Reinsurance Model Regulation (#786) and Life and Health Reinsurance Agreement Model Regulation (#791) or substantially similar laws. The SVO maintains a list of banks that meet defined eligibility criteria to issue letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law.
MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer (RI), Chair, Financial Regulations Standards and Accreditation (F) Committee and Director Lori K. Wing-Heier, (AK), Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM: Mike Boerner (TX), Chair, Life Actuarial (A) Task Force,
Pete Weber (OH), Vice Chair, Life Actuarial (A) Task Force

DATE: March 3, 2021

In 2017, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the Valuation Manual – Effective January 1, 2020 as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Life Actuarial (A) Task Force has made to the Valuation Manual in 2020. The changes were adopted by the Executive (EX) Committee and Plenary at the 2020 Summer Meeting.

Attachment A to this memo includes a detailed listing of the changes made to the Valuation Manual in 2020. On behalf of the Task Force, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards.

As outlined in the Valuation Manual, amendments will be adopted annually by the Executive (EX) Committee and Plenary at each NAIC Summer Meeting. As such, the Valuation Manual will be reposted with an effective date of January 1 of the year following Executive Committee and Plenary adoption. For example, the current Valuation Manual, which encompasses the attached modifications, is titled the 2021 Edition - Valuation Manual. This process allows for an efficient way to update the Valuation Manual and ensures that users have the latest version.

The Task Force sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the Valuation Manual. We will continue to notify the Committee of any changes to the Valuation Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

LATF Adopted Amendments for the 2021 VM.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: NAIC Staff

DATE: March 15, 2021

RE: Part A Preamble Update for the Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

In 2019, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as a new Part A accreditation standard, effective Sept. 1, 2022, with enforcement to begin Jan. 1, 2023. Model #787 establishes uniform, national standards governing captive reinsurance agreements pertaining to term and universal life insurance policies with secondary guarantees. Prior to Model #787, Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model #830) (AG48) was adopted as an interim step to address concerns regarding such reserve financing transactions. Model #787 completes the XXX/AXXX Reinsurance Framework by codifying the concepts in AG 48.

The NAIC Reinsurance Framework is discussed in the Part A Preamble under the section for captive reinsurers. The current iteration includes reference to the Reinsurance Framework and the impact on compliance with accreditation for captive reinsurers regarding specific lines of business. The lines of business include policies applicable under Section 3 of Model #787, commonly referred to as XXX/AXXX policies. The applicable excerpt of the Preamble is attached and includes recommended tracked changes to reference Model #787. The updates are not considered substantive, but rather are to ensure consistency with the adoption of Model #787 as the new standard for compliance.

Following adoption of AG 48 and prior to the effective date of Model #787, NAIC staff have performed an annual review of all insurers with applicable transactions. The review is designed to ensure all applicable transactions comply with the Reinsurance Framework and, as a result, comply with the Part A accreditation standards. NAIC staff will continue this review until the effective date of Model #787, at which time enactment of the model will be the measure of compliance.
Excerpt from Accreditation Manual – Part A Preamble

Captive Reinsurers
The following Part A standards apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct (captive insurer) that reinsurance business covering risks residing in at least two states, but only with respect to the following lines of business:

1) Term and universal life with secondary guarantee policies that are applicable under Section 3 of the Term and Universal Life Insurance Reserve Financing Model Regulation (#787)(commonly referred to as XXX/AXXX policies). The application of this provision is intended to have a prospective-only effect, so that regulation of captive insurers, special purpose vehicles and any other entities that reinsurance these types of policies will not be subject to the Part A standards if the policies assumed were both (1) issued prior to Jan. 1, 2015, and (2) ceded so that they were part of a reinsurance arrangement as of Dec. 31, 2014. [Drafting Note: This paragraph of the Preamble became effective Jan. 1, 2016]

2) Variable annuities valued under Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

3) Long term care insurance valued under the Health Insurance Reserves Model Regulation (Model #10). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

With regard to a captive insurer, special purpose vehicle, or any other entity assuming XXX/AXXX business, regulation of the entity is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction complies with Model #787.

[Drafting Note: The Part A standards with respect to entities assuming variable annuities and long term care reinsurance business are intended to be effective with respect to both currently in-force and future business. However, the effective dates for variable annuities and long term care insurance are not yet determined, and their application to in-force business need further discussion].

Re: 2020 Revisions to Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance.

Please find attached, memorandums and proposed changes to the Accreditation (E) Committee as adopted by the Financial Condition (E) Committee related to these most recent changes to #440 and #450. Each of the memorandum’s summarize the basis for recommending that certain provisions of these model changes become part of the Accreditation program as well as suggested timing. With respect to timing, consistent with action taken by the Financial Regulation Standards and Accreditation (F) Committee to use an expedited process in 2019 with respect to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) due to the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), we recommend a similar expedited process with respect to states who are a Group Wide Supervisor of a group with operations in the EU or UK. The attached provide further details on the specifics of such recommendations.

Date: February 25, 2021

Re: 2020 Revisions to Insurance Holding Company System Regulatory Model Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

Executive Summary

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance. This memorandum makes recommendations with respect to the accreditation standards that this Working Group believes is appropriate with respect to only the GCC and expect the Financial Stability (EX) Task Force to make separate recommendations to the Committee with respect to the LST.

The GCC was developed as a result of discussions which began in 2015. The GCC is a natural extension of work state insurance regulators had begun, in part by lessons learned from the most recent financial crisis, to better understand an insurance group’s financial risk profile for the purpose of enhancing policyholder protections. While state insurance regulators currently have the authority to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist state insurance regulators in identifying risks that may emanate from a holding company system. The GCC, and related financial reporting, will provide comprehensive transparency to state insurance regulators, making risks more easily identifiable and quantifiable. For these reasons, the Working Group recommends adoption of #440 and #450 as accreditation standards for all states with the normal accreditation timeline, which would result in an effective date of January 1, 2026.

In addition, the GCC is intended to comply with the requirements under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. On Dec. 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK). The GCC is intended to meet the requirement that the states have a “worldwide group capital calculation” in place by Nov. 7, 2022 in order to avoid the EU from imposing a group capital assessment or requirement at the level of the worldwide parent undertaking. Failure of any state to do so for any U.S. group operating in such jurisdiction raises the potential for any supervisor in the EU or UK to impose its
own group capital calculation (e.g., Solvency II capital requirements) on that group and therefore all of the U.S. insurers within that group. Due to this agreement, the Working Group recommends that the accreditation standard become effective Nov. 7, 2022 for those states who are the Group Wide Supervisor of a group with operations in the EU or UK.

**A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:**

The current Insurance Holding Company Systems accreditation standard requires that state law shall contain the significant elements from Model #440 and Model #450. These models have provided state insurance departments the framework for insurance group supervision since the early 1970s. Following the 2008 financial crisis, state regulators identified group supervision as an area where improvements could be made to the U.S. system. In December 2010, the NAIC adopted changes to the models enhancing the domestic legal structure under which holding companies are supervised. In December 2014, the NAIC adopted revisions to clarify legal authority and powers to act as a group-wide supervisor for internationally active insurance groups. These changes are newly required elements of the NAIC Accreditation Program and have been satisfactorily adopted by nearly all accredited U.S. jurisdictions. As discussed in the preceding paragraphs, the GCC was designed to enhance these same standards that were previously included as accreditation standards.

**A statement as to why ultimate adoption by every jurisdiction may be desirable:**

The Group Capital Calculation (E) Working Group believes that all states that are the lead state for a group subject to the GCC should be required to adopt the model revisions. The GCC is a tool intended to help protect the policyholders in all states from the risk that can emanate from outside the domestic insurer and will be an input into the Group Profile Summary (GPS). After an initial filing by all insurance groups, the GCC is required for all U.S. insurance groups with greater than $1 billion in premium. The groups subject to the GCC are expected to have domestic insurers in most U.S. states. Therefore, it is recommended that that the new significant elements apply to all states.

**A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:**

We are not currently aware of any states that have adopted the 2020 revisions to Model #440 and Model #450, although we have been advised that many states have begun their legislative processes for adoption of these revisions.

**A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:**

The current accreditation standard for Model #440 and Model #450 requires state adoption on a substantially similar basis. Therefore, the Group Capital Calculation (E) Working Group supports the attached proposed significant elements (Attachment A) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this
standard. The Group Capital Calculation (E) Working Group recommends that the accreditation standard become effective Nov. 7, 2022, the end of the 60-month period contemplated under the Covered Agreement, with enforcement of the standard to commence Jan. 1, 2023. However, the Working Group is also supportive of the effective date being bifurcated to allow those states that are not the Group Wide Supervisor of a group with operations in the EU or UK to be subject to a later effective date in line with the normal accreditation timeline, which would result in an effective date of January 1, 2026.

There were also revisions made to Section 8 of Model #440 regarding Confidential Treatment. The Group Capital Calculation (E) Working Group strongly supports the use of language similar to that contained in Section 8G of Model #440. This language was considered very critical to the GCC as its very important that members of the insurance industry (or regulators) not be allowed to make the results of the GCC public in any way as they are designed as regulatory-only tools. Unlike RBC that has regulatory trigger points, the GCC does not, and the regulators of these groups believed it would be detrimental if these tools were used by insurers as a means to advertise their relative solvency strength.

**An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:**

The NAIC has not performed a cost/benefit analysis with respect to the 2020 revisions to Model #440 and Model #450, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, the possible exemptions allowed under Model #450 are specifically designed to consider the cost to complete the GCC by the insurance company and the benefits of the GCC to the lead-state commissioner. More specifically, all insurers are required to submit the GCC at least once, after which time the expectation is that the lead state commissioner will evaluate the added insight brought to the state from GCC; then, provided the group has premium less than $1 billion, no international business, no risky non-regulated entities and no banks or similar capital regulated entities in the group, the lead state commissioner can exempt the group from filing in the future.

In addition, the construction of the GCC also considers cost of completion and specifically provides a principle-based approach where the insurance company can exclude non-risky affiliates from the calculation and also provides the insurance company to group the information of multiple non-insurance/non-regulated affiliates as a means to further reduce the burden of completion. In short, the GCC is only as complex as the insurance group has structured itself, and therefore the GCC already inherently considers the cost to comply.
6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar, and the department should have adopted the NAIC Insurance Holding Company System Model Regulation (#450).

Insurance Holding Company Systems – continued

Changes to Existing

k. Filing requirements for the enterprise risk filing similar to those specified in Section 4L(1) of the Model #440?

New

l. Filing requirements for the group capital calculation filing similar to those specified in Section 4L(2) of Model #440?

i. The ultimate controlling person of every insurer subject to registration shall annually file a group capital calculation completed in accordance with the NAIC Group Capital Calculation Instructions as directed by the lead state commissioner similar to section 4L(2)?

ii. Provision for exempting an insurance holding company system that has only one insurer within its holding company structure, that only writes business [and is only licensed] in its domestic state and assumes no business from any other insurer, similar to 4L(2)(a)?

iii. Provision for exempting an insurance holding company system that is required to perform a group capital calculation specified by the U.S. Federal Reserve? If the Federal Reserve Board cannot share the calculation with the lead state commissioner, the insurance holding company system is not exempt from the GCC, similar to 4L(2)(b)?

iv. Provision for exempting an insurance holding company system whose non-U.S. group-wide supervisor is located within a Reciprocal Jurisdiction that recognizes the U.S. state regulatory approach to group supervision and group capital, similar to 4L(2)(c)?

v. Provision for exempting an insurance holding company system that provides information to the lead state that meets the requirements for accreditation under the NAIC financial standards and accreditation program and whose non-U.S. group-wide supervisor that is not in a Reciprocal Jurisdiction recognizes and accepts the GCC as the worldwide group capital assessment for U.S. insurance groups who operate in that jurisdiction, similar to 4L(2)(d)?

vi. Provision that gives the lead state the authority to require the GCC for U.S. operations of any non-U.S. based insurance holding company system where after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes, similar to 4L(2)(e)?

Changes to Existing

cc. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

New

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?

n. Filing requirements for the group capital calculation filing similar to those specified in Section 21 of Model #450?
i. Provision that gives the lead state the authority to exempt the filing of the group capital calculation provided the criteria are similar to those allowed under Section 21A of Model #450?

ii. Provision that gives the lead state the authority to accept a limited group capital filing provided the criteria are similar to those allowed under Section 21B of Model #450?

iii. Provision that gives the lead state the authority to require the group capital calculation of any group that previously met an exemption or submitted a limited filing if any insurer in the holding company system either triggers an RBC action level event, is deemed in hazardous financial condition, or otherwise exhibits qualities of a troubled insurer, similar to those allowed under Section 21C of Model #450?

iv. Provision that sets forth the criteria for a jurisdiction to be included on the NAIC listing that “recognize and accept the group capital calculation” similar to that required under Section 21D and Section 21E of Model #450?
MEMORANDUM

To: Financial Condition (E) Committee
From: Financial Stability (E) Task Force
Date: February 22, 2021
Re: 2020 Revisions to Insurance Holding Company System Regulatory Act (#440)

Executive Summary

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance. This memorandum makes recommendations with respect to the accreditation standards that this Task Force believes is appropriate with respect to only the LST and expect the Group Capital Calculation (E) Working Group to make separate recommendations to the Committee with respect to the GCC.

Post-financial crisis, regulators from all financial sectors across the globe recognized the need for macroprudential surveillance and tools to address macroprudential risks. While the solvency framework established and managed by the Financial Condition (E) Committee thoroughly addresses legal entity insurers and insurance groups, there was no group with a macroprudential scope. This Task Force was created to fill this gap, and in 2017 was charged to “analyze existing post-financial crisis regulatory reforms for their application in identifying macroprudential trends, including identifying possible areas of improvement or gaps, and propose . . . enhancements and/or additions to further improve the ability of state insurance regulators and industry to address macroprudential impacts.” The Task Force created the NAIC Macroprudential Initiative (MPI) to focus its efforts in four key areas: liquidity risk, recovery and resolution, capital stress testing, and exposure concentrations. Liquidity risk was consistently recognized as a key macroprudential risk by federal and international regulatory agencies, and there were several attempts to assess potential market impacts emanating from a liquidity stress in the insurance sector. Many of these analyses relied heavily on anecdotal assumptions and observations from behaviors of other financial sectors.

In order to provide more evidence-based analyses, the Task Force decided to develop a LST for large life insurers that would aim to capture the impact on the broader financial markets of aggregate asset sales under a liquidity stress event. Unlike capital adequacy, which has risk-based capital as a standardized legal entity capital assessment tool and the newly created Group Capital Calculation to provide a capital analysis tool at the group level, there is no regulatory liquidity assessment or stress tool. The Task Force focused on large life insurers due to the long-term cash buildup involved in many life insurance contracts and the potential for large scale liquidation of assets, not because liquidity risk does not exist in other insurance segments. Thus, the primary goal of the LST is to provide...
quantitative as well as qualitative insights for macroprudential surveillance, such as identifying the amount of asset sales that could occur during a specific stress scenario; but it will also aid micro prudential regulation as well. Because this stress testing is complex and resource-intensive, a set of scope criteria were developed to identify life insurers with large balances of activities assumed to be highly correlated with liquidity risk; thus, many life insurers will not be subject to the LST.

A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The current Insurance Holding Company Systems accreditation standard requires that state law shall contain the significant elements from Model #440 and Model #450. These models have provided state insurance departments the framework for insurance group supervision since the early 1970s. Following the 2008 financial crisis, state regulators identified group supervision as an area where improvements could be made to the U.S. system. In December 2010, the NAIC adopted changes to the models enhancing the domestic legal structure under which holding companies are supervised. In December 2014, the NAIC adopted revisions to clarify legal authority and powers to act as a group-wide supervisor for internationally active insurance groups. These changes are newly required elements of the NAIC Accreditation Program and have been satisfactorily adopted by nearly all accredited U.S. jurisdictions. As discussed in the preceding paragraphs, the LST was designed to enhance these same standards that were previously included as accreditation standards.

Macroprudential risks can directly impact regulated legal entity insurers and groups, and/or can emanate from or be amplified by these insurers and transmitted externally. The NAIC solvency surveillance framework must address macroprudential risks to ensure that the companies states regulate remain financially strong for the protection of policyholders, while serving as a stabilizing force to contribute to financial stability, including in stressed financial markets. The LST is the first new tool developed for the macroprudential program within the financial solvency framework.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The Financial Stability Task Force believes that all states that are the lead state for a group subject to the LST should be required to adopt the model revisions. The LST is a tool intended to help assess the impacts the life insurance industry can have on the broader financial markets in a time of stress. Ideally, the tool would have been required of all life insurance groups, but this was not possible due to the complexity and resources required to accomplish such liquidity stress testing. Thus, the LST uses a set of scope criteria to identify those life insurers with significant amounts in activities assumed to have high liquidity risk, thus representing the larger portion of the life insurance industry in terms of liquidity risk rather than representing the entire life insurance industry. If a scoped-in life insurance group was not subject to the LST because a state did not adopt the model revisions, this would significantly reduce the ability of the NAIC to represent the results as truly macroprudential and reflective of the majority of risks of the life insurance sector. Additionally, the LST results will be helpful to the lead states in their group supervision efforts as well.

Though not every state will be the lead state of a scoped-in group, the Task Force still believes the model revisions for the LST should be adopted in every state. It is fairly common for legal entity insurers to move from one group to another, impacting the group dynamics including the lead state determination, and each state should have the LST in their statutes to ensure they will be prepared for any future appointment as lead state. Also, even without legal entities changing groups, business acquisition and operational changes within existing groups might subject a previously excluded group to the LST. Therefore, it is recommended that that the new significant elements apply to all states.
A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

We are not currently aware of any states that have adopted the 2020 revisions to Model #440, although we have been advised that many states have begun their legislative processes for adoption of these revisions.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

The current accreditation standard for Model #440 and Model #450 requires state adoption on a substantially similar basis. Therefore, the Financial Stability (E) Task Force supports the attached proposed significant elements (Attached) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this standard. The Financial Stability (E) Task Force recommends that the accreditation standard become effective Nov. 7, 2022, concurrent with the Group Capital Calculation revisions to the model, with enforcement of the standard to commence Jan. 1, 2023.

There were also revisions made to Section 8 of Model #440 regarding Confidential Treatment. The Financial Stability (E) Task Force strongly supports the use of language similar to that contained in Section 8G of Model #440. This language was considered very critical to the LST as its very important that members of the insurance industry (or regulators) not be allowed to make the results of the LST public in any way as they are designed as regulatory-only tools using complex assumptions for potential future stress events and the results could easily be misinterpreted and misrepresented by other users, causing true financial harm to the insurers.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to the 2020 revisions to Model #440, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, the LST scope criteria selects the larger, more complex life insurers, and all of these already perform some form of internal liquidity stress tests. While there are regulatory requirements for inputs and outputs, truly significant costs are avoided by using their existing internal stress testing systems instead of specifying a regulatory model.
6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar.

**Changes to Existing**

k. Additions to the filing requirements for the enterprise risk filing specified in Section 4L(1) of the Model #440 (see next item).

**New**

C. Define “NAIC Liquidity Stress Test Framework” similar to that in Section 1K?

d. Define “Scope Criteria” similar to that in Section 1M?

**Changes to Existing**

l. Filing requirements for the liquidity stress test filing similar to those specified in Section 4L(3) of Model #440:

i. The ultimate controlling person of every insurer subject to registration and also scoped into the NAIC Liquidity Stress Test Framework shall file the results of a specific year’s Liquidity Stress Test to the lead state insurance commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook similar to Section 4L(3)?

ii. Insurers meeting at least one threshold of the Scope Criteria for a specific data year are scoped into that year’s NAIC Liquidity Stress Test Framework unless the lead state, after consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should not be scoped into the Framework for that data year similar to Section 4L(3)(a)? Insurers that do not trigger at least one threshold of the Scope Criteria are considered scoped out of the NAIC Liquidity Stress Test Framework for the specified data year, unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should be scoped into the Framework for that data year?

iii. Provision requiring compliance with the NAIC Liquidity Stress Test Framework’s instructions and reporting templates for the specific data year and any lead state insurance commissioner determinations in consultation with the Financial Stability Task Force or its successor, provided within the Framework similar to Section 4L(3)(b)?

cc. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?

Fox (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Raymond G. Farmer (SC).

1. **Adopted its March 25, 2021; Feb. 3, 2021; Jan. 6, 2021; and 2020 Fall National Meeting Minutes**

   The Committee met March 25, 2021; Feb. 3, 2021; Jan. 6, 2021; and Dec. 9, 2020, and took the following action: 1) approved submission of NAIC comments on the International Association of Insurance Supervisors’ (IAIS) draft *Application Paper of Supervision of Control Functions, Application Paper of Resolution Powers and Planning, and Consultation on the Development of Liquidity Metrics*; 2) approved submission of NAIC comments on the joint Sustainable Insurance Forum (SIF) and IAIS draft *Application Paper on the Supervision of Climate-Related Risks in the Insurance Sector*; 3) heard an update on upcoming IAIS committee meetings and activities; and 4) heard an update on the SIF, Organisation for Economic Co-operation and Development (OECD), and other supervisory cooperation activities.

   Commissioner Anderson noted that the Committee also met Feb. 16 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss strategy and planning related to international issues, bilateral and regional outreach, and member educational efforts over the course of 2021.

   Commissioner Caride made a motion, seconded by Commissioner Mais, to adopt the Committee’s March 25, 2021 (Attachment One), Feb. 3, 2021 (Attachment Two), Jan. 6, 2021 (Attachment Three) and Dec. 9, 2020 (see NAIC Proceedings – Fall 2020, International Insurance Relations (G) Committee) minutes. The motion passed unanimously.

2. **Heard an Update on Key 2021 Projects and Priorities of the IAIS**

   Commissioner Anderson reported on recent IAIS activities, starting with an overview of the first set of committee meetings in 2021 that took place in March. Regarding implementation assessment activities related to the holistic framework for systemic risk, the first-phase baseline assessment (BLA) report has been finalized, and the second-phase targeted jurisdictional assessment is now underway. He then provided an update on the insurance capital standard (ICS) monitoring period, noting that IAIS members: 1) discussed results of the 2020 data collection; 2) received an update on the aggregation method (AM); and 3) discussed the public consultation comments received on the draft definition and high-level principles and the plan to develop criteria to assess whether the AM provides comparable outcomes to the ICS. Development of the criteria will take place throughout 2021, with a consultation expected by year-end.

   Commissioner Anderson said another important area of work underway are strategic discussions on the IAIS role, activities and priorities related to climate risk and sustainability. Lastly, he said the IAIS will also continue to monitor the ongoing global impact of COVID-19 on supervisors and the insurance sector.

   Conor Donaldson (IAIS) added that with respect to the BLA, the internal IAIS report has been uploaded for members, and a public version of the report is expected to be published in the next month. He said the IAIS expects to publish its Application Paper on climate risk before its June committee meetings. Mr. Donaldson noted continued work on Multilateral Memorandums of Understanding (MMoU) as an essential tool to enable supervisory cooperation, and the importance of having a strong chair from the NAIC for the work. The IAIS recently welcomed Argentina as its latest MMoU signatory.

   Steve Broadie (American Property Casualty Insurance Association—APCIA) asked about IAIS plans to publish a final version of the high-level principles for assessment of AM comparability and the IAIS’ resolution of comments from the public consultation. Ryan Workman (NAIC) noted that the IAIS is in the process of drafting a thematic high-level summary of comments received, which will be made public once finished.

   Commissioner Anderson thanked interested parties for their comments and encouraged them to attend the IAIS Secretariat question-and-answer (Q&A) session following the Committee meeting.
3. Heard a Presentation on Scalar Methodologies from the Academy

Steve Jackson (American Academy of Actuaries—Academy) gave an update on the Academy’s work looking at scalar methodologies, the proposal for which was presented to the Committee at the NAIC’s 2020 Summer National Meeting. He noted that the Executive Summary has been released for the Academy’s paper, *Aggregating Regulatory Capital Requirements Across Jurisdictions: Theoretical and Practical Considerations* (Attachment Four), and he presented the main findings and conclusions of the paper. Mr. Jackson noted that the full paper would be made available in the coming days.

Commissioner Anderson thanked the Academy for its efforts and asked whether there were any surprises or challenges during the work looking at scalars. Mr. Jackson noted that the whole project was more challenging than originally expected and that one surprise is that the probability of negative outcomes methodology appears to be more plausible than expected.

4. Heard an Update on International Activities

a. Regional Supervisory Cooperation

Director Ramge reported that following the success of last fall’s International Fellows Program, the NAIC will once again offer the program in a fully virtual format this spring, April 19–23. He said while there is no substitute for the hands-on experience that fellows receive during the weeks they spend hosted by state insurance departments and meeting with NAIC staff, the NAIC is grateful to be able to offer international colleagues an opportunity for technical growth and relationship building virtually. Director Ramge noted more than 100 participants are set to join from most major regions, including Western and Eastern Europe, Latin America, the Caribbean, Asia, Africa, and the Middle East.

Director Ramge said the NAIC met virtually on Dec. 10, 2020, with the Financial Services Agency (FSA) of Japan for a biannual bilateral dialogue. The NAIC and FSA discussed various regulatory and supervisory topics and developments, including: responses to COVID-19; updates on 2020 initiatives; and a preview of priorities for 2021.

Director Ramge said the NAIC held a virtual bilateral dialogue with representatives from the European Insurance and Occupational Pensions Association (EIOPA) and European Union (EU) member states on Dec. 18, 2020. He said NAIC representatives provided updates on a variety of initiatives, including: race and insurance, climate and resilience, the Macroprudential Initiative, the group capital calculation (GCC), and responses to COVID-19. Ongoing dialogue and discussions through the EU-U.S. Insurance Dialogue Project and its various workstreams has also continued.

Director Ramge reported that Dean L. Cameron, Director of the Idaho Department of Insurance (DOI) and NAIC President-Elect, participated in the 7th Annual Casablanca Insurance Meeting, organized in part by the Moroccan Supervisory Authority of Insurance and Welfare, with whom the NAIC has as a memorandum of understanding. He explained that Director Cameron spoke on a panel focused on changes necessary to foster innovation and inclusivity within insurance, noting the NAIC’s commitment to supporting the creation of innovative products, the importance of consumer education, and the continued work of the NAIC’s Special (EX) Committee on Race and Insurance.

Director Ramge said the Financial Stability Institute (FSI), the Association of Insurance Supervisors of Latin American and the IAIS will hold a joint webinar this month providing a platform for several Latin American authorities to exchange views on the main insurance risks that currently concern supervisors in the region. He noted that Nina Chen, Chief Sustainability Officer for the New York Department of Financial Services (DFS), will represent the NAIC on a panel on the supervisor’s role in addressing risks from climate change.

Director Ramge noted that a virtual bilateral meeting with the Bermuda Monetary Authority (BMA) is set to take place later this month, which will build on previous meetings and include discussions on the ICS and other timely topics.

Director Ramge said that with the United Kingdom’s (UK’s) exit from the EU, the NAIC is beginning to establish a closer working relationship with the Bank of England’s Prudential Regulation Authority (PRA) and the Financial Conduct Authority (FCA). Discussions have begun regarding the creation of recurring bilateral discussions, with the first expected to take place later this summer.

b. OECD

Director Ramge reported the OECD’s Insurance and Private Pensions Committee (IPPC) held a two-day virtual event in later March on addressing the protection gap for pandemic risk. Director Ramge highlighted topics of focus during the virtual event and noted the importance of collaboration and cooperation in the insurance sector.
meeting, including: 1) research showing how COVID-19 highlighted important coverage gaps for pandemic risk; 2) research showing that the magnitude of potential losses and high levels of correlation make pandemic risk challenging to insure; and 3) conclusions on loss-sharing arrangements between governments and insurers/reinsurers for future pandemics. Director Ramge noted the OECD’s Environment Directorate is organizing a virtual workshop for regulators on reducing and managing the risk of losses and damages from climate change, and that the next meeting of the IPPC will be held virtually in mid-June.

c. **SIF**

Director Ramge said the NAIC, alongside individual state SIF members—California, New York and Washington—participated in the first virtual call of 2021 in March. He noted that the SIF has a new chair, Anna Sweeney from the Bank of England, and that the Federal Insurance Office (FIO) also recently joined the SIF. The meeting included discussions on the start of the three workstreams agreed to in the SIF’s work plan: 1) impacts of climate-related risks on insurability of assets; 2) broader sustainability issues beyond climate; and 3) climate risks in the actuarial processes.

5. **Discussed Other Matters**

Commissioner Anderson noted that the NAIC’s 2021 International Insurance Forum will take place virtually and be livestreamed May 25–26, with morning and afternoon sessions. He said the Committee’s next meeting is scheduled for May 5 to review and approve the submission of NAIC comments on the IAIS draft *Application Paper on Macroprudential Supervision*.

Robert Neill (American Council of Life Insurers—ACLI) noted that ACLI President Susan Neely will be participating in a panel at the NAIC’s International Insurance Forum. He offered the ACLI’s assistance to continue to engage in constructive dialogue on work related to liquidity metrics. Lastly, he noted climate risk as a top issue being addressed domestically and internationally, and said that the Financial Stability Oversight Council is looking at these issues as well. As work continues by federal agencies and the states on such matters, the ACLI welcomes constructive discussions with the inclusion of its members to avoid any redundancies.

Having no further business, the International Insurance Relations (G) Committee adjourned.
International Insurance Relations (G) Committee
Virtual Meeting
March 25, 2021

The International Insurance Relations (G) Committee met March 25, 2021. The following Committee members participated:
Gary D. Anderson, Chair (MA); Bruce R. Ramge, Vice Chair (NE); Evan G. Daniels (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Raymond G. Farmer (SC).

1. **Discussed NAIC Comments on the IAIS Draft Application Paper on Supervision of Control Functions**

Commissioner Anderson explained that the International Association of Insurance Supervisors (IAIS) draft Application Paper on Supervision of Control Functions aims to help supervisors address issues related to the supervision of control functions as described in Insurance Core Principles (ICPs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame)—in particular, material from ICP 8 (Risk Management and Control Functions), but also relevant to ICP 5 (Suitability of Persons) and ICP 7 (Corporate Governance).

Ryan Workman (NAIC) gave an overview of the NAIC’s comments on the draft application paper, noting that some were editorial or for clarification. He provided more detail on those comments that were more substantial.

David Snyder (American Property Casualty Insurance Association—APCIA) noted agreement with the NAIC comments and said that the APCIA will submit their own comments. He stated that overall insurer corporate governance and insurance regulation has shown the stability of the sector throughout multiple crises. He commented that it is important that the application paper: 1) recognize the notion of proportionality; 2) reflect that the way insurance groups can effectively organize their control functions may vary based on the business model of the group; and 3) appropriately characterize the role of the supervisor when it comes to insurer governance areas such as renumeration, outsourcing, attendance at board meetings and succession planning.

Commissioner Caride made a motion, seconded by Director Farmer, to approve submission of the NAIC comments (Attachment One-A). The motion passed.

Having no further business, the International Insurance Relations (G) Committee adjourned.

<thead>
<tr>
<th>Section/Paragraph</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Typo: The work performed by control functions...</td>
</tr>
<tr>
<td>10</td>
<td>At the end of the paragraph, it is not clear what 'need' is being referred to. To add to the checks and balances and provide assurances to the Board or to have the control functions covered in ICP? Suggest clarifying.</td>
</tr>
<tr>
<td>11</td>
<td>Regardless of the organisational model adopted...</td>
</tr>
<tr>
<td>13</td>
<td>Should use a comma rather than semicolon: There was a consistent view among survey participants that actuaries developing products and setting prices... and actuaries assessing the adequacy of technical provisions for those products, should be independent from each other.</td>
</tr>
<tr>
<td>21</td>
<td>This paragraph does not really address independence and could provide a better introduction to points covered by the rest of the section (similar to what para 35 does); suggest: The central role of control functions and their level of independence may be adversely impacted depending how these functions are considered, established, and positioned in the reporting structure within the insurer. Additionally, remuneration practices and processes for dealing with conflicts of interest may affect the independence of control functions. In this regard, the supervisor should assess how well an insurer's control functions align with good practices and are compliant with governance requirements.</td>
</tr>
<tr>
<td>25</td>
<td>Suggest revising the start of the paragraph to better reflect that the bullets are examples and not the only indicators: There may be a variety of signs that the independence of an insurer's control functions may be compromised, such as...</td>
</tr>
<tr>
<td>28</td>
<td>It is not clear what 'weak status' refers to – lacking independence or weak stature or both? Suggest using terminology used elsewhere in the paper may make this clearer.</td>
</tr>
<tr>
<td>41</td>
<td>Typo: most supervisors responded that they use a combination of methods...</td>
</tr>
<tr>
<td>42</td>
<td>Second bullet should control function be plural? Or both: Periodic review of the control function(s)...</td>
</tr>
<tr>
<td>58</td>
<td>There may be a variety of the following indicators of problems related to effectiveness of the internal audit function, such as...</td>
</tr>
<tr>
<td>61</td>
<td>As paragraph 62 describes what the supervisor should consider and what the insurer should demonstrate, it is not really describing what would be exceptional circumstances, so suggest deleting “as described below”. Plus, as the text of the two paragraphs logically flow together, there is not a need to direct the reader.</td>
</tr>
<tr>
<td>62</td>
<td>Typo: ...assessing whether combination of the internal audit function with second line of defence control function...</td>
</tr>
<tr>
<td>67</td>
<td>Suggest revising the start of the paragraph to better reflect that the bullets are examples and not the only methods: Supervisors that use the work of the internal audit function use a variety of the following methods to assess the effectiveness of the internal audit function overall and specifically its ability to provide appropriate assurance on the work performed by other control functions, such as:</td>
</tr>
<tr>
<td>68</td>
<td>Typo: A decision about combining control functions... If the last sentence is illustrating proportionality, should it read: whereas in the case of smaller and less complex insurers, it may be appropriate for more than one function to be carried out by a single person or organisational unit.</td>
</tr>
<tr>
<td>78</td>
<td>Last bullet, it seems this is referring to things the insurer would put in place, not the supervisor. If so, using “regulations” may not be the correct wording, but rather something like “policies and processes”.</td>
</tr>
<tr>
<td>82</td>
<td>Second bullet, the rest of the paper does not refer to prudential and conduct supervision, plus some supervisors supervise both. This seems more of an offhand comment and could be deleted: The assessment of the effectiveness of the outsourced control functions, which is one of the main challenges for both prudential and conduct of business supervisors; and Third bullet, suggest clarifying whether this is intended to mean outsourced to third parties in other jurisdictions or outsourced to another legal entity within a group in another jurisdiction. Or both?</td>
</tr>
<tr>
<td>86</td>
<td>Typo: Supervisors address these challenges in various ways, including by</td>
</tr>
<tr>

Draft: 4/1/21

International Insurance Relations (G) Committee
Virtual Meeting
February 3, 2021

The International Insurance Relations (G) Committee met Feb. 3, 2021. The following Committee members participated: Gary D. Anderson, Chair (MA); Bruce R. Ramge, Vice Chair (NE); Evan G. Daniels (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmair (FL); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Jessica K. Altman (PA); and Raymond G. Farmer (SC).

1. Discussed NAIC Comments on the IAIS Draft Application Paper on Resolution Powers and Planning and Consultation on the Development of Liquidity Metrics

Commissioner Anderson explained that the International Association of Insurance Supervisors’ (IAIS’) draft Application Paper on Resolution Powers and Planning aims to provide guidance on supervisory practices related to resolution, which the IAIS defines as “actions taken by a resolution authority towards an insurer that is no longer viable, or is likely to be no longer viable, and has no reasonable prospect of returning to viability.”

Ryan Workman (NAIC) provided a detailed overview of the NAIC’s comments on the draft application paper, which were mostly editorial or for clarification.

Commissioner Anderson explained that the consultation on the development of liquidity measures is part of the IAIS’ development of its broader holistic framework for systemic risk that will serve as a tool for assessing insurers’ liquidity exposures and will help the IAIS to identify trends in insurers and the insurance-sector.

Mr. Workman provided a detailed overview of the NAIC’s responses on the consultation questions, including changes that were made in light of input received from interested parties in advance of the meeting (Attachment Two-A).

Director Daniels questioned whether the NAIC response to the first consultation question was meant to be read as the NAIC seeing the several metrics being developed as duplicative or complementary and suggested that clarification could be helpful.

Ralph Blanchard (Travelers) provided an overview of Travelers’ comments on the consultation, as well as on the draft NAIC responses, which highlighted flaws in some of the assumptions and approaches being used in Phase 1 of the liquidity metrics development process, including those that do not adequately reflect non-life insurance business. He suggested the need to address certain areas now instead of holding off until the Phase 2 consultation.

Director Ramge asked how the liquidity metrics being developed took into account different accounting treatments.

David Leifer (American Council of Life Insurers—ACLI) noted that the ACLI will be submitting its own comments, recommending that the IAIS needs to do more analysis on the differences of policy behavior, specifically in life annuities. He noted that the ACLI’s comments largely aligned with the NAIC’s comments.

Commissioner Anderson thanked Committee members and interested parties for their comments and asked Tim Nauheimer (NAIC) to respond to the points and questions raised. Mr. Nauheimer said that the NAIC response to the first consultation question was intended to convey that several metrics could provide different ways to achieve a similar outcome, not that they were duplicative, in part because the NAIC is supportive of the cash-flow approach being developed in Phase 2. He stated the points raised by Travelers were helpful as the IAIS liquidity metrics work progresses and encouraged Travelers to submit its own consultation responses. However, he noted the challenge of creating one ratio for both life and non-life insurers that would accurately be indicative of liquidity risk. Mr. Nauheimer acknowledged the concern that life insurance policies and annuities should be treated differently and would take it up as work continues within the IAIS. He also commented that different account treatments should not affect the liquidity metrics.

Commissioner Anderson suggested clarifying the NAIC’s response to the first question, to which Mr. Workman suggested revising the response to: “Yes, we agree with the IAIS phased approach to develop liquidity metrics for monitoring as different metrics may achieve the same goal and be comparable.”
Commissioner Caride made a motion, seconded by Director Ramge, to submit the NAIC’s comments as drafted on the Application Paper on Resolution Powers and Planning and to submit the NAIC’s responses, including the revisions proposed during the meeting, on the liquidity metrics consultation (Attachment Two-B). The motion passed unanimously.

Mr. Workman noted the IAIS had released another public consultation on its draft Application Paper on the Supervision of Control Functions, with comments due March 26. He noted that the internal review process is underway and that a Committee meeting will be scheduled accordingly prior to the submission date to review and approve the submission of any NAIC comments.

Having no further business, the International Insurance Relations (G) Committee adjourned.
# IAIS Draft Application Paper on Resolution Powers and Planning – NAIC Approved Comments

<table>

</table>
The Annex contains examples of legislation in four jurisdictions. It would be helpful to provide a more in-depth discussion of these laws, and how they function.

### IAIS Development of Liquidity Metrics: Phase 1 – Exposure Approach – *NAIC Approved Comments*

<table>
<thead>
<tr>
<th>Question / Response</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Do you agree with the IAIS’ plan for the development of liquidity metrics for monitoring? If not, please explain what changes you recommend and why.</td>
<td>Yes, we agree with the IAIS phased approach to develop liquidity metrics for monitoring as different metrics may achieve the same goal and be comparable.</td>
</tr>
<tr>
<td>2. Should the IAIS consider any other approaches or alternatives when developing liquidity metrics? If so, please explain.</td>
<td>No. We are happy to see the plan includes development of a company projection approach in Phase 2.</td>
</tr>
<tr>
<td>3. Should the IAIS develop additional liquidity metrics that examine other time horizons? If so, how should these metrics differ from the proposed metric?</td>
<td>Phase 2 should consider other time horizons as well as asset maturity and trading volumes over a period more consistent with the chosen time horizon.</td>
</tr>
<tr>
<td>4. Do you agree with the exclusion of separate accounts from the ILR? If not, how should separate accounts be incorporated?</td>
<td>Yes. However, we agree further metrics should be considered in the future. For certain products, the IAIS should review any potential residual risk in the general account.</td>
</tr>
<tr>
<td>5. Do you agree with the proposed factors for liquidity sources? If not, please explain.</td>
<td>No, we feel the asset factors are too low. We suggest they be based on empirical evidence such as market size, daily average trading volumes, and price volatility to determine appropriate factors, especially as the asset categories relate to each other. Absent empirical evidence, we are hesitant to recommend a percentage, but look to the factors used by S&amp;P as a logical starting point. In addition, the IAIS should take into account if the insurer has a diversified asset portfolio across business sectors. If an insurer’s investments have been concentrated on certain business sectors such as energy or financial services and not well diversified, then an overall haircut adjustment may be warranted.</td>
</tr>
<tr>
<td>6. Do you agree with the treatment of investment funds? If not, please explain and suggest an alternative treatment.</td>
<td>Yes, we agree to exclude them, but should review periodically if that is appropriate based on market conditions.</td>
</tr>
<tr>
<td></td>
<td>Question</td>
</tr>
<tr>
<td>---</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>7</td>
<td>Do you agree with the treatment of premiums? If not, please explain how premiums and excluded expenses should be treated in the ILR.</td>
</tr>
<tr>
<td>8</td>
<td>How should instruments issued by financial institutions be treated within the ILR?</td>
</tr>
<tr>
<td>9</td>
<td>Do you agree with the inclusion of certain encumbered assets as liquidity sources within the ILR or should the IAIS alternatively exclude these encumbered assets and measure certain the related liquidity needs on a net basis? Should any additional liquidity needs be included in the calculation because encumbered assets are included as a liquidity source?</td>
</tr>
<tr>
<td>10</td>
<td>Do you agree with the treatment of liquidity risk from surrenders and withdrawals from insurance products in the ILR? If not, please explain how this could be improved.</td>
</tr>
<tr>
<td>11</td>
<td>How should the IAIS capture liquidity needs from policy loans? Should these be incorporated into the ILR or be an alternative metric?</td>
</tr>
<tr>
<td>12</td>
<td>Do you agree with the factors applied to retail insurance products being half of the factors applied to institutional products? How should the factors applied to retail and institutional policies differ?</td>
</tr>
<tr>
<td>13</td>
<td>Do you agree with the treatment of unearned premiums in the ILR? If not, how can it be improved?</td>
</tr>
<tr>
<td>Question</td>
<td>Response</td>
</tr>
<tr>
<td>-------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Should the IAIS apply standardised factors to insurers projected ultimate catastrophe losses or rely on company projections for the speed of catastrophe payments and reinsurance recoveries?</td>
<td>Yes, but suggest conducting sensitivity analysis could be helpful.</td>
</tr>
<tr>
<td>We recommend using the companies 1/250 PML or 1/100 PML as an alternative for Phase 1 due to the ease of uniform data collection. Phase 2 should consider company projections.</td>
<td></td>
</tr>
<tr>
<td>Do you agree with the proposed treatment of catastrophe insurance claims? If not, how can it be improved?</td>
<td>Yes, but suggest conducting further analysis could be helpful; for example, an analysis of payouts within a year of a cat event may help improve requested data, especially for Phase 2.</td>
</tr>
<tr>
<td>Should the proposed treatment of deposit liabilities include more or less granularity? If so, what additional dimensions (eg the presence of an effective deposit insurance scheme) should be captured or left out?</td>
<td>We agree with the proposed treatment, with a less granular approach preferred.</td>
</tr>
<tr>
<td>Should the proposed factors be modified? If so, please explain how and why.</td>
<td>No, they look appropriate</td>
</tr>
<tr>
<td>Should insurance contracts without significant exposure to insurance events be captured by these factors, or included with other policyholder liabilities?</td>
<td>Yes, we believe such contracts warrant being captured by these factors and not just captured by other policyholder liabilities as the purpose is to capture the entire liquidity risk to insurer. For example, the exposure of the insurer to guaranteed investment contracts with no insurance riders attached to the contract should be captured.</td>
</tr>
<tr>
<td>Do you agree with the treatment of derivatives? If not, please explain and suggest an alternative treatment.</td>
<td>Yes, but suggest further historical analysis could be helpful.</td>
</tr>
<tr>
<td>How should the ILR treat debt with financial covenants that may be triggered under stress?</td>
<td>We believe that treating all (100%) of the category as being called, not rolled or not available under stress is too conservative. All debt that is short-term (i.e. commercial paper or long-term debt with maturity of less than a year) should be included. The stress event should be clearly defined. Any debt with covenants or collateral calls that are triggered by that specific stress event should only be included if there are provisions in the financial contracts that exclude them from the jurisdiction's bankruptcy code. The 100% factor on LT Debt appears too high as it is highly unlikely all the debt would be accelerated at once.</td>
</tr>
<tr>
<td>How should the ILR assess potential liquidity needs from a downgrade?</td>
<td></td>
</tr>
<tr>
<td>February 2, 2021</td>
<td></td>
</tr>
<tr>
<td>------------------</td>
<td></td>
</tr>
</tbody>
</table>

We agree with 100% of the category affected by the downgrade, but “downgrade” needs to be clearly defined. We believe that a credit rating downgrade of the holding company of significant magnitude that triggers debt covenants and posting of higher collateral requirements for derivatives, securities lending, and repurchase agreements would be appropriate as a definition. In contrast, an insurers’ underlying debt or subsidiaries as well as investments are subject to frequent up and downgrades and thus should be excluded.

<table>
<thead>
<tr>
<th>22</th>
<th>Do you agree with the discussed limitations and mitigations of the ILR? What other limitations should the IAIS consider and how can these be mitigated when the IAIS monitors liquidity risk?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes. The paper describes only one approximate measure of liquidity risk and such risk may be measured better with a cash flow approach, to be developed in Phase 2. Currently, renewal premiums, future claims from in force business and new business are not included. As these factors may affect the insurer’s liquidity position, one caveat of the current metric is that it will require more analysis of the insurer, on an ongoing basis, by the IAIS and the supervisor. Another issue the IAIS should consider is how to differentiate between a resolution with an orderly run-off, which will typically result in all claims being paid, and a liquidation due to a lack of liquidity.</td>

<th>General comments on the Public Consultation Document on the Development of Liquidity Metrics: Phase 1 – Exposure Approach</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>None.</td>
</tr>
</tbody>
</table>
We’d like to offer the following comments:

The proposed Insurance Liquidity Ratio (ILR) for Phase I has serious flaws and the NAIC should point these out in its response. The flaws are:

- **The use of only balance sheet values when looking at “Liquidity Sources” and “Liquidity Needs” over a one-year time horizon.** Liquidity sources over a one-year time horizon include premiums, investment income and investment maturities, even before consideration of asset sales. By focusing solely on the balance sheet the IAIS proposal is looking only at asset sales. Liquidity needs (claim liability runoff, new claims, expenses) offset some of those sources, but the degree to which that happens varies materially by company. Those that are in runoff or partial runoff (such as via exit of a long-tail line) might expect needs to consume most of the sources. Those that are going concerns or start-ups would expect sources to be greater (possible much greater) than needs, generating high levels of positive operating cash flows. In short, the use of only an exposure-based approach is materially inconsistent with a one-year time horizon.
  - We note that the Q22 response partially reflects this issue, but from a life insurance perspective as it makes no mention of the payout in the next 12 months of current claim liabilities, and focuses on “in force” business. We believe that response is insufficient as a result.

- **The use of only enterprise-wide calculations.** The use of only enterprise-wide calculations ignores the location of the liquidity sources vs. the needs. The paper points out on page 24 that the location of the funds matters, yet this is ignored in the design of the ratio. As a result, the proposed ILR is likely to propose false negatives (i.e., indicate that no liquidity concerns exist) in situations where liquidity concerns do exist.

- **Ignoring asset duration in its evaluation of liquidity sources.** In evaluating the degree to which asset values are available as liquidity sources, no reflection is made of the asset maturity. We believe that assets maturing in a shorter time frame would be more fully realizable in a crisis than those maturing in a longer timeframe.

- **Treatment of unearned premium as a liquidity need based partly on an archaic case study, and using an inadequately defined classification inconsistent with the available data.** The proposal would treat a certain portion of unearned premiums as a liquidity need, based partly on a 1933 case study for a surety insurer based in New York. A case study from 87 years ago is not relevant, given the changes in the environment (consumer, regulatory, financial, legal) since then. The proposed factors also vary for “retail” versus “institutional”. Such a classification is not sufficiently defined nor captured in the data for U.S. property/casualty insurers for it to be usable.

- **The catastrophe scenario is overly conservative with regard to the percent payout for an extreme event.** For property/casualty coverages affected by a catastrophe, the
larger the event the slower the payout. The 1-in-250 year scenario suggested would be larger than any recent event, and the largest recent events have payouts of over 12 months. Assuming that the event did not occur on January 1, the scenario suggested would have a payout of less than 12 months, making the suggested approach even more conservative. The result is an estimated liquidity need that is unrealistic. In addition, the longer the return period forecasted by catastrophe models, the more uncertain (if not speculative) the estimates become, making the quantification of this need unreliable.

Suggested edits to the NAIC response:

- Question 1 – Answer “No, as we believe that operating cashflow also needs to be considered, not just balance sheet values. In addition, we advise against enterprise-wide approaches that assume full fungibility of funds within a group.”
- Question 2 – Answer “Yes. We recommend recognizing operating cash flow consistent with the chosen time horizon, and investigating the use of entity-specific ratios rather than enterprise-wide ratios.”
- Question 3 – Modify the currently proposed answer to add consideration of asset maturity and trading volumes over a period more consistent with the chosen time horizon.
- Question 7 – Answer “No. We believe that recent historic operating cash flows should be reflected in the calculation. Such an approach is more consistent with the chosen time horizon, and reflects how many non-life insurers that do not have callable liabilities are currently managed.”
- Question 13 – Answer “We are not ready to agree or disagree until more information is collected with regard to recent situations. We do not believe the 1933 case study is sufficiently relevant to current times and, in addition, believe that the retail vs. institutional split proposed is not feasible or sufficiently defined for the U.S. property/casualty market.”
- Question 15 – Answer “No, as the percentage payout (i.e., 100%) is faster than that observed from the most extreme events in the relatively recent past. We also believe that catastrophe models are more reliable the shorter the return period, and conversely less reliable the longer the return period, such that estimates using a 1-in-250 year return period may not be sufficiently reliable. We recommend looking at percentage payouts within the year of occurrence from recent events, as well as investigating the reliability of catastrophe estimates for longer return periods. (The latter might be accomplished by comparison of various model estimates for various return periods.)”
- Question 19 – We believe that the proposed approach to derivatives is overly conservative, and recommend that the NAIC response reflect its experience with AIG’s derivatives during the 2008 financial crisis.
The International Insurance Relations (G) Committee met Jan. 6, 2021. The following Committee members participated: Gary D. Anderson, Chair (MA); Bruce R. Ramge, Vice Chair (NE); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Carter Lawrence (TN).

1. Discussed NAIC Comments on the Joint SIF and IAIS Draft Application Paper on the Supervision of Climate-Related Risks in the Insurance Sector

Commissioner Anderson explained that the joint Sustainable Insurance Forum (SIF) and International Association of Insurance Supervisors (IAIS) application paper aims to provide background and guidance on how the IAIS supervisory material can be used to manage the challenges and opportunities arising from climate-related risks. Following an internal review, including by the Climate and Resiliency (EX) Task Force, draft NAIC comments were circulated on Dec. 15, 2020. He noted that no additional input from state insurance regulators or interested parties was received in advance of the conference call.

Ryan Workman (NAIC) provided a detailed overview of the NAIC’s comments on the draft application paper.

David F. Snyder (American Property Casualty Insurance Association—APCIA) thanked the NAIC for its continued efforts at the international level and engagement with interested parties. He provided an overview of the APCIA’s climate core principles, which guided its comments on the public consultation, highlighting core principles the APCIA would like the IAIS to focus on; and he relayed support for the NAIC’s comments as drafted.

Robert Neill (American Council of Life Insurers—ACLI) noted that the ACLI is working on its environmental, social and governance (ESG) principles, and he suggested that the IAIS work in this area should focus on how climate risks affect the IAIS’s core objectives related to insurance supervision, and broader policy decisions should be left to individual jurisdictions. He also stressed that IAIS guidance should remain flexible.

Commissioner Mais made a motion, seconded by Commissioner Caride, to approve the NAIC’s comments (Attachment Three-A). The motion passed unanimously.

Commissioner Anderson noted that the next calls of the Committee will be held on Jan. 21 and Feb. 3 to discuss additional IAIS public consultations.

Having no further business, the International Insurance Relations (G) Committee adjourned.

AGGREGATING REGULATORY CAPITAL REQUIREMENTS ACROSS JURISDICTIONS:
THEORETICAL AND PRACTICAL CONSIDERATIONS

American Academy of Actuaries
Research Paper 2021, No. 1
This research paper was written primarily by Steve Jackson, Ph.D., assistant director for research (public policy), American Academy of Actuaries ("Academy"). The paper was sponsored by Tom Wildsmith, Academy international secretary with advice and guidance from Academy members Elizabeth Brill, Maryellen Coggins, and William Hines. The paper also benefited from discussions with and helpful comments by Carmen Suro-Bredie, Qamar Islam, Ned Tyrrell, Matt Walker, and members of the Academy’s Solvency Committee.

The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policy makers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
EXECUTIVE SUMMARY

Aggregating Regulatory Capital Requirements across Jurisdictions: Theoretical and Practical Considerations

Especially since the financial crisis of 2007–08, regulators in the U.S. and around the world have recognized that the solvency of insurance groups as well as that of their individual legal entities needs to be examined. Efforts toward global regulatory convergence were launched by the International Association of Insurance Supervisors (IAIS), initiated by the Financial Stability Board (FSB). These efforts include the negotiation of a group solvency capital standard for all Internationally Active Insurance Groups (IAIGs): Insurance Capital Standard 2.0 (ICS 2.0). The approach the IAIS has taken with the International Capital Standard has been largely resisted by regulatory and industry stakeholders in the United States (and some other countries) based on the nature of its current regulatory structures. The IAIS has agreed to consider an alternative approach based on comparability with ICS 2.0—referred to as the aggregation method (AM).

The AM was born of practical necessity. In the United States, the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank) requires the Federal Reserve Board (FRB) to regulate holding companies, which include banks and insurance companies. In 2016, an FRB paper proposed a building block approach (BBA) to regulate the capital of these mixed entities. As banks and insurance companies do not “share any common capital assessment methodology,” the FRB proposed relying on the existing methodologies for each sector and to aggregate capital requirements across regulatory frameworks with the use of a “translating mechanism” called a “scalar.”

This paper is offered to help clarify the objectives, both conceptual and practical, of a scalar methodology. It assembles an inventory of possible methodologies. It derives a set of criteria for the evaluation of methodologies from existing discussions of possible methodologies and from standard statistical principles. It evaluates each of the methodologies according to the specified criteria.

Scalars are designed to allow regulators in a jurisdiction to have access to a metric of the capital adequacy of an insurance group—or more generally, of a financial services group—based on the capital adequacy metrics of its individual components, including those entities regulated in other jurisdictions. While scalars might be developed for all kinds of entities, the focus of this paper is on scalars for entities regulated by jurisdictions that specify a measure of capital adequacy based on the ratio of some measure of available capital to some measure of the risk inherent in their operations. This measure of inherent risk (which is also referred to as “required capital” in this paper) might vary: for insurance, it might express the capital required to account for asset, interest rate, underwriting and/or other risks; for banking, it might express a risk-weighted measure of assets.

The ideal form of scalars is one where an entity in one jurisdiction hypothetically calculates its available and required capital as if it operated in the originating jurisdiction while adjusting (or controlling for) other factors that might affect the safety of the group’s ongoing operations. Of course, this conceptual “ideal” may be impractical requiring, as it would, each entity with ownership in a different jurisdiction to maintain two sets of books: one with accounting principles and solvency measures calculated according to local requirements and a second one aligning with the principles and practices of the jurisdiction of its ownership. This ideal might also require adjusting for all other relevant factors, and doing so in a manner that recognizes the possibility that different accounting practices and/or different levels of safety inherent in calculations of required capital might already reflect awareness by jurisdictional regulators of some or all of these other factors.

As this analysis examines possible scalar methodologies, four independent general criteria for assessment are introduced: validity, reliability, ease of implementation, and stability of parameters. Translating these criteria to explicitly apply to scalars and elaborating on specific factors that might be assessed under each of these four general criteria make the report’s assessments more comparable and more useful.

Four families of methodology for estimating scalars are assessed: No Scalars, Capital Ratios, Equivalence of Two Points, and Probability of Negative Outcomes. One of these families—Equivalence of Two Points—turns out to be a generalization of two other families. Each of the three distinct families include multiple variants. Two variants from each of two families are specifically assessed and the variants of the third family are assessed as a group. The evaluation of these methodologies by the criteria just suggested presents issues to consider, sometimes applying to all branches of a family and sometime applying to one branch but not others.
The assessments presented here suggest not only that any scalar methodology will be imperfect; they also suggest that the extent to which the results produced will vary from the “ideal” is itself variable, depending on the circumstances (e.g., how much of a company’s business is accounted for by entities in other jurisdictions). As a result, a final determination on preferred scalar methodologies likely will vary due to circumstances.

To summarize roughly the assessments of the five methodologies which are assessed in detail, it is useful to conceptualize two dimensions based on our four criteria of assessment: 1) validity; and 2) simplicity. Validity includes both conceptual validity as discussed in the paper and the lack of validity that follows from a lack of reliability. Simplicity includes both conceptual simplicity (discussed as part of validity) as well as ease of implementation. The best scalar methods would be very simple and highly valid. Unfortunately, none of the methods assessed here fit that description. Indeed, there is an ordinally inverse relationship between validity and simplicity, as can be seen in Figure A.

**Figure A: Validity and Simplicity of Scalar Methodologies**

![Figure A: Validity and Simplicity of Scalar Methodologies](image)
Four issues arise to a greater or lesser extent for all of the methodologies assessed, and it seems prudent to highlight them before concluding. Those issues are:

1. **The application of these methodologies to entities in different industries:**
   Jurisdictions differ by geography and/or by industry. The regulatory regime in a given geographic unit defines a jurisdiction. Most of the comments in this paper apply to scalars for entities in different jurisdictions, whether the basis for the difference is geography, industry, or both. However, it is true for all methodologies (with the exception of one of the No Scalar methods) that when the entities are in different industries, a second scalar element is required.

2. **The dependence of the anchors for these methodologies on regulatory actions and company responses (the "problem of endogeneity"):**
   For all methods discussed in this paper (with the exception of one of the two No Scalar approaches), the anchors of these methods (e.g., the Capital Adequacy ratio, or the Probability of Default), are the result, in part, of companies acting under regulatory requirements. As illustrated in this paper, scalars may adjust for the differences in those requirements. However, anchors also reflect the actions of regulators within the various regulatory systems, and the responses of companies to those actions. The anchors then are products both of the different requirements (for which scalars aim to adjust) and the responses of regulators and companies to those anchors.

3. **The dependence of stability and validity of results on jurisdictional regime stability:**
   For all methods discussed here, and likely for any other methods that might be contemplated, the validity of the results, and their stability over time, depends on regime stability.

4. **The value of sensitivity testing in selecting a most desirable method:**
   In discussing the role of sensitivity testing throughout this paper, two different dimensions of sensitivity have been implied: 1) sensitivity of results to changes of parameters within a model; and 2) sensitivity of results to differences in methods of calculating scalars.

This paper provides a discussion of these issues in more detail as well as possible responses. As with scalars themselves, there are no perfect solutions.
While the Academy offers the considerations presented in this paper to be taken into account by regulators as they consider adoption of scalars as part of the group capital regulation process, the Academy does not make any specific recommendations in favor of or against any particular methodology. However, three conclusions do seem to follow from the analysis presented here:

1. Methodologies based on observable data are preferable to methodologies based on assumption, other things being equal. Only the approaches discussed under the Probability of Negative Outcomes are defined by reference to the analysis of observable data, and thus deserve heightened attention in any regulatory environment. However, as discussed, with the advantage of reliance on data come several challenges—many of them directly related to the reliance on available data. As such, regulators should consider whether adoption of this methodology, the Probability of Negative Outcomes, is advisable especially after careful consideration.

2. Almost all methodologies will be prone to increased imperfection if regulatory regimes change in a manner affecting capital adequacy standards after scalars have been estimated. While there might be attempts to develop methods by which to calculate adjustments to scalars based on the changes observed, the optimal way to adjust scalars for regime change and other changes in relevant conditions is to recalculate the scalars periodically. Hence, it may be advisable for a periodic recalculation to be made as an intrinsic element of any methodology adopted.

3. All of the methodologies discussed here are and will be imperfect. While factors that might be addressed to reduce some of those imperfections have been identified, it is impossible to find perfect solutions given the criteria of validity, reliability, ease of implementation, and stability of parameters and results. The question facing regulators then involves balancing degrees of validity (i.e., how imperfect the measures are, given what they would be if ideally conceptualized and measured) against degrees of reliability, ease, and stability. The only reliable way in which to regard those degrees, and to provide meaningful information with which to select a methodology based on some optimization of the criteria, is through the application of sensitivity testing as described. Hence, it may be advisable that the information required to examine the impact of each selected methodology under varying parameters, and to compare the impact of differing methodologies, be collected by regulators in order to allow them, at least initially, to rely on sensitivity testing to determine the best scalars in a particular jurisdiction.
The complete version of this research report will be released in the coming days; you will be able to access the report at actuary.org/.scalars.
NAIC/CONSUMER LIAISON COMMITTEE

NAIC/Consumer Liaison Committee April 8, 2021, Minutes ................................................................................................ 13-2
NAIC/American Indian and Alaska Native Liaison Committee March 16, 2021, Minutes (Attachment One) .................. 13-7
The NAIC/Consumer Liaison Committee met April 8, 2021. The following Liaison Committee members participated: Michael Conway, Chair, and Debra Judy (CO); Andrew R. Stolfi, Vice Chair, and Tricia Goldsmith (OR); Lori K. Wing-Heier and Sarah Bailey (AK); Jim L. Ridling, Jimmy Gunn and Dusty Smith (AL); Alan McClain and Crystal Phelps (AR); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Evan G. Daniels, Maria Ailor, Vanessa Darrah and Erin Klug (AZ); Ricardo Lara, Lucy Jabourian, Pam O’Connell and Camilo Pizarro (CA); Andrew N. Mais and Kurt Swan (CT); Karima M. Woods, Howard Liebers, Sharron Shipp and Cheryl Wade (DC); Trinidad Navarro and Christina Haas (DE); David Altmaier, Alexis Bakofsky, John Reilly and Chris Struk (FL); John F. King and Martin Sullivan (GA); Doug Ommen, Jared Kirby and Sonya Sellmeyer (IA); Dean L. Cameron, Kathy McGill, October Nickel and Randy Pipal (ID); Vicki Schmidt and LeAnn Crow (KS); Sharon P. Clark and Ron Kreiter (KY); Kathleen A. Birrane and Joy Hatchette (MD); Anita G. Fox and Renee Campbell (MI); Grace Arnold, Peter Brickwedde and T.J. Patton (MN); Chlora Lindley-Myers, Cynthia Amann and Carrie Couch (MO); Mike Chaney and Andy Case (MS); Mike Causey represented by Tracy Biehn and Kathy Shortt (NC); Jon Godfrey, John Arnold and Chris Aufenthie (ND); Bruce R. Ramge, Laura Arp, Martin Swanson and Reva Vandevoorde (NE); Barbara D. Richardson and David Cassetty (NV); Linda A. Lacewell, Mark McLeod and My Chi To (NY); Tynesia Dorsey and Jana Jarrett (OH); Glen Mulready (OK); Jessica K. Altman, Katie Dzurec, Sean McDaniel (VT); Scott A. White, Don Beatty, Kathy McGill, October Nickel and Randy Pipal (VT); Sean McDaniel (WV); and Donna Stewart (WY). Also participating were: Kathleen Nakasone (HI); Karl Knable (IN); Robert Wake (ME); Jeannie Keller (MT); Chris Nicolopoulos (NH); Russel Toal and Paige Duhamel (NM); Elizabeth Kelleher Dwyer and Matt Gendron (RI); Glynnda Daniels (SC); Jill Kruger (SD); Jennifer Ramcharan (TN); Jonathan Spencer (VT); Sean McDaniel (WV); and Donna Stewart (WY).

1. **Heard Opening Remarks**

Commissioner Conway said the Consumer Board of Trustees is composed of six state insurance regulator members and six funded consumer representative members. He said the Board meets in closed, confidential sessions because it administers the NAIC Consumer Participation Program, which may require discussions of a confidential nature concerning personal information. He said the full Board will meet to discuss possibly revising the Plan of Operation for the NAIC Consumer Participation Program and two Consumer Representative Requests for NAIC Action on April 9.

2. **Heard a Presentation on Federal Health Care Reform Developments and the Impact on States**

Katie Keith (Out2Enroll) said the American Rescue Plan Act of 2021 (ARPA) affects subsidies for marketplace shoppers and people who are uninsured in many ways. She said the number of people eligible for marketplace subsidies has increased from 18.1 million to 21.8 million people, with most of that attributable to eligibility being extended to those making 400% over the poverty level nationwide. She said the ARPA included an average savings of $70 per month for 9 million current marketplace enrollees. She said half of the uninsured population is now eligible for free or nearly free coverage through Medicaid or a $0 premium marketplace plan. She also said at least 5.2 million people qualify for the equivalent of platinum coverage, which is a $0 premium plan with cost-sharing reductions (CSRs) and an average deductible of $177. She said if all states expanded Medicaid, the federal government would contribute $16.4 billion in increased Federal Medical Assistance Percentages (FMAPs) for traditional Medicaid spending when states contribute $6.8 billion for Medicaid expansion. She said the FMAPs are the percentage rates used to determine the matching funds rate allocated annually to certain medical and social service programs, such as Medicaid, in the U.S. She also said Medicaid expansion is associated with decreases in individual market premiums. She said her recommendations for state insurance regulators are to: 1) increase their marketing, outreach and support by emphasizing the new financial help and coverage options available under the ARPA; encouraging insurers to help consumers understand their options; coordinating with other agencies, such as unemployment agencies; partnering with organizations that work with underserved communities, especially immigrants and their family members; and working to reach those enrolled in non-federal Affordable Care Act (ACA) plans who now qualify for financial help; 2) allow consumers to enroll or change plans under with employers and consider additional Special Enrollment Periods (SEPs) for job loss or based on income; and 3) expand state Medicaid programs.

Lucy Culp (Leukemia & Lymphoma Society—LLS) said 30 patient organizations, including the LLS, recently released a report entitled, “Under-Covered: How ‘Insurance-Like’ Products are Leaving Consumers Exposed.” She said this report illustrates...
the significant risk patients face when they enroll in subpar plans because it focused on eight types of non-ACA compliant coverage sold as providing minimum Essential Healthcare Benefits (EHBs), such as grandfathered plans, health care sharing ministries (HCSMs), Simplified Employee Health Care Plans, Multiple Employer Welfare Associations (MEWAs), self-insured plans, and shared Employee Retirement Income Security Act of 1974 (ERISA) plans. She said the report chronicles the stories of six patients who struggled with their health and finances after their plans refused to cover treatment or pay for it; i.e., “under-covered” consumers who needed health care. She said Megan Martinez, an insurance consumer in Texas faced with emergency surgery, got her surgery pre-approved by her HCSM, paid her $5,000 member fee, and received a hospital bill for $126,000, indicating that the company denied coverage because it was a pre-existing condition. Ms. Culp said the Texas Department of Insurance (DOI) found that the company was not licensed in Texas, so the DOI forced the company to pay the bills, as well as a hefty fine. She said federal policy recommendations point to federal rulemaking, such as the 2022 Payment Notice, the federal No Surprises Act (NSA), and additional pandemic guidance. In states, there is an impending decision for California v. Texas which poses an extreme risk for consumers and states if the ACA is not upheld. Ms. Culp said opportunities for states and NAIC advocacy include continuing the timely implementation of APRA changes; urging the U.S. Congress (Congress) to make these enhancements permanent; protecting patients from subpar plans; and urging Congress and the Biden Administration to fix the family glitch.

Commissioner Lara said the coverage gap needs to be closed in that the discrimination clause prevents immigrants from paying into the ACA so immigrants end up in the emergency room for treatment. He said there is no excuse for it, and Congress needs to allow immigrants to pay into the ACA because they are hard-working people who are able to pay and who want to pay their way into it. Ms. Keith said the ARPA does not allow this either, but she said that the current administration could allow it under the Deferred Action for Childhood Arrivals (DACA); or, she said states could use Section 1332 waivers to allow it. Commissioner Lara said California is going to use a Section 1332 waiver to do it. Commissioner Conway said Erin Miller (Colorado Children’s Campaign) would be speaking to this issue for Colorado during her presentation.

3. Heard a Presentation on the Enforcement Needed to Ensure Health Care Compliance with HIV Preventive Drug Requirements

Wayne Turner (National Health Law Program—NHeLP) said pre-exposure prophylaxis (PrEP) can help prevent future infection. He said it was approved by the National Health and Food Administration (FDA) in 2012 and recommended by the U.S. Centers for Disease Control and Prevention (CDC) in 2014 for HIV prevention. Rather than a cure, he said it is a once daily medication regimen with three drugs that are now approved (Truvada, Descovy and generic Truvada). He said PrEP requires office visits, HIV and Hepatitis B tests, as well as other periodic lab tests to monitor liver and kidney function. However, he said PrEP reduces the risk of contracting HIV by approximately 99%. He said black and Hispanic/Latina communities are disproportionately affected by HIV because those with the highest risk have the lowest access. He said only 18% of Americans who could benefit from PrEP are taking the medication. He also said the gaps in PrEP coverage are highest among gay and bisexual men of color and transgender women. He said the ACA requires non-grandfathered individual and small group plans to cover 10 EHBs, including preventive services with no cost sharing. He said in June 2019, the U.S. Preventive Services Task Force (USPSTF) issued an “A” rating for PrEP for certain at-risk populations, and in January 2021, all EHB plans must cover PrEP without cost sharing. He said PrEP medications are not yet included on the federal healthc are.gov list of preventive services, which is important because some plans still link to this list when determining coverage. He said the PrEP ancillary services, such as colonoscopies should be included without cost sharing, as reiterated by the Interim Final Rule (IFR) in December 2020. He also said the federal Frequently Asked Questions (FAQ) on PrEP is also still pending. He said state actions taken by California, Colorado and New York include regulations or guidance requiring coverage of PrEP, as well as various levels of coverage for ancillary services without cost sharing.

Carl Schmid (HIV+Hepatitis Policy Institute) said while spot checking of formularies during the Open Enrollment Period in November 2020, he found many plans in compliance by offering at least one PrEP medication without cost sharing, but several plans were not in compliance and had transparency issues. When he reid the spot checking in March 2021, he found greater compliance and some transparency improvements, but there were still some violations. He said one concern was a general lack of consistency and transparency in that PrEP was noted on formulary tier 4 on plans that listed other preventative medications on tiers 0 or 5. He said recommended next steps state insurance regulators should consider include reviewing plans to ensure that at least one PrEP medication with $0 cost sharing; ensuring for other plans, if medically necessary, coverage of ancillary services without cost sharing by issuing guidance or regulations; responding to and tracking beneficiary complaints; and preparing for new PrEP medications in the future, such as long-acting injectable, oral and implantable medications.

Commissioner Conway said Pfizer had indicated future research into a new PrEP medication pinging off its COVID-19 vaccine.
4. **Heard a Presentation on How Commissioners Can Help Improve Maternal Health Outcomes**

Dorianne Mason (National Women’s Law Center—NWLC) said the disparities in black, indigenous and Latina maternity issues of coverage, care and community need to include contiguous coverage. She said in 2017, 22% of black and 29% of indigenous patient complaints were being ignored. She said an increase in access by policy will increase care by way of the federal black maternal health policy called Momnibus, which includes a 12-month postpartum Medicaid extension.

Jamille Fields Allsbrook (Center for American Progress) said recommendations for improvements in maternal health outcomes include network adequacy standards being expanded to ensure access to quality providers; coverage for midwives and doulas, as well as Certified Professional Midwives (CPMs) and Certified Midwives (CMs); and culturally competent care provided by encouraging training on implicit bias and anti-racism. She said the ignorance and lack of special cultural needs can be life threatening, as many black and indigenous women will not participate when faced with care standards that are outside of their traditions. However, she said better health for the mother and the baby are the result of insurers providing this type of out-of-the-norm care like flexible hours for people who are employed in jobs during off hours making it hard for them to get off work during the day for appointments, saving up to $1 billion or $884 per pregnancy in one year. She said EHB benchmark selection should include robust pre-natal and post-natal services; coverage for birth centers and home births (those outside of facilities, which are currently excluded from many plans); and ensuring that the following ACA requirements are met with no cost sharing: maternity coverage for dependent enrollees, women’s preventive services, no arbitrary limits on services, coverage of breastfeeding education and breast pumps. She said states; efforts to improve coverage could include SEPs for pregnancy, innovative care models, quality measures, Medicaid postpartum coverage extension, and data collection.

Commissioner Conway said he understands that the presentation just scratched the surface of coverage disparities in just one type of health care, but he is thankful to get the conversation started and he applauds their efforts. Commissioner Altman said as chair of one of the workstreams under the Special (EX) Committee on Race and Insurance, she is interested in whether the presenters found any examples of states who did well in this area. Ms. Allsbrook said there were lots of good actions and pieces, but no good model in all areas. She said Vermont includes maternity care in its EHB benchmark; Washington has no limit on a mother’s inpatient care; and Massachusetts has a task force working on network adequacy. Commissioner Lara said more time is needed to discuss important issues like this, and he suggested that this meeting be split into two sessions. He suggested that a list of model laws applicable to the topic be included and that the System for Electronic Rate and Form Filing (SERFF) public-facing Application Programming Interface (API) be looked at regarding language barriers and missing groups.

5. **Heard a Presentation on Addressing Coverage Losses Among Kids**

Steven Lopez (UnidosUS, formerly the National Council of La Raza) said the benefits of health coverage for children are that insured children are less likely to postpone care, resulting in fewer preventable hospitalizations and missed diagnoses; coverage increases the likelihood of high school and college completion because children do better in school and have better financial futures; and uninsured women are more likely to have adverse maternal outcomes and complications. He said since 2017, the Latino child uninsured rate has risen from a low of 7.7% to 9.2% in 2019. In 2018, he said the gap between health coverage rates for Latino children and all children widened for the first time in a decade, and the national child uninsured rate rose to 5.7% in 2019, amounting to 4.4 million children nationwide. He said millions of children were dropped off coverage that they desperately need. He also said coverage needs to be returned, expanded, and continued.

Courtney Bullard (Utah Health Policy Project—UHPP) said Utah has seen a steady uptick of uninsured children. She said Utah has one of the highest rates of uninsured children in the nation, 82,000 children (8%); the highest rate of uninsured Hispanic, Latinx and immigrant children in the nation (19%); and the highest rate of children currently eligible for health insurance, but not enrolled. She said Utah Medicaid Expansion passed via ballot initiative in 2018, and Medicaid enrollment has increased by 33.3% in Utah since March 2020, which is the second highest increase in the nation. She also said enrollment in the Children’s Health Insurance Program (CHIP) began to increase for the first time in several years. She said policy steps to covering more kids were that the Kids Coverage Amendments passed 2021 legislative session and community collaboration and buy-in were obtained on outreach and enrollment. However, expanding pregnancy Medicaid failed during the 2021 session, and fixing the family glitch was removed from the ARP.

Ms. Miller said in Colorado, policymaking to provide coverage for uninsured children (in 2019, numbering enough to fill nearly every seat in the Broncos’ Stadium) began with legislative partners and Senate Bill 20-215. She said the Colorado Children’s Campaign funded the state reinsurance program; funded cost sharing; expanded coverage for those left out due to the employer family glitch, etc.; and provided coverage for undocumented Colorado taxpayers who previously had no access. She said state insurance regulators can improve policy through Medicaid, CHIP, and private coverage and improve outreach through government officials, community-based groups, and welcoming rhetoric.
Commissioner Lara said he grew up without health care, but eventually he was able to get it through Mexico.

6. **Heard a Presentation on a Comprehensive Approach to Addressing Systemic Racism in Insurance**

Birny Birnbaum (Center for Economic Justice—CEJ) said according to a recent University of Georgia report on “Racism and the Contamination of Black Lives” published in the *Journal of African American Studies*, structural racism is the policies and practices that normalize and legalize racism in a way that creates differential access to goods, services and opportunities based on race. Environmental racism refers to policies, practices or directives that result in advantages or disadvantages to individuals or communities based on race. Mr. Birnbaum said systemic racism can manifest itself in insurance marketing, pricing and claims settlement by the intentional use of race called disparate intent; by disproportionate outcomes tied to historic discrimination and embedded in insurance outcomes called disparate impact; and by disproportionate outcomes tied to the use of proxies for race, not to outcomes called proxy discrimination. He said disparate impact and proxy discrimination are unnecessary to insurance, as they only predict race; they do not predict risk. Therefore, state insurance regulators should put a stop to these practices. He said the basic formula that is currently an insurance company standard uses race in the analysis, but it does not use race in the outcome. He said it is not reasonable or necessary to recognize disparate impact as unfair discrimination in insurance because it makes no sense to permit insurers to do indirectly what they are prohibited from doing directly. He said if the goal is to prevent racial discrimination in insurance, practices that have the same effect should not be banned, even if such practices reduce risk and costs, because systemic racism in an era of big data means that there are no facially neutral factors.

Mr. Birnbaum said the “Coded Bias” movie showed advocates of algorithmic techniques, arguing that data mining eliminates human biases from the decision-making process, but an algorithm is only as good as the data it works with. He said it is possible for data mining to inherit the prejudices of prior decision makers or reflect the widespread biases that persist in society at large. He said the patterns that data mining discovers are often simply preexisting societal patterns of inequality and exclusion. He said unthinking reliance on data mining can deny vulnerable groups full participation in society. He said the fact that an insurer does not use race in an algorithm does not logically or factually result in no racial discrimination. In fact, he said the only way to identify and eliminate the impacts of structural racism in insurance is to measure that impact by explicit consideration of race and other protected class factors.

Mr. Birnbaum said disparate impact is the use of a non-prohibited factor that causes disproportionate outcomes based on prohibited class membership in such a way that disproportionate outcomes cannot be eliminated or reduced without compromising the risk-based framework of insurance. He said proxy discrimination is the use of a non-prohibited factor that, due in whole or in part to a significant correlation with a prohibited class characteristic, causes unnecessary, disproportionate outcomes based on prohibited class membership. He said these definitions should be implemented by: 1) requiring insurers to test for disparate impact and proxy discrimination; 2) eliminating proxy discrimination; 3) minimizing disparate impact; 4) reporting test results to state insurance regulators and the public; 5) creating a safe harbor for insurers who do this using methods accepted by state insurance regulators; 5) establishing equity standards for minimizing disparate impact by seeking approaches that reduce disparate impact without compromising efficiency of the algorithm; and 6) establishing an equity/efficiency trade off of 20-to-1; i.e., reduce algorithmic efficiency by 2% if disparate impact can be reduced by 40% or more.

Mr. Birnbaum said some insurer executive officers have spoken out against racism in insurance, and some insurance trade associations have opposed state and federal proposed changes to end disparate impact and proxy discrimination, including the Casualty Actuarial and Statistical (C) Task Force white paper because it suggested that insurers be asked to show a rational relationship between new data sources and insurance outcomes. He urged state insurance regulators to reject the definition of proxy discrimination that the National Council of Insurance Legislators (NCOIL) adopted because it would block any efforts to identify or address disparate impact and proxy discrimination, as well as shield insurers from any accountability for such practices. He applauded the efforts of the NAIC, individual states, individual insurance trades, and individual insurers to examine, measure and improve racial diversity in leadership and throughout their organizations. However, he said the following concrete steps within a comprehensive framework are still needed: 1) recognize disparate impact and proxy discrimination against protected classes as unfair discrimination; 2) require insurers to test for and minimize disparate impact in all consumer-facing operations; 3) develop acceptable methods of testing and reporting results for disparate impact to the public; 4) develop a data reporting framework for the analysis of insurance availability and affordability of insurance in communities of color; 5) charge NAIC committees, task forces and working groups to identify practices that may perpetuate racial discrimination; 6) charge NAIC committees with identifying policies that unfairly discriminate on the basis of race, including low-value products targeted at communities of color; 7) commit to more consumer participation from communities of color in NAIC events so consumer stakeholder participation equals that of industry stakeholders; 8) direct committees, task forces and working groups to implement the NAIC’s Principles on Artificial Intelligence (AI) because insurers’ use of big data and AI has increased the potential for proxy discrimination and disparate impact; and 9) update advisory organization models, as efforts to implement
the NAIC’s AI principles and address systemic racism in insurance must modernize and expand the reach of state advisory organization laws.

Commissioner Stolfi said Oregon agrees that the definition proposed by NCOIL is incorrect, and he hopes NCOIL will reconsider it. Commissioner Conway said more time will be allotted in the future to discuss it.

7. Heard a Presentation on the Short-Term and Long-Term Recovery of Texas in the Aftermath of Catastrophic Disaster

Amy Bach (United Policyholders—UP) said collaboration opportunities for optimizing disaster recovery assistance, like facilitating the flow of accurate information and insurance dollars to overwhelmed, traumatized people, need to be taken. She said insurance and banking regulatory agencies issue notices and bulletins; extend deadlines and negotiate claim handling reforms with industry; arrange town halls, recovery events, and consumer assistance hotlines; facilitate lender releases on insurance checks; alert consumers to fraud scams and provide consumer education on prevention; and oversee contractor licensing. She said the UP Roadmap to Recovery™ program provides trained volunteers with personal experience from previous disasters using its 30 years of experience in providing empathy, technical information, and guidance on insurance and financial decision-making. She said collaboration is also essential with long-term recovery groups, National Voluntary Organizations Active in Disaster (VOADs), and disaster case managers.

Ms. Bach said UP worked closely with California, Colorado and Oregon following wildfires in their states on providing consumers with insurance and recovery help. She said this led in part to Oregon’s Wildfire Rebuild Agreement and voluntary claim handling reform in California. She said the Oregon Division reached an agreement with several insurance companies to provide at least two years from the date of loss for people to rebuild their homes and provide the ability for people to rebuild at a different location should they so choose. She said Tony Cignarale, California’s Deputy Commissioner, oversees disaster response, the consumer hotline, requests for assistance, and market conduct examinations. She said Mr. Cignarale also helped enact many of the laws in place that help disaster survivors collect insurance benefits in a timely manner. She announced upcoming town hall meetings and tele-town hall meetings in all three states.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The NAIC/American Indian and Alaska Native Liaison Committee met March 16, 2021. The following Liaison Committee members participated: Lori K. Wing-Heier, Chair (AK); Jeff Rude, Vice Chair (WY); Michael Conway (CO); Trinidad Navarro (DE); Dean L. Cameron represented by Randy Pipal and Kathy McGill (ID); Grace Arnold (MN); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn and Kathy Shortt (NC); Jon Godfread represented by John Arnold (ND); Glen Mulready (OK); Andrew R. Stolfi (OR); Larry D. Deiter (SD); and Mike Kreidler (WA). Also participating were: Russel Toal and Paige Duhamel (NM).

1. **Adopted its 2020 Fall National Meeting Minutes.**

Director Wing-Heier congratulated Commissioner Mulready on Oklahoma working successfully with its tribal partners to provide COVID-19 vaccine to all ages.

Commissioner Kreidler made a motion, seconded by Ms. Shortt, to adopt the Committee’s Nov. 16, 2020, minutes (see NAIC Proceedings – Fall 2020, NAIC/Consumer Liaison Committee, Attachment One). The motion passed unanimously.

2. **Heard a Presentation on COVID-19 Vaccine Distribution and Usage in Washington.**

Lou Schmitz (American Indian Health Commission for the state of Washington—AIHC) said the AIHC was created in 1994 by Washington’s federally recognized tribes and urban Indian health programs (UIHPs) to address tribal–state health issues. She said AIHC’s mission is to improve the health of American Indian and Alaska Native (AI/AN) people through tribal-state collaboration on health policies and programs. Ms. Schmitz said the AIHC’s work is directed by the 29 federally recognized tribes and two urban Indian health programs in the state. She said delegates are officially appointed by Tribal Councils and urban Indian health organization boards to represent each individual tribe and urban Indian health organization. Ms. Schmitz said each tribe is unique with its own culture, language, government, infrastructure, access to health care, laws, geography, and economy. She said what they have in common are shared values of respect and value for their elders; caring for one another; believing that every person has a role; being generous; and not wasting resources.

Ms. Schmitz said the COVID-19 age-adjusted mortality rate for AI/AN people is 2.43 times that of non-Hispanic whites. She said during the H1N1 emergency in 2009–2010, there was an absence of planning for the distribution of medical countermeasures (MCM) (pharmaceuticals, medical treatments, prophylaxes, supplies, equipment, and other items needed to treat or protect against public health threats). Ms. Schmitz said there was no planning or guidance at the state and federal levels regarding distribution of MCM (including vaccines) to tribal nations prior to 2009 and that Washington state’s strategy was to distribute tribes’ vaccine allocations to local health jurisdictions so they would transfer the vaccines to tribes. She said when the Centers for Disease Control and Prevention’s (CDC’s) recommended priority groups (pregnant women, household contacts and caregivers of children less than six months, health care and emergency medical services personnel, all people six months through 24 years of age, and persons aged 25 through 64 years of age with health conditions associated with higher risk of complications from influenza) differed from that determined by tribal sovereignty (some tribes prioritized elders first), there was a catastrophic failure in effective distribution. Ms. Schmitz said certain local health jurisdictions (LHJs) did not understand their lack of authority over tribes and refused to hand over tribes’ vaccine allocations if those tribes’ priority populations differed from CDC recommendations. As a result, some tribes never received their vaccine allocations, and many tribal members died. She said Washington tribes committed to preventing this from happening again.

Ms. Schmitz said Washington implemented cross-jurisdictional collaboration starting with regional cross-jurisdictional planning meetings that included tribes. LHJs and the U.S. Department of Health and Human Services (HHS). That was driven by a mutual aid agreement (MAA) for tribes and LHJs in Washington state, which led to the development of state policy that clearly outlined tribes’ sovereign authority over medical countermeasures and provided advocacy for federal policy. She said up to 75 people collaborated to put together an operational guide to be used by all partners who are ready to respond at a moment’s notice or to ask for help at 3:00 a.m. whenever necessary. Ms. Schmitz said this group did tabletop exercises in 2014 and 2018, followed by a full-scale exercise in 2019 that included mock distribution of MCMs, proving that the state could
deliver critical MCMs when needed to even the most remote reservations. She said that tribes and UIHPs began meeting weekly with Washington State Department of Health (DOH) COVID-19 vaccine team members and the Indian Health Service’s (IHS) regional COVID-19 vaccine coordinator in September 2020 to prepare to receive, store, manage and administer the COVID-19 vaccine. She also said that the relationships and tribal contacts that had been built by the state over several years allowed the state to be ready to go on the first day the COVID-19 pandemic hit. Ms. Schmitz said their achievements were extraordinary in that tribes and UIHPs were prepared to receive vaccine supply from the first shipment. She said 20 of the 29 tribes and both UIHPs chose to order vaccines through Washington state. She added that the four tribes that do not have a medical clinic are vaccinating their communities by leveraging tribal resources and partnerships. Additionally, 14 tribes have now offered their vaccination capacity to support other states and neighboring counties. She said the state now uses a broad definition of “community”—one that includes non-tribal school district staff and teachers; county-wide home health workers; county-wide elders; and other high-risk individuals. Ms. Schmitz recommended the following to other states as a template for key factors for success: 1) build relationships and partnerships across jurisdictions (federal, state, tribal and local); 2) develop and implement policies at federal, state, tribal and local levels that clearly comply with applicable laws; 3) provide training to agency staff at federal, state, tribal and local levels regarding applicable laws, policies, and procedures; and 4) participate in exercises with partners.

Director Wing-Heier asked if some of the tribal elders were reluctant to get vaccines as they were in Alaska because they had previously been used as guinea pigs to test vaccines during earlier pandemics. Ms. Schmitz said some of this had been seen, but most of the tribal elders were leading the charge to get vaccinated. However, she said there was more hesitation from younger groups, maybe due to the misinformation on social media as it varied by community. She said the solution was to share as much information as they could. For homebound tribal members, Ms. Schmitz said the vaccine was taken to people’s homes because Washington had anticipated this and had acquired funding from foundations to purchase vaccine transport coolers and digital recording equipment. Commissioner Trinidad asked if they were providing vaccines to those under the age 16 or 18. Ms. Schmitz said tribes are following medical recommendations. Commissioner Kreidler asked what type of vaccine is being distributed to tribal members. Ms. Schmitz said all three types (Johnson & Johnson, Moderna and Pfizer) because one tribe had ultra-cold storage equipment, so it was able to do Pfizer. Director Wing-Heier said the latest misinformation she had heard was about the Johnson & Johnson was that it was sub-par, which it is not.

3. **Heard a Presentation on Suggestions for Using the Latest Stimulus Package.**

Colin Baillio (New Mexico Office of Superintendent of Insurance) said the federal American Rescue Plan Act (ARPA) changes the federal Affordable Care Act’s (ACA’s) premium assistance by lowering the percent of income paid for the Benchmark Plan for every level of income as a percent of the federal poverty level (FPL) and adds another layer of 8.5% at the 400+% of FPL that had not existed prior to ARPA. He said that silver loading has caused premium subsidies to rise at a faster pace than the price of Bronze plans and that this dynamic has led to many people being eligible for free Bronze plans. Mr. Baillio said according to the Kaiser Family Foundation (KFF), 4 million uninsured Americans qualify for free Bronze plans under the ACA and that this number will increase significantly under the ARPA. He said this has huge implications for how many Native Americans can qualify for a free plan with no cost sharing. Mr. Baillio said in addition to ACA protections and benefits, Native Americans qualify for year-round enrollment and zero cost sharing under 300% FPL, which applies to all metal levels, including Bronze. He said expanding free Bronze plans to more Native Americans could significantly reduce a major barrier to coverage.

Mr. Baillio said in New Mexico, 10,600 Native Americans qualify for Marketplace subsidies and that about three-fourths of these individuals (7,950 people) qualify for zero cost sharing plans. However, only 571 signed up for coverage with zero cost sharing in 2020, which is just 7% of those who qualify for the benefit. At the same time, he said 88.7% of those who qualify for Medicaid have signed up, so awareness is one barrier, but costs are clearly another major barrier to coverage. Mr. Baillio said the Urban Institute study indicates that ARPA adds roughly 70 points to the FPL at all ages and through most all factors. He said possible strategies to reduce or eliminate premiums for Native Americans who qualify for federal subsidies would be to: 1) build upon the new federal premium assistance to fully subsidize Bronze plans for Native Americans. For example, for a 40-year-old in New Mexico’s rural rating area, at 250% FPL, it would cost $3 per person per month; at 275% FPL, it would cost $43 per person per month; and at 300% FPL, it would cost $88 per person per month. This could be financed through Purchased/Referred Care (PRC) or state funds.; 2) require carriers to use the induced demand factors in risk adjustment and assume only people under 200% FPL will enroll in Silver, which is shown to lower the cost of subsidized Bronze and Gold plans; and 3) prohibit age rating to extend lower cost Bronze plans to more lower income, younger individuals, which is counterintuitive to the results of age rating in the subsidized market because now that subsidies extend above 400% FPL, the downsides are less pronounced.
Director Wing-Heier asked how New Mexico would make it work for older tribal members, those in rural areas and those without broadband. Mr. Baillio said they had lots of work to do and that they have not reached out to enough people yet. However, he said they could use the vaccine rollout model to reach tribal members by transferring those techniques to the outreach project and go door to door. Silvia Yee (Disability Rights Education & Defense Fund—DREDF) asked what percentage of tribal members in New Mexico had disabilities and indicated that Bronze plans may not meet their needs. Mr. Baillio said he does not know how many and agreed that Bronze plans may not meet the needs of those who are disabled. He said federally recognized tribes can choose any plan they want to cover essential health benefits (EHB) at no cost, with some metal levels covering less. However, he said coverage under the Bronze plan is like the coverage under Medicaid. Ms. Duhamel said the Bronze plan would essentially equate to giving 10,000 tribal members in New Mexico Medicaid coverage, but that the state needed to get the word out to all tribes first.

Director Wing-Heier congratulated New Mexico on the recent announcement that the new U.S. Secretary of the Interior is from their state.

4. Discussed Other Matters

Director Wing-Heier announced that NAIC staff support is working with the National Congress of American Indians (NCAI) to schedule a meeting for the Liaison Committee either before or after the virtual All Commissioner Fly-in in May to discuss issues of mutual interest with regard American Indians and Alaska Natives. She said the date and time will be distributed when it has been determined.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
