Section 2: Statistical Plan for Mortality

A. Type of Experience Collected Under This Statistical Plan

The type of experience to be collected under this statistical plan is mortality experience.

B. Scope of Business Collected Under This Statistical Plan

The data for this statistical plan is the individual ordinary life line of business. Such business is to include direct written business issued in the U.S., and all values should be prior to any reinsurance ceded. Therefore, reinsurance assumed from a ceding company shall be excluded from data collection to avoid double-counting of experience submitted by an issuer and by its reinsurers; however, assumption reinsurance of an individual ordinary life line of business, where the assuming company is legally responsible for all benefits and claims paid, shall be included within the scope of this statistical plan. The ordinary life line of business does not include separate lines of business, such as SI/GI, worksite, individually solicited group life that does not meet all the requirements as defined in VM-20 Section 1.B, direct response, final expense, pre-need, home service, credit life and COLI/BOLI/charity-owned life insurance (CHOLI).

C. Criteria to Determine Companies That Are Required to Submit Experience Data

Companies with less than $50 million of direct individual life premium shall be exempted from reporting experience data required under this statistical plan. This threshold for exemption shall be measured based on aggregate premium volume of all affiliated companies and shall be reviewed annually and be subject to change by the Experience Reporting Agent. At its option, a group of nonexempt affiliated companies may exclude from these requirements affiliated companies with less than $10 million individual life premium provided that the affiliated group remains nonexempt.

Additional exemptions may be granted by the Experience Reporting Agent where appropriate, following consultation with the domestic insurance regulator, based on achieving a target level of approximately 85% of industry experience for the type of experience data being collected under this statistical plan.

Comment on APF 2019-33

In the exposed draft APF 2019-33, I have question about the intent with regard to the transition period language in Subsection 1: Life Insurance Products F. 1.

Can a company elect to value a certificate using VM-A and VM-C if the group master contract was issued before 1/1/2024 but that individual certificate was issued on or after 1/1/2024? If not, do you believe the transition period language is clear enough regarding that the certificate must also be "issued ... prior to 1/1/2024"?

Thanks for any clarification you can provide.

Stephen Boston
Life Actuary
Pennsylvania Insurance Department
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

American Academy of Actuaries, Life Reserves Work Group

Addition of language to clarify the definition of individually underwritten life insurance and the applicability of Principle-Based Reserve (PBR) requirements for group insurance contracts with individual risk selection issued under insurance certificates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 version of the Valuation Manual used.

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Individual insurance certificates issued under a group contract which utilize an individual risk selection process, pricing, premium rate structures and product features are similar to individual life insurance policies. They are currently excluded from VM-20 because they are filed under a group contract, but they should be subject to VM-20 due to this similarity. See Appendix.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2019-33
Appendix

Issue

Certain contracts issued under a master group contract require individual risk selection in order to qualify for issuance of the group insurance certificate and do not require continued membership in the group in order to maintain coverage. The certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing and risk classification, and are managed in a similar manner as individual ordinary life insurance contracts. These individual certificates should follow the same reserve requirements as other individual life contracts of the same product type. Therefore, a change is needed within the Valuation Manual to bring these individual certificates into scope of VM-20.

Eight changes are recommended:

1) Within the Reserve Requirements section (Section II), change the minimum reserve requirements to also apply to group life contracts which, other than the difference between issuing a policy and issuing a group certificate, have the same or mostly similar contract provisions, risk selection process and underwriting as individual ordinary life contracts;

2) Within the Reserve Requirements section (Section II), add a transition period for individual group certificates issued on or before 1/1/2024;

3) Within the Reserve Requirements section (Section II), add language to Subsection 1.D and the corresponding footnote to include premiums from group life contracts which have individual certificates that were issued using individual risk selection processes;

4) Add new paragraph, VM-20 Section 1.B (and reformat to make current paragraph Section 1.A) to clarify group life certificates issued using individual risk selection processes, including a definition and requirements to be met, are subject to the requirements of VM-20;

5) Add guidance note after first sentence in VM-20 Section 2.A.1 that group life certificates that meet the definition for individual risk selection process use the same VM-20 Reserving Categories as defined in Section 2;

6) Modify VM-51 Section 2.B to no longer exempt individually solicited group life which meet the requirements and definitions under items (1) and (2) above; and

7) Modify VM-51, Appendix 4, Item 17 to no longer exempt individually solicited group life contracts which meet the requirements under items (1) and (2) above.

8) Draft referral to the NAIC Blanks (E) Working Group, to revise the VM-20 Reserves Supplement, Part 2 to report premiums for total Group Life and Group Life with certificates subjected to an individual risk selection process and which meet all of the conditions as defined in VM-20 Section 1.B separately.

Commented [A1]: Is this a required criterion? If so, then it needs to be listed in VM-20 Section 1.B.
VM Changes 1, 2 and 3 – II. Reserve Requirements

II. Reserve Requirements

This section provides the minimum reserve requirements by type of product, as set forth in the seven subsections below, as follows:

1. Life Insurance Products
2. Annuity Products
3. Deposit-Type Contracts
4. Health Insurance Products
5. Credit Life and Disability Products
6. Riders and Supplemental Benefits
7. Claim Reserves

All reserve requirements provided by this section relate to business issued on or after the operative date of the Valuation Manual. All reserves must be developed in a manner consistent with the requirements and concepts stated in the Overview of Reserve Concepts in Section I of the Valuation Manual.

Guidance Note: The terms “policies” and “contracts” are used interchangeably.

Subsection 1: Life Insurance Products

A. This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

B. Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in subsection 1.F below. For this purpose, joint life policies are considered individual life.

C. Minimum reserve requirements for group life contracts with individual certificates which meet all the requirements in VM-20 Section 1.B are provided by VM-20, except for election of the transition period in subsection 1.F below.

D. Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

E. Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.

F. A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for.
1. Business described in subsection 1.C above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.

2. Business not described subsection 1.C otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

### G. Life PBR Exemption

1. A company meeting the condition in subsection DG.2 below may file a statement of exemption for ordinary life insurance policies including group life insurance certificates subject to an individual risk selection process and meeting all the conditions in VM-20 Section 1.B, except for policies in subsection DG.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition subsection DG.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:

   The company has less than $300 million of exemption premium, and if the company is a member of an NAIC group of life insurers, the group has combined exemption premium of less than $600 million. Exemption premium is determined as follows:

   (a) The amount reported in the prior calendar year life-health annual statement, Exhibit 1, Part 1, Column 3 (“Ordinary Life Insurance”), line 20.1;

   (b) The portion of the amount in the prior calendar year life-health annual statement, Exhibit 1, Part 1, Column 3 (“Ordinary Life Insurance”), line 20.2 assumed from unaffiliated companies;

   (c) Amounts included in either (a) or (b) that are associated with guaranteed issue insurance policies and/or preneed life insurance policies;

   (d) Amounts included in either (a) or (b) that represent transfers of reserves in force as of the effective date of a reinsurance assumed transaction;

   (e) Amounts of premium for group life certificates that were subject to an individual risk selection process and meet the conditions defined in VM-20, Section 1.B, and that are not included in either (a) or (b).

Guidance Note:

(i) Definitions of preneed and guaranteed issue insurance policy are in VM-01.

(ii) For a statement of exemption filed for calendar year 2022 and beyond, the amount in (e) was reported in the prior calendar year life health annual statement, VM-20 Reserve Supplement, Part 2, if applicable.

Commented [A2]: Replace “including” with “and”

Commented [A3]: Introduce new term.

Commented [A4]: Replaces footnote.

Commented [A5]: This will need to be added to the PBR Supplement by the NAIC Blanks (E) Working Group. (MB-N)
a. The company has less than $300 million of ordinary life premiums1, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums1 of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:

a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

---

Footnote change

1 Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance.” Premiums should also include the premiums from group life insurance certificates that were subject to an individual risk selection process and meet all the conditions as defined in VM-20 Section 1.B, and for a statement of exemptions filed for calendar year 2022 and beyond, the premiums for these group life certificates were reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement, Part 2, if applicable. Premiums should excluding premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1, Part 1, Column 3 as ordinary life insurance premium. Preneed and guaranteed issue life insurance policies are as defined in VM-01.

---

VM Change 4 – VM-20: Requirements for Principle-Based Reserves for Life Products

VM-20: Requirements for Principles-Based Reserves for Life Products

Section 1: Purpose

A. These requirements establish the minimum reserve valuation standard for individual life insurance policies issued on or after the operative date of the Valuation Manual and subject to a principle-based valuation with an NPR floor under Model #820. These requirements constitute the Commissioners Reserve Valuation Method (CRVM) for policies of individual life insurance.

B. If all of the following requirements are met, individual life certificates under a group contract are included subject to the requirements of VM-20 and these requirements constitute the Commissioners Reserve Valuation Method (CRVM) for such certificates.

[iii] An individual risk selection process, defined below, is used to obtain group life insurance coverage:

An individual risk selection process is one that is based on characteristics of the insured(s) beyond sex, gender, age, tobacco usage, and membership in a particular group. This may include, but is not limited to,
An individual risk selection process is based on characteristics of the insured(s) beyond sex, gender, age, tobacco usage, and membership in a particular group. This may include, but is not limited to, completion of an application (beyond acknowledgement of membership to the group, sex, gender and age), questionnaire(s), on-line health history or tele-interview to obtain non-medical and medical or health history information, prescription history information, avocations, usage of tobacco, family history, or submission of fluids such as blood, Home Office Specimens (HOS), or oral fluid. The resulting risk classification is determined based on the characteristics of the individual insured(s) rather than the group, if any, of which it is a member (e.g., employer, affinity, etc.). The individual certificate holder is charged a premium rate based solely on the individual risk selection process and not on membership in a specific group.

**Guidance Note:** The use of evidence of insurability does not by itself constitute an individual risk selection process. Use of information obtained from a census or question(s) regarding gender, occupation, age, income and/or tobacco usage solely for purposes of determining a rate classification does not by itself qualify a group as having used an individual risk selection process. Group insurance where the underwriting based on the characteristics of the group and census data but where some individuals are subjected to individual risk selection as a result of compensation level, age, an existing medical condition or impairment, late entry into the group, failure of the group to meet minimum participation requirements or voluntary buy-up of increased coverage does not meet the definition of an individual risk selection process.

---

**Commented [A11]:** Renumber

**Commented [A12]:** Renumber

**Commented [A13]:** Renumber

**Commented [A14]:** Renumber

**Commented [A15]:** Delete. This results from meeting the criteria; it should not be a criterion.

**Commented [A16]:** Moved to a location which allows reference.
Guidance Note: The use of evidence of insurability does not by itself constitute an individual risk selection process. Use of information obtained from a census or question(s) regarding gender, occupation, age, income and/or tobacco usage solely for purposes of determining a rate classification does not by itself qualify a group as having used an individual risk selection process. Group insurance where the underwriting based on the characteristics of the group and census data but where some individuals are subjected to individual risk selection as a result of compensation level, age, an existing medical condition or impairment, late entry into the group, failure of the group to meet minimum participation requirements or voluntary buy-up of increased coverage does not meet the definition of an individual risk selection process.
Section 2: Minimum Reserve

A. All policies subject to these requirements shall be included in one of the VM-20 Reserving Categories, as specified in Section 2.A.1, Section 2.A.2 and Section 2.A.3 below.

Guidance Note: Since Group Insurance subject to an individual risk selection process and meeting all the requirements, as defined by in Section 1.B is subject to VM-20 requirements, Section 2.A shall apply, meaning that any such contracts will be included in one of the VM-20 Reserving Categories defined by Section 2.A.1, Section 2.A.2, and 2.A.3. All requirements in VM-31 which apply to a VM-20 Reserving Category shall apply to any group insurance subject to individual underwriting risk selection that has been included in that VM-20 Reserving Category.

The company may elect to exclude one or more groups of policies from the stochastic reserve calculation and/or the deterministic reserve calculation. When excluding a group of policies from a reserve calculation, the company must document that the applicable exclusion test defined in Section 6 is passed for that group of policies. The minimum reserve for each VM-20 Reserving Category is defined by Section 2.A.1, Section 2.A.2 and Section 2.A.3, and the total minimum reserve equals the sum of the Section 2.A.1, Section 2.A.2 and Section 2.A.3 results below, defined as:
The Life Actuarial (A) Task Force met Feb. 4, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Tynesia Dorsey, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Seivinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlori Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewells represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomas Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV).

1. **Exposed Amendment Proposal 2020-12**

Ms. Hemphill said amendment proposal 2020-12 (Attachment Five-A) provides *Valuation Manual* edits to make the definition of the term “clearly defined hedging strategy” (CDHS) in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, consistent with the definition used in VM-20, Requirements for Principle-Based Reserves for Life Products. She said the definition is also applicable to the principle-based version of VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, currently in development. She noted that the amendment proposal moves the revised definition from VM-20 to VM-01, Definitions for Terms in Requirements. She said the amendment additionally proposes defining a new term, “seasoned hedging strategy” (SHS), which prevents companies from avoiding CDHS requirements by opting to fail one of the qualifying CDHS criteria. The SHS requirements mandate the modeling of an SHS that would increase the minimum reserve or total asset requirement (TAR). Ms. Hemphill also presented coordinating revisions to *Statement of Statutory Accounting Principles (SSAP) 108—Derivatives Hedging Variable Annuity Guarantees* (Attachment Five-B). The coordinating revisions will be forwarded to the Statutory Accounting Principles (E) Working Group following the Task Force adoption of amendment proposal 2020-12.

Mr. Robinson made a motion, seconded by Mr. Leung, to expose amendment proposal 2020-12 for a 50-day public comment period ending March 26. The motion passed unanimously.

2. **Exposed Amendment Proposal 2020-13**

Ms. Hemphill said amendment proposal 2020-13 (Attachment Five-C) revises the VM-20 starting asset collar parameters to correctly apply the collar to a modeled reserve that is negative.

Mr. Weber made a motion, seconded by Mr. Leung, to expose amendment proposal 2020-13 for a 21-day public comment period ending February 26. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Rachel Hemphill and Karen Jiang, Texas Department of Insurance

**Title of the Issue:**
Create consistency between CDHS determination in VM-20 and VM-21. Revise hedge modeling to only require CDHS if modeling future hedging reduces the reserves under VM-20 or TAR under VM-21.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

We propose having consistent requirements for a CDHS in VM-20 and VM-21, as well as any future work on VM-22, and consolidating these requirements in the VM-01 definition of a CDHS. This involves adding two criteria to VM-21’s definition of CDHS that currently exist for VM-20:

- Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- The circumstances under which hedging strategy will not be effective in hedging the risks.

These criteria are both reasonable and apply in principle to VM-21, and to any future work on VM-22, as well as VM-20.

Further, we propose revising the requirement for hedging to be a CDHS in order for future hedging to be modeled under VM-20, VM-21, and LR027’s C-3 RBC Amount calculation to only apply when modeling such hedging reduces the life reserve level or variable annuity Total Asset Requirement (TAR) level.

The current regulatory requirements for hedging to be a CDHS in order for future hedging to be modeled under VM-20, modeled under VM-21, modeled for the C-3 RBC Amount calculation for variable annuities,
and to be eligible for SSAP 108 treatment are all logical requirements when one considers whether hedging should be allowed to reduce the life reserve level or variable annuity TAR level, or whether any mismatch between movements in hedge assets and movements in the corresponding reserve levels should be allowed to be amortized over time.

However, this same requirement has led to a situation of there being unintended optionality in whether a hedging strategy that is like a CDHS is modeled or is not modeled, since a company may choose to satisfy or not satisfy certain of the criteria. This has been especially relevant for cases where modeling a company’s hedging strategy would increase reserves or variable annuity TAR.

As noted in the current guidance note in VM-20 Section 7.K.1 in the 2021 Valuation Manual:

“The prohibition in these modeled reserve requirements against projecting future hedging transactions other than those associated with a clearly defined hedging strategy is intended to address initial concerns expressed by various parties that reserves could be unduly reduced by reflection of programs whose future execution and performance may have greater uncertainty. The prohibition appears, however, to be in conflict with Principle 2 listed in VM-21. Companies may actually execute and reflect in their risk assessment and evaluation processes hedging strategies similar in many ways to clearly defined hedging strategies but lack sufficient clarity in one or more of the qualification criteria. By excluding the associated derivative instruments, the investment strategy that is modeled may also not reflect the investment strategy the company actually uses. Further, because the future hedging transactions may be a net cost to the company in some scenarios and a net benefit in other scenarios, the exclusion of such transactions can result in a modeled reserve that is either lower or higher than it would have been if the transactions were not excluded. The direction of such impact on the reserves could also change from period to period as the actual and projected paths of economic conditions change. A more graded approach to recognition of non-qualifying hedging strategies may be more theoretically consistent with Principle 2. It is recommended that as greater experience is gained by actuaries and state insurance regulators with the principle-based approach and as industry hedging programs mature, the various requirements of this section be reviewed.”

We propose to continue addressing the regulatory concern that reserves could be unduly reduced by reflection of programs whose future execution and performance may have greater uncertainty, by continuing to only allowing hedging strategies that qualify as a CDHS to reduce life reserves and variable annuity TAR. However, we propose that the treatment of CDHS be made more principles-based and less subject to manipulation. To accomplish this, the proposal requires that any hedging strategy that is a part of the investment strategy supporting the policies and is normally modeled as part of the company’s risk assessment and evaluation processes be modeled as if it were a CDHS if doing so results in an increase in life reserves or variable annuity TAR.

That is, CDHS becomes a requirement solely for hedging strategies that reduce life reserves or variable annuity TAR, and so becomes a more clear regulatory guardrail requiring that hedging strategies that reduce life reserves or variable annuity TAR must be clearly defined.

We continue to need the concept of a CDHS. A CDHS simply formally documents items that a company should be able to document for a robust, well-defined hedging strategy. It requires that the following be identified:

a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
b. The hedge objectives.
c. The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
d. The financial instruments used to hedge the risks.
e. The hedge trading rules, including the permitted tolerances from hedging objectives.
f. The metrics for measuring hedging effectiveness.
g. The criteria used to measure hedging effectiveness.
h. The frequency of measuring hedging effectiveness.
i. The conditions under which hedging will not take place.
j. The person or persons responsible for implementing the hedging strategy.
k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
l. The circumstances under which hedging strategy will not be effective in hedging the risks.

While the last two criteria have historically applied for life but not variable annuities, these are all reasonable documentation items that for a robust, well-defined hedging strategy regardless of whether the product is life or variable annuity.

The concept of a CDHS is used for accounting in SSAP 108. SSAP 108 allows companies to set up a deferred asset or liability to amortize the mismatch between changes in the value of the liability and changes in the value of the hedging instruments attributable to the hedged risk underlying a highly effective CDHS modeled for VM-21. Allowing this treatment encourages companies to reduce risk through robust, well-defined and highly effective hedging. Without having the hedging strategy be well-defined, regulators could not rely on past effectiveness being indicative of future effectiveness, and so could not offer companies the benefit of SSAP 108 treatment. Once we recognize the need for a concept of a well-defined hedging strategy, the only question is what criteria would need to be met to be considered well-defined – that is, what criteria should be required to be considered a CDHS. This is a distinct question from whether the concept of a CDHS is needed. We have not heard critiques of individual criteria in the CDHS definition, but consideration of the criteria is appropriate as we go forward to make the definitions in VM-20 and VM-21 consistent. Similarly, in reserve and capital calculations, we rely on the concept of historical effectiveness to determine an error factor. If modeling hedging reduces the reserve or capital amount, the error factor determines the magnitude to which this is reflected. However, this use of the historical effectiveness relies on the hedging strategy being well-documented and comparable between historical hedging and planned future hedging. So, again, a need for hedging strategies to be well-defined presents itself – a CDHS concept is needed.

Finally, edits to VM-31 are needed to reflect these updates and bring VM-20 and VM-21 reporting requirements more in line with one another where appropriate.

**Note on Coordination with RBC and APPM:** We have reviewed, and with these edits there are no corresponding edits necessary for LR027 for RBC but corresponding edits are necessary for SSAP 108. A referral to SAPWG is to be concurrently considered with this APF.

*This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.*

W:\National Meetings\2010\TF\LHA\Attachment Five-A

Life Actuarial (A) Task Force

4/8/21
VM-01

1. The term “clearly defined hedging strategy” (CDHS) means a strategy undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions. A CDHS must identify:
   a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
   b. The hedge objectives.
   c. The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
   d. The financial instruments used to hedge the risks.
   e. The hedge trading rules, including the permitted tolerances from hedging objectives.
   f. The metrics for measuring hedging effectiveness.
   g. The criteria used to measure hedging effectiveness.
   h. The frequency of measuring hedging effectiveness.
   i. The conditions under which hedging will not take place.
   j. The person or persons responsible for implementing the hedging strategy.
   k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
   l. The circumstances under which hedging strategy will not be effective in hedging the risks.

   The hedge strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as CDHS. A CDHS must meet all of the principles outlined in VM-21 Section 1.B (the most relevant of which may be Principle 5).

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.

2. The term “Seasoned Hedging Strategy” (SHS) means a hedging strategy that is part of the company’s investment strategy and is normally modeled as part of the company’s risk assessment and evaluation process. A SHS may or may not be a CDHS.

   The hedge strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as SHS. A SHS must meet all of the principles outlined in VM-21 Section 1.B (the most relevant of which may be Principle 5).
VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more CDHS or one or more SHS required to be modeled pursuant to Section 7.K.4 from stochastic reserve requirements, except in the case where all CDHS and all SHS required to be modeled pursuant to Section 7.K.4 are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the model investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the model investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of a CDHS (in compliance with the definition of CDHS in VM-01) or a SHS that is required to be modeled pursuant to Section 7.K.4 are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the deterministic reserve and the stochastic reserve, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of a CDHS or a SHS that is required to be modeled pursuant to Section 7.K.4, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

2. For each derivative program that is modeled, the company shall reflect the company’s established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For CDHS or SHS required to be modeled pursuant to Section 7.K.4, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that “zero” is an appropriate expectation.
3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the stochastic reserve as described in Section 5.E.

4. If a SHS is not a CDHS but modeling it would result in an increase to the company’s minimum reserve, then the company shall model the SHS as if it were a CDHS when calculating reserves under VM-20.

**VM-20 Section 7.L (Remove entire Section 7.L)**

**Deleted:**

A clearly defined hedging strategy must identify:

- The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
- The hedge objectives.
- The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
- The financial instruments used to hedge the risks.
- The hedge trading rules, including the permitted tolerances from hedging objectives.
- The metrics for measuring hedging effectiveness.
- The frequency of measuring hedging effectiveness.
- The conditions under which hedging will not take place.
- The person or persons responsible for implementing the hedging strategy.
- Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- The circumstances under which hedging strategy will not be effective in hedging the risks.
- Hedging strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

**Guidance Note:** For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.
VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

VM-21 Section 4.A.4

Modeling of Hedges
a. For a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6:
   i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling.
   ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets. The hedge assets may then be considered in one of two ways:
      a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
      b) No hedge positions — in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

b. For a company with a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.
   i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the stochastic reserve.
   ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the CDHS or the SHS that is required to be modeled pursuant to Section 9.A.6. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a stochastic reserve as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The stochastic reserve

Deleted: The term “clearly defined hedging strategy” (CDHS) is defined in VM-01. In order to be designated as a CDHS, the strategy must meet the principles outlined in Section 1.B (particularly Principle 5) and shall, at a minimum, identify:
   i. The specific risks being hedged (e.g., delta, rho, vega, etc.).
   ii. The hedge objectives.
   iii. The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
   iv. The financial instruments that will be used to hedge the risks.
   v. The hedge trading rules, including the permitted tolerances from hedging objectives.
   vi. The metrics for measuring hedging effectiveness.
   vii. The criteria that will be used to measure hedging effectiveness.
   viii. The frequency of measuring hedging effectiveness.
   ix. The conditions under which hedging will not take place.
   x. The person or persons responsible for implementing the hedging strategy.

Guidance Note: It is important to note that strategies involving the offsetting of the risks associated with VA guarantees with other products outside of the scope of these requirements (e.g., equity-indexed annuities) do not currently qualify as a clearly defined hedging strategy under these requirements.
shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (E) determined following the guidance of Section 9.C.4.

iii. The company is responsible for verifying compliance with CDHS requirements, or SHS requirements if required to be modeled pursuant to Section 9.A.6, and any other requirements in Section 9 for all hedging instruments included in the projections.

iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the model investment strategy and any non-prescribed asset spreads shall be adjusted as necessary so that the aggregate reserve is not less than that which would be obtained by substituting an alternative investment strategy in which all fixed income reinvestment assets are public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of a CDHS (in compliance with the definition of CDHS in VM-01) or a SHS that is required to be modeled pursuant to Section 9.A.6 are not affected by this requirement.

VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-22)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the Stochastic Reserve for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6 as discussed in Section 4.A.4.a.

VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as the stochastic reserves following Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

VM-21 Section 6.B.5

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6.
VM-21 Section 9

Section 9: Modeling of Hedges under a CDHS

A. Initial Considerations

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the stochastic reserve, determined in accordance with Section 3.D and Section 4.D.

2. If the company is following a CDHS, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the stochastic reserve using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

5. Before either a new or revised hedging strategy can be used to reduce the amount of the stochastic reserve otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months).

6. If a SHS is not a CDHS but modeling it as if it were a CDHS would result in an increase in the company’s TAR, then the company shall model the SHS as if it were a CDHS when calculating reserves under AG43 and/or VM-21 and when calculating the C-3 RBC Amount under LR027. The company shall not treat the SHS as a CDHS for purposes of SSAP 108.
B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the stochastic reserve otherwise calculated.

2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.

3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the stochastic reserve otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the stochastic reserve needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the stochastic reserve attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

**Guidance Note:** No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the “Greeks” other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

5. A safe harbor approach is permitted for CDHS reflection for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of Stochastic Reserve (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the CDHS (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the CDHS
(e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no CDHS, therefore following the requirements of Section 4.A.4.a.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the stochastic reserve is given by:

\[
\text{Stochastic reserve} = \text{CTE70 (best efforts)} + E \times \max[0, \text{CTE70 (adjusted)} - \text{CTE70 (best efforts)}]
\]

4. The company shall specify a value for \( E \) (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of \( E \). The value of \( E \) may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, \( E \) must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.

5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for \( E \).

6. Such a back-test shall involve one of the following analyses:

a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of \( E \), the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of \( E \) by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:
i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.

ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100% (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100% in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with no history, E should be at least 0.50. However, E may be lower than 0.50 if some reliable experience is available and/or if the change in strategy is a refinement rather than a substantial change in strategy.

**Guidance Note:** The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program:

- The error factor should be temporarily large (e.g., ≥ 50%) for substantial changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy) where the company has not been able to provide a meaningful simulation of hedge performance based on the new strategy.
- A temporary moderate increase (e.g., 15–30%) in error factor should be used for substantial modifications to hedge programs or CDHS modeling where meaningful simulation has not been created (e.g., adding second-order hedging, such as gamma or rate convexity).
- No increase in the error factor may be used for incremental modifications to the hedge strategy (e.g., adding death benefits to a program that previously covered only living benefits, or moving from swaps to Treasury Department futures).

D. Additional Considerations for CTE70 (best efforts)
If the company is following a CDHS, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the stochastic reserve and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the stochastic reserve, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the stochastic reserve, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:
a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.

5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the stochastic reserve otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

**VM-31 Section 3.C.5**

**Assets and Risk Management** – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4.

**VM-31 Section 3.D.6.f**

**Risk Management** – Detailed description of model risk management strategies, such as hedging and other derivative programs, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. This should include documentation for any hedging strategy that meets the requirements to be a CDHS. It should also include, for any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4, documentation of any CDHS criteria met, listing of CDHS criteria not met, and documentation of the reserve level with and without the SHS being modeled as if it were a CDHS.

a. **Investment Officer on Investments** – A certification from a duly authorized investment officer that the modeled company investment strategy, including any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4, is representative of and consistent with the company’s investment policy.
b. **Qualified Actuary on Investments** – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4 was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

Deleted: clearly defined hedging strategies

Deleted: clearly defined hedging strategies

Deleted: clearly defined hedging strategies
VM-31 Section 3.E.5

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any CDHS or any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, and any material changes to the hedging strategy from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any CDHS or any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, specific to the groups of contracts covered in this sub-report.
   i. Descriptions of basis risk, gap risk, price risk and assumption risk.
   ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
   iii. Results of any reviews of actual historical hedging effectiveness.

b. CDHS – Documentation for any hedging strategy that meets the requirements to be a CDHS.

c. Other Modeled Hedging Strategies – Documentation for any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, including documentation of any CDHS criteria met, listing of CDHS criteria not met, and documentation of the TAR level with and without the SHS being modeled as if it were a CDHS.

d. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.

e. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
   i. Differences in timing between model and actual strategy implementation.
   ii. For a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, disclosure of the method used to consider hedge assets included in the starting assets, either (1) including the asset cash flows in the projection model; or (2) replacing the hedge positions with cash and/or other general account assets in an amount equal to the market value of the hedge positions, as discussed in VM-21 Section 4.A.4.a.
   iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
   iv. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
   v. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the stochastic reserve, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
vi. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).

vii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the stochastic reserve.

viii. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges.

e. Error Factor ($E$) and Back-Testing – Description of $E$, the error factor, and formal back-tests performed, including:

i. The value of $E$, and the approach and rationale for the value of $E$ used in the reserve calculation.

ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for $E$. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.

iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:

a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.

b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.

iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for $E$.

v. For companies that do not have 12 months of experience, the basis for the value of $E$ is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available and the degree and nature of any changes made to the hedge strategy.

g. Safe Harbor for CDHS – If electing the safe harbor approach for CDHS, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.

g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

**VM-31 Section 3.F.12.c**

CTEPA – If using the CTEPA method, a summary including:

i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the stochastic reserves.
following VM-21 Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.

ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the stochastic reserves following VM-21 Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.

iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the stochastic reserve.

VM-31 Section 3.F.16.a and Section 3.F.16.b

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any CDHS and any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, is consistent with the company’s current investment strategy except where the modeled reinvestment strategy may have been substituted with the alternative investment strategy, and also any CDHS meets the requirements of a CDHS.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any CDHS and any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6 was performed in accordance with VM-21 and in compliance with all applicable ASOPs.
TO: Dale Bruggeman (OH), Chair of the Statutory Accounting Principles (E) Working Group
FROM: Mike Boerner, (TX), Chair of the Life Actuarial (A) Task Force
DATE: February 4, 2021
RE: Clearly Defined Hedging Strategy (CDHS) Requirements

This referral has been provided to notify the Working Group of revisions to the Valuation Manual being considered by the Life Actuarial (A) Task Force during the 2/4/2021 Meeting on APF 2020-12, regarding CDHS. The proposed revisions in APF 2020-12 would require an update to SSAP 108 to maintain consistency between the Valuation Manual and the Accounting Practices and Procedures Manual.

APF 2020-12 under consideration by Life Actuarial (A) Task Force:

1) Moves the definition of a CDHS from VM-21 to VM-01;
2) Adds two criteria from the VM-20 CDHS definition that had not been in the VM-21 CDHS definition to the final definition in VM-01 that applies to both VM-20 and VM-21;
3) Requires that companies model hedging strategies that do not meet the definition of a CDHS under VM-21 if they increase TAR. However, it is noted in the Valuation Manual that this does not impact the treatment of such non-CDHS hedging strategies under SSAP 108.

For coordination between the Valuation Manual and the Accounting Practices and Procedures Manual, proposed edits to SSAP 108 are shown in the attached Appendix. Please contact NAIC staff of the Life Actuarial (A) Task Force with any questions on this proposal. Also attached is a copy of LATF APF 2020-12.

cc Julie Gann, Robin Marcotte, Dave Fleming, Reggie Mazyck, Pat Allison
Appendix

Proposed edit to SSAP 108, Paragraph 6.b.ii

Certification by a financial officer of the company (CFO, treasurer, CIO, or designated person with authority over the actual trading of assets and derivatives) that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy within VM-01 and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day-to-day risk mitigation efforts. This provision does not require reporting entities to use a hedging strategy in determining VM-21 reserves, nor does it require entities to use the special accounting provision within this standard. However, it does require reporting entities that use the special accounting provisions within this standard to certify that the hedging strategy within scope of this standard is a Clearly Defined Hedging Strategy and is reflected in the establishment of VM-21 reserves.

Proposed edit to SSAP 108, Paragraph 7

As identified in paragraph 2, eligibility for the special accounting provision within this standard is strictly limited to variable annuity contracts and other contracts involving certain guaranteed benefits similar to those offered with variable annuities that are reserved for in accordance with VM-21. This special accounting provision requires the reporting entity to engage in highly effective fair value hedges that follow a Clearly Defined Hedging Strategy, as defined in VM-01, meeting all required provisions of VM-21 allowing the reporting entity to reduce the amount of the Conditional Tail Expectation (CTE) Amount. In order to qualify as a Clearly Defined Hedging Strategy (which may be dynamic, static, or a combination thereof), the strategy must meet the principles outlined in VM-21, be in place (implemented) for at least three months', and shall at a minimum, identify:

a. Specific risks being hedged,
b. Hedge objectives,
c. Risks not being hedged,
d. Financial instruments that will be used to hedge the risks,
e. Frequency of measuring hedging effectiveness,
f. Metric(s) used for measuring hedging effectiveness,
g. Criteria that will be used to measure effectiveness,
h. Conditions under which hedging will not take place,
j. The individuals responsible for implementing the hedging strategy,
k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified, and
l. The circumstances under which hedging strategy will not be effective in hedging the risks.

Proposed edit to SSAP 108, Paragraph 23.a

Discussion of hedged item, including information on the guarantees sensitive to interest rate risk, along with information on the designated hedging instruments being used to hedge the risk. Discussion of the hedging instruments shall identify whether a hedging instrument is a single instrument or portfolio, as well as information on the hedging strategy (including whether there have been changes in strategy from the prior reporting period, along with detailed information on the changes), and assessment of hedging effectiveness and compliance with the “Clearly Defined Hedging Strategy” of VM-01. Identification shall occur on whether the hedged item is intended to be fully hedged under the hedging strategy, or if the strategy is only focused on a portion of the liability characteristics or a portion of the interest rate sensitivity. Hedging strategies shall be identified as highly effective or not highly effective. If the strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, from the assessment of hedge effectiveness, details on the excluded components shall be disclosed.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Dany Provencher, Appointed Actuary, Industrial Alliance group of companies

Title of the issue:
Asset collar when modeled reserve is negative

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 7.D.3

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

If for all model segments combined, the aggregate annual statement value of the final starting assets, less the corresponding PIMR balance, is

(a) less than 98% of the modeled reserve; or
   (i) 98% of the modeled reserve if modeled reserve is positive;
   (ii) 102% of the modeled reserve if modeled reserve is negative; or
(b) greater than the largest of:
   (i) 102% of the modeled reserve;
   (ii) the NPR for the same set of policies, net of due and deferred premiums thereon: and
   (iii) zero,

then the company shall provide documentation in the PBR Actuarial Report that provides reasonable assurance that the modeled reserve is not materially understated as a result of the estimate of the amount of starting assets.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

If modeled reserve is negative, using assets corresponding to 100% of modeled reserve, would not fall within the asset collar.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.
The Life Actuarial (A) Task Force met Jan. 28, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Tynesia Dorsey, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glenn Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV).

1. Discussed the Questions on the ESG Exposures

Scott O’Neal (NAIC) discussed items related to the economic scenario generator (ESG). He said the revised ESG timeline (see the Jan. 21 Task Force minutes) is posted on the Related Documents tab on the Task Force webpage. He said the public comment period for the Initial ESG Recommendation has been extended to March 7. He noted that an addendum was added to the exposure to indicate the extended comment period and provide clarifying information about the industry field test. He gave a reminder that ESG scenario statistics and reports, the scenario picker tool, and the stochastic exclusion test scenarios are exposed for a public comment period ending March 7.

Mr. O’Neal discussed the ESG question and answer (Q&A) document being developed by NAIC actuarial staff to capture and respond to the questions submitted by industry members. He said references to the submitted questions have been removed. The Q&A document will be posted on the Conning website. Randall McCumber (Lincoln Financial Group) asked when Conning expects to provide revised scenarios that fix the issue with the short end of the yield curve and when the actual scenarios for the Valuation Manual (VM)-20, Requirements for Principle-Based Reserves for Life Products, Stochastic Exclusion Ratio Test (SERT) will be available. Mr. O’Neal said NAIC staff and Conning are working to produce and evaluate additional scenario sets, and they will provide them as soon as possible. Dan Finn (Conning) said the SERT scenarios should be available in two weeks. Mr. McCumber asked if the deterministic reserve (DR) would still be linked to the same SERT scenario from the new ESG. Pat Allison (NAIC) said that is still the case. Mr. McCumber asked what scenario data companies will receive for the field test. Ms. Allison said it will probably include both the full set of 10,000 scenarios and a smaller subset of scenarios. Connie Tang (Prudential) asked if additional statistics and reports could be provided when the scenarios are released. Ms. Allison expressed openness to receiving feedback on specific statistics that industry members would like to see. Brian Bayerle (American Council of Life Insurers—ACLI) and Jason Kehrberg (American Academy of Actuaries—Academy) communicated that having additional documentation as soon as possible will facilitate the development of better questions from industry. Mr. Boerner said any existing documentation questions should be submitted as soon as possible.

2. Discussed Comments on the Criteria to Assess VM-20 YRT Reinsurance Solutions

Mr. Bayerle discussed the ACLI comment letter (Attachment Six-A) on the Criteria to Assess VM-20 YRT Solutions (Attachment Six-B). He said industry is supportive of allowing a prudent level of mortality improvement in the reserve projection. He said the ACLI believes that a principle-based yearly renewable term (YRT) solution should not be constrained by the current requirements of the Accounting Practices and Procedures Manual (AP&P Manual). He opined that changes to the AP&P Manual to address the YRT solution may be appropriate depending on the solution chosen.

Mr. Robinson said his comment letter (Attachment Six-C) provides feedback on the considerations listed in the solutions document. He suggested that a few of the criteria included in the considerations could be eliminated.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Brian Bayerle  
Senior Actuary  

December 15, 2020  

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)  

Re: Criteria to Assess VM-20 Solutions for Modeling Non-guaranteed YRT Reinsurance  

Dear Mr. Boerner:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the exposed document “Criteria to Assess VM-20 Solutions for Modeling Non-guaranteed YRT Reinsurance”.  

ACLI recognizes the inherent challenges in addressing the level of the YRT reinsurance credit under a PBR framework. We appreciate the criteria document that the members of LATF have pulled together to assess potential solutions. We believe that some of the inherent complexity in addressing this issue is due to the level of margins, notably mortality margins, in the computation of the direct reserve. The results of the field study demonstrate the difficulty of clarity, consistency in interpretation, and application of any of the proposed solutions. Some companies favor a simpler solution; other companies support a solution that balances principles-based criteria and model complexity, considers the level of margins, and reflects an appropriate level of risk shared between the direct writer and reinsurer.  

Among the criteria outlined, industry is intrigued by the sixth criteria on consideration of mortality improvement beyond the valuation date. Industry supports a prudent level of mortality improvement in the reserve projection as a step to right-size the mortality margin. We support the effort of the joint SOA/Academy POG that is exploring a future mortality improvement methodology for use in projected reserves.  

Regarding the requirements outside of the Valuation Manual, we believe the point should make clear that changes to the APPM may be appropriate depending on the solution decided by regulators. As worded, it seems to suggest that the solution should fit into the confines of the accounting requirements, rather than appropriate reserve requirements informing the accounting requirements.  

We appreciate the consideration of our comments, and look forward to discussing on a future LATF call. Thank you.
Sincerely,

[Signature]

cc: Reggie Mazyck, NAIC
Criteria to Assess VM-20 Solutions for Modeling Non-guaranteed YRT Reinsurance

Below is a list of potential criteria that could be used to assess proposed VM-20 amendments regarding non-guaranteed YRT reinsurance.

<table>
<thead>
<tr>
<th>Consideration</th>
<th>Potential APF selection criteria and other requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Level of prescription</td>
<td>o The APF should be principles-based, as defined in VM Section I, Overview of Reserve Concepts:                                                                                  • Uses one or more methods, or one or more assumptions, determined by the insurer pursuant to requirements of Model #820 and the Valuation Manual   • Reflects risks that are associated with the policies being valued capable of materially affecting the reserve  Note: The definition above does not preclude the use of appropriate guardrails or the use of a formulaic component.</td>
</tr>
<tr>
<td>2. Modeling complexity</td>
<td>o The APF should be practical to implement                                                                                 o The APF should be auditable                                                                 o The APF should allow simplified methods                                                                 o The APF should provide a safe harbor (e.g. use ( \frac{1}{2} c ), if a company has a de minimis amount of YRT reinsurance or the product type (e.g. term) produces a small modeled reserve credit. This is in the spirit of the definition of PBR as reflecting risks that are “capable of materially impacting the reserve.”</td>
</tr>
<tr>
<td>3. Variation in interpretations leading to variation in results</td>
<td>o The APF should contain an appropriate degree of alignment between the modeled reinsurance premiums paid by the ceding company and the modeled death claims paid by the assuming company.                                                                 o The APF should allow for variations in results due to treaty differences                                                                 o The APF should allow for variations in results from established relationships between a reinsurer and the ceding company that can be supported in the PBR Actuarial Report, and there should be appropriate application of ASOP 56 Section 3.1.6 (Assumptions used as Input)                                                                 o The APF should contain clear and unambiguous language                                                                 o The wording of the APF should not result in a wide range of company interpretations (i.e., there are clear requirements). It should produce similar reserve credits for two identical companies, (i.e. companies with the same products, inforce, mortality experience, reinsurance treaties, etc.).</td>
</tr>
<tr>
<td>4. Potential for asymmetry between assumed and ceded interpretation</td>
<td>o Although mirror reserving is not a VM-20 requirement (VM-20 Section 8.C.1), the APF should provide guidance on modeling non-guaranteed reinsurance features to be considered by both ceding companies and assuming companies that promotes a reasonable relationship between 1) the ceding company’s pre-reinsurance reserves vs. 2) the ceding company’s post reinsurance ceded reserve + the reserve held by the assuming company.</td>
</tr>
</tbody>
</table>

VM-20 Section 8.C.1: The company shall use assumptions and margins that are appropriate for each company pursuant to a reinsurance agreement. In such instance, the ceding and assuming companies are not required to use the same assumptions and margins for the reinsured policies.
5. Defined level of risk sharing

- The APF should contain provisions for appropriate risk sharing between reinsurance counterparties such that the level of assuming company loss acceptance produced is realistic and consistent with the projected scenario and treaty provisions.
- The approach for setting assumptions for non-guaranteed reinsurance elements under the APF should be consistent with the considerations in VM-20 Section 8.C.7. In addition to the economic environment considered in 8.C.7.b, the NGE assumptions should reflect other relevant moderately adverse conditions – including a moderately adverse mortality scenario.
- The APF should reflect that assumptions used in determining the modeled reserve should account for any actions that the counterparty has taken or is likely to take (VM-20 Sections 8.C.8 and 8.C.10).

VM-20 8.C.7: The company shall assume that the counterparties to a reinsurance agreement are knowledgeable about the contingencies involved in the agreement and likely to exercise the terms of the agreement to their respective advantage, taking into account the context of the agreement in the entire economic relationship between the parties. In setting assumptions for the NGE in reinsurance cash flows, the company shall include, but not be limited to, the following:
- a. The usual and customary practices associated with such agreements.
- b. Past practices by the parties concerning the changing of terms, in an economic environment similar to that projected.
- c. Any limits placed upon either party’s ability to exercise contractual options in the reinsurance agreement.
- d. The ability of the direct-writing company to modify the terms of its policies in response to changes in reinsurance terms.
- e. Actions that might be taken by a party if the counterparty is in financial difficulty.

VM-20 8.C.8: The company shall account for any actions that the ceding company and, if different, the direct-writing company have taken or are likely to take that could affect the expected cash flows of the reinsured business in determining assumptions for the modeled reserve.

VM-20 8.C.10: The company shall use assumptions in determining the modeled reserve that account for any actions that the assuming company has taken or is likely to take that could affect the expected cash flows of the reinsured business.

6. Consideration of mortality improvement beyond the valuation date

- Differences between the future mortality improvement assumption in the VM-20 prudent estimate mortality (currently not allowed) and any future mortality improvement assumption embedded in the current scale of YRT premiums should not be the primary driver to an undue reduction in the aggregate reserve for the business, that is the sum of the ceding company’s post-reinsurance reserve and the assuming company’s reserve.

7. Requirements outside the Valuation Manual

- The APF must coordinate and align with the Accounting Practices and Procedures Manual (APPM), or if needed, acknowledge that changes would be required:
  - The APF should consider SAP No. 61R
  - The APF should consider APPM Appendix A-791

8. Other considerations not shown above

- The APF should promote a level playing field (e.g. not favor large companies over small companies, not favor companies with YRT reinsurance over companies without YRT reinsurance)
- The APF should not encourage the use of captives
- The APF should not lead to market disruption (e.g. discouraging use of YRT reinsurance; greatly increasing cost to consumers)
- The APF should not discourage innovation
- The APF should handle all existing types of non-guaranteed reinsurance. While the most commonly considered non-guaranteed reinsurance feature

---

Commented [OS1]: Consider changing 8.C.7.b economic environment in Valuation Manual to encompass more potential moderately adverse environments – such as a moderately adverse mortality environment.
| 9. Outstanding Questions | o Should negative reserve credits be avoided, i.e. should there be a floor on the reserve credit (such as ½ Cx)? |

is future YRT premium rates, other non-guaranteed features are also to be considered, such as non-guaranteed expense allowances.

o The APF should ideally contain language flexible enough to address emerging reinsurance structures that have not yet been seen in the marketplace.
**Criteria to Assess VM-20 Solutions for Modeling Non-guaranteed YRT Reinsurance**

Below is a list of potential criteria that could be used to assess proposed VM-20 amendments regarding non-guaranteed YRT reinsurance.

<table>
<thead>
<tr>
<th>Consideration</th>
<th>Potential APF selection criteria and other requirements</th>
</tr>
</thead>
</table>
| 1. Level of prescription | o The APF should be principles-based, as defined in VM Section I, Overview of Reserve Concepts:  
  ▪ Uses one or more methods, or one or more assumptions, determined by the insurer pursuant to requirements of Model #820 and the Valuation Manual  
  ▪ Reflects risks that are associated with the policies being valued capable of materially affecting the reserve  
  Note: The definition above does not preclude the use of appropriate guardrails or the use of a formulaic component.  
  
  **JR Comment:** If the APF pertains to DR and/or SR, then meeting this criterion is automatic. Consider deleting |
| 2. Modeling complexity | o The APF should be practical to implement  
  **JR Comment:** “Practical” is in the eye of the beholder.  
  o The APF should be auditable  
  **JR Comment:** “Auditable”, which pertains to the VM-31 report, depends on actuary’s ability to explain (to regulator’s satisfaction), which an APF can neither confirm nor deny.  
  o The APF should allow simplified methods  
  **JR Comment:** VM already has guidance on simplifications, which should be followed where applicable. Consider deleting.  
  o The APF should provide a safe harbor (e.g. use $\frac{1}{2}c$, if a company has a de minimis amount of YRT reinsurance or the product type (e.g. term) produces a small modeled reserve credit). This is in the spirit of the definition of PBR as reflecting risks that are “capable of materially impacting the reserve.”  
  **JR Comment:** Failure to provide a safe harbor should not lead to exclusion. |
| 3. Variation in interpretations leading to variation in results | o The APF should contain an appropriate degree of alignment between the modeled reinsurance premiums paid by the ceding company and the modeled death claims paid by the assuming company.  
  **JR Comment:** Add “from the perspectives of the ceding and assuming companies, respectively”.  
  Also, who decides “appropriate degree of alignment”?  
  o The APF should allow for variations in results due to treaty differences |
| 4. Potential for asymmetry between assumed and ceded interpretation | o Although mirror reserving is not a VM-20 requirement (VM-20 Section 8.C.1), the APF should provide guidance on modeling non-guaranteed reinsurance features to be considered by both ceding companies and assuming companies that promote a reasonable relationship between 1) the ceding company’s pre-reinsurance reserves vs. 2) the ceding company’s post reinsurance ceded reserve + the reserve held by the assuming company.  
VM-20 Section 8.C.1: The company shall use assumptions and margins that are appropriate for each company pursuant to a reinsurance agreement. In such instance, the ceding and assuming companies are not required to use the same assumptions and margins for the reinsured policies.  
JR Comment: Ceding and assuming companies are independent actors. An APF cannot ensure a reasonable relationship via principle-based calculations alone. |
|---|---|
| 5. Defined level of risk sharing | o The APF should contain provisions for appropriate risk sharing between reinsurance counterparties such that the level of assuming company loss acceptance produced is realistic and consistent with the projected scenario and treaty provisions.  
  o The approach for setting assumptions for non-guaranteed reinsurance elements under the APF should be consistent with the considerations in VM-20 Section 8.C.7. In addition to the economic environment considered in 8.C.7.b, the NGE assumptions should reflect other relevant moderately adverse conditions – including a moderately adverse mortality scenario.  
  o The APF should reflect that assumptions used in determining the modeled reserve should account for any actions that the counterparty has taken or is likely to take (VM-20 Sections 8.C.8 and 8.C.10)  
VM-20 8.C.7: The company shall assume that the counterparties to a reinsurance agreement are knowledgeable about the contingencies involved in the agreement and likely to exercise the terms of the agreement. |
### 6. Consideration of mortality improvement beyond the valuation date

- Differences between the future mortality improvement assumption in the VM-20 prudent estimate mortality (currently not allowed) and any future mortality improvement assumption embedded in the current scale of YRT premiums should not be the primary driver to an undue reduction in the aggregate reserve for the business, that is the sum of the ceding company’s post-reinsurance reserve and the assuming company’s reserve.

### 7. Requirements outside the Valuation Manual

- The APF should coordinate and align with the Accounting Practices and Procedures Manual (APPM), or if needed, acknowledge that changes would be required:
  - The APF should consider SSAP No. 61R
  - The APF should consider APPM Appendix A-791

**Comment: If APPM sets YRT reserve at \(1/2\) \(cx\), then any APF will require a change to APPM. (My hope is that the APPM change is to refer to VM rather than set out a specific formula, so future changes to VM don’t require APPM changes.)**

### 8. Other considerations not shown above

- The APF should not encourage the use of captives

**Comment: The use of captives is motivated by one or more outcomes. Consider identifying which specific outcomes are undesirable.**

- The APF should not lead to market disruption (e.g. discouraging use of YRT reinsurance; greatly increasing cost to consumers)

**Comment: Who is the judge?**

- The APF should not discourage innovation

**Comment: Who is the judge?**

---

Commented [OS1]: Consider changing 8.C.7.b economic environment in Valuation Manual to encompass more potential moderately adverse environments – such as a moderately adverse mortality environment.
| 9. Outstanding Questions | The APF should handle all existing types of non-guaranteed reinsurance. While the most commonly considered non-guaranteed reinsurance feature is future YRT premium rates, other non-guaranteed features are also to be considered, such as non-guaranteed expense allowances.

*JR Comment:* So far, we have only considered YRT. Let's nail down YRT and then expand later if needed.

| 9. Outstanding Questions | The APF should ideally contain language flexible enough to address emerging reinsurance structures that have not yet been seen in the marketplace.

*JR Comment:* If the structure has not been seen in the marketplace, a determination as to whether a particular APF is applicable doesn’t seem possible. Let's nail down YRT.

| 9. Outstanding Questions | Should negative reserve credits be avoided, i.e. should there be a floor on the reserve credit (such as ½ Cx)?

© 2021 National Association of Insurance Commissioners
The Life Actuarial (A) Task Force met Jan. 21, 2021. The following Task Force members participated: Texas, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Tynesia Dorsey, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Range represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); Scott A. White represented by Craig Chupp (VA); and James A. Dodrill represented by Tim Sigman (WV).

1. **Adopted its 2020 Fall Meeting Minutes**

Mr. Chou made a motion, seconded by Mr. Ostlund, to adopt the Task Force’s Dec. 3, 2020, minutes (see NAIC Proceedings – Fall 2020, Life Actuarial (A) Task Force). The motion passed unanimously.

2. **Heard an Update on IRC Section 7702**

Paul Graham (American Council of Life Insurers—ACLI) said the U.S. Congress passed the federal Consolidated Appropriations Act of 2020 at the end of December 2020. He said the Act included COVID-19 relief and changes to Section 7702 of the Internal Revenue Code (IRC), replacing the hard-coded 4% rate for the cash value accumulation test and the 6% rate used in the net single premium calculation for the guideline premium test with an indexed rate. He said that based on the revisions to Section 7702, a 2% life insurance nonforfeiture interest rate floor will be in place for 2021 and 2022, allowing a reduction in the maximum nonforfeiture interest rate to 3.75% for guarantee durations greater than 20 years. He said the ACLI will review the relevant wording in VM-02, Minimum Nonforfeiture Mortality and Interest, to fine-tune as needed. Mr. Boerner said that companies will have 12 months to comply with the 3.75% rate for states that provide the 12-month option as found in the Standard Nonforfeiture Law for Life Insurance (#808), Section 5cH(1). He said state insurance regulators should expect a surge in product filings.

3. **Heard a Status Report on the ESG and Exposed the Scenario Statistics and Reports, the Senior Picker Tool, and the Stochastic Exclusion Ratio Test Documents**

Pat Allison (NAIC) discussed the revised economic scenario generator (ESG) implementation timeline (Attachment Seven-A). She said the timing of the Executive Committee (EX) and Plenary anticipated adoption of ESG-related Valuation Manual amendments has been moved from the Summer National Meeting to the Fall National Meeting. She said the Life Insurance and Annuities (A) Committee and the Task Force target adoption dates have been adjusted accordingly. She discussed other target dates that have been adjusted to reflect the revised adoption dates. Brian Bayerle (ACLI) said the timeline is still aggressive and does not allow time for a second round of field testing, if necessary. Mr. Boerner said that if an additional field test is needed, the date for adoption of the Valuation Manual amendments will likely be pushed to 2022.

Ms. Allison said the initial ESG recommendations exposed for public comment in December will be revised to include an addendum indicating the types of feedback being sought. The exposure period was extended to March 7 without Task Force objection. Ms. Allison said the ESG field test is expected to run from June through August. NAIC staff will work with state insurance regulators to design the ESG field test. A request for field test participants will be distributed in the next few days. Companies will be asked to respond by March 1. Reports developed from field test results will be shared publicly.

Scott O’Neal (NAIC) shared that ESG-related exposures are posted on the Exposure tab of the Task Force web page. He said production scenario files and documentation will be available on the landing page of the Conning website. He said instructions for accessing these items are provided in the “Navigation to ESG Information” document (Attachment Seven-B) on the Related Documents tab of the Task Force web page. Mr. O’Neal and Dan Finn (Conning) discussed the Scenario Statistics and Reports
(Attachment Seven-C), the Scenario Picker Tool (Attachment Seven-D), and the Stochastic Exclusion Ratio Test (Attachment Seven-E) documents.

Mr. Boerner exposed the three documents for a 45-day public comment period ending March 7.

Having no further business, the Life Actuarial (A) Task Force adjourned.
## DRAFT FOR DISCUSSION

### ESG Implementation Timeline

ESG Exposure 1/21/21: Scenario Statistics and Reports

A set of scenario statistics and reports (ESG Timeline Item #13) are being exposed for a public comment period. Please send comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021.

Background and Monthly Process:
To help companies understand the range of results, Conning will produce statistics and reports based on the scenario output. These will be delivered with the scenario output by 4:00 PM Central Time on the first business day of the following month.

Simulation Summary
For the base model, there will be one Simulation Summary report for each column of the Basic dataset.

The Simulation Summary will include:

- a “fan chart” illustrating percentiles of the return distribution over time,
- a table of statistics at different periods in the projection, and
- a graph of the cross-sectional volatility throughout the projection.

The Simulation Summary reports for the 10,000 scenarios as of 12/31/19 exposed on December 18th, 2020 can be accessed via a link from the PBR section on the NAIC’s website to the ESG landing page on Conning’s website, or by clicking the following link directly below.

Simulation Summary as of 12/31/19

Note: The Simulation Summary currently contains separate reports for income and price and displays monthly returns. It may be preferable to:

- summarize just total returns, and/or
- summarize returns year over year, instead of monthly.

We are seeking feedback on this.
**Average Yield Summary**

To help envision the progression of yield curves, Conning will also produce a summary of average yields over time. (Note: To avoid over burdening the chart, the report will only include selected future time periods.)
**Additional Items**

Conning will also provide charts to help analyze other key items. For example, this may include information on yield curve inversion frequency, correlation (e.g. between different points on the yield curve, between equity and treasury returns, etc.), excess returns (e.g. excess returns over cash, equity returns over long treasury returns, long corporates over long treasuries etc.). The list of items can be extended as needed.

**Subset Reports**

Conning will produce reports which compare the scenario subset results to those from the entire distribution of 10,000 scenarios. For the Yields, the percentile results from the 10,000 scenarios would be compared to the percentiles taken from each subset and would be presented in a similar fashion to the graph below where the full set of GEMS scenarios is compared to AIRG scenarios. The actual subset reports will be available shortly via a link from the PBR section on the NAIC’s website to the ESG landing page on Conning’s website.
Request for Comments

Please send your comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021. Comments are appreciated on any aspect of the reports, including:

- the format and useability of the reports,
- the desired statistics to be included,
- whether reports for total returns are more desirable than separate reports for income and price,
  and
- whether returns should be summarized on a monthly or annual basis.
ESG Exposure 1/21/21: Scenario Picker Tool

A Scenario Picker Tool (ESG Timeline Item #9) is being exposed for a public comment period. Please send comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021.

**Background**

One of the components of the Academy Interest Rate Generator which needs to be replaced is the Scenario Picker Tool. This tool creates subsets (i.e., 50, 200, 500, and 1000 scenarios) from the full set of 10,000 scenarios, which can be used to reflect the full distribution.

Currently, if a scenario subset is used in reserve calculations, VM-20 prescribes use of the scenario picker tool but VM-21 does not. Applicable VM language is shown below.

VM-20 Section 7.G.2.c:

Use of fewer scenarios rather than a higher number of scenarios is permissible as a model efficiency technique provided that:

i. The smaller set of scenarios is generated using the scenario picker tool provided within the prescribed scenario generator, and

ii. The use of the technique is consistent with Section 2.G.

VM-21 Section 8.F:

1. For straight Monte Carlo simulation (with equally probable “paths” of fund returns), the number of scenarios should typically equal or exceed 1000. The appropriate number will depend on how the scenarios will be used and the materiality of the results. The company should use a number of scenarios that will provide an acceptable level of precision.

2. Fewer than 1,000 scenarios may be used provided that the company has determined through prior testing (perhaps on a subset of the portfolio) that the CTE values so obtained materially reproduce the results from running a larger scenario set.

3. Variance reduction and other sampling techniques are intended to improve the accuracy of an estimate more efficiently than simply increasing the number of simulations. Such methods can be used provided the company can demonstrate that they do not lead to a material understatement of results. Many of the techniques are specifically designed for estimating means, not tail measures, and could in fact reduce accuracy (and efficiency) relative to straight Monte Carlo simulation.

**Guidance Note:** With careful implementation, many variance reduction techniques can work well for CTE estimators. For example, see Manistre, B.J., and Hancock, G. (2003), “Variance of the CTE Estimator,” 2003 Stochastic Modeling Symposium, Toronto, September 2003.

4. The above requirements and warnings are not meant to preclude or discourage the use of valid and appropriate sampling methods, such as Quasi Random Monte Carlo (QRMC), importance sampling or other techniques designed to improve the efficiency of the simulations (relative to pseudo-random Monte Carlo methods).
**Scenario Picker Tool Methodology**

The proposed scenario picker tool follows the current Academy methodology (https://www.actuary.org/sites/default/files/files/esg/2009_ESWG_tool.zip) to create scenario subsets. Scenario subsets as of a given valuation date will contain the same scenarios for all users.

**Monthly Process**

Conning will run the Basic Data Set as of each month-end and produce the full set of 10,000 scenarios, along with four subsets containing 50, 200, 500, and 1,000 scenarios. This process will be completed in time to post the output by 4:00 PM Central Time on the first business day of the following month.

Note: Validation reports for the Basic Data Set and additional statistics will be delivered simultaneously with the scenario files. Users will be provided access to these items via a link from the PBR section on the NAIC’s website to the ESG landing page on Conning’s website.

Note: Rather than providing a scenario picker tool for users to run, Conning will deliver four scenario subsets (50, 200, 500, and 1,000) monthly. Users will not be able to pick a custom number of scenarios.

**12/31/2019 Scenario Subsets**

Scenario subsets produced as of 12/31/2019 will be provided shortly via a link from the PBR section on the NAIC’s website to the ESG landing page on Conning’s website. These will be selected from the full set of 10,000 scenarios included with the December 18th, 2020 exposure.

**Request for Comments**

Please send your comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021. Comments are appreciated on any aspect of the scenario picker tool, such as:

1. The methodology used in the proposed scenario picker tool,
2. The number and sizes of the subsets to be produced, and
3. The format and usability of the output.
ESG Exposure 1/21/21: VM-20 Stochastic Exclusion Ratio Test (SERT) Scenarios

A methodology to produce the SERT scenarios (ESG Timeline Item #11) is being exposed for a public comment period. Please send comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021.

**Background**
A tool must be developed to produce the prescribed set of 16 scenarios to be used for the VM-20 Stochastic Exclusion Ratio Test (SERT).

**Methodology**
The methodology used to produce the SERT scenarios is intended to follow the current AAA methodology (add link) except where the AAA methodology appears to differ from the scenario descriptions provided in VM-20 Appendix 1.E. For scenarios 13 through 16, the equity scenarios are described as “maintain the cumulative equity return at the 90% (or 10%) level”. The new SERT methodology follows this description. However, the equity returns for scenarios 13-16 produced in the AAA ESG have a delayed pop-up or pop-down.

The recommendation is to convert the Academy’s methodology into target percentiles for the three key variables: 1-Year and 20-Year Treasury Yields and Large Cap Total Return. Note that for scenario 10, the target percentiles are applied to the spread between the short and long rates. See the “Percentile Selection.xlsx” document below to find graphs and formulae describing how the Academy’s SERT methodology will be converted.

Going forward, Conning will take these percentiles and apply them to each projection’s 10,000 scenarios in order to produce 16 paths for these variables. For the additional Treasury Yields, Conning will apply the existing interpolation methodology. For the additional native GEMS equity models (i.e. Mid Cap, Small Cap and Aggressive US Equity), Conning will apply the percentiles from the Large Cap selection. These values will be entered into GEMS using the native User Path technology. This will allow GEMS to calculate all of the other items in both the Basic and Robust datasets conditional on these values. For example, the returns on the Long Inv Corp Bonds will include the following:

- Changes in Treasury Yields
- Expected changes in Corporate Spreads due to Treasury and Large Cap movements
- Expected transitions, defaults and recoveries due to current spread levels
12/31/2019 SERT Scenarios
SERT Scenarios produced as of 12/31/2019 will be provided shortly via a link from the PBR section on the NAIC’s website to the ESG landing page on Conning’s website. These SERT scenarios will be produced to align with the calibration used in the December 18th, 2020 exposure of 10,000 scenarios.

Request for Comments
Please send your comments to Reggie Mazyck (RMazyck@naic.org) by close of business March 7th, 2021. Comments that provide feedback on the methodology used, the output produced, the process to access the output, the format of the output files, or any other aspect of the exposure are welcome.
The Life Actuarial (A) Task Force met Dec. 17, 2020. The following Task Force members participated: Texas, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Tynesia Dorsey, Vice Chair, represented by Peter Weber (OH); Ricardo Lara represented by Ben Bock and Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Shannon Whalen represented by Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Tanji J. Northrup represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Exposed the Goals Spreadsheet and Treasury Targets and Parameters Spreadsheet

Daniel Finn (Conning Inc.) provided a GEMS equity and corporate models overview presentation (Attachment Eight-A), which outlines the potential goals related to the models and gives background information and rationale for each goal. Pat Allison (NAIC) discussed a spreadsheet that lists the goals for U.S. Treasury rates, equity and corporate bond returns, and the market proxies used to produce fund returns. The spreadsheet includes the related decisions the Task Force is asked to make for each goal and the initial Conning recommendations for each decision. Connie Tang (Prudential) asked if information supporting the initial Conning recommendations will be made available to interested parties. Ms. Allison said access to the Conning basic data set as of Dec. 31, 2019, calibrated based on the initial set of recommendations, will be made available on the Principle-Based Reserving (PBR) page on the Industry tab of the NAIC website (https://content.naic.org/pbr_data.htm). Mr. Finn said the information will be updated over time to reflect interested party comments and Task Force decisions.

Mr. Boerner asked if any Task Force members objected to exposing the spreadsheet summarizing the decisions needed for the Treasury, equity and corporate models (Attachment Eight-B) and the spreadsheet showing the parameters of the Treasury Model (Attachment Eight-C) for a public comment period ending Jan. 31. There was no objection from Task Force members.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Overview of GEMS® Equity and Corporate Models
Dec. 17, 2020
Dan Finn, FCAS, ASA – Managing Director at Conning
Pat Allison, FSA, MAAA – NAIC Managing Life Actuary

Agenda

1. Presentation Approach
2. Reference Materials and Documentation
3. GEMS® Equity and Corporate Models: Potential Goals
4. Exposure for comments
Presentation Approach

1. Potential goals relating to the GEMS® Equity and Corporate Models are outlined.

2. For each goal:
   a. Background information is provided for educational purposes, along with an underlying rationale
   b. Similarities and differences between the Academy ESG and GEMS® will be discussed
   c. Items requiring decisions are highlighted, along with initial recommendations

Reference Materials and Documentation

The following materials are available on the LATF webpage (Related Documents tab):
https://content.naic.org/cmte_a_latf.htm
1. NAIC Technical Documentation - Corporate Bonds.pdf
2. NAIC Technical Documentation - Equity, DRAFT.pdf

ESG Background Information:
Economic Scenario Generators: A Practical Guide
https://www.soa.org/resources/research-reports/2016/2016-economic-scenario-generators/
Goal relating to equity and bond fund scenarios:

1. Returns should be provided for funds representative of those offered in U.S. insurance products

Rationale and Background: Funds must be mapped to proxy funds. Applicable VM-21 language is shown below. There is similar language in VM-20.

VM-21 Section 4.A.2 (second paragraph) - An appropriate proxy fund for each variable subaccount shall be designed in order to develop the investment return paths. The development of the scenarios for the proxy funds is a fundamental step in the modeling and can have a significant impact on results. As such, the company must map each variable account to an appropriately crafted proxy fund normally expressed as a linear combination of recognized market indices, sub-indices or funds.
### Equity Scenarios: AAA ESG compared to GEMS®

<table>
<thead>
<tr>

<td>U.S. Small Capitalization Index</td>
<td>Russell 2000</td>
</tr>
<tr>
<td>Aggressive Equity**</td>
<td>25% Emerging Markets, 12.5% NASDAQ, 62.5% Hang Seng</td>
<td>MSCI Emerging Market, NASDAQ</td>
</tr>
</tbody>
</table>

Additional GEMS® Returns: Russell Midcap (Diversified Midcap U.S. Equity)

The AAA ESG Model produces total returns.

GEMS® returns will be split between income and price, which can be combined to get total returns. Dividends are linked to the 10-Year Treasury yield and are negatively correlated with S&P price movements. Dividends do not affect total returns.

*Source: AAA LCAS C3 Phase II RBC for Variable Annuities: Pre-Packaged Scenarios January 2006

**The Academy Equity Model Aggressive Equity proxy is not meant to suggest a representative asset profile for this class but used merely to build an historic index with high volatility and sufficient history.

Note: The proposed set of equity returns allows direct mapping to MSCI Emerging Market, NASDAQ, and the additional Russell Midcap. This would eliminate a blended mix of indices for the Aggressive Equity investment category (VM-20 and VM-21 allow companies to create their own proxy fund blends).

Rationale for this goal: It is important to incorporate a historical period that captures an appropriate range of market dynamics while also being careful not to introduce bias into the generated scenarios.

AAA ESG compared to GEMS®:
- Generally, GEMS Equity model uses historical data back to 1994. The Corporate model uses historical data back to 1991
  - Impacted by large spike in 2008 Financial Crisis

Decision to be made: What historical period would regulators like to use?

Initial Recommendation: Use Conning’s current calibration.

*Source: CONSTRUCTION AND USE OF PRE-PACKAGED SCENARIOS TO SUPPORT THE DETERMINATION OF REGULATORY RISK-BASED CAPITAL REQUIREMENTS FOR VARIABLE ANNUITIES AND SIMILAR PRODUCTS, Revised 2006, AAA C-3 Phase II Working Group
Goal relating to the equity scenarios:

3. **The equity model should have stochastic volatility and the initial volatility should be updated frequently**

**Rationale for this Goal:** Most equity models have stochastic volatility because this allows for fatter tails in the scenario distribution. Without it, there would be little ability to produce big drops, such as the 2008 financial crisis or Black Monday.

The initial volatility should be updated frequently to reflect recent market movements.

**Background:** Chicago Board Options Exchange Volatility Index (VIX) reflects the market's estimate of future volatility. When the VIX is high, there tends to be more volatility in the short term.

**AAA ESG compared to GEMS®:** Both have stochastic volatility. However, in the AAA ESG, the initial volatility is not updated. So, each time a new set of scenarios is produced, the same starting level of volatility is used.

In GEMS, the initial volatility is updated based on recent market movements (usually during the last month). The process references the VIX and is consistent with how the parameter is simulated.

**Decision to be made:** Do regulators want to begin using a method to update the initial volatility level?

**Initial Recommendation:** Utilize GEMS stochastic volatility and process for continued parameter calibration.
AAA ESG compared to GEMS®: S&P 500 Total Return by Year with 9/30/20 Start

Impact of Changing Initial Volatility: GEMS®
S&P 500 Total Return, 12 Month Projections with 9/30/20 Start
Goal relating to the equity scenarios:

4. The ESG should have the ability to generate very large losses and gains in short periods of time (i.e. jumps)

Rationale and Background: Historically there have been short periods of large losses (e.g. 1Q 2020, Black Monday) as well as short periods with large gains (e.g. 2Q 2020). This suggests the need for a jump process.

AAA ESG compared to GEMS®:

- AAA ESG does not have a jump process.
- The GEMS jump process is based on historical data and a target for the fatness of the tails (e.g. how likely is a Black Monday). GEMS has more moments and can allow skew and kurtosis, which impact the fatness of the tails.

Decision to be made: How will the targets which impact the calibration of the jump process (e.g. skew and kurtosis) be expressed?

Initial Recommendation: Use Conning’s existing calibration.
Goal relating to the equity scenarios:

5. Equity scenarios need to reflect the possibility of a very long recovery after a period of losses

Rationale and Background: During certain periods of time after periods of recession or depression, there have been extended periods of equity market recovery. This is important to reflect in the scenarios due to the long-term nature of some insurance liabilities.

**AAA ESG compared to GEMS®:** Both the AAA ESG and GEMS can produce equity scenarios that exhibit low returns over an extended period of time. This is largely driven by volatility and the expected return. If there is enough volatility or if there are low enough expected returns, low for long scenarios will be produced.

As of 9/30/20, GEMS produced 34 scenarios with cumulative negative returns over a 30-year projection compared to 3 scenarios for the AAA ESG.

**Decision to be made:** None

GEMS Scenarios with All Negative Cumulative Returns

© 2021 National Association of Insurance Commissioners
Goal relating to the equity scenarios:

6. There should be higher correlation in the tail scenarios between different equity indices

Rationale and Background: Historically, equity markets have been highly correlated in bad times. This is particularly important for reserve and capital CTE calculations.

Applicable VM-21 language:
VM-21 8.C.9: It is not necessary to assume that all markets are perfectly positively correlated, but an assumption of independence (zero correlation) between the equity markets would inappropriate exaggerate the benefits of diversification. An examination of the historic data suggests that correlations are not stationary and that they tend to increase during times of high volatility or negative returns. As such, the company should take care not to underestimate the correlations in those scenarios used for the reserve calculations.

AAA ESG compared to GEMS®:
• AAA ESG uses a static correlation matrix based on data going back to 1953
• GEMS is capable of producing returns that exhibit higher degrees of correlation in the tail scenarios. GEMS correlations are based on historical data going back mainly to 1994, and back to 1953 for some components.

Decision to be made: Should the Conning calibration be utilized or would regulators like to calibrate to a specific historical period?
Initial Recommendation: Use Conning’s existing calibration.

*Historical Correlation measured from 1979 to current
Goal relating to the equity scenarios:

7. There should be a link between equity returns and Treasury yields

Rationale and Background: It is difficult to see strong relationships between equities and Treasuries because the equity market is so volatile. However, investors typically demand equity returns in excess of those offered by risk-free assets to compensate for bearing risk. Today’s low yields imply lower equity returns.

AAA ESG compared to GEMS®:
- AAA ESG has no link between the equity returns and Treasury yields.
- GEMS links expected equity return to current short Treasury Yield
  - Produces different expected returns across start dates
  - Also makes them impacted by Treasury model’s mean reversion
  - This is a functional relationship, not a correlation

Decisions to be made:
1. Do regulators want a link between equity and treasury scenarios?
2. If so, are any changes to the functional relationship between equities and Treasuries desired?

Initial Recommendation: Use Conning’s existing calibration.

Impact of Changing Initial Treasury Yield
S&P 500 Total Return, 12 Month Projections with 9/30/20 Start

Prepared by Conning. Source: GEMS® Economic Scenario Generator scenarios
Goal relating to the bond fund scenarios:

8. The same model should be used to produce bond fund returns for the Basic and Robust Data Sets*, and the returns should reflect credit rating transitions, defaults, and dynamic spreads.

Rationale and Background:
- Use of the same model will ensure consistency between the total returns in the Basic and Robust Data Sets.
- The Basic and Robust Data Sets provide different levels of detail in the output.
  - The Basic Data Set includes only the total returns for the bond indices.
  - The Robust Data Set will provide details on the components (i.e., spreads, transitions, and defaults).

*The Basic Data Set will be prescribed. The Robust Data Set is optional and is available at a cost.

AAA ESG compared to GEMS®: The AAA ESG and GEMS Basic Data Set both provide total returns for bond indices.
- The AAA ESG total returns are linked to Treasuries, with a remainder modeled as a residual based on historical data
- GEMS Basic Data Set total returns will reflect modeled spreads, transitions, and defaults. Returns are expected to be between Treasuries and Corporate Yields minus a haircut.
  - “Haircut” typically reflects impact of defaults over a holding period
  - GEMS’ returns will also reflect up- and downgrades
  - Since downgrades tend to be more frequent and have a larger impact, the impact of including them will tend to exceed “haircut”

Decision to be made: Do regulators want any changes to the methodology used to generate credit rating transitions, defaults, and dynamic spreads?

Initial Recommendation: Use Conning’s existing calibration.
As Treasury yields increase, bond fund returns tend to decrease

As corporate spreads over Treasuries increase, bond fund returns tend to decrease
As downgrade probability increases, bond fund returns tend to decrease.

- Much of the difference between bars 1 and 3 is driven by higher volatility in the GEMS Treasury model.
- Bars 2 and 4 show the difference between the Corporate returns and Treasury returns.
Goal relating to the bond fund scenarios:

9. Separate yield curves should be generated by rating, and they should be linked to each other

Rationale and Background:
• Life insurers purchase a wide range of Corporate bonds.
• There are large differences in spreads between ratings.
• For blended bond funds (e.g., 50/50 blend of A/BBB), the total returns provided will be driven off blends of distinctly rated bonds. Bond returns by rating will not be provided in the Basic Data Set

Decision to be made: None
Goal relating to the bond fund scenarios:

10. The spread between Treasuries and corporate bonds should be stochastic

Rationale and Background: This allows spreads to gap out like they did during the 2008 Financial Crisis and 1Q 2020. The tail of the Corporate Bond returns is driven by these types of jumps. The magnitude of the jump has been significantly different between ratings.

This makes stochastic spreads very important for life insurer’s capital considerations, especially given the very large allocation to bond investments.

Decision to be made: None
Historical Corporate Spreads over US Treasuries (2008 Financial Crisis)

Projected GEMS Corporate Spreads over US Treasuries (single scenario)
Goal relating to the bond fund scenarios:

11. The ESG should include bond credit rating transitions and they should be dynamic

Rationale and Background: When Corporate spreads gap out, the market is indicating that these bonds have additional risk. The higher the spread, the more downward rating transitions.

- Increasing the volatility of spreads is helpful, but it won’t impact expected returns much in these situations
- Need to have some additional risk of downgrade (e.g., make an A Corporate “act” like a BBB Corporate)

Without this, the extra spread will simply lead to extra returns

Decision to be made: Do regulators want to change any of the assumptions driving spreads, rating transitions, and defaults?

Initial Recommendation: Use Conning’s existing calibration.

As spreads increase, downgrade probability increases
Summary of Goals

Goals relating to equity and bond fund scenarios:
1. Returns should be provided for funds representative of those offered in U.S. insurance products.
2. The ESG should be calibrated using an appropriate historical period.

Goals relating to the equity scenarios:
3. The equity model should have stochastic volatility and the initial volatility should be updated frequently.
4. The ESG should have the ability to generate very large losses and gains in short periods of time (i.e. jumps).
5. Equity scenarios need to reflect the possibility of a very long recovery after a period of losses.
6. There should be higher correlation in the tail scenarios between different equity indices.
7. There should be a link between equity returns and Treasury yields.

Goals relating to the bond fund scenarios:
8. The same model should be used to produce bond fund returns for the Basic and Robust Data Sets*, and the returns should reflect credit rating transitions, defaults, and dynamic spreads.
9. Separate yield curves should be generated by rating, and they should be linked to each other.
10. The spread between Treasuries and corporate bonds should be stochastic.
11. The ESG should include bond credit rating transitions and they should be dynamic.

ESG Exposure

The items listed below are exposed for a public comment period ending on 1/31/21.

1. A spreadsheet summarizing the decisions needed for the Treasury, equity, and corporate models (these were included in the 12/3/20 and 12/17/20 LATF presentations), along with an initial set of recommendations.
2. The entire Basic Data Set as of 12/31/19, calibrated based on the initial set of recommendations. This includes:
   • The full set of 10,000 interest rate scenarios
   • Equity and bond fund returns for the funds shown on slide 9.
   • Fan charts summarizing the interest rate scenarios
3. A spreadsheet showing the parameters of the Treasury model, and how targets (e.g., short and long-term mean reversion level, mean reversion speed) are converted into these parameters.

Notes regarding the materials:
• The initial set of recommendations and resulting scenarios represent a first cut at the types of changes that may be desired for the ESG. Additional modifications are expected based on comments received.
• These scenarios are a starting point for discussions, and are not intended to be used for an industry field test. A formal field test is currently planned in the March - May timeframe.
• Comments are appreciated on any aspect of the ESG.

From: Rhonda Ahrens, Chair
The Longevity Risk (E/A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Longevity Risk (A) Subgroup to the Life Actuarial (A) Task Force

The Longevity Risk (A) Subgroup has not met since the Fall National Meeting and is not likely to meet prior to the Summer National Meeting. A Drafting Group has been formed to contemplate reserve requirements related to pension risk transfer (PRT) and longevity reinsurance (LR) transactions that are more specific to the PRT reserves and are not solely related to the longevity component. The Subgroup will reconsider C-2 RBC for PRT products or LR transactions after reviewing the Drafting Group’s recommendations for resolution of identified issues.

From: Rhonda Ahrens, Chair
The Guaranteed Issue (GI) Life Valuation (A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the GI Life Valuation (A) Subgroup to the Life Actuarial (A) Task Force

The GI Life Valuation (A) Subgroup has not met since the Fall National Meeting and may meet prior to the Summer National Meeting depending on availability of subgroup members or their concerns. Otherwise, it is in a dormant/monitoring mode given that there have been no new known studies of GI Life mortality that could prove useful in formulating a new prescriptive requirement for the reserves for GI Life products. One direction we could go is to continue consideration of how to adopt the GI Life table but require companies with credible experience to use a credibility weighted mortality whether their experience is lower or higher than the table.
March 17, 2021

From: Fred Andersen, Chair
       The Experience Reporting (A) Subgroup

To: Mike Boerner, Chair
    The Life Actuarial (A) Task Force

Subject: The Report of the Experience Reporting (A) Subgroup to the Life Actuarial (A) Task Force

The Experience Reporting (A) Subgroup met on March 2, 2021 (see the attached minutes) to discuss plans for collecting life insurance mortality and policyholder behavior data using the NAIC as the statistical agent. There are plans to start developing mandatory reporting of variable annuity data and to continue work on evaluating actuarial aspects of accelerated underwriting in 2021.
The Experience Reporting (A) Subgroup of the Life Actuarial (A) Task Force met March 2, 2021. The following Subgroup members participated: Fred Andersen, Chair (MN); Perry Kupferman (CA); Wanchin Chou (CT); Nicole Boyd (KS); Rhonda Ahrens (NE); Bill Carmello (NY); and Mike Boerner (TX).

1. Received an Update on the Mortality Experience Data Collection Project

Pat Allison (NAIC) provided an overview of the mortality experience data collection project (Attachment Twelve-A). She said companies will be asked to submit data for the 2018 and 2019 observation years using 2020 and 2021 Valuation Manual requirements. Data for 129 companies, representing 90% of industry claims, is expected to be submitted by the Sept. 30 deadline. Ms. Allison said that VM-51, Experience Reporting Formats, lists the data items to be collected and the format to be used for record submission. She said validity checks and reasonability checks will be used to screen the data for accuracy. Jim Stinson (NAIC) discussed the internal NAIC reports, designed using the Tableau software, to facilitate the reasonability checks. Ms. Allison noted that the reasonability checks will include multiyear comparisons. She said data from the Kansas data call was used to help develop the validity and reasonability checks. She requested Subgroup feedback on the data screening approach.

An interested party asked whether each participating company will be asked to sign an agreement that outlines the details of the engagement. Dan Schelp (NAIC) responded that each company will execute a click agreement with the NAIC at the time of data submission. Ms. Allison discussed the multiple methods used to determine whether company submissions are acceptable. She noted the automated validity checks within the Regulatory Data Collection (RDC) tool. She said that the NAIC actuarial team will perform additional data validity checks. The results of the data validity checks will be shared with the submitting companies. Ms. Allison closed with a discussion of the responsibilities of participating companies.

Having no further business, the Experience Reporting (A) Subgroup adjourned.

Validity and Reasonability Checks

VM-50 Section 4.B.3: **Validity checks** are designed to identify:

a. Improper syntax or incomplete coding
b. Data elements containing codes that are not contained within the set of possible valid codes
c. Data elements containing codes that are contained within the set of possible valid codes but are not valid in conjunction with another data element code
d. Required data elements that are not populated

VM-50 Section 4.B.8: At a minimum, **reasonability checks** will include:

a. An unusually large percentage of company data reported under a single or very limited number of categories
b. Unusual or unlikely reporting patterns in a company’s data
c. Claim amounts that appear unusually high or low for the corresponding exposure
d. Reported claims without corresponding policy values and exposures
e. Unreasonable loss frequencies or amounts in comparison to ranges of expectation that recognize statistical fluctuation
f. Unusual shifts in the distribution of business from one reporting period to the next.
VM-50 Section 4.B.8 Part a. An unusually large percentage of company data reported under a **single or very limited number of categories**

RDC Form and Format Screening

• The NAIC’s RDC tool will automatically perform data validity checks when a company uploads their mortality experience data

• The company will receive a report on the data exceptions identified by RDC shortly after they upload their experience data file. The company will then have the option to make corrections or submit their data.

Example:

Actuarial Data Review

Identification of Critical Indications

• “Critical indications” are those that, if not corrected or confirmed, would leave a significant degree of doubt whether the affected data should be used (VM-50 Section 4.B.11)

• The NAIC will report “critical indications” to the company with an explanation of the unusual findings and their possible significance. Under the direction of the state insurance regulators, the NAIC will have reasonable flexibility to implement this, and may grade the severity of indications or simply identify certain indications as critical. (VM-50 Section 4.B.11)

Data Scoring System

• Where quality would not appear to be significantly compromised, the NAIC may use records with missing or invalid data if such invalid or missing data do not involve a field that is relevant or would affect the credibility of the report (VM-50 Section 4.B.5)

• For companies with a body of data for a state, line of business, product type or observation period that fails to meet these standards, the NAIC will use its discretion, with regulatory disclosure of key decisions made, regarding the omission of the entire body of data or only including records with valid data.
Reports to Companies

1. Cover Letter
2. Data Exception Distributions
3. Submission Summary spreadsheet – high level summary (record counts, rejected record counts, acceptance/rejection of submission)
4. Field Distributions
5. Rejected Record List
6. Detail file of all data exceptions with record identifier
Key Company Responsibilities

- There can be nothing known to be inaccurate or deceptive in the reporting (VM-50 Section 4.A.2).

- When the NAIC determines that the cause of an edit exception could produce systematic errors, the company must correct the error and respond in a timely fashion (VM-50 Section 4.A.3). Errors of a consistent nature are referred to as “systematic” (VM-50 Section 4.B.6).

- After notification of syntax errors and missing data elements, Companies are required to respond to the NAIC by submitting a corrected data file (VM-50 Section 4.B.1).

- Companies must respond to data exceptions identified by the NAIC as “critical” (VM-50 Section 4.B.11).

- Companies shall acknowledge and respond to reasonability queries from the NAIC. Corrections for critical indications shall be provided or, when a correction is not feasible, the extent and nature of the error shall be reported to the NAIC. (VM-50 Section 4.B.13)
March 15, 2021

From: Fred Andersen, Chair
The Indexed Universal Life (IUL) Illustration (A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Indexed Universal Life (A) Subgroup to the Life Actuarial (A) Task Force

The Indexed Universal Life Illustration (A) Subgroup has not met since the Fall National Meeting. The Subgroup plans to meet again after any significant market developments following the adoption of *Actuarial Guideline XLIX-A, The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest Sold On or After November 25, 2020 (AG 49-A).*
April 8, 2021

From:  Pete Weber, Chair
       The Variable Annuity Capital and Reserve (E/A) Subgroup

To:    Mike Boerner, Chair
       The Life Actuarial (A) Task Force

Subject: The Report of the Variable Annuity Capital and Reserve (E/A) Subgroup to the Life Actuarial (A) Task Force

The Variable Annuity Capital and Reserve (E/A) Subgroup has not met since the Fall National Meeting. The Subgroup will monitor results of companies implementing the Variable Annuity framework and stand ready to consider any requests of the Task Force or the Life Risk-Based Capital (E) Working Group.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met March 17, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Ahmad Kamil, Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello and Amanda Fenwick (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Voted to Use Two Risk Categories for VM-22 Valuations

Mr. Sartain said the consideration before the Subgroup is whether to have separate reserve categories for deferred and income annuities or have a single reserve category including both product types.

Mr. Carmello made a motion, seconded by Ms. Ahrens, to require two reserve categories for VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, with the requirement defaulting to a single risk category if the motion failed. The motion passed 6–4, with California, Kansas, Missouri, Nebraska, New York and Virginia in favor of the motion.

2. Tabled a Motion to Retain the VM-20 Integrated Risk Management Language

Ms. Lam made a motion, seconded by Mr. Leung, to retain the language in Section 5A of VM-20, Requirements for Principle-Based Reserves for Life Products, that allows for aggregation of products with significantly different risk profiles if the products are managed as part of an integrated risk management process. Ben Slutsker (American Academy of Actuaries—Academy) said the Academy Annuity Reserves and Capital Work Group (ARCWG) recommendation to have principles for aggregation was accompanied by a recommendation for having a single reserve category. He said, given the Subgroup vote for two reserve categories and the lack of clarity surrounding the integrated risk management language, the ARCWG favors removing the language in Section 5A from consideration for VM-22. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI concurs with the ARCWG position. Ms. Hemphill said the language should be removed because it is unclear and may result in differing state insurance regulator interpretations and applications. Mr. Carmello and Ms. Ahrens said they believe the language serves as a useful regulatory tool.

Ms. Lam said she would be willing to amend the motion to include principles that might help clarify the VM-20 language but was unable to immediately offer specific language. Mr. Sartain suggested tabling the motion. Mr. Carmello made a motion, seconded by Ms. Lam, to table the motion. The motion passed unanimously.

3. Voted to Retain the VM-20 SERT Language

Mr. Sartain asked the Subgroup to consider whether the language in VM-20 Section 6.A.2.b.iv prohibiting the grouping of “contract types with significantly different risk profiles” when performing the stochastic exclusion ratio test (SERT) should be retained for VM-22.

Mr. Carmello made a motion, seconded by Ms. Hemphill, to retain VM-20 Section 6.A.2.b.iv language. The motion passed unanimously.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met March 3, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Ahmad Kamil and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Anna Krylova (NM); Amanda Fenwick (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. **Discussed Field Test Timing**

Mr. Sartain said the VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, field test is now scheduled from February 2022 through June 2022. He said the new date will necessitate a shift in the target date for the implementation of the revised VM-22 beyond January 2023 as initially planned. He said an additional change is the inclusion of capital considerations into the scope of the field test as a means of updating C-3 Phase 1. He noted that different conditional tail expectation (CTE) measures will be used for the annuity valuation and the C-3 Phase 1 efforts.

2. **Discussed the Product Scope of the Proposed ARCWG Framework**

Chris Conrad (American Academy of Actuaries—Academy) said the Academy Annuity Reserves and Capital Work Group (ARCWG) has determined that the scope of VM-22 should include both deferred and immediate annuities, on both an individual and group basis. He said account value-based deferred annuities, including single premium deferred annuities (SPDAs), flexible premium deferred annuities (FPDAs) and fixed indexed annuities (FIAs), will be in scope. Examples of the payout annuities that are in scope are single premium immediate annuities (SPIAs), pension risk transfers (PRTs), deferred income annuities (DIAs) and structured settlement contracts. He said the ARCWG has proposed excluding, for now, guaranteed investment contracts (GICs), stable value contracts and funding agreements from the scope of VM-22, primarily because those products exhibit less optionality and are tied to other regulations. He said the application of the framework to in-force business is still in question. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI suggests exempting products that are expected to consistently pass the exclusion test. Mr. Sartain asked if the certification method of exclusion testing would sufficiently address the ACLI concern. Mr. Bayerle said the ACLI would prefer an approach similar to the Valuation Manual treatment of guaranteed issue (GI) products.

3. **Discussed Starting Assets and Discount Rates**

Mr. Conrad said the ARCWG recommends that the treatment of starting assets and discount rate follow the requirements of VM-21, Requirements for Principle-Based Reserves for Variable Annuities, with a safe harbor of using the new money re-investment rate for net asset earned rate (NAER) discount rate upon depletion of assets to avoid anomalous re-investment rates when the asset base is small. Mr. Bayerle said the ACLI agrees but would like the ARCWG to revisit making borrowing cost restrictions more principle-based. Mr. Tsang suggested using a higher cost of borrowing when assets are depleted. Mr. Conrad said the Academy’s proposal provides a guardrail that would allow a company the option to choose a more conservative rate. He said the issue may surface during the field test and can be addressed at that time.

4. **Discussed Allocation of Policy Reserves**

Ben Slutsker (Academy) said the method of reserve allocation affects the reporting categories in the annual financial statement, as well as per policy comparisons to cash value floor, which may have tax considerations. He said those considerations make allocation a sensitive issue. He said the ARCWG proposes a rigid approach that looks at the greatest present value of accumulated deficiencies (GPVAD) under a moderately adverse scenario. Ms. Hemphill said she is concerned about using a single scenario because it can be overly influenced by the business that drives the GPVAD for the CTE 70 scenario. She said the Texas Department of Insurance (TDI) recommended in its comment letter the disclosure of reserves for certain categories of business separately. She proposed using those same categories as the basis of an approach that could be scaled for the purpose of allocation. Mr. Slutsker said he will discuss the approach with the ARCWG. Mr. Sartain said he will add the disclosure proposal to the issues list.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met on February 24, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam, Ahmad Kamil and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Anna Krylova (NM); Bill Carmello (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Adding Longevity Risk to the Exclusion Test

Mr. Sartain said the topic of adding longevity risk to the exclusion test will be added to the issues list for consideration during the field test.

2. Discussed Whether to Allow a Policy with a CDHS to be Eligible for Exclusion from the Stochastic Reserve

Mr. Sartain said that VM-20, Requirements for Principle-Based Reserves for Life Products, does not allow a policy supported by a clearly defined hedging strategy (CDHS) to be excluded from the stochastic reserve calculation. He said the reasons given on the Feb. 17 Subgroup call were: 1) the existence of a CDHS implies that there is material economic risk that should preclude the associated policies from being excluded from the stochastic reserve; and 2) the possibility that policies could be excluded due to hedging is discomforting. Ben Slutsker (American Academy of Actuaries—Academy) said the Academy believes that hedging programs should generally require stochastic reserve modeling, with the exception of hedging programs that are solely for the purpose of funding interest credits. He said fixed indexed annuities (FIAs) are examples of products that inherently have hedging in their designs, may not contain significant basis risk and should be allowed to use an exclusion test. Mr. Slutsker agreed to have the Academy look at the existing language in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, to determine how it might be revised to address non-variable annuity hedging programs.

3. Discussed Reinvestment Guardrails

Chris Conrad (Academy) said that given the emphasis on the general account spread for fixed annuity products, the Academy is asking the Subgroup to revisit the existing fixed income guardrail of 50% A-rated bonds and 50% AA-rated bonds. He said the current split no longer reflects industry experience. He said the Academy recommends using the VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, credit quality distribution, which better represents average industry holdings. Ms. Hemphill said the Texas Department of Insurance (TDI) comment letter lists its concerns with the Academy recommendations. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI supports the Academy recommendations. Steve Tizzoni (Equitable) said the Equitable comment letter expresses its belief that spread limits on reinvestments and existing assets ensure that there is no outsized reliance on excess credit spreads. He said Equitable’s letter suggests that the timing for contraction of spreads should be shortened.

Mr. Sartain asked for a brief history of the data supporting the VM-22 credit quality distribution categories. Mr. Conrad said the bond data was obtained for the Academy C-1 Working Group, which provided granular data from the years 2011 and 2013. Mr. Tsang said he supports guardrails that consider industry trends but believes boundaries are necessary. He suggested that members of industry develop a proposal for state insurance regulator consideration. Mr. Bayerle said the ACLI will work to develop proposals for both life and annuity products.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met Feb. 10, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam, Ahmad Kamil and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT) and Craig Chupp (VA).

1. **Announced the Formation of a PRT Drafting Group**

Mr. Sartain said pension risk transfer (PRT) business is often originated in other countries, which raises the question of whether U.S. population tables are appropriate when reserving for PRT business. He said a regulator-to-regulator drafting group is being formed to look at this and other issues related to PRT business.

2. **Discussed Treatment of Longevity Risk for Exclusion Testing**

Ben Slutsker (American Academy of Actuaries—Academy) said the Academy proposed a stochastic exclusion ratio test (SERT) that had an up shock and a down shock to longevity for each of the 15 designated equity and interest scenarios. The greatest of the scenarios would become the numerator of the SERT. A baseline economic scenario without shocks would form the denominator of the SERT. Mr. Slutsker discussed a deterministic certification option, indicating that a stochastic run may not be necessary for contracts without policyholder options. He said a single deterministic scenario calibrated to a given conditional tail expectation (CTE) level may be sufficient. He said other criteria will have to be met.

Ms. Hemphill said that mortality is just one consideration to be addressed by the exclusion test; other risks will also need to be considered. She noted hedging as one such item that will need to be given consideration.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI believes that it is not clear whether including longevity as one of the considerations for stochastic testing makes sense. He said applying margins to the mortality assumptions might be a better way to capture longevity risk.

Ms. Hemphill said the Texas Department of Insurance (TDI) has concerns about having fixed SERT parameters that apply universally. She suggested incorporating a principle-based materiality threshold into the SERT determination.

3. **Discussion of Whether to Allow Risks to Be Combined**

Mr. Sartain asked if interest rate risk and longevity risk should be netted together. Mr. Slutsker said the intent of netting the two risks is to reflect any covariance that may exist. He said it also facilitates implementation. Mr. Tsang said he prefers keeping blocks of business separate to allow for a meaningful understanding of the specific risks in each block. Mr. Slutsker said that approach is similar to the deterministic certification option. He said the option does not eliminate the stochastic calculation but requires it less frequently.

4. **Discussed Exclusion Testing for FIAs**

Mr. Tsang discussed the reasoning for not allowing products for which a company uses a clearly defined hedging strategy (CDHS) to qualify for the exclusion tests. Mr. Sartain noted that if the VM-20, Requirements for Principle-Based Reserves for Life Products, language were to be used, fixed indexed annuities (FIAs) without guaranteed minimum benefits would not be eligible for exclusion.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met Feb. 3, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam, Ahmad Kamil and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); and Rachel Hemphill and Karen Jiang (TX).

1. **Discussed the Standard Projection Amount**

   Mr. Sartain said that a straw poll taken during Subgroup’s Jan. 27 showed that most Subgroup members prefer limiting the standard projection amount (SPA) to a disclosure item instead of a stochastic reserve floor. He asked if anyone who prefers the SPA as a disclosure item had an alternative stochastic reserve floor in mind other than the cash value. No Subgroup members indicated a desire for an alternative stochastic reserve floor.

2. **Discussed Aggregation Principles**

   Mr. Sartain said the final straw poll taken during the Subgroup’s Jan. 27 meeting asked whether the language governing the criteria for aggregating products based on the management of associated risks should remain principle-based, be more prescriptive or be removed from the framework. He said that members voted, by a small margin, to remove the language. Ben Slutsker (American Academy of Actuaries—Academy) said the Academy initially thought that the language would apply to exclusion testing criteria, as well as reserving. He said now that the Subgroup is separately considering aggregation criteria for exclusion testing, the Academy believes the language is not needed for reserving. Brian Bayerle (American Council of Life Insurers—ACLI) and Mr. Leung agreed with the Academy’s position. Ms. Lam said she considers the reserve categories as guardrails and believes the principles may still be necessary within the specific categories. Mr. Sartain said the principles are vague and might be difficult to regulate. He asked why it should matter whether their risks are managed together if the products can offset one another. Ms. Hemphill said if there are clear reasons that certain products should not be aggregated, that might be an indication that additional reserve categories are needed. Mr. Kamil said the principles should be further investigated before deciding they are not needed. Mr. Sartain said discussion will continue, with the goal of a final vote on the issue in March.

3. **Discussed Aggregation for Exclusion Testing**

   Mr. Sartain said that VM-20, Requirements for Principle-Based Reserves for Life Products, requires that the types of business aggregated for exclusion testing must be similar. He asked if participants agreed that the VM-20 concept should be included in the language of the principle-based reserving (PBR) for non-variable annuities. Mr. Slutsker said the Academy would not be opposed to application of the principle for the purpose of exclusion testing but would be cautious about the granularity of exclusion testing restrictions. Mr. Sartain said the VM-20 language would be used as it currently stands. Ms. Hemphill said she is supportive of that position.

4. **Discussed Other Exclusion Testing Issues**

   Mr. Bayerle said the ACLI comments include a suggestion that a materiality threshold be considered. He said decisions on the exclusion test should be deferred until they can be informed by the results of the field test. He said the ACLI has concerns about the inclusion of longevity risk in exclusion testing. He said products that will always be able to pass the exclusion tests should possibly be considered out of scope. He said the exclusion tests should be performed at the highest level of aggregation.

Having no further business, the VM-22 (A) Subgroup adjourned.
Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
January 27, 2021

The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met Jan. 27, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Russell Toal (NM); Bill Carmello (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed the Academy’s Preliminary Framework Elements for Fixed Annuity PBR

The Subgroup discussed whether the Valuation Manual should have separate categories for deferred annuities and payout annuities. Ms. Ahrens advocated for having separate chapters in recognition of the inherent differences in the products. She said the benefits of risk diversification between the products is not a sufficient reason for aggregating the products for the purpose of calculating reserves. She said she is comfortable with the two reserve categories for now. She noted that additional categories can be developed later if the necessity arises due to product innovation. Mr. Yanacheak said he is less concerned with whether deferred annuities and payout annuities are separated by chapters. He said he is more interested in developing principles that would apply appropriate reserving treatment for the two types of annuities.

The Subgroup took a straw poll on whether there should be one or two reserve categories for reserve aggregation. The vote was seven to five in favor of two reserve categories. Mr. Sartain noted that two or more categories could be required for disclosure.

A second straw poll asked whether the standard projection amount (SPA) should be used as a reserve floor or solely for disclosure. The vote was seven to four in favor of limiting the SPA to a disclosure item. The Subgroup agreed that multiple reserve categories should be required for the SPA.

The final straw poll asked whether the language governing the criteria for aggregating products based on the management of associated risks should remain principle-based, be more prescriptive, or be removed from the framework. There were four votes for removal of the principle-based language, three votes for retaining the principle-based language, and three abstentions. No members voted for more prescriptive language. Two members left the call prior to voting.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met Jan. 20, 2021. The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Russell Toal (NM); Bill Carmello (NY); Rachel Hemphill and Karen Jiang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed the Academy’s Preliminary Framework Elements for Fixed Annuity PBR

Mr. Sartain explained that the Subgroup will address the subject of aggregation separately for stochastic reserve calculation and exclusion testing. Ben Slutsker (American Academy of Actuaries [Academy] Annuity Reserve and Capital Work Group—ARCWG) said the aggregation of the reserve categories when calculating the conditional tail expectation (CTE)-70 allows for the benefits of diversification. He said the ARCWG favors a single reserving category for reserve aggregation. He said the ARCWG is open to considering multiple categories for exclusion testing aggregation.

Mr. Sartain asked commenters to discuss the portions of their comment letters that address aggregation. John Robinson (MN) said his comment letter (Attachment Twenty-One-A) reflects his concern with the auditability of non-variable annuity reserves if deferred and payout annuities are aggregated for the stochastic reserve calculation. Mr. Sartain asked if the auditability goal could be accomplished with additional disclosures. Mr. Robinson responded that even if the deferred and payout reserve numbers are separately disclosed, reconciling them to the aggregate reserve will be difficult. He reiterated his preference for at least two reserving categories. He also said the criteria applicable to aggregation requires greater definition.

Ms. Hemphill said page 3 of her comment letter (Attachment Twenty-One-B) addresses aggregation. She said the aggregation principles in the preliminary framework will lead to inconsistent aggregation across companies. She said aggregation based on the principles would be difficult to review. She said she favors full aggregation with disclosures of the aggregation benefits and application of the standard projection amount (SPA).

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Twenty-One-C) supports the principle that aggregation be consistent with how assets are managed. He said the ACLI supports full aggregation with the disclosure of aggregation benefits.

Steve Tizzoni (Equitable) said the Equitable comment letter (Attachment Twenty-One-D) supports full aggregation because it reflects the diversification benefits that are core to the insurance industry. He also spoke in favor of the SPA as a floor to ensure that the diversification benefit is not excessive.

A straw poll was taken on the issue of whether, in the determination of the stochastic reserve, all fixed annuity business should be aggregated as a single reserving category with the appropriate disclosures or more than one reserving category should be required for aggregation. The Subgroup member voting was split evenly, with both options getting six votes. Mr. Sartain, the chair, refrained from voting. He suggested that given the tightness of the voting, the topic requires more discussion.

Having no further business, the VM-22 (A) Subgroup adjourned.
I thank and congratulate the ARWG for this work.

I would like to comment on Slide 21, Aggregation. The principles enunciated are focused on how the business is managed, particularly from a risk perspective. However, the fourth ARWG Pillar of Objective (Slide 2) calls for a process that is, among other things, auditable. I believe it is the intent of ARWG that the pillars on Slide 2 supersede the principles on Slide 21.

“Auditable” means that the process must facilitate the explanation of results. Qualified Actuaries performing reserve calculations have traditionally determined and analyzed reserves by product type. This facilitates insight and understanding when explaining results to company management, regulators and other actuaries.

The promise of PBR is that reserves will be “right-sized” relative to the company’s circumstances. In the case of deferred annuities, the conventional wisdom is that the current formula-based methods produce worst-case-scenario, overly conservative reserves; so, right-sizing the reserves should decrease them. On the other hand, the current formula-based reserves for immediate annuities generally understate reserves due to the lock-in of out-dated mortality and interest assumptions; so, right-sizing the reserves should increase them. In order to determine whether this promise has been kept, it will be necessary to determine reserves for deferred annuities and immediate annuities separately.

I therefore call for the establishment of VM-22 Reserving Groups which would, at a minimum, separate deferred and immediate annuities.

Thank you.

John Robinson FSA, FCA, MAAA
DATE: December 14, 2020
TO: Bruce Sartain, Chair of VM-22 (A) Subgroup
SUBJECT: ARWG Preliminary Framework Oct 2020

Dear Bruce:

We appreciate the opportunity to provide input on the draft ARWG framework.

- Reinvestment mix should represent the fixed income assets portion of the investment portfolio and reflect moderately adverse conditions.
- A CDHS concept is needed for future hedge modeling that materially reduces the reserves.
- Aggregation requirements and methodology should be clearly defined.
- The design of the exclusion test needs to be clarified and consider non-tested risk factors that may have material impact on the ratio test results, e.g., liability assumptions and hedging. The ratio test passing criteria should be linked to the company’s definition of materiality, with the VM-22 threshold as a guardrail.
- The implication of the PBR reserve framework on the non-PBR capital framework needs to be carefully considered.
- Comments for other topics.

Sincerely,

Karen Jiang, FSA, MAAA, FRM
PBR Actuary
Actuarial Office, Financial Regulation Division

Rachel Hemphill, Ph.D., FSA, FCAS, MAAA
PBR Team Lead
Actuarial Office, Financial Regulation Division

Appendix I: Requested Feedback

Reinvestment Mix

- Comments on setting limits to the current VM-22 credit quality mix? (Slide 11)

A few considerations about the credit quality mix:

1. It should represent the fixed income investment portion of the asset portfolio only. The current proposal does not do this.
2. It should be based on the latest industry data. The current proposal does not do this.
3. Using a typical industry average fixed income portfolio mix is not conservative as needed for the purpose of setting reserves. A mix with higher credit quality to reflect moderately adverse conditions is more appropriate. The current proposal does not reflect this.
4. Currently VM-22 adds additional conservatism not in the current VM-22 credit quality mix by applying a 25 bps spread deduction; without this spread deduction in the ARWG framework, the credit quality mix should be more conservative. The current proposal does not reflect this.
5. It is desired that the same reinvestment mix guardrail be used for all of VM-20, VM-21 and the new VM-22.

Additionally, we are concerned with the grading from short-term spreads to long-term spreads, especially if there is an option to liquidate currently held hedges (as there is in VM-21) reflecting an unrealistic gain in reinvestments when short-term spreads are high as of the valuation date. This problem currently applies to VM-20 and VM-21. Additionally, it may be preferable to use a net yield pickup based criteria for reinvestments instead of a guardrail based on a specific asset mix, which would reduce implementation constraints seen to date with the alternative reinvestment guardrail.

Index Credit Hedging Treatment

- Does modeling breakage hedge expense seem reasonable? (Slide 13)

1. Generally speaking, a CDHS concept (having a clearly documented hedging strategy and program) is needed in cases where reserves or TAR is materially reduced. Future hedging should not materially reduce reserves or TAR if it is not a CDHS. For straightforward types of hedging, the CDHS documentation should only be simpler to provide.

2. Hedge breakage expense assumptions
   a. The wording of “hedge expense” should not be confused with the hedge cost that needs to be reflected in the projections of the hedge modeling.
   b. Are both sources of error reflected here - error in the hedging itself, and error in the ability to accurately model it? Should we be separately considering the two limitations
to make sure they are both clear: 1) the real-world hedging error and 2) the modeling error in reflecting the future hedging? Current error factor discussions seem muddied.

c. The 1% minimum allowed seems too low. How does the 1% breakage expense reflected as either the additional expense or the reduced investment income compare with the 5% reduction in future hedging benefit for reserves (on a PV basis)? A low E factor needs to be supported by the projected hedge gain and loss being within a close range of 100%. VM-21 suggests a range of 80-125%. With a lower minimum expense/error factor should this range be narrowed? The rationale for a lower expense factor (having lower basis risk and greater effectiveness) suggests that we should expect a back-testing result much closer to 100%.

d. The same requirement should be considered for VM-20 hedge modeling which are mostly index credit hedging for IUL products.

3. Will companies request special hedge accounting treatment from SAPWG similar to SSAP 108?

Aggregation

- Any additional principles to include, or suggested modifications or elaboration of principles listed? (Slide 21)
- Impose differences in aggregation for exclusion testing purposes? (Slide 22)

We have a concern with this approach, related to concern with the current VM-20 approach. We are not seeing clear or consistent approaches to what "managed together" or "managed separately" means. A fuzzy requirement here is no requirement. If the point is to generally allow full aggregation, why even have a fuzzy requirement? What are examples that one could not reasonably argue should be aggregated?

Consider 1) an aggregation certification to demonstrate that the aggregation chosen meets the requirements if they can be clearly defined and/or 2) if companies change aggregation method they need to get domicile commissioner's approval.

We prefer VM-22 define standard reserving categories for all exclusion test, stochastic reserve and standard projection amount purposes. There should be no aggregation of products with significantly different risk profiles for exclusion testing, but for products that fail the test and go through the SR/SPA calculation, aggregation is allowed but with the reserves for each individual category and the aggregation benefit being disclosed. SR and SPA are supposed to use the same aggregation method.

Ideally, for aggregation benefit disclosure, we would review these product categories:

- Deferred Annuities
  - FIAs with GLBs
  - FIAs without GLBs
FDAs with GLBs
FDAs without GLBs

Payout Annuities
- SPIAs
- PRT
- DIAs
- SSC

If this is too granular in some instances, a minimum split would include fixed annuities with GLBs, fixed annuities without GLBs, SPIAs, PRT, and then all others.

Exclusion Testing
- Include testing of longevity risk in the ratio test? (Slide 25)
- Provide potential deterministic calculation option for policies with limited optionality? (Appendix V)

1. Mortality Component: The shocks should be the greater of the mortality margin magnitude or the fixed amount determined by the ARWG.

2. Threshold: The threshold needs to consider the absolute dollar amount and be linked to the company's materiality standard. A group of contracts should not be able to be excluded from VM-22, if the aggregate variability under the scenarios exceeds the company's materiality standard. That is, if the economic or mortality variability is material based on the company's definition of materiality, then the SERT is failed. Then, any fixed threshold selected by the ARWG for the SERT (e.g., 6%) is just a "guardrail" on the company's defined materiality standard. Note that this is more principles based than an SERT with a fixed threshold and also applies as a critique of VM-20's SERT.

3. Impact of Liability Assumptions: Will exclusion testing include SPA results as part of the 16 scenario calculations, if it is for more than disclosure? If you are also being excluded from the SPA, the SPA needs to be somehow reflected as part of the SERT process. What if over-optimistic liability assumptions (e.g., policyholder inefficiency) drive passing the SERT? This reflects a difference between VM-20 and VM-21. VM-20 has a SERT but does not exclude you from the NPR. VM-21 has an SPA but no SERT.

4. Impact of Hedging: VM-20 does not allow a company to exclude a group of policies for which there is one or more CDHS from stochastic reserve requirements. VM-22 does not require policies with hedging to automatically fail exclusion test. Again, what if hedging drives the passing of the SERT? What hedging documentation and support is needed if a SERT is performed that relies on hedging? Should results be shown with and without hedging? This is another place where we should consider alignment between the two VM chapters.
Allocation Methodology

- Any alternative methods to consider? (Slides 27-28, Appendix III)

A single scenario won’t capture individual policy risk. Neither will immediate election.

Reserve allocation is not only for tax purpose but also for RBC purpose. For products that calculate RBC using a factor-based approach, reserves need to be allocated if they are aggregated with other products that use a different RBC approach, e.g., C3P1. Need to seek input from the LRBC group. One conservative approach is to use the standalone reserves for RBC purpose.
Appendix II: Additional Feedback

Reflecting Risk in Moderately Adverse Conditions (Slide 2)

Just a note that this is fundamentally different than the PBR approach for economic scenarios. A CTE(70) reflects both less than moderately adverse and more than moderately adverse scenarios, in an average. For non-economic variables that are not stochastically modeled we may partition particular risks or scenarios into moderately adverse and beyond moderately adverse, which needs to be reflected in capital only. But the more we move to stochastic modeling of risks, reserves will just generally be increased by tail risk, both above and below a “moderately adverse” threshold, with a lesser sensitivity to deeper in the tail risks or scenarios than capital.

Potential Management Actions (Slide 2)

Potential management actions reflected should only be those that, at a minimum, are pursuant to documented company policy and are not inconsistent with historical actions.

Principles (Slide 2)

Speaking of Principles, will VM-22 cite/follow the VM-21 principles?

SPA (Slide 3)

Note that the SPA is actually neither formulaic nor a floor. The types of arguments you present here against the SPA seem to be wrestling with the ghosts of past requirements (the old standard scenario), rather than addressing the living, evolving requirements of the Valuation Manual. In contrast, a CSV floor is both formulaic and a prescriptive floor. Is the ARWG opposed to a CSV floor?

Existing PBR Frameworks (Slide 3)

For each deviation from the current VM-21, please outline whether: 1) a deviation is necessary due to unique product features or risk characteristics between the policies in scope (describe) or 2) a deviation from the current VM-21 is proposed that would be a better requirement for both VM-21 and VM-22 (describe). Similar comparisons to VM-20 are also preferable.
Implementation Period (Slide 9)

We need to be mindful of potential inconsistency between reserves and capital. If a principles-based capital framework is not completed (updated), then interim revisions may be needed if the amount of business under the new VM-22 framework is material.

Can a company wait until the end of the transition period to start PBR, but then apply PBR to the issues from the transition period?

Mortality (Slide 15)

What does "unsupported judgment" mean? Why should there be any unsupported judgment? Let’s not perpetuate this phrasing.

Will international lives also use 2012 IAM Basic Table with Scale G2? This may not be appropriate in many cases.

What number of years of future improvement will be used?

Policyholder Behavior (Slide 16)

Margins: VM-20 and VM-21 have analogous requirements - both start with individually determined margins and then one substitutes margins based on the joint distribution while the other discusses a correlation adjustment to reflect the joint distribution. Should these be harmonized, along with VM-22?

VM-22 reporting should quantify the impact of all margins, showing the effect with and without. VM-22 reporting should also ensure A/E’s are provided with E being the anticipated or best estimate assumption.

NGEs (Slide 18)

Will this reflect company policy and past actions, and also include any legal and/or reputational considerations in determining anticipated NGEs?

Joint Payouts & Supplemental Benefits (Slide 19)

For VA products with joint payouts and/or supplemental benefits, similar requirements should be added to VM-21.
Reinsurance (Slide 20)

VM-20 requires that treaties be modeled either 1) if they qualify for credit for reinsurance or 2) if modeling them reduces surplus. This is a reasonable treatment, but VM-21 does not have the 2nd. We recommend the VM-20 treatment for VM-22. This should also be considered for VM-21.

Materiality

The ARWG will need to address materiality and simplifications/approximations/modeling efficiency techniques. If you are basing on VM-21, note that VM-21 is missing a consideration of the aggregate impact of all approximations and so does not have an assurance that the reserve is not materially understated in aggregate.

VM-20 has the requirement that individual approximations don't bias reserves downward. This provides some assurance about the aggregate impact, but is not the same as a consideration of the aggregate impact. Possibly all three should have a consideration of the aggregate impact.

Exclusion Test Methodology (Slide 25)

Item h) – Appendix V is mainly about the “certification” but not how the DR itself will be calculated. It may be reasonable to just do DR calculations in some situations, but this depends on the methodology/scenarios.

Allocation (Slide 28)

Again, need to consider non-US mortality.

VM-31 Disclosures (Slide 29)

What certifications will be included for the VM-22 reporting? Will they follow VM-20 or VM-21?

Hedge back-testing should be shown for the full time period current strategy has been in place. This should also apply to VM-21. VM-20 may also need additional details.
CTE(70)

For products with market value adjustment, CTE(70) needs to be floored at cash surrender value with MVA which varies by scenarios.

For products that do not have a cash surrender value, it is recommended that VM-22 use a "working reserve" concept, similar to VM-21 Section 3.G requirement.

Mr. Bruce Sartain  
Chair, NAIC VM-22 (A) Subgroup 

Re: ARWG Preliminary Framework

Dear Mr. Sartain:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the exposed presentation deck on the Academy Annuity Reserve Working Group (ARWG) preliminary framework for fixed annuity PBR.

ACLI is appreciative of the hard work of the ARWG in developing the framework for fixed annuity PBR. We believe the framework is going in the right direction, and we offer the following feedback on the five directed topics and additional comments:

1. Reinvestment Mix

We believe the 50% A / 50% AA fixed income reinvestment guardrail should be revisited, and regulators should consider using a more industry-consistent reinvestment mix in VM-22 and other principle-based reserves. As credit spreads and defaults are already prescribed, this level of conservatism in the reinvestment mix should not be necessary. Revisiting this reinvestment restriction for all products was also flagged for LATF review by the NAIC staff letter and a VM-21 drafting note. We would support the use of VM-22 credit quality mix as asset mix limitation for VM-22 reinvestment assets as proposed by the ARWG as it is reasonably industry-consistent for products in scope of VM-22. The VM-22 spread reflects an average credit quality of approximately ‘A’ to ‘A-’, which we believe is representative of fixed annuity market pricing and investing practices and is therefore an appropriate level for principle-based reserving.

2. Index Credit Hedging Treatment

We agree that modeling hedge breakage seems reasonable and appropriate. The index credit hedge breakage simplification seems like a potentially reasonable option for those that do not model their hedge program explicitly or manage market risks from their products more holistically; we believe it should be an optional simplification and not a requirement. We believe, however, that the proposed 1% floor factor can be too low in some instances. Static and dynamic hedges should
have different breakage expenses as dynamic hedges should have a higher minimum breakage expense given the inherent uncertainty of hedge income actually realized. For static hedging strategies, whereby the replicating portfolio of financial instruments is purchased at the index segment inception, a 1% floor on the hedge cost expressed as a percentage of the interest credited might be reasonable (but should be tested to determine whether another level is more appropriate). However, for dynamic hedging strategies that do not lock in the index crediting amount at segment inception, a 1% floor is likely too low. Depending on the strategy, we believe a floor approaching the 5% floor within VM-21 would be appropriate, as such strategies show more hedge ineffectiveness during periods of market stress than static hedge programs.

Additionally, we believe that there should be more discussion on the treatment of reflecting management actions in the reserve, such as index credits, caps, and management of hedge gains and losses and defaults.

3. Aggregation

Aggregation should be primarily driven by how assets are managed, since that is how the company views risk/return trade-offs. Companies already aggregate for other purposes including C3P1 and asset adequacy; the economic scenario that actually materializes will be the same for all business, and it would not make sense to calculate results separately and hold reserves for a product assuming rates spike and reserves for another product assuming that the same rates simultaneously decrease. Deviating from the level assets are managed would require arbitrary and/or complex asset allocations across blocks of business that could distort reserves, even if the allocation method is consistent over time. Concerns about shorter duration / less risky cash flows running off seem like a reserve pattern issue (rather than what is currently appropriate) that would be better addressed in the ORSA. Alternately, there could be an aggregation benefit disclosure.

4. Exclusion Testing

We support the inclusion of an exclusion test in VM-22, as well as a materiality threshold similar to the Life PBR Exemption. We believe that exclusion testing thresholds should be set based on the risks and field test results, rather than by a priori views about what should or should not pass. We do not believe longevity risk should be included in the ratio test for all products; rather, the test should limit its focus on ALM mismatch risk. Products with well-matched portfolios and only longevity risk do not necessarily need to be tested stochastically and should be able to pass the exclusion tests. Longevity risk can then be handled through the margins embedded in prescribed mortality assumptions. Alternatively, we support including a deterministic reserve option to handle payout contracts with longevity risk, similar to that described in the appendix of the exposure.

If there are products that regulators believe should always pass any exclusion test, regulators should consider if these products should be out of scope for VM-22. Where appropriate, it may be worth considering whether exclusion testing requirements could be simplified or potentially removed for certain products that regulators expect to pass to reduce the extra work of doing both an exclusion test and creating the required PBR documentation for these products (or as previously suggested something akin to the VM-20 Life PBR Exemption). This product-specific
guidance could also be addressed within VM-22 (for example, if FIAs without withdrawal benefits fall back on AG35, consider making the Iowa practice for indexed products part of VM-22).

5. Allocation Methodology

We believe there should be flexibility around allocation, so long as it supports an acceptable tax reserve. We do not believe VM-22 allocation needs to be more prescriptive than VM-21. VM-22 should allow for company discretion to develop an allocation method consistent with VM-21. For example, for many products using NAR (value of benefits above CSV) would generally produce a similar result as the proposed methodology, without requiring additional complexity/runs. We also note that tracking GPVAD on a seriatiol basis is extremely complex and functionally impossible for companies who use crunched/cluster models.

6. Scope

ACLI believes that whether a product falls under VM-21 or VM-22 should depend on the nature of the risk. Based on the nature of the risk, we believe that hybrid annuities and many structured annuity designs would be covered by VM-21. Further, we believe that funded and unfunded longevity reinsurance should fall within the scope of the existing VM-22. Finally, several categories from the existing VM-22 Scope section are not included in the slides (e.g., Supplementary Contracts, CDA’s); we would like to understand if certain products were deliberately excluded at this time from the potential regulatory framework.

7. Timeline

Target effective dates will need to be reconsidered if inforce business is included in VM-22 on either an optional or mandatory basis. The timeline should consider a later effective date for inforce than new business, alignment with C-3 Phase 1, and other considerations. Companies have a wide variety of systems and VM-20 and VM-21 processes do not necessarily support VM-22 required processes, so it is likely to require a very large build. A scope limited to new business would simplify the build because it would reflect the much smaller universe of products currently being developed and offered.

8. Discount Rates and Starting Assets

We believe there should be alignment of discount rates and starting assets to the VM-21 methodology. We recommend revisiting borrowing cost restrictions (e.g., to avoid anomalies and/or be more principles-based) and aligning the approach across all products. During VM-21 development, regulators deliberately aligned asset requirements with VM-20, but ultimately the framework deviated from this and added the borrowing cost restriction to VM-21. The NAIC staff letter from the VA subgroup work and a VM-21 guidance note flagged this for future LATF review for all products.

9. Mortality
We believe mortality should follow a principles-based approach consistent with VM-21 rather than the more prescriptive approach in VM-20. We believe it is appropriate for consistency of alignment between annuity products. Mortality curves in the “no data” case or for credibility weighting and mortality improvement should reflect appropriate experience / assumptions – including product differences, appropriate granularity, geographic / country differences, etc. It would be inappropriate to merely rely on VA mortality, and rather should consider updated SOA reports and studies (e.g., upcoming fixed deferred, individual payout, group payout, etc.).

10. VM-31 Disclosures

We have the following comments on the disclosure recommendations:

- General Account Assets: A full reserve calculation may not be necessary. Appropriately documented simplifications that demonstrate why the reinvestment restrictions are more conservative should still be allowed (e.g., similar to VM-20, Section 2.G) if it is clear the reinvestment restriction will dominate instead of requiring 2 runs.
- Hedging: It is not clear whether the full contract fair value comparison is useful for VA, and it seems potentially even less useful for fixed annuities (e.g., for a plain vanilla FIA with hedged index credits).
- Dynamic Policyholder Behavior: This requirement seems redundant with existing requirements to provide rationales for assumptions and could perhaps be addressed with a guidance note.

We appreciate the consideration of our comments, and look forward to discussing on a future call. Thank you.

Sincerely,

[Signature]

FROM: Aaron Sarfatti, Chief Risk Officer; Steve Tizzoni, Head of Actuarial Regulatory Affairs
SUBJECT: Equitable Comments on Fixed Annuity Principles Based Reserve (PBR) Proposal

Equitable appreciates the opportunity to comment on the Academy Annuity Reserve Working Group’s (ARWG) proposed Fixed Annuity PBR framework. Below are our views on two key aspects of the framework: (1) reinvestment mix; and (2) aggregation of reserves. The remainder of our views are appropriately captured in the ACLI comment letter.

**Reinvestment Mix:**
The VM-22 subgroup requested feedback on the reinvestment mix used in the fixed annuity PBR framework. The ARWG recommends use of reinvestment assumptions that are in line with VM-20 and VM-21 but proposes using a reinvestment mix of 5% Treasury, 15% AA, 40% A, and 40% BBB instead of the current 50%/50% blend of A/AA corporate bonds used in VM-20/21.

Equitable believes credit spread limits for both reinvestment and existing investments are central guardrails to assure the integrity of principle-based reserving. Aggregate or portfolio wide credit spread caps are necessary to ensure the asset portfolio reserve aligns with market pricing for interest-sensitive liabilities and hence ensures balance sheet resilience. Individual security credit spread caps ensure individual assets at high risk of impairment reflect appropriate default loss expectations, although may not be necessary in the presence of prudent portfolio-wide spread caps.

Equitable supports the use of a VM-22 credit quality mix as the aggregate credit spread cap for reinvestment assets as proposed by the ARWG. The VM-22 spread reflects an average credit quality of approximately ‘A’ to ‘A-’, which we believe is representative of fixed annuity market pricing and investing practices and is therefore an appropriate level for principle-based reserving.

In addition to applying the VM-22 based credit spread cap to reinvestment assets, Equitable supports application of such a cap to existing assets. Such a limit would ensure reserves do not rely on excessive amounts of credit spread in excess of industry investment and pricing practices. A credit spread cap applied at the individual security level could also be considered to ensure appropriate default loss expectations are used for assets at high risk of impairment. We think an appropriate level for such a cap would be the lower limit of investment grade credit, approximately BBB.

In addition to extending the scope of credit spread caps within the VM-22 framework, Equitable believes the ARWG should consider shortening the proposed four-year period over which current credit spreads grade to long term spreads to no longer than one year. In practice, we see credit spreads reverting to long term averages significantly faster than four years. In the event of elevated credits, such as in the 2008-2009 financial crisis or the 2020 COVID-19 crisis, we do not believe reserves should reflect benefits of historically wide spreads on assets that the company does not yet own. It is reasonable for reserves to
reflect a benefit from such elevated spreads once the assets are purchased and on the company’s balance sheet.

As an example, consider the March 2020 valuation date. Spreads were extremely elevated at that time, and, under a four-year grading construct, a company would be required to reflect elevated spreads in its reinvestments for the next three years -- a significant reserve benefit as of March 2020. Instead, over the next few months, spreads quickly compressed towards the long-term average, and by June 2020, most of the reserve reduction from elevated spreads at the March 2020 valuation date had reversed without any offsetting benefit to asset book values. This example illustrates why Equitable supports a shorter time horizon for grading to occur (no more than 1 year).

The graph below shows the Barclay’s A-rated corporate bond spreads over the past 14 years. The chart demonstrates the swift mean reversion of spreads towards the 10-year moving average corporate spread following each peak. We quantified this pattern by looking at the time for spreads to revert 75% of the way back to the 10yr moving average following each peak in spreads and in each case found that 75% mean reversion occurred within 1 calendar year.

![Single A Corporate Bond Spreads](image)

**Aggregation of Reserves:**

The ARWG proposal allows aggregation of reserves if certain aggregation principles are met (i.e. aggregating policies that have similar risk management strategies, disallowing aggregation for policies that are administered or managed separately, etc.).

Equitable broadly supports the concept of aggregation in reserving, as the aggregation of risk is at the core of the insurance industry. The key risk of including aggregation within reserving is the risk that the projected profits on profitable contracts/product lines are not realized over time and therefore are not available to supplement reserves for in-the-money contracts/product lines. As such, the risk of aggregation equates to the risk that economic and policyholder behavior assumptions on profitable product lines are not realized.
Equitable believes the present governance over aggregation, principally through denying aggregation across major liability types, does not align with the ultimate concern about actuarial risk and is at best a crude guardrail. Equitable recommends a two-fold governance mechanism consisting of:

a) Governance over assumptions via mechanisms such as the Standard Projection Amount
b) Disclosure of total aggregation benefits utilized in VM-22 PBR report

Equitable believes this tandem is the best way to govern policyholder behavior risk because it (a) directly guardrails key assumptions for both positive reserve (“in-the-money”) and profitable/negative reserve (“out-of-the-money”) business and (b) alerts regulators to situations where company capital may not be sufficient to withstand material deviations from the failure to realize projected profits.

Conclusion:
Equitable appreciates the opportunity to comment on the ARWG’s VM-22 proposal and we look forward to working with the ARWG and regulators to develop an appropriate principle based reserving framework for fixed annuities. We are available to discuss our comments further as desired.

Sincerely,

Aaron Sarfatti, Chief Risk Officer
Stephen Tizzoni, Head of Actuarial Regulatory Affairs
Future Mortality Improvement Recommendation (VM20)

MORTALITY IMPROVEMENTS LIFE WORKING GROUP (MILWG) OF THE ACADEMY LIFE EXPERIENCE COMMITTEE AND SOA PREFERRED MORTALITY PROJECT OVERSIGHT GROUP (“JOINT COMMITTEE”)

NAIC Spring Meeting - April 8, 2021

Individual Life Insurance
Future Mortality Improvement for VM20 Products

GOAL: To allow a prudent level of future mortality improvement (FMI) for VM20 products beginning with the 2022 valuation manual

- FMI scale will be developed, updated and made available to practitioners annually
- Updates will be limited to a threshold of materiality for making a change
- Two versions of the scale will be published: Basic and Loaded
- Period of scale application: 20 years
Recommended FMI Scale Methodology:
Modification of Consistent Framework for MI Scale Development

**Historical Basis**
- Annual AG 38/VM 20 MI scale adopted annually
- Best estimate of recent historical MI

**Transition Period**
- Grade from historical basis to a long-term MI rate ("LTMIR") at 10 years
- MI will remain level to 15 years
- Grade to no improvement at 20 years
- Linear interpolation for grading

**Long-term MI rates ("LTMIR")**
- "LTMIR" defined as average of projection years 10-15 from SSA intermediate projection ("Alt 2")

**Recommendation: Consistent Framework Approach Simplified Method**

- **Valuation Date**
- **Transition Period**
- **Long-term MI rate (LTMIR)**
- **Transition Period**

LTMIR will vary by age only

Starting level: VM20/AG38 MI Rates

Vary by sex and age

MI = 0
Loading/Margin Considerations

- **MARGIN ON THE INCREMENTAL MORTALITY IMPROVEMENT SCALE**
  - Simplified method represents our “best estimate”
  - Margin will be included for all companies
    - Companies may use a more conservative MI but not less conservative
  - Margin will take the form of a flat % reduction in the best estimate MI scale
    - Current thinking is between one-quarter and one-third reduction in MI levels
  - There will be a discontinuity in the starting rates for FMI and those used up to the valuation date representing the application of the margin

- **OPTIONS DISCUSSED:**
  - Greater volatility in recent historical data and for certain age groups

Items for Discussion in Phase 2

- **SHORTER TERM ISSUES**
  - Consideration of COVID-19 impacts when we reach 2020 data inclusion
    - Shock
    - Potential longer term impacts
  - Impacts of opioid epidemic
  - Threshold of materiality for making a change in a given year
  - Socioeconomic differences (between general and insured population)

- **LONGER TERM ISSUES**
  - Consideration of cohort effects
Next Steps

- Amendment Proposal Form /methodology approval
- Implement smoothing process
- Finalize margin levels
- Develop best estimate and loaded scales for 2022 implementation

Amendment Proposal Form 2020-10
Exposed for a 45-day public comment period ending May 25, 2021

Request for Comment: During the exposure, commenters are specifically asked to address whether the “may” in 9.C.7.f, as well as 9.C.3.g, should be changed to “shall”. That is, rather than the SOA rates for historical and future mortality improvement being optional, they are required. However, if historical or future mortality improvement were overall positive and so not applying it would be conservative, then that would still be permissible as a simplification, since VM-20 Section 2.G would still apply here. Thus, the difference between “may” and “shall” would arise if historical or future mortality improvement were ever overall negative and so not applying it would be less conservative and so not permissible.

Please submit comments to Reggie Mazyck (RMazyck@naic.org) by COB 5/25/21.
Life Actuarial (A) Task Force/ Health Actuarial
(B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Reflect a prudent level of mortality improvement beyond the valuation date.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached Appendix.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

The current Valuation Manual requirements are beyond moderately adverse with regard to future mortality improvement when significant future mortality improvement is expected. The requirements also need to be clarified for the handling of historical or anticipated future mortality deterioration (i.e., negative improvement). We propose to reflect a prudent level of mortality improvement beyond the valuation date, using SOA analysis for best estimate future mortality improvement and margin.

With the reflection of a prudent level of future mortality improvement in the mortality assumption, the interim 1/2cx approach to YRT is a reasonable consideration for a long-term approach.
Appendix

VM-20 Section 6.A.2.b.v:

v. Mortality improvement beyond the projection start date, other than that outlined in VM-20 Section 9.C.7.f, may not be reflected in the mortality assumption for the purpose of calculating the stochastic exclusion ratio.

VM-20 Section 8.C, introductory paragraph:

C. Reflection of Reinsurance Cash Flows in the Deterministic Reserve or Stochastic Reserve

For non-guaranteed YRT reinsurance ceded or assumed, the cash-flow modeling requirements in Sections 8.C.1 through 8.C.14 below do not apply since non-guaranteed YRT reinsurance ceded or assumed does not need to be modeled; see Section 8.C.18 below. YRT shall include other reinsurance arrangements that are similar in effect to YRT.

VM-20 Section 8.C.18 and Guidance Note:

18.

When the reinsurance ceded or assumed is on a non-guaranteed YRT or similar basis, the corresponding reinsurance cash flows do not need to be modeled. Rather, for a ceding company, the post-reinsurance-ceded DR or SR shall be the pre-reinsurance-ceded DR or SR pursuant to Section 8.D.2, plus any applicable provision pursuant to Section 8.C.15 and Section 8.C.17, minus the NPR reinsurance credit from Section 8.B. For an assuming company, the DR or SR for the business assumed on a non-guaranteed YRT or similar basis shall be set equal to the NPR from Section 3.B.8, plus any applicable provision pursuant to Section 8.C.16 and Section 8.C.17. In the case where there are also other reinsurance arrangements that are not on a non-guaranteed YRT or similar basis, the reinsurance credit shall include the modeled reinsurance credit reflecting those other reinsurance arrangements. In particular, where there are also other reinsurance arrangements that are dependent on the non-guaranteed YRT or similar actuarial judgment shall be used to project cash flows consistent with the above outlined treatment for non-guaranteed YRT or similar arrangements.

VM-20 Section 9.C.2.h:

h. Mortality improvement shall not be incorporated beyond the valuation date in the company experience mortality rates. However, historical mortality improvement from the central point of the underlying company experience data to the valuation date may be incorporated.

Guidance Note: Future mortality improvement is not applied to the company experience mortality rates since it would be duplicative of the future mortality improvement that is applied to the prudent estimate assumptions for mortality in Section 9.C.7.f.
VM-20 Section 9.C.3.g:

g. Mortality improvement shall not be incorporated beyond the valuation date in the industry basic table. However, historical mortality improvement from the date of the industry basic table (e.g., Jan. 1, 2008, for the 2008 VBT and July 1, 2015, for the 2015 VBT) to the valuation date may be incorporated using the improvement factors for the applicable industry basic table as determined by the SOA, adopted by LATF, and published on the SOA website, [https://www.soa.org/research/topics/indiv-val-exp-study-list/](https://www.soa.org/research/topics/indiv-val-exp-study-list/) (Mortality Improvement Rates for AG-38 for Year-End YYYY).

**Guidance Note:** Future mortality improvement is not applied to the industry basic table, since it would be duplicative of the future mortality improvement that is applied to the prudent estimate assumptions for mortality in Section 9.C.7.f.

To allow time for companies to reflect the updated mortality improvement rates, the rates that are to be used in the year-end YYYY valuation should be adopted by LATF and published on the SOA website by September of YYYY. If this timeline is not met, then at the company’s option they may use the most recent set of prior mortality improvement rates adopted by LATF and published on the SOA website.

VM-20 Section 9.C.7.f (new section):

The prudent estimate assumptions for mortality may be adjusted to reflect up to 20 years of future mortality improvement that the company expects beyond the valuation date, using prudent future mortality improvement factors no greater than the loaded factors determined by the SOA, adopted by LATF, and published on the SOA website, at [link/reference to SOA site TBD].

**Guidance Note:** Mortality improvement may be positive or negative (i.e., deterioration).

To allow time for companies to reflect the updated mortality improvement rates, the rates that are to be used in the year-end YYYY valuation should be adopted by LATF and published on the SOA website by September of YYYY. If this timeline is not met, then at the company’s option they may use the mortality improvement rates for the prior year (year YYYY-1).

VM-31 Section 3.D.3.i:

i. **Adjustments for Mortality Improvement** – Description of and rationale for any adjustments to the mortality assumptions for mortality improvement up to and beyond the valuation date. Such a description shall include the assumed start and end dates of the improvements and a table of the annual improvement percentage(s) used, both without and with margin, separately for company experience and the industry basic table(s), along with a sample calculation of the adjustment (e.g., for a male preferred nonsmoker age 45).

VM-31 Section 3.D.11.c.i:
If the company believes the method used to determine anticipated experience mortality assumptions includes an implicit margin, the company can adjust the anticipated experience assumptions to remove this implicit margin for this reporting purpose only. If any such adjustment is made, the company shall document the rationale and method used to determine the anticipated experience assumption.

**Deleted:** For example, to the extent the company expects mortality improvement after the valuation date, any such mortality improvement is an implicit margin and, therefore, is an acceptable adjustment to the anticipated experience assumptions.
Statement on Level of Documentation, Conning Intellectual Property:

The Task Force received several comment letters with respect to full documentation of the NAIC Economic Scenario Generator specifications, calibration and tools. For example, the American Academy of Actuaries Economic Scenario Generator Work Group in their comments stated that many key elements of full ESG documentation are missing, and that achieving full documentation is important to understanding whether the ESG is fit for use in principle-based reserve and capital calculations. In their comment letter the Academy referred to ASOP 56, which provides that “when selecting, reviewing or evaluating the model, the actuary should confirm that in the actuary’s professional judgment the model reasonably meets the intended purpose.” We will not be getting into an extended discussion of ASOP 56, but we note that the intended purpose for the NAIC ESG is to help set reserves and capital as “prescribed by applicable law”. LATF considered the issue of whether to permit insurers to use other proprietary ESGs in meeting their statutory reserve and capital requirements, and it was ultimately determined that we would continue with our current format of a prescribed ESG for use under the Valuation Manual. This will better produce uniform results that can be relied upon by states in regulating these companies. In essence, the prescribed ESG developed by the Academy and currently required under the Valuation Manual would be replaced by an ESG prescribed under law that we are developing with Conning.

In our opinion, Conning has been very forthcoming with various requests with respect to documentation, and we are continuing to work with Conning to develop documentation that would prove satisfactory to everyone. However, there is a limit under which we can expect Conning to supply documentation. Under the NAIC’s Professional Services Agreement with Conning, Inc., Conning retains ownership of its Intellectual Property, including its software and source codes. The Task Force understands that there is a limit to which Conning will share certain information, and that their ESG is proprietary. The NAIC remains committed to providing a prescribed ESG for our regulated companies that best reflects the potential future economic environments our companies could be exposed to, but we also want to respect the proprietary rights of our vendors. Monthly scenario files produced by the new ESG will remain free to use by the companies, and we are not adding increased regulatory costs. The Task Force remains fully committed to developing the best ESG for regulatory purposes, and we ask for everyone’s patience and reasonableness in helping us achieve this goal. The Task Force continues to believe that Conning is best situated to this task, which is why we retained them as our vendor.

Mike Boerner, ASA, MAAA
Chair of the Life Actuarial (A) Task Force (LATF)
NAIC ESG Comments: Common Themes

Pat Allison, FSA, MAAA – NAIC Managing Life Actuary
Scott O’Neal, FSA, MAAA – NAIC Life Examination Actuary
Dan Finn, FCAS, ASA – Managing Director at Conning

Agenda

1. Discuss Common Themes Present in the ESG Comment Letters Received by the NAIC
   a. Level of Negative Treasury Yields
   b. Corporate Model Complexity
   c. Extreme Equity Returns
   d. Inversion Frequencies
   e. Equity Model Link to Treasuries
   f. International Returns
   g. Timeline
   h. Data Format
   i. Projection Period
   j. Documentation
2. Open Discussion on Comments not Covered in Common Themes
Level of Negative Treasury Yields

**Commentary:**
- “The [initial] exposed scenario set, which is as of 12/31/19, has interest rates as low as -4.8%, which seems quite extreme. The likelihood and magnitude of negative interest rates produced by the model may be even more extreme when calibrated to more recent market conditions” - American Academy of Actuaries
- “…we believe that the projected frequency and severity of negative rates should be similar to historical US experience and not be unduly influenced by experience in other economies outside the US. Historically, no period of negative rates in the US has lasted for a meaningful period of time.” – ACLI
- “Equitable believes that the recent European experience with negative rates is a reasonable benchmark to establish a lower bound on negative rates.” - Equitable

**Response:**
- Regulators and Conning will develop targets to control the level of negative treasury yields
  - Likely target steady state distribution
  - May take several forms (e.g. x% below 0%, target skew)
  - Likely will NOT target short-term results: too heavily impacted by initial conditions
  - Likely will NOT target absolute minimum: too subject to sample variation

Corporate Model Complexity

**Commentary:**
- “Conceptually, we support the goals to have stochastic spreads, credit migration, granular credit modeling, and consistency between basic and robust data sets. However, we have several concerns:
  - We lack sufficient documentation on GEMS’ underlying credit model, assumptions, or existing calibration.
  - …discrepancies between prescribed general account credit assumptions … and … credit scenarios.
  - …tradeoff of a more sophisticated model …relative to the increased complexity…” - ACLI
- “Until we have complete documentation of the credit model, the ESGWG suggests revisiting whether a simpler approach to simulating bond fund returns (not requiring a credit model) would be more appropriate.” – American Academy of Actuaries

**Response:**
- **Regulator Decision:** Should the more complex current credit model be used, or a simpler model be developed?
  - Benefits of GEMS Corporate Model:
    - Better captures nature of these investments
    - Does not involve any additional build out
    - Links Basic and Robust Data Sets
  - Will require substantial additional documentation on this model – currently in development
Extreme Equity Returns

**Commentary:**
- “Equity returns appear to be explosive in the upside and downside tails.” – Prudential
- “Equity indices lose all value in some scenarios while increasing hundreds of times in others.” – American Academy of Actuaries
- “We would like a better understanding of jump process/parameters & comparison of returns after jumps vs. history (which includes strong market recovery in a relatively short time period after jump down). The S&P 500 (price index) has negative returns over 30 years in 12% of scenarios even though this has never been observed in history.” – ACLI

**Response:**
- **Regulator Decision:** Do regulators want to alter the targets for the mean and standard deviation of the Equity model to limit the extremity of the tail scenarios?
- Extreme returns are almost entirely driven by the expected mean and standard deviation of the annual returns for each index.

Inversion Frequencies

**Commentary:**
- “…inversions [in the 12/31/19 Revised Baseline] for short maturities are still relatively frequent (~25% of scenarios]…The frequency of short rate inversions also worsens dramatically in the first five years of the 12/31/2020 [Revised Baseline] scenarios.” – ACLI
- “While the revised scenarios are significantly improved vs. the original scenarios in this regard, the amount of yield curve inversions is still above what one would expect based on historical experience. Equitable encourages further discussion between industry and regulators on this topic.” – Equitable
- “Two features of these scenarios we consider troublesome are the magnitude of negative interest rates and the shape and frequency of yield curve inversion.” – Pedersen/Tenney

**Response:**
- Unlikely to specifically target inversion frequencies, however, the number of inversions will be reviewed in the scenario output for reasonableness.
- Inversion frequencies are tightly linked to the average term premium - which is being targeted.

Equity Model Link to Treasuries

**Commentary:**
- "We do not support the formulaic linkage ... given the lack of historical evidence." – ACLI
- "Equitable supports the structural linkage between interest rates and equity returns via an equity risk premium as utilized in the exposed GEMS scenarios... We would invite the consideration of expressing equity returns as a function of longer-term interest rates ... as that could help stabilize equity returns from calibration to calibration." – Equitable
- "The ESWG believes it is important to understand this connection that was not in the old model, and to consider the impact the connection has on reserve and capital levels and whether calibration standards may need adjustment in level and/or form as a result." – American Academy of Actuaries

**Response:**
- GEMS links expected equity return to current short Treasury Yield. The AIRG model does not have a link between these models
- **Regulator Decision:** Should there be a link between the Treasury and Equity models in the new ESG?

International Returns

**Commentary:**
- "The model returns should be calibrated similarly to the AIRG, with the addition of recent history. In particular, low EAFE returns and higher SPX/EAFE correlations may be contributing to inconsistencies in the risk return relationship between different equity indices." – ACLI
- "The exposed scenarios set international dividend yields to zero even though EAFE dividends have historically been non-zero." – Prudential
- "EAFE index returns meaningfully below US returns on a risk-adjusted basis" - Equitable

**Response:**
- **Regulator Decision:** Should International Diversified Equity returns align with history or risk/return framework?
- Exposed scenarios only have Total Return
  - Conning is developing a revised specification
  - Expect to release shortly
- For the past 30+ years, International Diversified Equity returns have underperformed
  - About 2% below Large Cap per year with slightly higher volatility
Timeline

Commentary:

- "The ESGWG believes the implementation timeline does not leave enough time for regulators and interested parties to:
  - (a) Review the totality of exposed documentation and adequately understand the newly proposed ESG...
  - (b) Discuss the properties that scenario sets used for reserves/capital should have...
  - Iterate to desirable field-testing options based on (a) and (b).
  - Conduct a field test, allowing time for additional/iterative testing..." - American Academy of Actuaries
- While ACLI recognizes the need to get a better generator in place as soon as possible, our observations to date do not give us comfort in the current state of the proposed model which may indicate timeline issues.” – ACLI

Response:

- The NAIC’s current plan is to continue with the existing timeline, however, adjustments will be made to the timeline if necessary to ensure regulators and interested parties can properly evaluate the new ESG.
Data Format

**Commentary:**
- “For use in companies’ existing models, the ESWG suggests publishing scenario sets in two alternative .CSV file formats: (A) GEMS .CSV file format, which is currently exposed, and (B) the Academy Interest Rate Generator (AIRG) multiple .CSV file format.” – American Academy of Actuaries
- “The prescribed generator must automatically output prescribed scenarios in a common electronic format.” – ACLI
- “…it may be helpful to have scenarios available in the current format, as suggested, but it is also helpful to the additional indices and data points available for the “full Conning format” – Link Richardson

**Response:**
- Conning can easily adjust this to meet industry’s needs
- Specifically looking for feedback on a single desired format – Questions Include:
  - All Yield Curve points or only selected?
  - Spot Rates and Coupon Curves?
  - Income and price or just total returns?
  - Incremental Returns or Wealth Factors?
  - One big file or separate files by column?
  - Months as rows or columns?
### Documentation

March 24, 2021

Mr. Mike Boerner  
Chair, Life Actuarial (A) Task Force (LATF)  
National Association of Insurance Commissioners (NAIC)  

Dear Mr. Boerner,  

The American Academy of Actuaries’ Economic Scenario Generator Work Group (the “ESGWG”) appreciates the opportunity to offer comments on LATF’s Economic Scenario Generator (ESG) exposures.

1. Proprietary ESGs  
As a general point, the ESGWG would like to reiterate the view previously communicated by Academy Life Practice Council work groups that the use of scenario sets generated by proprietary ESGs be permitted as an alternative option to scenario sets prescribed by the NAIC, subject to proper documentation on how the scenario sets were developed and why they are appropriate for statutory reserves and capital.

2. Full ESG Documentation  
Deliverable I of NAIC RFP #2053 is “Full documentation on the ESG specifications, calibration, and tools.” The ESGWG would like to reiterate the importance of this deliverable because it is full documentation of the model that enables actuaries to adequately understand the dynamics of the model and objectively evaluate whether the scenario sets it produces are fit for purpose (adequate for determining reserves and capital, irrespective of the starting yield curve) as required of actuaries by Actuarial Standard of Practice (ASOP) No. 56, Modeling, and ASOP No. 41, Actuarial Communications.

   a. ASOP No. 56, Modeling, provides guidance to actuaries when performing actuarial services with respect to using, reviewing, or evaluating models. Section 3.1.2 of ASOP No. 56 states actuaries “evaluating the model … should confirm that, in the actuary’s professional judgment, the model reasonably meets the intended purpose.” Section 3.1.3 of ASOP No. 56 states that “[w]hen using the model, the actuary should make reasonable efforts to confirm that the model structure, data, assumptions, governance and controls, and model testing and output validation are consistent with the intended purpose.”

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
b. Section 3.2 of ASOP No. 41, *Actuarial Communications*, states “In the actuarial report, the actuary should state the actuarial findings, and identify the methods, procedures, assumptions, and data used by the actuary with sufficient clarity that another actuary qualified in the same practice area could make an objective appraisal of the reasonableness of the actuary’s work as presented in the actuarial report.”

Although several pieces of ESG documentation have been exposed by LATF, the ESGWG believes that many key elements of full ESG documentation are missing. Furthermore the ESGWG believes that achieving full documentation relies on the critical project path of adequately understanding how the ESG will perform under different conditions and assessing whether scenario sets produced by the ESG are fit for use in principle-based reserve and capital calculations. The ESGWG also believes that a lack of sufficient documentation could unintentionally impact the ESG quantity and quality of these important risk management tools available to the life insurance industry. Additional detail can be found in *Exhibit 2.1—ESG Documentation*, but as a starting point, here are two specific pieces of documentation that, as yet, have not been publicly provided:

- The exact means by which the ESG model is adjusted to fit any discrepancies to the starting yield curve, and exactly how those discrepancies run off over the course of the projection (the entire yield curve, not just the three points corresponding to the model’s three state variables).
- The correlations between the various equity and bond funds.

3. Significant Differences From Previously Prescribed ESG

The ESGWG does not believe the newly proposed ESG needs to be substantially similar to the Academy’s Interest Rate Generator (AIRG). Indeed, the proposed ESG is not. But the ESGWG does believe it is important that regulators and interested parties appreciate just how different the two models are (in both underlying structure and calibration), generally agree that the differences are warranted, and understand the impact the differences will have on the scenario sets produced and the level and volatility of industry reserve and capital levels, including how model dynamics and interrelationships will change in the long term as the current economic environment changes. This will take time and additional documentation, but to start with, the ESGWG would like to highlight the following three significant differences:

a. **Lack of explicit MRP**—The old model has an explicit and intuitive mean-reversion parameter (MRP) that changes rather slowly according to a specified formula. The new model has no analogous MRP for regulators to explicitly set or control. Instead, NAIC’s vendor, Conning, has agreed to target an MRP by tweaking various parameters during calibration, but as seen in the revised baseline scenario set, this can have unintended consequences given the various linkages in the model. And it remains to be seen how sensitive mean reversion is to the current economic environment—e.g., to the observed yield curve on the valuation date. The ESGWG believes it is important to understand this significant change in the mean-reversion process and resulting impact on the volatility of capital over time.

b. **Connection Between Interest Rates and Equity Returns**—The old model has no such connection. The simple formulaic connection in the new model (equity risk premium over short Treasury rate) is largely based on actuarial judgment and the goal that the model produces risk-neutral scenarios. Empirical evidence suggests the equity risk premium depends on non-modeled macroeconomic factors (historical correlations have been both highly negative and highly

---

2 This exhibit and subsequent exhibits cited are included in the enclosure to this comment letter.
positive). This has the potential to magnify the tails because calibration points in the new model depend on the starting yield curve in a way that they did not in the past. It also has the potential to make long-duration insurance liabilities dependent on overnight Treasury rates, which seems artificial and counterintuitive. The ESWG believes it is important to understand this connection that was not in the old model, and to consider the impact the connection has on reserve and capital levels and whether calibration standards may need adjustment in level and/or form as a result.

c. **Stochastic Modeling of Credit Spreads and Defaults for Bond Fund Returns**—The new ESG simulates bond fund returns by first using a credit model to simulate each of the individual bonds contained in the bond fund; e.g., using stochastic credit spreads, transitions, and defaults. The old ESG uses a simpler approach that does not involve a credit model. To date, the ESGWG simply does not have enough documentation on the new credit model to comment further on the impact this significant change may have and whether it is desirable or not. Until we have complete documentation of the credit model, the ESWG suggests revisiting whether a simpler approach to simulating bond fund returns (not requiring a credit model) would be more appropriate. Regulators may also wish to consider the degree to which the approach for simulating bond fund returns is consistent with the regulatory framework for modeling insurer general account assets, which requires using deterministic prescribed credit spreads and defaults and could easily lead to calibration inconsistencies.

4. **Implementation Timeline**

   The ESGWG believes the implementation timeline does not leave enough time for regulators and interested parties to:
   a. Review the totality of exposed documentation and adequately understand the newly proposed ESG model and the scenarios it would produce under various initial conditions.
   b. Discuss the properties that scenario sets used for reserves/capital should have and evaluate the new ESG and its scenario sets on that basis.
   c. Iterate to desirable field-testing options based on (a) and (b).
   d. Conduct a field test, allowing time for additional/iterative testing (given the likelihood there will be adjustments based on what is learned from prior iterations of testing).

   The ESGWG also believes that approval in November/December could present companies and vendors with an insufficient short timeframe to implement the final ESG in their systems.

5. **Scenario Sets – Rates**

   Although the ESGWG may have additional comments as additional missing documentation is exposed, the ESGWG’s initial comments on the baseline scenario set (exposed 12/18/20) can be found in Exhibit 5.1: Scenario Sets—Rates. Key issues include the following:
   a. The exposed scenario set, which is as of 12/31/19, has interest rates as low as -4.8%, which seems quite extreme. The likelihood and magnitude of negative interest rates produced by the model may be even more extreme when calibrated to more recent market conditions.
   b. A comparison of risk-neutral and real-world calibrations implies a negative market price of risk for long-term interest rates.
   c. Equity indices lose all value in some scenarios while increasing hundreds of times in others.
   d. Unreasonable short-end inversions. In nearly all scenarios, the yield curve is inverted between 1-month and 2-year rates (fixed in the revised baseline scenario set).

   The ESGWG also reviewed the revised baseline scenario set (exposed 2/24/21). Although the addition of a long-term overnight yield target appeared to fix (d) above, the other issues found in the
baseline scenario set are still present, even exacerbated for example, for (a) negative rates are even more extreme, and for (c) equity indices have even more extreme tails. This highlights how calibrating ESG models can be complicated; i.e., recalibrating to fix a particular issue can easily have unforeseen consequences, often exposing new issues or exacerbating existing issues. The ESGWG suggests discussing the properties that scenario sets used for reserves/capital should have, and understanding the degree to which desired scenario set properties can be achieved via recalibration of real-world (RW) and/or risk-neutral (RN) parameters. It may be that certain desired scenario set properties are out of reach given constraints on calibration and/or model structure.

6. Scenario Sets—Accompanying Report
   To facilitate reviewing newly published scenario set files, the ESGWG suggests adding: (A) a new section on Model Input, and (B) additional statistics and charts for the existing section on Model Output. Additional detail can be found in Exhibit 6.1: Scenario Sets—Accompanying Report.

7. Scenario Sets—File Format
   For use in companies’ existing models, the ESGWG suggests publishing scenario sets in two alternative .CSV file formats: (A) GEMS .CSV file format, which is currently exposed, and (B) the Academy Interest Rate Generator (AIRG) multiple .CSV file format. Additional detail can be found in Exhibit 7.1: Scenario Sets—File Format.

We look forward to further documentation and discussion on the NAIC’s ESG project.

Sincerely,

Jason Kehrberg, MAAA, FSA
Chairperson, Economic Scenarios Work Group
American Academy of Actuaries

Enclosures: Exhibits 2.1, 5.1, 6.1 and 7.1
Exhibit 2.1 – ESG Documentation

There is widespread expectation that the NAIC will be providing sufficient details on the new models so that interested practitioners can attain a complete operational understanding of all aspects of the simulation of model output, calibration of the models, and application of related tools. This expectation was set by the requirement in item I in the Deliverables section of the RFP which states: “[f]ull documentation on the ESG specifications, calibration, and tools.” The requirement of full documentation was reiterated on slide 11 of the October 27, 2020 NAIC presentation of Pat Allison “ESG Implementation Project: Background and Deliverables” which states: “Conning will provide full documentation on specifications, calibration, and tools. This will include: Full documentation of the necessary components used to develop the Basic Data Set.” This is an important commitment since it is the Basic Data Set which is to be prescribed by the NAIC for statutory reporting.

As summarized on slide 7 of the aforementioned October 27, 2020 NAIC presentation, the components of the Basic Data Set are:

- Treasury Yields - 1M, 3M, 6M, 1Y - 30Y by year; Spot and Coupon Yields.

As of the end of February 2021, the NAIC has provided three documents that relate to the models underlying the Basic Data Set:

- NAIC Scenario Set Technical Documentation - Interest Rates Model
- NAIC Scenario Set Technical Documentation - Equity and Dividend Model
- NAIC Scenario Set Technical Documentation - Corporate Yield Model

No specific documentation has been provided on how the bond returns are computed. The NAIC Scenario Set Technical Documentation - Interest Rates Model contains significant information on the treasury interest rate model but does not constitute full documentation. The NAIC Scenario Set Technical Documentation - Equity and Dividend Model provides a sense of how the equity model works but is missing fundamental information. The NAIC Scenario Set Technical Documentation - Corporate Yield Model provides no meaningful details on how the corporate yield model works.

Full documentation must achieve the following outcomes for each of the models used to develop the Basic Data Set.

1. Full specification of model dynamics.
2. Operational description of the calibration process.
3. Mapping of the calibration parameters into the model dynamics.

Full documentation of calibration requires the details of how the parameters for each model are determined and what data is used in the calibration procedure. It is reasonable to expect that someone who has understood the model specification and calibration documents would be able to arrive at similar model parameters. Indeed, the ability to independently reproduce calibration results is an important check and robustness and stability of a model.

Full specification of Treasury model dynamics requires the following:

1. Bond pricing formulas
2. State variable simulation procedure
3. State variable initialization procedure
4. Initial yield curve fitting procedure
5. Explicit mapping between real world and risk neutral model parameters
6. Documentation should use the original standard notation of Cox, Ingersoll, and Ross

Full specification of Equity model dynamics requires the following:
1. Dynamic specification for equity price return
2. Details of jump process for equity index
3. Correlation specifications for diffusion and jump terms across equity indices
4. Dynamic specification for dividend yield process
5. Any adjustments that need to be made to dividend process when very large jumps occur in the equity process
6. Specific linkages between equity returns and interest rates

Full specification of Bond Fund Return model dynamics:
The bond fund returns models appear to be based on a corporate bond pricing model called the corporate yield model. Therefore, to understand the bond fund returns the details of the corporate yield model are needed, including details on credit spreads, credit migration, loss given default and the relationships between rates/spreads and equity/credit. Similar information detail to what is needed for the treasury model is required. NAIC documents and presentations have indicated that the bond fund returns are based on an index of individual bonds. Therefore, the methodology/rules of the index construction are required.
Exhibit 5.1: Scenario Sets – Rates

Selected ESWG findings on rates baseline scenario set (exposed on 12/18/20):

A. Interest Rate Model
   1. Conning’s interest rate model structure and calibration (i.e., 1M to 2Y) are inverted in most scenarios nearly immediately and in nearly all scenarios after projection year 5.
   2. The frequency and severity of negative interest rates in the exposed scenario set are high
      a. Rates for short-term maturities approach -5%.
      b. Roughly 20% of the 1Y and 2Y yields are negative between projection years 5 and 15, and those rates are negative in more than 15% scenarios over the longer term.
   3. Insufficiently broad range of rates or other anomalies / inconsistencies
      a. 20Y yields were above 8% for much of the period between 1974 and 1990, but exposed 20Y yields are above 8% less than 1% of the time.
      b. While there are more low-rate scenarios than the AIRG, 20Y rates seldom average below 1% over the 30-year projection (and never average below 70-80 bps).
      c. In the exposed scenarios, annualized realized volatility for 20Y yields is nearly double the annualized realized volatility for 1Y yields. This is inconsistent with both Conning’s 1995+ historical period (where 1Y volatility was lower than 20Y) and LATF’s 1953+ historical period (where 1Y volatility was higher than 20Y by ~50%, not double). The relationship between the volatilities for longer and shorter maturities may be contributing to shorter term bond funds having higher volatility and lower returns over the long term.

B. Equity Model
   1. Index returns explode in both tails. In some scenarios equity indices essentially become worthless while other scenarios have indices hundreds of times starting levels by year 30.
   2. Other characteristics of the equity distribution also seem to diverge from historical data
      a. Monthly S&P 500 returns in LATF’s exposure have substantially more negative skew and higher kurtosis than history.
      b. The S&P 500 (price index) has negative returns over 30 years in more than 5% scenarios (even though that has never been observed in history).
      c. The exposed scenarios set international dividend yields to zero even though EAFE dividends have historically been non-zero.
      d. SPX / EAFE correlations seem higher than long-term historical data.

C. Corporate Model:
   1. Credit spreads inferred by taking the difference between annualized corporate and government bond fund income returns suggest that
      a. LATF’s / Conning’s proposed long-term credit spread for bonds in the separate account are lower than the prescribed NAIC general account bond fund spreads.
      b. Extreme credit events in the scenarios appear to be materially higher than historical stresses.
   2. Month 1 income returns for government bonds do not seem to align with time 0 government bond yields. (Month 1 Short Gov income return ~ 1Y UST yield. Expected to align with the 50% 1Y / 50% 5Y given the short-term fund definition.)
**Exhibit 6.1: Scenario Sets – Accompanying Report**

To facilitate reviewing newly published scenario set files, the ESWG suggests adding the following to the report accompanying scenario sets.

**A. A new section on Model Input**
1. Values of the model parameters used to generate the associated scenario set
2. Starting state variables used to generate the associated scenario set

**B. Additional statistics and charts for the existing section on Model Output**
- Unless otherwise specified
  - Selected key rate tenors: 1M, 3M, 6M, 1Y, 2Y, 3Y, 5Y, 7Y, 10Y, 20Y, 30Y
  - Selected funds: all equity and bond funds included in the published scenarios
  - Selected time points: 0.25, 0.5, 1, 2, 3, 4, 5, 10, 20, 30, 40 and 50 years
  - Selected percentiles: 1, 2.5, 5, 10, 25, 50, 75, 90, 95, 97.5 and 99
  - Selected key rate pairs: 1m2s (2Y rate less 1M rate), 3m10s, 2s10s, 10s30s, 1s20s
  - Selected corp bonds: 1Y A, 5Y A, 10Y A, 30Y A, 1Y BBB, 5Y BBB, 10Y BBB and 30Y BBB
  - Selected yield curve shapes: Normal, Flat, Steep, Inverted, Humped (criteria TBD)

1. Not scenario path dependent
   - **a. Distribution of Key Rate Pair Term Spreads**
     - Key rate term spread (y-axis) by selected time points (x-axis)
     - One chart for each selected key rate pair
     - Legend: mean, min, max, selected percentiles

   - **b. Table on Key Rate Pair Inversions (no chart)**

Exhibit 7.1: Scenario Sets – File Format

For use in companies’ existing models, the ESWG suggests publishing scenario sets in two alternative .CSV file formats:

A. GEMS .CSV file format, which is currently exposed, but with the following additional fields:
   1. Interest Rates – The values of the three state variables and their associated random numbers
   2. Equity and Bond Fund Returns – The random deviates for the Wiener process and jumps.

B. AIRG multiple .CSV file format:
   1. Interest Rates – One file with spot (annual effective) rates, one file with coupon (BEY) rates, each with the following 12 columns: Scenario, Time, 0.25y, 0.5y, 1y, 2y, 3y, 5y, 7y, 10y, 20y, 30y. The ESWG feels that these 10 points on the yield curve, appropriately interpolated, are adequate when doing projections for principle-based reserve and capital calculations.
   2. Equity and Bond Fund Returns – One file for each fund modeled by the ESG, with Time across the columns, Scenarios down the rows, and data showing total return only (not split by price and income).

"The ESWG also notes the current AIRG can produce scenario sets with projection lengths up to 100 years to support insurance products with very long durations, e.g., SPIAs and some life insurance products. Therefore, for the files specified in both A and B above, actuaries will need similarly long projection lengths out of the new ESG."

Mr. Philip Barlow  
Chair, NAIC Life-Risk Based Capital (E) Working Group  

Re: ACLI Comments on Economic Scenario Generator Exposure  

Dear Messrs. Boerner and Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments on the exposures related to the economic scenario generator (ESG) project. ACLI is committed to working with regulators on the modifications and implementation of Conning’s GEMS as the replacement for the current Academy Interest Rate Generator (AIRG). We acknowledge that the current generator has clear shortcomings and further acknowledge the need to get an improved generator in place as soon as possible.

That said, our initial analysis of the scenario set has surfaced anomalies and scenario results that we consider inappropriate. These anomalies include significant and sustained negative interest rates, a large number of yield curve inversions, extreme equity returns, and low Sharpe ratios for certain equity indices, none of which is consistent with historical experience. The underlying causes of these issues are not currently clear due to the absence of detailed documentation and may be deeply rooted in the model. For this reason, we request more thorough and comprehensive documentation which will aid in understanding of the model and make the decisioning and testing process more efficient. While ACLI recognizes the need to get a better generator in place as soon as possible, our observations to date do not give us comfort in the current state of the proposed model which may indicate timeline issues. We believe that the implications of the collective set of decisions must be understood in order to avoid potential unintended consequences (i.e., addressing one concern but creating another). We support a timeline that ensures that the new generator is fit for purpose.

Our letter is organized as follows:

I. Overarching Comments
   A. Anomalies in Scenarios
B. Needed Additional Documentation
C. Timeframe Considerations

II. Comments on Treasury, Corporate, and Equity ESG Goals and Proposed Recommendations
A. Areas of Support
B. Areas for Additional Dialogue/Documentation
C. Areas of Significant Concern

III. Comments on ESG Scenario Statistics and Reports

IV. Comments on ESG Scenario Picker Tool, Stochastic Exclusion Ratio Test, and Data Formats

V. Comments on Other Related Topics

I. **Overarching Comments**

The Conning model represents a structural change relative to the current model, with interrelationships that should be vetted and understood. The components of GEMS (i.e., interest rate, equity, and corporate models) are linked, and their calibration (e.g., interest rate mean reversion level, volatility, and shift; equity risk premiums; jump parameters) should be evaluated holistically because a decision on one parameter or scenario property may have direct and indirect effects on scenario dynamics for multiple risk factors (e.g., changes to interest rate parameters will affect equity returns) both at a point in time and between reporting periods. In addition, the ESG has a complex relationship to the statutory requirements.

We believe that appropriate vetting and discussion of the key decision points is necessary so that regulators and industry can achieve the goal that the generator is fit for purpose in calculating reserves and capital. The discussion should go beyond individual technical decision points that, in a vacuum, may be reasonable but lead to an unreasonable scenario set. There should be a discussion of stylized facts and expectations around the results and their consistency with the relevant historical period. While the definition of the appropriate historical period can and should be debated, the results produced by the generator should be reasonable through the lens of that historical experience. As a reference to help assist in this discussion, Appendix One of our document outlines desirable attributes for the generator, which are further reflected in our specific comments on the exposures.

The focus of our following comments is the 12/31/2019 revised baseline scenario set and includes preliminary observations on the 12/31/2020 scenario set.

A. **Anomalies in Scenarios**

ACLI believes that the scenario generator should create a scenario set that reasonably reflects history, with some allowance for more extreme environments. Our initial analysis of the 12/31/2019 scenario set, however, has revealed several significant concerns. These concerns still appear to be present in the 12/31/2020 scenario set and may be generally exacerbated by lower initial interest rates.
Negative Rates: The revised 12/31/19 scenario set is generating significant and sustained negative interest rates. Short-term yields fall as low as -6.2%. Yields for maturities shorter than 1Y are negative during roughly 20% to 25% of the scenarios in projection years 5-15. Those yields are negative in ~15% to 20% of scenarios in the long term as illustrated in the following graph:

The frequency of negative rates is even more extreme (e.g., over 45% of scenarios have negative short-term yields in the first year) in the 12/31/2020 scenarios.

We believe that the projected frequency and severity of negative rates should be more consistent with historical US experience. Historically, no period of negative rates has lasted for a meaningful period of time in the US.

Yield Curve Inversions/Realized Volatilities: We are concerned by the number of inversions occurring within the scenarios. Based on our initial analysis of the revised 12/31/19 scenario set, the frequency of yield curve inversions appears elevated vs. history. While the revised baseline calibration addressed the 100% rate inversion problem in the initial set, inversions for short maturities are still relatively frequent (~25% of scenarios) as shown below:
The frequency of short rate inversions also worsens dramatically in the first five years of the 12/31/2020 scenarios.

In addition, realized volatilities for short maturities (e.g., 1-year rates) are roughly double the realized volatilities for long maturities (20-year rates). This is inconsistent with the historical data set used in Conning’s calibration and may also be contributing to other concerns with the scenario distribution we have observed (e.g., the ability to produce interest rate dynamics in recent history as well as the 1970s / 1980s, unintuitive long-term risk/reward relationships between bond funds).

We believe the yield inversions and realized volatilities should be more consistent with observable historical data.

**Extreme Equity Returns:** We have observed, as shown below, unusual distribution characteristics and jumps in the initial scenario set, the cause of which is unclear. At the extremes, there are scenarios that assume that equity indices essentially become worthless (see chart below for an example). The original baseline also includes indices that are 1000+ times (>100,000%) higher by year 30. We would like a better understanding of jump process / parameters & comparison of returns after jumps vs. history (which includes strong market recovery in a relatively short time period after jump down). The S&P 500 (price index) has negative returns over 30 years in 12% of scenarios even though this has never been observed in history. In the over 90 years of S&P 500 (SPX) data since 1928, monthly losses larger than...
25% and 20% have only occurred once (Great Depression) and 3 times (1929, 1932, 2008), respectively. Monthly declines of more than 25% occur in over 14% of Conning’s 30-year scenarios.
Mean Equity Returns / Return Relationships: Conning’s recommended calibration has a significantly lower view of long-term equity returns relative both to history and the AIRG. The model returns should be calibrated similarly to the AIRG, with the addition of recent history. In particular, low EAFE returns and higher SPX/EAFE correlations may be contributing to inconsistencies in the risk return relationship between different equity indices. We observe that the average Sharpe Ratio over 30 years for EAFE is ~18% vs. ~33% for S&P 500 in revised baseline scenario set as of 12/31/2019.

B. Needed Additional Documentation

Additional documentation will help enable industry to provide more constructive insights for a higher quality generator and a more efficient process. There are gaps in the interest rate model documentation (e.g., determination of the state variables), with more significant gaps noted in the equity model documentation (e.g., EAFE model, distribution, and correlation of jump processes) and the corporate / credit model. We note that the corporate model drives bond fund returns in the Basic Data Set, so while companies may not need the granular credit output in the Robust Data Set on an ongoing basis, the information is needed to appropriately vet the Basic Data Set.

We request the following additional documentation to assist in our review, noting while some of this may have been included in the March 18th exposures, the materials do not appear to substantively address the issues outlined below:

- Explanations of model selection considerations and theoretical justification for model choices (e.g., 3-factor vs. 2-factor model, formulaic equity risk premium relationship) as
these decisions determine fundamental scenario properties and their suitability for purpose.

- Direct and indirect relationships (e.g., equity risk premium, equity/credit, rate/spread relationships), including formulas, correlations, and any relationships imposed via judgment
- Methodology and formulas used to determine fund returns, including the composition of bond indices and derivation of bond fund returns, use / modeling of exchange rates in international equity returns
- State process information, including all distributions and correlations
- Calibration information, including model parameters and calibration targets at multiple points in time, methodologies for setting initial values and long-term targets, how and where historical data is used and the benchmarks used, the process and judgment used when a calibration fails, and identification of the values that would be updated at each reporting period, regularly, or based only on triggering events
- The criteria for evaluating the reasonability of each published scenario distribution (beyond validating that targets are reproduced)

In addition to documentation for Conning’s model and calibration, LATF should develop and document target scenario properties or stylized facts which can be done on a parallel track as documentation becomes available. Targets such as the original C-3 Phase 2 equity calibration points may be useful. It is important to confirm that the Conning generator and calibration can meet those targets under an appropriate range of market conditions and other sensitivities.

C. Timeframe Considerations

We encourage the Task Force to regularly assess the status of the timeline in light of the many steps to be completed prior to implementation. ACLI suggests the following considerations for additional milestones or adjustments for the expected timeframe of existing milestones:

- Additional time may be necessary to understand and confirm the suitability of the model and its calibration. Considerations include availability of documentation and adequate time to understand it, deliberation of key calibration decisions, adequate time to test impacts of changes, sensitivity testing and forecasting, and implementation to valuation systems and other processes. Additionally, smaller companies could be put at a disadvantage due to fewer resources to test and implement the change.
- Additional education sessions for regulators and interested parties may be necessary once more documentation is available to thoroughly understand the generator.
- The field testing start date may already be coming under pressure due to the lack of adequate documentation. There is currently no viable candidate for field testing as there are significant concerns with the revised baseline as noted in ‘Anomalies in Scenarios’.
- The timeline should provide time for consideration of reassessing generator modification(s) and parameters after the assessment of the field study results.
- Consideration in the implementation timeline should also contemplate time for companies to evaluate the potential impact of the new ESG on statutory reporting, risk management & hedging (due to changes in economic sensitivities), and system implementation.
We encourage the regulators to regularly assess the status of the timeline since failure to meet current and suggested milestones may adversely impact the timeline.

II. **Comments on Treasury, Corporate, and Equity ESG Goals and Proposed Recommendations**

ACLI agrees with many of the stated goals for the generator and notes the importance of a holistic view of how these come together for a generator that is deemed to be fit for purpose. This holistic view of the exposed scenario sets (which are based on "mixing and matching" of the Conning Standard Calibration parameters with the selected adjustments and overrides presented in the list of "ESG Goals") gives us some concerns about the viability of these recommendations and may require a fundamental or first principles recalibration of Conning’s model or selected model refinements to resolve these concerns. We have broken down our comments into three categories: areas of support, areas for improvement with additional dialogue or documentation, and areas of significant concerns:

A. **Areas of Support**

**Treasury goal #1 (Initial Yield Curve):** We support the goal that the model’s starting yield curve should match the actual starting yield curve as closely as possible. Our initial analysis suggests that the model would have had difficulty fitting historical rate curves. Based on our analysis to date, adjustments to the model beyond the grading period recommendation may be needed to fulfill this objective.

**Treasury goal #4 (Range of Results):** We support the goal that the model should be capable of producing a reasonable range of results for very long simulations. Based on our analysis to date, adjustments to the recommendation may be needed to fulfill this objective.

**Treasury goal #5 (Sustained Low Rates):** We support the goal that the ESG should be capable of producing low interest rates for an extended period of time. The definition of “low for long” should be based on plausible expectations and should be considered in conjunction with the broader scenario distribution. We observe that lowering the mean reversion point alone is not sufficient to achieve this goal. The structure of the mean reversion point, the mean reversion speed or strength, and volatility need to come into play so that scenarios have the appropriate degree of dispersion.

Regarding the speed of mean reversion, we observe that the exposed scenarios do not appear to be consistent with the recommendation of alignment with the current Academy scenarios. The GEMS scenarios (both original and Revised Baseline exposures) have significantly slower median reversion than the current Academy scenarios (as observed in the following chart). This difference may reflect structural differences between GEMS and the AIRG. Starting from 12/31/2019 initial conditions, median long-term rates in the Conning generator are 40 basis points below the corresponding AIRG median after 30 years. When mean yields do not approach their target within a typical projection period, it effectively results in an inadvertently lower target in today’s low-rate environment. Additionally, mean long-term yields decrease for...
the first several months in the Conning generator. It is unclear if this is intended or an unintentional side effect of the model calibration.

**Equity and corporate goal #1 (Returns are Representative):** We support the goal that returns should be provided for the types of funds representative of those offered in U.S. insurance products.

**B. Areas for Additional Dialogue/Documentation**

**Treasury goal #2 (Variety of Curve Shapes—also see above):** We support the goal that the model should produce a variety of yield curve shapes, and they should change over time. We recommend additional review of the appropriateness of yield curve shapes and the acceptable frequency of specific shapes (e.g., frequency of yield curve inversions, consideration of limitation of time for inverted curves).

**Treasury goal #6 (Sustained Volatility):** We support the goal that the model should produce interest rate levels that fluctuate significantly over long periods. Currently, we do not yet support the recommendation to use the GEMS volatility estimate. The volatilities from the initial scenario
set do not look to be related to the relevant historical period and are not explained by the available documentation. The volatilities may also be a source of the anomalies described above.

**Treasury goal #8 (Historical Data Period):** We support the goal that the ESG should be calibrated using an appropriate historical period. We would support consistency with the Academy generator’s historical period (starting in the 1950s), extended to include the most recent available data. Critical to this goal, the historical period should be consistently applied across the underlying calibration of state variables. Since Conning has effectively locked in significant aspects of their 1995+ based standard calibration (e.g., risk-neutral parameters, volatilities), it is unclear where they have reflected the data since 1953 in their calibration (other than when superimposing the mean reversion target). Using interest rate volatilities based on data since 1995 (generally a lower rate and lower volatility period) may lead to an insufficiently broad range of rates, which may not sufficiently capture disintermediation risk (from high-rate scenarios), and lead to other anomalies / inconsistencies.

**Equity and Corporate Goals #2 (Calibrated to Historical Period):** We support the goal that the ESG should be calibrated using an appropriate historical period. From the available documentation, it is not clear what historical period is currently being used by Conning. Consistent with Treasury goal #8, we believe the Academy generator’s historical period extended to include more recent data would be an appropriate period. Further, the scenarios that are generated by the model should be reasonable compared to the historical period results. The examples illustrated previously suggest areas where the revised baseline scenarios may be unreasonable (such as severely negative cumulative returns).

**Equity and Corporate Goals #3 (Stochastic Volatility):** We do not oppose the goal that the equity model should have stochastic volatility and that the initial volatility should be updated periodically. However, realized equity volatility appears to be higher in the Conning scenarios than in the Academy scenarios, and we do not have sufficient documentation to opine on the underlying rationale for this observed higher volatility. Stochastic volatility, if it exists, needs to decline over time to avoid arbitrage within the scenario sets. While we believe that there should be a defined process for updating initial volatility, the frequency and basis for the updates will need to be considered in conjunction with Conning’s jump process since the linkage between volatility and the jump process may increase the risk of procyclicality (e.g., higher likelihood of market stresses after a recent drop).

**Equity and Corporate Goals #6 (Higher Correlation in Tail):** We believe correlations between equity indices in stressed markets should be consistent with relevant historical data. We do not have sufficient documentation to opine on whether Conning’s approach is reasonable. Given the complexity of Conning’s model, we would like to understand Conning’s theoretical approach rather than focus on the results from any given scenario set.

**Equity and Corporate Goals #8-11 (Model for Returns, Separate Yield Curves by Rating, Stochastic Spreads, Dynamic Bond Credit Transitions):** Conceptually, we support the goals to have stochastic spreads, credit migration, granular credit modeling, and consistency between basic and robust data sets. However, we have several concerns:
1. We lack sufficient documentation on GEMS' underlying credit model, assumptions, or existing calibration.
2. We would like to understand the basis and consequences of discrepancies between prescribed general account credit assumptions and Conning’s assumptions and resulting credit scenarios.
3. It is unclear whether the tradeoff of a more sophisticated model is worthwhile relative to the increased complexity and lack of transparency (i.e., a significant amount of critical information only available in the Robust Data Set).

C. Areas of Significant Concern

Treasury goal #3 (Negative Rates—also see above): We do not inherently oppose the concept of negative interest rates. That said, we believe that the projected frequency and severity of negative rates should be similar to historical US experience and not be unduly influenced by experience in other economies outside the US. Historically, no period of negative rates in the US has lasted for a meaningful period of time. Negative rates are influenced by many model parameters, and each may entail different, potentially undesirable tradeoffs. In addition, the use of arbitrage-free scenarios may be contributing to the disconnect between the model and historical experience. While arbitrage-free scenarios are desirable (Treasury goal #7), a compromise may be preferable if necessary to prevent unrealistic scenario properties.

Equity and Corporate Goals #7 (Link between Equity and Treasury): We do not support the formulaic linkage between equity returns and Treasury yields given the lack of historical evidence. The existing approach in the AIRG allows for varying levels of correlation between rates and equities. At the same time, the correlations in the AIRG average close to zero across the entire distribution and have a historical basis. The selection of a strict formulaic relationship between equity returns and Treasury yields in every period appears to be driven by operational considerations (i.e., ability to simultaneously generate risk-neutral scenarios) unrelated to the NAIC’s objective, fundamentally changes the nature of the scenarios, and is not supported by historical data. Intuitively, this relationship has not held in every period due to other macroeconomic factors. If it did, the late 70s and early 80s would have had high returns for equities, and the current low interest rate environment would have poor returns. Equity risk premium relationships have varied significantly over time in a manner that is unlikely to be well represented by the current recommendation.
The proposed relationship is also likely to be a source of non-economic volatility. Reserves and capital will be sensitive to changes in overnight interest rates even though the underlying insurance liabilities generally would not be. This relationship may create an incentive to hedge against changes to the overnight rate due to the artificial dependency in the ESG. We note how Conning’s adjustment to target overnight rates in the revised baseline reduced equity returns by roughly 40% by year 30. Changes in actual overnight rates would also affect equity return paths in a manner that is unlikely to be offset by changes in other scenario parameters. For example, in the 2020 scenario set, equity index levels were approximately 10% lower at year 30 relative to the 2019 scenario set due to the lower initial overnight rates. However, the relationship varies at different periods, so any attempt to compensate for the change via high level adjustments to the equity risk premium would under/overcorrect depending on the product, introducing unintuitive results and volatility.

The revised baseline changes also illustrate how the explicit linkage may force unnecessary compromises between rate and equity distributions. The change to address a rate shortcoming in the original 12/31/19 baseline scenarios appears to have created or exacerbated inappropriate equity return distributions. Overall, we suggest an approach closer to the one used by the existing AIRG.

**Equity and Corporate Goals #4 (Model Jumps):** We do not oppose the goal of the ESG having the ability to generate very large losses and gains in short periods of time (i.e., jumps), but we have potential concerns about the recommendation to use Conning’s existing calibration given the extreme results observed in the upside and downside tails previously noted and so cannot yet support this recommendation. Additional information will help us assess the appropriateness of the existing calibration.

**Equity and Corporate Goals #5 (Long Recoveries):** While we do not oppose the goal of having some equity scenarios reflect the possibility of a very long recovery after a period of losses, we have observed that a large portion of 30-year returns for indices in the revised baseline scenario set seemed highly adverse (see comments on extreme equity returns above). Additional
documentation may help us understand the drivers of these outcomes. We believe that recovery scenarios should be calibrated to appropriate history.

III. Comments on ESG Scenario Statistics and Reports

We suggest that the generator produce the following additional statistics. Note that we may request additional statistics once we have sufficient documentation to better understand the GEMS model.

- Additional percentiles, particularly in the tail in the fan charts (or supporting data tables)
- Period-over-period (i.e., between reporting date) comparisons in the fan charts
- A distribution (fan chart) of cumulative average interest rate paths
- A distribution (fan chart) of total and price return accumulation factors for all equity and bond funds
- A distribution (fan chart) of credit spreads and default losses driving the Basic Data Set bond fund returns
- A graph of the percentage of scenarios with negative rates (at the key 10-11 points on the yield curve) or inverted yield curves (for selected rate pairs) by projection month
- Information on the prevalence of other yield curve shapes (e.g., normal, steep, inverted, humped)
- Realized interest rate volatility statistics for short and long maturities
- Equity return volatility, skew, and kurtosis statistics
- A distribution (fan chart) of equity risk premiums
- A table showing the distribution of correlations between equity returns and bond funds, interest rates and equity returns, credit spreads and equity returns over the scenario projection (correlations should be over the scenario or meaningful periods, not individual years).

IV. Comments on ESG Scenario Picker Tool, Stochastic Exclusion Ratio Test, and Data Formats

We suggest deferring discussion of these items until the scenario set itself is determined. In the meantime, we offer the following considerations:

- Since scenario selection will only be available as posted files and not a tool, clarification on how scenario selection will be implemented for companies licensing the API should be provided.
- Documentation on how the new SERT percentiles are applied (e.g., to return vs. accumulation factor distributions, the conditional versions of those distributions based on the GEMS cascade structure (and therefore available only to Conning) and whether the approach captures the range of scenario outcomes intended for SERT (e.g., low rates/high equity leads to low rates/high equity given low rates (= lower equity))].

V. Comments on Other Related Topics

- Governance: We agree with Conning on the importance of appropriate governance in this process. We would encourage as much of the ESG specifications to be incorporated into the Valuation Manual as possible. Appropriate items to consider include the setting
Appendix One

Desirable Properties of the Economic Scenario Generator

Stochastic Scenario Properties

- A single set of economic scenario requirements should apply to all products for which stochastic modeling is required.

- The prescribed scenario generator should be “fit for purpose” and produce a reasonable baseline set of economic scenarios. There should be a balance between complexity, transparency, and ease of use, and stability of scenario generator parameters.

- The scenario generator should have a sound fundamental basis. The generator parameterization should be based on relevant historical experience and produce a realistic distribution of real-world scenarios, including plausible and coherent tail stresses.

- The scenario generator should be based on best estimate assumptions to avoid unintended consequences between different products. For example, FIAs may have upside risk that would not be captured if the scenario parameters reflect additional margins geared towards products more sensitive to downside risk, such as VA GMxBs.

- The scenario generator should be viewed holistically, rather than focusing on narrow aspects of the generator. Refinements to the scenario generator should not be biased in one direction.

- Economic elements should be internally consistent. Bond fund returns should be consistent with the stochastic generator’s interest rate and credit assumptions or guidance.

- Updated generator parameterizations and their impacts on scenarios and results should be intuitive/explainable. The parameterizations should be stable.

- The scenarios should reflect initial market conditions where applicable and should not be disproportionately impacted in the long-term by initial market conditions. For example, the generator starts at the initial actual treasury rate curve and credit spreads when projecting both interest rates and bond fund returns.

Stochastic Scenario Governance

- Governance rules should be established for both routine updates (i.e. updating starting yield curve with recent actual results, calibration criteria, etc.) and periodic holistic review/validation of the generator.
  
  - Reviews and updates should be performed by a third party, vetted for complex interactions between the parameters and potentially significant impacts, and documented in sufficient detail for independent review.
  
  - The initial development process of the scenario generator should allow adequate time and resources for field testing to ensure all intended stochastic scenario properties are met.
  
  - Updates should allow for attributions, and field testing should be considered for more substantial changes.

- Non-prescribed generators should be permitted, subject to appropriate governance. Calibration criteria should be developed by the vendor so that the prescribed generator and non-prescribed
generators can be validated based on scenarios produced rather than reserve and capital results. Different scenario generators and/or parameters may produce a materially similar distribution of scenarios and results.

- Other stochastic scenario uses (e.g., hedging, ALM, risk management) may require more sophisticated economic scenario modeling (e.g., explicit credit spread, default, and migration modeling). Allowing companies to use their risk management generators for act valuation, provided the scenarios meet specific criteria for all elements included in the prescribed scenario generator, promotes better risk management without imposing unnecessary complexity on all statutory scenario stakeholders (i.e., companies and regulators).

**Production Implementation Requirements**

- The prescribed generator must automatically output prescribed scenarios in a common electronic format.

- The prescribed generator should be open source and sufficiently documented so that companies can call or otherwise implement the generator in their valuation, projections/forecasting, or risk management models. Providing just pre-generated scenarios on a quarterly basis is not sufficient to satisfy all of these purposes.

- Additional scenario tools should also be considered for development.
  - Representative scenario picking tool
  - Tool that generates the VM-21 Company-Specific Market Path method scenarios
  - Tool to generate scenarios for stochastic exclusion test
  - Tools to generate statistics on intermediate and final output of the generator.
of parameters, distribution properties, validation of results, and how the scenarios evolve through time. This will ensure appropriate controls of ESG changes and codify formulaic requirements and decision points that may be revisited over time. This work can begin while we are waiting on additional documentation.

- **Scenario timing**: We request assurance that the generator will be able to produce scenarios on the first day of each month, regardless of whether this falls on a weekend since many valuation processes commence based on a calendar day schedule.

- **Projection Period**: The projection period of the scenarios should be at least 70 years.

- **Sensitivity testing and forecasting**: It is unclear how scenarios for VM-20, VM-21, and VM-31 sensitivity testing requirements and potential attributions in Model Audit Rule key controls will be supported by the proposed process. For example, will additional scenario sets be generated and posted, or will companies be required to license the Conning API or full system to meet regulatory requirements or to understand and prudently manage their reserves and capital? The impact of changing economic conditions on the resulting scenario distribution will be vital for companies to understand for multiple reasons, including risk management & capital planning.

- **C-3 Phase 1 (C3P1) RBC testing**: Methodology clarifications will be needed if C3P1 is included in the ESG field study. Given the ongoing VM-22 discussions and their potential impact on C3P1 methodology, there are additional issues that may need to be addressed as part of the VM-22 field testing.

- **C-3 Phase 2 (C3P2) CTE Level**: We note that the revisions to C3P2 included the consideration of a scenario set with higher volatility, which was accompanied by a lower suggested CTE level (this is the CTE 95 vs CTE 98 discussion related to C3P2 TAR). Given that these decision points were contemplated as a package, the required CTE levels may need to be reconsidered in light of changes to the ESG.

We look forward to a discussion on this important initiative.

Sincerely,

Technical Review of Scenario Sets #1 (Original) and #2 (Revised Baseline): Equitable has reviewed the original 12/31/19 scenario set (exposed in December 2020) as well as the revised 12/31/19 baseline set (exposed in February 2021) and offers the following feedback:

Distribution of Interest Rate Scenarios: Equitable believes that it is critical to have an appropriate distribution of interest rate scenarios in order for this initiative to be successful. This includes appropriate (1) low interest rate levels; (2) negative interest rate levels/amounts; and (3) interest rate shapes.

(1) Low Interest Rates: The original and revised baseline interest rate scenarios, both as of 12/31/19, were calibrated using the mean reversion parameter (MRP) from the current Academy Interest Rate Generator (AIRG) but using the substantially higher GEMS volatility. This calibration significantly increases the number of sustained low interest rate scenarios. Under this calibration, approximately one fifth of scenarios have an average 20-year treasury rate at or below 2%, below the actual 20-year treasury rate of 2.25% at 12/31/19. In contrast, under the current AIRG, less than 2% of scenarios have an average 20-year treasury rate at or below 2%. Equitable commends the NAIC on the increase in low interest rate scenarios, as we believe the current AIRG is woefully insufficient in this regard.

(2) Negative Interest Rates: Equitable reviewed the scenarios for negative interest rates and found that the minimum short-term interest rates approached -4.8% (original scenario set) and -6.2% (revised baseline), which is extreme and would likely lead market participants to take extreme actions (e.g. physical cash hoarding, etc.) if they persisted for any meaningful amount of time. Equitable believes that the recent European experience with negative rates is a reasonable benchmark to establish a lower bound on negative rates.

(3) Term Structure of Interest Rates: Equitable observed a significant number of scenarios with inverted yield curves, especially at the shorter maturities, which seems anomalous. Under the revised scenario set, we observed a 1-month UST rate above the 2-yr UST rate in approximately 25% of time steps across all scenarios. While the revised scenarios are significantly improved vs. the original scenarios in this regard, the amount of yield curve inversions is still above what one would expect based on historical experience. Equitable encourages further discussion between industry and regulators on this topic.

Equity Returns:

Equitable supports most aspects of the equity return distributions but observes select deviations in the Sharpe Ratio “return-for-risk” principle in select areas. Our specific comments are noted below:

(1) Equitable observed a significant increase in the range of 30-yr annualized equity returns to the downside vs. those in the current AIRG. In particular, under the revised scenario set, approximately 5% of the observed 30-yr annualized equity returns for the S&P 500 were negative. While we believe such a distribution is within the realm of plausibility, we highlight that combined with a CTE 98 capital requirement (which considers the worst 2% of scenarios) this will ultimately require companies either to (a) capitalize for equity risk far more than for equivalent levels of credit risk (a correlated exposure to equities) or (b) increase equity hedging considerably in their CDHS. We observe the US has not witnessed a period of negative 30-yr equity returns in modern history, inclusive of the Great Depression, although such conditions did arise in Japan.

(2) Equitable also observed extreme results for the international equity index (EAFE), where over 10% of the observed scenarios exhibited negative 30-yr annualized returns and the average 30-yr
annualized equity return was only 3.5% - ostensibly a violation of the VM-21 Section 8.C guidance regarding consistency in the Market Price of Risk across indices. Equitable suggests more supporting documentation and discussion on the EAFE equity returns.

(3) Equitable supports the structural linkage between interest rates and equity returns via an equity risk premium as utilized in the exposed GEMS scenarios. We understand that in the current model, equity returns are based on short-term interest rates, which could potentially lead to some of the more extreme equity return scenarios noted above. We would invite the consideration of expressing equity returns as a function of longer-term interest rates (e.g. 10-yr or 20-yr US Treasury rates) as that could help stabilize equity returns from calibration to calibration. In addition, we believe more information regarding how the equity risk premia for each equity index are calibrated is necessary to enable more robust understanding of the GEMS calibration.

ESG Scenario Statistics and Reports: Equitable appreciates the opportunity to provide suggestions for the ESG scenario analytics. We believe it is important to look at the distribution of average long-term (e.g. 20 yr.) treasury rates across each scenario in determining the appropriateness of the resulting interest rate scenarios and the extent to which “low for long” interest rate scenarios are reflected. To that end, we suggest the inclusion of bar charts showing the number of scenarios exhibiting average 20-yr US Treasury rate within each of the various ranges shown on the chart. In addition, we believe the following statistics would be helpful to quickly understand future scenario sets:

1. Inversion statistics: comparing points on the yield curve such as the 10Y vs. 2Y rates and 2Y vs. 1-Mo. rates to understand how many scenarios produce inverted yield curves
2. Negative interest rate statistics: examining the frequency / magnitude of negative interest rates
3. Percentile analysis of the 30-year average annualized equity returns across each of the 10,000 scenarios. It is important to look at the cumulative equity return across each scenario as the cumulative return is more impactful to the valuation of long-term insurance liabilities vs. the distribution of returns in any one given year.

Sensitivity Testing: Equitable appreciates the ESG parameter sensitivity testing supplied by Conning in February. However, we believe more sensitivity testing of various initial market conditions should be performed, including both upward and downward shocks to the initial yield curve and initial equity volatility parameters. Testing the generator under a variety of economic conditions will allow industry and regulators to better understand the potential movements of the scenarios, which is critical considering the impact the scenarios can have to a company’s balance sheet. While Equitable appreciates that the NAIC will release other scenarios for testing purposes, Equitable suggests making these available as soon as practicable to (1) allow industry to understand how the proposed ESG performs under a range of market conditions and (2) enable robust field testing.

Initial Review of 12/31/2020 baseline scenario set: Equitable is currently reviewing the 12/31/2020 scenario set released on March 18th and appreciates the release of this scenario set in response to our inquiry. Our preliminary indication is that the majority of our comments above are still relevant to the 12/31/2020 scenario set with the key exception that “low for long” scenarios are not as well reflected in this scenario set. Specifically, in the 2019 set, approximately one fifth of scenarios had an average 20-year treasury rate at or below the 2.25% 20-year treasury rate on 12/31/19. In contrast, in the 12/31/20 scenario set, only 6% of scenarios have an average 20-year treasury rate below the 1.45% 20-year treasury rate on 12/31/20. Equitable recommends that the scenario calibration approach should ensure a meaningful percentage of scenarios reflecting average long term rates below the current rate on the valuation date regardless of starting conditions. Assigning a 6% probability that interest rates stay at or below current levels appears low given the high degree of uncertainty in accurately forecasting interest rates.
Timeline/Effective Date: Equitable is aligned with the NAIC’s urgency on this matter and current goal for 1/1/2022 implementation. However, developing and calibrating a scenario generator is proving to be a very complex task and ensuring the new ESG is appropriately calibrated and fit for purpose is paramount and potentially may require additional time beyond the current timeline.

Conclusion: Equitable appreciates the opportunity to comment on the ESG proposal and we look forward to working with industry and regulators to develop an appropriate economic scenario generator. We are available to discuss our comments further at your convenience.

Sincerely,

Aaron Sarfatti, Chief Risk Officer and Chief Strategy Officer

Stephen Tizzoni, Head of Actuarial Regulatory Affairs
March 25, 2021

Mr. Mike Boerner
Chair, Life Actuarial (A) Task Force
National Association of Insurance Commissioners

Dear Mr. Boerner:

We appreciate the opportunity to offer comments on LATF’s Economic Scenario Generator (ESG) exposures including Scenario Exposure 3.18.21.

In our opinion, the interest rate scenarios that have been released exhibit some peculiar features. Two features of these scenarios we consider troublesome are the magnitude of negative interest rates and the shape and frequency of yield curve inversion. As you know, a generally accepted rule of thumb in economic scenario generation is that a good economic scenario generator should generate some “extreme but plausible scenarios” with the practical application of this rule guided by the historical record. Negative interest rates with a magnitude of -5% are not compatible with any reasonable interpretation of the historical record.

The new NAIC interest rate model is based on the three-factor Cox, Ingersoll, and Ross framework which has the potential to provide great educational value for the industry, the peculiarity of the exposed scenarios notwithstanding. The Cox, Ingersoll, and Ross model was the first interest rate model to be based on a general equilibrium economy and featured volatility increasing with interest rate levels and the absence of negative interest rates - a condition previously viewed as a desirable feature.

We believe the NAIC should seize the opportunity to guide the insurance industry to a practical understanding of the financial economics modeling literature and its application to insurance risk management. In order for industry to understand these models, it is vital that “[f]ull documentation on the ESG specifications, calibration, and tools” be provided as the NAIC stipulated in section II.A.I of the March 4, 2020 RFP and was reiterated in Pat Allison’s NAIC presentation of October 27, 2020 as “[f]ull documentation of the necessary components used to develop the Basic Data Set.” We do not know precisely what the NAIC means by “full documentation”. However, we respectfully submit that it should mean that sufficient details are provided so that a determined risk management professional is able to fully understand the model dynamics and be able to approximately reproduce the model output and calibration parameters through a scientific process. We believe this is a requirement for best practice and is essential for the industry to gain confidence in any suite of models serving a fundamental role in the management of an insurance business.

The “NAIC Scenario Set Technical Documentation Interest Rates Model” provides bond pricing formulas but does not mention market price of risk parameters and their role in the model nor how the initial state variables are selected. These two specifications are vital in understanding the model. Market price of risk parameters are typically an essential aspect of this class of interest rate model and are
fundamental in controlling the behavior and performance of the model. The “NAIC Scenario Set Technical Documentation Equity and Dividend Model” provides an equation for the equity dynamics but does not explain how the variable jump sizes in the equity and dividend processes are modeled. These are surely fundamental components of the model and represent a very significant change from the equity model currently in use. The nature of the “government bond yield” used in the dividend process is not stipulated. The means by which equity returns and jumps are correlated/related across the S&P 500, Russell Midcap, Russell 2000, NASDAQ, MSCI EAFE and MSCI Emerging Market indices are not explained. These specifications are vital in understanding the model. The “NAIC Scenario Set Technical Documentation Corporate Yield Model” is introductory, with no meaningful specification of the model given.

Guiding the insurance industry to a working understanding of modern interest rate modeling is a valuable service to the industry and we are hopeful that it will be one of the successful outcomes of the NAIC’s new model.

Yours truly,

Mark Tenney                                      Hal Pedersen, ASA, MAAA, PhD

Comment on Conning GEMS ESG

Mr. Mike Boerner

Chair, Life Actuarial (A) Task Force

National Association of Insurance Commissioners

Dear Mr. Boerner:

We appreciate the opportunity to offer comments on LATF’s Economic Scenario Generator (ESG) exposures including Scenario Exposure 3.18.21.

The Conning GEMS model based on the 3 factor Cox, Ingersoll, and Ross model is a very awkward basis for an economic scenario generator. We developed the original economic scenario generator in the 1990s. Papers on multiple factor CIR models already existed at that time.

Mark and I did not pursue those for the original ESG work because those models are very limited in their relation to other variables. The 3 factors of the CIR model are not even correlated to each other. How they are correlated to equity portfolio returns is problematic, this is also true for credit models. So far, this has not been disclosed by Conning.

An approach that would retain more of the benefits of our original ESG work would be one based on the ideas in the Double Mean Reverting Process. In the DMRP, the short rate is mean reverting to a moving target. The moving target moves towards a fixed target. An analogy is the following. The dog chases the rabbit which tries to get to the hole. But both are on ice, so they skid around randomly. Further developments along this line would give more flexibility both as to an interest rate model and for correlation to equity returns. This type of generator is very flexible and allows the attachment of additional economic series, such as stock, credit, inflation, mortgage and GDP.

We respectfully suggest that the NAIC look in this direction instead of the Conning GEMS model. We believe the Conning model will put the NAIC into the wrong hole at a time when the industry can’t afford another skid.

Sincerely yours,

Steven Craighead

Mark Tenney

PS. This represents our opinions as individuals and not the Academy of Actuaries or any employer.
Hello all –

Scott, thanks very much for the response below about longer projection periods, which was Question 2 of Section F of the 3/10/2021 ESG Q&A. The response also relates somewhat to Question 6 about stratification. We appreciate the enhancement mentioned below to use the stratification process, rather than the response to Question 6 which suggested using the first so many scenarios. One further comment with respect to stratification is that if the smallest stratification was a 40 scenario subset, rather than 50, it would be a subset of the 200 scenario set and the 1000 scenario set. This could be beneficial for instances where people want to evaluate something that is too computationally intensive to do on, say, the 1000 scenario set, such as nested reserve or RBC calculations or some structured security projection models. The “subset property” would enable people to see the effects of the computationally intensive item across the full spectrum of outcomes for a larger set. This could be helpful in estimating effects across all scenarios. In addition, a 50 scenario set is likely not adequate on its own for estimating metrics such as CTE 90 or CTE 98. Thus we would suggest consideration of changing the 50 scenario subset to a 40 scenario subset.

Question 2 related to formatting. Here it may be helpful to have scenarios available in the current format, as suggested, but it is also helpful to the additional indices and data points available for the “full Conning format”. Thus we would suggest consideration of providing two scenario formats. It would also be helpful to have some sort of format identification number, so that people can code up checks on what format they have. Here it would also be helpful to assign a new identification number any time a format is changed.

Lastly, we believe a 9/30/2020 valuation date would be a good choice for the “next additional valuation date”, as this is the date most common to CFT and C-3 Phase 1 testing.

Thanks,
Link
Hi Reggie,

Thank you for all of your efforts to date in working with Moody’s Analytics and Conning to respond to our comments and questions.

We have some additional concerns below specific to the Scenario Picker Tool and Stochastic Exclusion Ratio Test (SERT) scenarios that have been exposed:

**Scenario Picker Tool:**

Two issues are preventing us from reconciling to the scenarios that Conning picked in the latest Dec. 2020 sample set:

1. Conning ranked significance measures from low to high before picking. The picking method embedded in the Academy’s Excel tool ranks from high to low. This opposite ranking order results in different scenario #’s being picked (i.e. ranked scenarios #5, 15, 25, ... 9995 for the subset of 1,000 scenarios).
2. Conning calculated significance measure using some unrounded data. We calculated significance measures using the level of accuracy provided in the static CSV files, which has Treasury rates rounded to 5 decimal places. In the Dec. 2020 sample subset of 1,000 picked scenarios (exposed March 18th), the rounding impacts resulted in only 890 of the 1,000 scenarios matching. 110 scenarios change if you use rounded data vs. unrounded data.

The second issue is of greater importance because end users will not have access to the unrounded data. We believe it would be beneficial to the industry if both of these issues could be resolved, for consistency and validation purposes.

**Stochastic Exclusion Ratio Test:**

We are concerned about the practicality of the targeted percentile approach for dynamically generating these scenarios at future points in time. Is this something that the API can currently do, and if so, how efficient is the runtime? Being able to dynamically project scenario #12 for the calculation of future VM-20 Deterministic Reserves if of particular concern.

We have been able to reconcile some of the data that has been provided in the sample files, but in other areas we would like to request further documentation:

1. Can you confirm that for native equity funds, the target percentiles are applied to wealth accumulation factors at each projection month?
2. For the additional equity funds and corporate bond funds, can you provide documentation about how the “GEMS User Path Technology” calculates these returns based on the user-specified inputs to Treasury and native equity funds?
3. For the inverted yield curve scenario #10, can you provide further documentation about how the targeted percentiles are applied to the spread between short and long term rates? Is the 20 year long rate set to the 50th percentile, with the targeted spread applied to the 1 year short rate?
Additionally, we would note that there appears to be a mistake in the generation of scenario #14 and #15:

4. Scenario #14 is supposed to be a delayed pop up interest / low equity scenario, but appears to be a delayed pop down interest / low equity scenario, making it a duplicate of scenario #16
5. Scenario #15 is supposed to be a delayed pop down interest / high equity scenario, but appears to be a delayed pop up interest / low equity scenario, making it a duplicate of scenario #13

Thanks again for your consideration of our comments and questions.

Regards,

Matt Kauffman, FSA
Asst. Director-Sr. Programmer & Actuary

| 1     | ACLI   | Criteria / stylized facts / distribution properties  
   a. What criteria or stylized facts did Conning apply and how did they assess the pros/cons when selecting / developing their ESG model?  
   b. How does Conning assess the reasonableness of scenario outputs (i.e., in the exposed scenarios and on an ongoing basis)?  
   c. What adjustments have been made either in model development or during the generation of scenarios as a result of these considerations?  
   [Comprehensive information on these items should also be included in Conning’s documentation.] | Question     | Partial    | ESG Goals; Model Selection Slides |
| 2     | ACLI   | It seems like the selected model and proposed calibration approach may increase procyclicality (and/or create unintuitive relationships). How did that factor into the model decisions and recommendation? | Question     | No         | Expect this to be part of the Field Test |
| 3     | ACLI   | Documentation Request  
   Please provide greater specifics about the processes, distributions, etc. Such information needed includes:  
   a. Model selection considerations  
   b. Direct and indirect relationships (e.g., equity risk premium, equity / credit, rate / spread relationships)  
   c. Fund return mechanics - including the composition of bond indices and derivation of bond fund returns, use / modeling of exchange rates in international equity returns  
   d. State process information - including all distributions and correlation structures  
   e. Calibration information - including model parameters and calibration targets at multiple points in time; methodologies for setting initial values and long-term targets; how and where historical data is used and the benchmarks used; adjustment processes / use of judgment; process and judgment used when a calibration fails; identification of the values that would be updated at each reporting period, regularly, or based only on triggering events  
   f. Process and criteria for evaluating the reasonableness each published scenario distribution (beyond validating that targets are reproduced) | Documentation Request | Partial    | Bond Fund Returns; ESG Q&A, Section C, Q8, Model Selection slides |
| 4     | ACLI   | On the 2/25 call, Conning indicated that international equity returns use a different model. Please provide documentation for that model (as well as any FX model that may drive international returns). | Documentation Request | Yes | International Equity Indices Presentation |
| 5     | ACLI   | Documentation Request  
   It would be beneficial for Conning to provide more meaningful statistics, both in the presentations and in the report packages that accompany the exposed scenarios sets and sensitivities.  
   a. Equity returns in the presentations and fan charts should focus on the distribution of accumulation factors over time. This information is more relevant that annual returns in a single year.  
   b. Given the interrelationship between Conning’s models, fan charts / statistics should be provided for rates, equities, bonds, and the underlying credit drivers. This information is necessary as changing interest rates will affect equity returns and perhaps other aspects of the model. | Statistic Request | Yes | Available in Fan Charts for the 12/31/20 “Revised Baseline” Scenarios |
<p>| 6     | ACLI   | Please provide the SERT scenarios based on Revised Baseline UST calibration. | Scenario Request | Yes | Available with 12/31/20 “Revised Baseline” scenarios |
| 7     | ACLI   | Please provide the scenario file and model parameters (including initial values) are also available which will make the 12/31/2010 scenarios a more useful data point in analysis. | Scenario Request | Yes | naic.conning.com/scenario_files |
| 8     | ACLI   | For a +/-25% basis change in the overnight rate, how would the accumulation factor distribution for equities change (across all periods – i.e., traditional calibration point table + additional percentiles)? Other sensitivities to individual initial conditions should also be provided (e.g., +/- initial vols since that seems to drive equity vol and jumps). | Scenario Request | Yes | ESG Q&amp;A, Section B, Q10 |
| 9     | Chris Conrad | With respect to the treasury calibration, is the optimization problem (i.e. solving for theta, kappa, displacement, etc.) a convex problem. If not how does Conning ensure that the calibration used reflects a global minimum? Is this optimization problem as configured a constrained problem? Does the optimization function contain any regularization terms? Empirically does the optimization routine exhibit sensitivity to initial conditions (it would be nice to see a monte carlo optimization to show the algorithms stability)? | Question     | Yes | ESG Q&amp;A, Section A, Q13 |
| 10    | Chris Conrad | With respect to the equity model, do the parameters vary over time to correct for the induced vol from the rates model? If this isn’t corrected for, does that mean that the equity distribution for the first timestep will accurately reflect the history but at later timesteps will not? | Question     | Yes | ESG Q&amp;A, Section B, Q9 |</p>

In the graph "Equity Equation – Impact of Jumps" on page 10 of the ppt slides, the projected cumulative wealth factors from AIRG and GEMS at the end of the 30th year can be approximated by the line

\[
\text{AIRG cumulative wealth factor} = 1.3082 \times (\text{GEMS cumulative wealth factor}) + 1.4558
\]

For example, if GEMS cumulative factor is 4500%, the AIRG cumulative factor is approximately 6000%.

Please explain the driver(s) which cause AIRG's cumulative wealth factor being significantly higher than GEMS's cumulative factor.

Given that the title of the slide is "Equity Equation – Impact of Jumps," is the difference in wealth factors attributable to the assumed jumps? If not, why?

---

### Question 53

**Question**

Does it mean that the jump parameters would reduce the drifting factor for the equity return?

**Answer**

Yes

**ESG Q&A, Section B, Q4**

---

### Question 54

**Question**

As the jump parameters \( \mu_0 \) and \( \mu_1 \) are positive and \( m \) is negative in page 8, the drifting factor due to the jump parameters is negative. Does it mean that the jump parameters would reduce the drifting factor for the equity return?

**Answer**

Yes

**ESG Q&A, Section B, Q5**
Society of Actuaries Research Update to LATF

R. DALE HALL, FSA, MAAA, CERA, CFA
Managing Director of Research
April 8, 2021

Group Life COVID-19 Mortality Survey

- Survey of claims experience of 20 of top 21 U.S. Group Term Life insurers during the COVID-19 pandemic
- Data through October 2020 (report to be updated in June)
- Measured overall excess mortality and portion of excess mortality due to COVID
- Analyzed results by geographic region, industry, and against the U.S. population as a whole
Group Life COVID-19 Mortality Survey

• Survey Highlights
  • Q2 & Q3 2020 incurred incidence compared to corresponding quarters of 2017-2019
    • By count: 12.9% increase
    • By amount: 23.8% increase
    • 16,740 COVID claims, totaling $662 million
  • Q2 & Q3 2020 reported incidence compared to corresponding quarters of 2017-2019
    • By count: 8.5% increase
    • By amount: 20.1% increase
    • 14,513 COVID claims, totaling $564 million

Group Life COVID-19 Mortality Survey

• Survey Highlights
  • 8% of all reported Group Life claims with death dates in April-August 2020 were determined to have a cause of death of COVID-19
  • Blue Collar group has seen the smallest increase in mortality (monthly 3% - 10%). White Collar and Grey Collar have had higher increases (monthly 10% - 30%)
  • Regional patterns have changed over time
    • Northeast region affected greatest in Q2
    • Southeast region affected greatest in Q3
  • Percentage of Group Life excess deaths approximately 50% - 70% of the percentage of U.S. population excess deaths
Individual Life COVID-19 Claims Analysis

- Data
  - 27 companies’ experience
  - 55% industry
  - 2.5 million claims from 2015 through Q2 2020; 239k in 2020, 11.6k COVID claims

- Analyses
  - 2020 Q1 & Q2 actual claims vs average of 2015-2019 experience
    - Attained age, sex, region, underwriting class, smoker status, face amount, cause of death
  - 2020 Q1 & Q2 actual claims vs U.S. population
    - Attained age, sex, region, cause of death
  - [https://www.soa.org/resources/experience-studies/2021/us-individual-life-covid-19/](https://www.soa.org/resources/experience-studies/2021/us-individual-life-covid-19/)

Individual Life Mortality Claims Analysis – Some Highlights

- Overall Actual to Expected
  - Similar ratios in 2020 Q1
  - Individual life lower in 2020 Q2

<table>
<thead>
<tr>
<th>Actual to Expected</th>
<th>Individual Life</th>
<th>U.S. Population (excess death)</th>

Underwriting Class Actual to Expected
- Preferred A/E > other classes at older ages

US Population Mortality

© 2021 National Association of Insurance Commissioners
2020 Excess Deaths in the US General Population by Age and Sex

- Expands on CDC excess death analysis
  - shows results by age group and sex breakdowns
- Enables better comparisons of population to insured experience
  - Can now adjust for age/sex differences

Interesting finding: Ages 35-54 have the highest actual/expected values

Life Practice Council Update

Laura Hanson, MAAA, FSA
Vice President

Life Actuarial Task Force Meeting—April 8, 2021

Agenda

- Recent Activities
- Current Activities
- Ongoing Activities
Recent Activities

- Hosted 2020 year-in-review webinar
- Published 2021 *Life & Health Valuation Law Manual*
- Created six principle-based reserving (PBR) analysis templates
  - Additional content on Academy PBR webpage [https://www.actuary.org/content/pbr-practice](https://www.actuary.org/content/pbr-practice)
- Published PBR In Brief (VM-22)

Recent Activities (continued)

- Updated C-1 bond factors with new tax rate
- Created Fixed Annuity PBR Deviations Grid
- Submitted comment letters on:
  - Economic scenario generator (LATF)
  - C-1 real estate factors (LRBC)
  - Colorado Senate Bill 21-169 (Senator Buckner)
Current Activities

- VM-21 Practice Note Addendum exposed for comment through April 30
- VM-22 drafting underway; expected in Q2 2021
- VM-22/C-3 P1 field study in development

Current Activities (continued)

- COVID-19 webinar planned for May
- PBR Boot Camp June 7–9
  - Registration is open!
  - Agenda
    - Day One: External reviews of PBR, model overview and model governance, and reserve change analysis and pricing projections.
    - Day Two: Overviews of life insurance—implementation of VM-20, mortality, additional liability assumption, and reinsurance.
    - Day Three: Asset overview, standard projection methodology, and sample reports.
Ongoing Activities

- Support Economic Scenario Generator transition
- Coordinate VM-22 and C-3 field study for non-variable annuities
- Recommend C-2 mortality factors
- Provide analysis of C-1 bond factors, C-1 real estate factors, and C-2 longevity factors

Ongoing Activities (continued)

- Provide commentary on mortality improvement discussions
- Support Yearly Renewable Term (YRT) reinsurance approach for VM-20
- Propose VM-51 data elements
- Publish Life Illustrations Practice Note Addendum
- Publish FAQs on changes to tax reserve calculations and reporting under TCJA (federal tax law)
Ongoing Activities (continued)

- Provide public policy analysis on the use of annuities in retirement plans, including changes as a result of the SECURE Act
- Provide public policy analysis on the use of data and algorithms in risk classification and underwriting
- Provide public policy analysis on efforts to promote diversity and inclusion in the actuarial profession and the broader insurance industry

Thank You

- Questions?
- For more information, please contact the Academy’s Life Policy Analyst, Khloe Greenwood, at greenwood@actuary.org.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Dany Provencher, Appointed Actuary, Industrial Alliance group of companies

Title of the issue:
Asset collar when modeled reserve is negative

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 7.D.3

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

If for all model segments combined, the aggregate annual statement value of the final starting assets, less the corresponding PIMR balance, is

(a) less than 98% of the modeled reserve; or
   (i) 98% of the modeled reserve if modeled reserve is positive;
   (ii) 102% of the modeled reserve if modeled reserve is negative; or
(b) greater than the largest of:
   (i) 102% of the modeled reserve;
   (ii) the NPR for the same set of policies, net of due and deferred premiums thereon:
   and
   (iii) zero,
then the company shall provide documentation in the PBR Actuarial Report that provides reasonable assurance that the modeled reserve is not materially understated as a result of the estimate of the amount of starting assets.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

If modeled reserve is negative, using assets corresponding to 100% of modeled reserve, would not fall within the asset collar.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.
Life Actuarial (A) Task Force/Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   
   Brian Bayerle, ACLI – edits adopted changes to VM-02 for improved clarity and to remove potential circularity.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   Valuation Manual (January 1, 2021 edition), VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   Subsequent the adopted changes to the federal tax code (IRC S. 7702), this proposed change would clarify the language in the previously adopted edits to VM-02 to avoid any potential circularity.

© 2020 National Association of Insurance Commissioners
Valuation Manual VM-02

Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the Valuation Manual shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the Valuation Manual for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

Guidance Note: For flexible premium universal life insurance policies as defined in Section 3.D of the Universal Life Insurance Model Regulation (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.
The proposed guidance note presumes that Section 6.C.5.n refers to how cohorts and weights are unaffected by changes in interest rates at each reporting date because the discount rate for the calculations is fixed, but it indicates that periodic updates to underlying prescribed assumptions may require recalculations. LATF is requesting comments on this interpretation and its applicability to this RMD change vs. Standard Projection assumption updates more broadly.

Please submit comments to Reggie Mazyck (RMazyck@naic.org) by COB 5/3/21.
1. Identify yourself, your affiliation and a very brief description (title) of the issue.

American Academy of Actuaries, Variable Annuity Reserves & Capital Work Group

Update the reference to the required minimum distribution (RMD) age in the VM-21 Standard Projection Amount for the Setting Every Community Up for Retirement Enhancement (SECURE) Act change.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2021, version of the Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

In VM-21, Section 6.C.5:

i. For tax-qualified contracts, add the following to the revised GAPV$^2$ corresponding to an initial withdrawal age of 71 the federal required minimum distribution (RMD) age.

\[
0.50 \times \left\{ \begin{array}{ll}
0.95 & - \sum_{i=\text{initial age}} \text{GAPV}_{\text{Adjusted, Scaled}}^2, \text{if contract is a tax-qualified GMWB} \\
0.85 & - \sum_{i=\text{issue age}} \text{GAPV}_{\text{Adjusted, Scaled}}^2, \text{if contract is a tax-qualified hybrid GMIB}
\end{array} \right.
\]

j. Scale the revised GAPV$^2$ values at all future initial withdrawal ages—i.e., all ages greater than 71 the federal required minimum distribution (RMD) age, as identified in the preceding step—such that the sum of the revised GAPV$^2$ values equals 0.95 for tax-qualified GMWB contracts and 0.85 for tax-qualified hybrid GMIB contracts again.

n. The cohorts and their associated weights as determined in Section 6.C.5.a through Section 6.C.5.k are for a contract with attained age equal to its issue age. Because the discount rate used in this determination is fixed, generally these calculations only need to be performed once for a given set of contracts with a certain issue age, guaranteed benefit product, and tax status.

Guidance Note: Cohorts and their associated weights may need to be revised if prescribed assumptions are updated.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
The Standard Projection’s withdrawal delay cohort method includes an adjustment at the required minimum distribution (RMD) age. The SECURE Act changed the RMD age from 70.5 to 72. This proposed amendment implements the change by directly referencing the RMD age. The direct reference will reduce Valuation Manual maintenance for any future changes.

The proposed guidance note presumes that Section 6.C.5.n refers to how cohorts and weights are unaffected by changes in interest rates at each reporting date because the discount rate for the calculations is fixed, but it indicates that periodic updates to underlying prescribed assumptions may require recalculations. LATF is requesting comments on this interpretation and its applicability to this RMD change vs. Standard Projection assumption updates more broadly.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Re: APF 2020-12

Dear Mike:

Nationwide appreciates the opportunity to comment on APF 2020-12 regarding Clearly Defined Hedging Strategies (CDHS). We are supportive of the goals of this APF to:

1. Create consistency in the hedging requirements across chapters within the Valuation Manual (VM), and
2. Encourage more consistent inclusion of hedging strategies within the VM calculation requirements.

The APF accomplishes its goals by moving hedging definitions to VM-01 and by including the newly defined Seasoned Hedging Strategies (SHS) in the VM requirements.

On page 2 of the APF in the “State the reason for the proposed amendment” section the concept of the SHS is given as:

“To accomplish this, the proposal requires that any hedging strategy that is a part of the investment strategy supporting the policies and is normally modeled as part of the company’s risk assessment and evaluation processes be modeled as if it were a CDHS if doing so results in an increase in life reserves or variable annuity TAR.”

However, the proposed definition of SHS in the APF uses slightly different language as follows:

“The term “Seasoned Hedging Strategy” (SHS) means a hedging strategy that is part of the company’s investment strategy and is normally modeled as part of the company’s risk assessment and evaluation process. A SHS may or may not be a CDHS.”

We prefer the SHS definition given on page 2 of the APF as it clearly indicates that the hedging strategy needs to be part of the investment strategy which supports the policies subject to the VM calculation requirements. We would recommend changing the SHS definition to be consistent with the language given on page 2 of the APF.

In addition, our interpretation of this APF is that it excludes company level “macro” hedges which we support. We believe that the page 2 SHS definition more clearly supports the exclusion of company level “macro” hedges from the VM calculation requirements. Company level “macro” hedges are meant to manage aggregate company level risks and not product specific risks. As such, we believe that it would not be appropriate to include them in product specific VM calculation requirements.

However, if the APF does intend to include company level “macro” hedges in the requirements, then we believe that the APF will need to be significantly expanded to include language on how this is to be accomplished. For example, how would these “macro” hedges be allocated to specific product calculation requirements across multiple chapters of the VM?
We appreciate your consideration of our comments.

Sincerely,

Re: APF 2020-12  

Dear Mr. Boerner:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the exposed APF 2020-12. The APF seeks to align and consolidate hedging requirements across Valuation Manual sections, address a drafting note within VM-20, and eliminate perceived company optionality with regard to the reflection of hedging in PBR requirements.  

We support the goal of aligning and consolidating hedging requirements and are not opposed to addressing the VM-20 drafting note. We also acknowledge the legitimate regulatory concerns around perceived company optionality. At the same time, APF 2020-12 raises a number of questions and potential concerns. We believe that there is a lack of understanding among all parties of the industry’s hedging strategies, the way in which those hedging strategies are reflected in PBR modeling, and the intent and potential effects of the APF. At the extreme, we believe the APF could create a regulatory disincentive to undertake certain strategies and would lead to resource-intensive reconsideration of and revisions to hedging programs.  

We suggest that an important next step involves a broad survey of the industry’s hedging programs. The proprietary nature of hedging programs makes it difficult for the industry to collect the information about the strategies employed by the industry. Therefore, a regulator survey might be a preferable vehicle. The survey could explore the landscape of hedging programs, their intent, their treatment within PBR modeling, whether or not such programs are considered a CDHS (and if not, why not), and the potential impact of APF 2020-12. The survey itself would promote a consistent understanding of the APF and a mutual understanding of whether the APF would lead to unintended consequences.  

Regarding the understanding of the APF, our discussions have surfaced different interpretations of the language, which has potentially led to some misperceptions. For example, the phrase “normally modeled as part of a company’s risk assessment and evaluation processes” can be interpreted very broadly or narrowly. These varying interpretations have led to inconsistent understandings and interpretations of the impact of the APF among our member companies.
Because we believe there are potential unintended consequences with APF 2020-12, we believe that it may be beneficial to consider alternative solutions. ACLI believes once we have a greater mutual understanding we can work with regulators to develop an alternative that provides for enhanced regulatory oversight while addressing many of our concerns.

Finally, we would like to share the following preliminary concerns with APF 2020-12. Again, these concerns may reflect an incomplete understanding of the APF:

1. **It may create a disincentive to hedge**

   One of the crowning achievements of the new VA framework is that it has removed previous disincentives to hedge risks due to the non-economic nature of the statutory framework. APF 2020-12 might unfortunately move in the opposite direction by reintroducing non-economic disincentives into the framework. Under the proposal, hedges that are deemed to be an SHS may produce unreasonable results in statutory modeling. For SHS strategies, the company would be required to reflect the more adverse of the with-hedging and without-hedging results, thus eliminating any regulatory benefit of undertaking such a strategy. Because hedging inevitably comes with an attendant cost, the framework would effectively be signaling that insurers should not be undertaking SHS strategies. We believe that this is contrary to the interests of regulators, companies, and policyholders.

2. **It may create excessive complexity**

   APF 2020-12 could be interpreted to apply broadly to hedging strategies and, if implemented, could lead to significant questions and complications. Macro hedges might need to be allocated to the product level which could create significant practical challenges. Further, hedging programs that are established to manage statutory outcomes would lead to circularity, due to the interplay in the valuation of the reserve and the hedge. In addition, situations could arise in which multiple hedging programs would need to be reflected, creating additional layers of complexity and complication.

In addition, we believe the APF raises various other technical and practical questions. For instance, the APF is currently silent on treatment of reinsurance, which could affect how the requirements are interpreted and applied. In addition, the APF requires modeling a SHS if doing such increases the reserve but does not clarify the treatment if modeling a SHS decreases the reserve. Further to that point, if the intent is one-sided then the APF would create challenges as there would potentially be period-to-period changes in whether strategies should be reflected. This toggling would create new challenges for both companies and regulators.

We believe that industry and regulators may be better served by a different solution. Therefore, in addition to an improved understanding of the landscape of hedging programs, we believe that alternative proposals should be considered.
We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

Re: APF 2020-12, CDHS

I appreciate the opportunity to provide comments on the Amendment Proposal Form 2020-12 submitted by Rachel Hemphill and Karen Jiang of the Texas Department of Insurance.

After 15 years, it would be nice if we could eliminate the CDHS concept as it was first introduced with C3-Phase II as a temporary measure until the regulators could become comfortable with the inclusion of hedge strategies that could potentially reduce capital requirements.

Since it appears the regulators are not quite ready to remove this requirement, it is important that the changes being made continue to move us closer to a principal-based approach as opposed to implementing additional regulatory restrictions and confusion as to what the valuation manual says and what is intended by the changes.

Although my preference is to remove the CDHS concept from the valuation manual, I believe the overall reason for the proposed amendment is fine. And although I generally agree conceptually with the proposal, I disagree with the changes proposed and the introduction of now another term “Seasoned Hedging Strategy”.

Theoretically, under a principle-based approach, the company should be reflecting how it is managing and how it intends to manage the assets and liabilities being modeled. This includes the investment strategy irrespective of the instruments being used. To the extent that regulators want to limit credit for certain activities, that is fine, but they need to articulate (devise rules) on what those activities are.

What does “a strategy undertaken by a company to manage risks through the future purchase or sale of hedging instruments” really mean?

So what activities constitute hedging? Can this be adequately and appropriately defined? Is the purchase of a 100-year bond as part of the company’s investment strategy also subject to CDHS requirements? Is a 100-year bond a hedging instrument? What about floating rate bonds? Would
this be exempt from a CDHS but if a fixed income bond was purchased and swapped for floating, the CDHS requirements would need to be met?

We need to remember, that CDHS was first introduced where the line between investment strategy and hedging was easier to draw because 15 years ago the strategies employed for variable annuities were distinctive and easily identified. As we move to cover more product types from fixed life and annuities to equity-indexed life and annuities to structured annuities, the distinction between investment strategy and hedging gets harder to distinguish.

For this reason, I prefer to move closer to a principle-based approach that reflects the investments the company has and anticipates to have in the future with disclosure as to the strategies employed and the risks involved.

With respect to CDHS if we retain the concept I would propose:

a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
b. The hedge objectives.
c. The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
d. The financial instruments used to hedge the risks.
e. The hedge trading rules, including the permitted tolerances from hedging objectives.
f. The metrics, criteria, and frequency for measuring hedging effectiveness.
g. The criteria used to measure hedging effectiveness.
h. The frequency of measuring hedging effectiveness.
i. The conditions under which hedging will not take place.
j. The person or persons responsible for implementing the hedging strategy.
k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
l. The circumstances under which hedging strategy will not be effective in hedging the risks.
m. **Discussion of primary risks associated with the strategy employed.**

As to the items I propose removing; in general, I think it is hard to document infinite lists such as what risk are not hedged, conditions when hedging will not take place, and circumstances under which the hedging strategy will not be effective in hedging the risks. I do agree that as much information about the strategy should be discussed, and therefore propose discussion of the risks, but I do not believe endless lists are appropriate or should be required.

As to person or persons responsible for “implementing” the hedging strategy, do you really mean “executing” the hedging strategy? I would claim this is the company’s responsibility and the “person or persons” is irrelevant and will quickly become stale in the documentation of strategies.

Lastly, areas where basis, gap or assumption risk has been identified. For variable annuities this should all be part of documenting and quantifying CTE(Best-efforts) versus CTE(Adjusted). From VM-21, Section 9.B.4.
“Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the stochastic reserve needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.).”

I believe this alternative is conceptually consistent with the objectives of the APF. Disclosure of investment strategies and risks are required and more conservative assumptions can be used if they produce a greater reserve or capital requirement. (I.e. Disclosure of CDHS items is required to reduce requirement.) If we keep the CDHS terminology we still need to make sure we can articulate when is a strategy subject to these CDHS requirements. Is it only when we utilize hedge accounting? Is it only when derivatives (excluding mortgage derivatives) are used? Is it only when the variability of potential outcomes exceeds a specific tolerance (i.e. strategies with greater uncertainty)? However, I believe this moves us closer to a principle-based approach and therefore will be more robust and infuse less confusion in the modeling of investments and strategies for a variety of products.

Sincerely,

William H. Wilton, CFA, FSA, MAAA
1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Rachel Hemphill and Karen Jiang, Texas Department of Insurance

**Title of the Issue:**
Create consistency between CDHS determination in VM-20 and VM-21. Revise hedge modeling to only require CDHS if modeling future hedging reduces the reserves under VM-20 or TAR under VM-21.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

**Summary of 4/2/2021 Updates:**

1. Revisions were made to VM-20 Section 7.K.4 (add “supporting the policies”) and VM-21 Section 9.A.6 (add “supporting the contracts”) in response to Nationwide’s comments.

2. We added a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology in response to Will Wilton’s comments.

3. We have updated the list of CDHS criteria in response to Will Wilton’s comments where we agreed:
   a. Added “significant” before risks in item (c) of the CDHS definition.
   b. Combined items (f) – (h) in the CDHS definition.
   c. Change “person or persons” to “group or area, including whether internal or external,” in item (j) of the CDHS definition.
   d. We did not remove items (k) or (l) as suggested by Will Wilton, as we find this information useful to regulators. Given that these are retained, and because we were uncertain what else would be included in the new “primary risks” item suggested by Will Wilton, we have not added it. If we can be provided additional information on the risks to be reflected under this new item, an edit could be made.

4. We modified the definition of a SHS to clarify “normally modelled” in response to the ACLI comment and clarify what may be a SHS in response to Will Wilton’s comment (e.g., a single bond would not be a SHS).
We propose having consistent requirements for a CDHS in VM-20 and VM-21, as well as any future work on VM-22, and consolidating these requirements in the VM-01 definition of a CDHS. This involves adding two criteria to VM-21’s definition of CDHS that currently exist for VM-20:

- Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- The circumstances under which hedging strategy will not be effective in hedging the risks.

These criteria are both reasonable and apply in principle to VM-21, and to any future work on VM-22, as well as VM-20.

Further, we propose revising the requirement for hedging to be a CDHS in order for future hedging to be modeled under VM-20, VM-21, and LR027’s C-3 RBC Amount calculation to only apply when modeling such hedging reduces the life reserve level or variable annuity Total Asset Requirement (TAR) level.

The current regulatory requirements for hedging to be a CDHS in order for future hedging to be modeled under VM-20, modeled under VM-21, modeled for the C-3 RBC Amount calculation for variable annuities, and to be eligible for SSAP 108 treatment are all logical requirements when one considers whether hedging should be allowed to reduce the life reserve level or variable annuity TAR level, or whether any mismatch between movements in hedge assets and movements in the corresponding reserve levels should be allowed to be amortized over time.

However, this same requirement has led to a situation of there being unintended optionality in whether a hedging strategy that is like a CDHS is modeled or is not modeled, since a company may choose to satisfy or not satisfy certain of the criteria. This has been especially relevant for cases where modeling a company’s hedging strategy would increase reserves or variable annuity TAR.

As noted in the current guidance note in VM-20 Section 7.K.1 in the 2021 Valuation Manual:

“The prohibition in these modeled reserve requirements against projecting future hedging transactions other than those associated with a clearly defined hedging strategy is intended to address initial concerns expressed by various parties that reserves could be unduly reduced by reflection of programs whose future execution and performance may have greater uncertainty. The prohibition appears, however, to be in conflict with Principle 2 listed in VM-21. Companies may actually execute and reflect in their risk assessment and evaluation processes hedging strategies similar in many ways to clearly defined hedging strategies but lack sufficient clarity in one or more of the qualification criteria. By excluding the associated derivative instruments, the investment strategy that is modeled may also not reflect the investment strategy the company actually uses. Further, because the future hedging transactions may be a net cost to the company in some scenarios and a net benefit in other scenarios, the exclusion of such transactions can result in a modeled reserve that is either lower or higher than it would have been if the transactions were not excluded. The direction of such impact on the reserves could also change from period to period as the actual and projected paths of economic conditions change. A more graded approach to recognition of non-qualifying hedging strategies may be more theoretically consistent with Principle 2. It is recommended that as greater experience is gained by actuaries and state insurance regulators with the principle-based approach and as industry hedging programs mature, the various requirements of this section be reviewed.”

We propose to continue addressing the regulatory concern that reserves could be unduly reduced by reflection of programs whose future execution and performance may have greater uncertainty, by continuing to only allowing hedging strategies that qualify as a CDHS to reduce life reserves and variable annuity TAR. However, we propose that the treatment of CDHS be made more principles-based and less
subject to manipulation. To accomplish this, the proposal requires that any hedging strategy that is a part of the investment strategy supporting the policies and is normally modeled as part of the company's risk assessment and evaluation processes be modeled as if it were a CDHS if doing so results in an increase in life reserves or variable annuity TAR.

That is, CDHS becomes a requirement solely for hedging strategies that reduce life reserves or variable annuity TAR, and so becomes a more clear regulatory guardrail requiring that hedging strategies that reduce life reserves or variable annuity TAR must be clearly defined.

We continue to need the concept of a CDHS. A CDHS simply formally documents items that a company should be able to document for a robust, well-defined hedging strategy. It requires that the following be identified:

a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
b. The hedge objectives.
c. The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
d. The financial instruments used to hedge the risks.
e. The hedge trading rules, including the permitted tolerances from hedging objectives.
f. The metrics for measuring hedging effectiveness.
g. The criteria used to measure hedging effectiveness.
h. The frequency of measuring hedging effectiveness.
i. The conditions under which hedging will not take place.
j. The person or persons responsible for implementing the hedging strategy.
k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
l. The circumstances under which hedging strategy will not be effective in hedging the risks.

While the last two criteria have historically applied for life but not variable annuities, these are all reasonable documentation items that for a robust, well-defined hedging strategy regardless of whether the product is life or variable annuity.

The concept of a CDHS is used for accounting in SSAP 108. SSAP 108 allows companies to set up a deferred asset or liability to amortize the mismatch between changes in the value of the liability and changes in the value of the hedging instruments attributable to the hedged risk underlying a highly effective CDHS modeled for VM-21. Allowing this treatment encourages companies to reduce risk through robust, well-defined and highly effective hedging. Without having the hedging strategy be well-defined, regulators could not rely on past effectiveness being indicative of future effectiveness, and so could not offer companies the benefit of SSAP 108 treatment. Once we recognize the need for a concept of a well-defined hedging strategy, the only question is what criteria would need to be met to be considered well-defined – that is, what criteria should be required to be considered a CDHS. This is a distinct question from whether the concept of a CDHS is needed. We have not heard critiques of individual criteria in the CDHS definition, but consideration of the criteria is appropriate as we go forward to make the definitions in VM-20 and VM-21 consistent. Similarly, in reserve and capital calculations, we rely on the concept of historical effectiveness to determine an error factor. If modeling hedging reduces the reserve or capital amount, the error factor determines the magnitude to which this is reflected. However, this use of the historical effectiveness relies on the hedging strategy being well-documented and comparable between historical hedging and planned future hedging. So, again, a need for hedging strategies to be well-defined presents itself – a CDHS concept is needed.

Finally, edits to VM-31 are needed to reflect these updates and bring VM-20 and VM-21 reporting requirements more in line with one another where appropriate.

Note on Coordination with RBC and APPM: We have reviewed, and with these edits there are no corresponding edits necessary for LR027 for RBC but corresponding edits are necessary for SSAP 108. A referral to SAPWG is to be concurrently considered with this APF.
The term “clearly defined hedging strategy” (CDHS) means a strategy undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions. A CDHS must identify:

a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
b. The hedge objectives.
c. The insignificant risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
d. The financial instruments used to hedge the risks.
e. The hedge trading rules, including the permitted tolerances from hedging objectives.
f. The metrics, criteria, and frequency for measuring hedging effectiveness.
g. The conditions under which hedging will not take place.
h. The group or area, including whether internal or external, responsible for implementing the hedging strategy.
i. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
j. The circumstances under which hedging strategy will not be effective in hedging the risks.

The hedge strategy may be dynamic, static, or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as CDHS. A CDHS must meet all of the principles outlined in VM-21 Section 1.B (the most relevant of which may be Principle 5).

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.

The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or
b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has forecasted acquisition or incurrence;

The term “Seasoned Hedging Strategy” (SHS) means a hedging strategy that is part of the company’s investment strategy and for which future hedging transactions are normally modeled as part of the company’s risk assessment and evaluation process. A SHS may or may not be a CDHS.

A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as SHS. A SHS must meet all of the principles outlined in VM-21 Section 1.B (the most relevant of which may be Principle 5).
VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more CDHS or one or more SHS required to be modeled pursuant to Section 7.K.4 from stochastic reserve requirements, except in the case where all CDHS and all SHS required to be modeled pursuant to Section 7.K.4 are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the model investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the model investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (A2/A).

Policy loans, equities and derivative instruments associated with the execution of a CDHS (in compliance with the definition of CDHS in VM-01) or a SHS that is required to be modeled pursuant to Section 7.K.4 are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the deterministic reserve and the stochastic reserve, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of a CDHS or a SHS that is required to be modeled pursuant to Section 7.K.4, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

2. For each derivative program that is modeled, the company shall reflect the company’s established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For CDHS or SHS required to be modeled pursuant to Section 7.K.4, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that “zero” is an appropriate expectation.

3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the stochastic reserve as described in Section 5.E.

4. If a SHS supporting the policies is not a CDHS but modeling it would result in an increase to the company’s minimum reserve, then the company shall model the SHS as if it were a CDHS when calculating reserves under VM-20.

Commented [RH8]: Added “supporting the policies” in response to Nationwide comments.
VM-20 Section 7.L (Remove entire Section 7.L)

A clearly defined hedging strategy must identify:

- The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
- The hedge objectives.
- The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
- The financial instruments used to hedge the risks.
- The hedge trading rules, including the permitted tolerances from hedging objectives.
- The metrics for measuring hedging effectiveness.
- The criteria used to measure hedging effectiveness.
- The frequency of measuring hedging effectiveness.
- The person or persons responsible for implementing the hedging strategy.
- Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- The circumstances under which hedging strategy will not be effective in hedging the risks.

Hedging strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.
VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

VM-21 Section 4.A.4

Modeling of Hedges

a. For a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6:

   i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling.

   ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets. The hedge assets may then be considered in one of two ways:

      a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or

      b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

b. For a company with a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.

   i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the stochastic reserve.

   ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the CDHS or the SHS that is required to be modeled pursuant to Section 9.A.6. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a stochastic reserve as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The stochastic reserve shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (E) determined following the guidance of Section 9.C.4.

   iii. The company is responsible for verifying compliance with CDHS requirements, or SHS requirements if required to be modeled pursuant to Section 9.A.6, and any other requirements in Section 9 for all hedging instruments included in the projections.
iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the model investment strategy and any non-prescribed asset spreads shall be adjusted as necessary so that the aggregate reserve is not less than that which would be obtained by substituting an alternative investment strategy in which all fixed income reinvestment assets are public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of a CDHS (in compliance with the definition of CDHS in VM-01) or a SHS that is required to be modeled pursuant to Section 9.A.6 are not affected by this requirement.

VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-22)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the Stochastic Reserve for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6 as discussed in Section 4.A.4.a.

 VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as the stochastic reserves following Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

VM-21 Section 6.B.5

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a CDHS or a SHS that is required to be modeled pursuant to Section 9.A.6.

VM-21 Section 9

Section 9: Modeling of Hedges under a CDHS

A. Initial Considerations

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the stochastic reserve, determined in accordance with Section 3.D and Section 4.D.

2. If the company is following a CDHS, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the stochastic reserve using projections.
otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

5. Before either a new or revised hedging strategy can be used to reduce the amount of the stochastic reserve otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months).

6. If a SHS supporting the contracts is not a CDHS but modeling it as if it were a CDHS would result in an increase in the company’s TAR, then the company shall model the SHS as if it were a CDHS when calculating reserves under AG43 and/or VM-21 and when calculating the C-3 RBC Amount under LR027. The company shall not treat the SHS as a CDHS for purposes of SSAP 108.

B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the stochastic reserve otherwise calculated.

2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.

3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the stochastic reserve otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the stochastic reserve needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy.
The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the stochastic reserve attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the “Greeks” other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

A safe harbor approach is permitted for CDHS reflection for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of Stochastic Reserve (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the CDHS (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the CDHS (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no CDHS, therefore following the requirements of Section 4.A.4.a.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the stochastic reserve is given by:

\[
\text{Stochastic reserve} = \text{CTE70 (best efforts)} + E \times \max[0, \text{CTE70 (adjusted)} – \text{CTE70 (best efforts)}]
\]

4. The company shall specify a value for E (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of E. The value of E may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, E must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.

5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for E.

6. Such a back-test shall involve one of the following analyses:
   a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and
losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g., reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of E, the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of E by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

i. Determine the hedge asset gains and losses—both realized and unrealized—incur over the month attributable to equity, interest rate, and implied volatility movements.

ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100% (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100% in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with no history, E should be at least 0.50. However, E may be lower than 0.50 if some reliable experience is available and/or if the change in strategy is a refinement rather than a substantial change in strategy.

**Guidance Note:** The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program:
• The error factor should be temporarily large (e.g., \( \geq 50\% \)) for substantial changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy) where the company has not been able to provide a meaningful simulation of hedge performance based on the new strategy.

• A temporary moderate increase (e.g., 15–30%) in error factor should be used for substantial modifications to hedge programs or CDHS modeling where meaningful simulation has not been created (e.g., adding second-order hedging, such as gamma or rate convexity).

• No increase in the error factor may be used for incremental modifications to the hedge strategy (e.g., adding death benefits to a program that previously covered only living benefits, or moving from swaps to Treasury Department futures).

D. Additional Considerations for CTE70 (best efforts)

If the company is following a CDHS, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the stochastic reserve and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the stochastic reserve, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the stochastic reserve, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.
4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.

b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.

5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the stochastic reserve otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

**VM-31 Section 3.C.5**

Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4.

**VM-31 Section 3.D.6.f**

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section. This should include documentation for any hedging strategy that meets the requirements to be a CDHS. It should also include, for any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4, documentation of any CDHS criteria met, listing of CDHS criteria not met, and documentation of the reserve level with and without the SHS being modeled as if it were a CDHS.

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4, is representative of and consistent with the company’s investment policy.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any CDHS and any SHS that is required to be modeled pursuant to VM-20 Section 7.K.4 was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

**VM-31 Section 3.E.5**

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any
VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any CDHS or any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, specific to the groups of contracts covered in this sub-report.
   i. Descriptions of basis risk, gap risk, price risk and assumption risk.
   ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
   iii. Results of any reviews of actual historical hedging effectiveness.

b. CDHS – Documentation for any hedging strategy that meets the requirements to be a CDHS.

c. Other Modeled Hedging Strategies – Documentation for any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, including documentation of any CDHS criteria met, listing of CDHS criteria not met, and documentation of the TAR level with and without the SHS being modeled as if it were a CDHS.

d. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.

e. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
   i. Differences in timing between model and actual strategy implementation.
   ii. For a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6, disclosure of the method used to consider hedge assets included in the starting assets, either (1) including the asset cash flows in the projection model; or (2) replacing the hedge positions with cash and/or other general account assets in an amount equal to the market value of the hedge positions, as discussed in VM-21 Section 4.A.4.a.
   iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
   iv. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
   v. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the stochastic reserve, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
   vi. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
   vii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actuarial initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the stochastic reserve.
   viii. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges.

e. Error Factor (E) and Back-Testing – Description of E, the error factor, and formal back-tests performed, including:
   i. The value of E, and the approach and rationale for the value of E used in the reserve calculation.
ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for $E$. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.

iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:
   a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.
   b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.

iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for $E$.

v. For companies that do not have 12 months of experience, the basis for the value of $E$ is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available and the degree and nature of any changes made to the hedge strategy.

f. Safe Harbor for CDHS – If electing the safe harbor approach for CDHS, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.

g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

**VM-31 Section 3.F.12.c**

CTEPA – If using the CTEPA method, a summary including:

i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the stochastic reserves following VM-21 Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.

ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the stochastic reserves following VM-21 Section 4.A.4.a for a company that does not have a CDHS or a SHS that is required to be modeled pursuant to VM-21 Section 9.A.6), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.

iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the stochastic reserve.

**VM-31 Section 3.F.16.a and Section 3.F.16.b**

a. **Investment Officer on Investments** – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any CDHS and any SHS that is required to be modeled pursuant
to VM-21 Section 9.A.6., is consistent with the company’s current investment strategy except where the modeled reinvestment strategy may have been substituted with the alternative investment strategy, and also any CDHS meets the requirements of a CDHS.

b. **Qualified Actuary on Investments** – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any CDHS and any SHS that is required to be modeled pursuant to VM-21 Section 9.A.6 was performed in accordance with VM-21 and in compliance with all applicable ASOPs.

April 8, 2021

2021 Experience Data Collection Timeline

Now
Companies may: 1) request exemptions or communicate exclusions (ongoing until 9/30/21), 2) review training materials, and 3) prepare submissions

Q2, 2021
Call for companies to submit data for 2018 and 2019 observation years using 2020/2021 Valuation Manual requirements. As of 4/1/21, we are expecting to collect data from 127 companies, representing approximately 90% of industry claims.

9/30/21
Deadline to submit data using the Regulatory Data Collection (RDC) tool. Automatic feedback on form and format data exceptions will be provided upon submission. Additional feedback will be provided within 30 days based on actuarial review.

12/31/21
Deadline for companies to make corrections

5/31/22
NAIC to submit aggregate experience data to SOA
Topics for Future Meetings with Companies

- Kick-off Meeting: Overview of data collection process, resources, and steps companies need to take prior to the data call
- Data validation and reasonability checks the NAIC will perform
- Walk-through of sample control total and reconciliation templates
- Communications with companies
- Policy for data submission by a reinsurer or third-party administrator
- How to submit data using the RDC Tool
HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Health Insurance and Managed Care (B) Committee April 12, 2021, Minutes ................................................................. 7-2
Consumer Information (B) Subgroup April 1, 2021, Minutes (Attachment One) ................................................................. 7-6
Health Innovations (B) Working Group March 26, 2021, Minutes (Attachment Two) .......................................................... 7-8
The Health Insurance and Managed Care (B) Committee met April 12, 2021. The following Committee members participated: Jon Godfread, Chair (ND); Jessica K. Altman, Vice Chair (PA); Lori K. Wing-Heier (AK); Michael Conway (CO); Dean L. Cameron (ID); Kathleen A. Birранe (MD); Anita G. Fox (MI); Grace Arnold (MN); Russell Toal (NM); Glen Mulready (OK); Andrew R. Stolfi (OR); Jonathan T. Pike (UT); Mike Kreidler represented by Molly Nollette (WA); and James A. Dodrill (WV). Also participating were: Jim L. Ridling (AL); Ricardo Lara (CA); David Altmaier (FL); Doug Ommen (IA); Dana Popish Severinghaus (IL); Vicki Schmidt (KS); Sharon P. Clark (KY); Eric A. Cioppa (ME); Mike Chaney (MS); Mariano A. Mier Romeu (PR); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Mark Afable (WI); and Jeff Rude (WY).

1. Heard a Presentation from the Biden Administration on its Federal Legislative and Administrative Initiatives and Priorities

Jeff Wu (federal Centers for Medicare & Medicaid Services—CMS) updated the Committee on the Biden Administration’s legislative and administrative priorities. He discussed the history of health insurance marketplaces with respect to the number of uninsured, enrollment and insurer participation. He said there was a sharp decrease in the uninsured after 2010, followed by an increase since 2016. He also pointed out that minority rates of the uninsured were persistently higher in 2019 than for whites. He discussed the effects of the COVID-19 pandemic on the number of uninsured. He explained that the Biden Administration’s initial fears of increases in the uninsured was driven by the high unemployment rate during the beginning months of the COVID-19 pandemic. However, he noted that pre-pandemic research suggests that the federal Affordable Care Act (ACA) plays a critical role in helping people maintain coverage after job losses, which may have mitigated coverage changes due to unemployment. In addition, he said the uninsured rate did not increase dramatically because many individuals who lost some form of employment had low incomes or were in jobs without health benefits, and some were either enrolled in Medicaid or were already uninsured before their job loss. He said economic relief and other COVID-19 measures provided in the federal Families First Coronavirus Response Act (FFCRA) and the federal Coronavirus Aid, Relief, and Economic Security (CARES) Act were contributing factors in stabilizing the number of uninsured.

Mr. Wu said enrollment in the health insurance marketplaces has steadied over time and insurer participation in the marketplaces has improved, but premium cost remains a challenge. He discussed how provisions in the federal American Rescue Plan Act of 2021 (ARPA) could address some of the marketplace premium cost issues. President Biden signed the ARPA into law on March 11. He said the ARPA makes major improvements in access to and affordability of health coverage through the marketplace by increasing eligibility for financial assistance to help pay for marketplace coverage. The ARPA also lowers premiums for most people who currently have a marketplace health plan and expands access to financial assistance for more consumers because of the increased tax credits to reduce their premiums. Mr. Wu also described other provisions in the ARPA, including: 1) subsidies to cover 100% of the cost of premiums for Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) continuation coverage; and 2) funding for grants to states to assist state-based marketplaces (SBMs) with implementation, covering information technology (IT) changes, and outreach.

Mr. Wu provided an update on the number of individuals who have enrolled to date in the marketplaces using the current special enrollment period (SEP), which has been extended to Aug. 31. He discussed the Biden Administration’s National Consumer Outreach Campaign to increase awareness among the uninsured about the existence of the SEP and the affordability and availability of assistance to pay for premiums. He announced that the CMS is making approximately $2.3 million in additional funding available to current navigator grantees in federally facilitated marketplace (FFM) states to support the outreach, education and enrollment efforts around the 2021 SEP.

Mr. Wu briefly discussed the federal No Surprises Act (NSA) and provisions in the NSA that provide consumer protections regarding surprise bills. He also touched on the Biden Administration’s efforts to address the COVID-19 pandemic through provisions in the FFCRA, the CARES Act, and other policy initiatives, including releasing additional guidance and toolkits on COVID-19 vaccine and testing coverage.

Commissioner Altman asked Mr. Wu about any initiatives the CMS might be pursuing to address the gap in the number of uninsured among minority groups versus the number of uninsured among whites and whether there would be opportunities for the NAIC to partner with the CMS to address the issue. She also asked how the CMS plans to coordinate with SBMs if it is working on this issue. Mr. Wu acknowledged the issue of health equity in health insurance coverage. He explained that one way the Biden Administration is working to initially address this gap is through significant investment in the navigator program.
Commissioner Godfread said state insurance regulators have reached out to the CMS for clarification on how the ARPA and reinsurance programs that states have implemented through the ACA’s Section 1332 waiver program are to work together with respect to pass through payment calculations moving forward. Mr. Wu said the CMS is aware of this issue and is working to provide answers on this issue to the states soon.

2. **Adopted its 2020 Fall National Meeting Minutes**

Superintendent Toal made a motion, seconded by Director Cameron, to adopt the Committee’s Dec. 7, 2020, minutes (see *NAIC Proceedings – Fall 2020, Health Insurance and Managed Care (B) Committee*). The motion passed unanimously.

3. **Adopted its Subgroup, Working Group and Task Force Reports**

Commissioner Conway made a motion, seconded by Director Cameron, to adopt the following reports: the Consumer Information (B) Subgroup, including its April 1 minutes (Attachment One); the Health Innovations (B) Working Group, including its March 26 minutes (Attachment Two); the Health Actuarial (B) Task Force, including its 2021 revised charges; and the Senior Issues (B) Task Force.

3. **Adopted the Regulatory Framework (B) Task Force Report and Received the Draft PBM Model Act**

Commissioner Conway said the Regulatory Framework (B) Task Force met March 25 and took the following action: 1) adopted its March 18, March 1, and 2020 Fall National Meeting minutes; 2) received an update from Georgetown University’s Center on Health Insurance Reforms (CHIR) on its work related to the ACA and two recently enacted federal laws; i.e., the NSA and the ARPA; 3) heard a presentation on the NSA; and 4) heard a discussion of the recent U.S. Supreme Court decision in Rutledge vs. Pharmaceutical Care Management Association (PCMA).

Commissioner Conway said the Task Force met March 18 and adopted the draft NAIC [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM model). He said after an almost year-long drafting process, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adopted the proposed new NAIC model in late October 2020, completing its charge to “consider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs)” and “consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.” During its meeting at the 2020 Fall National Meeting, the Task Force deferred immediate adoption of the draft PBM model and exposed it for an additional public comment period ending Dec. 22, 2020.

Commissioner Conway said the Task Force discussed the comments received on the draft PBM model during its March 1 meeting and adopted it during its March 18 meeting with non-substantive changes based on the comments received. He explained that at its core, the draft PBM model is a PBM licensing model. He said after a lot of discussion and given the lack of national consensus on some issues, particularly issues related to PBM pricing and cost transparency, the Subgroup decided on this framework. As a compromise, to address those topics that it felt there was not a national consensus to include in the substantive provisions of the draft PBM model, Commissioner Conway said the Subgroup decided to add a drafting note to Section 8—Regulations. The drafting note includes state statutory citations for 15 topic areas involving certain PBM business practices that some states might want to consider when developing their state legislation regulating PBMs.

Commissioner Conway said there has been a lot of debate and discussion, including during the Task Force’s March 18 meeting, on the appropriateness of including such options in an NAIC model, given the potential for the lack of uniform adoption by the states. However, the Task Force decided to move forward with adoption and forward the draft PBM model to the Committee for its consideration and additional discussion, as the Committee deems appropriate. Commissioner Conway explained that during its March 18 meeting, the Task Force discussed and decided to move forward with developing a new 2021 charge directing the Subgroup to develop a white paper to further detail state options in regulating PBM business practices with respect to some of the 15 topic areas included in the proposed Section 8 drafting note. He said the white paper also is to touch on how the Rutledge vs. Pharmaceutical Care Management Association (PCMA) decision may or may not affect state options in this area.

Director Cameron made a motion, seconded by Director Wing-Heier, to adopt the Regulatory Framework (B) Task Force’s report. The motion did not include adoption of the draft PBM model. After discussion, the Committee decided to defer adoption of the draft PBM model until it could further discuss the issues Commissioner Conway highlighted in his report, particularly the issues related to the Section 8 drafting note. The Committee will meet sometime after the Spring National Meeting to continue the discussion.
5. Received an Update on the Special (EX) Committee on Race and Insurance Workstream Five’s Work

Commissioner Altman and Commissioner Lara, co-chairs of the Special (EX) Committee on Race and Insurance (Special Committee) Workstream Five, provided an update to the Committee on Workstream Five’s work to date. Commissioner Lara said since the Special Committee created Workstream Five last year, the Workstream has been meeting in open and regulator-to-regulator sessions to work on its charge to “examine and to determine which practices or barriers exist in the insurance sector that potentially disadvantage people color and/or historically underrepresented groups in the health insurance line of business” and “make recommendations on action steps.” He said one of the first actions the Workstream took was to meet Dec. 2, 2020, to hear from various stakeholders to help the Workstream members identify and understand more fully disparities in health insurance affecting racial and historically underrepresented groups and what questions the Workstream members should be asking themselves and considering as it moves forward.

Commissioner Lara said the testimony provided during that Dec. 2, 2020, meeting confirmed the Workstream’s initial thoughts that access to care and network adequacy is an ongoing and persistent issue for people of color and/or historically underrepresented population groups. She said Workstream Five also believes the other issues it has identified merit discussion and examination as well, including affordability.

Commissioner Altman said as reported during the Special Committee’s meeting April 12, following its Dec. 2, 2020, meeting, Workstream Five met in regulator-to-regulator sessions to develop and finalize its initial report and recommendations to the Special Committee for its consideration. She said the Special Committee discussed 2021 proposed charges that included Workstream Five’s recommendations included in its initial report and exposed them for a 30-day public comment period ending May 14.

Commissioner Altman said the 2021 proposed charges include charges to the Committee and two of its groups; i.e., the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group and the Health Innovations (B) Working Group. She said the 2021 proposed charges also direct Workstream Five to continue its work in various areas the Workstream identified in its initial report as areas for more discussion, including network adequacy and consumer education.

Commissioner Altman said as the Workstream moves forward with its work related to network adequacy, the Workstream plans to focus its research on measures to remedy impacts on historically marginalized groups, as well as examination of the use of network adequacy and provider directory measures to promote equitable access to culturally competent care. She said as the Workstream continues its work related to consumer education targeted toward people of color and/or historically underrepresented population groups, Workstream Five plans to monitor opportunities and identify strategies for consumer education to address equity issues. The Workstream will make referrals, as appropriate, to the Consumer Information (B) Subgroup to develop educational materials after identifying areas and strategies believed to help increase awareness in communities of color and among other underrepresented groups.

Commissioner Altman said during the NAIC/Consumer Liaison Committee’s April 8 meeting, there were two presentations that reflected core areas Workstream Five is discussing with respect to health equity and communities of color and/or historically underrepresented groups; i.e., maternal health outcomes and coverage for children. She said the Workstream plans to continue to act as a forum for discussion of these issues as it continues its work.

6. Heard a Discussion on the 2021 Work of the Committee’s Subgroup, Working Group and Task Forces

Jolie H. Matthews (NAIC) discussed the 2021 work of the Committee’s subgroup, working group and task forces. She said included in the Committee meeting materials is a document that summarizes the 2021 charges for each of the groups that report to the Committee. The document also lists each group’s chair and, as appropriate, vice chair and NAIC staff support.

Ms. Matthews highlighted a few of the additional projects some of the groups, including the Committee itself, most likely will have to take on in addition to the work in their 2021 ongoing charges. She said the Consumer Information (B) Subgroup most likely will be tasked with preparing new consumer-facing materials related to health equity and diversity based on recommendations from Workstream Five. She said the Subgroup also anticipates completing additional work related to the NSA and the ARPA as it discussed during its April 1 meeting.

Ms. Matthews said the Health Innovations (B) Working Group will continue its work to gather and share information, best practices, experience and data to inform and support health innovation at the state and national levels with respect to the ACA and other health policy initiatives. She said over the last year, in part, because of the COVID-19 pandemic and how the federal
government and the states have used telehealth to address issues with access, the Working Group has been focusing on telehealth issues. She said based on a new 2021 charge from the Special Committee, as recommended by Workstream Five, it is anticipated that the Working Group will continue its focus on telehealth, but with respect to health equity and diversity issues.

Ms. Matthews said the Health Actuarial (B) Task Force will continue its work related to the ACA; but in addition to that work, the Task Force could take on additional work related to recently enacted federal legislation, such as the NSA and the ARPA. She said the Task Force recently submitted its recommendations to the CMS for the definition of “Geographic Regions” in the NSA.

Ms. Matthews said the Regulatory Framework (B) Task Force will continue to supervise the work of its working groups and subgroups. She said as Commissioner Conway discussed during this report to the Committee, the Task Force will be meeting soon to finalize a new charge for the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup for it to begin work on a white paper that will discuss options for the states to regulate certain PBM business practices and the effect, if any, the decision the Rutledge vs. Pharmaceutical Care Management Association (PCMA) case may have on those options. She said the Employee Retirement Income Security Act (ERISA) (B) Working Group is also anticipated to meet to discuss the Rutledge vs. Pharmaceutical Care Management Association (PCMA) decision from the ERISA preemption perspective and consider revising the Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation (ERISA Handbook), as appropriate, to include a discussion of the case. The MHPAEA (B) Working Group will begin work related to its anticipated new charge from the Special Committee to examine health equity and diversity in the mental health and substance use disorder (MH/SUD) treatment context during a meeting on April 21.

Ms. Matthews said the Senior Issues (B) Task Force will continue its core mission to examine issues affecting older Americans. She said like last year, it is anticipated that the Task Force will focus on long-term care insurance (LTCI) issues. The Task Force established a new subgroup, the Long-Term Care Insurance Model Update (B) Subgroup, to review the existing NAIC LTCI models to determine if any changes need to be made. She said that in addition to this work, the Subgroup will also consider any additional changes to these models as a result of the Long-Term Care Insurance (EX) Task Force’s discussions.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met April 1, 2021. The following Subgroup members participated: Mary Kwei, Chair, Joy Hatchett, and Paul Meyer (MD); Debra Judy, Vice Chair (CO); Anthony Williams (AL); Randy Pipal and Weston Trexler (ID); Michelle Baldock (IL); LeAnn Crow, Brenda Johnson, and Craig Van Aalst (KS); Judith Watters (ME); Carrie Couch, Jo LeDuc, and Michelle Vickers (MO); Kathy Shortt (NC); Laura Arp and Martin Swanson (NE); Cuc Nguyen and Mike Rhoads (OK); Katie Dzurec and Lars Thorne (PA); Candy Holbrook and Jill Kruger (SD); David Combs, Brian Hoffmeister, Jennifer Ramcharan, and Vickie Trice (TN); Heidi Clausen, Shelley Wiseman, and Jaakob Sundberg (UT); and Christina Keely and Jennifer Stegall (WI). Also participating was Emily DeLaGarza (MI).

1. **Discussed Potential Areas of Work for 2021**

Ms. Kwei said the group would work on products to help both state insurance regulators and consumers. She asked the Subgroup to consider the different topics it would like to cover during 2021, including direction from the Health Insurance and Managed Care (B) Committee to work on the federal No Surprises Act. She said some No Surprises Act topics likely fit into the group’s plan to develop a guide for consumers on the claims process.

Ms. Kwei asked whether changes to premium tax credits and COBRA subsidies are the key topics to cover from the federal American Rescue Plan. Subgroup members agreed that they are. Ms. Judy asked whether the Subgroup should work on individual coverage health reimbursement arrangements as part of its work on the American Rescue Plan, but the Subgroup concluded that it is not relevant to that law.

Eric Ellsworth (Consumers Checkbook) asked if the Subgroup would consider working on data products that could be incorporated into consumer materials, like in an app. He said consumer understanding of networks should also be considered.

Kris Hathaway (America’s Health Insurance Plans—AHIP) asked how the Subgroup would address the proposed topic of CPT codes. Ms. Kwei responded that consumers frequently encounter the codes as part of a denial, but do not understand them. She said a product could explain what a CPT code is and why they are important.

2. **Discussed the Sequencing of Work Products**

Ms. Kwei asked where materials on the claims process fit in with materials on new federal legislation. She asked whether revising the document Frequently Asked Questions on Health Care Reform should be done sooner than in past years. Ms. Arp said the FAQ responses would be useful in other materials, so either one could come first. Ms. DeLaGarza said the American Rescue Plan changes are temporary, so the full FAQ should not necessarily be updated. Subgroup members voiced support for starting with updates to the FAQ, in a separate addendum, to reflect changes made by the American Rescue Plan.

Mr. Ellsworth said exchanges will make a lot of information available to consumers about expanded tax credits, so the FAQ should incorporate existing materials. He said there is less available on the No Surprises Act.

Ms. Kwei said No Surprises Act work will need to be informed by rules expected from federal agencies over the summer, so the Subgroup should wait to develop related materials until those are available.

The Subgroup discussed the timeline for completing new questions for the FAQ addendum related to the American Rescue Plan.

Jeff Klein (McIntyre and Lemon) said the Virginia Corporation Commission recently released a helpful consumer document on health savings accounts.
Harry Ting (Consumer Representative) said the Subgroup is not reaching as many people as it should with its products. He said the Subgroup should discuss strategies for how to make more people aware of the group’s products. Sylvia Yee (Disability Rights Education and Defense Fund—DREDF) said new networks have been formed by community organizations around COVID-19 vaccination and they could be used to disseminate insurance consumer information. Mr. Ellsworth said the Subgroup should work to gather feedback on whether its products are useful and understandable for consumers.

Ms. Judy said that the Subgroup should take advantage of existing documents and mentioned one from Beyond the Basics on American Rescue Plan provisions.

The Subgroup decided that it would consider new questions for the FAQ addendum drafted by Ms. Kwei and Ms. Kruger.

Having no further business, the Consumer Information (B) Subgroup adjourned.
The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met March 26, 2021. The following Working Group members participated: Andrew R. Stolfi, Chair (OR); Laura Arp, Co-Vice Chair (NE); Nathan Houdrek, Co-Vice Chair, Barbara Belling, Diane Dambach, Darcy Paskey, Mark Prodoehl, Rebecca Rebholz and Richard Wicka (WI); Philip Barlow and Howard Liebers (DC); Angela Burke Boston, Andria Seip and Cynthia Banks Radke (IA); Claire Szpara (IN); Craig Van Aalst, Julie Holmes and Tate Flott (KS); Robert Wake and Marti Hooper (ME); Renee Campbell and Karen Dennis (MI); Grace Arnold, Helen Bassett, Galen Benshoof and Peter Brickwedde (MN); Camille Anderson-Weddle, Carrie Couch, Chlora Lindley-Myers, Jo LeDuc and Amy Hoyt (MO); Chrystal Bartuska, Angie Voegele and Karri Volk (ND); Michelle Heaton and Maureen Belanger (NH); Christine Machnowsky (NJ); Paige Duhamel (NV); Mark Garett (NV); Jessica K. Altman and Katie Dzurec (PA); Doug Danzeiser, Essi Eargle, R. Michael Markham, Ryan Jaffe, Debra Diaz-Lara and Angelica Garza (TX); Shelly Wiseman, Tanji Northrup and Jaakob Sundberg (UT); Jane Beyer, Jennifer Kreitler and Molly Nollette (WA); and Joylynn Fix (WV).

1. Heard Presentations on Regulations Regarding Coverage for Telehealth Services

Mei Wa Kwong (Center for Connected Health Policy—CCHP) gave a presentation on recent activity by the federal government and states to regulate coverage for telehealth services. She described changes made to allow and encourage greater use of telehealth in Medicare, Medicaid and by private payers. She identified state trends in 2021, including activity related to mental health and substance use disorder services, allowing telephone-only connections, requirements on regulatory boards to consider telehealth, and discussions on what to make permanent. She shared resources available from CCHP that continue to track changes in telehealth policy.

Commissioner Stolfi asked about lists of state legislative activity. Ms. Kwong said the CCHP website has a section devoted to state COVID-19 responses, as well an annual legislative roundup. Commissioner Stolfi asked what states might see from the federal level going forward. Ms. Kwong said federal programs have significant influence, but they are in the same position of a lot of states, deciding which changes to make permanent. She said her expectation is that some but not all of the federal telehealth changes will be extended.

Tim Clement (American Psychiatric Association—APA) provided a presentation on the use of telehealth by psychiatrists. He noted the sharp increase in telehealth services provided during the pandemic and shared study results that he said indicate the quality of telehealth services matches that of in-person services. He said the APA has supported state insurance regulators’ efforts to expand access to telehealth. He said even though APA members strongly prefer in-person services, they recognize some patients prefer or need telehealth services, both during the pandemic and after. He cited the APA’s model legislation on telehealth, which requires payment parity, allows telephone-only connections in limited circumstances, and prohibits insurers from employing utilization review that is not used for in-person services. He noted that physicians’ overhead costs are not lower because of telehealth unless they completely shut down their offices and only offer telehealth. He said the APA is open to payment parity requirements that might require a provider to maintain an office location.

Dr. Drew Oliveira (Regence BlueShield) presented on his plan’s experience with telehealth, as well as virtual and digital care. He said telehealth had previously been focused on urgent care visits and provider-to-provider consultations in rural areas. He said the majority of patients who used telehealth during the pandemic would do so again, and about 20% prefer virtual over in-person services. He said up to half of primary care and 85% of behavioral health care could potentially be delivered virtually. He described digital and in-home care as treatment methods in addition to synchronous telecommunication. He gave examples of physical therapy visits and orthopedic exams as new types of care that are starting to be delivered by telehealth. He said telehealth can support better access to care in rural and underserved areas, but it may require audio-only services until gaps in broadband access can be closed. He said he worries about fragmentation in care due to telehealth and said information sharing is important. He said there is also some worry about high-frequency, low-value care—like texting back and forth—that may not be beneficial. He said payment parity can perpetuate fee for service payments, and it would be helpful to put telehealth into a prospective payment system. He said a federal Health Insurance Portability and Accessibility Act (HIPAA)-compliant system would be preferable to audio-only, but it may take a while to get there.
Commissioner Stolfi asked whether there is any difference in effectiveness in telehealth for first visits and also about health equity. Mr. Clement said studies he is aware of did not break out first versus subsequent visits. He said research shows telehealth can increase access to underserved communities and that more research is ongoing.

Dr. Oliveira said behavioral health services have been underused in the past and that telehealth can encourage more appropriate use. Ms. Kwong said there has been a lack of studies on the impact of telehealth on communities of color. She said impacts are likely to vary from place to place.

Mr. Houdek asked how the payment parity issue has worked in other states and what state insurance regulators should think about. Mr. Clement said alternative payment models should be developed specifically for telehealth and that providers are willing to compromise on pure payment parity. Ms. Kwong said quality levels are comparable and questioned whether lower payments for telehealth would discourage its use after the pandemic. She said telehealth utilization dropped as states opened up. Dr. Oliveira said Medicare’s relative value calculation took overhead costs into account, and they should be considered with telehealth going forward, but closer to 80% of in-person costs than one-third. He said some telehealth visits are replacements for in-person, and others are in addition.

Commissioner Stolfi asked how health plan thinking about telehealth has shifted due to the pandemic. Dr. Oliveira said access to trained practitioners needs to be expanded. He said there can be cost savings if a practitioner can monitor someone who gets better faster because they complete physical therapy at home rather than waiting for an office visit. He said the biggest concern is connecting back to the practitioners who are providing care in person.

2. Discussed State Responses to the COVID-19 Pandemic

Commissioner Stolfi asked state insurance regulators how they have innovated and changed how they do business in the last 13 months due to the pandemic. Ms. Nollette and Ms. Kreitler responded for Washington. They described how the provider network access program responded to a proposal from an issuer to offer a product with a telemedicine-only network tier. Ms. Kreitler described the questions state insurance regulators asked the carrier and said the network was approved when the carrier agreed to the same cost-sharing for the telemedicine-only tier and the second tier of in-person providers.

Commissioner Stolfi asked about the scope of Washington’s provider contract reviews and the staff resources devoted to it. Ms. Kreitler said four staff members work on the reviews for about 8,000 contracts per year, and it takes approximately two hours per contract. Contracts are reviewed for the protection of the enrollee, including hold harmless, clean claim and grievance provisions.

Ms. Arp said Nebraska received many complaints from the behavioral health community regarding telehealth near the beginning of the pandemic. The state surveyed carriers on their policies and posted the answers on its website.

The Working Group discussed payment parity laws in their states.

3. Discussed Other Matters

Commissioner Arnold raised the impacts of increased premium tax credits on state reinsurance programs run with Section 1332 waivers. She said Minnesota and other states with reinsurance programs sent a letter to the federal Centers for Medicare & Medicaid Services (CMS) asking it to revise the pass through amounts it will pay states for 2021. She said insurers’ rates have already been set, but tax credits are changing, so the federal government will save more and should recalculate to share savings with states. She said there are other complex issues for 2022, but the letter was focused on 2021. Commissioner Stolfi asked how much movement there could be and whether states might adjust their reinsurance parameters. Commissioner Arnold said Minnesota is likely at the high end of how much additional funds it would receive because it has a lower percentage of subsidized enrollees compared to other states. She said states will likely have to provide additional information to CMS to justify revised amounts.

Wayne Turner (National Health Law Program—NHeLP) pointed out two resources for the Working Group. One was an article in Health Affairs on disproportionately low use of telehealth by patients with limited English proficiency. The second was a set of principles from a consortium of citizens with disabilities on how best to serve persons with disabilities with telehealth.
Kris Hathaway (America’s Health Insurance Plans—AHIP) noted that AHIP and the Blue Cross and Blue Shield Association (BCBSA) have initiated a vaccine community connector program to enhance vaccinations among vulnerable groups. She said state insurance regulators with questions could reach out to her or to the BCBSA through Randi Chapman or Clay McClure.

Having no further business, the Health Innovations (B) Working Group adjourned.
HEALTH ACTUARIAL (B) TASK FORCE

The Health Actuarial (B) Task Force did not meet at the Spring National Meeting.
REGULATORY FRAMEWORK (B) TASK FORCE

Regulatory Framework (B) Task Force March 25, 2021, Minutes.................................................................7-13
  Regulatory Framework (B) Task Force March 18, 2021, Minutes (Attachment One).................................7-16
    Pharmacy Benefit Manager (PBM) Model Draft Dated March 12, 2021 (Attachment One-A).............7-18
  Regulatory Framework (B) Task Force March 1, 2021, Minutes (Attachment Two).................................7-24
  Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group Jan. 28, 2021, Minutes
    (Attachment Three) ..................................................................................................................................7-28
The Regulatory Framework (B) Task Force met March 25, 2021. The following Task Force members participated: Michael Conway, Chair (CO); Bruce R. Ramge, Vice Chair (NE); Lori K. Wing-Heier (AK); Jim L. Ridling represented by Jennifer Li and Yada Horace (AL); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Evan G. Daniels represented by Sterling Gavette (AZ); Ricardo Lara represented by Bruce Hinze (CA); Andrew N. Mais represented by Jared Kosky (CT); Karima M. Woods represented Howard Liebers (DC); David Altmairer represented by Chris Struk (FL); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron (ID); Dana Popish Severingham represented by Shannon Whalen and Eric Anderson (IL); Stephen W. Robertson represented by Claire Szpara (IN); Vicki Schmidt represented by Tate Flott, Julie Holmes, Chris Hollenbeck and Shannon Lloyd (KS); Sharon P. Clark (KY); Gary D. Anderson represented by Rebecca Butler (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by Sarah Wohlford and Karen Dennis (MI); Grace Arnold represented by Peter Brickwedde (MN); Chlora Lindley-Myers represented by Amy Hoyt and Camille Anderson-Weddle (MO); Mike Causey represented by Robert Croom (NC); Jon Godfread (ND); Chris Nicolopoulos represented by Michelle Heaton (NH); Marlene Caride represented by Chanell McDevitt (NJ); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Larry D. Deiter (SD); Doug Slape represented by Rachel Bowden, Richard Lunsford and Doug Danzeiser (TX); Jonathan T. Pike represented by Tanji J. Northrup and Jaakob Sundberg (UT); Scott A. White represented by Don Beatty (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek and Jennifer Stegall (WI); and James A. Dodrill (WV).

1. **Adopted its March 18, 2021; March 1, 2021; and 2020 Fall National Meeting Minutes**

The Task Force met March 18, 2021; March 1, 2021; and Nov. 19, 2020. During these meetings, the Task Force discussed comments received on the draft the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM Model Act) and adopted the PBM Model Act.

Ms. Nollette made a motion, seconded by Commissioner Deiter, to adopt the Task Force’s March 18, 2021 (Attachment One), March 1, 2021 (Attachment Two); and Nov. 19, 2020 (see NAIC Proceedings – Fall 2020, Regulatory Framework (B) Task Force) minutes. The motion passed unanimously.

2. **Adopted its Subgroup and Working Group Reports**

Ms. Nollette made a motion, seconded by Commissioner Deiter, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup; the Employee Retirement Income Security Act (ERISA) (B) Working Group; the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, including its Jan. 28 minutes (Attachment Three); and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup. The motion passed unanimously.

3. **Heard an Update on the CHIR’s Work Related to the ACA**

Justin Giovannelli (Center on Health Insurance Reforms—CHIR, Georgetown University Health Policy Institute) provided an update on the CHIR’s work related to the federal Affordable Care Act (ACA) and recently enacted federal laws such as the federal No Surprises Act (NSA) and the federal American Rescue Plan Act (ARPA) and other issues of interest to state insurance regulators. He discussed the CHIR’s efforts to assess the impact of the extended special enrollment periods (SEPs) into the federal health insurance exchanges, as provided in the ARPA, on access and affordability of coverage and how it will be implemented. The CHIR is particularly interested in assessing the impact of these provisions on the individual market given that some are temporary. He also discussed the CHIR’s work related to the federal and state implementation of the NSA.

Mr. Giovannelli said the CHIR is also looking at the issue of the “family glitch” and potential solutions. The “family glitch” is the ACA rule that bases eligibility for a family’s premium subsidies on whether available employer-sponsored insurance is affordable for the employee only, even if it is not actually affordable for the whole family. The CHIR is continuing its work to track state regulatory reforms affecting the individual market, such as the ACA’s Section 1332 waiver program, including whether the states are looking at other options, in addition to reinsurance programs, considering the ARPA and other Biden administration changes, that could positively affect the affordability of comprehensive coverage. The CHIR anticipates publishing an issue brief on this topic soon.
Mr. Giovannelli also discussed some of the CHIR’s upcoming work on network adequacy and standardized health plans and noncomprehensive coverage arrangements. He said the CHIR is continuing its work of tracking state regulatory approaches to the COVID-19 pandemic. Additionally, Mr. Giovannelli highlighted the CHIR’s ongoing state technical assistance regarding insurance regulatory matters with the support of the Robert Wood Johnson Foundation (RWJF) through its State Health and Value Strategies Program and the support of the Laura and John Arnold Foundation (LJAF).

Commissioner Conway asked Mr. Giovannelli if the CHIR, as part of its work it plans to do with respect to noncomprehensive plans and health care sharing ministries, would be examining its appeal to consumers considering the ARPA and its new provisions enhancing the affordability of comprehensive coverage in the individual market. Mr. Giovannelli said the CHIR would be looking at this as part of its study.

4. Heard a Presentation on the NSA

Jack Hoadley (Georgetown University Health Policy Institute) presented on the NSA. He discussed the NSA’s scope, including what types of plans it covers and where its protections apply. The NSA does not apply to short-term plans and excepted benefits plans. It also does not apply to ground ambulance services, but it does apply to air ambulance services. Mr. Hoadley also described how the NSA protects patients from balance bills by requiring that patients be held responsible for in-network cost sharing only and barring providers from sending or collecting a bill for amounts other than in-network cost sharing.

Mr. Hoadley also discussed a key component of the NSA—determining the payment amount for out-of-network care when there is a payment dispute. He discussed how the payment amount would be determined: 1) for states with a “specified state law” that includes a method for determining the payment, the state method applies for the health plans regulated by the state and for the services to which the state law applies; and 2) for other states or for plans not regulated by the state (self-funded plans), the federal method applies. The state method is likely to apply in the 18 states with comprehensive surprise billing laws and in several states with partial protections for applicable services.

Mr. Hoadley explained that with respect to air ambulance services, consumers are protected from balance billing similar to the NSA’s consumer protections for emergency services. The federal independent dispute resolution (IDR) system would apply. The NSA includes no protections for ground ambulance services, but it does include a provision establishing an Advisory Committee on Ground Ambulances and Patient Billing (Advisory Committee) that will make recommendations for the states and the U.S. Congress on addressing balance billing issues for such services.

Mr. Hoadley described the NSA’s enforcement mechanisms and the role that the states will have in enforcement. The state departments of insurance (DOIs) are the primary enforcers of provisions that apply to insurers and fully insured group health plans. The federal government is the enforcer in the states that fail to substantially enforce the law and for self-funded group health plans. He discussed how the NSA’s provisions will be enforced on health care providers. He explained that the states may enforce provisions on providers, including air ambulances, but the federal government will do so where a state fails to substantially enforce the law. He noted that unless addressed through federal rule-making, the NSA is silent on which state agency is responsible for enforcing provider provisions. Given that state DOIs typically do not have jurisdiction over providers, the states that have current balance billing laws have taken various approaches regarding provider enforcement, such as vesting that authority in the state DOI, health department, medical licensing entity or the state attorney general’s office. Other states have taken a blended approach by allowing the state DOI or provider licensing entity to report patterns of unresolved or intentional violations to another entity for enforcement. Mr. Hoadley also discussed how, in some cases, determining the primary enforcer—federal or state—could be challenging, which is why the states need to begin communicating with the federal agencies charged with implementing the NSA to try to address and avoid these situations.

Mr. Hoadley discussed what questions remain with the NSA with respect to states that currently have balance billing laws and those that do not. He also identified specific opportunities and questions for the states to engage with the federal agencies implementing the NSA to obtain clarification on outstanding issues prior to federal rulemaking. Additionally, he discussed next steps regarding the NSA, including the timeline for anticipated federal regulations.

Commissioner Conway asked Mr. Hoadley if he had any thoughts on why the NSA does not address ground ambulance services. Commissioner Conway said Colorado does have provisions concerning ground ambulance services, but it was a struggle for Colorado to find the right balance in crafting its provisions. Mr. Hoadley said Colorado’s experience in trying to address the ground ambulance services issues is reflective of possibly why the U.S. Congress could not reach agreement on provisions to include in the NSA on ground ambulance services. He said another issue is that ground ambulance services typically involve local county and city governments, which adds to the complexity of the issue. As such, the U.S. Congress punted the issue to the Advisory Committee.
Commissioner Conway asked about the NSA’s enforcement provisions related to health care providers. Mr. Hoadley explained that the NSA makes the states the primary enforcers regarding providers with a federal backstop if a state fails to substantially enforce the NSA’s provisions on providers. He said states that currently have balance billing laws have discovered the importance of educating providers on the front end about their laws’ provisions rather than waiting for a violation. He said the Health Policy Institute has been talking to the states to learn more about their experiences on this issue and hopes to learn more.

5. **Heard a Discussion of the Decision in Rutledge v. PCMA**

Katie Keith (Out2Enroll) discussed the recent U.S. Supreme Court’s decision in *Rutledge v. the Pharmaceutical Care Management Association (PCMA)* and its potential effect on the ability of state insurance regulators to regulate certain pharmacy benefit manager (PBM) business practices. Among the roles PBMs play in the provision of prescription drugs, PBMs act as intermediaries between pharmacies and prescription drug plans. In that role, PBMs reimburse pharmacies for the cost of drugs covered by prescription drug plans. To determine the reimbursement rate for each drug, PBMs develop and administer maximum allowable cost (MAC) lists.

Ms. Keith said that in 2015, Arkansas passed Act 900. The Arkansas law effectively requires PBMs to reimburse Arkansas pharmacies at a price equal to or higher than the pharmacy’s wholesale cost. To accomplish this result, Act 900: 1) requires PBMs to timely update their MAC lists when drug wholesale prices increase; 2) provides pharmacies an administrative appeal procedure to challenge MAC reimbursement rates; and 3) allows pharmacies to decline to sell a prescription drug if PBM reimbursement is below acquisition costs. The PCMA sued in the Eastern District of Arkansas, arguing that Act 900 is preempted under ERISA. Following a precedent set in a case, *Pharmaceutical Care Mgmt. Assn. v. Gerhart*, 852 F. 3d 722 (2017), involving a similar Iowa statute, the District Court held that ERISA preempts Act 900, and the U.S. Court of Appeals for the Eighth Circuit affirmed that decision. Ms. Keith said the U.S. Supreme Court granted writ of certiorari in the case, held oral arguments Oct. 6, 2020, and issued its decision Dec. 10, 2020. She said that in a unanimous decision written by Associate Justice Sonia Sotomayor and concurrence by Associate Justice Clarence Thomas, the Court held that Act 900 is not preempted by ERISA. Ms. Keith said this decision most likely opens up a whole range of options for those states considering PBM regulation.

Ms. Keith explained the Court’s analysis. She also summarized some of the standards from previous Court decisions related to ERISA preemption and how the Court in this case most likely weighed whether Act 900 was more like the *New York State Conference of Blue Cross & Blue Shield Plans v. Travelers Ins. Co.*, 514 U.S. 645 (1995) case, which the Court found concerned rate regulation that only affects the costs of ERISA plans, or the *Gobeille v. Liberty Mutual Insurance Company*, 136 S. Ct. 936 (2016) case.

Ms. Keith said the Court found Act 900 is more like the *Travelers* case. Act 900 is “merely a form of cost regulation” by requiring PBMs to reimburse pharmacies at a certain level that does not bear an impermissible connection with or reference to ERISA. The Court reasoned that “ERISA does not preempt state rate regulations that merely increase costs or alter incentives for ERISA plans without forcing plans to adopt any particular scheme of substantive coverage.” Act 900: 1) does not “refer to” ERISA; 2) does not apply “immediately and exclusively” to ERISA plans; and 3) its application to ERISA plans is not “essential to the law’s operation.” Ms. Keith said the Court also held that Act 900 does not directly regulate health plans at all and applies to PBMs whether they act pursuant to an ERISA plan or not.

Ms. Keith said the Court rejected the PCMA’s argument that Act 900’s enforcement mechanisms directly affect central matters of plan administration and interfere with nationally uniform plan administration. The Court said Act 900’s enforcement mechanisms do not require plan administrators to structure their benefit plans in a particular way: 1) Act 900 “simply establishes a floor for the cost of benefits that plans choose to provide;” 2) ERISA does not preempt state laws that merely increase costs even if plans decide to limit benefits or charge higher rates as a result; and 3) PCMA’s position would preempt any state laws that could affect the price or provision of benefits.

Ms. Keith reiterated that she believes the *Rutledge* decision has big implications for the states with respect to PBM regulation, particularly on cost containment and the direct regulation of health care costs. She noted, however, that states are still not going to be able to regulate ERISA plans, but to the extent states are looking at hospitals and other actors in the health care system, the *Rutledge* case provides opportunities. She also said she anticipates more litigation related to these issues. Commissioner Conway said he anticipates more discussion of the *Rutledge* case as part of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup’s future work to develop a white paper on state options with respect to regulating PBM business practices and the ERISA (B) Working Group’s discussion of the case’s potential impact with respect to ERISA preemption.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\RP\RFT\3-25-21 MtgMin.docx

© 2021 National Association of Insurance Commissioners
The Regulatory Framework (B) Task Force met March 18, 2021. The following Task Force members participated: Michael Conway, Chair (CO); Bruce R. Ramge, Vice Chair, represented by Laura Arp and Martin Swanson (NE); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Anthony L. Williams, Jimmy Gunn and Yada Horace (AL); Evan G. Daniels represented by Jon Savary and Erin Klug (AZ); Ricardo Lara represented by Bruce Hinze and Sheirin Ghoddoucy (CA); Andrew M. Mais represented by Jared Kosky (CT); Karima M. Woods (DC); David Altmaier represented by Chris Struk (FL); Doug Ommen represented by Andria Seip, Sonya Sellmeyer and Cynthia Banks Radke (IA); Dean L. Cameron (ID); Dana Popish Severinghaus represented by Shannon Whalen (IL); Stephen W. Robertson represented by Claire Szpara (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary D. Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by Chad Arnold, Sarah Wohlford and Renee Campbell (MI); Grace Arnold represented by Galen Benshoof and Candance Gergen (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Robert Croom (NC); Jon Godfread represented by Chrystal Bartuska (ND); Chris Nicolopoulos represented by Michelle Heaton and Jason Dexter (NH); Marlene Caride represented by Philip Gennace (NJ); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn and Mike Rhoads (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Larry D. Deiter (SD); Doug Slape represented by Rachel Bowden (TX); Jonathan T. Pike represented by Tanji J. Northrup and Jakob Sundberg (UT); Scott A. White represented by Don Beatty, Stephen Hogge, Bob Grissom and James Young (VA); Mike Keidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek, Richard Wicka and Jennifer Stegall (WI); and James A. Dodrill represented by Ellen Potter (WV).

1. Adopted the PBM Model Act

Commissioner Conway said that during the Task Force’s March 1 meeting, the Task Force heard from various stakeholders who had submitted comments on the draft [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM model). He explained that following that meeting, NAIC staff had revised the draft PBM model to add additional relevant state statutory citations suggested in the some of the comment letters. He asked the Task Force members if anyone had any suggestions for additional revisions.

Commissioner Schmidt asked if Commissioner Conway had considered adding a reference to the Rutledge v. Pharmaceutical Care Management Association (PCMA) case in the Section 8—Regulations drafting note. Commissioner Conway said he asked NAIC staff if such references are typically included in NAIC models. He said NAIC staff said such language is not typically included. He also said that he anticipates more litigation involving state pharmacy benefit manager (PBM) regulation and because U.S. Supreme Court (Court) decisions tend to evolve over time, including a reference to this case could possibly be misleading in the future because stakeholders could be led to believe that the Rutledge case is the only relevant case when the Court could issue future decisions on the subject. Commissioner Conway also reiterated his support for further discussion of the Rutledge decision, but he suggested that the better setting for such a discussion would be in the proposed white paper, which the Task Force discussed charging the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup with developing during its March 1 meeting.

Commissioner Stolfi made a motion, seconded by Mr. Hinze, to adopt the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (Attachment One-A). The motion passed, with Connecticut and North Dakota voting against the motion.

Commissioner Conway asked NAIC staff about the Task Force’s next steps to charge the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup with developing the white paper as has been discussed. Jolie H. Matthews (NAIC) said the Task Force will need to develop and adopt a new 2021 Subgroup charge prior to the Subgroup beginning its work. She said the Health Insurance and Managed Care (B) Committee also would have to adopt the charge.

Mr. Kosky explained that Connecticut voted against the motion because of concerns with the Section 8 drafting note’s menu of options. He said Connecticut was concerned that the language in the drafting note could lead to inconsistency and the lack of uniformity in state adoption of the NAIC model. He said this potential lack of uniformity and standardization of language would appear to go against the NAIC’s goal when adopting NAIC models. He also expressed concern about setting a precedent. Mr. Kosky expressed support for developing a white paper and the white paper as the more appropriate vehicle to describe state options concerning PBM regulation rather than an NAIC model. Commissioner Conway said he believes some states will
add provisions beyond the PBM model’s core licensing provisions, but he believes the PBM model is a good work product with substantive core provisions that will be helpful to the states. He acknowledged that there is probably more work to be done on the menu of options in the Section 8 drafting note and that there will probably be discussion on whether the menu of options should remain in the NAIC model or be made part of the white paper.

Commissioner Schmidt noted that many state legislatures are moving forward with legislation to license or register PBMs with or without a NAIC model. She said there most likely will be no uniformity among the states as things are currently advancing in the states. She also noted how rapidly things are changing with respect to the state regulation of PBMs. She also agreed with Commissioner Conway that the Rutledge decision most likely will not be the last U.S. Supreme Court decision affecting the state regulation of PBMs, but she said she believes the PBM model is the best effort at this time.

Commissioner Altman said Pennsylvania voted in favor of the motion to move the discussion forward on the PBM model to the Health Insurance and Managed Care (B) Committee, but she also has concerns similar to Connecticut’s concerns about the Section 8 drafting note and its menu of options. She said she does not know how Pennsylvania will vote on the PBM model moving forward, but Pennsylvania strongly supports developing the white paper. Commissioner Conway acknowledged her comments. He said he agrees that the Section 8 drafting note will be a point of discussion as the PBM model moves forward, particularly because the Task Force has agreed to move forward with the white paper.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

[STATE] PHARMACY BENEFIT MANAGER LICENSURE AND REGULATION MODEL ACT

Table of Contents

Section 1. Short Title
Section 2. Purpose
Section 3. Definitions
Section 4. Applicability
Section 5. Licensing Requirement
Section 6. Gag Clauses and Other Pharmacy Benefit Manager Prohibited Practices
Section 7. Enforcement
Section 8. Regulations
Section 9. Severability
Section 10. Effective Date

Section 1. Short Title

This Act shall be known and may be cited as the [State] Pharmacy Benefit Manager Licensure and Regulation Act.

Section 2. Purpose

A. This Act establishes the standards and criteria for the licensure and regulation of pharmacy benefit managers providing claims processing services or other prescription drug or device services for health benefit plans.

B. The purpose of this Act is to:

(1) Promote, preserve, and protect the public health, safety and welfare through effective regulation and licensure of pharmacy benefit managers;

(2) Promote the solvency of the commercial health insurance industry, the regulation of which is reserved to the states by the McCarran-Ferguson Act (15 U.S.C. §§ 1011 – 1015), as well as provide for consumer savings, and fairness in prescription drug benefits;

(3) Provide for powers and duties of the commissioner; and

(4) Prescribe penalties and fines for violations of this Act.

Section 3. Definitions

For purposes of this Act:

A. “Claims processing services” means the administrative services performed in connection with the processing and adjudicating of claims relating to pharmacist services that include:

(1) Receiving payments for pharmacist services;

(2) Making payments to pharmacists or pharmacies for pharmacist services; or

(3) Both paragraphs (1) and (2).
B. “Commissioner” means the insurance commissioner of this state.

Drafting Note: Use the title of the chief insurance regulatory official wherever the term “commissioner” appears.

C. “Covered person” means a member, policyholder, subscriber, enrollee, beneficiary, dependent or other individual participating in a health benefit plan.

D. “Health benefit plan” means a policy, contract, certificate or agreement entered into, offered or issued by a health carrier to provide, deliver, arrange for, pay for or reimburse any of the costs of [physical, mental or behavioral] health care services.

E. “Health carrier” means an entity subject to the insurance laws and regulations of this state, or subject to the jurisdiction of the commissioner, that contracts or offers to contract or enters into an agreement to provide, deliver, arrange for, pay for or reimburse any of the costs of health care services, including a sickness and accident insurance company, a health insurance company, a health maintenance organization, a hospital and health service corporation, or any other entity providing a plan of health insurance, health benefits, or health care services.

Drafting Note: States that license health maintenance organizations pursuant to statutes other than the insurance statutes and regulations, such as the public health laws, will want to reference the applicable statutes instead of, or in addition to, the insurance laws and regulations.

F. “Other prescription drug or device services” means services other than claims processing services, provided directly or indirectly, whether in connection with or separate from claims processing services, including, but not limited to:

   1. Negotiating rebates, discounts or other financial incentives and arrangements with drug companies;
   2. Disbursing or distributing rebates;
   3. Managing or participating in incentive programs or arrangements for pharmacist services;
   4. Negotiating or entering into contractual arrangements with pharmacists or pharmacies, or both;
   5. Developing and maintaining formularies;
   6. Designing prescription benefit programs; or
   7. Advertising or promoting services.

G. “Pharmacist” means an individual licensed as a pharmacist by the [state] Board of Pharmacy.

H. “Pharmacist services” means products, goods, and services or any combination of products, goods and services, provided as a part of the practice of pharmacy.

I. “Pharmacy” means the place licensed by the [state] Board of Pharmacy in which drugs, chemicals, medicines, prescriptions and poisons are compounded, dispensed or sold at retail.

J. (1) “Pharmacy benefit manager” means a person, business or entity, including a wholly or partially owned or controlled subsidiary of a pharmacy benefit manager, that provides claims processing services or other prescription drug or device services, or both, to covered persons who are residents of this state, for health benefit plans.

   (2) “Pharmacy benefit manager” does not include:
(a) A health care facility licensed in this state;
(b) A health care professional licensed in this state;
(c) A consultant who only provides advice as to the selection or performance of a pharmacy benefit manager; or
(d) A health carrier to the extent that it performs any claims processing and other prescription drug or device services exclusively for its enrollees.

Section 4. Applicability

A. This Act shall apply to a contract or health benefit plan issued, renewed, recredentialed, amended or extended on or after the effective date of this Act, including any health carrier that performs claims processing or other prescription drug or device services through a third party.

Drafting Note: States may want to consider adding language to Subsection A above or Section 10—Effective Date providing additional time for pharmacy benefit managers to come into compliance with the requirements of this Act.

B. As a condition of licensure, any contract in existence on the date the pharmacy benefit manager receives its license to do business in this state shall comply with the requirements of this Act.

C. Nothing in this Act is intended or shall be construed to conflict with existing relevant federal law.

Section 5. Licensing Requirement

A. A person may not establish or operate as a pharmacy benefit manager in this state for health benefit plans without first obtaining a license from the commissioner under this Act.

B. The commissioner may adopt regulations establishing the licensing application, financial and reporting requirements for pharmacy benefit managers under this Act.

Drafting Note: States that are restricted in their rulemaking to only what is prescribed in statute may want to consider including in this section specific financial standards required for a person or organization to obtain a license to operate as a pharmacy benefit manager in this state.

C. A person applying for a pharmacy benefit manager license shall submit an application for licensure in the form and manner prescribed by the commissioner.

Drafting Note: States may want to consider reviewing their third party administrator statute if a state wishes to specify what documents must be provided to the commissioner to obtain a pharmacy benefit manager license in the state.

D. A person submitting an application for a pharmacy benefit manager license shall include with the application a non-refundable application fee of $[X].

E. The commissioner may refuse to issue or renew a license if the commissioner determines that the applicant or any individual responsible for the conduct of affairs of the applicant is not competent, trustworthy, financially responsible or of good personal and business reputation or has been found to have violated the insurance laws of this state or any other jurisdiction, or has had an insurance or other certificate of authority or license denied or revoked for cause by any jurisdiction.

F. (1) Unless surrendered, suspended or revoked by the commissioner, a license issued under this section shall remain valid as long as the pharmacy benefit manager continues to do business in this state and remains in compliance with the provisions of this act and any applicable rules and regulations,
including the payment of an annual license renewal fee of $[X] and completion of a renewal application on a form prescribed by the commissioner.

(2) Such renewal fee and application shall be received by the commissioner on or before [x] days prior to the anniversary of the effective date of the pharmacy benefit manager’s initial or most recent license.

Section 6. **Gag Clauses and Other Pharmacy Benefit Manager Prohibited Practices**

A. In any participation contracts between a pharmacy benefit manager and pharmacists or pharmacies providing prescription drug coverage for health benefit plans, no pharmacy or pharmacist may be prohibited, restricted or penalized in any way from disclosing to any covered person any healthcare information that the pharmacy or pharmacist deems appropriate regarding:

   (1) The nature of treatment, risks or alternative thereto;
   
   (2) The availability of alternate therapies, consultations, or tests;
   
   (3) The decision of utilization reviewers or similar persons to authorize or deny services;
   
   (4) The process that is used to authorize or deny healthcare services or benefits; or
   
   (5) Information on financial incentives and structures used by the insurer.

B. A pharmacy benefit manager may not prohibit a pharmacy or pharmacist from discussing information regarding the total cost for pharmacist services for a prescription drug or from selling a more affordable alternative to the covered person if a more affordable alternative is available.

C. A pharmacy benefit manager contract with a participating pharmacist or pharmacy may not prohibit, restrict, or limit disclosure of information to the commissioner, law enforcement or state and federal governmental officials, provided that:

   (1) The recipient of the information represents it has the authority, to the extent provided by state or federal law, to maintain proprietary information as confidential; and
   
   (2) Prior to disclosure of information designated as confidential the pharmacist or pharmacy:

      (a) Marks as confidential any document in which the information appears; or
      
      (b) Requests confidential treatment for any oral communication of the information.

D. A pharmacy benefit manager may not terminate the contract of or penalize a pharmacist or pharmacy due to pharmacist or pharmacy:

   (1) Disclosing information about pharmacy benefit manager practices, except for information determined to be a trade secret, as determined by state law or the commissioner; or
   
   (2) Sharing any portion of the pharmacy benefit manager contract with the commissioner pursuant to a complaint or a query regarding whether the contract is in compliance with this Act.

E. (1) A pharmacy benefit manager may not require a covered person purchasing a covered prescription drug to pay an amount greater than the lesser of the covered person’s cost-sharing amount under the terms of the health benefit plan or the amount the covered person would pay for the drug if the covered person were paying the cash price.
(2) Any amount paid by a covered person under paragraph (1) of this subsection shall be attributable toward any deductible or, to the extent consistent with section 2707 of the Public Health Service Act, the annual out-of-pocket maximums under the covered person’s health benefit plan.

Section 7. Enforcement

A. The commissioner shall enforce compliance with the requirements of this Act.

B. (1) The commissioner may examine or audit the books and records of a pharmacy benefit manager providing claims processing services or other prescription drug or device services for a health benefit plan to determine compliance with this Act.

Drafting Note: States may want to consider including a reference to the cost of examinations in the Model Law on Examinations (#390).

Drafting Note: States may want to consider incorporating their existing market conduct examination statutes into this Act rather than relying on the examination authority provided under this section.

(2) The information or data acquired during an examination under paragraph (1) is:

   (a) Considered proprietary and confidential;
   (b) Not subject to the [Freedom of Information Act] of this state;
   (c) Not subject to subpoena; and
   (d) Not subject to discovery or admissible in evidence in any private civil action.

C. The commissioner may use any document or information provided pursuant to Section 6C of this Act or Section 6D of this Act in the performance of the commissioner’s duties to determine compliance with this Act.

D. The commissioner may impose a penalty on a pharmacy benefit manager or the health carrier with which it is contracted, or both, for a violation of this Act. The penalty may not exceed [insert appropriate state penalty] per entity for each violation of this Act.

Drafting Note: If an appeals process is not otherwise provided, a state should consider adding such a provision to this section.

Section 8. Regulations

The commissioner may adopt regulations regulating pharmacy benefit managers that are not inconsistent with this Act.

Drafting Note: This Act is primarily intended to establish licensing standards for pharmacy benefit managers (PBMs). A number of states have enacted statutes or made suggestions that extend into the regulation of PBM business practices. The provisions below, which are followed by citations to state law where applicable, provide topic areas that states pursuing this Act may wish to consider in their proposed legislation:

(1) PBM network adequacy (Ark. Code 23-92-505 and Okla. Stat. 36-6961) (Also, see provisions in the Health Carrier Prescription Drug Benefit Management Model Act (#22) and the Health Benefit Plan Network Access and Adequacy Model Act (#74));

(3) Data reporting requirements under state price-gouging laws;
Section 9. Severability

If any provision of this Act, or the application of the provision to any person or circumstance shall be held invalid, the remainder of this Act, and the application of the provision to persons or circumstances other than those to which it is held invalid, shall not be affected.

Section 10. Effective Date

This Act shall be effective [insert date]. A person doing business in this state as a pharmacy benefit manager on or before the effective date of this Act shall have [six (6)] months following [insert date that the Act is effective] to come into compliance with the requirements of this Act.
The Regulatory Framework (B) Task Force met March 1, 2021. The following Task Force members participated: Michael Conway, Chair (CO); Bruce R. Rameg, Vice Chair, and Laura Arp (NE); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling(Al); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Bruce Hinze and Tyler McKinney (CA); Andrew M. Mais represented by Jared Kosky (CT); David Altmaier represented by Chris Struk and Shannon Doheny (FL); Doug Oommen (IA); Dean L. Cameron represented by Kathy McGill (ID); Dana Popish Severinghaus represented by Eric Anderson and Kate Northland (IL); Stephen W. Robertson represented by Karl Knable, Alex Peck and Claire Szpara (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary D. Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Robert Wake (ME); Grace Arnold represented by Eric Taulby (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Robert Croom (NC); Jon Godfread represented by Angie Voegele (ND); Chris Nicolopoulos represented by Maureen Belanger (NH); Marlene Caride (NJ); Judith L. French represented by Theresa Schaefer, Laura Miller and Marjorie Ellis (OH); Glen Muleady represented by Andrew Schallhorn and Kim Bailey (OK); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman represented by Michael Humphreys and Katie Dzurec (PA); Larry D. Deiter represented by Jill Kruger and Candy Holbrook (SD); Doug Slape represented by Rachel Bowden and Doug Danzeiser (TX); Jonathan T. Pike (UT); Scott A. White represented by Don Beatty (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek, Richard Wicka and Jennifer Steggall (WI); and James A. Dodrill represented by Joylynn Fix and Ellen Poter (WV). Also participating was: Troy Downing (MT).

1. Discussed Comments Received on the Draft PBM Model Act

Commissioner Conway said the main purpose of today’s meeting is for the Task Force to discuss the comments received on the draft [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM model). He explained that the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adopted the draft PBM model late last year after an extensive, open drafting process. The Subgroup presented the draft PBM model to the Task Force for its consideration during a meeting last November. The Task Force decided to defer adoption of the model and open the model for a public comment period ending Dec. 22, 2020.

Commissioner Conway said the Task Force received seven comment letters from various stakeholders—America’s Health Insurance Plans (AHIP), the Blue Cross and Blue Shield Association (BCBSA), the Health Benefits Institute (HBI), the HIV+HEP Policy Institute, NAIC consumer representatives, the National Community Pharmacists Association (NCPA) and the Pharmaceutical Care Management Association (PCMA). He said each of the commenters have been given opportunity to provide an overview of their written comments to the Task Force. He said that at the end of this discussion, he plans to discuss the Task Force’s next steps, which most likely will involve discussion of the Section 8—Regulations drafting note and the impact, if any, of the U.S. Supreme Court’s decision in Rutledge vs. Pharmaceutical Care Management Association (PCMA) on the drafting note.

Kris Hathaway (AHIP) said AHIP supports the PBM licensing and registration requirements and the gag clause prohibition provisions in the draft PBM model. However, AHIP remains concerned with some of the provisions included within the draft PBM model, including the Section 8 drafting note and Section 6—Gag Clauses and Other Pharmacy Benefit Manager Prohibited Practices gag clause language. Ms. Hathaway said that specifically, AHIP believes provisions within the Section 8 drafting note language would significantly increase overall health care costs. She said other provisions in the drafting note are not clearly defined and appear to exceed the scope of the draft PBM model. Ms. Hathaway said that with respect to the gag clause language in Section 6, AHIP continues to encourage adoption of the federal gag clause language that was heavily debated and advanced with broad-based stakeholder support and more than 30 states have adopted rather than the language in Section 6, which has only been adopted by one state. She also said that if it is contemplated that additional work needs to be done considering the Rutledge decision, then the Employee Retirement Income Security Act (ERISA) (B) Working Group would be the more appropriate NAIC group to conduct such discussions—not the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup—because expanding the draft PBM model beyond its current language could jeopardize the hard work done to reach consensus.

Haile Dagne (BCBSA) said the BCBSA supports many of the core provisions in the draft PBM model and appreciates the Subgroup’s decision during its drafting process to move the broad language from the initial draft of Section 8B to a drafting
John Rutledge (South Carolina Department of Insurance) expressed concern in the provision of prescription drug benefits, including any potential changes. He noted that the NAIC has the opportunity to develop a stronger and clearer PBM model.

The Commissioner Conway asked Ms. Howard what other areas the NAIC should consider when developing a white paper. Ms. Howard said that the white paper should focus on in addition to the drafting note suggesting states consider establishing financial standards if the state restricts DOI authority because Section 5 is intended to focus on licensing requirements—not financials or reporting stipulations; 3) modifying the language in Section 6 to mirror the federal gag clause provisions; and 4) deleting Section 6A(4) and Section 6A(5) because these provisions would allow pharmacists to disclose information to which a pharmacist would not have access and could lead to consumer confusion.

J.P. Wieske (HBI) said that although the draft PBM model is not perfect and the HBI has concerns, it supports the draft PBM model as drafted. He said the draft strikes the right balance with where most states are at this time without being divisive and allows for a lot of flexibility in its design. Mr. Wieske said that he believes the Rutledge decision has no major impact on the draft PBM model, but given its flexibility, those states that may want to explore the possibility of including similar provisions that were the subject of the Rutledge case can do so. He also said the draft PBM model reflects significant compromise from various sides of the issue including pharmacies, pharmacy benefit managers, insurers, and consumer representatives. The HBI supports the draft PBM model in the spirit of compromise.

Carl Schmid (HIV+HEP Policy Institute) discussed the role of PBMs in prescription drug access and availability using drug formularies and establishing prior authorization and other utilization management techniques. He also discussed the increasing role the HIV+HEP Policy Institute believes PBMs play in the high cost of prescription drugs in the U.S. He said the HIV+HEP Policy Institute is disappointed that the draft PBM model does not include provisions related to the second part of the Subgroup’s charge to consider PBM prescription drug pricing and cost transparency. He said that instead of adding a drafting note to Section 8 providing examples of laws passed by states that address many of the important issues involving PBMs, the HIV+HEP Policy Institute believes the Subgroup should have proposed specific language pertaining to: 1) ensuring greater transparency in the work of PBMs; 2) ensuring greater enforcement; 3) establishing that PBMs have a fiduciary relationship with health carriers; and 4) allowing PBMs to pass rebates on to consumers. Mr. Schmid said the recent Rutledge decision provides more reason for the NAIC to adopt a stronger and clearer PBM model. He also said the HIV+HEP Policy Institute suggests in its comment letter additional state citations to the Section 8 drafting note.

Anna Howard (American Cancer Society Cancer Action Network—ACS CAN), speaking on behalf of the NAIC consumer representatives, said the NAIC consumer representatives are concerned that the draft PBM model will not provide states that wish to go further in their regulation of PBMs with direction and options that may be available to them. She said the NAIC consumer representatives recommend a deeper discussion of these issues and the Subgroup’s development of a white paper to allow the NAIC to: 1) better analyze and assess the role that PBMs play in the provision of prescription drug benefits; and 2) to identify and describe emerging state regulatory approaches that curb the PBMs practices that contribute to high drug prices and insurance affordability challenges. The white paper should address the breadth of topics that were ultimately left out of the draft PBM model, including transparency and reporting requirements; fiduciary duty and other business practices provisions; and consumer cost sharing and access. Ms. Howard said the NAIC consumer representatives also suggest convening the Subgroup to discuss the implications of the Rutledge decision on the draft PBM model, including any potential changes, particularly given the draft PBM model’s limited scope. She said the NAIC consumer representatives also suggest adding additional state statutory citations to the Section 8 drafting note.

Commissioner Conway asked Ms. Howard what other areas a white paper should focus on in addition to the areas examined in the Rutledge case. Ms. Howard said the white paper should discuss the specific options and model language that states can use that might want to more extensively regulate PBMs, such as the business practices listed in the Section 8 drafting note.
Matthew Magner (NCPA) said the NCPA, and the other signatories to its comment letter, have been concerned for a while about the outsized impact PBMs have had on prescription drug benefits and patient access to pharmacy services. He said PBMs not only administer pharmacy benefits for health plans, but also some own their own pharmacies, which creates a conflict of interest that interferes with the patient-pharmacy relationship and can also raise prescription drug costs for consumers. Mr. Magner said the NCPA believes that given the decision in the Rutledge case, state legislatures will be pursuing legislation to increase PBM oversight in their states. He said the states will be looking to the NAIC’s model to determine how best to accomplish this. As such, the NCPA requests the Task Force consider its suggested amendments to the draft PBM model to better prepare the states to address PBM practices that limit patient access to community pharmacy services and increase prescription drug costs, such as provisions: 1) ensuring pharmacy or patient choice; 2) imposing a fiduciary responsibility between the PBM and the health carrier; and 3) concerning pharmacy audits. Mr. Magner said the suggested amendments reflect provisions enacted in one form or another in one or more states. He said the NCPA also recommends including a reference to the Rutledge decision in the Section 8 drafting note for the states to know where to go to obtain more information about their authority to include such provisions in their laws.

Commissioner Schmidt asked if the NCPA had any comments on the NAIC consumer representatives’ suggestion for the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup to develop a white paper. Mr. Magner said the NCPA supports the development of a white paper and would be happy to participate in the discussions during its development to provide a community pharmacist’s perspective on the issues the white paper will most likely discuss.

Lauren Rowley (PCMA) said the PCMA, along with a variety of interested parties, including representatives of pharmacies and consumer representatives, actively participated in the Subgroup’s work on the draft PBM model. She acknowledged the Subgroup’s work was a deliberative and thoughtful discussion of the comments received, and it worked to reach a compromise on some of the draft PBM model’s provisions. She said that while the compromises in the draft do not necessarily reflect the PCMA’s ideal public policy, it does reflect a reasonable set of compromises across all interested parties. Ms. Rowley said PBMs are not insurers and do not collect premium from beneficiaries. She outlined what services PBMs provide to insurers and consumer representatives, actively participated in the Subgroup’s work on the draft PBM model. She acknowledged the Subgroup’s work was a deliberative and thoughtful discussion of the comments received, and it worked to reach a compromise on some of the draft PBM model’s provisions. She said that while the compromises in the draft do not necessarily reflect the PCMA’s ideal public policy, it does reflect a reasonable set of compromises across all interested parties. Ms. Rowley said PBMs are not insurers and do not collect premium from beneficiaries. She outlined what services PBMs provide to insurers and deliver safe, cost-effective prescription drug benefits.

Mr. Beatty questioned why discussions of the Rutledge decision should not be discussed by the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup. Ms. Rowley said the PCMA believes the ERISA (B) Working Group’s membership includes those who are well-versed in ERISA and ERISA preemption issues. She said the Court’s decision in Rutledge did not invalidate its previous decisions related to ERISA preemption. She suggested that as such, the ERISA preemption issues should, perhaps, be looked at more broadly to discuss what the Court actually said in the decision and its implications for the states with respect to PBM regulation. Commissioner Conway suggested that there was a role for both the ERISA (B) Working Group and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup concerning any discussions of the Rutledge decision.

Mr. Keen discussed the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup’s drafting process, including the Subgroup’s early work to ensure everyone was equally educated on these issues before it started drafting a model. He explained that the current draft PBM model reflects the differing viewpoints from the Subgroup members with respect to PBM regulation. He said some states currently have robust PBM regulatory schemes, while other states do not currently regulate them. He said this dichotomy of state PBM regulation was evident in the Subgroup’s discussions, with some Subgroup members at the beginning of the drafting process advocating for establishing an elaborate regulatory scheme in the draft with other Subgroup members advocating for a more incremental approach. Mr. Keen said that in developing the model, given this dichotomy, the Subgroup tried to come up with a draft that would be helpful for every state. He said the Subgroup also was mindful that the states wanted an NAIC model on this topic as soon as possible because their legislatures are asking for information and some sort of general framework for regulating PBMs.

Ms. Arp expressed support for Mr. Keen’s comments. She said the Subgroup ultimately ended up with the Section 8 drafting note because of the lack of a consensus among the states on the topics described in the drafting note—not because of concerns with ERISA preemption. As such, the Rutledge decision does not mean the NAIC should restart its work on the draft PBM model. The decision means that a state can consider adding provisions in its laws related to maximum allowable cost (MAC) pricing and not be vulnerable to ERISA preemption. Ms. Arp discussed the uncertainty of other provisions listed in the drafting note on the cost of prescription drugs and the importance of obtaining such information as states move forward with implementing some of them. She also discussed the importance of understanding what the motive or end goal is of regulating PBMs rather than making public policy on Court dicta in a decision.
Mr. Keen said the Subgroup would be supportive of developing a white paper, as has been discussed, if that is what the Task Force decides should be the next step after adoption of the PBM model.

Commissioner Conway said NAIC staff will schedule a meeting prior to its already scheduled March 25 meeting to consider adoption of the draft PBM model. He requested comments from Task Force members. Commissioner Schmidt suggested that the draft PBM model should include a reference to the Rutledge decision. Commissioner Conway acknowledged her suggestion, but he questioned whether the NAIC has included such references in other NAIC models. Mr. Beatty expressed support for Commissioner Schmidt’s suggestion. Commissioner Conway agreed that there needs to be further discussion of the Rutledge decision, but he suggested that the better setting for such a discussion would be in the proposed white paper.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met Jan. 28, 2021. The following Working Group members participated: Katie Dzurec, Chair, Shannen Logue and Frank Callihan (PA); Jane Beyer, Vice Chair. Jeanette Plitt, Paul Dubois and John Haworth (WA); Jimmy Harris, Donna Lambert, Crystal Phelps and Chantel Allbritton (AR); Mary Boatright, Jeanette Henagan, Erin Klug and Vanessa Darrah (AZ); Pam O’Connell, Jessica Ryan, Doris Walker, Sheirin Ghoddoucy and Christopher Citko (CA); Cara Cheevers, Kate Harris and Damion Hughes (CO); Kurt Swan, Courtney Miner, Paul Lombardo and Robert Chester (CT); Howard Liebers and Mary Beth Senkewicz (DC); Sarah Crittenden (GA); Cynthia Banks Radke, Sonya Sellmeyer, Angela Burke Boston, Lindsay Bates, Andria Seip and Jan Jones (IA); Ryan Gillespie, Sara Stanberry, Kate Morthland and Erica Weyhenmeyer (IL); Shannon Lloyd, Chris Hollenbeck, Craig VanAalst, Brenda Johnson, Barbara Torkelson, Tate Flott, Julie Holmes and Mark McClaffin (KS); Erica Bailey (MD); Peter Brickwedde and Andrew Kleinendorst (MN); Jeannie Keller (MT); Ted Hamby, Rosemary Gillespie, Shane Quinlan, Kathy Shortt, Tracy Biehn and Cheryl Bivens (NC); Sara Gerving, Colton storseth, Chystal Bartuska and Ross Hartley (ND); Ingrid Marsh, Michelle Heaton, and Tyler Brannen (NH); Ralph Boeckman, Gale Simon, Erin Porter and Chanell McDevitt (NJ); Sheri Mortensen-Brown, Viara Ianakieva, Diane Bilodeau, Julie Weinberg and Sarah Grisham (NM); Laura Miller, Guy Self, Kyla Dembowski, Todd Oberholtzer, Molly Motttram and Marjorie Ellis (OH); Alyssa Metivier, Victor Woods, Emily Maranjian and John Garrett (RI); Kendall Buchanan and Michael Bailes (SC); Jill Kruger and Lisa Harmon (SD); Rachel Bowden and Angela Melina Raab (TX); Tani J. Northrup, Carrie Backus, Heidi Clausen, and Jaakob Sundberg (UT); Brant Lyons, Melissa Gerachis, Heather Webb, Ansley Fitzpatrick, Bryan Wachter, Jarod Mentzer, Julie Fairbanks and Tiffany Toney (VA); Barbara Belling, Jody Ullman, Diane Dambach and Mark Prodoehl (WI); Joylynn Fix (WV); and Denise Burke, Tara Howard and Mavis Earnshaw (WY).

1. **Heard a Presentation on Consumer Experiences with MHP**

Andrew Sperling (National Alliance on Mental Illness—NAMI) provided an overview of federal mental health parity (MHP) legislation and its interaction with state laws. He characterized the law as a success for consumers, but he said challenges remain, including enforcement and a lack of clarity on non-quantitative treatment limits (NQTLs). He said state insurance regulators should ensure compliance when behavioral health benefits are carved-out, tackle the difficulties of network adequacy in mental health, and work toward a recognized accreditation process, such as through URAC. He said the prospective medical management of inpatient hospitalization remains a big challenge and a difference from the way medical/surgical (MS) benefits are treated.

Ms. Beyer asked whether there is concern with insurers approving a lower level of care than requested by a provider. Mr. Sperling said plans insist on a lower level of care, even calling the provider every day to ask for discharge from an inpatient setting. Ms. Beyer asked about experiences consumers have in appealing determinations that a lower level of care is all that will be paid. Mr. Sperling said it is a large challenge for families, especially when the patient is in crisis. Ms. Dzurec asked whether there are different definitions of emergency services for psychiatric care versus MS services. Mr. Sperling said there are different legal standards, particularly for involuntary confinement. He said these legal considerations complicate health plan determinations because these are legal proceedings where law enforcement may be involved. Ms. Harris asked whether there is an opportunity to use criteria from the American Society of Addiction Medicine (ASAM) to guide coverage decisions. Mr. Sperling said this is a hot topic and the challenge is that treatment guidelines are different for each condition.

2. **Heard a Presentation on Provider Experiences with MHP**

Tim Clement (American Psychiatric Association—APA) described health care providers’ experiences with MHP. He said utilization reviews for behavioral health often involve second-level review and peer-to-peer reviews in which the reviewer strongly encourages the provider to seek a lower level of care. He said smaller practices are at a disadvantage in negotiating with insurers, regardless of the scarcity of providers in a market. He outlined a number of prescription drug and formulary issues providers face. He urged state insurance regulators to look to medical experts in their states as well as state insurance regulators in other states who are performing parity market conduct exams.
3. **Heard a Presentation on Health Plan Experiences with MHP**

Lisa Campbell and Ryan Temme (Groom Law Group) presented on health plans’ perspectives on MHP. Ms. Campbell noted that their remarks represent the views of America’s Health Insurance Plans (AHIP), the Association for Behavioral Health and Wellness (ABHW), and the Blue Cross Blue Shield Association (BCBSA). Ms. Campbell described federal laws, noting the complexity of the tests for parity compliance. She referenced existing federal compliance tools. Mr. Temme emphasized the need for plans to better understand what would be considered compliant, particularly with regard to NQTLs. He described three levels of complexity with parity requirements: 1) a wide variety of covered plans; 2) the variety of approaches that are permissible; and 3) the different levels of analysis that a state insurance regulator could request. He said workforce shortages and the reluctance of providers to join networks contribute to the way plans offer and pay for mental health benefits and add to the complexity of compliance analysis. He said the rule is focused on the process, so different outcomes are not determinative of compliance. Ms. Campbell said federal guidance under recent legislation to require comparative analyses will provide a uniform standard for plans to report on their NQTLs.

Pamela Greenberg (ABHW) said her organization’s main goal is to have a uniform implementation process and certainty for plans regarding what is compliant and non-compliant. Randi Chapman (BCBSA) said her organization seeks clarity and wants the new federal law to lead to consistent and transparent guidance. She said the new law provides an opportunity for a uniform approach. Miranda Motter (AHIP) recommended that the Working Group work with stakeholders to implement the new federal law, and she said work outside the framework of the new law could add confusion.

Ms. Beyer asked what role issuers have in making it easier for behavioral health providers to be part of plan networks. Ms. Greenberg said some providers do not have the means to offer telehealth and plans have helped there. She said plans have worked to reduce the administrative burden and provider partnerships can be more complex than working in a solo practice without taking insurance. Ms. Motter said another potential consideration is providers operating at the top of their licenses. Ms. Greenberg said collaborative care models are a good example of psychiatrists practicing at the top of their licenses, and it can help for plans to encourage and reimburse such models.

Ms. Dzurec asked about using provider ratios in measuring network adequacy. Mr. Clement said whether providers are taking new patients is an important consideration in addition to provider ratio. Ms. Greenberg said the variety of provider types in behavioral health must also be considered. Ms. Motter said telehealth should also be considered with regard to satisfying provider ratios.

Ms. Dzurec asked about federal guidelines for comparative analyses and how states can ask plans for them. Amber Rivers (U.S. Department of Labor—DOL) said it is a transitional time and guidance will come later. She added that much of the language in the new law is borrowed from existing statutes and regulations, so the concepts are not new. Mary Nugent (Center for Consumer Information and Insurance Oversight—CCIIO) said guidance has not yet been released, but there is nothing in federal law that prevents state insurance regulators from requesting analyses from state-regulated plans.

Having no further business, the MHPAEA (B) Working Group adjourned.

SENIOR ISSUES (B) TASK FORCE

Senior Issues (B) Task Force Feb. 23, 2021, Minutes ..........................................................7-31
Senior Issues (B) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)
February 23, 2021

The Senior Issues (B) Task Force met Feb. 23, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Lori K. Wing-Heier, Vice Chair, represented by Sarah Bailey (AK); Jim L. Ridling represented by William Rodgers (AL); Alan McClain represented by Carroll Astin (AR); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Tyler McKinney (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Mary Beth Senkewicz (DC); Trinidad Navarro represented by Susan Jennette (DE); David Altmair represented by Chris Struk (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Shannon Hohl (ID); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Brenda Johnson (KS); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Rebecca Butler (MA); Kathleen A. Birrane represented by Adam Zimmerman (MD); Eric A. Cioppa represented by Sherry Ingalls (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartska (ND); Bruce R. Range represented by Laura Arp (NE); Chris Nicolopoulos represented by Maureen Belanger (NH); Barbara D. Richardson represented by Nick Stosic (NV); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Ron Kreiter (OK); Andrew R. Stolfi represented by Gayle Woods (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Doug Slape represented by Doug Danzeiser (TX); Jonathan T. Pike represented by Tanji J. Norhurst (UT); Scott A. White represented by Bob Grissom (VA); Mike Kreidler represented by Michael Bryant (WA); and Mark Afable represented by Jennifer Stegall (WI). Also participating were: Eric Anderson (IL); Paige Duhamel (MN); Martin Wojcik (NY); Sarah Neil (RI); Andrew Dvorine (SC); Anna Van Fleet (VT); and Mavis Earnshaw (WY).

1. Discussed its 2021 Agenda

Commissioner Caride asked David Torian (NAIC) to summarize the potential agenda list. Mr. Torian explained the individual items the Task Force plans to do in 2021 and optional issue items the Task Force may wish to consider for the year.

Mr. Torian asked Ms. Arp to explain the issue Nebraska wishes to bring to the Task Force’s attention. Ms. Arp said Nebraska has durable medical equipment (DME) providers, or at least a provider, who has not taken assignment on certain DME products. She said the DME provider discovers that the person is on Medicare and has a Plan F, and the DME provider then charges “what he wants” or, at minimum, full retail for the equipment because he knows Plan F pays for 100% of the excess charges.

Ms. Arp said the federal government normally caps the excess amount on Part B at 15%, but that is not the case for DME. She said Plans F and G are then exposed to 100% of the cost of the DME product in this circumstance. She said in reaction, some carriers have said in their policy that the cost of the product must be medically necessary and the charge must be reasonable, while others may have utilized a usual, customary and reasonable (UCR) standard and limited the payment to that. She said the consumer who bought the Plan F then may be subject to “balance billing” based upon what the carrier did not pay to the DME provider.

Ms. Arp said the question becomes whether a Medicare Supplement carrier can limit the amount paid for the product even though there is no assignment and no cap imposed by the federal government like in other excess charges and what, if anything, would allow a carrier to not pay the full retail (or more) price imposed by a DME provider within the scope of the Medicare Supplement regulation model. She said Nebraska knows of some states that have imposed some restrictions on excess charges, but she also does not know, off hand, how many states have seen this issue arise.

Commissioner Caride asked if anyone has questions regarding the potential issues for the Task Force. Bonnie Burns (California Health Advocates—CHA) raised a concern about a class action lawsuit against Genworth. She said there are about 207,000 Genworth long-term care insurance (LTCI) policyholders who will receive a notice regarding the settlement of this class action lawsuit, and the settlement includes 39,000 Californians with partnership policies. She said several thousand more Californians with non-partnership policies from Genworth will receive a similar notice about their benefit options and premium increases.

Ms. Burns said the class action notices received in California offer policyholders various options to reduce their benefits and premiums, and she said some options include a cash payment, while others include paid up benefits with no further premiums required. She said some policyholders may be given only two options if their existing benefits are for less than two or three years of coverage, and policyholders with more than three years but less than lifetime coverage may have three options. She
said policyholders with lifetime benefits may have as many as five options. She said the notice also includes information about a pending premium increase and the possibility of future increases, some of more than 500% for policyholders with lifetime benefits and more than 300% for policyholders with fewer years of benefits.

Ms. Burns said while the disclosure notices resulting from this lawsuit have been largely dictated by the court, notices with similar options were distributed because of the Penn Treaty insolvency, and they are likely to be replicated if other insolvencies occur. In addition, she said the industry has begun to offer various options designed to reduce or eliminate a scheduled premium increase. She said consumer representatives are concerned that policyholders often do not understand the choices they are given or the implications of making one or more of these choices. She said she understands that the issue of reduced benefit options (RBO) is part of the workstream of the Long-Term Care Insurance (EX) Task Force, and she believes the issue deserves discussion within the Senior Issues (B) Task Force, a group that primarily deals with issues affecting older consumers and the model law and regulation for these products.

Ms. Klug asked Ms. Burns if the Task Force could move forward on this issue separate from the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. Ms. Burns said yes because consumers must have options, and the Task Force is the group that can address issues in the model. Mr. Knable asked Ms. Burns about the letters going to policyholders and the format, as relates to the model. Ms. Burns said the Task Force should discuss the formatting of these letters and notices, as reflected in the model. Mr. Knable said since this is a class action lawsuit, this matter is probably outside of the NAIC models, as well as perhaps the NAIC jurisdiction and reach. Ms. Nakasone said a standardized letter would not be helpful, as one size does not fit all. Mr. Knable asked about the role of the Long-Term Care Insurance Model Update (B) Subgroup in this matter.

Mr. Torian explained that the purpose of the Long-Term Care Insurance Model Update (B) Subgroup is to first determine whether the Long-Term Care Insurance Model Act (#640) and the Long-Term Care Insurance Model Regulation (#641) need to be updated. If the Subgroup determines that an update is needed, the Subgroup will report to the Task Force on its findings and begin work to update Model #640 and Model #641. Mr. Torian said if the Subgroup determines that Model #640 and Model #641 do not need an update, then the Subgroup is prepared to act on any recommendations that may come from the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. Mr. Torian said the Subgroup could begin its work immediately on whether Model #640 and Model #641 need an update, and it would most likely have not yet begun any edit or update on Model #640 and Model #641 prior to any potential recommendations that may come from the Subgroup.

Commissioner Caride asked the Task Force if there are any objections by Task Force members to let the Long-Term Care Insurance Model Update (B) Subgroup begin its work. Mr. Lombardo said he has no objection so long as the Subgroup can be prepared to receive any recommendations that may come from the Long-Term Care Insurance (EX) Task Force and any of its workstreams. Mr. Bryant said he has no objection, but he pointed out that the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup is looking at the issues raised by Ms. Burns. Commissioner Caride heard no objections, and she said the Long-Term Care Insurance Model Update (B) Subgroup should begin its work.

Commissioner Caride asked if there are any other issues the Task Force should consider for the year outside of the list provided to the Task Force. Ms. Burns said she would like the Task Force to look at innovative benefits in Medicare Supplement (Medigap). She said she has raised this before and feels these new or innovative benefits confuse consumers, cannot be compared with others, and dilute the simplification of standardized benefits. Commissioner Caride asked Ms. Burns to send details to Mr. Torian. Ms. Nakasone said Ms. Burns if she could include examples of the type of benefits and rewards.

Harry Ting (Consumer Advocate Volunteer, Chester County Department of Aging Services – Apprise Program) said he has an issue that has disturbed State Health Insurance Assistance Program (SHIP) counselors for years; i.e., Medicare Part D insurers that drop a low premium plan and auto-enroll Medicare beneficiaries in their highest cost plan during annual open enrollment. Beneficiaries are sent the federal Center for Medicare & Medicaid’s (CMS’s) standard Annual Notice of Changes letter and standard CMS changes booklet, which combined are around 16 pages long. Unless beneficiaries read the documents carefully, they may not even understand that their plan has changed. Even if they do, they are only given information on how their new plan's provisions and premiums differ from that of their old plan. They are not informed that there is a cheaper option offered by the company, whose premium is closer to the old premium.

Commissioner Caride asked Mr. Ting to also send details to Mr. Torian. Ms. Burns said the NAIC should take a position on the return of state regulation of Medicare Advantage, and she encouraged the states to learn more about and use the Senior Medicare Patrol (SMP) program, which is often housed in the SHIP, and one-third of SHIPs are in a state insurance department. She said these programs are the primary source in each state for frauds perpetrated against seniors.

Having no further business, the Senior Issues (B) Task Force adjourned.
PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

Property and Casualty Insurance (C) Committee April 13, 2021, Minutes ................................................................. 8-2
Cannabis Insurance (C) Working Group March 11, 2021, Minutes (Attachment One) .................................................. 8-7
Catastrophe Insurance (C) Working Group March 10, 2021, Minutes (Attachment Two) ........................................... 8-10
Catastrophe Insurance (C) Working Group Nov. 17, 2020, Minutes (Attachment Two-A) ....................................... 8-16
Pet Insurance (C) Working Group April 8, 2021, Minutes (Attachment Three) .......................................................... 8-20
Pet Insurance (C) Working Group March 26, 2021, Minutes (Attachment Three-A) ................................................... 8-21
Pet Insurance (C) Working Group Feb. 18, 2021, Minutes (Attachment Three-A1a) .................................................... 8-26
Transparency and Readability of Consumer Information (C) Working Group March 15, 2021, Minutes
(Attachment Four) ........................................................................................................................................... 8-28
Transparency and Readability of Consumer Information (C) Working Group Feb. 4, 2021, Minutes
(Attachment Four-A) .......................................................................................................................................... 8-31
Transparency and Readability of Consumer Information (C) Working Group Nov. 17, 2020, Minutes
(Attachment Four-B) ........................................................................................................................................... 8-32
The Property and Casualty Insurance (C) Committee met April 13, 2021. The following Committee members participated: Vicki Schmidt, Chair (KS); Mike Chaney, Vice Chair (MS); Jim L. Ridling (AL); Ricardo Lara represented by Ken Allen (CA); Andrew N.Mais and George Bradner (CT); Colin M. Hayashida and Martha Im (HI); Stephen W. Robertson represented by Kate Kixmiller (IN); James J. Donelon (LA); Kathleen A. Birrane (MD); Grace Arnold (MN); Larry D. Deiter represented by Maggie Dell (SD); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill (WV). Also participating were: Lori K. Wing-Heier (AK); Phil Vigliaturo (MN); Martha Lees and My Chi To (NY); Michelle Brugh Rafeld (OH); and Don Beatty (VA).

1. **Adopted its 2020 Fall National Meeting and 2020 Summer National Meeting Minutes**

Commissioner Birrane made a motion, seconded by Commissioner Chaney, to adopt the Committee’s Dec. 8, 2020 (see NAIC Proceedings – Fall 2020, Property and Casualty Insurance (C) Committee) and Aug. 12, 2020 (see NAIC Proceedings – Summer 2020, Property and Casualty Insurance (C) Committee) minutes. The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Mr. Vigliaturo reported that the Casualty Actuarial and Statistical (C) Task Force regularly holds predictive model training called the “Book Club” and a monthly regulator-only discussion about rate filing issues. He said non-actuaries are encouraged to attend. He said the Task Force is concerned about potential consequences of the Casualty Actuarial Society’s (CAS) recission of its Statement of Principles for Ratemaking (SOP). He said the Task Force adopted a letter to the CAS Board requesting that the CAS consider reversing its decision. In March, the CAS Board voted to not reverse its position, but to ask the American Academy of Actuaries (Academy) to develop a practice note to attempt to provide some concise and useful communication about ratemaking that is not included in Standards of Practice. Mr. Vigliaturo said the Consumer Federation of America (CFA) sent a letter to all commissioners, superintendents and directors requesting that they make revisions to their laws and/or regulations and has specifically pointed out that while the considerations in the rescinded SOP are included in Standards of Practice, the principles themselves, which are the most important part, are not included in standards. Mr. Vigliaturo said the Task Force will be addressing this issue during its future meetings.

Mr. Vigliaturo also provided an update on NAIC rate review activities, specifically the confidential shared model database and the NAIC rate model technical review process that were created for use by states that signed the Rate Review Support Services Agreement. Currently, 28 states have signed the agreement, and the NAIC has reviewed 31 rate filings and subsequent objection responses coming from nine different states. Mr. Vigliaturo reported that over the last year, the NAIC has added an expert modeling actuary and is in the process of considering two additional resources to assist with the increasing volume of requests.

Bob Hunter (CFA), with respect to the CAS SOP for Ratemaking, said no other actuarial standards or principles apply to final rates, and the rates that matter are final rates because that is what consumers pay and state insurance regulators regulate. He also noted that the state rate-making laws have aligned with the actuarial principles because the principles interpreted the statutory language of what is not excessive, inadequate or unfairly discriminatory meant. Some state statutes and regulations actually refer to sound actuarial principles. He said companies have been moving to pricing based upon willingness to pay and departures from cost-based pricing like price optimization. Mr. Hunter urged the Committee to indicate an intent to continue to rely upon the principles in regulatory processes. He said since a lot of model laws and state laws mention sound actuarial principles, any references should be replaced with the language of the rescinded principles. Commissioner Schmidt noted that the Task Force will continue to discuss these developments during future meetings.

Jessica Leong (CAS) said that as president of the CAS, the professionalism of members is extremely important, and that the CAS did receive feedback on its rescinding of the SOP. She said moving forward with the Academy to redraft a new document can fulfill some of the needs in terms of having a document that will be useful to non-actuaries in messaging about ratemaking.

Commissioner Donelon said the Surplus Lines (C) Task Force has not yet met in 2021, but during its next meeting, it will be discussing a strategy to update the Nonadmitted Insurance Model Act (#870). The Task Force will also be reviewing and discussing amendments to the Standard Form Trust Agreement for Alien Excess or Surplus Lines insurers, as well as amendments to the International Insurers Department (IID) Plan of Operation, which govern the more than 165 alien insurers and syndicates doing business in the U.S.
Ms. Rafeld said the Title Insurance (C) Task Force met Feb. 23 and took the following action: 1) heard the first half of a presentation from the American Land Title Association (ALTA) on the effects that the COVID-19 pandemic had on the title insurance industry; and 2) discussed a proposed work plan for the year, which includes: considering drafting a memorandum to the Government Relations (EX) Leadership Council to study the issues related to the Secure and Fair Enforcement (SAFE) Banking Act and U.S. Department of Justice (DOJ) “Cole” memorandum to determine if the NAIC should take certain positions or additional steps related to these; considering drafting a memorandum to the Producer Licensing (D) Task Force in combating fraud through joint calls and meetings; 3) monitoring issues and developments occurring in the title insurance space.

Director Wing-Heier said the Workers’ Compensation (C) Task Force met March 15 and heard presentations from the International Association of Industrial Accident Boards and Commissions (IAIABC) and the National Council on Compensation Insurance (NCCI) regarding COVID-19. The IAIABC has been collecting data regarding COVID-19 workers’ compensation claims, including the number of claims received; the number of fatalities; the denial rates; and rates per 100,000 workers in those claims. The NCCI presented information regarding COVID-19 claims, presumptions, combined ratios, COVID-19 loss summaries and other legislative issues being introduced this year. The NCCI reported that the calendar year combined ratios are expected to be favorable. There has not been an explicit adjustment made for COVID-19 in the recent rate and loss cost filings, and the NCCI still does not know what the final impact of COVID-19 will be. However, it is working with several modeling firms to evaluate the exposure.

Mr. Allen said the Cannabis Insurance (C) Working Group met March 11 and took the following action: 1) reviewed its current charges and how they should be addressed; and 2) discussed a proposed work plan for the year, which includes: considering drafting a memorandum to the Government Relations (EX) Leadership Council to study the issues related to the Secure and Fair Enforcement (SAFE) Banking Act and U.S. Department of Justice (DOJ) “Cole” memorandum to determine if the NAIC should take certain positions or additional steps related to these; considering drafting a memorandum to the Producer Licensing (D) Task Force in combating fraud through joint calls and meetings; 3) monitoring issues and developments occurring in the title insurance space.

Commissioner Chaney said the Catastrophe Insurance (C) Working Group met March 10 and took the following action: 1) heard federal updates from NAIC staff regarding the National Flood Insurance Program (NFIP) and the U.S. Department of Housing and Urban Development (HUD) proposed rule to change the Federal Housing Administration (FHA) regulations to allow lenders to accept private flood insurance policies located in special flood hazard areas; 2) heard a presentation from Q-risq Analytics regarding a product that runs storm surge and wind velocity models prior to a storm making landfall. The product provides data down to an individual address that is geocoded with a latitude and longitude. Commissioner Chaney noted Mississippi was able to take advantage of using this product during the hurricane season; and 3) heard presentations from Alabama, California, Louisiana, Mississippi and Texas regarding catastrophic events occurring over the past year.

Mr. Beatty said the Pet Insurance (C) Working Group is in its final stages of adopting a Pet Insurance Model Act. All sections of the model have been exposed for comment. The main issues covered are definitions, disclosure, preexisting condition clauses and waiting periods. Mr. Beatty said there has been participation from numerous interested parties, and he is hopeful the model might be complete by the Summer National Meeting.

Ms. Lees said the Terrorism Insurance Implementation (C) Working Group has not met this year, but there are some updates on activities related to the state regulator data call. She said workers’ compensation data has been received and is being analyzed by the NAIC in order to create a report as in prior years. Ms. Lees said the joint data templates for the state insurance regulator data call were released and a notification sent to insurers on March 12 asking insurers to file 2020 data for the 2021 joint data call by May 15 to both state insurance regulators through the New York portal and to the U.S. Department of the Treasury (Treasury Department). She said a regulator-to-regulator meeting has been scheduled to discuss the state supplement portion of the 2021 data call, and details will be sent to insurers once a decision is made by state insurance regulators. This notification should occur in May.
Mr. Bradner said the Transparency and Readability of Consumer Information (C) Working Group is currently working on a “best practices” document for state insurance regulators regarding significant premium increases on property/casualty (P/C) insurance products. There are three drafting groups working on various sections of the document. These drafting groups include: discussing and drafting a section of the best practices document regarding a threshold for notification of a premium increase, communication of a premium increase and communication standards for a premium increase; drafting a generic rate and rule filing checklist that can be used by a department of insurance (DOI); and drafting consumer education regarding premium increases. Mr. Bradner said the drafting groups have begun meeting and plan to meet monthly.

Commissioner Chaney made a motion, seconded by Commissioner Kreidler, to adopt the following task force and working group reports: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers’ Compensation (C) Task Force; Cannabis Insurance (C) Working Group (Attachment One); Catastrophe Insurance (C) Working Group (Attachment Two); Pet Insurance (C) Working Group (Attachment Three); Terrorism Insurance Implementation (C) Working Group; and Transparency and Readability of Consumer Information (C) Working Group (Attachment Four). The motion passed unanimously.

3. **Adopted an Extension for Revisions to the Proposed Pet Insurance Model Act**

Commissioner Dodrill made a motion, seconded by Mr. Bradner, to adopt an extension to the 2021 Summer National Meeting for revisions to the proposed Pet Insurance Model Act. The motion passed unanimously.

4. **Heard an Update Related to Workshops Concerning Disaster Preparedness and Response**

Aaron Brandenburg (NAIC) said state insurance regulators held a workshop with Federal Emergency Management Agency (FEMA) Regions 8, 9 and 10 in February. The workshop had set out to build upon existing relationships and identify new partnership opportunities for all phases of disaster management. It covered both NAIC and federal publications and resources on resiliency disaster preparedness and response; DOI disaster response organizational charts; communications; and sharing of key contacts. He said additional communication from FEMA on Risk Rating 2.0 to state insurance regulators is expected to occur before or during the upcoming Insurance Summit. The regions will also consider possible formation of an ongoing working group for continued engagement regarding individual assistance, disaster recovery center collaboration, data sharing and post-event reports covering lessons learned.

Mr. Brandenburg also reported that the pre-disaster mitigation workstream under the Climate and Resiliency (EX) Task Force worked with the NAIC Center for Insurance Policy and Research (CIPR) as well as the Federal Alliance for Safe Homes (FLASH) to co-host a building code and mitigation workshop in May. The workshop was reported on during the Climate and Resiliency (EX) Task Force meeting, and recordings with slides and resources from the event are posted on the Climate and Resiliency Resource Center. The workshop covered information on building codes; proven mitigation methods, including state programs; and funding resources for pre- and post-event mitigation. He said additional sessions will occur at the upcoming Insurance Summit in June.

Mr. Brandenburg also noted the Catastrophe Insurance (C) Working Group tasked NAIC staff with creating a disaster hub where regulatory information related to disasters could be housed. He said a prototype website has been created that has recordings and materials from prior FEMA workshops; regulatory resources like the State Disaster Response Plan and information on the NAIC’s disaster assistance capabilities such as data calls; state bulletins that can be used by states as they prepare for disasters; consumer documents; and FEMA resources. He also said a list of each state’s disaster contact is also posted.

5. **Appointed an NAIC/FEMA Advisory Group**

Commissioner Chaney said the workshops and additional engagement with FEMA have been extremely valuable to state insurance regulators by building relationships, discussing communication strategies, and committing to working together before, during and after disasters. He said some of the Southeast Zone states in FEMA Region 4 have agreed to create a working group to meet on a regular basis. One of the keys that has been discussed throughout these workshops is to ensure that conversations and engagement move forward. Commissioner Chaney said he would propose a new group be formed under the Catastrophe Insurance (C) Working Group to serve as an advisory group to provide oversight, planning, prioritization and a reporting mechanism for state insurance regulator and FEMA interaction. The group would help to make sure that state insurance regulators continue to work closely with FEMA to improve disaster preparation and resilience. Upon a motion by Commissioner Chaney, seconded by Commissioner Ridling, the following charge was adopted:
The NAIC/FEMA Advisory Group will assist state regulators in engaging and collaborating with FEMA on an ongoing basis by establishing a process for the oversight, prioritization and reporting of disaster-related regional workshops and other exercises to improve disaster preparation and resilience.

6. **Heard a Presentation Related to Insurance Rating for Dog Breeds**

Grace Lopes (Insurance Consumer Coalition for Pet Owners) said nine animal welfare groups issued a white paper in November 2020 about dog breed rating. She said homeowners sometimes go uninsured or underinsured because insurance companies are refusing to write a policy, excluding animal liability, or placing monetary limits on coverage due to dog breed lists that contain 13 breeds. She said this dog list was created by the Centers for Disease Control and Prevention (CDC) and later rejected by the CDC 25 years ago. She said the insurance industry has added a mix of any of the 13 breeds, which encompasses most dogs in dog shelters. She said experts agree that breed does not dictate behavior.

Ms. Lopes said the Insurance Information Institute (III) produces a report about how much dog claims cost that is based on all dog-related claims, including slip and fall accidents and other liability issues beyond dog bites. She said visual breed identification is unreliable, and DNA testing is the only reliable method to determine genetic heritage. She said no tests or breed label can predict dog behavior. Ms. Lopes said insurers make exceptions to the dog breed list with a higher premium. She said some insurers and associations have rejected the dog breed list. She said uneducated insurance consumers, low- or moderate-income consumers, and people of color are most harmed by the use of dog lists. She said more people have rescued dogs during the pandemic.

Ms. Lopes said underwriting guidance should not be arbitrary or capricious. She asked the Committee to determine whether actuarial data exists to support a breed list. She asked for countrywide data call to be issued to collect data on dog bites and that states issue a moratorium on the use of the breed list until the data is reviewed.

7. **Discussed the Status of Potential Charges Related to Race and Insurance Issues**

Commissioner Schmidt said the Special (EX) Committee on Race and Insurance met April 12 and discussed some proposed charges that are currently exposed for comment through May 14. Workstream Three of the Special Committee had previously met several times and drafted recommendations for the Special Committee. The Special Committee incorporated those recommendations into proposed charges having to do with affordability, availability and access; producer issues; consumer education and outreach; and unfair discrimination, including defining terms like “proxy discrimination” and “disparate impact” and developing regulatory and analytical tools as they relate to these issues and others, like the use of third-party data and certain socioeconomic rating variables. Commissioner Schmidt said the Committee will end up working on many of these issues either directly or indirectly. Birny Birnbaum (Center for Economic Justice—CEJ) said he looks forward to working with commissioners on defining terms and developing a framework to address racism in insurance.

8. **Discussed Cyberinsurance Charge and Heard a Report on the New York Cyber Insurance Framework**

Commissioner Schmidt said the Committee has a charge related to analyzing the cybersecurity insurance market. She said NAIC staff will present a report on the Cybersecurity Insurance and Identity Theft Coverage Supplement during a future meeting.

Ms. To said the New York State Department of Financial Services (NYDFS) recently hired Justin Herring as Executive Deputy Superintendent of the Cybersecurity Division. She said Mr. Herring was previously chief of the U.S. Attorney’s office in New Jersey’s first cybercrimes unit. Ms. To said as cyber risks are increasing, New York decided to focus on cyber insurers because they are uniquely exposed to cyber-risk from a solvency perspective and because they are uniquely positioned to help raise the bar in terms of cybersecurity best practices in the corporate world more generally. She said the New York Cyber Insurance Risk Framework is a good example of collaboration and what can come out of constructive dialogue between state insurance regulators and the industry.

Mr. Herring reported the cyberinsurance market is likely to grow from around $3 billion in premiums in 2019 to a projected $20 billion in 2025. He said growth slowed in 2019, but premiums understate exposure. The slow growth was driven by the increasing cost of cyberattacks and exposure of ransomware. Ransomware imposes many new costs and introduces the possibility a business or city could actually be shut down. Mr. Herring said that cost has made insurers more cautious in underwriting and has slowed the growth of the market.

Mr. Herring said the three key challenges of cyber-risk measurement are: 1) silent risk, meaning many cybercrimes could generate claims that are not under policies that specifically refer to cybercrimes, such as business interruption or liability
policies; 2) systemic or aggregation risk, meaning cyber incidents sometimes affect many organizations at the same time; or 3) rapid change, meaning cybercrime methods change very quickly.

Mr. Herring said the NYDFS issued a ransomware survey in 2020 of insurers to find out how ransomware costs had changed, finding they almost doubled. He said the NYDFS then met with other regulators like the European Insurance and Occupational Pensions Authority (EIOPA) and the Bank of England and with cyberinsurers. He said the NYDFS had cyberinsurance roundtables with large cyberinsurers, insurance brokers and cybersecurity experts. Mr. Herring said the NYDFS developed seven recommendations in the Cyber Insurance Risk Framework. Some insurers had already incorporated the recommendations. The recommendations are: 1) establish a formal cyberinsurance risk strategy; 2) manage and eliminate exposure to silent cyberinsurance risk; 3) evaluate systemic risk; 4) rigorously measure insured risk; 5) educate insured and insurance producers; 6) obtain cybersecurity expertise; and 7) require notice to law enforcement.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 11, 2021. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael-Brown-Brown and Camilo Pizarro (CA); Michael-Brown Conway, Vice Chair, represented by Peg Brown and Bobbie Bacca (CO); Lori K. Wing-Heier represented by Austin Childs (AK); Angel King (DC); Michael-Brown Gould (DE); Judy Mottar (IL); Marlene Caride represented by Nicole A. Brown and Randall Currier (NJ); Gennady Stolyarov and Mark Garratt (NV); Glen Mulready (OK); Andrew R. Stolfi represented by Raven Collins (OR); Elizabeth Kelleher Dwyer (RI); Christina Rouleau (VT); and Michael-Brown Bryant (WA).

1. Discussed its 2021 Work Plan

Ms. Michael-Brown stated that the Working Group did not meet in 2020 due to COVID-19. For this reason, it is important for the Working Group to review where it left off in 2019 before discussing what it should do in 2021. The Working Group was appointed by the Executive (EX) Committee during its Aug. 5, 2018, meeting to study insurance issues related to legal cannabis business. The Working Group’s major deliverable was drafting the white paper Understanding the Market for Cannabis Insurance, which it adopted in July 2019. The white paper was then fully adopted by the Executive (EX) Committee and Plenary during the 2019 Fall National Meeting. The white paper explored regulatory issues related to insurance in the cannabis industry, including how insurance rates are set; legal and regulatory authority at the federal, state and local levels; cannabis operations; and best practices. The white paper findings showed there are substantial gaps in insurance coverage for the cannabis industry, exposing those who engage with the cannabis industry.

Given the completion of its charge to develop the white paper, the Working Group proposed that its charges be updated for 2020. Since the Working Group did not meet in 2020, these charges have carried through to 2021. The charges include:

1) Assess and periodically report on the status of federal legislation that would protect financial institutions from liability associated with providing services to cannabis businesses operating legally under state law.

2) Encourage admitted insurers to ensure coverage adequacy in states where cannabis, including hemp, is legal.

3) Provide insurance resources to stakeholders and keep up with new products and innovative ideas that may shape insurance in this space.

4) Collect aggregated insurance availability and coverage gap information, as well as other cannabis and hemp insurance-related data to then publicly share the cannabis and hemp insurance-related data in a released report by the end of 2021.

The Working Group determined at the end of 2019 that its 2020 charges should include the evaluation of commercial insurance issues, including issues related to commercial auto, workers’ compensation and hemp. In determining this, it noted that both hemp and marijuana come from the same cannabis species. Additionally, many states are tracking hemp issues in parallel with marijuana issues, as businesses operating in both of these spaces face many of the same issues, such as banking and insurance availability. However, the Working Group believed issues related to impairment and safety extend beyond just cannabis-related issues and should be undertaken as part of a comprehensive effort under other working groups. The Working Group also determined that capturing information on coverage adequacy, such as the number of insurers writing in a state and what coverages they offer, was not feasible. The decision was based on the Working Group’s unsuccessful attempts to do this previously when it asked the states to verify similar information collected from the National Cannabis Industry Association (NCIA).

The proposed work plan for 2020 includes:
1. Consider drafting a memorandum to the Government Relations (EX) Leadership Council to consider NAIC support of the Secure and Fair Enforcement (SAFE) Banking Act.

2. Consider drafting a memorandum to the Government Relations (EX) Leadership Council asking that it study the status of issues related to the U.S. Department of Justice (DOJ) Cole Memorandum.

3. Hold a fact-finding hearing to hear from insurance companies on barriers they experience in expanding coverage availability in this space.

4. Consider drafting a memorandum to the Producer Licensing (D) Task Force asking that it examine how cannabis-related convictions may be preventing licensing approvals.

The first two work plan items are aimed at examining the current state of protections for financial institutions from liability associated with providing services to marijuana businesses operating legally under state law. The SAFE Banking Act was proposed legislation in 2019 regarding the disposition of funds gained through the cannabis industry. The Cole Memorandum stated that given its limited resources, the DOJ would not enforce federal marijuana prohibition in states that had legalized it. It was rescinded in 2018; in response, the Sensible Enforcement of Cannabis Act was introduced as a means to preserve the protections offered by the Cole Memorandum. As all NAIC policy positions go through the Government Relations (EX) Leadership Council, the Working Group’s memorandum would ask that the Leadership Council take up examining the SAFE Banking Act and the status of the Cole Memorandum to determine if the NAIC should take further steps or positions.

The third work plan item is related to the increasing need and demand for cannabis insurance as more states continue to legalize cannabis. A hearing would allow the Working Group to get feedback from insurers on what state insurance regulators can do to help remove the barriers they are experiencing in offering coverage. Colorado shared in 2019 that after conducting a survey, it found that coverage for hemp is much different than it is for cannabis. As such, the hearing may also need to include a discussion on how the U.S. Department of Agriculture (USDA) and the Federal Crop Insurance Corporation affect the hemp industry. The findings from the hearing can be summarized in some sort of deliverable, such as a brief report to fulfill the Working Group’s fourth charge. The fourth work plan item aims at how licensing efforts can increase diversity.

Mr. Stolyarov requested that the fourth work plan item be edited to hyphenate “cannabis-related.” Ms. Michael-Brown agreed.

Ms. Brown suggested that the third work plan item be modified to allow for the possibility of a lengthier deliverable, potentially a report extending beyond one page, if the content that needs to be covered warrants it. Ms. Michael-Brown agreed.

Ms. Brown asked for clarification on whether the second charge should be to “improve coverage adequacy” or “ensure coverage adequacy.” Ms. Michael-Brown stated that the official second charge is to “ensure coverage adequacy.”

Lisa Brown (American Property and Casualty Insurance Association—APCIA) stated that insurers would benefit most by NAIC support of the SAFE Banking Act. Although the Cole Memorandum stated that the DOJ would not enforce federal marijuana prohibition in states where it is legal, carriers would be more comfortable with something definitive. The industry would like to request that states consider their legal inability to provide cannabis insurance coverage under federal law before any individual state makes coverage mandatory.

Superintendent Dwyer stated that she regulates securities and banking in addition to insurance in Rhode Island. The Conference of State Bank Supervisors (CSBS) discussed the SAFE Banking Act and the Cole Memorandum on its March 10 call. Surprisingly, Rhode Island has found that its state charters banking marijuana have been unchanged. She suggested that the NAIC government relations staff reach out to the CSBS to find out more, as it seems there is less angst around this issue now. As chair of the Producer Licensing (D) Task Force, she supports the fourth work plan item, but she suggests that it be expanded to include the entire 1033 guidance, which includes all criminal backgrounds for producer licensing. She asked if there is any evidence that producer licenses are being held up by marijuana convictions.

Ms. Michael-Brown stated that she did not know, but research into this can be included in the memorandum. California took the initiative to review and change its licensing protocols after legalizing cannabis, but she was unsure if other states did the same. The work plan item was designed to research this; see if there are any such barriers limiting diversity; and if so, create guidance for states on how to move forward.

Superintendent Dwyer stated that the guidelines on 1033, the federal statute relating to felonies, and who can participate in the insurance industry are extremely outdated. She noted that only those who have a federal marijuana trafficking conviction would
Ms. Michael-Brown stated that Attorney General Nominee Merrick Garland indicated in his confirmation hearing that if confirmed, he would shift back towards the Obama-era approach of limiting resources spent on federal marijuana enforcement.

Ms. Brown stated that insurers are not comfortable writing cannabis coverage with the risk that another administration or attorney general could withdraw support for considerations that the previous administration held under the Cole Memorandum. If insurers need to provide coverage for cannabis activities, the NAIC should support the SAFE Banking Act. As such, the industry would most benefit from the Working Group prioritizing this.

Ms. Brown stated that Colorado is doing a series of forums starting in April to encourage admitted carriers to enter the space. Most of the coverage in Colorado is provided by the nonadmitted market. Ms. Brown believes the Working Group needs to examine if anything should be added to the SAFE Banking Act to encourage admitted carriers to participate in this space. The Working Group should look closely to determine what mechanisms coverage is currently being provided. A surplus broker brought to Ms. Brown’s attention that the inability of admitted carriers to get reinsurance may be causing insurers’ reticence in entering this space. The surplus broker stated that this is important information in drafting the memorandum on the SAFE Banking Act, and she asked if Ms. Brown has any additional insight.

Ms. Brown stated that she would inquire internally and report back on her findings.

Keri Kish (Wholesale & Specialty Insurance Association—WSIA) stated that this parallels her understanding of how reinsurance is limiting admitted carriers from entering the space. She offered to find out more details and report back on her findings.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 10, 2020. The following Working Group members participated: Mike Chaney, Chair, and Andy Case (MS); Brian Powell (AL); Ken Allen, Giovanni Muzzarelli and Lynne Wehmueller (CA); George Bradner and Wanchin Chou (CT); Virginia Christy (FL); Colin M. Hayashida (HI); Travis Grassel (IA); Judy Mottar (IL); Heather Droge and Brenda Johnson (KS); Warren Byrd, Richard Piazza and Thomas Travis (LA); Matthew Mancini (MA); Joy Hatchette (MD); Cynthia Amann, Carrie Couch, LeAnn Cox and Jeana Thomas (MO); Timothy Johnson (NC); Mark McGill (NJ); Tom Botsko (OH); Cuc Nguyen (OK); David Dahl, Ying Liu and Van Pounds (OR); Elizabeth Kelleher Dwyer and Beth Vollucci (RI); Gwen McGriff and Will Davis (SC); David Combs (TN); Brian Ryder and Mark Worman (TX); and David Forte (WA). Also participating were: Vincent Gosz (AZ); Renee Campbell (MI); Chris Aufenthie (ND); Gennady Stolyarov (NV); and Donna Stewart (WY).

1. **Adopted its Nov. 17, 2020, Minutes**

The Working Group met Nov. 17, 2020, in lieu of meeting at the 2020 Fall National Meeting.

Mr. Byrd made a motion, seconded by Mr. Bradner, to adopt the Working Group’s Nov. 17, 2020, minutes (Attachment Two-A). The motion passed.

2. **Heard an Update Regarding Federal Legislation**

Brooke Stringer (NAIC) said the National Flood Insurance Program (NFIP) is operating under its sixteenth short-term extension, which will expire Sept. 30, 2021. She said lawmakers are divided over issues, such as the role of the private flood insurance market, claims processing reforms and addressing affordability challenges. Congressional debates will likely factor in the new Risk Rating 2.0 initiative, as this initiative will revamp the way premiums are calculated.

Ms. Stringer said recent media reports indicate that the Federal Emergency Management Agency (FEMA) has told insurers that it will stagger the rollout of the new NFIP rates under Risk Rating 2.0. New rates will only take effect for new flood insurance policies beginning Oct. 1, 2021, while rates for existing policies will not take effect until April 1, 2022. Ms. Stringer said this has not yet been publicly confirmed.

Ms. Stringer said that during the last Congress, the U.S. House of Representatives’ Committee on Financial Services approved a five-year reauthorization bill, but coastal state lawmakers objected to the bill and introduced an alternative bill. She said these lawmakers did not believe Chairwoman Maxine Waters’ (D-CA) bill went far enough to protect policyholders from rate hikes. Neither bill proceeded further in the House, nor was there any focus on the NFIP reauthorization in the U.S. Senate. Ms. Stringer said Chairwoman Waters and U.S. Rep. Emanuel Cleaver (D-MO)—who is chair of the Subcommittee on Housing, Community Development, and Insurance—indicated that a long-term reauthorization of the NFIP is one of the priorities for the new Congress. It is unlikely that the Senate Committee on Banking, Housing, and Urban Affairs will prioritize reauthorization until it gets closer to the expiration of the current short-term reauthorization. The NAIC will continue to urge support for a long-term reauthorization that prioritizes mitigation and encourages private market growth.

Ms. Stringer said FEMA has continued to purchase reinsurance to cover losses for the NFIP and transfer more risk to the capital market. She said the February transfer, combined with some of the previous capital market placements and the January reinsurance placement, FEMA has now transferred a more than $2.9 billion of the NFIP flood risk to the private sector ahead of the 2021 hurricane season.

Ms. Stringer said FEMA has continued to purchase reinsurance to cover losses for the NFIP and transfer more risk to the capital market. She said the February transfer, combined with some of the previous capital market placements and the January reinsurance placement, FEMA has now transferred a more than $2.9 billion of the NFIP flood risk to the private sector ahead of the 2021 hurricane season.

Ms. Stringer said that in November 2020, the U.S. Department of Housing and Urban Development (HUD) published a proposed rule to change Federal Housing Administration (FHA) regulations to allow lenders to accept private flood insurance policies on FHA-insured properties located in special flood hazard areas (SFHAs). The FHA’s current rules have prevented buyers with FHA-insured mortgages from obtaining flood insurance through any source other than the NFIP. In 2019, the federal banking regulators finalized their rule for acceptance of private flood insurance.
Ms. Stringer said the proposed rule would amend FHA regulations to include the definition of “private flood insurance” from the federal Biggert-Waters Flood Insurance Reform Act of 2012. It includes a “compliance aid” allowing mortgagees to accept private policies, without further review, where the policy or an endorsement includes the language that it meets this definition of private flood insurance laid out in the rule. The proposal differs from the federal banking regulators’ private flood rule, particularly because it would not allow discretionary acceptance of other types of private flood insurance policies, including residential surplus lines policies.

Ms. Stringer said the NAIC submitted a comment letter in January 2021 encouraging HUD to further align its rule with the banking regulators and providing information on the regulatory regime for surplus lines insurance. She said, with the change in administration, it is unclear yet if HUD will continue to pursue such a new rule. Ms. Stringer will keep the Working Group apprised of updates.

3. Heard a Presentation from Q-risq Analytics

Q-risq Analytics (Q-risq) showed a short video. This video described an operational solution it has developed for forecasting address-specific wind and storm surge risk using geospatial analytics engines developed for federal, state and local emergency managers.

According to Q-risq, its product helps answer the following questions: 1) Who will be affected by the approaching storm surge and tropical winds? 2) What will be the intensity of the surge and wind when the storm makes landfall? 3) When is the impact of the approaching storm expected to begin? 4) Where should the most experienced personnel be deployed prior to landfall for the quickest response time? and 5) How will the storm affect individual property owners and the community as a whole?

The Q-risq team consistently monitors a storm’s track, the wind intensity and surge risk area days prior to a storm. This information can be used to contact property owners, municipalities and government entities via text message, email and/or voice calls to help them prepare for a storm’s effects and to help mitigate damage.

When received in advance, each address is geocoded with a precise latitude and longitude and entered into Q-risq’s secure client database and digitally represented in its program’s viewer. Each policy address is assigned an individual risk score based on its forecasted flood depth and its digitally derived ground elevation. Properties are then classified in one of four categories: 1) no risk; 2) low risk; 3) moderate risk; or 4) high risk.

Properties can be close to each other but assigned different risk levels. Q-risq’s proprietary wind and storm surge model results are layered over ground elevations. Customized assessments are built for each property. Properties that sit higher will not be as affected by a given amount of water. As seen with 2020’s Hurricane Laura Q-risq’s proprietary wind model Q-winds color codes the storm’s four-quadrant wind vortex according to maximum velocity. Updated with each National Hurricane Center (NHC) advisory, each property is then classified according to its forecasted wind risk.

In addition to client-specific policies in force, Q-risq also ingests community addresses to provide impact assessments to federal, state and local governments, aiding and preparing proportionate levels of staging and response teams. Well before landfall, Q-risq’s supercomputer uses real-time storm information to perform billions of calculations on hundreds of terabytes of data to calculate an ensemble of storm impact possibilities. This information is processed against the previously geocoded properties to determine community exposure for both surge and wind. Once the storm has made landfall, Q-risq focuses on creating a hindcast report of the storm’s impact. Maximum storm surge, sustained winds and accumulated rainfall are displayed in a spreadsheet for each location. The Q-risq team is committed to improving the ability to reach out to homeowners, public assistance applicants and emergency management personnel with the most advanced technology available.

Scott Bolton (Q-risq) said Q-risq essentially runs storm surge and wind velocity models prior to a storm making landfall. He said the data is then made available to individual addresses that are geocoded with a latitude and longitude, making the data specific to these individual addresses. Mr. Bolton said the dashboard in the Q-risq program also shows the overall impact to the customer. He said Q-risq is in the process of developing an app that provides data relevant to each address; this app provides updates every six hours as the NHC issues new advisories.

Mr. Bolton said, in a post-storm analysis, Q-risq does validation using National Oceanic and Atmospheric Administration (NOAA) and U.S. Geological Survey (USGS) observations, allowing Q-risq to match its model to actual observations after the
storm. He said this allows Q-risq to provide the information to municipalities, the federal government or to individual insurance companies to help validate what actually took place at specific addresses and help to expedite the closing of claims.

Mr. Case said Q-risq contacted the Mississippi Insurance Department (MID) last fall regarding its product and gave the MID the opportunity to use the product with Hurricane Zeta. He said a policyholder was denied coverage due to the fact Q-risq believed the damage to some of the properties was flood-related. Mr. Case said the MID worked with Q-risq and, within a day, there was a report with the data needed to show it was not a water loss, but in fact a wind loss, and the insurer reversed its decision.

Mr. Bradner said one of the concerns he would have regarding having individuals access this data and monitor the storm as it approaches is that individuals may think they are out of harm’s way according to the product and not evacuate when it might be necessary. He also asked how this related to Hurrevac, as many municipalities use Hurrevac to monitor and identify a storm path and where properties may be in harm’s way.

Mr. Bolton said Q-risq is using data issued by the NHC, so it is not doing predictive tracking. He said if there is a mass evacuation, Q-risq not contradicting this; it is simply producing a high-resolution model. Mr. Bolton said the Q-risq model does not just show an area that is going to receive an 8-to-10-foot storm surge, but how that surge is going to specifically impact an individual’s address with a surge above ground, not just above the sea level.

Elizabeth Valenti (Q-risq) said the Hurrevac product uses a storm surge model called SLOSH (Sea, Lake and Overland Surges from Hurricanes), which is a generalized model. Q-risq runs its model on a supercomputer, and it takes a couple of hours to run because Q-risq’s resolution is much higher than the SLOSH model. She said Hurrevac provides a general forecast, whereas the Q-risq tool provides a property-specific forecast, using light detection and ranging (LiDar)-derived digital elevation models. She said Q-risq takes the government products and post-processes them into the private market specific-use case.

Mr. Bradner asked if the new app is available for all jurisdictions or limited jurisdictions.

Ms. Valenti said the product works for all North American Atlantic basin, which includes the Eastern seaboard and the Gulf Coast for North American land-falling hurricanes.

Mr. Bolton said Q-risq has two different products. He said one is wind velocity and the other is storm surge. Mr. Bolton said storm surge is relative to a mesh, and a mesh is dictated by elevation. He said 10 meters above a mean sea level and 10 meters below a sea level are surge area and the wind velocity goes as far inland as the NHC continues to issue advisories.

Mr. Bolton said, with its wind analysis in a hind cast, Q-risq can report the maximum wind velocity at a particular location, as well as the direction and duration of the event.

Mr. Bolton said RMS is doing so-called “predictive destruction,” which Q-risq is looking into for its model. He said the Q-risq model currently does not include a prediction of damage ahead of landfall. Mr. Bolton said this is something Q-risq would like to produce, or possibly to work with modeling companies at some point in the future to provide. Mr. Bolton said if Q-risq is given coverage or the assessed value of an individual’s address, it can show the risk level; however, it has not started working on a predictive model for destruction.

4. **Heard Updates Regarding Recent Catastrophic Events**

   a. **Mississippi**

Mr. Case said the forecast models ahead of Hurricane Zeta showed it to be a Category 2 storm. He said these models were correct; however, the storm picked up speed as it made landfall and ended up being a lower-end Category 3 storm.

Mr. Case said there were roughly 24,000 residential property claims reported as a result of Hurricane Zeta, which resulted in $108 million in payments. He said there were also a significant number of claims closed without payment. The damage from this storm were primarily roof claims. Due to actual cash value (ACV) payments with holdbacks for depreciation, as well as named storm deductibles, payments were less than expected. Approximately 55% of the claims were closed without payment, meaning many policyholders did not have enough damage to reach their deductibles.
Mr. Case said, in addition to residential property claims, Mississippi had roughly 650 commercial property claims. These claims payments amounted to approximately $5 million. Commercial property claims closed without payments were a little less than 50%.

Mr. Case said personal auto claims were somewhat surprising, as this was mainly a wind event. He said there were more than 5,000 personal auto claims reported, resulting in claims payments of $24 million. Approximately 650 of these claims were closed without payment. Mr. Case said there were roughly 85 commercial auto claims reported, amounting in $400,000 in claims payments.

Mr. Case said the only complaints the MID received stem from some large commercial loss claims. He said, for the most part, the claim response following Hurricane Zeta has been good.

Mr. Bradner asked if Mr. Case had a sense as to whether 2% or 5% hurricane deductibles were used.

Mr. Case said the MID saw a representative number of deductibles at both 2% and 5%. He said in talking to consumers, there were a number of them that were unaware that they could buy that deductible down, per Mississippi statute.

Mr. Bradner asked if Mississippi had a provision in its law about multiple hurricane events and deductibles.

Mr. Case said Mississippi does not have a provision in its law regarding multiple hurricane events and deductibles. He said this has been discussed, as both Louisiana and Alabama have had multiple hurricane events this year. Mr. Case said Mississippi will be looking at this issue.

b. Alabama

Mr. Powell said Alabama had three storms that affected the state severely in 2020.

Mr. Powell said Tropical Storm Cristobal was basically a rain event. The storm passed through the state and saturated the ground. Shortly following Tropical Storm Cristobal, Alabama experienced its first and second hurricanes. The saturation from Tropical Storm Cristobal was the cause of a lot of flooding.

Mr. Powell said Alabama saw a lot of coastal and riverine flooding, but also experienced numerous trees falling due to the water saturation causing damage. The first hurricane did not cause a lot of wind damage; however, there was damage due to tree fall. Mr. Powell said the second hurricane was a wind event and mainly affected the central and northeastern part of the state. He said there are still a number of claims being filed due to the storm.

Mr. Powell said Alabama was faced with the deductible issue, as there is no mechanism to deal with multiple deductibles. He said there were parts of the state where insureds had significant damage to their homes or commercial business from the storm, and then a couple of weeks later another hurricane came through that did additional damage to the structures. Mr. Powell said Alabama is looking into a mechanism to deal with multiple deductibles, as it is going to be difficult for some policyholders to recover.

Mr. Powell said there were boats sitting in the middle of interstates and the state had problems finding the boats’ owners. He said the insurance industry responded to this problem and were able to get the boats towed and then worked to handle the claims with the boat owners.

c. California

Ms. Wehmueller said Moody’s identified the 2020 California wildfire season as having approximately 3 million acres burned, affecting 5,800 structures. This resulted in estimated losses of $4.8 billion. Ms. Wehmueller said 2020 was less damaging than previous years in terms of insured losses; however, there were more acres burned. She said, in contrast, the insured damage for 2017 and 2018 combined was $25 billion.

Ms. Wehmueller said the California Department of Insurance (CDI) Consumer Services Division assisted at approximately 16 local assistance centers to help insureds receive needed checks and contents advances, as well as to answer questions. Ms. Wehmueller said the CDI also did a demonstration for a virtual local assistance center due to the COVID-19 pandemic, so
consumers could speak to Consumer Services Division representatives virtually. She said the CDI had a positive experience with the virtual local assistance center and will explore using virtual local assistance centers in the future.

Ms. Wehmueller said the COVID-19 pandemic caused travel restrictions, as well as consumer fears about being involved on an in-person basis. Due to this issue, attendance at the local assistance centers was not as high as expected, given the number of wildfires that occurred during the year. Ms. Wehmueller said the CDI is in continuous talks with the California Governor’s Office of Emergency Services and FEMA to put in a plan for true virtual local assistance centers for future events. She said the CDI also used its Consumer Services Division hotline staff to assist consumers with insurance concerns.

Ms. Wehmueller said the CDI has kept its public website updated regarding wildfire resources that provide important notices the CDI has issued related to wildfires, as well as information regarding consumer rights and laws that specifically apply to the claims process. She said the CDI also has a Property Insurance Policy Locator tool, which helps survivors in the event that a property owner perishes in a wildfire. The legal representative may use the tool if the property is located in a declared disaster area.

d. Louisiana

Mr. Byrd said Louisiana experienced five storms in 2020.

The first storm experienced by Louisiana was Tropical Storm Cristobal. Residential losses were about $12.3 million, while commercial losses totaled $1.3 million. Mr. Byrd said a few months later, Hurricane Marco—which skirted the coast and was not declared a disaster—was, therefore, minimal in nature.

Mr. Byrd said, shortly after Hurricane Marco, Hurricane Laura hit. He said 170,000 claims resulted from this one storm. Residential losses totaled $3.3 billion and commercial losses totaled $3.4 billion, for a total of almost $7 billion in insured losses from this one event.

Mr. Byrd said Hurricane Delta hit in October and was the fourth storm to hit Louisiana in 2020. This storm produced 72,000 claims and, to date, there have been residential losses of $410 million and commercial losses of $150 million.

Mr. Byrd said, later in October, Hurricane Zeta hit, resulting in approximately 49,000 claims and causing residential losses of $230 million and commercial losses of $270 million.

Mr. Byrd said Louisiana also experienced an ice storm in 2021, and they are still working thorough this event. He said he did not have data to present today, but Louisiana does not generally experience three to four consecutive days of subfreezing temperatures.

Mr. Byrd said Commissioner James J. Donelon (LA) issued Emergency Rule 45 because of Hurricane Laura claims. He said the main complaint received regarding Hurricane Laura was the multitude of adjusters or the changing of adjusters by carriers, which resulted in a failure to pay or a late payment.

Mr. Byrd said the Louisiana Department of Insurance issued two bulletins, the first one being Bulletin 2021-02, which extends the proof of loss time frame from the normal 60 days to 180 days in the event of a catastrophe. The bulletin also describes how to calculate replacement cost coverage, especially on a room. He said the second bulletin issued was Bulletin 2021-03, which charges the industry with the duty of good faith and fair dealing with their policyholders. It also entitles policyholders to obtain a copy of their policy if they ask for it.

e. Texas

Mr. Worman said Texas experienced a winter storm Feb. 11–19, 2021. He said this event affected all 254 Texas counties. Mr. Worman said once the storm hit, the Texas Department of Insurance (TDI) extended its consumer help line hours, started to develop consumer information specific to the event (e.g., information regarding how to file claims, frequently asked questions, etc.) and worked with the Texas Department of Emergency Management to disseminate this information. Mr. Worman said the TDI has a storm resource page on its website. He said the TDI Public Affairs Department utilized social media to disseminate information to consumers.
Mr. Worman said the TDI issued several bulletins, just as it would after any catastrophic event. These bulletins reminded insurers of claims-handling deadlines and consumer protections related to underwriting, nonrenewals, credit scoring and other items. He said there are many policies that include provisions for freezing, so the TDI issued a bulletin regarding freezing. These items include the policyholder taking reasonable care to maintain heat or shut off water supply and drain pipes.

Mr. Worman said many things were beyond the control of the insured regarding this event, such as the frequency and length of power outages, that could have prevented many policyholders from maintaining heat in their homes. He said many consumers lost power for extended periods of time, while other consumers lost and had intermittent power. Mr. Worman said there are still consumers that do not have water. He said this bulletin was to inform insurers of the TDI’s expectations, as well as to consider the severity and nature of these events and to consider these factors when adjusting these claims.

Mr. Worman said there are two data-collection efforts underway. He said the TDI has issued a claims survey to some of the top writers in the state, which represents approximately 87% of the residential market and 80% of the commercial property market. The claims survey allows the TDI to collect information quickly on a statewide aggregate basis and includes information from licensed insurers. Information includes items such as the number of claims reported, the number of claims paid at the end of the month, and the number of claims open at the end of the month. Mr. Worman said this information is reported quickly, so it can be reported to the legislature, as the legislature is in session and has expressed interest in this information. The first submission is due March 12.

Mr. Worman said TDI has also activated its Catastrophe Event Statistical Plan for Personal and Commercial Risks. He said the reason the TDI is doing two data-collection efforts is that the catastrophe statistical plan is used to gather detailed information by ZIP code and it is not just to collect data from licensed insurers, but it is also to collect data from surplus lines insurers. This effort takes a little longer. He said the catastrophe statistical plan was activated Feb. 26 and insurers are required to submit the first round of data by March 31. Insurers are required to file monthly thereafter.

Commissioner Chaney said the NAIC is creating a website that is intended to be a “one-stop shop” for state insurance regulators that will contain resources pertaining to catastrophes. The website will house everything from bulletins, to regulator resources, to consumer resources for regulators to use. The website will also have links to federal information regarding catastrophic events, such as FEMA resources. This information will be shared in more detail during the Property and Casualty Insurance (C) Committee meeting during the Spring National Meeting. As the NAIC posts this information, input and suggestions from state insurance regulators are welcome.

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.
The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Nov. 17, 2020. The following Working Group members participated: Mike Chaney, Chair, and Andy Case (MS); Robert X. Lee, Vice Chair, and Virginia Christy (FL); Brian Powell and Willard Smith (AL); Katie Hegland (AK); Lynne Wehmuller (CA); George Bradner (CT); Colin M. Hayashida (HI); Travis Grassel (IA); Robert Rapp (IL); Brenda Johnson (KS); Warren Byrd (LA); Matthew Mancini (MA); Joy Hatchette (MD); Jeana Thomas (MO); Kelly Ricketts (Smith) (NC); Carl Sornson (NJ); Tom Botsko (OH); Cuc Nguyen and Andrew Schallhorn (OK); Beth Vollucci (RI); and Marianne Baker, J’ne Byckovski and Mark Worman (TX). Also participating was: Donna Stewart (WY).

1. Heard an Update Regarding Federal Legislation

Brooke Stringer (NAIC) said the National Flood Insurance Program (NFIP) is operating on a one-year extension through Sept. 30, 2021. This is the 16th short-term extension of the NFIP since the 2017 expiration of the program, but this is the longest of those extensions. Ms. Stringer said it will be up to the next U.S. Congress, which officially convenes in January 2021, to decide how to address a long-term reauthorization. She said that given the COVID-19 pandemic and other competing priorities, as well as the one-year extension, NFIP reauthorization is unlikely to be one of the top priorities at the beginning of the new Congress. She said it is likely that the same debates will come up again over whether more private insurers should take over, affordably, rebuilding repetitively flooded homes.

Ms. Stringer said that on Nov. 10, the U.S. Department of Housing and Urban Development (HUD) released a proposed amendment to Federal Housing Administration (FHA) regulations that would allow lenders to accept private flood insurance policies on FHA-insured properties located in Special Flood Hazard Areas (SFHAs). She said this is noteworthy, as the FHA’s current rules do not allow private flood insurance to satisfy the mandatory purchase requirement.

Ms. Stringer said that the proposed rule would amend FHA regulations to include the definition of “private flood insurance” from the federal Biggert-Waters Flood Insurance Reform Act of 2012 (Biggert-Waters Act). It also includes a “compliance aid” allowing mortgagees to accept private policies, without further review, where the policy or an endorsement includes the language: “This policy meets the definition of private flood insurance contained in 24 CFR 203.16a(e) for FHA-insured mortgages.” She said the proposed rule also says it “will not permit Mortgagees to exercise their discretion to accept flood insurance policies, provided by private insurers or mutual aid societies, that do not meet the definition and requirements for a private flood insurance policy as laid out in this rule.”

Ms. Stringer said that because of the differences between HUD and the federal banking regulators’ rules, compliance with the banking rule will not be interpreted as compliance with HUD’s requirements. She said HUD will accept comments for 60 days following the date of the proposed rule.

Mr. Byrd said he read something a few days ago in an article where the author suggested property developers developing property in areas presumed to be at sea level upon completion should not be allowed to obtain flood insurance. Not allowing flood insurance would be used as a way to prevent developers from developing in areas that might potentially soon be flood-prone areas. He asked if there has been any traction for this type of legislation in Congress.

Ms. Stringer said that with the incoming administration, there will likely be more of a focus on issues related to climate risk and resiliency. She said there will likely be more action at the federal regulatory level in the next four years too. Ms. Stringer said Congress is getting close to the end of the session, but she believes there will be more action at the federal regulatory level than in the past couple of years.

Mr. Bradner asked where Federal Emergency Management Agency (FEMA) stands regarding Risk Rating 2.0 and asked if it was still on schedule for 2021. He also asked if states would be provided with data so states would know how it is going to affect home property owners in their respective states.
Ms. Stringer said this is a good question and that she believes it was set to go into effect in October 2021. She said she is not sure if there will be any changes that will take place due to the incoming administration. Ms. Stringer said Congress has shown some concern regarding Risk Rating 2.0.

Jeffrey Klein (Consumer Representative) said he was on the Southeast State Emergency Response Agency (SERA) meeting a couple of weeks ago and heard from Tony Hake (FEMA). Mr. Hake said FEMA was planning to roll out training for state insurance regulators, realtors, banks and others sometime in early 2021.

Commissioner Chaney said he is also hearing that FEMA may enact a regulation to raise the sea level requirement, so it does not have to go through Congress to be eligible to write flood insurance through the NFIP. He said this is what FEMA does in counties and parishes throughout the country.

2. Discussed NAIC/FEMA Regional Meetings Held with Various Regions

Commissioner Chaney said the NAIC has been partnering with FEMA and holding joint meetings in various regions to present a better understanding of the flood event response process and to discuss ways in which FEMA and state departments of insurance (DOIs) can better coordinate in this process. He said, to date, the NAIC and FEMA have held events with FEMA Region 7 states and FEMA Region 4 states. The NAIC and FEMA will hold another event in January 2021 with FEMA Region 8, FEMA Region 9 and FEMA Region 10 states. Commissioner Chaney said these events have transitioned to virtual events as a result of the pandemic.

Jeff Czajkowski (NAIC Center for Insurance Policy and Research—CIPR) said the joint meetings with the NAIC and FEMA in 2020 will continue into 2021. He said the purpose for the roundtables is to make recommendations and to discuss solutions related to insuring for catastrophe risk. These roundtables discuss ways in which the NAIC can assist states in responding to disasters.

Mr. Czajkowski said that in January 2020 that the NAIC and FEMA held a forum with FEMA Region 7, which includes Iowa, Kansas, Missouri and Nebraska; this roundtable was organized in the aftermath of the 2019 Midwest flooding. The second roundtable was held with FEMA Region 4, which includes the eight Southeast zone states. He said the discussion at the second roundtable was centered on the possibility of an active hurricane season, as well as incorporating issues regarding how the response might be different due to the COVID-19 pandemic. Mr. Czajkowski said while the goals were similar, the topics of discussion were different. He said highlighting the NAIC Disaster Assistance Program was an important part of the discussions that took place.

Mr. Czajkowski said the roundtables also highlighted best practices that some of the state DOIs have put into place during a catastrophic event. These discussions helped other states, as well as FEMA, learn from each other. He said part of the goal was to make sure the states understand FEMA’s response at both the regional and federal level and what the touchpoints are for the states. The roundtable focused on the before, during and after aspects of a catastrophic event.

Mr. Czajkowski said part of the purpose of these events was to begin laying or expanding the relationship between FEMA and the states. He said many of these states have already established a relationship with FEMA. He said the states and FEMA were both able to share resources available. He said the states and FEMA also found some areas to collaborate on in the future.

Mr. Czajkowski said some of the topics discussed are geared toward: 1) how the NFIP and the private marketplace can work together moving forward; and 2) how FEMA and the NAIC can collaborate on messaging around flood insurance and mitigation. He said, from a research perspective, the roundtable highlighted some academic outreach; for example, the University of Iowa and its Iowa Flood Center was introduced to the state insurance regulators.

Mr. Czajkowski said a memorandum of agreement with schema has been formulated that allows for future partnership building to take place at the regional level as state DOIs and FEMA see fit. He said FEMA Region 4 states and FEMA were interested in forming a disaster resiliency working group within that region. This allows the states and FEMA to collaborate on resiliency moving forward. Mr. Czajkowski said the next roundtable will be held with FEMA Region 8, Region 9 and Region 10 and will focus on wildfire and earthquake.

Mr. Czajkowski said that in early 2021, he will begin to work on some long-term planning around mitigation funding.
3. **Discussed Hurricane Response During This Year’s Hurricane Season**

Commissioner Chaney said this year has been a highly active hurricane season; as a matter of fact, 2020 now officially has had the most named storms on record. This hurricane season brings twice the usual number of storms. Five of these storms have become named hurricanes as of Nov. 15. Iota became the 30th named storm and made landfall in Central America. This storm is extremely dangerous.

Commissioner Chaney said many residents in the Gulf states have suffered considerable losses this year. He said the Working Group will hear from Alabama, Louisiana and Mississippi about their experiences this year. Commissioner Chaney said he realizes other states have also experienced devastation from hurricanes this year and asked them to speak up and add their experiences during these discussions.

Commissioner Chaney said the Working Group also realizes there have been many devastating wildfire events across the U.S. and would like to meet a month following the Fall National Meeting to discuss this peril.

a. **Alabama**

Mr. Powell said this was a busy year for Alabama as far as the hurricane season was concerned. He said Alabama is fairly well prepared for hurricanes, and the industry responded well to the multiple storms that occurred. Mr. Powell said the storms took different tracks as they came through Alabama, so the damage was spread throughout the state, although there were some areas where damage was overlapping. He said the areas where the damage overlaps between more than one storm caused more issues than other areas.

Mr. Powell said Hurricane Sally caused a lot of flooding and flood damage. He said the second storm to hit was Hurricane Zeta, which was a fast-moving hurricane that caused widespread wind damage.

Mr. Powell said Alabama used the NAIC for data collection following the storms. He said this was the first year they used NAIC services, and they were happy with the assistance they have received.

Mr. Powell said one of the challenges faced in Alabama is the multiple deductible issue they are faced with due to multiple storms. He said Alabama does not have a mechanism in place to address the multiple deductible issue. Mr. Powell said multiple deductible issues were seen in the areas where storm paths overlapped, and storm damage occurred from multiple storms that occurred in fairly quick succession. He said Alabama does not have a mechanism in place for handling multiple deductibles, such as a seasonal deductible, or something of that nature, which caused some issues for some policyholders.

Mr. Powell asked for other states to share suggestions or ideas regarding what mechanisms states might have in place.

Mr. Bradner said Florida and Rhode Island have legislation in place that addresses how multiple named storms can be addressed so that the consumer is not affected as greatly.

Ms. Vollucci said Rhode Island has a requirement that hurricane deductibles are only allowed to be charged once in full per each policy term. She said for damages other than hurricane, policyholders are charged their regular deductible.

b. **Louisiana**

Commissioner Donelon said that in 2009, Louisiana experienced two hurricanes, Gustaf and Ike, within a three-week period.

He said that in 2008, Louisiana had reached out to Florida and used the legislation they had passed in the aftermath of four storms they experienced in 2004. He said the legislation in Louisiana applies a single hurricane named storm and wind/hail deductible per hurricane season. He said if a policyholder does not exhaust the named storm deductible with the first event, the remainder carries over to the second hurricane event. He said once the hurricane deductible is met, the all-perils policy deductible kicks in.

Commissioner Donelon said this year, there are a couple of insurers that have announced they will waive any deductible for the second hurricane event for damage occurring from Hurricane Delta.
Commissioner Chaney asked if the deductible accumulation applies to roofs. Commissioner Donelon said it applies to any damage.

Mr. Byrd said Louisiana gets claim reporting from FEMA on a regular basis for the three hurricanes that have caused flood events this year.

c. Mississippi

Mr. Case said Mississippi was also affected by Hurricane Zeta. He said Mississippi experienced more wind damage than what was expected. Mr. Case said Mississippi had a forecast surge of 9 feet in some areas, and the forecast was accurate. He said the surge exceeded 11 feet in some areas.

Mr. Case said Mississippi staff members traveled 60 miles of coastline after the storm, and virtually no property was untouched. He said much of the damage was not considered major, and there were many claims filed below the policyholder’s deductible.

Mr. Case said there are roughly 18,000 claims reported to date, and 60% of those claims have been closed without payment. He said through Nov. 6, there has been roughly $14 million paid in residential losses; however, this is only on roughly 25% of the reported claims being closed to date.

Mr. Case said that the personal auto claims reported were 80% less than the property claims, yet the paid loss on auto is nearly half of the paid losses on the property claims.

Mr. Case said there are less than 300 claims reported on commercial losses. He said the number of claims closed is probably a 2:1 ratio of those claims that are closed. The current commercial losses paid are currently less than $500,000. However, less than 50% of those claims have closed to date.

Mr. Case said the insurance response has been robust, and they are currently seeing some price gouging. He said there are some out-of-state roofers and out-of-state tree services charging for unnecessary equipment. Mr. Case said there are some contractors out of Florida that are attempting to obtain assignment of benefits, which are not recognized in Mississippi, so they are working closely with the attorney general’s office for some assistance on those issues.

Mr. Case said the insurance department is currently dealing with a number of inquiries and concerns regarding the named storm deductibles. He said some consumers are not quite understanding these deductibles when they purchase the policy, as well as not understanding that by Mississippi statute, they are able to buy down the deductible. Mr. Case said the insurance department is providing a lot of education and coaching on this issue.

Mr. Case said Mississippi had a number of wind pool policies that were underinsured. He said the wind pool worked with policyholders previously to make sure they were paid at a replacement cost level. Mr. Case said Mississippi made some statutory changes to allow the wind pool to make sure policyholders are insured for at least 100% to replacement cost value. He said the idea behind this was that they did not want a storm coming through that resulted in a bunch of actual cash value (ACV) policies.

Mr. Smith asked if someone from Louisiana would discuss suspension of cancellation of a policy during the time an emergency rule is in effect due to a hurricane.

Mr. Byrd said Emergency Rule 45 deals with Hurricane Laura and stated that from the day the emergency rule was issued, if a cancellation had not gone into effect, then the insurer had to remain on the risk during the emergency rule. He said once the emergency rule lifts, an insurer can reissue a nonrenewal or cancellation. Policyholders are still obligated to pay their premium. However, policyholders should pay their premium during the emergency rule if they are able to because the premium will come due.

Commissioner Chaney said it might be worthwhile to collect information on the practices of the various DOIs during the hurricane season.

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded April 8, 2021. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair (CA); George Bradner (CT); Shirley Corbin (MD); LeAnn Cox (MO); Erin Summers (NV); Michael McKenney (PA); Matt Gendron (RI); Kathy Stajduhar (UT); and David Forte (WA).

1. **Adopted its March 26 Minutes**

The Working Group conducted an e-vote to consider adoption of its March 26 minutes (Attachment Three-A). The motion passed with a majority of the Working Group members voting in favor of adopting the minutes.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 26, 2021. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Katie Hegland (AK); Kristin Fabian and George Bradner (CT); Angela King (DC); Warren Byrd (LA); Rasheda Chairs, Shirley Corbin, and Linas Glemza (MD); Carrie Couch, LeAnn Cox and Jeana Thomas (MO); Erin Summers (NV); Michael McKenney (PA); Elizabeth Kelleher Dwyer and Matt Gendron (RI); Anna Van Fleet (VT); and David Forte and Eric Slavich (WA). Also participating were: Elizabeth Perri (AS); Heather Droge and Brenda Johnson (KS); Tracy Burns (NE); Maggie Dell (SD); and Jody Ullman (WI).

1. **Adopted its March 4 Minutes**

The Working Group met March 4 to discuss Section 3D of the draft Pet Insurance Model Act.

Mr. Byrd made a motion, seconded by Mr. Gendron, to adopt the Working Group’s March 4 minutes (Attachment Three-A1). The motion passed unanimously.

2. **Discussed Section 7A and Section 7B of the Draft Pet Insurance Model Act**

Mr. Beatty said the Working Group had received proposed language from the North American Pet Health Insurance Association (NAPHIA) and the American Veterinary Medical Association (AVMA) to be added on to the current language in Section 7A. That language reads: “The insurer has the burden of proving the preexisting condition exclusion applies to the condition for which the claim is being made.” Mr. Gendron said the language was pro-consumer and that it made sense for the insurer to have the burden of proving the exclusion. Mr. Forte agreed and said the language would help avoid confusion. Birny Birnbaum (Center for Economic Justice—CEJ) said the language is good for the consumer, but it is unclear why the language is necessary because it should be given that the insurer would have to prove why the claim is being denied. Mr. Byrd said this language makes it clear that the insurer has the burden. Isham Jones (AVMA) said it is important to have clarity about who has the burden of proof and said that language does not exist anywhere else in the model. Kate Jensen (NAPHIA) said the current standard practice is that the insurer has the burden of proof, and this language reiterates that and provides comfortability to all stakeholders.

Mr. Birnbaum said the language in Section 7A is confusing and repetitive. He said Section 7 should include standards for what constitutes a legitimate preexisting condition provision. He suggested using language such as: “Any policy provision or disclosure for preexisting may not be obscure, misleading, deceptive or unfair.” Ms. Jensen said the standard is reflected in the definition of “preexisting condition” found in Section 3. She said there would not be a problem including language that disclosures cannot be unfair, deceptive or misleading, but those rules already exist in the unfair trade practices statutes. Lisa Brown (American Property Casualty Insurance Association—APCIA) said that pet insurance is a property/casualty (P/C) insurance product and that the model should avoid terms and considerations for the product that would be more appropriate for health insurance.

Mr. Forte made a motion, seconded by Mr. McKenney, to adopt the additional language for Section 7A as submitted by NAPHIA and the AVMA. The motion passed unanimously.

Mr. McKenney said the wording in Section 7B does not clearly state that it is referring to premium related to excluded coverage. He said he is not comfortable with the language as written. Mr. Gendron said he understands the concern, from an actuarial standpoint, of offering coverage without a cost. Mr. McKenney asked if industry would be concerned that the language reads as though a premium cannot be charged at all during a waiting period. Mr. Birnbaum said it is difficult to understand the concept of selling a product in which you must wait 30 days for coverage.

Ms. Jensen said as currently written, Section 7B: 1) would not allow insurers to have both waiting periods and preexisting condition exclusions; 2) has a 30-day limit on waiting periods; and 3) has a component that does not allow for premium to be charged during the waiting period. She said from NAPHIA’s perspective, these issues are problematic and will drive up the cost of pet insurance products. She said NAPHIA recommends striking the language in 7B and replacing it with language that
Discussed Policy Renewals as They Relate to the Draft Pet Insurance Model Act

Mr. McKenney proposed additional language to Section 3 to clarify how preexisting conditions are treated in renewal policies. He suggested adding to Section 3E—Pre-Existing Condition: “A condition for which coverage is afforded on a policy cannot be considered a preexisting condition on any renewal of the policy” and adding to Section 3H—Waiting Period: “A condition for which coverage is afforded on a policy cannot be excluded within a waiting period on any renewal of the policy.” He also suggested adding a new definition as Section 3I—Renewal that reads: “means to issue and deliver at the end of an insurance policy period a policy which supersedes a policy previously issued and delivered by the same insurer or affiliated insurer and there have been no consumer complaints around waiting periods. Mr. McKenney made a motion, seconded by Mr. Forte to adopt the proposed language for Section 3E—Pre-Existing Condition, Section 3H—Waiting Period and Section 3I—Renewal. The motion passed unanimously.

4. Discussed Unresolved Issues Within the Draft Pet Insurance Model Act

Mr. Beatty said there was discussion of inserting language in Section 3 that definitions should be substantially similar but not less favorable to those in the model. Ms. Brown said APCIA members think that their current policy definitions line up...
substantively with the definitions in the model and that they should not have to rewrite and refile their policies. She said she thinks the idea of using substantially similar language lines up with other NAIC models. Brendan Bridgeland (Center for Insurance Research—CIR) said there should be a standard as to what is substantially similar.

Mr. Beatty said there was discussion about expanding the definition of “chronic condition.” Mr. Forte said he had an issue with the word “chronic.” He said it is being used to mean incurable and asked if the AVMA had a perspective on the use of the word “chronic.” Dr. Gail Golab (AVMA) said they are comfortable with the use of the word “chronic” in the definitions. She said the current definition is applicable to most cases she has come across.

5. **Discussed Other Matters Affecting the Working Group**

Superintendent Dwyer said there are companies marketing wellness plans as non-insurance products that cover things that would normally be considered part of an insurance policy, such as wellness visits and spaying and neutering. She said the way they are marketed could be misleading to consumers. She said the Working Group should consider addressing this in the model.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 4, 2021. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Katie Hegland (AK); Kristin Fabian and George Bradner (CT); Warren Byrd (LA); Rasheda Chairs and Shirley Corbin (MD); LeAnn Cox and Kendra Hetland (MO); Erin Summers (NV); Mike McKenney (PA); Elizabeth Kelleher Dwyer and Matt Gendron (RI); Kathy Stajduhar (UT); Jamie Gile and Anna Van Fleet (VT); and David Forte, John Haworth and Eric Slavich (WA). Also participating were: Ken Williamson (AL); Vincent Gosz (AZ); Heather Droge and Brenda Johnson (KS); Chris Aufenthie (ND); Maggie Dell (SD); and Jody Ullman (WI).

1. **Adopted its Feb. 18 Minutes**

The Working Group met Feb. 18 to discuss Section 7 and Section 8 of the proposed Pet Insurance Model Act.

Mr. Byrd made a motion, seconded by Mr. Bradner, to adopt the Working Group’s Feb. 18 minutes (Attachment Three-A1a). The motion passed unanimously.

2. **Discussed Section 3D of the Draft Pet Insurance Model Act**

Mr. Beatty said the North American Pet Health Insurance Association (NAPHIA) and the American Veterinary Medical Association (AVMA) submitted language for the definition of “pre-existing condition” that was agreeable to both parties. Kate Jensen (NAPHIA) said the new language addresses questions about technical terms that came up on prior Working Group calls, and the new language also tightens the definition of what could be considered a pre-existing condition. She said the new definition inserts a clause about verifiable sources that allows sources beyond the pet’s medical record to be used to verify a pre-existing condition. She said the new definition includes the word “directly” inserted before “related to the condition” because the connection between the reported signs and symptoms and the condition for which the claim is being filed needs to be discernable. She said NAPHIA and the AVMA also submitted language related to pre-existing conditions to be used in Section 7A of the Pet Insurance Model Act that the burden is on the insurance company to prove that a pre-existing condition exclusion would apply. Isham Jones (AVMA) said the new proposed language better protects pet health, and the AVMA stands behind the language as submitted.

Mr. Forte said Washington is favorable to the new language. He asked for an example of a verifiable source of a symptom that would be directly related to a condition, and he asked why the term “symptoms” was included. Ms. Jensen said an example would be records from a shelter where a pet was adopted or information provided by the pet owner at the time of application for insurance. She said insurers could also use social media as a verifiable source of information relating to the pre-existing condition. Ms. Jensen said the term “symptoms” was included because it is consumer friendly and has been working in current California law. Mr. Gendron said the new language solves the problem of using the term “clinical signs” and the issues that would come up with having to define that term. He said the widely used definition of “symptom” makes sense in the context of this model.

Mr. Byrd asked whether there needs to be a temporal aspect to the three parts of the proposed definition to make it clear that previous veterinary advice does not preclude coverage for a current pet health condition. Dr. Jules Benson (NAPHIA) said the insertion of the term “directly related to” in the third part of the definition solves that problem. Mr. Byrd asked if there should be a temporal aspect in parts one and two of the definition. Dr. Benson said those parts of the definition deal directly with the advice and treatment of the stated condition, so there would not be a temporal issue with those parts.

Mr. Gendron asked whether a dog spraining a ligament three years ago and then spraining it again years later would be considered a pre-existing condition by the treating veterinarian. Dr. Gail Golab (AVMA) said re-injuring something that was already injured would be considered a pre-existing condition. Dr. Benson agreed that in this specific case, that injury would not fully heal, and a re-injury would be directly related to the previous injury. Mr. Gendron asked if the same logic would apply to a broken bone. Dr. Benson said if the bone broke in a different location and the break is not due to a weakness in the bone caused by the previous break, it would not be considered directly related to a pre-existing condition. Dr. Golab said the insertion of the “directly related to” language helps all parties understand that a clinical sign, even if presented exactly the same as in a...
past condition, cannot be used to justify a pre-existing condition if it is not directly related to the current condition for which treatment is being sought.

Ms. Salat-Kolm asked if pet insurers are currently using social media as a verifiable source for claims information. Dr. Benson said 99% of the time, information will come from the medical record. He said social media may be used in a case where a consumer reports an injury or illness close to the start of the policy to verify that the dog was healthy before the start of the policy. Mr. Bradner said insurers are already using social media to verify claims in other lines of business, like workers’ compensation. He said insurers would most likely use social media if there were suspicion of fraud.

Ms. Fabian asked how insurers would be provided with the language and the intent of the specific language being used within the model. Mr. Gendron said after the model is adopted by each state, there will sometimes be a model bulletin that can help clarify some of the language. Ms. Jensen said when the model is taken up by state legislation, there is an opportunity for the industry to participate in legislative hearings. She said NAPHIA represents 95% of pet insurance products, and a part of its mission for its members is education on regulatory issues.

Mr. Forte asked if an injury in a previous coverage period would be considered pre-existing in the renewal period. Dr. Benson said all policies on the market today include language that any subsequent policy period is a continuation of the first policy, and new pre-existing conditions do not apply to the language found in the first policy. He said there have been some policy types that state that each coverage term, the policy will start over as a new policy. He said this varies by product, and the same company can have different products that treat the renewal term differently in order to offer different policy price points. Mr. McKenney said if a pre-existing condition gets reset at a policy renewal, there should be language stating that in the disclosures. He asked if industry’s intent with the disclosures was to have them apply to both new and renewal policies. Ms. Jensen said NAPHIA would have no problem with more frequent disclosures if they include meaningful and helpful information to consumers. Mr. McKenney said a renewal policy not offering continuous coverage would violate the definition of renewal in Pennsylvania, and that type of policy would not be consumer friendly.

Ms. Dell asked if current policy language would allow for renewal of the policy if a veterinarian recommended euthanasia and whether the condition would then be treated as a pre-existing condition. Dr. Benson said to his knowledge, the recommendation of euthanasia would not change any of the coverage as it exists in the policy.

Brendan Bridgeland (Center for Insurance Research—CIR) said the term “verifiable sources” gives some cause for concern. He said if a condition is listed in a shelter record but the consumer was not aware of that condition prior to adopting the pet and applying for pet insurance, that shelter record could still be used against the applicant. He said while he understands the use of social media to prevent fraud in claims, there could be false information posted to social media that could be used as verifiable information. He suggested adding a drafting note to provide examples of verifiable sources. Mr. Beatty asked Mr. Bridgeland to submit language for the drafting note to the Working Group.

Mr. Gendron made a motion, seconded by Mr. Byrd, to adopt the proposed definition of pre-existing condition that reads:

“Pre-existing condition” means any condition for which any of the following are true prior to the effective date of a pet insurance policy or during any waiting period:

i. A veterinarian provided medical advice.
ii. The pet received previous treatment.
iii. Based on information from verifiable sources, the pet had signs or symptoms directly related to the condition for which a claim is being made.

The motion passed unanimously.

The Working Group agreed to look further into the issue of how renewal policies are treated and whether language requiring the treatment of renewal policies should be added to the draft model on a future call.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group met Feb. 18, 2021. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Katie Hegland (AK); Kristin Fabian and George Bradner (CT); Angela King (DC); Warren Byrd (LA); Sheri Cullen (MA); Rasheda Chairs, Shirley Corbin and Linas Glemza (MD); Carrie Couch, LeAnn Cox and Jeana Thomas (MO); Mike McKenney (PA); Matt Gendron (RI); Kathy Stajduhar (UT); Anna Van Fleet (VT) and David Forte, John Haworth and Eric Slavich (WA). Also participating were: Ken Williamson (AL); Michele MacKenzie (ID); Heather Droge and Brenda Johnson (KS); Daniel Lawson (ME); Chris Aufenthie (ND); and Jody Ullman (WI).

1. Discussed Section 7 and Section 8 of the Draft Pet Insurance Model Act

Mr. Beatty asked a representative from the American Veterinary Medical Association (AVMA) to speak to its submitted comments regarding the definition of “preexisting condition” as they related to Section 7. Dr. Gail Golab (AVMA) said the AVMA is pleased with the use of “contemporaneous” in the definition of “preexisting condition,” but he said the AVMA would like to see “and contemporaneous” used instead of the current “or contemporaneous.” She said the reason for the requested change is to make sure that “related” and “contemporaneous” were congruent. Dr. Golab said the AVMA believes that both conditions need to be present in order for the clinical signs to be appropriately associated with a particular animal’s condition. Mr. Beatty asked for the AVMA’s thoughts on the proposed definition from the North American Pet Health Association (NAPHIA). Dr. Golab said the AVMA continues to believe that “contemporaneous” is appropriate. She said the AVMA understands NAPHIA’s concern about the use of the term “clinical signs.” However, she said there is a concern that an animal could exhibit a clinical sign that may be related to multiple conditions during the animal’s lifetime and coverage should not be denied because an animal exhibits the same clinical sign for different conditions at different periods. Kate Jensen (NAPHIA) said the signs of some conditions do wax and wane, so the use of “contemporaneous” is not appropriate because it is not an accurate indicator of what may be going on with a pet at any given time. Mr. Beatty asked if the average consumer would understand a claim denial based on the “contemporaneous” language. Ms. Jensen said “contemporaneous” is not common terminology for the consumer. She said California has not had a problem administering its pet insurance law and its definition of “preexisting condition,” which does not include “contemporaneous.” She said the California law seems to be working well for both the California Department of Insurance (DOI) and consumers.

Mr. Gendron asked if it is possible to remove the word “clinical” from the “preexisting condition” definition. Dr. Golab said the previous discussion of the inclusion of “clinical sign” was related to the difference between a clinical sign and a symptom. She said symptoms are self-reported and do not exist in the world of veterinary medicine. She said the use of “clinical sign” allows for observation by both the owner and in a veterinarian’s exam room. She said the proposed AVMA definition is more supportive of both the consumer and the veterinarian because it reduces the number of claims that should potentially be denied. Ms. Jensen said NAPHIA is willing to withdraw its proposed definition of “clinical signs” in order to eliminate confusion on the part of the consumer. She said NAPHIA members have not had a difficult time administering the current California language that reads “signs or symptoms.” Brendan Bridgeland (Center for Insurance Research—CIR) said from a consumer perspective, the term “clinical” is problematic as it could be read to mean that it has been diagnosed by a professional.

Ms. King said from a consumer perspective, the meaning of “signs and symptoms” needs to be clear in order to understand what would be covered in a claim.

Mr. Byrd asked if a veterinarian gave advice on how to keep a dog healthy, and later on the dog developed an issue related to something the veterinarian previously discussed with the consumer, would the claim for treatment be denied. Jules Benson (NAPHIA) said the burden of proof is on the insurer to say that there is a connection to anything that happened before the policy and what is happening with the pet during the policy. He said with respect to Mr. Byrd’s example, an insurer would not be able to deny that claim.

Mr. Benson said this line of insurance is extremely open to adverse selection. He said people can buy pet insurance, knowing something is wrong with their pet but not having been to the veterinarian. Once the policy is in force, he said the consumer could report that his or her pet had had a certain clinical sign for some time. He said that the observations by pet owners and clinicians is used to build the clinical picture of the pet’s health. Mr. Benson said pet insurers have veterinarians on staff to
analyze medical records in order to prove beyond a doubt that a clinical sign is part of a preexisting condition. Mr. Byrd asked where the line is between clinical advice and diagnosis. Mr. Benson said advice about preventative care is not a clinical diagnosis.

Mr. Bradner said it is important to include language that prevents a situation where clinical signs that presented a year ago are not wrongly connected to clinical signs or a diagnosis in the future. He said he thinks “contemporaneous” or language with the same meaning should be included in the definition. Mr. McKenney and Ms. Van Fleet agreed that the definition should guard against the situation described by Mr. Bradner and others. Mr. Forte said the definition could include a statement that it is the burden of the insurer to prove the preexisting condition.

Mr. Beatty said NAPHIA and the AVMA will work together to come up with a compromise on the definition of “preexisting condition” to the Working Group.

Ms. Jensen said for Section 7B, NAPHIA has surveyed its members and found virtually no consumer issues with waiting periods. She said to keep the model from becoming too prescriptive, it would be better to rely on the disclosure requirements for waiting periods found in Section 4 of the model and allow for flexibility with policy structure within Section 7B.

Mr. Byrd asked if the language in Section 7B allows a company to employ a 30-day waiting period but choose to offer coverage during that period. Ms. Jensen said NAPHIA would like to allow for flexibility in the length of a waiting period. She said different companies and policies currently employ their waiting periods differently based on condition. She said waiting periods tend to be longer for conditions that take longer to manifest in pets—for example, joint issues. She said flexibility already exists in the marketplace, and consumers seem to like that. Mr. Byrd asked if a mandated waiting period would do away with the preexisting condition clause. Ms. Jensen said the waiting period and preexisting condition clause should work in tandem and are used to be fair to consumers with a healthy pet. She said NAPHIA is trying to eliminate the opportunity for someone with a very sick pet to get coverage after they know the pet is sick and, in turn, drive up the cost of policies for everyone. Ms. Fabian asked if an accident occurred during the waiting period that resulted in an injury, would that injury be covered. Mr. Benson said it would not be covered. Mr. Gendron said there should be a better balance in the allowable waiting period time and that disclosures would not be a reasonable alternative if enough consumers were not thoroughly reading their policies. Mr. Byrd asked if a pre-policy veterinary examination of the pet could get rid of a waiting period. Mr. Benson said that while some companies have implemented an examination requirement to waive the waiting period, it could be a barrier to adoption because of the time and cost to the consumer for the exam.

Mr. Beatty said the Working Group had previous discussions on the language in Section 8 with regard to reimbursement of covered expenses. Mr. Byrd and Ms. Jensen said the reimbursement requirements and notices are appropriately covered in Section 4C and Section 4D.

Mr. McKenney made a motion, seconded by Mr. Gendron to remove Section 8 from the model. The motion passed unanimously.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met March 15, 2021. The following Working Group members participated: Joy Hatchette, Chair, and Jimmy Gunn (AL); Ken Allen (CA); Bobbie Baca (CO); George Bradner (CT); Angela King (DC); Robert Rapp (IL); Heather Droge, Tate Flott and Brenda Johnson (KS); Ron Henderson (LA); Daniel Bryden (MN); Carrie Couch, Kendra Hetland, Jo LeDuc and Jeana Thomas (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Cuc Nguyen (OK); Brett Bache (RI); David Combs, Jennifer Ramcharan and Vickie Trice (TN); Marianne Baker, Laura Machado and Mark Worman (TX); and Dena Wildman (WV). Also participating were: Kate Kixmiller (IN); Renee Campbell (MI); Jana Jarrett (OH); Tracy Klausmeier (UT); Katie Humphrey (VT); Josh Culley and Manabu Mizushima (WA); Diane Dambach and Darcy Paskey (WI); and Tana Howard (WY).

1. **Adopted its Feb. 4, 2021, and Nov. 17, 2020, Minutes**

The Working Group met Feb. 4, 2021, and Nov. 17, 2020, to discuss the need for consumer disclosures regarding significant premium increases on property/casualty (P/C) insurance products.

The Working Group also conducted an e-vote that concluded Nov. 23, 2020, to adopt its Oct. 29, Oct. 13 and Sept. 21, 2020, minutes (see NAIC Proceedings – Fall 2020, Property and Casualty Insurance (C) Committee, Attachment Five).

Ms. Droge made a motion, seconded by Ms. Couch to adopt the Working Group’s Feb. 4, 2021 (Attachment Four-A) and Nov. 17, 2020 (Attachment Four-B) minutes. The motion passed.

2. **Discussed a Work Plan for Drafting a Best Practices Document Regarding Premium Increases**

Ms. Hatchette said the Working Group has previously discussed breaking into drafting groups to draft a best practices document regarding premium increases. Ms. Hatchette said several people have signed up for the various drafting groups; however, people can still be added to the drafting groups. She said there will be a lead regulator on each drafting group.

Ms. Hatchette said the drafting groups can collaborate with each other as necessary. She said it is important for policyholders to better understand premium increases. She said the Working Group had decided to split the drafting of the best practices document into five drafting groups.

a. **Drafting Group #1: Communication of a Premium Increase**

Ms. Hatchette said the task of the first drafting group would be to draft information regarding the communication of premium increase to policyholders. This section would cover the way insurers communicate with their policyholders regarding premium increases, whether it be social media, verbal communications, etc.

Ms. Hatchette said she hears consumers say they are unhappy because their insurer has not provided them with enough information regarding their premium increases. She said this drafting group will need to determine the best way for insurers to communicate, as well as how to communicate with policyholders. Ms. Hatchette said she believes this drafting group will need to focus on what industry is currently doing and what is working and what is not working.

b. **Drafting Group #2: Threshold for Notification of a Premium Increase**

Ms. Hatchette said the second drafting group was tasked with drafting information regarding setting a threshold for notification of premium increase (noting that each state would be able to set their own threshold).

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she understood from the Working Group’s last meeting that the second drafting group would not be setting a threshold, per se, but to discuss and draft information regarding the methodology and logic behind the threshold.
Ms. Hatchette said this is the case, noting that the drafting group will not be recommending any particular threshold. She said she believes the drafting group would focus on considerations that states should think about, because each state may have its own laws and regulations in place already. Ms. Hatchette said this section should include information that would help state insurance regulators to make decisions regarding thresholds if they needed to do so.

Charles Angell (AL – Retired) asked if this would include making a threshold recommendation, as well as pros and cons to the recommendation, even though the Working Group would not be recommending a particular threshold.

Ms. Hatchette said this might be a difficult undertaking unless the drafting group reviewed the laws and regulations of each state. She also expressed concern about the time it would take to review all these laws and regulations.

c. Drafting Group #3: Communication Standards for a Premium Increase

Ms. Hatchette said the third drafting group was tasked with drafting communication standards for providing a premium increase, such as informing the policyholder of the current premium versus the renewal premium, and the explanation for the change, if any. She said the information would be what is actually being communicated, whether it be a dollar amount or a percentage.

Birny Birnbaum (Center for Economic Justice—CEJ) said he believes it will be more efficient to carry out the Working Group’s charge by combining drafting groups #1, #2 and #3. He said drafting group #3 would need to understand what they are trying to communicate before putting a mechanism into place. Mr. Birnbaum said it would also be important to know what threshold is before knowing what the drafting group wants to communicate. He said he believes all three of the items in drafting groups #1, #2 and #3 inform each other. Mr. Birnbaum said many Working Group members are members of all three drafting groups.

Mr. Bradner said he likes Mr. Birnbaum’s suggestion. He asked if drafting groups #1, #2 and #3 could be broken down into stages. Mr. Bradner said the first item to be addressed would be to determine the threshold. He said next the drafting group could then address the various communications channels. Mr. Bradner suggested the combined drafting group might first discuss the threshold, then discuss the communications standards, and, finally, discuss the ways to communicate the premium increases.

Mr. Bradner said the drafting of the threshold section should be able to be accomplished in a couple of meetings. He said then the drafting group would move on to discuss the format in which the information is going to be communicated to policyholders. Finally, the drafting group would look at the vehicles for communicating the information, as well as how various age groups might want to receive communication.

Ms. Hatchette, Mr. Allen and Ms. Wildman all said they believe that the drafting group responsible for determining the ways to communicate a premium increase to the policyholders could stand on its own. All agreed that the section for setting a threshold for notification of premium increase and communication standards for providing the premium increase could be combined.

The consensus of the Working Group was to combine drafting groups #1, #2 and #3 into one group. Mr. Bradner will lead this combined drafting group.

d. Drafting Group #4: Rate and Rule Filing Checklist

Ms. Hatchette said the fourth drafting group was tasked with coming up with a rate and rule filing checklist to be used by a state insurance department. She said Kansas has a particular checklist in place that they currently use. Ms. Droge said she would lead this drafting group.

e. Drafting Group #5: Consumer Education About Premium Increases

Ms. Hatchette said the final drafting group was tasked with providing consumer education about premium increases. She said this portion of the document would be the section that informs consumers in general regarding what they need to know about premium increases. Ms. Hatchette said this section would also inform consumers of things they could do to mitigate a premium increase.
Mr. Angell asked if this section would include education regarding premium capping. He said this is one of the more confusing aspects of explaining premium increases.

Ms. Hatchette said it is important to try to explain this concept. The Working Group agreed that this topic should be covered in the consumer education section.

Ms. Hatchette said it is important to think about how the consumer understands the premium increase documents they receive. Ms. Shortt will chair this drafting group.

Ms. Hatchette asked the drafting groups to meet within the next couple of weeks to set up organizational calls for each of the drafting groups. NAIC staff will find available dates for the drafting groups to meet and set up the meetings.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met Feb. 4, 2021. The following Working Group members participated: Joy Hatchette, Chair (MD); Ken Allen (CA); Robert Rapp (IL); Carrie Couch and LeAnn Cox (MO); Chris Aufenthie (ND); Tricia Goldsmith (OR); and J'ne Byckovski (TX). Also participating were: Renee Campbell (MI); Tracy Klausmeier (UT); and Donna Stewart (WY).

1. **Discussed the Need for Consumer Disclosures Regarding Significant Premium Increases on P/C Insurance Products**

Ms. Hatchette said the purpose of the call is to decide on a work plan to draft a best practices document about consumer disclosures for significant premium increases on property/casualty (P/C) insurance products. She said the best practices document should address the content, the method of delivery, the threshold for disclosure, and the respective roles of state insurance regulators and insurers. The Working Group has held discussions over the past few months about ideas that it believes the best practices document should include. Ms. Hatchette said these ideas include ways to communicate a premium increase to policyholders and ideas regarding what thresholds will trigger the notification of premium increases to those policyholders. The Working Group needs to be sure that there is an understanding regarding a state requiring particular thresholds based on its own rules and regulations.

Ms. Hatchette said the Working Group additionally discussed communication standards for providing premium increases to policyholders. She said the Working Group discussed the items that need to be communicated to policyholders, as well as when this information should be provided to the policyholder. The Working Group has also discussed the type of explanation policyholders should receive. Ms. Hatchette said during the Working Group’s discussions, rate and rule filing checklists were also discussed. She said the Working Group believes these should also be included in the best practices document.

Ms. Hatchette said the Working Group also concluded that it would be a good idea to include some basic education for consumers regarding what constitutes a premium increase, as many people do not understand premium increases. This type of information would include a basis for understanding why a policyholder’s premium is increasing and the factors that go into a premium increase. These items provide some baseline information regarding a premium increase.

The Working Group decided that it would be most efficient to break into multiple drafting groups to begin drafting the document. Each drafting group will be assigned a section to draft. Once each section has been drafted, the Working Group will discuss the sections at the Working Group level.

The Working Group agreed to separate the best practices document into five drafting groups. These drafting groups include groups to discuss the following topics: 1) ways to communicate a premium increase to policyholders; 2) setting a threshold for the notification of premium increases, noting that each state would be able to set their own thresholds; 3) communication standards for providing premium increases, such as informing the policyholder of the current premium versus the renewal premium and the explanation for that change; 4) rate and rule filing checklists to be used by each state department of insurance (DOI); and 5) consumer education about premium increases.

Ms. Hatchette said examples for ways to communicate a premium increase to policyholders would include items such as: 1) whether communication increase to a policyholder should be a notice; 2) if so, when and how that notice should be sent; 3) whether the notice should be sent at the time of renewal or in advance of renewal; and 4) whether the notice should be sent electronically.

NAIC staff will send out a list of the various drafting groups to Working Group members, interested state insurance regulators, and interested parties. Once the list of volunteers is compiled, meetings among the drafting groups will begin.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met Nov. 17, 2020. The following Working Group members participated: Joy Hatchette, Chair (MD); Willard Smith (AL); Ken Allen (CA); Tracy Garceau (CO); George Bradner (CT); Heather Droge and Brenda Johnson (KS); Tricia Goldsmith (OR); Vickie Trice (TN); and Marianne Baker, David Dolduc and Laura Machado (TX). Also participating were: Renee Campbell (MI); Chanell McDevitt (NJ); and Jana Jarrett (OH).

1. Discussed the Need for Consumer Disclosures Regarding Significant Premium Increases on P/C Insurance Products

Ms. Hatchette said the Working Group would discuss the “Rate/Ruling Checklist” that Kansas has in place. Ms. Droge said the “Rate/Ruling Checklist” is part of Kansas’ general instructions it requires insurers to complete with all of its rate and rule filings. She said if the insurer does not return a completed checklist, then Kansas will reject the filing.

Ms. Droge said the purpose of the checklist is to allow Kansas to capture the information it needs to complete the extraordinary memorandum it provides, as well as to help speed to market. She said the checklist allows Kansas to have everything it needs upfront to be more efficient.

Ms. Droge said the first item requested on the checklist reads: “All rate information must be completed on the rate/rule tab without capping.” She said sometimes insurers may not provide information regarding the maximum or minimum rate increase. This requires the state to go back to the insurer to ask for this information, which slows down the review or creates another objection that they feel is unnecessary.

Ms. Droge said the second item requested on the checklist reads: “All proposed rate/rule manual pages must be submitted under the rate/rule schedule tab for approval.” She said Kansas requires all the rate and rule manual pages to be submitted. Ms. Droge said Kansas asks for any changes being made to be submitted.

The third item requested on the checklist reads: “Complete rate/rule manual tab with all proposed changes must be submitted under supporting documents tab as this will be marked informational only. A complete manual should consist of all corresponding rules for your optional forms, all rules corresponding to your rating factors, all rating factors, territory definitions and factors, and all proposed changes to rules and rates.” She said this information is important to Kansas because it does a manual comparison to be sure it can capture changes from a previous rate file to the file it is currently reviewing. If this is not received, the filing is rejected.

The fourth item on the checklist reads: “Provide a histogram on an uncapped basis. (If the file contains more than one company, please provide a separate histogram for each company).” Ms. Droge said this allows Kansas to see how many policyholders are getting the maximum increase and how many policyholders are getting the minimum increase. This information helps Kansas to write its extraordinary memorandum, as well as to provide information regarding the percentage of policyholders affected by the maximum rate increases. She said this allows Kansas to go back to the insurer and ask if there is a cap in place.

The fifth item on the checklist reads: “Provide the characteristics of the insured(s) receiving the maximum rate increase. (If the filing contains more than one company, please provide a separate histogram for each company).” Ms. Droge said this is helpful to help the state understand what is going on with the particular policy so it can be explained to consumers if they contact the Department of Insurance (DOI).

The sixth item on the checklist reads: “Provide the average dollar change, the maximum dollar change and minimum dollar change on an uncapped basis. (If the filing contains more than one company, please provide a separate histogram for each company).” Ms. Droge said this is helpful to the DOI, as it may want to ask for a cap.

The seventh item on the checklist reads: “Please provide our department with a talking points sheet that will assist our consumer assistance division should we receive consumer complaints regarding the rate increase. This submission should provide detailed information that we can share with policyholders that will explain what is causing this rate increase.” Ms. Droge said the
insurer provides these talking points to the DOI using their own words, which helps the DOI to provide information to consumers if they receive a consumer complaint. The information received from the insurer is not altered in any way and is put into the memorandum the DOI creates.

The eighth item on the checklist reads: “Please provide us with the breakdown of the permissible loss ratio by coverage including: 1) Taxes, licenses and fees; 2) Total production expense; 3) Underwriting profit; 4) Any other fees that comprise the permissible loss ratio; and 5) Permissible loss ratio.” Ms. Droge said this information is included so the examiners have it in their memorandum to be sure that number is accurate when compared to the loss ratio to make sure the rate increase is justified. She said if the number is not matching up, they can go back to the company and ask for an explanation as to why the rate increase is not justified.

The ninth item on the checklist reads: “Provide all support and justification exhibits for rate change including how you derived your overall indication, all support for proposed factor changes, etc.” Ms. Droge said this information includes how the insurer derives its overall indication and the support for the proposed changes for its factors. She said Kansas has a statute that requires insurers to include this information in their file. Ms. Droge said prior to using this checklist, insurers did not provide much detail. She said the statute allows the filing to be rejected if this information is not provided.

The 10th item on the checklist reads: “Provide the percentage breakdown of the rate impact per line of coverage. (If the filing contains more than one company, please provide a separate histogram for each company.) (**Only required for personal auto rate filings.)” Ms. Droge said this allows the DOI to look at impacts and how bodily injury and uninsured motorist lines are affected.

Ms. Droge said the checklist has allowed the DOI to receive more information from the insurer upfront. She said this allows the DOI to be more efficient. Ms. Droge said the DOI does not have any problems with insurers completing the document.

Mr. Allen asked if the checklist was used in conjunction with any other documentation. He said California created an array of documentation, including an application form, two sets of exhibits, a rate template that follows their regulations and a very large document of instructions on how to complete each of the documents. Mr. Allen said the DOI’s documentation is complex and has many requirements. He said once the filings are in, the DOI has documentation it uses internally to do a check to make sure that the information in the rate template matches with the information submitted in the exhibits and that the information in the exhibits matches the information submitted in the application. Mr. Allen said they are doing a validation of sorts regarding what was submitted to try to catch errors. He said a lot of this validation is automated. Mr. Allen said the DOI does not really have a checklist or anything currently in place that requires insurers to identify rate increases given to policyholders. Ms. Droge said the Kansas DOI uses this information mostly for writing an extraordinary memorandum for its consumer assistance division to use to assist with rate filings for some of the top writers. She said this information is required by statute for the exhibits contained within the System for Electronic Rate and Form Filing (SERFF) filings. Ms. Droge said the checklist used by the DOI asks for information it was having to go back to ask insurers for on a regular basis. She said this checklist has been in place for approximately five years and is used for both personal and commercial lines.

Amy Bach (United Policyholders—UP) asked if there was also a standardized form that an insurance agency puts out to notify consumers of premium increases. Ms. Droge said there is not a standardized form in Kansas. Ms. Bach asked if insurers were required to show the DOI examples of consumer notifications for premium increases. Ms. Droge said this was not required in Kansas.

Ms. Hatchette said one of the Working Group’s 2020 charges was to discuss whether there is a need for consumer disclosures regarding significant premium increases on property/casualty (P/C) insurance products. She said the Working Group will be reporting to the Property and Casualty Insurance (C) Committee during the Fall National Meeting regarding the Working Group’s findings. Ms. Hatchette asked if it was the will of the group to create a best practices document that would provide states some options as to what they might want to do individually to handle communications regarding significant premium increases. She said states would be able to refer to the best practices document and select the option that is the best fit for their state.

Ms. Hatchette said the best practices document would include items such as: 1) ways to communicate a premium increase to policyholders; 2) setting a threshold for notification of premium increase (each state would be able to set their own threshold for notification of a premium increase); 3) communication standards for providing the premium increase, such as informing...
the policyholder of the current premium versus the renewal premium, and the explanation for the change in premium, if any;  
4) rate and rule filing checklists to be used by a state DOI; and 5) consumer education regarding premium increases.

Ms. Droge asked how the Working Group would identify all the consumers who had a premium increase. Mr. Bradner asked it if could be included as a checkbox item as an increase of greater than some amount to a group of consumers the insurer has identified. Ms. Droge said the Kansas DOI only asks for this information for the top writers in the state and asked how this would be done for all writers. Ms. Baker said she thinks the idea was that the insurers will distribute the notices to the policyholders. Ms. Hatchette said the best practices document could provide choices, so a state could distribute the notice if it has the resources and chooses to do so.

Mr. Allen said the Working Group previously discussed capping. He asked if there is a cap in place, would the notice include this information. Mr. Allen suggested adding information regarding capping in the recommendations. He said he will provide language to add to the recommendation to the Working Group.

Ms. Hatchette said the consumer education (CE) portion of the document would be a piece that would explain premium increases to the consumer, as receiving a notice they do not understand is not helpful. She said the Working Group would create language to educate the consumer regarding premium increases.

Ms. Garceau said it would be helpful to have the insurer that is sending the information regarding premium increases provide contact information so the consumer can call the insurer with questions about the premium increase, as well as possible ways to reduce their premium. She said this would help to encourage communication between the policyholder and their insurer. Ms. Garceau said she will send suggested language to add to the recommendations.

Birny Birnbaum (Center for Economic Justice—CEJ) said the recommendation is too complicated and prescriptive for what needs to be done. He said the charge before the Working Group is to discuss whether there is a need for consumer disclosures regarding significant premium increases on P/C insurance products. Mr. Birnbaum said the report needs to consist of two things: 1) yes, the Working Group has determined there is a need for such a disclosure; and 2) the Working Group would like to develop such a disclosure. He said part of that disclosure would consider the content, method of delivery and the threshold for the disclosure. Mr. Birnbaum said all of the items discussed thus far fall into one of those three categories. Steve Clark (Insurance Services Office—ISO) said a body of requirements regarding notification on renewals already exists in many states. He said some of these requirements are by statute, some are in regulations, and some are by bulletin. Mr. Clark said the existing requirements regarding thresholds already exist and are between 10% to 25%. He said the thresholds can be set differently by line of business. Mr. Clark asked if this Working Group would be looking to determine new thresholds. Ms. Hatchette said the purpose of this document would be to provide best practices for a state. She said states would have the ability to use all or none of the suggestions. However, if a state has existing statutory or regulatory guidelines for thresholds, states would either follow the thresholds in place or impose any changes they might feel necessary. Ms. Hatchette said this Working Group will not be making changes to thresholds already in place.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.

Society of Actuaries (SOA) Research Report (Attachment Ten) ................................................................................ 8-57
The Casualty Actuarial and Statistical (C) Task Force met March 9, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Nichole Torbla (LA); Lori K. Wing-Heier represented by Katrina Kelly and Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Evan G. Daniels represented by Vanessa Darrah and Tom Zuppan (AZ); Ricardo Lara represented by Anna Chou, Giovanni Muzzarelli, Mitra Sanandajifar and Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson and Sydney Sloan (CO); Andrew N. Mais represented by Susan Andrews, Wanchin Chou and Qing He (CT); Karima M. Woods represented by David Christhilf, Monica Dyson and Monica Myers (DC); Dana Popish represented by Sandra Severinghaus; Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd and Heather Droge (KS); Kathleen A. Birrane represented by Robert Baron, Ron Coleman and Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by Cynthia Amann, Preston Nilges and LeAnn Cox (MO); Troy Downing represented by Mari Kindberg and Ashley Perez (MT); Mike Causey represented by Arthur Schwartz (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman represented by Kevin Clark, James DiSanto and Michael McKenney (PA); Raymond G. Farmer represented by Michael Wise (SC); Doug Slape represented by Monica Avila, J’ne Byckovski, Brock Childs, Nicole Elliott, Miriam Fisk, Eric Hintikka and Bethany Sims (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); and Jeff Rude represented by Donna Stewart (WY). Also participating was: Tomasz Serbinowski (UT).

1. **Adopted its Feb. 17, 2021; Feb. 9, 2021; Feb. 2, 2021; Dec. 30, 2020; and Nov. 10, 2020, Minutes**

Mr. Vigliaturo said the Task Force met Feb. 17, 2021; Feb. 9, 2021; Feb. 2, 2021; and Dec. 30, 2020. During these meetings, the Task Force adopted statistical reports presented by the Statistical Data (C) Working Group.

The Task Force also met Feb. 16, 2021, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

Mr. Piazza made a motion, seconded by Mr. Botko, to adopt the Task Force’s Feb. 17, 2021 (Attachment One), Feb. 9, 2021 (Attachment Two), Feb. 2, 2021 (Attachment Three), Dec. 30, 2020 (Attachment Four), and Nov. 10, 2020 (see NAIC Proceedings – Fall 2020, Casualty Actuarial and Statistical (C) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Report of the Statistical Data (C) Working Group**

Mr. McGill said all the statistical reports have been approved, posted on the website, and released to the public.

Mr. McGill made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

3. **Discussed the CAS’s Recission of its SoPs**

Mr. Vigliaturo said the Casualty Actuarial Society’s (CAS’s) recission of its collection of Statements of Principles (SoPs) was discussed on the Task Force’s Feb. 9 call. Some members of the Task Force volunteered to draft a letter to the CAS Board of Directors. Mr. Citarella said he, Ms. Krylova, Mr. Schwartz and Mr. McKenney drafted a letter for the Task Force to consider adopting and sending to the CAS. Mr. Citarella briefly described the letter’s content.
Ken Williams (CAS) provided a comparison of the SoPs on Ratemaking and the Actuarial Standards of Practice (ASOPs) (Attachment Five).

Jessica Leong (CAS), president of the CAS, said the CAS is hearing a lot of feedback on the CAS Board’s recission of the SoPs. She said the CAS takes the concerns being expressed and the professionalism of members seriously. She said given feedback to date, the CAS opened a formal comment period until March 15. The CAS Board will consider the feedback.

J. Robert Hunter (Consumer Federation of America—CFA) said he and other consumer groups support the draft letter (Attachment Six). He said there should be a linkage between final rates and cost. He said if the CAS rejects reinstatement of the principles, then he would suggest that the state insurance regulators would need to address the loss of the principles. He also supplied comments on the CAS’s comparison of the SoPs on Ratemaking and the ASOPs (Attachment Seven).

Mr. Stolyarov asked whether recission of the SoPs means the document can no longer be cited or republished. He also asked if the CAS would be amenable to gifting the principles to the public domain. Ms. Leong said she would find out and respond at a later date. Mr. Stolyarov said knowledge, in general, is objective irrespective of whether a specific organization considers it to be true. He said having the knowledge formulated in some way to be accessible to practitioners and those seeking to learn about the discipline would be useful. He said he believes the SoPs were useful in communicating the key areas. He said the principles should remain somewhere, either at the CAS or documented in some other way.

Peter Kochenburger (University of Connecticut School of Law) supported the letter, and he said a missing word might be “transparency” because it helps non-actuaries understand what the rules are. Ralph Blanchard (Travelers) clarified that the principles are not rules. He said “excessive, inadequate and unfairly discriminatory” are defined by each state’s statutes. For example, he said some states only consider rates to be “inadequate” if the rates would cause the insurer to be insolvent.

Mr. Citarella made a motion, seconded by Mr. Botsko, to adopt the attached letter and send it to the CAS (Attachment Eight). The motion passed unanimously.

4. Received a Report on the NAIC Rate Model Reviews

Kris DeFrain (NAIC) said in April 2018, the Executive (EX) Committee agreed with the Big Data (EX) Working Group’s recommendation to direct NAIC management to “conduct research on the appropriate skills and potential number of resources for the organization to help NAIC members in coordinating their reviews of predictive models.” NAIC senior management conducted the research and recommended gradual build-up of expertise at the NAIC to aid state insurance regulators’ review of property/casualty (P/C) rate models.

In 2019 with existing actuarial, legal and information technology (IT) staff, the NAIC did three things: 1) drafted a contractual agreement called the Rate Review Support Services Agreement (Agreement) to be used so a state can gain access to the shared model database and can request a rate model technical review from the NAIC; 2) developed the initial NAIC rate model technical review process with a consulting actuary, and 3) created a shared model database for confidential regulatory communication.

As of today, there are 28 states contracted with the NAIC using the Agreement. Of those 28 states, there is diverse participation from small states without P/C actuaries on staff to large states with actuarial teams. Twenty of the states are members of the Task Force.

The Agreement is set so the NAIC will review a rate model at the request of a state when resources are available. The NAIC’s technical review is consistent with the Task Force’s white paper, and it includes information such as what documentation is included or missing in the filing, any actuarial or statistical errors, and any potentially questionable support.

Ms. DeFrain said the NAIC does not assume any regulatory authority, create objections to be sent to the company, recommend acceptance or rejection of the model or any specific rating variable, or do separate modeling to determine any correlation with unlawful characteristics or assess disparate impact. The process and the report are subject to improvement over time, and suggestions are welcome.

In August 2020, the NAIC hired Sam Kloese (NAIC) to work with the rate model review team to implement the project. In total as of today, we have reviewed 31 rate filings and objection responses for nine states. The volume of requests is increasing. At the beginning of February, the team was already booked into March for reviews. NAIC staff is currently analyzing the
potential workload for this year and evaluating the need for additional resources. NAIC staff will soon be sending information to commissioners about potential resource needs to meet the demands for assistance.

Mr. Piazza asked if there is a list of filings that have been reviewed. Ms. DeFrain said the reviews are uploaded to the shared model database. She said she could also provide a list if desired. Mr. Piazza and Mr. Vigliaturo agreed that periodic communication to the state insurance regulators would be helpful.

Mr. Serbinowski asked if the NAIC review team would do presentations to the state insurance regulators to highlight the issues. Ms. DeFrain said Mr. Kloese presents case studies in months when the Task Force does not have a Book Club. She said the periodic communication requested by Mr. Piazza could also include a high-level overview of each model. She added that states can sign the Agreement with the NAIC and be under no obligation to do anything or ask the NAIC to conduct any reviews. She said the Agreement provides access to the database and case studies.

Birny Birnbaum (Center for Economic Justice—CEJ) asked for a copy of the Agreement, the processes and procedures for the shared model database, and the processes and procedures for the NAIC rate model reviews. Ms. DeFrain said parties can ask the states for a copy of the signed Agreement through their request for documents. She said there are no manuals for processes and procedures because it is a fairly simple process. She said there are instructions for use of the database, but they cover how to use the functions in the NAIC and do not describe processes and procedures. She said she would be happy to answer any direct questions. Mr. Birnbaum said this is a black box at the NAIC. He said he wants to know: 1) what provisions are in the Agreement, such as what confidentiality is promised; 2) what is included in the rate model review other than what has been said on this call; and 3) who can access the shared model database and what use it can be put to. He said he has been asking for this information at the NAIC for more than a year, and he believes this information should be public. He said he does not need content of the reviews. He asked if the NAIC’s report is available to the filers. Ms. DeFrain said this is a state decision. She said the NAIC does not provide actuarial opinions or step into the state insurance regulators’ role. He asked if the state is limited in its use of the review. Ms. DeFrain said she does not recall the Agreement restricting the use by the state insurance regulator.

Mr. Blanchard asked how long the reviews take. Ms. DeFrain said the reviews can take up to two weeks.

Robert Curry (Insurance Services Office—ISO) asked whether the filer would be notified that the NAIC is reviewing the model. He said the companies are notified when a consultant is involved. Ms. DeFrain said there is no notification process that is required. The state can inform you that they have requested an NAIC review. The state can list the NAIC as a reviewer if they choose. Ms. DeFrain said consultants provide opinions and write objections, putting themselves in the place of state insurance regulators. She said the NAIC does not do this.

5. **Heard Reports from Professional Actuarial Associations**

Ms. Cavanaugh said the Committee on Property and Liability Financial Reporting (COPLFR) produced its annual law manual and practice note on annual statement reserves and updated its COVID-19 frequently asked questions (FAQ). The Academy’s P/C Risk-Based Capital Committee produced a report on updated underwriting factors. The Academy’s Cyber Risk Task Force in cooperation with the Academy’s research team published individual states’ reporting requirements for cyber breaches. A paper is expected on COVID-19’s impact on auto ratemaking and a consumer-oriented paper to describe basic insurance concepts and rating for auto insurance. The Academy’s Casualty Practice Council formed a racial equity task force to address P/C race and insurance as it relates to public policy. Additional topics being monitored include the Pandemic Risk Insurance Act, flood insurance, the Terrorism Risk Insurance Program, and presumptive benefits for COVID-19. The Academy will assist with the NAIC Insurance Summit.

Mr. Blanchard provided the CAS’s research report (Attachment Nine). Dale Hall (Society of Actuaries—SOA) provided the SOA’s research report (Attachment Ten).

6. **Discussed Other Matters**

Mr. Vigliaturo said the Task Force’s white paper, *Regulatory Review of Rate Models*, will be considered for adoption by the Executive (EX) Committee and Plenary at the Spring National Meeting.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Feb. 17, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf and Angela King (DC); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing represented by Mari Kindberg (MT); Marlene Caride represented by Carl Sornson (NJ); Russell Toal (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Raymond G. Farmer represented by Will Davis (SC); Doug Slape represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); James A. Dodrill represented by Juanita Wimmer (WV); Jeff Rude represented by Donna Stewart (WY).

1. **Adopted the Auto Insurance Database Report**

The Task Force conducted an e-vote to consider adoption of the *Auto Insurance Database Report*. The motion passed unanimously.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force met Feb. 9, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza, Larry Steiners and Nichole Torblaa (LA); Lori K. Wing-Heier represented by Katrina Kelly and Michael Ricker (AK); Jim L. Ridding represented by Daniel Davis (AL); Evan G. Daniels represented by Vanessa Darrah and Tom Zuppan (AZ); Ricardo Lara represented by Ken Allen, Mitra Sanandajifar and Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson and Eric Unger (CO); Andrew N. Mais represented by Susan Andrews and Wanchin Chou (CT); Karima M. Woods represented by David Christhilf and Monica Myers (DC); David Altmaier represented by Sandra Starnes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Sevemingesen represented by Reid Mc Clintock and Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd and Heather Droge (KS); Kathleen A. Birrane represented by Ron Coleman and Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann and LeAnn Cox (MO); Troy Downing represented by Mari Kindberg and Ashley Perez (MT); Mike Causey represented by Kevin Conley and Arthur Schwartz (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarow (NV); Judith L. French represented by Benjamin Beckman and Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Jessica K. Altman represented by Kevin Clark, James DiSanto, and Michael Mc Kenney (PA); Raymond G. Farmer represented by Will Davis and Michael Wise (SC); Doug Slape represented by Monica Avila, J’ne Byckovski, Brock Childs, Nicole Elliott, Eric Hintikka, Jason Lester, Brian Ryder and Bethany Sims (TX); Michael S. Pietick represented by Rosemary Raszka (VT); Mike Kreidler represented by Dan Fornar (WA); James A. Dodrill represented by Tonya Gillespie and Juanita Wimmer (WV); Jeff Rude and Donna Stewart (WY). Also participating was: Gordon Hay (NE).

1. Adopted the Reports of the Actuarial Opinion (C) Working Group and the Statistical Data (C) Working Group

Mr. Vigliaturo announced the appointments of Ms. Krylova as chair and Miriam Fisk (TX) as vice chair of the Actuarial Opinion (C) Working Group, as well as Carl Sornson as chair and Mr. Chou as vice chair of the Statistical Data (C) Working Group.

Ms. Krylova said the Actuarial Opinion (C) Working Group has not met in 2021.

Mr. McGill said the Report on Profitability by Line by State (Profitability Report) was released publicly on Jan. 12. The Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report) was released publicly on Jan. 13. The Competition Report was posted on the NAIC website on Feb. 2. The Auto Insurance Database Report (Auto Report) will be considered for adoption via e-vote soon.

Mr. Piazza made a motion, seconded by Mr. Botsko, to adopt the reports of the Actuarial Opinion (C) Working Group and the Statistical Data (C) Working Group. The motion passed unanimously.

2. Discussed Project #2019-49: Retroactive Reinsurance Exception

Mr. Vigliaturo said the Statutory Accounting Principles (E) Working Group referred Project #2019-49: Retroactive Reinsurance Exception to the Task Force in January 2020. The project was initialized after receipt of a letter from the American Academy of Actuaries’ (Academy) Committee on Property and Liability Financial Reporting (COPLFR). Mr. Vigliaturo said Mr. Hay, Ms. Fisk and Mr. Botsko have been working on this difficult project.

Mr. Hay said Statement of Statutory Accounting Principles (SSAP) No. 62R — Property and Casualty Reinsurance does not deal with every possible reinsurance arrangement, but rather only the more commonly employed methods. Prospective exceptions to prescribed retroactive accounting appear in paragraphs 36 and 39. He said these exceptions emerged individually from historical circumstances, so unanticipated future circumstances are possible. For the identified exceptions, the default assumption is that prescribed prospective accounting, including Schedule P Instructions, will apply with no modification. In a few circumstances, the SSAPs (including SSAP No. 6R) require restatement of historical calendar years’ earned premium and/or losses on...
Schedule P. He said he, Ms. Fisk and Mr. Botsko need to reconcile the default assumption versus prescribed restatements, with examples of insurers and reinsurers’ actual Schedule P presentation, including the two examples in the COPLFR letter that gave rise to Project #2019-49. He said in some important examples, state interpretations in real time, rather than company decisions, created precedents for divergent Schedule P presentation in subsequent years. He said he still hopes to recommend appropriate Schedule P presentation guidance for each exception identified in SSAP No. 62R paragraphs 36 and 39. Mr. Hay said he, Ms. Fisk and Mr. Botsko are working on a recommendation to improve prospective reinsurance accounting prescriptions in SSAP No. 62R paragraphs 30–32 and paragraphs 49–54 (cedants’ accounting and credit taken) or paragraphs 42–48 (reinsurers’ accounting).

3. **Discussed CAS Recission of Statements of Principles**

Mr. Vigliaturo said the Casualty Actuarial Society (CAS) notified the Task Force that it rescinded its collection of Statements of Principles, including the ratemaking principles that many states use when reviewing rate filings. He said after the CAS presentation, he would like to hear from state insurance regulators and interested parties about the impact on state regulation and whether state insurance regulators want to take any actions such as creating NAIC principles on ratemaking or leave such decisions to individual states.

Ken Williams (CAS) said the impact on states was intended to be minimal. He said all the statements of principles (ratemaking, reserving and evaluation) were written in the late 1980s before Actuarial Standards of Practice (ASOPs) were developed and were intended to be a foundation for the development of standards. With more than 50 ASOPs developed today, he said the ASOPs are now robust, enforceable and somewhat prescriptive. He said the view is that the principles have served their purpose to be a foundation for ASOPs. He added the principles often parallel the ASOPs, with any differences sometimes leading to confusion.

Mr. Williams said actuaries are held to professional standards within the U.S. and are required to follow the Code of Conduct, ASOPs, Qualification Standards and state regulations. Mr. Williams said the CAS is now a worldwide organization. He said every state has “not excessive, not inadequate and not unfairly discriminatory” language in their regulatory statutes. He said the CAS notified the three states with direct reference to the statement of principles in laws or regulations.

State insurance regulators expressed multiple views: 1) the Task Force was dissatisfied that the CAS did not request comment from its membership before rescinding, and there might have been some concerns; 2) states may use the principles for other purposes, including a data call which cited the principles; 3) lawmakers would look to the CAS as experts on ratemaking and may interpret rescission of the principles as a need to rewrite laws on rates; 4) state insurance regulators make the principles enforceable by referring to the principles in certain situations; and 5) the principles on ratemaking seemed to be more specific than ASOPs, and some concepts do not exist in the ASOPs. The CAS was asked to send the Task Force a comparison of the principles with the ASOPs to be able to evaluate the redundancy. Mr. Williams said he would prepare a comparison for distribution.

J. Robert Hunter (Consumer Federation of America—CFA) described his document sent to the Task Force for the meeting (Attachment Two-A). He said the only public actuarial requirement that final rates be related to risk was rescinded. The Actuarial Standards Board (ASB) had tried to write an ASOP for the final rate and had to back off because of unfair discrimination. In the mid-2010s, there was a five-year debate on these issues, and then suddenly the CAS Board rescinded the principles. Initially, the principles were not going to be rescinded until the ASOPs covered the principles. There is now no final rate principle, so actuaries could use price optimization. Many documents refer to the statements of principles. Mr. Hunter suggested the Task Force urge the CAS to reverse its rescission at least long enough to seek input. If the CAS does not reinstate, then he suggested the NAIC create a bulletin for the states to delete references of sound actuarial principles in rate regulation and laws. He said another option would be for the Task Force to propose the four principles be codified into laws to define actuarial soundness of rates.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CAS could un-rescind the principles without notice and with immediate effect. He said the flawed process suggests the state insurance regulators have some urgency on this matter. Actuaries in rate hearings often quote the statements of principles.

Ralph Blanchard (Travelers) said the CAS generally stays out of the public policy arena. He said Article 9 of the CAS constitution says any public policy action requires a three-quarters vote of the Board. Based on his experience at the CAS, he said he expected there was a fair amount of analysis before the Board acted.
Ms. Amann said that given the reliance on the principles, the Task Force could develop its own principles. She said the document would then be controlled by state insurance regulators. She said if comfortable with the principles and the CAS does not reinstate the principles, then state insurance regulators can adopt the principles themselves. Mr. Birnbaum said that has merit, but many states refer to “sound actuarial principles” of practice. He said there needs to be a solution in the short term. Mr. Stolyarov said “sound actuarial principles” do not rely on a document from an organization. He said the principles are concepts, and state insurance regulators can quote sources that have no power over the rates. He said there is no real short-term impact. He said similar content developed by the state insurance regulators could be effective guidance. Mr. McKenney and Mr. Citarella said principles developed at the NAIC are non-binding. Mr. Citarella said he quotes the principles when working with legislators, so rescission makes that process more difficult.

Some members of the Task Force will draft a letter to the CAS for the Task Force’s future consideration.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
COMMENTS OF J. ROBERT HUNTER, FCAS, MAAA, 
DIRECTOR OF INSURANCE FOR CFA 
BEFORE THE CASUALTY ACTUARIAL AND STATISTICAL TASK FORCE 
OF THE NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 
FEBRUARY 9, 2021 
AGENDA ITEM 3: DISCUSS CAS RESCISSION OF STATEMENT OF PRINCIPLES 
AND IMPACT ON STATES 

EXECUTIVE SUMMARY 

The fundamental basis of insurance ratemaking is that rates must be related to risk. For 
decades, that concept has been made explicit for actuaries in the Casualty Actuarial Society's 
Statement of Principles Regarding Property and Casualty Insurance Ratemaking, which sets out 
the following four related Principles:

Principle 1: A rate is an estimate of the expected value of future costs. Ratemaking 
should provide for all costs so that the insurance system is financially sound.

Principle 2: A rate provides for all costs associated with the transfer of risk. 
Ratemaking should provide for the costs of an individual risk transfer so that equity 
among insureds is maintained. When the experience of an individual risk does not 
provide a credible basis for estimating these costs, it is appropriate to consider the 
aggregate experience of similar risks. A rate estimated from such experience is an 
estimate of the costs of the risk transfer for each individual in the class.

Principle 3: A rate provides for the costs associated with an individual risk transfer. 
Ratemaking produces cost estimates that are actuarially sound if the estimation is based 
on Principles 1, 2, and 3. Such rates comply with four criteria commonly used by 
actuaries: reasonable, not excessive, not inadequate, and not unfairly discriminatory.

Principle 4: A rate is reasonable and not excessive, inadequate, or unfairly 
discriminatory if it is an actuarially sound estimate of the expected value of all future 
costs associated with an individual risk transfer.

The CAS Board of Directors rescinded these Principles on December 22, 2020. To my 
knowledge, they did this with no public warning or request for input, not even from their 
Members. It was entirely foreseeable that such a move would be controversial based on the 
effort to alter the language of the SOP a few years ago, which makes the surreptitious nature of
this action all the more concerning. Many at NAIC will recall CAS withdrawing its controversial rewrite of the SOP in 2016 and, the next year, ASB failing to produce a comprehensive ASOP for Ratemaking, citing the controversy over issues like price optimization and unfair discrimination.

CAS claimed the rescissions were justified because of overlap between the SOPs and 50+ ASOPs. They did not point out that only five of the 50+ ASOPs relate to important specific aspects of P/C ratemaking, but no ASOP governs the final, selected rate.

So, today there is no actuarial standard that covers the final rate. After December 22, 2020, an actuary could file a rate with the state, with five aspects of the rate fully complying with ASOPs and, at the end, pick any rate to file the actuary wanted, including rates adjusted by a price optimization algorithm or just picked out of the air. The actuary could properly confirm to the regulator that this rate “meets all actuarial standards.”

The SOP on ratemaking has been relied upon by regulators and state legislators who often include language referencing sound actuarial principles or practices, sometimes mentioning the now defunct CAS SOP by name. The rescission leaves a major gap . . . and opens the door to the discredited efforts to de-link rates from expected costs.

We ask the CASTF to urge the CAS to reverse their rescission of the ratemaking principles. Failing that, we ask that the CASTF recommend that the NAIC issue a bulletin to the states to act to delete any references to sound actuarial principles in rate regulation laws and regulations. Alternatively, CASTF could give consideration to proposing that states codify the Principles into laws defining actuarial soundness.

BACKGROUND OF 3 MAJOR ACTIONS ON RATEMAKING STANDARDS BY CAS AND ASB

1. In 2016, CAS stopped work on a revision to their Ratemaking Principles.

Here is their explanation of that withdrawal:

**UPDATE ON THE PROPOSED REVISIONS TO THE CAS STATEMENT OF PRINCIPLES REGARDING PROPERTY AND CASUALTY INSURANCE RATEMAKING**

08/25/2016 —

In early 2015, the CAS released for comment a Discussion Draft of proposed revisions to the Statement of Principles Regarding Property and Casualty Insurance Ratemaking (Statement). The Statement was released concurrently with a draft Actuarial Standard of Practice (ASOP) on Property/Casualty Ratemaking from the *Actuarial Standards Board* (ASB).

Since the release of the Discussion Draft in 2015, the work on the Statement by the CAS Statements of Principles Task Force has been suspended while the ASB continues to
develop its ASOP. While it was initially thought that the two documents should be
developed in tandem, it was ultimately concluded that it was better to limit the number
of "moving parts" in the development process. Therefore, the CAS will wait until the ASB
has completed the development of its ASOP, and then assess, in light of the ASOP, how
to amend the Statement to avoid duplicative, conflicting or confusing guidance for
actuaries.

The ASB issued a second exposure draft of its proposed ASOP on Property/Casualty
Ratemaking in February 2016 with comments due by April 30, 2016. The proposed new
ASOP addresses items in the Considerations section of the Statement, as well as
ratemaking items not currently addressed in existing ASOPs.”

In fact, the reason for the withdrawal by CAS was the significant opposition to the CAS draft,
including from Commissioners, because it eliminated the requirement that rates be cost-based.
CAS did promise to “wait until the ASB has completed the development of its ASOP” on
ratemaking. However, a complete ratemaking ASOP has never been developed.

2. In 2017, the ASB withdrew its proposed ASOP on ratemaking.

The same opposition to the ASB draft ASOP on Property/Casualty Ratemaking (i.e., that it
resulted in allowing rates that were not cost-based) resulted in the ASB draft also being
withdrawn.

That draft was replaced by ASOP 53, Estimating Future Costs for Prospective Property/Casualty
Risk Transfer and Risk Retention (not in any way related to the entire final rate). When
announcing the new ASOP, the ASB made clear that key questions that led CAS to end its
revision efforts the prior year pending resolution of the issues by ASB remained unresolved.
ASB stated this clearly, as follows:

In crafting this ASOP and responding to comments from its initial exposures, the ASB
quickly realized that there are significant differences of opinion within the profession
regarding certain aspects of ratemaking, including pricing, price optimization
methodologies, and rate filing requirements, that would need to be reconciled before a
comprehensive standard of practice on ratemaking could be developed. Therefore, to
create a standard of practice for the core aspects of ratemaking that could be issued in a
reasonable amount of time, the ASB has chosen to develop this ASOP to pertain solely
to the development or review of future cost estimates for prospective property/casualty
risk transfer and risk retention. It should be noted, however, that upon completion of
this proposed ASOP, the ASB will give consideration to the development of a standard of
practice on rate filings in an attempt to address the various issues within rate regulatory
discussions today (for example, price optimization, unfair discrimination, and the
Principles contained in the current CAS Statement of Principles).”
This disclaimer, provided in the ASOP transmittal memorandum, makes clear that the ASB has no standard covering the final rate and an ASOP to cover the final rate remains to be developed.

3. IN 2020, The CAS rescinds the Statement of Principles on P/C Ratemaking

Even though CAS promised not to act to amend the Statement of Principles Regarding Property/Casualty Ratemaking, the CAS suddenly rescinded the Statement, with this explanation:

The original Statement of Principles were drafted before any Actuarial Standards of Practice were developed or promulgated by the Actuarial Standards Board. The adoption of the 50+ Actuarial Standards of Practice in the United States over the past 30 years, as well as the adoption of standards in many other jurisdictions, has resulted in considerable overlap between certain standards and the Statement of Principles. Therefore, the CAS Board has determined that the Statements were no longer necessary and that rescinding them will eliminate any confusion that may have existed between actuarial principles and actuarial standards.

The CAS argument supporting the rescission – that “50+ Actuarial Standards of Practice...has resulted in considerable overlap between certain standards and the Statement of Principles” – appears to be disingenuous. Of the 56 ASOPs adopted by the Actuarial Standards Board, only 11 (12 did exist but one has been withdrawn) apply to P/C insurance at all. Of these, only five directly relate to P/C ratemaking (#13 Trending, #29 Expense Provisions, #30 Profit and Contingency, #39 Catastrophes, and # 53 Future Costs for Prospective P/C Risk Transfer and Risk Retention). These are important discrete elements of ratemaking, none of which, as the ASB itself says, contain a “standard of practice on rate filings.” The only such standard, until now, was the Statement of Principles Regarding Property and Casualty Ratemaking of the CAS. But since December 22, 2020 that’s gone.

As they moved toward rescission, the CAS acted with no public comment as far as I am aware; the Members of CAS were not even asked to comment. This is a strange process when you consider the fact that, when considering changes to the language of the Principles heretofore, CAS asked for comments and received many responses. CAS leadership should have known from their own experience in 2014-2016, having to withdraw their proposed changes to the Principles, that this would be a controversial act. Certainly the depth of interest and concern among actuaries, regulators and others about the SOP was in evidence to CAS leadership again when the ASB unsuccessfully attempted to develop the ASOP on final rates. The ASB did not hide the need for ongoing stakeholder engagement in this area when it noted “significant differences of opinion within the profession regarding certain aspects of ratemaking, including pricing, price optimization methodologies, and rate filing requirements, that would need to be reconciled before a comprehensive standard of practice on ratemaking could be developed.” It is shocking that the CAS acted in such a stealthy way to pull off this rescission.
DISCUSSION OF THE PROBLEM FACING CASTF TODAY

The problem before the regulators and for consumers is obvious. No ASOP exists that applies to the final rate to be charged to policyholders. The ASOPs that exist only relate to specific aspects of ratemaking, not the final rate. CAS, supposedly waiting for the ASB to act on a ratemaking ASOP, went ahead and acted to eliminate the Statement of Principles Regarding P/C Ratemaking before the ASB even has a draft ASOP for the final rate. This means that the issues such as price optimization and unfair discrimination, mentioned as serious controversies by ASB when it did not propose an ASOP for the final rate, are unresolved.

So, since December 22, 2020 we have no actuarial guidance in place on the final rate to be charged. In other words, the actuary could make rates fully compliant with every ASOP relating to specific elements of the filing and, at the end, select any final rate to file, whether to grab market share or implement a price optimization algorithm, and still be able to declare the regulator that this rate “meets all existing actuarial standards”.

There is another implication of this rescission. The linkage between the actuarial standards and statutory requirements is broken. The statutes require risk-based rates, often cited as “actuarially sound” rates, while the actuarial standards no longer require that final rates are risk-based. Talk about confusion. This is a very serious problem that CASTF must face.

Of course, those who want to use price optimization and other models such as Consumer Lifetime Value to move the price away from the cost-based rate now have no actuarial standard barrier to overcome.

Fortunately, state rating laws still require rates not to be excessive, inadequate or unfairly discriminatory. The standard has always tied back to cost-based pricing. Regulators will still have the capacity to protect consumers since rates will remain unfairly discriminatory if two consumers of identical risk are charged different prices simply because of non-risk differences such as shopping habit or potential future purchases of other products. But the murkiness created by the removal of actuarial standards for filed rates will embolden insurers and weaken the hand of regulators to protect consumers and secure a fair marketplace. I know, from careful review of many rate filings in recent years, that insurers often do not disclose clearly to the regulators what is going on inside a filing (e.g., price optimization) and it is very complex indeed to dig such items out.

PROPOSED RESPONSE BY CASTF

So, what should CASTF do?

The hole in actuarial standards is a thumb in the eye of CASTF, which specifically opposed CAS’s prior attempt to change the language in the Ratemaking principles to allow Price Optimization. Now CAS has accomplished this by fiat, taking sudden action with no comments even from its own members.
State insurance laws mention the CAS Statement of Principles on P/C Ratemaking. For example, Oklahoma defines acceptable actuarial standards as “the standards adopted by the Casualty Actuarial Society Statement of Principles Regarding Property and Casualty Ratemaking or the Standards of Practice adopted by the Actuarial Standards Board.” But now Oklahoma has a definition of acceptable actuarial standards that relies on a non-existent standard. Worse, if ASOPs alone define “acceptable actuarial standards,” there is no standard at all that applies to the final rate. Indeed, the definition with no CAS Principle in place, opens the door to the discredited efforts to de-link rates from expected costs.

CFA calls upon CASTF to take the following actions:

First, CASTF should urge the CAS to reinstate the Principles. If CAS refuses, CASTF should propose that the states delete any reference to sound or acceptable actuarial standards in statute since there’s no longer alignment between the actuarial standards and the statutory standards.

Second, CASTF should consider proposing a Model Law codifying the four Principles of the rescinded SOP into a definition of sound or acceptable actuarial standards for state rating laws. Although the CAS has, in my view, dishonored itself by the action it took on December 22, 2020, CASTF can ensure that that action will have no adverse effect on insurance regulation or the insurance marketplace by codifying the Principles the CAS has rescinded.
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Feb. 2, 2021. The following Task Force members participated: James J. Donelon, Vice Chair, represented by Rich Piazza (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Evan G. Daniels represented by Tom Zuppan (AZ); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Kevin Conley (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Tynesia Dorsey represented by Tom Botsko (OH); Andrew R. Stolfi represented by David Dahl (OR); Jessica K. Altman represented by Michael McKenney (PA); Raymond G. Farmer represented by Will Davis (SC); Doug Slape represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); James A. Dodrill represented by Juanita Wimmer (WV); and Jeff Rude (WY).

1. **Adopted the Competition Database Report**

The Task Force conducted an e-vote to consider adoption of the *Competition Database Report*. All voted in favor of adoption. The motion passed.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Dec. 30, 2020. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); Doug Ommen represented by Travis Grassel (IA); Shannon Whalen represented by Anthony Bredel (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers and Cynthia Amann (MO); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Carl Somson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Tynesia Dorsey represented by Laura Miller (OH); Glen Mulready represented by Andrew Shallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Jessica K. Altman represented by Michael McKenney (PA); Raymond G. Farmer represented by Will Davis (SC); Doug Slape represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and Mike Kreidler represented by Eric Slavich (WA).

1. **Adopted the Profitability Report and the Homeowners Report**

The Task Force conducted an e-vote to consider adoption of the *Report on Profitability by Line by State* (Profitability Report) and the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report). All voted in favor of adoption. The motion passed.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

CFA SUPPORTS THE CASTF DRAFT LETTER CALLING UPON CAS TO REVERSE THE RESCISSION OF THE PRINCIPLES OF P&C RATEMAKING

To CASTF Members:

As your draft letter makes clear, the heart and soul of the now rescinded CAS SOP are in the Principles section where the Four Principles of Ratemaking are delineated. Both as a matter of process and substance, the decision by CAS to unceremoniously and without warning drop the ratemaking principles that have served as the foundation of regulatory practice for 30 years is unacceptable. The draft letter CASTF has presented speaks clearly to the importance of these Principles as key actuarial guidance and as a clear and concise tool for explaining the standards and parameters of our profession.

CASTF has a vital role to play to assure that these standards remain in place in one form or another. Without them, the movement away from cost-based rates, in violation of state rating laws, will accelerate. This would open the door to abuse, particularly of the poor and people of color. Your draft letter is a great step in the direction of maintaining cost-based prices. Should CAS refuse to reinstate the SOP, CASTF must stand ready to act to make the four Principles a regulatory standard for actuaries to continue to rely upon.

Sincerely,

J. Robert Hunter, FCAS, MAAA
Director of Insurance
TWO GLARING OMISSIONS IN DOCUMENT ATTACHED TO CASTF MATERIALS REGARDING ITEM 3 OF THE UPCOMING MARCH 9, 2021 CALL

The document, “Comparison of ASOP 53 and CAS Principles of Ratemaking” ignores the most important part of the rescinded SOP and, as the subtitle indicates, only looks at the less important “considerations and definitions” sections of the rescinded SOP.1

The comparison in this document could be confused to some readers as showing that ASOP 53 and other ASOPs are almost be a complete substitute for CAS Statement of Principles Regarding Property and Casualty Insurance Ratemaking. That is simply not true. The document only addresses lesser aspects of the CAS SOP on Ratemaking and does not address two central purposes of the rescinded CAS SOP: the Principles themselves and the linkage of final rates to cost-based indications.

1. The Document Ignores the Central Purpose of the Rescinded SOP on Ratemaking:

The heart and soul of the now rescinded CAS SOP is in the Principles section where four Principles of Ratemaking are delineated. They are:

_Ratemaking is prospective because the property and casualty insurance rate must be developed prior to the transfer of risk._

_Principle 1: A rate is an estimate of the expected value of future costs. Ratemaking should provide for all costs so that the insurance system is financially sound._

_Principle 2: A rate provides for all costs associated with the transfer of risk._

_Ratemaking should provide for the costs of an individual risk transfer so that equity among insureds is maintained. When the experience of an individual risk does not provide a credible basis for estimating these costs, it is appropriate to consider the aggregate experience of similar risks. A rate estimated from such experience is an estimate of the costs of the risk transfer for each individual in the class._

_Principle 3: A rate provides for the costs associated with an individual risk transfer._

_Ratemaking produces cost estimates that are actuarially sound if the estimation is based on Principles 1, 2, and 3. Such rates comply with four criteria commonly used by actuaries: reasonable, not excessive, not inadequate, and not unfairly discriminatory._

1 That ASOP 53 covers the “considerations” section of the rescinded CAS SOP on Ratemaking is no surprise. As ASB said, in transmitting ASOP 53 to actuaries, “It should be noted that this ASOP incorporates all of the Considerations contained in the CAS Statement of Principles and addresses issues related to the estimation of costs for risk transfer and risk retention not currently addressed in existing ASOPs. This ASOP also references other existing ASOPs that include relevant issues related to the estimation of future costs for prospective risk transfer and risk retention.”
Principle 4: A rate is reasonable and not excessive, inadequate, or unfairly discriminatory if it is an actuarially sound estimate of the expected value of all future costs associated with an individual risk transfer.

There is nothing in ASOP 53 or in any ASOP that addresses these key Principles, even remotely. (Please note that the rescinded Principle 4 contains language similar or identical to that which appears in the insurance rating laws of almost every state)

2. The Document Ignores the Fact that Final Rates Charged to Consumers are no Longer Covered by any Actuarial Standard or Principles:

Where the rubber hits the road when it comes to ratemaking are the final rates charged to consumers of insurance. ASOP 53 and all other ASOPs currently in place have no impact on final rates charged to policyholders. As ASB said in December 2017, in transmitting ASOP 53 to actuaries and to the public, “the ASB quickly realized that there are significant differences of opinion within the profession regarding certain aspects of ratemaking, including pricing, price optimization methodologies, and rate filing requirements, that would need to be reconciled before a comprehensive standard of practice on ratemaking could be developed. Therefore, to create a standard of practice for the core aspects of ratemaking that could be issued in a reasonable amount of time, the ASB has chosen to develop this ASOP to pertain solely to the development or review of future cost estimates for prospective property/casualty risk transfer and risk retention.”

The sudden and unexpected rescission of the CAS SOP on Ratemaking leaves actuaries with no actuarial standards or Principles as respects final rates, the only rates that really matter to the public and to regulators. Today, an actuary could make a filing with the state, fully complying with current ASOPs and, at the end, pick any rate to file the actuary wanted, including rates adjusted by a price optimization, consumer lifetime value or other algorithms or just picked out of the air. The actuary could then properly confirm to the regulator that this rate, untethered from any cost-based indication “meets all actuarial standards.” This puts the regulator in an untenable position and, in some cases at least, unable to determine exactly what is going on with the filed rates being reviewed since disclosure of the uses of new algorithms in rate filings is often obscure or even completely missing.
TO: Casualty Actuarial Society (CAS) Board of Directors  
Sent via email to Laura Stout

FROM: Phillip Vigliaturo, Chair  
Casualty Actuarial and Statistical (C) Task Force

DATE: March 9, 2021

SUBJECT: Comments on the CAS Board of Director’s Decision to Rescind Statements of Principles

On December 22, 2020, the Casualty Actuarial Society (“CAS”) announced that its Board of Directors unilaterally rescinded the following Statements of Principles:

- Statement of Principles regarding Property and Casualty Insurance Ratemaking (May 1988)
- Statement of Principles regarding Property and Casualty Valuations (September 1989)
- Statement of Principles regarding Property and Casualty Unpaid Claims Estimates (November 2014)

Not only was the decision unilateral, it was seemingly made without any notice to the CAS membership. We are disappointed that this rescindment occurred without notice, open discussion or input from the membership. For the reasons set forth in this letter, the NAIC’s Casualty Actuarial and Statistical Task Force (“CASTF”) requests the reinstatement of the Statement of Principles (“SOP”) regarding Property and Casualty Insurance Ratemaking.

We are not aware of another document as concise and accessible as the Ratemaking SOP that so clearly and completely ties rates to risk. A generation of actuaries have reviewed, relied upon and cited the ratemaking principles since its adoption in 1988. While the document was not prescriptive or exhaustive, it provided clearly stated principles for any and all insurance professionals to consider with regard to ratemaking. For this very reason, many regulatory actuaries relied on the document for a common foundation in discussions with industry representatives whether or not they were credentialed actuaries.

The rescindment of the Ratemaking SOP provides the impression that the principles are no longer viewed as valid by the actuarial profession. We find this especially troubling in an environment in which characteristics used by insurers in pricing are being challenged, quite publicly, for their perceived lack of a relationship to risk. The Ratemaking SOP complemented state laws that require rates to be related to risk and which provide regulators their authority to challenge rates that are not. The rescindment might open the door to attacks on these rate regulatory laws.

While it has been argued that aspects of the Ratemaking SOP are repeated in various Actuarial Standards of Practice (“ASOPs”), parties that are not closely affiliated with the CAS are challenged to search, read through and comprehend multiple ASOPs, which are often issue-specific. Much of the utility of the Ratemaking SOP was in its simplicity and focus; it applied to all aspects of actuarial ratemaking – a true principles statement – and provided value even if duplicative of certain parts of different ASOPs. For example, when testifying before a legislative committee or explaining a concept to a consumer, referring to multiple ASOPs risks the audience’s attention and comprehension as opposed to a singular SOP document that is credible, concise and understandable to a layperson.

We recognize that there are opportunities to modernize the SOP for recent developments in ratemaking such as price optimization, artificial intelligence and predictive models. These developments can be addressed with amendments to the SOP rather than a wholesale rescindment of the document. In fact, these developments support the need for the rescinded ratemaking principles to ensure that non-actuaries leading these developments understand the actuarial profession’s position on the need for risk-based rating.

In closing, we submit that the Statement of Principles regarding Property and Casualty Insurance Ratemaking is too important of a document and too widely cited and relied upon to be rescinded at this time. We urge you to reverse the rescindment.

Cc: Kris DeFrain, NAIC

SURPLUS LINES (C) TASK FORCE

The Surplus Lines (C) Task Force did not meet at the Spring National Meeting.
TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force March 16, 2021, Minutes

Title Insurance (C) Task Force Feb. 23, 2021, Minutes (Attachment One)
The Title Insurance (C) Task Force met March 16, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Jeffrey Joseph (FL); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Karima M. Woods represented by Angela King (DC); Colin M. Hayashida represented by Martha Im and Paul Yuen (HI); Vicki Schmidt represented by Heather Droge (KS); James J. Donelon represented by Warren Byrd (LA); Kathleen A. Borrane represented by David Zitterbart (MD); Chlora Lindley-Myers represented by Carrie Couch (MO); Troy Downing and Tyler Spady (MT); Mike Causey represented by Timothy Johnson (NC); Bruce R. Ramge (NE); Marlene Caride represented by Randall Currier (NJ); Russell Toal (NM); Jessica K. Altman represented by Michael McKenney (PA); Raymond G. Farmer represented by William Starks (SC); Larry D. Deiter represented by Maggie Dell (SD); Scott A. White represented by Mike Beavers (VA); and Michael S. Pieciak represented by Kevin Gaffney (VT). Also participating was: Adam Martin (UT).

1. **Adopted its Feb. 23 Minutes**

The Task Force met Feb. 23 and took the following action: 1) adopted its Oct. 21, 2020, minutes; 2) discussed its 2021 work plan; and 3) heard a presentation on effects of the COVID-19 pandemic on the title insurance industry.

Mr. Byrd made a motion, seconded by Superintendent Toal, to adopt the Task Force’s Feb. 23 minutes (Attachment One). The motion passed unanimously.

2. **Discussed its Revised 2021 Work Plan**

Ms. Rafeld stated that the revised list of work plan ideas for 2021 is as follows:

1. **Explore the effects of the COVID-19 pandemic on the title insurance industry through presentations.**
   a. Presentation, Part 1 from the American Land Title Association (ALTA) on the Feb. 23 call.
   b. Presentation, Part 2 from ALTA on the March 16 call.
   c. Possible presentations from other interested parties.
   d. Produce a brief summarizing the findings.

2. **Revise the Title Insurance Consumer Shopping Tool Template.**
   a. Discuss comment letters on revision suggestions during the March 16 call.
   b. Member drafting sessions begin March 23.
   c. Drafting members: Ms. Rafeld; Mr. Joseph and Anoush Brangaccio (FL); Mr. Byrd; Marianne Baker (TX); Sharon Richetti (MT); Mr. Johnson; Erica Bailey (MD); Dorcas Voyles (FL DFS); Marjorie Thompson (MO); and Mr. Beavers.

3. **Monitor issues and developments occurring in the title insurance industry, including profitability and claims settlement.**
   a. Presentation by AM Best on the latest Best’s Market Segment Report on the U.S. Title Insurance Market on TBD.
   b. Presentation by Demotech on their recent defalcation study on TBD.
   c. Presentation by consumer representatives on consumer protection issues they are hearing on TBD.
   d. Potential presentation by the Federal Bureau of Investigation (FBI) on cybercrime and business email compromises.
   e. Explore a presentation regarding criminal investigations of wire fraud.

4. **Assist the Antifraud (D) Task Force in combating fraud through joint calls and meetings.**
   a. A request was sent Jan. 28 to Antifraud (D) Task Force members asking them to share reports of title insurance fraud and/or mortgage fraud trends in their states. Responses will be used to develop sharing opportunities though future calls and meetings.
5. Will consult with the Consumer Financial Protection Bureau (CFPB) through regulator-only and/or open calls with the CFPB.
   a. Presentation from the CFPB on recent changes and priorities.
   b. Determine if joint regulator-only calls are needed.

6. Determine the role of the Task Force in exploring race and insurance implications in the title insurance space.
   a. Confer with the Special (EX) Committee on Race and Insurance and the Property Casualty Insurance (C) Committee.

Ms. Rafeld stated that the first work plan item remains to explore the impact of the COVID-19 pandemic on the title insurance industry though presentations, such as the one ALTA is finishing during the current meeting. Based on the Task Force’s mutual agreement on its Feb. 23 call, the work plan now also includes potential presentations from other interested parties, such as consumer representatives, title underwriters, and state insurance regulators. This includes a suggestion to take a deeper look into how consumers responded to virtual closings.

The second work plan item remains to update the Title Insurance Consumer Shopping Tool Template through member drafting sessions beginning March 23. Nine states have signed on to participate in the drafting sessions. Thus far, two states have submitted suggested revisions. Ms. Rafeld also discussed Birny Birnbaum’s (Center for Economic Justice) suggestion to conduct testing on the Title Insurance Consumer Shopping Tool Template. She indicated that while the suggestion is not without merit, the specific charge of the Task Force is to make updates to include information regarding fraud. She suggested the Task Force discuss any additionally proposed revisions when it discusses its 2022 charges.

The third work plan item now includes the addition of “monitor issues and developments occurring in the title insurance industry, including profitability and claims settlement.” This includes presentations by AM Best on its latest Best’s Market Segment Report, Demotech on its recent defalcation study, and consumer representatives on any related issues. Additionally, as recommended by Virginia, the Task Force will reach out to the FBI to hear about cybercrime and business email compromises, which is one of Virginia’s biggest issues. Other presentations on criminal investigations of wire fraud may be contemplated too.

The fourth work plan item is to assist the Antifraud (D) Task Force in combating fraud through future calls and meetings based on responses received from Antifraud (D) Task Force members on trends in their states.

Under the fifth work plan item, the Task Force will still consult with the CFPB to receive an update. Based upon the outcome of discussions with the Antifraud (D) Task Force, the Title Insurance (C) Task Force may hold regulator-only calls with the CFPB.

The sixth work plan item relates to the suggestion by some Task Force members to look into race and insurance implications in the title insurance space. The Special (EX) Committee on Race and Insurance has several workstreams. The third workstream is charged to examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the property/casualty (P/C) line of business. This workstream is currently determining if and what tasks it should delegate to specific subject matter expert (SME) groups. The workstream plans to take up the Task Force’s request for clarification on what role it should play in this area on a call in the near future. An update will be provided once a decision has been communicated by the Committee.

Mr. Byrd asked if the role of exploring race and insurance would focus on more minorities working in the field of title insurance or on the sale of a policy in areas that may be populated by minorities. Ms. Rafeld stated that it is her general impression that the Task Force members want to look into all of the issues in this space.

Steve Gottheim (ALTA) said ALTA is finalizing new base policy forms, and he would be happy to present on them during a future Task Force meeting. Ms. Rafeld stated that she would add the proposed presentation to the work plan for 2021.

3. Heard Part Two of a Presentation on the Effects of the COVID-19 Pandemic on the Title Insurance Industry

Mr. Gottheim, Mary Payne Thomas (Stewart Title Guaranty Company), and Nick Hacker (Guaranty & Title Co.) continued their presentation that began during the Feb. 23 meeting. The early days of the pandemic brought much uncertainty. Most companies experienced a 40% drop in volume. County closures created barriers to conducting searches and closing deals. This was followed by a rebound in volume, driven by mortgage refinances. The industry met these challenges and worked to ensure that closings occurred safely and efficiently. Costs increased due to personal protection equipment (PPE) purchases and digital
closings, which rose by over 500%. Flexible contingency plans were put in place to address staffing challenges presented by infection.

2020 was an unusual year with staggering levels of volume. The outlook for 2021 is also very strong if interest rates remain low. Existing home sales increased to $5.65 million in 2020, up from $5.34 million in 2019. They are anticipated to increase again to $6.04 million in 2021 before dropping to $5.7 million in 2022. New home sales increased to $811,000 in 2020, up from $682,000 in 2019. They are anticipated to increase again to $860,000 in 2021 before dropping to $851,000 in 2022. New purchase mortgages and refinances trend accordingly with existing and new home sales. The federal government is staying foreclosures and evictions though June, and states have similar limits in place. Once the limits are no longer in place, the market will face distress. Black Knight reported that 2.7 million Americans have active forbearance plans, with 308,000 already in modifications. However, only 1% of commercial sales are distressed, which is a significant difference from 2010, when about 20% were distressed. It should be noted that in nonjudicial foreclosure states, title companies are often listed as the trustee in a consumer’s mortgage. The current low foreclosure rate brings additional reserving uncertainty. The mix of claims is changing with more people at home. Neighbor disputes and issues related to renovations are more prevalent. Delayed mail delivery and service is also affecting the receipt of policies and claims notifications.

State insurance regulators have helped ease the strain of the pandemic by relaxing in-person audit or examination requirements. This includes allowing more audits to be conducted electronically. State insurance regulators have also waived notary and original signature requirements on filed forms. Additionally, education and testing for licensing was allowed to be done virtually.

The title insurance industry also dedicated time, effort and money to strengthening communities through charitable acts like donations of PPE, food and other services. In October 2020, ALTA launched the ALTA Good Deeds Foundation to bolster charitable efforts of its members in its communities. The Foundation’s aid goes to help those adversely affected by national emergencies, such as the COVID-19 pandemic, or with housing needs.

Ms. Rafeld stated that the presentation was very eye opening on the level of creativity the industry was forced to use as soon as the pandemic hit.

Mr. Byrd asked if the additional costs incurred due to the pandemic were passed on to the participants in the closing. Mr. Hacker said the costs were not passed on, and the pricing has remained the same for over a year. Ms. Thomas said costs in the early days of the pandemic included innovative things like partnering with local distilleries for hand sanitizer because PPE was not readily available during this time.

Mr. Martin asked if there is the potential for loans and foreclosures to cause significant fraud issues similar to what happened during the Great Recession. Mr. Hacker said it is a distinct worry because the foreclosures that came to fruition during the Great Recession were the result of fraud that happened during the run up to that recession. Additionally, a lot of fraud claims during the Great Recession related to issues with the mortgage modification process. There is a lot of work going on to find ways to speed up the modification process, including with the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac). The faster a consumer is transitioned from initial contact into active modification, the higher the success.

Ms. Thomas said there is the expectation of increased claims from fraudulent foreclosures. The industry must deal with these new issues while also still managing ongoing fraud issues, such as wire fraud, that has been sustained due to the increasing savvy of fraudsters. State insurance regulators should be aware of the potential for increased consumer complaints, since many complaints are centered around how a claim has been handled and how claims have increased.

Mr. Byrd asked for clarification on the process that occurs between a foreclosure and a title insurance issue. Ms. Thomas said there are many different ways, including intervening loans that might result in a lender claim during the foreclosure process, someone filing a claim to avoid foreclosure, and simply being included as a party because the company was involved in the policy issued and therefore listed as the trustee on the deed of trust. Mr. Gottheim said there are also circumstances beyond the standard types of claims just mentioned. One common way closure can add to the claims experience is an issue not being discovered until someone runs the title for foreclosure for the lenders. Mr. Hacker said there can also be legal description disputes. His company had a recent claim in which the mortgage encumbered a small piece of land that was not owned by the property owner. This resulted in the purchase of an additional four feet of the neighbor’s land during the foreclosure process.

Mr. Byrd said Louisiana is introducing legislation to remove the reference to “on-site audit” in its law so audits may also be done electronically.

© 2021 National Association of Insurance Commissioners
4. **Discussed Comments Received on Revision Suggestions to the Title Insurance Consumer Shopping Tool Template**

Ms. Rafeld stated that following the Feb. 23 call, a request was sent out for members, interested state insurance regulators, and interested parties of the Task Force to submit revision suggestions for the *Title Insurance Consumer Shopping Tool Template* for the drafting group to consider in its drafting sessions by March 12. Revision suggestions were received from Virginia and Louisiana. Virginia and Louisiana’s suggested edits included the following:

**Virginia**
- Revising the “If you’ve found the perfect home or property” subsection to: 1) combine the fifth and sixth bullets to: “You’ll buy homeowners insurance through a licensed property and casualty insurance agent who can also assist you in determining if you need additional coverages, such as flood or earthquake”; and 2) add that closings may be held in person or virtually.
- Revising the “If you’re refinancing your home or property” subsection to identify lenders and owners.
- Revising the “Two Types of Title Insurance—Owner’s and Lender’s Policies” section to note that coverage can also apply to heirs.
- Revising the “What Doesn’t Title Insurance Cover?” section to add a comment that encourages consumers to contact their title insurance company if there are any questions regarding coverage of a possible claim.
- Revising the “The Right to Choose Your Own Title Agent/Company” section to delete the reference to “in the phone book.”
- Revising the “Closing Agents” section to include banks and real estate brokers handling some settlements.
- Revising the “Shop Around for Title Insurance and Closing Services” section to mention some states allow for negotiated rates.
- Revising the “Final Tips to Remember” section to add fraud tips from the FBI and red flags and prevention methods for business email compromises (BECs), personal email compromises, phishing, etc.

**Louisiana**
- Replacing “agent” with “producer” and adding clarifying language to include “property” in addition to “home” throughout the document.
- Revising the “Introduction” section to change “good” to “wise” and move “however” to the beginning of the sentence.
- Revising “The Difference Between Title and Homeowners Insurance” section to create separate bullets for multi-sentenced bullets and support the statement on how a homeowners policy is paid and renewed.
- Adding a “The Role of Fraudsters in Real Estate Transactions” section.

Mr. Beavers stated that his proposed revisions focus primarily on information to assist consumers when they have an issue with fraud, such as email compromise.

Mr. Byrd stated that his proposed revisions include considering if “producer” should be used in place of “agent,” changing the format, and adding a new section on fraud.

Ms. Rafeld asked that any additional proposed revisions be submitted to NAIC staff by March 19.

Having no further business, the Title Insurance (C) Task Force adjourned.
Title Insurance (C) Task Force
Virtual Meeting
February 23, 2021

The Title Insurance (C) Task Force met Feb. 23, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Jeffrey Joseph and Anoush Brangaccio (FL); Lori K. Wing-Heier (AK); Karima M. Woods represented by Angela King (DC); Colin M. Hayashida represented by Martha Im (HI); Vicki Schmidt represented by James Norman (KS); James J. Donelon represented by Charles Hansberry (LA); Kathleen A. Bittner represented by David Zitterbart (MD); Grace Arnold represented by Phil Vigliaturo (MN); Chlora Lindley-Myers (MO); Troy Downing (MT); Mike Causey represented by Timothy Johnson (NC); Bruce R. Range (NE); Marlene Caride represented by Randall Currier (NJ); Russell Toal (NM); Jessica K. Altman represented by Maggie Dell (SD); Scott A. White represented by Mike Beavers (VA); and Michael S. Pieciak represented by Kevin Gaffney (VT).

1. Adopted its Oct. 21, 2020, Minutes

The Task Force met Oct. 21, 2020, to adopt its 2021 proposed charges.

Superintendent Toal made a motion, seconded by Ms. Brangaccio, to adopt the Task Force’s Oct. 21, 2020, minutes (see NAIC Proceedings – Fall 2020, Title Insurance (C) Task Force, Attachment One). The motion passed unanimously.

2. Discussed its 2021 Work Plan

Ms. Rafeld stated that the proposed list of work plan ideas for 2021 is as follows:

1. Will explore the effects of the COVID-19 pandemic on the title insurance industry through presentations.
   a. The first presentation will be from the American Land Title Association (ALTA) during the Feb. 23 meeting.

2. Revise the Title Insurance Consumer Shopping Tool (Shopping Tool) template through member drafting sessions beginning March 23.
   a. Please notify NAIC staff Anne Obersteadt (aobersteadt@naic.org) by March 12 if you would like to participate.
   b. The drafting group would like to solicit revision suggestions for its consideration. Please submit revision suggestions to NAIC staff Anne Obersteadt (aobersteadt@naic.org) by March 12.

3. Will assist the Antifraud (D) Task Force in combating fraud through joint calls and meetings.
   a. A request was sent Jan. 28 to Antifraud (D) Task Force members asking them to share reports of title insurance fraud and/or mortgage fraud trends in their state. Responses will be used to develop sharing opportunities through future calls and meetings.

4. Will consult with the Consumer Financial Protection Bureau (CFPB) through regulator-only calls with the CFPB.

Ms. Rafeld stated that the first item in the proposed work plan should also include inviting consumer representatives, title underwriters, and state insurance regulators to provide presentations on this topic. She stated that Birny Birnbaum (Center of Economic Justice—CEJ) brought up some very interesting questions related to virtual closings in his submitted comment letter. Answering these questions, concerns or issues consumers have raised since the pandemic through a presentation from Mr. Birnbaum and other consumer representatives would be beneficial to the Task Force.

On its last call in 2020 to discuss its 2021 proposed charges, the Task Force decided it should prioritize updating the Shopping Tool. As such, the second work plan item is to do so through member drafting sessions beginning March 23. Members of the Task Force interested in participating were directed to notify NAIC staff by email by March 12. Also, to get the drafting process started, revision suggestions from members, interested state insurance regulators, and interested parties for the drafting group to consider in its drafting sessions were requested to be submitted by March 12 to NAIC staff.

Mr. Birnbaum stated that the Task Force should take an analytic approach to evaluate how the Shopping Tool should be updated by establishing criteria that helps determine what is or is not useful. Criteria includes determining how or if the Shopping Tool
has been used by states and consumers. It also includes evaluating if the format needs to be revised and if the distribution channel needs improvement.

The third work plan item meets the Task Force’s charge to assist the Antifraud (D) Task Force in combating fraud. On January 28, a request was sent out to Antifraud (D) Task Force members asking them to share reports of title insurance fraud and/or mortgage fraud trends in their state. NAIC staff compiled the responses, and at a high level, states reported some of the following issues: consumer protection letter (CPL) concerns, defalcations, fraudulent settlement transactions, wire fraud complaints, cybercrime, improper rebating and discount offerings, payment of unlawful compensation to realtors, and using higher priced owners’ policies of title insurance without notice or consent of the policyholder. Including a regulator-only call with Antifraud (D) Task Force members to discuss these issues in greater detail could be helpful in determining if further such meetings are needed.

The fourth agenda item is designed to meet the Task Force’s charge to consult with the CFPB. An email was sent to the CFPB about this charge and the Task Force’s desire to work with them once again. If the CFPB is open to the suggestion, receiving an update from them on a future call would be very helpful. There may even be a need to have regulator-only calls with the CFPB and the Antifraud (D) Task Force.

Ms. Rafeld stated that AM Best sent NAIC staff its recently released *Market Segment Outlook: US Title Insurance* report. She proposed that hearing a presentation from AM Best on the report may address the comments received from Mr. Birnbaum on the need to examine title insurance profitability. She further proposed that Mr. Birnbaum’s questions on race and title insurance be referred to the Special (EX) Committee on Race and Insurance since they fall in line with the charges that the Committee is exploring.

Superintendent Toal stated that he has concerns in referring race and insurance issues to the Special (EX) Committee on Race and Insurance. He stated that it deserves the attention of the Title Insurance (C) Task Force. Mr. Birnbaum stated that the CEJ’s preference was to keep the issue at the Task Force level and inform the Committee that this is the Task Force’s preference. The Committee is examining global issues in this area. The Task Force should look into title insurance specific considerations. Steve Gottheim (ALTA) stated that he agrees with Mr. Birnbaum because there are many differences in the way title insurance operates, including in its rate structures and the proxies it uses for risk. Ms. Rafeld stated that the proposed 2021 work plan is a fluid document, and she said she would examine before the next call whether there is a place within the Task Force’s charges that the race and insurance issues could be taken up. She also stated that she would reach out to the Committee NAIC staff support to get feedback on how best to coordinate.

Mr. Gottheim stated that ALTA is in the final stages of updating its policy forms, and it would like to present on the updates to the Task Force during the Summer National Meeting or a later meeting.

Mr. Beavers requested that the AM Best report be distributed to the Task Force. Ms. Rafeld said NAIC staff would distribute it to the Task Force after the meeting.

3. Heard Part One of a Presentation on the Effects of the Pandemic on the Title Insurance Industry

Mr. Gottheim, Mary Payne Thomas (Stewart Title), and Nick Hacker (Guaranty & Title Co.) outlined how the title insurance industry was able to pivot its services during the early stages of the pandemic. In mid-March 2020, many states issued stay-at-home orders, and companies were suddenly left to figure out how to operate remotely. Volatile swings in demand in these early weeks drove uncertainty on how the pandemic and the resulting recession would affect home buying and the title business, potentially leading to furloughs. A number of companies saw volume drop over 40% in March and early April. Over five thousand title companies took Paycheck Protection Program (PPP) loans. Volume then spiked from new interest in home ownership and low interest rates.

The industry met these challenges and worked to ensure that closings occurred safely and efficiently. Closing options employed were in-person with accommodations for social distancing, curbside where the customer remained in the car during the closing, and remote via the internet with a webcam. Notarization methods used include: 1) remote online notarization (RON) of electronic documents with use of multi-factor authentication; 2) remote online notarization of paper documents (PRON) delivered via mail or courier with use of multi-factor authentication; 3) remote notarization of paper documents via audio-video (RIN); 4) traditional wet-in-person notarization (TWIN); and 5) in-person notarization of electronic documents (PEN). Twenty-nine states had passed online notary legislation by November 2020. Online closing is useful, but it is still cumbersome due to the multi-factor authentication needed to keep the transaction safe and the large number of partners involved in the
process.

There were many operational logistics that had to be worked out to produce a policy and close remotely. This included how to access needed public records when county recording offices are shut down, operating remotely, or operating on a skeleton staff. Some offices did not provide the ability to do a title search or record a document. Offices providing online services still came with the challenge of getting land records with sufficient history. Companies were faced with making a risk judgment on how comfortable they were with the limited data available to do the transaction. Since the operating procedure at each county office varied greatly, constant monitoring was needed to evaluate each individual county situation. It was of great help when several states partnered with the U.S. Department of Homeland Security and the General Services Administration (GSA) to put out a list of central services that included title insurance and county recorders.

To stay open, companies incurred many extra costs, including personal protection equipment—masks, sanitizer, Plexiglas, single-use pens—for employees and customers, new equipment to allow work from home and digital closing, internet access, and training on new protocols and technology. Not every job could be done remotely. Contingency plans were developed to keep operations going when an employee had to quarantine. This was especially challenging in rural operations where there may have been only one person doing that job with the nearest overflow staff two hours away. Safety protocols with little information, such as how long the coronavirus lasts on paper, also had to addressed.

The innovation that occurred out of necessity was spectacular in the industry. For example, there were companies that partnered with local distilleries to produce hand sanitizer. Other local offices rented wedding tents to set up drive through closings. Much of the innovation was due to technology. Technology will continue to be important to innovation in the title industry. However, technology is also driving up the cost of transactions. RON on average doubles staff time. These systems come with per transaction fees, require more training, new equipment, and other systems to be able to set it up. The industry’s challenge will be providing local service to home buyers (or homeowners refinancing) and balancing it with the needs of its staff.

Ms. Rafeld stated that the presentation had been very eye opening on the level of creativity the industry was forced to use as soon as the pandemic hit. She invited Mr. Gottheim, Ms. Thomas and Mr. Hacker to continue their presentation at the Task Force’s March 16 call.

Having no further business, the Title Insurance (C) Task Force adjourned.
WORKERS’ COMPENSATION (C) TASK FORCE

Workers’ Compensation (C) Task Force March 15, 2021, Minutes ................................................................. 8-69
Compensation Claims Related to COVID-19 (Attachment One) ........................................................................ 8-73
Percentage of COVID-19 Claims Compared to All Workers’ Compensation Claims (Attachment Two) .......... 8-74
Workers’ Compensation (C) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)
March 15, 2021

The Workers’ Compensation (C) Task Force met March 15, 2021. The following Working Group members participated: Lori K. Wing-Heier, Chair, Anna Latham and Michael Ricker (AK); Glen Mulready, Vice Chair, represented by Kim Bailey, Cuc Nguyen and Andrew Schallhorn (OK); Alan McClain represented by Jimmy Harris (AR); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Yvonne Hauscarriague, Giovanni Muzzarelli and Mitra Sanandajifar (CA); Andrew N. Mais represented by George Bradner and Wanchin Chou (CT); Karima M. Woods represented by David Christhilf and Angela King (DC); David Altmair represented by Sandra Starnes (FL); John F. King represented by Steven Manders (GA); Colin M. Hayashida represented by Randall Jacobson (HI); Dean L. Cameron represented by Michele MacKenzie, Randy Pipal and Aaron White (ID); Dana Popish Severinghaus represented by Judy Mottar and Benjamin Rekart (IL); Vicki Schmidt represented by Heather Droge and Brenda Johnson (KS); James J. Donelon represented by Warren Byrd and Tom Travis (LA); Eric A. Cioppa, Sandra Darby and Robert Wake (ME); Grace Arnold represented by Tammy Lohmann and Phil Vigliaturo (MN); Chlorinda Linley-Myers, Cynthia Amann and Jo LeDuc (MO); Mike Causey represented by Fred Fuller and Michelle Osborne (NC); Marlene Caride represented by Chanell McDevitt and Mark McGill (NJ); Barbara D. Richardson represented by Gennady Stolyarov (NV); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Raymond G. Farmer represented by Michael Schull and Michael Farmer (SC); Larry D. Deiter and Maggie Dell (SD); Michael S. Pieciak represented by Kevin Gaffney and Pat Murray (VT); and James A. Droril and Tonya Gilespie (WV). Also participating were: Amanda Harlow-Felder and John Wells (MS); Connie Adams, Marianne Baker and Nicole Elliott (TX); and Tracy Klausmeier (UT).

1. **Adopted its 2020 Fall National Meeting Minutes**

Mr. McKenney made a motion, seconded by Ms. Nakasone, to adopt the Task Force’s Nov. 16, 2020 (see NAIC Proceedings—Fall 2020, Workers’ Compensation (C) Task Force) minutes. The motion passed.

2. **Heard a Presentation from the IAIABC on COVID-19 Workers’ Compensation Claims**

Jennifer Wolf (International Association of Industrial Accident Boards and Commissions—IAIABC) said they have been collecting data regarding COVID-19 workers’ compensation claims. She said the IAIABC has been working with their research and standards committee for the past several years to collect claims information related to their workers’ compensation experience from states and provinces. The basic measures being collected include: 1) the number of claims received each year; 2) the number of fatalities; 3) the denial rates; and 4) the rates per 100,000 workers in those claims. Ms. Wolf said they used this model to create a data call for workers’ compensation claims related to COVID-19.

Ms. Wolf said the IAIABC Claims Measures survey seeks to provide a broad overview of workers’ compensation claims metrics across North American jurisdictions for injury and fatality data. She said the IAIABC’s first report was published in the summer of 2020 and includes five basic measures of claims across the states and provinces. Ms. Wolf said the survey is a good reference in helping to understand some of the data reporting differences across jurisdictions. She said the data reporting differences are important and meaningful when looking at the COVID-19 workers’ compensation claims that were reported.

Ms. Wolf said the IAIABC began having informal discussion sessions in April 2020 with jurisdictional administrators about their experiences and challenges related to COVID-19. She said that during those calls, there was a lot of informal sharing about the COVID-19 claims that states were beginning to see. As part of the discussion, the IAIABC began to collect and aggregate this information. The claims numbers are taken from the first report of injury data that is reported by claims administrators to the states. The IAIABC collected claims information from 19 states throughout 2020. Ms. Wolf said this information came from claims that were received from late February 2020 through December 2020. She said this data was collected through the end of January 2021, so there may still be a few claims outstanding through the end of last year. Ms. Wolf said this data provides a good snapshot of the COVID-19 claims experience for the 19 states. Across the 19 states, there were almost 260,000 COVID-19 workers’ compensation claims reported. Claims reported by California, Florida and Texas represented almost 70% of the total COVID-19 claims reported.

Ms. Wolf said one of the things discussed at the IAIABC and across the workers’ compensation industry is the interest in understanding the denial rate of workers’ compensation claims. She said they did not calculate the median across all 19 states because not all of the states collect denial information in the same manner. Ms. Wolf said the median denial rate across 15 states was 35.4%, which is higher than the denial rate of other types of workers’ compensation claims. She said as states looked
at the data more closely, they found that a significant portion of the COVID-19 claims denied were attributed to a negative COVID-19 test.

Ms. Wolf said one significant trend seen in 2020 was that states started using their first and subsequent report of injury data to create dashboards and analytic reports on COVID-19 claims. She said the California Workers’ Compensation Institute (CWCI) created an interactive dashboard that is updated frequently with workers’ compensation claims data. This data has several different measures and allows users to create customized views based on a number of different variables. Ms. Wolf said this interactive database is an example of how workers’ compensation claims data can be used to present information in a digestible and user-friendly way. This interactive data base is being updated more frequently than many of the injury and illness reports that have been presented in the past.

Ms. Wolf said Florida, Kansas, Minnesota, Montana, Ohio, Texas, Virginia and Washington sent weekly or monthly reports to their governors or other administration officials related to COVID-19 workers’ compensation claims. She said many of these reports were shared informally with the workers’ compensation industry and were available publicly. Ms. Wolf said this is an example of states using the data they are collecting to provide a more up-to-date analysis. She said she believes these kinds of efforts will be replicated in the future, giving stakeholders a better understanding of workers’ compensation claims experience within their states.

Ms. Wolf said the IAIABC collected information regarding the number of reported workers’ compensation claims coded to COVID-19 for 19 different states. She said the chart shown does not include California, because they have by far the largest number of workers’ compensation claims related to COVID-19 (Attachment One). Ms. Wolf said California saw more than 113,000 workers’ compensation claims, while Texas (the second highest number of COVID-19 claims) had more than 30,000 workers’ compensation cases filed. States such as Iowa and Maryland had less than 2,500 COVID-19 workers’ compensation claims files.

Ms. Wolf said it is important to understand that these are claims counts generated by the first report of injury received by the states and that there are many differences in reporting requirements across jurisdictions. She said this will account for some of the differences when trying to compare across jurisdictions. Ms. Wolf said some states require the reporting of all claims, while other states require only the reporting of lost-time claims. She said, for example, Florida and Michigan only require the reporting of claims that have a lost-time component. Ms. Wolf said there are also significant variations in the waiting periods across states, which will have an impact on some of the numbers of claims being reported.

Ms. Wolf said one of the questions the IAIABC had regarding COVID-19 workers’ compensation claims was whether they would see a difference in claims across states that had implemented a COVID-19 presumption versus states that had not implemented a presumption. She said there was really no discernable link between the number of COVID-19 workers’ compensation claims within states that implemented presumptions than within states that did not implement presumptions. Ms. Wolf said it is important to understand that presumptions are not created equal, and they vary in scope and the industries and worker’s classes they cover.

Ms. Wolf said another way to view this information is to look at how significant COVID-19 claims are in relation to all workers’ compensation claims reported within a jurisdiction. She showed a chart (Attachment Two) that reflected the percentage of COVID-19 claims compared to all of the reported workers’ compensation claims in 2020. The percentage varies from less than 5% of the claims in Georgia to more than 30% of the claims in Florida and Michigan. Ms. Wolf said the differences in reporting requirements could have an impact on the percentage. She said Florida only requires lost-time claims to be filed, while Georgia requires all claims be filed; this could account for one of the differences in terms of percentage. Ms. Wolf said the median across the 16 states shown was 10%, indicating that 10% of the workers’ compensation claims were COVID-19 claims.

Ms. Wolf said there has been a lot of interest and discussion regarding denial rates for workers’ compensation claims related to COVID-19. The denial rates range from 4% in Michigan and Missouri to as high as 63% in Colorado. She said there has been a lot of speculation that there were workers who filed claims based on exposure, or the fact they had to go into isolation or quarantine, because a colleague may have had COVID-19 and the claim represented a preemptive measure; if a COVID-19 test came back negative, this would lead to a claim denial. Director Wing-Heier said Alaska also experienced this.

Mr. Bradner asked if the IAIABC was also looking at self-insured entities in the data. Ms. Wolf said self-insured data was included in their data. She said the data for all the information she is reporting on was from all claims reported to the states by both insured and self-insured employers. Ms. Wolf said some states have seen some difference in denial rates from insured employers versus self-insured employers. Mr. Bradner asked how IAIABC was getting data from the self-insured entities and asked how comfortable the IAIABC was with the data received. Ms. Wolf said this data is based on the first report of injuries.
that were reported to the state. She said all claims have to be reported to the state regardless of whether a business is insured or self-insured. Ms. Wolf said she is confident that the data includes the landscape of insured and self-insured cases.

Ms. Wolf said regarding industry classes, health care workers accounted for the largest percentage of claims, followed by first responders.

Ms. Wolf said data shared by the states suggests that the majority of COVID-19 claims are fairly low cost and had minimal medical expenses. She said wage replacement benefits generally were limited to the quarantine or isolation period. Ms. Wolf said there is a small percentage of claims that were much more severe and higher in cost. She said there is a lot of speculation regarding the cost of the long-haul COVID-19 claims and what the cost of permanent partial awards might look like because COVID-19 can result in permanent damage to the lungs and to pulmonary function.

Ms. Wolf said that Texas received a lot of their data through a special data call and that the IAIABC was not able to obtain all of the information Texas collected. Therefore, not all information is available for Texas.

Ms. Wolf said there is one emerging issue for the state workers’ compensation administrations. She said as of December 2020, the IAIABC started receiving report of injury claims for people who have had adverse reactions to the COVID-19 vaccine, and they continue to receive them. Ms. Wolf believes this is contributing to the debate related to an employer’s ability to require vaccines, as well as to start discussion regarding the conditions that would make these claims compensable. She said there is activity at the state level that indicates these claims are more prevalent than initially seen.

A question was asked: “If a person is forced to miss work for quarantine and they submit a claim, are they denied for a negative test result?” Ms. Wolf said this is dependent upon the state and the insurer. She said the Washington State Department of Labor & Industries (L&I) made the decision to voluntarily pay for the isolation and quarantine period, even if the COVID-19 test result was negative, if there had been an exposure and the employer required a quarantine. Ms. Wolf said there is no broad rule to answer this question.

Mr. Stolyarov asked whether Ms. Wolf had any statistics regarding the denial for claims related to an adverse reaction from a COVID-19 vaccination. He said there could be certain influences on people submitting those claims that may lead the claims to be questionable from a scientific causation perspective. Ms. Wolf said she does not believe the data is in regarding adverse reactions from vaccinations yet and that states are just now receiving information regarding these claims. She said these claims would be reviewed in terms of their link to compensability. Ms. Wolf said that there was robust debate from the regulatory community about the compensability rules and that she believes each claim will be handled on a case-by-case basis. She said there was some discussion among some that would say if an employer made the COVID-19 vaccine mandatory as a part of an employment relationship and the individual has an adverse reaction, which results in medical treatment or time away from work, this would be a catalyst for filing a workers’ compensation claim.

3. **Heard a Presentation from the NCCI on Workers’ Compensation Presumptions and Loss Data**

Susan Donegan (National Council on Compensation Insurance—NCCI) said the NCCI has seen the workers’ compensation system demonstrate agility and resiliency over the past year. She said more than 20 states considered legislation to establish workers’ compensation presumptions regarding compensability for employees impacted by COVID-19. Ms. Donegan said nine states enacted legislation in 2020, while other states used the mechanisms of executive orders, emergency rules and bulletins. Most of these actions applied to first responders and health care providers, as well as other essential workers.

Ms. Donegan said the NCCI continues to see legislative and regulatory efforts continue in 2021. She said there are approximately 14 states that have various presumption bills pending and being introduced into legislatures. She said these bills have expanded or changed the presumption language to include things such as infectious diseases.

Ms. Donegan said in terms of rate and loss cost filings from 2020, the overall workers’ compensation system continues to experience unprecedented results. The calendar year combined ratios are expected to be quite favorable, coming in at 86%. Both premiums and losses are down for the 2020 calendar year in a similar magnitude. Premiums are -8.1 for private carriers, and she said it looks like final numbers will be closer to -10 with the NCCI’s latest data, which includes both private carrier and state funds.

Ms. Donegan said losses are at approximately a -0.6%, which includes a second-quarter anomaly with a big decline of about 16 to 20%. She said due to the lack of COVID-19 rate making data, the NCCI did not include an explicit adjustment for COVID-19 in the recent rate and loss cost filings. Ms. Donegan said the NCCI did not know whether COVID-19 would result in significant adverse loss development and loss rates, or whether the impact is going to be relatively small. She said that based
on early indications from reported data from the NCCI’s second-quarter medical data call, they saw two things. They looked at the medical transaction from the second quarter to get an idea of the medical component of COVID-19 losses, as well as any significant anomalies due to treatment of injured workers. The NCCI removed simple COVID-19 testing claims from the data.

Ms. Donegan said 20% of the COVID-19 medical includes an inpatient hospital stay. Of those requiring an inpatient hospital stay, one in five required intensive care unit (ICU) treatment. The average length of an inpatient hospital stay for COVID-19 claims ranged from 7.5 days to 11 days. If the ICU was involved, the hospital stay tended to be toward the higher end. Ms. Donegan said the cost of these claims averaged $38,000 for inpatient hospital stays and $60,000 for those stays requiring the ICU. She said there were more COVID-19 claims from females than males, and the average age for COVID-19 claims was 46. Ms. Donegan said 16% of the COVID-19 claims had signs of comorbidity treatments.

Ms. Donegan said there was little distortion in the time to treat injuries due to shutdowns or access to health care challenges, which is encouraging. She said the NCCI was not seeing any material change in the residual market composition at this time. Ms. Donegan said the residual market is made up mostly of small policies, where a substantial portion of the policies are for construction and a small percentage of policies include front-line workers.

Ms. Donegan said some of the topics arising during this year’s legislative sessions include legalization of marijuana, both medical and recreational, as well as CBD. She said there are currently numerous bills regarding these topics, as well as court cases about whether marijuana is covered under workers’ compensation laws.

Ms. Donegan said there are approximately 14 jurisdictions with pending legislation regarding single payer and universal health care. She said this legislation may or may not include workers’ compensation.

Ms. Donegan said there were 13 states that have introduced some form of independent contractor bill, as well as the federal rule. She said there has been nothing introduced in Congress regarding this issue. However, she said the NCCI has been hearing that there may be a bill regarding independent contractors that is similar to California’s independent contractor legislation that may be used as a model in Congress to address independent contractor issues.

Ms. Donegan said the NCCI is still considering COVID-19 as an extraordinary loss event and is working with several modeling firms to evaluate this exposure. She said one possibility would be to incorporate a pandemic load into existing catastrophe loads. Ms. Donegan said she wanted state insurance regulators to know the NCCI is looking at this exposure.

Ms. Donegan said almost 30 states have received filings regarding NCCI’s new Atlas manual modernization, and they have seen about 22 approvals. Some of the approvals are still pending. She said other states’ bills be rolled out later this year.

Ms. Donegan said the NCCI is looking at when and under what circumstances they will bring their staff back to the office and will begin traveling again.

Mr. Stolyarov asked if the NCCI would be offsetting the impact of work from home in future pandemic modeling. Ms. Donegan said that whether this is included in future modeling is something they will take into consideration. She said that one of the questions that has arisen is how working from home is affecting the class codes, at home injuries and safety. Ms. Donegan said the NCCI will follow this closely.

Ms. Donegan said the NCCI had some reclassification of class codes to cover COVID-19. However, she said the rates being discussed are last year’s rates, and class code presumptions were not pulled into last year’s rates; they reflected the prior year. She said this is being looked at for next year too, to see the shift in the reporting from carriers. Mr. McKenney said to the extent that teleworkers were reclassified to the appropriate class, he would have thought that everything was taken care of now. He said there was a class set up for teleworkers prior to COVID-19. Ms. Donegan said this was the case and that there was also one put in for COVID-19 for a deeper look.

Having no further business, the Workers’ Compensation (C) Task Force adjourned.
MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

Market Regulation and Consumer Affairs (D) Committee April 13, 2021, Minutes.................................................................9-2
Market Conduct Annual Statement (MCAS) Best Practices Guide (Attachment One)..............................................................9-7
NAIC Market Regulation Handbook (Attachment Two) ........................................................................................................9-21
Market Analysis Procedures (D) Working Group March 19, 2021, Minutes (Attachment Three)........................................9-33
Market Conduct Annual Statement Blanks (D) Working Group March 23, 2021, Minutes (Attachment Four)................9-42
Privacy Protections (D) Working Group March 29, 2021, Minutes (Attachment Six).................................................................9-51
The Market Regulation and Consumer Affairs (D) Committee met April 13, 2021. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair (KY); Alan McClain (AR); Evan G. Daniels represented by Maria Ailor (AZ); Trinidad Navarro (DE); John F. King (GA); Dana Popish Severinghaus (IL); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing (MT); Jon Godfread (ND); Chris Nicolopoulos represented by Edwin Pugsley (NH); Carter Lawrence represented by David Combs (TN); Jonathan T. Pike (UT); and Michael S. Pieciak represented by Kevin Gaffney (VT). Also participating were: Russell Toal (NM); Jessica K. Altman (PA); Larry D. Deiter (SD); John Haworth (WA); and Rebecca Rebholz (WI).

1. **Adopted its 2020 Fall National Meeting Minutes**

Commissioner Clark made a motion, seconded by Commissioner Godfread, to adopt the Committee’s Dec. 8, 2020, minutes (see NAIC Proceedings – Fall 2020, Market Regulation and Consumer Affairs (D) Committee). The motion passed unanimously.

2. **Heard a Presentation on the Activity of Lead Generators in Health Insurance**

Commissioner Navarro said for the past several months, state insurance regulators and officials from federal agencies have met to discuss improper marketing of health plans by various entities. He said prior to this ad hoc group, state insurance regulators in the health, market conduct and fraud areas were investigating these concerns, but not communicating with each other. He said after talking with the NAIC and other state insurance regulators, the states formed an ad hoc group designed to do two things. First, the ad hoc group was created to bring members of the Health Insurance and Managed Care (B) Committee and the Market Regulation and Consumer Affairs (D) Committee together to share information regarding entities that were improperly marketing health insurance products, including the use of lead generators, unsolicited phone calls, internet solicitations, and other marketing methods occurring in each state. Commissioner Navarro said these discussions have identified common practices, themes and actors. He said the group invited members of the federal government to participate, including the Center for Consumer Information and Insurance Oversight (CCIIO), the U.S. Department of Labor (DOL), and the Federal Trade Commission (FTC). He said as a result of those discussions, schemes have been identified and administrative actions taken. Second, he said the ad hoc group identified a need to look at and perhaps update or create new model laws to address the aggressive and improper marketing of health plans and the oversight of lead generators. He said the ad hoc group agreed that lead generators, whether by mailers, phone calls or internet solicitations, were part of the insurance sales process, but some states were concerned whether they had jurisdiction over these entities. However, he said all states agreed that there needs to be some oversight. He said the NAIC white paper, *The Marketing of Insurance Over the Internet*, needs to be updated to reflect the changes in how the internet is used today and how some entities use the internet to market plans in ways not contemplated only a few years ago.

Commissioner Navarro said the Antifraud (D) Task Force will be considering a proposal to formalize the ad hoc group into a working group under the Task Force. He said the working group would address two goals. First, it would facilitate continued discussions of state and federal insurance regulators about the improper marketing of health plans. Commissioner Navarro said participation of interested state insurance regulators would encompass state insurance regulators from all areas of expertise, including, but not limited to, health, market conduct, antifraud and legal. He said the working group would meet in regulator-only sessions to continue these ongoing discussions and potential prosecutions. Second, he said the working group would be charged with either modifying existing model laws or creating a model law: to 1) address the usage of lead generators in the sale of insurance products; and 2) update marketing rules to modernize the regulation of those activities.

Superintendent Toal commended the work of Commissioner Navarro and his staff. Superintendent Toal noted that this is a critical problem. There are many misleading and unapproved products being marketed. Additionally, contacting a lead generator can generate hundreds of calls to an individual consumer. Superintendent Toal said he would support the efforts in any way he can. Commissioner Altman said this is a very troubling issue. She noted that after the passage of the federal American Rescue Plan Act of 2021 (ARPA), she received calls soliciting Bidencare products. She said the biggest challenge is with unregulated entities. She said the state insurance regulators need to hold regulated entities responsible for the actions of unregulated entities that market their plans improperly. She said she is unsure if state laws allow that. Katie Keith (Out2Enroll)
and Harold M. Ting (Healthcare Consumer Advocate) noted that the consumer representatives support the work and are willing to assist.

3. **Adopted its Task Force and Working Group Reports**

Commissioner Richardson said Damion Hughes (CO) will be the new chair of the Market Conduct Examination Guidelines (D) Working Group. She said the Working Group summary report is in the materials. She also noted that the Market Actions (D) Working Group and the Advisory Organization Examination Oversight (D) Working Group met in regulator-only session due to the nature of their discussions focusing on specific company practices. She said there are no written or verbal reports for these working groups.

a. **Antifraud (D) Task Force**

Commissioner Navarro said the Antifraud (D) Task Force met March 24 and adopted its Nov. 16, 2020, minutes.

Commissioner Navarro said the Task Force received an update from the Antifraud Education Enhancement (D) Working Group. He said the Working Group hosted a webinar on Feb. 11 by CARCO regarding the mobile capabilities it can provide to state departments of insurance (DOIs) to assist in fighting insurance fraud. He said the Working Group will host the NAIC Investigator Safety training on June 2.

Commissioner Navarro said the Task Force received an update from the Antifraud Technology (D) Working Group. He said by finalizing the revisions to the *Antifraud Plan Guideline (#1690)*, the Working Group completed the first step in its charge to “review and provide recommendations for the development of an Antifraud Plan Repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions.” He said the Working Group will begin drafting a template for industry to use when creating their antifraud plan.

Commissioner Navarro said the Task Force discussed its 2021 charges and its continued monitoring of insurance fraud related to the COVID-19 pandemic. He said the Task Force will continue to monitor potential trends generated by the pandemic and hold meetings, as necessary, to bring general awareness at the state, industry and consumer levels.

Commissioner Navarro said the Task Force received an update on the NAIC Online Fraud Reporting System (OFRS) redesign. He said beta testing is scheduled to begin in April.

Commissioner Navarro said the Task Force received reports on matters of national interest to insurance fraud bureaus from the National Insurance Crime Bureau (NICB) and the Coalition Against Insurance Fraud (CAIF).

b. **Market Information Systems (D) Task Force**

Commissioner Kreidler said the Market Information Systems (D) Task Force met March 22 and reviewed its 2021 charges. He said the charge to “develop recommendations for the incorporation of artificial intelligence (AI) abilities in NAIC Market Information Systems for use in market analysis” was delegated to the Market Information System Research and Development (D) Working Group. This was done because the Working Group has members with expertise in this field, and it meets more frequently than the Task Force. Commissioner Kreidler noted that the Task Force remains responsible for the final product.

Commissioner Kreidler said the Task Force adopted the report of the Market Information System Research and Development (D) Working Group. He said the Working Group reported that it adopted a proposal for coding changes to the Regulatory Information Retrieval Systems (RIRS). He said the proposal will be posted to the Task Force web page and will be considered for adoption by the Task Force during the Summer National Meeting. He said the Working Group also adopted a change to the Uniform System Enhancement Request (USER) form process, which aligns the process to the agile approach used by the NAIC.

Commissioner Kreidler said the Task Force also adopted the Market Information Systems (MIS) Data Analysis Metrics and Recommendations.

Commissioner Kreidler said the Task Force reviewed outstanding USER forms.

b. **Producer Licensing (D) Task Force**

Director Deiter said the Producer Licensing (D) Task Force met on Mar. 26.
Director Deiter said during the meeting, the Task Force discussed state implementation of online examinations. He said 32 states have implemented online examinations, and three states are scheduled to implement online examinations by the end of April. Only three states decided not to implement remote online examinations. He said the Producer Licensing Uniformity (D) Working Group will be reviewing the examination standards in the NAIC State Licensing Handbook to ensure it is consistent with the state practices for implementing remote examinations.

Director Deiter said the Task Force heard a briefing on the National Association of Registered Agents and Brokers Reform Act of 2015 (NARAB Reform Act), which is a federal law that preempts state nonresident producer licensing laws and will establish nonresident producer licensing qualifications on a multi-state basis. He said the briefing addressed the impact on state producer licensing and included an overview of the NARAB Reform Act’s structure and governance and the responsibilities of the NARAB board. He said with the change in administration at the federal level, both the NAIC and the National Insurance Producer Registry (NIPR) leadership are monitoring federal activity that would lead to the appointment of the 13 member NARAB board and formation of NARAB.

Director Deiter said the Task Force received a report from the Producer Licensing Uniformity (D) Working Group. He said the Working Group continues to focus on licensing standards for pet insurance. He said the Task Force also received a report from the Uniform Education (D) Working Group. He said the Working Group continues to focus on state implementation of the 2019 Continuing Education Reciprocity (CER) Agreement, which 44 jurisdictions have signed.

Director Deiter said the Task Force received a report from the NIPR Board of Directors. He said the NIPR Board of Directors approved its 2021–2023 Strategic Plan. He said the plan has the following three pillars: 1) engaged and empowered teams; 2) customer-focused excellence; and 3) high-quality and reliable technology. He noted that NIPR also reported the release of a major upgrade to its Attachment Warehouse application. Finally, NIPR reported $47.9 million in revenue in 2020, a 5.7% increase from 2019.

Director Deiter said the Task Force discussed procedures for amending NAIC Uniform Producer Licensing Applications, and it will have a revised draft to address the comments submitted by state insurance regulators and interested parties.

Director Deiter said the Task Force received comments from the American Council of Life Insurers (ACLI) on how the NAIC’s initiatives on race and insurance relate to insurance producers and the desire to increase the number of minority producers. He said while not discussed by the Task Force, which met before the most recent meeting of the Special (EX) Committee on Race and Insurance, there have been three issues delegated to the Task Force from the Committee. He said the issues are: 1) the availability of producer licensing exams in foreign languages; 2) the steps exam vendors have taken to mitigate cultural bias; and 3) the number and location of producers by company compared to demographics in the same area.

d. Market Analysis Procedures (D) Working Group

Mr. Haworth said the Market Analysis Procedures (D) Working Group met Jan. 27, Feb. 25 and March 19.

Mr. Haworth said during these meetings, the Working Group adopted revisions to the Market Conduct Annual Statement (MCAS) Best Practices Guide (Best Practices Guide) (Attachment One). He said the Best Practices Guide had not been updated since its original adoption in 2014. He noted that among the revisions included identifying additional best practices, highlighting them in an appendix, and recommending a 14-day extension limitation. He said the Best Practices Guide is available on the Working Group’s web page.

Mr. Haworth said the Working Group also adopted revisions to the market analysis chapters of the NAIC Market Regulation Handbook (Handbook) (Attachment Two). He said considering the changing technology available to market analysts, the Working Group revised four chapters in the Handbook. He said the revisions will be forwarded to the Market Conduct Examination Guidelines (D) Working Group.

Mr. Haworth said the Working Group also adopted two changes affecting MCAS filings. First, the Working Group adopted a proposal to require companies to complete their attestations by line of business and by state. Second, the Working Group adopted a 14-calendar day limitation on extension requests from companies. He said companies will still be able to request additional extensions, if necessary, but for no longer than 14 days at a stretch.

Mr. Haworth said the Working Group continues its discussions on providing technical market analysis training to state insurance regulators, and it is receiving comments on what training is needed by jurisdictions.
e. Market Conduct Annual Statement Blanks (D) Working Group

Ms. Rebholz said the Market Conduct Annual Statement Blanks (D) Working Group met March 23.

Ms. Rebholz said the Working Group has four different subject matter expert (SME) groups currently working to finalize drafts for consideration by the Working Group. She said the SME groups are working on: 1) a new Other Health MCAS blank and data call and definitions; 2) a new Travel MCAS blank and data call and definitions; 3) new accelerated underwriting data elements and definitions for the Life MCAS blank; and 4) new digital claims data elements and definitions for the Private Passenger Auto and Homeowners MCAS blanks. She said the hope is to have these drafts exposed and considered by the Working Group prior to the June 1 deadline for updates to the MCAS for the 2022 data year.

Ms. Rebholz said the Working Group is discussing the placement of complaint and lawsuit data elements within the Homeowners and Private Passenger Auto MCAS blanks and reviewing the MCAS lawsuit definitions.

f. Privacy Protections (D) Working Group

Lois E. Alexander (NAIC) said the Privacy Protections (D) Working Group met March 29 and adopted its 2020 Fall National Meeting minutes, which included a discussion of the initial draft gap analysis of consumer issues.

Ms. Alexander said the Working Group received NAIC status reports on federal and state privacy legislation. She said the federal report indicated that the U.S. Congress (Congress) believes there is a need for federal data privacy legislation, but differences in approaches have thwarted efforts to enact comprehensive legislation. She said the points of contention include: 1) whether and to what extent federal legislation should preempt state laws; and 2) whether the legislation should include a private right of action. She said the NAIC continues to engage with Congress, oppose preemptive legislative proposals, and inform Congress of the Working Group’s efforts to update NAIC model laws. She said the NAIC continues to underscore the importance of not disregarding the existing state regulatory framework or inhibiting ongoing efforts in the states to develop laws and regulations in the best interest of consumers.

Ms. Alexander said the state report indicated that at least 30 states introduced data privacy legislation in 2020. She said many of them were comprehensive and similar to the California Consumer Privacy Act (CCPA). However, very few of them were enacted because the COVID-19 pandemic disrupted legislative sessions. Ms. Alexander said in 2021, bills have been introduced in 23 states that focus on business obligations stemming from consumer rights, but the bills vary in substance. She said many of the bills apply to for-profit businesses that: 1) have global annual gross revenues in excess of $23 million; 2) annually buy, sell or share the personal information of 50,000 or more consumers for commercial purposes; or 3) derive 50% or more of its global revenues from selling or sharing personal information. She said common issues have emerged, such as: 1) a requirement that covered entities perform a risk assessment; 2) providing for a private right of action; 3) addressing data security and privacy; 4) a resemblance to the General Data Protection Regulation (GDPR); and 5) exempting data collected in compliance with the Gramm-Leach-Bliley Act (GLBA), as well as entities subject to the GLBA. Other exemptions would only exclude the data collected in compliance with the GLBA, while still regulating the entity.

Ms. Alexander said the Working Group reviewed additional guidance through the Market Regulation and Consumer Affairs (D) Committee in the form of the NAIC member-adopted strategy for consumer data privacy protections. She said the strategy charges the Committee with: 1) summarizing consumer data privacy protections found in the Health Information Privacy Model Act (#55), the NAIC Insurance Information and Privacy Protection Model Act (#670), and the Privacy of Consumer Financial and Health Information Regulation (#672); and 2) identifying notice requirements of states, the European Union’s (EU’s) GDPR, and the CCPA and how insurers may be subject to these requirements. She said the Working Group has completed both charges.

Ms. Alexander said the strategy also charges the Committee with: 1) identifying corresponding consumer rights that attach to notice requirements, such as the right to opt out of data sharing, the right to correct or delete information, the right of data portability, and the right to restrict the use of data and how insurers may be subject to these requirements; 2) setting forth a policy statement on the minimum consumer data privacy protections that are appropriate for the business of insurance; and 3) delivering a report on the charges by the Fall National Meeting.

Ms. Alexander said the strategy additionally charges the Committee to: 1) engage with state attorneys general (AGs), Congress, and federal regulatory agencies on state and federal data privacy laws to minimize preemption provisions and maximize state insurance regulatory authority; and 2) reappoint the Working Group to revise NAIC models, as necessary, to incorporate
minimum consumer data privacy protections that are appropriate for the business of insurance. She said these last charges are also to be completed by the Fall National Meeting.

Ms. Alexander said the Working Group discussed comments concerning the gap analysis received after its Nov. 20, 2020, meeting. She said comments were received from ACLI, the Coalition of Health Carriers, the National Association of Mutual Insurance Companies (NAMIC), and the American Property Casualty Insurance Association (APCIA).

Ms. Alexander said the Working Group announced that a consumer privacy protections panel will speak at the virtual NAIC Insurance Summit in June.

Commissioner Richardson asked for a motion to adopt the reports of the Market Regulation and Consumer Affairs (D) Committee’s task forces and working groups, including the following action items: 1) the MIS data Analysis Metrics and Recommendations adopted by the Market Information Systems (D) Task Force; 2) revisions to the Best Practices Guide adopted by the Market Analysis Procedures (D) Working Group; 3) revisions to the four market analysis chapters of the Handbook adopted by the Market Analysis Procedures (D) Working Group; 4) the 14 calendar-day limitation on MCAS filing extension requests adopted by the Market Analysis Procedures (D) Working Group; and 5) the requirement for companies to identify MCAS filing attesters by both line of business and by state to be implemented for the 2021 data to be reported in 2022, which was adopted by the Market Analysis Procedures (D) Working Group.

4. Discussed Other Matters

Birny Birnbaum (Center for Economic Justice—CEJ) encouraged the Committee to become more engaged in the work of the Special (EX) Committee on Race and Insurance. He said the CEJ drafted a proposal for a comprehensive work plan to address systemic racism in insurance. Included within the proposal is the development of tools and resources for regulatory oversight. He said the development of the tools requires market regulation data collection that is sufficient to monitor consumer outcomes by prohibited class characteristics and the identification of gaps in regulatory skills and resources that are necessary for the analysis of disparate impact and proxy discrimination. He said both activities fall within the purview of the Market Regulation and Consumer Affairs (D) Committee.

Mr. Birnbaum said all aspects of insurance operations, such as marketing, claims and antifraud, are subject to racism and disparate impact. He said it is important for market regulators to be well represented in the work of the Special (EX) Committee on Race and Insurance.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

Introduction

The Market Conduct Annual Statement (MCAS) was developed with the input of state insurance regulators and representatives from the insurance industry to provide an analysis tool for certain key market data elements. Some of the states collected private passenger auto data as early as the 1990s. In 2003, the NAIC Market Regulation and Consumer Affairs (D) Committee established an annual statement pilot program for life and annuity and property/casualty companies. Today, 49 the states participate in MCAS and the NAIC collects the data on behalf of the states.

By using common data and analysis, the states have a uniform method of comparing the performance of companies. If a company’s performance appears to fall outside of industry norms, the state will want to undertake further review of that company. The purpose of this document is to encourage the use of best practices in the collection and review of MCAS data.

Before moving forward with follow-up activity or continuum actions, the following three principles should be considered:

- Always refer back to the underlying raw data. Is the company following the definitions? Did they leave claims open when actually all payments had been made?
- Before moving on, check the company comments. These comments can save time by directing you to specific data or explaining a market shift.
- Always interpret the MCAS within the context of all other available information. Was there a catastrophic event that caused the spike in number of claims?

Data consists of various market indicators, primarily related to two areas:

- Claims handling – claim denials, processing times and lawsuit activity.
- Underwriting – new issues, policies in force, non-renewals and cancellations.

Other line-specific indicators are used to determine, for example, the number of policy exchanges and resisted claims for life insurance policies.

As of the document revision date, MCAS data are collected for the following lines of business with 49 participating jurisdictions:

- Annuity
- Disability Income
- Health
- Homeowners
- Lender-Placed Home and Auto
- Life
- Long-Term Care
- Private Passenger Auto
- Private Flood (effective for the 2020 data year).
MCAS Timeline

- September – Call letter review/update
- December 15 - Call letters sent
- January 31 – Portal closes for the prior year plus one data
- March – April – MCAS Training Webinars
- April – Companies submit data and make extension or waiver requests
- April 30 – Data submissions are due*
- April – June – Data Validation by the NAIC and states
- May – June – data analysis by states and next steps
- May – States contact late filers
- July 1 – Scorecards are published

Please note that some lines of business may have due dates that vary from the standard April 30 filing due date. For the most current information on due dates for all lines of business, please refer to the MCAS webpage's calendar of key MCAS dates (http://www.naic.org/mcas_main.htm).

September: Call Letter Review/Update

In September, the NAIC requests that the participating states’ MCAS contacts submit any changes to the data call letters. These letters are sent to companies to obtain information for the next year. The data call letter identifies changes to the MCAS submission, as well as the contact person for the state requesting submission.

★★ Best Practice: Be sure your MCAS contact is current. You can check/update your state MCAS contact here: Link to Participating Jurisdiction Contacts.

Mid-December: Call Letters Sent

In December, the data call letters are sent to each company’s MCAS contact; companies are expected to keep their contact information current. At the same time, the NAIC updates its submission portal in preparation for the submission of new data.

January 31: Portal Closes

By January 31, companies may no longer use the MCAS portal to make changes to the prior year’s data. Changes to prior year’s data will need prior approval from the state(s) affected.

March to April: Training Webinars

The NAIC provides webinars detailing changes to the MCAS data process. Additional information is also available on the NAIC website. To properly analyze the MCAS data, the analyst needs to stay current on what the ratios and data elements mean and why these elements were chosen.

For companies not familiar with the MCAS process, the NAIC provides training on how to submit filings.

The MCAS webpage (http://www.naic.org/mcas_main.htm) has the most current training materials for each filing year on the left side of the page under the heading “TRAINING”. NAIC Education and Training (https://content.naic.org/education_schedule.htm) also provides links to training for both MCAS and market analysis (Market Analysis Techniques (MAT) On-line).
April: Companies Submit Data and Make Extension or Waiver Requests

Several methods are used to address questions by the companies regarding data submissions, including bulletin boards, frequently asked questions (FAQs), training webinars and other resources. The NAIC maintains a webpage dedicated to explaining the MCAS process and any changes expected. These resources are available to assist the states with incoming questions from insurance companies.

MCAS resources are located along the left-hand side on the MCAS webpage (http://www.naic.org/mcas_main.htm).

April 30: Data Submissions Due

Late Filings and Revised Filings

Late or inaccurate filings may impact statewide ratios. Regulators should balance the need for accurate data with company accountability. Companies should be encouraged to file timely and accurately. Changes associated with re-filings are detailed in the “MCAS Audit Trail” report, as are any comments the company may have as to why the data was changed. Companies that submit data late, or with changes, may have internal control issues. It also needs to be determined if a company is re-filing for a small number of states or is re-filing globally.

**Best Practice:** When a company re-files to correct an issue, the analyst should review the filings submitted to other states. If filings in other states have the same issues, then coordination with other states, or the domestic state, should be initiated when contacting the company.

Company re-filings should be kept to a minimum. A significant volume of re-filings can alter overall state ratios and change company rankings. Regulators should develop strategies to ensure data is submitted correctly the first time. Companies that habitually re-file over several years should be identified and contacted to help remediate difficulties. Companies should submit an extension request rather than submit data known to be incorrect with the expectation that it can simply re-file at a later date. If a company does have to re-file, it should provide a complete explanation, in the comments section, of the data errors and steps taken to ensure there is not recurrence.

If an insurer that files in multiple states has more than two filings in error within a five-year period and/or files late (a late filing includes failing to meet an extension due date in two consecutive years), information is available on i-Site+ in a Tableau dashboard available to regulators. If a majority of jurisdictions agree, a referral will be made to include the company in the Market Actions (D) Working Group’s National Analysis Program. To ensure that companies are aware of the submission requirements, the NAIC develops training classes for company as well as state representatives.

Companies who have multiple revised filings must provide a risk management or loss control policy that outlines their process to address these control/compliance issues. Companies that have a pattern of submitting late or re-filing may have other internal control issues that require additional analysis.

**Best Practice:** Companies that habitually re-file over several years should be identified using the Tableau dashboard and contacted to help remediate difficulties.

Waiver and Extension Requests

**Waivers:** Data call letters are sent to each company that exceeds premium thresholds on the financial annual statement (FAS) for each line of business captured by MCAS. Because there are slight definitional discrepancies between the FAS and MCAS, a company may receive a call letter even though they are exempt from filing. For example, antique auto products may be reported in the FAS as private passenger auto business, while such products are excluded from the MCAS. In these situations, the company may request a waiver from each state in which it markets these products.
Please Note: Companies that market regular private passenger auto products and reach the $50,000 threshold are still required to file even if they also market custom auto products.

It is recommended that the states verify the company’s request prior to granting a waiver.

For example, there may be situations where the company requests a waiver for a product line that is actually covered under MCAS. This happened in the past when companies stated they only market motorcycle coverages. While there was a time when motorcycle coverages were excluded from MCAS, this was changed for the 2011 submission. As some companies were not aware of the change, waivers were requested.

Extensions: There are situations where the company knows it will not be able to submit its MCAS filing on a timely basis. In these situations, the company may request an extension of up to 14 calendar days. Requests should be accompanied by the following:

1. Have you requested an extension within the five previous years?
2. If so, is your current request for the same reason?
   a. If the answer is yes, please provide the following:
      i. Any steps your company has taken to prevent this concern moving forward.
      ii. The progress your company has made toward streamlining MCAS filings so it is not dependent on staffing concerns.
      iii. Whether your company includes this process/review as part of the risk management plan.
3. If a company asks for an extension on or after the due date, additional information must be required of the company.

   ★ Best Practice: Requests for additional information should be made within the MCAS Extension tool. This allows your jurisdiction and other jurisdictions to view the requests over multiple years.

All extension requests must be processed through i-Site+. If a company’s request is not processed in i-Site+, the state analyst will not be able to see if the company has actually filed when reviewing the MCAS Filing Status Report. Analysts should review the responses of other states to the extension request. Coordination among the states is important to maintain consistency. Otherwise, one state may grant a 14-day extension where another might not grant one at all.

For additional reference, please see the MCAS Industry User Guide located in the Resources section of the MCAS webpage (http://www.naic.org/mcas_main.htm). For situations where a company requests more than a two-week extension, it is recommended that such an extension request be coordinated with other MCAS states.

April to June: Validation of Incoming Data

It is important to review the MCAS Correspondence Tracking link in the Summary Reports Section of i-Site+ when beginning review of a company. The NAIC notifies reporting companies by email if data anomalies are discovered.

In addition, inferences should be based only on statistically credible data. If the company is small and has few claims, a delay in a small number of claims could create a large impact on various ratios. The company should also be aware that its data is outside the norm and provide comments. If the company has made comments, the analyst should review them by going to the MCAS Pick-A-Page Section in i-Site+ and select the Jurat Company Contact Information report, as well as the interrogatories.
MCAS Data Review

Tier 1: Validation Review

- Once a company has submitted its MCAS data, the NAIC performs validations to test the data for internal consistency and reasonability. For example, a validation exception is generated if a company’s direct written premiums reported on their FAS and those reported on the MCAS vary by +/- 20%. All validation warnings can be viewed on the company’s Validation Exception Report, which is available on i-Site+. These tolerances have been established to avoid corresponding with insurers regarding validations that are generated due to small amounts of data provided by the company or small (immaterial) differences.

- The following table provides some examples of MCAS data validation conducted by the NAIC:

<table>
<thead>
<tr>
<th>Line Business of</th>
<th>Validation Description</th>
<th>Review Tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>PPA/HO claims closed w/o pay &gt; claims closed with pay</td>
<td>(claims closed with pay + claims closed w/o pay) &gt;= 100 claims AND &gt;= 25% more claims closed w/o pay than with pay</td>
<td></td>
</tr>
<tr>
<td>PPA/HO policies in force &lt; new policies issued</td>
<td>policies in force and policies issued each must be &gt;= 500 AND policies in force is three times &lt; new policies issued</td>
<td></td>
</tr>
<tr>
<td>HO FAS direct written premiums (DWP) and MCAS DWP vary by +/- 20%</td>
<td>MCAS &gt; FAS by &gt;= 100% OR FAS &gt; MCAS by &gt; = 20%</td>
<td></td>
</tr>
<tr>
<td>Life/Annuity total claims closed with payment &lt;= claims denied, resisted or compromised</td>
<td>(total claims closed with payment) + (claims denied, resisted or compromised) &gt;= 100</td>
<td></td>
</tr>
<tr>
<td>Life/Annuity replacements applied for &lt; policies issued</td>
<td>(replacements applied for + policies issued) &gt;=100 AND &gt;= 25% more replacements applied for than policies issued</td>
<td></td>
</tr>
<tr>
<td>Life/Annuity new policies issued or policies in force &gt;0 then DWP must be &gt; 0</td>
<td>(new policies issued &gt;50) OR (policies in force &gt; 100) AND DWP = 0</td>
<td></td>
</tr>
<tr>
<td>Life/Annuity DWP &gt; 0 then (policies issued + policies in force) must be &gt; 0</td>
<td>DWP &gt; 100,000 AND Policies in force = 0</td>
<td></td>
</tr>
</tbody>
</table>

Tier 2: Ratio and Indicator Review

- The MCAS published ratios are also reviewed to find any company ratios generated from data entry errors or other data anomalies. The ratio results for a given state are reviewed by sorting them to find extreme high or low values. The data is then further examined to determine if a possible data error exists.

- In addition to the MCAS published ratios, additional ratios and indicators are examined to find potential data errors. Following are examples of additional ratios and indicators that are used by NAIC staff:

| PPA/HO Dwellings or autos to policies in force |
| PPA/HO DWP to policies in force |
| PPA/HO Claims opened to policies in force |
| PPA/HO Suits open during the period to policies in force |
| PPA/HO Suits open end of period to (claims/1000) |
| PPA/HO Median days as reported compared to calculated median days |
| LIFE Denied, resisted or compromised claims to policies in force |
| LIFE/ANNUITY Surrenders to policies in force |
| LIFE/ANNUITY DWP to policies in force |
| LIFE Face amount of policies in force to policies in force |
Tier 3: Individual Data Element Review

- Once the previous two tiers of review have been completed, each individual data element, by line of business and state, are reviewed. This review is done to find possible data errors. Where possible, the data elements are compared to the value reported in the previous year to identify significant changes in reporting.

Validation of MCAS filings are performed by NAIC staff as well as the participating jurisdictions. All inquiries sent by the NAIC data analysts to companies are located in the Correspondence Tracking application found in i-Site+. Within Correspondence Tracking, an analyst can review the correspondence between the NAIC and the company, and can see the status of the validation issue—"in progress", "state handling", "resolved", or "no action required".

**Best Practice:** It is the responsibility of the states to verify that the data is reasonable. For example, are ratios that are extreme outliers an accurate reflection of company market practices, or are they reporting errors? Before contacting the company, check to see if the company has already been contacted by an NAIC data analyst for the same issue.

May to June: Analysis

For specifics on ratio formulas, see the MCAS Scorecard Ratio Formulas on the MCAS webpage (http://www.naic.org/mcas_main.htm).

The core of any MCAS analysis consists of developing ratios that serve as potential indicators of company performance and comparing these ratios to an industry-wide baseline. To assess the degree to which ratios deviate from the baseline, analysis can be done in various ways. One of the easiest is to use the MCAS Market Analysis Prioritization Tool (MAPT) for the respective line of business and determine the average for each ratio. Then, identify companies with ratios substantially above that average. For example, private passenger auto Ratio 3 is the percentage of claims paid beyond 60 days. If the state average for all private passenger auto companies is 25%, then companies with a value of 50% could be considered outliers. Though there may be situations where the focus is on very high ratios, attention should be paid to low ratios, as well. A company with a very low ratio of 5% for Ratio 3 may not be conducting any investigations and simply paying all claims. This could have a future impact for the company if loss ratios suddenly increase.

**Ranks**

The company’s ratio rank is a function of the company’s ratio value compared to those of all other filing companies. A ranking of zero indicates the ratio value is zero, null or incalculable. A ranking of 21 indicates the ratio value is greater than 100 or the ratio has the highest value of those being ranked. This may be due to anomalies with the data. It should be noted that private passenger auto and homeowners underwriting ratios cannot be calculated at the coverage level, as underwriting information is collected only at the line of business level.

In addition to the overall ranks, the homeowners and private passenger auto lines of business have a claims rank, an underwriting rank, and a suits rank. These supplemental ranks are calculated at the line of business, state and national levels. Ranks can be used to look at multiple companies simultaneously. Outliers can be identified by finding the mean and then calculating the standard deviation in Microsoft Excel or other spreadsheet programs.
Ranks should be evaluated with an understanding of the data elements and underlying raw data. There may be variations in the raw data that make a company appear normal when looking at the ranking. Also, companies with low ranks may be cause for concern. Very low ranks may indicate problems with the company’s data. Analysts should not concentrate only on those companies with higher ranks. On occasion, carriers with low underwriting ranks have failed to report certain underwriting activity; e.g., non-renewals or cancellations. Also note that ranks can be trended; i.e., companies moving up or down in ranks over a three-year period can be identified.

It is important to determine whether the underlying data is statistically credible. Due to what statisticians term the “law of large numbers,” valid inferences require a sufficient volume of data points. Ratios for smaller companies may not be meaningful indicators of general business practices but, rather, random fluctuations in the underlying data.

For example, if a company has only three claims and two of them were denied, their ratio of denials is 60%, and is very likely well above the industry norm. However, any inferences based on this ratio are likely to be unwarranted.

**Tools and Reports Available**

When reviewing MCAS filings, the analyst may find it useful to review rate and form filings to see what business is being marketed. The company’s Management’s Discussion and Analysis (MDA) filing may also assist. The MCAS-MAPT is a great tool to conduct analysis, as additional worksheets can be added for doing sorts or conditional formatting, and columns that are not needed can be hidden.

Review of the interrogatories is also helpful. Companies are to report if they are still actively writing; if there has been a significant event or business strategy change that affects the data; or if the insurer has sold, closed, or moved a block of business to another company. Having this knowledge is extremely helpful when reviewing the company’s data, especially when comparing it to prior years.

i-Site+ shows premium changes per year, which may be of assistance, and Microsoft Access can also be used to query several MAPT reports at the same time.

**Best Practice:** Make use of the tools available for MCAS analysis including; rate & form filing history, the company’s MDA, the MCAS-MAPT and a review of interrogatory responses.

**Analysis Techniques**

Analysis is an ongoing process, but it should begin as soon as data becomes available. The MCAS-MAPT can be used to review rankings and ratios. The mean of the data can be identified, and data that significantly deviate from the mean can be viewed as outliers. In other situations, depending on the skew of the data, using the median may be more representative of the center point of the data. Whether to use the mean or the median should be based on the analyst’s judgment, based upon a particular data set.

Thresholds can also be established in Tableau or using Microsoft Excel. With Microsoft Excel, conditional formatting can be used to quickly identify outliers. The analyst may also use highlighted colors with conditional formatting.

**Trending**

The MCAS-MAPT provides the availability to trend data. Companies that ranked low in prior years but high in the current year can be quickly identified. Claims payment patterns can also be trended to see if there are any patterns of concern. If a company is just entering a product line, trending can be used to identify the new activity and the company’s growth. If a company is leaving a market or
shifting product lines, these activities can also be monitored.

Data needs to be monitored to identify false trends or reporting errors. If the company recently expanded into the state but trending indicates a decline, then additional steps to verify the data must take place. This may require contacting the company or performing market analysis.

Comparisons

Once the data is in a searchable format, such as in Tableau, Excel or Access, additional comparisons can be performed. The data can be viewed by insurer group to identify possible non-standard underwriting companies or outlying companies that are part of the group.

Company to Company

Comparisons to other companies can also be conducted. If the industry is seeing higher claims utilization, is that reflected in the data? Are some companies affected more than others?

Newer companies may behave differently than older ones or may have slightly different policyholder demographics.

Standard versus Non-standard Lines

It is important for the analyst to be familiar with the company being reviewed. There may be value to looking at the rate or form filings to determine if products offered are standard or non-standard. Some companies that offer non-standard lines, such as homeowners or private passenger auto, may rank higher on many ratios than standard or preferred coverage. By understanding the product design before review, the analyst can determine if the non-standard company should be reviewed separately from the other companies. When reviewing private passenger or homeowners’ coverages, it is important to look at the interrogatory page that contains information about the amount of business written in the non-standard market. This can be located in the MCAS Pick-A-Page section of i-Site+. It can also be found on MCAS-MAPT.

For example, non-standard companies’ ratios generated from claims data may deviate from the industry norm because, historically, more claims are filed by non-standard policy owners or insureds are harder to locate.

Company to State Ratio

The company can be viewed in relation to the state-wide ratios. Is the company significantly higher or lower than average compared to other companies? Does a particular ratio appear to be high for a company compared to the state ratio? Is the company still writing in the line of business? Are there any trends over the past several years? These questions need to be considered when looking at company data compared to state ratios.

State Ratios to Other State Ratios

Average ratios or company ratios may differ between the states. If the company is writing the same product in specific states, MCAS data in those states may be relevant. The company may have different claims adjusters in different states. Also, data that should be similar between the states may be vastly different.

The analyst may review neighboring states for comparisons of state ratios or may look for states that have similar premium volumes and demographics. This approach may identify if the company has similar issues in multiple states and allow the analyst to develop strategies to resolve them.
Review of Individual Company Data

The underlying data must always be considered. If a company has very few claims and reports a delay in only one, this might cause the rankings and ratios to spike significantly. Annuity companies that no longer write business may see Ratio 3 spike when a consumer surrenders a policy.

It is important to note that the ratios are based on the underlying data. If the underlying data has inconsistencies, it may not be noticed by looking at the overall ratios.

As stated previously, the analyst needs to know and understand the various companies’ markets and how business is conducted in the state. If ratios are outliers, the analyst should look at the underlying data to see if the ratios are skewed for certain types of claims.

For example, for private passenger auto claims, the analyst should look at how claims are processed for collision, bodily injury, etc.

Also be careful of “false positives.”

For example, Ratio 3 for life and annuities measures surrenders to new policies issued. If the company writes little or no new business, but has surrenders, this ratio may be very high. Again, it is important to know what the company writes in the respective state. Where applicable, this can be determined by reviewing filings submitted to the state for review. The company may also use its comments section to provide clarification of outliers.

Combining MCAS with Other Market Information Tools

Analysis should not focus exclusively on MCAS data to make inferences about a company’s market behavior. Data from other NAIC systems—such as the Regulatory Information Retrieval System (RIRS), Market Analysis Review System (MARS), Examination Tracking System (ETS) and Market Analysis Prioritization Tool (MAPT)—provide a basis for a much more general overview of a company’s market performance. The data may be viewed in conjunction with the MAP-T by a specific line of business; e.g., private passenger, homeowners, life, etc. The state insurance department’s complaint database can be a resource, as well. By the time MCAS data is received, there may be five or six months of complaint data available within the department not viewable from the i-Site+ Level 1 screens. In addition, other states may have already performed Level 1 or other analyses, and such actions can be viewed in i-Site+. Just because the MCAS filing is unremarkable and does not reveal any areas of concern, the analyst should not infer that the company does not have other issues.

For example, the company could still be marketing unapproved forms through unlicensed producers, or engaging in other behaviors not reflected in the MCAS ratios.

Best Practice: Analysis should not focus exclusively on MCAS data – when there are questions, bring in data from other NAIC systems to gain a fuller understanding of a company’s market behavior.

Next Steps

When to Contact the Company

If MCAS data anomalies have no apparent explanation, then the analyst should contact the company’s MCAS representative. Every effort should be made to determine whether the data is accurate, and whether the representative can provide an explanation for the anomalies related to a company’s market practices. If the company representative appears to lack training or the understanding to adequately address concerns, then additional analysis of the company may be
appropriate.

For example, does a high ratio of claims closed without payment reflect the manner in which claims are counted in the production of the MCAS, as opposed to claims handling practices?

**Integrating MCAS Data into the Market Analysis Framework**

Level 1 analysis incorporates MCAS data for all MCAS lines in the states that require MCAS submissions. It is important to note, however, that there are states that do not require MCAS submissions; in these cases, MCAS data will not be incorporated into Level 1 or Level 2 analysis.

As noted in this document, there may be a variety of reasons a company is an outlier that are unrelated to market practices; in these cases, a Level 1 and/or Level 2 analysis may be revealing.

The analyst may also want to review Level 1 and Level 2 analyses conducted by other states prior to contacting the company about issues or concerns. This will allow the analyst to detect possible data issues, as opposed to contacting the company on a range of issues that may not represent true concerns. There may be other times when the company should be contacted directly.

For example, a significant number of lawsuits may require contact with the company for clarification.

**Integrating Other Data into MCAS**

The intent of market analysis is to understand how companies interact with consumers. Are claims paid timely and correctly? Are the products appropriately marketed for the consumer? If the analyst has an understanding of the products filed and approved, the type of producer marketing the product and the company’s claim payment method(s), the analyst will be better able to put the company’s MCAS submission into context. If the MCAS data suggests a change in the company’s practices, then the analyst can be more proactive in protecting consumers.

**July 1: Scorecards**

MCAS scorecards are produced each year to show the jurisdiction-wide ratio and the distribution of ratios for all companies filing an MCAS in a given jurisdiction. Individual company ratio information is available through the online MCAS application. A company can gain a better understanding of where they fit in the insurance marketplace and what opportunities may exist to improve their performance in a jurisdiction by comparing their jurisdiction-specific ratios to the scorecard for that jurisdiction. Each year, the most recent scorecards for all participating MCAS jurisdictions are made available on the NAIC MCAS Web page via a link to the Contacts and Scorecards ([https://content.naic.org/mcas_data_dashboard.htm](https://content.naic.org/mcas_data_dashboard.htm)).

Scorecards are posted on the MCAS Web page. The scorecard allows companies to compare their specific results to the rest of industry for the particular line of business. Please refer to [https://www.naic.org/mcas_main.htm](https://www.naic.org/mcas_main.htm) for key dates.
Appendix A: MCAS Best Practices

**Best Practice:** Be sure your MCAS contact is current. You can check/update your state MCAS contact here: Link to Participating Jurisdiction Contacts.

**Best Practice:** When a company re-files to correct an issue, the analyst should review the filings submitted to other states. If filings in other states have the same issues, then coordination with other states, or the domestic state, should be initiated when contacting the company.

**Best Practice:** Companies that habitually re-file over several years should be identified on the Tableau dashboard and contacted to help remediate difficulties.

**Best Practice:** Requests for additional information should be made within the MCAS Extension tool. This allows your jurisdiction and other jurisdictions to view the requests over multiple years.

**Best Practice:** It is the responsibility of the states to verify that the data is reasonable. For example, are ratios that are found to be extreme outliers an accurate reflection of company market practices, or are they reporting errors? Before contacting the company, check to see if the company has already been contacted by an NAIC data analyst for the same issue.

**Best Practice:** Make use of the tools available for MCAS analysis including; rate & form filing history, the company’s MDA, the MCAS-MAPT and a review of interrogatory responses.

**Best Practice:** Analysis should not focus exclusively on MCAS data – when there are questions, bring in data from other NAIC systems to gain a fuller understanding of a company’s market behavior.

- Be sure your state’s MCAS contact is current – check here: https://www.naic.org/mcas_data_dashboard.htm

**Analysis:**

- Always refer back to the underlying raw data
- Review ratio formulas to understand what each ratio is measuring https://www.naic.org/mcas_main.htm found under Resources > Scorecard Ratio Formulas (PDF)
- Check interrogatory pages for comments that may explain outliers
- Verify that reported data is reasonable; determine if outliers result from accurate data or are reporting errors
- Determine whether the underlying data is statistically credible
- Compare company data trend to state ratio trend
- Use other Market Information Tools to analyze company behavior in addition to MCAS and MAPT
- Contact the company if data anomalies have no apparent explanation

**Waiver/Extension Requests and Late Filings:**

- Check company’s history of waiver/extension requests
- Verify that company is entitled to a waiver before granting one
- Review filings submitted to other states to determine if similar issues are present
- Any company filing in multiple jurisdictions with prior history of extension requests, late filings, or incorrect filings will be elevated to discussion in the Market Analysis Bulletin Board.
Appendix B: Resource List

For Industry:

NAIC website
www.naic.org

Industry Links with a link to MCAS page:
https://content.naic.org/index_industry.htm

MCAS History, General Filing Information, Training, Resources
http://www.naic.org/mcas_main.htm

The MCAS webpage is data year specific. Along the top of the webpage, underneath the logo, you will see four data years to choose from—the next year, the current year and the two prior years. The resources available on the MCAS Webpage often change from one year to the next as revisions or additions are included for the new year. Be sure you choose the relevant data year before choosing the resource. Descriptions of each resource is included in the main page narrative.

The resources on the MCAS Webpage include:

- The Participation Requirements
- Training materials for companies
- The data collection worksheets (blanks) for each line of business
- The Data Call and Definitions for each line of business
- A summary of changes for each data year
- The MCAS User Guide for each year (includes instructions for companies and a listing of all validations)
- CSV upload instructions and templates for each line of business
- Scorecard ratio formulas
- Data Call Communications—Call letter, authority references, and participating jurisdiction signatures
- FAQ—An FAQ for all lines of business is available near the “log in” button used by companies
- Key Dates—The MCAS Webpage also contains key dates for the data year filings. The key dates include the date of the call letter, training dates, filing due dates, scorecard dates and the last date filings for the prior data year can be submitted.

MCAS Scorecards:
https://www.naic.org/mcas_data_dashboard.htm

Market Analysis Procedures Working Group Webpage

The Market Analysis Procedures Working Group (MAP) is responsible choosing which lines of business to include in MCAS and revisions to current data. On its page you can find current comments on information on lines of business under consideration.

Also on the MAP website, under Related Documents, there are links to:

- Process for Selecting New Lines of Business
- MCAS Revision Process
- The MCAS Best Practices Guide

Market Conduct Annual Statement Blanks Working Group Webpage

The Market Conduct Annual Statement Blanks Working Groups (MCAS Blanks WG) is responsible for the creation of new line of blanks, and the review and revisions of current MCAS blanks. On the MCAS Blanks WG website you will find discussions and comments on the creation of new blanks and reviews of existing blanks.
Under the Related Documents section there are links to:

- Data Calls and Definitions of recently adopted lines of business that will be collected in a later data year.
- **MCAS Revision Process**
- Recently adopted revisions and clarifications of current lines of business

**For Regulators:**

- MCAS Pick a Page
- MCAS Validation Exceptions
Chapter 6—Basic Analytical Tools

A. Market Conduct Indicators and Priorities

The common denominator of this handbook is change. When there are changes in laws or regulations or in the marketplace, they affect processes and procedures within insurance companies and can increase the risk of market conduct or compliance problems during a period of adjustment. Similar problems can result from internal changes in a company, such as where, how and what lines of business it writes. Conversely, disruptions in a market sector or stresses or irregularities in a particular company’s operations will also leave their mark in the statistics.

Many changes are positive and a market with no signs of change would be troubling. Nevertheless, significant signs of change deserve careful regulatory attention, at least until their causes and effects are better understood. Even when changes are undeniably for the better, changes may, however, highlight areas where some companies have not adapted as well as others to the evolving marketplace.

In order to assess the nature and extent of changes, it is essential to have meaningful data. This section of the handbook explains the use of the NAIC iSite+ system and then discusses a few key items of information, such as consumer complaint data and state-by-state data from insurers’ financial statements that are most likely to be indicators of market conduct problems. Other significant sources of available data are also discussed briefly.

The importance of data begins at the very earliest stages of the process. Because state resources are finite, one of the most critical market analysis functions is setting priorities for review. Almost all states have over 1,000 insurers licensed to do business, so without a good sense of priorities, it can be daunting for a state insurance department to identify which companies to look at and what to look for. Because companies with a larger market share will impact the greatest number of consumers, an effective regulatory review program must include the companies with the largest market shares, while at the same time being careful not to overlook concerns that may arise with smaller companies.

Market share reports are among the wealth of data compilations that the NAIC makes available to state regulators on iSite+. For example, if a single company writes 25 percent of a significant line of insurance in a regulator’s state, this company is a market leader to which regulators should pay attention for that reason alone. However, the same companies are likely to be targeted in other states, which makes multistate coordination imperative, not only to avoid imposing unnecessary regulatory burdens upon insurers, but also to facilitate a deeper and more coherent analysis by the various regulators so as to address as efficiently and consistently as possible the company’s activities in all states where it does business.

Other factors for state regulators to consider when setting priorities include consumer complaint activity and the lines of insurance transacted. Some lines of insurance are more prone than others to particular types of market conduct problems. A more proactive market regulation program is generally better suited to personal lines than to commercial lines and generally better suited to small business markets than to other commercial lines markets. However, none of these criteria should be applied too rigidly. There is no foolproof way to predict which market issues will rise to the forefront, as demonstrated, for example, by the impact of the COVID-19 pandemic on both health insurance and business interruption insurance.

B. NAIC iSite+

The iSite+ suite of applications are used to report financial, market regulation and producer information housed in the NAIC databases. Regulators should familiarize themselves with iSite+, a secure regulator-only area within the NAIC website which provides access to NAIC databases and a wide variety of reports prepared from those databases. Of particular importance to market analysis are consumer complaint data and annual statement information.
iSite+ provides state insurance department regulators with access to applications used by regulators. Regulators may access iSite+ via the myNAIC link on the NAIC website. In order to log into myNAIC, regulators must have an active NAIC login credential.

iSite+ reports are standardized reports that provide regulators with a variety of financial and market regulation information. Summary reports provide information related to a group of entities with similar attributes (e.g. companies that write business in a particular state), Company/Firm reports provide information related to individual entities. A comprehensive listing and description of available iSite+ reports are located under the Tools tab.

C. Use of Complaint Data in Market Analysis

One of the primary missions of state insurance departments is to serve and protect the insurance consumer. To fulfill that mission, state insurance departments provide the valuable service of working with consumers and insurers to address consumer complaints. For lines of business where the insurance department has an active complaint resolution program, such as automobile, homeowners and health, consumer complaints should be a key starting point both to identify emerging issues and to screen insurers for potential market conduct or compliance problems.

Of all the types of information that departments initially collect for other purposes, consumer complaints have the most obvious relevance to market conduct. The goal here is to take the information we learn when doing complaint resolution and put it to work for complaint prevention.

The efficient use of a complaint analysis system allows an insurance department to create an effective and immediate surveillance program by detecting potential problems on both individual company and industry-wide levels. This complaint information is used by the states as an early warning system to detect problems and to provide a basis for further market conduct review. However, despite the obvious correlations between consumer complaints and market conduct concerns, regulators must be careful not to jump to conclusions purely on the basis of complaint data, nor should they conclude that the absence of complaints means an absence of market problems. There are a number of reasons why an exclusive focus on consumer complaints cannot be used as a substitute for a more thorough inquiry into the company’s activities, including:

- Complaints are to some degree anecdotal and often are not documented in sufficient numbers to be statistically credible. Although this deficiency can be mitigated to some degree by using multistate data, inconsistencies between different state approaches raise other concerns;
- One reason for the small sample size is that not every problem gives rise to a documented complaint. States need to gauge how informed state consumers are about voicing concerns or complaints regarding insurance;
- Conversely, the customer might not always be right. The presence of a complaint points to the existence of a conflict, but not the nature or the cause. A complaint could be the result of an insurer failing to live up to its obligations or the result of a breakdown in communications, but it could also be the result of unrealistic expectations on the part of the consumer. To address this concern, “confirmed” complaints, meaning complaints that have been confirmed by the the state insurance department as the insurer as being in violation or in error, (Link to definition in chapter 7) should be distinguished from other consumer complaints;
- There are some lines of insurance for which there are no useful complaint records because the nature of the business makes it unlikely that consumers will file complaints or because the insurance department does not have an active complaint resolution program. For example, violations of disclosure requirements might never generate complaints because, in the absence of disclosure, consumers do not know their rights have been violated. Similar problems also arise when premiums or benefits involve complex calculations because of the nature of the product; and
• Some markets are inherently more prone to complaints than others. For example, this is likely to be true for the higher risk or non-standard sector within any line of insurance. Such differences must be taken into account before trying to compare the performance of different companies serving different markets. When there are problems with life insurance products, they are less likely to become visible through the consumer complaint process. Similarly, complaints are more likely in lines of business where consumers have more frequent interactions with their insurer, such as health or private passenger auto, regardless of how serious the potential problems might be.

Nevertheless, complaint information is still the single most useful source of currently available data for market analysis. Complaints provide a great deal of information about the industry, individual insurers, and real-time consumer concerns, including emerging issues in the marketplace.

Complaint information is one factor that should be considered in the selection of companies for further review and in the determination of the nature and scope of that review. Identifying companies with consistently high levels of complaint activity can be a first step toward corrective action. Once an insurance department has determined that a problematic complaint trend is occurring, complaint data may be helpful in resolving issues for consumers in a number of different ways. Insurance department staff may want to meet with the company to review adverse trends and require the company to establish a compliance plan, which may include self-audits and refunds to consumers.

Even in cases where a company turns out to have done nothing wrong, complaints serve as a compass pointing toward those issues where consumers need enhanced knowledge and awareness, allowing regulators to target efforts, such as publishing brochures, speaking engagements at schools and community groups, and placing public service announcements in the media.

Whatever system of recording and classifying complaints is used, complaint analysis must relate the raw complaint data to a meaningful analysis. Therefore, the centerpiece of a basic market analysis program should be the development and use of reports compiling, summarizing, and comparing complaint information about the companies in a regulator’s state marketplace.

The efficient use of a complaint tracking system as part of an insurance department’s market conduct surveillance system allows an insurance department to create an effective and immediate surveillance program in detecting problem areas on an industry-wide level and in isolating potential problems for an individual company. Any complaint system used by the complaint division of an insurance department, in order to be efficient and meaningful, must be tabulated at least quarterly and preferably on a monthly basis. If a longer period is used, trends will not be spotted in a timely manner and the statistics that are generated will only show proof of an existing problem. From the tabulations, the complaint division can readily detect problems by using comparisons of past performance from past statistical information on an industry-wide level, by line or from individual companies.

The NAIC recommends the use of the Model Regulation for Complaint Records to be Maintained Pursuant to the NAIC Unfair Trade Practices Act (#884). The purpose of the regulation is to prescribe the minimum information required to be maintained in a record of complaints in order to comply with the statute, and to set forth a format for a complaint record that may be used by any entity subject to the regulation. A complaints register/log, should be available at the offices of the insurer. Information from this register/log can be obtained during field examinations of the company or on request from the home office of the company. The register/log is primarily a management tool for insurance companies, but may help alert insurance regulators to problem areas within entities subject to the regulation.
Chapter 6—Basic Analytical Tools

In October 1991, the NAIC released the Complaints Database System (CDS). The CDS provides regulators with online access to a database, which consists of the complaints data collected from NAIC members. The database enables insurance departments in all jurisdictions to inquire about and analyze closed complaints filed against insurance firms and individuals within and/or across state boundaries. Additionally, the system provides summary reports and complaint ratios for NAIC members. States submit closed consumer complaints information to CDS on a monthly or quarterly basis. The complaint records are then aggregated on a regional and national basis, providing total complaint counts, trend analysis and complaint index rankings to state regulators.

Supplemental information regarding the Complaints Database System (CDS), such as complaint data fields and user guides, is available on StateNet. The most current version of the NAIC standard complaint data form is also available on StateNet on the Market Data Team (MIS) web page.

Although the focus of analysis is on patterns and trends, some individual complaints by their nature will raise serious questions about an insurer’s conduct, which call for follow-up even if the company’s complaint index and complaint trends are otherwise unremarkable. This underscores the need for effective communication between divisions. Insurance departments should establish criteria for their complaint analysts to use in identifying complaints, which should be called to the attention of their market conduct and/or enforcement staff for further review. Inquiries from producers, consumers, or health care providers about particular business practices may also warrant the attention of market regulators.

D. Use of Annual Statement Data in Market Analysis

Market Conduct Annual Statement
Similar to a Financial Annual Statement, the Market Conduct Annual Statement (MCAS) provides regulators with market conduct information not otherwise available on a regular basis. The first MCAS was adopted by the NAIC in 1991. It was designed as an aid in targeting examinations, as well as an alternative to examinations. MCAS data collection has grown from one area within one line of business, private passenger auto claim payment information, to multiple market regulation concerns within multiple lines of businesses.

Currently, MCAS data is collected on eight lines of business: individual life cash and non-cash value products; individual fixed and variable annuities; individual stand-alone and hybrid long-term care policies; private passenger automobile policies; homeowners policies; in-exchange and out-of-exchange health plans; lender placed home and automobile policies; and disability income. In addition, the collection of private flood MCAS data will begin for the 2020 data year reported in 2021. Travel insurance and other health MCAS will be reported in future years.

By using common data and analysis, states have a uniform method of comparing the performance of companies. Data is collected regarding claims, premiums, policies in force, new policies written, nonrenewals, cancellations, replacement-related activity, suits and consumer complaints on an industry-wide basis. If a company's performance appears to be unusual as compared to the industry, the state may undertake further review of that company. The additional review may be as simple as calling the company for further information or clarification or conducting further analysis.

Additional information regarding the Market Conduct Annual Statement program may be found at https://www.naic.org/mcas_main.htm or by contacting NAIC Market Regulation Department staff at mcas@naic.org.

Financial Annual Statements and State Pages
The most comprehensive source of data on the financial aspects of insurers’ activity in the marketplace are the annual and quarterly financial statements, which an insurer is required to file with its state of domicile, the NAIC and, in most instances, all jurisdictions in which the insurer is authorized to transact business. These statements include specific schedules and interrogatories that provide detailed information, such as premium volume, losses, and changes in business. The NAIC compiles a wide variety of reports from the filed financial statements and makes them available to state insurance departments at iSite+. Financial statement data has value for market analysis on
several levels and sometimes will allow regulators to identify companies with an increased risk of future compliance problems, allowing regulators to respond proactively before serious problems occur.

Most directly, financial information is meaningful to market regulators because market activity takes place through financial transactions. Although the dollars and cents, especially when aggregated at the statewide or nationwide level, do not by any means tell the whole story of a company’s underwriting, sales, rating, risk classification and claims-handling practices, the underlying financial information is systematically collected and quantified in a consistent manner and suitable for use as a starting point for further analysis.

Certain types of consumer problems tend to be accompanied by characteristic patterns in company-specific or aggregate financial data. Indicators of financial stress should also be of concern to market analysts because financial problems are often accompanied by market conduct problems, such as delayed claims payments and neglect of customer service. Furthermore, the failure, retrenchment, or reorganization of a major market presence will have a disruptive effect on the market as a whole.

Every insurer, as part of its annual statement, files a State Page in each state in which it is licensed. The financial data of greatest general interest to market analysts can be found there, with the caveat that State Pages do not capture potentially significant information on geographic units within the state. The content of the State Page varies by product line, but generally, it is an exhibit of premiums and losses.
For property/casualty insurers (which file on the yellow statement Blank), this page is, for historical reasons, referred to as “Statutory Page 14.” This page is officially called “Exhibit of Premiums and Losses—Statutory Page 14.” The page no longer appears on the actual page 14 of the property/casualty Blank. On the life and accident and health (blue) statement, the State Page is commonly referred to as “Page 15.” The actual location of the page changes from year to year. In the health (orange) statement, the State Page is officially titled “Exhibit of Premiums, Enrollment and Utilization.” And, as with the other Blanks, its actual location varies. On the health State Page, the company reports statewide earned and written premiums, incurred and paid losses and other key information, broken down by line of business. The reporting format will vary depending on the type of annual statement the company files, as will the additional information requested. For example, the property/casualty Blank includes entries for direct defense and cost containment expense, commission and brokerage expenses and taxes, licenses and fees, while the health Blank reports total members, ambulatory patient encounters, inpatient admissions and hospital inpatient days incurred.

Claims-related information is of particular relevance to market performance, so one of the key items of financial data for market analysts is claim reserves, which is itemized on the property/casualty Blank as “Direct Losses Unpaid” and “Direct Defense and Cost Containment Expense Unpaid.” A spike in reserves can occur for a number of reasons, some of which might signal market conduct problems. If losses and reserves are both moving in the same direction, there is less concern. A spike in reserves without a corresponding change in losses paid should be investigated. Perhaps a major lawsuit was filed against one of the company’s insureds, or there may be a correction of reserves on pending claims. The insurance regulator should investigate the reason and also check the complaints made against the insurer, trends over time, and reserve activity for comparable companies in the market.

For liability insurers, significant changes in defense costs may be an indicator of market conduct problems if it shows that a disproportionate share of claims are going into litigation. This information, like changes in reserves, must be looked at in its proper context in order for it to be used effectively as a market indicator. If the increase in defense costs correlates with increases in premium volume and losses, there is less concern. An inquiry should be made when defense costs are rising disproportionately to direct losses. Although less common, similar concerns may also be raised by unusual loss adjustment expense activity in other lines of business.

The premium information enables the calculation of the company’s market share for each line of business or for the market as a whole, by dividing the company’s premium by the market aggregate. Market share information allows regulators to quickly identify the companies with the most impact on the market—bearing in mind that these companies are by no means the entire market and smaller companies and their consumers cannot be ignored. In addition, comparing market share information over time allows regulators to identify companies whose operations in the state are expanding or contracting and to inquire further into the reasons for the change and whether the company has the resources to deal effectively with rapid growth or with lost business. States should analyze at least three to five years of historical data to place the information most recently reported in its proper context. For example, California provides a market share history on its website for insurers actively writing property/casualty, life/annuity and title business there.

Financial statement data also allows the analysis of how a state fits into the company’s overall operations, what the rest of its market looks like and how that pattern compares to other companies doing business in a regulator’s state marketplace.

---

3 Although this information may also be of value when studying accident and health insurers, particularly in lines like long-term disability and long-term care, there is no analogous line item on the health or life and health state pages. Because calendar year paid loss data aggregates layers of the losses incurred in many different years, unpaid losses cannot be backed out by comparing calendar year paid and incurred loss data.
From the State Page data, a regulator can run three categories of reports: Aggregate Reports; Detail Reports; and Market Share Reports. Aggregate Reports includes two kinds of reports: (1) Credit and A&H Pure Direct Loss Ratio; and (2) Lines of Business by State. Detail Reports include: By Line of Business; Life Premium & Annuity Considerations; Life Summary; PA& or Health Summary by Line of Business; and Unlicensed Premiums: Market Share Reports can be run on: A&H; Credit A & H; Credit Life; Life & Annuity; and By Line of Business. The Aggregate Report for Credit and A&H Pure Direct Loss Ratio can be tailored to data year (2010 to current). The loss ratio information will help identify companies with greater contact with consumers through the claims settlement process and significant deviations from the norm could indicate financial stress if the loss ratio is too high—or the potential for concerns about claim handling or underwriting practices if the loss ratio is unusually low. It must be kept in mind, however, that what might be considered a “normal” loss ratio—consistent with profitable operations—may vary significantly, depending upon the line of business and (especially for “long-tail” lines of business) upon changes in general economic conditions. The Aggregate Report By Line of Business can be tailored to data year (2010 to current) and statement type (property, life and health).

The Detail Report for Lines of Business can be tailored by data year (2010 to current), statement type (property, life, life – A&H, and Health), financial amount (e.g. direct premiums written), and multiple unique sub-types of business (e.g. private crop under Property; industrial under Life; federal employees health benefits plan premium under Life – A&H; and dental only under Health).

The Insurance Regulatory Information System (IRIS) tool, based on financial statement data, should also be noted. IRIS ratios are available for Fraternal, Property, and Life companies. The IRIS Worksheet calculates acceptable ranges for twelve ratios and notes when a company falls outside of that range. A company that consistently has multiple unusual IRIS values or fails to improve those ratios is of concern. Although the IRIS ratios were developed to assist solvency regulators, they also capture some information that can be useful to market analysts.

E. Issues Specific to Particular Types of Companies

As we have seen in the discussion of financial information, different types of insurers engage in different activities that make different types of information relevant. The most pronounced differences are reflected in the distinctions between the two major annual statement formats—property/casualty and life/accident/health—but there are also issues specific to particular lines of business that regulators need to take into consideration.

Health Insurance

In many insurance departments, there are consumer assistance resources dedicated specifically to health insurance. These areas may have more extensive complaint information, and the complaint information in most states will be supplemented by external review information. At the same time, however, the relevant financial statement information will be more fragmented, because this market uniquely comprises companies filing on all three types of annual statement Blanks. In addition, self-insured employers (which are exempt from state regulation) provide a substantial proportion of health coverage and consumers are not always aware that this coverage is not insurance. The Health Insurance Portability and Accountability Act (HIPAA) and Employee Retirement Income Security Act (ERISA) play a unique role in this area of coverage and there are also significant state-to-state variations in laws regulating access to individual coverage, mandated benefits and individual and small group rating practices. Property/Casualty Insurance

Personal lines property/casualty coverage is another key focus of consumer assistance and complaint resolution programs. A high proportion of consumer concerns in these lines of business relate to claims and to policy termination, and often the two go together. This is a dynamic market with many emerging issues. There are also significant state-to-state variations in property/casualty lines of business. Many of the variations in the liability insurance markets reflect variations in the underlying substantive laws giving rise to the liability exposure. This is especially true for automobile insurance, where several states have modified the traditional tort law for automobile collisions with some form of “no-fault” coverage.
Chapter 6—Basic Analytical Tools

Life Insurance

The coverage structure and company finances for life insurers are notably different from other types of insurance. Proportionately, market conduct problems with life companies are more likely to arise on the sales side and less likely to arise on the claims side than in other lines of insurance. In life insurance, there is significantly less interaction between the company and the consumer over the course of a customer relationship than with other lines of insurance. Market conduct problems are often less likely to surface promptly in the form of a consumer complaint.

Workers’ Compensation Insurance

In this line, market conduct issues may involve either the insured (the employer) or the claimant (the employee). This is true to a lesser degree for other third-party coverage, particularly auto insurance in tort states, but workers’ compensation insurers in most states have statutory obligations to claimants that liability insurers do not have. The experience rating system gives the employer a more direct interest in claims practices, and there are unique jurisdictional issues in states where workers’ compensation claim handling is the primary or exclusive responsibility of the state workers’ compensation agency rather than the insurance department.

F. Other Useful Information

While complaint records and financial statements may be the most comprehensive and concentrated sources of data on market activity, there are many additional sources that should be reviewed in order to obtain the complete picture of a company or an industry. For example, a high proportion of the activity in the insurance marketplace involves licensed insurance producers. Records of disciplinary actions or appointment terminations may reveal patterns of questionable practices in certain market sectors or implicate certain companies. Even routine activities, such as increases or decreases in new licenses or appointments or changes in lines of authority, can indicate market trends which might warrant further inquiry to evaluate whether the effects are positive, negative, or mixed. The information contained in this section of the handbook provides additional resources and tools for assisting with the analysis of a company..

Financial Reporting (Public and Private Sector)

Statutory annual and quarterly statements are the principal source of financial information on insurers, but they are not the only source. If the insurer is publicly traded, it will also be filing with the U.S. Securities and Exchange Commission (SEC). Filings can be accessed at the SEC website using EDGAR at https://www.sec.gov/edgar/search-and-access. The most useful filings for market regulation purposes are: 10-K and 10-Q; 8-K; and 4. There are a variety of private-sector sources that compile and evaluate financial information, such as rating agencies, statistical and ratemaking advisory organizations, trade associations, securities analysts, and academic and nonprofit research institutions. Some of these data compilations are directed towards specialized information, such as claims activity,. Surveys and reports on particular topics by research institutions, consumer groups, and trade organizations may also yield valuable data.
Rating Agencies
The principal rating firms that measure insurance companies’ financial strength: A.M. Best Company, Moody’s Investor Service, Fitch Ratings, NAIC’s Securities Valuation Office (SVO), Standard & Poor’s Global Ratings, and Weiss Ratings. It is common for a company’s compliance or marketing strategies to change when there is a rating decrease by one or more of these rating agencies. Market analysts should review a company’s financial rating from each of the main financial rating firms to determine if there is a possible correlation between a downgraded rating and market regulatory practices. It is important to note that ratings should be reviewed independently for each rating organization. For instance, a company may receive a high rating from Standard & Poor’s or Fitch Ratings, but fail to receive a high rating from A.M. Best. There are also variances in the areas rated by each rating firm and analysts should consider the areas of review and the methodology of the rating organizations. Market analysts are encouraged to review rating changes over a period of five years for substantive changes.

Informational Filings
All insurers are subject to state licensing and holding company regulations. Under these laws, state insurance departments will receive notice of changes in corporate officers and directors, changes in the domicile of insurers in the holding company group and reports on significant transactions among an insurer and its affiliates. These changes are rarely, if ever, indicators of market conduct problems by themselves, and material transactions in most cases have already been subject to regulatory review. However, when other indicators show warning signs, it is often useful to take a second look at holding company regulation statements and company licensing information, such as updates of director and officer information, to see if certain information that did not seem noteworthy at the time takes on a new meaning in hindsight. If a state insurance department collects or reviews them, companies’ underwriting and claims manuals may contain useful information, though it must be kept in mind that such manuals are generally regarded as proprietary and, as such, should be protected from public disclosure. Attention should be paid to changes in underwriting guidelines since this provides real-time information on market practices the companies themselves have identified as important.

Interdepartmental Communication
A continuous dialogue with regulators in other areas within a department of insurance is essential, as issues arising in other areas may be mirrored by related problems consumers are having with the same companies or markets. For lines of business that are subject to form or rate review or certification, incidents where a company has been observed using unapproved or improperly certified rates or forms should trigger further inquiry, since such incidents often are part of a wider pattern.

Communication with other Regulators
Communications with other state agencies, other state insurance departments, and the federal counterparts is instrumental in maintaining a seamless review of companies, keeping a fair playing field, and providing the most protection to consumers.

Enforcement Actions
In particular, significant enforcement actions against a licensed insurer or examination reports with findings of violations (keeping in mind that these could be from financial examinations, not just from market conduct examinations), are clearly of major interest from a market analysis perspective, whether they arise in a regulator’s state marketplace or in another state where the company does business. A consumer complaint or even a pending regulatory proceeding is of interest, especially on a cumulative basis, but in and of itself does not necessarily mean the company has done anything wrong. However, a disciplinary order or a finding of violations is a more serious matter, even though it may be based on different laws or market conditions. Likewise, a record that a company has been or is being investigated by several different states for similar reasons raises questions every bit as serious as the questions raised by a high complaint index.
Chapter 6—Basic Analytical Tools

Regulatory Information Retrieval System
The NAIC Regulatory Information Retrieval System (RIRS) tracks adjudicated regulatory actions for companies, producers and agencies. The origin, reason and disposition of the regulatory action are recorded in the RIRS database. RIRS is an essential resource for market regulators and states should ensure its high quality by taking care to report all adjudicated regulatory actions to RIRS. It should be kept in mind, however, that because enforcement actions are considerably less frequent than consumer complaints, they do not lend themselves well to ratios or other quantitative techniques. For most companies in most years, the percentage of premiums paid out as fines or restitution will be zero—and simply tracking the number of enforcement actions may give too much weight to minor violations, such as isolated cases of late reporting. The most recent version of the RIRS submission form is available on StateNet on the Market Data Team (MIS) web page.

Market Action Tracking System (MATS)
Information regarding market conduct examinations and other market conduct initiatives may be quickly obtained on iSite+ through the Market Action Tracking System (MATS) Detailed Report, which provides a history of market actions matching specified criteria. A report may be generated displaying all market conduct actions originating in a specified state for a specified date range. MATS includes not only actions related to market conduct examinations, but also non-examination regulatory interventions or inquiries. MATS Reports can also be run specific to an individual company.

Self-Audits and “Best Practices” Reviews
Reports from voluntary examinations of companies provide another potential source of useful market analysis information at any stage of the analysis process. In addition to self-audits conducted by companies, evaluations are also prepared when insurers apply for membership or accreditation to “best practices organizations” or independent standard-setting organizations and when those organizations conduct periodic reviews.5

It must be kept in mind, however, that such evaluations are a supplement to regulatory analysis and not a substitute, and that an organization might not set comprehensive standards for “best practices” across the entire field of operations, focusing instead on particular areas such as marketing and advertising. Market conduct analysts and examiners should be conversant with the standards required to qualify for membership in organizations such as the National Council on Quality Assurance (NCQA) and the Utilization Review Accreditation Commission (URAC) (for health insurers). State insurance departments should review these standards to evaluate the extent to which compliance with the standards can be considered as a relevant indicator of compliance with related state statutes and regulations, to refine the market analysis. States are encouraged to direct analysts and examiners to request information associated with these organizations’ assessment activities to determine how such information might be used to gauge the appropriate nature and scope of further market conduct review that may be indicated.

Some best practices organizations have developed standardized reporting formats, which are designed to provide market conduct analysts and examiners with a comprehensive summary of the testing and review activities that take place during a company’s self-audit and/or independent review process. Market conduct analysts and examiners are encouraged to become conversant with the specific review standards applicable to the independent analysis. Work papers retained by the company or its independent reviewer may provide additional useful information for market analysis purposes. Regulators must be sensitive, however, to the confidentiality concerns raised by these materials, as discussed in the NAIC white paper, Regulatory Access to Insurer Information: The Issues of Confidentiality and Privilege. Personnel who work with confidential material should be specifically trained in the applicable laws and in the agency’s procedures for protecting confidential or privileged information from public disclosure, whether it is maintained in paper or electronic form.

In some states, self-evaluative privilege statutes provide specific guidance on the regulators’ access rights and confidentiality obligations, whereas regulators in other states must consider a variety of issues related to the protection of proprietary information, attorney work product, trade secrets, and other privileged information.

5 Market analysts should refer to the NAIC white paper Best Practices Organizations for additional guidance related to the application of such evaluations and standards.
Addressing these concerns and working with companies’ voluntary review activities is important, because a full understanding of a company’s market activities encompasses the company’s policies and the practices that implement the company’s policies. An active compliance program at a company often reflects a corporate culture that places a high value on compliance. Since “bottom-up” information on a company’s market practices is more accessible to regulators, the “top-down” policy focus often found in insurer peer reviews can be a useful complement to the information that is otherwise available.

**Consumer Dispute Resolution Processes**
For some lines of insurance, statutory dispute resolution processes provide another useful source of market information. In particular, most states now have some sort of external review framework for health insurance claims disputes; regulators should review the records of external review requests, disposition, and companies’ responses over time. Similarly, records of administrative hearings on cancellations or nonrenewals of property insurance and automobile insurance policies (in states where these activities are subject to regulatory review) may shed some light on market practices in these lines of insurance.

**Matched Pair Testing**
For homeowners insurance, market conduct analysts should consider the use of matched pair testing to evaluate whether geographic areas with a relatively high percentage of persons in protected classes are receiving the same level of service and availability and quality of product as residents of nearby geographic areas which have different racial or ethnic characteristics. The number of matched pair tests conducted for this purpose does not need to be statistically significant, as the tests are designed to be a snapshot of the way in which a specific company is operating at a specific moment, and not an evaluation of the marketplace as a whole. In matched pair testing for homeowners’ insurance purposes, two houses of similar age, construction type, style, and maintenance level, but in different racially identifiable neighborhoods, are used as the basis for the test. Trained testers, whose race matches that of each neighborhood, call an insurance agent just as a bona fide homeowner would, and identify themselves as a homeowner or buyer. They request information and quotes about homeowners insurance, track the responses, and fill out a report which is submitted to the person coordinating the test, along with any written materials subsequently received from the insurer. The test coordinator reviews the results of both contacts and compares the treatment in each case to determine whether both callers were treated equally. (The same general concept of comparative treatment applies to auto insurance and can be executed using testers with similar driving records calling about similar cars). While the concept is simple and straightforward, quality of execution is important, and market conduct analysts should consider contracting with an entity experienced in the conduct of insurance testing, such as the National Fair Housing Alliance (NFHA). They may also use their own staff or contract testers. Training in how to conduct such tests should be sought from NFHA or other qualified organizations.

**Rating Territories**
An evaluation of the way in which the market is being served for homeowners and auto insurance should include overlaying rating territories with census maps, to determine whether the rating territories have been designed in such a way that makes it likely that persons in protected classes will pay higher prices than residents of predominately Caucasian or higher-income areas. If that appears to be the case, information on loss data should be gathered to determine whether the higher costs are justified.

**Miscellaneous**
Anecdotal information of useful interest may even be found in such unexpected sources as a state insurance department human resources division, which might have useful information, since an influx of applicants from a particular company could be a sign of stress. At the same time, regulators in various divisions of a state insurance department need to communicate on relevant issues. For example, claim delays or disputes could be a symptom of financial stress and repeated consumer complaints relating to particular policy language may suggest that an insurance department reconsider its approval of such clauses.

Other information collected by some regulators, though not necessarily available in all states, includes underwriting guidelines, detailed geographic market performance data, surveys of market participants and marketplace testing. Detailed geographic data—such as ZIP code data by company and type coverage—has been used by some regulators to identify underserved markets and investigate redlining allegations. Surveys of market participants—including agents, realtors and consumers—are another source of real-time market performance information. Testing—sending
people to purchase insurance who have similar risk characteristics but different races or other characteristics that may make them targets of unfair discrimination—adapts a tool that has long been used in the fields of housing, lending and employment to verify compliance with fair practices. In addition, a review of recent insurance-related lawsuits can provide insight into consumer perceptions of market abuses, and this information is publicly available.

Market regulators should keep their eyes and ears open outside the office as well. Valuable information can arrive in structured formats—such as regulatory meetings, continuing education programs, email discussion groups, and news feeds—and also in less structured environments, ranging from stories about lawsuits to interesting names in the news and chance remarks by acquaintances. The more one knows, the better equipped one is to ask the next question.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 19, 2021. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Teri Mecca (AR); Sarah Borunda (AZ); Don McKinley (CA); Kurt Swan (CT); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy Schott (ME); Jill Huisken (MI); Jo LeDue (MO); Robert McCollough (NE); Edwin Pugsley (NH); Ralph Boeckman (NJ); Leatrice Geckler (NM); Hermoliva Abejar (NV); Larry Wertel (NY); Landon Hubbart (OK); Jeffrey Arnold (PA); Matt Gendron (RI); Michael Bailes (SC); Shelley Wiseman (UT); Will Felvey (VA); Christina Rouleau (VT); and Theresa Miller (WV). Also participating was: Sarah Crittenden (GA).

1. **Adopted its Feb. 25 Minutes**

Mr. Haworth said the Working Group met Feb. 25 and took the following action: 1) adopted its Jan. 27 minutes; 2) discussed a 14-day limitation for Market Conduct Annual Statement (MCAS) extension requests; 3) discussed the MCAS attestation process; and 4) discussed training opportunities for market regulation analysts.

Mr. Pugsley made a motion, seconded by Mr. Boeckman, to adopt the Working Group’s Feb. 25 minutes (Attachment Three-A). The motion passed unanimously.

2. **Adopted Revisions to the MCAS Best Practices Guide**

Ms. Rebholz said during the Working Group’s last meeting, it discussed the completion of the **MCAS Best Practices Guide**, and the final draft was posted on the Working Group’s web page. She said the most significant changes are: 1) the recommendation to limit initial and subsequent extension requests to two weeks; 2) highlighting “best practices” within the document; and 3) adding an appendix to summarize all the recommended best practices. She said the drafting group also inserted a table of contents for ease of reference. She noted that no comments were received on the draft.

Mr. McKinley made a motion, seconded by Mr. Bailes, to adopt the revisions to the **MCAS Best Practices Guide**. The motion passed unanimously.

3. **Adopted a 14-Calendar Day MCAS Extension Limitation**

Mr. Haworth said the Working Group has discussed the 14-day extension limitation during its last two Working Group meetings. He said the proposal is to limit extension requests to 14 days but continue to allow companies to ask for additional extensions if needed. He said to accomplish this, the MCAS filing tool, which is used by companies to file their MCAS submissions, would need to be re-coded to limit extension requests to 14 days and allow for multiple requests after the initial extension request. He noted that because of the re-coding, if the Working Group adopted the proposal, the soonest it could take effect is for 2021 data collected in 2022, but considering other market information system priorities, it may be later. He noted, however, that any MCAS jurisdiction can still choose to only allow 14 days for any extension request.

Mr. Haworth said his sense is that state insurance regulators are in favor of limiting extension requests to 14 days. Industry, however, proposed making the proposal 14 business days. Mr. Haworth said the Working Group received one comment from a state that is comfortable with 15 business days, which on the calendar would be three weeks. He said during the February meeting, several members of the Working Group noted that if the final day of an extension fell on a weekend or holiday, the jurisdiction would allow the filing on the following business day.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said companies would like to have the ability to request extensions up to 60 days. She said the reliable filers start the process early, and they usually would not request an extension except in unusual situations where more than 14 days might be required. For reliable filers, extensions are not requested because of bad planning, and 14 days may not be enough time.
Birny Birnbaum (Center for Economic Justice—CEJ) said a company that is diligent in preparing its MCAS submission would not discover that it needs more time in the last days of the filing period and would not need 60 additional days after the due date. He said he supports the 14-day limitation. Ms. Brown said if the reliable MCAS filers find an issue with their data in the last days before the due date, it generally is not a 14-day fix.

Mr. McKinley asked if companies would be able to request additional extensions if 14 days are not enough. Mr. Haworth said the MCAS submission tool would be re-programmed to allow additional requests.

Mr. Gendron requested that the 14-day extension be referred to as a 14-calendar day extension. He said Rhode Island had no preference for either a 14-calendar day extension limitation or a 15-business day limitation. He said Rhode Island is willing to provide the time required to get accurate data. Mr. Haworth noted that the longer the market analysts must wait for the data, the more often they have to refresh the data they are using for their analysis. Ms. Crittenden said she is in favor of referring to the limitation as “calendar days,” and she said market analysts need accurate data as soon as possible.

Ms. Keller made a motion, seconded by Ms. Rebholz, to limit MCAS extension requests in the MCAS submission tool to 14 calendar days and allow for additional extension requests. The motion passed unanimously.

4. Adopted an MCAS Requirement to Attest by Line of Business and by Jurisdiction

Mr. Haworth said the Health Insurance Interested Parties (HIIPs) made a request to be able to identify a different attester per line of business and per state. This request was supported by representatives of companies in the other lines of business.

Mr. Haworth said currently, a company filing its MCAS submissions must have two attesters—one attester to the accuracy and completeness of the MCAS filings and one attester to the company being able to track the data to its source and re-create the results in MCAS filing. He said these two attesters are the same for all lines of business and all states. This causes concerns for companies that have different responsible people for different states and different lines of business.

Mr. Haworth said NAIC staff support advised the Working Group that this can be accomplished by placing the attestations within the blank itself and removing the separate attestation section. The wording of the attestation would be contained in the Data Call and Definitions for each line of business. No MCAS filing could be submitted without attesters being identified, but failure to provide attesters in one state or line of business would not stop other filings from the same company if those other filings had the attesters properly identified.

Mr. Haworth noted that the Working Group also had a conversation about whether the attesters should be officers of the company. He said he is setting that discussion aside until the Working Group votes on whether to allow for different attesters per line of business and per state.

Samantha Burns (America’s Health Insurance Plans—AHIP) said AHIP supports two attesters per line of business and per state. She also said the company should have the discretion as to who the attesters are.

Ms. Brown said she appreciates the needs of the health insurers, but having to name attesters for every filing would result in more work for national companies that have been filing for a long time with no need to differentiate by line of business or by state. Randy Helder (NAIC) said the change would only result in four additional lines to be completed on a comma-separated-values (CSV) upload. Teresa Cooper (NAIC) said the NAIC provides a CSV Assistant for companies on the MCAS web page to make the creation of the CSV simpler.

Mr. Birnbaum said he supports the change because it makes it more efficient for state insurance regulators to contact the correct people on each filing.

Mr. Schott made a motion, seconded by Mr. Pugsley, to allow companies to identify their attesters by line of business and by jurisdiction.

Ms. Brown asked that the motion be re-phrased to “require” companies to identify their attesters by line of business and by jurisdiction because companies will no longer have the option to use the attestation page.

Mr. Schott and Mr. Pugsley agreed to change the motion to allow companies to identify their attesters by line of business and by jurisdiction. The motion passed unanimously.

© 2021 National Association of Insurance Commissioners
5. Adopted Revisions to the NAIC Market Regulation Handbook

Mr. Haworth said the revisions to the market analysis chapters of the NAIC Market Regulation Handbook were completed prior to the Working Group’s last meeting, and they have been posted in the exposure drafts section of the Working Group’s web page. He said no comments have been received on the revisions.

Ms. Rebholz made a motion, seconded by Ms. Abejar, to adopt the revisions to the market analysis chapters of the NAIC Market Regulation Handbook. The motion passed unanimously.

6. Discussed Market Analysis Training

Mr. Haworth thanked Tony Dorschner (SD) for his written suggestions. He said those comments and others regarding training are posted on the Working Group’s web page. He encouraged others to put their thoughts in writing so they can be compiled. He said there is a study group of at least 40 people to learn how to conduct a level 1 review in the Market Analysis Review System (MARS). He said this is in preparation for the Market Actions (D) Working Group’s national analysis program.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Feb. 25, 2021. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Maria Ailor (AZ); Don McKinley (CA); Steve DeAngelis (CT); Cheryl Wade (DC); Frank Pyle (DE); Scott Woods (FL); Erica Weyhenmey (IL); Tate Flott (KS); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy Schott (ME); Jill Huiskens (MI); Teresa Kroll (MO); Paul Hanson (MN); Jeannie Keller (MT); Reva Vandevenooe (NE); Karen McAllister (NH); Leatrice Geckler (NM); Hermoliva Abejar (NV); Larry Wertel (NY); Landon Hubbard (OK); Jeffrey Arnold (PA); Segun Daramola (RI); Rachel Moore (SC); Tracy Klausmeier (UT); Will Felvey (VA); Christina Rouleau (VT); and Theresa Miller (WV). Also participating were: Sarah Crittenden (GA); and Jo LeDuc (MO).

1. **Adopted its Jan. 27 Minutes**

Mr. Haworth said the Working Group met Jan. 27 and took the following action: 1) adopted its Nov. 12, 2020, minutes; 2) discussed a 14-day limitation for Market Conduct Annual Statement (MCAS) extension requests; 3) discussed the MCAS attestation process; and 4) discussed training opportunities for market regulation analysts.

Ms. Rebholz made a motion, seconded by Mr. Pyle, to adopt the Working Group’s Jan. 27 minutes (Attachment Three-A1). The motion passed unanimously.

2. **Discussed Revisions to the MCAS Best Practices Guide**

Ms. Rebholz said the group assigned to updating the MCAS Best Practices Guide (Best Practices Guide) has completed its work, and the revised version can be viewed in the exposure drafts on the Working Group’s web page. She said the version in the exposure drafts can be compared with the current version of the Best Practices Guide, which is in the Related Documents tab. She said the most significant changes are: 1) the recommendation to limit initial and subsequent extension requests to two weeks; 2) the highlighting of “Best Practices” within the document and adding an appendix to summarize all the recommended best practices; and 3) the creation of a table of contents for ease of reference.

Ms. Rebholz said after the changes to the Best Practices Guide, the group also reviewed other MCAS references to ensure consistency. This included the web page, the Frequently Asked Questions (FAQs), the call letter, and participation requirements. Ms. Rebholz said since these are supporting documents, the Working Group will not be voting on the changes to them. She noted that the changes to those documents were all technical.

Ms. Rebholz said the Working Group will keep the revised Best Practices Guide posted in the exposure drafts through the next conference call, and she invited comments through March 17. She said at the Working Group’s next meeting prior to the Spring National Meeting, it will vote on the revised Best Practices Guide.

3. **Discussed MCAS 14-Day Extension Limitation**

Mr. Haworth said the MCAS submission tool currently allows a company to choose up to 60 days for an extension request. The subgroup revising the Best Practices Guide is advising that all states allow no more than a 14-day, or two-week, extension. The drafting group is also asking that the MCAS tool be adjusted to only allow extensions for no more than 14 days at a time.

Mr. Haworth said it is possible that companies may need more than the 14 days. The MCAS tool will also need to be changed to allow companies to submit second or third requests. Mr. Haworth said this will require some programming work by NAIC Information Services. He said if the change is approved, the soonest it would be in effect would be for the 2021 data reported in 2022, but it might be the following year.

Samantha Burns (America’s Health Insurance Plans—AHIP) asked the Working Group if the extension could be for 14 business days. Mr. Flott said the Kansas Department of Insurance (DOI) typically only provides 14 days and if the 14th day falls on a
Saturday, Sunday or holiday, then the last day would be the following working day. He prefers calendar days rather than business days. Ms. Keller said she also prefers calendar days with weekends assumed to be the following Monday.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said it is important to have the ability to make a second or third request if limited to 14 days. She said the reliable filers start the process early, and they usually would not request an extension except in unusual situations where more than 14 days might be required. For reliable filers, extensions are not requested because of bad planning.

Mr. Haworth said the Working Group will vote on this issue on its next conference call. He asked that comments be sent to Randy Helder (NAIC) by March 17.

4. **Discussed MCAS Attestation**

Mr. Haworth said a mock-up was created of a solution that will allow companies to identify two attesters per line of business, per state. He said the issue is that currently a company can only submit the same two attesters for all lines of business in all states. This creates issues where companies may have different responsible parties for different lines of business or in different states. Mr. Haworth said the proposed solution is to move the attestation to the reporting blank so different attesters can be identified in every filing. He said the actual wording of the attestation will be in the MCAS Data Call and Definitions for each line of business, and it will be referenced on the blank.

Ms. Burns said the health insurer interested parties (HIIPs) were supportive of the proposed solution. She said it was a positive change, and she would like to see it move forward. Joseph E. Zolecki (Blue Cross Blue Shield Association—BCBSA) agreed, and he said it looked like a feasible solution to allow different attesters for different lines of business and states.

Ms. Crittenden asked if the attester could be required to be an executive of the company. Mr. Haworth said it is important that the attester be someone knowledgeable about the specific data being reported. Mr. Arnold said if the attester is too far removed from the data, they are only attesting to the best of their knowledge. Mr. Haworth said there are lines for two attesters, so it may be possible to require one to be an executive while the other is knowledgeable about the specific data. Mr. Helder said there are two attesters because one of the attesters is attesting to the accuracy and the other is attesting to the source of the data and the ability to re-create it.

Ms. Brown said a large nationwide company may have a significant amount of input if the reporting is done with the reporting blank.

Andrew R. Pauley (National Association of Mutual Insurance Companies—NAMIC) said these seem to be two separate issues: 1) who needs to attest; and 2) how the attestation is done. He asked if the solution is all or nothing. He asked if a company can still choose to attest on the attestation page with one attester responsible for all lines and states. Mr. Helder said the solution anticipates removing the attestation page and replacing it with data elements on the reporting blank.

Mr. Haworth asked for comments to be sent to Mr. Helder by March 17. He said the Working Group will consider adoption of the new attestation process at its next meeting.

5. **Discussed the Market Analysis Framework**

Mr. Haworth said the small group reviewing and updating the NAIC *Market Regulation Handbook* chapters on market analysis completed its work. He said the exposure draft section of the Working Group web page contains links to the redlined versions of Chapters 6 through 9.

Mr. Haworth asked everyone to review the drafts and send comments to Mr. Helder by March 17.

6. **Discussed Market Analysis Training**

Mr. Haworth said for the last few meetings, the Working Group has been discussing training suggestions that state insurance regulators would find helpful. He said the Working Group received suggestions from South Carolina, and those are posted in the comments on the Working Group web page.
Ms. Abejar said new analysts and examiners would be helped by training in market conduct risk identification. She said it would be helpful to know what risks are present when certain data is seen. She also suggested a repository to document situations and how they were handled to learn from experiences.

Ms. LeDuc suggested a lunch and learn format that is regularly scheduled but informal. State insurance regulators could bring problems they are encountering to the lunch and learn to discuss solutions and ideas. She noted that it is difficult to find training on problems right when it is needed. The lunch and learn would allow for quicker turnaround.

Ms. Ailor said the timing of training should match with the need (e.g., MCAS training is needed when filings are being received and analyzed).

7. **Discussed Other Matters**

Mr. Haworth said HIIPs also said in their comment letter that there appears to be a one-megabyte file size limitation when uploading filings in the MCAS. He said NAIC staff were unaware of this, but they have duplicated the issue. He said it will likely be an issue that the Market Information Systems Research & Development (D) Working Group will consider addressing and prioritize if any changes need to be made. He said NAIC staff will submit a Uniform System Enhancement Request (USER) for to the Market Information Systems Research & Development Working Group to begin that review.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

W:\National Meetings\2021\Spring\Cmte\MAP\January\01-MAP.dotx
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Jan. 27, 2021. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Maria Ailor and Sarah Borunda (AZ); Don McKinley (CA); Damion Hughes (CO); Steve DeAngelis (CT); Sharon Shipp (DC); Frank Pyle (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy Schott (ME); Jill Huiskens (MI); Cynthia Aman (MO); Paul Hanson (MN); David Dachs (MT); Reva Vandevoorde (NE); Karen McAllister (NH); Ralph Boeckman (NJ); Leatrice Geckler (NM); Sharon Ma (NY); Guy Self (OH); Jeffrey Arnold (PA); Michael Bailes (SC); Shelley Wiseman (UT); Julie Fairbanks (VA); Marcia Violette (VT); and Theresa Miller (WV). Also participating was: Shane Quinlan (NC).

1. **Adopted its Nov. 12, 2020, Minutes**

Mr. Haworth said the Working Group met Nov. 12, 2020, and took the following action: 1) adopted its Oct. 22, 2020, minutes; 2) discussed the Market Conduct Annual Statement (MCAS) attestation process; and 3) discussed training opportunities for market regulation analysts.

Mr. Flott made a motion, seconded by Ms. Amann, to adopt the Working Group’s Nov. 12, 2020, minutes (see NAIC Proceedings – Fall 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment Six). The motion passed unanimously.

2. **Discussed Revisions to the MCAS Best Practices Guide**

Ms. Rebholz said the group revising the MCAS Best Practices Guide is reviewing other MCAS documents to ensure that all the MCAS documents are consistent. The other documents to be reviewed are the frequently asked questions (FAQ) document, the MCAS Industry User Guide, and the data call letter. Ms. Rebholz said the work should be complete after two more meetings.

3. **Discussed MCAS 14-Day Extension Limitation**

Mr. Haworth said the review of the MCAS Best Practices Guide raised the concern of a consistent response to requests for extensions. He said the MCAS submission tool currently allows a company to choose up to 60 days. This creates inconsistencies when some states allow the entire 60 days, some allow 30 days, and others limit the request to two weeks. Mr. Haworth also noted that companies need to re-log into the MCAS to know how the jurisdictions responded to their request. He said it is possible that a company may assume all states are providing 60 days if they only see one or two of the responses.

Mr. Haworth said the group revising the MCAS Best Practices Guide is advising all jurisdictions to allow no more than 14-day extensions. The group is also asking that the MCAS tool be adjusted to only allow extensions for no more than 14 days at a time. Mr. Haworth noted that it is possible that companies may need more than the 14 days, so the MCAS tool will also need to be changed to allow companies to submit second or third requests for extensions. He said this will require some programming work by NAIC’s Information Technology Group (ITG). He said if the Working Group approves this change, the soonest it would be in effect would be for the 2021 data reported in 2022, but it might be the following year.

Mr. Flott said he supports a 14-day limit on extension, and he said the Kansas Department of Insurance (DOI) already has a standard of only 14 days. He said if additional time is needed, the company is required to provide more specifics to the request. He said the company will typically not contact the DOI if it fails to submit by the end of the extension. Mr. Arnold said he supports the 14-day limitation. Ms. Ailor said the Arizona DOI has the same concern with companies asking for extensions and still not submitting their MCAS by the end of the extension. She also said certain companies fail to even request an extension. She suggested editing the MCAS data call letter to advise that the company must make an extension request if it cannot submit its data by the due date. Mr. McKinley asked if a company can receive a reminder as the end of extension period nears. He also suggested that the MCAS system could advise the jurisdictions about the extensions that are outstanding with no submission. Mr. Dachs also supported the 14-day limitation.
Mr. Haworth said the Working Group will vote on this issue on the next conference call. He asked that comments be sent to Randy Helder (NAIC) by Feb. 17.

4. Discussed MCAS Attestation

Mr. Haworth said in November, the Working Group heard an industry request to allow for more attesters in the MCAS. Some companies that write multiple lines of business in multiple states have different individuals who can appropriately attest to the data. However, Mr. Haworth said the MCAS currently only allows for one attester per company to attest to the accuracy of the data regardless of the number of lines of business and states being reported in the MCAS. He said there seemed to be support from the Working Group on expanding the ability of companies to have more than one attester to the accuracy of the data. He said during the November meeting, he asked NAIC staff support to investigate possible solutions.

Teresa Cooper (NAIC) said the MCAS interrogatories can quickly be revised to add two lines for each attester. She does not believe this would be a substantive change and could be implemented right away. There would be two lines for the individual attesting to the accuracy and another two lines for the person attesting that the data that can be traced back to its source within the company. The four additional lines would be available for each line of business blank in each state. The first line would be for the name of the attester and the second line for the title of the attester. While the current comment section for the attestation would be lost, the comment boxes in the interrogatories can be used for the attestation. Ms. Cooper said if the attestation is currently not completed, the company is unable to submit its filings. She said validations would need to be added to require the new interrogatories to be completed before the filing can be submitted.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she needs to speak with APCIA membership about this, but she does not believe there would be any concerns.

Joseph E. Zolecki (Blue Cross Blue Shield Association—BCBSA) asked if there would be a description and example provided. Ms. Cooper said she could draft a mock-up of the suggestion.

Birny Birnbaum (Center for Economic Justice—CEJ) said he agrees that the change is not substantive, but if companies believe they need time to re-program, a requirement could be put in place requiring a cover letter with the names of the attesters for each line of business and each state.

Mr. Haworth asked for comments to be sent to Mr. Helder by Feb. 17.

5. Discussed the Market Analysis Framework

Mr. Haworth said the subgroup revising the market analysis chapters of the Market Regulation Handbook has made progress and should be completed by the Spring National Meeting.

6. Discussed Market Analysis Training

Mr. Haworth said in the last Working Group meeting, there was clearly a strong desire to obtain additional training from both the NAIC and peers in other jurisdictions. He said the Working Group only received one response to its request for suggested training ideas and opportunities, and he once again asked for more comments by Feb. 17.

Ms. Phelps said she would appreciate training on the meaning and importance of the variety of different ratios used by market analysts. Ms. Amann said there is a how-to guide that was published by the NAIC that contained information on financial ratios and why they should be considered in market analysis. She said she has a hard copy, but it probably needs updates, even though the underlying concepts are still valuable.

Mr. Quinlan said the only MCAS training class for state insurance regulators is an on-site class in Kansas City that was cancelled in 2020. He asked if MCAS training can be made virtual. Mr. Helder noted that the training discussed at the Working Group should include a variety of delivery methods, including virtual and in-person.

7. Discussed Other Matters

Mr. Birnbaum said the initial premise of the MCAS was that the additional market conduct data obtained by annual reporting would increase the efficiency of analysts to identify and focus on priorities. This would also reduce the burden on companies...
because they would not have to respond to numerous ad hoc data calls and inquiries. However, Mr. Birnbaum noted that companies continually resist any additional lines of business or data elements in the MCAS. He said if the MCAS were meeting its initial goals, companies should be cooperative with adding additional lines and data elements. He asked why companies did not take the MCAS as seriously as they do other reporting requirements. He asked whether the MCAS is achieving its initial purpose, and the reason if it is not.

Mr. Zolecki asked if the Working Group has considered a possible extension of MCAS reporting, as was provided in 2020, since the COVID-19 pandemic is continuing. Mr. Haworth said it has not because, by now, companies and state insurance regulators have adapted to the new environment. He said extensions create delays in the market analysis process.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 23, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Crystal Phelps (AR); Sarah Borunda (AZ); Scott Woods (FL); Sarah Crittenden (GA); Erica Weyhenmeyer (IL); Dawna Kokosinski (MD); Jill Huiskens (MI); Teresa Kroll (MO); Martin Swanson (NE); Leatrice Geckler (NM); Guy Self (OH); Jeffrey Arnold (PA); Michael Bailes (SC); Maggie Dell (SD); Shelli Isiminger (TN); Tanji J. Northrup (UT); Lichiou Lee (WA); and Letha Tate (WV).

1. **Adopted its Feb. 24 Minutes**

   The Working Group met Feb. 24 and took the following action: 1) adopted its Nov. 16, 2020, minutes; 2) heard an update on the Travel Market Conduct Annual Statement (MCAS); 3) heard an update on the Other Health MCAS; 4) discussed a new MCAS proposal submission form; 5) discussed reporting of complaint and lawsuit data elements within the Home and Auto MCAS reporting blanks; 6) discussed the MCAS lawsuit definitions; and 7) discussed the addition of Accelerated Underwriting data elements to the Life MCAS and Digital Claims data elements to the Home and Auto MCAS lines of business.

   Mr. Flott made a motion, seconded by Ms. Kroll to adopt the Working Group’s Feb. 24 minutes (Attachment Four-A). The motion passed unanimously.

2. **Heard an Update on the Travel MCAS**

   Ms. Rebholz noted that the Travel MCAS subject matter expert (SME) group met March 3 and March 15. She stated that during those calls, Birny Birnbaum (Center for Economic Justice—CEJ) presented a draft blank for the SME group’s review. Discussions continued regarding the appropriate reporting granularity, and decisions were made on the granularity of specific data elements. The SME group is making good progress, and it will move to the definitions work in the next few sessions. Discussions will continue during the next Travel SME call, which is scheduled for March 29. Members of the SME group were advised to review the drafts posted to the Working Group’s web page in preparation for the call.

3. **Heard an Update on the Other Health MCAS**

   Randy Helder (NAIC) stated that the Other Health SME group is meeting on a weekly basis through the month of April and concentrating on short-term limited-duration (STLD) insurance products. He stated that the intention of the drafting group is to complete an STLD insurance blank and definitions before the end of April to allow for at least 30 days of exposure prior to a vote on the blank before June 1. He stated that as soon as the group completes the STLD insurance blanks and definitions, it will begin work on the remaining Other Health products. Currently, the group is on iteration 5.2, which is very close to what the final product will look like. This version and two prior versions are on the Working Group’s web page in the “Current MCAS Blanks Discussions” box. Mr. Helder stated that the drafting group’s next meeting would address producer commissions and the blank definitions.

4. **Heard an Update on the Accelerated Underwriting and Digital Claims Discussions**

   Ms. Rebholz stated that volunteers have agreed to participate in the Accelerated Underwriting and Digital Claims discussion groups. She stated that the first Accelerated Underwriting call is scheduled for March 24, and the first Digital Claims call is scheduled for April 1. Working Group members, interested state insurance regulators, and interested parties that would like to participate in these SME groups were asked to contact Teresa Cooper (NAIC). Leaders for these SME groups are also still needed, and they should contact Ms. Cooper if interested in leading these groups.

5. **Discussed the Placement of Complaint and Lawsuit Data Elements within the Home and Auto MCAS Reporting Blanks**

   Ms. Rebholz noted that Attachment Two in the meeting materials was also provided for the Feb. 24 meeting; it is a grid that summarizes the placement of the complaint and lawsuit data elements within each MCAS blank and whether the complaint and lawsuit data is reported at the line of business coverage level. She stated that the Home and Auto complaint data elements are...
currently reported within the underwriting section of the blank, and they are reported in total only. During its Feb. 24 call, the Working Group was asked to consider if this level of reporting is what state insurance regulators need to perform market analysis or if complaint data by coverage type is needed. Ms. Rebholz stated that all other MCAS lines of business that contain complaint data elements require reporting at the coverage type level. Mr. Birnbaum noted in February that separate coverage reporting of complaints makes sense for the Homeowners line of business, but it may be more difficult for the Private Passenger Auto line. Ms. Rebholz noted that the goal for this meeting is to get a couple of options for the Working Group to consider and then make a final decision during the April meeting. Mr. Self stated that he has not found the need to look for a higher level of detail than what is currently available in this complaint area; therefore, he suggested no change here. Ms. Rebholz stated that in the April Working Group meeting, no change here will be considered, but if anyone has additional thoughts on this matter, she suggested that they share them on the next call.

Ms. Rebholz stated that the lawsuit data elements for Home and Auto are reported by coverage type; using the current lawsuit definitions for the Home and Auto lines of business only captures lawsuit data for claim-related suits in the Home and Auto lines of business. During the February meeting, Peter Kochenburger (University of Connecticut School of Law) and Mr. Birnbaum encouraged the collection of data for lawsuits that are not related to claims. Mr. Birnbaum also encouraged consistency in the reporting of lawsuits within the MCAS lines of business. However, as with complaints, he noted that the reporting of lawsuit groups for auto coverage types may not make sense. Ms. Rebholz noted that there are similar issues to review regarding the Lender-Placed Insurance (LPI) Auto and Home line of business; LPI lawsuits are currently reported in the claims section, but the lawsuit definition for LPI is the same as for those MCAS lines where reporting is done in a separate reporting section. She noted that she would like to have some lawsuit reporting options that can be considered during the April meeting. The question for the Working Group to consider is whether only claims-related lawsuit data for the Home and Auto MCAS lines of business is needed or if lawsuit data should include suits not related to claims.

Ms. Rebholz stated that it appears the options are: 1) no change, which means data will continue being collected for only claims-related lawsuits; or 2) collecting data for lawsuits not just related to claims but also related to more broad categories for the insurance product, such as the application and sales processes. Mr. Flott stated that he supports option one, as the reviews he has done have not warranted a change here, but he also has no objections to option two if that information is necessary for others. Ms. Rebholz noted that a draft of these options will be written for consideration on the next Working Group call.

6. Discussed the MCAS Lawsuit Definitions

Ms. Rebholz stated that the Working Group needs to make determinations on the level of lawsuit reporting for Home, Auto and LPI before addressing the lawsuit definitions for those lines of business. However, at this time, the Working Group needs to review the lawsuit definition used for Life, Annuity, Disability Income, Private Flood and Long-Term Care (LTC) to determine if any revisions are needed. The definition was provided in Attachment Three of the meeting materials. Ms. Isiminger stated that in reading the definition of lawsuit and the second bullet listed, it states, “an action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant. For purposes of reporting lawsuits for (MCAS Line of Business) products: include all lawsuits, whether or not a hearing or proceeding before the court occurred.” She asked if this means any kind of filing whether it is the company doing it or the consumer. Lisa Brown (American Property Casualty Insurance Association—APCIA) stated that the first bullet states, “include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant,” and the way the first and second bullets are stated seems unclear. Ms. Rebholz stated that this would be a good time to review this information and add clarity where needed. Ms. Cooper stated that she will take notes on these comments so that edits to these bullets can be discussed further during the next Working Group meeting.

Mr. Kochenburger asked why information on arbitrations is not included, as bullet number three in the lawsuit definition states, “do not include arbitrations of any sort.” He stated that he understands that the results are confidential, but he believes knowing the number of arbitrations would be useful information for state insurance regulators. Ms. Brown stated that arbitration data is collected on the Auto and Homeowners lines of business. Richard L. Bates (State Farm Insurance) asked what the intent of including “agent as a defendant” in the first bullet discussed earlier is. He explained that it is possible that the insurance company may not be a party to the lawsuit or even know about it. Ms. Isiminger stated that she understands the term agent to mean a conservator or power of attorney. Ms. Brown stated that clarifying that producers are excluded could be helpful in this area. Ms. Rebholz stated that she would like to further review the use of the word “complainants” in bullet five versus potentially using the word “plaintiffs.” Mr. Bates asked for additional clarity on the last bullet, which states, “include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.” Ms. Isiminger suggested that the court case information could be cited here.
Mr. Bates stated that when looking at the lawsuit ratios that were developed for Auto and Homeowners, it compares it against claims closed without payment. He stated that if non-claims lawsuits are added in the aggregate, it could cause misrepresentation of information; he stated that the ratio could become less valuable. He asked that this be considered in the decisions going forward on whether to add lawsuits not related to claims. Ms. Rebholz stated that this would be considered if there were to be a change made on lawsuit data collected. There were no other concerns raised on the other bullet points in the lawsuit definition, and she stated that the concerns raised will be noted and discussed in further detail on the next call.

7. Discussed Other Matters

Ms. Rebholz stated that during the February meeting, a new MCAS proposal form was introduced to be used anytime a new change is proposed for an MCAS blank or data call and definitions. After introducing it, comments were received, and an updated version was posted to the Working Group’s web page. Any comments or questions regarding the new form should be sent to Ms. Rebholz, Mr. Flott or Ms. Cooper.

Ms. Rebholz stated that regarding the Disability Income MCAS, a question has come up that NAIC staff need guidance on. The issue is with the Schedule 3 reporting within the Disability Income blank. Schedule 3 is titled “Disability Income Claims Decisions Processed.” This title seems to indicate that all claim decisions, regardless of paid or declined, would be included in the schedule. However, the median day data elements 29 and 34 specifically say to include processing time for claims resulting in payment. Ms. Rebholz noted that Schedule 4 is titled “Disability Income Resulting in Closed Without Payment”; so, it includes only those decisions resulting in closed without payment. The question for the Working Group to consider is whether Schedule 3 should include all claim decisions or only those that result in payment.

Dianne Evans (UnitedHealthcare) stated that UnitedHealthcare uses Schedule 3 to report only claims that were paid. Ms. Rebholz stated that the solution could be adding a note or clarification within the data call and definitions on the blank itself, stating that Schedule 3 is intended to capture data only for claims processing times for those claims decisions that resulted in payment.

Mr. Flott made a motion, seconded by Mr. Self, to add a note in the Disability Income blank clarifying that Schedule 3 is designed to only collect claims information about claims that have payment. The motion passed unanimously.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Feb. 24, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Maria Ailor (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Erica Bailey (MD); Jill Huisken (MI); Teresa Kroll (MO); Martin Swanson (NE); Jeffrey Arnold and Katie Dzurec (PA); Michael Bailes and Rachel Moore (SC); Maggie Dell (SD); Shelli Isiminger (TN); and Letha Tate (WV).

1. **Adopted its Nov. 16, 2020, Minutes**

   The Working Group met Nov. 16, 2020, and took the following action: 1) adopted its Oct. 28, 2020, minutes; 2) discussed options for collections of transactional level data; 3) adopted the motion to revert the definition of lawsuit for the Home and Auto Market Conduct Annual Statement (MCAS) to the one used in the 2019 data year; and 4) adopted the motion to specify $50,000 in premiums written as the threshold in the 2021 Disability Income Data Call and Definitions document.

   Mr. Flott made a motion, seconded by Mr. Swanson, to adopt the Working Group’s Nov. 16, 2020, minutes (see NAIC Proceedings – Fall 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven). The motion passed unanimously.

2. **Heard an Update on the Travel MCAS**

   Ms. Rebholz noted that the Travel MCAS subject matter expert (SME) group met Jan. 26. She stated that the discussions have been moving forward at a nice pace, but they have been slowed down a bit by discussions related to the appropriate reporting granularity. Breaking the data out by retailer types such as airline, cruise line, websites, etc. was discussed. Discussions will continue during the next Travel SME call, which is scheduled for March 3 at 11:00 a.m. CT.

3. **Heard an Update on the Other Health MCAS**

   Ms. Dzurec stated that last year it was decided to break out two workstreams—one for Short-Term Limited-Duration (STLD) and the second for Other Health. The most recent version of the STLD blank was posted to the MCAS web page in December 2020 for further consideration. A lengthy discussion took place about whether to maintain summary level data in the STLD blank, and that is currently the path being pursued unless different direction is given by the Market Regulation and Consumer Affairs (D) Committee. The next step for the STLD blank is to finalize the definitions and use of terms in the document posted on the MCAS web page. Ms. Dzurec invited others to join the discussion and provide any thoughts or feedback on the document and definitions.

   Ms. Ailor asked if the goal is to get the STLD blank finalized and approved this year. Ms. Dzurec confirmed that it was, and she asked that any comments be provided by March 10. She stated that the next SME call for Other Health will be scheduled before the Spring National Meeting, likely in the second or third week of March. Ms. Ailor asked when final comments would need to be approved to be implemented next year. Teresa Cooper (NAIC) stated that approvals by the Working Group are needed by June 1 to be effective in the next data year, so having the information ready for the Working Group to review about one month before that would be best.

4. **Discussed a New MCAS Proposal Submission Form**

   Ms. Rebholz noted that a new MCAS proposal submission form will start being used to eliminate confusion and uncertainty surrounding proposed MCAS updates. The form is posted to the Working Group web page as a fillable Microsoft Word form, along with the instructions for completing the form. It can be found under the Related Documents tab of the web page. Suggestions for the MCAS blanks or data call and definitions can be proposed by completing this form. Ms. Rebholz noted that if there is a current proposal being discussed with anyone, NAIC staff will work with those parties to get the proposal put into the form.
5. Discussed the Reporting of Complaint and Lawsuit Data Elements within the Home and Auto MCAS Reporting Blanks

Ms. Rebholz noted that last year there was discussion regarding the placement of reporting of the complaint and lawsuit data elements within the Home and Auto MCAS reporting blanks, and no changes were made at that time. Attachment Three in the meeting materials is a grid that summarizes the placement of the complaint and lawsuit data elements within each MCAS blank and indicates whether the complaint and lawsuit data is reported at the line of business coverage level. Ms. Rebholz stated that no decisions will be made today, and this will be discussed again in the future. She stated that the focus for this call would be getting feedback on the Home and Auto complaints data, and these data elements are currently reported in the underwriting section as only a total number. The question for the Working Group to think about is if this level of reporting is what state insurance regulators need to perform market analysis or whether they want the complaint data broken out by coverage type. Ms. Rebholz stated that all other lines of business that contain complaint data elements require reporting at the coverage-type level.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that having complaints reported separately for life insurance makes sense because the different coverages represent different products and policies, and for similar reasons, he also believes it makes sense to break out the reporting for Homeowners. He said it might be more difficult for Auto though since there can be multiple coverages within one policy; a company may have difficulty deciding which coverage to report a complaint for on pricing or claim settlement when it might affect a bodily injury claim, property claim, or uninsured motorist claim at the same time. Ms. Rebholz asked call participants to give this agenda item some thought before the next meeting so the Working Group can consider which direction to move in.

Ms. Rebholz stated that the Home and Auto lawsuit data elements are reported by coverage type. Using the current lawsuit definitions for the Home and Auto lines of business, lawsuit information is only collected for claims-related suits. The question for the Working Group to consider is whether state insurance regulators need only claims-related lawsuit data for the Home and Auto lines of business or whether the lawsuit data include suits that are not related to claims.

Peter Kochenburger (University of Connecticut School of Law) stated that he encourages the collection of data for suits not related to claims, as he feels that information would be equally as valuable and important. He stated that there is an increasing ability for anyone who is interested to get access to litigation data for free by going on state dockets for example, so the ability to have a better understanding of what lawsuits are out there and have a better understanding of those lawsuits would be helpful.

Mr. Birnbaum stated that there should be consistency with treatment of lawsuits across the various MCAS lines of business. He stated that the CEJ supports collecting information on all types of lawsuits such as underwriting, pricing and sales, in addition to claims. He stated that on the issue of collecting lawsuit data by coverage, if there are separate products that are clearly distinguishable products like life insurance, then it would make sense to collect it broken out by coverage. However, when separate products are not clearly distinguishable among the coverages like Auto, it would not make sense to ask for reporting lawsuits by coverage.

Lisa Brown (American Property Casualty Insurance Association—APCIA) stated that the lawsuits closed during the period with consideration for the consumer were added for both Home and Private Passenger Auto (PPA) last year, which is consistent across the other lines.

Ms. Rebholz asked the Working Group to give this topic additional thought and to be prepared for further discussion on this matter in the next meeting.

6. Discussed the MCAS Lawsuit Definitions

Ms. Rebholz stated that during the 2020 Fall National Meeting, the Market Regulation and Consumer Affairs (D) Committee approved reverting the 2021 Homeowners and PPA definition of lawsuit back to the definition used in the 2020 Data Call and Definitions. The Committee also approved updating the 2021 definitions of lawsuits closed during the period with consideration for the consumer by replacing the phrase “applicant, policyholder, or beneficiary” with the term “claimant.” Ms. Rebholz noted that the meeting materials include the 2021 data year definitions for lawsuit and lawsuits closed during the period with consideration for the consumer for each of the MCAS lines of business and some additional definitions regarding lawsuits contained in the Disability Income MCAS data call and definitions for comparison. She asked that the Working Group review the materials provided and give thoughts on the definitions and level of granularity needed for lawsuit reporting so that it can be discussed in more detail in the future.
7. **Discussed the Addition of Accelerated Underwriting Data Elements to the Life MCAS and Digital Claims Data Elements to the Home and Auto MCAS Lines**

Ms. Rebholz stated that last year, the Working Group agreed to move forward with reviewing the proposed definitions and data elements for both accelerated underwriting and digital claims, with the intent to implement reporting on those terms. Discussions on these topics need to be done at a more detailed level, so SME groups will be formed to continue these discussions. Once the SME groups reach consensus, the topics will be brought back to the Working Group for consideration. Ms. Rebholz asked that if anyone would like to be part of the SME groups for either accelerated underwriting or digital claims, they should send an email to Tressa Smith (NAIC) or Ms. Cooper, and they will collect the lists. Leaders for these SME groups will also be needed; anyone with interest should contact Ms. Smith or Ms. Cooper as well.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 30, 2021. The following Working Group members participated: Bruce R. Ramge, Chair, and Laura Arp, Martin Swanson and Reva Vandevoorde (NE); Mel Heaps, Teri Ann Mecca and Crystal Phelps (AR); Eleanor Coe and Damion Hughes (CO); Kurt Swan (CT); Sharon Shipp (DC); Susan Jennette and Frank Pyle (DE); Sarah Crittenden (GA); Lindsay Bates and Daniel Mathis (IA); Erica Weyhenmeyer (IL); Lori Cunningham and Ron Kreiter (KY); Mary Lou Moran (MA); Jill Huiskens (MI); Paul Hanson (MN) Jo LeDuc, Win Nickens and Rob Reichart (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger and Edwin Pugsley (NH); Ralph Boeckman (NJ); Leatrice Geckler (NM); Hermoliva Abejar, Barbara D. Richardson and Peggy Willard-Ross (NV); Sylvia Lawson, Sharon Ma and Elvis Soto (NY); Rodney Beech and Jana Jarrett (OH); Landon Hubbart (OK); Brian Fordham (OR); Gary Jones (PA); Thomas Morgan and Matthew Tarpley (TX); Julie Fairbanks and Bryan Wachter (VA); Mary Block, Isabelle Turpin Keiser and Christina Rouleau (VT); John Haworth and Jeanette Plitt (WA); Barbara Belling, Diane Dambach, Darcy Paskey, Rebecca Rebholz and Jody Ullman (WI); and Desiree Mauller (WV). Also participating was: Matt Gendron (RI).

1. **Heard Opening Remarks and Reviewed its 2021 Charges**

   Director Ramge welcomed returning Working Group members and a new member state, Texas, represented by Mr. Tarpley. Changes in Working Group member state representation in 2021 include Mr. Kreiter, Joel Bengo (NM) and Ms. Dambach.

   Director Ramge said the charges of this Working Group, as adopted by the Market Regulation and Consumer Affairs (D) Committee, are to:
   - Develop market conduct examination standards, as necessary, for inclusion in the *Market Regulation Handbook* (Handbook).
   - Monitor the adoption and revision of NAIC models and develop market conduct examination standards to correspond with adopted NAIC models.
   - Develop updated standardized data requests (SDRs), as necessary, for inclusion in the Handbook.
   - Develop uniform market conduct procedural guidance (e.g., a library, depository or warehouse with market conduct examination templates, such as an exam call letter, exam exit agenda, etc.) for inclusion in, or for use in conjunction with, the Handbook.
   - Coordinate with the Innovation and Technology (EX) Task Force to develop market conduct examiner guidance for the oversight of regulated entities’ use of insurance and non-insurance consumer data and models using algorithms and artificial intelligence (AI).
   - Discuss the effectiveness of a group’s supervision of market conduct risks and develop examination procedural guidance, as necessary.
   - Discuss the role of market conduct examiners in reviewing insurers’ corporate governance, as outlined in the *Corporate Governance Annual Disclosure Model Act* (#305) and the *Corporate Governance Annual Disclosure Model Regulation* (#306).

2. **Discussed its Potential 2021 Tasks**

   Director Ramge said the Working Group is the successor Working Group to the Market Conduct Examination Standards (D) Working Group. The Working Group will not meet at NAIC national meetings; it will accomplish its assigned tasks via regularly scheduled conference calls, to occur approximately every four to six weeks.

   Regarding its adopted 2021 charges, the Working Group identified recently adopted NAIC models for which examination standards/state insurance regulator guidance may need to be updated in the Handbook. Some of the models include: 1) the *Suitability in Annuity Transactions Model Regulation* (#275) and the frequently asked questions (FAQ) document that the Annuity Suitability (A) Working Group is developing, when that document is ultimately adopted by the NAIC; 2) the *Insurance Holding Company System Regulatory Act* (#440); 3) the *Health Maintenance Organization Model Act* (#430); 4) the *Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act* (#651); and 5) the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805). Director Ramge indicated that he had prepared an initial
comprehensive draft of updated examination standards to address Model #275 for the Working Group to use as a starting point as it moves forward with its work this year to develop corresponding exam standards for that model.

Director Ramge asked for state insurance regulators to contact Petra Wallace (NAIC) to indicate their interest in volunteering to: 1) review any of the models on the list of recently adopted models—i.e., Model #275, Model #430, Model #440, Model #651 and Model #805; 2) report to the Working Group regarding whether the Handbook should be updated in these subject areas; and 3) to work together as regulator-only subject matter expert (SME) groups to prepare an initial draft for review and discussion by the Working Group.

Director Ramge made additional suggestions for the Working Group to consider, which include: 1) the Regulatory Framework (B) Task Force’s recent adoption of the new Pharmacy Benefit Manager Licensure and Regulation Model Act on March 18; 2) the amendments to the Unfair Trade Practices Act (#880) regarding rebating practices, which are currently being considered by the Innovation and Technology (EX) Task Force; 3) coordination with the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, since one of its charges is to “provide supplemental resources to support documentation and reporting in the MHPAEA chapter of the NAIC Market Regulation Handbook”; 4) monitoring the Long-Term Care Insurance Model Update (B) Subgroup, which plans in 2021 to update the Long-Term Care Insurance Model Act (#640), the Long-Term Care Insurance Model Regulation (#641), the Limited Long Term Care Insurance Model Act (#642), and the Limited Long Term Care Insurance Model Regulation (#643); 5) the issues being discussed at the Big Data and Artificial Intelligence (EX) Working Group surrounding the regulated entity use of AI in underwriting, claims, marketing and rating (as model laws/regulations are developed to address AI, there should be corresponding changes made to the Handbook); 6) the work that the Accelerated Underwriting (A) Working Group will be doing in 2021; and 7) the federal No Surprises Act whenever the regulations have been finalized at the federal level.

Birny Birnbaum (Center for Economic Justice—CEJ) suggested that the Working Group consider making corresponding revisions to the Handbook regarding the Real Property Lender-Placed Insurance Model Act, which was adopted by the Property and Casualty Insurance (C) Committee in December 2020 and will be considered for adoption by the Executive (EX) Committee and Plenary at the Spring National Meeting.

3. Discussed New Draft Title SDRs for Inclusion in the Reference Documents of the Market Regulation Handbook

Director Ramge said title insurance related SDRs addressing in force policies and claims were developed by state insurance regulator SMEs for the Working Group’s review, discussion and consideration of adoption for inclusion as new SDRs in the reference documents of the Handbook. The title insurance SDRs, which were circulated to the Working Group, interested state insurance regulators, and interested parties on March 23, replace the title SDRs that were adopted by the NAIC in 2008. Director Ramge said the SMEs had developed the SDRs under the leadership of Mr. Reichart.

Mr. Reichart said the new title SDRs have substantial changes and updates compared to the existing 2008 title SDRs, which were very basic. Mr. Birnbaum suggested that data fields be added to the title claims SDR to address regulated entity use of arbitration provisions. Ronald J. Blitenthal (Old Republic National Title Insurance Company) said some data fields in the SDRs do not apply to title insurance (e.g., the use of “NPN,” “agent first name,” “agent middle name,” “agent last name,” and “CSR”). He said a lot of the information requested in the title SDR exposure drafts may not be collected by regulated entities, and if it would need to be collected, software that is used by the industry would need to be updated.

Director Ramge said just because a data field is on an SDR does not mean it is a new requirement of regulated entities; an SDR is a list of suggested fields for state departments of insurance (DOIs) to consider when requesting data from regulated entities. Ms. Plitt agreed, saying that the fields on an SDR are not a mandate, and not each and every data field needs to be used or run in each and every SDR. Mr. Hanson said the fields on an SDR are not a mandate, but regulated entities need to be aware of the data. He added that the data fields contained in an SDR is an issue that a state DOI works out with a regulated entity’s exam coordinator; a state DOI adds fields to an SDR where it feels it is appropriate, and this occurs not only with title SDRs, but also with SDRs related to other lines of business.

Mr. Gendron said all title producers in Rhode Island are licensed with the Insurance Division of the State of Rhode Island Department of Business Regulation. He also indicated that per the information that he recently received from the Rhode Island Producer Licensing Division, while not every state/jurisdiction uses the NPN for title agents, most states do use the National Producer Number (NPN) number as a unique identifier.
Mr. Blitenthal said he would be submitting comments on behalf of the Old Republic National Title Insurance Company, and he mentioned that the American Land Title Association (ALTA) would likely also be submitting comments on the title SDR exposure drafts.

Director Ramge said the comment due date on the new draft title SDRs is April 23.

4. Discussed Other Matters

Director Ramge asked the Working Group members to participate in as many Working Group conference calls as possible this year so the Working Group can accomplish the tasks that are planned in 2021.

Director Ramge said NAIC staff will provide advance email notice of the next Working Group conference call, which is anticipated to occur in April.

With regard to Director Ramge’s retirement from the Nebraska DOI on April 9, Ms. LeDuc thanked Director Ramge for his leadership of the Working Group and his contributions to market regulation uniformity. Ms. Wallace added that Director Ramge has been chair of the Working Group’s predecessor group, the Market Conduct Examination Standards (D) Working Group since 2008, and substantial improvements to the Handbook and NAIC market conduct regulatory guidance have occurred under his leadership.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 29, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Erica Weyhenmeyer (IL); LeAnn Crow (KS); T.J. Patton (MN); Chris Aufenthie and Johnny Palsgraaf (ND); Martin Swanson (NE); Raven Collins and Brian Fordham (OR); and Don Beatty and Katie Johnson (VA).

1. **Adopted its 2020 Fall National Meeting Minutes**

Mr. Kreiter made a motion, seconded by Mr. Aufenthie, to adopt the Working Group’s Nov. 20 minutes (see NAIC Proceedings – Fall 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment Nine). The motion passed unanimously.

2. **Received Status Reports on Federal and State Privacy Legislation**

Brooke Stringer (NAIC) said both Republicans and Democrats acknowledge the need for federal data privacy legislation, but the differences in their approach have thwarted efforts to enact comprehensive legislation thus far. She said the key points of contention include: 1) whether, and to what extent, federal legislation should preempt state laws; and 2) whether the legislation should include a private right of action. Ms. Stringer said as momentum builds among the states to enact data privacy laws, so does the pressure on Congress to act at the federal level. She said both sides of the aisle were engaged over the past session of Congress on developing privacy bills and were committed to comprehensive legislation, but the onset of the pandemic stalled out their momentum.

Ms. Stringer said the most likely starting points for federal legislation in 2021 are: 1) U.S. Senate Commerce Committee Chairwoman Maria Cantwell’s (D-WA) Consumer Online Privacy Rights Act (COPRA), which contained strict standards, but would have established a preemptive floor and allowed for a private right of action; and 2) Senate Commerce Committee Ranking Member Roger Wicker’s (R-MS) SAFE DATA Act, which also had high standards and would have preempted all state data privacy and security laws. However, Ms. Stringer said it also had a federal Gramm-Leach-Bliley Act (GLBA) carve out, which may have protected some of the state consumer data privacy laws. While these two bills differ, Ms. Stringer said both senators remain interested in a bipartisan Senate bill.

She said the House Energy and Commerce Committee developed a bipartisan staff draft bill during the last Congress that would have provided the Federal Trade Commission (FTC) with significant rule-making authority to implement standards, but the committee had not yet determined how to handle preemption. Ms. Stringer said U.S. Rep. Suzan Delbene (D-WA) recently reintroduced the Information Transparency and Personal Data Control Act (H.R.1816), which would create a unified national data privacy standard and preempt conflicting state laws. She said according to Rep. Delbene’s press release, this act would allow consumers to opt-in before companies could use the consumer’s most sensitive, private information in ways consumers might not expect. Ms. Stringer said the Act increases transparency by requiring companies to disclose: 1) the purpose of sharing personal information; 2) if personal information will be shared; and 3) with whom the personal information will be shared.

Ms. Stringer said NAIC staff continue to engage with Congress, oppose preemptive legislative proposals and inform Congress of the NAIC’s Privacy Protections (D) Working Group’s efforts to update NAIC models. She said the NAIC continues to underscore the importance of not disregarding the existing state regulatory framework or inhibiting ongoing efforts in the states to develop laws and regulations in the best interest of insurance consumers. Birny Birnbaum (Center for Economic Justice—CEJ) asked if the NAIC had entered a position with Congress on the privacy of consumer data for insurance purposes. Ms. Stringer said this has been communicated via the staff level only at this time, but not in a formal letter to this Congress.

Jennifer Neuerburg (NAIC) provided a recap of what happened with state privacy legislation in 2020: 1) at least 30 states introduced data privacy legislation—many of them comprehensive and similar to the California Consumer Privacy Act (CCPA)—but very few of them were enacted since COVID-19 disrupted everyone’s legislative sessions; 2) California residents voted in November 2020 to approve the California Consumer Privacy Rights Act (CPRA), which modified the CCPA, further expanded consumer privacy rights, and created a statewide privacy agency that will be charged with enforcing privacy laws and will likely lead to increased enforcement actions for privacy violations in California; 3) California also extended its exemption from the CCPA to certain employment information and personal information involved in business-to-business
communications and transactions; 4) Michigan modified requirements for insurers providing privacy policies to customers; and
5) Virginia enacted a law governing driver’s license scanning.

Ms. Neuerburg said there has been a lot of activity in state privacy legislation in 2021. She said privacy bills have been
Neuerburg said these bills focus on business obligations stemming from consumer rights but vary in substance. She said many
of these bills indicate to which businesses the bill applies. For example, Florida’s bill applies to for-profit businesses in the
state that: 1) have global annual gross revenues in excess of $25 million; 2) annually buy, sell or share for commercial purposes
the personal information of 50,000 or more consumers; or 3) derive 50% or more of its global revenues from selling or sharing
personal information.

Ms. Neuerburg said no template is emerging yet; however, she said some have the following issues in common: 1) they have a
requirement that covered entities perform a risk assessment; 2) they provide for a private right of action; 3) they address data
security, as well as data privacy; 4) they resemble the General Data Protection Regulation (GDPR) and would be more
expansive than the CCPA. Arizona, Florida and Washington are examples of states with such legislation; and 4) they exempt
data collected in compliance with the GLBA, as well as entities subject to the GLBA. Colorado and Virginia, for example,
have this exemption. She said these exemptions differ from the CCPA and CPRA, which only exclude the data collected in
compliance with the GLBA, while still regulating the entity.

Ms. Neuerburg said the CCPA was amended just this month to make it easier for consumers to opt-out. She said most recently,
Virginia passed its Consumer Data Protection Act, which creates consumer rights like the CCPA; imposes security and
assessment requirements for businesses; and leaves enforcement entirely up to the attorney general, so there is no private right
of action. Ms. Neuerburg said a lot more movement in state legislation is anticipated throughout 2021. Ms. Amann said a lot
of legislation being considered this year lumps together data security and data privacy, but this Working Group will continue
to focus its efforts on the privacy of insurance-related consumer data.

3. **Reviewed the 2021 NAIC Member-Adopted Strategy for Consumer Data Privacy Protections**

Ms. Amann said since the Working Group completed its work plan in 2020, the Working Group received additional guidance
through the Market Regulation and Consumer Affairs (D) Committee in the form of the following NAIC Member-Adopted
Strategy for Consumer Data Privacy Protections (Attachment D). She said the Working Group is currently working on item C
because item A and item B have already been completed.

**NAIC Member-Adopted Strategy for Consumer Data Privacy Protections**

1. Charge the Market Regulation and Consumer Affairs (D) Committee with:
   a. Summarizing consumer data privacy protections found in existing NAIC models—the Health Information Privacy
      Model Act (#55), the NAIC Insurance Information and Privacy Protection Model Act (#670), and the Privacy of
      Consumer Financial and Health Information Regulation (#672).
   b. Identifying notice requirements of states, the European Union’s (EU’s) General Data Protection Regulation (GDPR)
      and the California Consumer Privacy Act (CCPA), and how insurers may be subject to these requirements.
   c. Identifying corresponding consumer rights that attach to notice requirements, such as the right to opt-out of data
      sharing, the right to correct or delete information, the right of data portability and the right to restrict the use of data,
      and how insurers may be subject to these requirements.
   d. Setting forth a policy statement on the minimum consumer data privacy protections that are appropriate for the
      business of insurance.
   e. Delivering a report on items (a–d) above by the NAIC Fall National Meeting.

2. Engage with state attorneys general (AGs), Congress and federal regulatory agencies on state and federal data privacy
   laws to minimize preemption provisions and maximize state insurance regulatory authority.

3. Reappoint the Privacy Protections (D) Working Group to revise NAIC models, as necessary, to incorporate minimum
   consumer data privacy protections that are appropriate for the business of insurance. Complete by the NAIC Fall National
   Meeting.

4. **Discussed Comments Received on the 2020 Fall National Meeting Verbal Gap Analysis**

Robert Neill (American Council of Life Insurers—ACLI) said he and Shelby Schoensee (ACLI) would be sharing trade
opinions on behalf of ACLI members since the retirement of Robbie Meyer (ACLI). He said the ACLI was concerned with the
Working Group’s strategy being too challenging and that the timeline was too short for the Working Group to accomplish its
objectives by the Fall National Meeting. Mr. Neill suggested that the Working Group would be better served to wait to see where federal and state legislation ended up regarding preemption, which seemed to cover business areas broader than insurance. He also said that the business of insurance would be uniquely affected by general data privacy concerns due to conflicting and overlapping provisions. Ms. Amann said the Working Group would attempt to simplify its discussions surrounding overlapping and conflicting legislation by focusing on actual practices rather than on theory. She said the Working Group would call on trades to assist in this important endeavor.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Insurers, said that health insurance is already subject to the GDPR and CCPA, even though these are not insurance-specific. He said insurance products should be regulated by insurance commissioners and should include a safe harbor for compliant companies. Mr. Petersen said a two-stage approach is encouraged for gap analysis: 1) gaps in NAIC models should be identified; and 2) it should be determined whether gaps need to be filled. For example, he said that portability is not needed in insurance because an employer (not the employee) decides what data is needed for employees while they are employed, but this data is no longer needed after the employee leaves the company. Mr. Petersen said this type of data cannot be purged from employers’ systems as the GDPR wants. Ms. Amann said the Working Group welcomes all kinds of input because insurance is unique from technology companies, vendors, data brokers, third parties, etc.

Cate Paulino (National Association of Mutual Insurance Companies—NAMIC) said clarification and workability should be goals of the Working Group. She said notices are covered by Model #672, and if it is revised, she asked that it also: 1) incorporates a safe harbor; 2) has more examples added to Appendix A; 3) continues to allow federal privacy notices to be used; and 4) allows web postings with other alternatives.

Ms. Paulino said the frequency of notices should be revisited because it has changed in that the annual notices required starting in 2016 by the GLBA are no longer required if there have been no changes by the company since the prior notice. She said workability is the concern regarding the opt-out versus opt-in data-sharing question, so the insurance industry, other than health insurance, urges the Working Group to continue to use opt-out for continuity of existing practices. Ms. Paulino said there is no real difference in them, except opt-in is a lot more difficult for companies to administer, and the scope of opt-out works much better with business function exemptions such as fraud, liens, underwriting, etc. Ms. Amann said state insurance regulators are ready to learn more about areas of functionality from trades.

Angela Gleason (American Property Casualty Insurance Companies—APCIA) said privacy regulation is not new to insurance, but there is a difference between theory and practice. She said that she appreciates the Working Group not rushing into changes without first considering the risk, uncertainty and conflicts such changes may cause. Ms. Gleason said notices are working well now, have changed over time, and can adapt again given the proper time and consideration. She said the concern with portability is that currently states have the right to regulate insurance in their states and that states should continue to have that right in the future.

Ms. Gleason said that partnership and collaboration is needed between industry and state insurance regulators. She said the timeline is challenging and asked if it might be more flexible. She also asked if other committees would be making decisions regarding consumer data privacy together or separately.

Ms. Amann said the Working Group process would not be slowed down, but it would be thorough. She asked that additional comments on strategy be sent to her, Mr. Kreiter or Lois E. Alexander (NAIC). Ms. Amann said all comments together will help the Working Group maintain its focus on consumer protections, not coverage inhibitors. She said all NAIC groups working on issues related to consumer data protection would work in tandem and collaboration with one another throughout the year.

Mr. Birnbaum said consumer protections and data privacy have more in common than not and that differences are the exception rather than the rule. He asked why the Working Group did not hear from consumer representatives about data protection gaps. Mr. Birnbaum said the Working Group should reach out to them to get a broader set of perspectives. Ms. Amann said all state insurance regulators and interested parties are always welcome to submit comments to the Working Group at any time.

5. **Announced the Consumer Privacy Protections Panel at the NAIC Virtual Insurance Summit**

Ms. Amann said there will be a panel on consumer privacy protections at the NAIC virtual Insurance Summit June 21–24, with herself, Mr. Kreiter, Ms. Stringer, Ms. Neuerburg and two NAIC consumer representatives serving as panelists.

© 2021 National Association of Insurance Commissioners
Ms. Amann said Ms. Alexander would be sending an email regarding the schedule of meetings every four to six weeks with a road map designed to avoid overlap with other groups working on interrelated issues.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Antifraud (D) Task Force met March 24, 2021. The following Task Force members participated: Trinidad Navarro, Chair (DE); Judith L. French, Vice Chair, represented by Michelle Brugh Rafeld (OH); Lori K. Wing-Heier represented by Alex Romero (AK); Alan McClain represented by Crystal Phelps, Pat O’Kelly and Teri Ann Mecca (AR); Evan G. Daniels represented by Paul Hill (AZ); Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); David M. Mais represented by Kurt Swan (CT); Karima M. Woods represented by Brian Bressman (DC); Vicki Schmidt represented by Ryan Morton (KS); Sharon P. Clark represented by Juan Garrett (KY); James J. Donelon represented by Matthew Stewart (LA); Kathleen A. Burren represented by Steve Wright (MD); Anita G. Fox represented Jill Huisken, Lee McCallister and Randall Gregg (MI); Grace Arnold represented by Michael Marben (MN); Chlora Lindley-Myers represented by Carrie Couch and Marjorie Thompson (MO); Mike Chaney represented by John Hornback (MS); Troy Downing and Jeannie Keller (MT); Mike Causey represented by Angela Hatchell and Della Shepherd and Tracy Biehn (NC); Jon Godfread represented by Dale Pittman (ND); Bruce R. Range represented by Martin Swanson (NE); Chris Nicoloopulos represented by Brendan Harrles (NH); Marlene Caride represented by Richard Besser (NJ); Russel Toal represented by Devin Chapman (NM); Barbara D. Richardson represented by Stephanie McGee (NV); Glen Mulready represented by Rick Wagnon (OK); Andrew R Stolfi represented by Stephanie Noren (OR); Raymond G. Farmer represented by Chuck Myers and Michael Bailes (SC); Doug Slape represented by Chris Davis (TX); Jonathan T. Pike represented by Armand Glick (UT); Scott A. White represented by Mike Beavers (VA); and James A. Dodrill and Greg Elam (WV).

1. **Adopted its 2020 Fall National Meeting Minutes**

   Mr. Stewart made a motion, seconded by Mr. Mueller to adopt the Task Force’s Nov. 16, 2020 (see NAIC Proceedings – Fall 2020, Antifraud (D) Task Force) minutes. The motion passed unanimously.

2. **Reviewed its 2021 Charges**

   Commissioner Navarro said that the Task Force’s 2021 charges did not change much from 2020 and that the focus remains the same, with its continued fight against insurance fraud. Commissioner Navarro said as the Task Force moves forward this year, it is important to note that aside from its charges, it will continue to focus on insurance fraud generated from COVID-19. He said the Task Force has held separate meetings and set time aside during previous national meetings to specifically discuss and receive updates on potential fraud resulting from COVID-19. Commissioner Navarro said in addition to these meetings, the Task Force members have participated in monthly regulator-only meetings concerning the improper marketing of health plans arising out of the COVID-19 pandemic. Commissioner Navarro advised that the Task Force will continue to monitor fraudulent activity and meet as necessary in an effort to bring public awareness.

3. **Received an Update from the Antifraud Technology (D) Working Group**

   Mr. Glick said the Working Group has not met this year. However, he said it is continuing to work on its new charge given to it in 2020: “Review and provide recommendations for the development of an Antifraud Plan repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions.” Mr. Glick said the Working Group determined that to complete this charge, it first needed to review and revise the 2011 Antifraud Plan Guideline (#1690). He said by the end of 2020, the Working Group finalized this review, and it was adopted by the Market Regulation and Consumer Affairs (D) Committee during the 2020 Fall National Meeting. Mr. Glick said that the revisions will be presented to the Executive (EX) Committee and Plenary for full adoption at the 2021 Spring National Meeting. Mr. Glick said once fully adopted, the Working Group’s next step will be to work on creating a guideline template that can be used for the creation and submission of an Antifraud Fraud Plan. He said this template will also be used for developing the repository. Mr. Glick said the Working Group will meet with NAIC staff to determine whether this project will need to be presented to the NAIC budget process or if it can be completed without additional budgetary resources.

   Mr. Glick said the Working Group has been responsible for monitoring the Online Fraud Reporting System (OFRS) for enhancements. Mr. Glick said due to the OFRS Redesign Project being completed internally, the Working Group has suspended its enhancement review. He said the Working Group remains involved in the redesign process and as the project moves closer to being completed, it will report back to the Task Force.
4. Received an Update from the Antifraud Education Enhancement (D) Working Group

Greg Welker (NAIC) said the Working Group hosted a webinar on Feb. 11, 2021, presented by CARCO on the mobile capabilities it can provide state insurance departments to assist with fighting insurance fraud. He said the Working Group also will host an investigator safety training webinar on June 2, 2021, from 12:00 – 1:30 p.m. CT.

5. Received an Update on the OFRS

Mr. Welker said in 2018, the NAIC approved the redesign of the OFRS. He said the purpose of the redesign was to modernize interfaces for state insurance regulator, public and industry users. The redesign changes would support a new functionality for the system while also providing the means to create a series of reports that would provide states with detailed data that could be used for tracking fraud trends. Mr. Welker said there is an industry and consumer side to the OFRS. NAIC staff have focused on completing the industry side first. Once completed, it can be used to mirror the changes for the consumer. Mr. Welker said this process is nearing completion, and a beta environment is being finalized. The expectation is to have that beta testing available in April. Mr. Welker said it is important for states and all other users to recognize that during the redesign process, the functionality of the OFRS has not been interrupted and that states are still receiving the fraud referral data. He said NAIC staff will continue to collaborate with the Working Group through the completion of the redesign.

6. Heard a Report from the Coalition

Matthew Smith (Coalition Against Insurance Fraud—Coalition) said the Coalition has been working heavily on its research studies. Mr. Smith said its recent survey in these studies concerns COVID-19. Mr. Smith said an email was sent to all state fraud directors in September 2020 to track insurance fraud taking place due to the COVID-19 pandemic. Mr. Smith said the survey has recently been sent out again for the two different sets of data to be used as comparison. Mr. Smith said the data indicates that there has been an increase in arson.

Mr. Smith said the Coalition is conducting a joint research study with IBM and Lux Off to track the globalization of insurance products. He said the goal is to get this study out in November. Mr. Smith said another study concerning technology will be used to track how states are using technology, the advantages and disadvantages of technology, and what the future brings.

Mr. Smith said the Coalition has been tracking 83 separate pieces of legislation across the U.S. He said five states have enacted new laws that are now on the books, and one bill in Idaho concerning the assignment of benefits died in the Senate. Mr. Smith said this leaves 77 bills that are still pending across the U.S. Mr. Smith said the Coalition maintains a map on its website showing the pending bills. He said a majority of the bills filed across the U.S. deal with public adjusters. Mr. Smith said there are also workers’ compensation reforms, with five separate bills pending. He said the Coalition has also been tracking efforts being done concerning storm chasers, roofing and other contractors regarding natural disasters.

Mr. Smith said the Coalition has passed its counterfeit airbag legislation to protect consumers from counterfeit airbags. He said states are working together to push this legislation through. Mr. Smith said this has become more of an interest in states, and he expects for them to have an interest later this year. Mr. Smith said between the Coalition, the American Trucking Association (ATA) and the American Property and Casualty Insurers Association (APCIA), they will continue to work together to assist with the counterfeit airbag legislation in other states.

Mr. Smith said the Coalition is also monitoring staged automobile accidents and said that more reports are starting to show up. Mr. Smith said he encourages any states noticing an uptick in this area to reach out to the Coalition. He said another fraudulent activity that is being pushed concerns juvenile life insurance cases. He said this type of insurance fraud is being seen more throughout the U.S. He said the Coalition is working with states and legislation to create better regulation to cover these type of issues. Mr. Smith said they have also been monitoring sober issues and may be coming to the Task Force in the future for assistance with fighting these issues.

Mr. Smith said the Coalition has been working on its webinar program. On March 17, the Coalition hosted a webinar called “Building the Bridge,” which focused on consumers, government officials and insurers regarding the fight against insurance fraud. Mr. Smith said the Coalition will continue to host more webinars throughout the rest of the year. He said in addition to its webinar program, the Coalition also released a new infographic last week concerning the use of cell phones to expose individuals to fraud. Mr. Smith said there is a new Journal of Insurance Fraud article that was published by the Coalition concerning the dark core of white-collar crimes. He said the Coalition Legal Affairs Committee is working on state immunity laws and immunity reporting. The Coalition has updated its compendium of immunity provisions across the U.S.
Mr. Smith said lastly, the June mid-year meeting will be virtual, and the goal is to hold the end of year annual meeting in person Dec. 6–7 in Washington, DC.

7. **Heard a Report from the NICB**

Alan Haskins (National Insurance Crime Bureau—NICB) said in January, NICB released a slip and fall report as a proactive effort to increase awareness of these types of scams. Mr. Haskins said that NICB analyzed slip and fall questions that were claim data reported to it from 2017–2019. Mr. Haskins said with the review of California, Florida, New York, Pennsylvania and Texas, it was found that slip and fall claims were up 30%, with the impact on commercial insurance policies. Mr. Haskins said concerning personal property homeowner policies, there was a 39% increase between 2017–2019. He said NICB also issued a preliminary analysis that shows auto theft took a dramatic upward trend in 2020 compared to 2019, reversing a two-year decline in vehicle insurance fraud. Mr. Haskins said that due to the COVID-19 pandemic, NICB expects to see the vehicle insurance fraud trend continue to increase. He said the NICB is also seeing an uptick in juvenile vehicle theft.

Mr. Haskins said legislative sessions are halfway through in most states, and there has some successful passing of legislative language concerning insurance fraud. He said NICB is tackling more than 600 bills. In Idaho and Kentucky, there is legislation for funding for state fire marshals, towing and storage legislation. North Dakota has a new law providing civil fines against people committing insurance fraud. Additionally, a new law in Utah would restrict the access to vehicle accident reports. Mr. Haskins said NICB has supported legislation that would address funding and resources for state fraud dues dedicated to insurance fraud prosecutors and funding for auto prevention authorities with the uptick in vehicle insurance fraud.

Mr. Haskins said NICB will be hosting a 2021 Virtual Fraud Investigations Academy April 27–May 6. Mr. Haskins said a new publication called the *NICB Informer* is aimed at providing insurance industry executives with participatory intelligence to help identity risk and emerging threats to the insurance industry. He said this article edition will focus on the alarming increase in vehicle crimes.

8. **Discussed Other Matters**

Commissioner Navarro said the NAIC/NIPR Insurance Summit will take place during June and September this year. Commissioner Navarro said the dates are still being finalized. However, he said the plan will be to hold virtual session in June and then have hybrid sessions in September.

Having no further business, the Antifraud (D) Task Force adjourned.
MARKET INFORMATION SYSTEMS (D) TASK FORCE

Market Information Systems (D) Task Force March 22, 2021, Minutes ..............................................................9-60
Market Information Systems (MIS) Data Analysis and Recommendations (Attachment One) ..............................9-63
Market Information Systems (D) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Spring National Meeting)
March 22, 2021

The Market Information Systems (D) Task Force met March 22, 2021. The following Task Force members participated: Mike Kreidler, Chair (WA); Chlora Lindley-Myers, Vice Chair (MO); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Pam O’Connell (CA); Michael Conway represented by Damion Hughes (CO); Andrew M. Mais represented by Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle (DE); Dana Popish Severinghaus represented by Erica Weyhenmeyer (IL); Vickie Schmidt represented by Tate Flott (KS); James J. Donelon represented by Jeff Zewe (LA); Troy Downing represented by Jeannie Keller (MT); Marlene Caride represented by Ralph Boeckman (NJ); Barbara D. Richardson represented by Nick Stosis (NV); Judith L. French represented by Rodney Beetch (OH); Glen Mulready represented by Landon Hubbard (OK); Doug Slape represented by Rachel Cloyd (TX); Michael S. Pieciak represented by Isabelle Turpin Keiser (VT); and James A. Dodrill represented by Jeannie Tincher (WV). Also participating was: Brent Kabler (MO).

1. **Adopted its Nov. 17, 2020, Minutes**

   Director Lindley-Myers made a motion, seconded by Mr. Flott, to adopt the Task Force’s Nov. 17, 2020 minutes (see NAIC Proceedings – Fall 2020, Market Information Systems (D) Task Force). The motion passed unanimously.

2. **Discussed the Task Force’s 2021 Charges**

   Commissioner Kreidler said the Task Force’s 2021 charges remain consistent with its charges from last year. He said the Task Force will continue to ensure that the market information systems (MIS) support the strategic goals set by the Market Regulation and Consumer Affairs (D) Committee. The Task Force will do this by analyzing the quality of the data reported into the MIS, making recommendations for improving data quality, and providing guidance on the appropriate use of the MIS and data.

   Commissioner Kreidler said the Task Force has one Working Group, the Market Information Systems Research and Development (D) Working Group, reporting to the Task Force. It is chaired by Mr. Kabler. Commissioner Kreidler said the Task Force relies on the members of the Working Group to review and prioritize the Uniform System Enhancement Requests (USER) forms, which are sent to the Working Group by interested state insurance regulators to request changes to the MIS. He said the Working Group is also responsible for the yearly MIS metrics report, which measures the timeliness, accuracy and completeness of data reported into the MIS.

   Commissioner Kreidler said the Task Force is moving the charge to “develop recommendations for the incorporation of artificial intelligence (AI) abilities in the MIS for use in market analysis” to the Working Group. He said the charge is moving to the Working Group for two reasons. First, the Working Group has members with expertise in this field. Second, the Working Group meets more frequently and can devote more time to the charge. Commissioner Kreidler said the Task Force will still be responsible for the final product, and the Working Group will undertake this charge in open meetings.

   Mr. Kabler said the Working Group met March 19, 2021, and Dec. 2, 2020, in regulator-to-regulator session. During these meetings the Working Group reviewed and adopted the MIS metric report and recommendations for metric updates and methods to improve metric result reporting and data quality.

   Mr. Kabler said the Working Group also reviewed a new process for prioritizing USER forms. Ginny Ewing (NAIC) noted that the new process moves from a waterfall process to the lean, agile process used by NAIC Information Services. She said it is more transparent regarding what is in the backlog.

   Mr. Kabler said the Working Group also adopted proposed changes to the Regulatory Information Retrieval System (RIRS) coding structure. He said the proposal was reviewed with representatives of the Financial Analysis Solvency Tools (E) Working Group and the state producer licensing directors. He noted that modifications were made to the proposal based on their feedback. He said the proposal was also reviewed with the state back-office system vendors, who made a recommendation to create a user’s guide providing guidance for how the new codes should be used. He noted that based on the current available information, the vendors do not anticipate an additional cost to implement the necessary system changes to support the proposal.
Mr. Kabler said the RIRS coding change and re-structure has been the most ambitious project of the Market Information Systems Research and Development (D) Working Group. He has been working on it even before the Working Group was formed.

Mr. Kabler said the Working Group also considered the charge to “develop recommendations for the incorporation of artificial intelligence (AI) abilities in the MIS for use in market analysis.” He said he has some concerns because the term “artificial intelligence” is nebulous and defined in different, often contradictory, ways. He said the Working Group’s first task will be to develop a working definition for AI. He encouraged interested parties and interested state insurance regulators to participate in the discussions. He also said the Working Group was concerned that there is not enough market data to make AI feasible for market analysis. However, he noted that the Working Group is approaching the charge with an open mind and willingness to learn.

Birny Birnbaum (Center for Economic Justice—CEJ) asked why the proposed RIRS coding changes did not include all lines of business that are included in the financial annual statement. As an example, he noted that there were no line of business codes for lender-placed insurance. He noted that the definition of each proposed RIRS line of business states that it corresponds to the financial annual statement, so it would be expected that all financial lines of business should be included. Mr. Kabler said if additional lines of business are needed, he would not be averse to adding them. He said they may not have been included because there was not much market conduct concern in the missing lines of business.

Mr. Birnbaum asked for clarification of the meaning of the “Origin of Action” code statuses “keep” and “delete.” Mr. Kabler said codes with a code status of “delete” would be removed from the RIRS as an option.

Mr. Birnbaum said there were many codes in the “Reasons for Action” that were mutually exclusive; yet, the RIRS will allow multiple reasons per action. He asked if that would compromise the integrity of the data. Mr. Kabler said the nature of regulatory actions is that they often have multiple concerns and reasons. He said an examination is a single record within the RIRS, and the system must be able to capture all the reasons for a regulatory action.

Commissioner Kreidler said when adopting the Working Group’s report, the Task Force will also be adopting the changes to the USER form process, but it will not be adopting the proposed RIRS changes. He said the proposed RIRS change will be posted on the Task Force web page, and they will be considered for adoption at the Summer National Meeting.

Director Lindley-Myers made a motion, seconded by Mr. Flott, to adopt the Market Information Systems Research and Development (D) Working Group report. The motion passed unanimously.

4. **Adopted the MIS Data Analysis Metrics and Recommendations**

Commissioner Kreidler said review of the market data analysis metrics and recommendations began at the 2020 Fall National Meeting, but the report was not ready for adoption. He said the report is attached to the materials, and it is ready for adoption.

Director Lindley-Myers made a motion, seconded by Mr. Flott, to adopt the MIS data analysis and recommendations (Attachment One). The motion passed unanimously.

5. **Heard a Report on Outstanding USER Forms**

Ms. Ewing said the following USER forms are in development or complete:

- USER Form 10051 is a request to implement the Market Actions Tracking Systems (MATS) Web Service in State Based Systems (SBS). Ms. Ewing said this project is in progress. She said prototype and design decisions are being made.

- USER Form 10053 is a request to review RIRS codes to clarify definitions for consistent usage and make recommendations for revisions. Ms. Ewing said the coding changes were shared with financial and producer licensing regulators, and their input has been incorporated. She said the Working Group adopted the RIRS changes.

- USER Form 10080 is the request to update the RIRS to display data retention policies and terminology related to action dates. She said much of this request is complete, but the RIRS subject matter experts (SMEs) are reviewing the data dictionary and considering the issue of the “earliest action date” being misleading in the Regulatory Systems Participating State Report.
• USER Form 10082 is the request to add a Complaints Database System (CDS) subject code for “pandemic” and a coverage code for “business interruption.” She said while completing this request, it was discovered that subject codes are not displayed. She said a USER form will be created to correct this issue.

Ms. Ailor said USER Form 10069B was to add codes for pet insurance and lender-placed insurance. She said the pet insurance codes were implemented but not the lender-placed insurance codes. Ms. Ewing said the codes were supposed to have all been completed. She will check on the status and have them implemented.

Having no further business, the Market Information Systems (D) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\MIS\3-MISTF.dotx
Objective
It is essential that the systems on which insurance consumers and state insurance regulators depend use reliable data. These systems include, but are not limited to, the Consumer Insurance Search (CIS), Market Analysis Prioritization Tool (MAPT), Market Analysis Profile (MAP) and Market Analysis Review System (MARS). In addition to these National Association of Insurance Commissioners (NAIC) systems, many state systems and processes use NAIC Market Information System (MIS) data. Therefore, MIS data quality is critical.

The MIS data analysis metrics were developed at the direction of the Market Information Systems (D) Task Force to identify potential data quality issues in the NAIC MIS database. For each system, three aspects of data quality are considered: 1) completeness; 2) timeliness; and 3) accuracy.

Results
Note: These symbols indicate the following changes between periods: (▲) trending in positive direction; (▼) no change or unable to determine trend; and (▼) trending in negative direction.

Recommendation:
1. To ensure greater awareness of these results, distribute the jurisdiction level results to the Market Analysis Chiefs and request that they review and if necessary, seek resolution to data quality issues.

Complaint Database System (CDS)
Completeness:
C1. Identify errors that prevented submitted complaints from successfully loading to the NAIC MIS database.

<table>
<thead>
<tr>
<th>Year</th>
<th>Total Complaints Submitted</th>
<th>Complaints Not Loaded First Time</th>
<th>Complaints Not Loaded</th>
<th>Complaints Loaded</th>
<th>Errors Created</th>
<th>% Errors to Total Complaints Submitted</th>
<th>% Complaints Not Loaded to Total Complaints Submitted</th>

</tr>
</thead>
<tbody>
<tr>
<td>2019*</td>
<td>367,880</td>
<td>93,518</td>
<td>22,926</td>
<td>344,954</td>
<td>112,725</td>
<td>30.64%</td>
<td>6.23%</td>
<td>▼</td>
</tr>
</tbody>
</table>

* A new load process was implemented in Q3 2017, which changed data captured regarding errors. For 2019, 'Number of Complaints Not Loaded' were included in the results. Therefore, trending information to prior years is unavailable.

Recommendation:
1. To bring more visibility to jurisdictions not participating in CDS, add completeness metric:
   C2. Identify jurisdictions that did not submit closed complaints in the prior year.

Timeliness:
T1. Identify jurisdictions that did not submit closed complaints to the NAIC MIS database at least monthly.

<table>
<thead>
<tr>
<th>Year</th>

<td>→</td>
</tr>
</tbody>
</table>

Recommendation:
1. Review the CDS coverage type mapping to the financial annual statement line of business premiums for potential updates.

Market Action Tracking System (MATS)

Completeness:
C1. Compare number of “Closed” exams and entities in exams with the reported completed exams and entities in the NAIC’s corresponding year’s Insurance Department Resources Report (IDRR).

<table>
<thead>
<tr>
<th>Year</th>
<th>Exams Closed in MATS</th>
<th>Closed Exams Reported in IDRR</th>
<th>Difference</th>
<th>Entities in Exams Closed in MATS</th>
<th>Entities in Exams Closed in IDRR</th>
<th>Difference</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019</td>
<td>382</td>
<td>511</td>
<td>-129 △</td>
<td>461</td>
<td>3,749</td>
<td>-3,288</td>
</tr>
<tr>
<td>2018</td>
<td>477</td>
<td>598</td>
<td>-121 △</td>
<td>616</td>
<td>641</td>
<td>-25</td>
</tr>
<tr>
<td>2017</td>
<td>525</td>
<td>544</td>
<td>-19 △</td>
<td>604</td>
<td>920</td>
<td>-316</td>
</tr>
<tr>
<td>2016</td>
<td>565</td>
<td>585</td>
<td>-20 △</td>
<td>670</td>

<td>667</td>
<td>806</td>
<td>-139   →</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Recommendations:
1. Investigate reasons for discrepancies between MATS and the IDRR.
2. To make trending from year to year more meaningful, add a relative percentage to the results.
C2. Compare number of entities included in “Closed” actions with the reported entities included in market actions including Focused Inquiries and Non-Exam Regulatory Interventions in the IDRR.

<table>
<thead>
<tr>
<th>Year</th>
<th>Entities in Market Actions Closed in MATS</th>
<th>Entities in Market Actions Closed in IDRR</th>
<th>Difference</th>
</tr>
</thead>
<tbody>

<td>2,197</td>
<td>-1,413</td>
</tr>
<tr>
<td>2017</td>
<td>834</td>
<td>2,705</td>
<td>-1,871</td>
</tr>
</tbody>
</table>

Recommendations:
1. Investigate reasons for discrepancies between MATS and the IDRR.
2. To make trending from year to year more meaningful, add a relative percentage to the results.

C3. Identify records in the Regulatory Information Retrieval System (RIRS) with an origin code of “Market Conduct Exam” that do not have a corresponding record in MATS.

<table>
<thead>
<tr>
<th>Year</th>
<th>RIRS Actions with ‘Market Conduct Exam’ Origin with MATS</th>
<th>RIRS Actions with ‘Market Conduct Exam’ Origin without MATS</th>
<th>% RIRS Actions without MATS to RIRS Actions with ‘Market Conduct Exam’ Origin</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019</td>
<td>243</td>
<td>8</td>
<td>96.71%</td>
</tr>
<tr>
<td>2018</td>
<td>195</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>2017</td>
<td>168</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Timeliness:

Recommendations:
1. Provide education and training on an overview of MATS to insurance department staff, particularly those responsible for entering and maintaining MATS data.
2. NAIC staff outreach to MATS users to determine if updates are needed and assist, as necessary.

T2. Identify actions with an estimated start date that has passed more than 30 days ago, and the status is “Called Not Begun.”

<table>
<thead>
<tr>
<th>Year</th>
<th># Actions in ‘Called Not Begun’ Status with Estimated Start Date Passed the Following # Days</th>
<th>Actions in ‘Called Not Begun’ Status w/Estimated Start Date &gt; 30 Days</th>

</tbody>
</table>

* For years 2014-2017, this metric evaluated regulatory actions with a date of entry 90 days greater than the date of action.

Accuracy:
Note: No metrics have been defined to measure RIRS data accuracy.

Recommendations:

1. To determine use of ‘Other’ codes when existing codes may be more appropriate, add accuracy metric:
   A1. Identify regulatory actions with an ‘Other’ code and a write-in description that is identical to one of the other existing codes.

2. To determine potential excessive use of ‘Other’ codes, add accuracy metric:
   A2. Identify jurisdictions that use ‘Other’ codes in more than 20% of submitted actions.

Conclusions
After a thorough review of the analysis results and metrics themselves, the conclusion of the Market Information Systems Research and Development (D) Working Group is that for the most part the metrics are performing as desired. There are caveats associated with most of the metrics. In some cases, the results do not necessarily reflect data quality issues. However, overall, the metrics are very helpful identifying potential issues.

In addition, the majority of NAIC MIS data is of good quality overall. There are several areas where the results improved from the previous year. However, some areas in need of improvement have been identified. There appears to be an ongoing need for education and training regarding expectations and best practices for ensuring data quality. Training opportunities on the Market Information Systems, particularly MATS and MCAS are recommended for the Insurance Summit.

The Working Group will continue to review the metrics and their results and will propose recommended changes to improve the accuracy and usefulness of the metrics and the quality of the MIS data.
PRODUCER LICENSING (D) TASK FORCE

Producer Licensing (D) Task Force March 26, 2021, Minutes................................................................. 9-74
Producer Licensing Uniformity (D) Working Group March 18, 2021, Minutes (Attachment One) .......... 9-77
Uniform Education (D) Working Group March 2, 2021, Minutes (Attachment Two)............................. 9-80
The Producer Licensing (D) Task Force met March 26, 2021. The following Task Force members participated: Elizabeth Kelleher Dwyer, Co-Chair (RI); Larry D. Deiter, Co-Chair (SD); Lori K. Wing-Heier represented by Troy Murray (AK); Jim L. Riddling represented by Deborah Fike and Jimmy Gunn (AL); Ricardo Lara represented by Troy Dickinson, Charlene Ferguson and Tyler McKinney (CA); Michael Conway represented by JT Thompson (CO); Trinidad Navarro represented by Ashley Webb and Stacy Washburn (DE); David Altmair represented by Matthew Guy and Matt Tamplin (FL); Doug Ommen represented by Jackie Russo and Andria Seip (IA); Dean L. Cameron represented by Lisa Tordjman (ID); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon represented by Lorie Gasior (LA); Kathleen A. Birrane represented by Erica Bailey and Shelley Taylor-Barnes (MD); Grace Arnold (MN); Troy Downing represented by Mary Arnold (MT); Mike Causey represented by Angela Hatchell (NC); Bruce R. Ramge represented by Tracy Burns and Kevin Schlahtia (NE); Chris Nicolopoulos represented by Joan LaCourse and Christie Rice (NH); Russell Toal represented by Victoria Baca (NM); Judith L. French represented by Karen Vourvopoulos (OH); Glen Mulready represented by Courtney Khodabakhsh (OK); Andrew R. Stolfi represented by Kirsten Anderson (OR); Jessica K. Altman represented by Mike Beavers and Richard Tozer (PA); Doug Slape represented by Chris Herrick (TX); Scott A. White represented by Mike Beavers and Richard Tozer (VA); Mike Kreidler represented by Jeff Baughman (WA); Mark Aible (WI); James A. Dodrill represented by Greg Elam and Robert Grishaber (WV); and Jeff Rude represented by Bryan Stevens (WY). Also participating was: Rachel Chester (RI).

1. **Adopted its 2020 Fall National Meeting Minutes**

Mr. Baughman made a motion, seconded by Commissioner Clark, to adopt the Task Force’s Nov. 13, 2020 minutes (*see NAIC Proceedings – Fall 2020, Producer Licensing (D) Task Force*). The motion passed unanimously.

2. **Heard an Update on State Implementation of Online Examinations**

Superintendent Dwyer said 32 states have implemented remote, proctored examinations since March 2020, and 16 states are in the process of implementing them. Superintendent Dwyer said only three jurisdictions have decided not to implement remote examinations. Superintendent Dwyer said Rhode Island has not experienced issues with pass rates or other anomalies from in-person exams. Superintendent Dwyer said the Producer Licensing (D) Task Force has requested the Producer Licensing Uniformity (D) Working Group to review the examination section of the NAIC *State Licensing Handbook* since the Handbook language is based on in-person examinations only. Superintendent Dwyer said she thinks remote exams will provide better access to exams.

3. **Heard a Briefing on the NARAB Reform Act of 2015**

Karen Hornig (National Insurance Producer Registry—NIPR) said nonresident producer licensing has been discussed for more than 150 years, and the issue of uniform and reciprocal producer licensing is often used as a criticism of the state insurance regulatory system. Ms. Hornig said the purpose of the National Association of Registered Agents and Brokers (NARAB) is to create a single, national standard for nonresident insurance producer licensing.

Ms. Hornig said the federal Gramm-Leach-Bliley Act (GLBA) was passed in 1999 and contained provisions for what is referred to as NARAB I. Under the GLBA, states were provided three years to implement either licensing uniformity or licensing reciprocity and, if they could not achieve this, NARAB would be formed. In response to this, the NAIC passed the *Producer Licensing Model Act (#218)* in 2000, and the NAIC certified 35 states as having implemented licensing reciprocity in accordance with the mandates of the GLBA. Despite this effort, there was a demand for greater licensing reciprocity and uniformity, which led to the NARAB Reform Act of 2015. The NARAB Board of Directors was supposed to be in place by May 2015; however, this did not occur. Ms. Hornig said the NARAB Board is to be comprised of 13 members appointed by the president of the U.S. and confirmed by the U.S. Senate. The 13 members will be comprised of eight insurance commissioners and five members from the insurance industry.

Ms. Hornig said a licensed insurance producer may become a NARAB member and, once a member, would have the equivalent of a nonresident produce license. She said this is a similar concept to a driver’s license. Ms. Hornig said there are membership requirements, which include an individual holding a valid resident producer license and satisfying a national criminal background check.
Ms. Hornig said NARAB preempts state nonresident producer licensing laws, as well department of insurance (DOI) and secretary of state registration requirements for nonresident business entities. She said a state cannot impose continuing education (CE) or training requirements on nonresident producers who are members of NARAB; however, all state enforcement authority and licensing fees are preserved.

Ms. Hornig said a producer would have the option to either obtain nonresident licenses through NIPR and the state system or through NARAB membership. To clarify the CE requirements, Ms. Hornig said NARAB will set CE requirements for NARAB membership comparable to the CE requirements in the majority of states. In response to a question from Mr. Baughman about preemption of state training requirements, Ms. Hornig said a state could not impose flood training, suitability training or long-term care (LTC) training on a nonresident producer who is a NARAB member.

4. **Adopted the Reports of the Producer Licensing Uniformity (D) Working Group and the Uniform Education (D) Working Group**

Mr. Murray said the Producer Licensing Uniformity (D) Working Group met March 18 to discuss licensing standards for pet insurance. He said the Working Group will provide a comment period for two weeks and meet to discuss three options for the licensing of individuals selling pet insurance: 1) confirm that the current Uniform Licensing Standards (ULS) for pet insurance are the correct policy direction; 2) recommend that pet insurance become a core limited line that all states should adopt; and 3) recommend that the major lines of authority of property/casualty (P/C) be required to sell pet insurance.

Ms. Chester said the Uniform Education (D) Working Group met March 2nd and took the following action: 1) discussed the 2019 Continuing Education Reciprocity (CER) Agreement, which 44 states have signed; 2) discussed the posting of exam pass rates to the NAIC website; and 3) discussed state requirements for course instructors. Ms. Chester said the Working Group will create more uniform guidelines concerning course instructor requirements. In response to a question from Director Deiter regarding the posting of exam pass rates, Ms. Chester said the information would be posted on a state-basis, by examination vendor. Ms. Chester said there should not be any concerns with this since the information is already publicly available.

Mr. Stevens made a motion, seconded by Mr. Baughman, to adopt the reports of the Producer Licensing Uniformity (D) Working Group (Attachment One) and the Uniform Education (D) Working Group (Attachment Two). The motion passed unanimously.

5. **Received a Report from the NIPR Board of Directors**

Director Deiter said the NIPR established the COVID-19 Resource Center, a communication hub to share information about the state credentialing orders and bulletins issued by state insurance regulators. NIPR worked with 48 states on implementing more than 100 separate bulletins and orders to extend license renewal deadlines, issue temporary licenses and allow online testing.

Director Deiter said NIPR launched a major upgrade to its Attachment Warehouse application used to enable insurance producers and other licensees to upload licensing-related documents for review by state insurance regulators. This new capability for allowing additional documents to be submitted by the industry will streamline and improve the licensing application review process for the states in lieu of having the documents submitted separately. NIPR processed 38 million credentialing and report transactions in 2020, a 5.2% increase from 2019. NIPR had $47.9 million in revenue in 2020, a 5.7% increase from 2019.

Director Deiter said the NIPR Board of Directors approved a 2021–2023 NIPR Strategic Plan – Our Bridge to the Future. The plan has the following three pillars connected to NIPR’s values of teamwork, excellence, trust and innovation: 1) an engaged and empowered team; 2) customer-focused excellence; and 3) high-quality and reliable technology.

Director Deiter said NIPR has been working to bring more products and services to state and industry customers. NIPR is excited to announce that contact change requests for business entities will soon be available online through NIPR. Currently, only individual licensees may update their contact information, which includes the physical address, e-mail and phone number through NIPR. The new capability will enable business entities to utilize NIPR’s online product and eliminate the need for a separate state by state notification process for updating the entity’s contact information. Arizona, North Carolina, North Dakota and Rhode Island are expected to be implemented on April 5. NIPR plans a phased state rollout plan. NIPR is also launching a chat feature for the customer call center. Finally, NIPR has been working with California and Hawaii to implement adjuster licensing online through NIPR.
6. Received Comments from the ACLI on Race and Insurance

David Leifer (American Council of Life Insurers—ACLI) said the ACLI has made race and insurance a priority issue. Mr. Leifer said the ACLI is working on strategies to recruit minority insurance producers. He encouraged the NAIC to think about whether there are regulatory and licensing standards, such as certain background check processes, that should be reviewed. He said the ACLI supports strong background checks but questioned if certain processes, such as 1033 Waivers, could be done differently. Mr. Leifer said the implementation of remote, proctored exams is a good development and suggested states may also consider eliminating the requirement for pre-licensing education. He said pre-licensing education requirements may deter economically disadvantaged individuals from seeking a producer license and that there does not appear to be a correlation to pre-licensing education requirements and examination pass rates. Mr. Leifer said greater uniformity in resident licensing standards eliminates expenses for companies and helps companies recruit and train new candidates for producer licensing examinations.

Birny Birnbaum (Center for Economic Justice—CEJ) said he supports the ACLI’s efforts on racial justice but questioned whether the direction suggested by the ACLI will benefit communities of color. Mr. Birnbaum said the Producer Licensing (D) Task Force should review the reasons a producer licensing may be denied, suspended or revoked and whether the reason disproportionately affects communities of color due to the historically bias policing practices.

7. Discussed Procedures for Amending the NAIC Producer Licensing Applications

Director Deiter said the procedures were circulated for comment in November 2020, and comments were received from California, Washington, and the Professional Insurance Agents (PIA).

Ms. Ferguson asked what will happen to the changes the Producer Licensing (D) Task Force adopted in 2018. Director Deiter and Superintendent Dwyer said these changes were not approved by the Executive (EX) Committee and that they would work with NAIC staff to determine the appropriate next steps due to the procedures being developed. Ms. Ferguson suggested reversing steps 2 and 3 of the procedures to allow the Producer Licensing Uniformity (D) Working Group to review suggested changes and prior to the NAIC and NIPR staff providing a time and cost estimate to implement a change. Ms. Ferguson said the procedures should also address what happens if the Producer Licensing Uniformity (D) Working Group cannot agree on a suggested change. Mr. Baughman said initial conversation of changes should start with the Producer Licensing Uniformity (D) Working Group prior to the NAIC and NIPR review. Director Deiter said he understood the preference of state insurance regulators but said it also is important to understand how the suggestions might affect the business and resources of the NAIC and NIPR.

Lauren Pachman (PIA) said the timing for approving changes to the Uniform Applications is inconsistent with the timing for approving changes in the Producer Licensing (D) Task Force charges. Tim Mullen (NAIC) said he would review the procedures and charges to ensure they are consistent. Director Deiter and Superintendent Dwyer said they would work with Mr. Mullen to review the comments and circulate a revised draft of the procedures.

8. Discussed Any Other Matters

Superintendent Dwyer said the Producer Licensing (D) Task Force will be receiving a referral from the NAIC’s Special (EX) Committee on Race and Insurance and the Cannabis Insurance (C) Working Group on whether prior criminal charges are impeding individuals from obtaining an insurance producer license. Superintendent Dwyer said Rhode Island does not deny too many licenses for criminal convictions, unless it involves a felony. Because of the importance of how criminal convictions may be affecting insurance producer applicants, Superintendent Dwyer suggested the NAIC may want to review the NAIC’s Guidelines for State Insurance Regulators to the Violent Crime Control and Law Enforcement Act of 1994. Superintendent Dwyer said she would contact Commissioner Trinidad Navarro (DE), chair of the Antifraud (D) Task Force, for further coordination on this issue.

Having no further business, the Producer Licensing (D) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\PTF\PTF Minutes 3.26.21.docx
The Producer Licensing Uniformity (D) Working Group of the Producer Licensing (D) Task Force met March 18, 2021. The following Working Group members participated: Chris Murray, Chair (AK); Courtney Khodabakhsh, Vice Chair (OK); Crystal Phelps, Letty Hardee and Peggy Dunlap (AR); Charlene Ferguson, Troy Dickinson and Tyler McKinney (CA); Matt Guy (FL); Lisa Tordjman (ID); Shelley Taylor-Barnes (MD); Chris Aufenthie, Janelle Middlestead and Stephanie Butz (ND); Gina Goodro and Kevin Schlautman (NE); Hermoliva Abejar, Stephanie Kerry and Stephanie McGee (NV); Karen Vourgopoulos, Lee Washburn and Michelle Brugh Rafeld (OH); Rachel Chester (RI); Maggie Dell (SD); Randy Overstreet (UT); Mike Beavers and Richard Tozer (VA); Jeff Baughman (WA); and Melody Esquivel and Rebecca Rebholz (WI). Also participating was: Bryan Stevens (WY).

1. Discussed the Pet Insurance Licensing Standards

Mr. Murray said the Producer Licensing (D) Task Force has asked the Working Group to review the current pet insurance licensing standards and provide a recommendation on whether changes should be made. Mr. Murray said a reminder notice was sent out notifying everyone that the materials can be found on the Working Group web page. These materials include a discussion document that summarizes the work that has been completed in addition to the status of the pet insurance licensing standards. Mr. Murray said the Working Group’s goal is to discuss this topic and adopt a recommendation that can be taken back to the Task Force.

Mr. Murray said the Working Group’s task is not to discuss the pet insurance product but to focus on licensing related to pet insurance. He said discussions concerning pet insurance began in 2010 and 2011, and then they picked back up in 2017 by the Task Force. There were some concerns voiced by industry about the direction pet insurance was taking. The consensus from Task Force discussions was that those around the table did not have enough information about the product to make an informed decision. The Task Force asked the Property and Casualty Insurance (C) Committee to look at pet insurance. The Committee formed a Pet Insurance (C) Working Group, which has been working on this topic for some time now. This Working Group created a white paper on pet insurance, which was referred to the Producer Licensing (D) Task Force. The Pet Insurance (C) Working Group is also working towards the creation of a model law for pet insurance, which will deal with consumer protection and aspects related to policy.

Mr. Murray said pet insurance is currently addressed in the NAIC Uniform Licensing Standards (ULS), which list pet Insurance as a non-core limited line. The ULS non-core limited line states that a state is not required to implement any non-core line of authority for which a state does not already require a license or that is not already incorporated with a major line of authority. Mr. Murray said if a state offers a non-core limited line such as pet insurance or legal expenses, it shall do so with specific licensing requirements listed in the ULS. Basically, a state does not have to implement a non-core limited line for which a state does not already issue that license. Mr. Murray said at this time, four states have made pet insurance a non-core limited line license. The remaining states have this license sold under a property/casualty (P/C) license. This is consistent with current ULS non-core limited lines. The goal of the Producer Licensing Uniformity (D) Working Group is to determine whether this is the correct path or if other requirements should be looked at.

Mr. Murray said the Working Group will need to look at three different potential recommendations: 1) confirm that current ULS for pet insurance is correct policy direction; 2) recommend that pet insurance become a core limited line all states shall adopt; or 3) recommend that the major lines of authority of P/C be required to sell pet insurance.

Mr. Murray said the purpose of today’s meeting is to initiate an open discussion with state insurance regulators and industry to find common ground in order to move forward with confirming the best recommendation. He said the pet insurance product is currently a P/C product at this time, and it is not within the Working Group’s scope of authority to change this but to review the standards.

Ms. Tordjman said Idaho licenses pet insurance as a non-core limited line. She said pet insurance is not a limited line and is not considered incidental insurance. Ms. Tordjman said more work needs to be done and to determine if it belongs under P/C lines. She said the products generated from pet insurance are more complicated and mimic some provisions of health insurance.
Mr. Baughman said Washington has been very vocal concerning pet insurance. He said Washington thinks it should be a P/C license rather than limited line due to the complexity of the product, much like health insurance. Mr. Baughman said a pet is considered property and not a person. Therefore, it belongs under the P/C line of authority. Mr. Guy said Florida echoes Washington’s comments and that Florida has concerns for nefarious characters that may take advantage of these complex products. Mr. Guy said he does have concerns regarding the marketing of this product.

Ms. Chester said Rhode Island has pet insurance as a limited line due to the history with how the product is sold. She said it would be helpful to understand how this product has changed from the way it was traditionally marketed.

Mr. Murray said the pet insurance white paper outlines some of the concerns with this product and encourages everyone to review and make themselves aware of the concerns and changes in this product that have made it a relevant discussion at this time. He said to his knowledge, there are no specific questions for pet insurance on a P/C examination.

Ms. Ferguson said California added pet insurance objectives to its P/C license examination based off the information found in the pet insurance white paper concerning disclosures and requirements.

Mr. Baughman said there are a lot of policies that are not included into an exam for other licenses. He said this is something to keep in mind when reviewing the pet insurance licensing standards. Mr. Baughman said Washington language says that if someone wants a pet insurance license, it would be provided under a P/C license and, therefore, would not have oversight over pet insurance specifically.

Ms. Ferguson said the authority of the individual is granted in the resident state if an investigation goes on or if a consumer complaint is received. She said the nonresident stated would then need to contact the home state, which caused more of a reactive instead of proactive stance.

Mr. Murray said that the issues that have been raised have been addressed with the way it is written currently. He said he asks what there is with the pet insurance license that would suggest the current standards need to be changed.

Ms. Chester said it is an incidental product. A pamphlet in a veterinarian office is different from a call center for other products. Ms. Chester said they are not seeing this in Rhode Island, but it may be taking place in other states.

Mr. Stevens asked if the Working Group starts reviewing pet insurance, would that open the door for other incidental products to be pieced out. Mr. Murray said while this is a relevant concern, the Working Group has been given the task to review this standard specifically.

Mr. Baughman said out of 55 jurisdictions, there are 51 that have this as P/C. This would cause these 51 jurisdictions to change legislation in order to add this as a limited line. Mr. Murray said this is current and significant for the Working Group to consider when reviewing the different options for recommendations.

LeeAnn Goheen National Association of Insurance and Financial Advisors—NAFIA) said they support a limited line approach but think it should be a robust testing and exam standards.

Paul Williams (Unum) said Unum’s perspective, as a company that operates in life and health, is that there is a lot of interest in pet insurance. He said Unum is not able to offer this product because its agents are not licensed in P/C. Mr. Williams said this prohibits growth potential. He said Unum supports pet insurance being made into a core limited line, which would allow it to offer this product.

Mr. Murray said one of the ways that pet insurance is growing is through employer benefit programs. He said it is important for the Working Group to recognize this when reviewing our recommendation.

Jack Chaskey Society for the Prevention of Cruelty to Animals—SPCA) said one of the advantages of limited lines is the point of sale and the ability to make the financial responsibility with the insurance product. Mr. Chaskey said this is when the consumer needs protection. He said the appropriate standards will not only protect consumers, but also, they will provide appropriate avenues to provide this product safely.

Jeanie Keller said that licensure is not a barrier to sales of insurance products. Licensure is a consumer protection and fail-safe to make sure that trained people are offering the product.
Ms. Ferguson said one item of interest for the P/C producers who do sell pet insurance is if those in the insurance industry who are selling pet insurance become an education provider. She said to have them offer courses specific to pet insurance, which will provide an avenue to learn what they need to know. Ms. Ferguson said this would add to the 24 hours of continuing education (CE) that the person would need to complete anyway. She said this would be part of the education course, which would assist this individual with gaining knowledge on this product.

Mr. Murray said the next step will be to send out an email soliciting comments on the pet insurance standards. He said the comments will be discussed and a survey request will be distributed for the Working Group members to provide their preference. Mr. Murray said the Working Group will then meet to adopt the best recommendation. He said once the Working Group adopts the recommendation, it would be presented to the Task Force for consideration.

Having no further business, the Uniform Education (D) Working Group adjourned.
The Uniform Education (D) Working Group of the Producer Licensing (D) Task Force met March 2, 2021. The following Working Group members participated: Rachel Chester, Chair (RI); Mike Beavers, Vice Chair (VA); Chris Murray (AK); Charlene Ferguson (CA); Vanessa Miller (MS); Karen Vourvopoulos (OH); and Jeff Baughman (WA).

1. **Discussed the CER Agreement Signature Status**

Ms. Chester provided a brief overview of the 2019 Continuing Education Reciprocity (CER) Agreement. Ms. Chester said the Working Group has received 43 signatures from state insurance commissioners on the 2019 CER Agreement. She said she will continue working with NAIC staff to reach out to states and obtain the remaining signatures.

2. **Discussed Exam Pass Rates**

Ms. Chester said the tracking of exam pass rates has been a topic of discussion off and on for the past few years. She said originally NAIC staff went directly to the states to request the pass rate data. She said the decision was made a few years ago that the testing vendors would send the states’ first-time pass rate data to NAIC staff, which would compile and post on the Working Group website. Ms. Chester said a new format was created and advised the Working Group members that she would be speaking to the testing vendor directly to clear up any confusion and simplify the process.

3. **Discussed the Creation of Course Instructor Requirements.**

Ms. Chester said she has been working with NAIC staff to review the RegEd instructor qualifications document created in 2020, which lists each state and its specific qualifications. Ms. Chester said the plan is to review these qualifications to determine common denominators that can be used for the creation of NAIC uniform course instructor requirement guidelines. Ms. Chester said the Working Group will meet in May to further discuss and begin the first steps to finalize this project.

Having no further business, the Uniform Education (D) Working Group adjourned.

The Financial Condition (E) Committee met April 13, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, represented by Rolf Kaumann (CO); Dana Popsh Severinghaus (IL); Stephen W. Robertson represented by Roy Eft (IN); Eric A. Cioppa (ME); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Russell Toal (NM); Linda A. Lacewell represented by My Chi To (NY); Judith L. French (OH); Raymond G. Farmer represented by Michael Shull (SC); Doug Slape, Jamie Walker and James Kennedy (TX); Mark Afable (WI); and Jeff Rude (WY). Also participating were: Russ Galbraith (AR); James J. Donelon (LA); and Glen Mulready (OK).

1. **Adopted its March 8 and 2020 Fall National Meeting Minutes**

Commissioner White said the Committee met March 8 and took the following actions: 1) adopted a request for extension from the Mortgage Guaranty Insurance (E) Working Group; 2) adopted a new charge for the Qualified Jurisdiction (E) Working Group and a change to reposition the Working Group to report directly to the Committee; and 3) adopted proposed recommendations to the Financial Regulation Standards and Accreditation (F) Committee with respect to the group capital calculation (GCC) and the liquidity stress test (LST).

Commissioner Rude made a motion, seconded by Commissioner Caride, to adopt the Committee’s March 8 (Attachment One), and Dec. 8, 2020, **(see NAIC Proceedings – Fall 2020, Financial Condition (E) Committee)** minutes. The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner White stated that items adopted within the Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to NAIC members shortly after completion of the Fall National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to an item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

Superintendent Toal made a motion, seconded by Commissioner Caride, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Risk Retention Group (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Two); Group Solvency Issues (E) Working Group (Attachment Three); Mortgage Guaranty Insurance (E) Working Group (Attachment Four); and National Treatment and Coordination (E) Working Group (Attachment Five).

The Financial Analysis (E) Working Group met Jan. 27, Feb. 24, and March 17 in regulator-to-regulator sessions, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met March 25 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies. Finally, the Risk-Focused Surveillance (E) Working Group met March 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.

3. **Adopted the Guideline for Definition of Reciprocal State in Receivership Laws**

Mr. Kennedy noted that the Receivership and Insolvency (E) Task Force adopted the Guideline for Definition of Reciprocal State in Receivership Laws as a possible option to effectuate the recognition of receiverships that affect multiple states. He highlighted that this was one of the recommendations that was derived from the Macroprudential Initiative (MPI) on recovery and resolution from the referral from the Financial Stability (E) Task Force. He described how receivership laws typically...
provide for a stay of actions on the attachment of assets of an insurance company when it is placed into liquidation in a reciprocal state. In many states, the definition of reciprocal state is based upon receivership language originally drafted in the late 1970s, and it is more restrictive than the Part A Accreditation Standards. As a result, in some cases, a court may not stay a litigation when an insurance company is placed into liquidation in another state. The Guideline’s definition of reciprocal state is consistent with the definition in accreditation standards; and because it is a guideline, it is optional and would not have to be adopted in all states but rather is for those states looking to update their laws in this area. Mr. Kennedy stated that in November 2020, it was exposed for public comment, and there were no comments submitted.

Commissioner Caride made a motion, seconded by Mr. Kaumann, to adopt the Guideline for Definition of Reciprocal State in Receivership Laws (Attachment Six). The motion passed unanimously.

4. Adopted a Charge for the New Receiver’s Handbook (E) Subgroup

Mr. Kennedy stated that the Receivership and Insolvency (E) Task Force adopted amended 2021 charges that include the formation of the new Receiver’s Handbook (E) Subgroup. He stated that it has been over 10 years since the Receiver’s Handbook for Insurance Company Insolvencies (Handbook) was formally reviewed for updates, and the state insurance regulators have identified several areas where it is outdated. He noted how the new Subgroup would be charged with reviewing and drafting revisions to the Handbook. The timeline would extend through the 2022 Fall National Meeting, as this project could take some time.

Superintendent Toal made a motion, seconded by Commissioner Caride, to adopt a charge for the new Receiver’s Handbook (E) Subgroup (Attachment Seven). The motion passed unanimously.

5. Adopted Changes to SSAP No. 71

Commissioner White stated that the last item on the agenda is an issue that has received a considerable amount of discussion within the Statutory Accounting Principles (E) Working Group over the last couple years. He stated that unlike the premium refund issue from 2020, where the Committee overturned the adoption of a position and suggested that the issue be redrafted, he does not believe that should occur for this particular issue. He stated that the reason for this was that it was his understanding that the vast majority of the life insurance industry is very much opposed to the practice that has apparently been used by what we think is a handful of companies. The reason being is they believe it gives those handful of companies an unfair competitive advantage over the rest of the industry that has been abiding by Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions ever since its inception, as well as even dating back before at least the 1990s according to Commissioner White’s staff. He suggested that if the Committee does not adopt this item, his understanding is that it would force the Working Group to change the entire SSAP No. 71 to allow all commissions and related acquisition costs to be deferred and amortized over time. The reason this would be required is that is essentially what the handful of companies are doing today, while the rest of the industry expenses these costs at the inception of the contract in accordance with statutory accounting principles (SAP). Commissioner White summarized that this would require the Working Group to go back and basically adopt U.S. Generally Accepted Accounting Principles (GAAP) for this particular issue, even though this is one of the biggest differences between SAP and U.S. GAAP. He noted that even if the Committee adopts the issue, it still needs to be adopted by the Executive (EX) Committee and Plenary. He also noted that he already recommended that this issue not be taken up by the Executive (EX) Committee and Plenary at the Spring National Meeting, but rather the Executive (EX) Committee and Plenary consider taking it up either at the Summer National Meeting or during an interim call of the Executive (EX) Committee and Plenary.

Ms. Walker noted that included in the materials is a document that provides an overview of the levelized commission agenda item 2019-24 from the Working Group, which modifies SSAP No. 71 through a clarification. She discussed how the Working Group began discussion on the issue in August 2019, and on March 15, 2021, the Working Group adopted nonsubstantive revisions illustrated at the end of the attachment, with an effective date of Dec. 31, 2021. The Working Group vote was 13 states in favor and one state opposed. On March 23, 2021, the Accounting Practices and Procedures (E) Task Force adopted the Working Group’s revisions without modification. The vote was 41 members in favor and two opposed (LA and OK).

Ms. Walker discussed that although U.S. GAAP and SAP calculate acquisition costs in a similar manner, one major financial reporting difference between the two is that U.S. GAAP capitalizes acquisition costs and expenses them over time to match revenues and expenses while SAP expenses policy acquisitions costs as incurred. This accounting treatment is in line with the SAP Statement of Concepts, particularly the recognition concept. This concept specifically identifies that accounting treatments that defer expense recognition are not generally acceptable under SAP.
Ms. Walker noted that this agenda item was initiated because some reporting entities are using third parties to pay their sales commission costs without recognizing the full liability to repay the third parties, as required under SSAP No. 71. These entities have taken the position that their agreements are not funding agreements, as they pass on lapse risk to the third party. Ms. Walker discussed how the Working Group has noted that the revisions clarify the long-standing principles in SSAP No. 71, which have existed since even prior to codification. The nonsubstantive revisions emphasize the original principles that require full liability recognition for the commission paid on an insurer’s behalf and any interest and fees incurred to date. Ms. Walker described how the Working Group noted that it is not permissible to pass insurance lapse risk to a non-insurance entity. Furthermore, as the commission is owed with the issuance of an insurance contract, the proper recognition shall continue to require recognition at the time the insurance contract is issued. Ms. Walker indicated that the Working Group confirmed that it is not permissible to utilize a third-party payer of sales commission as a means to defer recognition of commission expenses.

Ms. Walker described how if the agenda item is adopted, a small number of companies will have a material financial impact. She emphasized that because of the unfair competitive advantages that are perceived, and as the guidance is in line with the original intent of SSAP No. 71, the Working Group did not adopt grandfathering or transition provisions. She discussed how the Working Group has recommended that affected companies speak to their domiciliary states regarding potential permitted practices, as needed, for phasing in the financial impact. This approach was favored because the impact to the affected companies may vary, and it provides disclosure in Note 1 to ensure the comparability of all insurers with SAP. Ms. Walker noted that it is her understanding that most companies are not employing this practice and will not be affected by the agenda item’s adoption.

Superintendent Toal suggested that the Committee should consider modifying the effective date from the current proposed year-end 2021 for another year to year-end 2022. Ms. Walker stated that the Working Group had already delayed the effective date from its usual practice of effective upon adoption for nonsubstantive items such as this, but the Working Group wanted to allow time for domestic states to work with any of their companies affected. She also described how a further delay was considered, but since the vast majority of the industry is complying, such a suggestion was rejected by the Working Group. Superintendent Toal questioned whether having less than six months allows enough time for companies to make the changes necessary. Commissioner Donelon repeated a comment that he indicated he has made in the past, which was that even though this was not a substantive change, the real-world impact to some companies was to the tune of hundreds of millions of dollars; therefore, grandfathering of the old contracts, perhaps on a phased-in approach, should be allowed. He described that he had been directed to some communication from the U.S. Securities and Exchange Commission (SEC) where this practice was uncovered as far back as 30 years ago. He described how such companies therefore may have been using this practice in good faith, or at least one they believed was appropriate, and they are being asked to record hundreds of millions of changes in surplus from this practice. He stated that for this reason, he and other commissioners have interceded in this process. Commissioner White described how he believes that Commissioner Donelon summarized that significant debate that has already appropriately occurred on this issue. Commissioner White described how everything he has been told is that this may have been taking place within a handful of companies, but that does not mean the state insurance regulators of those companies were aware of its existence in those companies. He described how this is not readable or identified in the financial statements since it is an unrecorded liability. He described how expensing these costs as incurred has been a bedrock principle within statutory accounting for years, even before SSAP No. 71 was adopted in 2001. He noted that he understands the argument for phasing in the impact, given that it could be material for some companies; however, the other side of that is the argument about the level playing field. He emphasizes what Ms. Walker said earlier about affected companies working with their domestic regulator about a permitted practice, which is disclosed in Note 1 of the financial statements. Commissioner Donelon stated that he believes from his experience as a commissioner for so many years that the term “permitted practice” certainly comes with a negative connotation. He stated that for the companies he has heard from, the affected companies are unwilling to pursue a permitted practice. However, he stated his appreciation for the time that the Committee and its subsidiary task forces and working groups have given to this issue.

Mr. Galbraith asked if it is possible to determine definitively if there were just a handful of companies and also whether the practice will definitively cease with all companies going forward on the same level playing field if the proposed changes are adopted. Commissioner White stated that he has heard no evidence to the contrary that it was anything more than a handful of companies since he believes state insurance regulators would have heard from those companies that are affected, and he noted that he is aware of companies in only three states where this is an issue. He described how this is a difficult practice to identify since it is not recorded in the financial statements. He also stated that with the significant discussion, the industry appears to be very aware of the issue, and the vast majority of the industry is supportive of the clarification. He emphasized again therefore that this issue boils down to having a level playing field.

Commissioner Mulready stated his support for the comments made by Commissioner Donelon, noting that his concerns have never been about the issue but rather the implementation. He stated his understanding that grandfathering may be difficult, but
a delayed effective date, as suggested by Superintendent Toal, should be considered. Commissioner White responded that he believes that point was debated at the Working Group and the Accounting Practices and Procedures (E) Task Force. Commissioner Mulready noted that as a result of these discussions, Oklahoma had sent communication to all of its domestics to determine if other insurers are affected, and he suggested that he is sure other states are likely doing the same thing. Commissioner White stated his support for that practice, noting that it allows the domestic regulator to determine what is best for any affected companies. Wayne Goodwin, former North Carolina Insurance Commissioner, stated that he had previously submitted comments on this issue, noting slippery slope concerns with what could happen if it is implemented as quickly as is suggested since those concerns affect consumers. He stated his support for comments from Commissioner Donelon, Commissioner Mulready and Mr. Galbraith, and he noted concern about the potential impact on smaller carriers.

Superintendent Toal stated that he wants to be clear in the idea of moving to a level playing field, and he is not objecting to the policy, rather his objection was with the limited time to implement, particularly given that state insurance regulators do not know the number of companies affected. Commissioner White responded that his deputy refers to the issue that arises from this practice as illusory surplus, and if in fact there are millions in unrecorded liabilities, that indicates information should be available to solvency regulators and indicates a level of concern. Ms. Walker stated that she believes this is a consumer protection issue, and her highest responsibility is ensuring that carriers can pay policyholder claims as they come due. She stated that when she hears some of the concerns that are being stated, as the domiciliary regulator, she needs the companies to come speak to her so that the two can work out a practice that takes care of consumers while considering the concerns of the company. She stated that the Accounting Practices and Procedures Task Force is trying to adopt some disclosures to gather information on companies, but that depends upon accurate completion by the company, something that may not occur given this particular accounting practice of expensing commissions as they are incurred, which is a fundamental bedrock of statutory accounting that differs from other standards. She noted that there was discussion of trying to obtain more data on the companies using this practice, but the companies did not come forward to their state insurance regulator even though that was requested. So, while a complete scope is not known, the Working Group and the Task Force did not receive information from state insurance regulators that are on the Task Force or follow it. Ms. Walker also noted that the current proposed effective date of year-end 2021 is already a delay. Mr. Slape suggested that if this is going to have hundreds of millions of impacts on a handful of companies, that is illusory surplus, and that raises questions about the solvency of such insurers using this practice. Therefore, it could have an impact on this small number of companies. Mr. Slape stated that the reference to SEC action may not be accurate, as he believes the facts indicate that the company was in worse financial condition after entering into these transactions. In essence, these companies are borrowing money, paying interest on that borrowed money, then competing against other companies that are following the current accounting requirements. Mr. Slape noted that this is not a new issue; this is the first thing that a state insurance regulator learns about regarding the differences between SAP and U.S. GAAP.

Lynn Kelley (Delaware Life Insurance Company), on behalf of interested parties, stated that this is an issue that has been discussed for some time, and she appreciates the ongoing discussions of the Committee and NAIC staff that have worked with Delaware Life. She strongly advocated for additional time to work through this implementation because Delaware Life still believes there are unanswered questions with regard to the calculations. She stated that Delaware Life has advocated all along for an extended effective date. She stated that Delaware Life maintains that this is a substantive change and believes that it has applied SSAP No. 71 in good faith, with all prior financial statements subject to examination and audit. Terrance Corbett (Guggenheim Life and Annuity Company) stated that the accounting for levelized commissions has been presented as a solvency issue, whereby companies have unrecorded liabilities for future commission payments. If this is the case, the liability is deemed necessary for policyholder protection, so how would the Committee be comfortable with any persistency commissions being recorded over time when all insurers have policy experience to be used as a basis for estimating the liability for these future expected payment payments. Therefore, the obligating event, which is defined by one of three essential characteristics in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, has not occurred until the policy anniversary date. Mr. Corbett noted that paragraph 2 of SSAP No. 71, which contains no proposed modifications to the definition of a liability, determine that the expense has been incurred. The proposed changes to levelized commissions with a link to persistency are contradictory to paragraph 2. Commissions that are paid and earned according to persistency, which is a long-standing insurance element, should be treated in a consistent manner to ensure comparability among reporting entities. Guggenheim believes the proposed changes to SSAP No. 71 sets a dangerous precedence for the need to accrue for other liabilities for other predictable future expenses. Ms. Walker noted that the expense is incurred for the first year when the policy is written. So, even if the funding agreement allows the company to pay the sales agent in the future, that does not allow the company to defer expenses the first year of the policy. She stated that by deferring, and not recording the liability, and making the statement that it is not due until after the period is contrary and has a different assumption. The assumption that one does not have to book the liability until the policy is still in effect ignores the fact that the policy is currently in effect. As long as the policy is in effect, that amount will be owed. Therefore, you are not to adjust the liability down until the policy lapses or is cancelled. Using a funding agreement simply changes the timing of when the payment is due and does not affect if there should be an expense. Mr. Slape said these are not persistency commissions because in those situations the agent is paid a commission

© 2021 National Association of Insurance Commissioners
in future years for when that policy stays in force. These are referred to as renewal commissions, and they are reported on the future anniversary date, but the first-year commission must be expensed immediately up front regardless of the existence of a funding agreement since that is a loan. Mr. Slape stated that he takes issue with the statement that these funding agreements provide for a persistency commission.

Roger Sevigny (Sevigny Consulting), as a former state insurance regulator, asked for common sense to prevail. He stated that what he keeps hearing is a lack of information, and he asked that the work be slowed down. Commissioner Donelon stated that with respect to the companies referred to, they are owned by wealthy owners and some of the largest insurers in the world. Commissioner White stated that the debate has been vigorous, and he reminded everyone that even if the Committee votes to adopt the proposal, it will still need to be considered by the Executive (EX) Committee and Plenary. He stated that he has recommended that the Executive (EX) Committee and Plenary not consider this at this meeting, but rather at the Summer National Meeting or during an interim meeting before that date.

Ms. Walker made a motion, seconded by Superintendent Cioppa, to adopt the nonsubstantive changes to SSAP No. 71 (Attachment Eight). The motion passed with Mississippi, New Mexico, and South Carolina dissenting.

Having no further business, the Financial Condition (E) Committee adjourned.
The Financial Condition (E) Committee met March 8, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway (CO), Vice Chair, represented by Rolf Kaumann (CO); Dana Popsh Severinghaus represented by Kevin Fry (IL); Stephen W. Robertson represented by Roy Eft (IN); Eric A. Cioppa (ME); Mike Chaney represented by David Browning (MS); Chlora Lindley-Myers and John Rehagen (MO); Marlene Caride (NJ); Russell Toal (NM); Linda A. Lacewell represented by My Chi To and Bob Kasinow (NY); Judith L. French (OH); Raymond G. Farmer (SC); Doug Slape represented by Jamie Walker (TX); Mark Afable (WV); and Jeff Rude (WY).

1. Adopted a Model Law Development Request Extension

Commissioner White described how the NAIC model law process requires the sponsoring committee to request from the Executive (EX) Committee the authority to work on modifying a particular NAIC model. He noted that in this context, permission was granted some time ago for the Mortgage Guaranty Insurance (E) Working Group to do so, but since such work had begun, most of the time had been spent developing a capital model that would essentially prevent mortgage insurers from lowering their lending standards similar to what occurred during the 2008 financial crisis. He described how he knew this was a time-consuming process in part because of the limited amount of state resources to work on this project. He said that approximately two years ago, the current chair, North Carolina, began an effort to create a more simplified version of a previously proposed capital model, with the model focused on loan-to-value ratios, FICO scores, housing market information and other signs of previous poor standards. Commissioner White said that due to COVID-19 and other state priorities, no work was conducted on this project in 2020, and the request is for an extension given these circumstances.

Director Farmer made a motion, seconded by Commissioner Caride, to adopt the request for extension from the Mortgage Guaranty Insurance (E) Working Group (Attachment One-A). The motion passed unanimously.

2. Adopted a New Proposed Charge and Request for Restructuring

Dan Daveline (NAIC) stated that the Group Capital Calculation (E) Working Group requests that a new charge be given to the Qualified Jurisdiction (E) Working Group related to the “Recognize and Accept” process already incorporated into the December 2020 version of the NAIC Insurance Holding Company System Model Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). He described how the suggestion includes renaming the Qualified Jurisdiction (E) Working Group to the Mutual Recognition of Jurisdictions (E) Working Group since it is proposed that the Working Group continue to fulfill its existing charges related to maintaining the qualified and reciprocal jurisdiction lists, but also take on developing and maintaining this new list related to group capital that also focuses on considering the recognition of other jurisdictions.

Superintendent Cioppa made a motion, seconded by Commissioner Caride, to adopt the proposed new charge and rename the group as recommended (Attachment One-B). The motion passed unanimously.

3. Adopted Suggested Accreditation Standards

Commissioner Caride discussed how during the Financial Stability (E) Task Force’s meeting on Feb. 22, it adopted the recommendation proposed including the liquidity stress test (LST) changes to Model #440 as an accreditation requirement, as well as the corresponding requirements for the specific standard. She indicated that two items worthy of note were discussed. First, regarding the timing considerations, the Task Force supported the timely adoption of the LST changes to Model #440, especially for those lead states of the 23 in-scope insurance groups for the 2020 LST. However, the Task Force agreed that the timing of adoption for accreditation purposes was something that should be determined by the Financial Regulation Standards and Accreditation (F) Committee. Commissioner Caride noted the Texas member representative indicated some concerns with the timing considerations but agreed that those were not decisions for the Task Force and could be discussed with that Committee.
Second, Commissioner Caride said the Task Force amended its draft recommendation letter during the meeting in an attempt to address some of the comments from the American Council of Life Insurers (ACLI) regarding the “substantially similar” standard elements. The ACLI comment letter asked for inclusion of each of the confidentiality clauses in the LST revisions to Model #440. The Task Force’s concern with the ACLI comments was the likelihood of attaining such specific language for each confidentiality clause when the LST revisions to Model #440 go before the many different legislatures across the country. She stated that because of this, the Task Force proposed an amendment to balance the ACLI’s request with the Task Force’s concern. Commissioner Caride explained that the Task Force added a new paragraph to the recommendation, making it consistent with the accreditation substantially similar elements for confidentiality provisions in the Risk Management and Own Risk and Solvency Assessment Model Act (#505). While industry’s initial read of the amended language was favorable, they did not have an opportunity to consider it at length, nor had the ACLI been able to discuss any potential concerns with its member companies. However, no one was opposed to the Task Force finalizing the amended recommendation and referring it to this Committee.

Commissioner White repeated a comment from Commissioner Caride that he found to be important, which was that he believed it was part of the Committee’s role to advance these recommendations since ultimately the matters noted are decisions to be made by the Financial Regulation Standards and Accreditation (F) Committee.

Commissioner Caride made a motion, seconded by Commissioner Afable, to adopt the recommendations to the Financial Regulation Standards and Accreditation (F) Committee related to the LST. The motion passed unanimously.

Mr. Rehagen stated he wanted to highlight a few items related to the accreditation recommendations related to the group capital calculation (GCC). First, he indicated they received suggestions from two parties related to the cover memorandum. The first was from South Dakota, who suggested adding language to the document to describe the reason the Working Group was recommending that the GCC be an accreditation standard for all states. Mr. Rehagen directed participants to the second paragraph of the memorandum, where they added language to the third line that speaks to how the GCC will allow states to better understand an insurance group’s financial risk profile for the purpose of enhancing policyholder protections. He described how it does this largely through its quantification of risk and described how they reworded the second to last sentence about how that makes these things more identifiable and quantifiable. He also described how they added the last sentence to denote that this entire paragraph was the reason the Working Group believed the GCC should be an accreditation standard for all states. Mr. Rehagen noted that the revised language was not adopted by the Working Group, but the Working Group did instruct NAIC staff to add language to make this clearer, which Mr. Rehagen noted he believed the revised language did so.

Mr. Rehagen described how the second item was from America’s Health Insurance Plans (AHIP), which suggested the memorandum should clearly identify why the Working Group has recommended that a more expeditious process be used for some states, for which the Working Group recommended the GCC be required to be in place by Nov. 7, 2022, for purposes of the compliance with the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) or the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement). He discussed that this recommendation only pertains to those states that are the group-wide supervisor of a U.S. group that operates in either the United Kingdom (UK) or the European Union (EU). Mr. Rehagen noted that this language was not something the Working Group asked to be made, but as Working Group chair, he authorized inclusion of the last sentence since it ties the discussion on the EU Covered Agreement and the UK Covered Agreement to the expeditious process suggested later in the document.

Mr. Rehagen asked to highlight two additional items. First, in the actual proposed standards, a number of areas include striking the word “substantially” before “similar.” This is because the general practice in the standards is that the entire model be worded with the word “substantial,” and subject to that standard, but that the rest of the document just refer to “similar.” He noted that during the Working Group meeting, he had asked that NAIC staff make those corrections. He also stated he wanted to highlight the language stricken on standard L6. In that paragraph, the Working Group deleted the words “or for ensuring the competitiveness of the insurance marketplace.” He stated he was highlighting this because the language struck is in Model #440, but the Working Group voted to have it removed. Mr. Rehagen ended by stating he wanted to make the same point as Commissioner Caride, which was he felt their job was to develop these recommendations for the GCC, but that ultimately the decision will be made by the Financial Regulation Standards and Accreditation (F) Committee. Commissioner White agreed with Mr. Rehagen’s statement.

Mr. Rehagen made a motion, seconded by Commissioner Caride, to adopt the recommendations to the Financial Regulation Standards and Accreditation (F) Committee related to the GCC. The motion passed unanimously.

Commissioner Caride made a motion, seconded by Superintendent Cioppa, to adopt a cover memorandum from the Committee to the Financial Regulation Standards and Accreditation (F) Committee to accompany the recommendations adopted from the Task Force and the Working Group. The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.
To: Commissioner Scott White (VA), Chair, Financial Condition (E) Committee  
From: Kevin Conley (NC), Chair, Mortgage Guaranty Insurance (E) Working Group  
Date: January 5, 2021  
Re: Updated Request for Extension

The Mortgage Guaranty Insurance (E) Working Group is in the process of fulfilling its charge to update the Mortgage Guaranty Insurance Model Act (Model #630). The Working Group anticipated completion of its Charge by the 2021 Spring National Meeting. As chair, I would like to update that request to the Financial Condition (E) Committee in accordance with NAIC procedures.

As background, the NAIC engaged Milliman to assist the Working Group in finalizing a Mortgage Guaranty Insurance Capital Model that will become the new capital standard for mortgage insurers. Subsequent to discussion at the 2019 Fall National Meeting, the Working Group exposed the Draft Mortgage Guaranty Insurance Capital Model, Mortgage Guaranty Insurance Model Act (#630), Mortgage Guaranty Insurance Standards Manual, and a proposed Mortgage Guaranty Insurance Exhibit. As result of issues in work efforts due to COVID, the Working Group did not meet during 2020. The Working Group will reconvene and discuss comments received on the exposure and send a referral to the Blanks (E) Working Group regarding the proposed exhibit during the next couple of months.

At this time, we believe we can complete this work by the 2022 Spring National Meeting. The request for additional time is to allow the necessary time to address comments regarding the above referenced documents and ensure that a comprehensive regulatory framework is in place to effectively regulate these complex insurance entities. We are aware that we have been unable to complete our work within the one-year time period expected under the NAIC model law process and request an extension until the 2022 Spring National Meeting in order to finalize a product that can be adopted by the domestic states of the mortgage insurers, as well as any other state also wishing to adopt the same.
MEMORANDUM

To: Financial Condition (E) Committee

From: Group Capital Calculation (E) Working Group

Date: February 25, 2021

Re: Proposed New Charge for the Recognize and Accept Process

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions will enable the Group Capital Calculation (GCC) once adopted by the states. The revisions specifically include provisions that allow the Commissioner to exempt groups that have a group-wide supervisor that “recognize and accept” the GCC for U.S. groups in their jurisdiction; thereby embracing the concepts of mutual recognition and one group/one group wide supervisor. Model #450 provides a general framework for how the “recognize and accept” process will work and specifically contemplates the development of “a list” of such jurisdictions. This concept of a list in the context of mutual recognition is not a new one and is already used by the Qualified Jurisdiction (E) Working Group of the Reinsurance (E) Task Force. To that end, the Working Group recommends the Financial Condition (E) Committee reposition the group to report directly to the Committee, modify the charges of the Qualified Jurisdiction (E) Working Group as shown below, and revise the title of the group to be more encompassing, as also shown in the following:

2021 Charges

The Qualified Mutual Recognition of Jurisdictions (E) Working Group will:

1. Develop a process for evaluating jurisdictions that meets the NAIC requirements for recognizing and accepting the NAIC Group Capital Calculation (GCC).
2. Maintain the NAIC List of Qualified Jurisdictions and the NAIC List of Reciprocal Jurisdictions in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.
3. Perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions.
4. Consider evaluations of any additional jurisdictions for inclusion on the NAIC List of Qualified Jurisdictions.

If you have any questions, please contact NAIC staff support Dan Daveline (ddaveline@naic.org).
Group Capital Calculation (E) Working Group
Virtual Meeting
March 10, 2021

The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met March 10, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Ray Spudeck (FL); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Barbara Carey (MN); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Mike Boerner (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

During its Feb. 25, 2021, meeting, the Working Group took the following action: 1) adopted recommended accreditation standards for referral to the Financial Condition (E) Committee related to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450); and 2) adopted a recommendation to the Financial Condition (E) Committee to modify the charges of the Qualified Jurisdiction (E) Working Group and revise the title of the group to be more encompassing. During its Jan. 28, 2021, meeting, the Working Group took the following action: 1) heard a presentation on the data analysis for the adopted group capital calculation (GCC) template using 2019 field test data; and 2) discussed further GCC data collection. The Working Group conducted an e-vote that concluded Jan. 19 to expose the proposed accreditation standards for the GCC.

Mr. Spudeck stated that he had attended the Feb. 25, 2021, meeting and asked that his name be added to the attendees listed for that meeting.

Ms. Belfi made a motion, seconded by Ms. Bernard, to adopt the Working Group’s Feb. 25, 2021 (Attachment Two-A); Jan. 28, 2021 (Attachment Two-B); Jan. 19, 2021 (Attachment Two-C); and Nov. 17, 2020 (see NAIC Proceedings – Fall 2020, Financial Condition (E) Committee, Attachment Three) minutes, with the addition of Mr. Spudeck to the attendee list for the Feb. 25 meeting. The motion passed unanimously.

2. Continued Discussion of the 2021 GCC Data Collection

Mr. Rehagen noted that a 2021 data collection is now being referred to as a 2021 Trial Implementation (Trial). He referred the Working Group’s attention to an updated data collection considerations attachment (Attachment Two-D) in the meeting materials. The document was originally presented during the Working Group’s Jan. 28 meeting. He stated that a survey was subsequently sent to all Working Group members and interested state insurance regulators. The survey posed questions related to the Trial, including selection process, submission and review deadlines, data year, and practical numbers of volunteers that could be included. Mr. Rehagen stated that 16 responses were received by the due date of March 5. He said that almost all of the responses came from Working Group members and that survey responses are reflected in the attachment.

Mr. Rehagen stated that the Purpose section at the beginning and the Related Considerations section at the end of the document reflected some of the input from the Working Group’s January meeting but otherwise have not changed much. He added that most of today’s discussion will be focused on the revisions to the other sections in the document. He then walked through each relevant issue addressed in the survey.

a. Process for Selecting Participants in the Trial

Mr. Rehagen said that based on the results of the survey, NAIC staff recommend following the same confidentiality process used for the 2019 field test and that 75% of the survey respondents supported this approach. There were no objections to this approach from Working Group members.

Mr. Rehagen said that NAIC staff could take the lead in establishing a list of potential volunteers, which then would be presented to each lead state for review and selection based on available resources. However, for the 2019 field test, potential volunteers were directed to contact their lead state to discuss participation. Ms. Belfi stated that more lead state involvement is preferred so that the number of volunteers could match resources to review submissions. She said she prefers that the canvass
letter come from the Connecticut Insurance Department. Ms. Weaver asked whether what Ms. Belfi was suggesting would
limit participation from groups that other licensed states might want to see. Ms. Malm said she has no problem with the NAIC
compiling a list as long as the state insurance regulators had the final say on which groups could participate. Lou Felice (NAIC)
confirmed that Ms. Carey’s view was consistent with the NAIC’s intent. Ms. Berry stated that some groups want all contact to
go through the Illinois Department of Insurance (DOI) rather than directly to the NAIC. Mr. Schrader agreed that the lead state
should do the actual canvass for participants. Ms. Carey asked how the number of participants accepted by all lead states would
match NAIC resources available to assist in the review of Trial submissions. Mr. Felice stated that most states responding to
the survey indicated they could handle between two and four volunteers and that the NAIC could handle roughly 30 participants.
He said that the NAIC could also provide limited assistance for additional participants that do not want the lead state to share
data with the NAIC. Mr. Wolf noted that NAIC resources should prioritize internationally active groups that also participate in
the insurance capital standard (ICS) aggregation method (ICS-AM) data collection exercise conducted by the International
Association of Insurance Supervisors (IAIS).

In response to a question from Ms. Berry, Mr. Rehagen stated that the Trial would be open to groups beyond those who
participated in the 2019 GCC field test depending on the resource capacity of each lead state.

Mr. Rehagen summarized the discussion by stating that he would work with NAIC staff to draft wording for a canvass letter
that would then be sent by each lead state to select groups. The Working Group members agreed. Mr. Rehagen directed NAIC
staff to draft the language and present it to him for review.

b. Due Date for Submissions and Data Year

Mr. Rehagen said that a majority of state insurance regulators responding to the survey supported starting the review of
submission in June 2021 and that almost all state insurance regulators responding to the survey supported a default date for

Thomas Finnell (America’s Health Insurance Plans—AHIP) asked about shadow submission from groups not participating in
the Trial but wanting to complete the GCC templates, specifically with regard to submitting questions as part of question-and-
answer (Q&A) guidance published. Ms. Belfi said she supports involvement of such groups in the Q&A process. Mr. Felice
stated that the NAIC would address questions from nonparticipants but suggested that all questions come through the group’s
lead state rather than directly from the group.

Mr. Finnell, Keith Bell (Travelers Insurance) and Maria Gomez-Vock (American Council of Life Insurers—ACLI) expressed
concern about groups’ ability to submit the Trial template with 2020 data by the end of June. Ms. Gomez-Vock also asked
about the timeline for the 2021 ICS-AM data collection. Ned Tyrrell (NAIC) stated that the submission will be due at the end
of August using 2020 financial data. Ms. Gomez-Vock suggested an August submission date for the Trial template. Mr. Wolf
stated that the Trial submission should be received before the ICS-AM data in order to allow the NAIC sufficient time to review
the Trial submission and provide feedback prior to the states reviewing the ICS-AM submission. Ms. Berry and Ms. Belfi
agreed. Ms. Malm asked if an August submission date would leave enough time to complete the review and have a report by
the Fall National Meeting. Ms. Mears asked if the June deadline could be retained but extended by the lead state based on
requests by a participating group.

Mr. Rehagen asked if the Working Group prefers a fixed July 31, 2021, submission deadline or Ms. Mears’ suggestion. Ms.
Belfi expressed support for a fixed July 31 submission date. Mr. Wolf and Mr. Eft agreed. Mr. Rehagen asked if the Working
Group members agreed with a July 31 submission deadline for the Trial template using year-end 2020 data. There were no
objections.

In response to a question about when the GCC would become effective, Dan Daveline (NAIC) stated that adoption into a state’s
law would govern. However, it was not expected that such legislative action would occur in 2021. So, for most states, the GCC
would most likely be effective for year-end 2022.

c. End Date for Review of Submissions

Mr. Rehagen said that about half of state insurance regulators responding to the survey thought the review should be completed
by October. Some suggested earlier, and a few later. Mr. Rehagen expressed support for an October time frame as reasonable
in order to possibly have results compiled and discussed by the Fall National Meeting.
d. Stress Tests

Mr. Rehagen stated that the data considerations attachment also included initial thoughts on stress testing that could be added to the Trial template. He asked for some initial feedback. Mr. Finnell stated that scenario testing might be overly complex for health groups. Mr. Bell stated that there are unique stresses for property/casualty (P/C) groups. Ms. Gomez-Vock suggested referring the stress testing issue out to a study group made up of state insurance regulators and industry representatives. Mr. Felice stated that the Trial stresses were intended to be used for the purpose of evaluating unintended consequences but not generally as permanent additions to the GCC template. Mr. Rehagen agreed. Mr. Finnell supported Ms. Gomez-Vock’s comments and suggested taking the issue offline for further detailed discussion.

3. Discussed Other Matters

Mr. Finnell repeated a prior request that the GCC instructions be edited for increased clarity. Mr. Felice stated that NAIC staff are completing edits, which will be presented during a future Working Group meeting. In response to a question from John DuBois (MassMutual), Mr. Rehagen clarified that the Working Group supports a July 31 Trial data submission deadline and a completion date of Oct. 31 for the review of the submissions.

Having no other business, the Group Capital Calculation (E) Working Group adjourned
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met Feb. 25, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair, and John Loughran (CT); Susan Bernard (CA); Kevin Clark (IA); Ray Spudeck (FL); Susan Berry (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Kathleen Orth (MN); Jackie Obusek (NC); Justin Schrader (NE); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating were: Johanna Nickelson (SD); and David Provost (VT).

1. Adopted Recommendations to the Financial Condition (E) Committee Regarding Accreditation

Mr. Rehagen described the materials for the meeting, including the comments (Attachment Two-A1) received and the exposed recommendations and related memorandum.

a. Expeditious Adoption of Standards

Mr. Rehagen described some of the comments received related to the issue of the expeditious adoption of the standards. He said there was a suggestion in the cover memorandum to the draft memorandum to the Financial Condition (E) Committee that, similar to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) adopted in 2019, the Working Group would propose a waiver of the procedures in terms of normal timelines at the Financial Regulation Standards and Accreditation (F) Committee to allow the group capital calculation (GCC) to be adopted prior to the Nov. 7, 2022, date for the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement). Mr. Rehagen pointed out that after reviewing the comments, NAIC staff are now suggesting the Working Group consider a “bifurcated” accreditation due date to allow states that do not have a U.S. group subject to the covered agreement to adopt the model under a more normal timeline. He noted that NAIC staff have also suggested the Risk Retention Group (E) Task Force be given more time to determine its own standard for risk retention groups (RRGs) as long as it does not contradict that the NAIC needs to have all states that have groups that are subject to the EU Covered Agreement to have the model in place by the Nov. 7, 2022, date.

Marianna Gomez-Vock (American Council of Life Insurers—ACLI) stated that the ACLI continues to feel strongly that the standards need to be in place by the EU Covered Agreement date, which would be essential for those who supervise groups subject to that agreement. She said the ACLI would also feel more comfortable if it was for all states as opposed to the bifurcated approached, in part because what would occur if a group were to have its business changed to where it had a new group-wide supervisor in a state that would not have otherwise passed the model. She stated she believes that complication raised issues that should be considered. Mr. Rehagen agreed and stated he believes the state would have to adopt the model and noted that he believes the state would want to do so. Ms. Gomez-Vock stated the ACLI does not have an opinion on RRGs.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) stated that AHIP thinks if state insurance regulators believed this was a critical issue to shorten the normal accreditation timeline, then AHIP asks that the circumstances that justify that shortening of the period be set out clearly in the referral memorandum. He stated that the accreditation program has worked well and that everything should be done to retain its high standards and noted nothing should be done in casual manner. Mr. Rehagen asked Mr. Ridgeway if he has considered the revised language in the memorandum that contemplates a bifurcated timeline and noted that even if he had not, this referral will next be considered by the Financial Condition (E) Committee. Therefore, there may be an opportunity for further changes to the language to the memorandum to the Financial Regulation Standards and Accreditation (F) Committee. Becky Meyer (NAIC) stated that any consideration of shortening the normal
accreditation timeline would require a two-thirds majority vote and, therefore, is considered very carefully. Mr. Ridgeway stated that he is most interested in the documentation of the reason and not just the vote since the documentation will last.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) asked if the accreditation program would run on two separate tracks if the bifurcated approach were adopted. Ms. Meyer asked Mr. Rodgers if he were asking whether this pertains to when the Financial Regulation Standards and Accreditation (F) Committee were to consider adoption if it would be two different tracks. Mr. Rodgers clarified his question by asking if this would be an accreditation standard for all states or only those states that are affected by the EU Covered Agreement. Ms. Meyer responded that the current memorandum suggests the intention is it would be an accreditation standard for all states. However, with the bifurcation method, if implemented, some states would be required to implement the standard earlier in accordance with the EU Covered Agreement time frame, but all states would eventually be required to adopt the language. Ms. Gomez-Vock asked the circumstances of a state that has an internationally active insurance group (IAIG) and the efforts at the International Insurance Relations (G) Committee to obtain comparability for the aggregation method with the insurance capital standard (ICS). Mr. Rehagen stated that he believes so, noting that he believes states with IAIGs would consider. Ms. Meyer clarified that the task before the Working Group is to make a recommendation to the Financial Regulation Standards and Accreditation (F) Committee and to include enough information for it to make such a decision. Mr. Rehagen stated that unless Working Group members disagree, he believes it is appropriate for the Working Group to move forward with the bifurcated approach as documented. Ms. Nickelson requested additional information be added to the memorandum to describe the reason for proposing the GCC as an accreditation standard for all states. Mr. Rehagen stated he believes the letter already described the reason. However, Dan Daveline (NAIC) suggested further language could be added.

b. Requirements for Groups Not Operating Internationally

Ms. Walker stated Texas has been consistent in its view that this standard should be applicable to those groups subject to the EU Covered Agreement. Mr. Ridgeway noted AHIP supports the Texas suggestion. Ms. Gomez-Vock stated the ACLI is strongly opposed to the Texas suggestion and strongly supports the suggestion by the NAIC that no change should be made on the basis that the GCC was developed as a tool to help with the group supervision of all groups and not just those that have international operations.

c. Subgroup Reporting

Ms. Walker said there was an issue as the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) were being finalized. The phrase for “ensuring competitiveness of the insurance marketplace” was one whose terms did not align with the terms of the EU Covered Agreement, and she requested it not be included in the accreditation standard. Ms. Belfi stated that she would like to hear more from interested parties on whether that language needs to be included and noted that some members of the industry said they did not think it was necessary. Kim Welsh (Reinsurance Group of America—RGA) noted that RGA weighed in early and believes it needs to be in the law. She said RGA wants to make sure states have that authority and, therefore, she believes it is critical. Ms. Belfi and Mr. Rehagen clarified the question relates only to the small number of words. Ms. Welsh emphasized this is at the commissioner’s discretion, and while RGA thinks it is important, it may not consider it is at the commissioner’s discretion. Mr. Bruggeman stated he believes the language would not cause harm and that is why it was included in the model. However, he said he does not think it is necessary. Ms. Macaluso stated she does not understand why this language was being removed given it was included in the model. Ms. Belfi noted that she believes the issue that the language already includes broad language using the term “prudential oversight” and that this is sufficient, and some states have concerns with the language that is being proposed to be removed. Mr. Rehagen noted that given three states are not opposed to taking it out, the Texas suggestion to remove this phrase would be taken out.

d. Concurrently File the GCC With Form B

Ms. Berry asked if the date could be similar to the Own Risk and Solvency Assessment (ORSA) and, therefore, be different from one group to the next. Mr. Rehagen stated the due date could be different from state to state, but the state should set it—not the company. Mr. Bruggeman noted the due date should be set by the lead state, and concurrently the file may not work with an early due date. As such, he stated he supports the recommendation.
e. Confidentiality Requirements

Mr. Rehagen noted the accreditation requirement of “substantially similar” applies to the entire model, but that “similar” was used for the individual elements so that some are not reinforced more than others. He noted that if some of the individual elements indicate “substantially similar,” those should be modified. Ms. Gomez-Vock stated they support the NAIC staff recommendation with the proposed change from what was originally exposed, with the understanding that Mr. Rehagen just noted. Ms. Meyer stated she agrees with Mr. Rehagen. She noted that that the approach used for the ORSA is the same structure and is the correct way forward, and she said she appreciates working through the language together. Mr. Ridgeway noted that confidentiality hit a nerve. He said the states may adopt different language where the careful language is eroded, and those words have meaning, which is troubling. He stated they were trying to change that trend. He noted that if “substantially similar” is a higher standard, it should be followed, and he suggested if it were up to him, the language should have to be the same or as close to the same from state to state or from model to model. Dan Schelp (NAIC) stated he believes there was a misunderstanding. Specifically, states are required to adopt Model #440 or substantially similar to Model #440. As a matter of style, in the significant elements, similar is indicated, but they are are being looked at in a substantially similar threshold.

Ms. Belfi made a motion, seconded by Ms. Walker, to adopt the revised recommendations memorandum and revised standards, with modifications to incorporate language to address the comments from South Dakota, and send to the Financial Condition (E) Committee. The motion passed, with Virginia abstaining.

2. Adopted a Recommendation to the Financial Condition (E) Committee Regarding a New Charge

Mr. Rehagen said that included in the materials was a recommendation to the Financial Condition (E) Committee to create a group to address the GCC’s recognize and accept concept that was built into Model #440 and Model #450. He stated that in 2020, he suggested it be the same group as the Qualified Jurisdiction (E) Working Group, and the memorandum makes that recommendation. He also recommended that the Working Group be moved from under the Reinsurance (E) Task Force and report directly to the Financial Condition (E) Committee. He stated he believes the idea is that once the Working Group developed the process, it would also maintain the two listings contemplated in Model #440 and Model #450.

Mr. Schrader made a motion, seconded by Mr. Lathrop, to adopt the recommendations. The motion passed unanimously. Having no other business, the Group Capital Calculation (E) Working Group adjourned.
Re: NAIC Group Capital Calculation Exposure Memo (dated Jan. 19, 2020) to the E Committee regarding accreditation standards for the 2020 revisions to the Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation (#450).

Dear Mr. Rehagen,

The ACLI appreciates the opportunity to respond to the NAIC Group Capital Calculation (“GCC”) working group’s exposed memo to the NAIC “E” Committee (dated January 19, 2021). The memo addresses the GCC working group’s proposed accreditation standards for the 2020 revisions to incorporate the GCC into the Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation (#450).

ACLI supports the waiver of procedure & expeditious adoption of the standards.

ACLI strongly supports the memo’s recommendation that the F Committee should consider a waiver of procedure, as provided for in the Accreditation Program Manual and expeditiously consider adoption of the GCC-related standards, so they become effective by November 7, 2022. We encourage the NAIC, as a standard setting body, to actively communicate the importance and consequences of the November 7, 2022 deadline, to the regulatory community. As the memo correctly notes, the deadline is especially consequential for lead-state regulators who supervise insurance entities or groups that operate in the E.U. or U.K. Those states have a very limited amount of time to pass the revisions. ACLI has launched initial outreach efforts to discuss the 2020 amendments to the Holding Company Act, and we are ready and willing to assist with the timely passage of these important amendments.

ACLI recommends changing the filing period to “annual” instead of “concurrently” with Form B.

ACLI recommends a minor change to the accreditation standard for the filing requirements for the group capital calculation. We recommend replacing “shall concurrently file with the registration and annual group capital calculation” with “shall annually file a group capital calculation” in item (l)(i). This would ensure states
and the respective insurance groups they supervise have sufficient time to develop and aggregate the information needed to complete the GCC filing (e.g., final year-end statutory results for subsidiaries, international affiliates, etc., some of which would not be available until after the registration is filed).

**ACLI supports the adoption of “substantially similar” confidentiality provisions.**

The confidentiality of the GCC (and the Liquidity Stress Test) calculation, including group capital information shared by the Federal Reserve or international regulators, is highly important to our members. The memo’s proposed list of “significant elements” of the 2020 revisions to the Model Act and Regulation includes one confidentiality-related element, item “m”, which prohibits insurers from sharing information about the GCC or LST to advertise. ACLI supports the inclusion of this section in the standards, but we believe additional significant elements are warranted.

ACLI strongly prefers that the significant elements for accreditation incorporate all substantive revisions made to section 8G. At a minimum, the significant elements should also include these items:

- Provisions for maintaining the confidentiality of GCC (or Liquidity Stress Test) materials submitted to the Department (section 8A(1))
- Provisions for information sharing agreements that maintain the confidential and privileged status of the documents (section 8C(4)(a))

Similar confidentiality protections, such as the Own Risk Solvency Act (#550) are already afforded status as “significant elements” of the “substantially similar” accreditation status. Given that most states have already enacted similar confidentiality provisions for ORSA materials – it is reasonable to expect the same levels of confidentiality for the GCC and LST related materials.

**Conclusion**

Thank you for the opportunity to share our comments on the exposed memo to the E Committee. ACLI always appreciates the chance to engage with the Working Group on this important issue. If you have any questions or concerns about our comments, please feel free to contact me. We look forward to continuing to work together in the future.

Sincerely,

Mariana Gomez

---

1. This section inadvertently referred to section 8G. The intent was to state our belief that all material changes to section 8 should be included in the standards, and the standards should not be limited to amended section 8G.
2. Similarly, we believe that is equally important to deem section 8A(2) a “significant element.” Section 8A(2) protects the confidentiality of liquidity stress test results and data.
3. The final accreditation standards for the 2020 revisions should also include significant elements that are LST-related, including, but not limited to: (i) a provision exclude materials or information collected through the liquidity stress test from being stored in a permanent database once the initial analysis is completed; and (ii) provisions requiring notification and identification of third-party consultants who will receive LST materials.
4. The significant elements from the Own Risk Solvency Assessment (#505) accreditation standard require states to: “Include substantially similar provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators. If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.”

Re: Draft Memorandum from Group Capital Calculation (E) Working Group to Financial Condition (E) Committee

Dear Mr. Daveline:

Liberty Mutual strongly supports your draft memorandum and its recommendation that the 2020 amendments to the Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation (#450) become accreditation standards.

Liberty Mutual has been an early and stalwart advocate of the NAIC’s now fully developed and adopted Group Capital Calculation (GCC). As the memo points out, “the GCC will serve as an additional financial metric that will assist state insurance regulators in identifying risks that emanate from a holding company system.” Importantly, the GCC is the result of years of careful and responsible regulatory study and analysis during a process that offered ample opportunity for all interested persons to express their views and participate in its development.

As the memo correctly notes, action on the GCC is needed more today than when the NAIC began its development. It should become an NAIC accreditation standard because uniform adoption of the GCC across the states is crucial so that the U.S. can meet its obligations under its Covered Agreements with the EU and the UK. Moreover, the GCC will form the basis for the U.S. to assert that it has developed an Aggregation Method that is comparable with the Insurance Capital Standard being finalized by the IAIS. This outcome is essential in order to ensure our strong and competitive insurance market is not materially weakened by the ICS.

In summary, we urge the NAIC to move promptly to adopt the GCC as an accreditation standard and stand ready to assist in achieving that objective.

Very truly yours,

Edmund C. Kenealy

RE: NAMIC Comments on January 19, 2021 Memorandum to Financial Condition (E) Committee

Dear Chair Rehagen:

The following comments are submitted on behalf of the member companies of the National Association of Mutual Insurance Companies1 regarding the recommendations included in a memo dated January 19, 2021 from the NAIC Group Capital Calculation (E) Working Group to the Financial Condition (E) Committee.

The memorandum details several recommendations by the GCCWG for the E Committee to consider including a recommendation that all states that are the lead state for a group subject to the Group Capital Calculation should be required to adopt the revisions to the Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation (#450) by November 22, 2022. The memo further states that the new “significant elements” included as an appendix to the memo should apply to all states and be adopted by NAIC-accredited jurisdictions in a substantially similar manner. The GCCWG is also recommending the E Committee consider supporting a waiver of procedure to expeditiously consider adoption of the recent changes to the models that include the new GCC as an accreditation standard. Our comments will be limited to these three issues: timing for states to adopt, significant elements, and the requested waiver of procedure.

Timing

1 NAMIC membership includes more than 1,400-member companies. The association supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies write more than $278 billion in annual premiums. Our members account for 58 percent of homeowners, 44 percent of automobile, and 30 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
NAMIC understands the importance of states complying with the requirements under both the Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance as well as the similar agreement between the U.S. and U.K. (Covered Agreements). However, it appears there is a gap in understanding about the application of the group supervision requirements included in the Covered Agreements and a question about the Federal Insurance Office’s preemption authority in this regard. We agree that the FIO was granted preemption authority over state laws that do not conform to the terms of the negotiated Covered Agreements as defined and provided for under the Dodd-Frank Act. And as it applies to reinsurance, the preemption authority is clear to us that any laws that would still require reinsurers to post collateral in the US would likely be stricken down. Where it is not entirely clear is whether the Covered Agreement’s preemption authority extends to the creation/absence of a group capital requirement.

We suggest that the NAIC authorize a third-party legal analysis of the Covered Agreements preemption authority to determine if and how that applies to the GCC. Given the differences in interpretation, NAMIC members do not agree with the aggressive timeline for all states to adopt the changes to Model #440 and #450 as suggested in the memo. It is our understanding that U.S. groups with no operations in the EU or UK should not be impacted by the Covered Agreements. It does not appear to our members that the Covered Agreements would even apply to territories outside of the US and EU or US and UK. As such, a group that is not actively operating insurance activities in the EU or UK would not need to be regulated under a group supervision scheme designed for the Covered Agreements purposes.

The NAIC has completed its work on developing a group capital calculation. As states begin to consider the changes to the models, it is worth reviewing the stated purpose of the Covered Agreements. That is to create mutual acceptance of regulatory supervision of entities operating in both parties’ territories in order to remove duplicative regulatory supervision of those entities. It is important to not lose sight of the intent of these Covered Agreements. As far as group supervision, a US group with no operations in the EU/UK should not be impacted by the Covered Agreements. For these reasons, we suggest a comprehensive review of FIOs preemption authority.

**Significant Elements**

The revisions to Models #440 and #450 include a new requirement for insurers in a holding company structure to file an annual GCC. This new requirement was developed largely to enhance group supervision capabilities and to quantify risk of insurance entities and their affiliates that may be exposed to risk from other entities in a large and complex holding company. While the calculation was developed to apply to complex entities and internationally active groups, the model law revisions include certain exemptions for single-state, single-insurer holding companies, groups required to perform a group capital calculation for the Federal Reserve Board, and certain internationally active insurers operating in Reciprocal Jurisdictions. These provisions are included as significant
elements and are being recommended as required provisions in order for states to maintain accreditation status with the NAIC. In addition to these exemption provisions, it is also recommended that states adopt the confidentiality provisions prohibiting the making, publishing, disseminating, circulating, or placing before the public the GCC or resulting GCC ratio in a substantially similar manner. NAMIC members agree with the inclusion of these significant elements as part of the Accreditation procedures.

Additional flexibility for the regulator is needed for the GCC.

As it applies to the significant elements included as part of the Model Act (#450), NAMIC members recommend the NAIC defer the inclusion of the Model #450 significant elements until regulators have had a chance to review the initial batch of GCC results. This would not impede states ability to adopt the model law changes or from insurance departments from implementing the changes to the model regulation but would give insurance departments more flexibility and time to consider the impact of the GCC, without having to adopt a regulation that provides little flexibility.

Regulatory discretion is already baked into the model law and regulation. Nearly every state that previously adopted the holding company act has the general authority to exempt a company from any or all of the provisions of the HCA registration requirements. It is part of the model law adopted by the NAIC and already made an accreditation standard. It is part of the flexibility that the NAIC intended to give regulators. Given that most all holding companies will be required to file at least one GCC, state insurance regulators should have an opportunity and time to determine the usefulness and value the GCC provides them for the domestic insurers they regulate.

**Accreditation Waiver of Procedure**

Given our objection to the aggressive timeline for all states to adopt these standards and our request for an independent third-party assessment of FIO’s preemption authority in regard to the GCC, NAMIC members do not agree that the F Committee should waive any procedures that would avoid seeking public input on these important changes to the Financial Regulation Standards and Accreditation Program. Historically when changes are made to solvency standards and those changes are considered for accreditation purposes, a set schedule of events are established in a deliberative process for interested parties to understand how/when key decisions will be made. It appears to us that the NAIC is suggesting waiving that process altogether and deeming the recent changes to the holding company models already accreditation standards. There is no need to rush the Accreditation process, particularly when you have states introducing and adopting credit for reinsurance legislation, an accreditation standard that went through the Accreditation approval process. In the meantime, it is more important to address some of these unanswered questions and to support impacted lead-states on adopting the changes to the model law. Therefore, NAMIC suggests that these proposed changes to the Accreditation
standards go through the normal 12-month approval process, including exposing for comment the significant elements included in the memo.

We appreciate the opportunity to take part in the process. Thank you for your consideration of these comments on this matter of importance to NAMIC, its member companies and their policyholders. If there are any questions, please feel free to contact me at 317-876-4206.

Sincerely,

Jonathan Rodgers
Director of Financial and Tax Policy
National Association of Mutual Insurance Companies
February 9, 2021

John Rehagen, Chair
Group Capital Calculation (E) Working Group

Dear Mr. Rehagen:

Texas appreciates the opportunity to provide comments on the exposed recommendation to the Financial Condition (E) Committee regarding accreditation standards associated with the group capital calculation (GCC) amendments to Models 450 and 460. Our comments are as follows:

Exposed:

i. Filing requirements for the group capital calculation filing similar to those specified in Section 4L(2) of Model #440?

   i. The ultimate controlling person of every insurer subject to registration shall concurrently file with the registration and annual group capital calculation completed in accordance with the NAIC Group Capital Calculation Instructions as directed by the lead state commissioner similar to section 4L(2)?

n. Filing requirements for the group capital calculation filing similar to those specified in Section 21 of Model #450?

   i. Provision that gives the lead state the authority to exempt the filing of the group capital calculation provided the criteria are substantially similar to those allowed under Section 21A of Model #450?

Comments:

Texas is opposed to the broad requirement that every group file a GCC as an accreditation requirement. The accreditation standard to file a GCC should be limited to those with international operations and provide the lead state commissioner the discretion to require any group file a GCC.

A state’s accreditation status should not be threatened if all groups are not required to file the GCC once. As currently contemplated, if all groups are required to seek an exemption from the lead state commissioner annually, valuable resources that could be used to monitor solvency will be used in a bureaucratic process that does not enhance
solvency oversight of companies. Insurance department staff are already receiving ORSA filings, Form Bs, and Form Fs and have been completing group analyses for several years. The added filing of the GCC should only be required in situations where the lead state commissioner believes that it would add valuable insight and information to group oversight, not just because it is an accreditation requirement.

Through the supervisory college framework, other regulators would be able to raise concerns about a group's operations and discuss whether a GCC should be required. Because this approach would “achieve the objective of the standard,” this approach should be accepted as substantially similar in effect.

Additionally, Texas is supportive of modifying this standard to generally refer to the filing of the GCC annually and not tie that filing to submission of the registration statement. In Texas the registration statement is due on April 1 each year, but the consolidated independent audit report of a group may not be completed by that time. Therefore, the GCC filing would be diminished in value. The lead state commissioner should have the discretion to determine the timing that would yield the most valuable information in situations where a GCC is required.

Exposed:

vi. Provision that gives the lead state the authority to require the GCC for U.S. operations of any non-U.S. based insurance holding company system where after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace, substantially similar to 4L(2)(e)?

Comments:

Texas recommends deleting the phrase “for ensuring competitiveness of the insurance marketplace” from the accreditation standards because this phrase is not found in the covered agreement. We worry that a regulatory decision that relies on this language risks triggering scrutiny by the Joint Committee established under the covered agreement. Additionally, this provision does not promote sound insurance company financial solvency regulation which is the mission of the Accreditation Program. There are other avenues for addressing concerns with international jurisdictions.
Conclusion:

Texas opposes requiring GCC filings to be prepared by groups and reviewed by insurance departments when the filing is not needed to understand group operations. A state’s accreditation should not be affected if:

- the state enacts a GCC law that requires filings from all groups with international operations and provides the lead state commissioner discretion to require all other groups file and
- aligns with the language included in the covered agreement.

In closing, Texas also suggests consideration be given to whether the accreditation standard applies to all states or a subset of states where the GCC will be more meaningful. As proposed, Texas sees no reason to apply this standard to all states, some of whom have a limited number of non-complex groups and are already receiving sufficient information via the other form filings. An all-state accreditation standard aligned with Texas’ suggestions, however, could be more useful as it would give a lead state commissioner the authority to require a GCC if needed, but not require a filing.

Thank you for the opportunity to provide these comments.

Respectfully,

Jamie Walker
Deputy Commissioner

Director, Financial Regulatory Services
Group Capital Calculation (E) Working Group
National Association of Insurance Commissioners

RE: GCC Recommendation to E committee with respect to accreditation standards related to 2020 Revisions to Insurance Holding Company System Model Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

The Vermont Department of Financial Regulation – Captive Insurance Division (VT DFR) appreciates the opportunity to comment on the GCC Working Group’s recommendation to E Committee regarding the appropriateness of the GCC with respect to accreditation standards. The VT DFR has concerns about broadly applying an accreditation standard for GCC to all risk retention groups within a holding company system and respectfully requests additional time to consider appropriate ways to include, exclude, or develop iterations specifically for risk retention groups given their unique structure. Thank you for your consideration.

Sincerely,

Christine Brown, Assistant Director
Captive Insurance Division

cc: David Provost, Deputy Commissioner of Captive Insurance – VT DFR
    Sandy Bigglestone, Director of Captive Insurance – VT DFR
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met Jan. 28, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Fred Andersen (MN); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Mike Boerner (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Heard a Presentation on Data Analysis for the Adopted GCC Template Using 2019 Field Test Data**

Mr. Rehagen stated that NAIC staff have completed a high-level analysis and comparison of the impact of data collected during the 2019 group capital calculation (GCC) field test, and after applying that data in the adopted GCC template. He asked Lou Felice (NAIC) to present the information.

Mr. Felice described the various manners in which the data was compiled and presented to compare the GCC ratio resulting from the field test with that resulting from the adopted GCC template and presented the results of the analysis (Attachment Two-B1). That data included:

- Overall GCC ratio.
- Impact of excess relative ratio scalars applied to foreign insurers.
- Impact of debt allowed as additional available capital.
- Impact of adjusting level of risk for asset managers.
- Impact of applying alternative “sensitivity analysis” capital calculation to non-insurance/nonfinancial entities.

Mr. Felice provided some initial observations and limitations on how the data was translated from the field-testing template to the adopted template. He concluded with NAIC staff recommending supporting further data collection in 2021. Mr. Rehagen then asked for comments or questions. Mr. Rehagen asked about three volunteers that were excluded from the analysis. Mr. Felice indicated that only one was excluded due to quality of the data. The others were excluded due to their insurance operations being either non-risk-based capital (RBC) or an unusual business profile where noninsurance financial activities outweighed insurance operations. Tom Finnell (America’s Health Insurance Plans—AHIP) suggested use of de-identified scatter charts with plotting boxes. Mr. Felice said he thinks that is a good idea but might be better when there are more data points for the various group types and business lines. David Neve (Global Atlantic Financial Group—Global Atlantic) asked if the GCC ratio for health insurance groups was higher than for life insurance groups. Mr. Felice confirmed that to be true. Mr. Neve then asked why health insurance group aggregated data was not shown separately in the analysis. Mr. Felice noted that the data was driven by two large health insurers and that there were a small number of health insurance groups that volunteered, so presenting the data could be problematic.

2. **Discussed Future Data Collection**

Mr. Rehagen stated there are some outstanding issues, such as awaiting a report from the American Academy of Actuaries (Academy) regarding foreign insurer scalars. He noted the NAIC staff recommendation to conduct further data collection in 2021. Mr. Rehagen then asked for comments on data collection and that of several interested parties had made prior comments in support of further GCC data collection in 2021. He added that he had reached out to several of those commenters and that some of their comments resulted in discussion points (Attachment Two-B2). The points included purpose and data/timing for a potential 2021 data collection.

Marianna Gomez-Vock (American Council of Life Insurers—ACLI) stated support for data collection and using March 2021 data to evaluate stress on the GCC ratio. Mr. Finnell stated that a March 2021 cutoff could be burdensome and that the stresses and the duration of those stresses related to COVID-19 could vary by insurer type. He said that adding clarity to the instructions and template should be part of the key points.

Mr. Rehagen then highlighted the potential range of methodologies for conducting a 2021 data collection. Some would fully involve the NAIC and others would limit NAIC involvement. Mr. Finnell supported an expansion of the prior field test process on a voluntary basis. He stated that a mandatory data call should be avoided. Mr. Neve agreed and said he supports NAIC involvement to aggregate data and present results. Jonathan Rodgers (National Association of Mutual Insurance Companies—
NAMIC) agreed and asked if the discussion points document would be exposed for a public comment period. Mr. Rehagen stated that the document would be updated and may be exposed during a future meeting after further discussion. Ms. Belfi agreed with expanding the prior field test approach with NAIC participation, and she echoed concerns about the impact of COVID-19-related stresses being different across insurance lines of business. Mr. Schrader stated that it would be helpful to use the data collection to take the opportunity to improve the instructions and template. He added it would also be helpful to work with groups to assure good reporting. He stated that using calendar-year data would be preferrable to interim data. Mr. Felice stated that participation could be increased via a voluntary participation outside an expanded field-testing method for those groups that are uncomfortable with sharing data with NAIC. NAIC staff could still assist by answering questions raised by those groups or the lead-state reviewer. Mr. Rehagen agreed that would be a good way to further expand participation in the data collection.

Mr. Rehagen stated that other considerations included coordination with RBC and review and validation, which will be part of separate state insurance regulator guidance being developed by an ad hoc group of state insurance regulators and interested parties.

Mr. Rehagen reminded all participants that an initial draft recommendation of an accreditation standards document was previously exposed for a public comment period ending Feb. 9. He said a meeting will be scheduled to go over comments received.

Having no other business, the Group Capital Calculation (E) Working Group adjourned.
Data Breakouts

• Data Excluded for 3 Volunteers

• Company Type Breakouts
  ➢ Line of business
  ➢ Mutual vs. stock

• Ratios Presented
  ➢ Adjusted field test ratio (300% calibration)
  ➢ Adopted GCC ratio (200% calibration)
  ➢ Adopted GCC ratio sensitivity at 300% calibration

• Impact of XS Relative Ratio Scalars on Ratios
• Impact of Debt Allowance on Ratios
• Impact of Sensitivity Method on Non-financial Entities
Inputs

• Field Test Presented With the Following Adjustments
  ➢ Included entities only
  ➢ Debt included at 30% / 15% for senior and hybrid Debt
  ➢ Debt limited to 100% of available capital and 100% of debt
  ➢ Base capital charges
  ➢ Foreign insurers unscaled

• No changes to entity categorization from Field Test to Adopted GCC

• Adopted GCC (Unscaled Foreign insurer and Bank Capital Requirements Held Constant at all Calibration Levels)
  ➢ Asset managers assumed at high risk
  ➢ Other financial entities assumed at medium risk
  ➢ Alternative GCC Results with asset managers assumed at medium risk shown separately

Analysis Observations

• Issues With Analysis
  ➢ Filed test categorization of other financial and non-financial entities may not align with current categorization in adopted GCC
  ➢ Risk levels selected in adopted GCC for asset managers and other financial entities without capital requirements may not align with actual risk level determined by filer.
  ➢ Potential inconsistency or misalignment between included and excluded entities
  ➢ Additional scalar options may emerge
  ➢ Limited de-stacking for mutual groups in adopted GCC

• Additional data collection is Recommended
  ➢ To be discussed by GCC WG
CONSIDERATIONS FOR 2021 GCC DATA COLLECTION

Purpose:

- Evaluate changes incorporated into the adopted GCC Template and Instructions
  - GCC Ratio and other analytics-based data
- Consider Stress Scenarios
- Evaluate potential scalar options from Academy work performed for G Committee
- Inform IAIS Work on the ICS

Data and Timing:

- 2019 Data for consistency in results
  - Most available and audited data
- 2020 Data
  - Latest data but may require later data collection
- March or June 2020 data cutoff
  - Balance sheet data reflect highest level of stress of COVID-19 Pandemic
  - Income Statement Data will need to be annualized or adjusted
  - Most related to GCC ratio rather than other analytic data

Testing Methodology Options:

- Renew Field Test confidentiality agreements with lead-States for existing volunteers
  - NAIC gets data from lead-States and assists in review
  - Can analyze data over time
- Renew Field Test confidentiality agreements with lead-States for expanded list of volunteers
  - NAIC gets data from lead-States and assists in review
  - Expands profile of Groups for evaluation and future lead-State decision making
- Lead-state data call and review with ORSA Team style review
  - NAIC staff only sees data on a case by case basis
  - Still requires confidentiality
- Lead-state data call and review
  - NAIC gets no data but is available to provide clarity and answer questions on the template and instructions
  - Provide most expansive data collection
  - Can run in parallel with other methods described above

Related Considerations:

- Evaluate potential for increased consistency between GCC capital calculations and RBC
- Review and Validation
  - Likely related to the analysis guidance that is under development
- Future Maintenance of the GCC
  - Likely similar to RBC (TBD)
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee conducted an e-vote that concluded Jan. 19, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Susan Bernard (CA); Philip Barlow (DC); Carrie Mears (IA); Judy Weaver (MI); Kathleen Orth (MN); Jackie Obusek (NC); Justin Schrader (NE); Bob Kasinow (NY); Dale Bruggeman (OH); Greg Lathrop (OR); Melissa Greiner (PA); Trey Hancock (TN); David Smith (VA); and Amy Malm (WI).

1. Exposed Proposed Accreditation Standards for the Group Capital Calculation

The Working Group conducted an e-vote to expose proposed accreditation standards for the Group Capital Calculation (GCC).

Ms. Obusek made a motion, seconded by Mr. Lathrop, to expose the proposed accreditation standards for the GCC. The motion passed unanimously.

Having no further business, the Group Capital Calculation (E) Working Group.
CONSIDERATIONS FOR 2021 GCC DATA COLLECTION – Updated 3/10/2021

Purpose:
- Evaluate changes incorporated into the adopted GCC Template and Instructions
  - GCC Ratio and other analytics-based data
- Consider Potential Stress Scenarios:
- Evaluate potential scalar options from Academy work performed for G Committee.
  - Update as available from G Committee.
- Inform IAIS Work on the ICS

Testing Methodology:
- Based upon the results of a survey sent to states with responses due back March 5, NAIC recommends the following:
  - The NAIC will utilize confidentiality agreements between each of the lead states and the NAIC similar to the Field Test (75% of 16 responding states supported this approach)
  - The NAIC will distribute a request for volunteers through its interested parties distribution list and would ask trade groups share with any groups they believe may have an interest.
  - Its expected more groups may want to participate in this process than the GCC Field Test but the NAIC and the states will be limited in how many participants their resources can handle in the same way as the GCC Field Test (e.g., delivery of observations and calls with the participant).
    - The first step for limiting the number of volunteers will be for NAIC staff to provide a complete list of volunteers to each of the lead states and for the lead states to indicate which of those volunteers they are willing to participate in the data collection with.
    - The survey results suggested some states were willing to handle 4-5 but more states suggested 1, 2 or 3 was more reasonable for their state.
    - Assuming the number of volunteers is high, NAIC staff will discuss with the proposed volunteer states to determine if a “lighter” touch can be used for additional volunteers as a means to reduce the required resources on the NAIC and the states. Some interest was expressed in a combination of an expanded data collection along with NAIC Q&A type assistance for voluntary filings by those groups preferring that the lead-State not share data with the NAIC.
    - Assuming there is a further need to limit, NAIC staff may ask that certain states further limit to a specific level to reach a more manageable number of volunteers.
    - 63% of responding states suggested not starting reviewing the volunteers’ data until June.
    - While there were different views on when the states need to have all of this work completed to make room for other work, October was the most common with 44% of the states, but some also preferred August and September and November.
    - Most responding states suggested a default date of 12/31/20 for the data collection but this may not be ideal given the goals of the data collection are to also consider the impact of certain “stresses” to be certain that the GCC is not too punitive in different economic situations.
    - A “dual date” can be considered, particularly for those States that can accept submissions in April or May whereby 12/31/19 data is submitted / reviewed earlier and 12/31/2020 data submitted in the September / October timeframe somewhat contemporaneously with typical ICS – AM data collection.
Process for the reviews will be similar to the GCC Field test where the NAIC gets the data from the lead-states and assist in the review.

Other Information:

- Life IPs expressed support for March 2021 cutoff to use COVID-19 as a stress.
- P&C and Health IPs and some regulators questioned whether COVID-19 posed similar stresses or timing of those stresses across insurer types.
  - One common suggestion was to use a stress(es) based on scenarios such as the impact of COVID. This could be accomplished by a two-part design:
    - First would be a set of individual stresses to the GCC. Impact on available and required capital would be calculated separately for each legal entity.
      **Example Stresses:** a decrease in interest rates, decrease in equities, increase in mortality, increase in corporate tax rate.
    - The next would be a set of scenario(s) which would combine the impact of these individual stresses. This would be calculated automatically by adding, at individually legal entity level, the impact of a set of individual stresses and then summarized into higher level groupings. A scenario may allow for additional input, as on-top adjustment, to reflect group’s response (e.g., issuance of debt).
      **Example Scenario:** A decrease in US 10-year treasury rate based on quarterly high/low from 2020 (151 basis points), with a decrease in equities of from high/low point in 2020 (33.9%) and an increase in mortality of equal to that of the impact of the Spanish flu (6.5 excess deaths per 1000).

Related Considerations:

- Evaluate potential for increased consistency between GCC capital calculations and RBC.
  - Possible referral to Capital Adequacy (E) Task Force
- Review and Validation
  - Likely related to the analysis guidance that is under development and State Department’s familiarity with the group.
- Future Maintenance of the GCC
  - Likely similar to RBC (TBD)
The Group Solvency Issues (E) Working Group met March 18, 2021. The following Working Group members participated:

Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Susan Bernard and Kim Hudson (CA); Kathy Belfi (CT); Charles Santana (DE); Virginia Christy and Carolyn Morgan (FL); Kevin Clark (IA); Cindy Andersen and Eric Moser (IL); John Turchi (MA); Judy Weaver (MI); Debbie Doggett and Shannon Schmeoeg (MO); Margot Small (NY); Dale Bruggeman and Tim Biler (OH); Kimberly Rankin and Melissa Greiner (PA); Ed Buyalos (VA); and Amy Malm (WI).

1. Received a Report on Group-Related Activities of the IAIS

Mr. Schrader stated the first agenda item is to receive an update on recent International Association of Insurance Supervisors (IAIS) group-related activities. Mr. Schrader stated that he serves as the U.S. representative and vice chair of the IAIS’ Insurance Groups Working Group (IGWG). While the efforts of the IGWG have been affected by COVID-19 and in-person meetings continue to be suspended, work continues to move forward via virtual meetings.

Mr. Schrader stated the IGWG continues its work on updating the IAIS Application Paper on Supervisory Colleges (Application Paper). The IGWG will produce two separate documents: 1) a streamlined updated public version of the Application Paper focusing on cooperation among supervisors participating in supervisory colleges and other necessary information relevant to stakeholders; and 2) a member-only document focusing on implementation guidance in operationalizing supervisory college meetings. The public version of the Application Paper is expected to be consulted on this summer. The member-only document will not be subject to a public consultation.

Mr. Shrader stated the IGWG is also drafting a group-wide risk assessment framework member-only document to aid supervisors by incorporating IAIS Insurance Core Principles (ICPs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) standards as objectives. However, the document will not be an authoritative source of what constitutes a supervisory risk assessment framework.

Ms. Belfi asked Mr. Schrader whether state insurance regulator practices around supervisory colleges are in line with the international best practices being developed. Mr. Schrader stated that state insurance departments appear to be conducting colleges in line with best practices and that he does not anticipate changes coming out of the IGWG work that would significantly affect college sessions being led by state insurance departments.

2. Received a Report of the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup

Ms. Belfi stated that the ORSA Implementation (E) Subgroup met March 10 in regulator-to-regulator session, pursuant to paragraph 6 (consultation with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. During the meeting, Subgroup members discussed matters relating to the timely receipt and review of ORSA filings and received an update on NAIC ORSA training initiatives. The Subgroup also briefly discussed its role in ComFrame drafting work for the NAIC Own Risk and Solvency Assessment Guidance Manual (ORSA Guidance Manual), which will likely take place later this year after proposed revisions to the NAIC’s Financial Analysis Handbook are drafted and exposed for public comment.

3. Received a Status Report on ComFrame Drafting Group Efforts

Mr. Schrader stated that during its last meeting, the Working Group discussed its charge to: “Assess the IAIS Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) and make recommendations on its implementation in a manner appropriate for the U.S.” Mr. Schrader stated that during that discussion, the Working Group noted that while certain elements of ComFrame were incorporated into the 2014 revisions to the NAIC’s Model Holding Company Act (#440), there were several additions and enhancements made to ComFrame elements after that time that have not yet been addressed. As such, the Working Group asked NAIC staff to conduct an internal ComFrame gap analysis to highlight elements that might need to be considered for implementation.

Mr. Schrader stated that the results of the gap analysis indicated that many of the key elements of ComFrame, from an outcomes-focused perspective, are already incorporated into the U.S. system through recent amendments to model laws, the...
establishment of ORSA requirements and other ongoing regulatory practices. The gap analysis also noted that some of the more prescriptive elements of ComFrame do not appear appropriate for the U.S. system and are not being recommended for consideration. However, other elements of ComFrame were identified that appeared appropriate for consideration. Those elements included, among other things, the need to collect and review information at the Head of the Internationally Active Insurance Group (IAIG) level and the need to incorporate additional guidance into NAIC handbooks.

As such, Mr. Schrader noted that the Working Group decided to form three separate drafting groups to consider revisions to the NAIC’s Financial Analysis Handbook, Financial Condition Examiners Handbook and ORSA Guidance Manual as necessary to incorporate ComFrame elements deemed appropriate for the U.S. system of solvency regulation. Several states volunteered to participate on the drafting groups, and an initial drafting group meeting was held in September 2020 to discuss how to proceed. During that meeting, the volunteers determined that the Financial Analysis Drafting Group should first move forward with drafting proposed revisions as state insurance regulators expect the Financial Analysis Handbook to house the majority of ComFrame considerations.

Mr. Schrader stated that since that organizational meeting, the drafting group has met five different times to work through discussions on various ComFrame elements and draft proposed revisions to the Financial Analysis Handbook. Mr. Schrader stated that the drafting group is nearing the completion of its work and plans to refer its proposed revisions to the full Working Group for discussion and public exposure in the coming weeks. Thereafter, Mr. Schrader stated that he expects the other two drafting groups to begin their work soon, with a goal of completing all proposed ComFrame revisions by the end of 2021.

Robert Neill (American Council of Life Insurers—ACLI) asked whether the proposed revisions to the Financial Analysis Handbook would be considered ahead of the Spring National Meeting. Mr. Schrader stated that the Working Group does not plan to meet again until after the Spring National Meeting and will review the proposed revisions at that time.

4. Discussed a Referral From the 2020 FSAP

Mr. Schrader stated that the Working Group recently received a referral to consider a recommendation that came through state insurance regulator participation in the 2019/2020 Financial Sector Assessment Program (FSAP). In referring this matter to the Working Group, the International Insurance Relations (G) Committee made it clear that the Working Group is not obligated to implement the recommendation but should give it consideration before reporting back on the conclusion reached. The recommendation states:

State insurance regulators should better coordinate and leverage the expertise of teams of supervisors dedicated to financial analysis and financial examination for large insurance groups, including Internationally Active Insurance Groups (IAIGs).

Ms. Belfi stated that coordination between financial analysts and examiners continues to improve in our system, although we do operate differently than many international jurisdictions. Mr. Schrader stated that staffing for IAIG oversight is being considered as part of the ComFrame drafting work and will likely be addressed in the revisions proposed to the Financial Analysis Handbook and that the issue can be discussed in more detail at that time.

Having no further business, the Group Solvency Issue (E) Working Group adjourned.
Mortgage Guaranty Insurance (E) Working Group
Virtual Meeting
April 6, 2021

The Mortgage Guaranty Insurance (E) Working Group of the Financial Condition (E) Committee met April 6, 2021. The following Working Group members participated: Kevin Conley, Chair, Jackie Obusek and Richard Kohan (NC); Kurt Regner (AZ); Monica Macaluso (CA); Robert Ballard (FL); John Rehagen (MO); Margot Small (NY); Melissa Greiner (PA); Chris Miller (TX); and Amy Malm (WI).

1. Discussed Comments Received on the Proposed Mortgage Guaranty Insurance Exhibit

Mr. Conley said that one comment letter (Attachment Four-A) was received from the Mortgage Guarantors (MGs). He proceeded by discussing each comment within the comment letter regarding the proposed Mortgage Guaranty Insurance Exhibit (Exhibit) (Attachment Four-B).

   a. Question 1

   Mr. Conley stated that the MGs are concerned with confidentiality of the earned premium and State Regulatory Mortgage Insurance Capital Standard (SRMICS) triangles within the draft Exhibit. He commented that the Exhibit data would be collected electronically and stored within tables by the NAIC and made available to state insurance regulators.

Andy Daleo (NAIC) said that although the data is intended to be regulator-only, it is part of the financial statement, and the public could request the data. Mr. Daleo offered an example of a potential alternative approach for the data collection. He indicated that the filing for the Annual Statement Blank – Supplemental Compensation Exhibit is confidential and as a result, the data is not collected by the NAIC. He indicated that the Exhibit is provided directly to the states and that this data collection could be handled the same way.

Ms. Malm asked about the possibility of handling the data collection similar to the way risk-based capital (RBC) data is collected. Jackie Obusek (NC) commented that RBC is protected by state statute and said this data collection would require a change in state statute to protect it. She said that the entire contents of the financial statement are considered public and inquired as to whether the data collection could be done separately as a workpaper until states were able to change their statute to treat the data as confidential. Ms. Small said that in New York, an individual can request data. However, she said it will not be released unless the insurer approves its release. Ms. Small continued that a request for confidential data would need to be approved by a court subpoena, which is extremely rare.

Mr. Conley commented that he does not have a concern regarding confidentiality since it is just earned premium and SRMICS triangles. He stated that risk-in-force would be reported for the first time. He said it could provide some insight on pricing patterns and that the information would be helpful to state insurers regulators. He asked the Working Group if they have any concerns regarding the confidentiality of the data to the point of requiring special treatment of the data. Mr. Rehagen commented that since the MGs commented on the concern of confidentiality, they should provide their prospective.

Tony Shore (Essent Guaranty Inc.) commented that the MGs are comprised of public companies that make public disclosures and that this type of data is different. Mr. Conley said that a lot more public data is disclosed within the financial statements than what is being requested within the proposed Exhibit. He said that the data would be nongranular and that he does not believe any harm could be caused. Mr. Shore commented that he was encouraged by the discussion of keeping the data confidential by submission as a workpaper until it could be kept confidential by the model act.

Joy Benner (National Mortgage Insurance Corporation) said that she reiterates Mr. Shore’s comments and questioned whether requests by the public could be monitored along with details on how the data is being used. Mr. Daleo commented that there is a section of the NAIC that handles contracts and data requests and that he is confident that a biannual report to the Working Group on data requests would be possible. He added that he is not completely certain that all data requests are granted to the public. Mr. Shore commented that this type of report is not as good as keeping the data confidential and that the data being requested is more granular than the data within the financial statement.
Mr. Conley questioned the MGs about the particular harm that would be caused by including an earned premium and SRMICS triangle within the data collection. Mr. Shore commented that he would like to gather more thoughts on public disclosure from his company and the MGs and that he would get back to the Working Group. Mr. Conley commented that there is fear from state insurance regulators regarding hindering the ability to complete research due to access to data. Mr. Daleo commented that the Working Group will need to move forward in order to ensure it is included within the year-end financial statement. Further, he stated that the MGs were provided additional comment period time to adequately prepare.

Mr. Kohan asked about more detail on the type of data that is too granular within the proposed Exhibit. He stated that the data is country-wide data and that states are looking for an early indicator of potential problems. Robin Marcotte (NAIC) stated that most of the data being requested is very similar to other data being collected through other financial statement schedules. Following additional discussion, the Working Group decided to proceed with the proposed Exhibit.

b. Question 2

Mr. Conley commented that he is uncertain where SRMICS is tied to the Mortgage Guaranty Insurance Model Act (#630). Further, he indicated that the SRMICS formula will need to be provided within the exhibit instructions to allow the triangles to be filled out based on the formula but not necessarily tied to Model #630. Ms. Small stated that it would be nice to have a document that discloses the SRMICS formula, as well as any subsequent changes to the formula. Mr. Conley responded that the details of this documentation would be discussed during the Working Group’s status update on SRMICS.

c. Question 3

Mr. Conley stated that the Exhibit would be required of all companies with exposure to mortgage guaranty insurance.

d. Question 4

Ms. Malm commented that all companies with exposure to mortgage guaranty insurance should be required to file the Exhibit. Mr. Conley concurred with Ms. Malm and stated that there would also be a requirement to file the combined financial statement filing.

e. Question 5A

Mr. Conley indicated that column 1 and column 2 of the Exhibit would be reported on a direct basis, which would equate to the sum of all policies written during the 12-month period despite some not being current at Dec. 31. Mr. Conley also said to remove “Written” from the titles for column 1 and column 2. Will Meers (Arch Mortgage) asked whether column 1 would be as of year-end. He said this would be in direct relation to the SRMICS calculation, which is as of year-end. Mr. Conley stated that column 1 should reflect the original, whereas SRMICS would reflect the current, which is the year-end amount or slightly less than the original.

f. Question 5Aii

Mr. Conley stated that currently the industry reports assumed and ceded data on an accident year basis for 10 years within the Annual Statement Blank, Schedule P – Analysis of Loss and Loss Expenses. As a result, he stated that it is uncertain as to why the MGs feel the additional reporting is onerous. Mr. Meers commented that there are terminated reinsurance agreements that they no longer can access to calculate the historical cumulative paid loss on an assumed and ceded basis. Mr. Meers indicated that providing the data on the latest calendar year would be possible. Stacy Javorek (Mortgage Guaranty Insurance Corporation) stated that it would also be problematic to provide the historical cumulative data, but they could provide the current year. Mr. Conley questioned whether the MGs could provide the most recent five book years inclusive of values for assumed and ceded. Ms. Javorek stated that five years would be possible and that moving forward, the cumulative would build. Mr. Meers concurred that they could also provide five years of data. Following additional discussion, five years of reporting would be required, with additional years added moving forward.

g. Question 5Aiii

Mr. Kohan said that the column for “Other Income” was migrated over and that the definition was unknown. Mr. Daleo said that it comes from the income statement and that it includes fee income, previously charged off recoverables and miscellaneous income. Mr. Conley said that the column would remain as it could be applicable and should be provided by book year.
h. **Question 5Aiv**

Mr. Conley commented that the title for column 17 would be changed to “Number of Claims Closed with Payment (Direct).” He also said that the title for column 26 would be changed to “Number of Delinquencies” and tied to schedule 2E, column 10, which defines the number of delinquencies as three or more consecutive missed payments. Nicholas Realmuto (National Mortgage Insurance Corporation) stated that changing both columns as suggested would more accurately reflect the data being collected.

i. **Question 5Av**

Mr. Conley stated that he concurs with changing all references from “Known Claims Reserves” to “Known Loss Reserves.”

j. **Question 5Avi**

Mr. Conley commented that there is uncertainty regarding the use of the term “bulk” and whether it should be included with primary flow or pool business. Mr. Realmuto commented that pool business could be subject to a deductible and treated in aggregate in terms of loss experience. He said that bulk is treated the same way as primary flow business in terms of individual policies and not on an aggregate basis in terms of losses. Mr. Conley commented that the SRMICS formula can be applied to primary flow and bulk business accurately. As a result, Mr. Conley concluded that primary flow would be added with bulk business.

k. **Question 5Bi**

Mr. Conley commented that 20 years of data would be required and that the Annual Statement Blank, Schedule P – Analysis of Loss and Loss Expenses should continue to be provided.

l. **Question 5Bii**

Mr. Conley stated that the prior year row should be reported back to 1993. Further, he indicated that all references to “accident year” will be replaced with “policy year.”

m. **Question 5Biii**

Mr. Conley commented that the paragraph would be removed.

n. **Question 5Biv**

Following a brief discussion, Mr. Conley said that the definition would be removed from the table.

o. **Question 6**

Mr. Daleo commented that there are four references that were requested to be reported in millions as a result of uncertainty of the length of the reported data. He indicated that “millions” could be removed since there is space for 15 characters. Mr. Conley concurred that the references to “millions” should be removed. Mr. Daleo commented that there are two references to interrogatories that also should be removed since there are no interrogatories with regard to the Exhibit. Mr. Conley concurred on removing the references.

The Working Group then briefly discussed a plan to: 1) summarize the amendments within a subsequent e-vote on the proposal; and 2) complete the balance of the agenda during a subsequent meeting.

Having no further business, the Mortgage Guaranty Insurance (E) Working Group adjourned.
Re: Proposed Mortgage Guaranty Insurance Exhibit and Instructions (the “MG Exhibit”).

Dear Mr. Daleo:

These comments on the MG Exhibit are submitted on behalf of the “MG Industry Group” consisting of Arch Mortgage Insurance Company, Essent Guaranty, Inc., Genworth Mortgage Insurance Corporation, Mortgage Guaranty Insurance Corporation, National Mortgage Insurance Corporation, and Radian Guaranty Inc. We appreciate your approval of a two week extension until April 1st to provide comments on the proposed MG Exhibit.

We have a few general questions and comments followed by some more technical issues:

1. We view the alterations to the scope of public disclosure associated with Schedule MG as extremely problematic from a confidentiality perspective. We point to Part 2C: Earned Premium triangle and Part 2D: SRMICS triangle as particularly problematic, as earned premium could be used to derive rate history and SRMICS could be used to derive change in risk quality for the book. As the MG Industry Group is comprised of public companies, we recommend that Schedule MG be implemented as a confidential filing under examination (or other similar) authority that the domestic regulators might share under terms of an MOU.

2. It is helpful to hear that the SRMICS triangle in this supplement continues to be tied to the Model Act. For now, we recommend against including the “Direct Calculated SRMICS” triangles (in Part 2D). It is uncertain whether the SRMICS model will be ready at the same time as this proposed Schedule MG, and the MG Industry Group considers it more appropriate to incorporate a request for provision of SRMICS data through Schedule MG if/when the SRMICS model is adopted.

3. We would like to understand if Schedule MG will be required of all companies, or on a voluntary basis depending on the domiciliary commissioner.

4. Is there a minimum company capital amount required for Schedule MG to be submitted? Some MG companies have smaller MG affiliates within their holding company systems and we request that Schedule MG only be applicable to flagship companies.
5. Technical Concerns

A. Schedule MG – Part 1.

i. Are Columns 1 (Original Risk In Force) and Column 2 (Current Risk In Force) direct or net? For additional clarity, is Column 1 as of December 31, 20xx? Meaning, for the 2012 policy year, new risk written as of December 31, 2012, could be different than new risk written throughout 2012 as a policy written in January could have been rescinded. For Column 2, the word “written” should be removed.

ii. Providing earned premium and paid losses (in Columns 3 to 17) cumulatively by policy year will be unduly onerous. All companies can provide direct (as also requested in the triangles for Part 2A and 2C) but some are unable to provide cumulative assumed/ceded/net (Columns 4, 6, 7, 9, 10, 12, 13, 16) due to the unavailability of past ceded and assumed information and changing internal reinsurance agreements in some companies’ histories. Accordingly, we recommend amending Columns 3 to 17 to request calendar year information.

iii. What is “Other Income” (Column 5)?

iv. The Summary requests the Number of Claims Reported (Direct) at Column 17 and Number of Claims Outstanding (Direct) at Column 26. We do not report this information for other NAIC schedules/supplements such as Schedule P. If we are expected to report this, we will require some additional definitions. For example, what is meant by the number of Claims Reported (Column 17)? Does it include current and paid claims? Does it include denied claims? Does it include NODs that have not filed claims? And, would Claims Outstanding (Column 26) include NODs or just filed claims? We note existing NAIC definitions would benefit from more clarification:

1. **Definition as per Schedule P – “The number of claims is to be cumulative by policy year. The number of claims reported for each policy year is equal to the number of open claims at the end of the current year plus cumulative claims closed with or without payment for the current and prior calendar years”** [Note that this doesn’t apply to Schedule P for monoline MG companies; however it applies for certain other industries.]

2. **Definition as per NAIC model laws (as applied to Health Insurance Contracts): “Claims reported” are considered as a reported claim for annual statement purposes when an insurer has been informed that a claim has been incurred, if the date reported is on or prior to the valuation date**

v. The header for Columns 18-20 should read “known loss reserves” or simply “loss reserves” rather than “claim reserves.” The current header implies the reserves for claims which would not make sense.
vi. For Part IA and IB, the MG Industry Group believes bulk should be combined with primary “flow” to be consistent with how the industry reports results.

B. Schedule MG, Part 2.

i. For Part 2 to 2E, are so many years necessary? Might we align with the years reported in Part 1 and Schedule P? Would this schedule replace the requirement for mortgage insurers to complete Schedule P?

ii. The Instructions for Part 2C state, “Only accident years 1993 and subsequent must be reported.” Does this refer to how far back the Prior row is expected to report? Also, we recommend references to accident year be changed to policy year.

iii. The Instructions state, “For report year development, group the claims by year in which the claim was first reported.” The year in which the claim was reported will be different than the policy year, so we seek clarification as to what we are being asked to report. Also, if we are reporting by the year the claim was reported, we believe this would be redundant with the results reported on Schedule P.

iv. Part 2E – Policy Year Direct Delinquencies. We recommend removing the definition of delinquencies from the header to the table. MG companies will define reporting to align with their reserve requirements. We request clarification as to whether the report seeks a snapshot of existing DQs (i.e. DQ inventory) or an “ever DQ” count, and recommend a calendar year inventory.

6. Housekeeping. Finally, we recommend conforming the tables, some of which are denoted in thousands while others are denoted in millions, and removing the reference to interrogatories on page 2 of the Instructions as there are no interrogatories associated with this Schedule MG.

We look forward to discussing these matters with the members of the Mortgage Guaranty Insurance Working Group at the April 6th meeting you have arranged, and are also prepared to engage on the comments previously submitted by the MG Industry Group with respect to the latest exposure draft of the Model Act and SRMICS.

Thank you for your consideration of our comments.

Respectfully submitted,

MG Industry Group

IDENTIFICATION OF ITEM(S) TO CHANGE

Add a new supplement Mortgage Guaranty insurance Exhibit to capture more information from mortgage guaranty insurers.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The proposed Mortgage Guaranty Insurance Supplement will be primarily used by the domestic regulators of mortgage guaranty insurers. Currently, there is limited data captured on mortgage guaranty insurance within the financial statement. The proposed supplement will provide the means for the regulators to assess the capital level of the insurer and their overall financial solvency.

ANNUAL STATEMENT INSTRUCTIONS - PROPERTY

MORTGAGE GUARANTY INSURANCE EXHIBIT

This exhibit is required to be filed no later than April 1.

All reporting entities reporting mortgage guarantees on Line 6 of the Annual Statement Underwriting and Investment Exhibit, Part 1 and/or Part 2 must prepare this Exhibit.

The following definitions should be used in completing the Mortgage Guaranty Insurance Exhibit:

a. “Primary Flow Business” means loans are insured on an individual loan-by-loan transaction basis. Premium rates typically vary depending on the perceived risk of a potential claim on the loan type based on consideration of the loan to value ratio, borrower credit score, payment plan, mortgage term and property type. The mortgage instrument may require the borrower to pay for the mortgage insurance, which is referred to as “borrower paid”. Alternatively, the lender may be required to pay the premium, who in turn recovers the premium through an increase in the note rate, which is referred to as “lender paid”.

b. “Pool and Bulk Business” means a collection of mortgages with similar rates and terms which are often securitized by dividing the pool into bonds backed by the payments of principal and interest into the pool by borrowers. Pool insurance typically covers the loss on a defaulted mortgage loan included in the pool, which is in excess of the loan’s primary coverage, as well as the total loss on a defaulted mortgage which does not require primary coverage. Pool insurance may have a stated aggregate loss limit for a pool of loans or a deductible under which no loss is paid by the insurer until the deductible is exceeded. Bulk Business means coverage is provided on each mortgage loan included in a defined portfolio of loans insured under a single or bulk transaction. Bulk coverage typically insures the closed loans in an insured portfolio to a specified level of coverage. Loans insured on a bulk basis are typically part of a negotiated transaction, resulting in a composite rate applied to all such loans in the portfolio.

SCHEDULE MG

There are five parts and the interrogatories within Schedule MG. Part 1 provides detailed information on losses and loss expenses. Part 2 provides a history of incurred losses and loss expenses on a policy year basis. If the reporting entity is unable to provide any part of the data required in Schedule MG for years prior to 1994, the company must obtain a letter of waiver from its domiciliary commissioner. A copy of this letter must be included with the reporting entity’s filing of the Mortgage Guaranty Insurance Exhibit. Data for 1994 and subsequent should be provided in complete detail except for adjusting & other expenses (A&O) that should be in complete detail for 1996 and subsequent.

Schedule MG includes only the data for the insurer identified on the cover of the exhibit. Do not include consolidated data for affiliated companies. If the insurer participates in a pooling agreement, it should report only its share of the business, not the total of all participants.

In those instances where an insurer files an amended annual statement as a result of a restatement of prior year written premium, losses or loss adjustment expenses, Schedule MG must be restated and included in the amended of the exhibit. In those instances where one insurer is merged into another mortgage guaranty insurer, Schedule MG must be prepared so it includes the entire combined history of both companies.

When changes to pooling agreements impact prior policy years, historical data values in Schedule MG Parts, 1 and 2 should be restated based on the new pooling percentage. This should be done to present meaningful development patterns in Schedule MG. When pooling changes only impact future policy years, no restatement of historical values should be made.

Earned premium is on a calendar-year basis. Losses incurred should be assigned to the year in which the policy was written that triggered coverage under the contract.

Retroactive reinsurance should not be reflected in Schedule MG. The transferor in such an agreement must record, without recognition of the retroactive reinsurance, its loss and loss adjustment expense reserves on a gross basis on its balance sheet and in all schedules and exhibits. The transferee in such an agreement must exclude the retroactive reinsurance from its loss and loss expense reserves and from its schedules and exhibits.
The reserves for unpaid losses and loss adjustment expenses should take into account the explicit or implicit impacts of the various factors affecting claim frequency or ultimate claim cost.
Schedule MG, Part 1 is organized so that written premiums and other income for a year are matched with corresponding losses and Defense & Cost Containment expenses (D&CC) and Adjusting & Other expenses for policies issued during that year. Experience is shown for direct business, reinsurance assumed, reinsurance ceded and net of reinsurance.

Policy year loss and loss adjustment expense payments and reserves should be assigned to the year in which the policy was written under which coverage is triggered.

Part 2 displays 20-year loss development triangles on a policy year basis. In Part 2, losses are combined with D&CC. Loss and D&CC development is shown for total incurred, payments, case basis reserves, bulk reserves and incurred but not reported (IBNR) reserves (policy year basis only). Part 2 displays 20-year claim count development triangles on a policy year basis.

For report year development, group the claims by year in which the claim was first reported. The reserves reported are expected to represent the ultimate amounts to be paid, including anticipated inflation.

Report all dollar amounts in Schedule MG in thousands of dollars ($000 omitted), either by rounding or truncating. All claim counts are to be shown in whole numbers.

The number of claims reported is to be cumulative by policy year. The number of claims reported for each policy year is equal to the number of open claims at the end of the current year plus cumulative claims closed with or without payment for the current and prior calendar years.

For reporting entities reporting on a pooling basis, the pooling percentage should be applied to claim count as well as dollar amounts.

If the company changes its method of counting claims, the new method should be disclosed in the Notes to Financial Statements.
SCHEDULE MG - PART 1 – SUMMARY

Part 1 – Summary provides a 10-year summary of loss and defense & cost containment experience for the company. Part 1 – Summary should be equal to the sum of Part 1A and Part 1B. Columnar headings provide instructions necessary for completion.

The columnar headings provide instructions necessary for completion.

For each year, Number of Claims Reported (Column 17) should include the cumulative number of claims reported through the annual statement date for pooled and non-pooled business. For reporting entities reporting on a pooling basis, the pooling percentage should be applied to claim count as well as dollar amounts. Indicate in the Interrogatories whether per claim or per claimant.

Cumulative salvage and subrogation received and losses and expenses paid should be reported for each specific year. For “prior,” report only salvage and subrogation received and losses and expenses paid in current year.

In Schedule MG, Part 1, salvage and subrogation received should be reported net of reinsurance, if any. Loss payments are to be reported net of salvage and subrogation received in Schedule MG.

Adjusting & Other Payments, Column 15, should reflect net payments in 1996 and prior and direct and assumed payments for 1997 and subsequent.

Premiums earned and losses paid, unpaid, and incurred should reconcile with the Statement of Income page. The workpapers that show a reconciliation explaining reinsurance and salvage and subrogation adjustments should be available for examination on request.

“Assumed” means reinsurance assumed, including from affiliated pooling agreements, but excluding any non-proportional reinsurance assumed reported as a separate line and reported accordingly.

“Direct” means as directly written, but not if part of an affiliated pooling agreement.

“Ceded” means reinsurance ceded on business so reported as direct or assumed.

Line 1, “Prior,” Columns 8 through 16 should only reflect amounts paid or received in the current calendar year.

Report cumulative amounts paid or received for specific years.

“Defense & Cost Containment” expenses include defense, litigation and cost containment expenses, whether internal or external. “Defense” means defense by the reporting entity in a contentious situation, whether a first party or a third-party claim. The fees charged for reporting entity employees should include overhead, just as an outside firm’s charges would include. The expenses exclude expenses incurred in the determination of coverage. These expenses include the following items:

1. Surveillance expenses;
2. Fixed amounts for cost containment expenses;
3. Litigation management expenses;
4. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;
5. Fees or salaries for appraisers, private investigators, hearing representatives, inspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;
6. Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
7. The cost of engaging experts.
“Adjusting & Other” expenses are those expenses other than those above and which have been assigned to the “Loss Adjustment Expense” group in the Underwriting and Investment Exhibit, Part 3, Expenses. These expenses include the following items:

1. Fees of adjusters and settling agents (but not if engaged in a contentious defense);
2. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;
3. Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder; and
4. Fees or salaries for appraisers, private investigators, hearing representatives, re-inspectors and fraud investigators, if working in the capacity of an adjuster.

The foregoing list is not intended to be all-inclusive. We are relying on the reporting entities to use reasonable judgment in particular situations.

Reporting entities should assign the “Defense & Cost Containment” expenses to the policy year in which the associated losses were assigned. Reporting entities may assign the “Adjusting & Other” expenses in any justifiable way among the policy years. The preferred way is to apportion these expenses in proportion to the number of claims reported, closed, or outstanding each year.

Please Note: This instruction is intended solely to give guidance on reporting loss adjustment expenses in Schedule MG in the annual statement. It is not intended to provide guidance on the types of expenses to include in loss adjustment expenses. These definitions of defense & cost containment expense and adjusting & other expense are not intended to affect insurance or reinsurance agreements or other contractual agreements.

Pooling

Many insurers have a pooling arrangement with affiliated companies, approved by the domiciliary commissioner, in which the business written is reallocated among the affiliated companies according to a specified percentage. Some affiliated companies may be part of the pool and some may not, and some lines may be included, and some may not. The premiums and losses are to be reported in Schedule P after such pooling arrangements, not before.

Pooled business ceded is that which, if retained instead of ceded, would be pooled among the affiliated companies who are party to the pooling agreement. Any such business that is ceded by the pool participants to non-pooled companies prior to the pooling distribution among the participating companies is considered pooled business ceded. Non-pooled business includes all direct, assumed, and ceded business not subject to pooling, as well as any pooled business that is ceded after the pooling distribution has been made.

Direct and Assumed columns include the participation in any pool. In addition, all direct business not pooled plus assumed business from other than the pool is to be included. Ceded columns include the company’s participation in the pool such as any ceding by the company to companies independent of the pool.

Claim counts should be reported in accordance with the pooling arrangement and should reflect the company’s proportionate share of the total number of claims. If the company’s losses are 40% of the pool, then 40% of the claim count should be reported.

The pooling percentage is to reflect the company’s participation in the pool as of year-end. When changes to pooling agreements impact prior policy years, historical data values in Schedule MG Parts, 1 and 2 should be restated based on the new pooling percentage. This should be done to present meaningful development patterns in Schedule MG. When pooling changes only impact future policy years, no restatement of historical values should be made.

SCHEDULE MG – PARTS, 1A and 1B

Reporting entities should complete Schedule MG in thousands only but must report all claim counts in whole numbers.

NOTE: For “prior,” report amounts paid or received in current year only. Report cumulative amounts paid or received for specific years. Report loss payments net of salvage and subrogation received.

The number of claims reported is to be cumulative by accident year. The number of claims reported in each accident year is equal to the number of open claims at the end of the current year plus cumulative claims closed with or without payment for current and prior calendar years.

Column 7 – Premiums Earned and Other Income Net

Should equal Columns 3 + 4 + 5 – 6.

Column 16 – Total Net Loss and Expense Paid

Should equal Columns 8 + 9 – 10 + 11 + 12 – 13 + 15.

Column 25 – Total Net Loss and LAE Unpaid

Column 27 – Losses and Defense & Cost Containment Expenses Incurred Direct

Should equal Columns 8 + 11 + 18 + 21.

Column 28 – Losses and Defense & Cost Containment Expenses Incurred Assumed

Should equal Columns 9 + 12 + 19 + 22.

Column 29 – Losses and Defense & Cost Containment Expenses Incurred Ceded

Should equal Columns 10 + 13 + 20 + 23.

Column 30 – Losses and Defense & Cost Containment Expenses Incurred Net

Should equal Columns 27 + 28 – 29.

Column 31 – Loss and LAE Ratio Direct Basis

Should equal (Columns 15 + 24 + 27)/Column 3.

Column 32 – Loss and LAE Ratio Net Basis

Should equal (Columns 15 + 24 + 30)/(Columns 7 – 5).

Column 33 – Net Loss & LAE Coverage

Should equal (Columns 15 + 24 + 30)/Column 1.

Column 34 – Net Reserves

Should equal Columns 25 – 33.
SCHEDULE MG- PART 1A – PRIMARY FLOW BUSINESS

Part 1A provides a summary of primary flow business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.

SCHEDULE MG- PART 1B – POOL AND BULK BUSINESS

Part 1B provides a summary of pool and bulk flow business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.

SCHEDULE MG- PART 2
POLICY YEAR DIRECT INCURRED LOSS AND DEFENSE & COST CONTAINMENT EXPENSE

Part 2 provides a historical summary of loss and defense & cost containment expenses development by policy year. Columnar headings provide instructions necessary for completion.

The definition of “prior years” should be the same as that used by the company in Part 1.

SCHEDULE MG- PART 2A
POLICY YEAR DIRECT PAID LOSS AND DEFENSE & COST CONTAINMENT EXPENSE

Part 2A shows cumulative direct loss and defense & cost containment expense payments by year the policy was written as of December 31 of each year shown in Columns 1 to 10.

SCHEDULE MG- PART 2B
POLICY YEAR DIRECT CURRENT RISK IN FORCE

Part 2B provides a policy year summary of direct risk in force.

SCHEDULE MG- PART 2C
POLICY YEAR DIRECT EARNED PREMIUM

For Schedule MG, Part 2C, the premiums to be reported are exposure or coverage year earned premiums, recalculated each subsequent year to reflect audits, retrospective adjustments based on loss experience, accounting lags, etc. Mechanically, the earned premium file would be restated and the earned premium calculation repeated each year. Premium adjustments for policy periods that cover more than one calendar year should be proportionately distributed between the calendar years covered by the policy period. The objective is to develop earned premiums by calendar year of coverage consistent with the loss and Defense & Cost Containment expense by policy year. Only accident years 1993 and subsequent must be reported.
Part 2D provides a policy year summary of direct calculated State Regulatory Mortgage Insurance Capital Standard (SRMIC).

Part 2E provides a policy year summary of direct delinquencies.
ANNUAL STATEMENT BLANK - PROPERTY

MORTGAGE GUARANTY INSURANCE EXHIBIT

The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met March 4, 2021. The following Working Group members participated: Debbie Doggett, Co-Chair (MO); Linda Johnson, Co-Chair (WY); Cindy Hathaway (CO); Joan Nakano and William Mitchell (CT); Alisa Pritchard (DE); Virginia Christy (FL); Stewart Guerin (LA); Kari Leonard (MT); Cameron Piatt (OH); Greg Lathrop (OR); Cressinda Bybee (PA); Robert Rudnai (TX); Jay Sueoka (UT); Susan Baker and Ron Pastuch (WA); and Amy Malm (WI).

1. **Adopted its Revised 2021 Charges**

   The Working Group adopted its revised 2021 charges to absorb the charges from the Biographical Third-Party Review (E) Subgroup and disband the Subgroup. Ms. Doggett said the Biographical Third-Party Review (E) Subgroup was established in 2011 when the Working Group determined there was a need to establish uniformity in the background investigation reports prepared by a third-party. She added that since August 2017, the Subgroup has been chaired by Cameron Piatt (OH), and with the development of a biographical database in the near future, the current work of the Subgroup has been completed. She thanked Mr. Piatt for his diligent work on this Subgroup. She also thanked the Subgroup members: Amy Stuart (IL), Jay Sueoka (UT) and Ron Pastuch (WA), as well as Kathy Kelley (NV) and Joel Sander (OK), who have both since retired.

   Ms. Malm made a motion, seconded by Mr. Lathrop, to adopt the revised 2021 charges (Attachment Five-A) and disband the Biographical Third-Party Review (E) Subgroup. The motion passed unanimously.

2. **Discussed a Change of Control Referral**

   Ms. Doggett said that an ad hoc group from the Chief Financial Regulators submitted this referral to the Working Group. Ms. Bybee said that Pennsylvania was recently aware that the Form A database allows for the notice of closing to be recorded. She said she is curious if other states were using that status and if providing the details of the closing as part of their procedures and would solve the issue raised. Ms. Doggett said that using the closed date would remove the filing from the list of open files for each state but would not trigger any other action within the NAIC database for the company demographics to update the group code for the target entity or to the acquiring party that corporate amendment filings must be submitted to the foreign states. Ms. Bybee said that Pennsylvania has developed an internal process to make sure that its records are updated and that information is sent to the NAIC to update the group code. Companies are not consistent in regard to contacting the NAIC to have the group code, CoCode or company name updated after the transaction is closed. Jane Barr (NAIC) reminded the states that the Form A database does have a specific tab that pertains to updated information after the transaction has closed that allows the state to provide the updated group code, CoCode and company name. She did add that it does not send an automatic email notification to the NAIC but can consider this an enhancement if the states choose to use the post-acquisition page. There are procedures established in the *Company Licensing Best Practices Handbook* that detail the steps regarding post acquisitions.

   Ms. Doggett said that the Working Group will continue discussion of this referral during future meetings to determine the best solution on where instructions or enhancements should be added to current processes.

3. **Exposed Proposal 2021-01**

   Ms. Johnson said the purpose of the revised primary application is to separate initial start-up companies and companies that are redomesticating. Since its inception, the primary application and instructions were developed to include start-ups and redomestication applications filed with a domiciliary state in hard copy. The primary application and instructions have been revised and refined for start-up companies only. She said that two new forms have been created to capture management information (Form 4P) and holding company debt to equity information (Form 5P). With the implementation of the electronic application, state-specific requirements will be captured, as well as electronic signatures. The anticipated production date for the primary electronic application is 2022. She said that Form 2P will include surplus lines insurer designations for those states that have enacted the domestic surplus lines legislation.

   Ms. Johnson said the Primary Ad Hoc group has recommended exposing the proposal for a 45-day public comment period ending April 19.
4. **Exposed Proposal 2021-02**

Ms. Johnson said the redomestication application (Proposal 2021-02) is intended for companies that are redomesticating from one state to another. The original primary application was revised to remove all requirements for start-up companies, and the electronic format will capture state-specific requirements. The redomestication forms will be labeled as 1R, 2R and so on. The production release is anticipated in late 2022.

Ms. Johnson said that the Primary Ad Hoc group also recommended exposing the proposal for a 45-day public comment period ending April 19. She added that once the comments are received and the proposals are adopted, an effective date will be determined on when the forms will be posted to the Uniform Certificate of Authority Application (UCAA) website for use.

5. **Received a Status Update on the Electronic Application Ad Hoc Group**

Ms. Barr said that the ad hoc group began meeting in August 2020 to gather business rules for the primary (start-up) application and then the redomestication application. She said the ad hoc group is currently discussing business rules for domestic corporate amendment applications. From there, it will begin working on an electronic Form A application and create forms based on the *Insurance Holding Company System Regulatory Act* (#440). The intent of the electronic Form A application will be to prepopulate pertinent information into the Form A database. She added that future enhancements will include Form B, C, D and E of Model #440 and asked if anyone was interested in joining the ad hoc group to contact her directly. The ad hoc group meets every two weeks to review mock-up forms and discuss state requirements. Ms. Barr said that once all the electronic applications have been developed and current applications enhanced, the ad hoc group will begin developing the biographical affidavit database. She added that a specific timeline has not been laid out because the developers are finishing a current project, which has caused some delays.

Ms. Johnson asked if the Form A database ad hoc group could look into some items from the change of control referral to enhance the processes. Ms. Barr concurred and asked if the Working Group, through its discussion, could provide some objectives for the ad hoc group to consider incorporating into the electronic format or how it could trigger some automated notifications for state insurance regulators, the NAIC and the applicant company.

6. **Received an Update on the Domestic Surplus Lines Ad Hoc Group**

Crystal Brown (NAIC) said that the ad hoc group was formed last year based on a referral the Working Group received from the Chief Regulator Forum regarding domestic surplus lines carriers and whether they have enacted the new legislation. A survey was sent to the states to determine which states had enacted the legislation and found that 19 states of the 41 states that responded adopted the domestic surplus lines legislation. Ms. Brown said the ad hoc group will review the state statutes and regulations from the 19 states to identify similarities that can be incorporated into guidance or used to clarify the annual statement instructions or code list for the reporting of these types of carriers on Schedule T.

7. **Discussed Other Matters**

   a. **Forms 2 and 14**

Ms. Barr said that a couple of states have reached out to the NAIC staff regarding an enhancement to the current Form 2 and Form 12 to capture the applicant company’s web address. When there is a change of control, there may be a gap when the company is providing its financial reports to the NAIC, so the NAIC database may not have the most current company information.

Another request to Form 2 was to include: 1) the first and last name of the contacts currently listed on Form 2; 2) premium tax, producer licensing, and rate and form filing contacts; and 3) the company compliance contact. Ms. Barr said that these suggestions were not included in the items to be exposed to avoid confusion with the current proposals being exposed that include Form 2P and Form 2R, but they could be included for consideration during the Working Group’s next meeting. Ms. Doggett said that the changes are not significant and agreed that the Working Group could consider them during its next meeting. Ms. Barr said that there could be a delay when these changes could be implemented into the electronic applications.

   b. **Company Licensing Collaboration Page**
The National Treatment and Coordination (E) Working Group will:

A. Increase utilization and implementation of the *Company Licensing Best Practices Handbook*.
B. Encourage synergies between corporate changes/amendments and rate and form filing review and approval to improve efficiency.
C. Continue to monitor the usage and make enhancements to the Form A Database.
D. Maintain educational courses in the existing NAIC Insurance Regulator Professional Designation Program for company licensing regulators.
E. Make necessary enhancements to promote electronic submission of all company licensing applications.
F. Monitor the ongoing adherence of background investigation reports and third-party vendors and increase uniformity of state requirements regarding concerns or changes to key individuals’ fitness and propriety.

H. The Biographical Third-Party Review (E) Subgroup of the National Treatment and Coordination (E) Working Group will:

   a. Increase the uniformity of the third-party vendors that prepare background investigative reports to those state insurance departments that require them. Reduce the inefficiency of applications by developing procedures and approval processes.
   b. Monitor the ongoing adherence of background investigation reports and third-party vendors.
   c. Encourage uniformity of requirements in relation to individuals’ fitness and propriety and the company's responsibility in notifying state insurance departments of concerns or changes to key individuals.
PROJECT HISTORY

GUIDELINE FOR DEFINITION OF RECIPROCAL STATE IN RECEIVERSHIP LAWS

1. Description of the Project, Issues Addressed, etc.

The Receivership and Insolvency (E) Task Force has an active and ongoing charge, which was adopted in each year of this project by the Executive (EX) Committee and Plenary that reads as follows:

Perform additional work as directed by the Financial Condition (E) Committee and/or received through referral by other groups.

In 2020, the Task Force finalized its study, which began in 2019, and recommendations to address the referral from the Financial Stability (EX) Task Force to address an evaluation of receivership and guaranty fund laws and practices in the context of the Macroprudential Initiative (MPI). The Task Force surveyed state insurance regulators and interested parties on each of the key provisions of receivership and guaranty fund laws that states should consider adopting into their laws, particularly with respect to receivership of insurers operating in multiple states. While a receivership of a multi-jurisdictional insurer would not likely have a material impact on financial stability or the broader financial markets, this project highlighted areas of our receivership process that may need attention, including laws related to full faith and credit of stays and injunctions.

The Task Force discussed the effect of whether a stay or injunction entered into a receivership court is honored in another state. This has been the subject of a lot of litigation, and receivers have expressed concern about this issue. The receivership laws of most states address the coordination of receiverships involving multiple states. However, in many states’ laws, these provisions may apply only if the domiciliary state is a “reciprocal state.” Frequently, the definition of a reciprocal state is based on NAIC model laws adopted more than 20 years ago.

The Task Force drafted this Guideline as an alternative to address how states define “reciprocal state.” This Guideline provides an optional statutory definition that may be used by states with a reciprocity requirement to effectuate the purposes of provisions regarding the coordination of receiverships involving multiple states.

2. Name of Group Responsible for Drafting the Model and States Participating.

The Receivership and Insolvency (E) Task Force was responsible for drafting the Guideline. The 2020 and 2021 members of the Task Force were:

2020: Texas (Chair); District of Columbia (Vice Chair); Alaska; American Samoa; Arkansas; California; Colorado; Connecticut; Florida; Illinois; Iowa; Kansas; Kentucky; Maine; Massachusetts; Michigan; Missouri; Montana; Nebraska; New Jersey; North Carolina; Oklahoma; Pennsylvania; Rhode Island; South Carolina; Tennessee; and Utah.

2021: Texas (Chair); Louisiana (Vice Chair); American Samoa; Arizona; Colorado; Connecticut; Florida; Hawaii; Illinois; Iowa; Kansas; Kentucky; Maine; Massachusetts; Michigan; Missouri; Montana; Nebraska; New Jersey; New Mexico; North Carolina; Northern Mariana Islands; Oklahoma; Pennsylvania; Rhode Island; South Carolina; and Utah.

3. Project Authorized by What Charge and Date First Given to the Group.

As described in paragraph 1, on its Oct. 7, 2020, meeting, the Task Force agreed to draft a guideline to address this issue, which was identified through the results of the MPI study and the subsequent survey regarding key provisions of receivership and guaranty fund laws that states should consider adopting into their laws.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc.). Include any parties outside the members that participated.

The Guideline was drafted by Task Force members: Florida; Maine; Texas; and Patrick Cantilo (Cantilo and Bennett LLP), an interested party. This drafting group met Oct. 19, 2020, and considered language contained in both the Florida and Maine laws.
Rather than identifying a list of specific key provisions in law that would be required for a state to be defined as “reciprocal,” the drafting group agreed to use the same criteria used by the NAIC Financial Regulation Standards and Accreditation Program. Under this definition, any state meeting the applicable NAIC Part A accreditation standards for receivership laws, which requires a state to have a “receivership scheme,” will be treated as a reciprocal state. The definition recognizes the diversity of existing state receivership laws, and it should avoid unnecessary litigation regarding the recognition of a state as a reciprocal state.

5. **A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited).**

On Nov. 19, 2020, the Task Force met to release the draft Guideline for a 42-day public comment period ending Dec. 31, 2020. The exposure was distributed by email to members, interested state insurance regulators, and interested parties of the Task Force and posted to the NAIC website.

The Task Force did not receive any comments.

The Task Force adopted the Guideline on March 12, 2021.

6. **A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response).**

There were no issues of significance raised during the exposure periods or during meetings.

7. **List the key provisions of the model (sections considered most essential to state adoption).**

The Guideline provides the following definition as well as an explanatory drafting note:

“Reciprocal state” means a state that has enacted a law that sets forth a scheme for the administration of an insurer in receivership by the state’s insurance commissioner [or substitute the equivalent title used by the state, such as superintendent or director] or comparable insurance regulatory official.

8. **Any Other Important Information (e.g., amending an accreditation standard).**

The Guideline will not be considered for any accreditation standard.
Draft 3/12/21
Adopted by the Executive (EX) Committee and Plenary.
Adopted by the Financial Condition (E) Committee April 13, 2021
Adopted by the Receivership and Insolvency (E) Task Force March 12, 2021

GUIDELINE FOR DEFINITION OF RECIPROCAL STATE IN RECEIVERSHIP LAWS

Drafting Note: The receivership laws of most states address the coordination of receiverships involving multiple states. Typically, these laws provide that a domiciliary receiver appointed in another state has certain rights and protections, such as the following:

- The domiciliary receiver is vested with the title to the insurer’s assets in the state.
- Attachments, garnishments or levies against the insurer or its assets are prohibited.
- Actions against the insurer and its insureds are stayed for a specified period of time.

In many states’ laws, these provisions may apply only if the domiciliary state is a “reciprocal state.” Frequently, the definition of a reciprocal state is based on NAIC model laws adopted more than 20 years ago. These definitions may be inconsistent with laws in other states, and they may be more prescriptive than the Part A standards of the NAIC Financial Regulation Standards and Accreditation Program for state receivership laws. As a result, the assets of a receivership estate might not be protected outside of the domiciliary state, and the receiver may be forced to defend litigation in multiple forums.

The provisions described above are intended to promote judicial economy, which benefits all participants in the receivership process. This guideline provides a statutory definition that may be used by states with a reciprocity requirement to effectuate the purposes of these provisions. Under this definition, any state meeting the applicable NAIC Part A Accreditation standards for receivership laws will be treated as a reciprocal state. The definition recognizes the diversity of existing state receivership laws and should avoid unnecessary litigation regarding the recognition of a state as a reciprocal state.

Definition of Reciprocal State for Receivership

“Reciprocal state” means a state that has enacted a law that sets forth a scheme for the administration of an insurer in receivership by the state’s insurance commissioner [or substitute the equivalent title used by the state, such as superintendent or director] or comparable insurance regulatory official.

Chronological Summary of Action (all references are to the Proceedings of the NAIC)
[insert reference if adopted]
2021 Proposed Amended Charges

RECEIVERSHIP AND INSOLVENCY (E) TASK FORCE

The mission of the Receivership and Insolvency (E) Task Force shall be administrative and substantive as it relates to issues concerning insurer insolvencies and insolvency guarantees. Such duties include, without limitation, monitoring the effectiveness and performance of state administration of receiverships and the state guaranty fund system; coordinating cooperation and communication among regulators, receivers and guaranty funds; monitoring ongoing receiverships and reporting on such receiverships to NAIC members; developing and providing educational and training programs in the area of insurer insolvencies and insolvency guarantees to regulators, professionals and consumers; developing and monitoring relevant model laws, guidelines and products; and providing resources for regulators and professionals to promote efficient operations of receiverships and guaranty funds.

Ongoing Support of NAIC Programs, Products or Services

1. The Receivership and Insolvency (E) Task Force will:
   A. Monitor and promote efficient operations of insurance receiverships and guaranty associations.
   B. Monitor and promote state adoption of insurance receivership and guaranty association model acts and regulations and monitor other legislation related to insurance receiverships and guaranty associations.
   C. Provide input and comments to the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB), or other related groups on issues regarding international resolution authority.
   D. Monitor, review, and provide input on federal rulemaking and studies related to insurance receiverships.
   F. Monitor the work of other NAIC committees, task forces and working groups to identify and address any issues that affect receivership law and/or regulatory guidance.
   G. Perform additional work as directed by the Financial Condition (E) Committee and/or received through referral by other groups.

2. The Receivership Financial Analysis (E) Working Group will:
   A. Monitor receiverships involving nationally significant insurers/groups to support, encourage, promote and coordinate multistate efforts in addressing problems.
   B. Interact with the Financial Analysis (E) Working Group, domiciliary regulators, and lead states to assist and advise as to what might be the most appropriate regulatory strategies, methods and/or action(s) regarding potential or pending receiverships.

3. The Receivership Law (E) Working Group will:
   A. Review and provide recommendations on any issues identified that may affect states’ receivership and guaranty association laws (e.g., any issues that arise as a result of market conditions; insurer insolvencies; federal rulemaking and studies; international resolution initiatives; or as a result of the work performed by or referred from other NAIC committees, task forces and/or working groups).
   B. Discuss significant cases that may impact the administration of receiverships.
   C. Complete work as assigned from the Receivership and Insolvency (E) Task Force to address recommendations from the Financial Stability (EX) Task Force’s Macroprudential Initiative (MPI) referral:
      1. Complete work related to qualified financial contracts (QFCs), including: 1) explore if bridge institutions could be implemented under regulatory oversight pre-receivership to address an early termination of QFCs and, if appropriate, develop applicable guidance; 2) develop enhancements to the Receiver's Handbook guidance on QFCs; and 3) identify related pre-receivership considerations related to QFCs and, if necessary, make referrals to other relevant groups to enhance pre-receivership planning, examination and analysis guidance.
      2. Review and provide recommendations for remedies to ensure the continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Among other solutions, this will
encompass a review of the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to provide proposed revisions to address the continuation of essential services through affiliated intercompany agreements in a receivership.

3. Consult with and/or make referrals to other NAIC working groups, as deemed necessary, as the topic relates to affiliated intercompany agreements and pre-receivership considerations. Complete by the 2021 Fall National Meeting.

4. The **Receiver’s Handbook (E) Subgroup** will:
   A. Review the Receiver's Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook.
   B. Complete by the 2022 Fall National Meeting.

NAIC Support Staff: Jane Koenigsman/Sherry Flippo
MEMORANDUM

To: Financial Condition (E) Committee
From: Jamie Walker, Accounting Practices and Procedures (E) Task Force
Date: March 31, 2021
Re: Agenda item 2019-24: Levelized and Persistency Commission

This memorandum is to provide an overview of the key points of the levelized commission agenda item 2019-24, which affects SSAP No. 71—Policy Acquisition Costs and Commissions. The Statutory Accounting Principles (E) Working Group began discussion in August 2019 and on March 15, 2021, adopted revisions (see illustrated revisions page 5) which are effective Dec. 31, 2021. The Working Group vote was 13 states in favor and one state opposed. On March 23, 2021, the Accounting Practices and Procedures (E) Task Force adopted the revisions as adopted by the Working Group with a vote of 41 members in favor and two opposed (LA and OK).

- **Acquisition Costs:** Acquisition costs are expenses incurred in the acquisition of new and renewal insurance contracts. These are costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). It is a foundational concept for statutory accounting principles (SAP) that acquisition costs including commissions are expensed as incurred. This is because incurred costs are not available to pay policyholder claims. Both U.S. generally accepted accounting principles (GAAP) and SAP would calculate acquisition costs in a similar manner. GAAP treatment capitalizes acquisition costs and expenses them over time to match revenue and expenses. This is one of the major financial reporting differences between SAP and GAAP. These differences are intentional because SAP is measuring the ability to pay policyholder claims using the foundational principles of conservatism, consistency and recognition. GAAP, on the other hand, is focused on matching revenue to expenses.

- **Funding Agreement:** A funding agreement is using a third-party to pay commission costs on the insurer’s behalf, with the insurer repaying the third-party over time plus interest. To ensure consistent and conservative treatment, and appropriate recognition, SSAP No. 71 requires that the full amount of the funding agreement liability be recognized upfront by the insurer plus interest and fees owed to date. This is because the substance of the agreement is a LOAN. That is, the third-party is paying an insurer’s acquisition commission obligation and accepting repayment over time (e.g., over 3-8 years).
• Persistency Commission Versus Loan with a Contingency Element: A normal persistency commission is one in which additional commission is earned over time, when a policy is renewed or remains in force. A distinct difference is that persistency commission occurs subsequent to an initial sales commission. The triggering event is the continuation (or renewal) of a policy. An additional amount is owed if the policy persists overtime. A persistency commission is typically a much smaller payment than initial sales commission. For example, a small percentage if the policy is in force in years 2-10.

Note: Although traditional persistency commission is not required to be recognized before the triggering event (e.g., renewal), earlier comments from industry noted that they could be inadvertently scoped in with the initially exposed revisions. The adopted edits addressed this concern and are clear that the recognition of commission is based on the triggering event, which is the policy action, such as initial issuance or renewal.

The practice under dispute represents initial sales commission that is not being recognized by a limited number of insurers. With these designs, the insurer has an agreement to reimburse a third-party in the future (who has paid the commission cost to the agent on the insurer’s behalf) plus interest and fees. The third-party agreement notes that the insurer does not have to pay the future installments if the policy lapses. (The impacted insurers have noted that this practice inserts a “persistency” element into the initial sales commission already incurred. This is actually a LOAN with a contingency element.) Note: Insurers are required to recognize the full initial commission cost when a policy is issued. If a policy is cancelled, at that time, an insurer can derecognize the liability to repay the third party.

Disputed practice: Those few insurers that are not recognizing the full liability under the funding agreement (to repay the parties who are paying acquisition costs on their behalf) are not following the long-standing guidance in SSAP No. 71. These limited companies are only recognizing a fraction of the acquisition commission expense, which results in misleading financial statements, and presents a better financial position than actually exists (as the company has unrecorded liabilities for commissions already paid on their behalf). SSAP No. 71 requires recognition of the full liability amount of such an agreement, even if repayment is not guaranteed. The small number of insurers have asserted that their reporting is a decades-long practice. However the SSAP No. 71 guidance that requires full accrual of the liability was adopted in 1998 and is based on even earlier statutory accounting guidance which notes that, “The accounting treatment for certain transactions, characterized as levelized commissions, which results in enhancement of surplus, has been determined to be inappropriate for statutory reporting.” The Working Group discussions identified that not recognizing the full liability appears to have been practiced by only a small minority of companies, which supports that the majority of industry is reporting correctly.

• Lapse - Lapse risk is a risk identified in Model 791 Life and Health Reinsurance, as a significant insurance risk therefore it cannot be transferred to a non-insurance entity. However, some employing the disputed practice have tried to assert that it has been transferred to the funding agent.

• Overview of Edits: Revisions clarify that an insurance entity cannot use third-party structures to recharacterize and delay recognition of liabilities for initial sales commission owed, regardless of how a third-party arrangement is structured with regards to the timing of the payment from the insurers. This guidance clarifies that it is the writing of the insurance contract that obligates the insurer and recognition of expense shall occur consistently among insurers. SSAP No. 71 does not require advanced recognition for expected renewals or normal persistency metrics. When an insurance policy is issued, renewed or when metrics are met that require additional commission, then SSAP No. 71 consistently requires expense recognition for all insurers.

• Substantive / Nonsubstantive - The determination of a change as substantive or nonsubstantive is based on whether the edits reflect original intent (nonsubstantive) or incorporates new accounting concepts (substantive). Throughout the discussion process, it has been reiterated that the edits simply clarify the original intent of SSAP No. 71. As such, the change was classified as nonsubstantive. The impact to companies or the number of companies that have incorrectly applied accounting guidance is not a factor in determining whether a clarifying edit is substantive or nonsubstantive. However, the incorrect application only seems to involve a limited number of linked-companies, with other entities following the original intent of SSAP No. 71, which supports that the changes are nonsubstantive and
consistent with original intent. The March 15 Working Group discussion affirmed the nonsubstantive classification of the revisions was consistent with the policy statement.

- **Correction of Error / Change in Accounting Principle:** An earlier comment from an impacted company identified that there is a process concern as the edits to SSAP No. 71 are classified as a change in accounting principle and not a correction of error. *(Under SSAP No. 3—Accounting Changes and Correction of Errors, a mistake in the application of accounting principles is a correction of an error.)* The edits proposed in July 2020 were to classify changes required from misapplication of SSAP No. 71 as a correction of error. However, in response to comments, the Working Group agreed to designate the impact as a change in accounting principle. This provision was provided to assist companies in reflecting the change. Both processes require the impact to be recognized to unassigned funds (surplus). If reported as a correction of an error, then an entity may be subject to filing amended financial statements for periods in which the error was reflected. As a change in accounting principle, then the entity calculates the change as a cumulative effect to the Jan. 1 balance in the current year financials.

- **Use of Funding Agreements:** SSAP No. 71 does not prohibit the use of funding agreements or the use of third parties to pay commission expense to selling agents. SSAP No. 71 simply requires consistent recognition of commission expense based on policy issuance or renewal. The involvement of third parties and funding agreements to front commission owed to selling agents is not a free service. These third-parties require fees and interest from these financing arrangements; which presumably exceeds the costs of commission only. The long-standing guidance in SSAP No. 71 requires recognition of the full amount of unpaid principal and interest accrued to date in these arrangements. One comment raised during the discussion was that the clarified guidance would hurt policyholders. This comment was never fully substantiated, but it was noted that failing to report expenses in line with SSAP No. 71 would result with inappropriate financial positions – which could hurt policyholders. Additionally, it was noted that if the process to defer expense recognition was sanctioned, then all insurers would have to engage in these arrangements to prevent competitive disadvantages with reporting.

- **Payments to the Direct Agent:** Some of the comments received from the impacted companies (or their representatives) have tried to indicate that the timing (and how) the initial sales commission is paid to the direct selling agent by the third-party should not impact the recognition of commission expense by the insurer. These comments were made because it has been highlighted that in the known situations, the third-party agents have already paid the direct selling agent the owed commission. Although the third-party payment to the direct selling agent substantiates that a commission was owed from policy issuance, the payment to the direct agent is not the triggering event. *(Meaning, even if a third-party was to revise their agreements with direct agents to delay payment, this will not change that the insurer owes commission expense from policy issuance.)*

- **Consistent Application Across Companies:** SSAP No. 71 is a “common area” SSAP and applies to all entities regardless of their line of business or product offerings. Some comments made to regulators have implied that certain large companies are permitted processes that are not in line with SSAP No. 71. It is speculated that these comments are trying to compare commission expenses from renewals (which are not required until policy renewal occurs) to the process engaged by these companies in which they have not recognized commission expense from the initial issuance of policies. This goes back to these impacted companies mischaracterizing these financing arrangements as “persistency” commission. These timing arrangements do not alter the requirement to recognize commission expense with the issuance of a policy. Because many of these funding agreements were mischaracterized, it was noted that the disputed practice is difficult to identify on financial examinations and audits. One Working Group member shared that they had dealt with an issue like this previously when $16 million of off-balance sheet commission liabilities was identified after a third party funding agent applied to the liquidator for reimbursement.

- **Impacted Companies:** Throughout the discussion, key industry representatives continued to highlight that the impacted companies were less “than 10” and likely “5 or less.” The impacted companies were requested to reach out to domiciliary states to provide information. However the impact for these few companies is expected to be material. A consumer representative also voiced concerns about the illusory surplus and unlevel playing field such arrangements create. Because of the unfair competitive advantages that are perceived, the Working Group was not in favor of grandfathering the practices. However the Working Group did discuss that companies could have discussions with their
domiciliary states regarding obtaining a permitted practice for phasing in the financial impact. A permitted practice approach was favored because the impact to the affected companies may vary.

• Effective Date: Although nonsubstantive revisions are generally effective upon adoption, the Working Group ultimately determined to have a Dec. 31, 2021 effective date. Two of the industry commenters (Guggenheim and interested parties (Delaware Life)) stated support for an effective date no sooner than Dec. 31, 2021 at the March meeting. Annual 2020 effective dates were previously deferred. While some members of the Working Group supported an effective date earlier in 2021, it was discussed that a year-end 2021 effective date would allow insurers, to assess the impact and review contracts, and additionally allow the issue to be fully through the NAIC committee process. During the March meeting, the National Council of Insurance Legislators (NCOIL) comments were supportive of a later effective date or an extended phase-in period. The Working Group determined that a year-end 2021 effective date was preferred because of the competitive issues and because the revisions were viewed as a clarification of long-standing guidance. The Working Group also reiterated its prior comments that the limited number of companies seeking phase in application could seek a permitted practice and that the permitted practices disclosures would provide regulatory transparency.
Adopted Revisions to SSAP No. 71 (new text from the prior exposure is shown as shaded):

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing
of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless of if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

**Effective Date and Transition**

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted March 15, 2021 regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter.

Blanks (E) Working Group Agenda Item Submission Form 2020-29BWG; Effective Annual 2021; Remove the Line Category and Reference to the NAIC Bond Fund List (Bond List) from the Investment Schedule Instructions and Blank (Attachment Two-A2).................................................................................................................. 10-275
Blanks (E) Working Group Agenda Item Submission Form 2020-30BWG Modified; Effective Annual 2021; Move the Interrogatory Question Regarding Communication of Internal Control Related Matters Noted in Audit from the Annual Supplemental Exhibits and Schedules Interrogatories to the Quarterly Supplemental Exhibits and Schedules Interrogatories to be Answered for the Second Quarter (Attachment Two-A3).................................................................................................................. 10-301
Blanks (E) Working Group Agenda Item Submission Form 2020-31BWG; Effective Annual 2021; Replaces the Life and Health Insurance Guaranty Association Model Act (#520) Assessment Base Reconciliation and the Adjustments to the Model #520 Assessment Base Reconciliation Exhibits with Modernized Exhibits in Order to Promote Consistent Reporting of Assessable Premiums Among Industry Members and Reflect Changes in Guaranty Association Laws Adopted Over the Past Two Decades (Attachment Two-A4)................................................................. 10-309
Blanks (E) Working Group Agenda Item Submission Form 2020-32BWG; Effective Annual 2021; Add New Health Care Receivables Supplement to the Life/Fraterna Annual Statement that Adds Exhibits 3 and 3A from the Health Annual Statement to the Life/Fraternity Annual Filings; Add Guidance Document Reference to Exhibit 3A of the Health Annual Statement (Attachment Two-B).................................................................................................................. 10-345
Blanks (E) Working Group Agenda Item Submission Form 2020-33BWG Modified; Effective First Quarter 2022; Modify Annual Statement Lines (ASLs) Used on Underwriting and Investment (U&I) Exhibits, State Page and Insurance Expense Exhibit (IEE); Change Health ASL Categories Used in Property to be Consistent with Other Statement Types; Update ASL References Used in Crosschecks; Update Definitions Used in the Appendix for the Health ASLs (Attachment Two-C).................................................................................................................. 10-351
Blanks (E) Working Group Agenda Item Submission Form 2020-34BWG; Effective Annual 2021; Add Definitions for the Occupational Accident, Fiduciary Liability Premises and Operations (OL&T and M&C), Professional Errors and Omissions Liability, Kidnap & Ransom Liability and Tuition Reimbursement Plans Products to the Appropriate Line of Business in the Appendix (Attachment Two-D).................................................................................................................. 10-367
Blanks (E) Working Group Agenda Item Submission Form 2020-35BWG Modified; Effective First Quarter 2022; Expand the Number of Characters Used from Seven to 10 in the Investment Line Categories for Schedules D, DA, DL and E Excluding Schedule D, Part 6 (Sections 1 and 2) and Schedule E (Part 1 and 3); Add Line Categories for Unaffiliated Certificates of Deposit (CDs) and Exchange Traded Funds (ETFs); Split the Line Categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into Lines Indicating if the Fund has been Assigned a Designation by the Securities Valuation Office (SVO); Make Changes to Summary Investment Schedule, Summary by Country and Schedule D, Part 1A (Sections 1 and 2) to Reflect the Additional Line Categories (Attachment Two-E).................................................................................................................. 10-375
Blanks (E) Working Group Agenda Item Submission Form 2020-36BWG; Effective Annual 2021; Modify the General Schedules Investment Instructions and Schedule DB General Instructions to Reflect Treatment of Publicly Traded Stock Warrants as Being in the Scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock and Reporting as Common and Preferred Stock (Attachment Two-F).................................................................................................................. 10-458
Blanks (E) Working Group Agenda Item Submission Form 2020-37BWG; Effective Annual 2021; Add New Schedule Y, Part 3, to Capture all Entities with Ownership Greater than 10%, the Ultimate Controlling Parties of Those Owners and Other Entities that the Ultimate Controlling Party Controls (Attachment Two-G).................................................................................................................. 10-462
Blanks (E) Working Group Agenda Item Submission Form 2020-38BWG Modified; Effective Annual 2021 (Except State Level Detailed Which Will be Effective Annual 2022); Make Changes to the Accident and Health Policy Experience Exhibit by Adding New Columns, Removing Lines Distinguishing with and without Contract Reserves; Add New Product Lines; Eliminate Summary Tables; Change the Date that the Exhibit is Due and have it Reported by State (Attachment Two-H).................................................................................................................. 10-465
Memorandum Dated Feb. 3, 2021, from Charles A. Therriault, Director of the NAIC SVO, and Eric Kolchinsky, Director of the NAIC Structured Securities Group (SSG) and Capital Markets Bureau, to Kevin Fry, Chair of the Valuation of Securities (E) Task Force, Regarding Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Update the...
The Accounting Practices and Procedures (E) Task Force met March 23, 2021. The following Task Force members participated:

- Doug Slape, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Rylynn Brown, Dave Lonchar and Tom Hudson (DE); Lori K. Wing-Heier and David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Evan G. Daniels represented by Kurt Regner (AZ); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by William Arflanis and Kathy Belfi (CT); Karima M. Woods represented by N. Kevin Brown (DC); David Altmairer represented by Carolyn Morgan and Virginia Christy (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Eric Fletcher (ID); Stephen W. Robertson and Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); Jams; J. Donelon represented by Caroline Fletcher, Melissa Gibson and Denise Gardner (LA); Gary D. Anderson represented by John Turchi (MA); Eric A. Cioppa and Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Ort (MN); Chlora Lindley-Myers represented by Shannon Schmoeger and John Rehagen (MO); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfried represented by Colton Schulz (ND); Bruce R. Ramge represented by Lindsay Crawford and Justin Schrader (NE); Chris Nicolopoulos represented by Patricia Gosselin and Doug Bartlett (NH); Russell Toal represented by Leatrice Geckler (NM); Juanita M. Allen represented by Kimberly Rankin and Melissa Greiner (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli and John Tudivino (RI); Raymond G. Farmer represented by Michael Shull (SC); Larry D. Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Trey Hynke and Just Schrader (NE); Jonathon T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and David Smith (VA); Michael S. Pieciak represented by Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Rob Aftable represented by Amy Malm (WI); James A. Dorchin represented by Jamie Taylor (WV); and Jeff Rude, Linda Johnson and Doug Melvin (WY).

1. **Adopted its 2020 Fall National Meeting Minutes**

Ms. Walker directed the members to the Task Force’s 2020 Fall National Meeting minutes. Ms. Walker also noted that the Task Force met March 16, 2021, in regulator-to-regulator session, pursuant to paragraph 3 (discussion of specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance of the Accounting Practices and Procedures Manual) of the NAIC Policy Statement on Open Meetings. No actions were taken during this meeting, and the discussion was limited to the Spring National Meeting agenda.

Ms. Malm made a motion, seconded by Ms. Obusek, to adopt the Task Force’s Nov. 19, 2020, minutes (see NAIC Proceedings – Fall 2020, Accounting Practices and Procedures (E) Task Force). The motion passed unanimously.

Mr. Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which met March 15, except for 2019-24 related to levelized commissions which will be discussed separately. During this meeting, the Working Group adopted its Jan. 25, 2021; Jan. 6, 2021; Dec. 28, 2020; Dec. 18, 2020; Dec. 8, 2020; and Nov. 12, 2020, minutes. The interim minutes included the following adoptions to Appendix B—Interpretations (INTs) of statutory accounting principles (SAP):

a. **Extended INT 20-03: Troubled Debt Restructuring Due to COVID-19** and **INT 20-07: Troubled Debt Restructuring for Certain Debt Instruments Due to COVID-19** through Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

b. **INT 20-10: Reporting Nonconforming Credit Tenant Loans (CTLs)**: This INT allows nonconforming CTLs to continue to be reported on Schedule D Part 1 – Long-Term Bonds if filed with the NAIC Securities Valuation Office (SVO) by Feb. 15, 2021. The provisions within this INT and the ability to continue reporting nonconforming CTLs on Schedule D Part 1 with an SVO-assigned NAIC designation are limited to Oct. 1, 2021.

c. **INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms**: This INT provides a 60-day extension from the 90-day rule for uncollected premium balances, bills
receivable and amounts due from agents and for policies directly affected by the noted events. This INT expires Feb. 28, 2021.

Mr. Bruggeman stated that the Working Group adopted the following nonsubstantive revisions to statutory accounting guidance:

a. **Statement of Statutory Accounting Principles (SSAP) No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations** and **SSAP No. 86—Derivatives**: Revisions reject Accounting Standards Update (ASU) 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity for statutory accounting. (Ref #2020-41)

b. **SSAP No. 25—Affiliates and Other Related Parties**: Revisions clarify that an ownership greater than 10% in a reporting entity results in a related party designation, regardless of any disclaimer of control or affiliation. Additionally, the agenda item requires disclosure of such instances and identification of an insurer’s ultimate controlling party, as requested by the Group Solvency Issues (E) Working Group. (Ref #2019-34)

c. **SSAP No. 26R—Bonds**:
   i. Revisions clarify that perpetual bonds are within the scope of SSAP No. 26R, and they are subject to the yield-to-worst concept. Additionally, perpetual bonds that possess a future call date will retain bond accounting—i.e., accounted for at amortized cost. However, if a perpetual bond does not possess a future call date, fair value accounting is required regardless of NAIC designation. (Ref #2020-22)
   ii. Revisions expand the current called bond disclosures to also include bonds terminated early through a tender offer. (Ref #2020-32)

d. **SSAP No. 32R—Preferred Stock** and **SSAP No. 86**: Revisions direct that publicly traded preferred stock warrants are in the scope of SSAP No. 32R, and they shall be reported at fair value. (Ref #2020-33)

e. **SSAP No. 43R—Loan-Backed and Structured Securities**: Revisions incorporate minor scope modifications to reflect recent changes to the Federal Home Loan Mortgage Corporation (Freddie Mac) Structured Agency Credit Risk (STACR) and Federal National Mortgage Association (Fannie Mae) Connecticut Avenue Securities (CAS) programs, which allow credit risk transfer securities from these programs to remain in the scope of SSAP No. 43R when issued through a real estate mortgage investment conduit (REMIC) structure. (Ref #2020-34)

f. **Appendix D—Nonapplicable GAAP Pronouncements**: Revisions reject ASU 2020-07, Not-for-Profit Entities (Topic 958): Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets as not applicable for statutory accounting. (Ref #2020-42)

g. **Appendix F—Policy Statements**: Revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles clarify the existing process regarding the Working Group’s issuance and adoption of accounting interpretations. (Ref #2020-39)

h. **Preamble**: Revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state: 1) shall be reflected in the financial statements filed with the NAIC; and 2) are the financial statements subject to independent audit requirements. (Ref #2020-40)

Mr. Bruggeman stated that the Working Group exposed the following nonsubstantive revisions to statutory accounting guidance:

a. **Exposed INT 21-01T: Statutory Accounting Treatment for Cryptocurrencies**, which clarifies that cryptocurrencies do not meet the definition of cash, and they are nonadmitted assets for statutory accounting. The Working Group requested comments on the level of interest and ownership of cryptocurrencies. (Ref #2021-05)
b. Revisions reject:

i. ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs for statutory accounting. (Ref #2021-02)

ii. ASU 2021-02, Franchisors – Revenue from Contracts with Customers (Subtopic 952-606): Practical Expedient. (Ref #2021-07).

iii. ASU 2020-11, Financial Services—Insurance (Topic 944): Effective Date and Early Application (Ref #2021-08).

c. Exposed revisions to INT 20-01: ASU 2020-04 – Reference Rate Reform. INT 20-01 exposes a temporary (optional) expedient and exception guidance for ASU 2021-01, Reference Rate Reform (Topic 848): Scope with an expiration date of Dec. 31, 2022. The optional expedients would expand the current exceptions to allow for the continuation of the existing hedge relationship and thus not require hedge redesignation for derivative instruments affected by changes to interest/reference rates due to reference rate reform, regardless of whether they reference the London Interbank Offered Rate [LIBOR] or another rate that is expected to be discontinued. The exception in INT 20-01 would apply for affected derivatives used for discounting, margining or contract price alignment. (Ref #2021-01)

d. SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities: Exposed this agenda item with the intent to dispose without statutory edits. NAIC staff note that the long-standing, required statutory adjustments to SSAP No. 97, paragraph 8.b.iv. – Foreign Insurance SCA Entities could result in negative equity valuation, as assets held in a foreign subsidiary should not be valued in a more favorable manner than had they been held directly by the insurer. Industry comments are requested regarding detailed instances of negative value subsidiary, controlled and affiliated entities (SCAs). (Ref #2021-04)

e. SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities: Revisions propose data-captured templates for existing disclosures in SSAP No. 103R, which are currently only completed in narrative form. Data-capturing of such items will permit state insurance regulators to submit system inquiries to determine the extent to which reporting entities have transferred (sold), but still retain, a material participation with said assets. A blanks proposal will be concurrently exposed with the Working Group’s exposure. (Ref #2021-03)

f. SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act: Revisions include state Affordable Care Act (ACA) reinsurance programs, which are using Section 1332 waivers in the scope of SSAP No. 107. The revisions continue to follow the hybrid accounting approach for the state ACA programs, as they operate in a similar manner. (Ref #2021-09)

g. SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees: Re-exposed this agenda item to provide additional time for interested parties to develop a proposal for establishing accounting and reporting guidance for derivatives hedging the growth in interest for fixed indexed products. (Ref #2020-36)

Mr. Bruggeman stated that the Working Group exposed the following blanks proposals:

a. Re-exposed this agenda item for a concurrent exposure with the Blanks (E) Working Group. The Working Group is sponsoring blanks agenda item 2021-03BWG to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form be separately identified. The instructions will also indicate that companies may eliminate proprietary information. However, the elimination will still require the use of a unique reporting identifier. (Ref #2020-37)

b. Re-exposed this agenda item for a concurrent exposure with the Blanks (E) Working Group. The Working Group is sponsoring blanks agenda item 2021-03BWG to clarify reporting by each separate product filing or policy form and add product identifiers, specifically for pension risk transfer (PRT) and registered index linked annuity (RILA) transactions in the Separate Account General Interrogatories. (Ref #2020-38)
Mr. Bruggeman stated that the Working Group exposed the following editorial revisions (Ref #2021-06EP):

a. **SSAP No. 53—Property Casualty Contracts–Premiums**: Revisions retitle the statement to **SSAP No. 53—Property and Casualty Contracts–Premiums**.

b. **SSAP No. 97**: Revisions correct grammatical errors in paragraph 54.

c. **SSAP Glossary**: Revisions remove the footnote in the Glossary title and replace it as an opening paragraph with updated verbiage.

Mr. Bruggeman stated that the Working Group disposed agenda item 2020-35: SSAP No. 97 – Audit Opinions without statutory revisions, as the issue of nonadmittance due to the inability to quantify a departure from U.S. generally accepted accounting principles (GAAP) was not deemed prevalent. (Ref #2020-35)

Mr. Bruggeman stated that the Working Group received an update on the following projects and referrals:

a. Received an update that NAIC staff, industry and key state insurance regulators have made significant progress on agenda item 2019-21: SSAP No. 43R – Investment Classification Project. While discussions remain ongoing, it is anticipated that a public exposure will occur via an interim meeting prior to the Summer National Meeting. The exposure will include additional principle concepts on which investments are eligible for reporting on Schedule D as a bond.

b. Received an update that INT 19-02: Freddie Mac Single Security Initiative remains in full effect. The Freddie Mac Single Security Initiative remains an ongoing program, and it does not appear to be subject to termination in the foreseeable future.

c. Received an update on agenda item 2019-49: Retroactive Reinsurance Exception. This agenda item addresses a referral from the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy), which noted diversity in reporting regarding companies applying the retroactive reinsurance exception, which allows certain contracts to be reported prospectively. NAIC staff have held preliminary discussion with Casualty Actuarial and Statistical (C) Task Force members, with a preliminary recommendation that the premium and losses transferred under such transactions should be allocated to the prior Schedule P calendar year premiums and the losses allocated to the prior accident year incurred losses.

d. Received an update on the reporting and extinguishment of loans received from the Paycheck Protection Program (PPP). For statutory accounting, the authoritative guidance in **SSAP No. 15—Debt and Holding Company Obligations**, paragraph 11 provides that debt is recognized until extinguished, including formally being forgiven. In addition, per SSAP No. 15, paragraph 25 gains on termination of debt are recognized as capital gains.

e. Received an update on the Valuation of Securities (E) Task Force discussion regarding revisions to the **Purpose and Procedures Manual of the NAIC Investment Analysis Office** (P&P Manual) as coordination regarding the revisions to SSAP No. 105R—Working Capital Finance Investments adopted by the Working Group in May 2020 (agenda item 2019-25). At its Nov. 18, 2020, meeting, the Task Force directed a referral to the Working Group, which is still pending. NAIC staff anticipate addressing this referral when received.

f. Received an update on current U.S. GAAP exposures/invitations to comment, noting that no comments by the Working Group are planned during the exposure periods.

Mr. Bruggeman stated the public comment period for all exposed agenda items ends April 30.

Mr. Bruggeman made a motion, seconded by Ms. Rankin, to adopt the Working Group’s report except for agenda item 2019-24 on levelized commission, which will have a separate vote (Attachment One). The motion passed unanimously.

3. **Adopted Agenda Item 2019-24**

Mr. Bruggeman provided an overview of Statutory Accounting Principles (E) Working Group agenda item 2019-24 regarding levelized commission, which affects **SSAP No. 71—Policy Acquisition Costs and Commissions**. He stated that the Working Group has been discussing this item since August 2019, when it was brought to the Working Group by a domiciliary state. Mr.
Bruggeman stated that after six public discussions, the nonsubstantive revisions that clarify the guidance in SSAP No. 71 regarding levelized commissions were adopted on March 15, 2021, with a Dec. 31, 2021, effective date. Thirteen Working Group members voted in favor of adoption, and one member was opposed. At the March 15 meeting, the Working Group affirmed the nonsubstantive classification of these revisions as consistent with the original intent of SSAP No. 71. In addition, the Working Group exposed a new annual statement general interrogatory to identify the use of a third party for the payment of commission expenses, which will be concurrently exposed with the Blanks (E) Working Group.

Mr. Bruggeman stated that both U.S. GAAP and SAP would calculate acquisition costs in a similar manner. However, one of the major financial reporting differences between SAP and GAAP is that GAAP capitalizes acquisition costs and expenses them over time to match revenue and expenses. SAP expenses policy acquisitions costs as incurred.

Mr. Bruggeman stated that at the heart of this issue is that a small number of reporting entities are using third parties to pay their sales commission costs and not recognizing the full liability of what is in essence a loan to repay the third parties as required under SSAP No. 71. He said that the Working Group has had extensive discussion on this topic and has noted that the revisions clarify the long-standing principles in SSAP No. 71, which have existed since even prior to codification. He stated that the revisions were classified as nonsubstantive because the revisions emphasize the original principles regarding funding agreements and the impact to a minor number of companies do not determine the classification of the revisions.

Mr. Bruggeman noted that state insurance regulators and consumer representative also voiced concerns about the illusory surplus and unlevel playing field such arrangements create. He stated that because of the unfair competitive advantages that are perceived, the Working Group was not in favor of grandfathering the practices. He noted that the Working Group did discuss that companies could have discussions with their domiciliary states regarding obtaining a permitted practice for phasing in the financial impact. He stated that a permitted practice approach was favored because the impact to the affected companies may vary.

Ms. Fletcher noted that Commissioner James J. Donelon could not attend the meeting, but he wanted his comments that this is a substantive change noted and also that he is in favor of a phase-in period. Mr. Snowbarger noted that Oklahoma also supports the comments from Louisiana.

Lynn Kelley (Delaware Life) stated that their position is also that the revisions are substantive and that they appreciate the time that the Working Group has spent discussing this issue even if not all of the edits they submitted were incorporated. She also stated support for an effective date at least as late as Dec. 31, 2021.

Elly Nettleton (Guggenheim Life and Annuity) highlighted two points from their prior comment letters: 1) levelized commissions are not a new concept and date back several decades. She noted that a 2010 U.S. Securities and Exchange Commission (SEC) complaint against another carrier identified levelized commissions as a common practice in the industry. She said Guggenheim is not aware that the accounting treatment was determined not to be in accordance with statutory accounting principles; and 2) traditional commissions such as those tied to policy persistency are carved out of the proposals. Ms. Nettleton said Guggenheim believes it is a dangerous precedent to remove persistency as a factor in the accrual of commissions as it is a key insurance element.

Mr. Bruggeman noted that similar comments as Ms. Nettleton’s were made at the Working Group. He stated that the Working Group did hear the comments but did not agree with them.

Thomas Considine (National Council of Insurance Legislators—NCOIL) stated that NCOIL members feel strongly that the revisions are substantive but are willing to put that aside and do not feel the need to debate that classification again at this time. He stated that this is a practice that has been going on for decades. He stated that to implement this change during a period of great economic turmoil seems not only short-sighted, but also it is dangerous to require entities to make such a change in a period of a year. He stated that NCOIL recommends a significant phase-in period with a proposed effective date of Dec. 31, 2025. He noted prior Working Group discussions have recommended that reporting entities seeking a phase-in period should seek a permitted practice from their domiciliary regulators. He stated that a permitted practice does not reflect positively on the state granting the practice or the reporting entity receiving the practice. He stated that accreditation reviews note the permitted practices granted by a jurisdiction. He stated that the most fair and equitable solution and a way to avoid the debate of change classification is to add a four- or five-year phase-in.

Mr. Bruggeman stated that funding agreements to levelized commission costs are not prohibited. He said the issue is that the full liability for the funding agreement must be recognized for the inherent loan. In other words, it is a financing arrangement; it does not delay the timing of recognition of the acquisition costs. He stated that a permitted practice may not have a positive
perception. However, permitted practice disclosure requirements allow state insurance regulators to understand the surplus impact of the arrangement. He stated that a permitted practice provides transparency and noted that if there were any decisions to extend the effective date beyond Dec. 31, 2021, there would need to be a disclosure of the impact. Ms. Walker agreed, noting that consistency, meaning the ability to compare reporting entities’ financial positions, is a fundamental concept that statutory accounting is based on. She noted its importance for solvency regulation.

Mr. Considine noted that to address Mr. Bruggeman’s point about state insurance regulators’ information, he is confident that if there were a four- or five-year phase-in, legislators would be supportive of a reasonably tailored data call. Mr. Rehagen asked if Mr. Considine envisioned a confidential data call or one that would be publicly produced. Mr. Considine indicated he assumed if it were for the state insurance regulators, then such a data call would be confidential. However, he said NCOIL would be open to discussion. Mr. Bruggeman stated his intent was for a disclosure to be part of the public statutory accounting filing.

Mr. Stolte stated that the Task Force is discussing noncompliant statutory accounting by a handful of companies. He stated that in 1991, Virginia had an insurance receivership of a large life insurance company that had a deferred commission funding arrangement. He said that the insurer had not booked the liability, but when the company was put into receivership, the funding entity/financier filed with the receivership a request for payment of $16 million. He said that the reporting entity prior to the receivership was reporting $120 million in surplus, but true surplus ended up being approximately $4 million. He said he disagreed with the statement that what the handful of companies are doing is an acceptable SAP practice. He said it is noncompliance with statutory accounting in SSAP No. 71, and also with the statutory accounting guidance that existed even prior to codification. He said from a level playing field perspective, he does not want to be forced to approve such agreements for his companies to be able to compete with reporting entities employing this practice. He stated that not recording the full liability for the funding agreements creates illusory surplus. He stated that if a reporting entity needs more time to implement the revisions, a permitted practice is what should be employed. He noted that he received notification of more than 100 permitted practices in an average year. He stated that the permitted practices are designed to provide transparent disclosure for all state insurance regulators.

Mr. Considine stated that what Mr. Stolte is terming “noncompliance” has been accepted in the regulatory community for 20 years. He said if reporting entities have been doing so for 20 years, it seems unreasonable to require a change in one year. Mr. Stolte said that in Virginia, they have not accepted such practices. He noted that there may be some that they were unaware of, but they do not view it as an acceptable practice. He stated that this has been noted as problematic in a formal examination report, and he respectfully disagrees with Mr. Considine’s statement that it was an acceptable practice. Ms. Walker also noted that she has been a Texas state insurance regulator for 20 years and is not aware of any entities that are using funding agreements to defer the recognition of acquisition costs. She noted that she would also take exception to doing so if it were identified in an examination or other regulatory review.

Brendon Bridgeland (Center for Insurance Research—CIR) stated support for the proposal as adopted by the Working Group. He stated that one of the top priorities for state insurance regulators was ensuring that the insurers are solvent. He stated that part of that is also ensuring that there is a level playing field. He stated that in this case, there are a handful of companies using a technique that, by their own admission, is enhancing surplus. He noted that as a consumer advocate, he does not want to see insurers have illusory surplus.

Mr. Bruggeman made a motion, seconded by Mr. Stolte to adopt the nonsubstantive revisions to SSAP No. 71 with a Dec. 31, 2021, effective date as adopted by the Working Group (Attachment One-Q). The motion passed with 41 in favor and the states of Louisiana and Oklahoma opposed.

Ms. Walker stated that agenda item 2019-24 will next be discussed by the Financial Condition (E) Committee, which is scheduled to meet April 13.

Mr. Garn provided the report of the Blanks (E) Working Group, which met March 16. He stated that the Working Group adopted its Dec. 16, 2020, minutes, which included the following action:

a. **Adopted four blanks proposals:** 1) 2020-28BWG – remove Note 22; 2) 2020-29BWG – remove a line category from the investment schedules; 3) 2020-30BWG – move an interrogatory question from the annual blank to the quarterly blank; and 4) 2020-31BWG – changes to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibits.
b. Exposed seven proposals for a 60-day public comment period ending Feb. 16.

c. Adopted its editorial listings.

Mr. Garn stated that the Working Group adopted its editorial listing and the following seven proposals:

a. 2020-32BWG – Add a new Health Care Receivables Supplement to the Life/Fraternal Annual Statement that adds Exhibit 3 and Exhibit 3A from the Health Annual Statement to the Life/Fraternal annual filings. Add a guidance document reference to Exhibit 3A of the Health Annual Statement.

b. 2020-33BWG – Modify Annual Statement Lines (ASLs) used on Underwriting and Investment (U&I) Exhibits, State Page and Insurance Expense Exhibit (IEE). Change Health ASL categories used in Property to be consistent with other statement types. Update ASL references used in crosschecks. Update definitions used in the appendix for the Health ASLs.

c. 2020-34BWG – Add definitions for the Occupational Accident, Fiduciary Liability, Premises and Operations (OL&T and M&C), Professional Errors and Omissions Liability, Kidnap & Ransom Liability and Tuition Reimbursement Plans products to the appropriate Line of Business in the appendix.

d. 2020-35BWG – Expand the number of characters used from seven to 10 in the investment line categories for Schedules D, DA, DL and E excluding Schedule D, Part 6 (Sections 1 and 2) and Schedule E (Part 1 and 3). Add line categories for Unaffiliated Certificates of Deposit and Exchange Traded Funds (ETFs). Split the line categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into lines indicating if the fund has been assigned a designation by the SVO. Make changes to Summary Investment Schedule, Summary by Country and Schedule D, Part 1A (Section 1 and Section 2) to reflect the additional line categories.

e. 2020-36BWG – Modify the General Schedules Investment Instructions and Schedule DB General Instructions to reflect treatment of publicly traded stock warrants as being in the scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R and reporting as common and preferred stock (SAPWG 2020-33).

f. 2020-37BWG – Add a new Schedule Y, Part 3 to capture all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party owns (SAPWG 2020-34).

g. 2020-38BWG – Make changes to the Accident and Health Policy Experience Exhibit by adding new columns, removing lines distinguishing with and without contract reserves, adding some new product lines, eliminating summary tables, changing the date that the exhibit is due and having it reported by state.

Mr. Garn stated that the Working Group exposed five new proposals for a six-week public comment period ending April 27 and received a memorandum from the Valuation of Securities (E) Task Force regarding the addition of two new residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) administrative codes.

Mr. Garn made a motion, seconded by Mr. Eft, to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met March 15, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Vice Chairs (IA); Shelia Travis (AL); Kim Hudson (CA); William Arfanis and Kathy Belfi (CT); Tom Hudson (DE); Eric Moser, Cindy Andersen and Kevin Fry (IL); James J. Donelon, Stewart Guerin, Melissa Gibson and Caroline Fletcher (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner and Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating was: Glen Mulready (OK).

1. **Adopted its Jan. 25, 2021; Jan. 6, 2021; Dec. 28, 2020; Dec. 18, 2020; Dec. 8, 2020; and Nov. 12, 2020 Minutes**

Ms. Malm made a motion, seconded by Mr. Kim Hudson, to adopt the Working Group’s Jan. 25, 2021 (Attachment One-A); Jan 6, 2021 (Attachment One-B); Dec. 28, 2020 (Attachment One-C); Dec. 18, 2020 (Attachment One-D); Dec. 8, 2020 (Attachment One-E); and Nov. 12, 2020 (see NAIC Proceedings – Fall 2020, Accounting Practices and Procedures (E) Task Force, Attachment One) minutes. The motion passed unanimously.

The Working Group met in regulator-to-regulator session on March 9. This regulator session was pursuant to the NAIC Open Meetings Policy paragraph 3 (discussion of specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance of the Accounting Practices and Procedures Manual). No actions were taken during this meeting and the discussion was limited to its March 15 agenda.

2. **Adopted Non-Contested Positions**

The Working Group held a public hearing to review comments (Attachment One-F) on previously exposed items.

Mr. Bartlett made a motion, seconded by Ms. Weaver, to adopt the statutory accounting revisions detailed below as non-contested statutory accounting revisions. Included in this motion was the disposal of agenda item 2020-35: SSAP No. 97 – Audit Opinions. The motion passed unanimously.

a. **Agenda Item 2020-32**

Mr. Bruggeman directed the Working Group to agenda item 2020-32: SSAP No. 26R – Disclosure Update (Attachment One-G). He stated that this nonsubstantive agenda item expands a current disclosure element in Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds to include securities terminated early through a tender offer. This disclosure will require securities that are sold, redeemed or disposed of through either a call or tender offer to be specifically identified.

b. **Agenda Item 2020-33**

Mr. Bruggeman directed the Working Group to agenda item 2020-33: SSAP No. 32R – Publicly Traded Preferred Stock Warrants (Attachment One-H). He stated that this nonsubstantive agenda item expands the scope of SSAP No. 32R—Preferred Stock to include publicly traded preferred stock warrants, and it will require these warrants to be reported at fair value.

c. **Agenda Item 2020-34**

Mr. Bruggeman directed the Working Group to agenda item 2020-34: SSAP No. 43R – GSE CRT Program (Attachment One-I). He stated that this nonsubstantive agenda item incorporates modifications to reflect recent changes to the Freddie Mac Structured Agency Credit Risk (STACR) and Fannie Mae Connecticut Avenue Securities (CAS) programs. The modifications will allow credit risk transfer (CRT) securities from these programs to remain in scope of SSAP No. 43R—Loan-Backed and Structured Securities when issued through a real estate mortgage investment conduit (REMIC) trust structure.
d. **Agenda Item 2020-35**

Mr. Bruggeman directed the Working Group to agenda item 2020-35 (Attachment One-J). He stated that this nonsubstantive agenda item was recommended for disposal without changes to statutory accounting, as feedback from interested parties indicated that the nonadmittance of an SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities 8.b.iii entity (non-insurance subsidiary, controlled and affiliated [SCA]) due to the inability to quantify a U.S. generally accepted accounting principles (GAAP) departure was not prevalent. Accordingly, additional admittance exceptions are not deemed to warrant further consideration.

e. **Agenda Item 2020-41**

Mr. Bruggeman directed the Working Group to agenda item 2020-41: ASU 2020-06, Convertible Instruments (Attachment One-K). He stated that this nonsubstantive agenda item rejects Accounting Standards Update (ASU) 2020-06 in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations, and SSAP No. 86—Derivatives, as this ASU references accounting models for convertible debt instruments not reflected in statutory accounting.

f. **Agenda Item 2020-42**

Mr. Bruggeman directed the Working Group to agenda item 2020-42: ASU 2020-07, Presentation and Disclosures by Not-for-Profit Entities (Attachment One-L). He stated that this nonsubstantive agenda item rejects ASU 2020-07 as not applicable for statutory accounting. Reference to this ASU will be reflected in Appendix D—Nonapplicable GAAP Pronouncements.

3. **Reviewed Comments on Exposed Items**

The Working Group held a public hearing to review comments (Attachment One-F) on previously exposed items.

a. **Agenda Item 2020-22**

Mr. Bruggeman directed the Working Group to agenda item 2020-22: Accounting for Perpetual Bonds. Jim Pinegar (NAIC) stated that this agenda item addresses the accounting treatment for perpetual bonds in SSAP No. 26R. This agenda item incorporates guidance to clarify that the premium associated with a perpetual bond that has an effective call option shall be amortized using the yield-to-worst concept. Perpetual bonds that do not have an effective call option are to be reported at fair value. The proposed revisions to the exposure include clarification regarding the use of the yield to worst concept provided in the interested parties. Diane Bellas (Allstate), representing interested parties, stated that interested parties support adoption of the proposed edits to SSAP No. 26R, and further exposure is not necessary.

Mr. Kim Hudson made a motion, seconded by Mr. Bartlett, to adopt the nonsubstantive revisions to SSAP No. 26R, modified from the exposure to include proposed edits received from interested parties during the exposure period (Attachment One-M). The motion passed unanimously.

b. **Agenda Items 2020-37 and 2020-38**

Mr. Bruggeman directed the Working Group to agenda item 2020-37: Separate Account Product Mix and agenda item 2020-38: Pension Risk Transfer Disclosure. Mr. Pinegar stated that these agenda items were drafted at the request of state insurance regulators due to the recent growth of pension risk transfers (PRTs) and registered indexed linked annuities (RILAs). These agenda items initially requested input on the degree of product identifying details in the separate account blanks. Mr. Pinegar stated that as a result of the prior exposure, interested parties suggested general interrogatory reporting of PRTs and RILAs, and state insurance regulators have requested additional reporting granularity in the separate account general interrogatories to ensure consistent reporting of products. He stated that based on these comments, a blanks proposal has been developed to add PRT and RILA reporting categories and modify the general interrogatory instructions to require disaggregated product reporting, using unique product identifiers for each product represented. He stated that aggregation in reporting can still occur if the products are under the same product filing or policy form; otherwise, the instructions require disaggregation in reporting.

Mr. Bruggeman stated that as noted in the meeting materials, while disaggregated reporting is proposed to be required, companies will have the ability to eliminate proprietary information in reporting.
Ms. Malm made a motion, seconded by Ms. Weaver, to expose agenda item 2020-37 and agenda item 2020-38 with detail on the proposed general interrogatory reporting changes. The motion passed unanimously. It was noted that the blanks proposal is expected to be concurrently exposed by the Blanks (E) Working Group.

c. **Agenda Item 2020-39**

Mr. Bruggeman directed the Working Group to agenda item 2020-39: Interpretation Policy Statement. Mr. Pinegar stated that this agenda item was drafted in response to questions received last year as the Working Group and the Accounting Practices and Procedures (E) Task Force considered Interpretation (INT) 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends. The agenda item clarifies the voting requirements of the Working Group for INTs that do or do not amend, supersede or conflict with existing statutory accounting principles (SAPs). Additionally, it clarifies existing options of the Working Group, such as the deferral of adoption until the INT has had an opportunity to be reviewed by the Task Force. Mr. Pinegar stated that interested parties responded with a few edits, primarily to clarify the purpose or ability to issue INTs that conflict with SAPs. He stated that the guidance proposed for adoption does integrate a majority of the edits proposed by interested parties, except for edits that would have restricted the issuance of INTs to emergency situations. He stated that those edits would have restricted the Working Group’s current ability to make INTs for time-sensitive, but not emergency items, such as the issuance of INT 20-01: ASU 2020-04 - Reference Rate Reform.

Michael M. Monahan (American Council of Life Insurers—ACLI) stated that the ACLI agrees with the edits as proposed by NAIC staff, and an additional exposure of this agenda item is not necessary.

Mr. Kim Hudson made a motion, seconded by Mr. Bartlett, to adopt nonsubstantive revisions, modified from the exposure with edits as proposed by NAIC staff and interested parties, to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles regarding the issuance and adoption of accounting interpretations (Attachment One-N). The motion passed unanimously.

d. **Agenda Item 2020-40**

Mr. Bruggeman directed the Working Group to agenda item 2020-40: Prescribed Practices. Julie Gann (NAIC) stated that this agenda item was drafted in response to questions received last year as the Working Group considered INT 20-08. She stated that this agenda item clarifies that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC, and they are the ones subject to independent audit requirements. The revisions clarify that non-domiciliary states may require supplemental financial information that details different accounting practices pursuant to the prescribed practices of the non-domiciliary state. Ms. Gann stated that in response to comments received from interested parties, references to financial statements in both the agenda item and the proposed authoritative guidance have been corrected to reflect supplemental financial information when referring to submissions to the non-domiciliary state.

Keith Bell (Travelers), representing interested parties, agreed that the edits proposed by NAIC staff reflect the request of interested parties, and an additional exposure of this agenda item is not necessary.

Mr. Smith made a motion, seconded by Mr. Kasinow, to adopt nonsubstantive revisions, modified from the exposure to incorporate edits as proposed by NAIC staff and interested parties, to the Preamble Implementation Questions and Answers regarding prescribed accounting practices. (Attachment One-O). The motion passed unanimously.

e. **Agenda Item 2020-36**

Mr. Bruggeman directed the Working Group to agenda item 2020-36: Derivatives Hedging Fixed Indexed Products. Ms. Gann stated that this agenda item proposes the development of new substantive guidance for the accounting and reporting of derivatives that effectively hedge the growth in interest credited for fixed indexed products that are reported in the general account. Interested parties provided a comment letter requesting additional time for the development of a proposal. Ms. Gann stated that NAIC staff recommend re-exposure of this agenda item with the direction to work with interested parties in the development of applicable guidance.
Rosemarie Albrizio (Equitable), representing interested parties, stated that interested parties appreciates the opportunity to jointly collaborate on this project, and now that year-end reporting has concluded, its staff have the capacity to focus on this proposal.

Mr. Kim Hudson made a motion, seconded by Ms. Weaver, to re-expose agenda item 2020-36 and direct NAIC staff to continue to collaborate with industry on a proposal to account for derivatives that effectively hedge the growth in interest credited for fixed indexed products. The motion passed unanimously.

4. Reviewed Comments on Exposed Items

a. Agenda Item 2019-34

Mr. Bruggeman directed the Working Group to agenda item 2019-34: Related Parties, Disclaimer of Affiliation and Variable Interest Entities. Jake Stultz (NAIC) stated that this agenda item proposes several nonsubstantive revisions to SSAP No. 25—Affiliates and Other Related Parties. He stated that the agenda item clarifies: 1) the definition of related parties; 2) that a non-controlling ownership over 10% results in a related party classification, regardless of any disclaimer of control or affiliation; and 3) that a disclaimer of control or affiliation does not eliminate the classification as a related party for the disclosure of material transactions, as is required under SSAP No. 25. This agenda item also rejects several Financial Accounting Standards Board (FASB) ASUs regarding variable interest entities. Mr. Stultz stated that the agenda item requires increased disclosure of related parties, and it will provide information on minority ownership interests, as well as significant relationships between minority owners and other U.S. domestic insurers and groups. He stated that in collaboration with interested parties, a few additional minor modifications have been proposed, primarily clarifying that ownership includes both direct or indirect ownership. He stated that in conjunction with the Working Group’s agenda item, the Blanks (E) Working Group has a concurrent exposure that includes a new Schedule Y, Part 3, which will be considered for adoption pending the action taken by the Working Group.

Mr. Bell stated that Travelers agrees that the edits proposed by NAIC staff are consistent with the requests of interested parties, and an additional exposure of this agenda item is not necessary.

Mr. Bartlett made a motion, seconded by Ms. Travis, to adopt the exposed nonsubstantive revisions to SSAP No. 25, with modifications to incorporate the minor edits as proposed by NAIC staff and interested parties (Attachment One-P). The motion passed unanimously.

b. Agenda Item 2019-24

Mr. Bruggeman directed the Working Group to agenda item 2019-24: Levelized and Persistency Commissions. Robin Marcotte (NAIC) stated that the Working Group has been discussing this topic since August 2019 with this being the sixth public discussion. This agenda item was drafted in response to a specific state insurance regulator request to address an accounting practice identified during a financial examination. Ms. Marcotte stated that a few insurers are utilizing a disputed practice by using third parties to pay policy acquisition costs, and they are not recognizing the full liability to repay those third parties. Not recognizing the full liability to repay the parties who are paying acquisition costs on an insurer’s behalf is inconsistent with the guidance in SSAP No. 71—Policy Acquisition Costs and Commissions. SSAP No. 71, which has been in place prior to 1998, provides statutory accounting guidance and identifies such agreements as funding agreements, which require full liability recognition. Ms. Marcotte stated that in November 2020, the Working Group exposed additional edits to clarify that the SSAP No. 71 updates would be effective immediately upon adoption and apply to all contracts that are in effect as of the date of adoption. The Working Group has also previously determined that the revisions to SSAP No. 71 have met the due process for either a substantive or nonsubstantive revision; however, it concluded that the revisions are to be classified as nonsubstantive. Ms. Marcotte stated that the Working Group has previously reiterated that under the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, it is not the impact of a change on an individual entity that determines whether a change is substantive or nonsubstantive but whether the revision is consistent with the original intent of the SSAP. In addition, the Working Group directed the development of an issue paper to document the historical discussion on this topic.

Ms. Marcotte stated that NAIC staff are recommending that the Working Group: 1) adopt the previously exposed updates to SSAP No. 71 after consideration regarding the effective date; and 2) concurrently expose with the Blanks (E) Working Group a proposal to incorporate a new general interrogatory to assist with the identification of the use of funding agreements. She stated that NAIC staff have drafted an issue paper to document the historical discussions regarding this topic. She stated that
an issue paper is not authoritative, so there is no need to delay the SSAP No. 71 effective date for the adoption of the issue paper. She recommended that the Working Group direct NAIC staff to update the issue paper for actions from this meeting and determine when to expose the issue paper. Additionally, NAIC staff did not recommend further edits to SSAP No. 71, as revisions proposed by interested parties and other commentors either do not concur with the principles of SSAP No. 71 or have been rejected by the Working Group in prior discussions. Mr. Bruggeman stated that NAIC staff have provided a summary of comments received, which includes a response to each position. Accordingly, NAIC staff are not recommending additional modifications.

Commissioner Mulready stated that he had provided a comment letter to the NAIC president and the Financial Condition (E) Committee. He inquired as to whether actions taken by the Working Group regarding this project would go through the complete NAIC committee process, including reporting to the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee and review by the Executive (EX) Committee and Plenary. Mr. Bruggeman stated that due to the controversial nature of this topic, this agenda item will be specifically considered through all levels of the committee process.

Commissioner Mulready further inquired regarding the expense recognition and payment of cashflows for using a third party to pay policy acquisition costs compared to insurers who directly pay commission expense. Mr. Bruggeman stated that traditional life insurance policies typically have a larger commission in the first year the policy is written. Through the use of a third party, some insurers have used a levelized repayment plan, so the first-year commission is repaid over several years. Additionally, the immediate expense recognition for this first year commission, as is required under SSAP No. 71, is not being properly recognized by some insurers in the year of acquisition. As a third party has remitted funds on behalf of an insurer, the insurer needs to properly recognize the loan as a liability. Commissioner Mulready queried about lapse risk, which is a common element built into these financing agreements. Mr. Bruggeman commented that lapse risk cannot be transferred to a noninsurance entity; and SSAP No. 71 still requires the liability to be recognized, even if repayment to the third party is not guaranteed. Mr. Bruggeman further stated that by not recognizing the full commission financing liability, an insurance company is asserting a 100% lapse rate, which is not an appropriate assumption and not consistent with the reserving methodology used for these products.

Elly Nettleton (Guggenheim) stated that levelized commissions are not a new concept. She noted that a 2010 U.S. Securities and Exchange Commission (SEC) complaint against another carrier notes that levelized commissions were common practice before Issue Paper No. 71 was finalized. She stated that the concept of persistency remains a concern, as Guggenheim believes expense recognition will occur earlier than has traditionally been required. She stated that Guggenheim does feel it is a dangerous practice to remove persistency in the treatment of levelized commission. Mr. Bruggeman stated that the concepts regarding traditional persistency commission are not a part of the proposed edits, as this agenda item is to clarify that initial acquisition costs should not be deferred through the use of a funding agreement.

Mr. Stolte stated that in 1991, Virginia had an insolvency in which the company participated in a structure where it utilized a levelized commission financing arrangement and did not properly recognize a liability for the amounts paid by the third party. However, as the insurer was liquidated, the third-party financier sought reimbursement for commission amounts previously forwarded on behalf of the insurer. Mr. Stolte stated that the insurer had not recorded the full amount of the liability, and this overstated surplus. He stated that if these amounts due are not recorded, they are in essence off book, unrecorded liabilities. He stated that the concept of recognizing commission expenses when incurred has been a long-standing concept of statutory accounting, which was noted even prior to codification. He noted that acquisition costs are expensed as incurred upfront.

Commissioner Donelon responded that the insurer referenced by Mr. Stolte did a levelized commission practice; however, he perceived the accounting practice was fully transparent, and the $16 million amount of the off-balance sheet liability only represented a fraction of the $120 million insolvency. He stated that earlier exposures of this item, involved other large life insurers; however their earlier concerns appear to have been accommodated. He inquired regarding the nature of this accommodation. Mr. Bruggeman stated that the referenced was clarification that true persistency commissions—i.e., subsequent year commissions—were not intended to be captured in the scope of levelized commissions revisions in SSAP No. 71. He said the initial revisions that were perceived by the broader insurance industry as affecting traditional persistency commission and the Working Group subsequently clarified that that was not the intent of the revisions. Ms. Gann stated that SSAP No. 71 is a common area SSAP, so it is applicable to all insurer and product types. She stated that the intent of SSAP No. 71 revisions is to capture initial acquisition costs, not traditional persistency commissions as are common in many insurance products.
Thomas B. Considine (National Council of Insurance Legislators—NCOIL) stated that NCOIL believes that the changes proposed are substantive in nature and the timing of an adoption is less than prudent, especially in light of the current economic environment. He noted that he believes the revisions will have adverse capital consequences on some companies. Companies utilizing levelized commission structures have done so for decades, and in conjunction with this requiring a significant financial impact, NCOIL would recommend a four or five-year phase-in of expense recognition. Mr. Stolte stated that in response to a multi-year phase-in request, insurers affected could request a permitted practice from their state of domicile. In doing so, a multi-year phase-in could be granted; however, the financial and capital impact could be appropriately disclosed. Mr. Considine stated that permitted practices are not viewed as favorably as uniform treatment, and this would not be a preferred solution.

Lynn Kelley (Delaware Life), on behalf of interested parties, stated that they do not agree with the proposed edits, and they believe the edits are substantive in nature. She stated that interested parties believe that their accounting practices have been in compliance with SSAP No. 71 and have been subject to numerous insurance exams and independent financial audits. If adopted by the Working Group, an effective date no earlier than Dec. 31, 2021, is requested. She stated her agreement with a multi-year phase-in.

Brendan Bridgeland (Center for Insurance Research—CIR), NAIC consumer representative, stated that the most important function of statutory accounting is to ensure solvency and a level playing field among similar insurers. He stated that an insurer’s financial statements should reflect capital available to pay policyholder claims and not include off-balance sheet liabilities. Despite this requiring material adjustments to a few insurers, he stated that adoption was recommended to ensure that financial statements appropriately reflect an insurer’s financial position. He stated that deferring the recognition of commissions is what is maintaining a company in the appropriate risk-based capital (RBC) range, then the company may warrant additional scrutiny for other areas as well.

Mr. Bruggeman stated that as the edits proposed do not change the original intent of SSAP No. 71, he views the edits as nonsubstantive in nature. He stated that the concept of requiring immediate expense recognition of initial acquisition costs meets the spirit of statutory accounting concepts, as well as the concept of conservatism as referenced in the preamble. Commissioner Donelon stated that he believes this issue to be substantive in nature, even if it is not in the technical accounting sense. He indicated that the reporting entity that contacted him indicated that it will not have a materially adverse impact on them. However, he has been told that there are reporting entities that will have a significant financial impact on some small companies, and it will jeopardize members of the ACLI and the National Alliance of Life Companies (NALC). He stated recommendation for grandfathering of existing practices or a multi-year phase-in of any recognition requirements. He stated his agreement with Mr. Considine that a permitted practice is not preferred. Mr. Smith stated that when referencing the definitions of substantive versus nonsubstantive in the Accounting Practices and Procedures Manual (AP&P Manual), the exposed edits are nonsubstantive in nature.

Commissioner Mulready stated that this practice has been in place for decades, and to classify this as nonsubstantive signifies to him that all prior insurance exams and independent audits are incorrect. Ms. Andersen stated that the proposed edits are only clarifying in nature, as they do not change the intent of SSAP No. 71. She stated that this practice has only been employed by a small subset of insurance entities, and it results in liabilities that are not recorded in the financial statements. Mr. Stolte stated that commission financial arrangements are difficult to discover; in the prior insolvency example referenced by Mr. Stolte, it was not until the company was in receivership that the issue was discovered. He noted that such arrangements create illusory surplus and violate the concepts of statutory accounting. He noted that audits do not review every single contract.

Mr. Smith made a motion, seconded by Mr. Kim Hudson, to classify the edits as nonsubstantive in nature. The motion passed, with Louisiana voting opposed.

Mr. Bruggeman stated that nonsubstantive agenda items are generally effective immediately; however, due to the nature of this topic, it will need to be approved by the Accounting Practices and Procedures (E) Task Force, the Financial Condition (E) Committee, and the Executive (EX) Committee and Plenary. With the Executive (EX) Committee and Plenary not meeting until the Summer National Meeting, the earliest this adoption could take effect is likely the third quarter of 2021. Mr. Smith stated that due to the length that this agenda item has been discussed, they would support an immediate effective date. Ms. Belfi, Mr. Fry, Mr. Clark and Mr. Kim Hudson stated that due to the likelihood of a significant financial impact combined with the requirement for adoption by the Executive (EX) Committee and Plenary, a Dec. 31, 2021, effective date is recommended. In an inquiry from Mr. Bruggeman, no one opposed to a Dec. 31, 2021, effective date.
Ms. Gann stated that in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors, as this agenda item directs that any adjustments be accounted for as a change in accounting principle, the effective date will not have a material impact, as any required cumulative adjustments calculated as of Jan. 1, 2021, will impact unassigned funds (surplus). Mr. Bruggeman stated in response to a query that upon adoption, insurers will be required to record a liability for outstanding amounts due to a third-party funding agent as a cumulative effect adjustment to surplus as of Jan. 1. He noted that activities throughout the year after Jan. 1 are recorded through income.

Mr. Kim Hudson made a motion, seconded by Mr. Smith, to adopt the previously exposed nonsubstantive edits to SSAP No. 71 with a Dec. 31, 2021, effective date discussed in the meeting (Attachment One-Q). Included in this motion was a recommendation to support a concurrent Blanks (E) Working Group agenda item requiring a general interrogatory to identify, in certain instances, companies who use third parties to pay commission expenses. The motion passed, with Louisiana voting opposed.

Ms. Marcotte asked whether the Working Group wants to plan an interim vote for exposure after the issue paper is updated for today’s actions or wait until a later date to consider for exposure. Mr. Bruggeman noted that the issue paper will be updated for the Working Group’s and the Task Force’s final actions, and it will be considered for exposure at a later date.

5. Considered Maintenance Agenda – Pending Listing – Exposures

Mr. Kim Hudson made a motion, seconded by Mr. Kasinow, to move agenda items 2021-01 through 2021-09, all of which are classified as nonsubstantive, to the active listing and expose all items for a public comment period ending April 30. The motion passed unanimously.

a. Agenda Item 2021-01

Mr. Bruggeman directed the Working Group to agenda item 2021-01: ASU 2021-01, Reference Rate Reform. Mr. Pinegar stated that in March 2020, the FASB issued ASU 2020-04 – Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting. He stated that the Working Group adopted ASU 2020-04 in its entirety, where applicable, through its adoption of INT 20-01: ASU 2020-04 – Reference Rate Reform. ASU 2020-04 and INT 20-01 provided temporary, optional and expedient relief in that a qualifying contract modification (because of reference rate reform) should not be considered an event that requires contract remeasurement. This exception guidance applies to both general business and derivative contracts. Mr. Pinegar stated that since the issuance of ASU 2020-04, questions have arisen regarding the accounting for changes in reference rates (that do not specifically reference the London Interbank Offered Rate (LIBOR) or another rate that is expected to be discontinued) that are specifically used for margining, discounting, or contract price alignment. He stated that these items are generally referred to as “basis swaps,” and basis swaps were specifically addressed by the Working Group through INT 20-09: Basis Swaps as a Result of the LIBOR Transition. He stated that INT 20-09 requires basis swaps to be reported as “hedging other,” and they are recorded at fair value, unless the entity can prove hedge effectiveness, as is required per SSAP No. 86. However, ASU 2021-01 directs that basis swaps and other derivative instruments affected by changes to the interest rates used for discounting, margining, or contract price alignment (regardless of whether they reference LIBOR or another rate that is expected to be discontinued as a result of reference rate reform) are eligible for the optional relief provided for in ASU 2020-04. Mr. Pinegar stated that NAIC staff recommend minor modifications to INT 20-01 to reflect the additional financial instruments affected by ASU 2021-01.

b. Agenda Item 2021-02

Mr. Bruggeman directed the Working Group to agenda item 2021-02: ASU 2020-08 – Premium Amortization on Callable Debt Securities. Mr. Pinegar stated that ASU 2020-08 clarifies the amortization of premium associated with callable debt securities, and while the guidance closely mimics existing guidance in SSAP No. 26R, it does preclude the statutory accounting’s yield-to-worst concept. Accordingly, there may be scenarios for statutory accounting where application of the yield-to-worst concept will result in a lower asset value than amortizing callable debt premium in accordance with ASU 2020-08. Mr. Pinegar stated that this agenda item proposes to reject ASU 2020-08 in SSAP No. 26R.

c. Agenda Item 2021-03

Mr. Bruggeman directed the Working Group to agenda item 2021-03: SSAP No. 103R – Disclosures. Mr. Pinegar stated that this agenda item was drafted as a result of ongoing discussions with industry and state insurance regulators regarding the current
SSAP No. 43R project. One of the topics discussed was the state insurance regulators’ desire to identify situations in which a reporting entity has entered into a securitization, asset-backed financing, or similar transfer transaction where a significant economic interest in the transferred asset is retained by the reporting entity. Mr. Pinegar stated that one of the primary concerns is where an asset has been self-securitized, but the economic benefits have been retained. This agenda item proposes additional disclosures and data capturing certain existing disclosures required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Data capturing of these disclosure elements will permit state insurance regulators to have the ability to perform system inquiries to identify which reporting entities have such transactions and the extent to which they occur. This agenda item proposes a concurrent blanks exposure for possible inclusion in the 2021 year-end financial statements.

d. Agenda Item 2021-04

Mr. Bruggeman directed the Working Group to agenda item 2021-04: SSAP No. 97 – Valuation of Foreign Insurance SCAs. Fatima Sediqzad (NAIC) stated that this agenda item is in response to the Working Group’s previously adopted guidance in SSAP No. 97, indicating that equity method losses stop at zero (preventing a negative equity value) except in scenarios in which limited statutory adjustments result in a negative asset value. She noted that interested parties have requested that the Working Group consider an agenda item to reevaluate whether the ability to go negative from the limited statutory basis of accounting adjustments should remain applicable for SSAP No. 97, paragraph 8.b.iv (foreign insurance SCA) entities. She stated that these long-standing adjustments have historically been viewed as necessary in order to prevent non-admitted assets held by an SCA from receiving more favorable treatment than had the assets been held directly by the reporting entity. She stated that after a review of foreign SCA filings, there were no noted instances of negative value SCAs; therefore, revisions to SSAP No. 97 are not recommended. She stated that this agenda item is proposed to be disposed of without edits to statutory accounting.

Mr. Bruggeman stated that while this agenda item was brought forth as a theoretical exercise, industry is requested to demonstrate examples, specifically those that may not be subject to SCA filing requirements and, as a result, were not a part of the review performed by NAIC staff.

Angelica Tamayo-Sanchez (New York Life) stated that only reviewing foreign insurance SCAs that are subject to SSAP No. 97 filing requirements may not be representative of all foreign insurance SCAs captured in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Additionally, while negative valuation has not been an issue to date, requiring a potential negative equity valuation of a solvent foreign insurance subsidiary does not seem appropriate. Ms. Tamayo-Sanchez stated that a foreign insurance subsidiary should be treated in a similar manner as a domestic insurance subsidiary. Mr. Bruggeman requested that additional details and comments to be submitted during the exposure period.

e. Agenda Item 2021-05

Mr. Bruggeman directed the Working Group to agenda item 2021-05: Cryptocurrencies. Mr. Stultz stated that this agenda item has been drafted in response to inquiries received on the statutory accounting treatment for cryptocurrencies, specifically whether Bitcoin is an admitted asset and within the definition of SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments. This agenda item proposes INT 21-01T: Accounting for Cryptocurrencies to clarify that cryptocurrencies do not meet the definition of cash in SSAP No. 2R or any other admitted asset that is included in the AP&P Manual. Mr. Stultz stated that the exposure also requests information on the current ownership and potential future acquisition of cryptocurrencies.

f. Agenda Item 2021-06EP

Mr. Bruggeman directed the Working Group to agenda item 2021-06EP: Editorial Maintenance Update. Mr. Stultz stated that this agenda item provides nonsubstantive editorial corrections in accordance with the maintenance process. The revisions propose a minor update to the title of SSAP No. 53—Property Casualty Contracts—Premiums, correct grammatical errors in SSAP No. 97, and relocate an existing footnote in the Glossary.

g. Agenda Item 2021-07

Mr. Bruggeman directed the Working Group to agenda item 2021-07: ASU 2020-11, Financial Services—Insurance (Topic 944): Effective Date and Early Application. Mr. Stultz stated that ASU 2020-11 updates effective dates of the amendments in ASU 2019-09, Financial Services – Insurance and ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts.
Contracts. However, both ASU 2019-09 and ASU 2018-12 have previously been rejected for statutory accounting. He noted that the proposed nonsubstantive revisions to Appendix D reject ASU 2020-11 as not applicable to statutory accounting.

h. Agenda Item 2021-08

Mr. Bruggeman directed the Working Group to agenda item 2021-08: ASU 2021-02, Franchisors Revenue from Contracts with Customers. Mr. Stultz stated that ASU 2021-08 slightly amends the guidance that was previously issued in ASU 2014-09, Revenue from Contracts with Customers as it relates to franchisors. The Working Group has previously rejected ASU 2014-09 and several other ASUs related to revenue recognition in SSAP No. 47—Uninsured Plans. He noted that the nonsubstantive revisions propose to reject ASU 2021-02 in SSAP No. 47.

i. Agenda Item 2021-09: State ACA Reinsurance Programs

Mr. Bruggeman directed the Working Group to agenda item 2021-09: State ACA Reinsurance Programs. Ms. Marcotte stated that SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act provides guidance regarding the three federal Affordable Care Act (ACA) risk-sharing programs that had the intent to stabilize insurance rates in the marketplace. She stated that although the risk corridors program and the federal transitional reinsurance program have ended, several states have received approval from the U.S. Department of Health and Human Services (HHS) to run state ACA reinsurance programs under “Section 1332” waivers, which are similar to the federal transitional reinsurance program. This agenda item proposes nonsubstantive revisions to SSAP No. 107 to direct a hybrid accounting approach for the state ACA programs, which is similar to the federal transition reinsurance program. The hybrid accounting approach will divide the accounting into three broad categories, and depending on the characteristics of the plan, a reporting entity will account for the program per SSAP No. 63—Underwriting Pools, SSAP No. 35R—Guaranty Fund and Other Assessments, or SSAP No. 47.

6. Discussed Other Matters

a. Agenda Item 2020-21: SSAP No. 43R – Update

Ms. Gann stated that since December 2020, Iowa state insurance regulators, NAIC staff, and a small subset of interested parties have been meeting weekly to discuss the exposed Iowa Insurance Proposal to define what should be captured in scope of Schedule D, Part 1: Long-Term Bonds. The decision to review investments eligible for Schedule D, Part 1 reporting was determined an appropriate first step, as this schedule entails investments in scope of both SSAP No. 26R and SSAP No. 43R. Significant progress has been made during these meetings, and it is anticipated that an initial exposure will occur in May 2021, potentially to allow comments prior to the Summer National Meeting. Ms. Gann stated that the initial focus has been on principal concepts to differentiate between issuer credit obligations and asset-backed securities. It is anticipated that there will be investments that have been previously reported on Schedule D, Part 1 that will no longer qualify for bond reporting. At this time, it is anticipated that these investments will be captured on Schedule BA as an other long-term invested asset. However, despite potential Schedule BA reporting, consideration will be given to the proper accounting for these investments, and referrals to the Capital Adequacy (E) Task Force will occur to ensure appropriate consideration for RBC charges.

Mr. Clark stated that while this topic remains complex, all parties have approached the discussions in good faith, and as a result, significant progress has been made. He stated that the concern of state insurance regulators is investments that have been legally structured as a bond but do not reflect the characteristics of a bond that state insurance regulators would anticipate for Schedule D, Part 1 reporting. This structuring could result in a more favorable RBC charge than had the assets been held directly. Mr. Clark stated that the discussions with NAIC staff and the subset of interested parties remain principles-based and are anticipated for initial exposure in the near future.

Mr. Monahan, on behalf of the ACLI and interested parties, stated appreciation for the Iowa state insurance regulators, NAIC staff, and interested parties for assisting with the ongoing SSAP No. 43R project. Mr. Bruggeman stated that remaining principles-based is an important aspect of the project, and he noted that beginning with the review of Schedule D, Part 1 was appropriate, as its implications may affect investments captured in both SSAP No. 26R and SSAP No. 43R.

b. INT 19-02: Freddie Mac Single Security Initiative

Ms. Gann stated that INT 19-02 remains applicable as long as securities are exchanged under the Freddie Mac Single Security Initiative. She stated that NAIC staff researched this item, and as the Freddie Mac Single Security Initiative remains an ongoing
program, INT 19-02 remains in full effect. Subsequent reviews will continue to assess continued applicability.

c. **Agenda Item 2019-49: Retroactive Reinsurance Exception – Update**

Ms. Marcotte stated that this agenda item was to address a referral from the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy) that noted diversity in reporting for companies applying the retroactive reinsurance exception by allowing certain contracts to be reported prospectively. She stated that NAIC staff have held some preliminary discussion with members of the Casualty Actuarial and Statistical (C) Task Force on this topic, and they anticipate additional discussions with industry. A proposal is anticipated for Working Group review for exposure either in the interim or at the Summer National Meeting.

d. **Paycheck Protection Program (PPP) – SAP Guidance**

Ms. Marcotte stated that in response to questions received, statutory accounting guidance for the forgiveness of Paycheck Protection Program (PPP) loans is addressed in SSAP No. 15—Debt and Holding Company Obligations, paragraph 11, and it provides that debt is recognized until extinguished, including formally being forgiven. In addition, per SSAP No. 15, paragraph 25, gains on termination of debt are recognized as capital gains.

e. **VOSTF Referral Regarding WCFI**

Ms. Marcotte stated that a referral from the Valuation of Securities (E) Task Force regarding revisions to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) in response to the Working Group’s May 2020 revisions to SSAP No. 105R—Working Capital Finance Investments is expected. NAIC staff anticipate addressing this referral when received.

f. **Review of GAAP Exposures:**

Ms. Sediqzad stated that NAIC staff have reviewed the outstanding U.S. GAAP exposure, and she noted that comments during the exposure period are not recommended; however, a review will occur once the new ASU is issued as final.

Mr. Bruggeman stated that the comment deadline for all exposed agenda items is April 30.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Jan. 25, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); David Smith (VA); and Amy Malm (WI).

1. **Extended INT 20-03 and INT 20-07**

As directed by the Working Group during its Jan. 6 e-vote, as public comments (Attachments One-A1 and One-A2) were supportive of extending two previously adopted interpretations (INTs), the Working Group conducted an e-vote to consider extension of **INT 20-03: Troubled Debt Restructuring Due to COVID-19** and **INT 20-07: Troubled Debt Restructuring for Certain Debt Instruments Due to COVID-19**. A summary of the INTs is as follows:

1) **INT 20-03** – This INT clarifies that a modification of mortgage loan or bank loan terms in response to COVID-19 shall follow the provisions detailed in the April 7, 2020, “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” and the provisions of the federal Coronavirus Aid, Relief and Economic Security (CARES) Act in determining whether the modification shall be reported as a troubled debt restructuring. This INT had an effective date that mirrored the original CARES Act, and it originally terminated on Dec. 31, 2020. As extended, the INT is now applicable through whichever date is earlier—Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

2) **INT 20-07** – This INT provides temporary practical expedients in assessing whether modifications in response to COVID-19 are insignificant under **Statement of Statutory Accounting Principles (SSAP) No. 36—Troubled Debt Restructuring** and whether a modification shall be considered an exchange under **SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities**. This INT had an effective date that mirrored the original CARES Act, and it originally terminated on Dec. 31, 2020. As extended, the INT is now applicable through whichever date is earlier—Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

Mr. Guerin made a motion, seconded by Mr. Smith, to extend INT 20-03 (Attachment One-A3) and INT 20-07 (Attachment One-A4). The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
January 22, 2021

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on November 12, 2020 with Comments due January 22, 2021

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

INT 20-03: Troubled Debt Restructuring Due to COVID-19

This interpretation was effective for the specific purpose to address loan modifications in response to COVID-19. Consistent with the CARES act, this interpretation was only applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, interest rate modification, a repayment plan and other similar arrangement that defer or delays the payment of principal or interest for a loan that was not more than 30 days past due as of December 31, 2019. As determined in the CARES Act, this interpretation was originally only applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that was 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID-19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 6, 2021, the provisions in this INT were tentatively extended to be applicable through the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID-19), outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

Interested parties support the continued consistency with the Cares Act.
INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19

This interpretation was originally effective for the specific purpose to provide practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36 and in assessing whether a change is substantive under SSAP No. 103R. This interpretation will only be applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates. For clarity, this effective timeframe specifies when modifications in response to COVID-19 can be incorporated using the provisions of this interpretation. Once incorporated, the provisions of this interpretation will continue for the duration of the modification.

On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 6, 2021, the provisions in this INT were tentatively extended to be applicable through the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19), outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

Interested parties support the continued consistency with the Cares Act.

Ref #2019-24: Levelized and Persistency Commission

On November 12, 2020, the Working Group held a hearing to receive comments and based on those comments, took the following actions:

- Re-exposed the prior version of SSAP #71 with certain edits: – (1) the proposed effective date of Jan.1, 2021 was changed to be effective upon adoption, and (2) the revised text made explicit that the proposed revisions will apply to contracts in effect as of the date of adoption.

- Determined that the revisions to SSAP #71 met the due process for either a substantive or a non-substantive revision but concluded to keep the revision classified as nonsubstantive. The Working Group reiterated that it is not the impact of a change on an individual entity that determines whether a change is substantive or non-substantive, but whether the revision is in line with the original intent of the SSAP. The Working group noted that this is a clarification of existing guidance consistent with original intent. (Commissioner Donelon noted an objection to the classification as non-substantive.)

- Directed NAIC Staff to draft an Issue Paper to document the discussion on this topic for historical purposes.
Interested parties would like to again thank the Working Group for the opportunity to continue to comment on the most recent revisions to exposure Ref #2019-24 – Levelized and Persistency Commission (SSAP No. 71, Policy Acquisition Costs and Commissions) discussed on November 12, 2020 (the “Exposure”).

These comments begin with industry comments regarding the Working Group’s most recent revisions to the Exposure:

**Paragraph #5 new comments pertain to the sentence below:**

Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled.

The Working Group has made a change to the last phrase of this sentence that still does not provide clarity as to its meaning and to the sentence as a whole. Assuming that the phrase refers to the contingency noted in the previous phrase within the sentence, industry disagrees with wording that creates a blanket statement across all third-party agreements with regard to recognizing a liability similar to a funding agreement. During the entire exposure/revision process, interested parties has consistently stated that agreements which include traditional elements such as persistency as part of a legally binding commission contract should be excluded from the funding agreement treatment as was provided in the original (current) SSAP No. 71 wording. If the last phrase “until the underlying policy has been cancelled” pertains to the recognition of the liability, it seems that the wording does not contemplate even a partial repayment of the liability during the period when the policy is active.

**Paragraph #7 new comments pertain to the following:**

The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts are effective in effect on the date of adoption of the revisions January 1, 2021.

Industry has consistently maintained that there has been a long-standing industry practice to link third party contracts to insurance elements such as persistency, including commission arrangements, reinsurance contracts, etc. Removing this link as has been indicated in the Working Group revisions is a substantive change. As such, we do not agree with the language in paragraph #7 that calls the revisions nonsubstantive and we disagree that such changes should be put in effect immediately upon adoption since they are substantive in nature and require further evaluation.

Certain of the third-party contracts noted above are complex and not quite as simple as the description of levelized commissions in the most recent draft of the Exposure. The Exposure depicts a simple arrangement whereby the insurer repays a third party over time, with interest, for making upfront heaped commissions to agents. This does not consider, for example, certain third-party contracts for which the insurer pays the third-party trail commissions based upon account value in-force in exchange for performing many contractual agency services other than simply funding and making upfront payments to selling agents. Such complex contracts require sufficient time to allow insurers to work with their state of domicile to determine the correct application of the revised guidance with respect to contracts which the regulator has already approved. Then, if establishment of a liability is indeed required,
additional time would be necessary to calculate such an accrual and review with external auditors prior to reporting the change on a quarterly or annual statement. For these reasons, and as you suggested, Chairman Bruggeman, we propose that the revisions within the Exposure be adopted with an effective date no sooner than 12/31/21.

Comments previously made on existing revisions included for purposes of documentation:

Paragraph #4, most recent exposure:
4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

Paragraph #4, most recent exposure with highlighted edits:
4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity over time. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) In instances where the levelized commission is not tied to, or contingent upon, traditional elements such as policy persistency or premium payments, these transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized when the contract between the reporting entity and the third party has no substance but to defer commission payments by the reporting entity. The continuance of the stream of payments specified in the levelized commission contract in these situations is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

Industry proposes to replace a large section of paragraph #5, including the Working Group recent revisions, with more concise language that expresses the need to establish a liability when an arrangement is in substance a funding agreement. The current revisions are lengthy and somewhat redundant. Industry continues to disagree with the current revisions which too broadly state that all third-party arrangements, even those with traditional insurance elements, are considered funding arrangements. Industry retained the concept of the link between the accrual of commissions and traditional elements such as policy persistency.
Excerpt from paragraph #5, most recent exposure requested to be deleted:
Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Interested parties highlighted wording to replace the above excerpt from paragraph #5:
The reporting entity is required to recognize the full repayment amount of earned commission costs by the direct policy writing agents even if those costs are paid indirectly by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Recognition of those commission costs and recording a liability is required in such arrangements that are not linked to or contingent upon traditional elements. Such treatment shall occur consistently among insurers.

Summary:
Since its initial exposure in August 2019, industry has had concerns with the substantive nature of the proposed revisions and has consistently expressed these concerns.

- The last paragraph of the current SSAP No. 71 states: “The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.” This wording was revised to instead explicitly include arrangements linked to traditional elements with those that have no substance other than to link to the repayment of an advance amount. This is clearly a substantive change and not clarifying the original intent. It is a change to the intent.

- The current revisions require the accrual of a liability in situations that are inconsistent with the guidance SSAP No. 5R. Under a levelized commission program a third party has the obligation for the full initial sales commission. The insurer’s obligation under a levelized commission program that incorporates persistency should be accrued to the extent of legally contracted amounts owed. We do not believe the original intent of the SSAP required accruing for amounts
that are not yet due and that may never be due. We strongly feel that the recognition of an obligation based on persistency is in accordance with the principles of SSAP 5R.

- The interpretation of SSAP No. 71 that persistency is the obligating event for accrual of the levelized/persistency commissions is long-standing industry practice that has been subject to both independent audits and state insurance department examinations without this interpretation being raised as an issue nor requiring adjustments to the companies’ financial statements.

- The current proposed language does not address the many varying product/distribution compensation arrangements in the industry and interested parties continue to believe this will cause unintended consequences.

- The existing SSAP No. 71 guidance is consistent in the application of persistency being part of the transfer of the risk (liability) to another party. If the lapse risk (persistency) is transferred to another party, the liability that the insurance company may have is also transferred to that party and the insurance company has no liability. Removing persistency as a factor in the accrual of commissions is a dangerous precedent. The differentiation between commissions based on real insurance risks versus payments based solely upon the passage of time in SSAP No. 71 goes directly to the risk transfer issue of one type of level commissions versus another. The proposed additional language eliminates this differentiation.

**Conclusion:**

Industry continues to maintain that the revisions exposed have changed the original intent of SSAP No. 71 and do not believe that they are nonsubstantive. Removing insurance elements from the determination of obligating events of third-party commission contracts may set a precedent that will have significant unintended consequences. As such, interested parties request that the Working Group consider these comments and proposed revisions. In addition, we request that this exposure be categorized as substantive, and given due process and an effective date.

**Ref #2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities**

The Working Group exposed this agenda item, with detailed revisions to SSAP No. 25, as detailed in a draft labeled with the date of November 12, 2020.

That draft contained proposed revisions intended to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.

- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.

Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

On December 10, 2020, some members of interested parties and NAIC staff had a conference call to discuss the November 12th draft and possible edits to address concerns that the draft unintentionally impacted passive investments held by insurers in addition to investment in insurers. Staff amended the draft to address these concerns and is taking the updated draft back to the Working Group for its consideration.

Interested parties thank the staff for meeting with industry and in working to address our concerns.

Ref #2020-22: Accounting for Perpetual Bonds

The Working Group exposed revisions to SSAP No. 26R—Bonds to clarify that perpetual bonds are within scope as a “bond,” and shall apply the yield-to-worst concept. Additionally, perpetual bonds that do not possess or no longer possess a call feature shall follow fair value reporting.

Interested parties appreciated the opportunity to work directly with NAIC staff on this topic. After reviewing the modified proposal, we have one remaining comment, which has already been discussed with NAIC Staff. In paragraph 9, the proposal reads as follows:

“New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized to the next effective call date. For perpetual bonds purchased at a discount, any applicable discount shall be accreted utilizing the yield-to-worst concept.”

We recommend the language be “fine-tuned” as it implies those with a remaining premium would be amortized to the next effective call date. The language regarding amortization should be aligned with other bonds and reference the use of the yield to worst method, not the next effective call date. We suggest the following wording:

“New footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.”

Ref #2020-32: SSAP No. 26R - Disclosure Update

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds to expand the called bond disclosures to also include bonds terminated early through a tender offer.

Interested parties have no comments on this item.
**Ref #2020-33: SSAP No. 32R – Publicly Traded Preferred Stock Warrants**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 32R—Preferred Stock and SSAP No. 86—Derivatives to scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

Interested parties have no comments on this item.

**Ref #2020-34: SSAP No. 43R – Government-Sponsored Enterprises – Credit Risk Transfer Transactions**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 43R—Loan-Backed and Structures Securities to incorporate minor scope modifications to reflect recent changes to the STACR and CAS programs. The proposed edits would allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope of SSAP No. 43R when a REMIC structure is used in the STACR program or CAS program.

Interested parties have no comments on this item.

**Ref #2020-35: SSAP No. 97 – Audit Opinions**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed this agenda item with a request for comments on the extent in which situations exist that hinder admittance of 8.b.iii. entities due to the inability to quantify a departure from U.S. GAAP.

Interested parties is not aware of any situations that hinder admittance of 8.b.iii entities due to the departure of U.S. GAAP as a result of the inability to quantify the departure.

**Ref #2020-37: Separate Account – Product Identifiers**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding the degree of product identifying details needed to adequately assess the product features and reserve liabilities in the separate account. Particularly, this is requesting feedback on how to obtain increased product identifier reporting granularity in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). Additionally, feedback is requested regarding if a threshold should be established for when aggregate reporting would be permitted.

In response to the solicitation of feedback on additional product identifiers specifically for PRT and RILA transactions in the Separate Account General Interrogatories, the ACLI suggests adding a PRT and RILA product identifier. See example identifiers in bold:
The addition of these identifiers would bifurcate out PRT and RILA transactions. Further, the use of these additional identifiers would show in General Interrogatory 1.01 if there were guarantees associated with these different products.

**Ref #2020-38: Pension Risk Transfer – Separate Account Disclosure**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding possible modifications to SSAP No. 56—Separate Accounts specific to pension risk transfer (PRT) products. Depending upon the feedback received, the Working Group would have several options available including, but not limited to, requiring the separate identification of pension risk transfer products (including transactions, guarantees, reserve assumptions, etc.) within existing disclosure requirements or the addition of a new general interrogatory (and perhaps new separate accounting reporting schedules / exhibits) to separate specific product detail that was previously reported in an aggregated format.

Pension risk transfer transactions differ from other separate account transactions in that PRT products are group products, not individual products. The American Council of Life Insurers believes that these differences are adequately addressed in the current disclosure requirements of SSAP No. 56 – Separate Accounts. Specifically, paragraphs 31c and 33a include disclosure requirements for products with guarantees, which may include PRT transactions. Further, these disclosure requirements extend to the General Account Annual Statement Note 35B. Additionally, the proposal above on Ref# 2020-37 will provide additional detail for PRT products in the General Interrogatories.

We believe that the current disclosures sufficiently capture PRT transactions however, we defer to the Working Group and regulators if these groups voice concern that they are not able to discern something specific.
Ref #2020-39: Interpretation Policy Statement Updates

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F—*Policy Statements* regarding the issuance and adoption of accounting interpretations.

Based upon interested parties’ discussion with NAIC staff and our understanding of the objective of the changes to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F—*Policy Statements* (Appendix F), we’ve marked up Appendix F with edits that clarify the policy for issuing interpretations which amend, supersede, or conflict with existing SSAPs (please see attached). Specifically, the interested parties’ proposed revisions clarify that such interpretations are temporary and restricted to circumstances requiring immediate, temporary guidance such as catastrophes or other emergencies. We believe the marked Appendix F is consistent with the intent to use interpretations in limited circumstances. Our proposed revisions explicitly establish that interpretations are not intended as a shortcut to bypass the deliberative process for amending existing statutory accounting guidance or developing new guidance.

Ref #2020-40: Clarification of Prescribed Practices

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

Interested parties are concerned that the discussion of prescribed and permitted practices in this proposal are likely to cause confusion. An insurer’s annual and quarterly statutory statements that are filed with the state of domicile and all states the insurer is licensed are prepared in accordance with the accounting practices prescribed or permitted by the state of domicile. However, in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than provided in the AP&P manual. We believe the proposal should be amended to clarify that if a non-domiciliary state in which the company is licensed requires or allows a practice by state statute / bulletin (or other state-wide provision) in such supplemental financial information that is different from NAIC SAP, that practice(s) is also considered a prescribed practice. We recommend changes to the proposed wording to clarify these points (please see attached).

Ref #2020-41: ASU 2020-06 - Convertible Instruments

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations and SSAP No. 86—Derivatives, to reject ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s
Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity for statutory accounting.

Interested parties have no comment on this item.

Ref #2020-42: ASU 2020-07 - Presentation and Disclosures by Not-for-Profit Entities

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets as not applicable to statutory accounting.

Interested parties have no comment on this item.

Mr. Dale Bruggeman
Chair, Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Re: Working Group’s Recent Action on INT 20-03 and INT 20-07

Dear Mr. Bruggeman:

The Mortgage Bankers Associations (MBA)\(^1\) and the American Council of Life Insurers (ACLI),\(^2\) on behalf of our respective member insurers, express their support for the Statutory Accounting Principles (E) Working Group’s proposed extensions of the periods covered by INT 20-03 and INT 20-07, to conform them to the period covered by section 4013 of the CARES Act, *Temporary Relief from Troubled Debt Restructurings (TDR)*, as amended on December 27, 2020.

We believe it is appropriate for SAPWG to continue to harmonize insurers’ financial reporting of modifications of mortgage loans and certain other debt instruments under statutory accounting standards and financial reporting of the same modifications under United States Generally Accepted Accounting Principles (US GAAP).

---

\(^1\) The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 280,000 people in virtually every community in the country. Its membership of over 2,300 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, 70 life insurance companies engaged in real estate finance, and others in the mortgage lending field. For additional information, visit MBA’s website: www.mba.org

\(^2\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 95 percent of industry assets in the United States. Learn more at acli.com.
We want to take this opportunity to express on behalf our members our appreciation for how quickly and effective the SAPWG has operated throughout this pandemic to provide insurers with certainty as to these important accounting issues.

Sincerely,

Mike Flood                      Paul Graham

INT 20-03: Troubled Debt Restructuring Due to COVID-19

INT 20-03 Dates Discussed
March 26, 2020; April 15, 2020; January 6, 2021; January 25, 2021

INT 20-03 References
SSAP No. 36—Troubled Debt Restructuring

INT 20-03 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, Congress and federal and state prudential banking regulators have considered provisions pertaining to mortgage loans as a result of the effects of the COVID-19. These provisions are intended to be applicable for the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

3. Furthermore, guidance has been issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable, or may become unable, to meet their contractual payment obligations because of the effects of COVID-19. As detailed in that guidance, the Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-19.

4. This interpretation considers the interagency guidance issued by federal and state prudential banking regulators on March 22, 2020, addressing whether the modification of mortgage loan or bank loan terms in response to COVID-19 shall be considered a troubled debt restructuring.

INT 20-03 Discussion

5. SSAP No. 36—Troubled Debt Restructuring provides guidance, predominantly adopted from U.S. GAAP, in determining whether a debt restructuring is considered a troubled debt restructuring. Additionally, SSAP No. 36 provides accounting and disclosure guidance when a troubled debt restructuring has been deemed to occur. Pursuant to existing guidance in SSAP No. 36, a debt restructuring is not necessarily considered a troubled debt restructuring and a creditor must assess whether the debtor is experiencing financial difficulties. The guidance also indicates that a delay in payment that is insignificant is not a concession.
6. On March 22, 2020, the federal and state prudential banking regulators issued a joint statement that included guidance on their approach to the accounting for loan modifications in light of the economic impact of the coronavirus pandemic. The guidance was developed in consultation with the staff of the FASB who concur with the approach and indicated that they stand ready to assist stakeholders with any questions. This interagency statement is provided below and is accessible through the FASB response via the following link:

https://fasb.org/cs/Satellite?c=FASBContent_C&cid=1176174374016&pagename=FASB%2FFASBContent_C%2FFNewsPage

Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), the Office of the Comptroller of the Currency (OCC), the Consumer Financial Protection Bureau (CFPB), and the State Banking Regulators (hereafter, the agencies), are issuing this interagency statement to provide additional information to financial institutions who are working with borrowers affected by the Coronavirus Disease 2019 (also referred to as COVID-19). The United States has been operating under a presidentially declared emergency since March 13, 2020, and financial institutions and their customers are affected by COVID-19. The agencies understand that this unique and evolving situation could pose temporary business disruptions and challenges that affect banks, credit unions, businesses, borrowers, and the economy. The agencies will continue to communicate with the industry as this situation unfolds, including through additional statements, webinars, frequently asked questions, and other means, as appropriate.

Working with Customers

The agencies encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because of the effects of COVID-19. The agencies view loan modification programs as positive actions that can mitigate adverse effects on borrowers due to COVID-19. The agencies will not criticize institutions for working with borrowers and will not direct supervised institutions to automatically categorize all COVID-19 related loan modifications as troubled debt restructurings (TDRs). The agencies will not criticize financial institutions that mitigate credit risk through prudent actions consistent with safe and sound practices. The agencies consider such proactive actions to be in the best interest of institutions, their borrowers, and the economy. This approach is consistent with the agencies’ longstanding practice of encouraging financial institutions to assist borrowers in times of natural disaster and other extreme events. The agencies also will not criticize institutions that work with borrowers as part of a risk mitigation strategy intended to improve an existing non-pass loan.

Accounting for Loan Modifications

Modifications of loan terms do not automatically result in TDRs. According to U.S. GAAP, a restructuring of a debt constitutes a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider. The agencies have confirmed with staff of the Financial Accounting Standards Board (FASB) that short-term modifications made on a good faith basis in response to COVID-19 to borrowers who were current prior to any relief, are not TDRs. This includes short-term (e.g., six months) modifications such as payment deferrals, fee waivers, extensions of repayment terms, or other delays in payment that are insignificant. Borrowers considered current are those that are less than 30 days past due on their contractual payments at the time a modification program is implemented.
Working with borrowers that are current on existing loans, either individually or as part of a program for creditworthy borrowers who are experiencing short-term financial or operational problems as a result of COVID-19, generally would not be considered TDRs. For modification programs designed to provide temporary relief for current borrowers affected by COVID-19, financial institutions may presume that borrowers that are current on payments are not experiencing financial difficulties at the time of the modification for purposes of determining TDR status, and thus no further TDR analysis is required for each loan modification in the program.

Modification or deferral programs mandated by the federal or a state government related to COVID-19 would not be in the scope of ASC 310-40, e.g., a state program that requires all institutions within that state to suspend mortgage payments for a specified period.

The agencies’ examiners will exercise judgment in reviewing loan modifications, including TDRs, and will not automatically adversely risk rate credits that are affected by COVID-19, including those considered TDRs. Regardless of whether modifications result in loans that are considered TDRs or are adversely classified, agency examiners will not criticize prudent efforts to modify the terms on existing loans to affected customers.

In addition, the FRB, the FDIC, and the OCC note that efforts to work with borrowers of one-to-four family residential mortgages as described in the modification section of this document, where the loans are prudently underwritten, and not past due or carried in nonaccrual status, will not result in the loans being considered restructured or modified for the purposes of their respective risk-based capital rules.

Past Due Reporting

With regard to loans not otherwise reportable as past due, financial institutions are not expected to designate loans with deferrals granted due to COVID-19 as past due because of the deferral. A loan’s payment date is governed by the due date stipulated in the legal loan documents. If a financial institution agrees to a payment deferral, this may result in no contractual payments being past due, and these loans are not considered past due during the period of the deferral.

Nonaccrual Status and Charge-Offs

Each financial institution should refer to the applicable regulatory reporting instructions, as well as its internal accounting policies, to determine if loans to stressed borrowers should be reported as nonaccrual assets in regulatory reports. However, during the short-term arrangements discussed in this statement, these loans generally should not be reported as nonaccrual. As more information becomes available indicating a specific loan will not be repaid, institutions should refer to the charge-off guidance in the instructions for the Consolidated Reports of Condition and Income.

Discount Window Eligibility

Institutions are reminded that loans that have been restructured as described under this statement will continue to be eligible as collateral at the FRB’s discount window based on the usual criteria.

7. On March 27, 2020, President Donald Trump signed into law the Coronavirus Aid, Relief and Economic Security Act (CARES Act). The provisions in Section 4013 specifically address temporary relief from troubled debt restructurings. On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act as shown below:
SEC. 4013. TEMPORARY RELIEF FROM TROUBLED DEBT RESTRUCTURINGS.

(a) DEFINITIONS.—In this section:

(1) APPLICABLE PERIOD.—The term “applicable period” means the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020 January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

(2) APPROPRIATE FEDERAL BANKING AGENCY.—The term “appropriate Federal banking agency”—
(A) has the meaning given the term in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813); and
(B) includes the National Credit Union Administration.

(b) SUSPENSION.—

(1) IN GENERAL.—During the applicable period, a financial institution including an insurance company may elect to— (A) suspend the requirements under United States generally accepted accounting principles for loan modifications related to the coronavirus disease 2019 (COVID–19) pandemic that would otherwise be categorized as a troubled debt restructuring; and (B) suspend any determination of a loan modified as a result of the effects of the coronavirus disease 2019 (COVID–19) pandemic as being a troubled debt restructuring, including impairment for accounting purposes under United States Generally Accepted Accounting Principles.

(2) APPLICABILITY.—Any suspension under paragraph (1)—

(A) shall be applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019; and

(B) shall not apply to any adverse impact on the credit of a borrower that is not related to the coronavirus disease 2019 (COVID–19) pandemic.

(c) DEFERENCE.—The appropriate Federal banking agency of the financial institution including an insurance company shall defer to the determination of the financial institution, including an insurance company, to make a suspension under this section.

(d) RECORDS.—For modified loans for which suspensions under subsection (a) apply—

(1) financial institutions, including insurance companies, should continue to maintain records of the volume of loans involved; and

(2) the appropriate Federal banking agencies may collect data about such loans for supervisory purposes.

8. On April 7, 2020, the federal and state prudential banking regulators issued a revised joint statement to reflect the issuance of the CARES Act:

Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus (Revised)

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), the Office of the Comptroller of the Currency (OCC), and the Consumer Financial Protection Bureau (CFPB) (hereafter, the agencies), in consultation with the state financial regulators, are issuing this revised interagency statement to provide additional information to financial institutions that are working with borrowers affected by the Coronavirus Disease 2019 (also referred to as COVID-19). The United States has been operating under a presidentially declared emergency since March 13, 2020 (National Emergency). The agencies understand that this unique and evolving situation could pose temporary business disruptions and challenges that affect banks, credit unions, businesses, borrowers, and the economy.

On March 27, 2020, the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) was signed into law. As discussed in more detail below, the CARES Act creates a forbearance program for federally backed mortgage loans, protects borrowers from negative credit reporting due to loan accommodations related to the National Emergency, and provides financial institutions the option to temporarily suspend certain requirements under U.S. generally accepted accounting principles (GAAP) related to troubled debt restructurings (TDR) for a limited period of time to account for the effects of COVID-19.

The agencies originally issued a statement on March 22, 2020, to encourage financial institutions to work prudently with borrowers and to describe the agencies’ interpretation of how current accounting rules under U.S. GAAP apply to certain COVID-19-related modifications. This revised interagency statement clarifies the interaction between the March 22, 2020, interagency statement and section 4013 of the CARES Act, Temporary Relief from Troubled Debt Restructurings (section 4013), as well as the agencies’ views on consumer protection considerations. The agencies will continue to communicate with the industry as this situation unfolds, including through additional statements, webinars, frequently asked questions, and other means, as appropriate.

Working with Customers: General Safety and Soundness Considerations

The agencies encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because of the effects of COVID-19. The agencies view loan modification programs as positive actions that can mitigate adverse effects on borrowers due to COVID-19. The agencies will not criticize institutions for working with borrowers in a safe and sound manner. As described below, institutions generally do not need to categorize COVID-19-related modifications as TDRs, and the agencies will not direct supervised institutions to automatically categorize all COVID-19 related loan modifications as TDRs.

The agencies will not criticize financial institutions that mitigate credit risk through prudent actions consistent with safe and sound practices. The agencies consider such proactive measures to be in the best interest of institutions, their borrowers, and the economy. This approach is consistent with the agencies’ longstanding practice of encouraging financial institutions to assist borrowers in times of natural disaster and other extreme events although the agencies recognize that the effects of this event are particularly extreme and broad-based. The agencies also will not criticize institutions that work with borrowers as part of a risk mitigation strategy intended to improve an existing non-pass loan.

Financial institutions have broad discretion to implement prudent modification programs consistent with the framework included in this statement.
Accounting and Reporting Considerations

As provided for under the CARES Act, a financial institution may account for an eligible loan modification either under section 4013 or in accordance with ASC Subtopic 310-40.5 If a loan modification is not eligible under section 4013, or if the institution elects not to account for the loan modification under section 4013, the financial institution should evaluate whether the modified loan is a TDR.

Accounting for Loan Modifications under Section 4013

To be an eligible loan under section 4013 (section 4013 loan), a loan modification must be (1) related to COVID-19; (2) executed on a loan that was not more than 30 days past due as of December 31, 2019; and (3) executed between March 1, 2020, and the earlier of (A) 60 days after the date of termination of the National Emergency or (B) December 31, 2020 (applicable period).

Financial institutions accounting for eligible loans under section 4013 are not required to apply ASC Subtopic 310-40 to the section 4013 loans for the term of the loan modification. Financial institutions do not have to report section 4013 loans as TDRs in regulatory reports. However, consistent with section 4013, financial institutions should maintain records of the volume of section 4013 loans. Data about section 4013 loans may be collected for supervisory purposes. Institutions do not need to determine impairment associated with certain loan concessions that would otherwise have been required for TDRs (e.g., interest rate concessions, payment deferrals, or loan extensions). For the most recent information on reporting requirements for section 4013 loans, refer to the Federal Financial Institutions Examination Council Instructions.

Accounting for Other Loan Modifications Not under Section 4013

There are circumstances in which a loan modification may not be eligible under Section 4013 or in which an institution elects not to apply Section 4013. For example, a loan that is modified after the end of the applicable period would not be eligible under Section 4013. For such loans, the guidance below applies.

Modifications of loan terms do not automatically result in TDRs. According to ASC Subtopic 310-40, a restructuring of a debt constitutes a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider. The agencies have confirmed with staff of the Financial Accounting Standards Board (FASB) that short-term modifications made on a good faith basis in response to COVID-19 to borrowers who were current prior to any relief are not TDRs under ASC Subtopic 310-40. This includes short-term (e.g., six months) modifications such as payment deferrals, fee waivers, extensions of repayment terms, or delays in payment that are insignificant. Borrowers considered current are those that are less than 30 days past due on their contractual payments at the time a modification program is implemented.

Accordingly, working with borrowers who are current on existing loans, either individually or as part of a program for creditworthy borrowers who are experiencing short-term financial or operational problems as a result of COVID-19 generally would not be considered TDRs. More specifically, financial institutions may presume that borrowers are not experiencing financial difficulties at the time of the modification for purposes of determining TDR status, and thus no further TDR analysis is required for each loan modification in the program if:

- The modification is in response to the National Emergency;
- The borrower was current on payments at the time the modification program is implemented; and
- The modification is short-term (e.g., six months).
Government-mandated modification or deferral programs related to COVID-19 would not be in the scope of ASC Subtopic 310-40, for example, a state program that requires institutions to suspend mortgage payments within that state for a specified period.

Credit Risk

The agencies’ examiners will exercise judgment in reviewing loan modifications and will not automatically adversely risk rate credits that are affected by COVID-19. All loan modifications should comply with applicable laws and regulations and be consistent with safe and sound practices (including maintenance of appropriate allowances for loan and lease losses or allowances for credit losses, as applicable). Regardless of whether modifications result in loans that are considered TDRs, section 4013 loans, or are adversely classified, agency examiners will not criticize prudent efforts to modify the terms on existing loans to affected customers.

Regulatory Capital

The FRB, the FDIC, and the OCC note that efforts to work with borrowers of one-to-four family residential mortgages as described above, where the loans are prudently underwritten, and not 90 days or more past due or carried in nonaccrual status, will not result in the loans being considered restructured or modified for the purposes of their respective risk-based capital rules.

Past Due Reporting

With regard to loans not otherwise reportable as past due, financial institutions are not expected to designate loans with deferrals granted due to COVID-19 as past due because of the deferral. A loan’s payment date is governed by the due date stipulated in the legal agreement. If a financial institution agrees to a payment deferral, this may result in no contractual payments being past due, and these loans are not considered past due during the period of the deferral.

Nonaccrual Status and Charge-Offs

Each financial institution should refer to the applicable regulatory reporting instructions, as well as its internal accounting policies, to determine if loans to stressed borrowers should be reported as nonaccrual assets in regulatory reports. However, during the short-term arrangements discussed in this statement, these loans generally should not be reported as nonaccrual. As more information becomes available indicating a specific loan will not be repaid, institutions should refer to the charge-off guidance in the instructions for the Consolidated Reports of Condition and Income.

Discount Window Eligibility

Institutions are reminded that loans that have been restructured as described under this statement will generally continue to be eligible as collateral at the FRB’s discount window based on the usual criteria.

Working with Customers: Consumer Protection Considerations

The agencies encourage financial institutions to consider prudent arrangements that can ease cash flow pressures on affected borrowers, improve their capacity to service debt, increase the potential for financially stressed residential borrowers to keep their homes, and facilitate the financial institution’s ability to collect on its loans. Additionally, such prudent arrangements may mitigate the long-term impact of this emergency on consumers by avoiding delinquencies and other adverse consequences.

When working with borrowers, lenders and servicers should adhere to consumer protection requirements, including fair lending laws, to provide the opportunity for all borrowers to benefit from these arrangements. When exercising supervisory and enforcement responsibilities, the agencies...
will take into account the unique circumstances impacting borrowers and institutions resulting from the National Emergency. The agencies will take into account an institution’s good-faith efforts demonstrably designed to support consumers and comply with consumer protection laws. The agencies expect that supervisory feedback for institutions will be focused on identifying issues, correcting deficiencies, and ensuring appropriate remediation to consumers. The agencies do not expect to take a consumer compliance public enforcement action against an institution, provided that the circumstances were related to the National Emergency and that the institution made good faith efforts to support borrowers and comply with the consumer protection requirements, as well as responded to any needed corrective action.

INT 20-03 Consensus

9. The Statutory Accounting Principles (E) Working Group reached a consensus to clarify that a modification of mortgage loan or bank loan terms in response to COVID-19 shall follow the provisions detailed in the April 7, 2020, “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” (detailed in paragraph 8) and the provisions of the CARES Act (detailed in paragraph 7) in determining whether the modification shall be reported as a troubled debt restructuring within SSAP No. 36.

10. Original Effective Date: This interpretation is effective for the specific purpose to address loan modifications in response to COVID-19. Consistent with the CARES act, this interpretation is only applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, interest rate modification, a repayment plan and other similar arrangement that defer or delays the payment of principal or interest for a loan that was not more than 30 days past due as of December 31, 2019. As determined in the CARES Act, this interpretation will only be applicable for the period beginning on March 1, 2020, and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by President Trump on March 13, 2020, under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

11. Extension of Effective Date: On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 25, 2021, the provisions in this INT were extended to be applicable through the earlier of January 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19), outbreak declared by the President on March 13, 2020, under the National Emergencies Act terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT and will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

INT 20-03 Status

12. No further discussion is planned.
Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19

INT 20-07 Dates Discussed

May 5, 2020; May 20, 2020; January 6, 2021; January 25, 2021

INT 20-07 References

SSAP No. 26R—Bonds
SSAP No. 36—Troubled Debt Restructuring
SSAP No. 43R—Loan-Backed and Structured Securities
SSAP No. 103R—Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

INT 20-07 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities issued “stay at home” orders and forced non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed; however, the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, Congress and federal and state prudential banking regulators issued provisions pertaining to loan modifications as a result of the effects of COVID-19. These provisions are intended to be applicable for the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, interest rate modification, repayment plan, or other similar arrangements that defers or delays the repayment of principal and/or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

3. On April 15, the Statutory Accounting Principles (E) Working Group issued INT 20-03T: Troubled Debt Restructuring Due to COVID-19. This interpretation provides guidance for mortgage loans and bank loans, consistent with the CARES Act and an April 7 interagency statement in recognizing troubled debt restructurings in response to COVID-19. Although the original comment letter received from interested parties proposed an expansion to all SSAP No. 26R and SSAP No. 43R debt securities, during the April 15 discussion, the comments presented from interested parties clarified their request to expand the interpretation, which was primarily related to private placement debt securities. The Working Group requested that interested parties provide more detail on this request.

4. On April 23, the interested parties submitted a comment letter requesting expansion consideration to all debt instruments in scope of SSAP No. 26R and SSAP No. 43R. In making these expanded requests, the interested parties’ comment letter stated that from a practical standpoint, actual relief will almost exclusively apply to private placement debt securities. However, by referencing “all debt securities,” it will not be necessary to provide a precise definition of a private placement debt security. In addition to considering edits for troubled debt restructuring, the comment letter also requested exceptions to impairment recognition for these securities.
5. The issues addressed in this interpretation include:

   a. Should exceptions be provided to the determination of troubled debt restructurings and impairment for all debt securities in response to COVID-19?

   b. Should exceptions be considered in the determination of troubled debt restructurings for non-public debt instruments in which the reporting entity is a direct, active, participant in the modification negotiations?

   c. Should exceptions be considered to assist with the determination of insignificant modifications in accordance with SSAP No. 36, paragraph 10?

INT 20-07 Discussion

Consideration of Exceptions for All Debt Securities

6. After evaluating the April 23 interested parties’ comment letter, this interpretation considers statutory accounting exceptions to minimize documentation and assessment requirements for specific debt securities. However, due to the importance of state regulators having accurate and reliable financial statement information, this interpretation does not propose the following:

   a. Exceptions to the recognition of a troubled debt restructuring for debt securities with modifications that result in non-insignificant concessions to a debtor that is experiencing financial difficulties.

   b. Exceptions to the assessment or recognition of impairment for debt instruments.

7. With the conclusion in paragraph 6, this interpretation does not eliminate a reporting entity’s responsibility to recognize modifications in debt instruments that to a debtor that is experiencing financial difficulties that qualify as concessions under SSAP No. 36. Furthermore, this interpretation does not delay the assessment and recognition of impairment for debt instruments that are not captured in scope of INT 20-04. As detailed above, these exceptions are not granted due to the importance of state regulators having timely, accurate and reliable financial information.

Consideration of Exceptions if the Reporting Entity is a Direct, Active Participant in Negotiating Modifications

8. Consideration was given as to whether exceptions should be provided for troubled debt restructuring and impairment assessments for situations in which the reporting entity is a direct, active participant in negotiating debt instrument modifications. However, due to the vast nature of non-public instruments that are currently classified as debt instruments that are designed in response to specific insurance reporting entity needs (such as collateralized fund obligations, principal protected notes, and other non-traditional securitizations), using direct, active participation as the sole threshold in determining whether exceptions should be granted was viewed as too expansive to ensure appropriate recognition of non-insignificant concessions and/or known impairments in the statutory financial statements.

Consideration of Provisions to Assist with Existing Troubled Debt Restructuring Guidance

9. Pursuant to existing guidance in SSAP No. 36, not all modifications are considered a troubled debt restructuring. In order to be troubled debt restructuring, a creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise. As such, in order to be considered a troubled debt restructuring, the debtor must be having financial difficulties and the modification must
be considered a concession. Pursuant to paragraph 10 of SSAP No. 36, a restructuring that results in only a delay in payment that is insignificant is not a concession. The guidance also indicates that the following factors, when considered together, may indicate that a restructuring results in a delay in payment that is insignificant:

a. The amount of the restructured payments subject to the delay is insignificant relative to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due.

b. The delay in timing of the restructured payment period is insignificant to any one of the following:
   i. frequency of payments due under the debt
   ii. debt’s original contractual maturity,
   iii. debt’s original expected duration.

10. Although this interpretation does not support exceptions that would result with “significant” modifications (concessions) not being recognized, from information received, differing assessments of what could be considered insignificant, and the required documentation, may be prohibitive in providing modifications. Particularly, it has been noted that the assessments are subject to auditor assessment and there are concerns that a modification considered insignificant by a reporting entity may be subsequently assessed as a significant modification by the reporting entity’s auditor.

**Practical Expedients to Assessing Concessions**

11. This interpretation, as a means of assisting with troubled debt restructuring assessments, provides limited-time practical-expedient determinants that can be used in accordance with existing SSAP No. 36 provisions in determining whether a modification shall be considered a troubled debt restructuring. These provisions are intended to assist reporting entities and auditors when considering whether a modification is insignificant. If a modification is considered insignificant, then the modification is not a concession, and recognition of a troubled debt restructuring, and disclosure is not required. If a modification does not meet the practical expedient provisions provided within this interpretation, the modification shall not automatically be considered a “non-insignificant” modification (concession). Rather, the reporting entity can continue to apply the existing guidance in SSAP No. 36 in assessing whether the modification is insignificant and is therefore not a concession. Modifications that qualify as concessions (do not qualify as insignificant) are required to follow the existing guidance in SSAP No. 36 as a troubled debt restructuring.

12. Specifically, this interpretation provides the following limited-time practical expedients:

a. Paragraph 10.a. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay is insignificant to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results with a change that reflects a 10% or less shortfall amount in the contractual amount due.

b. Paragraph 10.b. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay in timing of the restructured payment period is insignificant to the frequency of payments due under the debt, debt’s original contractual maturity or the debt’s original expected duration. For the duration of this interpretation, debt security restructurings in response to COVID-
19 are considered to be insignificant if the restructuring does not result in an extension of the maturity of the debt by more than three years.

13. For the duration of this interpretation, debt security restructurings in response to COVID-19 that solely impact covenant requirements are not considered troubled debt restructurings.

**Practical Expedients on Debt Extinguishments and Exchanges**

14. In addition to the limited-time practical expedients to SSAP No. 36, this interpretation provides an exception to assess modifications as an exchange of debt instruments under paragraph 22 of SSAP No. 103R—Transfer and Servicing of Financial Assets and Extinguishments of Liabilities. Pursuant to the guidance in SSAP No. 103, debt instruments that are exchanged with substantially different terms are reported as an extinguishment and a new debt instrument. Pursuant to the provisions in this interpretation:

a. Modifications that reflect a 10% or less change in contractual cash flows considered insignificant pursuant to paragraph 12.a. do not need to be further evaluated to determine whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification. As such, these investments shall not be reported as an extinguishment and a new debt instrument.

**INT 20-07 Consensus**

15. The Working Group reached a consensus in response to requests to consider exceptions to statutory accounting guidance for troubled debt restructurings and impairment for all debt instruments. Pursuant to this consensus:

a. This interpretation does not provide exceptions to the recognition of a troubled debt restructuring for debt securities with modifications that result in non-insignificant concessions to a debtor that is experiencing financial difficulties.

b. This interpretation does not provide exceptions to the assessment or recognition of impairment for debt instruments. Pursuant to the guidance in SSAP No. 26R, after a modification for a debt instrument, assessment of OTTI shall be based on the current terms of the debt instrument.

16. In response to assessments on the application of existing SSAP No. 36 provisions, particularly in determining whether a modification is a concession (insignificant), this consensus provides the following limited-time practical expedients in determining whether a modification is a concession under SSAP No. 36:

a. Paragraph 10.a. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay is insignificant to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results with a change that reflects a 10% or less shortfall amount in the contractual amount due.

b. Paragraph 10.b. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay in timing of the restructured payment period is insignificant to the frequency of payments due under the debt, debt’s original contractual maturity or the debt’s original expected duration. For the duration of this interpretation, debt security restructurings in response to COVID-
19 are considered to be insignificant if the restructuring does not result in an extension of the maturity of the debt by more than three years.

17. For the duration of this interpretation, debt security restructurings in response to COVID-19 that solely impact covenant requirements are not considered troubled debt restructurings.

18. In response to assessments on the application of existing SSAP No. 103R provisions, particularly in determining whether a modification that is not a troubled debt restructuring needs to be assessed as an exchange, this consensus provides the following exceptions to SSAP No. 103R:

   a. Modifications that reflect a 10% or less change in contractual cash flows considered insignificant under this interpretation do not need to be further evaluated to determine whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification. As such, these investments shall not be reported as an extinguishment and a new debt instrument.

   b. Modifications in response to COVID-19 that exceed the practical expedient of a 10% shortfall in contractual cash flows permitted in this interpretation that were assessed and deemed insignificant under paragraph 10 of SSAP No. 36 shall not be considered an exchange of debt instruments with substantially different terms under SSAP No. 103, paragraph 22. (Under SSAP No. 103, an exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of cash flows under the terms of the new instruments is at least 10% different from the present value of the remaining cash flows under the terms of the original instrument.) Reporting entities shall work with auditors and regulators with the application of paragraph 10 of SSAP No. 36 to confirm that a change in contractual cash flows in excess of 10% qualifies as insignificant.

19. The Working Group highlights that modifications that would be considered troubled debt restructurings, particularly as they provide a non-insignificant concession, may be presented to the domiciliary state regulatory for a permitted practice exception to prevent troubled debt restructuring recognition and disclosure. However, the Working Group concluded that the need for reliable and accurate financial information does not permit exceptions that would allow wide-spread non-insignificant restructurings to occur and not be recognized on the statutory financial statements.

20. Original Effective Date: This interpretation is effective for the specific purpose to provide practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36 and in assessing whether a change is substantive under SSAP No. 103R. This interpretation will only be applicable for the period beginning on March 1, 2020, and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by President Donald Trump on March 13, 2020, under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates. For clarity, this effective timeframe specifies when modifications in response to COVID-19 can be incorporated using the provisions of this interpretation. Once incorporated, the provisions of this interpretation will continue for the duration of the modification.

21. Extension of Effective Date: On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 25, 2021, the provisions in this INT were extended to be applicable through the earlier of January 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by President Trump on March 13, 2020, under the National Emergencies Act.
terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

INT 20-07 Status

22. No further discussion is planned.

Application of the INT 20-07 Consensus

Example 1: Payment Holiday with Extension of Payment Term for SSAP No. 26R Instrument

A. Insurer modifies a debt instrument captured in scope of SSAP No. 26R to provide a payment holiday for 6-months in response to COVID-19. For the duration of the payment holiday, no payments are due, however the original maturity of the debt instrument has been extended from 10 years to 10 years and 6 months, with all terms and conditions remaining the same except for the payment holiday.

B. The amount of restructuring is considered insignificant as it results in a less than 10% shortfall in the contractual amount due.

C. At the time of the restructuring, fair value has dropped below amortized cost.

D. At the time of the restructuring, the reporting entity believes it is probable that the reporting entity will collect all amounts due in accordance with the modified terms of the debt instrument. Furthermore, the reporting entity does not intend to sell the instrument.

Example 1 - Application of INT 20-07

1. As this modification only extends the duration 6-months and results in a less than 10% shortfall in the contractual amount due, pursuant to the practical expedients in INT 20-07, the modification is considered insignificant and not a concession under SSAP No. 36. As this modification is not a concession, accounting and reporting as a troubled debt restructuring is not required.

2. As this modification is less than 10% of the contractual cash flows, pursuant to the practical expedients in INT 20-07, further assessment is not required to determine whether the modification is more than minor under SSAP No. 103R. As such, the modification shall not be reported as an extinguishment and a new debt instrument.

3. As the reporting entity believes it is probable that they will collect all amounts due in accordance with the modified terms of the debt instrument, no other-than-temporary impairment recognition is required under SSAP No. 26R. Future assessments of impairment will be based on the modified terms of the debt instrument.

Example 2: Reduction of Covenant Terms for SSAP No. 43R Instrument

A. Insurer modifies a debt instrument captured in scope of SSAP No. 43R to eliminate covenant terms in response to COVID-19. For the remainder of the maturity of the debt instrument, the covenant terms will reflect the modification incorporated in response to COVID-19. There has been no changes to the debt instrument with the exception of the covenant requirements.
B. At the time of the restructuring, fair value has dropped below amortized cost.

C. At the time of the restructuring, the reporting entity has the intent and ability to hold debt instrument to recover the amortized cost basis. Additionally, the reporting entity has not identified that a non-interest related decline exists.

Example 2 - Application of INT 20-07

1. As this modification only pertains to covenant components (and not the amount or timing of payments), pursuant to the practical expedients in INT 20-07, the modification is considered insignificant and not a concession under SSAP No. 36. As this modification is not a concession, accounting and reporting as a troubled debt restructuring is not required.

2. As this modification does not change the contractual cash flows, pursuant to the practical expedients INT 20-07, further assessment is not required to determine whether the modification is more than minor under SSAP No. 103R. As such, the modification shall not be reported as an extinguishment and a new debt instrument.

3. As the reporting entity has the intent and ability to hold the debt security to recover the amortized cost basis, and they have not identified a non-interest related decline, an other-than-temporary impairment is not required under SSAP No. 43R.

Example 3: Reduction in Interest Rate and Covenants for SSAP No. 26R Debt Security

A. Insurer modifies a debt instrument captured in scope of SSAP No. 26R in response to COVID-19 to eliminate interest payments for a 12-month timeframe, and to eliminate covenant requirements for the same 12-month timeframe. This change will represent an 11% shortfall of the contractual amount due.

B. At the time of the restructuring, fair value has dropped below amortized cost.

C. At the time of the restructuring, the reporting entity believes it is probable that the reporting entity will collect all amounts due in accordance with the modified terms of the debt instrument. Furthermore, the reporting entity does not intend to sell the instrument.

Example 3 - Application of INT 20-07

1. As this modification results with a 11% shortfall in the contractual amount due, the reporting entity cannot assume the change is insignificant, and therefore not a concession, under the practical expedients provided within this interpretation.

2. The reporting entity may continue to assess whether this modification is an insignificant change under paragraph 10 of SSAP No. 36. (If the reporting entity elects not to further assess for insignificance, then would proceed with considering the change as a concession.) If the reporting entity concludes that the change is insignificant, and therefore not a concession, then recognition as a troubled debt restructuring is not required. If the change is assessed as insignificant, although the change in cash flows exceeds 10%, the instrument does not need to be assessed as an exchange of debt instruments pursuant to SSAP No. 103R, paragraph 22. An OTTI is not required at the time of the modification if the reporting entity has the intent and ability to hold to recover the modified amortized cost basis and if the reporting entity has not identified that a non-interest related decline exists. Future assessments of impairment will be based on the modified terms of the debt instrument.
3. If the reporting entity concludes that the change is not insignificant under paragraph 10 of SSAP No. 36, then the modification is a concession and further assessment as a troubled debt restructuring is required. Assuming there is no collateral, a realized loss shall be recognized for the difference between fair value and amortized cost. Subsequent to this realized loss recognition, future assessments of impairment will be based on the modified terms of the debt security.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Jan. 6, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); David Smith (VA); and Amy Malm (WI).

1. Exposed Agenda Item INT 20-03 and INT 20-07

On Dec. 27, 2020, the federal Consolidated Appropriations Act of 2021 was signed into law, which extended certain provisions of the federal Coronavirus Aid, Relief, and Economic Security (CARES) Act. As the Working Group previously adopted two interpretations (INTs) specifically tied to the CARES Act, on Jan. 6, it conducted an e-vote to expose a possible extension of INT 20-03: Troubled Debt Restructuring Due to COVID-19 and INT 20-07: Troubled Debt Restructuring for Certain Debt Instruments Due to COVID-19 for a public comment period ending Jan. 22. A summary of the exposed INTs is as follows:

1) INT 20-03 – This INT clarifies that a modification of mortgage loan or bank loan terms in response to COVID-19 shall follow the provisions detailed in the April 7, 2020, “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus,” and the provisions of the CARES Act in determining whether the modification shall be reported as a troubled debt restructuring. This INT has an effective date that mirrors the original CARES Act, and it terminated on Dec. 31, 2020. With a possible extension, the INT will be applicable through the earlier of Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

2) INT 20-07 – This INT provides temporary practical expedients in assessing whether modifications in response to COVID-19 are insignificant under Statement of Statutory Accounting Principles (SSAP) No. 36—Troubled Debt Restructuring and whether a modification shall be considered an exchange under SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. This INT has an effective date that mirrors the original CARES Act, and it terminated on Dec. 31, 2020. With a possible extension, the INT will be applicable through the earlier of Jan. 1, 2022, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

Mr. Arfanis made a motion, seconded by Mr. Guerin, to expose INT 20-03 and INT 20-07 for extension consideration. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Dec. 28, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner (PA); David Smith (VA); and Amy Malm (WI).

1. INT 20-10

As directed by the Working Group during its Dec. 18 meeting, because public comments (Attachment One-C1) were supportive of adoption, the Working Group held an e-vote to consider adoption of Interpretation (INT) 2020-10: Reporting Nonconforming Credit Tenant Loans. This INT provides a limited-time exception on the reporting of nonconforming credit tenant loans (CTLs). The temporary exception allows for continued reporting on Schedule D Part 1 – Long-Term Bonds Owned December 31 of Current Year for nonconforming CTLs that are filed with the NAIC Securities Valuation Office (SVO) by Feb. 15, 2021. This provision only requires that an entity file the security with the SVO, not that the entity receive the SVO-assigned designation prior to submitting its 2020 annual statutory financial statements. If an entity does not file with the SVO by Feb. 15, 2021, the investment shall be reported on Schedule BA – Other Long-Term Invested Assets. CTLs reported on Schedule BA are not eligible to be reported with a credit-rating provider (CRP)-determined NAIC designation.

For nonconforming CTLs that have been filed with the SVO and retained on Schedule D Part 1, the reporting entity is required to disclose the total amount of nonconforming CTLs reported on Schedule D Part 1 on Note 1 as if it were a permitted practice. The reporting entity shall complete the permitted practice disclosures required by Statement of Statutory Accounting Principles (SSAP) No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures.

Additionally, this INT provides that nonconforming CTLs that have been previously reported on a different reporting schedule may remain on the prior reporting schedule, as there is no requirement to pursue SVO-assigned designations. Reporting entities that have previously reported nonconforming CTLs on Schedule D Part 1 that do not want to file with the SVO or do not want to disclose in Note 1 are permitted to reclassify these CTLs to Schedule B – Mortgage Loans or Schedule BA without NAIC designations.

The exceptions granted in this INT are only applicable for year-end 2020 statutory financial statements. Nonconforming CTLs that have been filed with the SVO and are reported on Schedule D Part 1 shall continue Note 1 reporting for each 2021 quarterly financial statement until an SVO-assigned designation is received. The provisions within this INT and the ability to continue reporting nonconforming CTLs on Schedule D Part 1 with an SVO-assigned NAIC designation are limited time exceptions that extend only to Oct. 1, 2021.

Mr. Arfanis made a motion, seconded by Mr. Kasinow, to adopt INT 20-10 (Attachment One-C2). The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
December 22, 2020

Mr. Dale Bruggeman, Chairman
NAIC Statutory Accounting Principles Working Group
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Re: Ref #2020-24 INT 20-10, Reporting Nonconforming Credit Tenant Loans (CTLs)

Dear Mr. Bruggeman

The American Council of Life Insurers (ACLI)1, Private Placement investors Association (“PPiA”)2, North American Securities Valuation Association (“NASVA”)3, and the Lease-Backed Securities Working Group4 (collectively, “the undersigned”) would like to thank the Statutory Accounting Principles Working Group

1 The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

2 The Private Placement Investors Association (PPiA) is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPiA serves 44 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace. Learn more at www.usppia.com.

3 The North American Securities Valuation Association (NASVA) is an association of insurance company representatives who interact with the National Association of Insurance Commissioners Securities Valuation Office to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC’s ISIS electronic security filing system, and commenting on year-end processes. Find more information here

4 The Lease-Backed Securities Working Group is an industry group consisting of insurance company investors, investment bankers, attorneys and advisors. The members of the group collectively have multiple decades of experience investing in, structuring and closing over $50 billion of lease-backed financings — including Credit Tenant Loans (CTLs), Ground Lease Financings (GLFs) and other rated lease-backed securities. Over the past 30 years, principals of our group have worked closely with the NAIC SVO to devise and clarify the CTL and GLF guidelines, as well as on related efforts including matters governed by SSAP 26 and SSAP 43R.
Group (SAPWG) and NAIC Staff for the opportunity to comment on the exposed INT 20-10: Reporting Nonconforming Credit Tenant Loans.

The undersigned are supportive of SAPWG’s changes to the original INT, exposed on November 28, 2020, which extend the time horizon under which the SVO may review non-conforming CTL (i.e., for commercial lease rated lease-backed securities which are not CTLs or GLFs) filings, allow insurers to hold such securities on Schedule D-1 for year-end 2020, so long as they disclose additional information in Annual Statement, Notes to Financial Statements, Note 1 – Summary of significant Accounting Policies (“Note 1”), and allow insurers the option to hold such securities on Schedule B or BA, if they do not wish to file for an NAIC designation and provide the Note 1 disclosures. These changes provide much needed time for industry to comply with the new filing requirements and increases the likelihood that the SVO may actually be able to assign ratings designations to some of these securities within the required timeframe. It also provides capital certainty and streamlined reporting for those insurers who choose not to pursue Schedule D-1 filings. We appreciate Regulators’ and Staff’s willingness to accommodate Industry’s desire for additional time and capital relief.

As we move forward, investors may seek additional clarification from the SVO on whether or not a specific security needs to be filed. For instance, we note that there are many lease-backed securities which have been issued -- either as public bonds or 144A’s -- in the municipal taxable or tax-exempt markets which “[meet] the characteristics of a credit tenant loan”. For these deals, the subject transactions may have been issued based on a prospectus or were issued many years ago, and investors may not have access to the underlying loan-level documentation. We hope that the SVO will be able to provide individual guidance to investors in such cases.

The undersigned stand ready to help communicate this exposure broadly across Industry and to work with the SVO to resolve any operational questions or challenges that may arise, as insurers begin to comply with these new rules.

Sincerely,

Mike Monahan
Tracey Lindsey
American Council of Life Insurers
NASVA

John Petchler
John M. Garrison

Interpretation of the Statutory Accounting Principles Working Group

INT 20-10: Reporting Nonconforming Credit Tenant Loans

INT 20-10 Dates Discussed
Evote to Expose November 18, 2020; December 18, 2020; Evote to Adopt December 28, 2020

INT 20-04 References
SSAP No. 43R—Loan-Backed and Structured Securities

INT 20-10 Issue
1. During the Statutory Accounting Principles (E) Working Group meeting on November 12, 2020, the Working Group discussed and deferred final decision on inconsistencies in the reporting of “nonconforming” credit tenant loans (CTLs) currently reported on Schedule D-1 and directed reporting exceptions for year-end 2020. Due to subsequent questions, this interpretation has been issued to detail the provisions provided and clarify the reporting of CTLs in the year-end 2020 statutory financial statements.

INT 20-10 Discussion
2. As detailed in agenda item 2020-24, some reporting entities have reported CTLs that do not qualify as “conforming” CTLs per the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) on Schedule D-1: Long-Term Bonds. CTLs that do not qualify under the P&P Manual structural requirements are noted as “nonconforming” CTLs. During the November 12 discussion, the Working Group deferred final guidance on the reporting of nonconforming CTLs. This deferral was supported as the Working Group has a separate project to assess investments that are captured on Schedule D-1. With this project, it was identified that it would be undesirable to require an investment that is currently being reported on Schedule D-1 to be moved to a different schedule if there was potential for that investment to subsequently qualify for Schedule D-1.

3. Although the Working Group deferred final conclusion on the reporting of nonconforming CTLs, it was identified that the long-standing guidance detailed in the P&P Manual only permits CTLs that met certain structural criteria, which is verified by the SVO, to be reported on Schedule D-1. Under this existing guidance, these conforming CTLs are also prohibited from using CRP ratings in determining NAIC designation but are required to utilize SVO-assigned NAIC designations obtained after the SVO verifies compliance with the structural elements. As such, to ensure that nonconforming CTLs are not provided more favorable provisions than conforming CTLs that meet structural requirements, the Working Group confirmed that only CTLs that are filed with the NAIC SVO by February 15, 2021, shall be reported on Schedule D-1. Key aspects noted in this direction:

   a. This direction is a limited-time exception to the NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Purposes and Procedures Manual of the Investment Analysis Office and shall not be inferred to other investments. Pursuant to the noted Policy Statement, obtaining an NAIC designation does not change an investment’s applicable SSAP, annual or quarterly statement reporting schedule, or override other SSAP guidance required
for the investment to be an admitted asset. Although nonconforming CTLs will be permitted to be reported on Schedule D-1 when filed with the SVO for future receipt of an SVO-assigned NAIC designation (even without meeting structural requirements), this is strictly a limited-time exception to prevent reporting schedule changes while a larger project on the scope of Schedule D-1 is considered.

b. The requirement to file the nonconforming CTL for an SVO-assigned NAIC designation for Schedule D-1 applies to all investments that represent credit tenant loans. It is not permissible for a reporting entity to classify an investment, which meets the characteristics of a credit tenant loan, as a different type of investment (for example, as a form of leased-backed security) for purposes of reporting the investment on Schedule D-1 without filing for an SVO-assigned NAIC designation.

c. The Working Group direction intends to only address nonconforming CTLs that have previously been reported on Schedule D-1 although they did not comply with the requirements of the P&P Manual. This direction is not intended to require, or permit, nonconforming CTLs that have been previously reported as mortgage loans (on Schedule B – Mortgage Loans) or as other invested assets (on Schedule BA – Other Long-Term Invested Assets) to be moved to a different reporting schedule. Nonconforming CTLs that have previously been reported on Schedule B or BA shall remain on that reporting schedule for the duration of this INT.

INT 20-10 Consensus

4. The Working Group reached a consensus to provide a limited time exception allowing nonconforming CTLs to continue to be reported on Schedule D-1 for year-end 2020 provided they have filed for an SVO-assigned NAIC designation. With the issuance of this interpretation, the Working Group confirmed the provisions and limitations detailed in paragraph 3, and summarized the resulting provisions below:

a. CTLs that qualify per the provisions of the P&P Manual are considered to be “conforming” CTLs and shall be reported on Schedule D-1 with the NAIC designation obtained from the SVO.

b. CTLs that do not qualify per the provisions of the P&P Manual to be “conforming”CTLs shall follow the accounting and reporting provisions detailed in the following subparagraphs. These CTLs are noted as “nonconforming CTLs.”

i. Nonconforming CTLs that have previously been reported on Schedule D-1 may continue to be reported on Schedule D-1 for year-end 2020 if they have filed for an SVO-assigned NAIC designation. This provision only requires that an entity file the security with the SVO by February 15, 2021, not that the entity receive the SVO-assigned designation prior to submitting their 2020 annual statutory financial statements. If an entity does not file the security with the SVO by February 15, 2021, the investment shall be reported on Schedule BA. If reporting on Schedule BA, these CTLs shall not be reported with a credit-rating provider (CRP) determined NAIC designation. For nonconforming CTLs that have been filed with the SVO and retained on Schedule D-1, the reporting entity is required to disclose the total amount of nonconforming CTLs reported on Schedule D-1 on Note 1 as if it were a permitted practice. The reporting entity shall complete the permitted practice disclosures required by SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures, with two separate entries that detail the nonconforming CTLs that were reported on D-1 on one line, and the nonconforming CTLs that were not reported on.
Schedule BA on a separate line within this disclosure. (These lines will likely net to a zero impact to statutory surplus; therefore, the separate line reporting is required.)

ii. Nonconforming CTLs that have been previously reported on a different reporting schedule (e.g., Schedule B or Schedule BA) shall remain on the prior reporting schedule. There is no requirement for reporting entities to pursue SVO-assigned designations for these CTLs or disclose these nonconforming CTLs in Note 1. Furthermore, reporting entities that have previously reported nonconforming CTLs on Schedule D-1 that do not want to file with the SVO or that do not want to disclose in Note 1 pursuant to paragraph 4.b.i. are permitted to reclassify these CTLs to Schedule B or Schedule BA without NAIC designations.

5. The exceptions granted in this interpretation are applicable for the year-end 2020 statutory financial statement only. Nonconforming CTLs that have been filed with the SVO and are reported on Schedule D-1 shall continue the Note 1 reporting for each 2021 quarterly financial statement until an SVO-assigned designation is received. The provisions within this INT, and the ability to continue reporting nonconforming CTLs on Schedule D-1 with an SVO-assigned NAIC designation, are limited time exceptions that extend only to October 1, 2021. The exceptions provided in this INT shall not be interpreted to indicate the likely conclusion of the Working Group in determining the appropriate reporting schedule for nonconforming CTLs. All reporting entities shall be prepared to make adjustments to comply with the reporting schedule utilized for nonconforming CTLs upon final conclusion by the Working Group.

INT 20-10 Status

6. On November 18, 2020, the Statutory Accounting Principles (E) Working Group exposed this interpretation to provide a limited-time exception on the reporting of nonconforming CTLs. On December 18, 2020, the Working Group exposed revisions to this interpretation to allow continued D-1 reporting of nonconforming CTLs if they are filed with the SVO by February 15, 2021. With this provision, nonconforming CTLs reported on Schedule D-1 that have not received an SVO-assigned designation shall be disclosed in Note 1 as if a permitted practice. On December 28, 2020, the Working Group finalized action, via evote, to adopt the interpretation exposed December 18, 2020.

7. No further discussion is planned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met Dec. 18, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Kevin Fry (IL); Caroline Fletcher (LA); Kristin Hynes (MI); Doug Bartlett (NH); Bob Kasinow (NY); Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-D1) on previously exposed items.

a. INT 20-11

Mr. Bruggeman directed the Working Group to Interpretation (INT) 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms. He stated that in response to a higher catastrophe year, this INT provides a 60-day extension from the 90-day rule for uncollected premium balances, bills receivable, and amounts due from agents and for policies directly impacted by the noted 2020 hurricanes, California wildfires and Iowa windstorms. He stated that the INT expires Feb. 28, 2021, to allow for year-end 2020 application. In response to an inquiry from Mr. Bruggeman, Robin Marcotte (NAIC) stated that there were no comments received on this exposed INT. As this INT provides a temporary exception to the 90-day rule, the NAIC Policy Statement on Maintenance of Statutory Accounting Principles requires a two-thirds supermajority vote for adoption by the Working Group.

Ms. Malm made a motion, seconded by Mr. Hudson, to adopt INT 20-11, providing limited time exceptions to the 90-day rule in Statement of Statutory Accounting Principles (SSAP) No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers (Attachment One-D2). The motion passed unanimously. Ms. Marcotte stated that INT 20-11 will be publicly posted on the Working Group’s webpage.

b. INT 20-10

Mr. Bruggeman directed the Working Group to INT 20-10: Reporting Nonconforming Credit Tenant Loans (CTLs). He stated that the Working Group met in public forum Nov. 12 and adopted guidance for the accounting and reporting of nonconforming CTLs for year-end 2020; however, due to inquiries received subsequent to that meeting, NAIC staff drafted the INT for clarity purposes and conducted an evote on Nov. 18 to expose the INT for public comment. (Attachment One-D3). As the INT reflects the Working Group’s previous action, the adoption can occur with a single majority vote, whereas changes to the INT will require a two-thirds majority vote for adoption in accordance with the NAIC Policy Statement on Maintenance of Statutory Accounting Principles.

Julie Gann (NAIC) stated that the original agenda item, 2020-24 Accounting and Reporting of Credit Tenant Loans, was initially drafted in response to a Valuation of Securities (E) Task Force referral regarding the accounting and reporting of nonconforming CTLs, which had incorrectly been captured in Schedule D, Part 1, Long-Term Bonds Owned December 31 of Current Year. She stated that the original agenda item exposed two options for the reporting of nonconforming CTLs. The first option is to reaffirm that the reporting of conforming CTLs were in scope of SSAP No. 43R—Loan-Backed and Structured Securities to be reported on Schedule D, Part 1. However, this option clarified that the reporting of nonconforming CTLs should occur on either Schedule B as a mortgage loan or on Schedule BA as an other invested asset. The second option was to classify all CTLs on Schedule BA as an other invested asset. Ms. Gann stated that despite these two initial options, the Nov. 12 decision of the Working Group was to allow an exception for year-end reporting, permitting nonconforming CTLs to remain on Schedule D, Part 1 only if they receive an assigned designation from the NAIC Securities Valuation Office (SVO). She stated that this option is preferred by the Working Group so nonconforming CTLs would not receive better treatment than conforming CTLs, as conforming CTLs are required to be filed with the SVO and receive a designation. In this decision, nonconforming CTLs that do not receive an SVO designation for any reason are to be reported on Schedule BA subject to a 30% capital charge.
Additionally, the Working Group decided that for entities reporting nonconforming CTLs on Schedules B or BA, continued reporting on these schedules should occur, and filing with the SVO would not be required.

Ms. Gann stated that comments received from the industry “Lease-Backed Securities Working Group” proposed several requests: 1) consideration that if the Working Group ultimately decides that nonconforming CTLs are in scope of SSAP No. 43R, they will remain filing exempt (FE), meaning the nonconforming CTLs can be reported with a credit rating provider (CRP) rating rather than require analysis by the SVO; 2) an extension of the Dec. 31, 2020, filing deadline for these types of securities; and 3) specifying that if nonconforming CTLs are moved to Schedule BA, they will be permitted to retain their bond-equivalent capital charge based on their current CRP ratings. In response to these requests, she stated that consideration on whether a nonconforming CTL would be FE eligible is a decision of the Valuation of Securities (E) Task Force, and it will not be in the purview of the Working Group. Additionally, the referenced Dec. 31, 2020, filing deadline was not published by either the SVO or in the INT. The prior discussion indicated only that the SVO designation would need to be received before the statutory financial statements are filed. Finally, NAIC staff did not recommend that the Working Group allow for bond-equivalent risk-based capital (RBC) charges on Schedule BA, as that would allow for reporting optionality. An entity could, in effect, choose which nonconforming CTLs to file with the SVO for Schedule D, Part 1 reporting and elect to report others on Schedule BA with an equivalent capital charge based on CRP ratings. Ms. Gann stated that additional comments, while not reflected in the hearing agenda due to the timing of receipt, were received from the Private Placement Investors Association (PPIA). The PPIA comments in the meeting attachments recommend delaying the proposal until after year-end 2020. If delaying is not an option, the PPIA would then recommend optionality in reporting on either Schedule D, Part 1 or Schedule BA. Finally, if neither of these options are acceptable, the PPIA would request that the Working Group consider that all nonconforming CTLs be reported on Schedule BA, with an RBC charge commensurate to the securities’ CRP rating. Ms. Gann stated that reporting on Schedule BA with an RBC charge driven by a CRP rating was the original suggestion offered by NAIC staff on the Nov. 12 call; however, the motion that occurred for that action failed for lack of a second by the Working Group.

John Garrison (Lease-Backed Securities Working Group) stated appreciation for several previous Working Group decisions regarding the accounting and reporting of CTLs, including: 1) reporting conforming CTLs on Schedule D, Part 1; and 2) requesting analysis on whether the 5% uninsured residual asset risk threshold should be examined. He stated that the 5% threshold was established nearly 20 years ago; it was arbitrary at the time; and as other investment types possess residual risk greater than 5%, CTLs should benefit from a reexamination so that they are on an even playing field with other similar investment types. Additionally, he stated appreciation for the Working Group delay of the accounting and reporting determination of nonconforming CTLs until a final decision can be made regarding the definition of a bond in conjunction with the ongoing SSAP No. 43R/Schedule D, Part 1 project. He stated that in response to the requirement to file these investments with the SVO, many logistical issues have been discovered that are causing difficulties with filing. Examples include contracts not being in electronic form and in off-site storage to the length of documents, causing difficulty with submission to the SVO. Mr. Garrison stated that in addition, many reporting entities close their books early in January, which makes the requirement to receive an SVO-designation before filing not feasible for year-end 2020 reporting. He stated that due to year-end timing, combined with the logistical issues, and with the SVO having to designate an unknown number of nonconforming CTLs, the decision to require filing for 2020 is not feasible. He stated that with the proposal to move nonconforming CTLs to Schedule BA and be subject to a 30% capital charge, a charge equivalent to equity investments or default debt does not accurately reflect the economics of the transaction, as no evidence has been presented that these items have caused a negative credit or a solvency issue for a reporting entity. Additionally, many of these securities have been reported on Schedule D, Part 1 for up to 15 years, all without previous scrutiny or concern. Mr. Garrison stated in response to NAIC staff’s comments regarding optionality in reporting, that he believes the SVO will determine Schedule D, Part 1 or Schedule BA reporting, not the reporting entity itself. He stated that the Lease-Backed Securities Working Group supports filing these items with the SVO; however, an interim 30% capital charge would be an unfair outcome. Mr. Fry, in response to an inquiry from Mr. Bruggeman, stated that if a deferral for year-end reporting is permitted, a deadline should be required for filing with the SVO, as all CTLs should require an NAIC SVO-assigned designation for 2021 reporting. Mr. Bruggeman stated that if deferred for year-end 2020, nonconforming CTLs should still be filed with the SVO by a filing deadline to be reported in the 2020 year-end financial statements on Schedule D, Part 1, even if the SVO has not provided the SVO-assigned designation.

Mr. Smith inquired about whether nonconforming CTLs are incorrectly being reported on Schedule D, Part 1 and whether a deferral would simply allow these items to improperly remain on Schedule D, Part 1. Mr. Bruggeman stated that through recent developments, it was discovered that nonconforming CTLs have been reported on Schedule D, Part 1, primarily due to an interpretation that these items, in good faith, are believed to be FE securities. Additionally, the timing required to receive an SVO-assigned designation, required for Schedule D, Part 1 reporting, is no longer feasible for year-end 2020. Mr. Bruggeman stated that the final result of the nonconforming CTL issue should be considered in conjunction with the ongoing SSAP No.
43R/Schedule D, Part 1 project. Ms. Gann stated that due to the legal structure of these investments being classified as securities, they are not eligible for SSAP No. 37—Mortgage Loans; thus, this caused uncertainty with their applicable SSAP and reporting location, with some reporting entities concluding that they were Schedule D, Part 1 eligible. In a response to an inquiry from Mr. Smith, Charles Therriault (NAIC) stated that a small number of nonconforming CTLs have been filed with the SVO, and more are anticipated. Mr. Arfanis stated support for deferral of a final decision regarding the reporting of nonconforming CTLs, but he would support special identification of such items in the year-end financial statements.

Sasha Kamper (American Equity), representing the PPIA, stated that the PPIA consists of 55 members, most of whom are U.S. domiciled insurance companies that invest regularly in the private placement debt market, including CTLs. She stated that the PPIA appreciates that the Nov. 12 Working Group call was an attempt to accommodate various industry requests; however, further review of the guidance has identified additional concerns. She stated that the INT requires insurers who have previously been carrying nonconforming CTLs on Schedule D, Part 1 to file all of these securities with the SVO immediately so that the SVO can review and decide whether to assign a NAIC designation to such securities on or before March 1, 2021. She stated that many reporting entities close their books in early January and would not be able to file the necessary documentation and receive a definitive answer in time to close the financial statements. Additionally, many records are in off-site storage or are so large that expedited filing with the SVO has proved difficult. Ms. Kamper also stated that there is industry concern regarding the SVO’s ability to timely analyze and assign ratings for nonconforming CTLs. She stated that the SVO does not have an approved rating methodology, and when combined with the volume of details in each investment, difficulties in assigning a designation will occur. She stated that industry should be able to file all required documentation by the first quarter of 2021, and she would be supportive of a deferral until year-end 2021. She stated that the PPIA also has concerns regarding the proposed 30% capital charge if reported on Schedule BA, which would cause a major deterrent in the marketplace. She stated that these investments are not as volatile as equity investments, and they are akin to mortgage loans, which are only subject to a 5–7% capital charge. Requiring a 30% capital charge on a strong asset class would be punitive to investors. Ms. Kamper stated that in summary, the PPIA would support deferral or bifurcated reporting on Schedule D, Part 1 and Schedule BA with adjusted capital charge treatment, and if neither of these options were supported, she would request consideration for all nonconforming CTLs to be reported on Schedule BA with adjusted capital charge treatment. Mr. Bruggeman stated that he understands the PPIA’s request as: 1) deferral with special identification of nonconforming CTLs in the year-end investment schedules; 2) bifurcated reporting on Schedule D, Part 1 (with an SVO-assigned designation) or Schedule BA with bond capital charge treatment; or 3) all nonconforming CTLs moved to Schedule BA with bond capital charge treatment. Mr. Garrison inquired about whether a capital charge “haircut” on Schedule BA could be considered, so if a bifurcated reporting approach is not approved by the Working Group, a capital charge less than 30% could be considered. Mr. Bruggeman stated that capital charges are not in the purview of the Working Group, and bifurcated reporting is not preferred, as it does allow for optionality in reporting. He stated that the main issue is for nonconforming CTLs to be reviewed with designations received from the SVO.

Mr. Clark stated that based on the responses received, the timing of filing remains the primary issue. He stated that from a long-term perspective, receiving SVO-assigned NAIC designations is the primary goal. However, in an effort to not overly complicate a solution, he said he would support deferral of this topic with a filing deadline that can be practically achieved in the current environment. In response to an inquiry from Mr. Fry, Ms. Gann stated that if the Working Group were to support Schedule BA reporting, a specific reporting line would be utilized to allow bond-like capital treatment based on the CRP rating; i.e., not subject to a 30% capital charge. Mr. Bruggeman stated that based on regulator discussions, Schedule D, Part 1 reporting does not appear to be the primary concern. The primary concern is related to the timing of filing and receipt of SVO-assigned designations. Mr. Bruggeman stated that a deferral could be considered with special identification of nonconforming CTLs in Note 1 of the financial statements. As this is a one-time special consideration, this note could be utilized to identify the amount of nonconforming CTLs reported in Schedule D, Part 1. This provision would only be allowed if the securities are filed for review, even if designations are not received before the statutory financial statements are filed with the NAIC. In response to an inquiry from Mr. Smith, Mr. Bruggeman stated that Schedule D, Part 1 reporting could be allowed with the continued use of Note 1 until the SVO has assigned a designation.

Mr. Bruggeman stated that due to the change in direction, he would recommend an exposure of a new INT documenting deferral of moving nonconforming CTLs from Schedule D, Part 1, subject to filing requirements. He stated that due to year-end, the timing of an exposure period would need to be minimal. Michael Monahan (American Council of Life Insurers—ACLI) stated that the ACLI would be supportive of an expedited exposure period of an INT supporting deferral of moving nonconforming CTLs from Schedule D, Part 1.

Ms. Gann electronically displayed a draft INT supporting deferral of moving nonconforming CTLs from Schedule D, Part 1. Mr. Bruggeman stated that he proposed a filing deadline of Feb. 15, 2021. As such, to continue reporting on Schedule D, Part
1, a reporting entity would have to file the nonconforming CTL with the SVO by Feb. 15, 2021. The INT only requires that an entity file the security with the SVO by Feb. 15, 2021, not that the entity receive the SVO-assigned designation prior to submitting their 2020 annual statutory financial statements. If an entity does not file the security with the SVO by Feb. 15, 2021, the investment shall be reported on Schedule BA, and it would not be reported with a CRP-determined NAIC designation, thus the CTL would be subject to a 30% capital charge. In addition, for nonconforming CTLs that have been filed with the SVO and retained on Schedule D, Part 1, the reporting entity is required to disclose the total amount of nonconforming CTLs reported on Schedule D, Part 1 in Note 1 as if it were a permitted practice. The reporting entity shall complete the permitted practice disclosures required by SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures, with two separate entries that detail the nonconforming CTLs that were reported on Schedule D, Part 1 on one line and the nonconforming CTLs that were not reported on Schedule BA on a separate line within this disclosure. Two lines are required in the disclosure to reflect the detail, as it is expected that there would be a net zero impact to statutory surplus. Ms. Gann stated that the INT also includes provisions for reporting entities that previously reported nonconforming CTLs on Schedule D, Part 1 that do not want to file with the SVO or do not want to disclose in Note 1. With the provisions, these entities are permitted to reclassify these CTLs to Schedule B or Schedule BA without NAIC designations. Ms. Gann stated that the effective date of the INT would apply for year-end 2020 and expire after third-quarter 2021 reporting.

Mr. Bruggeman stated that this INT would defer the final reporting schedule for nonconforming CTLs, but it would allow Schedule D, Part 1 reporting if the investments are filed with the SVO by the Feb. 15, 2021, deadline. Additionally, it would require Note 1 to be completed, detailing the amount of nonconforming CTLs reported in Schedule D, Part 1. He stated that to expedite potential adoption, if public comments are not contrary to adoption or do not propose significant edits, an email vote may occur. However, if substantial comments are received, a public call will be scheduled. Mr. Monahan stated that the INT will likely be conceptually supported, and it is not expected that industry would not provide substantial comments to the contrary. Mr. Clark made a motion, seconded by Mr. Hudson, to expose INT 20-10 for a public comment period ending Dec. 22. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

The Lease-Backed Securities Working Group

To: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group

Re: Minutes of the November 12th Meeting of the Statutory Accounting Principals Working Group & Interpretation 20-10: Accounting and Reporting of Non-conforming Credit Tenant Loans

Dear Mr. Bruggeman:..............................

We have reviewed the minutes from the November 12th meeting of the Statutory Accounting Principles Working Group, and the Interpretation, INT 20-10, prepared by staff summarizing the conclusion that was reached in that meeting on the reporting of “non-conforming CTLs” (agenda item 2020-24). (For reference, we have attached an excerpt from the minutes to this letter.)

Based on our review, we note the following:

- The Interpretation correctly states the “the Working Group deferred final guidance on the reporting of non-conforming CTLs...as the Working Group has a separate project to assess investments that are captured on Schedule D-1. With this project it was identified that it would be undesirable to require an investment that is currently being reported on Schedule D-1 to be moved to a different schedule if there was the potential for that investment to subsequently qualify for Schedule D-1”.

  In addition, with regard to the filing of existing transactions on investors books for the current calendar year, the Interpretation correctly states that “Nonconforming CTLs that have previously been reported on Schedule D-1 may continue to be reported on Schedule D-1 if they receive an SVO-assigned NAIC designation”.

- The minutes include the requirement for “all nonconforming CTLs to be filed immediately with the SVO [in order] to remain on Schedule D-1......If the nonconforming CTLs are not filed or have not received an NAIC SVO designation before the March 1, 2021 filing date, the securities shall be reported on Schedule BA.”

However, we seek clarification on several issues:

1.) Based on the above, it seems clear that while no final decision is being made at this time, notwithstanding that some “nonconforming CTLs” — namely those that do not receive an SVO-assigned NAIC designation -- may be moved to Schedule BA for some interim period pending the outcome of the Schedule D-1 project (formerly the “43R Project”), that to the extent that so-called “nonconforming CTLs” are ultimately determined to be Schedule D-1 eligible bonds, they would then revert to Schedule D-1 as filing exempt securities if they have received an eligible CRP rating.

2) Not explicitly discussed in the November 12th meeting was the RBC charge to be assigned to those securities previously reported on Schedule D-1 and subsequently moved to BA. The Interpretation states that “these [BA] CTLs shall not be reported with a credit-rating provider (CRP) determined
The Lease-Backed Securities Working Group

NAIC designation.” Presumably, based on this interpretation, those securities which are moved from Schedule D-1 to Schedule BA would receive a 30% RBC charge – equivalent to defaulted debt.

In addition, the Interpretation also states that “if an SVO-assigned designation cannot be obtained for any reason, which includes situations in which the SVO determines that it cannot provide an NAIC designation…..the investment shall be reported on Schedule BA”.

Read literally, this raises the possibility that these performing assets could receive a 30% capital charge – equivalent to defaulted debt – for any number of reasons, including an inability on the part of investors to meet the filing deadline -- or simply the inability of the SVO to get to certain transactions by the March 1st deadline. This would be unfairly punitive to a performing asset class, and patently unfair to insurance company investors who have been reporting these transactions as Schedule D-1 investments in good faith for years.

3.) With regard to timing, we note that the SVO just posted – on December 4, 2020 – its filing instructions for these transactions. The instructions are for Conforming CTLs (not Non-Conforming CTLs, for which no current form exists) run to eight pages and include the requirement to provide the SVO with all the major legal documents related to a transaction, including appraisals, environmental reports, etc. – a document package that could run to hundreds of pages of legal and other documents. For many investors with old deals on their books, these documents may be stored off-site, and even if available, are often not in electronic form. It may not be possible for investors to compile and make copies of and submit all these documents in the short time available. Our group has received many inquiries from investors who have not been following the CTL discussion closely, and who are confused about exactly what they are required to do – even as to what constitutes a “non-conforming CTL”.

We note further that in the November 12 meeting, Chairman Fry made the comment that “It’s important that these [non-conforming CTLs] don’t get put on BA and have a 30% capital charge put on them – I don’t think we’re recommending that.”

In a recent conversation we had with Chairman Fry, he suggested that an alternative to this outcome would be to move the non-designated transactions to Schedule BA, but that they would continue to receive their bond equivalent capital charges based on their current CRP ratings.

We would ask the Working Group to consider the following:

1.) That the final decision as to the appropriate accounting and reporting requirements for the “non-conforming CTL” transactions will be included in and made part of the Schedule D-1 Project (formerly the “43R Project) and that to the extent that so-called “nonconforming CTLs” are ultimately determined to be Schedule D-1 eligible bonds, they would then revert to Schedule D-1 as filing exempt securities if they have received an eligible CRP rating.

2.) To amend the Interpretation to specify that those transactions which are re-classified to Schedule BA for the current reporting year be allowed to be reported using their bond-equivalent capital charges based on their current CRP ratings, pending the final outcome of the Schedule D-1 project.
3.) Extending the December 31st deadline for investors to submit these securities to the SVO,

We would ask the Working Group to consider amending the Interpretation to reflect the foregoing points.

Realizing that approval of the current language in the Interpretation may occur via an “e-mail vote”, there is limited opportunity for discussion or for us to raise this issue with the members of the Working Group. However, our goal – as always – is to make sure that the system operates as fairly and transparently as possible for all participants, and to avoid creating confusion in the markets. We would hope that the members of the Working Group would have an opportunity to discuss our comments in advance of a final approval vote on the “Interpretation”.

We thank you for considering our comments.

John Garrison,
On behalf of the Lease-Backed Securities Working Group

Attachment:

From the minutes for the November 12, 2020 SAP Working Group Meeting:

“Mr. Fry made a motion, seconded by Mr. Clark, to require all nonconforming CTLs to be immediately filed with the SVO to remain on Schedule D-1. However, Schedule BA reporting will be required for those who are unable or will not file. Charles Therriault (NAIC) stated that while the SVO would consider an existing nationally recognized statistical rating organization’s (NRSRO’s) report for nonconforming CTLs, the SVO has not developed a methodology for assigning designations to such items. Mr. Bruggeman stated the motion included all the following elements: 1) confirm that conforming CTLs will remain in scope of SSAP No. 43R and reported on D-1; 2) direct a referral to the SVO to request information on the residual risk percentage permitted to be considered a conforming CTL; and 3) permit nonconforming CTLs filed with the SVO that receive an SVO-assigned NAIC designation to be reported on Schedule D-1. If the nonconforming CTLs are not filed or have not received a NAIC SVO designation before the March 1, 2021, filing date, the securities shall be reported on Schedule BA. The motion passed unanimously.”
December 15, 2020

Mr. Dale Bruggeman, Chair  
Ms. Carrie Mears, Vice-chair  
NAIC Statutory Accounting Principles (E) Working Group (“SAPWG”)  
1100 Walnut Street  
Suite 1500  
Kansas City, MO 64106-2197

Dear Mr. Bruggeman and Ms. Mears:

The Board of Directors of the Private Placement Investors Association (“PPIA”) appreciates the opportunity to provide comment on “INT 20-10: Reporting Nonconforming Credit Tenant Loans.” Such investments are held by many of our 55 member companies, most of whom are US-domiciled insurance companies that invest regularly in the private placement debt market, including in Credit Tenant Loans (“CTLs”).

The PPIA understands that this exposure is an interpretation of discussion from a mid-November SAPWG meeting and resulted from NAIC Staff’s and Regulators’ desire to work with insurers to find a temporary solution for reporting non-conforming CTLs and to possibly provide capital relief. We know that the NAIC has been in multi-year discussions with Industry regarding these securities, and we appreciate your genuine willingness to accommodate insurers’ needs and look for a mutually agreeable solution. That said, we do have two concerns around the non-conforming CTL proposal which we will detail below. We would also like to offer a solution which we believe would help alleviate both concerns and help move the process forward.

Timing

The interpretation requires insurers who have previously been carrying non-conforming CTLs on Schedule D-1 to file all of these securities with the SVO immediately, so that the SVO can review and decide whether to assign an NAIC designation to such securities on or before March 1, 2021. This timing is challenging, as it results in a major reporting change and significant new filing requirements for insurers right before year-end. It also places a significant burden on the SVO staff to review and attempt to assign designations to such securities in a short time window.

The PPIA has begun telegraphing these new rules to our member companies; however, the change has resulted in multiple questions and a lot of confusion around which deals need to be filed, what is required to be filed as supporting documentation, the timing of such filings, whether the ruling was intended to be prospective or retrospective, and what criteria the SVO will use to assign designations to these investments. Given the nature and volume of questions, we expect that there will be a variety of inconsistent responses from insurers at year-end, with some complying fully with the new proposal, some complying partially but perhaps without a full
understanding of which CTLs are necessary to file, and some not even aware of the new requirements. The fact that certain insurers will be allowed to continue carrying these securities on Schedule B or BA, while others must file for Schedule D-1 treatment and then hold on Schedule BA, if the SVO cannot assign a designation for any reason, only adds to this confusion.

Other challenges include assembling the documents needed to support the filings. Some of these securities have been on insurers’ books for 15+ years, and insurers may not have documentation stored electronically, such that it’s easy to upload requirements into the NAIC’s systems. In these situations, insurers are forced to retrieve documents from off-site paper storage warehouses, which takes time and reduces the likelihood that such filings can be submitted before year-end. This issue is exacerbated by the current work-from-home conditions under which most insurers are still operating.

The PPiA is also concerned that this will be a first-time filing for many of these securities, and that the requested list of supporting documents for such filings is extensive. (For example, once such transaction that the PPiA is currently aware of has a closing documents package from outside counsel that is 256MB and cannot be sent over email—instead, investors must access these files from an electronic DropBox.) While the PPiA appreciates the SVO’s effort to try and review as many of these transactions as possible between now and March 1st, as a practical matter, we believe it will be extremely difficult for the SVO Staff to review most of these investments and assign designations in this short timeframe. The fact that the SVO currently has no rating methodology criteria in place to assess the risks associated with these securities compounds the difficulties. The PPiA is concerned that the SVO will either not be able to review many of these securities in the allotted timeframe, or that the SVO will be unable to designate such securities without some pre-existing rating methodology in place, and many of these deals will be relegated to Schedule BA reporting with onerous capital treatment (see RBC concerns below).

For the reasons stated above, the PPiA believes it would be best to delay implementation of the new rules from year-end 2020 into 2021. Industry is willing to begin filing all non-conforming CTLs with the SVO to provide transparency for Regulators, and we are willing to work with the SVO to discuss and develop a potential ratings framework in early 2021, so that many of these securities could be designated over the course of the full year. However, we believe that it is too late in the year to adopt new reporting requirements that could potentially have negative capital consequences for insurers, and we think that more time would allow a more thoughtful approach to review such securities and implement the new rules smoothly. As such, we would ask Regulators to consider delaying the reporting and RBC requirements change until year-end 2021. However, if Regulators are unwilling to delay implementation of such rules changes, then the PPiA would ask for relief on the RBC requirement as noted below.

**RBC Requirements**

As discussed above, the PPiA believes that these new interim rules will result in many of the non-conforming CTL transactions moving to Schedule BA, either because the SVO lacks sufficient time to review the investments, or because the SVO is unable to assign a designation without a pre-defined ratings methodology framework. The PPiA’s interpretation of INT 20-10 is that such securities, if reported on Schedule BA, would be assessed a 30% C1 RBC charge. This capital charge is typically assigned to equity securities and limited partnership investments and seems overly conservative for securities which are—at worst—mortgages with a 20-year fixed-income cash...
flow payment stream derived from an investment grade tenant(s). We note that the current discussions around non-conforming CTLs originated from a desire to provide capital relief for these securities, which were previously reported on the Schedule B (the commercial mortgage schedule). However, absent some form of additional capital relief, any non-conforming CTLs that are reported on Schedule BA would be forced to carry more than 5x the capital vs. if such securities were reported on Schedule B with the requisite commercial mortgage RBC charges. A 30% RBC C1 charge for these securities is not a desirable outcome for PPIA members or for their respective policyholders. Therefore, we would ask that SAPWG make an exception to allow any non-conforming CTLs reported on Schedule BA to carry bond RBC treatment, based on the credit ratings assigned to such securities by a CRP. We understand that such a request is a departure from historical NAIC policy regarding CTLs and would be a temporary exception, limited to only non-conforming CTLs, but we believe such an exception makes sense, given the tight timing for implementing these new rules, and given that this issue will be revisited later, in conjunction with projects to rewrite SSAP No. 43R and to provide a more robust definition of a bond in the SSAPs.

The PPIA understands that some Regulators may be uncomfortable with allowing some non-conforming CTLs to be carried on Schedule D-1 (those for which the SVO assigns a designation), while allowing other non-conforming CTLs to be reported on Schedule BA, yet still carry a bond RBC charge. Such Regulators have stated a preference for an “either/or” approach, rather than providing insurers with “the best of both worlds” (i.e. Schedule D for some securities, and Schedule BA with bond RBC charges for others). If this is truly the case, and Regulators can only see fit to approve one reporting option that grants bond RBC treatment for non-conforming CTLs, then the PPIA requests that all non-conforming CTLs be reported on Schedule BA with the exception granted for bond RBC treatment, based on assigned CRP ratings. The PPIA feels strongly that a 30% RBC charge is a punitive outcome and not appropriate for the risk associated with these securities. As such, we would prefer less punitive capital treatment for the full universe of these securities rather than Schedule D-1 reporting for some (but not all) non-conforming CTLs.

The PPIA shares the NAIC’s desire to provide clarity around this issue and to move forward. We hope to work constructively with the NAIC Staff and with Regulators to develop a final solution that is mutually agreeable and reasonably reflects/reports the risks associated with non-conforming CTLs. However, it is our strong desire to avoid equity RBC treatment for any of these securities—particularly so close to year-end. We would be very appreciative if NAIC Staff and SAPWG would give serious consideration to our proposal, and we stand prepared to answer any questions or offer help, if needed.

Sincerely,

John Petchler

John Petchler, PPIA President, on behalf of the PPIA Board of Directors

CC: Ms. Julie Gann, Assistant Director—Solvency Policy

Interpretation of the Statutory Accounting Principles Working Group

INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms

INT 20-11 Dates Discussed

December 8, 2020; December 18, 2020

INT 20-11 References

SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

INT 20-11 Issue

1. In the second half of 2020, the United States was impacted by several hurricanes in the Gulf Coast region, California Wildfires, and Iowa had a series of catastrophic straight-line windstorms. These events have resulted in loss of life and property, the extent to which is currently not known. State regulators and insurers are taking action to provide policyholders affected by these disasters with the support and understanding that is deserved.

2. This issue concerns consideration of allowing a fourth quarter 2020 temporary extension of the 90-day rule for uncollected premiums to insurers for policies in U.S. jurisdictions where a state of emergency was declared as identified below. This interpretation is intended to only cover impacted policies in areas for which a state of emergency has been declared by either the states, U.S. territories or federal government and which is noted on the Federal Emergency Management Agency (FEMA) website for the identified disasters as described below:

   a. Hurricane Isaias, Hurricane Laura, Hurricane Sally, Hurricane Delta, Hurricane Zeta and Hurricane Eta and the related tropical storms or flooding from these six named hurricanes.

   b. California Wildfires which were declared a disaster on or after August 1, 2020, some of which are ongoing during the fourth quarter 2020.

   c. Iowa straight-line windstorms impacted policies in the counties in which a state of disaster was declared in August 2020.

INT 20-11 Discussion

3. The Working Group reached a consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders required per SSAP No. 6, paragraph 9, as described within this paragraph.

   a. The exception applies to policies in effect as of the declaration of a state of emergency for the disasters described in paragraph 2.

   b. Insurers with policies in areas impacted by the disasters described in paragraph 2, which would be overdue by greater than ninety days (90) on December 31, 2020, may wait until February 28, 2021, before nonadmitting premiums receivable from those policies.

   c. Existing impairment analysis remains in effect for these affected policies.
4. The Working Group noted that a temporary sixty day (60) extension had previously been provided for other nationally significant disasters including INT 18-04: Extension of Ninety-Day Rule for the Impact of Hurricane Florence and Hurricane Michael; INT 17-01: Extension of Ninety-Day Rule for the Impact of Hurricane Harvey, Hurricane Irma and Hurricane Maria; INT 13-01: Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy; and INT 05-04: Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma. For this interpretation, as it encompasses a number of different disasters, the dates of emergency declarations vary. Therefore, for ease of application, the sixty-day extension applies to all uncollected premiums more than 90 days overdue from impacted policies at year-end 2020 and expires prior to the first quarter 2021 financial statements.

5. Due to the short-term nature of the applicability of this extension, which expires February 28, 2021, this interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group web page. This interpretation will be automatically nullified on March 1, 2021, and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “As of March 2021” Accounting Practices and Procedures Manual.

INT 20-11 Status

6. No further discussion is planned.
Statutory Accounting Principles (E) Working Group
E-Vote
November 18, 2020

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Nov. 18, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Co-Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); David Smith (VA); and Amy Malm (WI).

1. Exposed INT 20-10T

The Working Group conducted an e-vote to consider exposure of Interpretation 20-10: Reporting Nonconforming Credit Tenant Loans (INT 20-10). This tentative interpretation clarifies the action from the Working Group’s Nov. 12 meeting, which permits continued Schedule D-1: Long-Term Bond reporting for nonconforming credit tenant loans (CTLs) if the reporting entity obtains a Securities Valuation Office (SVO)-assigned NAIC designation. (As a nonconforming CTL, the instrument does not qualify for Schedule D-1 reporting in accordance with the legal and structural requirements detailed in the Purposes and Procedures Manual of the NAIC Investment Analysis Office [P&P Manual].) This temporary provision provides an exception to the NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual (AP&P Manual) and the P&P Manual, which is explicit that an NAIC designation from a credit analysis (and not a structural assessment) does not change an investment’s applicable Statement of Statutory Accounting Principles (SSAP) or reporting schedule. In addition to clarifying that nonconforming CTLs that had previously been reported on Schedule D-1 can continue this reporting with an SVO-assigned designation, the interpretation also specifies that nonconforming CTLs that had previously been reported on a different reporting schedule shall continue to report on the prior reporting schedule. As such, there is no requirement for reporting entities to pursue SVO-assigned designations for those CTLs.

This tentative interpretation is applicable for the year-end 2020 statutory financial statements and through the first three quarters of 2021 (expiring on Oct. 1, 2021). This time frame was provided to allow for continued discussion of the Schedule D-1 project, with the Working Group determining the appropriate reporting schedule for nonconforming CTLs. It is highlighted that all reporting entities shall be prepared to make adjustments to comply with the reporting schedule concluded by the Working Group as the appropriate reporting location for nonconforming CTLs.

Mr. Clark made a motion, seconded by Mr. Arfanis, to expose INT 20-10T for a public comment period ending Dec. 4, 2020. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Dec. 8, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Co-Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); David Smith (VA); and Amy Malm (WI).

1. **Exposed INT 20-11**

The Working Group conducted an e-vote to consider exposure of *Interpretation 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms* (INT 20-11). This tentative interpretation provides a 60-day extension from the 90-day rule for uncollected premium balances, bills receivable, and amounts due from agents and for policies directly affected by the noted 2020 hurricanes, California wildfires and Iowa windstorms. This temporary relaxation of the 90-day rule for directly affected policies is similar to previous extensions that have been granted for other major national storms and hurricanes.

For this interpretation, as it encompasses a number of different disasters, the dates of emergency declarations vary. Therefore, for ease of application, the 60-day extension applies to uncollected premiums more than 90 days overdue from affected policies at year-end 2020, and it expires prior to the first quarter of 2021 financial statements on Feb. 28, 2021.

Mr. Guerin made a motion, seconded by Mr. Clark, to expose INT 20-11. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

This is one of my final letters as the Montana Insurance Commissioner as my fellow Montanans have honored me with the privilege of representing them in the United States House of Representatives. I will continue to champion our state-based system of insurance regulation while I am a member of Congress.

With that noted, I do have a concern as I close out my term as Insurance Commissioner: the proposed changes to the SSAP 71. There is no reason to change the current SSAP 71 accounting principle. There has been no policyholder peril, fraud, or company financial impairment by using SSAP 71 as currently allowed since 1998.

I believe the changes being proposed constitute a significant change in application of this statutory accounting principle and therefore should be deemed a substantive change under the SSAP guidelines. The Statutory Accounting Principles Working Group (SAPWG) continues to conclude that the proposed changes simply clarify the intent of the working group, but the proposed changes would significantly change the way some companies report certain commission arrangements. These companies have been reporting these arrangements the same way for decades without, as far as I have been informed, any harm to policyholders.

Efforts to fix something that isn't broken often have negative consequences, whether intentional or not. As a former state legislator and as an incoming federal legislator, I have always been a strong proponent for closely following appropriate processes and not taking shortcuts.

I encourage the SAPWG to take the necessary steps to study this issue further and give proposed substantive changes the appropriate attention they deserve.

Sincerely,

Matt Rosendale

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on November 12, 2020 with Comments due January 22, 2021

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

**INT 20-03: Troubled Debt Restructuring Due to COVID-19**

This interpretation was effective for the specific purpose to address loan modifications in response to COVID-19. Consistent with the CARES act, this interpretation was only applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, interest rate modification, a repayment plan and other similar arrangement that defer or delays the payment of principal or interest for a loan that was not more than 30 days past due as of December 31, 2019. As determined in the CARES Act, this interpretation was originally only applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that was 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

On December 27, 2020, President Trump signed into law the *Consolidated Appropriations Act, 2021*, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 6, 2021, the provisions in this INT were tentatively extended to be applicable through the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

Interested parties support the continued consistency with the Cares Act.
INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19

This interpretation was originally effective for the specific purpose to provide practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36 and in assessing whether a change is substantive under SSAP No. 103R. This interpretation will only be applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates. For clarity, this effective timeframe specifies when modifications in response to COVID-19 can be incorporated using the provisions of this interpretation. Once incorporated, the provisions of this interpretation will continue for the duration of the modification.

On December 27, 2020, President Trump signed into law the Consolidated Appropriations Act, 2021, which slightly modified and extended the original CARES Act. These modifications included extending the provisions for temporary relief from troubled debt restructurings. Accordingly, on January 6, 2021, the provisions in this INT were tentatively extended to be applicable through the earlier of January 1, 2022 or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19), outbreak declared by the President on March 13, 2020 under the National Emergencies Act terminates. With this extension, this INT’s effective date corresponds with the current effective dates of the CARES Act. Unless the outbreak under the National Emergencies Act terminates, this INT will automatically expire on January 2, 2022 (to include year-end 2021 financial statements reporting).

Interested parties support the continued consistency with the Cares Act.

Ref #2019-24: Levelized and Persistency Commission

On November 12, 2020, the Working Group held a hearing to receive comments and based on those comments, took the following actions:

- Re-exposed the prior version of SSAP #71 with certain edits: – (1) the proposed effective date of Jan.1, 2021 was changed to be effective upon adoption, and (2) the revised text made explicit that the proposed revisions will apply to contracts in effect as of the date of adoption.

- Determined that the revisions to SSAP #71 met the due process for either a substantive or a non-substantive revision but concluded to keep the revision classified as nonsubstantive. The Working Group reiterated that it is not the impact of a change on an individual entity that determines whether a change is substantive or non-substantive, but whether the revision is in line with the original intent of the SSAP. The Working group noted that this is a clarification of existing guidance consistent with original intent. (Commissioner Donelon noted an objection to the classification as non-substantive.)

- Directed NAIC Staff to draft an Issue Paper to document the discussion on this topic for historical purposes.

Interested parties would like to again thank the Working Group for the opportunity to continue to comment on the most recent revisions to exposure Ref #2019-24 – Levelized and Persistency Commission (SSAP No. 71, Policy Acquisition Costs and Commissions) discussed on November 12, 2020 (the “Exposure”).

These comments begin with industry comments regarding the Working Group’s most recent revisions to the Exposure:
Paragraph #5 new comments pertain to the sentence below:

Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until unless the underlying policy has been cancelled.

The Working Group has made a change to the last phrase of this sentence that still does not provide clarity as to its meaning and to the sentence as a whole. Assuming that the phrase refers to the contingency noted in the previous phrase within the sentence, industry disagrees with wording that creates a blanket statement across all third-party agreements with regard to recognizing a liability similar to a funding agreement. During the entire exposure/revision process, interested parties has consistently stated that agreements which include traditional elements such as persistency as part of a legally binding commission contract should be excluded from the funding agreement treatment as was provided in the original (current) SSAP No. 71 wording. If the last phrase “until the underlying policy has been cancelled” pertains to the recognition of the liability, it seems that the wording does not contemplate even a partial repayment of the liability during the period when the policy is active.

Paragraph #7 new comments pertain to the following:

The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts are effective in effect on the date of adoption of the revisions January 1, 2021.

Industry has consistently maintained that there has been a long-standing industry practice to link third party contracts to insurance elements such as persistency, including commission arrangements, reinsurance contracts, etc. Removing this link as has been indicated in the Working Group revisions is a substantive change. As such, we do not agree with the language in paragraph #7 that calls the revisions nonsubstantive and we disagree that such changes should be put in effect immediately upon adoption since they are substantive in nature and require further evaluation.

Certain of the third-party contracts noted above are complex and not quite as simple as the description of levelized commissions in the most recent draft of the Exposure. The Exposure depicts a simple arrangement whereby the insurer repays a third party over time, with interest, for making upfront heaped commissions to agents. This does not consider, for example, certain third-party contracts for which the insurer pays the third-party trail commissions based upon account value in-force in exchange for performing many contractual agency services other than simply funding and making upfront payments to selling agents. Such complex contracts require sufficient time to allow insurers to work with their state of domicile to determine the correct application of the revised guidance with respect to contracts which the regulator has already approved. Then, if establishment of a liability is indeed required, additional time would be necessary to calculate such an accrual and review with external auditors prior to reporting the change on a quarterly or annual statement. For these reasons, and as you suggested, Chairman Bruggeman, we propose that the revisions within the Exposure be adopted with an effective date no sooner than 12/31/21.

Comments previously made on existing revisions included for purposes of documentation:

Paragraph #4, most recent exposure:

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass
recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

Paragraph #4, most recent exposure with highlighted edits:
4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity over time. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) In instances where the levelized commission is not tied to, or contingent upon, traditional elements such as policy persistency or premium payments, these transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized when the contract between the reporting entity and the third party has no substance but to defer commission payments by the reporting entity. The continuance of the stream of payments specified in the levelized commission contract in these situations is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

Industry proposes to replace a large section of paragraph #5, including the Working Group recent revisions, with more concise language that expresses the need to establish a liability when an arrangement is in substance a funding agreement. The current revisions are lengthy and somewhat redundant. Industry continues to disagree with the current revisions which too broadly state that all third-party arrangements, even those with traditional insurance elements, are considered funding arrangements. Industry retained the concept of the link between the accrual of commissions and traditional elements such as policy persistency.

Excerpt from paragraph #5, most recent exposure requested to be deleted:
Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Interested parties highlighted wording to replace the above excerpt from paragraph #5:
The reporting entity is required to recognize the full repayment amount of earned commission costs by the direct policy writing agents even if those costs are paid indirectly by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Recognition of those commission costs and recording a liability is required in such arrangements that are not linked to or contingent upon traditional elements. Such treatment shall occur consistently among insurers.
Summary:

Since its initial exposure in August 2019, industry has had concerns with the substantive nature of the proposed revisions and has consistently expressed these concerns.

- The last paragraph of the current SSAP No. 71 states: “The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.” This wording was revised to instead explicitly include arrangements linked to traditional elements with those that have no substance other than to link to the repayment of an advance amount. This is clearly a substantive change and not clarifying the original intent. It is a change to the intent.

- The current revisions require the accrual of a liability in situations that are inconsistent with the guidance SSAP No. 5R. Under a levelized commission program a third party has the obligation for the full initial sales commission. The insurer’s obligation under a levelized commission program that incorporates persistency should be accrued to the extent of legally contracted amounts owed. We do not believe the original intent of the SSAP required accruing for amounts that are not yet due and that may never be due. We strongly feel that the recognition of an obligation based on persistency is in accordance with the principles of SSAP 5R.

- The interpretation of SSAP No.71 that persistency is the obligating event for accrual of the levelized/persistency commissions is long standing industry practice that has been subject to both independent audits and state insurance department examinations without this interpretation being raised as an issue nor requiring adjustments to the companies’ financial statements.

- The current proposed language does not address the many varying product/distribution compensation arrangements in the industry and interested parties continue to believe this will cause unintended consequences.

- The existing SSAP No. 71 guidance is consistent in the application of persistency being part of the transfer of the risk(liability) to another party. If the lapse risk(persistency) is transferred to another party, the liability that the insurance company may have is also transferred to that party and the insurance company has no liability. Removing persistency as a factor in the accrual of commissions is a dangerous precedent. The differentiation between commissions based on real insurance risks versus payments based solely upon the passage of time in SSAP No. 71 goes directly to the risk transfer issue of one type of level commissions versus another. The proposed additional language eliminates this differentiation.

Conclusion:

Industry continues to maintain that the revisions exposed have changed the original intent of SSAP No. 71 and do not believe that they are nonsubstantive. Removing insurance elements from the determination of obligating events of third-party commission contracts may set a precedent that will have significant unintended consequences. As such, interested parties request that the Working Group consider these comments and proposed revisions. In addition, we request that this exposure be categorized as substantive, and given due process and an effective date.

Ref #2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities

The Working Group exposed this agenda item, with detailed revisions to SSAP No. 25, as detailed in a draft labeled with the date of November 12, 2020.
That draft contained proposed revisions intended to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.

- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.

- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.

- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

On December 10, 2020, some members of interested parties and NAIC staff had a conference call to discuss the November 12th draft and possible edits to address concerns that the draft unintentionally impacted passive investments held by insurers in addition to investment in insurers. Staff amended the draft to address these concerns and is taking the updated draft back to the Working Group for its consideration.

Interested parties thank the staff for meeting with industry and in working to address our concerns.

Ref #2020-22: Accounting for Perpetual Bonds

The Working Group exposed revisions to SSAP No. 26R—Bonds to clarify that perpetual bonds are within scope as a “bond,” and shall apply the yield-to-worst concept. Additionally, perpetual bonds that do not possess or no longer possess a call feature shall follow fair value reporting.

Interested parties appreciated the opportunity to work directly with NAIC staff on this topic. After reviewing the modified proposal, we have one remaining comment, which has already been discussed with NAIC Staff. In paragraph 9, the proposal reads as follows:

“New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized to the next effective call date. For perpetual bonds purchased at a discount, any applicable discount shall be accreted utilizing the yield-to-worst concept.”

We recommend the language be “fine-tuned” as it implies those with a remaining premium would be amortized to the next effective call date. The language regarding amortization should be aligned with other bonds and reference the use of the yield to worst method, not the next effective call date. We suggest the following wording:

“New footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.”

Ref #2020-32: SSAP No. 26R - Disclosure Update

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds to expand the called bond disclosures to also include bonds terminated early through a tender offer.

Interested parties have no comments on this item.
Ref #2020-33: SSAP No. 32R – Publicly Traded Preferred Stock Warrants

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 32R—Preferred Stock and SSAP No. 86—Derivatives to scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

Interested parties have no comments on this item.

Ref #2020-34: SSAP No. 43R – Government-Sponsored Enterprises – Credit Risk Transfer Transactions

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 43R—Loan-Backed and Structures Securities to incorporate minor scope modifications to reflect recent changes to the STACR and CAS programs. The proposed edits would allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope of SSAP No. 43R when a REMIC structure is used in the STACR program or CAS program.

Interested parties have no comments on this item.

Ref #2020-35: SSAP No. 97 – Audit Opinions

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed this agenda item with a request for comments on the extent in which situations exist that hinder admittance of 8.b.iii. entities due to the inability to quantify a departure from U.S. GAAP.

Interested parties is not aware of any situations that hinder admittance of 8.b.iii entities due to the departure of U.S. GAAP as a result of the inability to quantify the departure.

Ref #2020-37: Separate Account – Product Identifiers

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding the degree of product identifying details needed to adequately assess the product features and reserve liabilities in the separate account. Particularly, this is requesting feedback on how to obtain increased product identifier reporting granularity in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). Additionally, feedback is requested regarding if a threshold should be established for when aggregate reporting would be permitted.

In response to the solicitation of feedback on additional product identifiers specifically for PRT and RILA transactions in the Separate Account General Interrogatories, the ACLI suggests adding a PRT and RILA product identifier. See example identifiers in bold:

<table>
<thead>
<tr>
<th>1 Product Identifier</th>
<th>Not Registered with SEC</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2 Private Placement</td>
</tr>
<tr>
<td></td>
<td>3 Private Placement</td>
</tr>
<tr>
<td></td>
<td>4 Other (Not PPVA or PPLI)</td>
</tr>
<tr>
<td>Pension Risk Transfer Group Annuities</td>
<td></td>
</tr>
<tr>
<td>All Other Group Annuities</td>
<td></td>
</tr>
<tr>
<td>Registered Index Linked Annuities Individual Annuities</td>
<td></td>
</tr>
<tr>
<td>All Other Individual Annuities</td>
<td></td>
</tr>
<tr>
<td>Life Insurance</td>
<td></td>
</tr>
<tr>
<td>Totals</td>
<td></td>
</tr>
</tbody>
</table>
The addition of these identifiers would bifurcate out PRT and RILA transactions. Further, the use of these additional identifiers would show in General Interrogatory 1.01 if there were guarantees associated with these different products.

**Ref #2020-38: Pension Risk Transfer – Separate Account Disclosure**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding possible modifications to *SSAP No. 56—Separate Accounts* specific to pension risk transfer (PRT) products. Depending upon the feedback received, the Working Group would have several options available including, but not limited to, requiring the separate identification of pension risk transfer products (including transactions, guarantees, reserve assumptions, etc.) within existing disclosure requirements or the addition of a new general interrogatory (and perhaps new separate accounting reporting schedules / exhibits) to separate specific product detail that was previously reported in an aggregated format.

Pension risk transfer transactions differ from other separate account transactions in that PRT products are group products, not individual products. The American Council of Life Insurers believes that these differences are adequately addressed in the current disclosure requirements of SSAP No. 56 – Separate Accounts. Specifically, paragraphs 31c and 33a include disclosure requirements for products with guarantees, which may include PRT transactions. Further, these disclosure requirements extend to the General Account Annual Statement Note 35B. Additionally, the proposal above on Ref# 2020-37 will provide additional detail for PRT products in the General Interrogatories.

We believe that the current disclosures sufficiently capture PRT transactions however, we defer to the Working Group and regulators if these groups voice concern that they are not able to discern something specific.

**Ref #2020-39: Interpretation Policy Statement Updates**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F—Policy Statements regarding the issuance and adoption of accounting interpretations.

Based upon interested parties’ discussion with NAIC staff and our understanding of the objective of the changes to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F—Policy Statements (Appendix F), we’ve marked up Appendix F with edits that clarify the policy for issuing interpretations which amend, supersede, or conflict with existing SSAPs (please see attached). Specifically, the interested parties’ proposed revisions clarify that such interpretations are temporary and restricted to circumstances requiring immediate, temporary guidance such as catastrophes or other emergencies. We believe the marked Appendix F is consistent with the intent to use interpretations in limited circumstances. Our proposed revisions explicitly establish that interpretations are not intended as a shortcut to bypass the deliberative process for amending existing statutory accounting guidance or developing new guidance.

**Ref #2020-40: Clarification of Prescribed Practices**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

Interested parties are concerned that the discussion of prescribed and permitted practices in this proposal are likely to cause confusion. An insurer’s annual and quarterly statutory statements that are filed with the state of domicile
and all states the insurer is licensed are prepared in accordance with the accounting practices prescribed or permitted by the state of domicile. However, in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than provided in the AP&P manual. We believe the proposal should be amended to clarify that if a non-domiciliary state in which the company is licensed requires or allows a practice by state statute / bulletin (or other state-wide provision) in such supplemental financial information that is different from NAIC SAP, that practice(s) is also considered a prescribed practice. We recommend changes to the proposed wording to clarify these points (please see attached).

Ref #2020-41: ASU 2020-06 - Convertible Instruments

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations and SSAP No. 86—Derivatives, to reject ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity for statutory accounting.

Interested parties have no comment on this item.

Ref #2020-42: ASU 2020-07 - Presentation and Disclosures by Not-for-Profit Entities

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets as not applicable to statutory accounting.

Interested parties have no comment on this item.

Description of Issue: This agenda item proposes edits to Appendix F of the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, clarifying the requirements regarding the issuance and adoption of accounting interpretations.

Existing Authoritative Literature:

*NAIC Policy Statement on Maintenance of Statutory Accounting Principles* (Appendix F) documents the requirements of interpretation issuances and adoptions.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

9. Interpretations will be developed to address, but will not be limited to issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an "interpretation" during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. The voting requirement to adopt an interpretation is a simple majority. As interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The Working Group shall report the adopted interpretation to the Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

11. In rare circumstances, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption. These interpretations can be adopted, overturned, amended or deferred only by a two-thirds majority of the Task Force membership.
12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

a. **Interpretation of the new SSAP** - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading “Interpreted by.”

b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

c. **Incorporation** - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the “affects” section of the SSAP and is not referenced under the “interpreted by” section of the status page of the SSAP.

ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** N/A

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose clarifying revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F regarding the issuance and adoption of accounting interpretations.

**Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs**

**Interpretations which DO NOT amend, supersede, or conflict with existing SSAPs**

9. Interpretations **will** be developed to address, **but will not be limited to** issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.
10. **The voting requirement to adopt an interpretation is a simple majority.** As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption, unless specifically stated otherwise. **The voting requirement to adopt an interpretation of this type is a simple majority.** The Working Group shall report the adopted interpretation to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

**Interpretations which amend, supersede, or conflict with existing SSAPs**

11. **In rare certain circumstances such as catastrophes or emergencies requiring immediate, temporary statutory accounting guidance,** the Working Group may adopt an interpretation which creates a new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). **Interpretations that conflict with existing SSAPs shall be temporary guidance and restricted to circumstances arising from the need to issue guidance for circumstances requiring immediate temporary guidance.** In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

a. **These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable).** In circumstance where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b. **These interpretations can be adopted overturned, amended or deferred by a two-thirds majority of the Task Force membership.** For clarification, a two-thirds majority of the Task Force requires two-thirds of entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Staff Review Completed by: Jim Pinegar, NAIC Staff – August 2020

**Status:**
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F—Policy Statements regarding the issuance and adoption of accounting interpretations, as illustrated above.

Description of Issue:
This agenda item intends to clarify the definition and application of prescribed practices. This issue has been presented in response to questions received on existing references in the NAIC Accounting Practices & Procedures Manual (AP&P). In summary:

- Each state insurance department has the authority to regulate any insurance company that is licensed in their state. The AP&P Manual is not intended to preempt states’ legislative and regulatory authority.

- The financial statements filed with the NAIC and subject to independent audit, pursuant to Model Law 205: Annual Financial Reporting Model Regulation shall be in accordance with practices prescribed or permitted by the domiciliary state.

- However, in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than provided in the AP&P manual. Ideally, to prevent reporting entities from having to file different financial statements or reports prepared on different basis of accounting with differenting states, the practices permitted or prescribed by a domiciliary state will be accepted in all states in which a company is licensed. However, as noted above, the provisions of the AP&P Manual are not intended to preempt states’ legislative or regulatory authority. Accordingly, each state in which a company is licensed could require supplemental financial information that requires or allows statutory accounting practices that differ from the AP&P manual. If a non-domiciliary state in which the company is licensed requires or allows a practice by state statute / bulletin (or other state-wide provision) in such supplemental financial information that is different from NAIC SAP, that practice(s) is also considered a prescribed practice. If the company files supplemental financial information that reflect this practice(s), even if the supplemental financial information is filed only in the non-domiciliary state, then the prescribed practice disclosure of Note 1 shall apply.

Examples of two possible situations:

Scenario 1: Non-domiciliary State A issues a state statute / bulletin that requires the filing of supplemental financial information and which requires the use of a prescribed accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

Scenario 1 Conclusion: The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or prescribed by the domiciliary state (State B). (These financial statements would be subject to the
independent audit requirements per Model 205.) The reporting entity also shall file separate supplemental financial information with State A in accordance with the accounting practice mandated by that non-domiciliary state but shall include the prescribed practice disclosure of Note 1 in the supplemental financial information.

**Scenario 2:** Non-domiciliary State A issues a state statute / bulletin that allows an accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

**Scenario 2 Conclusion:** The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or prescribed by the domiciliary state (State B). (These financial statements would be subject to the independent audit requirements per Model 205.) The reporting entity then has the ability, but is not required, to file supplemental financial information in State A that reflects the accounting practice prescribed by that non-domiciliary state and shall include the prescribed practice disclosure of Note 1 in the supplemental financial information.

**Existing Authoritative Literature:**

**Preamble**

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state’s statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state’s insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA's Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

**Preamble Questions and Answers**

**Permitted Practices Advance Notification Requirement – Implementation Questions and Answers**

2. **Q:** What is the difference between a permitted accounting practice and a prescribed practice?

   **A:** **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

   **Prescribed** accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority.

   If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

**The NAIC Model laws do not contain a definition of “prescribed practice,” but references to prescribed practices are noted in the Model laws below. These are provided as reference. There are no revisions proposed to the Model Laws:**

© 2021 National Association of Insurance Commissioners
Model 205 – Annual Financial Reporting Model Regulation

Section 6 - Designation of Independent Certified Public Accountant

B. The insurer shall obtain a letter from the accountant, and file a copy with the commissioner stating that the accountant is aware of the provisions of the insurance code and the regulations of the Insurance Department of the state of domicile that relate to accounting and financial matters and affirming that the accountant will express his or her opinion on the financial statements in terms of their conformity to the statutory accounting practices prescribed or otherwise permitted by that Insurance Department, specifying such exceptions as he or she may believe appropriate.

Model 450 – Insurance Holding Company System Model Regulation with Reporting Forms and Instructions

Item 12. Financial Statements and Exhibits

The annual financial statements of the applicant shall be accompanied by the certificate of an independent public accountant to the effect that such statements present fairly the financial position of the applicant and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the applicant is an insurer which is actively engaged in the business of insurance, the financial statements need not be certified, provided they are based on the Annual Statement of the person filed with the insurance department of the person’s domiciliary state and are in accordance with the requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of the state.

Model 785 – Credit for Reinsurance Model Law

Section 4. Qualified U.S. Financial Institutions

4.c. Maintains at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is

Model 787 – Term and Universal Life Insurance Reserve Financing Model Regulation

Section 6. The Actuarial Method

B. Valuation used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply: (1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None
Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent auditor requirements. (NAIC staff do not believe revisions are necessary to paragraph 12 of the Preamble as that guidance does not limit practices to the domiciliary state and already confirms that the domiciliary state practices shall be reflected in the financial statements subject to audit. For reference paragraph 12 is below.)

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state’s statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state’s insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA’s Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

Proposed Revisions to the Preamble Questions and Answers:

2. Q: What is the difference between a permitted accounting practice and a prescribed practice?

A: Permitted accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

Prescribed accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled and/or licensed in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority. Prescribed accounting practices of the domiciliary state shall be reflected in the statutory financial statements filed with the NAIC. Non-domiciliary states may additionally require insurance entities licensed in their state to file supplementary financial information that requires or allows the use of different accounting practices in the supplementary filing than provided in the AP&P manual.

If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

Statutory Accounting Principles (E) Working Group

We have reviewed the revised proposed changes to SSAP No. 71 – Policy Acquisition Costs and Commissions as outlined in Ref. #2019-24. We continue to question several elements of the proposal and strongly object to the revisions for the following reasons:

1. This continues to be a substantive change to existing policy, contrary to the characterization in the published exposure draft.
2. The proposal continues to alter the fundamental premise of statutory accounting by creating a situation in which certain historically period expenses, trail commission payments, are to be treated differently from other period expenses by way of an accrual methodology, which leads to:
   a. A hybrid of statutory, GAAP and tax accounting.
   b. Fundamentally and permanently different economics for products designed with trail commission payments, leading to the need for significant effort at primary writers to redesign and/or reprice such products, presumably at a cost to the consumer.
   c. Guaranteed renewable products, like Long Term Care Insurance, could be exposed to further rate increases if the fundamental profit dynamics of the products change as a result of the new reserving practices.
   d. New uncertainty within the statutory accounting framework as to which other period expenses should also be accrued or might be targeted for similar treatment.
   e. A situation whereby trail commission expenses have a greater impact on statutory capital than other, similar expenses.
   f. A disincentive for primary writers to align the interests of the writer, broker/agent and policyholder through trail commissions because of the unique treatment and resulting capital implications.
3. Should the proposed changes be adopted, primary writers will be exposed to new and substantial accounting and actuarial workload relating to the determination of accrual methodologies for each affected product and the related periodic ‘true-up’ required to adjust the new statutory reserves for actual performance.
4. There is no apparent benefit for the consumer, primary writer, investment community, or regulatory bodies. The additional costs involved are highly restrictive and will likely cause either a decline in product offering or result in a higher cost to the consumer, which will ultimately curb the ability for the average person to save some of their earnings for retirement, children’s schooling or other reason.
5. Moreover, there will be a material adverse impact on the RBC ratios of carriers utilizing legitimate third-party distribution structures, which may in some cases be material enough to affect carrier capital solvency.
We understand some have expressed concerns that related party structures have been put in place to achieve a deferral of commission expense, and understand that in such circumstances existing accounting rules may appropriately require that a liability should be established - but we continue to be of the view that existing accounting standards provide both the necessary guidance and basis for enforcement. In cases – like Acadia’s carrier contracts - where a third-party licensed agent is involved and applies a trail commission to in-force policies only, there is no obligation to pay commissions until the anniversary date of the policy and therefore no reason to recognise a liability. The proposed change ignores both of these material elements – the involvement of a third party, and fact that an obligation does not arise until the anniversary date – and sweeps up these materially different arrangements in the same basket as related-party structures.

It is manifestly contrary to the public interest to pursue a change where:

- there is no clear benefit or public interest in favour of it;
- there is ample clarity and scope under existing accounting rules;
- there is material adverse impact on carriers;
- there is resulting adverse impact on the public through higher prices, reduced access, or both.

We urge the NAIC to reject this poorly conceived and clearly material change which is rife with unintended consequences, and instead rely on the proven ample scope under the existing SSAP 71 which has been in effect for decades.

January 19, 2021

Re: Comment Period / Revised Proposed Changes to SSAP No. 71 – Policy Acquisition Costs and Commissions

It has come to my attention that the Statutory Accounting Principles (E) Working Group is accepting comments pertaining to the Revised Proposed Changes to SSAP No. 71 – Policy Acquisition Costs and Commissions.

Although I concluded my service as NC Insurance Commissioner four years ago, I served eight (8) years in that office and an additional four (4) years as Assistant Commissioner, for a total of 12 years as a state insurance regulator. During that time, I also served on the NAIC Executive Committee and as Vice Chair of the Southeast Zone. Further, I have experience both as a state legislator (8 years) and licensed attorney (28 years). To the best of my ability, I have remained aware of many contemporary issues, proposals, and agenda items before the NAIC and its various committees and working groups.

Before the comment period closes, I want to restate the compass points of my tenure as well as that of my predecessor, the late great Jim Long: (1) Consumer protection and (2) fair, stable, reasonable regulation of the insurance market. Paramount, first and foremost of course, is consumer protection.

Today I submit my comment in opposition to the revised proposed changes to SSAP No. 71 based on the following:

SSAP 71 has been in place approximately 30 years and, by most accounts of which I am familiar, it has worked well.

It is my understanding that during those three decades such levelized commission programs have gone through multiple official examinations by insurance regulators with few to no material issues having been noted.

To the best of my knowledge presently, there has been no policyholder peril, fraud, or company financial impairment by using the current version of SSAP 71. Accordingly, existing rules have apparently worked as intended.

The revised changes have been described as non-substantive but upon analysis by other current and past state insurance regulators whom I respect and trust, whose comments in opposition or expressing concern are incorporated by reference, and upon my own review, it is more evident that the proposal is,
in fact, substantive – in part because the current proposal will apparently cause unnecessary financial damage to some carriers and their policyholders because rating agencies would consequently and unnecessarily downgrade any impacted company due to a retroactive drop in surplus/RBC numbers.

Among other consumer concerns is this: This proposed new reserving practice could cause further, unnecessary rate increases for guaranteed renewable products like Long Term Care insurance.

Respectfully, acknowledging the above and consumer protection most of all, it appears that a more detailed, comprehensive study is necessary before further consideration of the revised proposal. More feedback will be particularly enlightening and will provide the best counsel on what direction – if any -- to take on the proposal.

RE: Ref #2019-24 Levelized and Persistency Commission

Dear Mr. Bruggeman,

Guggenheim Life and Annuity Company is writing to express our concern with the proposed changes to SSAP No. 71 set forth in agenda item #2019-24: Levelized and Persistency Commission (“2019-24”). There have been serious flaws in the exposure process, including the designation of the proposed change as “nonsubstantive”, inconsistency regarding how to characterize the proposed changes, and a changing effective date.

Companies potentially impacted by 2019-24, in their attempt to provide input, have been aiming at a constantly moving target. 2019-24 has gone through several rounds of exposure, with significant variations to foundational aspects of the proposal, including how reporting entities should classify the proposed changes and the effective date of the proposed changes. The proposal has varied on the fundamental point of whether the change is a correction of error or change in accounting principle. Similarly, the effective date of the proposal has changed 3 times (from no effective date, to a January 1, 2021 effective date, to an “effective upon adoption” date).

We believe that a change to an accounting principle dating back to 1998 should be deemed a substantive change. The Statutory Accounting Principles Working Group has determined the process around 2019-24 has met the due process requirements of a substantive revision; however, we believe additional scrutiny and process should be given to this issue for several reasons. First, the proposed changes constitute a change to accounting principles that could have a significant impact on certain reporting entities. Second, decades of examinations and audits did not result in any objection to reporting entities’ reporting of the commission arrangements at issue.1 Third, companies have not harmed policyholders nor put themselves in financial impairment by reporting the way they have for decades. To us, this change in accounting principle seems like a punitive measure against a small number of companies that have been reporting these commissions a certain way for decades.

We appreciate the opportunity to comment on 2019-24 and believe regulators should continue to explore this issue and come to a reasonable solution.

Sincerely,

Ellyn M. Nettleton
Chief Accounting Officer

c: NAIC Staff

1 Note also that a 2010 SEC complaint against a carrier explained that levelized commissions were a common practice in the insurance industry. There is no evidence in the complaint that the statutory accounting treatment was ever determined not to be in accordance with statutory accounting principles.
December 7, 2020

Dale Bruggeman, Chair
NAIC Statutory Accounting Principles (E) Working Group

Re: SSAP No. 71 - Policy Acquisition Costs and Commissions

Dear Chair Bruggeman & Members of the Working Group:

I write to you today on behalf and at the request of the elected leadership of the National Council of Insurance Legislators (“NCOIL”)1 regarding the NAIC’s Statutory Accounting Principles Working Group’s (WG) efforts to update SSAP No. 71 titled “Policy Acquisition Costs and Commissions.” Without delving deeply into the specifics of the principle itself, with which you are well-versed, NCOIL has significant concerns about it. We note that SSAP No. 71 has been in effect since 1998, and inquire why, after 22 years, there needs to be a rush to implementation of this proposal for year-end?

Additionally, our members have heard differing opinions as to whether the proposed changes are substantive or non-substantive. Candidly, when NCOIL’s legislators start to hear of substantive changes being made via a handbook or manual, it creates tension because it brings to mind the debate surrounding incorporation by reference (IBR) for substantive matters. Beyond this impairment of the legislative prerogative, I must note that there is a constitutional provision in California stating that no law shall be enacted except by statute and no statute except by bill. Regardless of the determination on substantive vs non-substantive here though, there seems to be little debate that these changes could have a material and perhaps significant impact on insurers

---

1 NCOIL is a national legislative organization with the nation’s 50 states as members, represented principally by legislators serving on their states’ insurance and financial institutions committees. NCOIL writes Model Laws in insurance and financial services, works to preserve the State jurisdiction over insurance as established by the McCarran-Ferguson Act seventy-five years ago, and to serve as an educational forum for public policymakers and interested parties. Founded in 1969, NCOIL works to assert the prerogative of legislators in making State policy when it comes to insurance and educate State legislators on current and longstanding insurance issues.
if adopted. If the impact is as large as some have told us, and we have heard of impacts as high as 30% of risk-based capital (RBC), it strikes NCOIL as quite bad timing to implement such changes as the entire global economy is suffering during this global pandemic. A number of companies from several states have advised us that the impact on their capital will be so great that these now-healthy companies would fall below the RBC regulatory action level if this change were to be implemented.

One of our most senior leaders has asked us, and we in turn ask you, if a solvent & healthy insurance carrier has been accounting for commissions in error due to a misunderstanding of SSAP No. 71, and the proposed change to SSAP No. 71 threatens to render that insurer insolvent, then is the proposed change really meeting its intent? It certainly would seem to fly in the face of the number one priority of the state regulatory system.

Accordingly, NCOIL requests and recommends that the WG delay implementation of the proposal until such time that staff completes the issue paper it is charged with drafting on the classification of the proposal. Moreover, NCOIL requests and recommends that in any case or at any point if the WG determines to move forward with the proposal, it be subject to a five year phase-in period in order to allow companies to maintain their health, soundness and solvency as the capital impact of the “clarification” to SSAP No. 71 takes effect.

On behalf of our member legislators, I thank you for your consideration of this matter.

Very truly yours,

Thomas B. Considine
Chief Executive Officer
NCOIL

RE: Ref #2020-36, Derivatives Hedging Fixed Indexed Products

Dear Mr. Bruggeman:

Interested parties would like to thank the Statutory Accounting Principles Working Group (SAPWG) for the opportunity to comment on the exposed 2020-36, Derivatives Hedging Fixed Indexed Products

The interested parties’ response will be brief at this time as we continue our work reviewing the exposure, assessing the proposal and working on potential variances to the exposure.

Interested parties are committed to working with NAIC staff and SAPWG on this very complicated and important topic.

*     *     *     *     *

</table>

Description of Issue: During the Summer National Meeting, through agenda item #2020-02: Accounting for Bond Tender Offers, the Working Group clarified that the accounting and reporting of investment income and capital gains/losses, due to early liquidation either through a call or a tender offer shall be similarly applied. This nonsubstantive update was effective on July 30; however, reporting entities that had historically applied a differing accounting methodology and required systems changes to properly account for the early termination of tendered bonds, were granted an effective date deferral of no later than January 1, 2021.

This agenda item is to expand an existing disclosure regarding called bonds to include tendered bond activity.

Existing Authoritative Literature: Only the relevant disclosures from SSAP No. 26R—Bonds, have been included below.

30. The financial statements shall include the following disclosures:

   i. For securities sold, redeemed or otherwise disposed as a result of a callable feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Not Applicable.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to the disclosures in SSAP No. 26R—Bonds. The revisions expand the called bond disclosures to also include bonds in which are terminated early through a tender offer.

30. The financial statements shall include the following disclosures:

   i. For securities sold, redeemed or otherwise disposed as a result of a callable or tender offer feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

Description of Issue: NAIC staff received inquiries on which standard and reporting schedule would be most appropriate for publicly traded preferred stock warrants. A stock warrant represents the right to purchase a company's stock at a specific price and at a specific date and are typically issued directly by a company to an investor. When a stock warrant is exercised, the shares of the stock received are issued directly from the company itself, rather than another investor.

Stock warrants generally fall into scope of SSAP No. 86—Derivatives, although there is a special carveout for publicly traded common stock warrants (see existing authoritative literature section). However due to the fact that the only difference between publicly traded common and preferred stock warrants is the type of stock an entity would receive (i.e. common or preferred stock), NAIC staff believe that publicly traded preferred stock warrants should receive a similar carveout from SSAP No. 86 and similar accounting and reporting treatment.

This agenda item proposes 1) to expand the scope of SSAP No. 32R—Preferred Stock to include publicly traded preferred stock warrants and 2) require publicly traded preferred stock warrants to be reported at fair value.

Existing Authoritative Literature:

Warrants, both public and private are described in SSAP No. 86, however publicly traded (common) stock warrants are scoped into SSAP No. 30—Unaffiliated Common Stock as highlighted below. (Note: only relevant excerpts have been included below.)

SSAP No. 86:

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.

j. “Warrants” are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity. Publicly traded stock warrants are captured in scope of SSAP No. 30R—Unaffiliated Common Stock. All other warrants, including non-publicly traded stock warrants, shall be captured in scope of SSAP No. 86.
Accordingly, as referenced in SSAP No. 86, publicly traded common stock warrants are captured within the scope of SSAP No. 30R, as highlighted below.

SSAP No. 30R:

4. In addition, the following equity investments are captured within scope of this statement:

   a. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York or NASDAQ exchange;

   b. Publicly traded common stock warrants;

   c. Shares of SEC registered Investment Companies captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks);

   d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org;

   e. Foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction. Other foreign funds are excluded from the scope of this statement; and

   f. Equity interests in certified capital companies in accordance with INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 32R—Preferred Stock and SSAP No. 86—Derivatives, which would scope publicly traded preferred stock warrants into SSAP No. 32R. This would result in publicly traded preferred stock warrants receiving similar treatment as publicly traded common stock warrants. Additionally, the publicly traded preferred stock warrants would be accounted for as perpetual preferred stock, thus requiring to be accounted for at fair value.

Proposed edits to SSAP No. 86—Derivatives:

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.
j. “Warrants” are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity. Publicly traded stock warrants are captured in scope of SSAP No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock. All other warrants, including non-publicly traded stock warrants, shall be captured in scope of SSAP No. 86.

Proposed edits to SSAP No. 32R—Preferred Stock:

SUMMARY CONCLUSION

3. Preferred stock which may or may not be publicly traded is a security that represents ownership of a corporation and gives the holder a claim prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. Preferred stock does not usually carry voting rights. Preferred stock has characteristics of both common stock and debt. Preferred stock shall include:

a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is at the option of the holders. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders. Preferred stock which meet one or more of these criteria would be classified as redeemable preferred stock, regardless of other attributes such as voting rights or dividend rights.

b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock pursuant to paragraph 3.a.

c. Publicly traded preferred stock warrants.

Balance Sheet Amount

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

a. For reporting entities that do not maintain an AVR:

i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus)

b. For reporting entities that maintain an AVR:

i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.

ii. Perpetual preferred stocks and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Impairment of Perpetual Preferred Stock

14. For any decline in the fair value of perpetual preferred stock or publicly traded preferred stock warrants, which is determined to be other-than-temporary (INT 06-07), the perpetual preferred stock or warrant shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines, which are determined to be other-than-temporary, shall be recognized as realized losses. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a preferred stock at an amount below its carrying value.

Staff Review Completed by: Jim Pinegar, NAIC Staff – September 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 32R—Preferred Stock and SSAP No. 86—Derivatives, as illustrated above, to scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 32R—Preferred Stock and SSAP No. 86—Derivatives, as shown above. These revisions scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

Description of Issue:

During the 2019 Spring National Meeting, the Working Group adopted agenda item 2018-18: Structured Notes, which expanded the scope of SSAP No. 43R—Loan-Backed and Structures Securities to include certain Government-Sponsored Enterprises (GSE) – Credit Risk Transfer (CRT) Transactions.

Credit risk transfer securities are mortgage-referenced securities issued by government sponsored entities that are tied to a referenced pool of mortgages. These are instruments in which the payments received are linked to the interest and principal repayment of underlying mortgage loans from those identified in a particular pool of mortgages. For these instruments, investors may not receive a full return of principal as principal repayment is contingent on the ultimate repayment by the mortgage loan borrowers (as credit risk has been transferred to the investor). The program naming convention for CRT’s was identified as Structured Agency Credit Risk (STACR) for Freddie Mac and Connecticut Avenue Securities (CAS) for Fannie Mae.

This agenda item has been drafted to reflect recent changes to the Freddie Mac STACR and Fannie Mae CAS programs. It is anticipated that future Freddie Mac STACR and Fannie Mae CAS issuances will be solely conducted through a Real Estate Mortgage Investment Conduit (REMIC) trust. The REMIC is functionally equivalent to the original Freddie Mac STACR and Fannie Mae CAS programs, in that the trusts will pay interest and principal to investors on a monthly basis. All other material characteristics also remain unaffected as the investment represents a large, diversified reference pool, multiple tranches are available to accommodate various risk appetites, and the notes are highly liquid with an estimated $2 billion in buy/sale trades occurring each month. Also unchanged is that the STACR notes are not guaranteed by Freddie Mac (i.e., credit risk has been transferred) and CAS notes are not guaranteed by Freddie Mac, and both entities maintain the senior risk tranche, which is unfunded and not issued for public investors.

The primary difference in the use of a REMIC trust is that counterparty risk exposure to Freddie Mac and Fannie Mae is reduced as the trust is designed to stand on its own. The trust’s assets are intended to fund interest and principal payments on the notes, thus insulating investors from a possible Freddie Mac or Fannie Mae insolvency. While several other benefits are touted, the use of a REMIC will also not subject international investors to U.S. withholding tax requirements, likely resulting in higher international investor participation.

In collaboration with NAIC Securities Valuation Office (SVO) staff, SAPWG support staff has confirmed that the anticipated use of a REMIC trust remains functionally equivalent and retains the same material risk structure as the original STACR and CAS programs. Additionally, investment in securities issued by a GSE REMIC trust remains within the review scope of the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). Per part 4 of the P&P Manual, Mortgage Referenced Securities are not eligible for filing exemption and are subject to assessment by the Structures Securities Group.
This agenda item proposes to 1) include STACR and CAS REMIC’s into the scope of SSAP No. 43R and, 2) align SSAP No. 43R guidance regarding the financial modeling of mortgage referenced securities to the requirements as directed in the P&P Manual.

Existing Authoritative Literature:

**SSAP No. 43R—Loan-Backed and Structured Securities**

The inclusion GSE CRT securities into the scope of SSAP No. 43R is referenced in paragraph 5:

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages. These securities do not qualify as “loan-backed securities” as the pool of mortgages are not held in trust and the amounts due under the investment are not backed or secured by the mortgage loans. Rather, these items reflect instruments in which the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

Financial modeling of CRT Securities is referenced in paragraph 27:

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The Purposes and Procedures Manual of the NAIC Investment Analysis Office provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: The NAIC identifies securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then

---

1 Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that issue qualifying mortgage-referenced securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of residential mortgage credit risk.
determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled break point values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For loan-backed and structured securities not subject to paragraphs 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the Purposes and Procedures Manual of the NAIC Investment Analysis Office. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to, mortgage-referenced securities, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), and loan-backed and structured securities with SVO assigned NAIC designations.

Specific Interim Reporting Guidance for RMBS/CMBS Securities

28. The guidance in this paragraph shall be applied in determining the reporting method for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).
Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual); Part 4 – Mortgage Reference Securities:

Definition

29. A Mortgage Referenced Security has the following characteristics: A Mortgage Referenced Security’s coupon and/or principal payments are linked, in whole or in part, to prices of, or payment streams from, real estate, index or indices related to real estate, or assets deriving their value from instruments related to real estate, including, but not limited to, mortgage loans.

Not Filing Exempt

30. A Mortgage Referenced Security is not eligible for filing exemption but is subject to the filing requirement.

NAIC Risk Assessment

31. In determining the NAIC Designation of a Mortgage Referenced Security, the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.

Quarterly Reporting for Mortgage Reference Securities

32. To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group:
Relevant background from agenda item 2018-18 was included in the ‘Description of Issue’ section.

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 43R—Loan-Backed and Structures Securities, incorporating minor scope modifications to reflect recent changes to the STACR and CAS programs. The proposed edits would allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope when a REMIC structure is used in the STACR program or CAS program.
5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise\(^2\) or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages and. These securities do not qualify as “loan-backed securities” as the pool of mortgages are not held in trust and the amounts due under the investment are not backed or secured by the mortgage loans. Rather, these items reflect instruments in which the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:

   i. **Step 1:** Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

   ii. **Step 2:** Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

   iii. **Step 3:** Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities loan-backed and structured securities—not subject to paragraphs 27.a. (financial modeling) follow the

\(^2\) Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of residential-mortgage credit risk.
established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to, mortgage-referenced securities, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), and loan-backed and structured securities and mortgage-referenced securities with SVO assigned NAIC designations.

**Specific Interim Reporting Guidance Financially Modeled for RMBS/CMBS Securities**

28. **For securities that will be financially modeled under paragraph 27.** The guidance in this paragraph shall be applied in determining the reporting method for such securities (residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

   a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

   b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

   c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

   d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

Description of Issue: SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities provides guidance for the various audit opinions that can be issued when an entity records certain investments utilizing the U.S. GAAP equity method of accounting.

The complete guidance for the various audit opinions is included in the ‘Existing Authoritative Literature,’” however the relevant guidance is summarized as:

- Disclaimers of opinion shall be nonadmitted.
- Qualified opinions due to a scope limitation can only be admitted if the limitation is quantified, then the quantified limitation is nonadmitted.
- Qualified opinions due to a GAAP departure can only be admitted if the departure is quantified (then the departure is nonadmitted), OR if the departure is as the result of utilizing a statutory accounting principle in lieu of following GAAP (in such cases, a quantification of the departure is not required).
- Adverse opinions due to a GAAP departure can only be admitted if the departure is quantified (then the quantified departure is nonadmitted), OR if the departure is as the result of utilizing a statutory accounting principle in lieu of following GAAP (in such cases, a quantification of the departure is not required).

The allowance of qualified or adverse audit opinions for admission of SCA investments without quantification are only permitted for U.S. insurance entities (commonly referred to as an 8.b.i entity). This agenda item proposes to expand the quantification exception guidance to 8.b.iii entities (referred to as U.S. GAAP SCA entities) in limited situations. Particularly, the proposed exception would allow U.S. GAAP SCA entities that depart from a U.S. GAAP provision that has been rejected for statutory accounting to be admitted SCAs without quantification if the departure from U.S. GAAP results in a more conservative position (i.e. fewer assets or greater liabilities), as a result of the departure.

Although specific quantification is not needed, this would require auditor certification that the departure from U.S. GAAP results in a more conservative position. From a situation shared in which an 8.b.iii SCA (U.S. GAAP entity) was following provisions similar to the insurer with regards to revenue recognition, the auditor noted that the U.S. GAAP revenue recognition provisions (which requires consideration of future, expected activity) warranted a qualified opinion. Under the existing guidance, this qualified opinion results in nonadmittance of the SCA because it could not be quantified, which was material to the reporting entity. This nonadmittance treatment was noted to be punitive as the SCA was following processes that were consistent with SAP accounting that resulted in a more conservative financial statement representation of the SCA.

Existing Authoritative Literature: The entity types (8.b.i, 8.b.ii, etc.) referenced in the ‘Description of Issue,’ the audit opinion requirements and the permitted exceptions to the unqualified opinion requirements within SSAP No. 97 are below. Relevant guidance has been bolded for emphasis.
SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

Applying the Market Valuation, Audited Statutory Equity and Audited GAAP Equity Methods

8. The admitted investments in SCA entities shall be valued using either the market valuation approach (as described in paragraph 8.a.), or one of the equity methods (as described in paragraph 8.b.) adjusted as appropriate in accordance with the guidance in SSAP No. 25—Affiliates and Other Related Parties, paragraph 17.d.

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. The subsidiary must be traded on one of the following major exchanges: (1) the New York Stock Exchange, (2) the NASDAQ, or (3) the Japan Exchange Group;

ii. The reporting entity must submit subsidiary information to the NAIC SCA analysts for calculation of the subsidiary’s market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

iii. Ownership percentages for determining the discount rate shall be measured at the holding company level;

iv. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

v. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required;

vii. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public’s control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 8.a. or, if the requirements are met, but a reporting entity elects not to use that approach, the reporting entity’s proportionate share of its investments in SCAs shall be recorded as follows:

i. **Investments in U.S. insurance SCA entities shall be recorded based on either**
   1) the underlying audited statutory equity of the respective entity’s financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill or 2) the underlying audited statutory equity of the respective entity’s financial statements, adjusted for any unamortized goodwill, modified to remove the impact of any permitted or prescribed accounting practices that depart from the NAIC Accounting Practices and Procedures Manual. Reporting entities shall record investments in U.S.
insurance SCA entities on at least a quarterly basis, and shall base the investment value on the most recent quarterly information available from the SCA. Entities may recognize their investment in U.S. insurance SCA entities based on the unaudited statutory equity in the SCAs year-end annual statement if the annual SCA audited financial statements are not complete as of the filing deadline. The recorded statutory equity shall be adjusted for audit adjustments, if any, as soon as the annual audited financial statements have been completed. Annual consolidated or combined audits are allowed if completed in accordance with the Model Regulation Requiring Annual Audited Financial Reports as adopted by the SCA’s domiciliary state;

iii. Investments in both U.S. and foreign noninsurance SCA entities that do not qualify under paragraph 8.b.ii., shall be recorded based on the audited U.S. GAAP equity of the investee. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Additional guidance on investments in downstream holding companies is included in paragraphs 22-27. Additional guidance on the use of audited foreign GAAP basis financial statements for the U.S. GAAP equity valuation amount is included in paragraph 23.b.

Qualified Versus Unqualified Opinions

21. Various opinions can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. The reporting entity shall record investments that require audited GAAP equity in the manner described below when the audit opinion on the GAAP financial statements contains the following language:

   a. The investment shall be nonadmitted if the audit opinion contains a disclaimer of opinion for the most recent statement of financial position presented in the financial statements.

   b. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a scope limitation that impacts the most recent statement of financial position presented in the financial statements and the impact of the scope limitation cannot be quantified. However, if the impact of the scope limitation is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity’s valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified scope limitation.

   c. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor’s report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity’s valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor’s report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.
The investment shall be nonadmitted if the audit opinion contains an adverse opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor’s report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity’s valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor’s report or the footnotes to the financial statements if an adverse audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

The investment shall be nonadmitted if the audit report or accompanying financial statements/notes contains explanatory language indicating there is an unalleviated substantial doubt about the investee’s ability to continue as a going concern.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and request comments on the extent to which situations exist that hinder admittance of 8.b.iii entities due to the departure of U.S. GAAP as a result of the inability to quantify the departure.

Staff Review Completed by: Jim Pinegar - NAIC Staff – September 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed this agenda item with a request for comments on the extent in which situations exist that hinder admittance of 8.b.iii entities due to the departure of U.S. GAAP.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group disposed of this agenda item, without statutory revisions, as the issue of nonadmittance due to the inability to quantify a departure from U.S. GAAP is not prevalent.

Description of Issue: ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity intends to address issues identified as a result of the complexity associated with applying U.S. generally accepted accounting principles (U.S. GAAP) for certain financial instruments with characteristics of liabilities and equity. Complexity associated with the accounting is a significant contributing factor to numerous U.S. GAAP financial statement restatements and has resulted in complexity for users attempting to understand the results of applying the current guidance.

Under current U.S. GAAP, there are five accounting models for convertible debt instruments. Except for the traditional convertible debt model that recognizes a convertible debt instrument as a single debt instrument, the other four models, with their different measurement guidance, require that a convertible debt instrument be separated (using different separation approaches) into a debt component and an equity or a derivative component. Convertible preferred stock also is required to be assessed under similar models. The amendments in ASU 2020-06 provide financial statement users with a simpler and more consistent starting point to perform analyses across entities. The amendments also improve the operability of the guidance and reduce, to a large extent, the complexities in the accounting for convertible instruments and the difficulties with the interpretation and application of the relevant guidance.

The amendments to the derivatives scope exception for contracts in an entity’s own equity change the population of contracts that are recognized as assets or liabilities. For a freestanding instrument, if the instrument qualifies for the derivatives scope exception under the amendment, an entity should record the instrument as equity. For an embedded feature, if the feature qualifies for the derivatives scope exception under the amendment, an entity should no longer bifurcate the feature and account for it separately.

ASU 2020-06 also provides updated guidance on earnings per share calculations.

Existing Authoritative Literature:

1. Earnings per share – Rejected as Not Applicable for Statutory Accounting:

The concept of earnings per share (Topic 260) has previously been reviewed with the following U.S. GAAP standards rejected as not applicable in Appendix D—Nonapplicable GAAP Pronouncements:

- FASB Statement No. 128, Earnings per Share (FAS 128)
- EITF 07-04, Application of the Two-Class Method under FASB Statement No. 128 to Master Limited Partnerships

© 2021 National Association of Insurance Commissioners
2. Distinguishing Liabilities from Equity / Derivatives and Hedging:

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets defines a liability with excerpts below:

Financial Instruments with Characteristics of both Liabilities and Equity

27. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent the instruments embodies an unconditional obligation of the issuer. (Pursuant to SSAP No. 86, embedded features in derivative contracts shall not be separated from the host contract for separate recognition.) Free-standing financial instruments that meet any of the criteria below meet the definition of a liability:

   a. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the issuing reporting entity.

   b. A financial instrument, other than an outstanding share, that at inception both 1) embodies an obligation to repurchase the issuer’s equity shares or is indexed to such an obligation and 2) requires or may require the issuer to settle the obligation by transferring assets.

   c. Obligations that permit the holder to require the issuer to transfer assets.

   d. A financial instrument is a liability if the issuer must settle the obligation by issuing a variable number of its equity shares and the obligation’s monetary value is based solely or predominantly on: 1) a fixed monetary amount, 2) variation in something other than the fair value of the issuer’s equity shares, or 3) variations inversely related to changes in the fair value of the issuer’s equity shares.

   e. Instruments in which the counterparty (holder) is not exposed to the risks and benefits that are similar to those of a holder of an outstanding share of the entity’s equity shall be classified as a liability.

28. If a free-standing financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument. However, that financial instrument shall be assessed each reporting period to determine whether circumstances have changed such that the instrument meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument shall be reclassified as a liability.

29. The classification of a free-standing financial instrument as a liability or equity shall only apply to the instrument issuer. Holders or purchasers of such instruments shall refer to the appropriate investment statement for valuation and reporting.

SSAP No. 72—Surplus and Quasi-Reorganizations

Capital Stock

3. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a “stated value” and record such amount in the capital stock account. Changes in the par value of a reporting entity’s capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent described in SSAP No. 5R.
SSAP No. 104R—Share-Based Payments, Exhibit A – Classification Criteria: Liability or Equity

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:
   a. A term extension option
   b. A provision that defers redemption until a specified liquidity level is reached
   c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer’s Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:
   a. It embodies an obligation to repurchase the issuer’s equity shares, or is indexed to such an obligation, and
   b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, “indexed to” is used interchangeably with “based on variations in the fair value of.” The phrase “requires or may require” encompasses instruments that either conditionally or unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

9. Examples of financial instruments that meet the criteria in paragraph 7 of this Exhibit include forward purchase contracts or written put options on the issuer’s equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.
Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): The Working Group addressed similar issue in agenda item 2019-43, and adopted language that was included in the “Existing Authoritative Literature” section, primarily in SSAP No. 5R.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 5R, SSAP No. 72 and SSAP No. 86 to reject ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity for statutory accounting as this update primarily addresses various convertible debt valuation models (a concept not employed by statutory accounting) as well as require bifurcating embedded derivative components (a concept not permitted under statutory accounting).

Staff Review Completed by:
Jake Stultz, NAIC Staff – September 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations and SSAP No. 86—Derivatives, to reject ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity, ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities, and ASU 2016-03, Intangibles—Goodwill and Other, Business Combinations, Consolidation, Derivatives and Hedging.

SSAP No. 5R

39. This statement rejects ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity.

SSAP No. 72

30. This statement rejects ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity.

SSAP No. 86

72. This statement rejects ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity, ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities, and ASU 2016-03, Intangibles—Goodwill and Other, Business Combinations, Consolidation, Derivatives and Hedging.
On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as shown above to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, SSAP No. 72—Surplus and Quasi-Reorganizations and SSAP No. 86—Derivatives, to reject ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity for statutory accounting.

Issue: ASU 2020-07 - Presentation and Disclosures by Not-for-Profit Entities

Check (applicable entity):
- Modification of Existing SSAP: P/C
- New Issue or SSAP: Life, Health
- Interpretation: 

Description of Issue: ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets intends to improve U.S. generally accepted accounting principles (U.S. GAAP) by increasing the transparency of contributed nonfinancial assets for not-for-profit (NFP) entities through enhancements to financial statement presentation and disclosure. The amendments address stakeholder input concerning the lack of transparency about the measurement of contributed nonfinancial assets recognized by NFPs, as well as the amount of those contributions used in an NFP’s programs and other activities. These updates provide minor changes to U.S. GAAP disclosures for not-for-profit entities and require that contributed nonfinancial assets be reported on a separate line item in the statement of activities, apart from contributions of cash and other financial assets.

Existing Authoritative Literature: Disclosure requirements are included in most SSAPs, but none are specific to only not-for-profit entities.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as ASU 2020-07 is specific to not-for-profit entities, which for statutory accounting purposes are not subject to different disclosure treatment than other entity types.

Staff Review Completed by:
Jake Stultz, NAIC Staff – September 2020

Description of Issue: Questions have arisen regarding accounting treatment for perpetual bonds held as investments within scope of SSAP No. 26R—Bonds. A perpetual bond is a fixed income security, representing a creditor relationship, with a fixed schedule of future payments, however it does not contain a maturity date - thus yielding the definitional term “perpetual.” These bonds are typically not redeemable at the option of the holder but likely possess call options for the benefit of the issuer.

Perpetual bonds possess characteristics very similar to that of perpetual preferred stock in that both offer a projected return for an indefinite of time. The similarities of these two securities extend beyond both having indefinite lives and receiving periodic, scheduled income cash flows (i.e. interest for perpetual bonds and dividends for perpetual preferred stock). Both investments 1) have a higher than average duration from their perpetual cashflows reflecting a greater market value sensitivity, up and down, to interest rate movements, 2) generally are subject to issuer call provisions, and 3) do not possess voting rights. The only primary cashflow difference between perpetual bonds and perpetual preferred stock is seniority in the event of a liquidation (bond typically place higher in the liquidation hierarchy) – which is why perpetual preferred stock may warrant a higher yield to compensate for seniority risk.

Existing Authoritative Literature:

SSAP No. 26R does not contain specific or differing valuation and reporting guidance for perpetual bonds. These investments would be captured in the existing valuation and reporting guidance for bonds that are not mandatory convertible, which anticipate a scheduled maturity date. Under this existing guidance, bonds are held at amortized cost or lower of amortized cost or fair value, depending on NAIC designation of the bond. Due to perpetual bonds lacking a maturity date (and possessing indefinite lives), they are unable to experience accretion or amortization to yield an amortized cost basis.

SSAP No. 26R—Bonds

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office (SVO).

   a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value.
b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of SSAP No. 30R—Unaffiliated Common Stock, if converted to preferred stock, the security will be in scope of SSAP No. 32—Preferred Stocks.)

Due to the numerous payment similarities between perpetual bonds and perpetual preferred stock, the accounting and reporting guidance for perpetual preferred stock is below. (Note: guidance below is from agenda item 2019-04: SSAP No. 32 – Investment Classification Project.) This agenda item substantially revises SSAP No. 32—Preferred Stock as a part of the Investment Classification Project. This guidance is anticipated for adoption during the Summer 2020 National Meeting.

SSAP No 32R—Preferred Stock

10. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

a. For reporting entities that do not maintain an AVR:

i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value.

ii. Perpetual preferred stocks shall be reported at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

b. For reporting entities that maintain an AVR:

i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.

ii. Perpetual preferred stocks shall be valued at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (SSAP No. 7).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): While not specific to perpetual bonds, in agenda item 2019-04: SSAP No. 32 – Investment Classification Project, the Working Group has agreed in principle with the accounting for perpetual preferred stock, which from an investor perspective, is materially similar to perpetual bonds.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 26R—Bonds to clarify that perpetual bonds shall be reported at fair value, not to exceed any current effective call price. Although this is considered a nonsubstantive change, if a stated effective date is preferred (instead of immediately upon adoption), NAIC staff recommends an effective date of Jan. 1, 2021, with early application permitted. (Although these bonds cannot amortize without a maturity date, NAIC staff notes that the specific reference to fair value may cause a change for reporting entities immediately before year-end. However, it is also noted that these types of bonds are not believed to be overly prevalent.)

SSAP No. 26R – Proposed Updates

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office (SVO).

a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. For perpetual bonds, the bonds shall be reported at fair value regardless of NAIC designation, not to exceed any current effective call price.

b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of SSAP No. 30R—Unaffiliated Common Stock, if converted to preferred stock, the security will be in scope of SSAP No. 32—Preferred Stocks.)
Effective Date and Transition

36. Revisions adopted April 2019, to explicitly exclude securities for which the contract amount of the instrument to be paid at maturity (or the original investment) is at risk for other than failure of the borrower to pay the contractual amount due, are effective December 31, 2019.

36.37. The reporting of perpetual bonds at fair value shall be effective January 1, 2021, with early adoption permitted.

Staff Review Completed by: Jim Pinegar, NAIC Staff – May 2020

Status:
On July 30, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds, as illustrated above, to clarify that perpetual bonds shall be reported at fair value, not to exceed any current effective call price. Although this is considered a nonsubstantive change, a stated effective date of Jan. 1, 2021, with early application permitted, has been proposed to allow time for reporting entities to make measurement changes as needed.

On November 12, 2020, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 26R—Bonds, as illustrated below, to clarify that perpetual bonds are within scope as a “bond,” and shall apply the yield-to-worst concept. Additionally, for perpetual bonds that do not possess or no longer possess a call feature shall follow fair value reporting.

SSAP No. 26R – Proposed Updates for the November 12th Interim Meeting:
In conjunction with the NAIC staff recommendation to retain bond accounting (i.e. amortized cost) for perpetual bonds that possess a future call date, however to require fair value accounting for those that do not (or no longer) possess a future call date, the following edits are recommended. All items below are new and have not previously been exposed.

Amortized Cost

9. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond FN. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion), except “make-whole” call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized to the next effective call date. For perpetual bonds purchased at a discount, any applicable discount shall be accreted utilizing the yield-to-worst concept.

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office (SVO).

a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an
On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 26R—Bonds, as illustrated below, to clarify that perpetual bonds are within scope. Perpetual bonds with an effective call option shall be amortized under the yield-to-worst concept, whereas perpetual bonds that do not possess, or no longer possess, a call feature shall follow fair value reporting. The adopted revisions included edits discussed during the meeting.

**Adopted Revisions to SSAP No. 26R:**

**Amortized Cost**

9. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion), except “make-whole” call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.

**Balance Sheet Amount**

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the NAIC *Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).

c. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. For perpetual bonds in which do not possess or no longer possess an effective call option, the bond shall be reported at fair value regardless of NAIC designation.

**Description of Issue:** This agenda item proposes edits to Appendix F of the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, clarifying the requirements regarding the issuance and adoption of accounting interpretations.

**Existing Authoritative Literature:**

*NAIC Policy Statement on Maintenance of Statutory Accounting Principles* (Appendix F) documents the requirements of interpretation issuances and adoptions.

**Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs**

9. Interpretations will be developed to address, but will not be limited to issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. The voting requirement to adopt an interpretation is a simple majority. As interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The Working Group shall report the adopted interpretation to the Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

11. In rare circumstances, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption. These interpretations can be adopted, overturned, amended or deferred only by a two-thirds majority of the Task Force membership.
12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

   a. **Interpretation of the new SSAP** - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading "Interpreted by."

   b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

   c. **Incorporation** - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

      i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the "affects" section of the SSAP and is not referenced under the "interpreted by" section of the status page of the SSAP.

      ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** N/A

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose clarifying revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F regarding the issuance and adoption of accounting interpretations.

**Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs**

**Interpretations which DO NOT amend, supersede, or conflict with existing SSAPs**

  9. Interpretations will **may** be developed to address, but will not be limited to issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

  10. The voting requirement to adopt an interpretation is a simple majority. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working
Group adoption, unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations which amend, supersede, or conflict with existing SSAPs

11. In rare circumstances, the Working Group may adopt an interpretation which creates a new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstance where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e. due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b. These interpretations can be adopted overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Staff Review Completed by: Jim Pinegar, NAIC Staff – August 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to NAIC Policy Statement on Maintenance of Statutory Accounting Principles in Appendix F—Policy Statements regarding the issuance and adoption of accounting interpretations, as illustrated above.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group, adopted, as final, revisions to NAIC Policy Statement on Maintenance of Statutory Accounting Principles in Appendix F—Policy Statements in Appendix F—Policy Statements, as illustrated below, regarding the issuance and adoption of accounting interpretations. This adoption included additional revisions to paragraph 11, as discussed during the meeting.

Appendix F – Adopted Revisions:

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations which DO NOT amend, supersede, or conflict with existing SSAPs

9. Interpretations will may be developed to address, but will not be limited to, issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing,
effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. The voting requirement to adopt an interpretation is a simple majority. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption, unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations which amend, supersede, or conflict with existing SSAPs

11. In rare certain circumstances such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance, the Working Group may adopt an interpretation which creates a new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). (Examples of time sensitive issues that have been previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as the federal TALF program.) Interpreations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstance requiring immediate guidance. In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

a) These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstance where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b) These interpretations can be adopted overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Issue: Clarification of Prescribed Practices

Check (applicable entity):

- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

P/C  Life  Health

Description of Issue:
This agenda item intends to clarify the definition and application of prescribed practices. This issue has been presented in response to questions received on existing references in the NAIC Accounting Practices & Procedures Manual (AP&P). In summary:

- Each state insurance department has the authority to regulate any insurance company that is licensed in their state. The AP&P Manual is not intended to preempt states’ legislative and regulatory authority.

- The financial statements filed with the NAIC and subject to independent audit, pursuant to Model Law 205: Annual Financial Reporting Model Regulation shall be in accordance with practices prescribed or permitted by the domiciliary state.

- However, in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than provided [for] in the AP&P Manual. In the financial statements filed in that state. Ideally, To prevent reporting entities from having to file different financial statements or reports prepared on different basis of accounting with differing states, the practices permitted or prescribed by a domiciliary state will be accepted in all states in which a company is licensed. However, as noted above, the provisions of the AP&P Manual are not intended to preempt states’ legislative or regulatory authority. Accordingly, each state in which a company is licensed could allow or require supplemental financial information that required or allows statutory accounting practices that differ from the AP&P manual and differing financial reports. If a non-domiciliary state in which the company is licensed requires or allows a practice by state statute / bulletin (or other state-wide provision) in such supplemental financial information that is different from NAIC SAP, that practice (s) this provision is also considered a prescribed practice. If the company files financial statements that reflect this practice, even if the financial statements are filed only in the non-domiciliary state, then the prescribed practice disclosure of Note 1 shall apply.

Examples of two possible situations:

**Scenario 1:** Non-domiciliary State A issues a state statute / bulletin that requires the filing of supplemental financial information and which requires the use of an prescribed accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

**Scenario 1 Conclusion:** The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or
prescribed by the domiciliary state (State B). (These financial statements would be subject to the independent audit requirements per Model 205.) The reporting entity also shall file supplemental financial information separate financial statements with State A in accordance with the accounting practice mandated by that non-domiciliary state, but shall also include the prescribed practice disclosure of Note 1 in the supplemental financial information.

**Scenario 2:** Non-domiciliary State A issues a state statute / bulletin that allows an accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

**Scenario 2 Conclusion:** The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or prescribed by the domiciliary state (State B). (These financial statements would be subject to the independent audit requirements per Model 205.) The reporting entity then has the ability, but is not required, to file supplemental financial information statements in State A that reflects the accounting practice prescribed by that non-domiciliary state and shall include the prescribed practice disclosure of Note 1 in the supplemental financial information.

**Existing Authoritative Literature:**

**Preamble**

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state’s statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state’s insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA’s Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

**Preamble Questions and Answers**

**Permitted Practices Advance Notification Requirement – Implementation Questions and Answers**

2. **Q:** What is the difference between a permitted accounting practice and a prescribed practice?

   **A:** **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

   **Prescribed** accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority.

   If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.
The NAIC Model laws do not contain a definition of “prescribed practice,” but references to prescribed practices are noted in the Model laws below. These are provided as reference. There are no revisions proposed to the Model Laws:

Model 205 – Annual Financial Reporting Model Regulation

Section 6 - Designation of Independent Certified Public Accountant

B. The insurer shall obtain a letter from the accountant, and file a copy with the commissioner stating that the accountant is aware of the provisions of the insurance code and the regulations of the Insurance Department of the state of domicile that relate to accounting and financial matters and affirming that the accountant will express his or her opinion on the financial statements in terms of their conformity to the statutory accounting practices prescribed or otherwise permitted by that Insurance Department, specifying such exceptions as he or she may believe appropriate.

Model 450 – Insurance Holding Company System Model Regulation with Reporting Forms and Instructions

Item 12. Financial Statements and Exhibits

The annual financial statements of the applicant shall be accompanied by the certificate of an independent public accountant to the effect that such statements present fairly the financial position of the applicant and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the applicant is an insurer which is actively engaged in the business of insurance, the financial statements need not be certified, provided they are based on the Annual Statement of the person filed with the insurance department of the person's domiciliary state and are in accordance with the requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of the state.

Model 785 – Credit for Reinsurance Model Law

Section 4. Qualified U.S. Financial Institutions

4.c. Maintains at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is.

Model 787 – Term and Universal Life Insurance Reserve Financing Model Regulation

Section 6. The Actuarial Method

B. Valuation used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply: (1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and
Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None.

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent auditor requirements. (NAIC staff do not believe revisions are necessary to paragraph 12 of the Preamble as that guidance does not limit practices to the domiciliary state and already confirms that the domiciliary state practices shall be reflected in the financial statements subject to audit. For reference paragraph 12 is below.)

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state’s statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state’s insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA’s Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

Proposed Revisions to the Preamble Questions and Answers:

2. Q: What is the difference between a permitted accounting practice and a prescribed practice?

A: **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

**Prescribed** accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled and/or licensed in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority. **Prescribed accounting practices of the domiciliary state shall be reflected in the statutory financial statements filed with the NAIC. Non-domiciliary states may additionally require insurance entities licensed in their state to file financial statements in accordance with the prescribed accounting practices of that particular non-domiciliary state.**

If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

Staff Review Completed by:
Julie Gann - NAIC Staff
July 2020
**Status:**
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices, as illustrated above. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices, as illustrated below. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

**NAIC staff note:** In addition to the edits proposed to the authoritative guidance, interested parties recommended various edits to the body of this agenda item. While these additional edits do not further modify the authoritative guidance, NAIC staff recognized that agenda items are typically referenced for historical purposes. Accordingly, the additional recommended edits have been reflected and remain shown in the ‘description of issue’ section of this agenda item. These edits clarify the understanding that in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than as is required in the AP&P manual.

**Preamble Implementation Questions and Answers Adopted Revisions:**

2. **Q:** What is the difference between a permitted accounting practice and a prescribed practice?

   **A:** **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

   **Prescribed** accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled and/or licensed in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority. **Prescribed accounting practices of the domiciliary state shall be reflected in the statutory financial statements filed with the NAIC.** Non-domiciliary states may additionally require insurance entities licensed in their state to file supplementary financial information that details the use of different accounting practices required or allowed by the non-domiciliary state that differs from the AP&P Manual.

   If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

**Issue:** Related Parties, Disclaimers of Affiliation and Variable Interest Entities

**Check (applicable entity):**

- Modification of existing SSAP
- New Issue or SSAP
- Interpretation

**Description of Issue:**

The intent of this agenda item is to clarify identification of related parties and affiliates in *SSAP No. 25—Affiliates and Other Related Parties* and to incorporate new disclosures to ensure regulators have the full picture of complicated business structures.

The proposed SSAP revisions intend to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. generally accepted accounting principles (GAAP) or Securities Exchange Commission (SEC) reporting requirements would be considered a related party under statutory accounting principles (SAP).
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

NAIC staff noted that the requirements for the SEC filings do not allow for a disclaimer of affiliation, as is allowed in the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) and included in Appendix A-440. As a result, the statutory financial statements do not provide the full picture of some complicated business structures, which can be common among insurance companies. This agenda item intends to propose revisions to have the related party and affiliate reporting more closely match that of SEC filings. This will be done by adding language from SEC laws and regulation and clarifying the disclaimer of affiliation or control from a statutory reporting standpoint.

Additionally, this agenda item addresses the FASB Accounting Standards Updates (ASU) related to Variable Interest Entities (VIE) and Consolidation (Topic 810).

FASB defines a VIE as an entity (the investee) in which the investor holds a controlling interest that is not based on the majority of voting rights. This agenda item discusses several ASUs that established the initial guidance for VIEs and all subsequent ASUs to update and clarify this guidance. As a fundamental issue, the concept of consolidation has been rejected for statutory accounting. As such, the main concepts included in the ASUs that are discussed in this agenda item are proposed to be rejected for statutory accounting. While this agenda item is not intended to change the concept of consolidation for statutory accounting, NAIC staff believe that there is a need and justification for enhanced disclosures to supplement the reporting process of related parties and affiliates within...
a company structure. The proposed additions will ensure state insurance regulators have a full picture of the companies that they are regulating.

A brief description of the ASUs that are addressed in this agenda item are included below:

- **ASU 2009-17, Consolidations (Topic 810)—Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities** clarifies and establishes the basis of U.S. GAAP accounting for consolidation and VIEs. This ASU is a result of *FASB Statement No. 167, Amendments to FASB Interpretation No. 46(R)*.
- **ASU 2010-02, Consolidation (Topic 810)—Accounting and Reporting for Decreases in Ownership of a Subsidiary—a Scope Clarification** addresses implementation issues related to the changes in ownership provisions in Subtopic 810-10, originally issued as *FASB Statement No. 160, Noncontrolling Interests in Consolidated Financial Statements*, which establishes the accounting and reporting guidance for noncontrolling interests and changes in ownership interests of a subsidiary.
- **ASU 2010-10, Consolidations (Topic 810)—Amendments for Certain Investment Funds** defers consolidation requirements for a reporting entity’s interest in an entity that has all the attributes of an investment company or for which it is industry practice to apply measurement principles for financial reporting purposes that are consistent with those followed by investment companies.
- **ASU 2014-07, Consolidation (Topic 810)—Applying Variable Interest Entities Guidance to Common Control Leasing Arrangements** permits a private company lessee (the reporting entity) to elect an alternative not to apply VIE guidance to a lessor entity in certain situations.
- **ASU 2015-02, Consolidation (Topic 810)—Amendments to the Consolidation Analysis** includes updates to limited partnerships and similar legal entities, evaluating fees paid to a decision maker or a service provider as a variable interest, the effect of fee arrangements on the primary beneficiary determination, the effect of related parties on the primary beneficiary determination, and certain investment funds.
- **ASU 2016-17, Consolidation (Topic 810)—Interests Held through Related Parties That Are under Common Control** provides that if a reporting entity satisfies the first characteristic of a primary beneficiary (such that it is the single decision maker of a VIE), these amendments require that reporting entity, in determining whether it satisfies the second characteristic of a primary beneficiary, to include all of its direct variable interests in a VIE and, on a proportionate basis, its indirect variable interests in a VIE held through related parties, including related parties that are under common control with the reporting entity.
- **ASU 2018-17, Consolidation (Topic 810)—Targeted Improvements to Related Party Guidance for Variable Interest Entities** includes updated VIE guidance for private companies and considers if indirect interests held through related parties under common control for determining whether fees paid to decision makers and service providers are variable interests.

**Existing Authoritative Literature:** Statutory accounting guidance is in *SSAP No. 25—Affiliates and Other Related Parties*, model law and regulation provisions are included in *Insurance Holding Company System Regulatory Act (#440)* and the *Insurance Holding Company System Model Regulation (#450)*.

From Model #440

**Section 4. Registration of Insurers**

K. **Disclaimer.** Any person may file with the commissioner a disclaimer of affiliation with any authorized insurer or a disclaimer may be filed by the insurer or any member of an insurance holding company system. The disclaimer shall fully disclose all material relationships and bases for affiliation between the person and the insurer as well as the basis for disclosing the affiliation. A disclaimer of affiliation shall be deemed to have been granted unless the commissioner, within thirty (30) days following receipt of a complete disclaimer, notifies the filing party the disclaimer is disallowed. In the event of disallowance, the disclaiming party may request an administrative hearing, which shall
be granted. The disclaiming party shall be relieved of its duty to register under this section if approval of the disclaimer has been granted by the commissioner, or if the disclaimer is deemed to have been approved.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In 2010, in response to the issuance of FAS 166, Accounting for Transfers of Financial Assets—an amendment of FASB Statement No. 140 and FAS 167, Amendments to FASB Interpretation No. 46(R), the SAPWG formed the “SAPWG FAS 166/167 Subgroup. FAS 167 was issued in June 2009 and revised the scope of the FASB consolidation guidance to ensure that entities previously considered qualifying special purpose entities were included within the GAAP consolidation. Additionally, FAS 167 requires consolidation for entities (variable interest entities) in which the reporting entity has the “controlling financial interest”. Those situations are specific to when the entity is not controlled by contract, but the reporting entity has: (1) the power to direct the activities of the entity that most significantly impact the entity’s economic performance; and (2) the obligation to absorb losses or receive benefits of the entity that could be potentially significant to the entity. Although the concept of consolidation was not supported for SAP, the Subgroup discussion was focused on considering new disclosures for variable interest entities. The discussion of this Subgroup was deferred as Agenda Item 2011-16, Definition of a Related Party in SSAP No. 25 was considering changes to clarify the relationships that should be considered related parties. Discussion on this agenda item was halted in 2012 and 2015 as FASB issued new ASUs pertaining to VIEs. With the issuance of this new agenda item (2019-34), it is recommended that the 2011 agenda item be disposed.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 25—Affiliates and Other Related Parties, to clarify the types of entities or persons that are included as related parties, to clarify that a non-controlling ownership interest greater than 10% is a related party and is subject to the related party disclosures, to clarify the guidance for disclaimers of affiliation and control for statutory accounting, to clarify that the reporting entity must disclose if they knowingly engaged in any non-arms-length transactions with any entity, individual or company that has not been previously identified as a related party and to reject the seven FASB Accounting Standards Updates listed in the agenda item as not applicable for statutory accounting in SSAP No. 25.

Staff Review Completed by:
Jake Stultz, NAIC Staff – November 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 25—Affiliates and Other Related Parties, to clarify the following:

- The types of entities or persons that are included as related parties;
- That a non-controlling ownership interest greater than 10% is a related party and is subject to the related party disclosures; and
- The guidance for disclaimers of affiliation and control for statutory accounting.
This agenda item also rejects seven FASB Accounting Standards Updates, listed above, for statutory accounting. With exposure, an intent is included to dispose of agenda item 2011-16: Definition of Related Party, which is a historical item drafted to consider the SSAP No. 25 definition. The Working Group also directed notice of the exposure to be sent to the Group Solvency Issues (E) Working Group.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group deferred discussion of this item for a subsequent call or meeting.

**Summer 2020:**
Pursuant to the direction received Dec. 7, 2019, NAIC staff has drafted nonsubstantive revisions to SSAP No. 25. The current version is shown as tracked changes to SSAP No. 25 is attached as an exhibit to this agenda item. The updated draft revisions to SSAP No. 25 are discussed below.

- Based on the comments from the Group Solvency Issues (E) Working Group, NAIC staff have added a new disclosure that provides information on minority ownership interests, as well as significant relationships between minority owners and other U.S. domestic insurers/groups. This new disclosure is not intended to include passive fund owners, such as ETFs and mutual funds. This is in paragraph 22 in the exhibit to this agenda item.
- NAIC staff have removed the direct references to U.S. GAAP and SEC guidance that was included in the initial draft revisions. It was not intended to incorporate by reference the guidance from these sources but was instead intended to show that the revisions were going to be more consistent with the U.S. GAAP and SEC guidance. The language that was added to the description of related parties in paragraph 4 in the original expose draft are all language from either U.S. GAAP or from laws and regulations related to the SEC.
- With the proposed rejection of the U.S. GAAP VIE guidance for statutory accounting, our intention is to rely on SSAP No. 25, including the proposed revisions, to capture related parties for reporting. These updates are not intended to change reporting in Schedule BA or Schedule D for any investments.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with revisions as detailed above under “Summer 2020.”

On November 12, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with detailed revisions to SSAP No. 25, as detailed below under “November 12, 2020.”

**November 12, 2020:**
The proposed SSAP revisions intend to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.
On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, with modifications to add “direct or indirect’ to paragraphs 4f, 7d, and 8 as discussed during the meeting, to SSAP No. 25—Affiliates and Other Related Parties to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

The detailed revisions to SSAP No. 25—Affiliates and Other Related Parties are detailed below.
Statement of Statutory Accounting Principles No. 25

Affiliates and Other Related Parties

STATUS

Type of Issue .......................................... Common Area
Issued ...................................................... Initial Draft, November 12, 2020 exposure draft
Effective Date ......................................... January 1, 2001
Affects .................................................... Supersedes SSAP No. 96 with guidance incorporated
Affected by ............................................. August 2011; Nullifies and incorporates INT 03-16
Interpreted by ......................................... No other pronouncements
Relevant Appendix A Guidance ............. A-440

SCOPE OF STATEMENT

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

2. This statement shall be followed for all related party transactions, including transactions with parties that own 10% or more of the reporting entity, even if the transaction is also governed by other statutory accounting principles. Furthermore, this statement shall be followed in all transactions which involve unrelated parties as intermediaries between related parties. In determining whether a transaction is a related party transaction,
consideration shall be given to the substance of the agreement and the parties whose actions or performance materially impact the insurance reporting entity under the transaction. For example, an investment acquired from a non-related intermediary in which the investment return is predominantly contingent on the performance of a related party shall be considered a related party investment. As a general principle, it is erroneous to conclude that the mere inclusion of a non-related intermediary eliminates the requirement to assess and properly identify the related party transaction in accordance with the provisions of this statement. It is also erroneous to conclude that the presence of non-related assets in a structure predominantly comprised of related party investments eliminates the requirement to assess and identify the investment transaction as a related party arrangement.

3. If a company receives the stock of an affiliated company as a capital contribution rather than through a purchase, the transaction shall be accounted for according to SSAP No. 25—Affiliates and Other Related Parties, SSAP No. 95—Nonmonetary Transactions, or SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, based on the details of each transaction. The statutory purchase method within SSAP No. 68—Business Combinations is not applicable for stock received as a capital contribution.

SUMMARY CONCLUSION

4. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:

a. Affiliates of the reporting entity, as defined in paragraph 5;

b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

c. The principal owners, directors, officers of the reporting entity;

d. Any immediate family member of a principal owner, director or executive officer of the reporting entity, which means any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law, or sister-in-law, or individual related by blood or marriage whose close association is equivalent to a family relationship of such director, executive officer or nominee for director, or any person (other than a tenant or employee) sharing the household of such director, executive officer or nominee for director;

e. Companies and entities which share common control, such as principal owners, directors, or officers, including situations where a principal owners, directors, or officers have a controlling stake in another reporting entity;

f. Any direct or indirect ownership greater than 10% of the reporting entity results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.

g. The management of the reporting entity, its parent or affiliates (including directors);

h. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;

i. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;
g. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h-k. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i-l. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

j-m. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participation rights\(^1\) as a shareholder to the investee.

\(^1\) The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in EITF 96-16, Investor's Accounting for an Investee When...
d. Agreements where direct or indirect non-controlling ownership interest is less than 10% where the parties have structured the arrangement in this structure to avoid the 10% threshold in paragraph 4.f. and paragraph 8.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

8.9. Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted, except to the extent this is specifically addressed by other statements of statutory accounting principles (SSAPs). If the due date is not addressed by the written agreement, any uncollected receivable is nonadmitted.

**Related Party Loans**

9-10. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner’s independent payment ability. An affiliate’s ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Pursuant to SSAP No. 72—Surplus and Quasi-Reorganization, forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholder shall be accounted for as a dividend.

10-11. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm’s-length transactions as defined in paragraph 1443. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 1443 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

11-12. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month’s payment shall be nonadmitted assets.

12-13. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions,
in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 109. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraph 1110 and paragraph 1211.

Transactions Involving the Exchange of Assets or Liabilities

43-14. An arm’s-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm’s-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., “permanence.” The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in SSAP No. 9—Subsequent Events. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

44-15. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

d. Whether limitations or restrictions exist on the buyer’s use of the financial interest transferred or on the profits arising from it;

e. Whether there is retention of effective control of the financial interest by the seller.

45-16. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at fair value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting...
entity would record the securities at their cost (fair value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

46.17. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 1615, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

47.18. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 1645);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

48.19. Transactions involving services between related parties can take a variety of different forms. One of the significant factors as to whether these transactions will be deemed to be arm’s length is the amount charged for such services. In general, amounts charged for services are based either on current market rates or on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party’s books and expense on the second party’s books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements are generally subject to regulatory approval.
19.20. Transactions involving services provided between related parties shall be recorded at the amount charged\(^2\). Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See SSAP No 70—Allocation of Expenses for additional discussion regarding the allocation of expenses.

Disclosures

20.21. The financial statements shall include disclosures of all material related party transactions, including transactions with the ownership interests identified in paragraph 22. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm’s-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

- The nature of the relationships involved;
- A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:
  - Date of transaction;
  - Explanation of transaction;
  - Name of reporting entity;
  - Name of affiliate;
  - Description of assets received by reporting entity;
  - Statement value of assets received by reporting entity;
  - Description of assets transferred by reporting entity; and
  - Statement value of assets transferred by reporting entity.

\(^2\) The amount charged shall be reviewed when there are any modifications or waivers subsequent to the establishment of the contract terms. If waivers or modifications to amounts charged occur, the related party transaction shall be reassessed to determine whether the contract continues to reflect fair and reasonable standards. If the transaction was with a parent or other stockholder and the charge for services has been fully waived, then the guidance in SSAP No. 72 for recognition as contributed capital (forgiveness of reporting entity obligation) or as a dividend (forgiveness of amount owed to the reporting entity) shall apply.
c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;

e. Any guarantees or undertakings, written or otherwise, shall be disclosed in accordance with the requirements of SSAP No. 5R. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed;

f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity’s financial statements;

g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and

h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the Purposes and Procedure Manual of the NAIC Investment Analysis Office, “Procedures for Valuing Common Stocks and Stock Warrants.”

22. The disclosures of ownership interests in the reporting entity shall be provided outside of the financial statements (Schedule Y). The intent of this disclosure is to capture information related to active ownership and is not intended for passive fund owners to be reported.

a. Disclosure is required for all owners with greater than 10% ownership of the reporting entity.

b. Reporting entity must disclose each owner’s ultimate controlling party and must provide a listing of other U.S. insurance groups or entities under that ultimate controlling party’s control.

24-23. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

22-24. This statement adopts FASB Statement No. 57, Related Party Disclosures with a modification to paragraph 4 to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

23-25. This statement rejects ASU 2009-17, Consolidations (Topic 810)—Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities, ASU 2010-02, Consolidation (Topic 810)—Accounting and Reporting for Decreases in Ownership of a Subsidiary—a Scope Clarification, ASU 2010-10, Consolidations (Topic 810)—Amendments for Certain Investment Funds, ASU 2013-06, Not-For-Profit Entities, Services Received from Personnel of an Affiliate, ASU 2014-07, Consolidation (Topic 810)—Applying Variable Interest Entities Guidance

24.26. Guidance in paragraph 98 was incorporated from SSAP No. 96 as discussed in Issue Paper No. 128—Settlement Requirements for Intercompany Transactions, An Amendment to SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties. SSAP No. 96 was nullified in 2011 with the guidance from that SSAP retained within this SSAP.

Effective Date and Transition

25.27. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

26.28. Guidance reflected in paragraph 98, incorporated from SSAP No. 96, is effective for reporting periods ending December 31, 2007. Early adoption is permitted. A change resulting from the application of this paragraph shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. Guidance reflected in paragraph 3, incorporated from INT 03-16: Contribution of Stock, was originally effective December 7, 2003.

Description of Issue:
NAIC staff has received regulator inquiries on the application of the levelized commissions guidance in SSAP No. 71—Policy Acquisition Costs and Commissions. This agenda item is to recommend clarifications to the existing levelized commissions guidance and provide additional guidance regarding commission that is based on policy persistency. SSAP No. 71 describes that levelized commissions occur in situations in which a third party pays agents non-levelized commissions and the reporting entity pays a third party by levelized payments. The statement notes that it is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid to the third party from the reporting entity. SSAP No. 71 identifies such arrangements as funding agreements between the reporting entity and the third party. SSAP No. 71 then identifies that the use of a commission arrangement where commission payments are not linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions is required.

The questions received by NAIC staff relate to the use of levelized commission arrangements and when the liability for commission based on annual persistency is required to be recorded as a liability in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

Levelized Commission

For the example in question, a third party is paying agent commissions and receiving periodic payments. Consistent with the guidance in SSAP No. 71, paragraph 4, the third party (funding agent) is paying the agents on behalf of the reporting entity and receiving levelized payments from the reporting entity which include additional fees or interest in excess of the commissions. The agreement between the reporting entity and the funding agent specifies that the funding agent will not be reimbursed by the reporting entity if the policies that generate the commission are cancelled prior to the policy anniversary date. The regulator noted that the reporting entity was not accruing the liability to the third-party funding agent, asserting that the payments to the funding agent were theoretically avoidable until the policy had passed the anniversary year-end date.

The accounting issue is whether levelized commission arrangements that are linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Persistency Commission

Also, in the noted example, the reporting entity was also asserting that the levelized commission obligations related to policy persistency commission were not required to be accrued until the policy anniversary year end had
been passed. The reporting entity asserts that the liability is not required until the persistency commission was fully earned by the agent and therefore unavoidable.

The accounting issue is if the persistency commission expense should be accrued proportionately over the policy period to which the commission relates, or if it is accrued only when fully earned and unavoidable.

Existing Authoritative Literature:

_Preamble_ provides the following (bolding added for emphasis):

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

38. Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. **Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.**

_SSAP No. 5 – Revised—Liabilities, Contingencies and Impairments of Assets_

**Liabilities**

2. A liability is defined as certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity’s financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

**Loss Contingencies or Impairments of Assets**

6. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:
   a. Probable—The future event or events are likely to occur;
   b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;
   c. Remote—The chance of the future event or events occurring is slight.

7. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).
8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

**SSAP No. 71—Policy Acquisition Costs and Commissions** provides the following (bolding added for emphasis):

**SUMMARY CONCLUSION**

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). **Acquisition costs and commissions shall be expensed as incurred.** Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. **Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.**

4. **Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party.** It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. **The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.**

5. **The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.**

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** Not applicable
Staff Review Completed by:
Robin Marcotte, NAIC Staff – July 2019

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 71 as illustrated below. NAIC Staff recommends that revisions to the guidance clarify the following:

1. A levelized commission arrangement (whether linked to traditional or nontraditional elements) require the establishment of a liability for the full amount of the unpaid principal and accrued interest payable to a third party at the time the policy is issued.

2. The persistency commission is accrued proportionately over the policy period in which the commission relates to and is not deferred until fully earned.

These recommendations are consistent with the original intent of SSAP No. 71 as well as the Statutory Statement of Concepts focusing on Recognition (excerpts from Preamble, paragraphs 37 and 38):

- Liabilities require recognition as they are incurred.
- Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

July 2019 Proposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. The recognition of commission expense for new and renewal insurance contracts meets the definition of a liability under SSAP No. 5R when the policy is issued or renewed. The issuance of the policy is the obligating event under SSAP No. 5R.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. Commission contracts that include persistency (or other such components) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency (or similar components), the commission is accrued based on experience to date for the policy period (it is inappropriate to wait until the amount is fully earned and/or unavoidable). Actual policy cancellation would reverse the accrual of the related persistency commission.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid
to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent’s license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

New Footnote – The guidance in this paragraph does not imply that levelized commissions that are linked to traditional elements do not require establishment of a liability. Rather, such levelized commissions are captured in paragraphs 3-4.

Status:
On August 3, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 71—Policy Acquisition Costs and Commissions, as illustrated above, to clarify levelized commissions guidance and provide additional direction regarding commissions that are based on policy persistency. The revisions also clarify that the recognition of commission expense is based on experience to date.

For Fall 2019 Discussion NAIC staff has proposed updates for exposure.

Paragraph 2 - Removed previously exposed revisions as unneeded.
Paragraph 3 - Added clarifying phrases regarding persistency commission accrual. The concept is that normal persistency commission is accrued for the period it relates to unless the policy is cancelled.
Paragraph 4 - Added two clarifying phrases to assist with identifying levelized commission funding agreements.
Paragraph 5 - Added clarifying phrases regarding funding agreements.
Footnote 1 - Redrafted to remove double negative wording.

Fall 2019 Proposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. Commission contracts that include persistency (or other such components) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy
Persistency (or other similar components), the commission shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent’s license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 71—Policy Acquisition Costs and Commissions, as illustrated above, to include additional NAIC staff modifications regarding persistency commission and levelized commission arrangements to address certain comments received and to allow for further discussion. With this exposure, the Working Group directed a notification of the exposure to be sent to the Life Actuarial (A) Task Force.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group deferred discussion of this item for a subsequent call or meeting.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 71—Policy Acquisition Costs and Commissions, as illustrated below. Exposed revisions clarify existing levelized commissions guidance which requires full recognition of the funding liabilities incurred to date for commission expenses prepaid on behalf of an insurer. The exposed revisions are consistent with the 2019 Fall National Meeting exposure, with the inclusion of guidance to clarify that reporting entities that have not complied with the original intent shall reflect the change as a correction of an error, in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors, in the year-end 2020 financial statements.

July 30, 2020 Exposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and
medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. Commission contracts that include persistency (or other such components) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency (or other similar components), the commission shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions FN.

New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted regarding levelized commission intend to clarify the original intent of this statement. Reporting entities that have not complied with the original intent of the statement shall reflect the change as a correction of an error (as a mistake in the application of an accounting principle) pursuant to SSAP No. 3 in the December 31, 2020 financial statements. In accordance with SSAP No. 3, correction of all accounting errors in previously issued financial statements, for which an amended financial statement was not filed, shall be reported as an adjustment to unassigned funds (surplus) in the period in which the error was detected. Disclosure shall also occur in accordance with SSAP No. 3.
On October 15, 2020, the Statutory Accounting Principles (E) Working Group held a hearing to receive comments, resulting in updated exposed revisions to SSAP No. 71—Policy Acquisition Costs and Commissions, as illustrated below. The updated exposed revisions clarify existing levelized commissions guidance, which requires full recognition of funding agreement liabilities incurred for commission expenses obligated when an insurance policy is written. (This guidance clarifies that writing the insurance policy is the obligating event for initial sales commission.) The exposed revisions have the following key changes from the prior exposure:

1. Improved description of the funding agreements in paragraphs 4 and 5.
2. Deletes the previously proposed revisions in paragraph 3 regarding other types of commission to address the comments received regarding unintended impacts on traditional renewal commission.
3. Modifies the revisions in paragraph 7 to remove the language on correction of an error.
4. Proposes the nonsubstantive revisions apply to contracts in effect on Jan. 1, 2021.

For ease of review the following pages illustrate the October 15, 2020 exposed revisions in two formats:

1. Exposure reflecting tracked revisions to Existing SSAP No. 71
2. October 2020 (new) Shaded Revisions to prior July exposure

Oct. 2020 Exposure of Tracked Revisions to Existing SSAP No. 71

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer
and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted regarding levelized commission are to clarify the original intent of this statement and are effective January 1, 2021.
October 2020 (new) Shaded Revisions to prior July exposure

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other experience shall be established for the earned portion. Assumptions used to calculate the contingent commission are set at the time of the commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency the commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent’s license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g., by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.
Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted regarding levelized commission intend are to clarify the original intent of this statement and are effective January 1, 2021. Reporting entities that have not complied with the original intent of the statement shall reflect the change as a correction of an error (as a mistake in the application of an accounting principle) pursuant to SSAP No. 3 in the December 31, 2020 financial statements. In accordance with SSAP No. 3, correction of all accounting errors in previously issued financial statements, for which an amended financial statement was not filed, shall be reported as an adjustment to unassigned funds (surplus) in the period in which the error was detected. Disclosure shall also occur in accordance with SSAP No. 3.

On November 12, 2020, the Statutory Accounting Principles (E) Working Group held a hearing to receive comments. The Working Group took the following actions:

- **Re-exposed** the prior version of SSAP #71 with shaded edits reflected below. – (1) the proposed effective date of Jan.1, 2021 was changed to be effective upon adoption, and (2) the revised text made explicit that the proposed revisions will apply to contracts in effect as of the date of adoption. Comments due by Jan. 11, 2021.

- **Determined that the revisions to SSAP #71 had met the due process for either a substantive or a non-substantive revision but concluded to keep the revision classified as nonsubstantive.** The Working Group reiterated that it is not the impact of a change on an individual entity that determines whether a change is substantive or non-substantive, but whether the revision is in line with the original intent of the SSAP. The Working group noted that this is a clarification of existing guidance consistent with original intent. Commissioner Donelon noted an objection to the classification as non-substantive.

- **Directed NAIC Staff to draft an Issue Paper** to document the discussion on this topic for historical purposes. The issue paper will be exposed for comment before considered for adoption by the Working Group.

**Nov. 12, 2020 Exposed shaded SSAP No. 71 revisions are new from prior exposure.**

2. **Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.**

3. **Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.**
4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts are effective in effect on the date of adoption of the revisions January 1, 2021.
For Spring 2021 discussion, NAIC staff recommend that the Working Group take the following actions:

1. **Expose the issue paper to document the historical discussion.**

2. **Adopt the exposed revisions to SSAP No. 71 after discussion regarding whether to incorporate the revisions to paragraph 7 regarding the effective date** which is illustrated as shaded text below. The November 2020 exposure was for the revisions to be effective on adoption. This is because some members noted a preference for an early as possible effective date in 2021. Guggenheim and IPs comments requested an effective date no sooner than December 31, 2021 to allow time to work with regulators, auditors etc.

   In the event that the Working Group wants to consider the industry request, NAIC staff has provided language for a December 31, 2021 effective date as illustrated below. As the issue paper is to document the historical discussion there is not a need to delay the effective date for an issue paper that is not authoritative. A December 31, 2021 effective date would allow the issue paper to be adopted prior to the implementation of the revisions. Note that under SSAP No. 3, the impacts are still calculated using Jan. 1 numbers, but would not be initially reported until the year-end 2021 financial statements.

   **Effective Date and Transition (shaded revisions to paragraph 7 are for discussion).**

   7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter on the date of adoption of the.

3. **Note – It is recommended that the Working Group expose a blanks proposal (2021-04BWG, see attachment 20.1) to incorporate a new general interrogatory to assist with identifying the use of funding agreements** as a concurrent exposure with the Blanks (E) Working Group. This general interrogatory will require the identification of circumstances of when an insurer utilizes third parties to pay agent commissions in which the advances paid by the 3rd party are not settled in full within 90 days. The 90-day threshold for reporting was selected to not require reporting when an insurer a third-party for traditional payment processing. This proposal is attached at 20.1 and was developed with Working Group member input. (Staff Note: Input from interested parties is requested to ensure that this GI is written to capture the desired information on companies using financing arrangements to pay commissions.)

**SSAP No. 71 Nov. 12, 2020 exposure with shaded revisions to paragraph 7 for Spring 2021 discussion**

2. **Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.**

3. **Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent**
commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless of if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter on the date of adoption of this statement.
interrogatory to identify certain situations where an insurer utilizes a third-party for the payment of commission expenses. The blanks proposal will be concurrently exposed with the Blanks (E) Working Group exposure.

**Adopted Revisions to SSAP No. 71** *(new text from the prior exposure is shown as shaded)*:

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless of if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.
Effective Date and Transition
7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The nonsubstantive revisions adopted March 15, 2021 regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met March 16, 2021. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Rylynn Brown and Tom Hudson (DE); Carolyn Morgan (FL); Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Lindsay Crawford and Justin Schrader (NE); Patricia Gosselin (NH); Nakia Reid (NJ); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Kimberly Rankin (PA); Trey Hancock (TN); Shawn Fredrick (TX); Steve Drutz (WA); Randy Milquet (WI); and Jamie Taylor (WV).

1. **Adopted its Dec. 16 Minutes**

   The Working Group met Dec. 16 and adopted four proposals. Among these was: 1) removing the disclosure for the federal Affordable Care Act (ACA) Section 9010 Assessment from Note 22 – Events Subsequent; 2) removing the line category and reference to the NAIC Bond Fund List (Bond List) from the investment schedule instructions and blank; 3) moving the interrogatory question regarding Communication of Internal Control Related Matters Noted in Audit from the annual Supplemental Exhibits and Schedules Interrogatories to the quarterly Supplemental Exhibits and Schedules Interrogatories to be answered for the second quarter. For title, a new page in the quarterly statement is added for the Supplemental Exhibits and Schedules Interrogatories; and 4) replacing the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation and the Adjustments to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibits with modernized exhibits. The Working Group exposed seven proposals for a 60-day public comment period ending Feb. 16, 2021. The Working Group also adopted its editorial listing.

   Ms. Crawford made a motion, seconded by Mr. Hudson, to adopt the Working Group’s Dec. 16 minutes (Attachment Two-A). The motion passed unanimously.

2. **Adopted Proposals Previously Exposed**

   a. **Agenda Item 2020-32BWG – Effective Dec. 31, 2021**

      Mr. Garn stated that this proposal adds a new Exhibit 3 and Exhibit 3A Health Care Receivables Supplement to the life/fraternal annual statement. It adds a reference to the guidance document posted as part of the health annual statement health care receivables (HCR) reporting. He stated that there were no interested party comments received.

      Mr. Arfanis made a motion, seconded by Mr. Snow, to adopt the proposal (Attachment Two-B). The motion passed unanimously.

   b. **Agenda Item 2020-33BWG – Effective Jan. 1, 2022**

      Mr. Schrader stated that this proposal modifies the annual statement lines used in the Underwriting and Investment Exhibits, the Exhibit of Premiums and Losses (State Page) and the Insurance Expense Exhibit (IEE) for consistency throughout the property/casualty (P/C) blank. The proposal changes the health line categories used in the property blank to be consistent with other statement types. The lines were updated in the crosscheck references and in the definitions section of the instructions.

      The effective date has been changed to first-quarter 2022 at the suggestion of interested parties for consistency between the annual filings and quarterly statement filings. The size issue referenced by interested parties has also been resolved. Interested parties requested changes to Schedule H to be consistent with the changes being made in this proposal. NAIC staff have been working on another Schedule H proposal and will incorporate these suggestions as well to be presented for exposure in the near future. He stated that the modifications are highlighted within the proposal document.

      Mr. Schrader made a motion, seconded by Mr. Milquet, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Schrader made a motion, seconded by Mr. Milquet, to adopt the modified proposal (Attachment Two-C). The motion passed unanimously.
c. **Agenda Item 2020-34BWG – Effective Dec. 31, 2021**

Mr. Garn stated that this proposal includes a change to the P/C blank only. It adds additional definitions for occupational accident, fiduciary liability, premises and operations (OL&T and M&C), professional errors and omissions liability, kidnap and ransom liability, and tuition reimbursement plans products to the appropriate line of business in the appendix of the annual statement instructions. He stated that there were no interested party comments received for this proposal.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Two-D). The motion passed unanimously.

d. **Agenda Item 2020-35BWG – Effective Jan. 1, 2022**

Mr. Hudson stated that this proposal expands the number of line characters used from seven to 10 in the investment categories for Schedules D, DA, DL and E, excluding Schedule D, Part 6, Section 1 and Section 2 and Schedule E, Part 1 and Part 3. It adds line categories for Unaffiliated Certificates of Deposit and Exchange Traded Funds (ETFs). It splits the line categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into lines indicating if the fund has been assigned a designation by the Securities Valuation Office (SVO). It makes changes to the Summary Investment Schedule, the Summary by Country and Schedule D, Part 1A, Section 1 and Section 2 to reflect the additional line categories. He stated that the purpose of this change is to accommodate more line categories and to allow for room in the numbering scheme for Schedules D, DA, DL and E to add additional lines in the future without major disruption of line numbering. It also adds new lines to address crosscheck issues and reporting questions that have been received in the past. Interested parties made some editorial corrections and suggestions, which are highlighted in the proposal.

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the modified proposal (Attachment Two-E). The motion passed unanimously.

e. **Agenda Item 2020-36BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this agenda item reflects actions taken by the Statutory Accounting Principles (E) Working Group on March 15. The Working Group adopted its agenda item 2020-33, which provides a change in Statement of Statutory Accounting Principles (SSAP) for publicly traded preferred stock warrants. He stated that in general, warrants are in the scope of SSAP No. 86—Derivatives. However, there is a special carveout for publicly traded common stock warrants. They are in the scope of SSAP No. 30R—Unaffiliated Common Stock. With the only difference between the two instruments being the type of security one receives (i.e., public or common stock), the Working Group elected a similar carveout for publicly traded preferred stock warrants. This blanks proposal modifies the instructions for both the General Investment Schedules and for Schedule DB to reflect this change. He stated that interested parties did not have any comments on this proposal. (SAPWG Ref #2020-33.)

Mr. Bruggeman made a motion, seconded by Ms. Brown, to adopt the proposal (Attachment Two-F). The motion passed unanimously.

f. **Agenda Item 2020-37BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this agenda item reflects actions taken on March 15 by the Statutory Accounting Principles (E) Working Group regarding its agenda item 2019-34. In collaboration with interested parties, the Working Group adopted additional related party disclosure elements, specifically to capture instances where an entity, either directly or indirectly, owns greater than 10% of a reporting entity. While the Statutory Accounting Principles (E) Working Group agenda item clarified that ownership greater than 10% results in a related party classification, regardless of any disclaimer of control of affiliation, the blanks item proposed a new Schedule Y, Part 3 to data capture items such as owners with more than 10% and identification of an insurer’s ultimate controlling party. During this last Blanks (E) Working Group exposure, interested parties commented that terms of “ultimate controlling party” and “ultimate controlling entity(ies)/person(s)” were not being consistently referenced. The Statutory Accounting Principles (E) Working Group confirmed that in model laws Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), the terms are used interchangeably. Since this change was not made prior to the posting of materials, Mr. Bruggeman stated that he agrees with incorporating a notation in the instructions to indicate that the two terms, “ultimate controlling party” and “ultimate controlling entity(ies)/person(s),” may be used interchangeably. (SAPWG Ref #2019-34.)
Mr. Bruggeman made a motion, seconded by Mr. Hancock, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Hancock, to adopt the modified proposal (Attachment Two-G). The motion passed unanimously.

g. Agenda Item 2020-38BWG – Effective Dec. 31, 2021 (State Data Reporting Requirement Effective Dec. 31, 2022)

Mr. Garn stated that this proposal makes changes to the Accident and Health Policy Experience Exhibit, adding new columns, removing the lines “with and without contract reserves” in the individual section, and adding some new product lines. The summary tables are being eliminated; since reinsurance has been incorporated into the main exhibit, the summary tables are no longer needed. The proposal changes the reporting due date to a March 1 filing and requests the data to be reported by state. Interested parties requested the reporting date to remain as an April 1 filing. This modification, along with some editorial suggestions made by interested parties, has been incorporated into the proposal. Mr. Garn stated that the effective date of the state reporting will be annual 2022.

Tip Tipton (Thrivent Financial) stated that interested parties agree with the filing date of April 1 for the supplement, as well as deferring the reporting of state information until annual 2022.

Mr. Eft made a motion, seconded by Ms. Rankin, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Eft made a motion, seconded by Mr. Hudson, to adopt the modified proposal (Attachment Two-H). The motion passed unanimously.

3. Exposed New Items

a. Agenda Item 2021-01BWG

Mr. Drutz stated that this proposal adds a reference to health care receivables in line 24 – Health Care and Other Amounts Receivable on the Assets page. It changes the description of line 0699999 to read Other Health Care Receivables on Exhibit 3 and modify column headers for Exhibit 3A. He stated that the Health Risk-Based Capital (E) Working Group continues to study health care receivables data. However, the reported data did not appear to be accurate. This change is intended to provide clarifying instructions to gain accuracy and consistency in the reporting of health care receivables.

Hearing no objection from the Working Group, the proposal was exposed with a 6-week public comment period ending April 27.

b. Agenda Item 2021-02BWG

Dan Daveline (NAIC) stated he is staff support for the Group Capital Calculation (E) Working Group, sponsor of this proposal. The purpose of this proposal is to obtain greater information relating to insurers that are regulated by the Federal Reserve System (FRS) and to gain consistent terminology with that used by the FRS. Regarding the terminology, one example is replacing the “holding company” with “depository institution holding company.” Mr. Daveline said to ensure that the entire population of such groups is picked up, the Group Capital Calculation (E) Working Group is proposing two distinct questions, 8.5 and 8.6, to identify the different types of groups likely to be subject to the Federal Reserve Group Capital, also known as the BBA. Mr. Daveline stated that these entities are not required to file the GCC. Having this more granular information will be helpful to the lead states of those groups. Having current information will also help in addressing questions that the Working Group and NAIC staff often receive from NAIC members about the insurers subject to regulation by the FRS.

Hearing no objection from the Working Group, the proposal was exposed with a 6-week public comment period ending April 27.

c. Agenda Item 2021-03BWG

Mr. Bruggeman stated that this agenda item is in response to the Statutory Accounting Principles (E) Working Group items 2020-37 and 2020-38. This proposal increases the reporting granularity in the Separate Accounts General Interrogatories, specifically for interrogatory questions 1.01, 1.01A, 2.5 and 4.2. In response to the recent and extensive growth of pension risk transfer (PRT) transactions and registered indexed linked annuity (RILA) products, state insurance regulators sought a method to more readily identify PRT transactions and RILA product features, reserves and the extent they pose a potential risk to the
general account. From review of the 2019 separate account blanks, it was found that most separate account products were grouped into three or four broad categories. Thus, they were not very detailed when it came to specific product identification. This proposal adds separate and distinct reporting product identifiers for RILA products and PRT transactions, and the instructions to the general interrogatories have been slightly modified to require a disaggregated product identifier for each product represented. With that said, aggregation in reporting can still occur if the products are under the same product filing or policy form. However, to the extent they are not, it would require disaggregated reporting. A couple of additional notes: 1) the distinct product identifier requirements have been a long-standing instruction. However, most reporting entities have been grouping or aggregating reporting. This instruction change simply requires further detailed reporting; and 2) the proposal also includes instructions so that a company may eliminate proprietary or confidential information, but still require a unique reporting product identifier.

Hearing no objection from the Working Group, the proposal was exposed with a 6-week public comment period ending April 27.

d. Agenda Item 2021-04BWG

Mr. Bruggeman stated that this proposal is related to the Statutory Accounting Principles (E) Working Group agenda item 2019-24 regarding levelized commission guidance in SSAP No. 71—Policy Acquisition Costs and Commissions. This proposal was in response to state insurance regulators having a more readily available method to identify situations where an insurer used a third party to pay commission obligations. The general interrogatory has been written in such a way as to not require disclosure if the amounts are settled in full within 90 days, to hopefully scope out situations where an insurer uses a third party for typical accounts payable processing. Mr. Bruggeman said input from industry is welcome if any clarification edits would be helpful in drafting the general interrogatory. This item is a concurrent exposure with the Statutory Accounting Principles (E) Working Group.

Hearing no objection from the Working Group, the proposal was exposed with a 6-week public comment period ending April 27.

e. Agenda Item 2021-05BWG

Mr. Bruggeman stated that this proposal is related to Statutory Accounting Principles (E) Working Group agenda item 2021-03, which was derived from the ongoing SSAP No. 43R—Loan-Backed and Structured Securities project. This proposal is primarily to data capture existing PDF disclosures required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, specifically when a reporting entity has entered into a securitization, asset-backed financing or other similar transfer where a significant economic interest in the transferred asset is retained by the reporting entity. This item is a concurrent exposure with the Statutory Accounting Principles (E) Working Group.

Hearing no objection from the Working Group, the proposal was exposed with a 6-week public comment period ending April 27.

4. Received a Memorandum from the Valuation of Securities (E) Task Force

Mr. Garn stated that a memorandum was received from the Valuation of Securities (E) Task Force (Attachment Two-I) dated Feb. 3, 2021, referencing the proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to update the financial modeling instructions for residential mortgage-backed security/commercial mortgage-backed security (RMBS/CMBs) securities and to direct Investment Analysis Office (IAO) staff to produce NAIC designations and NAIC designations categories for non-legacy securities. This adds two new administrative symbols: 1) “FSR,” which identifies a non-legacy security RMBS that is subject to the financial modeling methodology and assignment of an NAIC designation and designation category by the Structured Securities Group (SSG); and 2) “FSC,” which indicates that the specific Committee on Uniform Security Identification Procedures (CUSIP) identifies a non-legacy security CMBs that is subject to the financial modeling methodology and assignment of an NAIC designation and designation category by the SSG. These codes will be added to the designation/modifier/administrative code list on the Blanks (E) Working Group website.

5. Adopted the Editorial Listing

Ms. Gosselin made a motion, seconded by Mr. Drutz, to adopt the editorial listing (Attachment Two-J). The motion passed unanimously.

© 2021 National Association of Insurance Commissioners
6. Discussed Other Matters

Joe Zolecki (Blue Cross and Blue Shield Association—BCBSA) stated that interested parties would be willing to work with a small group of state insurance regulators, NAIC staff and other interested parties as an ad hoc group to study and identify any current gaps, particularly in health filing information, to figure out what carriers can provide that would be meaningful and not redundant with all of the other filings that are already being made. He stated that the Risk-Focused Surveillance (E) Working Group has a charge to consider regulatory redundancies raised by interested parties and recommendations provided to other committees. He questioned whether the issues should be addressed by the Blanks (E) Working Group or by the Risk-Focused Surveillance (E) Working Group, which has a charge of reviewing regulatory redundancy issues.

Mr. Garn stated that this is a big project and that the Blanks (E) Working Group takes each issue one piece at a time, working to make improvements as well as trying to remove elements that are no longer needed while adding more relevant data elements. He stated that if there is something specific within the blanks reporting that interested parties would like to point out, the Blanks (E) Working Group can address that. He stated that a more comprehensive project would involve a number of other groups; for example, the investment issues would involve the Valuation of Securities (E) Task Force, and any statutory reporting issues would involve the Statutory Accounting Principles (E) Working Group.

Having no further business, the Blanks (E) Working Group adjourned.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met Dec. 16, 2020. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Adrienne Lupo (DE); Carolyn Morgan (FL); Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Lindsay Crawford and Justin Schrader (NE); Patricia Gosselin (NH); John Sirovetz (NJ); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Melissa Greiner (PA); Trey Hancock (TN); Jamie Walker (TX); Steve Drutz (WA); Randy Milquet (WI); and Jamie Taylor (WV).

1. **Adopted its Aug. 27 Minutes**

The Working Group met Aug. 27 and adopted five proposals. Among these was: 1) a proposal to add a column to the health blank Schedule T for the breakout reporting of the Children’s Health Insurance Program (CHIP) business; 2) two proposals sponsored by the Statutory Accounting Principles (E) Working Group—one addressing changes made to Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives for the present value of financing premiums, and another changing the disclosures in the Notes to Financial Statement and Schedule D, Part 6 to reflect changes adopted for SSAP No. 68—Business Combinations and Goodwill and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities; and 3) a proposal adding a new line to Schedule E, Part 2 for reporting qualified cash pools. The Working Group also adopted its editorial listing.

Mr. Eft made a motion, seconded by Mr. Hudson, to adopt the Working Group’s Aug. 27 minutes (see NAIC Proceedings – Fall 2020, Accounting Practices and Procedures (E) Task Force, Attachment Two). The motion passed unanimously.

2. **Discussed a Proposal Previously Deferred**

   a. **Modify the Instructions and Illustration for Note 10L to Reflect the Disclosure Changes for Statement of Statutory Accounting Principles (SSAP) No. 97—Investments in Subsidiary, Controlled and Affiliated Entities Being Considered for Adoption by the Statutory Accounting Principles (E) Working Group (2020-02BWG)**

Mr. Bruggeman stated that this proposal was originally intended to modify the instructions and illustration for Note 10L – Information Concerning Parent, Subsidiaries, Affiliates and Other Related Parties to reflect SSAP No. 97 disclosure changes being discussed by the Statutory Accounting Principles (E) Working Group, agenda item Ref #2019-41. Since the discussions are ongoing, he requested to withdraw the proposal with the possibility of submitting a new proposal at a future date. Mr. Garn stated that no action was required by the Blanks (E) Working Group as the sponsor withdrew the proposal.

3. **Adopted Proposals Previously Exposed**

   a. **Remove the Disclosure for the Federal Affordable Care Act (ACA) Section 9010 Assessment from Note 22 – Events Subsequent (SAPWG Ref #2020-05) (2020-28BWG) Effective 12/31/2021**

Mr. Bruggeman stated that this blanks agenda item is related to the Statutory Accounting Principles (E) Working Group agenda item Ref #2020-05: Repeal of the Affordable Care Act Section 9010 Assessment adopted by the Working Group in July for SSAP No. 106—Affordable Care Act Section 9010 Assessment. The proposal removes the disclosure for the assessment from Note 22 – Events Subsequent reflecting the federal Affordable Care Act (ACA) Section 9010 assessment repeal effective Jan. 1, 2021.

Mr. Bruggeman stated that interested parties suggested adding some clarifying language to indicate that quarterly reporting would not be required for this item during 2021. NAIC staff did not agree that the clarifying language was needed as Note 22 is not a required quarterly disclosure and the existing instructions at the beginning of the Notes to Financial Statement should be sufficient. A related ACA guidance document is also being presented during this meeting to assist companies in reporting the note in the 2020 annual statement addressing the fact that there is no fee due in 2021. Mr. Bruggeman stated that there were no modifications made to the proposal.
Mr. Bruggeman made a motion, seconded by Ms. Gosselin, to adopt the proposal (Attachment Two-A1). The motion passed unanimously.

b. Remove the Line Category and Reference to the NAIC Bond Fund List (Bond List) From the Investment Schedule Instructions and Blank (SAPWG 2020-01) (2020-29BWG) Effective 12/31/2021

Mr. Bruggeman stated that this blank proposal is related to the Statutory Accounting Principles (E) Working Group agenda item Ref #2020-01: Update/Remove References to SVO Listings adopted in March, which eliminated references to the NAIC Bond Fund List (Bond List) in SSAP No. 26R—Bonds. It added reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R—Unaffiliated Common Stock. This proposal removes the line category and reference to the bond list from the applicable investment schedule instructions and blanks. There were no comments from interested parties.

Mr. Bruggeman made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Two-A2). The motion passed unanimously.

c. Move the Interrogatory Question Regarding Communication of Internal Control Related Matters Noted in Audit From the Annual Supplemental Exhibits and Schedules Interrogatories to the Quarterly Supplemental Exhibits and Schedules Interrogatories to be Answered for the Second Quarter. For Title, a New Page in the Quarterly Statement will be Added for the Supplemental Exhibits and Schedules Interrogatories (2020-30BWG) Effective 12/31/2021

Mr. Hudson stated that this proposal moves the interrogatory question regarding Communication of Internal Control Related Matters Noted in Audit from the annual Supplemental Exhibits and Schedules Interrogatories to the quarterly Supplemental Exhibits and Schedules Interrogatories to be answered for the second quarter. For the Title blank, a new page in the quarterly statement will be added for the Supplemental Exhibits and Schedules Interrogatories.

Mr. Hudson stated that interested parties suggested modifying the quarterly statement interrogatory question to be consistent with the Life Principles-Based Reserve Statement of Exemption quarterly statement interrogatory question. NAIC staff modified the language to indicate that the response for the first and third quarters should be “N/A” and that a “NO” response resulting with a bar code is only appropriate in the second quarter. A similar change will also be made in the NAIC filing directive.

Mr. Hudson made a motion, seconded by Mr. Sirovetz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Mr. Sirovetz, to adopt the modified proposal (Attachment Two-A3). The motion passed unanimously.

Paul Peterson (National Organization of Life and Health Guaranty Association—NOLHGA) stated that this proposal replaces the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation and the Adjustments to the Life, Health and Annuity Guaranty Association Model Act Assessment Base Reconciliation Exhibits that have been in place since the 1990s. It was used to determine the assessable premium basis that is used by the guaranty fund association in its assessment process. There are more lines and instructions, but they should not create an undue burden to the insurance companies as the information reflects the data they have had in the past. Mr. Peterson stated that this new information will make it easier for his team to assess the guaranty fund information.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Two-A4). The motion passed unanimously.
4. **Exposed New Items**

a. **Add a New Health Care Receivables Supplement to the Life/Fraternal Annual Statement that Adds Exhibit 3 and Exhibit 3A from the Health Annual Statement to the Life/Fraternal Annual Filings. Add a Guidance Document Reference to Exhibit 3A of the Health Annual Statement (2020-32BWG)**

Mr. Garn stated that this proposal adds an Exhibit 3 and Exhibit 3A Health Care Receivables Supplement to the life/fraternal annual statement and adds a reference to the guidance document posted as part of the health annual statement health care receivables (HCR) reporting. The purpose is to allow for more consistency of reporting between the life and health blanks with regards to health care receivables and to provide state insurance regulators with detailed health care receivables information from life companies.

Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.

b. **Modify Annual Statement Lines (ASLs) Used on Underwriting and Investment (U& I) Exhibits, State Page and Insurance Expense Exhibit (IEE). Change Health ASL Categories Used in Property to be Consistent with Other Statement Types. Update ASL References Used in Crosschecks. Update Definitions Used in the Appendix for the Health ASLs (2020-33BWG)**

Mr. Schrader stated that this proposal affects the property/casualty (P/C) blank. It modifies the annual statement lines (ASLs) used in the Underwriting and Investment (U&I) Exhibits, the State Page and the Insurance Expense Exhibit (IEE). It changes the health ASL categories used in the P/C blank to be consistent with other statement types. The purpose is to gain consistency in the granularity of reporting of annual statement lines of business.

Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.

c. **Add Definitions for the Occupational Accident, Fiduciary Liability, Premises and Operations (OL&T and M&C), Professional Errors and Omissions Liability, Kidnap & Ransom Liability and Tuition Reimbursement Plans Products to the Appropriate Line of Business in the Appendix (2020-34BWG)**

Mr. Garn stated that this proposal includes a change to the P/C blank only. It adds additional definitions for the Occupational Accident, Fiduciary Liability, Premises and Operations (OL&T and M&C), Professional Errors and Omissions Liability, Kidnap & Ransom Liability and Tuition Reimbursement Plans Products to the Appropriate Line of Business in the appendix of the annual statement instructions. The purpose is to provide more clarity of reporting and more consistency in the lines of business between the Property Uniform Product Matrix and the annual statement.

Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.

d. **Expand the Number of Characters Used From Seven to Ten in the Investment Line Categories for Schedules D, DA, DL and E Excluding Schedule D, Part 6 (Sections 1 and 2) and Schedule E (Part 1 and 3). Add Line Categories for Unaffiliated Certificates of Deposit and Exchange-Traded Funds. Split the Line Categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into Lines Indicating if the Fund has Been Assigned a Designation by the Securities Valuation Office. Make Changes to Summary Investment Schedule, Summary by Country and Schedule D, Part 1A (Sections 1 and 2) to Reflect the Additional Line Categories (2020-35BWG)**

Mr. Hudson stated that this proposal expands the number of characters used in the investment line categories from seven to ten. The purpose of the change is to accommodate more investment categories and to allow for room in the numbering scheme for Schedule D, Schedule DA, Schedule DL and Schedule E to add additional lines in the future without major disruption of line numbering. It also adds new lines to address crosscheck issues and reporting questions that have been received in the past.

Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.
Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.

f. Add a New Schedule Y, Part 3 to Capture All Entities with Ownership Greater Than 10%, the Ultimate Controlling Parties of Those Owners and Other Entities That the Ultimate Controlling Party Controls (SAPWG Ref #2020-34) (2020-37BWG)

Mr. Bruggeman stated that this proposal is in response to the Statutory Accounting Principles (E) Working Group agenda item Ref #2020-34: Related Parties, Disclaimer of Affiliation and Variable Interest Entities associated with SSAP No. 25—Affiliates and Other Related Parties, which was exposed on Nov. 12. In collaboration with interested parties, the Working Group agenda item and this proposal adds a new annual Schedule Y, Part 3 exhibit. This new exhibit would require companies to identify those with an ownership percentage greater than 10%, identify if any owners have a disclaimer of control or affiliation, and identify the controlling parties. He stated that this is not intended to duplicate information reported in Schedule Y, Part 1. The related Statutory Accounting Principles (E) Working Group discussion addressed where the company already has control, being a party owning more than 10% who are not in the chain normally reported on Schedule Y, Part 1. The intent is to identify those insurance companies so that across multiple entities, especially on unrelated entities, those parties would be able to be known if they happened to own more than one insurance company more than 10%.

Hearing no objection, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.

g. Make Changes to the Accident and Health Policy Experience Exhibit by Adding New Columns, Remove Lines Distinguishing With and Without Contract Reserves, Add New Product Lines, Eliminate Summary Tables, Change the Date That the Exhibit is Due and Having it Reported by State (2020-38BWG)

Mr. Garn stated that this proposal makes changes to the Accident and Health Policy Experience Exhibit, which is a uniform schedule. Some of the changes include removing lines for reporting “With Contract Reserves” and “Without Contract Reserves” in the individual business categories. It adds additional columns to the exhibit including: Direct Premiums Written, Assumed Premiums Earned, Ceded Premiums Earned, Net Premiums Earned, Assumed Incurred Claims Amount, Ceded Incurred Claims Amount, and Net Incurred Claims Amount. He stated that the proposal adds a line for “vision” coverage in the group and individual sections. Since the reinsurance amounts are being included in the main exhibit, the summary tables are being eliminated. The proposal requests that the exhibit be reported by state with a change in the filing due date to March 1. The purpose of the proposal is to provide state insurance regulators additional health data and greater consistency across the blanks. The intent of the March 1 filing date is to allow for comparison with the risk-based capital (RBC) filings, which have a March 1 filing due date.

Tip Tipton (Thrivent Financial) stated that interested parties are concerned with the significant change and potential redundancy among other schedules throughout the statement, as well as moving the date up one month in an already tight time frame. He stated that this may be an opportunity for interested parties, state insurance regulators and NAIC staff to collaborate on how industry can provide information that would benefit state insurance regulators but at the same time mitigate potential redundancies.

Ray Nelson (TriPlus Services) representing America’s Health Insurance Plans (AHIP) stated that member companies have reviewed the proposal and are concerned with the volume of data being requested, the potential redundancies with data provided in other areas and exhibits, and the acceleration of the filing deadline. He stated that this is a significant hardship for companies given the effort involved in compiling the data and the resource constraints due to the statement, actuarial opinion and filing
work due March 1. He stated that interested parties request the opportunity to work with state insurance regulators and NAIC staff to review the health data and provide data that is critical for the state analysts and examiners, and identify the data needed March 1 and the data that can wait until April 1. Mr. Nelson stated that interested parties would like to develop a more feasible and permanent proposal that will provide state insurance regulators with necessary health data and reduce the regulatory redundancy in the spirit of the Risk-Focused Surveillance (E) Working Group charges.

Mr. Garn stated that this proposal is only being considered for exposure at this time and that there will be additional opportunity for comments during the exposure period. He stated that consideration has been made to remove some possible redundancy from the state page; however, it is difficult to process a comprehensive proposal all at once because of the timeliness of the needed data.

Mary Caswell (NAIC) stated that NAIC staff have received requests over time from state insurance regulators and from members of the Health Risk-Based Capital (E) Working Group to obtain more consistent health data across all statement types. The Health Risk-Based Capital (E) Working Group has an ad hoc group looking at potential changes to the health test with the intent of having some companies that currently file on the life blank to move to the health blank if they pass the revised health test. This proposal is an attempt to gain more comprehensive health data on the health blank. The ad hoc group was looking at making changes to various exhibits and schedules within the life and health blank to obtain more uniform data. Ms. Caswell stated that this proposal was an attempt to limit the disruptions to the blank for companies, vendors, NAIC staff and state insurance regulators to review. NAIC staff suggested revising this uniform exhibit to accommodate the data being requested by the Health Risk-Based Capital (E) Working Group, as well as data being requested by various state financial analysts and examination regulators and NAIC staff. She stated that this proposal has been reviewed by the Health Actuarial (B) Task Force. It was sent to the Life Actuarial (A) Task Force for review, working to meet state insurance regulator needs without removing needed data.

Ms. Caswell stated that discussions on the health test became somewhat problematic when considering situations where a company might have a separate account that is not accounted for on the health blank; potential treatment for companies that hold an asset valuation reserve; and issues related to companies that write long-term care (LTC) coverage that state insurance regulators prefer to continue to be reported on the life blank. The reporting date issue, whether a March 1 filing or an April 1 filing, can be considered and decided upon by the state insurance regulators. The March 1 date is suggested in the proposal to coincide with the RBC filing in case that group would want to devise direct pulls from the exhibit. The exhibit is currently an April 1 filing, which could remain if the state insurance regulators so decide. The request for state data came more from the analysis side. With the potential future emphasis on health coverage, state insurance regulators may need to have more state-specific data.

Mike Monahan (American Council of Life Insurers—ACLI) stated that this proposal is not ready for exposure at this time and requested the proposal be deferred.

Joe Zolecki (Blue Cross and Blue Shield Association—BCBSA) stated that he would echo the previous interested party comments and indicated that the biggest issue is the March 1 filing date. He stated that he appreciates the efforts of NAIC staff to address redundancy. He stated that he was involved in that effort on the examination side. It seems appropriate to have a long-term project to consider some of the health filings and potential redundancy. He asked that the initial exposure include the April 1 rather than the March 1 filing date if the Blanks (E) Working Group decides not to defer this proposal. He stated that having the April 1 filing date and not having the data by state would give industry time to consider the changes and work with state insurance regulators and NAIC staff to come up with more permanent filings. He stated that interested parties could support an exposure with an April 1 filing date, not requiring the data by state and working together in 2021 to address some of the redundancy issues.

Mr. Garn stated that there is time for further discussion of the proposal during the exposure period, as well as for it to be deferred if needed prior to being considered for adoption. Exposing the proposal allows for industry and state insurance regulators to provide their comments regarding the suggested changes.

Hearing no objection from Working Group members, the Working Group exposed the proposal for a 60-day public comment period ending Feb. 16, 2021.
5. **Adopted the Editorial Listing**

Mr. Lathrop made a motion, seconded by Ms. Gosselin, to adopt the editorial listing (Attachment Two-A5). The motion passed unanimously.

6. **Approved Posting of Reporting Guidance**

   a. **ACA, Note 22 Guidance**

   Mr. Garn stated that with the repeal of the Section 9010 ACA fee beginning Jan. 1, 2021, the Statutory Accounting Principles (E) Working Group recommended filing guidance for companies in completing the Note 22 disclosures regarding the Section 9010 assessment. This guidance will help companies in consistently filling out the annual statement notes at year-end. Hearing no objection, NAIC staff were directed to post the guidance to the Blanks (E) Working Group web page.

   b. **Health Care Receivables (HCR) Guidance (Health Blank)**

   Mr. Garn stated that the HCR Guidance is intended to assist companies in completing Exhibit 3 and Exhibit 3A within the health blank with regards to health care receivables. The intent is to gain greater accuracy and consistency among the filers of HCR data. Hearing no objection, NAIC staff were directed to post the guidance to the Blanks (E) Working Group web page.

7. **Received a Statutory Accounting Principles (E) Working Group Memorandum**

   Mr. Bruggeman stated that a memorandum was submitted to the Blanks (E) Working Group addressing the Statutory Accounting Principles (E) Working Group agenda item Ref #2019-20 – Rolling Short-Term Investments and how that is handled with some definitions for washed sales for Note 17C. The instructional clarification will be included in the 2020 annual statement instructions revisions. The Statutory Accounting Principles (E) Working Group agenda item Ref #2018-26 regarding SCA Loss Tracking – Accounting Guidance – Revisions state that the reported equity method losses of the subsidiary, controlled or affiliate (SCA) would not go negative (thus would stop at zero). However, to the extent there is a financial guarantee or commitment, the guarantee or commitment would be separately captured under SSAP No 5R—Liabilities, Contingencies and Impairment of Assets. This agenda item also updated footnote 10O by removing the “SCA’s reported value” and replacing it with “the amount of any guarantee under SSAP No. 5R.” He stated that this memorandum intends to inform financial statement filers who complete annual statement note 10O that: 1) note 10O no longer requires “SCA’s reported value”; and 2) as the data capture element cannot be completed for year-end 2020 reporting, any financial guarantees recognized under SSAP No. 5R shall be disclosed in narrative format in annual statement Note 10. As noted, the new data element should be included in narrative format for year-end 2020 annual statement reporting.

   Mr. Bruggeman also stated that as a courtesy notification, the Statutory Accounting Principles (E) Working Group has two additional accounting interpretations (INT 2020-10: Reporting Nonconforming Credit Tenant Loans and INT 2020-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms). If adopted during the Dec. 18 Statutory Accounting Principles (E) Working Group meeting, they will be posted on the Blanks (E) Working Group web page for year-end reporting guidance.

8. **Discussed Other Matters**

   Mr. Garn stated that this issue is informational only and that there is no action needed by the Blanks (E) Working Group. On the NAIC Financial Statement Filing web page, there is a notation regarding methods of filing a company’s statutory statement, which states: “Note: If disaster(s) or other contingencies prevent timely online filing, authorization to submit a company's filing other than via the Internet Filing Website should come from the company's domiciliary state. Approval from the company's domiciliary state must be submitted to the NAIC along with the filing submitted via alternative media (CD-ROM only).” He stated that the NAIC no longer maintains a system to accommodate CD-ROM filings. Therefore, NAIC staff will remove the language referencing CD-ROM from the web page and participation packet.

Having no further business, the Blanks (E) Working Group adjourned.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Remove the disclosure for the Affordable Care Act Section 9010 Assessment from Note 22 - Events Subsequent.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect disclosure changes adopted by the Statutory Accounting Principles (E) Working Group superseding SSAP No. 106—Affordable Care Act Section 9010 Assessment (Ref #2020-05). The Affordable Care Act Section 9010 assessment has been repealed effective Jan. 1 2021 and these revisions, will remove the disclosure.

Comment on Effective Reporting Date: __________________________ |

Other Comments: __________________________ |

**© 2021 National Association of Insurance Commissioners**

1
22. Events Subsequent

Refer to SSAP No. 9—Subsequent Events for accounting guidance.

Instruction:

Subsequent events shall be considered either:

Type I – Recognized Subsequent Events:

Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements.

Type II – Nonrecognized Subsequent Events:

Events or transactions that provide evidence with respect to conditions that did not exist at the date of the balance sheet but arose after that date.

For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed only if necessary to keep the financial statements from being misleading.

Material Type II subsequent events shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If the Type II subsequent event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclose supplemental pro forma financial data including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it occurred on the date of the balance sheet.

Reporting entities shall disclose the dates through which subsequent events have been evaluated along with the dates the statutory reporting statements were issued, or available to be issued.

For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under Section 9010 of the Federal Affordable Care Act shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under SSAP No. 9—Subsequent Events for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.
Additionally, for annual reporting periods ending on or after December 31, 2014, the reporting entity shall disclose the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable for the upcoming year (current year and the prior year), amount of assessment paid (current and prior year) and written premium (current and prior year) that is the basis for the determination of the Section 9010 fee assessment to be paid in the subsequent year (net assessable premium). The disclosure should also provide the Total Adjusted Capital before and after adjustment (as reported in its estimate of special surplus applicable to the Section 9010 fee) and Authorized Control Level (in dollars) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The reporting entity shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

Illustration:

Type I – Recognized Subsequent Events:

Subsequent events have been considered through __/__/__ for the statutory statement issued on __/__/__.

On February 1, 20___, a settlement was reached in a major lawsuit against the Company. In conjunction with the lawsuit, the Company estimated and recorded a liability of $_______ on Line ___ of the Liabilities, Surplus and Other Funds page. The actual settlement amount of $_______ was paid to the plaintiff on February 10. The change will be recorded in the First Quarter Statement on Line ___ of the Statement of Income.

Type II – Nonrecognized Subsequent Events:

Subsequent events have been considered through __/__/__ for the statutory statement issued on __/__/__.

The Company faces loss exposure from the January 15, 20___ earthquake in the State of __________. This exposure is primarily in the Company’s property and casualty subsidiaries, but also includes potential losses on its real estate and mortgage loan portfolios. Based on a review of the range of expected loss, the Company does not believe this event will have a material impact on its financial condition.

On January 1, 2021, the Company will be subject to an annual fee under Section 9010 of the federal Affordable Care Act (ACA). This annual fee will be allocated to individual health insurers based on the ratio of the amount of the entity’s net premiums written during the preceding calendar year to the amount of health insurance for any U.S. health risk that is written during the preceding calendar year. A health insurance entity’s portion of the annual fee becomes payable once the entity provides health insurance for any U.S. health risk for each calendar year beginning on or after January 1 of the year the fee is due. As of December 31, 2020, the Company has written health insurance subject to the ACA assessment, expects to conduct health insurance business in 2021, and estimates their portion of the annual health insurance industry fee to be payable on September 30, 2021 to be $_____. This amount is reflected in special surplus. This assessment is expected to impact risk based capital (RBC) by _____. Reporting the ACA assessment as of December 31, 2020, would not have triggered an RBC action level.

22. Events Subsequent

Refer to SSAP No. 9—Subsequent Events for accounting guidance.

Instruction:

Subsequent events shall be considered either:

Type I – Recognized Subsequent Events:

Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements.

Type II – Nonrecognized Subsequent Events:

Events or transactions that provide evidence with respect to conditions that did not exist at the date of the balance sheet but arose after that date.

For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed only if necessary to keep the financial statements from being misleading.

Material Type II subsequent events shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If the Type II subsequent event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclose supplemental pro forma financial data including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it occurred on the date of the balance sheet.

Reporting entities shall disclose the dates through which subsequent events have been evaluated along with the dates the statutory reporting statements were issued, or available to be issued.

For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under Section 9010 of the Federal Affordable Care Act shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under SSAP No. 9—Subsequent Events for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.
Additionally, for annual reporting periods ending on or after December 31, 2014, the reporting entity shall disclose the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable for the upcoming year (current year and the prior year), amount of assessment paid (current and prior year) and written premium (current and prior year) that is the basis for the determination of the Section 9010 fee assessment to be paid in the subsequent year (net assessable premium). The disclosure should also provide the Total Adjusted Capital before and after adjustment (as reported in its estimate of special surplus applicable to the Section 9010 fee) and Authorized Control Level (in dollars) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The reporting entity shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

Illustration:

**Type I – Recognized Subsequent Events:**

Subsequent events have been considered through __/__/__ for the statutory statement issued on __/__/__.

On February 1, 20___, a settlement was reached in a major lawsuit against the Company. In conjunction with the lawsuit, the Company estimated and recorded a liability of $_______ on Line ___ of the Liabilities, Surplus and Other Funds page. The actual settlement amount of $_______ was paid to the plaintiff on February 10. The change will be recorded in the First Quarter Statement on Line ___ of the Statement of Income.

**Type II – Nonrecognized Subsequent Events:**

Subsequent events have been considered through __/__/__ for the statutory statement issued on __/__/__.

The Company faces loss exposure from the January 15, 20___ earthquake in the State of __________. This exposure is primarily in the Company’s property and casualty subsidiaries, but also includes potential losses on its real estate and mortgage loan portfolios. Based on a review of the range of expected loss, the Company does not believe this event will have a material impact on its financial condition.

On January 1, 2021, the Company will be subject to an annual fee under Section 9010 of the federal Affordable Care Act (ACA). This annual fee will be allocated to individual health insurers based on the ratio of the amount of the entity’s net premiums written during the preceding calendar year to the amount of health insurance for any U.S. health risk that is written during the preceding calendar year. A health insurance entity’s portion of the annual fee becomes payable once the entity provides health insurance for any U.S. health risk for each calendar year beginning on or after January 1 of the year the fee is due. As of December 31, 2020, the Company has written health insurance subject to the ACA assessment, expects to conduct health insurance business in 2021, and estimates their portion of the annual health insurance industry fee to be payable on September 30, 2021 to be $_____. This amount is reflected in special surplus. This assessment is expected to impact risk-based capital (RBC) by _____. Reporting the ACA assessment as of December 31, 2020, would not have triggered an RBC action level.

22. Events Subsequent

Refer to SSAP No. 9—Subsequent Events for accounting guidance.

Instruction:

Subsequent events shall be considered either:

Type I – Recognized Subsequent Events:

Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements.

Type II – Nonrecognized Subsequent Events:

Events or transactions that provide evidence with respect to conditions that did not exist at the date of the balance sheet but arose after that date.

For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed only if necessary to keep the financial statements from being misleading.

Material Type II subsequent events shall not be recorded in the financial statements but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If the Type II subsequent event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclose supplemental pro forma financial data including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it occurred on the date of the balance sheet.

For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under Section 9010 of the Federal Affordable Care Act shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under SSAP No. 9—Subsequent Events for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.
Reporting entities shall disclose the dates through which subsequent events have been evaluated along with the dates the statutory reporting statements were issued, or available to be issued.

Additionally, for annual reporting periods ending on or after December 31, 2014, the reporting entity shall disclose the amounts reflected in special surplus in the data year. The disclosure shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable for the upcoming year (current year and the prior year), amount of assessment paid (current and prior year) and written premium (current and prior year) that is the basis for the determination of the Section 9010 fee assessment to be paid in the subsequent year (net assessable premium). The disclosure should also provide the Total Adjusted Capital before and after adjustment (as reported in its estimate of special surplus applicable to the Section 9010 fee) and Authorized Control Level (in dollars) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The reporting entity shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

### IDENTIFICATION OF ITEM(S) TO CHANGE

Remove the line category and reference to the NAIC Bond Fund List (Bond List) from the investment schedule instructions and blank.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect disclosure changes adopted by the Statutory Accounting Principles (E) Working Group superseding SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock (Ref #2020-01) to eliminate references to the NAIC Bond Fund List (Bond List).

**ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE**

**SCHEDULE D – SUMMARY BY COUNTRY**

**LONG-TERM BONDS AND STOCKS OWNED DECEMBER 31 OF CURRENT YEAR**

Enter summarized amounts in the appropriate columns by the specified major classifications, subdividing into United States, Canada, and Other Countries where applicable. For purposes of this schedule, investments in Other Countries are considered Foreign Investments. For the definition of Foreign Investment, and Domestic Investment, see instructions to the Supplemental Investment Risk Interrogatories.

**Column 2 – Fair Value**

For certain bonds, values other than actual market may appear in this column. (See Schedule D, Part 1 instructions for details.)

Exclude: Accrued interest.

**Column 3 – Actual Cost**

Include: Brokerage and other related fees, to the extent they do not exceed the fair market value at the date of acquisition.

Exclude: Accrued interest.

**Lines 8 through 11 – Bonds – Industrial and Miscellaneous, SVO Identified Funds, Unaffiliated Bank Loans and Hybrid Securities (Unaffiliated)**

Include: Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO reported in Schedule D, Part 1.

Unaffiliated Bank Loans

**Line 13 – Total Bonds**

Columns 1, 2, 3, and 4, should agree with Columns 11, 9, 7 and 10, respectively, in Schedule D, Part 1.

Column 1 should equal Column 1, Line 1 of the Assets page.

**Lines 14 through 17 – Preferred Stocks – Industrial and Miscellaneous (Unaffiliated)**

Include: Exchange Traded Funds (ETFs) reported in Schedule D, Part 2, Section 1.

---

**Detail Eliminated to Conserve Space**
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRACTERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 1A – SECTION 1

QUALITY AND MATURITY DISTRIBUTION OF ALL BONDS OWNED DECEMBER 31
BY MAJOR TYPE AND NAIC DESIGNATION

The schedule summarizes the aggregate book/adjusted carrying value of all bond holdings, including those in Schedule DA and Schedule E, Part 2 by quality, designation, maturity and bond categories. Include short-term and cash equivalent bonds in the category that most closely resembles their credit risk.

The maturity category for a particular holding is determined by the following criteria:

a. Serial issues and mandatory fixed prepayment obligations valued on an amortizable basis may be distributed based on the par value of each scheduled repayment date and the final installment and adjusted for any discount or premium. Such holdings reported at market may be distributed based on market value by applying market rate to each scheduled repayment.

b. (i) Mortgage-backed/loan-backed and structured securities (these securities are considered loan-backed securities and subject to the guidance in SSAP No. 43R—Loan-Backed and Structured Securities) should be distributed based on the anticipated future prepayment cash flows used to value the security.

(ii) Other bonds with optional prepayment provisions should be distributed based on the expected future prepayments used to value the security.

(iii) Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO (as described in the Investment Schedules General Instructions) should be reported in Column 6, “No Maturity Date” in Section 9 “SVO Identified Funds.” Only funds reported in Section 9 would be reported in Column 6.

c. Place all holdings in default as to principal or interest in the “Over 20 years” category in the absence of definitive information as to final settlement. Perpetual bonds should also be included in this category.

d. Consider obligations without maturity date and payable on demand to be due within one year if in good standing. Otherwise, include in the “Over 20 years” category, or earlier if justifiable.

There are 14 sections to this schedule: Sections 1 through 10 for each of the 10 bond categories, Section 11 for total bonds current year, Section 12 for total bonds prior year, Section 13 for total bonds publicly traded and Section 14 for total bonds privately placed. The 10 bond categories combine corresponding subtotals from Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 as follows, and for each of those 10 bond categories, the total line for Column 7 of each section should equal the sum of the subtotal lines shown below:

Detail Eliminated to Conserve Space
**ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE**

**SCHEDULE D – PART 1A – SECTION 2**

**MATURITY DISTRIBUTION OF ALL BONDS OWNED DECEMBER 31**

**BY MAJOR TYPE AND SUBTYPE**

The schedule summarizes the aggregate book/adjusted carrying value of all bond holdings, including those in Schedule DA and Schedule E, Part 2 by maturity, major bond categories and the subcategories of issuer obligations, and mortgage-backed/loan-backed and structured securities.

The maturity category for a particular holding is determined by the following criteria:

a. Serial issues and mandatory fixed prepayment obligations valued on an amortizable basis may be distributed based on the par value of each scheduled repayment date and the final installment and adjusted for any discount or premium. Such holdings reported at market may be distributed based on market value by applying market rate to each scheduled repayment.

b. (i) Mortgage-backed/loan-backed and structured securities (these securities are considered loan-backed securities and subject to the guidance in SSAP No. 43R—Loan-Backed and Structured Securities) should be distributed based on the anticipated future prepayment cash flows used to value the security.

(ii) Other bonds with optional prepayment provisions should be distributed based on the expected future prepayments used to value the security.

(iii) Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO (as described in the Investment Schedules General Instructions) should be reported in Column 6, “No Maturity Date” in Section 9 “SVO Identified Funds.” Only funds reported in Section 9 would be reported in Column 6.

c. Place all holdings in default as to principal or interest in the “Over 20 years” category in the absence of definitive information as to final settlement. Perpetual bonds should also be included in this category.

d. Consider obligations without maturity date and payable on demand to be due within one year if in good standing. Otherwise, include in the “Over 20 years” category, or earlier if justifiable.

Column 2 – Description

Give a description of all bonds owned. As appropriate, the reporting entity is encouraged to include data consistent with that reported in Column 31, Issuer and Column 32, Issue. This does not preclude the company from including additional detail to provide a complete and accurate description. Abbreviations may be used as needed.

For Bond Mutual Funds—as Identified by the SVO and Exchange Traded Funds—as Identified by the SVO, enter the complete name of the fund. As appropriate, the reporting entity is encouraged to include data consistent with that reported.

For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit. As appropriate, the name of the name of the banking institutions should follow from the registry of the Federal Financial Institutions Examination Council (FFIEC) (www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx).

For CDOs (Collateralized Debt Obligations) or CLOs (Collateralized Loan Obligations), indicate what the CDO/CLO collateral is, such as high-yield bonds, corporate loans, etc. If the collateral is of mixed type, indicate “Mix,” in addition to the largest type of collateral in the mix. If the collateral is derived synthetically, indicate “synthetic.”

Detail Eliminated to Conserve Space

Column 16 – Interest Rate

Show rate of interest as stated on the face of the bond. Where the original stated rate has been renegotiated, show the latest modified rate. For long-term bonds with a variable rate of interest, use the last rate of interest. For short-term bonds with various issues of the same issuer, use the last rate of interest. All information reported in this field must be a numeric value.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds) and Principal STRIP Bonds or other zero-coupon bonds, enter numeric zero (0).

Column 17 – Effective Rate of Interest

For issuer obligations, include the effective rate at which the purchase was made. For mortgage-backed/loan-backed and structured securities, report the effective yield used to value the security at the reporting date. The Effective Yield calculation should be modified for other-than-temporary impairments recognized.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter Zero (0).

Column 18 – Interest – When Paid

For securities that pay interest annually, provide the first 3 letters of the month in which the interest is paid (e.g., JUN for June). For securities that pay interest semi-annually or quarterly, provide the first letter of each month in which interest is received (e.g., JD for June and December, and MJSD for March, June, September and December). For securities that pay interest on a monthly basis, include “MON” for monthly. Finally, for securities that pay interest at maturity, include “MAT” for maturity.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds) and Principal STRIP Bonds or other zero-coupon bonds, enter N/A.
Column 20 – Amount Received During Year
For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds) enter the amount of distributions received in cash or reinvested in additional shares.

Include: The proportionate share of interest directly related to the securities reported in this schedule.

Report amounts net of foreign withholding tax.

Column 21 – Acquired Date
For public placements use trade date, not settlement date. For private placements, use funding date. Each issue of bonds or stocks acquired at public offerings on more than one date may be totaled on one line and the date of last acquisition inserted.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter date of last purchase.

Column 22 – Stated Contractual Maturity Date
For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), leave blank.

For perpetual bonds, enter 01/01/9999.

For mandatory convertible bonds use the conversion date.

Column 34 – Capital Structure Code
Please identify the capital structure of the security using the following codes consistent with the SVO Notching Guidelines in the *Purpose and Procedures Manual of the NAIC Investment Analysis Office*:

Capital structure is sometimes referred to as rank or payment priority and can be found in feeds from the sources listed in the Issue and Issuer column.

As a general rule, a security is senior unsecured debt unless legal terms of the security indicate another position in the capital structure. Securities are senior or subordinated and are secured or unsecured. Municipal bonds, Federal National Mortgage Association securities (FNMA or Fannie Mae) and Federal Home Loan Mortgage Corporation securities (FHLMC or Freddie Mac) generally are senior debt, though there are examples of subordinated debt issued by Fannie and Freddie. 1st Lien is a type of security interest and not capital structure but could be used to determine which capital structure designation the security should be reported under. The capital structure of “Other” should rarely be used.

Capital structure includes securities subject to SSAP No. 26R—Bonds and SSAP No. 43R—Loan-Backed and Structured Securities.

1. Senior Secured Debt

   Senior secured is paid first in the event of a default and also has a priority above other senior debt with respect to pledged assets.
2. Senior Unsecured Debt

Senior unsecured securities have priority ahead of subordinated debt for payment in the event of default.

3. Subordinated Debt

Subordinated is secondary in its rights to receive its principal and interest payments from the borrower to the rights of the holders of senior debt (e.g., for loan-backed and structured securities, this would include mezzanine tranches).

(Subordinated means noting or designating a debt obligation whose holder is placed in precedence below secured and general unsecured creditors e.g., another debtholder could block payments to that holder or prevent that holder of that subordinated debt from taking any action.)

4. Not Applicable

Securities where the capital structure 1 through 3 above do not apply (e.g., Line 5899999 Exchange Traded Funds – as Identified by the SVO and Line 5999999 Bond Mutual Funds – as Identified by the SVO).

NAIC Designation Category Footnote:

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount reported in Column 11.

The sum of the amounts reported for each NAIC Designation Category in the footnote should equal Line 8399999.
ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE D – PART 3

LONG-TERM BONDS AND STOCKS ACQUIRED DURING CURRENT YEAR

This schedule should include a detailed listing of all securities that were purchased/acquired during the current reporting year that are still owned as of the end of the current reporting year (amounts purchased and sold during the current reporting year are reported in detail on Schedule D, Part 5 and only in subtotal in Schedule D, Part 3). This should include all transactions that adjust the cost basis of the securities. Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes. The following list of items provides examples of the items that should be included:

- Purchases of securities not previously owned;
- Subsequent purchases of investment issues already owned;
- Acquisition of a new stock through a stock dividend (e.g., spin off); and
- Any increases in the investments in SCA companies that adjust the cost basis (e.g., subsequent capital infusions [investments] in SCA companies valued using the equity method).

This schedule should NOT be used for stock splits to show increases in the number of shares; nor should it be used for stock dividends to show increases in the number of shares (unless the stock shares received as dividends are in a stock that is not already owned by the reporting entity – e.g., received in a spin off). Rather, for stock splits and stock dividends of an already owned stock, adjustments for the appropriate columns should be made in Schedule D, Part 2, Section 1 and in Schedule D, Part 2, Section 2.

Bonds, preferred stocks and common stocks are to be grouped separately, showing a subtotal for each category.

Bond Mutual Funds— as Identified by SVO and Exchange Traded Funds – as Identified by SVO, which are described in the Investment Schedules General Instructions, are to be included in SVO Identified Funds.

Bonds are to be grouped as listed below and each category arranged alphabetically (securities included in U.S. States, Territories and Possessions; U.S. Political Subdivisions of States, Territories and Possessions; and U.S. Special Revenue and Special Assessment Obligations and all Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions should be listed with a state abbreviation in the column provided for electronic data capture).

If a reporting entity has any detail lines reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>
<thead>
<tr>
<th>Column 2</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Give a description of all bonds and preferred and common stocks. As appropriate, the reporting entity is encouraged to include data consistent with that reported in Column 12, Issuer and Column 13, Issue. This does not preclude the company from including additional detail to provide a complete and accurate description. Abbreviations may be used as needed.</td>
</tr>
</tbody>
</table>

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter complete name of the fund. As appropriate, the reporting entity is encouraged to include data consistent with that reported for Column 12, Issuer.
For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit. As appropriate, the name of the banking institutions should follow from the registry of the Federal Financial Institutions Examination Council (FFIEC) ([www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx](http://www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx)).

For CDOs (Collateralized Debt Obligations) or CLOs (Collateralized Loan Obligations), indicate what the CDO/CLO collateral is, such as high-yield bonds, corporate loans, etc. If the collateral is of mixed type, indicate “Mix,” in addition to the largest type of collateral in the mix. If the collateral is derived synthetically, indicate “synthetic.”

</table>
LONG-TERM BONDS AND STOCKS SOLD, REDEEMED OR OTHERWISE DISPOSED OF DURING CURRENT YEAR

This schedule should include a detailed listing of all securities that were sold/disposed of during the current reporting year that were owned as of the beginning of the current reporting year (amounts purchased and sold during the current reporting year are reported in detail on Schedule D, Part 5 and only in subtotal in Schedule D, Part 4). This should include all transactions that adjust the cost basis of the securities (except other-than-temporary impairments that are not part of a disposal transaction). Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes. The following list of items provides examples of the items that should be included:

- Pay downs of securities still owned (including CMO prepayments);
- Subsequent partial sales of investment issues still owned;
- Reallocation of the cost basis of an already owned stock to the cost basis of a new stock received as a dividend (e.g., spin off); and
- Any decreases in the investments in SCA companies that adjust the cost basis, not including other-than-temporary impairments alone (e.g., subsequent return of capital from investments in SCA companies valued using the equity method).

Bonds, preferred stocks and common stocks are to be grouped separately, showing a subtotal for each category.

**Bond Mutual Funds—as Identified by the SVO and Exchange Traded Funds—as Identified by the SVO, which are described in the Investment Schedules General Instructions**, are to be included in SVO Identified Funds.

Bonds are to be grouped as listed below and each category arranged alphabetically (securities included in U.S. States, Territories and Possessions; U.S. Political Subdivisions of States, Territories and Possessions; and U.S. Special Revenue and Special Assessment Obligations and all Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions should be listed with a state abbreviation in the column provided for electronic data capture).

If a reporting entity has any detail lines reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>
<thead>
<tr>
<th>Column 2</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Detail Eliminated to Conserve Space</td>
<td></td>
</tr>
</tbody>
</table>

Give a description of all bonds and preferred and common stock, including location of all banks, trust and miscellaneous companies. If bonds are serial issues, give amounts maturing each year. As appropriate, the reporting entity is encouraged to include data consistent with that reported in Column 24, Issuer and Column 25, Issue. This does not preclude the company from including additional detail to provide a complete and accurate description. Abbreviations may be used as needed.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter complete name of the fund. As appropriate, the reporting entity is encouraged to include data consistent with that reported for Column 24, Issuer.
For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit. As appropriate, the name of the banking institutions should follow from the registry of the Federal Financial Institutions Examination Council (FFIEC) (www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx).

For CDOs (Collateralized Debt Obligations) or CLOs (Collateralized Loan Obligations), indicate what the CDO/CLO collateral is, such as high-yield bonds, corporate loans, etc. If the collateral is of mixed type, indicate “Mix,” in addition to the largest type of collateral in the mix. If the collateral is derived synthetically, indicate “synthetic.”

Column 3 – Foreign

Insert the appropriate code in the column based on the list provided in the Investment Schedules General Instructions.

Column 4 – Disposal Date

For public placements use trade date, not settlement date. For private placements, use funding date. Each issue of bonds or stocks disposed of at public offerings on more than one date may be totaled on one line and the date of last disposal inserted.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter date of last disposal.

Column 5 – Name of Purchaser

If matured or called under redemption option, so state and give price at which called.

Column 7 – Consideration

Include: In the determination of this amount, the broker’s commission and incidental expenses of effecting delivery.

Exclude: Accrued interest and dividends.

For Bond Mutual Funds—as Identified by the SVO and Exchange Traded Funds—as Identified by the SVO, enter price received at sale, usually the number of shares sold times the selling price per share.

Column 8 – Par Value

For mortgage-backed/loan-backed and structured securities, enter the par amount of principal sold on a security on which the reporting entity has a claim. For interest only bonds without a principal amount on which the reporting entity has a claim, use a zero value. Enter the sale date par value for bonds with adjustable principal. An interest only bond with a small par amount of principal would use that amount.

For preferred stock, enter par value per share of stock if any.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter 0.

Detail Eliminated to Conserve Space
Column 18 – Realized Gain (Loss) on Disposal

This should be the difference between the Consideration column amount and the Book/Adjusted Carrying Value at Disposal Date, excluding any portion that is attributable to foreign exchange differences.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter the difference between the consideration, Column 7 and actual cost Column 9 at date of sale.

Bonds called where consideration received exceeds par:

For securities sold, redeemed or otherwise disposed of, which generate investment income as a result of a prepayment penalty and/or acceleration fee, the amount of realized gain (loss) reported is equal to the Par value of the investment (Column 8) less the BACV at the Disposal Date (Column 16).

Bonds called where consideration received is less than par:

For securities sold, redeemed or otherwise disposed of, the amount of investment income and realized gain reported shall be calculated in accordance with SSAP No. 26R—Bonds.

Column 19 – Total Gain (Loss) On Disposal

Enter the sum of Column 17, foreign exchange gain or (loss), and Column 18, realized gain or (loss).

Column 20 – Bond Interest/Stock Dividends Received During Year

For Mutual Funds (including Bond Mutual Funds— as Identified by the SVO and Exchange Traded Funds— as Identified by the SVO), enter the amount of distributions received in cash or reinvested in additional shares.

Include: The proportionate share of investment income directly related to the securities reported in this schedule.

Report amounts net of foreign withholding tax.

Bonds called where consideration received exceeds par:

For securities sold, redeemed or otherwise disposed of, which generate investment income as a result of a prepayment penalty and/or acceleration fee; the amount of investment income reported is equal to the total consideration received (Column 7) less the Par value of the investment (Column 8).

Bonds called where consideration received is less than par:

For securities sold, redeemed or otherwise disposed of, the amount of investment income and realized gain reported shall be calculated in accordance with SSAP No. 26R—Bonds.

Column 21 – Stated Contractual Maturity Date

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), leave blank.

For perpetual bonds, enter 01/01/9999.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 5

LONG-TERM BONDS AND STOCKS ACQUIRED DURING THE YEAR AND FULLY DISPOSED OF DURING CURRENT YEAR

This schedule should include a detailed listing of all securities that were both purchased/acquired and sold/disposed of during the current reporting year (amounts purchased and sold during the current reporting year are also reported in subtotals in Schedule D, Parts 3 and 4).

Reporting entities should track information separately for securities purchased in different lots rather than using some type of averaging for the issue in aggregate. Thus, this schedule should only be used when an entire lot of a security has been purchased and sold during the current reporting year (even when different lots of the same security still exist on the reporting entity’s books).

As with Schedule D, Parts 3 and 4, this schedule should not be used for a transaction unless it affects the cost basis of the securities. Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes.

Bonds, preferred stocks and common stocks are to be grouped separately, showing subtotals for each category. Bonds should be grouped and arranged alphabetically as described in the instructions for Schedule D, Part 1. (Securities included in U.S. States, Territories and Possessions; U.S. Political Subdivisions of States, Territories and Possessions; and U.S. Special Revenue and Special Assessment Obligations and all Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions should be listed with a state abbreviation in the column provided for electronic data capture).

Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO that are described in the Investment Schedules General Instructions are to be included in SVO Identified Funds.

If a reporting entity has any detail lines reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line number:

<table>
<thead>
<tr>
<th>Column 2 – Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Give a description of all bonds and preferred and common stocks, including location of all banks, trust and miscellaneous companies. As appropriate, the reporting entity is encouraged to include data consistent with that reported in Column 24, Issuer and Column 25, Issue. This does not preclude the company from including additional detail to provide a complete and accurate description. Abbreviations may be used as needed.</td>
</tr>
<tr>
<td>For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter complete name of the fund. As appropriate, the reporting entity is encouraged to include data consistent with that reported for Column 24, Issuer.</td>
</tr>
<tr>
<td>For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit. As appropriate, the name of the name of the banking institutions should follow from the registry of the Federal Financial Institutions Examination Council (FFIEC) (<a href="http://www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx">www.ffiec.gov/nicpubweb/nicweb/SearchForm.aspx</a>).</td>
</tr>
<tr>
<td>For CDOs (Collateralized Debt Obligations) or CLOs (Collateralized Loan Obligations), indicate what the CDO/CLO collateral is, such as high-yield bonds, corporate loans, etc. If the collateral is of mixed type, indicate “Mix,” in addition to the largest type of collateral in the mix. If the collateral is derived synthetically, indicate “synthetic.”</td>
</tr>
</tbody>
</table>
Column 3 – Foreign

Insert the appropriate code in the column based on the list provided in the Investment Schedules General Instructions.

Column 4 – Date Acquired

For public placements use trade date, not settlement date. For private placements, use funding date. Reporting entities may total on one line each issue of bonds or stocks acquired at public offerings on more than one date and insert the date of last acquisition.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter date of last purchase.

Column 5 – Name of Vendor

The items with reference to each issue of bonds and stocks acquired at public offerings may be totaled in one line and the word “various” inserted.

Column 6 – Disposal Date

For public placements use trade date, not settlement date. For private placements, use funding date. Reporting entities may total on one line each issue of bonds or stocks disposed of at public offerings on more than one date and insert the date of last disposal.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter date of last disposal.

Detail Eliminated to Conserve Space

Column 10 – Consideration

Include: In the determination of this amount, the broker’s commission and incidental expenses of effecting delivery.

Exclude: Accrued interest and dividends.

For SVO Identified Funds (Bond Mutual Funds and Exchange Traded Funds), enter price received at sale, usually the number of shares sold times the selling price per share.

Detail Eliminated to Conserve Space
Column 20 – Interest and Dividends Received During Year

For Mutual Funds (including Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO), enter the amount of distributions received in cash or reinvested in additional shares.

Include: The proportionate share of investment income directly related to the securities reported in this schedule.

Report amounts net of foreign withholding tax.

Bonds called where consideration received exceeds par:

For securities sold, redeemed or otherwise disposed of, which generate investment income as a result of a prepayment penalty and/or acceleration fee, the amount of investment income reported is equal to the total consideration received (Column 10) less the Par value of the investment (Column 8).

Bonds called where consideration received is less than par:

For securities sold, redeemed or otherwise disposed of, the amount of investment income and realized gain reported shall be calculated in accordance with SSAP No. 26R—Bonds.

ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE DL – PART 1

SECURITIES LENDING COLLATERAL ASSETS
Reinvested Collateral Assets Owned December 31 Current Year
(Securities lending collateral assets reported in aggregate on Line 10 of the asset page and not included on Schedules A, B, BA, D, DB and E.)

This schedule should include a detailed listing of reinvested collateral assets that were owned as of the end of the current reporting year. For Schedule DL, reinvested collateral assets are collateral currently held as part of a securities lending program administered by the reporting entity or its agent (affiliated or unaffiliated) that can be resold or repledged. This is the currently held collateral, meaning original collateral if it is still in the original form received or the new invested asset resulting from the disposal and/or reinvestment of the original collateral. See SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities for accounting guidance.

Include reinvested collateral assets from securities lending programs where the program is administered by the reporting entity’s unaffiliated agent (i.e., collateral is received by the reporting entity’s unaffiliated agent that can be resold or repledged). These securities will be reported in aggregate on the Assets page, Line 10.

For reinvested collateral assets from securities lending programs where the program is administered by the reporting entity’s affiliated agent (i.e., collateral is received by the reporting entity’s affiliated agent that can be resold or repledged), the securities may be reported on Schedule DL, Part 1 if reported in aggregate on the Assets page, Line 10 or reported on Schedule DL, Part 2 if reported in other investment schedules (e.g., Schedules A, B, BA, D, DA and E), but not both.

Reinvested collateral assets reported on Schedule DL, Part 1 are excluded from other investment schedules (e.g., Schedules A, B, BA, D, DA and E).

Bonds, preferred stocks and common stocks are to be grouped separately, showing a subtotal for each category.

Securities borrowing and securities lending transactions shall be shown gross when reported in the Schedule DL. If these transactions are permitted to be reported net in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities, the investment schedule shall continue to provide detail of all transactions (gross), with the net amount from the valid right to offset reflected in the financial statements (pages 2 & 3 of the statutory financial statements). Disclosures for items reported net when a valid right to offset exists, including the gross amount, the amount offset, and the net amount reported in the financial statements are required per SSAP No. 64—Offsetting and Netting of Assets and Liabilities.

Bond Mutual Funds—as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO, which are described in the Investment Schedules General Instructions, are to be included in SVO Identified Funds.

If an insurer has any detail lines reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

NOTE: See the Investment Schedules General Instructions for the following:

- Category definitions for bonds and stocks.
- Code column list of codes and definitions for securities not under the exclusive control of the reporting entity.
- List of stock exchange names and abbreviations.

Detail Eliminated to Conserve Space

Column 2 – Description

Give a complete and accurate description of all bonds and preferred and common stocks as listed in the *Valuations of Securities*.

For Bond Mutual Funds – as Identified by the SVO and Exchange Traded Funds – as Identified by the SVO, enter complete name of the fund.

For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit.
ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE DL – PART 2

SECURITIES LENDING COLLATERAL ASSETS
Reinvested Collateral Assets Owned December 31 Current Year
(Securities lending collateral assets included on Schedules A, B, BA, D, DB and E
and not reported in aggregate on Line 10 of the asset page.)

This schedule should include a detailed listing of reinvested collateral assets that were owned as of the end of the current reporting year. For Schedule DL, reinvested collateral assets are collateral currently held as part of a securities lending program administered by the reporting entity or its agent (affiliated or unaffiliated) that can be resold or repledged. This is the currently held collateral, meaning original collateral if it is still in the original form received or the new invested asset resulting from the disposal and/or reinvestment of the original collateral. See SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities for accounting guidance.

Include reinvested collateral assets from securities lending programs where the program is administered by the reporting entity (i.e., collateral is received by the reporting entity that can be resold or repledged).

For reinvested collateral assets from securities lending programs where the program is administered by the reporting entity’s affiliated agent (i.e., collateral is received by the reporting entity’s affiliated agent that can be resold or repledged), the securities may be reported on Schedule DL, Part 2 if reported in other investment schedules (e.g., Schedules A, B, BA, D, DA and E) or reported on Schedule DL, Part 1 if reported in aggregate on the Assets page, Line 10, but not both.

Reinvested collateral assets reported on Schedule DL, Part 2 are included in the other investment schedules (e.g., Schedules A, B, BA, D, DA and E).

Bonds, preferred stocks and common stocks are to be grouped separately, showing a subtotal for each category.

Securities borrowing and securities lending transactions shall be shown gross when reported in the Schedule DL. If these transactions are permitted to be reported net in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities, the investment schedule shall continue to provide detail of all transactions (gross), with the net amount from the valid right to offset reflected in the financial statements (pages 2 & 3 of the statutory financial statements). Disclosures for items reported net when a valid right to offset exists, including the gross amount, the amount offset, and the net amount reported in the financial statements are required per SSAP No. 64—Offsetting and Netting of Assets and Liabilities.

Bond Mutual Funds—as Identified by the SVO and Exchange Traded Funds—as Identified by the SVO that are described in the Investment Schedules General Instructions are to be included in SVO Identified Funds.

If an insurer has any detail lines reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

NOTE: See the Investment Schedules General Instructions for the following:

- Category definitions for bonds and stocks.
- Code column list of codes and definitions for securities not under the exclusive control of the reporting entity.
- List of stock exchange names and abbreviations.

## Bonds (Schedule D, Part 1):

### U.S. Governments
- **Issuer Obligations**: 0199999
- **Residential Mortgage-Backed Securities**: 0299999
- **Commercial Mortgage-Backed Securities**: 0399999
- **Other Loan-Backed and Structured Securities**: 0499999
- **Subtotals – U.S. Governments**: 0599999

### Parent, Subsidiaries and Affiliates
- **Issuer Obligations**: 4999999
- **Residential Mortgage-Backed Securities**: 5099999
- **Commercial Mortgage-Backed Securities**: 5199999
- **Other Loan-Backed and Structured Securities**: 5299999
- **Affiliated Bank Loans – Issued**: 5399999
- **Affiliated Bank Loans – Acquired**: 5499999
- **Subtotals – Parent, Subsidiaries and Affiliates**: 5599999

### SVO Identified Funds
- **Exchange Traded Funds – as Identified by the SVO**: 5799999
- **Bond Mutual Funds – as Identified by the SVO**: 5899999
- **Subtotals – SVO Identified Funds**: 5999999

### Unaffiliated Bank Loans
- **Unaffiliated Bank Loans – Issued**: 6099999
- **Unaffiliated Bank Loans – Acquired**: 6199999
- **Subtotals – Unaffiliated Bank Loans**: 6299999

### Total Bonds
- **Subtotals – Issuer Obligations**: 6399999
- **Subtotals – Residential Mortgage-Backed Securities**: 6499999
- **Subtotals – Commercial Mortgage-Backed Securities**: 6599999
- **Subtotals – Other Loan-Backed and Structured Securities**: 6699999
- **Subtotals – SVO Identified Funds**: 6799999
- **Subtotals – Affiliated Bank Loans**: 6899999
- **Subtotals – Bank Loans**: 6999999
- **Subtotals – Total Bonds**: 7099999

---

**Description**

Give a complete and accurate description of all bonds and preferred and common stocks as listed in the *Valuations of Securities*.

For **Bond Mutual Funds – as Identified by the SVO** and **Exchange Traded Funds – as Identified by the SVO**, enter complete name of the fund.

For Certificate of Deposit Account Registry Service (CDARs) or other similar services that have a maturity of greater than one year, individually list the various banking institutions that are financially responsible for honoring certificates of deposit.

© 2021 National Association of Insurance Commissioners
Line 13.02 through 13.11 – Report the amounts and percentages of admitted assets held in the ten largest equity interests including equity funds that qualify individually as one of the largest equity interests and a look-through of investments in the shares of non-diversified mutual funds and ETFs, preferred stocks, publicly traded equity securities, and other equity securities (including Schedule BA equity interests). Equity interests in all funds that are diversified in accordance with the Investment Company Act of 1940 do not need to be individually assessed and aggregated to determine the ten largest equity interests. For funds that are not diversified within the meaning of the Investment Company Act of 1940, insurance reporting entities are required to identify actual equity interests within the fund and aggregate those equity interests to determine their ten largest equity interests.

Determine the ten largest equity interests by first aggregating investments included in this line by issuer. For example, the reporting entity owns preferred stock of the XYZ Company of $600,000, common stock of the XYZ Company of $300,000 and $50,000 of XYZ identified through a look-through of a non-diversified stock closed-end fund reported on Schedule D-2-2. The total is $950,000 ($600,000+$300,000+$50,000). The reporting entity also owns bonds issued by the XYZ Company of $500,000 that are excluded from this calculation because bonds are debt instruments. The reporting entity may also have exposure to equity interests in XYZ through mutual funds that are excluded from this calculation as the funds are diversified within the meaning of the Investment Company Act of 1940. Other equity securities include partnerships and Limited Liability Companies (LLC) and any other investments reported in Schedule BA classified as equity.

The following funds shall also be excluded from aggregation as equity interests: SVO-Identified U.S. Direct Obligations / Full Faith And Credit Exempt List of Money Market Mutual Funds, SVO-Identified Bond ETFs, SVO-Identified Bond Mutual Funds and SVO Identified fund investments with underlying characteristics of fixed-income instruments, which do not contain underlying equities and that are outlined within the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

IDENTIFICATION OF ITEM(S) TO CHANGE

Move the interrogatory question regarding Communication of Internal Control Related Matters Noted in Audit from the Annual Supplemental Exhibits and Schedules Interrogatories to the Quarterly Supplemental Exhibits and Schedules Interrogatories to be answered for the 2nd Quarter. For Title a new page in the Quarterly statement will be added for the Supplemental Exhibits and Schedules Interrogatories.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

By having the question in the annual some companies appear to be answering “yes” to the question on the annual statement but then don't file it. Placing in the quarterly statement puts the answering of the question in the same quarter as the filing of the document.

### ANNUAL STATEMENT BLANK – LIFE/FRATERNAL

**SUPPLEMENTAL EXHIBITS AND SCHEDULES**

**INTERROGATORIES**

The following supplemental reports are required to be filed as part of your statement filing unless specifically waived by the domiciliary state. However, in the event that your domiciliary state waives the filing requirement, your response of WAIVED to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

The following supplemental reports are required to be filed as part of your annual statement filing if your company is engaged in the type of business covered by the supplement. However, in the event that your company does not transact the type of business for which the special report must be filed, your response of NO to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

ANNUAL STATEMENT BLANK – HEALTH

SUPPLEMENTAL EXHIBITS AND SCHEDULES INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing unless specifically waived by the domiciliary state. However, in the event that your domiciliary state waives the filing requirement, your response of WAIVED to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason, enter SEE EXPLANATION and provide an explanation following the interrogatory questions.
