</tr>
</tbody>
</table>

#### 3031.4
Describe the sources or methods utilized in determining the fair values:

- ............................................................................................................................
- ............................................................................................................................
- ............................................................................................................................

#### 3132.1
Was the rate used to calculate fair value determined by a broker or custodian for any of the securities in Schedule D?

- Yes [ ] No [ ]

#### 3132.2
If the answer to 3132.1 is yes, does the reporting entity have a copy of the broker’s or custodian’s pricing policy (hard copy or electronic copy) for all brokers or custodians used as a pricing source?

- Yes [ ] No [ ]

#### 3132.3
If the answer to 3132.2 is no, describe the reporting entity’s process for determining a reliable pricing source for purposes of disclosure of fair value for Schedule D:

- ............................................................................................................................
- ............................................................................................................................
- ............................................................................................................................

#### 3233.1
Have all the filing requirements of the Purposes and Procedures Manual of the NAIC Investment Analysis Office been followed?

- Yes [ ] No [ ]

#### 3233.2
If no, list exceptions:

- ............................................................................................................................
- ............................................................................................................................

#### 3334
By self-designating 5GI securities, the reporting entity is certifying the following elements of each self-designated 5GI security:

- a. Documentation necessary to permit a full credit analysis of the security does not exist or an NAIC CRP credit rating for an FE or PL security is not available.
- b. Issuer or obligor is current on all contracted interest and principal payments.
- c. The insurer has an actual expectation of ultimate payment of all contracted interest and principal.

Has the reporting entity self-designated 5GI securities?

- Yes [ ] No [ ]

#### 3435
By self-designating PLGI securities, the reporting entity is certifying the following elements of each self-designated PLGI security:

- a. The security was purchased prior to January 1, 2018.
- b. The reporting entity is holding capital commensurate with the NAIC Designation reported for the security.
- c. The NAIC Designation was derived from the credit rating assigned by an NAIC CRP in its legal capacity as an NRSRO which is shown on a current private letter rating held by the insurer and available for examination by state insurance regulators.
- d. The reporting entity is not permitted to share this credit rating of the PL security with the SVO.

Has the reporting entity self-designated PLGI securities?

- Yes [ ] No [ ]

#### 3436
By assigning FE to a Schedule BA non-registered private fund, the reporting entity is certifying the following elements of each self-designated FE fund:

- a. The shares were purchased prior to January 1, 2019.
- b. The reporting entity is holding capital commensurate with the NAIC Designation reported for the security.
- c. The security had a public credit rating(s) with annual surveillance assigned by an NAIC CRP in its legal capacity as an NRSRO prior to January 1, 2019.
- d. The fund only or predominantly holds bonds in its portfolio.
- e. The current reported NAIC Designation was derived from the public credit rating(s) with annual surveillance assigned by an NAIC CRP in its legal capacity as an NRSRO.
- f. The public credit rating(s) with annual surveillance assigned by an NAIC CRP has not lapsed.

Has the reporting entity assigned FE to Schedule BA non-registered private funds that complied with the above criteria?

- Yes [ ] No [ ]

#### 3437
By rolling/renewing short-term or cash equivalent investments with continued reporting on Schedule DA, Part 1 or Schedule E, Part 2 (identified through a code (%) in those investment schedules), the reporting entity is certifying to the following:

- a. The investment is a liquid asset that can be terminated by the reporting entity on the current maturity date.
- b. If the investment is with a nonrelated party or nonaffiliate, then it reflects an arms-length transaction with renewal completed at the discretion of all involved parties.
- c. If the investment is with a related party or affiliate, then the reporting entity has completed robust re-underwriting of the transaction for which documentation is available for regulator review.
- d. Short-term and cash equivalent investments that have been renewed/rolled from the prior period that do not meet the criteria in 3437 and 3437.c are reported as long-term investments.

Has the reporting entity rolled/renewed short-term or cash equivalent investments in accordance with these criteria?

- Yes [ ] No [ ] N/A [ ]

ANNUAL STATEMENT INSTRUCTIONS – LIFE\FRATERNAL, HEALTH, PROPERTY AND TITLE

GENERAL INTERROGATORIES

PART 1 – COMMON INTERROGATORIES

Detail Eliminated to Conserve Space

FINANCIAL

Detail Eliminated to Conserve Space

INVESTMENT

2425. For the purposes of this interrogatory, “exclusive control” means that the company has the exclusive right to dispose of the investment at will, without the necessity of making a substitution thereof. For purposes of this interrogatory, securities in transit and awaiting collection, held by a custodian pursuant to a custody arrangement or securities issued subject to a book entry system are considered to be in actual possession of the company.

If bonds, stocks and other securities owned December 31 of the current year, over which the company has exclusive control are: (1) securities purchased for delayed settlement, or (2) loaned to others, the company should respond “NO” to 2425.01 and “YES” to 2526.1.

2425.03 Describe the company’s securities lending program, including value for collateral and amount of loaned securities, and whether the collateral is held on- or off-balance sheet. Note 17 of Notes to Financial Statement provides a full description of the program.

2425.04 Report amount of collateral for conforming programs as outlined in the Risk-Based Capital Instructions.

2425.05 Report amount of collateral for other programs.

2425.091 The fair value amount reported should equal the grand total of Schedule DL, Part 1, Column 5 plus Schedule DL, Part 2, Column 5.

The fair value amount reported amount should also equal the fair value amount reported in Note 5E(5)a1(m).

2425.092 The book adjusted/carrying value amount reported should equal the grand total of Schedule DL, Part 1, Column 6 plus Schedule DL, Part 2, Column 6.

2425.093 The payable for securities lending amount reported should equal current year column for payable for securities lending line on the liability page.

2526. Disclose the statement value of investments that are not under the exclusive control of the reporting entity within the categories listed in 2526.2.
2828. The purpose for this General Interrogatory is to capture the statement value for securities reported in Schedule D, Part 1, Bonds or Schedule D, Part 2, Section 1, Preferred Stock that are mandatorily convertible into equity, or at the option of the issuer, are convertible into equity. This disclosure will facilitate the application of the equity factors to the statement value of such securities for purposes of RBC.

2829. The question, regarding whether items are held in accordance with the Financial Condition Examiners Handbook, must be answered.

2829.01 If the answer to 2829 is “YES,” then list all of the agreements in 2829.01. If the answer is “NO,” but one or more of the agreements do comply with the Financial Condition Examiners Handbook, then list the agreements that do comply in 2829.01.

2829.02 If the answer to 2829 is “NO,” then list all agreements that do not comply with the Financial Condition Examiners Handbook. Provide a complete explanation of why each custodial agreement does not include the characteristics outlined in the Financial Condition Examiners Handbook (Section 1 (III) (F), Outsourcing of Critical Functions, Custodial or Safekeeping Agreements), available at the NAIC website:

www.naic.org/documents/committees_e_examover_fehtg_custodial_or_safekeeping_agreements.doc

2829.03 This question, regarding changes in custodian, must be answered.

2829.04 If the answer to 2829.03 is “YES,” list the change(s).

2829.05 Identify all investment advisors, investment managers and broker/dealers, including individuals who have the authority to make investment decisions on behalf of the reporting entity. For assets that are managed internally by employees of the reporting entity, note as such.

Name of Firm or Individual:

Should be name of firm or individual that is party to the Investment Management Agreement

Affiliation:

Note if firm or individual is affiliated, unaffiliated or an employee by using the following codes:

A Investment management is handled by firms/individuals affiliated with the reporting entity.

U Investment management is handled by firms/individuals unaffiliated with the reporting entity.

I Investment management is handled internally by individuals that are employees of the reporting entity.

2829.0597 If the total assets under management of any the firms/individuals unaffiliated with the reporting entity (i.e., designated with a “U”) listed in the table for Question 2829.05 are greater than 10% of the reporting entity’s invested assets (Line 12 of the Asset page), answer “YES” to Question 2829.0597.

2829.0598 If the total assets under management of all the firms/individuals unaffiliated with the reporting entity (i.e., designated with a “U”) listed in the table for Question 2829.05 are greater than 50% of the reporting entity’s invested assets (Line 12 of the Asset page), answer “YES” to Question 2829.0598. When determining the aggregate total of assets under management, include all firms/individuals unaffiliated with the reporting entity not just those who manage more than 10% of the reporting entity’s assets.
For assets managed by an affiliated or unaffiliated firm or individual, provide for each firm or individual the Central Registration Depository Number, Legal Entity Identifier (LEI), who they are registered with and if an Investment Management Agreement has been filed for each firm or individual.

**Name of Firm or Individual:**

Should be name of firm or individual provided for 2829.05

**Central Registration Depository Number**

The Central Registration Depository (CRD) number is a number issued by the Financial Industry Regulatory Authority (FINRA) to brokers, dealers or individuals when licensed, and can be verified against their database [www.finra.org](http://www.finra.org). These brokers, dealers or individuals would be those contracted to manage some of the reporting entity’s investments or funds and invest them for the reporting entity. The brokers, dealers or individuals can be affiliated or unaffiliated with the reporting entity. The reporting entity must list all brokers, dealers or individuals who have the authority to make investments on behalf of the reporting entity.

**Legal Entity Identifier (LEI)**

Provide the 20-character Legal Entity Identifier (LEI) for issuer as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

**Registered With:**

If a Registered Investment Advisor, specify if registered with Securities Exchange Commission or state securities authority. Note if not a Registered Investment Advisor.

**Investment Management Agreement (IMA) Filed:**

Indicate if a current Investment Management Agreement (IMA) has been filed with the state of domicile or the insurance department in another state(s). Use one of the codes below to indicate if the IMA has been filed and with whom it was filed.

- **DS** If the current IMA has been filed with the state of domicile regardless if it was also filed with another state.
- **OS** If the current IMA has been filed with a state(s) other than the state of domicile but not the state of domicile
- **NO** If the current IMA has not been filed with any state

This interrogatory is applicable to Property/Casualty and Health entities only.

The diversified mutual funds (diversified according to the U.S. Securities and Exchange Commission (SEC) in the Investment Company Act of 1940 [Section 5(b)(1)]) that are excluded from the Asset Concentration Factor section of the risk-based capital filing are to be disclosed in this interrogatory.

“Significant Holding” means the top five largest holdings of the mutual fund. For each diversified mutual fund disclosed in Interrogatory 2930.2, the top largest holdings of the mutual fund must be disclosed in this interrogatory.

The “Amount of Mutual Fund’s Book/Adjusted Carrying Value Attributable to the Holding” should be based upon the fund’s latest available valuation as of year-end (e.g., fiscal year-end or latest periodic valuation available prior to year-end).
The “Date of Valuation” should be the date of the valuation amount provided in the Amount of Mutual Fund’s Book/Adjusted Carrying Value Attributable to the Holding column.

3031. Include bonds reported as cash equivalents in Schedule E, Part 2.

3233. This interrogatory applies to any investment required to be filed with the SVO (or that would have been required if not exempted in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*), whether in the general account or separate accounts.

The existence of Z securities does not mean that a reporting entity is not complying with the procedures. As long as the entity has filed its Z securities with the SVO within 120 days of purchase, compliance with the procedures has been met. If an entity wishes to provide the counts of Z securities, include those counts in the explanation lines. An explanation is only expected if the answer to the compliance question is NO.

**OTHER**

3338. The purpose of this General Interrogatory is to capture information about payments to any trade association, service organization, and statistical or rating bureau. A “service organization” is defined as every person, partnership, association or corporation that formulates rules, establishes standards, or assists in the making of rates or standards for the information or benefit of insurers or rating organizations.

3839. The purpose of this General Interrogatory is to capture information about legal expenses paid during the year. These expenses include all fees or retainers for legal services or expenses, including those in connection with matters before administrative or legislative bodies. It excludes salaries and expenses of company personnel, legal expenses in connection with investigation, litigation and settlement of policy claims, and legal fees associated with real estate transactions, including mortgage loans on real estate. Do not include amounts reported in General Interrogatories No. 32-38 and No. 3940.

3940. The purpose of this General Interrogatory is to capture information about expenditures in connection with matters before legislative bodies, officers or departments of government paid during the year. These expenses are related to general legislative lobbying and direct lobbying of pending and proposed statutes or regulations before legislative bodies and/or officers or departments of government. Do not include amounts reported in General Interrogatories No. 32-38 and No. 3839.

17. Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

Instruction:

B. Transfer and Servicing of Financial Assets

For securitizations, asset-backed financing arrangements and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary of the Accounting Practices and Procedures Manual) with the transferred financial assets:

b. For each statement of financial position presented, regardless of when the transfer occurred:

1. Qualitative and quantitative information about the transferor’s continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor’s risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk and other risks), including:

   a. The total original principal amount outstanding (BACV), the amount that has been derecognized and the outstanding amount that continues to be recognized in the statement of financial position. The amount recognized (allocated fair value) by the reporting entity for the acquired participation in the transferred assets. The reporting schedules of both the transferred and reacquired assets. The percentage of beneficial interests from the reporting entity’s transferred assets acquired by affiliated entities. The percentage of original principal held in the company group and the percentage of derecognized principal held by related parties.

The purpose of the table illustrated below is to provide for data capture of certain disclosures required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, paragraph 28g. As detailed in paragraph 28.g.ii, disclosure is required for each statement of financial position presented, regardless of when the transfer occurred. Determination of continuing involvement shall be applied in accordance with the definition reflected in SSAP No. 103R, Appendix A.
Columns requesting information that results in a null result (i.e., if column 5 results in a zero balance as 100% of the asset was transferred), shall indicate zero (0). In the event a column is not applicable, (i.e., if affiliated entities did not acquire an interest in the transferred asset), the column shall be referenced as zero (0).

In circumstances where an entity has multiple assets associated with a sale (i.e., several limited partnerships are sold as a single transaction), the assets should be aggregated and reported as a single transaction.

<table>
<thead>
<tr>
<th>Column 1</th>
<th>Identification of Transaction</th>

<th>Earned Premiums</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.</td>
</tr>
</tbody>
</table>

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Grand Total Page, Line 1 should equal Form 1, Column 1, Line 1 plus Line 6.

<table>
<thead>
<tr>
<th>Column 4</th>
<th>Incurred LTC Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.</td>
</tr>
</tbody>
</table>

Grand Total Page, Line 1 should equal Form 1, Column 2, Line 1 plus Line 6.

<table>
<thead>
<tr>
<th>Column 5</th>
<th>Incurred Extended Benefits Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.</td>
</tr>
</tbody>
</table>
Column 6 – Number of Claims Remaining Open

Open claims are all claims that have been opened at any date but have not been closed as of the end of the year.

Grand Total Page, Line 1 should equal Form 1, Column 5, Line 1 plus Line 6.

Column 7 – Number of Claims Opened

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Grand Total Page, Line 1 should equal Form 1, Column 3, Line 1 plus Line 6.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add additional line categories to the instruction for Column 26 – Collateral Type to capture collateral type data for all RMBS, CMBS and LBSS securities regardless of reporting category.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to expand the line categories listed in the instructions for Column 26 – Collateral Type on Schedule D, Part 1 so the column captures collateral type data for all RMBS, CMBS and LBSS securities regardless of reporting category.

Enter one of the following codes to indicate collateral type. Pick exactly one collateral type for each reported security. For securities that fit in more than one type, pick the predominant one. Judgment may need to be used when making selections involving prime, Alt-A and subprime, as there are no uniform definitions for these collateral types. In the description field, use abbreviations like ABS, CDO or CLO to disclose the type of the loan-backed/structured security.

Note: Various investments below require SVO review and approval, please refer to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) for further description.

1  Residential Mortgage Loans/RMBS
   Include all types of residential first lien mortgage loans as collateral (e.g., prime, subprime, Alt-A).

2  Commercial Mortgage Loans/CMBS
   Include all types of commercial mortgage loans as collateral (e.g., conduits, single name, etc.).

3  Home Equity
   Include all home equity loans and/or home equity lines of credit as collateral. These are not first liens and are deemed loans to individuals. Bonds that are collateralized by home equity loans/lines of credit are considered asset-backed securities (ABS) rather than RMBS.

4  Individual Obligations – Credit Card, Auto, Student Loans and Recreational Vehicles
   Include bonds collateralized by individual obligations. Do not include individual obligations that have a real-estate aspect.

5  Corporate/Industrial Obligations – Tax Receivables, Utility Receivables, Trade Receivables, Small Business Loans, Commercial Paper
   Include bonds collateralized by corporate or industrial obligations (sometimes referred to as commercial obligations).

6  Lease Transactions – Aircraft Leases, Equipment Leases and Equipment Trust Certificates
   Include bonds collateralized by leases. Equipment leases are loans on heavy equipment. Equipment trust certificates are certificates that entitle the holder to the lease payments on the underlying assets.

7  CLO/CBO/CDO
   Include bank loans, which securitize CLOs; investment grade and high-yield corporate bonds, which securitize CBOs; and corporate bonds and structured securities, which securitize CDOs.

8  Manufactured Housing and Mobile Home Loans
   Include manufactured housing loans and mobile home loans as collateral. These are not typical residential mortgage loans, and when they securitize bonds, they are considered ABS.
9  Credit Tenant Loans

Real estate loans secured by the obligation of a single (usually investment grade) company to pay debt service by means of rental payments under a lease, where real estate is pledged as collateral also referred to as credit tenant lease, sale-leaseback or CTL.

10  Ground Lease Financing

Real estate loans secured by the obligation to pay debt service by means of rental payments of subleased property; where a long-term ground lease was issued in which the lessee intends significant land development and the subleasing of such property to other long-term tenants.

11  Other

Include other collateral types that do not fit into categories 1 through 10.

Anticipated Effective Date: Annual 2021

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Add a new supplement Mortgage Guaranty insurance Exhibit to capture more information from mortgage guaranty insurers.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The proposed Mortgage Guaranty Insurance Supplement will be primarily used by the domestic regulators of mortgage guaranty insurers. Currently, there is limited data captured on mortgage guaranty insurance within the financial statement. The proposed supplement will provide the means for the regulators to assess the capital level of the insurer and their overall financial solvency.

**NAIC STAFF COMMENTS**

ANNUAL STATEMENT INSTRUCTIONS - PROPERTY

MORTGAGE GUARANTY INSURANCE EXHIBIT

This exhibit is required to be completed annually by all insurers, excluding reinsurers, with any mortgage guaranty exposure and filed no later than April 1. The exhibit is provided for the benefit of regulators of mortgage guaranty insurers to use as an assessment tool aiding in the evaluation of an insurer’s capital adequacy and financial solvency.

All reporting entities reporting mortgage guarantees on Line 6 of the Annual Statement Underwriting and Investment Exhibit of Premiums and Losses, Part 1 and/or Part 2 must prepare this Exhibit.

The following definitions should be used in completing the Mortgage Guaranty Insurance Exhibit:

a. “Primary Flow and Bulk Business” means loans are insured on an individual loan-by-loan transaction basis. Premium rates typically vary depending on the perceived risk of a potential claim on the loan type based on consideration of the loan to value ratio, borrower credit score, payment plan, mortgage term and property type. The mortgage instrument may require the borrower to pay for the mortgage insurance, which is referred to as “borrower paid”. Alternatively, the lender may be required to pay the premium, who in turn recovers the premium through an increase in the note rate, which is referred to as “lender paid.” Bulk Business means coverage is provided on each mortgage loan included in a defined portfolio of loans insured under a single or bulk transaction. Bulk coverage typically insures the closed loans in an insured portfolio to a specified level of coverage. Loans insured on a bulk basis are typically part of a negotiated transaction, resulting in a composite rate applied to all such loans in the portfolio.

b. “Pool Business” means a collection of mortgages with similar rates and terms which are often securitized by dividing the pool into bonds backed by the payments of principal and interest into the pool by borrowers. Pool insurance typically covers the loss on a defaulted mortgage loan included in the pool, which is in excess of the loan’s primary coverage, as well as the total loss on a defaulted mortgage which does not require primary coverage. Pool insurance may have a stated aggregate loss limit for a pool of loans or a deductible under which no loss is paid by the insurer until the deductible is exceeded.

c. “State Regulatory Mortgage Insurer Capital Standard” (SRMICS) means the economically countercyclical risk-based margin of safety developed to recognize risk and control elements unique to the mortgage guaranty insurance industry, the calculation of which is described in the Mortgage Guaranty Insurance Standards Manual.

SCHEDULE MG

Schedule MG This Exhibit includes only the data for the insurer identified on the cover of the exhibit. Do not include consolidated data for affiliated companies. If the insurer participates in a pooling agreement, it should report only its share of the business, not the total of all participants.

In those instances where an insurer files an amended annual statement as a result of a restatement of prior year written premium, losses or loss adjustment expenses, Schedule MG this Exhibit must be restated and included in the amended exhibit. In those instances where one insurer is merged into another mortgage guaranty insurer, Schedule MG the Exhibit must be prepared so it includes the entire combined history of both companies.

When changes to pooling agreements impact prior policy years, historical data values in Schedule MG Parts 1 and 2 should be restated based on the new pooling percentage. This should be done to present meaningful development patterns in Schedule MG the Exhibit. When pooling changes only impact future policy years, no restatement of historical values should be made. Even though no restatement is required, changes are to be included within the Notes to Financial Statements, per SSAP No. 3—Accounting Changes and Corrections of Errors.
Earned premiums, losses paid, and losses incurred should be assigned to the year in which the policy was written that triggered coverage under the contract.

Retroactive reinsurance should not be reflected in Schedule MG this Exhibit. The transferor in such an agreement must record, without recognition of the retroactive reinsurance, its loss and loss adjustment expense reserves on a gross basis on its balance sheet and in all schedules and exhibits. The transferee in such an agreement must exclude the retroactive reinsurance from its loss and loss expense reserves and from its schedules and exhibits.

The reserves for unpaid losses and loss adjustment expenses should take into account the explicit or implicit impacts of the various factors affecting claim frequency or ultimate claim cost.

Schedule MG, Part 1 is organized so that written premiums and other income for a year are matched with corresponding losses and Defense &and Cost Containment expenses (D&CC) and Adjusting &and Other expenses for policies issued during that year. Experience is shown for direct business, reinsurance assumed, reinsurance ceded and net of reinsurance.

Policy year loss and loss adjustment expense payments and reserves should be assigned to the year in which the policy was written under which coverage is triggered.

Part 2 displays 20-year loss development triangles on a policy year basis. In Part 2, losses are combined with D&CC. Loss and D&CC development is shown for total incurred, payments, case basis reserves, bulk reserves and incurred but not reported (IBNR) reserves (policy year basis only). Part 2 displays 20-year claim count development triangles on a policy year basis.

Report all dollar amounts in the Schedule MMortgage Guaranty Insurance Exhibit in thousands of dollars ($000 omitted), either by rounding or truncating. All claim counts are to be shown in whole numbers.

The number of claims reported is to be cumulative by policy year. The number of claims reported for each policy year is equal to the number of open claims at the end of the current year plus cumulative claims closed with or without payment for the current and prior calendar years.

For reporting entities reporting on a pooling basis, the pooling percentage should be applied to claim counts as well as dollar amounts.

If the company changes its method of counting claims, the new method should be disclosed in the Notes to Financial Statements.
SCHEDULE MG- PART 1 – SUMMARY

Part 1 – Summary provides a 10-year summary of loss and defense & cost containment experience for the company. Part 1 – Summary should be equal to the sum of Part 1A and Part 1B. Columnar headings provide instructions necessary for completion.

The columnar headings provide instructions necessary for completion.

For reporting entities reporting on a pooling basis, the pooling percentage should be applied to claim count as well as dollar amounts.

Cumulative salvage and subrogation received and losses and expenses paid should be reported for each specific year. For “prior,” report only salvage and subrogation received and losses and expenses paid in current year.

In Schedule MG, Part 1, salvage and subrogation received should be reported net of reinsurance, if any. Loss payments are to be reported net of salvage and subrogation received in Schedule MG.

Premiums earned and losses paid, unpaid, and incurred should reconcile with the Statement of Income page. The workpapers that show a reconciliation explaining reinsurance and salvage and subrogation adjustments should be available for examination on request.

“Assumed” means reinsurance assumed, including from affiliated pooling agreements, but excluding any non-proportional reinsurance assumed reported as a separate line and reported accordingly.

“Direct” means as directly written, but not if part of an affiliated pooling agreement.

“Ceded” means reinsurance ceded on business so reported as direct or assumed.

Line 1, “Prior,” Columns 8 through 16 should only reflect amounts paid or received in the current calendar year.

Report cumulative amounts paid or received for specific years.

“Defense & Cost Containment” expenses include defense, and litigation and cost containment expenses, whether internal or external. “Defense” means defense by the reporting entity in a contentious situation, whether a first party or a third-party claim. The fees charged for reporting entity employees should include overhead, just as an outside firm’s charges would include. The expenses exclude expenses incurred in the determination of coverage. These expenses include the following items:

1. Surveillance expenses;
2. Fixed amounts for cost containment expenses;
3. Litigation management expenses;
4. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by policy year;
5. Fees or salaries for appraisers, private investigators, hearing representatives, inspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;
6. Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
7. The cost of engaging experts.
“Adjusting & Other” expenses are those expenses other than those above and which have been assigned to the “Loss Adjustment Expense” group in the Underwriting and Investment Exhibit, Part 3, Expenses. These expenses include the following items:

1. Fees of adjusters and settling agents (but not if engaged in a contentious defense);
2. Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;
3. Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder; and
4. Fees or salaries for appraisers, private investigators, hearing representatives, re-inspectors and fraud investigators, if working in the capacity of an adjuster.

The foregoing list is not intended to be all-inclusive. We are relying on the reporting entities to use reasonable judgment in particular situations.

Reporting entities should assign the “Defense & Cost Containment” expenses to the policy year in which the associated losses were assigned. Reporting entities may assign the “Adjusting & Other” expenses in any justifiable way among the policy years. The preferred way is to apportion these expenses in proportion to the number of claims reported, closed, or outstanding each year.

Please Note: This instruction is intended solely to give guidance on reporting loss adjustment expenses in Schedule MG, the Mortgage Guaranty Insurance Exhibit, in the annual statement. It is not intended to provide guidance on the types of expenses to include in loss adjustment expenses. These definitions of defense cost containment expense and adjusting other expense are not intended to affect insurance or reinsurance agreements or other contractual agreements.

Pooling

Many insurers have a pooling arrangement with affiliated companies, approved by the domiciliary commissioner, in which the business written is reallocated among the affiliated companies according to a specified percentage. Some affiliated companies may be part of the pool and some may not, and some lines may be included, and some may not. The premiums and losses are to be reported in Schedule P after such pooling arrangements, not before.

Pooled business ceded is that which, if retained instead of ceded, would be pooled among the affiliated companies who are party to the pooling agreement. Any such business that is ceded by the pool participants to non-pooled companies prior to the pooling distribution among the participating companies is considered pooled business ceded. Non-pooled business includes all direct, assumed, and ceded business not subject to pooling, as well as any pooled business that is ceded after the pooling distribution has been made.

Direct and Assumed columns include the participation in any pool. In addition, all direct business not pooled plus assumed business from other than the pool is to be included. Ceded columns include the company’s participation in the pool such as any ceding by the company to companies independent of the pool.

Claim counts should be reported in accordance with the pooling arrangement and should reflect the company’s proportionate share of the total number of claims. If the company’s losses are 40% of the pool, then 40% of the claim count should be reported.

The pooling percentage is to reflect the company’s participation in the pool as of year-end. When changes to pooling agreements impact prior policy years, historical data values in Schedule MG, Parts 1 and 2 should be restated based on the new pooling percentage. This should be done to present meaningful development patterns in Schedule MG, this exhibit. When pooling changes only impact future policy years, no restatement of historical values should be made.
Column 7 ——— Premiums Earned and Other Income Net
Should equal Columns 3 + 4 + 5 – 6.

Column 16 ——— Total Net Loss and Expense Paid
Should equal Columns 8 + 9 – 10 + 11 + 12 – 13 + 15.

Column 25 ——— Total Net Loss and LAE Unpaid

Column 27 ——— Losses and Defense & Cost Containment Expenses Incurred Direct
Should equal Columns 8 + 11 + 18 + 21.

Column 28 ——— Losses and Defense & Cost Containment Expenses Incurred Assumed
Should equal Columns 9 + 12 + 19 + 22.

Column 29 ——— Losses and Defense & Cost Containment Expenses Incurred Ceded
Should equal Columns 10 + 13 + 20 + 23.

Column 30 ——— Losses and Defense & Cost Containment Expenses Incurred Net
Should equal Columns 27 + 28 – 29.

Column 31 ——— Loss and LAE Ratio Direct Basis
Should equal (Columns 15 + 24 + 27)/Column 3.

Column 32 ——— Loss and LAE Ratio Net Basis
Should equal (Columns 15 + 24 + 30)/(Columns 7 – 5).

Column 33 ——— Net Loss & LAE Coverage
Should equal (Columns 15 + 24 + 30)/Column 1.

Column 34 ——— Net Reserves
Should equal Columns 25 – 33.

**PART 1A – PRIMARY FLOW AND BULK BUSINESS**

Part 1A provides a summary of primary flow and bulk business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.

Column 2625 — Number of Direct Delinquencies
Should equal Part 2F, Column 910.

**PART 1B – POOL BUSINESS**

Part 1B provides a summary of pool business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.
## SCHEDULE MG – Part 1 – SUMMARY, PARTS 1A and PART 1B

### NOTE:
Starting with 2021 reporting, Line 1 and Lines 7 through 12 are required. Lines 2 through 6 will be phased over the years 2022 through 2026.

Reporting entities should complete Schedule MG report dollar amounts in thousands only but must report all claim counts in whole numbers.

Part 1 is organized so that written premiums for a year are matched with corresponding losses and Defense and Cost Containment expenses (DCC) and Adjusting and Other expenses for policies issued during that year. Experience is shown for direct business, reinsurance assumed, reinsurance ceded and net of reinsurance.

Policy year loss and loss adjustment expense payments and reserves should be assigned to the year in which the policy was written under which coverage is triggered.

### NOTE:
For “prior,” report amounts paid or received in current year only. Report cumulative amounts paid or received for specific years. Report loss payments net of salvage and subrogation received.

The number of claims closed with payment is to be cumulative by policy year.

| Column 16 | Number of Claims Closed with Payment (Direct) | Number of claims closed with payment should be reported “per claim” and not “per claimant.” |
| Column 26 | Number of Direct Delinquencies | Should equal Part 2E, Column 10. |
| Column 2726 | Losses and Defense & Cost Containment Expenses Incurred Direct | Should equal Columns 87 + 140 + 187 + 204. |
| Column 2827 | Losses and Defense & Cost Containment Expenses Incurred Assumed | Should equal Columns 98 + 121 + 198 + 221. |
| Column 3130 | Loss and LAE Ratio Direct Basis | Should equal (Columns 154 + 243 + 276)/Column 3. |
Column 3231 – Loss and LAE Ratio Net Basis
Should equal (Columns 154 + 243 + 3029)/(Columns 76 – 5).

Column 3332 – Net Loss and& LAE Coverage
Should equal (Columns 154 + 243 + 3029)/Column 1.

Column 3433 – Net Reserves
Should equal Columns 254 – 332.

SCHEDULE MG- PART 1A – PRIMARY FLOW AND BULK BUSINESS
Part 1A provides a summary of primary flow and bulk business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.

SCHEDULE MG- PART 1B – POOL BUSINESS
Part 1B provides a summary of pool business premium, payments, claims, and reserves by policy year. Columnar headings provide instructions necessary for completion.

PART 2
Part 2 provides a historical summary of loss and defense and cost containment expenses development by policy year. Exclude pool business.
Part 2 displays 20-year loss development triangles on a policy year basis. In Parts 2A and 2B, losses are combined with D&CC. Loss and D&CC development is shown for total incurred; payments, case basis reserves, bulk reserves and incurred but not reported (IBNR) reserves (policy year basis only). Part 2F displays 20-year policy count development triangles on a policy year basis.

The definition of “prior years” should be the same as that used by the company in Part 1.

SCHEDULE MG- PART 2
PART 2A – POLICY YEAR DIRECT INCURRED LOSS AND DEFENSE & COST CONTAINMENT EXPENSE
Part 2A provides a historical summary of loss and defense & cost containment expenses development by policy year. Columnar headings provide instructions necessary for completion. Exclude pool business.

The definition of “prior years” should be the same as that used by the company in Part 1.

SCHEDULE MG- PART 2A
PART 2B – POLICY YEAR DIRECT PAID LOSS AND DEFENSE & COST CONTAINMENT EXPENSE
Part 2BA shows cumulative direct loss and defense & cost containment expense payments by year the policy was written as of December 31 of each year shown in Columns 1 to 10. Exclude pool business.

SCHEDULE MG- PART 2B
PART 2C – POLICY YEAR DIRECT CURRENT RISK IN FORCE
Part 2CB provides a policy year summary of direct risk in force. Exclude pool business.
SCHEDULE MG- PART 2C
PART 2D – POLICY YEAR DIRECT EARNED PREMIUM

For Schedule MG, Part 2DC, the premiums to be reported are exposure or coverage year earned premiums, recalculated each subsequent year to reflect audits, retrospective adjustments based on loss experience, accounting lags, etc. Mechanically, the earned premium file would be restated and the earned premium calculation repeated each year. Premium adjustments for policy periods that cover more than one calendar year should be proportionately distributed between the calendar years covered by the policy period. The objective is to develop earned premiums by policy year of coverage consistent with the loss and Defense & Cost Containment expense by policy year. Only policy years 1993 and subsequent must be reported. Exclude pool business.

SCHEDULE MG- PART 2D
PART 2E – POLICY YEAR DIRECT CALCULATED STATE REGULATORY MORTGAGE INSURER CAPITAL STANDARD (SRMICS)

SCHEDULE MG- PART 2E
PART 2F – POLICY YEAR DIRECT DELINQUENCIES

Part 2FE provides a policy year summary of direct delinquencies. Exclude pool business.
### ANNUAL STATEMENT BLANK - PROPERTY

### SUPPLEMENTAL EXHIBITS AND SCHEDULES

**INTERROGATORIES**

The following supplemental reports are required to be filed as part of your statement filing unless specifically waived by the domiciliary state. However, in the event that your domiciliary state waives the filing requirement, your response of WAIVED to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason, enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

**MARCH FILING**

1. Will an actuarial opinion be filed by March 1?

   ………………………………

**APRIL FILING**

28. Will the Credit Insurance Experience Exhibit be filed with the state of domicile and the NAIC by April 1?

   ………………………………

29. Will the Long-term Care Experience Reporting Forms be filed with the state of domicile and the NAIC by April 1?

   ………………………………

30. Will the Accident and Health Policy Experience Exhibit be filed by April 1?

   ………………………………

31. Will the Supplemental Health Care Exhibit (Parts 1, 2 and 3) be filed with the state of domicile and the NAIC by April 1?

   ………………………………

32. Will the regulator-only (non-public) Supplemental Health Care Exhibit’s Allocation Report be filed with the state of domicile and the NAIC by April 1?

   ………………………………

33. Will the Cybersecurity and Identity Theft Insurance Coverage Supplement be filed with the state of domicile and the NAIC by April 1?

   ………………………………

34. Will the Life, Health & Annuity Guaranty Association Assessable Premium Exhibit – Parts 1 and 2 be filed with the state of domicile and the NAIC by April 1?

   ………………………………

35. Will the Private Flood Insurance Supplement be filed with the state of domicile and the NAIC by April 1?

   ………………………………

36. Will the Mortgage Guaranty Insurance Exhibit be filed with the state of domicile and the NAIC by April 1?

   ………………………………

**AUGUST FILING**

37. Will Management’s Report of Internal Control Over Financial Reporting be filed with the state of domicile by August 1?

   ………………………………

**Explanation:**

State Regulatory Mortgage Insurance Capital Standard
**Effective** | **Table Name** | **Description** | **Statement Type** | **Filing Type**
--- | --- | --- | --- | ---
2021 | Accident and Health Policy Experience Exhibit | **CHANGE TO BLANK**
Removed United States Policy Forms from header as alien amounts were to be included on line D1 and will need to be included for validations to tie.
Deleted line 19 in the Individual section and renumbered as it was a duplication of line 20. | H, L/F, P/C | Annual
2021 | Accident and Health Policy Experience Exhibit | **CHANGE TO INSTRUCTION**
Add clarifying instruction on transitioning to by state reporting of the exhibit in 2022. | H, L/F, P/C | Annual

---

**ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT**

This exhibit is required to be filed no later than April 1.

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has Written Premium (Direct), Earned Premium (Direct, Assumed and Ceded) or Incurred Claims (Direct, Assumed and Ceded). In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.

---

**For 2021 Reporting Only**

For 2021, the reporting entity can choose to complete a separate page for each jurisdiction (plus an OT for other than US) and the Grand Total (GT) page or the reporting entity can submit a page for their state of domicile and the Grand Total (GT) page.

</tr>
</tbody>
</table>

The equivalent designation category assigned will correspond to a current financial strength rating received from any one of the approved rating agencies as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the assuming reinsurer and shall not be based solely on publicly available information. If the reinsurer does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated Reinsurers” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “reinsurer equivalent code of Secure 3” equivalent rating.<br><br>An authorized association, including incorporated and individual unincorporated underwriters or a member thereof (e.g. individual authorized syndicates of Lloyds’ of London that are backed by the Central Fund), may utilize the lowest financial strength group rating received from an approved rating agency.

| 2021      | Supplemental Investment Risks Interrogatories | **CHANGE TO INSTRUCTION**  
Modify the instructions as shown below to clarify preferred stock reporting for Line 3.  
Line 3 – Report by NAIC designation, the amounts and percentages of the reporting entity’s total admitted assets held in bonds and preferred stocks (perpetual preferred and redeemable preferred).  
Report the total amount for each subcategory. The amounts reported in the bond subcategories should be consistent with the amounts reported in Schedule D, Part 1A, Section 1, Column 7, Lines 11.1 – 11.6. Schedule D, Part 1A, Section 1 is reported gross and will not tie to this line if any amounts are reported and nonadmitted for bonds and preferred stocks on the asset page.  
The amounts reported in the preferred stock subcategories should be consistent with the amounts reported in Asset Page, Column 3, Lines 2.1. | H, L/F, P/C, T | Annual |
| 2022      | Schedule DL, Part 1                  | **CHANGE TO INSTRUCTION**  
Remove the “$” code for certificates of deposit to be consistent with the change for Schedule D, Part 1 adopted with 2020-35BWG. This change should have been included in original proposal.  
Column 3 – Code  
Enter “*” in this column for all SVO Identified Funds designated for systematic value.  
Enter “@” in this column for all Principal STRIP Bonds or other zero coupon bonds.  
Enter “$” in this column for Certificates of Deposit under the FDIC limit.  
Enter “&” in this column for To Be Announced (TBA) securities.  
If assets are not under the exclusive control of the company as shown in the General Interrogatories, they are to be identified by placing one of the codes (identified in the Investment Schedules General Instructions) in this column. | H, L/F, P/C, T | Quarterly |

</table>
| 2022      | Schedule DL, Part 1 | **CHANGE TO INSTRUCTION**  
Remove the “$” code for certificates of deposit to be consistent with the change for Schedule D, Part 1 adopted with 2020-35BWG. This change should have been included in original proposal. |

**Column 3 – Code**
- Enter “*” in this column for all SVO Identified Funds designated for systematic value.
- Enter “@” in this column for all Principal STRIP Bonds or other zero-coupon bonds.
- Enter “$” in this column for Certificates of Deposit under the FDIC limit.
- Enter “&” in this column for TBA (To Be Announced) securities.
- Enter “^” in this column for all assets that are bifurcated between the insulated separate account filing and the non-insulated separate account filing.

If assets are not under the exclusive control of the company as shown in the General Interrogatories, they are to be identified by placing one of the codes (identified in the Investment Schedules General Instructions) in this column.

If the security is an SVO Identified Fund designated for systematic value, Principal STRIP bond or other zero coupon bond, certificates of deposit under the FDIC limit or a TBA (To Be Announced) security and is not under the exclusive control of the company, the “*”, “@”, “$” or “&” should appear first, immediately followed by the appropriate code (identified in the Investment Schedules General Instructions).

**Separate Account Filing Only:**
If the asset is a bifurcated asset between the insulated separate account filing and the non-insulated separate account filing, the “^” should appear first and may be used simultaneously with the “*”, “@”, “$” or “&” with the “^” preceding the other characters (“*”, “@”, “$” or “&”) depending on the asset being reported, immediately followed by the appropriate code (identified in the Investment Schedules General Instructions).

### Supplemental Health Care Exhibit - Part 2

**CHANGE TO INSTRUCTION**

Remove crosscheck because Accident and Health Policy Experience Exhibit, Part 4 has been eliminated.

For Part 2, the GT (Grand Total) page:

- Column 13, Line 1.16 (Net Premiums Earned) should equal the Accident and Health Policy Experience Exhibit, Part 4, Column 1, Line D24 (Grand Total Individual, Group, and Other Business) minus Line D25 (Other Total Non-U.S. Policy Forms Direct Business).
- Column 13, Line 1.11 (Total Direct Premiums Earned) minus Line 1.15 (Other Adjustments Due to MLR Calculation – Premiums) should equal the Accident and Health Policy Experience Exhibit, Part 4, Column 21, Line D2 (Grand Total Individual, Group, and Other Business) minus Line D1 (U.S. Total Non-U.S. Policy Forms Direct Business).
- Column 13, Line 2.20 (Net Incurred Claims) minus Line 2.11 (Incurred Medical Incentive Pools and Bonuses) should equal the Accident and Health Policy Experience Exhibit, Part 4, Columns 92 plus 103, Line D26 (Grand Total Individual, Group, and Other Business) minus Line D12 (Other Total Non-U.S. Policy Forms Direct Business).
- Column 13, Line 2.15 (Total Incurred Claims) minus Line 2.8 (Paid Rate Credits) minus Line 2.9 (Reserve for Rate Credits Current Year) plus Line 2.10 (Reserve for Rate Credits Prior Year) minus Line 2.11 (Incurred Medical Incentive Pools and Bonuses) plus Line 2.19 (Other Adjustments Due to MLR Calculation – Claims) should equal the Accident and Health Policy Experience Exhibit, Part 4, Columns 62 plus 103, Line D2 (Grand Total Individual, Group, and Other Business) minus Line D1 (U.S. Total Non-U.S. Policy Forms Direct Business).

**NOTE:** If the reporting entity has a Premium Deficiency Reserve, they will fail the crosschecks above due to the Accident and Health Policy Experience Exhibit excluding Premium Deficiency Reserve. The reporting entity should provide that explanation for the crosscheck failure.

### BLANK(S) TO WHICH PROPOSAL APPLIES

- [ X ] ANNUAL STATEMENT
- [ X ] QUARTERLY STATEMENT
- [ X ] INSTRUCTIONS
- [ X ] CROSSCHECKS
- [ X ] Life, Accident & Health/ Fraternal
- [ X ] Property/Casualty
- [ X ] Health
- [ X ] Separate Accounts
- [ X ] Protected Cell
- [ X ] Health (Life Supplement)

Anticipated Effective Date: 1st Quarter 2022

### IDENTIFICATION OF ITEM(S) TO CHANGE

Remove language in quarterly General Interrogatories Part 1, line 4.1 that requires filing of a quarterly merger/history form. The annual form shall still be required.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Proposal 2017-21BWG added language to the General Interrogatories to require filing a merger/history form for annual and quarterly statements. The annual form works as intended. It is used for IRIS calculations, as well as validations. The quarterly form does not function with the database system as currently designed. Therefore, the requirement to file quarterly should be removed.

### NAIC STAFF COMMENTS

Comment on Effective Reporting Date: ____________________________

GENERAL INTERROGATORIES

PART 1 – COMMON INTERROGATORIES

1.1 Did the reporting entity experience any material transactions requiring the filing of Disclosure of Material Transactions with the State of Domicile, as required by the Model Act?

Yes [ ] No [ ]

1.2 If yes, has the report been filed with the domiciliary state?

Yes [ ] No [ ]

2.1 Has any change been made during the year of this statement in the charter, by-laws, articles of incorporation, or deed of settlement of the reporting entity?

Yes [ ] No [ ]

2.2 If yes, date of change:

__________________________

3.1 Is the reporting entity a member of an Insurance Holding Company System consisting of two or more affiliated persons, one or more of which is an insurer?

Yes [ ] No [ ]

If yes, complete Schedule Y, Parts 1 and 1A.

3.2 Have there been any substantial changes in the organizational chart since the prior quarter end?

Yes [ ] No [ ]

3.3 If the response to 3.2 is yes, provide a brief description of those changes.

...............................................................................................................................................................................................................................

...............................................................................................................................................................................................................................

3.4 Is the reporting entity publicly traded or a member of a publicly traded group?

Yes [ ] No [ ]

3.5 If the response to 3.4 is yes, provide the CIK (Central Index Key) code issued by the SEC for the entity/group.

__________________________

4.1 Has the reporting entity been a party to a merger or consolidation during the period covered by this statement?

Yes [ ] No [ ]

If yes, complete and file the merger history data file with the NAIC.

**CHANGE TO BLANK**

Clarify the data being requested for Column 32, the title of that column is "Net Loss and LAE Coverage" to make it clear what is being requested the title is being changed to "Net Loss and LAE as a % of Original Risk in Force".

**CHANGE TO INSTRUCTIONS**

Duplication in the data is being requested. Columns 24 asks for "Total net losses and LAE unpaid" and Column 33 which asks for "Net Reserves", Column 33 is being removed.
June 1, 2021

TO: Jacob Garn, Chair
    Blanks (E) Working Group
FROM: Marti Hooper, Chair
    Health Actuarial (B) Task Force
DATE: June 1, 2021
SUBJECT: Health Actuarial Statement of Opinion Guidance for the 2021 Reporting Year

Dear Mr. Garn,

The Actuarial Standards Board received comments while exposing Actuarial Standard of Practice (ASOP) No. 28 that indicated some actuaries felt the NAIC Health Annual Statement instructions regarding Statements of Actuarial Opinion were not in concert with the proposed ASOP. The Annual Statement instructions specifically addressed the treatment of actuarial liabilities, but not actuarial assets. To avoid future confusion on the matter, we intend to update the wording for the 2022 instructions to clarify that both actuarial liabilities and assets should be considered in the opinion. We view this as a clarification and not a change in practice; actuaries should be considering actuarial assets when making Statements of Actuarial Opinion.

Thank You,
Marti Hooper

2022 PROPOSED CHARGES

ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE

The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations; modify the Accounting Practices and Procedures Manual [AP&P Manual] to reflect changes necessitated by Task Force action; and study innovative insurer accounting practices that affect the ability of state insurance regulators to determine the true financial condition of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Accounting Practices and Procedures (E) Task Force will:

2. The Blanks (E) Working Group will:
   A. Consider improvements and revisions to the various annual/quarterly statement blanks to:
      1. Conform these blanks to changes made in other areas of the NAIC to promote uniformity in reporting of financial information.
      2. Develop reporting formats for other entities subject to the jurisdiction of state insurance departments.
      3. Conform the various NAIC blanks and instructions to adopted NAIC policy.
      4. Oversee the development of additional reporting formats within the existing annual financial statements as needs are identified.
   B. Continue to monitor state filing checklists to maintain current filing requirements.
   C. Continue to monitor and improve the quality of financial data filed by insurance companies by recommending improved or additional language for the Annual Statement Instructions.
   D. Continue to monitor and review all proposals necessary for the implementation of statutory accounting guidance to ensure proper implementation of any action taken by the Accounting Practices and Procedures (E) Task Force affecting annual financial statements and/or instructions.
   E. Continue to coordinate with other task forces of the NAIC to ensure proper implementation of reporting and instructions changes as proposed by these taskforces.
   F. Coordinate with the Life Actuarial (A) Task Force to use any special reports developed and avoid duplication of reporting.
   G. Review requests for investment schedule blanks and instructions changes in connection with the work being performed by the Capital Adequacy (E) Task Force and its working groups.
   H. Review changes requested by the Valuation of Securities (E) Task Force relating to its work on other invested assets reporting for technical consistency within the investment reporting schedules and instructions.

3. The Statutory Accounting Principles (E) Working Group will:
   A. Maintain codified statutory accounting principles by providing periodic updates to the guidance that address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements. Provide authoritative responses to questions of application and clarifications for existing statutory accounting principles. Report all actions and provide updates to the Accounting Practices and Procedures (E) Task Force.
   B. At the discretion of the Working Group chair, develop comments on exposed GAAP and International Financial Reporting Standards (IFRS) pronouncements affecting financial accounting and reporting. Any comments are subject to review and approval by the chair of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee.
   C. Coordinate with the Life Actuarial (A) Task Force on changes to the AP&P Manual related to the Valuation Manual VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other Valuation Manual requirements. This process will include the receipt of periodic reports on changes to the Valuation Manual on items that require coordination.
   D. Obtain, analyze and review information on permitted practices, prescribed practices or other accounting treatments suggesting that issues or trends occurring within the industry may compromise the consistency and uniformity of statutory accounting, including, but not limited to, activities conducted by insurers for which there is currently no statutory accounting guidance or where the states have prescribed statutory accounting that differs from the guidance issued by the NAIC. Use this information to consider possible changes to statutory accounting.
Communication of Internal Control Related Matters Noted in an Audit (Section 11)

In addition to the annual Audited financial report, each insurer must furnish the Commissioner with a written communication as to any unremediated material weakness in its internal control over financial reporting noted during the audit. The communication is prepared by the accountant within 60 days after the filing of the annual Audited financial report and is filed by the insurer. Recognizing it may not always be practical, insurers are encouraged to file the communication concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The insurer is required to provide a description of remedial actions taken or proposed to correct unremediated material weaknesses, if the actions are not described in the accountant’s communication.

The Model requires that the Commissioner be notified when unremediated material weaknesses in internal control over financial reporting were noted during the audit. Previous versions of the Model required such communication when any significant deficiencies in internal control over financial reporting were noted during the audit, whether remediated or not. This distinction is important because of the level of severity of the internal control deficiency that is applicable to each term. The terms “material weakness” and “significant deficiency” have the same meaning respectively as used in PCAOB or American Institute of Certified Public Accountants (AICPA) auditing literature - PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Matters Identified in an Audit (see Section 17E of this Guide for the definitions of material weakness and significant deficiency that are included in the auditing literature). However, the insurer is expected to maintain information about significant deficiencies that were communicated by its auditors and such information should be available for review during the financial condition examination.

Effective for audits as of 12/31/21 and thereafter, the information required in Section 12 of the MAR required to be communicated by the accountant should be supplemented by providing both the name of the current lead audit partner and the year at which he or she began serving in that capacity. For the purpose of maintaining confidentiality, this information will not be included in the annual letter of qualifications, but instead shall be included in the internal control communication required in Section 11 of the MAR by the accountant as a footer or under the firm signature as follows:

The engagement partner, [name], has served in that capacity with respect to the Company since [year that current term started].
Consistent with the Drafting Note\(^1\) to Section 11 of the MAR, the information provided on the engagement partner shall remain confidential.

The following is an example of the type of communication that an insurer should prepare to communicate the remedial actions taken or proposed to correct a material weakness in its internal control over financial reporting noted during an audit.

\(^1\) The insurer is expected to maintain information about significant deficiencies communicated by the independent certified public accountant. Such information should be made available to the examiner conducting a financial condition examination for review and kept in such a manner as to remain confidential.

Working Agenda (Attachment Seven) ................................................................................................................ 10-1007
The Capital Adequacy (E) Task Force met July 28, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Slape, Vice Chair, represented by Rachel Hemphill (TX); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Shelia Travis (AL); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Almdahl represented by Virginia Christy and Robert Ridenour (FL); Doug Ommen represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Grace Arnold represented by John Rehagen and William Leung (MO); Eric Dunning represented Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Glen Mulready (OK); Raymond G. Farmer represented by Michael Shull (SC); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Amy Malm (WI).

1. **Adopted its June 30, April 29 and Spring National Meeting Minutes**

The Task Force met June 30, April 29 and March 23. During its June 30 meeting, the Task Force adopted the following proposals: 1) 2021-04-CA (investment income in health underwriting factors); 2) 2021-07-CA (receivables for securities factors); 3) 2021-06-L (real estate factors); 4) 2021-08-P (property and casualty bond factors); 5) 2021-09-H (health bond factors); 6) 2021-11-L (life bond factors); and 7) 2021-13-L (longevity risk factors and instructions). Mr. Barlow noted that a typo on the second page of the June 30 minutes, end of the paragraph for item 5, should reflect 2.4 as the factor for the first 50 assets and not 2.9. During its April 29 meeting, the Task Force took the following action: 1) adopted the real estate structure; 2) adopted the managed care credit incentives; 3) adopted the credit risk instruction modification; 4) adopted its working agenda and working group reports; and 5) exposed the receivables for securities factors and investment income in health underwriting factors, with comments due May 21 and May 28, respectively.

Mr. Barlow made a motion, seconded by Mr. Chou to adopt the Task Force’s June 30 (Attachment One), April 29 (Attachment Two), and March 23 (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Reports and Minutes of its Working Groups**

a. **Health Risk-Based Capital (E) Working Group**

Mr. Drutz noted some items of interest from the Health Risk-Based Capital (E) Working Group’s July 12 minutes, which include interest in health risk-based capital in the underwriting risk charge and re-evaluating the bond factors. The Working Group also adopted its 2021 newsletter and 2020 health risk-based capital (RBC) statistics.

b. **Life Risk-Based Capital (E) Working Group**

Mr. Barlow said that the Life Risk-Based Capital (E) Working Group met July 21 and took the following action: 1) adopted various minutes reflecting a busy last quarter; 2) adopted the life RBC newsletter; and 3) the 2020 life and fraternal RBC statistics.

c. **Catastrophe Risk (E) Subgroup**

Mr. Chou noted that the Catastrophe Risk (E) Subgroup met July 15 and took the following action: 1) adopted its June 1 and April 26 minutes; 2) adopted its working agenda items; 3) heard an update from its Catastrophe Model Technical Review Ad Hoc Group; and 4) heard a presentation from AIR Worldwide regarding the wildfire model.

d. **Property and Casualty Risk-Based Capital (E) Working Group**

Mr. Botsko said that the Property and Casualty Risk-Based Capital (E) Working Group met July 22 and took the following action: 1) adopted its June 9 and April 27 minutes; 2) adopted the Catastrophe Risk (E) Subgroup’s July 15 minutes; 3) adopted its 2021 property/casualty (P/C) RBC newsletter; 4) adopted its 2020 P/C RBC statistics; 5) adopted its 2021 working agenda;
and 6) heard an update on different projects related to calibrating various components of the underwriting risk and reserve risk from the American Academy of Actuaries (Academy).

Ms. Hemphill made a motion, seconded by Mr. Chou, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Three), the Life Risk-Based Capital (E) Working Group (Attachment Four), and the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Five). The motion passed unanimously.

3. **Adopted Proposal 2021-04-CA**

Mr. Drutz said the Task Force adopted proposal 2021-04-CA (Modified for Rounding) June 30. The proposal revised the underwriting risk for the investment income adjustment, which carried the factor to four decimal places. During implementation, NAIC staff noted a system constraint in which all ratios reported in a column must round to the same number of decimal places. This includes the underwriting risk claims ratio and managed care discount factor, (Lines 12 and 15 in health and Lines 9 and 12 in P/C and life).

Mr. Drutz made a motion, seconded by Mr. Leung, to adopt proposal 2021-04-CA (Modified for Rounding) (Attachment Six). The motion passed unanimously. Mr. Botsko added that the rounding made a small negligible difference.

4. **Adopted its Working Agenda**

Mr. Barlow noted that the life section of the working agenda removed several items that were previously adopted by its Working Group, modified the description regarding longevity risk transfers, and added two new items regarding guidance on the potential impact of the bond factor changes and reviewing companies in action level to determine its drivers.

Mr. Drutz said that the health section of the working agenda clarified the description regarding investment income by including a process for reviewing investment income, as well as determining the frequency of adjustments and if other lines of business are affected.

Mr. Chou reported that the Catastrophe Risk (E) Subgroup received a referral from the Climate and Resiliency (EX) Task Force and will make that referral a priority for 2022.

Mr. Botsko said the P/C items were updated to reflect recent adoptions, and the expected completion dates were updated for 2022. He also said that the Task Force items were also updated with recent adoption information, and the expected completion dates were also updated.

Mr. Chou made a motion, seconded by Mr. Leung, to adopt its working agenda (Attachment Seven). The motion passed unanimously.

5. **Discussed Other Matters**

Mr. Botsko said he wanted to thank Randy Milquet (WI) for his dedication to the Property and Casualty Risk-Based Capital (E) Working Group and various RBC-related ad hoc groups, as well as for his participation with the Capital Adequacy (E) Task Force. Mr. Botsko said will be greatly missed.

Mr. Barlow added that John Robinson (MN) is also retiring and wanted to thank him for his dedication and participation with the Life Risk-Based Capital (E) Working Group and the Capital Adequacy (E) Task Force.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Capital Adequacy (E) Task Force met June 30, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Slape, Vice Chair, represented by Rachel Hemphill (TX); Lori K. Wing-Heier represented by Wally Thomas (AK); Jim L. Ridling represented by Richard Ford (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmair represented by Carolyn Morgan (FL); Doug Ommen represented by Carrie Mears (IA); Dana Popish Severinghaus represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Chlora Lindley-Myers represented by John Rehagen and William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented Rhonda Ahrens (NE); Marlene Caride represented by Diana Sherman (NJ); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted Proposal 2021-04-CA (Investment Income Health Underwriting Factors)**

Mr. Drutz said proposal 2021-04-CA was developed to adjust the health underwriting risk factors to incorporate a 0.5% investment income adjustment into the Comprehensive Medical, Medicare Supplemental, and Dental/Vision. The revised factors will be included in the health, life, and property/casualty (P/C) formulas. The proposal was exposed at both the working group and task force level. Comments were received and supported the adoption of the 0.5% investment income adjustment.

Mr. Drutz added that there was a minor editorial correction to the life and P/C blanks to reflect the factors on Line 10.1 and Line 10.2 on page LR020 and PR020, respectively. The Health Risk-Based Capital (E) Working Group will continue to discuss the development of a benchmarking system to use in updating the factors, as well as the frequency for updates.

Mr. Drutz made a motion, seconded by Mr. Chou, to adopt proposal 2021-04-CA with the editorial change to reflect the factors on Line 10.1 and Line 10.2 on page LR020 and PR020 (Attachment One-A). The motion passed unanimously.

2. **Adopted Proposal 2021-07-CA (Receivables for Securities Factors)**

Mr. Botsko said the receivables for securities factors were exposed for a 30-day public comment period ending May 28. No comments were received. The Task Force agreed to update the factors every three years.

Mr. Thomas made a motion, seconded by Mr. Chou, to adopt proposal 2021-07-CA (Attachment One-B). The motion passed unanimously.

3. **Adopted Proposal 2021-09-H (Health Bond Factors)**

The Health Risk-Based Capital (E) Working Group adopted the five-year time horizon bond factors developed by the American Academy of Actuaries (Academy) during its May 25 meeting. The health factors have incorporated the bond portfolio adjustment within the factors.

Mr. Drutz made a motion, seconded by Ms. Ahrens, to adopt proposal 2021-09-H (Attachment One-C). The motion passed unanimously.

4. **Adopted Proposal 2021-06-L (Real Estate Factors – Modified)**

Mr. Barlow said proposal 2021-06-L was modified with the factor for the market value adjustment set to zero and will work further with the Statutory Accounting Principles (E) Working Group, the Risk-Focused Surveillance (E) Working Group and the American Council of Life Insurers (ACLI) to set the market value adjustment.

Mr. Barlow made a motion, seconded by Ms. Hemphill, to adopt proposal 2021-06-L (Attachment One-D). The motion passed unanimously.
5. **Adopted Proposal 2021-11-L (Life Bond Factors)**

Mr. Barlow said that the proposal being considered also includes an adjustment to reduce the burden on smaller companies, which is to change the bond size adjustment to use factors that have a break point at up to the current 50 assets and would revise the factor for the first 50 assets to be 2.4.

Mr. Barlow made a motion, seconded by Mr. Leung, to adopt proposal 2021-11-L (Attachment One-E). The motion passed.

6. **Adopted Proposal 2021-12-L (Reinsurance)**

Mr. Barlow stated that the Life Reinsurance Proposal intends to address the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786).

Mr. Barlow made a motion, seconded by Mr. Thomas, to adopt proposal 2021-12-L (Attachment One-F). The motion passed unanimously.

7. **Adopted Proposal 2021-13-L (Longevity Risk Factors and Instructions)**

Mr. Barlow said that the proposal for longevity risk includes tiered after-tax factors of 1.35% down to 0.70%, negative 0.25 covariance, and no guardrail. He said it will be effective for year-end 2021, and any future work regarding the reserve should be considered by the Life Actuarial (A) Task Force.

Mr. Barlow made a motion, seconded by Ms. Ahrens, to adopt proposal 2021-13-L (Attachment One-G). The motion passed unanimously.

8. **Adopted Proposal 2021-03-P (Credit Risk Instruction Modification)**

Mr. Botsko said the purpose of this proposal is to provide examples to clarify how the reporting companies should select the designation in the Annual Statement Schedule F, Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies. He also stated that the Property and Casualty Risk-Based Capital (E) Working Group received no comments during the exposure period.

Mr. Milquet made a motion, seconded by Mr. Chou, to adopt proposal 2021-03-P (Attachment One-H). The motion passed unanimously.

Mr. Botsko said the purpose of this proposal is to provide a routine annual update to the Line 1 premium and reserve industry underwriting factors in the P/C risk-based capital (RBC) formula. He also stated that the Property and Casualty Risk-Based Capital (E) Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Drutz, to adopt proposal 2021-05-P (Attachment One-I). The motion passed unanimously.

10. **Adopted Proposal 2021-08-P (P/C Bond Factors)**

Mr. Botsko said the purpose of this proposal is to modify the P/C RBC forecasting and instructions to: 1) incorporate 20 NAIC designation category bond factors; 2) modify the bond size factor formula; and 3) reclassify hybrid securities in PR006, PR011, and PR015. He also stated that the expansion of 20 NAIC designation categories will provide more robust and accurate results, primarily as it increases the granularity of the formula and reduces the cliffs between the different factors for the different categories. Mr. Botsko also stated that the Property and Casualty Risk-Based Capital (E) Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Thomas, to adopt proposal 2021-08-P (Attachment One-J). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

**DESCRIPTION OF CHANGE(S)**

Incorporate investment income into the Underwriting Risk – Experience Fluctuation Risk factors for columns 1-3. The base underwriting factors would be adjusted for Comprehensive Medical, Medicare Supplement and Dental and Vision.

---

**REASON OR JUSTIFICATION FOR CHANGE **

Incorporated investment income into Columns 1-3 on the Underwriting Risk – Experience Fluctuation Risk page. The American Academy of Actuaries provided recommended factors to the Working Group. The Academy found that due to no claims lag in Stand-Alone Medicare Part D coverage, the investment income adjustment would be negligible and the RBC factors would not be impacted.

The Working Group will continue to work with the Academy to look at the potential to incorporate an investment income adjustment to the factors for the other health lines of business for 2022 or later.

---

**Additional Staff Comments:**

These changes will also need to be incorporated into the Life and P/C formula.

3-17-21 cgb The Working Group exposed the proposal for 30-days with comments due back on April 16, 2021.

---

**This section must be completed on all forms.**

---

© 2021 National Association of Insurance Commissioners
Underwriting Risk is the largest portion of the risk-based capital charge for most reporting entities. The Underwriting Risk page generates the RBC requirement for the risk of fluctuations in underwriting experience. The credit that is allowed for managed care in this page comes from the Managed Care Credit Calculation page.

Underwriting risk is present when the next dollar of unexpected claim payments comes directly out of the reporting entity’s capital and surplus. It represents the risk that the portion of premiums intended to cover medical expenses will be insufficient to pay such expense. For example, a reporting entity may charge an individual $100 in premium in exchange for a guaranty that all medical costs will be paid by that reporting entity. If the individual incurs $101 in claims costs, the reporting entity’s surplus will decline because it did not charge a sufficient premium to pick up the additional risk for that individual.

There are other arrangements where the reporting entity is not at risk for excessive claims payments, such as when an HMO agrees to serve as a third-party administrator for a self-insured employer. The self-insured employer pays for actual claim costs, so the risk of excessive claims experience is borne by the self-insured employer, not the reporting entity. The underwriting risk section of the formula, therefore, requires some adjustments to remove non-underwriting risk business (both premiums and claims) before the RBC requirement is calculated. Appendix 1 contains commonly used terms for general types of health insurance.

Refer to INT 05-05: Accounting for Revenue under Medicare Part D Cover for terms specifically used with respect to Medicare Part D coverage of prescription drugs.

Claims Experience Fluctuation

The RBC requirement for claims experience fluctuation is based on the greater of the following calculations:

A. Underwriting risk revenue, times the underwriting risk claims ratio, times a set of tiered factors. The tiered factors are determined by the underwriting risk revenue volume.

or

B. An alternative risk charge that addresses the risk of catastrophic claims on any single individual. The alternative risk charge is equal to multiple of the maximum retained risk on any single individual in a claims year. The maximum retained risk (level of potential claim exposure) is capped at $750,000 per individual and $1,500,000 total for medical coverage; $25,000 per individual and $50,000 total for all other coverage except Medicare Part D coverage and $25,000 per individual and $150,000 total for Medicare Part D coverage. Additionally, for multi-line organizations (e.g., writing more than one coverage type), the alternative risk charge for each subsequent line of business is reduced by the amount of the highest cap. For example, if an organization is writing both comprehensive medical (with a cap of $1,500,000) and dental (with a cap of $50,000), then only the larger alternative risk charge is considered when calculating the RBC requirement (i.e., the alternative risk charges for each line of business are not cumulative).

For RBC reports to be filed by a health organization commencing operations in this reporting year, the health organization shall estimate the initial RBC levels using operating (revenue and expense) projections (considering managed care arrangements) for its first full year (12 months) of managed care operations. The projections, including the risk-based capital requirement, should be the same as those filed as part of a comprehensive business plan that is submitted as part of the application for licensure. The Underwriting, Credit (capitation risk only), and Business Risk sections of the first RBC report submitted shall be completed using
the health organization’s actual operating data for the period from the commencement of operations until year-end, plus projections for the number of months necessary to provide 12 months of data. The affiliate, asset and portions of the credit risk section that are based on balance sheet information shall be reported using actual data. For subsequent years’ reports, the RBC results for all of the formula components shall be calculated using actual data.

L(1) through L(21)

There are six lines of business used in the formula for calculating the RBC requirement for this risk: (1) Comprehensive Medical and Hospital; (2) Medicare Supplement; (3) Dental/Vision; (4) Stand-Alone Medicare Part D Coverage; and (5) Other Health; and (6) Other Non-Health. Each of these lines of business has its own column in the Underwriting Risk – Experience Fluctuation Risk table. The categories listed in the columns of this page include all risk revenue and risk revenue that is received from another reporting entity in exchange for medical services provided to its members. The descriptions of the items are described as follows:

Column (1) - Comprehensive Medical & Hospital. Includes policies providing for medical coverages including hospital, surgical, major medical, Medicare risk coverage (but NOT Medicare Supplement), and Medicaid risk coverage. This category DOES NOT include administrative services contracts (ASC), administrative services only (ASO) contracts, or any non-underwritten business. These programs are reported in the Business Risk section of the formula. Neither does it include Federal Employees Health Benefit Plan (FEHBP) or TRICARE, which are handled in Line 24 of this section. Medicaid Pass-Through Payments reported as premiums should also be excluded from this category and should be reported in Line 25.2 of this section. The alternative risk charge, which is twice the maximum retained risk after reinsurance on any single individual, cannot exceed $1,500,000. Prescription drug benefits included in major medical insurance plans (including Medicare Advantage plans with prescription drug coverage) should be reported in this line. These benefits should also be included in the Managed Care Credit calculation.

Column (2) - Medicare Supplement. This is business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement and includes Medicare Select. Medicare risk business is reported under comprehensive medical and hospital.

Column (3) - Dental & Vision. This is limited to policies providing for dental-only or vision-only coverage issued as a stand-alone policy or as a rider to a medical policy, which is not related to the medical policy through deductibles or out-of-pocket limits.

Column (4) - Stand-Alone Medicare Part D Coverage. This includes both individual coverage and group coverage of Medicare Part D coverage where the plan sponsor has risk corridor protection. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. Medicare drug benefits included in major medical plans or benefits that do not meet the above criteria are not to be included in this line. Supplemental benefits within Medicare Part D (benefits in excess of the standard benefit design) are addressed separately on page XR014. Employer-based Part D coverage that is in an uninsured plan as defined in SSAP No. 47—Uninsured Plans is not to be included here.

Column (5) - Other Health Coverages. This includes other health coverages such as other stand-alone prescription drug benefit plans, NOT INCLUDED ABOVE that have not been specifically addressed in the other columns listed above.

Column (6) - Other Non-Health Coverages. This includes life and property and casualty coverages.

The following paragraphs explain the meaning of each line of the table for computing the experience fluctuation underwriting risk RBC.
<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Premium</td>
<td>This is the amount of money charged by the reporting entity for the specified benefit plan. It is the earned amount of prepayments (usually on a per member per month basis) made by a covered group or individual to the reporting entity in exchange for services to be provided or offered by such organization. However, it does not include receipts under administrative services only (ASO) contracts; or administrative services contracts (ASC); or any non-underwritten business. Nor does it include federal employees health benefit programs (FEHBP) and TRICARE. Report premium net of payments for stop-loss or other reinsurance. The amounts reported in the individual columns should come directly from Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. For Stand-Alone Medicare Part D Coverage the premium includes beneficiary premium (standard coverage portion), direct subsidy, low-income subsidy (premium portion), Part D payment demonstration amounts and risk corridor payment adjustments. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. It does not include revenue received for reinsurance payments or low-income subsidy (cost-sharing portion), which are considered funds received for uninsured plans in accordance with Emerging Accounting Issues Working Group (EAIWG) INT. No. 05-05. Also exclude the beneficiary premium (supplemental benefit portion) for Stand-Alone Medicare Part D coverage. &lt;br&gt;NOTE: Where premiums are paid on a monthly basis, they are generally fully earned at the end of the month for which coverage is provided. In cases where the mode of payment is less frequent than monthly, a portion of the premium payment will be unearned at the end of any given reporting period.</td>
</tr>
<tr>
<td>2. Title XVIII Medicare</td>
<td>This is the earned amount of money charged by the reporting entity (net of reinsurance) for Medicare risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicare subscribers. This includes the beneficiary premium and federal government’s direct subsidy for prescription drug coverage under MA-PD plans. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement.</td>
</tr>
<tr>
<td>3. Title XIX Medicaid</td>
<td>This is the earned amount of money charged by the reporting entity for Medicaid risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicaid subscribers. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. Stand-Alone Medicare Part D coverage of low-income enrollees is not included in this line.</td>
</tr>
<tr>
<td>4. Other Health Risk Revenue</td>
<td>This is earned amounts charged by the reporting entity as a provider or intermediary for specified medical (e.g., full professional, dental, radiology, etc.) services provided to the policyholders, or members of another insurer or health entity. Unlike premiums, which are collected from an employer group or individual member, risk revenue is the prepaid (usually on a capitated basis) payments, made by another insurer or health entity to the reporting entity in exchange for services to be provided or offered by such organization. Payments to providers under risk revenue arrangements are included in the RBC calculation as underwriting risk revenue and are included in the calculation of managed care credits. Exclude fee-for-service revenue received by the reporting entity from another reporting entity. This revenue is reported in the Business Risk section of the formula as non-underwritten and limited risk revenue. The amounts reported in the individual columns will come directly from Page 7, Line 4 of the annual statement.</td>
</tr>
<tr>
<td>5. Medicaid Pass-Through Payments Reported as Premiums</td>
<td>Medicaid Pass-Through Payments that are included as premiums in the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 should be reported in this line.</td>
</tr>
<tr>
<td>6. Underwriting Risk Revenue</td>
<td>The sum of Lines (1) through (4) minus Line (5).</td>
</tr>
</tbody>
</table>
| 7. Net Incurred Claims | Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the reporting entity. Paid claims include capitation and all other payments to providers for services to members of the reporting entity, as well as reimbursement directly to members for covered services. Paid claims also include salaries paid to reporting entity employees that provide medical services to
members and related expenses. Do not include ASC payments or federal employees health benefit program (FEHBP) and TRICARE claims. These amounts are found on Page 7, Line 17 of the annual statement.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in INT 05-05: Accounting for Revenue under Medicare Part D Coverage). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claims liabilities should reflect expected recoveries from the reinsurance coverage, for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS. Exclude the beneficiary incurred claims (supplemental benefit portion) for Stand-Alone Medicare Part D coverage and report the incurred claims amount (supplemental benefit portion) on Line (25.1) of page XR014.

Line (8) Medicaid Pass-Through Payments Reported as Claims. Medicaid Pass-Through Payments that are included as claims in the Analysis of Operations by Lines of Business, Page 7, Line 17 should be reported in this line.

Line (9) Total Net Incurred Claims Less Medicaid Pass-Through Payments Reported as Claims. Line (7) minus Line (8).

Line (10) Fee-for-Service Offset. Report fee for service revenue that is directly related to medical expense payments. The fee for service line does not include revenue where there is no associated claim payment (e.g., fees from non-member patients where the provider receives no additional compensation from the reporting entity) and when such revenue was excluded from the pricing of medical benefits. The amounts reported in the individual columns should come directly from Page 7, Line 3 of the annual statement.

Line (11) Underwriting Risk Incurred Claims. Line (9) minus Line (10).

Line (12) Underwriting Risk Claims Ratio. For Columns (1) through (5), Line (11) / Line (6). If either Line (6) or Line (11) is zero or negative, Line (12) is zero.

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column 1-3 have incorporated investment income.

Line (14) Base Underwriting Risk RBC. Line (6) x Line (12) x Line (13).

Line (15) Managed Care Discount. For Comprehensive Medical & Hospital, Medicare Supplement (including Medicare Select) and Dental/Vision, a managed care discount, based on the type of managed care arrangements an organization has with its providers, is included to reflect the reduction in the uncertainty about future

The factors for the highlighted items to the left will be updated based on either Option 1 or Option 2.
claim payments attributable to the managed care arrangements. The discount factor is from Column (3), Line (17) of the Managed Care Credit Calculation page. An average factor based on the combined results of these three categories is used for all three.

For Stand-Alone Medicare Part D Coverage, a separate managed care discount (or federal program credit) is included to reflect only the reduction in uncertainty about future claims payments attributable to federal risk arrangements. The discount factor is from Column (4), Line (17) of the Managed Care Credit Calculation page.

There is no discount given for the Other Health and Other Non-Health lines of business.

Line (16) RBC After Managed Care Discount Line (14) x Line (15).

Line (17) Maximum Per-Individual Risk After Reinsurance. This is the maximum after-reinsurance loss for any single individual. Where specific stop-loss reinsurance protection is in place, the maximum per-individual risk after reinsurance is equal to the highest attachment point on such stop-loss reinsurance, subject to the following:

- Where coverage under the stop-loss protection (plus retention) with the highest attachment point is capped at less than $750,000 per member, the maximum retained loss will be equal to such attachment point plus the difference between the coverage (plus retention) and $750,000.
- Where the stop-loss layer is subject to participation by the reporting entity, the maximum retained risk as calculated above will be increased by the reporting entity’s participation in the stop-loss layer (up to $750,000 less retention).

If there is no specific stop-loss or reinsurance in place, enter $9,999,999.

Examples of the calculation are presented below:

**EXAMPLE 1 (Reporting entity provides Comprehensive Care):**

- Highest Attachment Point (Retention): $100,000
- Reinsurance Coverage: 90% of $500,000 in excess of $100,000
- Maximum reinsurance coverage: $600,000 ($100,000 + $500,000)

Maximum Ret. Risk =

\[ = \frac{100,000}{150,000} + \frac{150,000}{750,000 - 600,000} + \frac{50,000}{600,000 - 100,000} \]

\[ = 300,000 \]

**EXAMPLE 2 (Reporting entity provides Comprehensive Care):**

- Highest Attachment Point (Retention): $75,000
- Reinsurance Coverage: 90% of $1,000,000 in excess of $75,000

...
Maximum reinsured coverage = $1,075,000 ($75,000 + $1,000,000)

Maximum Ret. Risk = $75,000 deductible

+ $67,500 (10% of ($750,000 – $75,000)) coverage layer

= $142,500

**Line (18) Alternate Risk Charge.** This is twice the amount in Line (17) for columns (1), (2), (3) and (5) and Column (4) is six times the amount in Line (17), subject to a maximum of $1,500,000 for Column (1), $50,000 for Columns (2), (3) and (5) and $150,000 for Column (4). Column (6) is excluded from this calculation.

**Line (19) Alternate Risk Adjustment.** This line shows the largest value in Line (18) for the column and all columns left of the column. Column (6) is excluded from this calculation.

**Line (20) Net Alternate Risk Charge.** This is the amount in Line (18), less the amount in the previous column of Line (19), but not less than zero. Column (6) is excluded from this calculation.

**Line (21) Net Underwriting Risk RBC.** This is the maximum of Line (16) and Line (20) for each of columns (1) through (5). This is the amount in Line (14), Column (6). The amount in Column (7) is the sum of the values in Columns (1) through (6).
## UNDERWRITING RISK

### Option 1 - 0.5% Investment Return

**Experience Fluctuation Risk**

### ALTERNATE RISK CHARGE**

**The Line (15) Alternate Risk Charge is calculated as follows:**

<table>
<thead>
<tr>
<th>LESSER OF:</th>
<th>$1,500,000 or 2 x Maximum Individual Risk</th>
<th>$500,000 or 2 x Maximum Individual Risk</th>
<th>$50,000 or 2 x Maximum Individual Risk</th>
<th>$150,000 or 6 x Maximum Individual Risk</th>
<th>$50,000 or 2 x Maximum Individual Risk</th>
<th>N/A</th>
</tr>
</thead>
</table>

---

* Denotes items that must be manually entered on filing software.
† The Annual Statement Sources are found on page XR013.
* This column is for a single result for the Comprehensive Medical & Hospital, Medicare Supplement and Dental Vision managed care discount factor.
*** Limited to the largest of the applicable alternate risk adjustments, prorated if necessary.

ON BEHALF OF: Capital Adequacy Task Force

NAME: Tom Botsko

TITLE: Chair

AFFILIATION: Ohio Department of Insurance

ADDRESS: 50 West Town Street, Suite 300
Columbus, OH 43215

FOR NAIC USE ONLY

Agenda Item # 2021-07-CA

IDENTIFICATION OF SOURCE AND FORM(S)/INSTRUCTIONS TO BE CHANGED

[ x ] Health RBC Blanks [ x ] Property/Casualty RBC Blanks [ ] Life and Fraternal RBC Instructions
[ ] Health RBC Instructions [ ] Property/Casualty RBC Instructions [ x ] Life and Fraternal RBC Blanks
[ ] OTHER ____________________________

DESCRIPTION OF CHANGE(S)

Update the RBC factors for Receivables for Securities.

REASON OR JUSTIFICATION FOR CHANGE **

Based on a weighted average calculation of bonds, common, preferred and hybrid stock investments, the receivable for securities factors were adjusted for all RBC forecasting blanks.

Additional Staff Comments:

6/30/21 Factors were adopted by the Task Force.

** This section must be completed on all forms. Revised 2-2019

---

**DESCRIPTION OF CHANGE(S)**

Incorporate the factors for the 20 NAIC Designation Category Bonds based on a five-year time horizon for page XR006, XR007 and XR012. Modify the instructions to incorporate references for the bonds.

---

**REASON OR JUSTIFICATION FOR CHANGE **

The reason for the change is to incorporate the new bond factors for the 20 NAIC Designation Categories for a five-year time horizon in both the blank and instructions. The factor includes the bond portfolio adjustment.

---

**Additional Staff Comments:**

4-23-21 cgb The WG exposed the proposal for a 25-day comment period ending on May 21.

5-25-21 cgb No comments were received. The WG adopted the proposal with the 5-year time horizon factors.

6/30/21 jdb Factors were adopted by the Task Force.

**This section must be completed on all forms.**

OFF-BALANCE SHEET SECURITY LENDING COLLATERAL AND SCHEDULE DL, PART 1 ASSETS
XR006

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements and incur the related risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

The collateral in these accounts is maintained by a third party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/adjusted carrying value, and maturity date.

The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Off-balance sheet collateral included in General Interrogatories Part 1, Lines 24.05 and 24.06 of the annual statement should agree with Line (40), Column (1).

Lines (1) through (27) – Bonds – Bond factors described on page XR007 – Fixed Income Assets.

Line (28) through (34) – Preferred Stock – Preferred stock factors described on page XR010 – Equity Assets.

Line (35) – Common Stock – Common stock factors described on page XR010 – Equity Assets.

Line (37) – Other Invested Assets – Other invested assets factor described on page XR008 – Fixed Income Assets.

Line (38) – Mortgage Loans on Real Estate – Mortgage Loans on Real Estate factors described on page XR008 – Fixed Income Assets.

Line (39) – Cash, Cash Equivalents and Short-Term Investments – Cash, Cash Equivalents and Short-Term Investments factors described on page XR008 – Fixed Income Assets.

FIXED INCOME ASSETS
XR007 AND XR008

The RBC requirement for fixed income assets is largely driven by the default risk on those assets. There are two major subcategories: Bonds and Miscellaneous. Bonds include item that meet the definition of a bond, regardless if the bond is long-term (reported on Schedule D-1), short-term (reported on schedule DA) or a cash equivalent...
(reported on Schedule E-2.) Miscellaneous fixed income assets include non-bond items reported on the cash equivalent and short-term schedules, derivatives, mortgage loans, collateral loans, and other items reported on Schedule BA: Other Long-Term Invested Assets.

**Bonds (XR007)**

The bond factors for investment grade bonds (NAIC Designation Category (1.A-2.C) are based on cash flow modeling. Each bond of a portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by NAIC Designation Category and that year’s economic environment. The default probabilities were based on historical data intended to reflect a complete business cycle of favorable and unfavorable credit environments. The risk of default was measured over a five-year time horizon, based on the duration of assets held for health companies.

The factors for NAIC Designation Category 3.A to 6 recognize that these non-investment grade bonds are reported at the lower of amortized cost or fair value. These bond risk factors are based on the market value fluctuation for each of the NAIC designation category compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

While the life and property/casualty formulas have a separate calculation for the bond size factor (based on the number of issuers in the RBC filer’s portfolio), the health formula does not include a separate calculation, instead a bond size component was incorporated into the bond factors. A representative portfolio of 382 issuers was used in calculating the bond risk factors.

There is no RBC requirement for bonds guaranteed by the full faith and credit of the United States, Other U.S. Government Obligations, and securities on the NAIC U.S. Government Money Market Fund List because it is assumed that there is no default risk associated with U.S. Government issued securities.

The book/adjusted carrying value of all bonds should be reported in Columns (1), (2) or (3). The bonds are split into twenty-one different risk classifications. These risk classifications are based on the NAIC Designation Category as defined and permitted in the Purposes and Procedures Manual of the NAIC Investment Analysis Office. The subtotal of Columns (1), (2) and (3) will be calculated in Column (4). The RBC requirement will be automatically calculated in Column (5).

**Miscellaneous Fixed Income Assets (XR008)**

The factor for cash is 0.3 percent. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held. This factor was based on the original unaffiliated NAIC 01 bond risk factor prior to the increased granularity of the NAIC Designation Categories in 2021, and reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company’s cash position is negative.

The Short-Term Investments to be included in this section are those short-term investments not reflected elsewhere in the formula. The 0.3 percent factor is equal to the factor for cash. The amount reported in Line (35) reflects the total from Schedule DA: Short-Term Investments (Line 33), less the short-term bonds (Line 34). (The short-term bonds reported in Line (34) should equal Schedule DA, Part 1, Column 7, Line 8399999.)

Mortgage loans (reported on Schedule B) and Derivatives (reported on Schedule DB) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.

The following investment types are captured on Schedule BA: Other Long-Term Invested Assets. Specific factors have been established for certain Schedule BA assets based on the nature of the investment. Those Schedule BA assets not specifically identified below receive a 20 percent factor (Line (43)).

- Collateral Loans reported on Line (40) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.
- Working Capital Finance Investments: The book adjusted carrying value of NAIC 01 and 02 Working Capital Finance Investments, Lines (41) and (42), should equal the Notes to Financial Statement, Lines 5M(01a) and 5M(01b), Column 3 of the annual statement.

- Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93—Low Income Housing Tax Credit Property Investments.
  o Federal Guaranteed Low-Income Housing Tax Credit (LIHTC) investments are to be included in Line (44). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.
  o Federal Non-Guaranteed LIHTC investments with the following risk mitigation factors are to be included in Line (45):
    a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
    b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.
  o State Guaranteed LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments are to be included in Line (46).
  o State Non-Guaranteed LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments are to be included on Line (47).
  o All Other LIHTC investments, state and federal LIHTC investments that do not meet the requirements of Lines (44) through (47) would be reported on Line (48).

**EQUITY ASSETS**

**XR010**

**Unaffiliated Preferred Stocks**

Experience data to develop preferred stock factors is not readily available; however, it is believed that preferred stocks are somewhat more likely to default than bonds. The loss on default would be somewhat higher than that experienced on bonds; however, formula factors are equal to bond factors.

The RBC requirements for unaffiliated preferred stocks are based on the NAIC designation. Column (1) amounts are from Schedule D, Part 2, Section 1 not including affiliated preferred stock. The preferred stocks must be broken out by asset designation (NAIC 01 through NAIC 06) and these individual groups are to be entered in the appropriate lines. The total amount of unaffiliated preferred stock reported should equal annual statement Page 2, Column 3, Line 2.1, less any affiliated preferred stock in Schedule D Summary by Country, Column 1, Line 18.

**Unaffiliated Common Stock**

Federal Home Loan Bank Stock has characteristics more like a fixed income instrument rather than common stock. A 2.3 percent factor was chosen. The factor for other unaffiliated common stock is based on studies which indicate that a 10 percent to 12 percent factor is needed to provide capital to cover approximately 95 percent of the greatest losses in common stock over a one-year future period. The higher factor of 15 percent contained in the formula reflects the increased risk when testing a period in excess of one year. This factor assumes capital losses are unrealized and not subject to favorable tax treatment at the time of loss in market value.
The purpose of the asset concentration calculation is to reflect the additional risk of high concentrations of certain types of assets in single exposures, termed “issuers.” An issuer is a single entity, such as IBM or the Ford Motor Company. When the reporting entity has a large portion of its asset portfolio concentrated in only a few issuers, there is a heightened risk of insolvency if one of those issuers should default. An issuer may be represented in the reporting entity’s investment portfolio by a single security designation, such as a large block of NAIC Designation Category 2.A bonds, or a combination of various securities, such as common stocks, preferred stocks, and bonds. The additional RBC for asset concentration is applied to the ten largest issuers.

Concentrated investments in certain types of assets are not expected to represent an additional risk over and above the general risk of the asset itself. Therefore, prior to determining the ten largest issuers, you should exclude those assets that are exempt from the asset concentration factor. Asset types that are excluded from the calculation include: NAIC 06 bonds, unaffiliated preferred stock; affiliated common stock; affiliated preferred stock; property and equipment; U.S. government full faith and credit, other U.S. government obligations, and NAIC U.S. government money market fund list securities; NAIC 01 bonds and unaffiliated preferred stock; any other asset categories with risk-based capital factors less than 1 percent, and investment companies (mutual funds) and common trust funds that are diversified within the meaning of the federal Investment Company Act of 1940 [Section 5(b)(1)]. The pro rata share of individual securities within an investment company (mutual fund) or common trust fund are to be included in the determination of concentrated investments, subject to the exclusions identified.

With respect to investment companies (mutual funds) and common trust funds, the reporting entity is responsible for maintaining the appropriate documentation as evidence that such is diversified within the meaning of the federal Investment Company Act and providing this information upon request of the Commissioner, Director or Superintendent of the Department of Insurance. The reporting entity is also responsible for maintaining a listing of the individual securities and corresponding book/adjusted carrying values making up its investment companies (mutual funds) and common trust funds portfolio, in order to determine whether a concentration charge is necessary. This information should be provided to the Commissioner, Director or Superintendent upon request.

The assets that **ARE INCLUDED** in the calculation when determining the 10 largest issuers are as follows:

- NAIC Designation Category 2.A – 2.C Bonds
- NAIC Designation Category 5.A – 5.C Bonds
- Collateral Loans
- Mortgage Loans
- NAIC 02 Unaffiliated Preferred Stock
- NAIC 03 Unaffiliated Preferred Stock
- NAIC 04 Unaffiliated Preferred Stock
- NAIC 05 Unaffiliated Preferred Stock
- Other Long-Term Assets
- NAIC 02 Working Capital Finance Investments
- Federal Guaranteed Low Income Housing Tax Credits
- Federal Non-Guaranteed Low Income Housing Tax Credits
- State Guaranteed Low Income Housing Tax Credits
- State Non-Guaranteed Low Income Housing Tax Credits
All Other Low Income Housing Tax Credits
Unaffiliated Common Stock

The concentration factor basically doubles the risk-based capital factor (up to a maximum of 30 percent) for assets held in the 10 largest issuers. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, this factor itself only serves to add an additional risk-based capital requirement on these assets.

The name of each of the largest 10 issuers is entered at the top of the table and the appropriate statement amounts are entered in Column (2), Lines (1) through (26). Aggregate all similar asset types before entering the amount in Column (2). To determine the 10 largest issuers, first pool all of the assets subject to the concentration factor. From this pool, aggregate the various securities by issuer. The aggregate book/adjusted carrying values for the assets are computed, and the 10 largest are subject to the concentration factor. For example, an organization might own $6,000,000 in NAIC Designation Category 2.A bonds of IBM, plus $4,000,000 in NAIC Designation Category 2.C plus $5,000,000 of common stock. The total investment in that issuer is $15,000,000. If that is the largest issuer, then the identifier (“IBM Corporation”) would be entered in the space allowed for the first Issuer Name, and the $6,000,000 would be entered under the book/adjusted carrying value column for Line (1) (NAIC Designation Category 2.A Bonds) $4,000,000 would be entered on Line (3) (NAIC Designation Category 2.C Bonds) and the $5,000,000 would be entered on Line (22) (Unaffiliated Common Stock).

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

DESCRIPTION OF CHANGE(S)
To update the RBC calculation for Real Estate to reflect updated experience and analysis since RBC was first developed. This proposal presents the instructions and factors for the structure in proposal 2021-01-L.

REASON OR JUSTIFICATION FOR CHANGE **
When RBC was developed, there was limited experience on the default and loss for commercial real estate. Since then data sources have been compiled and tracked in the industry, and can now be accessed to provide more meaningful analysis and information for development of capital standards.

Additional Staff Comments:
This proposal was adopted by the Working Group on 5/27/21. The fair value adjustment is set to zero for yearend 2021 RBC filings.
6/30/21- jdb Factors were adopted by the Task Force.

** This section must be completed on all forms.  Revised 2-2019
1. **REAL ESTATE**

**LR007**

*Basis of Factors*

The base factor for equity real estate of 11% was developed by adding a margin for conservatism to the results of an analysis of real estate performance over the period of 1978 – 2020. The analysis was conducted by a group of life insurance company real estate investment professionals coordinated by the ACLI. The data used was a national database of real property owned by investment fiduciaries and supplemented by data on real estate backing mortgage securities. The analysis is documented in a report to the NAIC dated March 29, 2021. In addition to modifying the factor for company owned and investment real estate, this updated factor will also be used for real estate acquired in satisfaction of debt (Foreclosed real estate). Foreclosed real estate is recognized in the statutory statements as having acquisition cost equal to market value at time of foreclosure. For assets with the characteristics of real held estate (partnership or other structure) reported on Schedule BA, a higher factor of 13% is used to account for the lower transparency involved with these structures. Schedule BA real estate was originally given a higher factor under a presumption that it was more highly levered. Analysis has shown these assets to have experience very similar to directly held and will therefore use a modestly higher factor.

While the experience analysis was done based on analysis of fair value impacts, Real Estate is reported at depreciated cost in the Statutory statements. The difference in values impacts the risk to statutory surplus. Therefore, an adjustment is made to the factor based on the difference between fair value and statutory carrying value on a property by property basis. The adjustment is defined as

\[
\text{Adj Factor} = \text{RE Factor} \times (1 - \text{factor} \times (\text{MV} - \text{BV}_g)/\text{BV}_g)
\]

*factor* is [0] This zero factor for the fair value adjustment is for yearend 2021 RBC filings.

The resulting adjusted RBC factor is subject to a minimum of zero. In the RBC calculation, see Figure 7, fair value is taken from Schedule A Column 10 plus encumbrances, or from Schedule BA column 11 plus encumbrances, respectively, while BV$_g$ is the net Book Adjusted Carrying Value plus the encumbrance.

Encumbrances have been included in the real estate base since the value of the property is held net of the encumbrance, but the entire value is subject to loss. Encumbrances receive the base real estate factor of 11% reduced by the average factor for commercial mortgages of 1.75 percent pre-tax. In the past this was computed as a base factor applied to the net real estate value plus a separate factor applied to the amount of the encumbrance. Beginning in 2021, the equivalent result will be obtained by applying a base factor to the gross statutory value of the property, and a credit provided for the amount of the encumbrance.

The final RBC amount is subject to a minimum of the Baa bond factor 1.30% applied to the BACV, and a maximum of 45% of the BACV.

*Specific Instructions for Application of the Formula*

**Column (1)**

Calculations are done on an individual property or joint venture basis in the worksheets and then the summary amounts are entered in this column for each class of real estate investment. Refer to the real estate calculation worksheet (Figure 7) for how the individual property or joint venture calculations are completed.

Line (1) should equal Page 2, Column 3, Line 4.1.
Line (2) should equal Page 2, inside amount, Line 4.1.
Line (4) should equal AVR Equity Component Column 1 Line 20.
Line (5) should equal AVR Equity Component Column 3 Line 20.
Line (7) should equal AVR Equity Component Column 1 Line 19.
Line (8) should equal AVR Equity Component Column 3 Line 19.
Line (14) should equal Schedule BA, Part 1, Column 12, Line 2199999 plus Line 2299999, in part.
Line (15) should equal Schedule BA, Part 1, Column 12, Line 1799999 plus Line 1899999, in part.
Line (17) should equal AVR Equity Component Column 1 Line 75.
Line (18) should equal AVR Equity Component Column 1 Line 76.
Line (19) should equal AVR Equity Component Column 1 Line 77.
Line (20) should equal AVR Equity Component Column 1 Line 78.
Line (21) should equal AVR Equity Component Column 1 Line 79.

Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93—Low Income Housing Tax Credit Property Investments.

Column (2)
The average factor column is calculated as Column (3) divided by Column (1).

Column (3)
Summary amounts are entered for Column (3) based on calculations done on an individual property or joint venture basis. Refer to Column (8) of the real estate calculation worksheet (Figure 7).

Line (17)
Guaranteed federal low-income housing tax credit (LIHTC) investments are to be included in Line (17). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.

Line (18)
Non-guaranteed federal LIHTC investments with the following risk mitigation factors are to be included in Line (18):
   a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
   b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.

Line (19)
State LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments.

Line (20)
State LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments.

Line (21)
State and federal LIHTC investments that do not meet the requirements of lines (17) through (20) would be reported on Line (21).

§ Column (9) is calculated as \(\text{Column (3)} \times \text{Column (6)}\).

* Column (10) is calculated as Column (8) minus Column (9), but not less than 1.3% nor more than 45% of column (2), and not less than zero.

---

**ASSET CONCENTRATION FACTOR**

**LR010**

*Basis of Factors*

The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an individual issuer of a security or a holder of a mortgage, etc.) The concentration factor doubles the risk-based capital pre-tax factor (with a maximum of 45 percent pre-tax) of the 10 largest asset exposures excluding various low-risk categories or categories that already have a maximum factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, the asset concentration factor only serves to add in the additional risk-based capital required. The calculation is completed on a consolidated basis; however, the concentration factor is reduced by amounts already included in the concentration factors of subsidiaries to avoid double-counting.

*Specific Instructions for Application of the Formula*
The 10 largest asset exposures should be developed by consolidating the assets of the parent with the assets of the company’s insurance and investment subsidiaries. The concentration factor component on any asset already reflected in the subsidiary’s RBC for the concentration factor should be deducted from Column (4). This consolidation process affects higher tiered companies only. Companies on the lowest tier of the organizational chart will prepare the asset concentration on a “stand alone” basis.

The 10 largest exposures should exclude the following: affiliated and non-affiliated common stock, affiliated preferred stock, home office properties, policy loans, bonds for which AVR and RBC are zero, NAIC 1 bonds, NAIC 1 unaffiliated preferred stock, NAIC 1 Hybrids, CM 1 Commercial and Farm Mortgages and any other asset categories with RBC factors less than 0.8 percent post-tax (this includes residential mortgages in good standing, insured or guaranteed mortgages, and cash and short-term investments).

In determining the asset subjects to the concentration factor for both C-1o and C-1cs, the ceding company should exclude any asset whose performance inures primarily (>50 percent) to one reinsurer under modified coinsurance or funds withheld arrangements. The reinsurer should include 100 percent of such asset. Any asset where no one reinsurer receives more than 50 percent of its performance should remain with the ceding company.

Assets should be aggregated by issuer before determining the 10 largest exposures. Aggregations should be done separately for bonds and preferred stock (the first six digits of the CUSIP number can be used as a starting point) (please note that the same issuer may have more than one unique series of the first six digits of the CUSIP), mortgages and real estate. Securities held within Schedule BA partnerships should be aggregated by issuer as if the securities are held directly. Likewise, where joint venture real estate is mortgaged by the insurer, both the mortgage and the joint venture real estate should be considered as part of a single exposure. Tenant exposure is not included. For bonds and unaffiliated preferred stock, aggregations should be done first for classes 2 through 6. After the 10 largest issuer exposures are chosen, any NAIC 1 bonds, NAIC 1 unaffiliated preferred stock or NAIC 1 hybrids from any of these issuers should be included before doubling the risk-based capital. For some companies, following the above steps may generate less than 10 “issuer” exposures. These companies should list all available exposures.

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

The book/adjusted carrying value of each asset is listed in Column (2).

The RBC factor will correspond to the risk-based capital category of the asset reported previously in the formula before application of the size factor for bonds. The RBC filing software automatically allows for an overall 45 percent RBC cap.

**Lines (17) through (22)**

The Asset Concentration RBC Requirement for a particular property plus the Real Estate RBC Requirement for a particular property cannot exceed the book/adjusted carrying value of the property. Any properties exceeding the book/adjusted carrying value must be adjusted down to the book/adjusted carrying value in Column (6) of the Asset Concentration.

Line (18), Column (4) is calculated as Line (17), Column (2) multiplied by 0.1100 plus Line (18), Column (2) multiplied by 0.092500, but not greater than Line (17), Column (2). Line (20), Column (4) is calculated as Line (19), Column (2) multiplied by 0.1100 plus Line (20), Column (2) multiplied by 0.0925, but not greater than Line (19), Column (2). Line (22), Column (4) is calculated as Line (21), Column (2) multiplied by 0.1300 plus Line (22), Column (2) multiplied by 0.1125, but not greater than Line (21), Column (2).
Executive Summary

The following recommendations are the product of analyses conducted or sponsored by the ACLI, the NAIC, and industry real estate specialists. These recommendations represent the final product of discussions and deliberations that began in 2012 and are inclusive of changes meant to address questions and recommendations posed by members of the Investments Risk Based Capital (IRBC) and Life Risk Based Capital (LRBC) NAIC working groups, the American Academy of Actuaries (AAA) and other interested parties.

Implementation of the recommendations described below will ensure that the RBC assessment methodology and charges for the real estate sector more accurately reflect the sector’s underlying risks and will promote consistency with the methodology used in other asset sectors.

A. Schedule A Real Estate Factor. Update the C-1 factor for real estate assets held on Schedule A to be a base factor of 11%. This recommended factor is based on an estimated worst cumulative loss at a 95th – 96th percentile confidence level based on historical experience, which suggested a base factor of 9.5%. As was done with common stock, we used values at 2 years loss horizon. An additional 1.5% charge is recommended to account for potential disparity in individual life company real estate portfolio composition and uncertainty surrounding the longer-term implications of the COVID-19 pandemic on the commercial real estate sector. The proposed factor would be applicable for all categories of real estate reported in Schedule A of the Life and Health Annual Statement. (See Section A)

B. Unrealized Capital Gains/Losses. Recognize that the factors are based on analysis of market values while the statutory accounting basis is depreciated cost. Since RBC is to account for possible loss of statutory capital, when the statutory asset value is lower than market value, the risk of loss from that lower value is lower than the factors developed using market value performance data. To adjust for this discrepancy within RBC, reflect the impact of the margin from unrealized gains and losses on the potential for loss of statutory surplus. (See Section B)

C. Encumbrances. Revise the RBC factor for real estate encumbrances following the principles of the current RBC with factors to be consistent with the commercial mortgage RBC framework adopted in 2013. (See Section C)

D. Schedule BA Real Estate Factor. Revise the factor for Schedule BA real estate to 13%, equivalent to the proposed factor for Schedule A plus a premium of about 20% over the Schedule A factor. All other mechanics would parallel the proposal for Schedule A Real Estate. (See Section D)

Scope

This proposal is developed for the Life and Fraternal Risk Based Capital formulas. This proposal does not address possible adjustment to the Asset Valuation Reserve (AVR) or tax adjustments for these assets. Finally, this proposal does not directly address the factors for the Health Risk Based Capital or for the Property & Casualty Risk Based Capital.
Background

RBC is used to measure potential future excess losses and their effect on statutory capital. The goal is to help regulators identify weakly capitalized companies, given risks that individual companies are taking. This proposal is consistent in methodology with recent RBC development work for common stock and bonds in areas such as the confidence levels for statistical analyses, while recognizing real estate’s unique characteristics.

There is limited historical perspective available on the original construction methodology supporting the currently applied RBC factors for real estate investments. The following general description is taken from a 1991 report covering RBC C-1 (default) factors:

“There is little data upon which to base requirements for this asset group. Company practice, as shown by the 1990 intercompany survey, indicates factors in the range of 5 percent to 20 percent. An article in the May-June 1991 Financial Analysts Journal (Ennis and Burk) proposes that real estate volatility is about 60 percent of that for common stock, suggesting a factor in the range of 18 percent. If one assumes full tax credit for losses, this converts to a factor of about 10 percent which is the Subcommittee’s recommendation for all real estate subcategories, except real estate acquired by foreclosure for which the factor is 15 percent. This is one of several asset groups which deserve continuing study to assure that risk-based capital requirements are adequate and appropriate.”

Since the original real estate factor estimation, which was based on the somewhat rudimentary analysis described above, there has been a very significant improvement in the availability of performance data for the sector. While there have been additional analyses conducted for this sector since the initial methodology and factor adoption (i.e., AAA proposals in September and December 2000), to date there have been no significant changes made to the C-1 factor for real estate.

Since 2000, the pre-tax base C-1 factor for real estate applied in the sector has been 15%. The derivation of this factor, as described above, was based on 60% of the common stock factor, adjusted for taxes. The logic at the time was that the volatility of real estate was assumed to be around 60% of common stock volatility. This assumption was reportedly based on inferences made from historical real estate investment trust (REIT) performance, as a robust private market performance history was not available at that time. REITs are companies that use debt in owning and managing properties and have performance characteristics different from that of the underlying commercial real estate. The same 15% C-1 factor currently applies to virtually all directly held real estate, including company occupied properties, investment properties for long-term hold, and properties held for sale, but excludes properties acquired through foreclosure which were perceived to be riskier.

It is also important to note, that while real estate is considered an equity asset, statutory accounting requires it to be valued at depreciated cost. Any capital improvements are added to the statutory book value, and then depreciated from that time. If and when there is an other-than-temporary impairment, the book value is revised down to then market value, if lower, and depreciated going forward. Throughout this document this is referred to as depreciated cost.

The real estate sector has matured significantly in the last 30 plus years, as institutional investment has become prevalent and public capital markets have become more developed. Information transparency has increased materially and the market has become much more “efficient”. Valuation and accounting policies and standards,

---

1 Various studies have since shown that equity real estate in general has volatility well less than 60% of that of the S&P 500.
2 The volatility of REIT performance is higher than the volatility of direct property performance primarily because REITs are leveraged investments, which results in greater volatility of results. Further, privately held property is not marked-to-market daily, trades infrequently, and tends to exhibit price changes rather slowly.
and increased regulation, have also increased standardization and invest ability. Ownership of commercial real
estate is now much more widespread across institutions, including pension funds, than in the earlier period.

A. Review of Base C-1 RBC Factor – Support for Change to 11%

Analyses conducted or sponsored by the ACLI, the NAIC, and industry specialists suggest that the base C-1 RBC
factor applicable to Schedule A real estate (including investment, foreclosed and held for sale real estate) should be
set at 9.5%. An additional 1.5% cushion is recommended to account for potential disparities between the
composition of the index used and individual life insurance company real estate portfolios, plus uncertainty
surrounding the impact of COVID-19 on the longer term performance of commercial real estate. This
recommendation is based primarily upon the NCREIF National Property Index (NPI) Price Variation Analysis
presented below.3 Note that the support presented in this Section A represents an updated methodology meant
to address certain concerns expressed by the American Academy of Actuaries regarding representation of the
Global Financial Crisis in the data set.

The primary methodology employed to determine the recommended charge is analyses based on actual historical
real estate investment performance data from the NCREIF Property Index (NPI), appended by data from
FRC/Kelleher to extend the series through earlier years of 1961-1977.4 This data set is collectively referred to as
“NPI” in this analysis.

<table>
<thead>
<tr>
<th>Results of Price Variation Model of NCREIF Property Index (“NPI”)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 YR HP Cumulative Loss</td>
</tr>
<tr>
<td>-------------------------</td>
</tr>
<tr>
<td>95-PCT</td>
</tr>
<tr>
<td>96-PCT</td>
</tr>
</tbody>
</table>

The above table presents the results of analyses of historical NPI total return data. The table presents the results of
analyses based on both 95th percentile (PCT) and 96th PCT worst results in the historical data set. Further, the table
presents cumulative losses at varying periods ranging from 1 to 4 years. Historically, downturns in real estate tend
to last less than 3 years, so this period also represents the worst cumulative decline that would be observed even if
the assumed period was extended further. The “cumulative” observations represent the largest cumulative loss
experienced at any point in the period.

The recommendation of 9.5% is based on consideration of the maximum cumulative losses at both the 95th and
96th percentiles (“PCT”) during the observed period. This assumed period of loss is consistent with the assumption
used for common stock. Importantly, based on historical performance data for the sector, the 11% recommended
base factor would cover cumulative losses during a 2-year period at a 96.8% confidence level.

We also note that in using cumulative losses over time, there is no discounting for time value of money, and all
analysis are conducted without any consideration of the federal income tax impact of the losses.

The use of actual historic quarterly returns across 60 years of industry experience provides for the incorporation of
the impact of several economic cycles on supply and demand for commercial real estate and the impact on market

3 See Appendix 1 for a detailed description of NCREIF and the NPI.
values. This lengthy time period also allows for incorporation of the effects from earlier governmental impact on prices, such as from changes in the tax code in the 1980s.

Considerations

1. **Applicability of Index to Individual Life Company Portfolios**

   The recommended decrease in the RBC factor for Real Estate is based on the performance of a large and well diversified commercial real estate benchmark performance index (i.e., NCREIF-National Property Index, NPI). The index includes quarterly data from all the major property types (office, retail, industrial, multifamily and hotel) across all regions of the US, which makes it broadly applicable to all of these major property types nationwide. Additionally, we compared the distribution of properties by type and by geographical region in the NCREIF database to the distribution of those held by the life insurance companies and found the distributions to be quite similar.

   The question of the potential need for increased granularity for the RBC factor was considered thoroughly. In particular, we considered a different factor for company occupied as a class with lower risk than investment properties. However, granularity beyond the single factor representative of all US commercial real estate was deemed inappropriate due to 1) the relatively small size of the asset class, 2) the alignment of composition between the NPI and the life industry portfolio, and 3) regulations separate from RBC factors that address concentration risks and assure diversification of life company real estate portfolios.

   Additionally, segmenting the NPI dataset into smaller granularities can be problematic. The NPI as of Q4-2020 consisted of just over 9,000 properties but roughly 30,000 properties have been in the index at some point during its 30+ year history. Over that history, the geographic and property type distribution of NPI has been constantly evolving. While the database of properties is large in total, segmenting it into more granular levels can produce sample sizes too small to be statistically sound. Beyond this, segmenting can add only limited additional value. The primary driver of real estate property performance is the national real estate cycle\(^5\) as portrayed in the NPI. The pattern of real estate losses for both the industry and for individual companies is aligned with that cycle. In other words, the overall real estate cycle tends to dominate other effects including geography and property type. The strength of that national real estate cycle has been found in academic research to explain roughly 50% of the variation in property performance across all properties in the index.

2. **Impact of Select Key Assumptions**

   - **Loss Horizon:** The period of time assumed for the accumulation of losses in the analysis (loss horizon) plays an important role in determining the appropriate amount of required capital. In this updated proposal, we suggest an 11% RBC factor, which is based on cumulative losses over 2 years. Real estate assets are typically held longer-term, often five years or greater. As the assets are more illiquid than publicly traded bonds or other securities, they are often used to back surplus, or longer-term liabilities. Liquidity is managed such that the timing of sale of real estate assets can often be strategically determined, thus avoiding realization of the larger maximum potential losses. The key focus is the length of economic cycles with losses. In past real estate cycles, the duration of losses typically spans a 2 to 3-year period, with the majority of losses during past downturns being materially concentrated within one year. Average holding periods for real estate assets are typically much longer than one year, averaging 10 years or longer, based on analysis periods and investment targets for most institutional investors. Given the statutory accounting for the asset class with declining book value and rigorous impairment requirements, it is normal for the

---

actual recognized impairment rates by insurance companies to be lower in both frequency and severity than market averages. This is primarily related to the existence of unrealized gains that must be exhausted prior to any recognition of losses.

- **Confidence Level:** The confidence level also plays an important role in determining the appropriate amount of required capital. The 9.5% suggested base factor generally corresponds to the losses modeled at between the 95th and 96th percentiles (PCT) over a worst cumulative period. The recommended 11% factor covers losses at a 96.8% confidence level, assuming maximum cumulative losses during a 2-year period.

- **Reserve Offset:** The development of the bond factors includes an offset for expected losses based on the principle that expected losses are covered by reserves. Real estate and common stock are both treated as equity assets which are generally viewed as supporting surplus and not reserves, and for which expected loss is not considered. The current RBC methodology for real estate equity does not include an offset for expected loss, as the basic contribution to AVR used as a proxy for expected loss is zero. Similarly, this proposal does not include an offset for expected loss. The rationale for excluding the mitigating effects of the expected loss include:
  - There is no basic contribution to AVR for real estate investments.
  - Real estate is a small asset class, and analyses required to develop appropriate offsets for expected loss are deemed unnecessary.
  - Discussions around the appropriate relationship between expected loss, AVR, and RBC are ongoing. In the future, as precedent is set in the other larger asset classes where the effects are likely even more important, the potential integration of an offset in the real estate equity sector should be reconsidered.

- **Income:** In the development of RBC factors for bonds, income in excess of the expected loss offset discussed above is not included in the modeling and is assumed to be used for policyholder liabilities and not available as a loss offset. For common stock, and for real estate as equity investments, the total return is used. First, since the equity assets are generally presumed to back surplus and not policyholder reserves, the policyholder does not have claim to the income. Consistent with the lack of offset for expected loss, the income is available. When bonds default there is no subsequent income available to the investor. Real estate does not default, and even if subject to impairment, continues to produce income. The Real Estate values were therefore developed consistent with common stock using a total return view of the assets.

- **Taxes:** All of the modeling discussed in this project was done on a “cash” basis. No consideration has been given to the effect of these losses on the tax liability of the investor. Since losses reduce taxes that otherwise would be paid by the investor, this will result in a lower post-tax RBC factor than the recommended level.

- **Property acquired through foreclosure:** Property acquired through foreclosure should be treated the same as any other real estate. If the insurer forecloses on a mortgage and obtains the property, statutory accounting requires the property to be brought onto the company’s books at then current market value. As a result, the value is no different than any other property purchased in the course of business. If the property has low income potential, that will be reflected in its market value.

---

6 There are currently discussions at the NAIC regarding whether RBC assessments should be adjusted to remove the expected losses for sectors. In real estate equity’s case, we are uncertain as to the materiality of adjusting for expected losses. The same could be said for common stock, as expected loss is a fixed income concept and would be difficult to apply to equities.
3. **Application of stochastic approaches**: While we considered stochastic approaches, a fully stochastic model was deemed inappropriate by the working group due in large part to the limited amount of quarterly historical observations (limited when compared to the amount of daily transaction data available for public stocks and bonds). It is possible that a stochastic analysis could be performed wherein an algorithm would be built and calibrated to actual history. However, if the algorithm is calibrated to historical performance, we believe that the results of such an analysis would be consistent with our work, which includes periods of very significant market stress in the sector. Note that the work performed in both common stocks and bonds excluded significant periods of stress in those markets, given changes in the economy from the advent of the creation of the Federal Reserve. Both asset classes have public data going back to early in the 19th century, though of varying quality. We used the full historic track record for commercial real estate (CRE) that is available and includes the downturn in CRE from the S&L crisis in the 1990s, the effects of the dot-com bubble, the global financial crisis and the most recent effects of COVID-19 pandemic in 2020.

**B. Adjust RBC to recognize risk impact of unrealized gains and losses**

We also recommend implementation of an adjustment to individual property RBC that will account for the cushion against statutory losses that is often created in real estate assets as they are held through time. The RBC factor that is recommended in Section A is calibrated based on volatility of market values through time. However, real estate assets are reported for statutory accounting using depreciated cost. In real estate, the assets depreciate annually, so each year the asset’s statutory value will be adjusted downward, even though the actual market value of the asset is more likely to be increasing. Annual depreciation rates in real estate are often 2% or higher. This creates an “unrealized gain” that serves as a cushion that must be completely eroded as market values fall before there would be any risk of loss of statutory capital. Since risk to statutory capital varies based on the size of this margin, a single factor applied to the statutory value does not appropriately measure the risk. This adjustment reflects the varying amount of risk resulting from this margin.

Fair value of real estate assets held by Life Companies is reported in Schedule A for each individual property. This fair value includes the changing market value of the asset and the impact of any improvements that have been capitalized. This excess of market value over the statutory value is a cushion against loss of statutory capital.

We propose that the applied base RBC factor be adjusted using a ratio of 1/2 of the difference between the reported fair value and statutory book value, to the statutory book value. Note that in situations where fair value is less than statutory, the RBC factor will be increased. We recommend that the final RBC for any property not be less than the amount determined using the factor for a Baa bond applied to the BACV.

Examples of the application of the adjustment are presented in the below table and are hypothetical. If a market value were lower than book value, that property would be reviewed for possible impairment. If the value were down temporarily, this adjustment would provide a short-term increase in RBC. If the value is down on a permanent basis, this may provide an early increase in RBC prior to taking an impairment.

The specific formula including adjustment would be:

\[
RBC\% = \text{Max} \left[ \text{NAIC2}\%, \ 11.0\% \times (1 - \frac{1}{2} \times \frac{(MV-BVg)}{BVg}) \right]
\]
### In an effort to assess the effects of statutory accounting on actual life insurance company experience, a simulation was constructed to analyze hypothetical life company portfolio performance given statutory accounting. The results of this study demonstrate the materially lower statutory losses as compared to market value losses during downturns, and thus provide support for the proposed adjustment.

In 2013 the ACLI, NAIC, and Industry real estate specialists engaged Jeff Fisher (Academic Consultant), who is a special academic consultant to NCREIF, to use the historical property level performance data in the NPI to construct simulated historical performance under statutory accounting rules. The analysis leveraged all available NPI data history at the required level of granularity at that time, which included the period of 1978Q2 through 2013Q1. This analysis was performed to provide additional insight around the impact of statutory accounting (recognition of depreciation, impairment rules, etc.) on the historical performance and risk to capital for insurance companies.

The simulation used the actual historical market experience of the NPI at the individual property level, wherein estimates of statutory accounting were applied. This hypothetical exercise was not intended to serve as the primary basis for determination of an appropriate RBC factor. Rather, the results of this hypothetical exercise illustrate the effect that statutory accounting (i.e., with depreciating book values and impairment rules/requirements) can have on the timing and severity of loss recognition relative to market value changes and provide additional evidence that the primary analysis is reasonable, if not conservative, given the effect of statutory accounting.

The simulation made the following assumptions:

1. Beginning Book Value for statutory accounting when properties enter the data set is set equal to then current market value.
2. For Book Value projections, depreciation is over 20 years (5% per year) for all properties.
3. Properties are tested for impairment quarterly, with impaired properties removed from index after recognizing the loss from the impairment. Any income received to that point is retained in the modeling.
4. As in statutory accounting, there is no accounting for property value increases, only losses are recognized in the analysis.
5. There is no offset related to expected loss (i.e., there is no accounting for AVR).
Example of Simulated Statutory Property Performance: In the simulation, individual asset market values are recorded in the quarter a property enters the index. At this beginning quarter, book value is set equal to market value, which is assumed to be the cost to acquire and is therefore consistent with statutory accounting. Every quarter forward, NCREIF has updated estimates of market value for the asset.\(^7\) Future statutory carrying value of the asset (depreciated book value) is estimated using the generic depreciation assumptions listed above. In every quarter, we estimate whether an impairment would have been recognized using statutory accounting rules, the then current market value, anticipated future property cash flows as implied from that market value, and then current statutory carrying value. Aggregate impairment rates by quarter are tracked through time, which are useful for comparison to actual market value losses reported for the index.

Using the above assumptions in the simulation model and including all properties over the entire history of the NPI, the following chart presents quarterly total losses as a percent of market value. As the chart below illustrates, the largest quarterly loss rate for the simulated index performance was just slightly over 2% during the recent Great Recession. Further, over this entire simulated history there are only a few quarters with significant simulated statutory losses. Losses were concentrated in the real estate market downturns of the early 1990s and in 2009 following the Great Recession.

The largest one-year loss for the full history of the simulated data occurred during the Great Recession, when the simulated one-year cumulative statutory loss was approximately 7% during the year 2009.\(^8\) During 2009, the actual recorded total return for properties in the NPI was a cumulative loss of 17%. This decline occurred amid the most severe downturn in history, based on its intensity. However, the value decline during this period was relatively short-lived, as the negative quarterly total returns persisted for only six quarters.

Given the event was an extreme outlier in the history of real estate performance, the probability of it reoccurring is extremely low within the modeled random sampling. In simple terms, since the 17% decline in one year occurred once in the 36-year exposure, the implied frequency is 2.8% probability (i.e., one year out of 36) while RBC is set to a 5% (or 95% confidence) level. In addition, this temporary reduction in market value would not necessarily have led to equal statutory impairments both since market value is typically in excess of book value, and requirements for statutory impairments do not immediately recognize all changes to market price. Thus, statutory accounting can lessen the severity of recognized losses during market downturns.

---

\(^7\) The NCREIF database relies on appraisals to establish value where there has not been a transaction. The simulation projected MV could be viewed as projected appraised value. Various studies of CRE appraisals have been performed and show that the appraisals are good estimates of MV, though they may lag actual market changes. This assumption does not affect the validity or applicability of the results.

\(^8\) While the 7% maximum simulated loss should provide a degree of comfort in the reasonableness of the proposed factor, it is not directly comparable in concept to either the proposed factor or the cited actual historic market value based index returns.
As further evidence of the impact of statutory accounting, we examined actual losses incurred during the Global Financial Crisis, which is the most severe real estate market downturn within the 60-year data analysis period. The ACLI conducted an analysis of the life insurance industry’s actual performance during 2008 through 2012. The analysis examined all impairments of real estate investments, along with recognized losses on sale of real estate investments, during the period using data from Annual Statement exhibits Schedule A Parts 1 and 2. The industry reported cumulative losses of about 3.5% over that 5-year period, significantly lower than the 9.5% recommended factor. These reported industry losses include Other-Than-Temporary Impairments and losses on sale as reported in the Annual Statement schedule. Note that the analyses did not account for the declines in value of assets that are reported at fair value for statutory purposes.

C. Update RBC charge on real estate encumbrances

Under Statutory Accounting rules, real estate is held at depreciated cost net of encumbrances. Under the current proposal, RBC will be assessed by estimating the risk on the total property, then providing a credit for the value of the encumbrance based on the equivalent risk of the mortgage. The rationale for this is that the total underlying risk of loss on the property is the same whether or not there is an encumbrance, but the holder of the encumbrance bears part of the risk and the holder of the property bears the balance. Therefore, the risk is split effectively by developing the risk for the entire real estate value, then subtracting the amount of risk ascribed to the mortgage. We chose the approach of a reduced factor based on the average factor for mortgages in light of the small size of the real estate asset class, and the even smaller amount of encumbrances. For implementation, we recommend changing the RBC worksheet to show the RBC for the entire real estate, then a credit for the amount of the encumbrance.

The current encumbrance factors were based on the current RE factor of 15% reduced by the average RBC for commercial mortgages, which was 3.00% under the prior RBC formula. The proposed factor for Real Estate is 11.0%, and the average commercial mortgage factor that was developed as part of the commercial mortgage RBC proposal in 2013 was 1.75%. As an example, consider the following:
<table>
<thead>
<tr>
<th>Property Value</th>
<th>Amount</th>
<th>RBC factor</th>
<th>$RBC</th>
</tr>
</thead>
<tbody>
<tr>
<td>No encumbrance</td>
<td>100</td>
<td>11.0%</td>
<td>11.0</td>
</tr>
<tr>
<td>With 60% LTV mortgage</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Property Value</td>
<td>100</td>
<td>11.0%</td>
<td>11.0</td>
</tr>
<tr>
<td>- Equity value</td>
<td>40</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Encumbrance</td>
<td>60</td>
<td>-1.75%</td>
<td>-1.05</td>
</tr>
<tr>
<td>- Real Estate RBC</td>
<td>40</td>
<td>24.9%*</td>
<td>9.95</td>
</tr>
<tr>
<td>- Mortgage RBC¹</td>
<td>60</td>
<td>1.75%</td>
<td>1.05</td>
</tr>
<tr>
<td>- Total</td>
<td>100</td>
<td></td>
<td>11.0</td>
</tr>
</tbody>
</table>

* Equals the RBC value (9.95) divided by the real estate equity value (40).

¹ This is an estimate of the value of the risk attributable to the mortgage by assuming that the mortgage was held by a life insurance company and estimating the resulting RBC.

This table illustrates our suggestion that the same amount of total capital be held whether a property is held with no encumbrance, or if it has an encumbrance, to reflect the constant level of risk of loss at the property irrespective of the capital stack. The RBC calculated on the encumbrance derives from the price risk of the property. It is to reflect that there is more risk as a percent of the equity investment, though not in total risk, to the equity investment of an investor in a property when leverage is used compared to when there is no leverage and a property is owned outright. In the case of having an encumbrance, the RBC held by the lender, when added to the RBC held by the owner on its equity and its encumbrance, sum to the same amount as if the property was held with no encumbrance.

In the current RBC, the result of this formula on encumbrances includes a maximum amount equal to 100% of the book adjusted carrying value of the real estate. While recognizing that the loss is generally limited to 100% of the carrying value, we believe that an RBC factor of 100% is excessive, and that the limit should be set at 45% of the carrying value. We note that for common stock, the combined factor at the maximum Beta is 45%.

D. Update Schedule BA Real Estate Factor

Real Estate held in joint ventures (JVs), limited liability companies (LLCs) or similar structures are recorded in Schedule BA, on lines 2199999 and 2299999. Currently, these assets are assessed RBC with a factor (23%) that is 50% higher than the factor for wholly owned real estate reported in Schedule A. The documentation for Schedule BA assets from the original RBC development articulates a premium over the RBC for Schedule A assets to account for additional risk associated with potentially lower transparency and control within the structures. However, since that time, data availability and industry experience has provided evidence that this premium is overly conservative, if not altogether unnecessary for the assets classified as real estate. We propose that the factor for Schedule BA real estate be adjusted to 13%, equivalent to the proposed factor for Real Estate recorded on Schedule A plus a premium of about 20% of the Schedule A factor for conservatism. All of the other mechanics and components described above for Schedule A real estate would also apply consistently for the real estate recorded on Schedule BA. This proposal is supported by the following:

- Real estate investments today are very often executed through corporate structures such as LLCs simply to mitigate risks. Institutional investors regularly use these structures to reduce the risk of loss from contingent liabilities. Contingent liabilities could be associated with the operations of the property (e.g.,
slip-and-falls), disputes with vendors or tenants, or debt. LLCs insulate investors from losses above the value of the net equity in an individual investment. Institutional investors also often use LLCs as holding companies for a series of single-asset LLCs, in order to better organize a portfolio in a manner that limits liabilities along each level of the corporate ownership structure.

- The NAIC recently approved the reclassification of certain wholly owned single owner, single asset LLCs to be reported on Schedule A. This was due to the recognition that the LLC structure itself did not produce additional risk. In this approval, the NAIC also agreed that additional reclassification could be proposed and approved when additional supporting materials were submitted. Rather than seeking a change in the accounting, we are proposing to adjust the RBC to reflect the risk.

- Partnership structures are often used to align interests between the life insurance company and local partners who have superior access to the market and property development, asset management and property management skills, while still maintaining control of significant investment decisions, especially around liquidity. This better execution and alignment of interest can result in better investment performance and even lower market risk.

- Partnership structures reduce the capital commitment of the life insurance company to an individual transaction, and thus can add portfolio diversification.

- A study was performed to compare the actual realized risk of institutional real estate investments held through JV’s to those of directly-held real estate investments. Jeffrey Fisher, a Ph.D. and consultant for NCREIF, broke down all properties in the NCREIF Property Index into joint venture and wholly owned properties to compare the performance since 1983. Mr. Fisher’s analysis found as follows:
  - Since 1983, the average quarterly return for JV properties was 2.35% versus wholly owned properties at 1.97%. This performance gap widened over time.
  - The standard deviation of returns for JV properties (2.4%) was only modestly higher than the standard deviation of wholly owned properties (2.2%).
  - Values of the wholly owned properties fell more than the values of JV properties from peak-to-trough during the Global Financial Crisis (GFC).
  - In terms of return dispersion during the GFC’s worst quarter, wholly owned properties had the largest negative return and JV properties had the highest positive return.
  - JV properties were found to have shorter average holding periods than wholly owned properties, suggesting potentially higher liquidity in JV structures.

In summary, real estate held through joint ventures has performed consistently with and perhaps even slightly better than, wholly owned real estate. Based on this research, and in recognition of the several legitimate risk/return benefits of ownership through structures, we propose that real estate held on schedule BA use a factor of 13%, which is the factor for wholly owned real estate held on schedule A with a modest premium.
Appendix 1

The historical National Council of Real Estate Investment Fiduciaries (NCREIF) database goes back to December 31, 1977, and as of Q4-2020 consisted of approximately 9,000 properties. NCREIF collects 67 data fields each quarter that consist of financial information such as Market Value, NOI, Debt, and Cap Ex, as well as descriptor data such as Property Type and Subtype, Number of Floors, Square Footage, Number of Units, and Location.

The flagship index of NCREIF is the NCREIF Property Index (NPI), which is a quarterly index tracking the performance of core institutional property markets in the U.S. The objective of the NPI is to provide a historical measurement of property-level returns to increase the understanding of, and lend credibility to, real estate as an institutional investment asset class. The NPI is comprised exclusively of operating properties acquired, at least in part, on behalf of tax-exempt institutions and held in a fiduciary environment. Each property’s return is weighted by its market value. The NPI includes properties with leverage, but all returns are reported on an unleveraged basis. The NPI includes Apartment, Hotel, Industrial, Office and Retail properties, and sub-types within each type. The index covers all regions of the US, which makes it broadly applicable to all of these major property types nationwide. Additionally, we have also done a comparison of the distribution of properties by type and by geographical region between those in the NCREIF database and those held by the life insurance companies and found them to be quite similar.

Over the history of the NPI data, there have been two severe downturns, in the 1990s and the recent GFC; as well as a shallow recession corresponding to the 2001 economic recession that did not produce negative total returns for real estate. Given the time series of the data, the index does reflect ‘tail events’ such as the Great Recession thus appropriately capturing the downturn in the employed primary methodology for estimation of the appropriate RBC charge.

Additional information on NCREIF and the NCREIF Property Index (NPI) can be found here: https://www.ncreif.org/data-products/property/
Appendix 2

The difference between market value and statutory value (depreciated cost) is not included in surplus within statutory accounting. As a result, the risk of future impairments of statutory value would be much less for a company where the current market value of its portfolio of properties is well in excess of statutory carrying value, especially compared to one where market value is much closer to statutory carrying value.

Our primary analysis was based on market values, and therefore overstates the risk relative to statutory accounting. We are not proposing that statutory accounting for commercial real estate should change, but rather partially leveling the playing field for properties that have been held for extended periods with market value well in excess of statutory carrying value, versus recent acquisitions with no such unrealized gains. And we are proposing a floor charge equal to that for an NAIC 2 bond (currently 1.30%) so that capital will never be lower.

The following provides a numerical example. Assume a property held at a book value of $100 with a market value of $150. The NCREIF data measures changes in market value, and the 11% proposed factor would make provision for a loss of value to a value down to $133.50. Under the RBC process, factors are applied to the book value and normally do not recognize that unrealized gain. Since real estate is held at book value which in this case is $100, and is below this market value, effectively there an increased margin against the loss of statutory capital in excess of the amount of RBC.

For an asset with a market value well in excess of the carrying value, the reduction in RBC is minimal compared to the large-implied reserve. Similarly, in those relatively few circumstances where an asset will have a market value less than book value, the RBC amount would increase, to reflect the increased likelihood of a loss to carrying value. This increase in RBC would likely be in advance of an actual impairment, which would provide earlier visibility and recognition of weakening market conditions.
This proposal incorporates bond factors proposed by the American Council of Life Insurers (ACLI) which are based on the work of Moody’s Analytics for the expanded presentation of bond designation categories in the annual statement and risk-based capital (RBC) schedules.

**REASON OR JUSTIFICATION FOR CHANGE**

The expanded presentation of bonds is a result of the work of the Investment Risk-Based Capital (E) Working Group. This proposal presents alternative factors to those proposed by the American Academy of Actuaries (Academy).

**Additional Staff Comments:**

4-22-21: Proposal was exposed for comments (DBF)
6-11-21: Proposal was adopted with the base factors as presented in the April 2021 report, the inclusion of the adjusted tax factors for LR030 and Moody’s Analytics’ revised bond size factors as presented in the June 2021 report (DBF)

- **Total Short-Term Bonds**: Sum of Lines (9) + (10.8) + (11.4) + (12.4) + (13.4) + (14.4) + (15)
- **Total Long-Term and Short-Term Bonds**: Line (8) + (16)
- **Credit for Hedging**: LR014 Hedged Asset Bond Schedule Column 13 Line (0) - (16) or (14.4) + (13.4) + (14.4) + (13)
- **Non-exempt U.S. Government Agency Notes**: Schedule D Part 1 or Schedule DA Column 1 Line (0) - (16) or (14.4) + (13.4) + (14.4) + (13)

1. Only investments in U.S. Government agency bonds previously reported in Line (2.8) and (10.8), net of those included on Line (19), plus the portion of Line (2.8) attributable to certain companies Line (2.8) and (10.8) should be included on Line (19). No other bonds should be included in this line. Enter U.S. Government agency bonds shown on Lines (1) and (9) should not be included on Line (19). Refer to the bond section of the risk-based capital instructions for more clarification.

2. Denotes items that must be manually entered on the filing software.

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Notes:

- **Note:** For the intermediate category of hedging, we recommend that the risk mitigation and resulting RBC credit be determined as if each specific security common to both the index/basket hedge and the portfolio is a basic hedge with the entire basic hedge methodology applied to each matching name. This includes the application of the maturity mismatch formula and the maximum RBC credit of 94% of the C-1 asset charge for fixed income hedges.

- **† Columns are derived from Investment schedules.**

- **‡ The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book / Adjusted Carrying Value. This amount cannot exceed Column (7) Book / Adjusted Carrying Value.**

- **§ Factor based on Column (10) NAIC Designation and NAIC C-1 RBC factors table.**

- *** Column (7) Book / Adjusted Carrying Value multiplied by Column (11) RBC Factor.**

- **£ Column (13) is calculated according to the risk-based capital instructions.**

- ****Column (12) Gross RBC Charge minus Column (13) RBC Credit for Hedging Instruments.

Denotes manual entry items that do not come directly from the annual statement.

BONDS
LR002

Basis of Factors

The bond factors are based on cash flow modeling using historically adjusted default rates for each bond category. For each of 2,000 trials, annual economic conditions were generated for the 10-year modeling period. Each bond of a 400-bond portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by designation category and that year’s economic environment. When a default takes place, the actual loss considers the expected principal loss by category, the time until the sale actually occurs and the assumed tax consequences.

Actual surplus needs are reduced by incorporating anticipated annual contributions to the asset valuation reserve (AVR) as offsetting cash flow. Required surplus for a given trial is calculated as the amount of initial surplus funds needed so that the accumulation with interest of this initial amount and subsequent cash flows will not become negative at any point throughout the modeling period. The factors chosen for the proposed formula produce a level of surplus at least as much as needed in 92 percent of the trials by category and a 96 percent level for the entire bond portfolio.

The factor for NAIC 6 bonds recognizes that the book/adjusted carrying value of these bonds reflects a loss of value upon default by being marked to market.

Specific Instructions for Application of the Formula

Lines (1) through (7)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For long-term bonds, these classifications are found on Lines 1 through 7 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (8)
The total should equal long-term bonds and other fixed-income instruments reported on Page 2, Column 3, Line 1 plus Schedule DL Part 1, Column 6, Line 7099999 minus Schedule D, Part 1A, Section 1, Column 7, Line 7.7 of the annual statement.

Lines (9) through (15)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For short-term bonds, these classifications are found on Lines 18 through 24 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (16)
The total should equal short-term bonds reported on Schedule DA, Part 1, Line 8399999 plus Schedule DL Part 1, Column 6, Line 8999999 plus LR012 Miscellaneous Assets Column (1) Line (2.2).

Line (22)
Class 1 bonds (highest quality) issued by a U.S. government agency that are not backed by the full faith and credit of the U.S. government should be reported on this line. The loan-backed securities of the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC) would be examples of the securities reported on this line. Line (22) should not be larger than the sum of Lines (2) and (10). Exempt obligations should not be included on this line.

Line (24)
Bonds should be aggregated by issuer (the first six digits of the CUSIP number can be used). Exempt U.S. government bonds and bonds reported on Line (22) are not counted in determining the size factor. The RBC for those bonds will not be included in the base to which the size factor is applied. If this field is left blank, the maximum size factor adjustment of 2.52.40 will be used.
The size factor reflects the higher risk of a bond portfolio that contains relatively fewer bonds. The overall factor decreases as the portfolio size increases. Portfolios with more than 1,300 issuers will receive a discount. The size factor is based on the weighted number of issuers. (The calculation shown below will not appear on the RBC filing software but will be calculated automatically.)

Total Number of Issuers from Line (23)

Total Weighted Issuers

Size Factor = Total Weighted Issuers divided by Total Number of Issuers
**ASSET CONCENTRATION FACTOR**

**LR010**

**Basis of Factors**

The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an individual issuer of a security or a holder of a mortgage, etc.) The concentration factor doubles the risk-based capital pre-tax factor (with a maximum of 45 percent pre-tax) of the 10 largest asset exposures excluding various low-risk categories or categories that already have a maximum factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, the asset concentration factor only serves to add in the additional risk-based capital required. The calculation is completed on a consolidated basis; however, the concentration factor is reduced by amounts already included in the concentration factors of subsidiaries to avoid double-counting.

**Specific Instructions for Application of the Formula**

The 10 largest asset exposures should be developed by consolidating the assets of the parent with the assets of the company’s insurance and investment subsidiaries. The concentration factor component on any asset already reflected in the subsidiary’s RBC for the concentration factor should be deducted from Column (4). This consolidation process affects higher tiered companies only. Companies on the lowest tier of the organizational chart will prepare the asset concentration on a “stand alone” basis.

The 10 largest exposures should exclude the following: affiliated and non-affiliated common stock, affiliated preferred stock, home office properties, policy loans, bonds for which AVR and RBC are zero, NAIC 1 bonds, NAIC 1 unaffiliated preferred stock, NAIC 1 Hybrids, CM 1 Commercial and Farm Mortgages and any other asset categories with RBC factors less than 0.8 percent post-tax (this includes residential mortgages in good standing, insured or guaranteed mortgages, and cash and short-term investments).

In determining the assets subject to the concentration factor for both C-1o and C-1cs, the ceding company should exclude any asset whose performance inures primarily (>50 percent) to one reinsurer under modified coinsurance or funds withheld arrangements. The reinsurer should include 100 percent of such asset. Any asset where no one reinsurer receives more than 50 percent of its performance should remain with the ceding company.

Assets should be aggregated by issuer before determining the 10 largest exposures. Aggregations should be done separately for bonds and preferred stock (the first six digits of the CUSIP number can be used as a starting point) (please note that the same issuer may have more than one unique series of the first six digits of the CUSIP), mortgages and real estate. Securities held within Schedule BA partnerships should be aggregated by issuer as if the securities are held directly. Likewise, where joint venture real estate is mortgaged by the insurer, both the mortgage and the joint venture real estate should be considered as part of a single exposure. Tenant exposure is not included. For bonds and unaffiliated preferred stock, aggregations should be done first for classes 2 through 6. After the 10 largest issuer exposures are chosen, any NAIC 1 bonds, NAIC 1 unaffiliated preferred stock or NAIC 1 hybrids from any of these issuers should be included before doubling the risk-based capital. For some companies, following the above steps may generate less than 10 “issuer” exposures. These companies should list all available exposures.

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

The book/adjusted carrying value of each asset is listed in Column (2).

The RBC factor will correspond to the risk-based capital category of the asset reported previously in the formula before application of the size factor for bonds. The RBC filing software automatically allows for an overall 45 percent RBC cap.
The Asset Concentration RBC Requirement for a particular property plus the Real Estate RBC Requirement for a particular property cannot exceed the book/adjusted carrying value of the property. Any properties exceeding the book/adjusted carrying value must be adjusted down to the book/adjusted carrying value in Column (6) of the Asset Concentration.

Line (18), Column (4) is calculated as Line (17), Column (2) multiplied by 0.2300 plus Line (18), Column (2) multiplied by 0.2000, but not greater than Line (17), Column (2).

Line (20), Column (4) is calculated as Line (19), Column (2) multiplied by 0.1500 plus Line (20), Column (2) multiplied by 0.1200, but not greater than Line (19), Column (2).

Line (22), Column (4) is calculated as Line (21), Column (2) multiplied by 0.2300 plus Line (22), Column (2) multiplied by 0.2000, but not greater than Line (21), Column (2).

The Asset Concentration RBC Requirement for a particular mortgage plus the LR004 Mortgages RBC Requirement or LR009 Schedule BA Mortgages RBC Requirement or LR004 Schedule BA Mortgages RBC Requirement cannot exceed 45 percent of the book/adjusted carrying value of the mortgage. Any mortgages exceeding 45 percent of the book/adjusted carrying value must be adjusted down in Column (6) of the Asset Concentration.

Line (32), Column (4) is calculated as the greater of 0.1800 multiplied by (Line (31) plus Line (32)) less Line (32) or Line (31) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (34), Column (4) is calculated as the greater of 0.0140 multiplied by (Line (33) plus Line (34)) less Line (34) or Line (33) multiplied by 0.0068.

Line (36), Column (4) is calculated as the greater of 0.1800 multiplied by (Line (35) plus Line (36)) less Line (36) or Line (35) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (38), Column (4) is calculated as the greater of 0.2200 multiplied by (Line (37) plus Line (38)) less Line (38) or Line (37) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (40), Column (4) is calculated as the greater of 0.0270 multiplied by (Line (39) plus Line (40)) less Line (40) or Line (39) multiplied by 0.0068.

Line (42), Column (4) is calculated as the greater of 0.2200 multiplied by (Line (41) plus Line (42)) less Line (42) or Line (41) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (43), Column (4) is calculated as Line (43) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (44), Column (4) is calculated as the greater of 0.2150 multiplied by (Line (44) plus Line (45)) less Line (44) or Line (45) multiplied by the appropriate factor for the CM class to which the loan is assigned.
Hedging

The concept of hedging credit, equity and other risks is widely accepted and understood among insurers and their regulators. In order for regulators to distinguish between insurers that have effectively reduced their risks from those insurers that have not, the risk based capital computation should be sensitive to such differences. Increasing or decreasing exposure to different asset classes in relation to a benchmark asset allocation tailored to meet the long term obligations to policy owners is critical to successfully managing an insurance company. Hedging is the process of using derivative instruments to most efficiently limit risk associated with a particular asset in a manner consistent with the insurer’s long term objectives. The relative advantage of using cash market transactions versus derivative market transactions depends upon market conditions.

The NAIC model investment laws and regulations establish specific constraints on the use of derivatives. Governance of derivative use starts with approved and documented authorities from the insurer’s Board of Directors to management. These authorities are coordinated with and enhanced by limits established by the insurer’s domiciliary state.

Hedging strategies currently employed by insurers range from straightforward relationships between the hedged asset and the derivative instrument (the hedge) to more complex relationships. The purpose of this section of the RBC calculation is to measure and reflect in RBC the risk reduction achieved by an insurer’s use of the most straightforward types of hedges involving credit default and equity C-1 risks.

To avoid the possible double counting of RBC credits, excluded from this section are any RBC credits arising from hedges that are part of the Clearly Defined Hedging Strategy (CDHS) required for C-3 cash flow testing or other risk mitigation techniques (e.g. reinsurance) which produce reduced levels of RBC by operation of other parts of the RBC formula.

RBC and Measuring the Risk Reduced by Hedging

To measure the risks reduced by hedging and reflect the effects in RBC it is important to understand the characteristics and purpose of the hedge. A portfolio manager seeking to hedge a particular asset or portfolio risk must determine if the derivative instruments available will do a suitable job of risk mitigation.

Default risk - A portfolio manager may determine that the default risk of a particular debt security which matures in 8 years needs to be hedged because of a near term credit concern which may resolve before the debt matures. A credit default swap (CDS) would be the most effective hedging instrument. In some circumstances the manager may purchase a CDS with 8 years to maturity which fully mitigates the default risk and shall result in an RBC credit which fully offsets the C-1 default risk charge on the debt security. However, seeking the most liquid and cost efficient market for the purchase of such an instrument may lead to the purchase of a 5 year CDS which the manager plans to renew (roll) as the credit circumstances evolve in the coming years. In this case there is a 3 year maturity mismatch between the debt security and the hedging instrument. To account for the difference between insurers that have hedged the debt security to full maturity versus those with a mismatched position, the determination of the RBC credit shall be made in accordance with the following formula which limits the results to a fraction of the C-1 charge for the hedged asset.
RBC Credit As % of C1 Asset Charge = Min\(\left(1, \frac{\text{Time to Maturity of CDS}}{\text{Time to Maturity of Bond}}\right) \times (94\% - 10\%) + 10\%\)

This accounts for mismatched maturities and provides a regulatory margin of safety within a range of 94%-10% of the C-1 asset charge.

There may also be circumstances where default risk is reduced by hedging specific portfolios using a basket or index-based derivative (e.g. CDX family of derivatives) with the same or very similar components as the portfolio. For these hedges the risk reduction shall be measured based on the number of issuers common to both the insurer’s portfolio and the index/basket CDS. A minimum of 50% overlap of the derivative instrument notional amount and the book/adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit. Additionally, if the insurer hedges an index, each bond must be listed (e.g. if the insurer acquires a CDX that hedges 125 names equally, then the insurer must list all 125 names on the schedule), regardless if the insurer owns all the bonds in the index.

As RBC is currently measured and reported annually and to an extent provides a regulator with an indicator of capital sufficiency for the near term future; default risk protection as provided by CDS (based on a specific security or an index of securities) shall have more than 1 year remaining to maturity in order to receive any RBC credit, provided that the remaining maturity of the hedged debt security or average maturity of the hedged portfolio is greater than 1 year. When both the default risk protection and the hedged debt security have less than one year to maturity, full RBC credit shall be allowed provided that the maturity of the protection is later than the maturity of the debt security; otherwise no RBC credit is allowed.

Equity market risk - A portfolio manager may determine that the market risk of holding a particular common stock needs to be reduced. Because an outright sale at that point in time might be disadvantageous to the insurer and/or policy owners, a short futures contract may be purchased to eliminate the current market risk by establishing a sale price in the future. The C-1 RBC equity risk credit shall be limited to 94%.

There may also be circumstances where equity market risk is reduced by hedging equity portfolios using derivatives based on equity market indices (e.g. S&P 500 futures contracts). Unless the equity portfolio is exactly matched to the index, the hedge will not provide precise one-to-one protection from fluctuations in value. The insurer must list all positions in the equity index individually (e.g. all 500 common stocks that are part of the S&P 500), regardless if the insurer owns all the stocks in the index.

Definitions and Instructions for the Spreadsheet Computation of Risk Reduction

(Numeric references represent spreadsheet columns)

Bonds

1. Description - Reported on Schedule DB.

2. Notional Amount - Amount reported on Schedule DB.

3. Relationship Type of the Hedging Instrument and Hedged Asset. There are two categories; Basic and Intermediate relationships. Basic relationship = Single issuer credit default swap on a single issuer name to hedge the credit risk of a specific hedged asset. Intermediate relationship = A portfolio of insurer assets paired with a basket or index based hedging instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit.

4. Maturity Date - Date reported on Schedule DB.
(5) **Description** - Bond description found in Schedule D. *For intermediate relationships, each bond must be listed (e.g. if the insurer acquires a credit default index that hedges 125 names equally, then the insurer must list all 125 names on the schedule.)*

(6) **CUSIP Identification** - Bond unique identifier found in Schedule D.

(7) **Book Adjusted Carrying Value** - Value found on Schedule D.

(8) **Overlap with Insurer’s Bond Portfolio** - The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book Adjusted Carrying Value. This amount cannot exceed Column (7) Book Adjusted Carrying Value.

(9) **Maturity Date** - The date is found in Schedule D.

(10) **NAIC Designation** - Designation found in Schedule D. Necessary to determine correct RBC Factor for the Bonds.

(11) **RBC Factor** - Factor based on Column (10) NAIC Designation and NAIC C-1 RBC factors table.

(12) **Gross RBC Charge** - This is the C-1 RBC charge based on holdings at the end of the year. Calculation: Columns (7) Book Adjusted Carrying Value multiplied by (11) RBC Factor.

(13) **RBC Credit for Hedging Instruments** - If Column (8) Overlap with Insurer’s Bond Portfolio is zero; the RBC Credit would also be zero. The Hedging Instrument must have more than 1 year remaining to maturity in order to receive any RBC credit provided that the remaining time to maturity of the Hedged Asset - Bonds is greater than 1 year. If both the Hedging Instrument and the Hedged Asset - Bonds maturity dates are less than 1 year, the maximum RBC credit determined using the formula below shall be allowed provided that the maturity of the hedging instrument is equal to or later than the maturity of the bond. Calculation is Column (8) Overlap with Insurer’s Bond Portfolio multiplied by RBC Credit as % of C-1 Asset Charge formula (formula listed below) multiplied by Column (11) RBC Factor.

\[
\text{RBC Credit as % of C-1 Asset Charge} = \min\left(1, \frac{\text{Time to Maturity of Hedging Instrument}}{\text{Time to Maturity of Bond}}\right) \times (94\% - 10\%) + 10\%
\]

Time to Maturity of Hedging Instrument divided by Time to Maturity of Bond cannot exceed 1.

(14) **Net RBC Charge** - Column (12) Gross RBC Charge minus (13) RBC Credit for Hedging Instruments.

**Common Stocks**

(1) **Description** - Reported on Schedule DB.

(2) **Notional Amount** - Amount reported on Schedule DB.

(3) **Relationship Type of the Hedging Instrument and Hedged Asset**. There are two categories; Basic relationships or Intermediate relationships. Basic relationship = Single name equity Hedging Instrument paired with a specific common stock. Intermediate relationship = A portfolio of common stocks paired with a basket or index based Hedging Instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged common stocks shall be required to qualify for any RBC credit.
(4) Description - Common Stock description found in Schedule D Part 2 Section 2. For intermediate relationships, each common stock must be listed (e.g. if the insurer acquires a short futures contract that hedges the S&P 500, then the insurer must list all 500 stocks on the schedule).

(5) CUSIP Identification - Common Stock unique identifier found in Schedule D Part 2 Section 2.

(6) Book Adjusted Carrying Value - Value found on Schedule D Part 2 Section 2.

(7) Overlap with Insurer’s Stock Portfolio – The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (6) Book/Adjusted Carrying Value. This amount cannot exceed the Column (6) Book Adjusted Carrying Value.

(8) RBC Factor - Factor based on NAIC C-1 RBC factors table.

(9) Gross RBC Charge - The C-1 RBC charge based on holdings at the end of the year. Calculation: Columns (6) Book Adjusted Carrying Value multiplied by (8) RBC Factor.

(10) RBC Credit for Hedging Instruments - RBC credit for equity market risk reduction is limited to 94% of the C-1 Asset charge. Calculation: Column (7) Overlap with Insurer’s Stock Portfolio multiplied by (8) RBC Factor multiplied by 94%.

(11) Net RBC Charge - Column (9) Gross RBC Charge minus (10) RBC Credit for Hedging Instruments.

OFF-BALANCE SHEET COLLATERAL
(Including any Schedule DL, Part 1 Assets not Included in the Asset Valuation Reserve)
LR018

Basis of Factors
Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements, and incur C-1 risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

Annual Statement Schedule DL, Part 1, Securities Lending Collateral Assets reported on the balance sheet (Assets Page, Line 10) should be included on the schedule with the Off-Balance Sheet Collateral if they are not already reflected in the Asset Valuation Reserve and are reflected in another portion of the Life RBC formula.

The collateral in these accounts is maintained by a third-party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/carrying value, and maturity date. The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula
Off-balance sheet collateral included in General Interrogatories, Part 1, Lines 24.05 and 24.06 of the annual statement should agree with Line (19).

Lines (1) through (8) – Bonds
Bond factors are described on page LR002 Bonds.

Line (9) through (15) – Preferred Stocks
Preferred stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (16) – Common Stock
Common stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (17) – Schedule BA – Other Invested Assets
Other invested assets factors are described on page LR008 Other Long Term Assets.

Line (18) – Aggregate Write-ins for Other Invested Assets
Aggregate write-ins for other invested assets factors are described on page LR012 Miscellaneous Assets.
Moody's (NYSE:MCO) is a global integrated risk assessment firm that empowers organizations to make better decisions. Its data, analytical solutions and insights help decision-makers identify opportunities and manage the risks of doing business with others. We believe that greater transparency, more informed decisions, and fair access to information open the door to shared progress. With over 11,400 employees in more than 40 countries, Moody's combines an international presence with local expertise and more than a century of experience in financial markets. Learn more at moody.com/about.

Moody's Corporation is comprised of two separate companies: Moody's Investors Service (MIS) and Moody's Analytics (MA).

Moody's Investors Service (MIS) provides investors with a comprehensive view of global debt markets through credit ratings and research. Moody's Analytics (MA) provides data, analytics, and insights to equip leaders of financial, non-financial, and government organizations with effective tools to understand a range of risks.

Throughout this document, “MIS rating” refers to a MIS credit rating. And while references to MIS are made, the views and opinions in this document are solely of MA.
Proposing RBC C1 bond factors using data and methodologies that better reflect economic risks to better assess insolvency risk and help identify potentially weakly capitalized life insurers; the C1 factors should not incentivize poor business decisions that can adversely impact solvency.

- Methodologies and data rely entirely on public sources that are accessible and reproducible by NAIC and industry
- Articulated limitations
- NAIC to use at its discretion in setting the final C1 factors, although MA cautions isolated modifications to modeling features and parameters without considerations of the interconnected elements of the C1 modeling framework and limitations
- While the ACLI, the industry, the NAIC, and commissioners have been engaged extensively, the views are solely those of MA and based on an objective assessment of supporting documentation, and data and modeling approaches that in MA’s experience viewed as best practice

**Scope**

**What We’re Doing**

Proposing C1 factors that
- Better represent the historical experience of life insurers’ holdings
- More accurately reflect empirically observed default correlations and issuer diversification benefits

**Challenges:**
- C1 factors are cardinal, and a function of MA’s default rates estimated using MIS corporate default rates that reflect the historical experience of life insurance corporate holdings for each MIS rating, which are opinions of ordinal, horizon-free credit risk, rather than cardinal
- C1 factors are static while risks and spreads change over time, across ratings and asset classes, resulting in a potential misalignment between the C1 factors and the underlying risks of varied holdings in insurers’ portfolios.
- Applied to range of credit assets, based on their NAIC designations (i.e., the second lowest nationally recognized statistical rating organization (NRSRO) rating) with statistical properties that can be different from those estimated using MIS corporate default rates

**Heuristic Performance Criteria**

**How We’re Doing It**

**Proposing C1 factors that**
- Better represent the historical experience of life insurers’ holdings
- More accurately reflect empirically observed default correlations and issuer diversification benefits

**Past presentation to the Life Risk-Based Capital (E) Working Group**
- [Assessment of Proposed Revisions to the RBC C1 Bond Factors](#) (February 2021)

Agenda

1. Overview of Impactful Targeted Improvements
2. Economic State Model and the MA Proposed Correlation Model
3. Default Rates
4. Risk Premium
5. Discount Rate and Tax Rate
6. Recap

© 2021 National Association of Insurance Commissioners
Overview of Impactful Targeted Improvements
MA’s Proposed C1 Factors
Targeted improvements with largest impact

Economic state model, initially outside scope, limitations sufficiently material that MA recommends replacement:
- Economic state model understates default correlations and overstates diversification across issuers relative to that observed empirically, resulting in:
  - C1 base factors that potentially understate credit losses
  - PAFs that are overly punitive (lenient) to portfolios with a smaller (larger) number of issuers
- Economic Scalars result in counterfactual increases and decreases to the C1 base factors across the NAIC designation categories. They lead to an overall flattening of high yield C1 base factors relative to investment grade, and under certain parameterizations C1 base factors that are non-monotonic.
- MA proposed correlation model is calibrated to default correlations and diversification across issuers observed empirically. Resulting C1 base factors are more conservative and differentiated across MIS ratings compared with economic state model.

Corporate default rate term structures estimated to historical experience of life company holdings:
- Life company holdings differ from overall issuance; e.g., life company holdings have less weight on financial institutions that tend to issue shorter term debt.
- MA proposed default rates tend to have a steeper slope (more differentiated across MIS ratings) than those proposed by the Academy, with differentiation more closely aligning with benchmarks.

Risk Premium set at expected loss plus 0.5 standard deviation recognizing variation in industry reserving standards and to closer align with PBR and reserving standards generally aiming to cover moderately adverse conditions. A higher Risk Premium lowers the C1 base factors and mildly increases the cross-sectional variation (or slope) and should be set to better identify of weakly capitalized firms identify and mitigate risk shifting incentives with new bond purchases.

Discount Rate & Tax rate set at 3.47% (2000-2020 window) and 21% under guidance of NAIC during the Life Risk-Based Capital (E) Working Group meeting on April 22, 2021. While an alternative window start date can be justified, the discount rate enters the RBC C1 framework as a single static rate and not as impactful as some other targeted improvements, reinforced by updated tax rate offset. Potentially important term structure dynamics that interplay with credit risk are not captured within the current framework.
Economic State Model and the MA Proposed Correlation Model
Economic State Model Initially Outside Scope

Two material limitations

Economic state model is calibrated to default rates across contraction and expansion states, but it implies default correlations of ~0% for IG issuers, overstating diversification across issuers relative to that observed empirically, resulting in:

» C1 base factors that potentially understate credit losses
» PAFs that are overly punitive (lenient) to portfolios with a smaller (larger) number of issuers

Economic Scalars, that are applied to the default rate term structure in each simulated state (expansion and contraction) exhibit counterfactual increases and decreases across the NAIC designation categories.

» They lead to an overall flattening of C1 base factors for high yield relative to those of investment grade
» Contraction Economic Scalars average 2.56 for investment grade and 1.75 for high yield (1)
» Under certain parameterizations C1 base factors are non-monotonic, e.g., contraction scalar going from 1.9421 (Ba3) to 1.4958 (B1) (2).

NAIC Proceedings – Summer 2021

Attachment One-E

Capital Adequacy (E) Task Force

7/28/21
**MA Proposed Correlation Model**

Calibrated to default correlations observed empirically

The Academy’s 10-year simulation model was adapted

» Default rate Economic Scalars set to 1 (this effectively disables the economic state model)
» Default correlations calibrated to empirically observed default correlations and issuer diversification benefits

Several benchmarks for default correlation

» Joint default events
» CDS implied
» MIS ratings implied
» Equity market and financial statement

MA proposed correlation model results in

» C1 base factors that reflect empirical default correlations and are more conservative and more differentiated across MIS ratings than those implied by the economic state model; and
» PAFs that more accurately reflect issuer diversification benefits, and that are less punitive (lenient) to portfolios with a smaller (larger) number of holdings, relative to those from Academy’s proposal

MA proposed correlation model is calibrated to reflect empirically observed joint default events across MIS rating categories

» In each period the likelihood of issuer x and y defaulting is determined by their default rates as depicted by the visualized distribution in red
» The likelihood of a joint default, captured through a single factor model, is depicted in yellow and determined by the joint distribution represented by concentric circles
» The model is continuous and not tied to 2 (or 4) discrete economic states, and generally results in higher 96 percentile loss
Proposed C1 Base Factors

Incremental effects of replacing the economic state model with MA’s proposed correlation model

» MA’s proposed correlation model generally increases C1 base factors

» (1) As part of the economic state model, Economic Scalars lead to overall flattening of high yield C1 base factors relative to investment grade. MA’s proposed correlation model
  — increases high yield factors by 28%
  — Increases investment grade factors by 24%

» (2) Economic Scalars lead to non-monotonic C1 base factors under some parameterizations, e.g., 4.952% for Ba3 to 4.920% for B1

» (3) Economic Scalars lead to more differentiation (22%) between A3 and Baa1 C1 base factors, compared to the correlation model (11%)

*Current PAF converted to Academy’s proposed thresholds for better comparison.
**MA’s Proposed Factors**

**Impact on Post-PAF C1 RBC**

- Resulting RBC under MA’s proposal are generally more conservative than under the current formula, with an increase across life companies of different sizes.
- Under the Academy’s proposal, a disproportionate share of the C1 RBC increase is attributed to life companies with portfolios that have a small and medium number of issuers, driven largely by the economic state model implying more issuer diversification benefits (i.e., lower default correlations).

![Graph showing Total Industry Post-PAF C1 RBC (Pre-Tax)](image)

![Graph showing Ratio of Life Company’s Post-PAF C1 RBC (Pre-Tax) Under Proposed-to-Current Formula (Schedule D Part 1 Holdings)](image)

- Generally, portfolios with fewer than 10 issuers, sometimes a single issuer.
Default Rates
MA Proposed 10-Year Cumulative Default Rates

More closely reflect historical experience of life companies’ corporate holdings

Raw default rates and benchmarks are subject to data challenges:

- Non-monotonicity (1)
- Few defaults in upper end of MIS ratings spectrum (2). 3 Aaa defaults in the US since 1970; 2 were debatable and experienced near full recovery (Texaco and Getty Oil).

Historical experience of life companies’ corporate holdings differs from overall issuance (3), the resulting default rates tend to have a steeper slope (more differentiated across MIS ratings) than those proposed by the Academy.

MA proposed baseline default rates combine empirical data, anchoring, and smoothing to address data paucity and ensure conformity to economic logic.

- Anchoring:
  - 10-year cumulative default rates for Aa2, A2, Baa2, Ba2, B2, Caa are anchored to Aa, A, Baa, Ba, B, Ca sector-weighted US corporate CDRs at 1- and 10-year, with curvature adjustment.

- Interpolation:
  - Other alphanumeric ratings were interpolated geometrically between anchored ratings.

Attachment One-E

Capital Adequacy (E) Task Force
Institutional features drive life insurers towards holdings with characteristics different from overall issuance.

Certain sectors are more suitable for life insurers across the ratings scale:
- Financial sector issued debt tends to exhibit shorter duration (3.9 average remaining maturity), with insurers holding longer dated financial sectors issues (11.1 average remaining maturity) (1).
- Insurers hold a varying proportion of debt across the rating scale (2).

Relevant in the estimation of:
- Default rates
- LGD

Proposed C1 Base Factors

Incremental effects of MA proposed default rates

> Default rate term structures representing experience of life insurance holdings tend to be more differentiated across MIS ratings than Academy proposed, and closer aligned to benchmarks

> The resulting C1 base factors under MA’s proposed default rates are generally more differentiated across the Aa3 to Baa3 range

> The ratio of the Baa3 factor to the Aa3 factor is
  - 2.7 under MA’s proposal with the Academy’s default rates
  - 4.1 under MA’s proposal

> The Academy’s proposed default rates result in C1 base factors being approximately 15% larger on average than under MA’s proposed default rates.

Risk Premium

4
Risk Premium Updates

Aligning with reserves

» C1 RBC is the minimum required capital above statutory reserves to buffer against a tail loss
  – Risk Premium acts as an offset to C1 RBC; it is the part of statutory reserves provisioned against default loss

» Variation in industry reserving standards
  – Both VM-20 and VM-21 explicitly require that reserves cover CTE 70, or approximately 88th percentile, default loss
  – VM-20 only applies to new life products after 2017. Most existing policies follow industry reserving standards that are commonly understood to cover moderately adverse conditions.

» Recognizing variation in industry reserving standards and to closer align with PBR and reserving standards generally aim to cover moderately adverse conditions, Risk Premium is proposed to be set at expected loss plus 0.5 standard deviation
  – A higher Risk Premium lowers the C1 base factors and mildly increases their differentiation across MIS ratings and should better identify weakly capitalized firms and mitigate risk shifting incentives with new bond purchases
  – On average, as we decrease (increase) the risk premium by 0.5 standard deviation from MA's proposed level, the C1 base factors increase (decrease) around 20% for investment grade and around 15% for high yield factors

» A transition to expected loss plus one standard deviation once
  – VM-20 become more widely applicable
  – VM-22 is formally updated and widely applicable
Discount Rate and Tax Rate
Discount and Tax Rate
Possible candidates

Tax rate was updated from 35% to 21%

Discount rate

» Used to calculate the net present value of projected cash flows.
» MA recognizes the need to parameterize the discount rate with a long-term perspective of long-term interest rates, and the desire for this parameter to be relatively stable while also allowing a closer reflection of the current, low-rate, environment

- 2000–2020 (3.47%) used in developing MA proposed C1 base factors under guidance of NAIC during the Life Risk-Based Capital (E) Working Group meeting on April 22, 2021

- Compared with the discount rate of 3.47%
  - 1993–2013 used by the Academy (5%) decreases C1 base factors by
    » 6-7% for investment grade
    » 3-6% for high-yield
  - 1993–2020 (4.32%) decreases C1 base factors by
    » 2-6% for investment grade
    » 2-3% for high-yield
  - 2010–2020 (2.25%) increases C1 base factors by
    » 5-7% for investment grade
    » 3-5% for high-yield
Recap
Proposed Updates to the RBC C1 Bond Factors

Post-PAF C1 RBC Industry Impact – Complete Portfolio Holdings

Post-PAF RBC proposed by MA is higher than the current level

*Data on ~94% life companies in US that have reported, which includes over 99% of the industry BACV as of 03/19/2021

MOODY’S ANALYTICS

Proposed Updates to the RBC C1 Bond Factors

Attachment One-E

Capital Adequacy (E) Task Force

7/28/21

NAIC Proceedings – Summer 2021
Summary of MA Proposed C1 Factors and their Impact

**Impact on post-PAF C1 RBC**
- Higher post-PAF RBC, on average, across the life industry compared to current formula
- Larger post-PAF RBC increase compared to current formula, on average, for insurers with small and medium number of issuers, but much less so than that under Academy's proposal

**Limitations of economic state model and their impact on accuracy of C1 base factors & PAFs**
- The economic state model overstates diversification across issuers relative to that observed empirically, resulting in
  - Understatement of credit losses in C1 base factors, all else equal
  - PAFs that are overly punitive (lenient) to portfolios with a smaller (larger) number of issuers
- Economic Scalars, which are part of the economic state model under the Academy's proposal, result in counterfactual increases and decreases to the C1 base factors across the NAIC designation categories. They lead to an overall flattening of high yield C1 base factors relative to investment grade, and under certain parameterizations C1 base factors that are non-monotonic.

**Impact of replacing the economic state model with MA proposed correlation model**
- MA proposed correlation model more accurately reflects empirically observed default correlations and issuer diversification benefits, and that addresses all aforesaid limitations of the economic state model. As a result:
  - MA proposed C1 base factors are more conservative and more differentiated across NAIC designation categories than those implied by the economic state model.
  - MA proposed PAFs more accurately reflect issuer diversification benefits and are less punitive (lenient) to portfolios with a small (larger) number of issuers, relative to those from the Academy's proposal.

MOODY'S ANALYTICS

Proposed Updates to the RBC C1 Bond Factors
MA C1 Factors with Risk Premium (RP) Sensitivity Analysis and Override of Portfolio Adjustment Factors (PAFs) 
For Discussion with Life Risk-Based Capital (E) Working Group 

June 2021
Moody's (NYSE:MCO) is a global integrated risk assessment firm that empowers organizations to make better decisions. Its data, analytical solutions and insights help decision-makers identify opportunities and manage the risks of doing business with others. We believe that greater transparency, more informed decisions, and fair access to information open the door to shared progress. With over 11,400 employees in more than 40 countries, Moody’s combines an international presence with local expertise and more than a century of experience in financial markets. Learn more at moodys.com/about.

Moody’s Corporation is comprised of two separate companies:
Moody's Investors Service (MIS) and Moody’s Analytics (MA).

Moody’s Investors Service (MIS) provides investors with a comprehensive view of global debt markets through credit ratings and research. Moody's Analytics (MA) provides data, analytics, and insights to equip leaders of financial, non-financial, and government organizations with effective tools to understand a range of risks.

Throughout this document, “MIS rating” refers to a MIS credit rating.
And while references to MIS are made, the views and opinions in this document are solely of MA.
Requested Sensitivity Analysis of MA C1 Factors

As requested by Life Risk-Based Capital (E) Working Group on May 20, 2021

1. Sensitivity analysis of MA C1 factors with Risk Premium changed from expected loss plus 0.5 standard deviation to 60th percentile while maintaining other MA targeted modifications
   - Increases and flattens the base factors. The factors are less differentiated across NAIC designations, resulting in lower rated credit becoming more attractive on a relative basis
   - Base factors increase by ~21% for investment grade NAIC designations, and ~11% for high yield
   - The increase in Post-PAF C1 RBC range from 9% (for portfolios with lower NAIC rated issuers) to 37% (for portfolios with higher NAIC rated issuers)

2. Analysis of post-PAF RBC with portfolio adjustment factor (PAF) overridden for portfolios with fewer than 50 issuers (106 life portfolios; Book Adjusted Carrying Values range from $79K to $877M)
   - MA PAF-override post-PAF C1 RBC is, in general, higher than under the current formula, and the increase continues to be relatively evenly distributed across life companies of different sizes
   - To facilitate comparison, the Academy's PAF-override post-PAF C1 RBC is analyzed, and is found to remain disproportionately higher for small and medium sized life portfolios

For articulation of defined scope and performance criteria associated with methodology, data, and limitations associated with MA C1 factors, see 'Moody's Analytics' Report on Proposed Bond Factor Revisions'
Overview of Risk Premium (Recap)

One of several interconnected modifications with largest impact to MA C1 factors

» MA understands C1 RBC is the minimum required capital above statutory reserves to buffer against a tail loss
  – Risk Premium acts as an offset to C1 RBC

» Variation in industry reserving standards
  – VM-20 and VM-21 explicitly require that reserves cover CTE 70, or approximately 88th percentile, default loss, without accounting for any assets backing Asset Valuation Reserve (AVR)
  – VM-20 applies to new life products after 2017; with increasing coverage for new bond purchases
  – New reserve standards such as VM-22 are also expected to follow the same framework and cover CTE 70 default loss
  – Existing policies follow industry reserving standards, which generally aim to cover moderately adverse conditions; AVR used in Cash Flow Testing (CFT) of these reserves is excluded from Total Adjusted Capital (TAC), and thus functions as additional CFT reserves rather than available capital

» MA’s Risk Premium
  – Together with several other interconnected modifications, MA’s Risk Premium was set at expected loss plus 0.5 standard deviation recognizing variation in industry reserving standards and to closer align with PBR and other reserving standards generally aimed to cover moderately adverse conditions
Aligning C1 Factors with AVR (Recap)

The Academy raised concerns related to Risk Premium and AVR consistency

- AVR is an allocation of surplus to smooth the cyclicality of credit default events
- Allocation of surplus across AVR and unassigned surplus does not affect RBC Ratio
- AVR does not enter the Academy or MA’s C1 formula
- While historically the basic contribution of AVR has been set to be the same as Risk Premium, the alignment between AVR and Risk Premium is not relevant to the RBC framework, whose purpose is to help identify potentially weakly capitalized companies

![Diagram showing the calculation of Authorized Control Level RBC]

\[ \text{Authorized Control Level RBC} = \text{RBC Ratio} = \text{Unassigned Surplus} + \text{AVR} + 0.5 \times \text{Dividend Liability} \]
### C1 Base Factors

Sensitivity analysis with Risk Premium set at 60th percentile

- With the Risk Premium set at the 60th percentile, base factors increase across the board.
- The factors are less differentiated across NAIC designations, resulting in lower rated credit being more attractive on a relative basis.
- Factors increase by around 21% for investment grade NAIC designations, and around 11% for high yield.

Sensitivity Analysis with Risk Premium set at 60th percentile

Without PAF-override

- Total industry post-PAF C1 RBC increases from $41.83B to $49.16B when MA formula’s Risk Premium is set at 60th percentile
- The increase in Post-PAF C1 RBC ranges from 9% (for portfolios with lower NAIC rated issuers) to 37% (for portfolios with higher NAIC rated issuers)

Note 1: Holdings includes all exposures on Schedule D Part 1 excluding US government bonds.
Note 2: For visual ease, the right-hand graph excludes portfolios with less than $100K post-PAF RBC under the current formula.
Impact of PAF-Override for Portfolios with fewer than 50 Issuers

While keeping MA's Risk Premium set at expected loss plus 0.5 standard deviation

- PAF-override decreases Post-PAF RBC for 106 portfolios with fewer than 50 issuers; Book Adjusted Carrying Values ranges from $79K to $877M
- Total industry PAF-override post-PAF C1 RBC impact is limited under the MA and Academy factors
- MA PAF-override post-PAF C1 RBC is, in general, higher than under the current formula; the increase continues to be relatively evenly distributed across life companies of different sizes
- To facilitate comparison of the two proposals, the Academy's PAF-override post-PAF C1 RBC is analyzed and found to be, in general, higher than under the current formula; the analysis continues to show the disproportionate increase for small and medium sized life portfolios

Impact of PAF-Override for Portfolios with fewer than 50 Issuers

**DESCRIPTION OF CHANGE(S)**

This proposal changes the description on line 15 on LR016 to allow for inclusion of amounts held for reciprocal jurisdiction reinsurance.

---

**REASON OR JUSTIFICATION FOR CHANGE **

The purpose of the credit in the life RBC formula is to avoid having both the total adjusted capital decreased by amounts re-established as liabilities and the authorized control level increased for the charge on reserve credit and recoverable amounts.

NAIC Proceedings – Summer 2021
REINSURANCE
LR016

Basis of Factors

There is a risk associated with recoverability of amounts from reinsurers. The risk is deemed comparable to that represented by bonds between risk classes 1 and 2 and is assigned a pre-tax factor of 0.78 percent. To avoid an overstatement of risk-based capital, the formula gives a 0.78 percent pre-tax credit for reinsurance with non-authorized and certified companies, for reinsurance among affiliated companies, for reinsurance with funds withheld or reinsurance with authorized reinsurers that is supported by equivalent trustee collateral that meets the requirements stipulated in Appendix A-785 (Credit for Reinsurance), where there have been regular bona fide withdrawals from such trustee collateral to pay claims or recover payments of claims during the calendar year covered by the RBC report, and for reinsurance involving policy loans. Withdrawals from trustee collateral that are less than the amounts due the ceding company shall be deemed to not be bona fide withdrawals.

Specific Instructions for Application of the Formula

Lines (1) through (7)
The first seven components of the reinsurance formula are charged against all reinsurance recoverables and ceded reserve credits as reported in Schedule S.

Lines (8) through (12)
A negative 0.78 percent pre-tax factor is applied to these five components. These adjustments should only be applied to business assumed from subsidiaries of the company. The adjustment should be multiplied by the proportion of the ceding company owned by the parent. The subsidiary’s RBC is part of the individual company’s RBC, and sister affiliate reinsurers should NOT be included. In addition, no adjustment should be made where an adjustment has already been taken in the re-established liability components above. This would be the case if the subsidiary insurer was unauthorized or the treaty with the company involved funds held.

Lines (13) through (16)
The last four components are primarily Page 3 liabilities (including Line 24.02 – Reinsurance in Unauthorized and Certified Companies and Line 24.03 – Funds Held under Reinsurance Treaties with Unauthorized and Certified Reinsurers, Line 24.07 – Funds Held under Coinsurance and Line 25 – Aggregate Write-ins for Liabilities). Line (15) is also to include amounts in support of Lines (1) through (7) and subject to the provisions of Credit for Reinsurance Model Regulation (#786). A pre-tax factor of negative 0.78 percent is applied. This considers that these liabilities reported on Page 3 have been reestablished in the balance sheet offsetting the reinsurance ceded reserve credits taken elsewhere.
This proposal presents base factors and correlation and guardrail factors for the longevity risk charge.

**REASON OR JUSTIFICATION FOR CHANGE **

The Longevity Risk (A/E) Subgroup was charged with providing recommendations for recognizing longevity risk in statutory reserves and/or RBC, as appropriate. The Subgroup’s recommendation for the structure necessary was adopted by the Life Risk-Based Capital (E) Working Group on 2-14-20 in proposal 2019-13-L and factors of zero were adopted in proposal 2020-06-L for year end 2020.

Additional Staff Comments:

*6/30/21 (jdb) Instructions and Factors adopted by the Task Force.

** This section must be completed on all forms.
LONGEVITY RISK
LR025-A

Basis of Factors

The factors chosen represent surplus needed to provide for claims in excess of reserves resulting from increased policyholder longevity calibrated to a 95th percentile level. For the purpose of this calibration aggregate reserves were assumed to provide for an 85th percentile outcome.

Longevity risk was considered over the entire lifetime of the policies since these annuity policies are generally not subject to repricing. Calibration of longevity risk considered both trend risk based on uncertainty in future population mortality improvements, as well as level or volatility risk which derives from misestimation of current population mortality rates or random fluctuations. Trend risk applies equally to all populations whereas level and volatility risk factors decrease with larger portfolios consistent with the law of large numbers.

Statutory reserve was chosen as the exposure base as a consistent measure of the economic exposure to increased longevity. Factors were also scaled by reserve level since number of insured policyholders is a less accessible measure of company specific volatility risk. Factors provided are pre-tax and were developed assuming a 21% tax adjustment would be subsequently applied.

Specific Instructions for Application of the Formula

Annual statement reference is for the total life contingent reserve for the products in scope. The scope includes annuity products with life contingent payments where benefits are to be distributed in the form of an annuity. The entire reserve amount for contracts in scope that include any life contingent payments are in scope. For example, under a certain-and-life style annuity, the entire reserve for both the certain payments and life contingent payments are in scope. Variable immediate annuity reserves under VM-21 are also in scope where there are life contingent payments. Scope does not include annuity products that are not life contingent, or deferred annuity products where the policyholder has a right but not an obligation to annuitize. A certain-and-life style annuity, where only certain payments remain (such as following the death of the annuitant), is out of scope. Variable deferred annuity contract reserves under VM-21 are out of scope, including reserves valued under VM-21 for any contracts where policyholder account value has reached zero, but a lifetime benefit may still be payable by the insurer. Line (3) for General Account Life Contingent Miscellaneous reserves is included in the event there are any reserves for products in scope reported on Exhibit 5 line 079999; it is not meant to include cash flow testing reserves reported on this line. Included in scope are:

- Single Premium Immediate Annuities (SPIA) and other payout annuities in pay status
- Deferred Payout Income Annuities which will enter annuity pay status in the future upon annuitization
- Structured Settlements for annuitants with any life contingent benefits
- Group Annuities, such as those associated with pension liabilities with both immediate and deferred benefits

The total reserve exposure is then further broken down by size as in a tax table. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to reserves is completed automatically. The calculation is as follows:

<table>
<thead>
<tr>
<th>Line (5)</th>
<th>Life Contingent Annuity Reserves</th>
<th>Statement Value</th>
<th>Factor</th>
<th>RBC Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 250 Million</td>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Over 1,000 Million</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The amount ultimately included in the authorized control level will be subject to a guardrail factor of 0 and a correlation factor of -.25.

**DESCRIPTION OF CHANGE(S)**

Adding examples as a guide to portray the intent of the R3 ratings instructions.

---

**REASON OR JUSTIFICATION FOR CHANGE **

The proposed instruction changes would provide examples to clarify how the reporting companies should select the designation in the Annual Statement Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies.

---

**Additional Staff Comments:**

3/15/21 – The PCRBC WG exposed this proposal for a thirty-day public comment period ending Apr. 14.

4/27/21 – The PCRBC WG adopted this proposal with no received comments.

6/30/21 (jdb) Instructions adopted by the Task Force.

**This section must be completed on all forms.**

© 2021 National Association of Insurance Commissioners
The calculation of the credit risk charge for reinsurance recoverables is detailed in Schedule F Part 3 Columns 28 through 36 of the Property/Casualty Annual Statement. This calculation is performed at the transaction level and those results are then summed to determine the charge. Reinsurance balances receivable on reinsurance ceded to non-affiliated companies (excluding certain pools) and to alien affiliates are subject to the credit risk-based capital charge. The following types of cessions are exempt from this charge:

- Cessions to State Mandated Involuntary Pools and Associations or to Federal Insurance Programs.
- Cessions to U.S. Parents, Subsidiaries and Affiliates.
- Cessions to U.S. Parents, Subsidiaries and Affiliates.

The categories above are automatically excluded from the data that is calculated in Schedule F Part 3 of the Annual Statement.

Since the Annual Statement requires the collectability of reinsurance balances be considered via the reinsurance penalty, the appropriate balances must be offset by any liability that has been established for this purpose. The amount from Page 3, Line 16 should be allocated to the appropriate reinsurers listed on Schedule F. The total amount recoverable from reinsurers less any applicable reinsurance penalty is multiplied by 120% to stress the recoverable balance. The total of reinsurance payable and/or funds held amounts (not in excess of the stressed recoverable) are applied as offsets to arrive at the stressed net recoverable.

Since there are different reinsurance credit risk factors for collateralized and uncollateralized reinsurance recoverables, the stressed net recoverable should be offset by any available collateral, such as letters of credit, multiple beneficiary trusts, and single beneficiary trusts and other allowable offsets (not in excess of the stressed net recoverable). The collateralized amounts are derived from Schedule F Part 3 Column 32 and the uncollateralized amounts are derived from Column 33.

The risk-based capital for the various credits (including collateral offsets where applicable) taken for reinsurance may not be less than zero even if the amount reported or the amount net of offsets is negative.

The factor for reinsurance recoverables (paid and unpaid less any applicable reinsurance penalty) due from a particular reinsurer is determined based on that reinsurer’s financial strength rating assigned on a legal entity basis.

For the purpose of the credit risk-based capital charge, the equivalent rating category assigned will correspond to current financial strength rating received from one of the approved rating agencies as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the reinsurer and shall not be based solely on publicly available information. If the reinsurer does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “Secure 3” equivalent rating.

For authorized associations including incorporated and individual unincorporated underwriters or a member thereof (e.g. individual authorized syndicates of Lloyds’ of London that are backed by the Central Fund) utilize the lowest financial strength group rating received from an approved rating agency.

For authorized associations, including incorporated and individual unincorporated underwriters or a member thereof (e.g. individual authorized syndicates of Lloyds’ of London that are backed by the Central Fund), may utilize the lowest financial strength group rating received from an approved rating agency.

The table below shows the R3 reinsurer equivalent rating categories and corresponding factors for A.M. Best, Standard and Poor’s, Moody’s and Fitch ratings.
Reinsurer Designation Equivalent Rating Category and Corresponding Factors—For RBC R3 Credit Risk Charge

<td>5.3%</td>
<td>7.1%</td>
<td>14.0%</td>
</tr>
</tbody>
</table>

Each reporting company should record in Schedule F Part 3, Column 34, the reinsurer designation equivalent financial strength ratings assigned to the (re)insurers listed, where there are balances receivable on reinsurance ceded for the Schedule F categories subject to the credit risk charge on reinsurance recoverables. The resulting credit risk charge for reinsurance recoverables is determined by applying the corresponding factor by reinsurer designation equivalent to the collateralized and uncollateralized balances respectively. These respective charges are derived from Schedule F Part 3, Columns 35 and 36 and Line 9999999 totals are reported on PR012 Lines 1 and 2. See examples below.

Miscellaneous Recoverables

There is risk associated with recoverability of amounts from creditors other than reinsurers. In addition to the default risk, there is the risk that the amounts are not accurately estimated. The factor to measure this risk is estimated at 5 percent for Amounts Receivable Relating to Uninsured Accident and Health Plans; Receivables from Parent, Subsidiaries and Affiliates; and Aggregate Write-ins for Other Than Invested Assets. For Interest, Dividends and Real Estate Income Due and Accrued, which for the most part represents interest income due and accrued from bond holdings, the charge is 1 percent, which is equivalent to the charge applicable to unaffiliated NAIC 02 bonds.

Examples: The following examples are here as a guide to portray the intent of these instructions.

These examples assume that all financial strength ratings are from one of the rating agencies listed in the table above and there is interactive communication between the rating agency and the reinsurer unless stated otherwise.

Example 1—Reinsurer has only one rating: Assume the Reinsurer XYZ has a financial strength rating of A from A.M. Best. This falls in the Secure 3 category and the reporting company should select this category and corresponding charge.

Example 2—Reinsurer has more than one rating: Assume the Reinsurer XYZ has a financial strength rating of “A” from A.M. Best and another rating of “AAA” from Fitch. The reporting company may use either of the ratings provided by A.M. Best or Fitch.

Example 3—Reinsurer only has a Public Information Rating: Ratings that include the symbol of “pi” (e.g. Api), which indicates a public information rating, are not allowed to be used. If a reinsurer has only been assigned Public Information ratings, meaning no other financial strength ratings have been assigned to it; then the reporting company must list the reinsurer’s rating as Vulnerable 6 or Unrated.

DESCRIPTION OF CHANGE(S)

The proposed change would update the Line 1 Factors for PR017 and PR018.

REASON OR JUSTIFICATION FOR CHANGE **

The proposed change would provide routine annual update of the industry underwriting factors (premium and reserve) in the PCRBC formula.

Additional Staff Comments:
The P/C RBC WG exposed this proposal for a 30-day comment period ended by 5/26/21.
The P/C RBC WG adopted this proposal on 6/9/21.
6/30/21- (jdb) Factors were adopted by the Task Force.

** This section must be completed on all forms.

PR006 - Bonds and Bond Size Factor Adjustment

Basis of General Bond Factors

The bond risk factors for investment grade bonds (NAIC Designation Category 1.A – 2.C) are based on cash flow modeling. Each bond of a portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by NAIC Designation category and that year’s economic environment. The default probabilities were based on historical data intended to reflect a complete cycle of favorable and unfavorable credit environment. The risk of default was measured over a 5-year time horizon, selected considering the duration of property/casualty assets and liabilities.

The factors for NAIC Designation Category 3.A to 6 recognize that these non-investment grade bonds are reported at the lower of amortized cost or fair value. These bond risk factors are based on the market value fluctuation for each of the NAIC designation category compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

The bond risk factors are selected with consideration of the effect of the bond size factor.

Bond Size Factor

The bond factors assume a portfolio of 802 issuers. The size factor reflects that the risk increases as the number of bond issuers decreases. The bond size factor adjusts the computed RBC for those bonds that are subject to this size factor to more accurately reflect the risk.

The bond size factor is to be multiplied by the risk-based capital of the bonds subject to the size factor. This calculation produces the additional RBC required for a portfolio that has 801 or less bonds in it. Portfolio with 803 or more issuers will receive a discount. The bond size factor was developed as a step factor (as in a tax table) so that the overall factor decreases as the portfolio size increases.

Bonds should be aggregated by issuer (the first six digits of the CUSIP number should be used for aggregation). In determining the total number of issuers, do not count:

- U.S. government bonds that are direct and guaranteed and backed by the full faith and credit of the U.S. government (other U.S. Government Obligations / Full Faith and Credit)
- FNMA and FHLMC collateralized mortgage obligations.
- Other obligations backed by the U.S. government.

The calculation shown below will not appear in the software but will be calculated automatically. However, you must enter the total number of issuers in the appropriate field on the RBC filing software. If you leave this field blank, the program will assume that there are less than 10 issuers and will default to the maximum bond size factor adjustment. The calculation to derive the bond size factor is:

<table>
<thead>
<tr>
<th>Source</th>
<th>No of Issuers</th>
<th>Weighted Issuers</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 10</td>
<td>Co Records</td>
<td>X 2.6 = X 0.75</td>

<tr>
<td>Next 50</td>
<td>Co Records</td>
<td>X 3.0 = X 0.75</td>
</tr>
<tr>
<td>Next 100</td>
<td>Co Records</td>
<td>X 0.5 = X 0.75</td>
</tr>
<tr>
<td>Over 300</td>
<td>Co Records</td>
<td>X 0.9 = X 0.75</td>
</tr>
<tr>
<td>Total</td>
<td>Co Records</td>
<td>X 0.75</td>
</tr>
</tbody>
</table>
Size Factor = Total Weighted Issuers/Total No of Issuers less 1

PR007 - Unaffiliated Preferred and Common Stock

Unaffiliated Preferred Stock
Detailed information on unaffiliated preferred stocks is found in Schedule D Part 2 Section 1 of the annual statement. The preferred stocks must be broken out by NAIC Designation (NAIC 01 through NAIC 06) and these individual groups are to be entered in the appropriate lines of the RBC software. The total amount of unaffiliated preferred stock reported should equal annual statement P2 L2.1 C3 less any affiliated preferred stock in Schedule D-Summary by Country C1 L18.

Unaffiliated Common Stock
The factor for other unaffiliated common stock is based on studies that indicate a 10 percent to 12 percent factor is needed to provide capital to cover approximately 95 percent of the greatest losses in common stock value over a one-year future period. The higher factor of 15 percent contained in the formula reflects the increased risk when testing a period in excess of one year. This factor assumes capital losses are unrealized and not subject to favorable tax treatment at the time loss in fair value occurs.

The total of all unaffiliated common stock reported should be equal to the total value of common stock in Schedule D-Summary by Country C1 L25 less the sum of Schedule D-Summary by Country C1 L24 and PR007, Column 1, Line 18.

PR009 - Miscellaneous Assets
Collateral loans and write-ins for invested assets are generally a small proportion of total portfolio value. A factor of 5 percent is consistent with other risk-based capital formulas studied by the working group.

The factor for cash is 0.3%. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held. This factor was based on the original unaffiliated NAIC 01 bond risk factor prior to the increased granularity of the NAIC Designation Categories in 2021, and reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company’s cash position is negative.

If the book/adjusted carrying value of Aggregate Write-ins for Invested Assets (Page 2, Line 11, Column 3 of the annual statement) is less than zero, the RBC amount will be zero.

PR011 - Asset Concentration
The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an issuer of a security or a mortgage borrower, etc.). The concentration factor basically doubles the risk-based capital factor (up to a maximum of 25 percent) of the 10 largest asset exposures excluding various low-risk categories or categories which already have a 25 percent factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, this factor itself only serves to add an additional risk-based capital requirement on these assets.

Concentrated investments in certain types of assets are not expected to represent an additional risk over and above the general risk of the asset itself. Therefore, prior to determining the 10 largest issuers, you should exclude those assets that are exempt from the asset concentration factor. Asset types that are excluded from the calculation include: NAIC 06 bonds and preferred stock, affiliated common stock, affiliated preferred stock, property and equipment, U.S. government guaranteed bonds, NAIC Designation Category A to L. Triangles, bonds and hybrid securities are also excluded from this calculation.
unaffiliated preferred stock, and investment companies (mutual funds) and common trust funds that are diversified within the meaning of the Investment Company Act of 1940 [Section 5(b) (1)]. The pro rata share of individual securities within an investment company (mutual fund) or common trust fund are to be included in the determination of concentrated investments, subject to the exclusions identified.

With respect to investment companies (mutual funds) and common trust funds, the reporting company is responsible for maintaining the appropriate documentation as evidence that such is diversified within the meaning of the Investment Company Act and provide this information upon request of the commissioner, director or superintendent of the department of insurance. The reporting company is also responsible for maintaining a listing of the individual securities and corresponding book/adjusted carrying values making up its investment companies (mutual funds) and common trust funds portfolio, in order to determine whether a concentration charge is necessary. This information should be provided to the commissioner, director or superintendent upon request.

The assets that ARE INCLUDED in the calculation are divided into two categories – Fixed Income Assets and Equity Assets. The following asset types should be aggregated to determine the 10 largest issuers:

**FIXED INCOME ASSETS**
- Bonds – NAIC Designation Category 2.A
- Bonds – NAIC Designation Category 2.B
- Bonds – NAIC Designation Category 2.C
- Bonds – NAIC Designation Category 3.A
- Bonds – NAIC Designation Category 3.B
- Bonds – NAIC Designation Category 3.C
- Bonds – NAIC Designation Category 3.D
- Bonds – NAIC Designation Category 3.E
- Bonds – NAIC Designation Category 4.A
- Bonds – NAIC Designation Category 4.B
- Bonds – NAIC Designation Category 4.C
- Bonds – NAIC Designation Category 4.D
- Bonds – NAIC Designation Category 5.A
- Bonds – NAIC Designation Category 5.B
- Bonds – NAIC Designation Category 5.C
- Collateral Loans
- Mortgage Loans
- Working Capital Finance Investments – NAIC 02
- Federal Guaranteed Low Income Housing Tax Credits
- Federal Non-Guaranteed Low Income Housing Tax Credits
- State Guaranteed Low Income Housing Tax Credits
- State Non-Guaranteed Low Income Housing Tax Credits
- All Other Low Income Housing Tax Credits

**EQUITY ASSETS**
- Unaffiliated Preferred Stock – NAIC 02
- Unaffiliated Preferred Stock – NAIC 03
- Unaffiliated Preferred Stock – NAIC 04
- Unaffiliated Preferred Stock – NAIC 05
- Unaffiliated Common Stock
- Investment Real Estate
- Encumbrances on Inv. Real Estate
- Schedule BA Assets (excluding Collateral Loans)
- Receivable for Securities
- Aggr. Write-ins for Invested Assets
- Derivatives

The name of each of the largest 10 issuers is entered at the top of the table and the appropriate statement amounts are entered in C(2) Ls (01) through (20) for fixed income assets and C(2) Ls (22) through (32) for equity assets. Aggregate all similar asset types before entering the amount in C(2). For instance, if you own five separate $1,000,000 NAIC 2.A bonds from Issuer #1, enter $5,000,000 in C(2) L (04) – NAIC 2.A Unaffiliated Bonds.
Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements and incur the related risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.
The collateral in these accounts is maintained by a third party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/carrying value, and maturity date.

The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Lines (1) through (26) – Bonds
Bond factors described on PR006 – Bonds and Bond Size Factor Adjustment

Lines (28) through (33) – Preferred Stocks

Capital Adequacy (E) Task Force
Virtual Meeting
April 29, 2021

The Capital Adequacy (E) Task Force met April 29, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Slape, Vice Chair, represented by Rachel Hemphill (TX); Lori K. Wing-Heier represented by Wally Thomas (AK); Jim L. Ridling represented by Richard Ford (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen represented by Carrie Mears (IA); Dana Popish Severinghaus represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Glen Mulready represented by Diane Carter (OK); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Randy Milquet (WI).

1. Exposed Proposal 2021-07-CA

Mr. Botsko said the Task Force agreed to conduct a weighted average every three years for the receivables for securities factor. The analysis and proposed factor will be exposed for a 30-day public comment period ending May 28.

2. Exposed Proposal 2021-04-CA Investment Income in Health Underwriting Factors

Mr. Drutz said the purpose of Proposal 2021-04-CA is to incorporate investment income into the underwriting risk factors for Columns 1–4 on the Experience Fluctuation Risk page. The proposal was previously exposed at the Working Group level for a 30-day public comment period. The Life Risk-Based Capital (E) Working Group received two comment letters and discussed those on its April 23 call. The Working Group agreed to move forward with the 0.5% investment yield return. The Working Group asked that the Task Force re-expose the proposal for health—that incorporates the changes for the life and property/casualty (P/C) formulas—for a 23-day public comment period ending May 21, with comments to come back to the Working Group.

3. Adopted Proposal 2021-01-L (Real Estate Structure)

Mr. Barlow said proposal 2021-01-L was exposed and adopted by the Life Risk-Based Capital (E) Working Group on its April 6 call. The purpose of this proposed is to update the experience and analysis since it was first developed.

Mr. Barlow made a motion, seconded by Mr. Chou, to adopt proposal 2021-01-L (Real Estate Structure) (Attachment Two-A). The motion passed unanimously.

Nancy Bennett (American Academy of Actuaries—Academy) clarified that the verbiage shown in the proposal for Schedule BA real estate “use same factor” is not part of the current exposure for the real estate language. Mr. Barlow concurred.

4. Adopted Proposal 2021-02-CA (Managed Care Credit Incentives)

Mr. Drutz said proposal 2021-02-CA provides clarifying language for the inclusion of incentives in the Managed Care Credit instructions and blank. The proposal was exposed by the Task Force, and no comments were received.

Mr. Drutz made a motion, seconded by Mr. Barlow, to adopt proposal 2021-02-CA (Attachment Two-B). The motion passed unanimously.

5. Adopted Proposal 2021-03-P (Credit Risk Instruction Modification)

Mr. Botsko said the purpose of proposal 2021-03-P is to provide examples to clarify how the reporting companies should select the designation in the Annual Statement Schedule F, Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies. He also stated that the Life Risk-Based Capital (E) Working Group received no comments during the exposure period.

© 2021 National Association of Insurance Commissioners
Mr. Chou made a motion, seconded by Mr. Milquet, to adopt proposal 2021-03-P (Attachment Two-C). The motion passed unanimously.

6. Adopted its Working Agenda

Mr. Drutz summarized the changes to the 2021 health risk-based capital (RBC) working agenda, which included the substantial change to add an item to work with the Academy to perform a comprehensive review of the H2 – Underwriting Risk Component, along with the Managed Care Credit.

Mr. Barlow summarized the change to the Life Risk-Based Capital (E) Working Group’s 2021 working agenda, which was to remove items that have been addressed by the Working Group.

Mr. Botsko added that the Task Force continues to address the items on its working agenda as they are prioritized and reflect the completion of items that were referred to the Working Group.

Mr. Chou made a motion, seconded by Mr. Drutz, to adopt the Task Force’s working agenda (Attachment Two-D). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

[ ] Health RBC Instructions [ ] Property/Casualty RBC Instructions [X] Life and Fraternal RBC Blanks
[ ] OTHER

DESCRIPTION OF CHANGE(S)
To update the RBC calculation for Real Estate to reflect updated experience and analysis since RBC was first developed. The factors and instructions included are not final, with the exception of the structure which is included and presented in Figure 7, and will be addressed with a separate proposal.

REASON OR JUSTIFICATION FOR CHANGE **
When RBC was developed, there was limited experience on the default and loss for commercial real estate. Since then data sources have been compiled and tracked in the industry, and can now be accessed to provide more meaningful analysis and information for development of capital standards.

Additional Staff Comments:

** This section must be completed on all forms.
1. REAL ESTATE

Basis of Factors

Companies that have developed their own risk-based capital factors for real estate have used a range of factors from 5 percent to 20 percent. One study indicated real estate volatility is about 60 percent of common stock, suggesting a factor in the range of 18 percent. Assuming a full tax effect for losses, a pre-tax factor of 15 percent was chosen. Foreclosed real estate would carry a somewhat higher risk at 23 percent pre-tax. Schedule BA real estate also has a 23 percent factor pre-tax because of the additional risks inherent in owning real estate through a partnership. The pre-tax factors were developed by dividing the post-tax factor by 0.65 (0.65 is calculated by taking 1.0 less 0.35). The pre-tax factors are not changing for 2018 due to tax reform. The base factor for equity real estate of [10%] was developed by adding a margin for conservatism to the results of an analysis of real estate performance over the period of 1978 – 2012. The analysis was conducted by a group of life insurance company real estate investment professionals coordinated by the ACLI. The data used was a national database of real property owned by investment fiduciaries and supplemented by data on real estate backing mortgage securities. The analysis is documented in a report to the NAIC dated April 9, 2017. In addition to modifying the factor for company owned and investment real estate, this updated factor will also be used for real estate acquired in satisfaction of debt (Foreclosed real estate) and for assets with the characteristics of real held estate (partnership or other structure) reported on Schedule BA. Foreclosed real estate is recognized in the statutory statements as having acquisition cost equal to market value at time of foreclosure. Schedule BA real estate was originally given a higher factor under a presumption that it was more highly levered. Analysis has shown these assets to have experience very similar to directly held and will therefore use the same factor.

While the experience analysis was done based on analysis of fair value impacts, Real Estate is reported at depreciated cost in the Statutory statements. Therefore, beginning in 2021 an adjustment is made to the factor to partially account for the difference between fair value and statutory carrying value on a property by property basis. The adjustment is defined as

\[
\text{Adj Factor} = \text{RE Factor} \times (1 - \text{factor} \times \frac{\text{MV-BVg}}{\text{BVg}})
\]

factor is [2/3]

The resulting adjusted RBC factor is subject to a minimum of zero. In the RBC calculation, see Figure 7, fair value is taken from Schedule A Column 10 plus encumbrances, or from Schedule BA column 11 plus encumbrances, respectively, while BVg is the net Book Adjusted Carrying Value plus the encumbrance.

Encumbrances have been included in the real estate base since the value of the property is held net of the encumbrance, but the entire value is subject to loss would include encumbrances. Encumbrances receive a base real estate factor of [10%] reduced by the average factor for commercial mortgages of 1.752 percent pre-tax, In the past this was computed as a base factor applied to the net real estate value plus a separate factor applied to the amount of the encumbrance. Beginning in 2021, the equivalent result will be obtained by applying a base factor to the gross statutory value of the property, and a credit provided for the amount of the encumbrance for real estate encumbrances not in foreclosure and 20 percent pre-tax for real estate encumbrances in foreclosure and encumbrances on Schedule BA real estate.

The final RBC amount is subject to a minimum of the Baa bond factor (1.30%) applied to the BACV, and a maximum of 45% of the BACV.

All references to involuntary reserves as it relates to real estate were removed to comply with the codification of statutory accounting principles.

Specific Instructions for Application of the Formula

Column (1)

Calculations are done on an individual property or joint venture basis in the worksheets and then the summary amounts are entered in this column for each class of real estate investment. Refer to the real estate calculation worksheet (Figure 7) for how the individual property or joint venture calculations are completed.
Low income housing tax credit investments are reported in Column (1) in accordance with SSAP No. 93—Low Income Housing Tax Credit Property Investments.

Column (2)
The average factor column is calculated as Column (3) divided by Column (1).

Column (3)
Summary amounts are entered for Column (3) based on calculations done on an individual property or joint venture basis. Refer to Column (8) of the real estate calculation worksheet (Figure 7).

Line (17)
Guaranteed federal low-income housing tax credit (LIHTC) investments are to be included in Line (17). There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.

Line (18)
Non-guaranteed federal LIHTC investments with the following risk mitigation factors are to be included in Line (18):
   a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
   b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.

Line (19)
State LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments.

Line (20)
State LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments.

Line (21)
State and federal LIHTC investments that do not meet the requirements of lines (17) through (20) would be reported on Line (21).

Note that column (2) is the book/adjusted carrying value net of any encumbrances, while column (4) is the fair value of the property not reduced for any encumbrances. 
† For each category, each property Line (1) should also exclude properties or joint ventures that have a negative book/adjusted carrying value. These should be listed individually, including those for which there is no encumbrance.
‡ Column (7) is Column (5) times (1-factor) * (Column (4) – (Column (2) + Column (3))) / (Column (2) + Column (3)), but not less than zero.
§ Column (97) is calculated as Column (3) multiplied by Column (65).
* Column (108) is calculated as the sum of Column (96) minus Column (95), but not less than zero or more than Column (2) * 1.3% nor more than 4.5% of column (2), and not less than zero.

### DESCRIPTION OF CHANGE(S)

Incorporate references for “Incentives” under the managed care instructions and blank as “Bonuses/Incentives.”

### REASON OR JUSTIFICATION FOR CHANGE **

Currently the managed care instructions and blank only reference the bonuses, this change would clarify that both incentives and bonuses are to be included.

### Additional Staff Comments:

02-10-21 cbg The Proposal was exposed to the Health Risk-Based Capital (E) Working Group for a 30-day comment period that ends on Mar. 12, 2021.  
03-17-21 cbg No comments were received during the comment period. The Working Group referred the proposal to the Capital Adequacy (E) Task Force for a 30-day comment period for all lines of business, with any comments to come back to the Working Group.  
03-23-21 cbg The Capital Adequacy (E) Task Force exposed the proposal for a 30-day comment period ending on 4/22/21.  
4/23/21 cbg No comments were received during the exposure period.  

** This section must be completed on all forms.  
Revised 2-2019

1
The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between health entities and pure indemnity carriers. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claim payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the formula, other than for Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase, or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 – Arrangements not Included in Other Categories
- Category 1 – Contractual Fee Payments
- Category 2 – Bonus and/or Incentives / Withhold Arrangements
- Category 3 – Capitation
- Category 4 – Non-Contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future, no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care “buckets” to determine the weighted average discount, which is then used to reduce the Underwriting Risk-Experience Fluctuation RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claim payments may fit into more than one category. If that occurs, enter the claim payments into the highest applicable category. CLAIM PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claim payments reported in the Managed Care Credit Calculation page should equal the total year’s paid claims.

Line (1) – Category 0 – Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:

- Fee for service (charges)
- Discounted FFS (based upon charges)
- Usual Customary and Reasonable (UCR) Schedules
- Relative Value Scales (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less
- Stop-loss payments by a health entity to its providers that are capitated or subject to withhold incentive programs
- Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement)
- Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs)
This amount should equal Exhibit 7, Part 1, Column 1, Line 5 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (2) - Category 1 – Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:

- Hospital per diems, DRGs or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- RVS where the payment base and RV factor are fixed by contract for more than one year.
- Ambulatory payment classifications (APCs).

This amount should equal Exhibit 7, Part 1, Column 1, Line 6 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (3) - Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives With No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withhold and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

EXAMPLE – 2019 Reporting Year

<table>
<thead>
<tr>
<th>2018 withhold / bonus/incentive payments</th>
<th>750,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>2018 withholds / bonuses/incentives available</td>
<td>1,000,000</td>
</tr>
<tr>
<td>A. MCC Factor Multiplier</td>
<td>75% – Eligible for credit</td>
</tr>
<tr>
<td>2018 withhold / bonuses/incentives available</td>
<td>1,000,000</td>
</tr>
<tr>
<td>2018 claims subject to withhold - gross*</td>
<td>5,000,000</td>
</tr>
<tr>
<td>B. Average Withhold Rate</td>
<td>20%</td>
</tr>
<tr>
<td>Category 2 Managed Care Credit Factor (A x B)</td>
<td>15%</td>
</tr>
</tbody>
</table>

The resulting factor is multiplied by claim payments subject to withhold - net** in the current year.

** These are amounts due before deducting withhold or paying bonuses, and/or incentives.
** These are actual payments made after deducting withhold or paying bonuses, and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives, but otherwise had no managed care arrangements. This amount should equal Exhibit 7, Part 1, Column 7 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).
Line (4) – Category 2b – Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentives withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claim payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1. This amount should equal Exhibit 7, Part 1, Column 1, Line 8 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (5) – Category 3a – Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

- All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claim payments paid DIRECTLY to licensed providers on a capitated basis. This amount should equal Exhibit 7, Part 1, Column 1, Line 1 + Line 3 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

Line (6) – Category 3b – Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries. An intermediary is a person, corporation or other business entity (not licensed as a medical provider) that arranges, by contracts with physicians and other licensed medical providers, to deliver health services for a health entity and its enrollees via a separate contract between the intermediary and the health entity. This includes affiliates of a health entity that are not subject to RBC, except in those cases where the health entity qualifies for a higher managed care credit because the capitated affiliate employs providers and pays them non-contingent salaries, and where the affiliated intermediary has a contract only with the affiliated health entity. A Regulated Intermediary is an intermediary (affiliated or not) subject to state regulation and files the Health RBC formula with the state.

Line (7) – Category 3c – Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claim payments in this category, which includes:

- All capitation or percent of premium payments to intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0.)

Enter the amount of medical expense capitations paid to non-regulated intermediaries.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 1 for a provider, and for an intermediary at the greater of category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive revisions...
either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under category 0 for both providers and intermediaries.

**Line (8) – Category 4 – Medical & Hospital Expense Paid as Salary to Providers:** There is a managed care credit of 75 percent for claim payments in this category. Once claim payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on line 7 in the Underwriting Risk section should be deducted before applying the managed care credit factor. This category includes:

- Non-contingent salaries to persons directly providing care.
- The portion of payments to affiliated entities, which is passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with its affiliated health entity.
- All facilities related medical expenses and other non-provider medical costs generated within a health facility that is owned and operated by the health entity.
- Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as "medical expense" payments (paid claims) rather than administrative expenses. The "aggregate cost" method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other users of services, and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, which put their respective capital and surplus at risk in guaranteeing each other.

This amount should equal Exhibit 7, Part 1, Column 1, Line 9 + Line 10 of the annual statement excluding Stand-Alone Medicare Part D business reported in Lines (12) and (13).

**Line (9) – Sub-Total Paid Claims:** The total of paid claims for Comprehensive Medical, Medicare Supplement and Dental should equal the total paid claims for the year as reported in Exhibit 7, Part 1, Column 1, Line 13 less Line 11 of the annual statement and the sum of Lines (8.3), (12) and (13) on page XR017 – Underwriting Risk – Managed Care Credit.

**Line (10) – Category 0 – No Federal Reinsurance or Risk Corridor Protection:** Category 0 for Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

**Line (11) – Category 1 – Federal Reinsurance but no Risk Corridor Protection:** Category 1 for Medicare Part D Coverage would be all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

**Line (12) – Category 2a – No Federal Reinsurance but Risk Corridor Protection:** Category 2a for Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

**Line (13) – Category 3a – Federal Reinsurance and Risk Corridor Protection:** Category 3a for Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

**Line (14) – Sub-Total Paid Claims:** The total paid claims for Medicare Part D Coverage, excluding supplemental benefits.

**Line (16) – Weighted Average Managed Care Discount:** These amounts are calculated by dividing the total weighted claims by the comparable sub-total claim payments. For Column (3), this is Column (3), Line (9) divided by Column (2), Line (9). For Column (4), this is Column (4) Line (14) divided by Column (2), Line (14).
Line (17) - Weighted Average Managed Care Risk Adjustment Factor. These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount values in Line (16).

Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withholds and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor. These do not apply to Medicare Part D coverage.

Line (18) - Withhold & Bonus Incentive Payments, prior year. Enter the prior year’s actual withhold and bonus/incentive payments.

Line (19) - Withhold & Bonuses Incentives Available, prior year. Enter the prior year's withholds and bonuses/incentives that were available for payment in the prior year.

Line (20) - MCC Multiplier - Average Withhold Returned. Divides Line (18) by Line (19) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

Line (21) - Withholds & Bonuses Incentives Available, prior year. Equal to Line (19) and is automatically pulled forward.

Line (22) - Claims Payments Subject to Withhold, prior year. Claim payments that were subject to withholds and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of the managed care credit claims payment table FOR THE PRIOR YEAR.

Line (23) - Average Withhold Rate, prior year. Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

Line (24) - MCC Discount Factor, Category 2. Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the health entity’s withhold/bonus/incentive program in the prior year.
LIFE

UNDERWRITING RISK - MANAGED CARE CREDIT
LR022

This worksheet LR022 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the comprehensive medical dental business, Stand-Alone Medicare Part D Coverage or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 - Arrangements not Included in Other Categories
- Category 1 - Contractual Fee Payments
- Category 2 - Bonus and/or incentives / Withhold Arrangements
- Category 3 - Capitation
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Stand-Alone Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10) through (13) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formularies and may utilize other methods to reduce uncertainty, for the near future no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among these managed care “buckets” to determine the weighted average discount, which is then used to reduce the Underwriting Risk-Experience Fluctuation RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claims payments may fit into more than one category. If that occurs, enter the claims payments into the highest applicable category. CLAIMS PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to insure that true risk transfer is accomplished.

Line (1)
Category 0 - Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:
- Fee for service (charges).
- Discounted fee for service (based upon charges).
Usual customary and reasonable (UCR) schedules.
Relative value scale (RVS), where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
Claim payments not included in other categories.

Line (2)
Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:
- Hospital per diems, diagnostic related groups (DRGs) or other hospital case rates.
- Non-adjustable professional case and global rates.
- Provider fee schedules.
- Relative value scale (RVS), where the payment base and RV factor are fixed by contract for more than one year.

Line (3)
Category 2a - Payments Made Subject to Withholds or Bonuses with No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withheld returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

\[
\text{Category 2 Managed Care Credit Factor (A x B)} = \frac{\text{1997 withhold / bonus/incentive payments}}{\text{1997 withhold / bonus/incentive available}} \times \frac{\text{1997 claims subject to withhold - gross}}{\text{average Withhold Rate}}
\]

The resulting factor is multiplied by claims payments subject to withhold - net in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses, but otherwise had no managed care arrangements.

Line (4)
Category 2b - Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a provider fee schedule (Category 1). The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum of Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses/incentives AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5)
Category 3a - Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

• All capitation or percent of premium payments directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6)
Category 3b - Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

• All capitation or percent of premium payments to regulated intermediaries that, in turn, pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 2 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7)
Category 3c - Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

• All capitated or percent of premium payments to non-affiliated intermediaries that, in turn, pay licensed providers (subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations that meet the definition in Appendix 2 for Intermediary but not regulated intermediary. In those cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater
of Category 4 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

Line (16) Weighted Average Managed Care Discount – The amounts in Column (3) and Column (4) are calculated by dividing the total weighted claims in Column (3) by the total paid claims in Column (2) for Lines (9) and (14) respectively.

attachment Two-B 
Capital Adequacy (E) Task Force 
7/28/21
Weighted Average Managed Care Risk Adjustment Factor – These are the credit factors that are carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (16)).

Lines (18) through (24) are the calculation of the weighted average factor for the Category 2 claims payments subject to withhold and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

Line (18)
Enter the prior year’s actual withhold and bonus/incentive payments.

Line (19)
Enter the prior year’s withhold and bonuses/incentives that were available for payment in the prior year.

Line (20)
Divides Line (18) by Line (19) to determine the portion of withhold and bonuses/incentives that were actually returned in the prior year.

Line (21)
Equal to Line (19) and is automatically pulled forward.

Line (22)
Claims payments that were subject to withhold and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of LR022 Underwriting Risk – Managed Care Credit FOR THE PRIOR YEAR.

Line (23)
Divides Line (21) by Line (22) to determine the average withhold rate for the prior year.

Line (24)
Multiplies Line (20) by Line (23) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus/incentive program in the prior year.
This worksheet PR021 Underwriting Risk – Managed Care Credit is optional. It may be completed for only part of the Comprehensive Medical, Stand-Alone Medicare Part D Coverage, Dental business or all of them. Line (1) will be filled in as the balancing item if any of Lines (2) through (8) are entered (and then Line (9) will be required).

The effect of managed care arrangements on the variability of underwriting results is the fundamental difference between coverages subject to the managed care credit and pure indemnity insurance. The managed care credit is used to reduce the RBC requirement for experience fluctuations. It is important to understand that the managed care credit is based on the reduction in uncertainty about future claims payments, not on any reduction in the actual level of cost. Those managed care arrangements that have the greatest reduction in the uncertainty of claims payments receive the greatest credit, while those that have less effect on the predictability of claims payments engender less of a discount.

There are currently five levels of managed care that are used in the RBC formulas other than for Stand-Alone Medicare Part D Coverage, although in the future as new managed care arrangements evolve, the number of categories may increase or new arrangements may be added to the existing categories. The managed care categories are:

- Category 0 - Arrangements not Included in Other Categories
- Category 1 - Contractual Fee Payments
- Category 2 - Bonus and/or Incentives / Withhold Arrangements
- Category 3 - Capitation
- Category 4 - Non-contingent Expenses and Aggregate Cost Arrangements and Certain PSO Capitated Arrangements

For Stand-Alone Medicare Part D Coverage, the reduction in uncertainty comes from two federal supports. The reinsurance coverage is optional in that a plan sponsor may elect to participate in the Part D Payment Demonstration. The risk corridor protection is expected to have less impact after the first few years. To allow flexibility within the RBC formula, Lines (10.1) through (10.4) will be used to give credit for the programs in which the plan sponsor participates. While all PDPs will have formulas and may utilize other methods to reduce uncertainty, for the near future no other managed care credits are allowed for this coverage.

The managed care credit is based on the percentage of paid claims that fall into each of these categories. Total claims payments are allocated among the managed care “buckets” to determine the weighted average discount, which is then used to reduce the Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental RBC. Paid claims are used instead of incurred claims due to the variability of reserves (unpaid claims) in incurred claim amounts and the difficulty in allocating reserves (unpaid claims) by managed care category.

In some instances, claims payments may fit into more than one category. If that occurs, enter the claims payments into the highest applicable category. CLAIMS PAYMENTS CAN ONLY BE ENTERED INTO ONE OF THESE CATEGORIES! The total of the claims payments reported in the managed care worksheet should equal the total year’s paid claims. Category 2a, Category 2b and Category 3c are not allowed to include non-regulated intermediaries who are affiliated with the reporting company in order to ensure that true risk transfer is accomplished.

**Line (1)**

Category 0 - Arrangements not Included in Other Categories. There is a zero managed care credit for claim payments in this category, which includes:

- Fee for service (charges).
- Discounted fee for service (based upon charges).
- Usual customary and reasonable (UCR) schedules.
- Relative value scale (RVS) where neither payment base nor RV factor is fixed by contract or where they are fixed by contract for one year or less.
* Retroactive payments to capitated providers or intermediaries whether by capitation or other payment method (excluding retroactive withholds later released to the provider and retroactive payments made solely because of a correction to the number of members within the capitated agreement).
* Capitation paid to providers or intermediaries that have received retroactive payments for previous years (including bonus arrangements on capitation programs).
* Claim payments not included in other categories.

Line (2)
Category 1 - Payments Made According to Contractual Arrangements. There is a 15 percent managed care credit for payments included in this category:
* Hospital per diems, diagnostic related groups (DRGs) or other hospital case rates.
* Non-adjustable professional case and global rates.
* Provider fee schedules.
* Relative value scale (RVS) where the payment base and RV factor are fixed by contract for more than one year.

Line (3)
Category 2a - Payments Made Subject to Withholds or Bonuses/Incentives with No Other Managed Care Arrangements. This category may include business that would have otherwise fit into Category 0. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a UCR schedule (Category 0).

The maximum Category 2a managed care credit is 25 percent. The credit is based upon a calculation that determines the ratio of withholds returned and bonuses and/or incentives paid to providers during the prior year to total withholds and bonuses and/or incentives available to the providers during that year. That ratio is then multiplied by the average provider withhold ratio for the prior year to determine the current year’s Category 2a managed care credit factor. Bonus and/or incentive payments that are not related to financial results are not included (e.g., patient satisfaction). Therefore, the credit factor is equal to the result of the following calculation:

**EXAMPLE - 1998 Reporting Year**

| 1997 withhold / bonus payments | $750,000 |
| 1997 withholds / bonuses available | $1,000,000 |
| A. MCC Factor Multiplier | 75% - Eligible for credit |
| 1997 withholds / bonuses available | $1,000,000 |
| 1997 claims subject to withhold - gross† | $5,000,000 |
| B. Average Withhold Rate | 20% |
| Category 2 Managed Care Credit Factor (A x B) | 15% |

The resulting factor is multiplied by claims payments subject to withhold - net‡ in the current year.

† These are amounts due before deducting withhold or paying bonuses and/or incentives.
‡ These are actual payments made after deducting withhold or paying bonuses and/or incentives.

Enter the paid claims for the current year where payments to providers were subject to withholds and bonuses, but otherwise had no managed care arrangements.

Line (4)
Category 2b - Payments Made Subject to Withholds or Bonuses/Incentives That Are Otherwise Managed Care Category 1. Category 2b may include business that would have otherwise fit into Category 1. That is, there may be a bonus/incentive withhold arrangement with a provider who is reimbursed based on a provider fee schedule.
The Category 2 discount for claims payments that would otherwise qualify for Category 1 is the greater of the Category 1 factor or the calculated Category 2 factor.

The maximum Category 2b managed care credit is 25 percent. The minimum Category 2b managed care credit is 15 percent (Category 1 credit factor). The credit calculation is the same as found in the previous example for Category 2a.

Enter the paid claims for the current year where payments to providers were subject to withhold and bonuses AND where the payments were made according to one of the contractual arrangements listed for Category 1.

Line (5) Category 3a - Capitated Payments Directly to Providers. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments made directly to licensed providers.

Enter the amount of claims payments paid DIRECTLY to licensed providers on a capitated basis.

Line (6) Category 3b - Capitated Payments to Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitation or percent of premium payments to regulated intermediaries that in turn pay licensed providers.

Enter the amount of medical expense capitations paid to regulated intermediaries (see Appendix 1 for definition). In those cases where the capitated regulated intermediary employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

Line (7) Category 3c - Capitated Payments to Non-Regulated Intermediaries. There is a managed care credit of 60 percent for claims payments in this category, which includes:

* All capitated or percent of premium payments to non-affiliated intermediaries that in turn pay licensed providers. (Subject to a 5 percent limitation on payments to providers or other corporations that have no contractual relationship with such intermediary. Amounts greater than the 5 percent limitation should be reported in Category 0).

Enter the amount of medical expense capitations paid to non-regulated intermediaries not affiliated with the reporting company. Do not include the amount of medical expense capitations paid to non-regulated intermediaries that are affiliated with the reporting company. These amounts should be reported in Category 0. Non-regulated intermediaries are those organizations which meet the definition of Intermediary but not regulated intermediary in Appendix 1. In cases where the capitated non-regulated intermediary (even if affiliated) employs providers and pays them non-contingent salaries or otherwise qualifies for Category 4, the insurer may include that portion of such capitated payments in Category 4.

IN ORDER TO QUALIFY FOR ANY OF THE CAPITATION CATEGORIES, SUCH CAPITATION MUST BE FIXED (AS A PERCENTAGE OF PREMIUM OR FIXED DOLLAR AMOUNT PER MEMBER) FOR A PERIOD OF AT LEAST 12 MONTHS. Where an arrangement contains a provision for prospective revision within a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 1 for a provider, and for an intermediary at the greater of Category 1 or a credit calculated using the underlying payment method(s) to the providers of care. Where an arrangement contains a provision for retroactive
revisions either within or beyond a 12-month period, the entire arrangement shall be subject to a managed care credit that is calculated under Category 0 for providers and intermediaries.

Line (8)
Category 4 - Medical & Hospital Expense Paid as Salary to Providers. There is a managed care credit of 75 percent for claims payments in this category. Once claims payments under this managed care category are totaled, any fee for service revenue from uninsured plans (i.e., ASO or ASC) that was included on Line (7) in the underwriting risk section should be deducted before applying the managed care credit factor.

* Non-contingent salaries to persons directly providing care.
* The portion of payments to affiliated entities which is passed on as non-contingent salaries to persons directly providing care where the entity has a contract only with the company.
* All facilities related medical expenses and other non-provider medical costs generated within health facility that is owned and operated by the insurer.
* Aggregate cost payments.

Salaries paid to doctors and nurses whose sole corporate purpose is utilization review are also included in this category if such payments are classified as “medical expense” payments (paid claims) rather than administrative expenses. The Aggregate Cost method of reimbursement means where a health plan has a reimbursement plan with a corporate entity that directly provides care, where (1) the health plan is contractually required to pay the total operating costs of the corporate entity, less any income to the entity from other uses of services; and (2) there are mutual unlimited guarantees of solvency between the entity and the health plan, that put their respective capital and surplus at risk in guaranteeing each other.

Line (10.1)
Category 0 for Stand-Alone Medicare Part D Coverage would be all claims during a period where neither the reinsurance coverage or risk corridor protection is provided.

Line (10.2)
Category 1 for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the reinsurance coverage is provided. This is designed for some future time period and is not to be interpreted as including employer-based Part D coverage that is not subject to risk corridor protection.

Line (10.3)
Category 2a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when only the risk corridor protection is provided.

Line (10.4)
Category 3a for Stand-Alone Medicare Part D Coverage would be for all claims during a period when both reinsurance coverage and risk corridor protection are provided.

Line (10.6)
Total Paid Claims – The total of Column (1) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1 and 2, Line D16 of the annual statement.

Line (11)
Weighted Average Managed Care Discount – This amount is calculated by dividing the total weighted claims (Line (9) Column (2)) by the total claim payments (Line (9) Column (1)).

Line (12)
Weighted Average Managed Care Risk Adjustment Factor - This is the credit factor that is carried back to the underwriting risk calculation. They are one minus the Weighted Average Managed Care Discount (Line (11)).

Lines (13) through (19) are the calculation of the weighted average factor for the Category 2 claims payments subject to withhold and bonuses/incentives. This table requires data from the PRIOR YEAR to compute the current year’s discount factor.

Line (13)
Enter the prior year’s actual withhold and bonus/incentive payments.

Line (14)
Enter the prior year’s withhold and bonuses/incentives that were available for payment in the prior year.

Line (15)
Divides Line (13) by Line (14) to determine the portion of withholds and bonuses/incentives that were actually returned in the prior year.

Line (16)
Equal to Line (14) and is automatically pulled forward.

Line (17)
Claims payments that were subject to withhold and bonuses/incentives in the prior year. Equal to Line (3) + Line (4) of Underwriting Risk–Managed Care Credit FOR THE PRIOR YEAR.

Line (18)
Divides Line (16) by Line (17) to determine the average withhold rate for the prior year.

Line (19)
Multiplies Line (15) by Line (18) to determine the discount factor for Category 2 claims payments in the current year, based on the performance of the insurer’s withhold/bonus/incentive program in the prior year.
HEALTH, LIFE AND PROPERTY AND CASUALTY

APPENDIX 1 – COMMONLY USED TERMS

The Definitions of Commonly Used Terms are frequently duplicates from the main body of the text. If there are any inconsistencies between the definitions in this section and the definitions in the main body of the instructions, the main body definition should be used.

Incentives, Withhold and Bonus Amounts—Are amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. An incentive arrangement may involve paying an agreed-on amount for each claim (e.g., provider agrees to practice in an underserved area). While a bonus arrangement may be paid at the end of a contract period after specific goals have been met. Withhold arrangements can involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

Incentive pool, withhold, and bonus amounts are defined as: amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. Some arrangements involve paying an agreed-on amount for each claim, and then paying a bonus at the end of the contract period. Other arrangements involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

Commented [BC1]: This could also be worded as “e.g., provider is paid on a per-claim basis for practicing in an underserved area.”

Commented [BC2]: This is directly from the A/S instructions. It was used as a basis for the definition drafted above.

DESCRIPTION OF CHANGE(S)

Adding examples as a guide to portray the intent of the R3 ratings instructions.

REASON OR JUSTIFICATION FOR CHANGE **

The proposed instruction changes would provide examples to clarify how the reporting companies should select the designation in the Annual Statement Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies.

Additional Staff Comments:
3/15/21 – The PCRBC WG exposed this proposal for a thirty-day public comment period ending Apr. 14.
4/27/21 – The PCRBC WG adopted this proposal with no received comments.
6/30/21 (jdb) Instructions adopted by the Task Force.

** This section must be completed on all forms.

Revised 2-2019
The calculation of the credit risk charge for reinsurance recoverables is detailed in Schedule F Part 3 Columns 28 through 36 of the Property/Casualty Annual Statement. This calculation is performed at the transaction level and those results are then summed to determine the charge. Reinsurance balances receivable on reinsurance ceded to non-affiliated companies (excluding certain pools) and to alien affiliates are subject to the credit risk-based capital charge. The following types of cessions are exempt from this charge:

- Cessions to State Mandated Involuntary Pools and Associations or to Federal Insurance Programs.
- This category includes all federal insurance programs [e.g., National Flood Insurance Program (NFIP), Federal Crop Insurance Corporation (FCIC), etc., all state mandated residual market mechanisms and the National Council on Compensation Insurance (NCCI).
- Cessions to U.S. Parents, Subsidiaries and Affiliates.

The categories above are automatically excluded from the data that is calculated in Schedule F Part 3 of the Annual Statement.

Since the Annual Statement requires the collectability of reinsurance balances be considered via the reinsurance penalty, the appropriate balances must be offset by any liability that has been established for this purpose. The amount from Page 3, Line 16 should be allocated to the appropriate (re)insurers listed on Schedule F. The total amount recoverable from reinsurers less any applicable reinsurance penalty is multiplied by 120% to stress the recoverable balance. The total of reinsurance payable and/or funds held amounts (not in excess of the stressed recoverable) are applied as offsets to arrive at the stressed net recoverable.

Since there are different reinsurance credit risk factors for collateralized and uncollateralized reinsurance recoverables, the stressed net recoverable should be offset by any available collateral, such as letters of credit, multiple beneficiary trusts, and single beneficiary trusts and other allowable offsets (not in excess of the stressed net recoverable). The collateralized amounts are derived from Schedule F Part 3 Column 32 and the uncollateralized amounts are derived from Column 33.

The risk-based capital for the various credits (including collateral offsets where applicable) taken for reinsurance may not be less than zero even if the amount reported or the amount net of offsets is negative.

The factor for reinsurance recoverables (paid and unpaid less any applicable reinsurance penalty) due from a particular reinsurer is determined based on that reinsurer’s financial strength rating assigned on a legal entity basis.

For the purpose of the credit risk-based capital charge, the equivalent rating category assigned will correspond to current financial strength rating received from one of the approved rating agencies as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the reinsurer and shall not be based solely on publicly available information. If the reinsurer does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “Secure 3” equivalent rating.

For authorized associations including incorporated and individual unincorporated underwriters or a member thereof (e.g., individual authorized syndicates of Lloyds’ of London that are backed by the Central Fund) utilize the lowest financial strength group rating received from an approved rating agency.

For authorized associations, including incorporated and individual unincorporated underwriters or a member thereof (e.g., individual authorized syndicates of Lloyds’ of London that are backed by the Central Fund), may utilize the lowest financial strength group rating received from an approved rating agency.

The table below shows the R3 reinsurer equivalent rating categories and corresponding factors for A.M. Best, Standard and Poor’s, Moody’s and Fitch ratings.
Reinsurer Designation Equivalent Rating Category and Corresponding Factors—For RBC R3 Credit Risk Charge

</table>

Each reporting company should record in Schedule F Part 3, Column 34, the reinsurer designation equivalent financial strength ratings assigned to the (re)insurers listed, where there are balances receivable on reinsurance ceded for the Schedule F categories subject to the credit risk charge on reinsurance recoverables. The resulting credit risk charge for reinsurance recoverables is determined by applying the corresponding factor by reinsurer designation equivalent to the collateralized and uncollateralized balances respectively. These respective charges are derived from Schedule F Part 3, Columns 35 and 36 and Line 9999999 totals are reported on PR012 Lines 1 and 2. See examples below.

Miscellaneous Recoverables

There is risk associated with recoverability of amounts from creditors other than reinsurers. In addition to the default risk, there is the risk that the amounts are not accurately estimated. The factor to measure this risk is estimated at 5 percent for Amounts Receivable Relating to Uninsured Accident and Health Plans; Receivables from Parent, Subsidiaries and Affiliates; and Aggregate Write-ins for Other Than Invested Assets. For Interest, Dividends and Real Estate Income Due and Accrued, which for the most part represents interest income due and accrued from bond holdings, the charge is 1 percent, which is equivalent to the charge applicable to unaffiliated NAIC 02 bonds.

Examples: The following examples are here as a guide to portray the intent of these instructions.

These examples assume that all financial strength ratings are from one of the rating agencies listed in the table above and there is interactive communication between the rating agency and the reinsurer unless stated otherwise.

Example 1—Reinsurer has only one rating: Assume the Reinsurer XYZ has a financial strength rating of A from A.M. Best. This falls in the Secure 3 category and the reporting company should select this category and corresponding charge.

Example 2—Reinsurer has more than one rating: Assume the Reinsurer XYZ has a financial strength rating of “A” from A.M. Best and another rating of “AAA” from Fitch. The reporting company may use either of the ratings provided by A.M. Best or Fitch.

Example 3—Reinsurer only has a Public Information Rating: Ratings that include the symbol of “pi” (e.g. Api), which indicates a public information rating, are not allowed to be used. If a reinsurer has only been assigned Public Information ratings, meaning no other financial strength ratings have been assigned to it; then the reporting company must list the reinsurer’s rating as Vulnerable 6 or Unrated.

<td>Consideration given to 20 designations for bonds in all RBC formulas so that an impact analysis can be provided on 2020 year-end data to determine the bond RBC factors. The Task Force will need to discuss and determine whether Hybrids are included with the new bond's structure. History In 2012 /13 as part of the Solvency Modernization Initiative &quot;roadmap&quot; and subsequent White Paper roadmap, the Capital Adequacy (E) Task Force identified increased granularity in the asset and investment risk charges as a priority area. It was originally targeted at the Life RBC formula and was referred to as the “C1 factor review”. The project was assigned to a newly formed Investment RBC (E) Working Group in 2013. Work was conducted by the Life C-1 Work Group of the American Academy of Actuaries (Academy) at the instructions of the working group using defined criteria for the analysis: The C1 bond factors are defined as the amount needed to pre-fund losses at the 96th percentile minus the amount assumed to be funded in statutory policy reserves. The credit loss distribution is skewed with the mean occurring at approximately the 60th percentile. The RP does not vary by economic scenario.</td>
<td>RBCWG - Dec 2019</td>
<td>An Academy report issued in 2015 and updated 2017 report recommended an increase in the number of designations. Ultimately, the WG members agreed that the number of designations should be increased to 20. In 2017/2018, the PRBC and HRBC (E) Working Groups began discussion of the change to 20 designations. In 2019 both working groups concurred with the LRBC WG position that the number of designations should be increased to 19 in their respective formulas Proposal # 2019 – 16CA Factors are Exposed for Comment and will be considered on the June 30th CADTF call.</td>

Health Risk-Based Capital (E) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Summer National Meeting)
July 12, 2021

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 12, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Jennifer Li (AL); Wanchin Chou (CT); Kyle Collins, (FL); Tish Becker and Brenda Johnson (KS); Rhonda Ahrens, Lindsay Crawford and Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Mike Boerner, Matthew Richard, and Sean Fulton (TX).

1. **Adopted its June 8, May 25, and April 23 Minutes**

The Working Group met June 8, May 25, and April 23. During these meetings, the Working Group took the following action:
1) adopted its March 17 minutes; 2) discussed the 20 bond designation factors; 3) received comments and referred the investment income adjustment to the underwriting risk factors (2021-04-CA) proposal to the Capital Adequacy (E) Task Force; 4) discussed, exposed, and requested the American Academy of Actuaries’ (Academy’s) assistance in a comprehensive review of the H2 – Underwriting Risk component; 5) adopted revisions to the 2021 health risk-based capital (RBC) working agenda; 6) adopted proposal 2021-09-H (Bond Factors); 7) discussed developing a process and the other lines of business to be considered for investment income in the underwriting risk factors; and 8) received an update on the Health Test and Health RBC Excessive Growth Charge Ad Hoc Groups.

Mr. Chou made a motion, seconded by Mr. Boerner, to adopt the Working Group’s June 8 (Attachment Three-A), May 25 (Attachment Three-B), and April 23 (Attachment Three-C) minutes. The motion passed unanimously.

2. **Adopted its 2021 Health RBC Newsletter**

Mr. Drutz said the health RBC newsletter has been updated to include a summary of the proposals adopted for the 2021 health RBC formula, which have been incorporated into the instructions, blanks, and formula.

Ms. Rankin made a motion, seconded by Mr. Dudek, to adopt the 2021 health RBC newsletter (Attachment Three-D). The motion passed unanimously.

3. **Approved the 2020 Health RBC Statistics**

Mr. Drutz said the 2020 health statistics were run on June 30. He said there were 1,067 health RBC filings loaded onto the NAIC database, up from 1,012 in 2019. Fifteen companies triggered an action level in 2020, of which four were in a company action level, three were in a regulatory action level, two were in an authorized control level, and six were in a mandatory control level. Twelve companies triggered the trend test. He said that both the authorized control level (ACL) and total adjusted capital (TAC) increased from 2019 to 2020.

The Working Group unanimously approved the 2020 health RBC statistics (Attachment Three-E) to be posted to the Working Group’s web page.

4. **Received a Response from the Academy on H2-Underwriting Risk Component Review**

Derek Skoog (Academy) said that the Academy is happy to support the effort and review of the underwriting risk factors. (Attachment Three-F) He asked the Working Group to provide guidance on: 1) the scope and phases of work; 2) desired output/perspective requested by the NAIC from the Academy; and 3) general time frame and key dates/deadlines to assist in putting a project plan together. He said that the Academy wants to be thoughtful and upfront to make sure that the Working Group gets the information needed and in the time frame that is needed.

Mr. Drutz said that the scope and phases of work could include breaking out the work by structure, factors, or potentially by line of business and managed care credit. Mr. Skoog agreed. He said this will allow the Academy to identify where to focus its resources. He said that the Academy plans to approach this review in pieces to ensure that it is providing the Working Group with the information it is looking for, by starting with a survey and review of methodologies.
Mr. Drutz said that the Working Group may address the desired output/perspective requested by the NAIC from the Academy by asking if: 1) the current structure and formula still accurately reflect the risks associated with the types of business included under the H2 component; 2) there are other business types that should be considered; and 3) the structure and format of the H2 component still make sense. Mr. Boerner agreed with the questions outlined on addressing the desired output/perspective.

Mr. Drutz said if a year-end 2023 implementation date was used, the Working Group would need to receive a final report by year-end 2022 in order to expose and address any structural changes that would need to be implemented. He asked if this seemed to be a reasonable time frame to work towards and noted that if additional time was needed, the Working Group could work with the Academy to revise this. Mr. Skoog agreed that this seemed like a reasonable time frame. Mr. Boerner agreed with this approach.

Mr. Skoog said that given the importance and impact of the managed care credit, the Academy would tackle both the underwriting risk and managed care credit together because it is difficult to extricate the managed care credit from how the broader underwriting risk factors work today. He suggested that the Academy discuss both the underwriting risk and managed care credit together within the context of the broader underwriting risk structure.

Lou Felice (NAIC) suggested that additional study be done on “incentives” within the “withholds or bonuses/incentives” portion of the managed care credit to clarify what is still valid with regard to these types of incentive arrangements. Mr. Skoog said that this is something that could be incorporated into the project.

Mr. Skoog said that the information provided will assist the Academy in moving forward. The Academy will then come back to the Working Group to discuss the existing structure, fit for purpose and to the extent necessary suggested structure alternatives, quantification approaches, and come up with a path forward but not yet a full execution. He said that it may make the most sense for the Academy to first focus on the Underwriting Risk – Experience Fluctuation Risk page (experience fluctuation risk) and determine if those columns are the right roll up of the Analysis of Operations page. Mr. Muldoon said it would be worthwhile to understand all the pieces of the experience fluctuation risk page and if it is the correct roll up and combination of how that should be.

Mr. Drutz summarized the Academy’s approach as first reviewing the structure to ensure it would meet the purposes going forward and any changes to consider. Then the Academy will go to a more granular level and look at the different lines of business.

The Academy agreed to provide updates to the Working Group.

5. Discussed Bond Factors

Mr. Drutz said that the Working Group adopted the Academy’s proposed health bond factors with the bond portfolio adjustment for year-end 2021 reporting. He said the Academy’s life model was used as the basis in the development of the health bond factors and adjusted for health assumptions. He said the Life Risk-Based Capital (E) Working Group adopted the proposed Moody’s bond factors in June, which used differing assumptions from the Academy model.

Mr. Drutz asked if the Working Group thinks the adopted bond factors should be reevaluated given the differing models used between the life and health formulas. Mr. Chou said the Working Group should reevaluate the bond factors due to major assumption differences in the models by the Academy and Moody’s. The Academy used the economic state of the cycle, while Moody’s used a correlation model. He also noted that the original scope of the Academy’s data was from 2010.

Mr. Drutz said the Moody’s analysis used a typical life bond portfolio and not the broad spectrum of bonds available out in the market. He said consideration may need to be given on how a health portfolio may differ from life, as well as how that could drive some of the differences in analysis between the Moody’s and Academy’s models.

Mr. Drutz said the Working Group would need to gain a better understanding of the Moody’s model, as well as compare the differences between each model. He said the Working Group will need to identify the assumptions used by Moody’s and how those assumptions would align with health. Mr. Felice said that the Property and Casualty Risk-Based Capital (E) Working Group also adopted the Academy’s factors and suggested bringing this to the Capital Adequacy (E) Task Force to identify a justification for each group to look at adjusting the factors based on what the Life Risk-Based Capital (E) Working Group did. Mr. Chou said that he also brought this up to the Property and Casualty Risk-Based Capital (E) Working Group. Mr. Drutz
agreed to reach out to the Property and Casualty Risk-Based Capital (E) Working Group and the Working Group will continue
to discuss this item further on future calls.

6. Discussed Developing a Process and the Other Lines of Business to Be Considered for Investment Income in the
   Underwriting Risk Factors

Mr. Drutz said the Working Group previously adopted revised underwriting factors for comprehensive medical, Medicare
supplement, and dental and vision business to include a 0.5% investment income adjustment. He said the Working Group
agreed to develop benchmarking guidelines for updating the factors in the future for potential changes in investment yields. He
suggested the following approach based on the previous discussions: use a three- or six-month Treasury as the basis of the
benchmark and round up to the nearest 0.5% mark. For example, if the current rate was 0.4%, the investment yield would
remain at 0.5%. However, if the yield increased to 0.7%, the yield would round up to 1%. Mr. Drutz suggested using Jan. 1 for
which to base the adjustment. He said his suggestion for rounding up to the nearest half a percent was based on previous
discussions where the argument was made to base the adjustment on the investment portfolio as a whole, while other arguments
were made to the fact that the premiums that are part of the underwriting components are only held by the companies for a
short period of time, and the investment income from those premiums that are held are later paid out in claims. Therefore
the yield on those investments was little. Therefore, the rounding up to the nearest half percent was to provide a compromise
between both arguments.

Mr. Muldoon agreed with what has previously been discussed and noted that the Working Group will likely be reviewing this
again as part of the H2 review. He suggested using the six-month Treasury and rounding up to the nearest half of a percent, as
well as the Jan. 1 date to update annually based on where the Working Group is at right now.

Jim Braue (UnitedHealth Group—UHG) said that UHG thinks that using something like a six-month Treasury is excessively
conservative. If one is focusing on the run-off period of the reserves or the lag between premium receipt and pay out of claims,
that is basically looking at it from the viewpoint that 100% of the business runs off immediately. He said it was noted during a
previous meeting that while it may not be the case that one should expect 100% to run-off immediately, it could easily be the
case that 30% runs off immediately. This is true and supports UHG’s position. For example, 30% of the business runs off
immediately, and then another 30% runs off each year thereafter. Then one still has about two and a half years average maturity
of the business. In order to get down to six months, one would have something like 60% of the business running off
immediately. This means the day after RBC is calculated and the entirety of the remainder of the business running off the next
year, so it is a conservative approach and is not consistent with what is actually going on in the business. Mr. Braue said that
investment income adjustment was driven on a charge for a risk associated with the investment portfolio, and it seems
appropriate to have an offset for the benefits arising from that portfolio. He said UHG originally suggested that the adjustment
be incorporated as part of the bond factors. However, based on the Academy’s recommendation, the adjustment was made to
the underwriting risk factors. He said as a result one is really only looking at the investments associated with the claim reserves
in effect and ignoring some of the longer liabilities that may be out there, such as rate credit reserves that may not pay out until
a fair amount of time is past even after the business has run of the books. He said it also does not reflect the earnings on surplus.
Mr. Braue said from the extremely conservative viewpoint of how long the business will stay around and the extremely
conservative viewpoint of what investment should even be considered, the end result will be extremely conservative. He said
UHG understands the arguments for not going out the full five years to be consistent with the bond factors and consistent with
the modeling done for those factors, but going down to three to six-months is excessive. He said that an average maturity could
be calculated for a reasonable amount of business that is terminated each year and could come out with something in excess of
a year and maybe even two years. He asked the Working Group to give further consideration to this.

Mr. Drutz said his understanding of a run-off period is that premium is brought in on month one, and claims are generally paid
out on those premiums in months two and three. By the time one gets to month six, those claims have already been paid by
those premiums that were initially taken in. Mr. Braue said in terms of cash flow, premiums come in at the beginning of the
first month, and claims are paid out in the second month. However, in that second month, additional premiums would be
received. He said not everything would be invested in one-month instruments because one is going to be paying out claims in
the next month and there is a reasonable expectation of receiving more premium in the next month and more premium in the
month after that. The result is that with the net cash inflow over that entire period, one never has to liquidate any investments.
Therefore, it is not that one is taking those same premium dollars and paying them out a month and a half later. There is a
constant inflow of premiums and a constant outflow of claims. As long as the business is at least a break even, the entity will
generally have a net positive cash flow and would not have to liquidate any investments or use the maturity proceeds of any
investments to pay claims. Mr. Braue said the assumption cannot be made that business will remain constant or grow forever.
Therefore, a conservative short time horizon may be considered. He said typically an entity is not going to invest all of the

© 2021 National Association of Insurance Commissioners 3
money back in claim reserves in one-month instruments. He said from a cash-flow standpoint, an entity is not constantly investing money and then immediately liquidating the investment to pay claims. Instead, the entity invests based on what the net cash flow is going to be over time. Mr. Braue said that determining how quickly the business will run-off will determine how far out a company can invest.

Mr. Muldoon said that when reviewing the investment income, the Working Group should look at what carriers are telling state insurance regulators in the rate filings, such as how much investment income they are getting and how much is accounted for in their margins. He said some carriers state it is so negligible (not even one-tenth of a percent) that they do not account for it in their profit margins or contingency margins. Because the investment income on the unpaid claim liability reserves is so small and such a short-term liability, they do not make any investment income on it. He said at some point, the Working Group will need to put those pieces together, where they tell state insurance regulators that there is almost no investment income so it is not identified as part of the retention versus the argument here. Mr. Muldoon said that for the time being, the proposal that Mr. Drutz outlined seems the best approach for moving forward at this time.

Mr. Drutz said that the Working Group will continue to discuss this during future meetings.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 8, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Jennifer Li (AL); Wanchin Chou (CT); Kyle Collins, Lilyan Zhang and Benjamin Ben (FL); Tish Becker (KS); Rhonda Ahrens (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges and Sean Fulton (TX).

1. **Referred the Request Letter to the Academy to Review the Underwriting Risk – H2 Component**

Mr. Drutz said the letter to the American Academy of Actuaries (Academy) to request its assistance in reviewing the Underwriting Risk – H2 component was exposed for a short time, during which no comments were received. He suggested that the July 30 response date be modified to July 10 due to working groups meeting in advance of the Summer National Meeting scheduled for August. Derek Skoog (Academy) indicated that the Academy could provide a response by July 10.

Mr. Chou made a motion, seconded by Mr. Dudek, to refer the request letter (Attachment Three-A1) to the Academy to review the Underwriting Risk – H2 component with a modification to change the response date to July 10. The motion passed unanimously.

2. **Adopted Updates to the 2021 Health RBC Working Agenda**

Mr. Drutz said item 21 on the health risk-based capital (RBC) working agenda has been modified to include the following: 1) develop a process to review the investment income adjustment; 2) determine the frequency for updates to the adjustment; and 3) determine if other lines of business should include an investment income adjustment.

Ms. Rankin made a motion, seconded by Mr. Chou, to adopt the revised 2021 health RBC working agenda (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Seven). The motion passed unanimously.

3. **Discussed Developing a Process and the Other Lines of Business to be Considered for Investment Income in the Underwriting Risk Factors**

Mr. Drutz said the Working Group previously agreed to begin developing a process for reviewing the investment income in the underwriting risk factors, and one way to do this would be to develop a set of benchmarks for the updates. He said one possible benchmark could be a six-month treasury, rounded up for the nearest 0.5%, and it could then be reviewed annually until the Academy’s review of the H2 component is completed. He said the suggestion to round up to the nearest 0.5% was based on interested party comments to use a higher investment yield and a longer holding assumption of five years for assets. He said based on the Working Group’s decision to use the 0.5% investment yield in the comprehensive medical, Medicare supplement, and dental and vision factors, it seems that a five-year benchmark should not be used; however, if Working Group members feel a need to revisit this possibility, they can pursue it.

Mr. Drutz said the Working Group also agreed to look at incorporating investment income into the other lines of business, and one approach may be to incorporate this into the Underwriting Risk – H2 component review; however, this may depend on the timeline for completion of that review. He said if the Working Group feels that the other lines of business need to be reviewed sooner, they can reach out to the Academy on the feasibility of this. He suggested that the Working Group revisit this once a response from the Academy has been received regarding the Underwriting Risk – H2 component review.

Mr. Drutz said the Working Group will continue to discuss this topic on future calls.

4. **Received an Update on the Health Test and Health RBC Excessive Growth Charge Ad Hoc Groups**

Mr. Drutz said the Health Test Ad Hoc Group met June 2 and discussed the current health test language, most specifically the “Passing the Test” section. He said the ad hoc group discussed whether there is a need to update the language at this time, given the recent updates to the annual statement by the Blanks (E) Working Group. He said the ad hoc group plans to perform additional analysis to see how many companies would move if the “licensed in 5 states or less...” and “writing 75% of premium
in the domiciliary state…” were removed and the 95% premium and reserve ratio were left as is. The ad hoc group also discussed whether the premium and reserve ratio should be modified. The ad hoc group is currently scheduled to meet again July 14.

Mr. Drutz said the Excessive Growth Charge Ad Hoc Group met June 2 and took the following action: 1) discussed how to continue moving the project forward, including the review of the property/casualty (P/C) excessive growth charge; and 2) continued analysis, including a case study. The ad hoc group is scheduled to meet again in July to continue its work on this project.

5. Discussed Other Matters

Mr. Drutz said the Working Group previously exposed proposal 2021-09-H – Bond Factors, with no comments received, and adopted it on its May 25 call. He noted that the bond portfolio adjustment was included within the Academy’s Bond Factor Model, as discussed and approved by the Working Group. Therefore, as a result, the portfolio adjustment is included within the health bond factors on page XR006 – Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets. Mr. Drutz said this is being brought to the Working Group’s attention because the life and property RBC formulas do not reflect a bond portfolio adjustment on the Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets page, whereas the health bond factors on page XR006 will include the bond portfolio adjustment. He said the impact analysis did include these factors, and the one company that moved to the trend test did not have any off-balance sheet collateral items. He said there are only 42 out of 952 companies that report off-balance sheet collateral items, and the overall industry change to authorized control level (ACL) RBC is approximately $5.7 million

Mr. Drutz said based on the lack of materiality on the inclusion of the bond portfolio adjustment in the off-balance sheet collateral charges, he does not see a reason to revisit the bond factor proposal previously adopted for 2021 reporting. He noted that if the Working Group feels that further consideration is needed, they can discuss this issue further to determine if a change is necessary for 2022 reporting.

Mr. Chou said the health bond factors were based on the original Academy life bond factor model and the 2017 study. He said the Life Risk-Based Capital (E) Working Group is continuing to study the life bond factors, and he suggested that the Health Risk-Based Capital (E) Working Group review the bond factors again after the Life Risk-Based Capital (E) Working Group has adopted its factors to consider any changes in methodology and updated data.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

MEMORANDUM

TO: Derek Skoog, Chair of the Health Solvency Subcommittee of the American Academy of Actuaries

FROM: Steve Drutz, Chair of the Health Risk-Based Capital (E) Working Group

DATE: May 25, 2021

RE: Request for Comprehensive Review of the H2 – Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula

On April 23, 2021, the Health Risk-Based Capital (E) Working Group agreed to request assistance from the Health Solvency Subcommittee of the American Academy of Actuaries (Academy) to perform a comprehensive review of the H2 – Underwriting Risk component and the managed care credit calculation in the health risk-based capital (RBC) formula. While there have been modifications to certain pieces of the H2 – Underwriting Risk component, there has not been a comprehensive review of the component and the managed care credit calculation performed since the inception of the formula in 1998.

Because of the evolving and changing health market over the last 23 years, the Working Group believes a review of the lines of business, methodology, and factors for the H2 – Underwriting Risk component is warranted at this time.

The Working Group requests the assistance of the Health Solvency Subcommittee to perform a comprehensive review of the H2 – Underwriting Risk component and the managed care credit calculation in the health RBC formula. Please notify the Working Group by July 30, 2021, if the Academy is willing to accept and work on this project.

Please send any questions or comments to Crystal Brown (NAIC) via email at cbrown@naic.org.

cc: Matthew Williams, Staff Support of the Health Solvency Subcommittee of the Academy
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 25, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Blase Abreo and Jennifer Li (AL); Wanchin Chou and Andrew Greenhalgh (CT); Hui Tao and Lilyan Zhang (FL); Tish Becker (KS); Rhonda Ahrens, Lindsay Crawford and Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges (TX).

1. **Adopted Proposal 2021-09-H (Bond Factors)**

   Mr. Drutz said proposal 2021-09-H was exposed with the five-year time horizon bond factors for a 20-day comment period, and no comments were received. Mr. Chou suggested that the Working Group consider a future review of the factors for two reasons: 1) potential changes in the life bond factors since the health factors were based on the 2017 version and different from what life used; and 2) the relationship between life, health and property/casualty (P/C) are quite similar, and methodology changes to the life formula may need to be considered for health. He said he agrees with moving the current proposal forward and re-evaluating the factors in the future after life has made their final adoption.

   Mr. Chou made a motion, seconded by Mr. Muldoon, to adopt proposal 2021-09-H (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-C). The motion passed unanimously.

2. **Referred Proposal 2021-04-CA to the Capital Adequacy (E) Task Force for Consideration**

   Mr. Drutz said proposal 2021-04-CA was exposed by the Capital Adequacy (E) Task Force for all lines of business until May 21, and one comment letter was received from UnitedHealth Group (UHG).

   Jim Braue (UHG) summarized UHG’s comment letter and suggested that additional consideration be given to the appropriate investment income rate to be used in the future; however, for the present and in the interest of timeliness, UHG supports the current proposal, as it stands for year-end 2021 reporting.

   Mr. Muldoon said he is open to hearing additional discussion to determine if the Working Group should consider looking at the short-term liabilities or the five-year bond investment rate for the entire bond portfolio of a company. He said there could be a disconnect in having a large bond portfolio that is two to three times larger than the same reserve liability, and somewhere within this bond portfolio, there is not a specific set of bonds to cover the claim reserves. He said the Working Group must still have a range of short-term to long-term bonds that are used to cover much more than just the investment returns on the claim reserves. He said it does not seem as simple as just splitting it apart and going with a five-year bond portfolio rate. He said Colorado has a regulation that requires health insurers in their rate filings to account for the investment income that is being made on the unpaid claim liability reserves and the incurred but not reported (IBNR) losses and accounted for in the profit margins. He said many companies would say they had very short-term liabilities and made very little investment income, thus they would build in zero for their investment income because they did not want to have to account for it as part of their retention. He said UHG’s comment letter indicated that state insurance regulators cannot just go by if a plan terminates. He said it is not just if a plan terminates all their health business, it can affect companies writing federal Affordable Care Act (ACA) business. Because there are new companies coming in all the time and should one of those companies lose 30% of their volume in a year and then lose premium in the next year, they would still have to cover all the run out of claims in the next year. Now the company must cover those very short-term claims run outs, and by using the five-year adjustment, it would assume that all the company invested in were five-year bonds, which would be unlikely. Reviewing a company’s bond list shows a wide range of varying maturity dates. Mr. Muldoon said he does not believe that a simple argument can be made to disconnect the short-term duration of the claim reserve liabilities from the overall bond portfolio, which is much larger and covers other kinds of risk.

   Mr. Muldoon reiterated that he is open to hearing more discussion on this because the American Academy of Actuaries’ (Academy’s) recommendation reflected that the investment rate was based on these being very short-term liabilities or a one-year business, which makes sense in an ACA world where things can change significantly from year to year.

   Mr. Drutz suggested that the Working Group refer the proposal back to the Capital Adequacy (E) Task Force for consideration on its June 30 call using the 0.5% investment income return for year-end 2021 reporting. He said the Working Group will
update the working agenda to continue its work on developing a process for reviewing the assumed rate of investment return in future years and the frequency for which the adjustment should be reviewed.

Hearing no objections, proposal 2021-04-CA was referred to the Capital Adequacy (E) Task Force for consideration on all lines of business on its June 30 call.

3. Exposed the Letter to the Academy to Review the H2 – Underwriting Risk Component

Mr. Drutz said the Working Group agreed to request the Academy’s assistance in performing a comprehensive review of the H2 – Underwriting Risk component that includes a review of the lines of business, methodology and factors. He suggested that the Working Group expose the letter for a 10-day public comment period ending June 3.

Hearing no objections, the request letter was exposed for a 10-day public comment period ending June 3.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 23, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Steve Ostlund and Jennifer Li (AL); Wanchin Chou, (CT); Carolyn Morgan and Kyle Collins (FL); Tish Becker (KS); Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Matthew Richard and Aaron Hodges (TX).

1. **Adopted its Spring National Meeting Minutes**

The Working Group met March 17, 2021, and took the following action: 1) adopted its Feb. 10, 2021; Jan. 22, 2021; and Dec. 18, 2020, minutes; 2) adopted its 2021 working agenda; 3) referred proposal 2021-02-CA to the Capital Adequacy (E) Task Force for exposure; 4) received an update from the American Academy of Actuaries (Academy) on incorporating investment income into the Underwriting Risk – H2 component and exposed proposal 2021-04-CA; and 5) received an update on the bond factor impact analysis.

Mr. Drutz said the Working Group met March 31 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to review the company specific impact analysis on the two- and five-year time horizon bond factors.

Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the Working Group’s March 17 minutes (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Two). The motion passed unanimously.

2. **Discussed 20 Bond Designation Bond Factors**

Mr. Drutz said the Working Group has continued to work with the Academy on the 20 new bond designations and factors as well as Johnson Luk (New York Department of Financial Services) and Eva Yeung (NAIC) to develop the impact analysis for the proposed health bond factors.

Mr. Drutz summarized the results of the health bond factor impact analysis (Attachment Three-C1). He said the base factors and BSF table reflects the current and proposed two- and five-year-time horizon factors, as well as the difference between the current factors and proposed factors. The two-year time horizon factors for NAIC 01 bonds are, for the most part, equal to or less than the current factors except for the NAIC 1F and 1G. The five-year factors for NAIC 01 bonds are equal to or greater than the current factors. Because the NAIC 3A–6 factors were calculated on a different basis than the NAIC 1A–2C factors, the only difference in the two- and five-year time horizon factors are for NAIC 1A–2C. The two- and five-year time horizon factors include the bond portfolio adjustment rather than having a separate charge or calculation. Currently, the health formula does not include a portfolio adjustment.

Mr. Drutz said the Results page provides a summary of the overall impact of the proposed two- and five-year time horizon factors. Table One shows the percent change in the H1 component by company size, as well as the percent change in Authorized Control Level (ACL). The change in the H1 component is relatively small, while the largest average change in the ACL for the five-year factors was 2.345%. Table Two shows the comparison of action level for the change in factors. There is no change in an action level for the two-year factors, while one company moved from no action to the trend test level with the five-year factors. The company that moved to the trend test was due to the significant amount in the company’s H1 component compared to the H2 component, and a large majority of the bonds are held in NAIC 1E–2C bonds. Table Three shows the distribution of the percent change in the H1 charges by company size. Table Four shows the percent change in ACL by company size. Most companies in both the two- and five-year time horizon factors had only a 5% change in their ACL. Mr. Drutz said four companies showed an improvement on their risk-based capital (RBC) with the five-year factors; however, given that the five-year factors are equal to or greater than the current factors, the RBC ratio should have been lower. NAIC staff have reviewed these four companies and found that the book/adjusted carrying value (BACV) of the NAIC 01 bonds in Column 1A and Column 1 was not reported consistently, and the companies were contacted to identify the reason for the inconsistencies. Table Five shows the distribution of the percent change in RBC ratios by company size, with most companies having only about a 5% change in their RBC ratio under both the two- and five-year time horizon factors.
Mr. Chou said the Life Risk-Based Capital (E) Working Group is looking at the bond factors and potential changes based on the Moody’s report. He said the NAIC 3A–3C factors in health seem significantly higher than life, and he suggested that further consideration be given to these factors. Crystal Brown (NAIC) said for health companies, NAIC 1 and 2 bonds (investment grade) are reported at amortized cost, while NAIC 3–6 (non-investment grade) are reported at amortized cost or fair value, and this is one reason for the difference in the NAIC 3–5 bond factors between life and health.

Mr. Drutz said the Academy’s original report indicated that a time horizon greater than two years could be considered, and the duration of assets for health insurers is about 5.2 years, which is longer than the duration of liabilities. He said a two-year time horizon makes it harder for regulatory framework to support an amortized cost basis rather than a market value-based valuation, whereas using a five-year time horizon would be more consistent with the property/casualty (P/C) formula and the asset duration for health is five years.

Hearing no objections, proposal 2021-09-H was exposed with the five-year time horizon factors for a 25-day public comment period ending May 21.

3. Received Comments on an Investment Income Adjustment to the Underwriting Risk Factors (Proposal 2021-04-CA)

Mr. Drutz said the Working Group worked with the Academy to incorporate investment income into the underwriting risk factors for Columns 1–4 on the Experience Fluctuation Risk page, and it previously exposed both the 0.5% and 1% adjusted factors. Two comment letters were received during the comment period (Attachments Three-C2 and Three-C3).

Jim Braue (UnitedHealth Group—UHG) said UHG supports the changes, and it is appropriate to include investment income in the health RBC formula. He said the key item of its comment letter relates to the rate of investment return, and it suggested that the Working Group establish the rationale for what rate should be used to support the change, as well as provide a path for updating the factors as necessary in the future. He said UHG believes there are four key considerations in determining the rationale for the rate to be used. The first is what the average maturity of the investments is to assume. Mr. Braue said UHG strongly believes the rate should be tied to the average maturity for the bond factors themselves, because it is all the same portfolio of bonds. He said to be consistent with the five-year bond factors that were exposed, and if those factors are adopted, UHG would recommend that a five-year maturity be considered for the rate of investment return as well. The second consideration is the average quality, because there have been concerns raised in the past about using a quality that is tied to an insurer’s actual portfolio, as it could provide inappropriate incentives to move to lower quality investments. Mr. Braue said UHG believes it would be appropriate to use something similar or like a U.S. Department of the Treasury (Treasury Department) rate, which is considered risk free or at least a very high-quality bond rate, to avoid any improper incentives. The third consideration is the historical time period, UHG believes historical rates and not projected rates should be used in order to give a firmer foundation. Mr. Braue said UHG does not believe it would be appropriate to look at current rates because that is not generally representative of what portfolios are actually earning at any given time. He suggested two possible ways to look at this: 1) as a time period that is fairly consistent with the maturity assumption; and 2) rounding. He said maturity assumption is not a perfect proxy for when investments in the portfolio would have been purchased, but it seems like a reasonable approximation for this purpose. He said if going with a five-year maturity, it may be appropriate to take a five-year average rate to pick the rate of investment return. He added that if a five-year average is used, it could potentially change significantly every two to three years and possibly update the factors more frequently. He said if the Working Group wants factors in place for a longer period and that requires less frequent updating, a longer period could be used and considered as a long-term average, which would be appropriate for long-term solvency regulation. Mr. Braue said the factors should be rounded to a sufficient degree of precision, so that significant changes are not skewed; however, they should not be rounded to a precision so that they have to be re-evaluated every time the rate changes by one basis point. UHG suggested using between a quarter and half of a percentage point; however, a quarter of a point will still make a meaningful change in the underwriting risk factors. Based on those considerations, a table of rates resulting from the various combinations was included in the comment letter. Mr. Braue noted that the high tier factors in the Academy’s letter were rounded to one-tenth of a percent, whereas the lower tiered factors were rounded to two-tenths of a percent, and he suggested that the two-tenths of a percent be used in both the high tier and low tier factors for greater precision. Steve Guzski (Academy) said the Academy would provide the Working Group with revised factors to include the rounding to two-tenths of a percent in the high tier factors.

Mr. Drutz said in the Academy letter, it discussed how the investment income tied to the underwriting risk factors would relate primarily to the run-off of claims, and the average for comprehensive medical is 1.5 months. He asked Mr. Braue if he disagreed with that concept. Mr. Braue said it is wrong to think of the 1.5 months as being the runoff of the reserves and therefore the runoff of the assets. He said the underwriting risk factors have nothing to do with the runoff of reserves. He said they look at the potential for underwriting losses over a period of time; i.e., two to three years. He said when modeling out over two years,
premiums come in regularly and claims are paid out regularly, and the investments represent the timing difference between the premium and claims. Therefore, the 1.5 month difference is not the difference between 0 and 1.5, but instead more like the difference between two years and two years and 1.5 months. The maturity of the assets that are being looked at should not be thought of as 1.5 month assets, but instead thought of as two year and 1.5 month assets or three year and 1.5 month assets. Mr. Braue said the case could be made that it should be tied back to the modeling period, but the Working Group has already made the decision with respect to the bond factors to think of it in terms of asset maturity rather than the liability maturity; therefore, to be consistent, asset maturity should be considered here. Mr. Drutz said when writing this business, more assets must be kept liquid, such that those claims payments can continue to roll over and then more premiums are received but still need to keep that liquidity.

Carl Labus (Blue Cross Blue Shield Association—BCBSA) summarized its comment letter and noted that the investment income is warranted. He said the maturity dates in its health portfolios are longer than those highlighted in the Academy’s letter for a claim payment pattern. He suggested that the Working Group consider a longer horizon because there is a claim payment pattern, where there are constant cash flows coming that support payment of claims, but non-profit health plans have to build up surplus, and the assets that support surplus have longer maturities and generate investment to support growth and capital as well as changes the health care industry is experiencing. He said that the BCSBSA supports the 1% option over the 0.5% option. He also suggested a transparent process for updating these factors in the future.

Mr. Drutz said he is leaning towards the 0.5% assumption after looking at the six-month and one-year Treasury Department yields. The six-month Treasury Department yield has ranged from a high 0.2% to 0.04% currently, and the one-year Treasury Department ranged from 0.2% to 0.07% currently. Mr. Muldoon agreed with moving forward with the 0.5%.

Hearing no objections, proposal 2021-04-CA was referred to the Capital Adequacy (E) Task Force for an exposure for all lines of business, with any comments to come back to the Working Group.

4. Discussed a Comprehensive Review of the H2 – Underwriting Risk Component and Adopted the Revised Working Agenda

Mr. Drutz said the Underwriting Risk - H2 component has not had a comprehensive review since its inception in 1998. There have been portions, such as stop loss, stand-alone Medicare Part D, and other health and non-health, that have been looked at on an individual basis. He asked the Working Group if it believes it would be beneficial to ask the Academy to do a comprehensive review of the H2 component, along with a review of the Managed Care Credit based on recent discussions related to the managed care credit and the investment income. He said he did reach out to the Academy to see if this is something it would be willing to look at, and it agreed that it would. Mr. Muldoon said Nebraska is in favor of a comprehensive review of the Underwriting Risk – H2 component. Mr. Drutz added that the working agenda was revised to include the underwriting risk review.

Hearing no objections, the Working Group agreed to move forward with the request to seek the Academy’s assistance in performing a comprehensive review of the Underwriting Risk – H2 component, and it requested that NAIC staff draft the request letter to be discussed on its next call.

Mr. Muldoon made a motion, seconded by Mr. Chou, to adopt the revised working agenda (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Seven) to incorporate the Underwriting Risk – H2 component review. The motion passed unanimously.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Mr. Steven Drutz, Chair  
Health Risk-Based Capital (E) Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

Via electronic mail to Crystal Brown.

Re: Proposal 2021-04-CA.

Dear Mr. Drutz:

I am writing on behalf of UnitedHealth Group in regard to Proposal 2021-04-CA, as exposed for comment on 3/17/21, and the 2/22/21 letter from the American Academy of Actuaries (the “Academy letter”) that was exposed with the proposal. We appreciate your Working Group’s efforts to appropriately reflect investment income in the Health Risk-Based Capital (RBC) formula, and have previously expressed our support for this initiative in our comment letters of 8/31/20 and 1/6/21.

We fully support the changes that are recommended in Proposal 2021-04-CA. We concur that adjustments would be appropriate to the factors for Comprehensive Medical, Medicare Supplement, and Dental & Vision, and that consideration of other products can be deferred. We note that there is still an open issue as to the rate of investment return that should be used, and we offer some comments on that matter below. We also provide a comment on the Academy letter.

Rate of investment return.

The adjustment to the underwriting risk factors depends on an assumption regarding the rate of investment return on health entities’ investment portfolios. Proposal 2021-04-CA offers two options: a rate of 0.5% and a rate of 1.0%. We believe that, whatever rate is ultimately selected, the Working Group should clearly state the rationale for the selection. This would have two important benefits: first, the rationale would help to support the appropriateness of the recommended adjustment; and second, the rationale would guide future updates of the adjustment. Accordingly, we set forth below our thoughts as to how the rate should be selected; we then present illustrative rates based on those concepts.
We believe that the selected rate of investment return should be based on historical averages, rather than some projection of future rates, as historical data provide an objective basis for determining the rate. We recognize four key components of determining the rate of investment return:

1. The average maturity of the investments.
2. The average quality of the investments.
3. The historical time period over which rates should be averaged. (This also has implications for the frequency of future updates.)
4. The degree of rounding to employ. (This also has implications for the threshold for change that would trigger a future update.)

We address each of these components under the corresponding heading below.

**Average maturity.**

As we stated in our comment letters of 1/6/21 and 1/13/21, we feel strongly that the maturity underlying the assumed rate of investment return should be consistent with the maturity underlying the bond factors. The same investments are being considered for both purposes, so there is no clear rationale for making a distinction. We believe that the degree of investment return that is reflected in the underwriting risk factors should be consistent with the degree of risk that is reflected in the bond factors. (We have explained in our comment letter of 1/13/21 why the approximately 1.6-month discounting period used by the Academy is not relevant to the average maturity assumption for the rate of investment return.)

We understand that the Working Group is currently considering maturities of 2 years and 5 years for the bond factors. We urge that whichever maturity is chosen as the basis for the bond factors, that same maturity should be used in adjusting the underwriting risk factors. For the illustrative rates, we have assumed that either 2 years or 5 years will be the final choice.

**Average quality.**

Working Group members previously expressed concern about tying the average quality assumed for this adjustment to the average quality of the investments actually held by health entities. Because of the covariance adjustment in the Health RBC formula, the impact of the bond factors will be diminished relative to the impact of the underwriting risk adjustment; higher yields from riskier bonds would therefore be likely to have a net favorable impact on RBC requirements, providing an undesirable incentive to lower the quality of investments held.

We agree that this is a reasonable concern. The best way to address it would be to base the adjustment on a high-quality rate. The rate could be a risk-free rate, for which U.S. Treasury securities yields would usually be considered a proxy. That may be unnecessarily conservative; a high-quality corporate bond rate, perhaps with a reduction
for expected defaults, might be a better option. For the illustrative rates, we present rates for both Treasury securities and single-A-rated corporate bonds.

**Historical time period.**

It would not be appropriate to use current rates. First, relatively few bond portfolios will have been invested entirely at current rates; investments will have been purchased over a series of years. Second, basing the adjustment on current rates would imply very frequent updates in the future.

One possibility is to tie the averaging period to the maturity assumption. In reality, a 2-year average maturity does not imply that the investments were purchased over the last two years; e.g., the portfolio could include a bond with 4 years to maturity that was purchased 6 years ago as a 10-year bond. However, as a matter of convenience, we can look at a 2-year average if the 2-year rate is being used, and a 5-year average if the 5-year rate is being used.

If a 2-year average is being used, the average could change significantly every year, and it would be necessary to monitor the average annually to determine if an update to the adjustment is needed. Even if a 5-year average is used, an adjustment might be necessary every 2 to 3 years. If the Working Group would prefer less frequent updates, a longer-term average should be used.

For the illustrative rates, we present averages over three periods for the Treasury rates and two periods for the single-A corporate rates (because of limitations on our corporate rate data set). For each average maturity, we present an average over the maturity period (2 or 5 years); a 10-year average; and a 30-year average.

**Rounding.**

There are two competing considerations with regard to rounding. On the one hand, rounding should be to a sufficient degree of precision that significant changes are not obscured. On the other hand, rounding should not be to such a high degree of precision that a change is indicated every time that the rate is re-evaluated.

Based on the tables in the Academy letter that show how the underwriting risk factors would vary with the assumed rate of investment return, we suggest that rounding to the nearest quarter of a percentage point (0.25%) would be appropriate. The change in the underwriting risk factor would be meaningfully large at such a degree of rounding, whereas smaller changes probably would not be.

If, over time, the Working Group concludes that rounding to the nearest 0.25% would result in the factors being updated too frequently, the rounding precision could be increased to 0.50%. However, we suggest beginning with 0.25%, and modifying that if necessary in the future.
To illustrate a currently reasonable range of rates, below we present rates for two maturities (2 years and 5 years), two quality categories (Treasury and single-A corporate), and three averaging periods (2/5 years, 10 years, and 30 years). The 30-year averaging period is shown only for Treasury securities, as our data source did not include the earlier years for single-A corporates; however, the difference between the 10-year and 30-year averages for single-A corporates can perhaps be inferred from the corresponding difference for Treasury securities. All averages are for periods ending 12/31/20.

<table>
<thead>
<tr>
<th>Average over maturity period</th>
<th>10-year average</th>
<th>30-year average</th>
</tr>
</thead>
<tbody>
<tr>
<td>2-year maturity:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Treasury</td>
<td>1.11%</td>
<td>0.70%</td>
</tr>
<tr>
<td>A-rated corporate</td>
<td>1.55%</td>
<td>1.28%</td>
</tr>
<tr>
<td>5-year maturity:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Treasury</td>
<td>1.67%</td>
<td>1.45%</td>
</tr>
<tr>
<td>A-rated corporate</td>
<td>2.29%</td>
<td>2.24%</td>
</tr>
</tbody>
</table>

As can be seen, the appropriate assumption for the rate of investment return can vary widely, depending on which combination of options is decided upon. If a rounding precision of 0.25% is applied, then the rate of investment return would fall within the range of 0.75% to 4.50%.

The Academy letter.

We have only one comment with regard to the Academy letter. In the table on page 3 of the letter titled “Investment Income Adjusted Tiered RBC Factors,” the “high tier” factors should be rounded to two decimal places, just as the “low tier” factors are. There is no obvious reason to use a different degree of precision for the two sets of factors, and two decimal places give a better representation of the impact of the adjustment. We recommend that the Academy be asked for a re-rounded set of factors.

* * * * *

We would be happy to discuss these comments with you and the Working Group.

Mr. Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1000 Walnut Street, Suite 1500
Kansas City, Missouri 64106-2197

Dear Mr. Drutz:

America’s Health Insurance Plans and Blue Cross and Blue Shield Association appreciate the opportunity to provide comments on the Health Risk-Based Capital (E) Working Group exposed proposal 2021-04-CA – Investment Income Adjustment in Underwriting Risk regarding the two options for an investment income adjustment to the H2 underwriting risk factors in the Health RBC formula.

We would also like to thank and express our appreciation to the Health Risk Based Capital Working Group (“Working Group”) and the Academy of Actuaries (“Academy”) for their work in the development of revised bond factors and incorporating an investment income adjustment into H2 Underwriting Risk calculation as we feel this was warranted.

Our comments regarding the proposed investment income adjustments in the underwriting risk are brief and our support is for Option 2 in the exposure.

The Academy in the development of the bond factors used a two-year time horizon and noted that a longer time horizon could be used based on the duration of assets held by health insurers. Additionally, the Academy developed bond factors for a five-year time horizon and the Working Group is completing a bond factor sensitivity analysis based on bond factors developed for both the two-year and five-year time horizons. On the surface one could assume similar time horizons would be used in the development of the H2 Investment Income Underwriting adjustment factor. In the Academy’s December 15, 2020 letter to the Working Group regarding proposed H2 investment income adjustment factors, based those factors on claim payment completion patterns and investment income earned on premium less claims, or what is left after the timing of claim payment completion. Claim and expense payments for health companies are generally funded through routine ongoing cash receipts of premium. Any excess of premium after paying claims and expenses is held by companies to fund future cash needs or earmarked in surplus to support longer term needs like new business growth, operations, RBC capital
AHIP and BCBSA comments on Investment Income Adjustment

requirements and future investments. Most of the underlying investments in health companies that support surplus are held in high quality fixed investments due to the conservative nature of health company investment policies. Historically, these bond investments have maturity dates longer than a claim payment cycle and have generated significant investment income over time to offset potential investment and underwriting risks that may be posed. Therefore, the longer time horizon in Option 2 is the more appropriate option of the two presented.

Additionally, we would recommend the development and use of a consistent transparent process to review and determine when factors should be adjusted to reflect changes in investment returns. We also recommend that ample lead time is given when any changes are proposed to allow health insurers the ability to adjust their capital and operating models to determine the impact from proposed changes. Extensive capital planning utilizing HRBC ratios is done to assure adequate capital is maintained as health plans price and grow their business and invest in strategic initiatives especially for the non-public health plans who have to support growth and strategic initiatives from operations.

Thank you in advance for your consideration of our comments and the continued work of the Health RBC Working Group and the Academy. If there are any questions about the comments submitted, please let us know. We look forward to further discussions related to this topic.

Ray Nelson
Consultant to AHIP

What RBC Pages Should Be Submitted?
For the year-end 2021 health risk-based capital (RBC) filing, submit hard copies of pages XR001 through XR027 to any state that requests a hard copy in addition to the electronic filing. Beginning with year-end 2007, a hard copy of the RBC filings was not required to be submitted to the NAIC. Other pages, outside of pages XR001 through XR027, do not need to be submitted. Those pages would need to be retained by the company as documentation.

ACA Sensitivity Test
The Capital Adequacy (E) Task Force adopted proposal 2020-02-CA to delete the Affordable Care Act (ACA) Fee Sensitivity Test from the health RBC formula during its Nov. 19, 2020, meeting.

Max Function—Line 17 RBC Growth Safe Harbor

Page Split—Bonds and Miscellaneous Assets
The Capital Adequacy (E) Task Force adopted proposal 2020-07-H to break out the bonds and miscellaneous fixed assets into separate pages (XR007 and XR008) during its Nov. 19, 2020, meeting. The break out of these pages resulted in the renumbering of all subsequent pages. The instructions and blanks were revised to reflect the changes in the page numbers.

Bond Designation Structure
The Capital Adequacy (E) Task Force adopted proposal 2020-10-CA to modify: 1) bond structure for the 20 designation categories for the bonds; 2) reclassified hybrid securities; and 3) the instructions for the incorporation of bond references and hybrid securities reclassification in the health RBC formula during its March 23, 2021, meeting. The structure for the 20 bond designation categories was modified for the Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets page (XR006), Fixed Income Assets page (XR007), and Asset Concentration page (XR012).

Incentives—Managed Care Credit
As a result of the adoption of proposal 2021-02-CA by the Capital Adequacy (E) Task Force during its April 29, 2021, meeting, the term "incentives" was incorporated into the managed care instructions and blanks as “Bonuses/Incentives.”
**Receivable for Securities Factor**

As a result of the adoption of proposal 2021-07-CA by the Capital Adequacy (E) Task Force during its June 30 meeting, the factor for the Receivables for Securities (Line (38), Page XR008) was updated from 0.0250 to 0.0240.

**Investment Income Adjustment to Underwriting Risk Factors**

As a result of the adoption of proposal 2021-04-CA by the Capital Adequacy (E) Task Force during its June 30, 2021, meeting, a 0.5% investment income adjustment was incorporated into the Underwriting Risk factors for comprehensive medical, Medicare Supplement, and dental and vision. The revised factors are:

<table>
<thead>
<tr>
<th>$0–$3 Million</th>
<th>$3–$25 Million</th>
<th>Over $25 Million</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comprehensive Medical &amp; Hospital</td>
<td>0.1493</td>

</tr>
<tr>
<td>Medicare Supplement</td>
<td>0.1043</td>
<td>0.0663</td>
</tr>
<tr>
<td>Dental &amp; Vision</td>
<td>0.1195</td>
<td>0.0755</td>
</tr>
</tbody>
</table>

**Bond Factors**

During its June 30, 2021 meeting, the Capital Adequacy (E) Task Force adopted proposal 2021-09-H that: 1) revised factors for the 20 bond designation categories with the incorporation of a bond portfolio adjustment (based on an average of 382 issuers); and 2) modified instructions for the revised bond factors. The factors for the 20 bond designation categories were incorporated on the Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets page (XR006), Fixed Income Assets page (XR007), and Asset Concentration page (XR012).

| 1.A  | 0.003 | 2.A  | 0.022 | 3.A  | 0.069 | 4.A  | 0.089 | 5.A  | 0.123 |

**Editorial Changes**

1. Editorial changes were made to the Health RBC Blank and Forecasting files for consistent referencing to the Annual Statement Source columns, column headings, and footnotes (e.g., Column, Line, Schedule, etc.).

2. An editorial change was made to Columns (1), (2) and (3) headings on page XR007 to change “L2 thru 26” to “L3 thru 26.”

3. An editorial change was made to the Annual Statement Source column on page XR007 to reference the following: “(1)=Footnote Amt 1 L000001A - L(1); (2)=Footnote Amt 1 L000001A - L(1); (3)=Footnote Amt 1 L000001A- SCE, Pt2, C7 L0599999.”

RBC Forecasting and Instructions

The Health RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2021 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies, and it is available to download from the NAIC Account Manager. The 2021 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies publication is available for purchase in an electronic format through the NAIC Publications Department. This publication is available for purchase on or about Nov. 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

**WARNING:** The RBC Forecasting Spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

NAIC Proceedings – Summer 2021
July 8, 2021

Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Re: Request for Comprehensive Review of the H2—Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries Health Solvency Subcommittee, I am pleased to provide this response letter to the National Association of Insurance Commissioners (NAIC) Health Risk-Based Capital (HRBC) (E) Working Group. This letter is in response to the request from the working group to provide analysis to perform a comprehensive review of the H2—Underwriting Risk component and the managed care credit calculation in the health risk-based capital (RBC) formula.

The subcommittee is willing to agree to this request and, as such, would like to discuss and establish the following with the working group:

- Scope and phases of work
- Desired output/perspective requested by the NAIC from the Academy
- General time frame and any key dates/deadlines

Our suggested approach would be to initially survey methods of evaluating risk and in particular underwriting risk taken by other risk quantification formulas (e.g., health, life and P&C RBC formulas, credit rating agencies) and summarize their respective merit for health underwriting risk. This initial phase would be discussed with the HRBC Working Group to determine the best approach before beginning detailed analysis and factor development.

We look forward to working with the HRBC Working Group on this worthwhile endeavor.

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

cbrown@naic.org
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 21, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. **Adopted its June 11, June 3 and June 4, May 27, May 20, April 29, April 22, April 15, April 6, March 30, and March 12 Minutes**

Mr. Chou made a motion, seconded by Ms. Mears, to adopt the Working Group’s June 11 (Attachment Four-A), June 3 and June 4 (Attachment Four-B), May 27 (Attachment Four-C), May 20 (Attachment Four-D), April 29 (Attachment Four-E), April 22 (Attachment Four-F), April 15 (Attachment Four-G), April 6 (Attachment Four-H), March 30 (Attachment Four-I), and March 12 (see NAIC Proceedings – Spring 2021, Capital Adequacy (E) Task Force, Attachment Three) minutes. The motion passed unanimously.

2. **Adopted the 2021 Life and Fraternal RBC Newsletter**

Mr. Leung made a motion, seconded by Mr. Boerner, to adopt the Life and Fraternal Risk-Based Capital (RBC) Newsletter (Attachment Four-J). The motion passed unanimously.

3. **Discussed the 2020 Life and Fraternal Statistics**

Mr. Barlow said the Working Group has previously discussed taking a more in-depth look at the statistics (Attachment Four-K) to determine whether the right statistics are being captured and how the Working Group can make better use of them. He said some members of the Working Group had previously volunteered to work on this. Dave Fleming (NAIC) said he could share some of the in-depth review put together with those members interested. Mr. Tsang volunteered to take the lead on this. Mr. Chou and Mr. Boerner reiterated their willingness to work on this.

4. **Adopted Revisions to its Working Agenda**

Mr. Fleming explained that the changes were to delete items that have been addressed by the Working Group and add one item for guidance on the impact of the bond factor changes and one item to address the review of the RBC statistics. Mr. Barlow said the first new item is to provide some information, mainly to the financial regulators, on the potential impact of the bond factor changes that may, for example, cause some companies that would not otherwise do so to trigger a trend test. Mr. Fleming said this is an item directed to NAIC staff to draft, but it will need to be approved by the Working Group. Mr. Chou made a motion, seconded by Mr. Leung, to adopt the Working Group’s working agenda (Attachment Four-L). The motion passed unanimously.

5. **Discussed Other Matters**

Mr. Barlow reminded the Working Group of the work being done on the new economic scenario generator (ESG). He said most of this discussion will be through the Life Actuarial (A) Task Force; and while this will affect both reserves and capital and there is a large overlap with the Working Group in both membership and interested parties, those interested in the progress on ESGs should be aware of that.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 11, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted the ACLI Bond Proposal

Mr. Barlow stated that the meeting materials contain a proposed revision to the tax factor adjustment and should be considered as part of the adoption of either proposal before the Working Group. Paul Graham (American Council of Life Insurers—ACLI) stated that in the calculation of the bond factors, all the calculations are done on an after-tax basis; then, these are converted to a before-tax number, and a separate sheet performs the tax adjustment. He said the calculation is based on a tax efficiency factor of 80%. Jerry Holman (American Academy of Actuaries—Academy) and Nancy Bennett (Academy) stated that they agree with the calculation. Mr. Tsang asked if this revision will be double counted in the calculation. Mr. Graham verified that there is no double counting.

To reduce the burden on smaller companies, Mr. Barlow said there was a proposal to change the bond size adjustment to use factors that have a break point at up to the current 50 assets, and it would revise the factor for the first 50 assets to be 2.9. Mr. Chou stated that he agrees with the 50-threshold change, but he noted that the factor depends on either the ACLI proposal or the Academy proposal. Mr. Robinson recommended an impact study before updating this factor. Mr. Barlow said no matter which proposal is selected, he believes the best approach is to use the break point at the 50-threshold. Mr. Leung asked for clarity on the proposal as it relates to the factors discussed in the last meeting. Mr. Graham clarified how the calculation changes when the breakpoint is changed from the 50-50 threshold to the 10-90 threshold. Amnon Levy (Moody’s Analytics) provided further details on the threshold in the ACLI proposal.

Mr. Barlow stated that the meeting materials contain proposal 2021-11-L (Life Bond Factors) (ACLI) and proposal 2021-10-L (RBC Proposal) (Academy). Ms. Ahrens asked for clarity on which factors were up for adoption if using the ACLI proposal. Mr. Barlow verified that the ACLI proposal uses a one-half standard deviation. Mr. Chou asked for more documentation of the calculations of the ACLI proposal.

Steven Clayburn (ACLI) noted that an earlier exposed document contained approximately 80 pages of support for the proposal. Mr. Graham noted that when the ACLI contracted Moody’s Analytics to assist with the proposal, part of the agreement was to provide all documentation and support from the process. Ms. Ahrens stated that she believes any issues with providing documentation of the ACLI proposal have been addressed by its earlier submission. Mr. Robinson stated that he is concerned with the fairness of this process of selecting bond factors. He recommended that the Working Group use the Academy’s factors with the impact study that was provided earlier in the process, and then the state insurance regulators adjust the factors as needed. Ms. Hemphill stated that she believes the process used was appropriate, and regardless of the process, the Working Group should pick the proposal that is best for the state insurance regulators. Ms. Ahrens agreed with Ms. Hemphill’s comments on the Working Group’s process. Ms. Mears noted that there are expected changes in portfolio makeup over time, and the state insurance regulators will benefit from the ACLI proposal. Mr. Chou recommended that the bond factors be reviewed more frequently going forward.

Ms. Ahrens made a motion, seconded by Ms. Hemphill, to adopt proposal 2021-11-L (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-E), with the tax factor adjustment and the bond adjustment factor using the first 50, next 50 as included in the Moody’s Analytics June report. The motion passed with Minnesota dissenting.

2. Discussed Other Matters

Mr. Barlow stated that with the revised bond factors, there is the possibility that companies may trigger a trend test because of this change. He recommended that NAIC staff prepare communication for state insurance regulators with guidance for these situations. Ms. Ahrens noted that with the other revisions to risk-based capital (RBC) that have been adopted this month, there

© 2021 National Association of Insurance Commissioners
may be some overall impact on total RBC, and she recommended reaching out to domestic insurers and doing an impact study to assist the state insurance regulators.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 3 and June 4, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted the Proposal 2021-12-L

Mr. Barlow stated that proposal 2021-12-L (Life Reinsurance) intends to address the 2019 revisions to the Credit for Reinsurance Model Law (§785) and the Credit for Reinsurance Model Regulation (§786). The proposal was exposed for a 30-day public comment period on April 29, and one comment letter (Attachment Four-B1) was received from the American Council of Life Insurers (ACLI). Steven Clayburn (ACLI) stated his agreement with the proposal.

Mr. Boerner made a motion, seconded by Mr. Leung, to adopt proposal 2021-12-L (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-F). The motion passed unanimously.

2. Adopted the Proposal 2021-13-L

Mr. Barlow stated that proposal 2021-13-L (Longevity Risk Factors and Instructions) and the accompanying memorandum were exposed for a 30-day public comment period, and comment letters were received from the ACLI (Attachment Four-B2), the American Academy of Actuaries (Academy) (Attachment Four-B3), and the Principal Financial Group (Principal) (Attachment Four-B4).

Paul Navratil (Academy) stated that correlation factors of negative 0.30 and negative 0.25 are reasonable and generally consistent with the negative 0.33 factor previously proposed. He noted that the impact analysis using industry totals was conservative, and the original calculation used a 5% discount rate, where 3.75% is more reasonable.

Sam Early (Principal) stated that he supports the Academy proposal and the negative 0.30 factor, and he encouraged a zero guardrail; however, if the Working Group uses a guardrail, he recommended that it be reviewed periodically. Paul S. Graham (ACLI) stated his agreement with Mr. Early.

Ms. Ahrens provided a presentation showing additional calculations that had been performed that showed the relationship between mortality and longevity. Mr. Robinson asked that the guardrail be split from the rest of the proposal for a separate vote. Mr. Carmello stated that he prefers a covariance of zero. Mr. Leung noted that he has reservations about the factors in the proposal. Ms. Eom recommended using a covariance factor between negative 0.25 and zero. Mr. Yanacheak suggested that any work regarding the reserve should be done by the Life Actuarial (A) Task Force.

Ms. Ahrens made a motion, seconded by Mr. Chou, to adopt proposal 2021-13-L (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-G), with tiered after-tax factors of 1.35% down to 0.70%, negative 0.25 covariance, no guardrail, and effective for year-end 2021. The motion passed with New York dissenting.

3. Discussed the Bond Proposals

Mr. Barlow said the Working Group exposed the ACLI’s proposal and the Academy’s proposal on April 27, and 16 comment letters (Attachment Four-B5) were received. He asked if any of those submitting comment letters wish to offer additional comments.

Mr. Clayburn stated that he supports the adoption of the ACLI and Moody’s Analytics proposal. He noted that the ACLI proposal factors better differentiate risk across rating grades and are not punitive to small and medium sized carriers, and he noted that the proposal would increase aggregate risk-based capital (RBC).
Jerry Holman (Academy) summarized the main points included in the Academy’s comment letter. Nancy Bennett (Academy) noted that Moody’s Analytics developed default rates that were customized for the life insurance industry, which is a different approach than has been done historically. She noted that the Academy model bond factor used a default rate calculated from the entire corporate sector and then applied that to a representative portfolio, which projected a series of cash flows over 10 years. She stated that she is unsure of how that works within the Moody’s Analytics’ model. She noted that she supports the use of the updated discount rate of 3.47%. Mr. Leung asked for more information on the calculation of the risk premium. Ms. Bennett noted that the information was included in an earlier presentation. Mr. Tsang stated that there is no literature to support a claim that the reserve is adequate at any percentile.

Pam Hutchins (Government Personnel Mutual [GPM] Life) stated that she supports the adoption of the ACLI and Moody’s Analytics proposal, and she noted that the factors are much less punitive to small and medium sized companies.

Mr. Robinson stated that any model will include elements that are determined based on expert judgment, but different experts may disagree on those judgements. He noted that the factors used are more generous to industry than the Academy’s proposal. Amnon Levy (Moody’s Analytics) noted that the factors used in the ACLI and Moody’s Analytics model are not universally higher or lower than those used by the Academy. He said when there was uncertainty in the inputs, they intended to remain conservative.

Ms. Hemphill asked for more information on the application of judgment in the proposal for the default rate. Mr. Levy noted that the proposal is based on the composition of life insurers holdings and not on the full sample of rated corporate bonds. Edward L. Toy (Risk & Regulatory Consulting LLC) noted that the mix of assets has substantially changed over the years, but the actual year-to-year changes are minimal. Mr. Chou noted that the Academy’s proposal was based on the original scope of this project from 2010, and some of their inputs are based on outdated assumptions. Ms. Ahrens asked for clarity on the assumptions used for what percentile the reserves are meant to cover. Mr. Barlow stated that he had requested updated calculations, as it was a possibility that updated assumptions would be used. Ms. Bennett stated that the risk premium is set at the mean of the loss distribution, and because loss distribution is skewed, the result is that it is approximately the 60th percentile, so the assumption is that statutory policy reserves cover credit losses up to that mean distribution of approximately the 60th percentile. Ms. Ahrens asked if the Moody’s Analytics proposal original factors are based on one standard deviation for the reserves. Mr. Levy stated that it was one-half of a standard deviation above expected loss, which was approximately the 75th percentile.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

RE: 2021-12-L Life Reinsurance

Dear Philip:

The American Council of Life Insurers (“ACLI”) appreciates the opportunity to provide comments on 2021-12-L Reinsurance, which updates and clarifies the LR016 (Reinsurance) Exhibit and instructions. ACLI supports the exposure and encourages adoption of the exposure.

Briefly, when the U.S.-EU Covered Agreement was signed, seven charges were developed and referred to appropriate NAIC task forces and working groups. The charge sent to Life RBC Working Group was to review LR016 and update accordingly to take into consideration reciprocal jurisdictions. The Statutory Accounting Principles Working Group also received a charge to update the Annual Statement blanks to accommodate the new terminology. They updated page 3 instructions of the Annual Statement to add line items for reciprocal jurisdictions. Reciprocal jurisdiction language had been added to Schedule S – Reinsurance as well.

The additional language to LR016 exhibit and the instructions provides clarification of the information that should either feed from Schedule S or to be included in the exhibit. Also, the changes add the new reciprocal jurisdiction terminology to the exhibit and the instructions.

We appreciate the opportunity to comment on this exposure and support its adoption by the Life RBC Working Group.

Sincerely,

Steven Clayburn

Mr. Philip Barlow  
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)  

Re: ACLI Comments on Longevity Risk Exposure

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments regarding the current longevity risk exposure. We applaud the hard work of Life RBC, the NAIC Longevity Risk (E/A) Subgroup, and the American Academy of Actuaries Longevity Risk Task Force (Academy) to develop, discuss, and decide on the proposed factors. Consistent with our prior comments, we are supportive of the Academy recommendation in its entirety. Regarding the current exposure, ACLI supports the correlation factor of -30% with a guardrail factor of 0%.

**Negative correlation is appropriate for diversification between mortality and longevity**

ACLI supports appropriate incentivization to diversify risks within the RBC framework. Inherently, there are offsets between mortality and longevity risks. The Academy provided analysis supporting their recommendation, and the proposed -30% is consistent with correlation estimates in other jurisdictions. A negative correlation appropriately encourages diversification of risks, providing a real risk reduction benefit. The current pandemic provides evidence of unexpected losses in mortality products being offset by unexpected gains in longevity products.

**The guardrail is unnecessary and adds undue complexity**

ACLI appreciates the concerns of regulators that the correlation would lower the current C-2 level for certain companies; however, we believe the guardrail factors adds unnecessary complexity to the calculation, making capital forecasting and dividend planning more difficult. Had a longevity charge been proposed along with the original mortality charge, regulators would likely have thought diversification of the risks to be a benefit. Further, the inclusion of the guardrail undermines the desired incentive to diversify risks. Additionally, there is a very narrow

---

1 Bermuda BSCR applies a -50% correlation between longevity and mortality risks. Canada’s LICAT and Europe’s Solvency II apply a correlation factor of -25%.

---

© 2021 National Association of Insurance Commissioners
corridor in which the guardrail would apply. If Life RBC decides on a guardrail value other than 0, we would encourage active monitoring of its effectiveness and consideration of reducing the factor as you gain comfort that the lower charge is appropriate given the real offset of risks provided by diversification.

We appreciate the consideration of our comments and look forward to discussing on a future call.

Sincerely,

[Signature]

Re: April 30, 2021, 2021-13-L Longevity Factors and Instructions exposure

Dear Philip,

On behalf of the C-2 Longevity Risk Work Group of the American Academy of Actuaries,¹ I am providing comments on the April 30, 2021, exposure of longevity risk-based capital (RBC) factors.

1. Correlation Factors

   The exposed correlation factors of negative 0.30 and negative 0.25 are reasonable and generally consistent with the negative 0.33 factor we previously proposed. As discussed in prior comment letters on this topic² we do not believe a positive 100 percent correlation is a reasonable representation for how longevity and mortality risks are related.

2. Industry Level Impacts

   A draft version of the industry-level impact of the proposed factors was included in the materials for the April 29, 2021, Life Risk-Based Capital Working Group meeting with the expectation they will be updated with correlation factors matching the April 30 exposure. These impacts were calculated by using the total industry-level reserve exposure subject to longevity C-2 risk then applying the capital factors to statutory reserves up to each breakpoint and correlation calculation using this total. It is important to note that this calculation results in a smaller aggregate C-2 amount than would result from summing the total C-2 amounts calculated at an individual company level to arrive at a total. This difference is driven in two areas of the calculation:

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

i. As acknowledged during the April 29 meeting, applying the capital factor breakpoints to the total industry amount of statutory reserves will result in a smaller total longevity C-2 amount than would applying the breakpoints at an individual company level then summing the resulting longevity C-2 directly.

ii. In addition, applying the correlation adjustment to the total industry levels of mortality C-2 and longevity C-2 will result in a lower total C-2 amount than would result from applying correlation at an individual company level then summing the resulting total C-2 amounts directly.

It is not possible to accurately estimate the amount by which this simplified aggregate level calculation understates the impact at an industry level without additional insight into company level results. The impact could be material however, and the limitations of the aggregate level calculation should be understood by the Life Risk-Based Capital Working Group when interpreting this impact analysis.

3. Interest Rate Sensitivity

The capital factors included in the exposure, which we first shared with the Longevity Risk (A/E) Subgroup in February 2019, used a pre-tax discount rate of 5% as an assumption in the analysis. This assumption was set to be consistent with the rate that had been used elsewhere in the development of capital factors for other risks. Since that 2019 proposal, interest rate levels have remained low. Further work group discussion of discount rates used in capital analysis across areas of life risk-based capital has led us to conclude that consistency of methodology is preferable to consistency in a numerical discount rate.

The original 5% discount rate used in C-1 analysis had been calculated at the time as a 20-year historical average of a 10-year risk-free rate. We are using a 20-year Treasury rate tenor for longevity risk, which is measured over the future lifetime of policyholders. At the time of our original analysis in 2018, the average 20-year Treasury rate tenor was 4.3% based on the 1998-2017 period. The impact of recent low interest rates would further decrease this assumption to 3.75% if based on 2001–2020 data. This lower discount rate would increase the present value longevity capital factors by approximately 10% compared to the 2019 proposal. Rounding the result to the nearest 0.05% would result in the after-tax factors below:

<table>
<thead>
<tr>
<th></th>
<th>Original 5% Discount Rate</th>
<th>Revised 3.75% Discount Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>First $250 Million</td>
<td>1.35%</td>
<td>1.50%</td>
</tr>
<tr>
<td>Next $250 Million</td>
<td>0.85%</td>
<td>0.95%</td>
</tr>
<tr>
<td>Next $500 Million</td>
<td>0.75%</td>
<td>0.85%</td>
</tr>
<tr>
<td>Over $1,000 Million</td>
<td>0.70%</td>
<td>0.80%</td>
</tr>
</tbody>
</table>
Implementation Considerations

We have included the interest rate sensitivity above as additional information given known material changes since the time of the analysis underlying the proposed capital factors. As with other factors within RBC, we anticipate that periodic review of the longevity risk factors will be required to reflect changing market conditions or to incorporate additional information that may become available. We included in our May 21, 2019, letter to the Longevity Risk Subgroup a list of circumstances under which a review of the factors should be considered, including a material change in the long-term assumption for interest rates.

This interest rate sensitivity does not represent a holistic review of the analysis and assumptions that underly the proposed capital factors and, as such, we are not prepared to update the recommendation. While we are not aware of other material information or assumptions that would impact the analysis, we have not done a complete refresh of the analysis and it is possible that other assumptions would also change as part of a holistic review. Long-term mortality implications of the pandemic and potential insights from Society of Actuaries’ research on mortality across socioeconomic groups are examples of developments that could also be considered in a review of the analysis. Of course it is up to the Life Risk-Based Capital Working Group to consider whether to incorporate this interest rate sensitivity into the implementation of a longevity risk charge in the near term or to defer consideration to a future review.

1050 First Street, NE, Suite 801
Washington, DC 20002

RE: Longevity Risk Exposure

Dear Mr. Barlow,

This letter is written on behalf of Principal Life Insurance Company (Principal) in response to the NAIC Life RBC Working Group’s exposure of proposed changes to incorporate longevity risk into the Life RBC formula. Attached is Principal’s letter from February 2020, which expressed our support for the American Academy of Actuaries (Academy) work on the longevity risk charge, including the Academy recommendations for factors and an appropriate correlation between longevity risk and mortality risk. We continue to support the Academy proposal.

Of the options presented in the current exposure, we view the -30% correlation with no guardrail as most consistent with the Academy’s proposal and the most fit for adoption. We also note that Principal’s life insurance and annuity blocks have endured an extreme mortality event during the COVID-19 pandemic, and our results were consistent with an offset between mortality and longevity. Across product lines with exposure to mortality and longevity, we experienced higher than expected mortality, and the impact of higher life insurance claims was offset in part by higher reserves released upon death within our annuity blocks.

We appreciate the opportunity to comment on this exposure and are available to discuss our comments with regulators should they find such discussion helpful.

Sincerely,

Sam Early, FSA, MAAA

Greetings:

The American Council of Life Insurers (“ACLI”) appreciates the opportunity to provide comments on the two C-1 bond factor proposals exposed on April 27, 2021:

1. 2021-11-L Life Bond Factors (ACLI) developed by Moody’s Analytics (hereinafter referenced as the 2021-11 proposal), and
2. 2021-10-L RBC Proposal (Academy), the American Academy of Actuaries (“Academy”) October 10, 2017 report updated in 2021 with the 21% rate from the Tax Cuts and Jobs Act of 2017 (hereinafter referenced as the 2021-10 proposal)

Executive Summary

Corporate bonds are the largest life industry asset class (over $3 trillion), and it is important for the regulatory capital requirements for this asset class to appropriately reflect the associated credit risk. The existing RBC C-1 bond framework has provided excellent protection during tumultuous times over the last 30 years. This experience shows that the existing framework and calibration is quite robust and does not support a material increase in capital requirements, even with the project to expand from six rating categories to twenty rating categories.

- ACLI supports and urges the adoption of the C-1 bond factors and portfolio adjustment factors (2021-11 proposal) as developed and presented on April 22, 2021 (with the original 4.32% discount rate), by Moody’s Analytics, one of the world’s premiere portfolio global credit modeling firms. The proposal developed by Moody’s Analytics would materially increase aggregate C-1 RBC, reaching a 96th percentile safety level. Furthermore, it better differentiates risk across rating grades and diversification than the 2021-10 proposal.

- As stated in several previous comment letters1, ACLI has identified areas of concern with the Academy’s underlying credit risk model and is not supportive of the adoption and

implementation of the C-1 bond factors and portfolio adjustment in the 2021-10 proposal. These concerns were confirmed by Moody’s Analytics’ work.

**Background**

We appreciate the willingness of the Financial Condition (E) Committee and the Life RBC Working Group to allow for an independent third-party review by Moody’s Analytics of the underlying model and data issues. Moody’s Analytics’ review, as presented to the Life RBC Working Group and interested parties in February 2021, noted several concerns related to the modeling and use of the data including: 1) default correlations and the resulting portfolio adjustment; 2) the actual modeling approach and the resulting slope of the proposed factors; 3) loss given default approach and the resulting factors; 4) the risk premium assumption; and 5) omission of most recent experience.

The Life RBC Working Group asked Moody’s Analytics to model a set of C-1 bond factors and portfolio adjustment factors, resulting in the 2021-11 proposal.

The Moody’s Analytics work in the 2021-11 proposal has three distinctions: (1) the model is well-documented, (2) the historical data is seriatim and not summarized, and 3) data is updated through 2020. Industry is supportive of the proposed factors resulting from this model. Significantly, the 2021-11 proposal achieves an increased capital requirement using updated data, resulting in intuitive outcomes though the industry is presumed well-capitalized under existing reserving and capital requirements.

By using current experience (data through 2020 year-end) in developing assumptions and working through the limitations of the underlying model used to calculate the Academy’s proposed factors, Moody’s Analytics developed a set of factors addressing the concerns noted above. Further, Moody’s has made explicit provision in their modeling to calibrate the resulting factors to the 96th percentile. In taking this approach, their work makes transparent the level of conservatism layered upon the underlying best estimate factors. Such transparency is lost when conservatism is added at each interim step to assumptions in the bond factor determination process.

In addition to producing more intuitive factors, the Moody’s Analytics proposed bond factors also eliminate the Academy’s disincentives for insurers to hold higher quality portfolios. The ACLI believes elimination of these disincentives is both appropriate and desirable in a regulatory capital regime. Furthermore, the resulting increase in capital is allocated across industry based on portfolio adjustment factors to reflect the actual diversification of individual insurer portfolios. Note that, unlike the 2021-10 proposal, there is no need for an arbitrary adjustment to portfolio adjustment factors under the 2021-11 proposal.

**Detailed Review**

Moody’s Analytics’ integrated model addresses the interconnectivity of the underlying components of the credit risk model; this interconnectivity is not addressed by the Academy’s compartmentalized approach. See Appendix A – Summary of MA’s Targeted Modifications to the C1 Factors.

---

2. [2021 MA Updates to RBC C1 Bond Factors](#)
Review of the empirical data indicates the relative riskiness across rating grades more closely aligns with 2021-11 proposal. The 2021-11 proposal also incentivizes higher quality bond portfolios. As evidenced by history, the existing bond RBC framework has provided excellent protection during tumultuous times, specifically the following most recent 30-year crises:

- The dot-com bubble;
- The aftermath of September 11th;
- The accounting frauds of the early 2000’s;
- The Great Financial Crisis;
- The Energy/Commodity Crisis of 2015/2016; and
- The worst pandemic in 100 years.

This track record shows that the RBC C-1 framework and calibration is quite robust. This experience does not support a material increase in capital requirements. Moody’s Analytics estimates the following overall capital increases under the various proposals:

<table>
<thead>
<tr>
<th>Total Industry Post Portfolio Adjustment Factor C-1 RBC (Pre-Tax)</th>
<th>$ Billions</th>
<th>Increase to Current</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Framework</td>
<td>37.82</td>
<td>n/a</td>
</tr>
<tr>
<td>Moody’s Analytics (Original with Moody’s 4.32% Discount Rate supported by ACLI)*</td>
<td>40.46</td>
<td>+7%</td>
</tr>
<tr>
<td>Moody’s Analytics (Lower Discount Rate of 3.47%)</td>
<td>41.83</td>
<td>+11%</td>
</tr>
<tr>
<td>Academy’ Proposal (with 5% Discount Rate)</td>
<td>43.19</td>
<td>+14%</td>
</tr>
</tbody>
</table>

* ACLI believes the initial rate of 4.32% used by Moody’s Analytics in its modeling produces a more supportable increase in RBC capital. This rate was calculated using information from 1993-2020.

**Default Correlations and the Resulting Portfolio Adjustment**

Moody’s Analytics used a parameterized correlation model. The correlation model more accurately reflects empirically observed default correlations and issuer diversification benefits. The correlation model generated C-1 base factors that are more conservative and more differentiated across NAIC designation categories than those using the economic state model.

The Academy’s economic state model implies very low default correlations, leading to a portfolio adjustment factor that is overly punitive to portfolios with a small number of holdings and overly lenient to portfolios with a large number of holdings. A near-zero assumption of default correlations runs counter to historical observations and may tend to overstate diversification benefits. This leads to an overall flattening of high-yield C-1 base factors relative to investment grade. In addition, the portfolio adjustment factors and the number of issuers to have a factor of 1.0 have varied tremendously between the three formal re-runs of the underlying model raising concerns about the stability of the modeling approach:

- In the Academy’s December 2016 proposal, this figure was approximately 750 issuers.
- In its June 2017 proposal, a portfolio needed 5,300 unique issuers to have a factor of 1.00.
- And in the exposed Academy’s proposal the number of issuers dropped down to 810.
Modeling Approach and the Resulting Slope of Factors

Moody’s Analytics’ correlation model resulted in C-1 base factors that are more conservative and more differentiated across NAIC designation categories than those implied using the economic state model. Furthermore, the portfolio adjustment factors are less punitive to portfolios with a smaller number of issuers and less lenient to portfolios with a larger number of issuers, relative to those from the 2021-10 proposal.

The Academy’s proposed factors are based on a projection of defaults for each rating category, leading to a misstated assessment of risk for bond portfolios as a whole. This modeling choice leads to an overestimation of projected losses on investment-grade bonds relative to below-investment-grade bonds.

LGD Approach and Resulting Misestimated Factors

Moody’s Analytics used data covering the period 1987-2019 from their MA’s Default & Recovery Database (DRD), reflecting the loss experience of life insurers’ U.S. corporate holdings across sectors. This data also reflected issuer-level loss given default (“LGD”) to avoid overweighting outliers and aligned ultimate recovery with default rate.

The Academy’s approach to LGD uses issue-level data, which tends to overweight outlier data points. This approach gives undue influence to defaulted issuers that had many issues.

Risk Premium Assumption

In its modeling, Moody’s Analytics acknowledged some conservatism already built into reserves, and provided a reasoned and thoughtful rationale for their model recommendation. They have proposed that the C-1 factors assume that reserves cover 0.5 standard deviation of credit risk beyond expected losses. Given the evolution of reserves, together with many interconnected model features, this assumption recognizes variation in industry reserving standards and closer aligns with PBR and other reserving standards generally aimed to cover adverse conditions.

While the Academy’s proposal prioritizes consistency between risk premium and AVR, the allocation of surplus across AVR and unassigned surplus does not affect the RBC ratio. Thus, the alignment between AVR and risk premium is irrelevant to the RBC framework, whose purpose is to help regulators identify potentially weakly capitalized companies.

The Academy’s risk premium, which is set equal to the expected loss, is inconsistent with the statutory reserving framework. The risk premium assumption should reflect the fact that reserves make provision for more than mean expected loss. This is explicit at a CTE 70 level in Principle-Based Reserves (PBR) and is implicitly evident in pre-PBR reserves. As the Academy stated in its 2015 report on its proposal, “The general consensus in the actuarial community is that statutory policy reserves (tabular plus additional reserves due to cash flow testing) at least cover credit losses up to one standard deviation (approximately 67th percentile).”3 We note that one standard deviation above the mean is actually closer to the 83rd percentile in a Normal distribution, as all of the losses below the mean are covered (rather than just being within one standard deviation both below and above the mean).

---

3 Model Construction and Development of RBC Factors for Fixed Income Securities for the NAIC’s Life Risk-Based Capital Formula, American Academy of Actuaries C1 Work Group, August 3, 2015
Omission of recent historical data

Moody's Analytics used the most recent experience available to model its factors, data through year-end 2020.

The Academy’s proposal does not include historical default and recovery data more recent than 2012. As the Academy states in the exposed letter, "While we have not modeled any assumption changes, we are concerned that the factors in this letter may be lower than what an analysis of updated data would produce." It is important to include as much recent and relevant experience as possible. In addition, some of the Academy’s assumptions have become outdated since their last update in 2017.

Summary

The ACLI supports and urges the adoption of the 2021-11-L Life Bond Factors (ACLI) proposal (with the original 4.32% discount rate). The modeling of these proposed C-1 bond factors and portfolio adjustment factors addresses the concerns and issues outlined by industry over the years. The factors, produced via a correlation model with up-to-date experience and assumptions, have a steeper slope (true delineation between rating categories) and provide superior estimates of diversification benefits. The Moody’s Analytics model promotes a more equitable distribution of the industrywide RBC increase, reducing the onus on small to medium size carriers in the 2021-10 proposal. The 2021-11 proposal is built by one of the premier experts in credit portfolio modeling, it represents a material increase in capital, and the results are intuitive.

Since the Moody’s Analytics model is fully integrated, its assumptions and parameters should be viewed holistically; Moody’s Analytics cautions against piecemeal modifications to individual model parameters without consideration of the interconnected elements of the framework.

Finally, we also support the LR030 change that was added during the exposure period.

*A technical note: There is a typo in the 2021-11-L Life Bond Factors (ACLI) exposure – on page 9 the portfolio adjustment factor for “Next 90” should be 1.53 and not 1.54 as shown.

We appreciate the opportunity to comment.

Sincerely,

Steven Clayburn

### Appendix A: Summary of MA’s Targeted Modifications to the C1 Factors

<table>
<thead>
<tr>
<th>Targeted Modification</th>
<th>Current</th>
<th>Academy-Proposed</th>
<th>MA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Corrected possible errors in the engine code^[1]</td>
<td>Limited documentation</td>
<td>Code that replicates Academy’s results suggests two possible errors: First, the four-state model used different simulation seeds for default rates and LGD economic state. Second, when removing the mean simulated portfolio loss, the model used the product of expected default rate and expected LGD, neglecting LGD and default correlation.</td>
<td>Corrected possible simulation engine errors (1) Default rates and LGD are drawn from the same economic state for Baa-Caa MIS rated issuers; and (2) Removed mean adjustment from simulated portfolio loss (Section 6.2.6 demonstrates limited concern for simulation noise).</td>
</tr>
<tr>
<td>Discount Rate &amp; Tax Rate</td>
<td>Tax rate: 35% Discount rate: 9.23% (6% after tax) Recovery of tax loss benefit: 75% Tax recovery on default: 26.25%</td>
<td>Tax rate: 21% Discount rate (2000-2020 window): 3.47% (2.74% after tax) under guidance from the Life Risk-Based Capital (E) Working Group on April 22, 2021 Recovery of tax loss benefit: 80% Tax recovery on default: 16.8% While an alternative window start date can be justified, the discount rate enters the C1 formula as a single static rate and not as impactful as some other targeted modifications, reinforced by updated tax rate offset. Potentially important term structure dynamics that interplay with credit risk are not captured within the current framework.</td>
<td></td>
</tr>
</tbody>
</table>

---

^[1] MA did not have access to the Academy’s model and stipulates these errors based on the following: we were not able to match the Academy’s proposed C1 base factors [2017] closely when relying only on the Academy’s documentation. Discussions with industry members lead us to find two errors, that when purposely introduced, allowed for matching Academy’s proposed factors within simulation noise. First, the four-state model under the matched model used different simulation seeds for default rates and LGD economic state. Second, when removing the mean simulated portfolio loss, the matched model used the product of expected default rate and expected LGD, neglecting LGD and default correlation.
| **Loss Given Default (LGD)** | Limited documentation  
Average LGD by NAIC designation  
37.25% (NAIC 1),  
52.17% (NAIC 2),  
56.67% (NAIC 3-5) | Does not align with the date of default. This deviation can result in bias with recovery rate levels, as well as their relationships with default rates.  
Average value of LGD = 53% | Use MA’s Default & Recovery Database (DRD) over 1987–2019 window, reflect the loss experience of life insurers’ U.S. corporate holdings across sectors, reflect issuer-level LGD to avoid overweighting outliers, align ultimate recovery with default date.  
Average value of LGD = 52% |
| **Risk Premium** | Set equal to expected loss | Set equal to expected loss | Set at expected loss plus 0.5 standard deviation, recognizing variation in industry reserving standards and to closer align with reserving standards generally aimed at covering moderately adverse conditions and PBR. In addition, MA outlines a potential future update to AVR allowing alignment with default rates and LGDs that parameterize the final C1 framework; although this update is not urgent given AVR does not impact the RBC ratio and solvency. A higher Risk Premium lowers the C1 base factors and mildly increases their differentiation across the NAIC designation categories. |
| **Economic State Model** | Limited documentation  
Fivé-state model; affects both default and LGD; MA did not analyze, possibly similar properties to recent Academy proposal | A combination of two and four-state model; affects both default and LGD; Model results in C1 base factors that are not sufficiently differentiated across NAIC designation categories and under certain parameterizations C1 base factors that are not monotonic, and PAFs that provide more diversification benefits than observed empirically. | Initially outside Scope, economic state model limitations are viewed to be sufficiently material to warrant replacement by a correlation model that reflects default correlations and diversification benefits observed empirically in MA C1 Factors. Resulting C1 base factors are more differentiated across NAIC designation categories, and PAFs are a more accurate reflection of diversification benefits. |
| Default Rates | Based on data from, Moody's 1991 Special Comment: Corporate Default and Recovery Rates, 1970-1990. Documentation on data treatment is limited | Smoothed corporate default rate term structures representing the historical experience of life insurers’ U.S. corporate holdings using default data grouped by MIS alphanumeric rating using MA’s DRD. MA default rates tend to have a steeper slope (more differentiated across MIS ratings) than those proposed by the Academy, with differentiation more closely aligning with benchmarks. |
| PAFs | Documentation is limited | Initially outside Scope, economic state model limitations are viewed to be sufficiently material that the economic state model is replaced by a correlation model that reflects default correlations and diversification benefits observed empirically in MA C1 Factors. Resulting C1 base factors are more differentiated across NAIC designation categories, and PAFs are a more accurate reflection of diversification benefits. |

Mr. Philip Barlow  
Chair, Life Risk-Based Capital E Working Group  
National Association of Insurance Commissioners  
Kansas City, Missouri

Re: Bond Factors and Companion Portfolio Adjustment Factors

Dear Mr. Barlow:

I am the Executive Director of the National Alliance of Life Companies (the NALC), a trade group of more than fifty life insurance companies and associates that represents the interests of small and mid-sized insurers and their policyholders.

As noted in our prior letter of April 8, 2021, a copy of which is attached, we have very significant concerns about the American Academy of Actuaries’ proposed changes in the bond factors and portfolio adjustment factors under consideration by the Working Group. This letter updates our earlier comments based upon our subsequent review of information provided in the Moody’s Analytics report, and after further discussions with representatives of small and mid-sized life insurers from across the United States.

The NALC continues to believe that the proposed bond factors presented by the American Academy of Actuaries are more appropriate for larger life insurers with larger and more diverse bond holdings, and would do significant harm to small life insurance companies with more modest bond portfolios. The Academy’s portfolio adjustment factors would push smaller insurers to purchase bonds that may not meet their long-term duration objectives to increase user count.

Our survey of small companies showed that the proposed changes would force an increase of company capital between 7% and 17%, and a negative impact on RBC between 6.6% and 11.14%. This material adverse impact would occur without any change in the risk profile of their portfolios. The NALC strongly encourages the Working Group to make necessary adjustments in its report to address these inequities to prevent disparate impact on smaller life insurance companies.

We note further that other observers share our concerns. In a Guggenheim Investments, perspective dated May 13, 2021, the commentary notes “no comprehensive study has been performed on the impact of the new RBC changes to insurers.” We believe our survey supports this conclusion, as it shows smaller companies would see a significant erosion of their capital position the moment the ink dries on these regulatory changes. Guggenheim further notes, “the U.S. industry has nearly $7 trillion in general account assets. Without a phase-in period, there is likely to be unintended repercussions on the insurance industry and the capital markets.” Again, our survey results support this observation.

In reviewing the various options, we believe that Moody’s proposal provides better building blocks for changes in RBC factors for fixed-income securities.

We would therefore urge the Working Group to extend the deadline for comment to allow additional time to work through the concerns raised in this letter, as well as other concerns raised by interested parties. With this additional time, we believe the parties can address these reasonable concerns, and create a stronger, equitable, and more complete report.

Thank you.
Sincerely,

Jim Hodges
Executive Director
NALC

Mr. Philip Barlow  
Chair, Life Risked Based Capital E Working Group  
National Association of Insurance Commissioners  
Kansas City, Missouri

Re: Bond Factors and Companion Portfolio Adjustment Formulas

Dear Mr. Barlow:

I am the Executive Director of the National Alliance of Life Companies (the NALC), a trade group of more than fifty (50) members and associates that represents the interests of small life insurance companies in the United States. We have closely followed the work of the American Academy of Actuaries regarding proposed changes in the bond factors and the portfolio adjustment factors (herein new bond factors) for investments held by life insurance companies. We have also read the preliminary report of Moody's Analytics commissioned by the American Council of Life Insurers (the ACLI) on the impact of such changes.

We felt it would be helpful for the Working Group to hear real-world examples of the impact of these proposed bond factor changes, so we surveyed a number of small life insurance companies around the country to better assess the impact. In our survey, we looked at the Required Change in Company Capital Level based on new bond factors, as well as the RBC Ratio Percentage Change using the new bond factors. The survey was done prior to the Academy update for the decrease in the corporate tax rate.

Of the twelve companies responding to the survey, all but one reported the new factors would require a change of company capital between 7% and 17%. Those same companies reported a negative impact on their RBC Ratio of between 6.6% and 11.14%. This clearly demonstrates that the proposed bond factor changes would have a significant adverse impact on the capital position of smaller life insurance companies without any change in portfolio or risk.

One other important point is worth making - it does not appear that the impact of these proposed changes on commercial transactions for life insurance companies has been adequately explored. Many commercial transactions, such as loan documents, reinsurance agreements and other agreements, contain RBC covenants which provide for defaults to be declared if RBC covenants are violated. Of course, those provisions were negotiated and agreed to under current bond factors and RBC calculations. We are very concerned that the proposed changes would force some companies into non-compliance with those covenants, triggering a material and adverse impact on these companies. We would note further that this an issue for companies of all sizes with such covenants in place.
Based upon these and other considerations, the NALC urges the Task Force to closely examine the potential adverse business consequences of the proposed changes on small life insurance companies and their policyholders. We appreciate the positive comments that have been made about regulatory discretion as a means to mitigate the adverse effects of these changes. That approach could reduce the negative impact of the changes on a company by company basis. An additional approach would be to allow a generous phase in period that would allow companies sufficient time to make the necessary adjustments to their bond portfolios.

Thank you for allowing us to comment. We are happy to provide summary details regarding our surveys if helpful.

Sincerely,

Jim Hodges
Executive Director
NALC

NAIC
Life Risk-Based Capital Working Group
444 North Capitol Street NW, Suite 700
Washington, DC 20001

Dear Life Risk-Based Capital Working Group,

The North American CRO Council (CRO Council) is a professional association of Chief Risk Officers (CROs) of leading insurers based in the United States, Bermuda and Canada. Member CROs currently represent 32 of the largest Life and Property and Casualty insurers in North America. The CRO Council seeks to develop and promote leading practices in risk management throughout the insurance industry and provide thought leadership and direction on the advancement of risk-based solvency and liquidity assessments.

The CRO Council appreciates your continued efforts to maintain a robust and modern RBC framework. We also appreciate the opportunity to comment on the ongoing work to update RBC C1 Bond Factors. We urge the members of the Life Risk Based Capital Working Group to adopt the proposal set forth by Moody’s Analytics on April 22nd. This proposal is robust, well documented, and backed by one of the most respected names in credit analytics. This is also the only proposal to include updated experience through 2020 and updated assumptions aligning with the current credit markets and reserving standards. The Working Group is considering a top-side adjustment of the Academy’s portfolio adjustment factors to make them more intuitive. Moody’s Analytics proposal would require no such adjustment.

Moody’s Analytics is one of the premier portfolio credit modeling firms in the world. For decades, their models and analytics have been used by many of the largest banks and insurers as well as many regulators. Their parent firm curates critical data sets, including the one used to derive the original C1 factors, the Academy of Actuaries proposal and the Moody’s Analytics proposal. Moody’s Analytics submitted a response to the request for proposal by the American Council of Life Insurers because they believe in the mission of protecting the insurance industry and ensuring that rational incentives drive capital markets. They also understand the importance and magnitude of a framework that will be applied to several Trillion dollars of debt.

In our experience, issues arise when regulatory requirements materially deviate from economic incentives. In capital frameworks, this typically happens with the overall level of capital and the allocation of capital across securities.

Level of Capital: The current RBC C1 framework has served the industry and policyholders well for almost 30 years. Overall capital levels have been more than sufficient to weather every credit event that has occurred. It is hard to justify a material increase in overall capital.
requirements for the industry. Moody’s Analytics proposal on April 22nd demonstrates this with a modest increase of 7% while the Academy’s proposal would increase capital by 14%. The past 30 years simply does not justify such a large increase in required capital.

**Allocation of Capital:** The current allocation of C1 charges across bond ratings is generally intuitive and has worked well for the past 30 years. While we support expanding to additional rating granularity, it is critical that relative capital (e.g., investment grade vs high yield) is appropriate. The Academy’s proposal would significantly increase investment grade charges relative to high yield. We believe this is unintuitive (confirmed by review of the February 2021 report from Moody’s Analytics) and may incentivize increased risk taking within the investment portfolio that could potentially impact the balance sheet strength for the industry.

Thank you again for your continued efforts on this critical update. This is an opportunity for the Working Group to adopt a proposal that is backed up by transparent analytics, historical experience, intuition, and a market-leading credit analytics group. We urge you to thoughtfully consider and adopt the Moody’s Analytics proposal.

Sincerely,

Jonathan Porter  
Chair of the North American CRO Council
Mr. Philip Barlow
Chair
NAIC Life Risk-Based Capital Working Group

May 25, 2021

Dear Mr. Barlow,

As a small mutual life insurer I am very concerned about the impact of the RBC bond factors being considered for implementation. While understanding the need for conservatism, I do not understand the necessity of such punitive additional capital requirements. As I am sure you are aware, mutual companies, and small mutual companies to boot, do not have ready access to capital. For that reason, small insurers like us are very conservative in our investment philosophy (we can’t afford to lose principal). We anticipate the impact to Columbian to be on the order of 50% on a CAL basis. This, in addition to the impact of Covid-19 mortality we experienced over the past year, will have a significant negative impact on our organization, an organization which has less than 1% of our assets in below investment grade bonds and is not at significant risk to credit defaults.

I do not understand the problem the NAIC is trying to correct. Over the past 15 years the industry has experienced two potentially traumatic events with potentially devastating effect to the investment portfolios of life and P&C insurers. However, in the most recent Pandemic, I am aware of no insurers that were so negatively impacted by credit concerns that they were forced into regulatory review. From the financial crisis, I am aware of only one life insurer that was forced into receivership due to investments, and that was due to defaulted FNMA and FHLMC preferred stock positions. The insurer would not have been influenced by higher capital requirements in the purchase of these securities, due to the defaulted securities being US Government Agency obligations, which enjoyed essentially the lowest capital requirements. Indeed, more stringent capital requirements on lower rated bonds could conceivably have caused more organizations to have invested in those higher rated, but defaulted securities, purely to avoid higher capital requirements.

If you have to institute additional capital requirements I ask that the ACLI proposal, developed by Moody’s analytics, be adopted. While the ACLI proposal is still quite punitive in my mind, it is less punitive and more sound than the Academy’s proposal. Please consider adopting the ACLI proposal.

Thank you for taking into consideration the concerns of small life insurers, who typically have conservative investment portfolios and limited capital raising ability.

Sincerely,

Michael C. S. Fosbury
President & CEO

Chair
NAIC Life Risk-Based Capital Working Group
(via email to Dave Fleming (NAIC Staff for the Working Group)

Dear Mr. Barlow,

On behalf of my company, Gleaner Life Insurance Society, I am writing to you concerning the two exposure drafts related to RBC factors for bonds.

As bonds are, by far, the largest asset class that we own, the choice of RBC factors is critical.

We have reviewed both the Academy proposal (2021-10-L) and the ACLI proposal (2021-11-L) and wholeheartedly support the adoption of the ACLI proposal.

The ACLI proposal was developed by Moody’s Analytics, which is a premier credit analysis company. We believe that the methodology they used in developing the factors is state-of-the-art and superior to the older methods employed by the Academy.

As a result, companies investing in highly-rated bonds are not penalized for holding those assets. Furthermore, the portfolio adjustment factor proposed by Moody’s is much less punitive than that contained in the Academy proposal for smaller companies such as ours.

As a result, we strongly urge the Working Group to adopt the ACLI proposal.

Thank you for taking our concerns about the proposed RBC factors for bonds into account as you deliberate this important matter.

Sincerely,

Kevin A. Marti
President and CEO

NAIC Life Risk-Based Capital Working Group

Dear Mr. Barlow,

I am writing on behalf of my company, Homesteaders Life Company, concerning the two exposure drafts related to RBC factors for bonds. As bonds are, by far, the largest asset class that we own, the choice of RBC factors is critical. We have reviewed both the Academy proposal (2021-10-L) and the ACLI proposal (2021-11-L) and support the adoption of the ACLI proposal. The ACLI proposal was developed by Moody’s Analytics, which is a premier credit analysis company. We believe that the methodology they used in developing the factors is state-of-the-art and superior to the older methods employed by the Academy. As a result, companies investing in highly-rated bonds are not penalized for holding those assets. Furthermore, the portfolio adjustment factor proposed by Moody’s is much less punitive than that in the Academy proposal for small companies such as ours. As a result, I highly urge the Working Group to adopt the ACLI proposal.

Thank you for taking our concerns into account as you deliberate this important matter.

Sincerely,

[Signature]

Dear Mr. Fleming,

The American Fraternal Alliance (Alliance) appreciates the opportunity to provide input to the Life Risk-Based Capital Working Group on the review of the proposal from the American Academy of Actuaries (Academy) and a newer plan supplied by ACLI and Moody’s Analytics (ACLI) related to the C-1 Bond Factor project.

The Alliance urges the NAIC to consider implementing the proposal provided the ACLI. In previous years, Alliance members participated in a survey that demonstrated that incorporating the Academy recommendations unintentionally reduced the RBC ratios of many small-to-mid size insurers, including fraternals, significantly.

This impact to solvency ratio(s) can be misinterpreted by regulators or the general public based solely on a change in the formula. A fraternal’s actual assets, liabilities and surplus will not have changed, but the change in ratio(s) calculation or trend can be very misleading.

The magnitude of the changes in the Academy proposal is severe for smaller companies when the new portfolio adjustment factor is applied. The impact of the proposed changes will be significant, especially for smaller insurers like many fraternals.

The Alliance supports consideration of the ACLI proposal which includes up-to-date data, provides more intuitive results, and is less punitive than the Academy proposal on smaller insurers like fraternals.

Thank you for giving the Alliance the opportunity to provide feedback. Please contact me with questions or comments.

Re: RBC

Dear Mr. Fleming,

Catholic Financial Life appreciates the opportunity to provide input to the Life Risk-Based Capital Working Group on the review of the proposal from the American Academy of Actuaries (Academy) and a newer plan supplied by ACLI and Moody’s Analytics (ACLI) related to the C-1 Bond Factor project.

Consistent with the view from the American Fraternal Alliance (AFA), the Society urges the NAIC to consider implementing the proposal provided by the ACLI. Following is the projected impact on the Society utilizing March 31, 2021 assets, assumptions and factors for both the Academy and ACLI:

<table>
<thead>
<tr>
<th></th>
<th>Actual</th>
<th>Academy Factors</th>
<th>ACLI Factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>RBC Ratio</td>
<td>1087%</td>
<td>923%</td>
<td>1000%</td>
</tr>
<tr>
<td>Difference from Actual</td>
<td>0%</td>
<td>-164%</td>
<td>-87%</td>
</tr>
</tbody>
</table>

While Catholic Financial Life remains well capitalized under both proposed factor changes, the impact to solvency ratio(s) can be misinterpreted by regulators or the general public based solely on a change in the formula. A fraternal’s actual assets, liabilities and surplus will not have changed, but the change in ratio(s) calculation, or trend, can be very misleading. Additionally, the magnitude of the changes in the Academy proposal is anticipated to be severe for smaller companies when the new portfolio adjustment factor is applied. This is reflective for Catholic Financial Life as the...
Academy factors are projected to decrease by nearly twice as much as the ACLI factors.

Catholic Financial Life supports consideration of the ACLI proposal which includes up-to-date data, provides more intuitive results, and is less punitive than the Academy proposal on insurers like Catholic Financial Life and other smaller fraternals.

Thank you for giving Catholic Financial Life the opportunity to provide feedback. Please contact us with questions or comments.

Sincerely,

William R. O’Toole

Mr. Fleming,

I am reaching out regarding the two Bond Factor proposals that the NAIC is considering. The Catholic Association of Foresters supports the ACLI proposal as it includes up to date data and provides more intuitive results. This option is also less punitive to smaller insurers.

Thank you in advance for your support.

Christine Cunningham
High Secretary – Treasurer
Catholic Association of Foresters

Wednesday, May 26, 2021

I respectively request that the Life Risk-Based Capital (E) Working Group consider supporting the ACLI proposal as opposed to the American Academy of Actuaries (Academy). The ACLI proposal includes up-to-date data, provides more intuitive results and is less punitive than the Academy’s proposal on smaller insurers like fraternals.

Thank you for your consideration in this matter.

Theresa

Thursday, May 20, 2021

Good afternoon Mr. Fleming,

My name is Scott Pogorelec and I am the Executive Secretary of the Slovak Catholic Sokol (#57193). Just wanted to reach out to the Life RBC Working Group in hopes you support the ACLI proposal in regard to the adjustment of bond factors. The Academy’s proposal would negatively impact fraternals like ourself in a major way.

I thank you for your time in reading this.

All the best!

Scott T. Pogorelec, F.I.C.
Supreme Secretary

Slovak Catholic Sokol

Monday, May 24, 2021  

Mr. Fleming,  

As the CFO of a small fraternal insurer I am contacting you to urge the NAIC to support the ACLI proposal for revised C-1 bond factors. While both the American Academy of Actuaries and ACLI proposals could suddenly lower our RBC, the ACLI model includes up-to-date data, provides more intuitive results, and is less punitive than the Academy proposal on smaller insurers like Sons of Norway. Thank you for your time and attention to this matter.  

Fraternally,  

Erica Oberg  
Chief Financial Officer

Mr. Philip Barlow
Chair
NAIC Life Risk-Based Capital Working Group

Dear Mr. Barlow,

I am writing on behalf of my society, Royal Neighbors of America, concerning the two exposure drafts related to RBC factors for bonds. As bonds are, by far, the largest asset class that we own, the choice of RBC factors is critical. We have reviewed both the Academy proposal (2021-10-L) and the ACLI proposal (2021-11-L) and support the adoption of the ACLI proposal. The ACLI proposal was developed by Moody’s Analytics, which is a premier credit analysis company. We believe that the methodology they used in developing the factors is state-of-the-art and superior to the older methods employed by the Academy. The proposed Moody’s C-1 Factors are more differentiated across the current C-1 factors and have a steeper slope than the current C-1 factors proposed by the Society of Actuaries. In addition, the method used by Moody’s Analytics better captures economic risks of insurers fixed income portfolios. As a result, companies investing in highly rated bonds are not penalized for holding those assets. Furthermore, the portfolio adjustment factor proposed by Moody’s is much less punitive than that in the Academy proposal for small companies such as ours. Given all of these factors, I highly urge the Working Group to adopt the ACLI proposal.

Thank you for taking our concerns into account as you deliberate this important matter.

Sincerely,

John A. Friederich
General Counsel & Secretary
May 27, 2021

Mr. Philip Barlow  
Chair  
Life Risk-Based Capital Working Group (LRBCWG)  
National Association of Insurance Commissioners (NAIC)

Dear Philip,

The American Academy of Actuaries\(^1\) C1 Work Group (C1WG) appreciates the opportunity to comment on the exposure drafts of factors for bonds (Exposure of American Academy of Actuaries’ and American Council of Life Insurers’ Proposed Bond Factors and Instructions, exposed by the LRBCWG on April 21, 2021). We recognize the tight timetable to adopt a set of bond factors by June 30, 2021, and as such our comments will highlight the areas of greatest importance consistent with this timeline. In particular, our letter highlights those areas that are both material to the resulting factors and represent the greatest difference with the C1WG’s updated factors.\(^2\)

The choice before the LRBCWG involves two different methodologies to forecast credit risk for the purpose of determining capital requirements. With the exception of the corporate tax rate, the C1WG’s recommendations are based on the existing C1 bond framework with updated assumptions consistent with the timeframe when the majority of our modeling was conducted (in the early 2010s). The C1WG has provided extensive analysis, documentation, and explanations for the updated factors. Our work was guided by the request of regulators and several discussions with regulators throughout our work.

Moody’s Analytics (MA) has provided the LRBCWG with an alternative approach using a different method for measuring credit risk along with different assumptions. Some of its modeling choices have been described as more sophisticated and utilize more modern techniques. Some of the methods used by MA to project credit losses not only update for recent experience, but also represent a philosophical departure from the methods that have been used in establishing capital requirements. While some of their methods may do a better job projecting credit risk, it is difficult to completely analyze the differences without full disclosure and detailed documentation of the basis and assumptions used in the MA model.

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

\(^2\) https://www.actuary.org/sites/default/files/2021-03/C1_Bond_Factor_Tax_Update_03112021_Final.pdf.
Nevertheless, comparing the MA recommended factors to the factors recommended by the C1WG, we make the following high-level comparisons based on some rudimentary analysis:

A. MA modeled loss experience has almost no effect, on average, on the bond factors but has significant effect across ratings. Modeled loss experience is a combination of the assumptions for default rates, loss given default (1 – recovery percentage), and the use of a correlated default rate approach;

B. MA risk premium assumptions decrease the factors by approximately 18%; and

C. MA discount rate assumption increases the factors by approximately 6-7%.

In the following section, we identify our most significant questions with each of these major areas of difference.

A. Modeled Loss Experience

The C1WG estimates the MA base factors are 0.2% lower than the C1WG’s factors due to differences between the C1WG and MA assumptions for modeled loss experience where the materiality of those differences varies by rating class. Isolating only the modeled loss experience, the MA factors for Aaa-A1 ratings are lower than the C1WG bond factors on average by 11.3% while the Baa1-Caa3 factors recommended by MA are higher by 12.5% on average. Though not completely quantifiable due to undisclosed assumptions, our analysis suggests that most of the difference in modeled loss is attributable to the default rate assumption rather than the recovery assumption.

1. Default Rates

A comparison of default rates assumed by MA and the C1WG is challenging given the use of different time periods for the experience and MA’s use of a tailored life industry default series. We observe that the additional eight years of default experience reduces the default probabilities for all corporate sectors combined. If the C1WG used the additional eight years in its model, the C1 bond factors would decrease. Whether to use the additional eight years would be the subject of significant discussion; the C1WG would explore if 38 years of experience should be used, or whether it would make sense to use a set time frame (e.g., 30 or 35 years).

Further complicating the comparison of base default rates is that MA uses default rates specifically developed for the life insurance industry. MA’s decision to include or exclude certain experience results in a downward bias for Aaa-A2 issuers and an upward bias for Baa1-Ba2 issuers as compared to default experience for the entire corporate sector. These customized default rates resulted in the “steeper slope” for the 20 C1 bond factors, resulting in lower capital charges for the highest investment-grade bonds.

In the next several paragraphs, we expand on the observations above. However, the overriding consideration for regulators should be whether the capital requirements should be based solely on aggregate historical default probabilities for the entire corporate sector applied to typical life
insurance portfolios, or whether capital requirements should be based on customized default probabilities (i.e., historical experience adjusted for outliers, shifting sector allocations, and other subjective considerations). The current basis for capital requirements is historical default experience for the entire U.S. corporate holdings (financials, industrials, and utilities).

Figure 1 shows that the additional default experience of 2013–2020 decreased 10-year cumulative default rates by about 20% with all quality ratings showing lower default rates except for Aa1 (note that 1983–2020 experience is in the numerator and 1983–2012 experience is in the denominator). Ratings below B3 are not shown because they are not available for Caa1-Caa3 in the 1983–2020 Moody’s report (*Moody’s Annual Default Study*, January 28, 2021).

Figure 2 shows the ratios of the default rates assumed vs. reported by Moody’s Investor Service (MIS) for the respective experience periods evaluated by the C1WG and MA. The MA ratios show a downward bias of assumed rates for Aaa-A2 and upward bias for Baa1-Ba2 whereas the C1WG ratios tend to track more closely to 100% of the MIS default rates.
Figure 3 shows a side–by-side view of the values embedded in the ratios of Figure 2. The bias described above of the MA rates is apparent in the right-hand graph.

Figure 4 shows the 1983–2020 10-year cumulative default rates for U.S. corporates (a subset of the annually reported MIS default rates) before smoothing and adjustments on two bases: 1) MA’s tailored life insurance series (Life Index) based on life insurance industry sector weightings and, 2) the MIS U.S. corporate rates (MIS Subset) weighted by total corporate issuance of the sectors shown. Because the rate differences are difficult to illustrate using base values, they are shown as the percentage of the Life Index to the MIS Subset in the right-hand secondary axis. The bias of the MA Life Index rates above and below the MIS Subset rates suggests that at least some of the bias noted above is due to the construction of the tailored life insurance default rates. Because the MA Life Index rates are unsmoothed in this view, the bias for Aaa is not apparent.
The tailored Aaa life insurance default rate was reduced from 0.503% to 0.079%.

Figure 4

Based on the above analysis in Figures 1-4, the C1WG concludes that there is a downward bias for higher ratings of default rates assumed by MA relative to historical 1983–2020 default rates published by MIS. This is due at least in part to the tailored weightings of life insurance industry exposure of sector-specific default rates.

The MA default rates relative to the MIS rates for the same period are also affected by the selection of a subset of the MIS universe as described in the MA documentation. These filters produced the default rates shown in Tables 8 and 16 that directly inform MA’s baseline empirical default rates, as described in Appendix Section 8.2. Because the filtering process does not completely reconcile the starting point of the MIS published rates and the endpoint of the U.S. corporate issuers, the C1WG is unable to draw further conclusions about the appropriateness of these exclusions and the resulting subset of U.S. corporate-based default rates.

A few additional comments:

a. MA has separated default experience for three different sectors (utilities, financials, and industrials). Based on conversations with Moody’s Investor Services, our understanding was that differences in expected loss were captured in the assigned rating class. We are curious why different C1 bond factors are created for different sectors, given that Global Ratings Methodology assigns equivalent ratings across all sectors. The LRBC calculation relies on the assigned rating from an NRSRO (nationally recognized statistical rating organizations) and the principle of equivalent ratings by sector. Why is MA subdividing default experience by sector when MIS has stated the equivalence of ratings by sector?
b. The downward adjustment of Aaa experience based on removing the two selected events as outliers (Getty Oil and Texaco) has contributed to pulling down the MA loss curve for higher-quality ratings. This pulling down of the fitted curve at its inception point contributes to the difficulties of tracking closer to MIS experience. We are curious as to why this modification was made, given the apparent bias created. Additionally, the Aaa default probability is used as an anchor point for all other default probabilities along the credit spectrum; therefore, while life insurers have a relatively small exposure to Aaa securities, adjusting the Aaa loss assumptions downward affects all exposures.

2. Variation of Baseline Total Loss Experience

The C1WG model uses an economic state model to project different loss experience that varies with the economic state (i.e., contraction, expansion). The C1WG bond model projects loss experience over 10,000 economic scenarios, with the resulting C1 bond factors developed from equal weighting of the scenario specific results. Moody’s is recommending a different approach using a more complex model that assumes correlated loss experience between bonds. MA analysis showed that use of this correlation model increased total loss from the base case by 24-28%. The C1WG’s analysis concluded that its economic state model increased total loss from the base case by 26%. Therefore, the approach for reflecting how total loss varies due to economic conditions is approximately the same on average but the effect varies materially by rating.

The documentation provided by MA does not describe how its correlation algorithm was calibrated and validated against actual default experience. In parameterizing the economic state algorithm, the C1WG’s bond model increased losses in contractions and decreased losses in expansions. Additionally, we compared the “stressed results” to actual loss experience to ensure the model was reasonable over the entire 10-year projection period.

While there may be validity in assuming correlation within a bond portfolio, the approach used by MA is a significant departure in method. Without further study and greater disclosure of the MA model, it is difficult to provide additional comments.

3. Recovery Assumptions

The differences between MA and the C1WG on this assumption are relatively minor. The average loss given default (LGD) for MA is 52% while the average LGD used by the C1WG is 53%. Each entity uses a histogram of possible recovery percentages in developing its respective sets of C1 bond factors. The C1WG used recovery assumptions for senior unsecured debt as approximately 85% of bonds held by life insurers are senior unsecured bonds. While MA also used senior unsecured debt as the assumed lien position, it produced a weighted LGD tailored to the sector mix of life insurance industry holdings. The difference as modeled by MA between the C1WG and MA LGD assumptions was described as a “moderate decrease” in MA’s April 15, 2021, presentation to the LRBCWG. These slight differences between the recovery assumptions do not appear to be material relative to other assumptions (particularly the default rate).
B. **Risk Premium**

As we have discussed in our July 17, 2018, letter to the Investment Risk-Based Capital (IRBC) Working Group, we continue to recommend the use of the mean of the loss distribution for the risk premium (RP). The RP assumption was established when the existing NAIC solvency framework was implemented. The C-1 bond factors assume that statutory policy reserves cover moderately adverse conditions, approximated as one standard deviation. The Asset Valuation Reserve (AVR) bond component is assumed to cover risks between the mean and one standard deviation, with the C-1 bond component covering risks between one standard deviation and the 96th percentile. Capital requirements for life insurers are not intended to make up for any deficiencies in reserve requirements and do not make allowances for any excesses or deficiencies in statutory policy reserves. Finally, the C-1 bond factor is applied to all bonds, and not just those bonds backing statutory policy reserves; consequently, any offset for the C-1 factor should only apply to those assets backing policy reserves.

If the RP is changed in the C1 bond factors, then the AVR Bond Component should be reviewed as well as the requirements for reflecting credit risk in statutory policy reserves, including the Actuarial Opinion and Memorandum. Reducing capital requirements for credit risk under the guise that statutory policy reserves cover a larger portion of credit risk than when RBC was first designed should be done with the assurance that corresponding provisions have been made for statutory policy reserves.

C. **Discount Rate**

We believe the use of a discount rate updated for recent experience, consistent with other updated assumptions, is appropriate.

D. **Modeling Questions**

1. Representative Portfolio
2. Cash Flow Projections
3. Stochastic Scenario Calculation

We also have questions related to the modeling mechanics and the derivation of the specific bond factors. Our understanding of the Moody’s loss assumptions is that they were developed for a typical life insurer’s bond portfolio. MA has used default probabilities that have been customized for the life insurance industry by removing specific default events and

altering the sector weightings (e.g., reducing the weight assigned to financials, a sector with poor credit experience in the Great Recession). Those default probabilities are applied to a modeled portfolio of bonds to project credit losses. What are the characteristics of that portfolio?

The C1WG’s factors were based on sector-wide loss given default experience for all corporate bonds (public bonds, senior unsecured) and applied to a representative portfolio for life insurers. The C1WG calculated the after tax base factor capital (before the portfolio adjustment) as the after tax present value of the maximum loss over a 10-year period. Losses are defined as the total annual losses offset by annual risk premium. Losses occurring before the end of the 10-year period are reinvested at the original quality rating and subject to subsequent additional loss until the end of the original 10-year period. Losses for these preliminary base factors were calculated at the 96th percentile level.

Although an 824-issuer portfolio is referenced in the MA documentation, it is not clear how this portfolio is used in the MA projection of bond losses. Also, there is no description of the projection mechanics (e.g., scenarios, calculation of the scenario-specific factor, scenario weights, etc.).

The components for determining projected losses comprise a material assumption and are critical to gaining comfort with the recommended factors.

******************************

We continue to encourage the LRBC to adopt the factors recommended by the C1WG. These factors were developed in response to the request of the C1WG by regulators, which was to update the C1 bond factors, consistent with the prevailing solvency framework for U.S. life insurance companies. Throughout the lengthy process in which the NAIC has been considering this proposal, the C1WG has worked with regulators and industry in evaluating the merits of different modeling choices and the impact of assumptions. Our recommended factors reflect the regulators’ decisions leading up to the request being made and during this process. These factors satisfy the regulator-stated objectives of identifying potentially weakly capitalized companies using public information reported in statutory financial statements. A key question may be whether regulators are seeking a new framework for the factors or a framework to pursue factors in line with the prior framework.

We continue to be available to answer regulators’ questions and look forward to the final disposition on this lengthy project.
Sincerely,

Nancy Bennett, MAAA, FSA, CERA
Co-Chairperson, C1WG

Jerry Holman, MAAA, FSA, CFA
Co-Chairperson, C1WG
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 27, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello and Michael Cebula (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT). Also participating was: Dale Bruggeman (OH).

1. **Discussed Comments Received on the ACLI’s Real Estate Proposal**

Mr. Barlow stated that the meeting materials included memorandums from the Statutory Accounting Principles (E) Working Group (Attachment Four-C1) and from the Risk-Focused Surveillance (E) Working Group (Attachment Four-C2). Mr. Barlow said the Working Group had requested information related to the real estate proposal from these two groups.

Mr. Bruggeman stated that the letter from the Statutory Accounting Principles (E) Working Group included optional approaches that could be taken, such as delaying adjusting current factors until at least 2022 to ensure time for examiners to expand procedures to include an assessment of reported fair values or by establishing guidance to restrict fair values used for risk-based capital (RBC) to the “lesser of” current or prior year reported fair values, or possibly averaging reported fair values across multiple years.

Mr. Barlow suggested the Working Group move forward with the current proposal and use zero as the market value adjustment for 2021 year-end filings.

Bruce Oliver (Mortgage Banks Association—MBA) stated that the MBA had submitted a comment letter (Attachment Four-C3) supporting the American Council of Life Insurers’ (ACLI’s) proposal. He noted that capital standards based on historical experience is the correct approach. John Bruins (ACLI) stated that the ACLI comment letter (Attachment Four-C4) agrees with a one-year deferred implementation of the fair value adjustment component of the real estate equity RBC proposal and noted that a one-year delay is warranted to enable review and possible modification of the accounting requirements and audit and exam procedures.

2. **Adopted of the ACLI Real Estate Proposal**

Mr. Barlow suggested the Working Group adopt the ACLI real estate proposal, with the factor for the market value adjustment set to zero, and to work further with the Statutory Accounting Principles (E) Working Group, the Risk-Focused Surveillance (E) Working Group and the ACLI to set the market value adjustment. Mr. Cebula stated that he is concerned with moving forward with this proposal during the COVID-19 pandemic and the unknown impact on real estate and the change on Schedule BA where the factor changes from 23% to 13%.

Mr. Barlow noted that this project has been ongoing for several years and that it is the intent of the Working Group to adopt the real estate proposal at this time. Mr. Reedy stated that he agrees with Mr. Cebula and suggested that the impact on office space will be better known in three to six months. Mr. Cebula suggested that adoption for 2022 would be a better option. Ms. Mears stated that the Working Group should move forward with adoption of the real estate proposal today. Ms. Eom stated that she agrees with Mr. Cebula and Mr. Reedy. Ms. Ahrens stated that she agrees with Ms. Mears. Ms. Hemphill said she agrees with keeping the timing consistent with the bond proposal and adopting the real estate proposal today.

Mr. Robinson made a motion, seconded by Mr. Schallhorn, to adopt the real estate proposal (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-D) as it was submitted by the ACLI, with the factor for the market value adjustment set to zero for 2021 annual filings. The motion passed, with California, New Jersey and New York dissenting.

3. **Discussed Other Matters**

Mr. Barlow stated that several members of the Working Group have been working with members of the Life Actuarial (A) Task Force to develop the new prescribed economic scenario generator and noted that subject-matter experts (SMEs) from the
ACLI and the American Academy of Actuaries (Academy) will be included. He said this will be published at a later Life Actuarial (A) Task Force meeting.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
MEMORANDUM

TO: Philip Barlow (DC), Chair, Life Risk-Based Capital (E) Working Group
FROM: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
Carrie Mears (IA), Vice-Chair, Statutory Accounting Principles (E) Working Group

DATE: May 20, 2021

RE: SAPWG Response to the Life Real Estate Proposal

The Statutory Accounting Principles (E) Working Group appreciates the opportunity to provide comments to the Life Risk-Based Capital (E) Working Group on the American Council of Life Insurers (ACLI) proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. This proposal would potentially reduce the life RBC charges for real estate based on the fair value reported. The SAPWG understands the Life RBC (E) Working Group has adopted the structure for this change and is now reviewing whether the factors to be used will reduce charges. In summary, with the limited appraisal provisions of SSAP No. 40R—Real Estate and what appears to be inconsistent historical fair value data reported in Schedule A – Part 1: Real Estate Owned, the SAPWG identifies that relying on fair value amounts reported in Schedule A to influence real estate RBC could create a situation that is susceptible to RBC optimization. The following three points further highlight this conclusion for the Schedule A proposal:

1. **Fair Value Supplemental Disclosure** – The fair value reported for real estate captured on Schedule A is only a disclosure element and is not utilized in determining the reported balance sheet amount (book adjusted carrying value - BACV) or a company’s financial condition when exceeding the reported amount. This disclosed fair value is generally considered supplementary information and not subject to audit or verification procedures.

2. **Fair Value only for OTTI** – Other than supplemental information, the intent of fair value appraisals / assessment disclosure is for purposes of determining whether an other-than-temporary impairment (OTTI) assessment is required, not for the evaluation of unrealized gains. There are a number of reporting entities that have historically left the fair value field blank for some properties or reported a fair value amount that equals the reported BACV of the real estate. (These zero values / matching BACV reporting represent 29% of Schedule A properties. Detailed data can be provided to the Life RBC Working Group staff.) This reporting has been noted even when recent appraisals have been obtained. If the appraisal supported the balance sheet reported value, some entities simply reported BACV as the proxy for fair value, presumably because there was no incentive to use resources to calculate a different fair value. This proposal will require additional resources from companies to ensure comparability of RBC, potentially creating a disparate impact in RBC calculation between large and small reporting entities if such resources are not readily available.
3. **5 Year Appraisal** – The statutory accounting “every 5-year appraisal requirements for admittance” only impacts real estate that is income producing or held for sale. There is no ongoing appraisal requirement for property that is occupied by the reporting entity. Furthermore, there is no requirement for a current appraisal prior to revising the fair value reported for any of the real estate categories. From a review of the 2020 investment schedule detail, it was noted that some reporting entities made significant changes to the reported fair value, although the last appraisal (if any) occurred years prior.

In addition to the points raised for the Schedule A proposal, there are additional concerns for this proposal if it is applied to investments captured in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and reported on Schedule BA – Other Long-Term Invested Asset as having underlying characteristics of real estate. **These Schedule BA concerns are summarized as points 4-6 as follows:**

4. **Subjectivity of Schedule BA classification and transparency of movement within** – Classification of SSAP No. 48 investments on Schedule BA as having “underlying characteristics of real estate” is subjective. The instructions indicate the investments should have “real estate development interest,” and direct that if the requisite details are not available for reporting, then the investment should be reported in the Schedule BA “Other” category. With a potential reduction of RBC based on fair value (particularly as the “Schedule BA Other” category has the highest RBC charge of all asset classes), this change may result with an increase of SSAP No. 48 investments being classified from "Other" to having underlying real estate interests. Under current RBC factors, the variation between these Schedule BA reporting lines (0.23 and 0.30 respectively) does not create a significant motivation for this reclassification. However, if this comparison were to significantly change – and perhaps result with the elimination of RBC based on fair value differentiation – there is a significant motivation for a company to reassess whether an investment could be considered to have characteristics of underlying real estate. Furthermore, movement between reporting lines on the same schedule does not trigger any regulator indicator for assessment. It is only when investments move from one schedule to another are they captured as disposals and reacquisitions and can be identified.

5. **U.S. GAAP valuation of real estate inside holding company** – SSAP No. 48 investments are required to be audited for admittance with the BACV reflecting the reporting entity’s share, calculated using the equity method, of the SSAP No. 48 investment. The equity method begins with cost and is adjusted to reflect gains and losses within the structure not distributed to the investors. Whether those gains / losses reflect fair value changes of the underlying real estate in the SSAP No. 48 structure depends on the measurement method used within the investment structure. Under U.S. GAAP, certain structures may be required to measure holdings at fair value. (If not required, fair value may be an election by the reporting entity.) This could result with significant variation on whether the proposal influences RBC:
a. SSAP No. 48 structures that account for the underlying real estate at historical cost would likely have a lower BACV and a potential higher fair value on Schedule BA. The lower BACV is already incurring a lower RBC impact, and under the proposal, the RBC impact could be further decreased based on the differential between BACV and fair value.

b. SSAP No. 48 structures that account for the underlying real estate at fair value would likely have a higher BACV and a lower differential to the fair value reported on Schedule BA. The higher BACV is already incurring a higher RBC impact and would be less likely to be reduced based on fair value under the proposal.

6. **No appraisal requirement for Schedule BA Real Estate** – There is no requirement for appraisals of the underlying real estate held within a SSAP No. 48 structure. As such, regardless of whether the underlying real estate is held at fair value in the SSAP No. 48 structure, or if the reporting entity is calculating fair value for the entire SSAP No. 48 structure for reporting on Schedule BA, there are no appraisal requirements to validate the fair value calculation of the underlying real estate property. Pursuant to *SSAP No. 100—Fair Value*, these fair value calculations can be entity-determined based on the entity’s own assumptions of what a market participant would assume in pricing the asset. Consistent with the comments for the proposal on Schedule A, the fair value column on Schedule BA is only a disclosure element and is not utilized in determining the reported balance sheet amount (BACV) or a company’s financial condition. Other than supplemental information, the intent of the fair value disclosure is for purposes of determining whether an OTTI assessment is required.

In response to these six points, it is noted that incorporating the ACLI proposal in the current year would likely result in inconsistent application in RBC as well as result with an environment that incentivizes companies to potentially inflate reported fair values to optimize their RBC results. Although the SAPWG notes concerns with the use of fair value to influence real estate RBC, if further consideration is supported, the following initial suggestions are offered:

1. Delay adjusting current factors until at least 2022 to ensure time for examiners to expand procedures to include an assessment of reported fair values on Schedule A and Schedule BA. This would also allow time for companies that have historically not determined fair value beyond the amount needed to support BACV to revise their procedures so that the proposed RBC change will uniformly impact companies. This may not be feasible if Life RBC Working Group decides real estate and bond factors should be updated to start with the same year-end.

2. Establish guidance to restrict fair values used for RBC to the “lesser of” current or prior year reported fair values, or possibly averaging reported fair values across multiple years. Such guidance would prevent reporting entities from increasing fair value in the current year to
optimize RBC results or in response to an expected RBC shortfall. This would also allow regulators time to review updated fair value amounts, particularly if there are significant increases from past reported amounts before the increased fair value is used to reduce RBC.

Summary
After review of the year-end 2020 reported Schedule A and Schedule BA information and the SSAP No. 40R appraisal requirements and SSAP No. 48 reporting requirements, the Statutory Accounting Principles (E) Working Group has concerns on the reliability and consistency of data with the ACLI proposal to allow reporting entities to reduce RBC through their reported fair value of real estate. Additional time and safeguards are needed to ensure consistent treatment across reporting entities, ensure regulators have procedures in place to assess reported fair value information and prevent situations in which reporting entities can utilize this guidance to optimize RBC results or prevent an RBC shortfall that hinders proper assessment of the entity’s financial condition.

If you have any questions on this referral response, please contact Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group, or Julie Gann, NAIC staff.

MEMORANDUM

TO: Philip Barlow (DC), Chair, Life Risk-Based Capital (E) Working Group

FROM: Justin Schrader (NE), Chair, Risk-Focused Surveillance (E) Working Group
Amy Malm (WI), Vice-Chair, Risk-Focused Surveillance (E) Working Group

DATE: May 24, 2021

RE: RFSWG Response to the Life Real Estate Referral

The Risk-Focused Surveillance (E) Working Group appreciates the opportunity to provide comments to the Life Risk-Based Capital (E) Working Group on the American Council of Life Insurers (ACLI) proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. Based on the referral received, existing guidance and common practices around the review of real estate holdings in financial analysis and examination processes were reviewed and considered.

As a result of our review, we noted that guidance in the Market Risk Repository of the NAIC’s Financial Analysis Handbook focuses on identifying concentrations in real estate exposure at an insurer and evaluating the appropriateness of the Book Adjusted Carrying Value (BACV) of any significant real estate holdings. The NAIC’s Financial Condition Examiners Handbook does not include procedures for use in reviewing real estate holdings due to the relative infrequency of significant real estate holdings at insurers. However, common examination practices focus on verifying and validating the BACV of material real estate holdings, including consideration of OTTI, as opposed to verifying or validating Fair Value (FV) disclosures and reporting.

As such, the Life Risk-Based Capital (E) Working Group would be cautioned against relying on financial analysis or exam practices to verify or validate the FV of real estate holdings for purposes of determining an RBC charge but should be able to place some reliance on solvency monitoring processes for the accuracy of BACV reporting.

If you have any questions on this referral response, please contact Justin Schrader, Chair of the Risk-Focused Surveillance (E) Working Group, or Bruce Jenson, NAIC staff.

RE: Proposed Modifications to RBC Calculations for Real Estate

Dear Mr. Barlow and Working Group Members:

The Mortgage Bankers Association\(^1\) respectfully submits this letter of support for the modified proposal to update the risk-based capital (RBC) calculation for real estate, which was proposed by the American Council of Life Insurers (ACLI) and which this Working Group exposed on April 7, 2021.

First, we want to recognize the considerable and thoughtful engagement of the Chair and the members of the Working Group. This proposal has been in the works for some time, and the Working Group has put in the time and attention necessary to bring it forward to a decision.

As for the proposal, we believe that it is a vast improvement over the current state, and is both reasonable and appropriately conservative, as we describe below.

**Schedule A: Equity investments in real estate**

The current C-1 factor for real estate investments reported on Schedule A is 15\%. Because there was little data available on the performance of real estate assets at the time of adoption in 2000, the current C-1 factor is based on a suggested relationship between common stock and real estate volatility described by Ennis and Burik (1991).\(^2\)

---

\(^1\) The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 330,000 people in virtually every community in the country. Its membership of over 1,700 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, more than 70 life insurance companies engaged in real estate finance, and others in the mortgage lending field. For additional information, visit MBA’s website: [www.mba.org](http://www.mba.org).

In contrast, the proposal is based on analysis of historical real estate investment performance data from the NCREIF Property Index (NPI), supplemented by further data from FRC/Kelleher to extend the series through earlier years of 1961-1977. The results of the analysis of historical data suggest a far C-1 smaller factor, as low as 9.5%, would be more than appropriate to cushion against potential losses, while maintaining a safe and efficient lending market. Therefore, MBA supports the proposed factor of 11% as a reasonable and conservative application of the results of that analysis.

Schedule BA: Indirect equity investments in real estate

The current C-1 factor for Schedule BA real estate assets is 23%. This factor is based on an implicit assumption that the indirect real estate investments (e.g., through structures such as LLCs) reported on Schedule BA are on average about 50% riskier than direct real estate investments reported on Schedule A.

It has become clear that the current 50% risk add-on does not accurately reflect the marginal additional risks. For example, the Jeffrey Fisher study cited in the ACLI submission found that the performance of real estate held through joint ventures was consistent with and perhaps even slightly better than wholly owned real estate. As the ACLI submission notes, real estate investments are typically executed through corporate structures such as LLCs specifically to reduce or mitigate risks. In fact, treating Schedule BA real estate investments on a par with Schedule B real estate investments would be consistent with prior NAIC action reclassifying certain wholly owned single-asset LLCs as Schedule A assets, recognizing that the LLC structure does not itself produce additional risk.

For the reasons above, MBA supports the proposed C-1 factor of 13 percent for Schedule BA real estate (applying a multiplier of about 1.18 vs. the current multiplier of 1.5) assets as reasonable and conservative.

RBC Adjustment for Real Estate Encumbrances

The proposal would update the treatment of encumbrances to incorporate the proposed revised C-1 factor for Schedule A real estate investments (as the Working Group may adopt) and the revised commercial mortgage factor adopted in 2012. Our understanding that this is essentially a technical update to the treatment of encumbrances that is necessary to conform it changes in the

Page 3

treatment of the two components of that treatment (i.e., treatment of mortgages and of real estate investments). Accordingly, MBA supports the proposed change.

**Adjustment for Unrealized Capital Gains/Losses**

Under Statutory Accounting, a commercial property is accounted for at depreciated cost. As a result, over time, there will tend to be an increasing gap between the accounting value of a property on an insurer’s balance sheet and the property’s fair value. For example, a property could have a fair value of $150 and a depreciated cost of $100. ACLI’s proposed market value adjustment is a novel approach to capturing the impacts those unrealized gains or losses have on an insurer’s effective capital cushion against insolvency.

We have reviewed the Statutory Accounting Principles Working Group (SAPWG) Response to the Life Real Estate Proposal adopted on May 20, 2021, and we recognize the practical considerations the SAPWG raises. In light of those considerations, we recommend continued exploration of this and other possible approaches to recognizing the capital-like character of unrealized gains and losses on real estate investments.

* * *

Again, we appreciate the considerable time and attention the Chair and members of this Working Group have devoted to this proposal, and to the many other matters the Working Group has addressed over the past year and is currently addressing. We hope that these comments will be helpful as the Working Group considers these proposals.

Respectfully,

Mike Flood

Re: Comments on Proposal 2021-06-L RBC Real Estate Instructions and Factors

Dear Mr. Barlow:

The American Council of Life Insurers (“ACLI”) is submitting the following comments on the exposure of Proposal 2021-06-L RBC Real Estate Instructions and Factors and providing additional perspective on the Life RBC Working Group’s referral response from Statutory Accounting Principles Working Group (“SAPWG”). We appreciate SAPWG’s contributions on this issue leveraging their accounting expertise.

Regulators and industry agree that the spread between real estate fair value and its depreciated book value over time generates a statutory capital “cushion” limiting losses of statutory capital in real estate equity during economic downturns. This statutory capital cushion should be reflected in a lower RBC charge for qualifying real estate equity.

SAPWG points out, however, that there are currently shortcomings in statutory fair value estimates reflected on statutory balance sheets – particularly for smaller insurance firms. In light of these findings, industry concedes that a one-year deferred implementation of the fair value adjustment component of the real estate equity RBC proposal is warranted to enable a more thorough review and possible modification of the accounting requirements and audit and exam procedures. Industry is willing to be a full partner in this review.
Since inclusion of a fair value adjustment reduces the RBC charge for real estate equity, deferring the fair value adjustment while maintaining the same base factors (11% for Schedule A and 13% for Schedule BA) inherently increases the conservatism of the 2021 industry proposal.

The statistics below, shown in Appendix A clarify and provide additional perspective on SAPWG’s comments. We feel these comments and clarifications are important to a thorough understanding of the existing issues surrounding the use of fair value in the proposed RBC adjustment methodology. These values are based on the 2019 annual statement database, the first chart showing numbers of properties similar to the SAPWG comments split by company-occupied, investment, and held-for-sale. We also show the same breakdowns by BACV to give an indication of RBC impact:

- About 4% of properties have no BACV. While these contracts generally have no FV reported, RBC is not impacted since an asset with no statutory value produces no statutory surplus, no risk to surplus, and no RBC.

- As noted at the Life RBC Working Group, company-occupied properties are not required to have an appraisal. That fact, combined with limited guidance on how to establish fair value in the absence of an appraisal, leads to more than ½ of those properties having a fair value that is either zero or equal to the BACV. We agree that these are not likely to represent actual fair value, and that additional guidance on reporting would be appropriate.

- For properties requiring an appraisal, nearly 90% have an appraisal from the last 2 years. The remaining 10% of properties have no appraisal, an outdated appraisal, or an appraisal that is several years old.

- For these properties with appraisals, the reported fair values are generally in a reasonable range relative to the cost and the BACV. Some have FV that is approximately equal to the BACV, either because they were recently purchased or because properties held for sale often set BACV to lower of cost or market.

We believe the issues with the existing data quality and consistency for Schedule A, while imperfect, could be materially improved through reporting clarifications and changes in requirements for relatively small segments of the portfolios, specifically:

- Consider standards for reporting fair value of company occupied assets where an appraisal is not required or obtained

- Consider whether any enhancements are needed to the standards for the development of appraisals, and

- Consider enhancements to the review and examination procedures related to fair value.
Concerns expressed for Schedule BA assets include:

- There is a choice in the accounting basis which can lead to different values. Industry believes that this is a reporting issue.

- Fair values are not required to be audited. Industry believes appraisal standards of SSAP40 should be reviewed as discussed above.

- Unclear standards for classification of assets as having characteristics of real estate

We appreciate the opportunity offer these comments as the Life RBC Working Group continues its work on this project. We look forward to discussing these comments with the Working Group.

Sincerely,

Steven Clayburn

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 20, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); John Robinson (MN); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed the Bond Size Adjustment

Mr. Barlow said this has been discussed previously and that he is comfortable with making an adjustment to the factors included in the American Academy of Actuaries’ (Academy) proposal. He said there are two issues related to the bond size adjustment. The first is whether the expansion of the number of thresholds is problematic, and he asked if there had been any feedback on this. Dave Fleming (NAIC) said nothing has been submitted formally, but it appears changing the number of thresholds may not be problematic. Mr. Barlow said the second issue is the actual factors assigned to those thresholds, and he said he is in favor of making an adjustment to mitigate the impact on smaller companies. He suggested the Working Group go forward with the assumption that changing the number of thresholds is not an issue. He noted that a comparison of the bond size adjustments was included in the meeting materials. He said the current factor is 2.5 for the first 50 issuers, while the Academy proposal has a factor of 7.5 for the first 10 issuers. He suggested changing the thresholds to match the current ones of the first 50 and the next 50 and changing the factors applied to the first 50 to 2.9 with the factor applied to the next 50 remaining at the Academy’s proposed 1.75, which would mitigate the impact for smaller companies having less than 50 issuers. Mr. Boerner said he supports those changes. David Neve (Global Atlantic) asked if the same adjustment would be made to the Moody’s/ACLI’s proposal. Mr. Barlow directed NAIC staff to create and distribute a document for the Working Group members.

2. Discussed the Moody’s Analytics Report on Risk Premium

Amnon Levy (Moody’s Analytics) provided a presentation (Attachment Four-D1) on the ACLI/Moody’s Analytics proposal to updating the bond factors and risk premium. He noted that the proposal intends to replace the economic state model with a correlation model, update the default rate and recovery rate, set risk premium at expected loss plus 0.5 standard deviations, and update the tax rate to 21% and the discount rate to 3.47%.

Mr. Barlow stated that there are currently exposures for both the Academy and the Moody’s Analytics/ACLI proposals. He stated that after the exposure period ends, the Working Group will select a proposal with the possibility of another public exposure if that is needed. Mr. Carmello stated that the 70 CTE in VM-20, Requirements for Principle-Based Reserves for Life Products, VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and principle-based reserving (PBR) only applies to what is modeled stochastically, which includes Treasury rates and stock returns for equities, and not for defaults, mortality or lapse risk. Paul Graham (ACLI) stated that the defaults in PBR are set at the 70 CTE level. Nancy Bennett (Academy) stated that her recommendation is to continue with the same solvency framework. Mr. Graham asked if the Academy would have had separate factors if asset valuation reserve (AVR) were to be set at zero. Jerry Holman (Academy) stated that AVR would not affect the base factors but would have an impact on RBC.

Mr. Barlow asked Moody’s Analytics to provide a calculation using the Academy’s risk premium assumptions. Mr. Chou stated that this appears that the Working Group has selected the risk premium assumptions from the Academy’s proposal. Mr. Barlow stated that this will allow for a further exposure, if needed, and is the best approach given the compressed time frame.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Scope: What we were asked to do
Develop RBC C1 bond factors that better reflect economic risks

Heuristic Performance Criteria
MA C1 Factors*

- Better represent the historical experience of life insurers’ holdings
- More accurately reflect empirically observed issuer diversification benefits
- Challenges:
  - C1 factors are cardinal, and a function of MA’s default rates estimated using MIS corporate default rates that reflect the historical experience of life insurance corporate holdings for each MIS rating, which are opinions of ordinal, horizon-free credit risk, rather than cardinal
  - C1 factors are static while risks change over time, across ratings and asset classes
  - Applied to range of credit assets, based on their NAIC designations (i.e., the second lowest NRSRO rating)
- While the ACLI, the industry, the NAIC, and commissioners have been engaged extensively, the views are solely those of MA and based on an objective assessment of supporting documentation, and data and modeling approaches that in MA’s experience viewed as best practice

*MA’s Revisions to the RBC C1 Bond Factors' April 2021 report articulates the data, methodology and limitations associated with the MA’s C1 factors
Risk Premium is one of several interconnected modifications with largest impact

» Replace the economic state model with a correlation model to better align with default correlation and issuer diversification observed empirically, which also affects PAFs

» Update the default rate and recovery rate to better align with historical experience of the company’s holdings

» Set Risk Premium at expected loss plus 0.5 standard deviation (compared to just expected loss) to better align with current reserving standards

» Update tax rate to 21% and discount rate to 3.47% as requested by NAIC; compared with 5% under the current and Academy formula

Overview of Risk Premium Modification

» C1 RBC is the minimum required capital above statutory reserves to buffer against a tail loss

» Risk Premium acts as an offset to C1 RBC

» Variation in industry reserving standards

» VM-20 and VM-21 explicitly require that reserves cover CTE 70, or approximately 88th percentile, default loss, without accounting for any assets backing Asset Valuation Reserve (AVR)

» VM-22 applies to new life products after 2017, with increasing coverage for new bond purchases

’Existing policies follow industry reserving standards, which generally aim to cover moderately adverse conditions, AVR used in Cash Flow Testing (CFT) of reserves is excluded from Total Adjusted Capital (TAC), and thus functions as additional CFT reserves rather than available capital

MA’s Modifications

» Together with many other interconnected model features described in later slides, Risk Premium is updated to be expected loss plus 0.5 standard deviation recognizing variation in industry reserving standards and to closer align with PBR and other reserving standards generally aimed to cover moderately adverse conditions

Aligning C1 Factors with AVR

The Academy raised concerns related to Risk Premium and AVR consistency

» AVR is an allocation of surplus to smooth the cyclicality of credit default events

» Allocation of surplus across AVR and unassigned surplus does not affect RBC Ratio

» While historically the basic contribution of AVR has been set to be the same as Risk Premium, the alignment between AVR and Risk Premium is not relevant as they measure different things: AVR is to help “identify potentially weakly capitalized companies”

Sensitivity Analysis of Risk Premium

All values are based on MA’s formula including all targeted modifications

» Risk Premium level:

- Expected loss (used by the Academy) along with MA’s targeted modifications not included in the Academy’s proposal
- Expected loss + 0.5 standard deviation (used by MA)
- Expected loss + 1 standard deviation

» Higher level of Risk Premium leads to lower C1 base factors, as more losses will be covered by Risk Premium

- On average, a decrease (increase) of 0.5 standard deviation from MA’s Risk Premium, increases (decreases) C1 base factors by ~20% for investment grade and around 15% for high yield

</tbody>
</table>

All values in the table are calculated based on MA’s correlation model including other targeted modifications.

**Recap of C1 Factors**

- MA default rates, correlation model and Risk Premium lead to more differentiated across the MIS ratings scale.
- Economic state model results in counterfactual increases (and decreases) to C1 base factors along the rating scale (e.g., Credit risk set at 5% under the Academy’s formula under the current economic conditions).
- The economic model results in a more differentiated across the MIS ratings scale.

**Impact of MA C1 Factors on All Life Companies**

- Impact on RBC
- Impact on RBC of Life Companies

**Most Impactful Targeted Modifications**

- Economic state model overstates diversification benefits.
- MA default rates are a more accurate reflection of the historical experience of life insurers’ experience of life insurers.
- Alternative rating categories, and PAFs that are a more accurate reflection of the historical experience of life insurers.

**MA C1 Factors**

- MA default rates tend to have a steeper slope (more differentiated across MIS categories). A higher Risk Premium lowers the C1 base factors and increases their differentiation across the MIS designation categories.
- Resulting increase in RBC with MA C1 factors is relatively evenly distributed across life companies of different sizes.
- Economic state model results in counterfactual increases (and decreases) to C1 base factors along the rating scale (e.g., Credit risk set at 5% under the Academy’s formula under the current economic conditions).
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 29, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. **Discussed Additional Instruction on Real Estate**

John Bruins (American Council of Life Insurers—ACLI) stated that after the prior exposure of the updated real estate factors, it was noted that the Asset Concentration LR010 needs to be adjusted to align with the real estate factors that had been exposed. Mr. Bruins stated that his recommendation is to make the instruction change for 2021 and noted that there will be a structural change for 2022 to incorporate the market value adjustment.

Mr. Barlow directed NAIC staff to modify the previous real estate exposure to include the revisions to the instructions, which will align with the real estate factors that had been exposed. The comment deadline for this exposure is May 24.

2. **Discussed Life Reinsurance**

Dave Fleming (NAIC) said the Working Group was directed to review the credit risk charge and to verify that reciprocal jurisdiction reinsurers were being treated consistently with the other categories. He noted that this proposal would modify Line 15 of LR016 to allow for the reporting of reinsurance with reinsurers from reciprocal jurisdictions.

Steve Clayburn (ACLI) said the proposal addresses the charge from the Capital Adequacy (E) Task Force and clarifies the instructions for risk-based capital (RBC).

Mr. Barlow directed NAIC staff to expose the proposed edits to LR016 to allow reporting for reciprocal jurisdiction reinsurers for a 30-day public comment period ending May 27.

3. **Discussed Longevity Risk**

Ms. Ahrens stated that the base factors for longevity risk are applied in a decreasing order, where 1.35% is used for the first $250 million, 0.85% is used for $250 million to $500 million, 0.75% is used for $500 million to $1 billion, and 0.70% is used for all amounts greater than $1 billion. She noted that when this data is viewed across the industry, it would appear that the factor used was 0.70%, but when viewing individual companies, it is clearer. She noted that when this is exposed, she wants commenters to consider covariance of negative 0.25 with a guardrail of 1, covariance of negative 0.30 with a guardrail of 1, covariance of positive 1 (making C-2 mortality and C-2 longevity purely additive) with a guardrail of 1 (the guardrail will not alter the result since the calculation is additive), covariance of negative 0.25 with no guardrail (guardrail=0), and covariance of negative 0.30 with no guardrail (guardrail=0).

Mr. Barlow said the Working Group had previously adopted the structure, so any proposed changes would only be for the factors and instructions. Mr. Tsang suggested that the exposure include the preferences of the Working Group and an explanation for those preferences. Ms. Ahrens provided the rationale for the various options that she presented. Mr. Barlow recommended a memorandum be included with the exposure to explain the options for consideration. Mr. Chou asked if there would be a need for a meeting of the Longevity Risk (E/A) Subgroup. Ms. Ahrens stated that there is currently no plan to meet again for this topic. Mr. Barlow stated that the Working Group would meet in regulator-to-regulator session to discuss this topic further.

Mr. Barlow directed NAIC staff to expose the proposed longevity risk factors and instruction, with a memorandum explaining the rationale of the options presented for a 30-day public comment period ending May 27.
4. **Discussed Other Matters**

Paul Graham (ACLI) said there is an inconsistency in the earlier exposure for the tax rate change. He stated that in LR030, a hardcoded formula needed to be changed from 21% tax rate multiplied by a factor of 0.70 to be the 21% tax rate multiplied by a factor of 0.80, which would make this consistent with the other proposals. Nancy Bennett (American Academy of Actuaries—Academy) stated that she agrees.

Mr. Barlow directed NAIC staff to expose the revision to the prior exposure, which includes a hardcoded formula change from 21% tax rate multiplied by a factor of 0.70 to be 21% tax rate multiplied by a factor of 0.80 in LR030. The exposure is for a 30-day public comment period ending May 27.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 22, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed the Moody’s Analytics Updated Report on Bonds and the Academy’s Proposed Factors

Mr. Barlow said NAIC staff had supplied additional information on the impact of the factors based on the 2020 annual statement filings. He said the original file included an error in the calculation and that a new file would be sent to Working Group members when it is ready.

Mr. Barlow said there are several issues that he would like to have addressed in the presentations. He noted that the discount rate being used in the American Council of Life Insurers (ACLI) and Moody’s Analytics recommended approach (ACLI/Moody’s Analytics proposal) is similar to the American Academy of Actuaries’ (Academy’s) proposal and noted that the discount rates from 2017 are similar to today, when his assumption would be that these would change based on market conditions. He said the Academy provided a rationale for the risk premium used in its proposal, and the ACLI/Moody’s Analytics proposal uses a different standard, and he would like more information on why they would use a different risk premium. He said he would also like more information on the slope of the factors used in the ACLI/Moody’s Analytics proposal.

Amnon Levy (Moody’s Analytics) provided a presentation (Attachment Four-F1) on the ACLI/Moody’s Analytics proposal to updating the bond factors. He noted that he believes that his proposed C1 factors will allow data and methodologies to better capture economic risk, provide more accurate C1 base factors and portfolio adjustment factors and improve solvency by better identifying weakly capitalized firms.

Mr. Carmello asked if an earlier reference to VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, should have been to VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Mr. Levy noted that VM-20, Requirements for Principle-Based Reserves for Life Products, VM-21 and VM-22 are all relevant to this discussion and proposal.

Nancy Bennett (Academy) stated that she had considered using a different type of model instead of the economic state model but noted that in earlier discussion at the Investment Risk-Based Capital (E) Working Group, the more sophisticated model was found to be too complex for risk-based capital (RBC).

Mr. Carmello asked if an earlier reference to VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, should have been to VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Mr. Levy noted that VM-20, Requirements for Principle-Based Reserves for Life Products, VM-21 and VM-22 are all relevant to this discussion and proposal.

2. Discussed the Estimated Impact of Bond Proposals

Mr. Barlow stated that the Working Group’s meeting materials include a comparison between the ACLI/Moody’s Analytics proposal and the Academy’s proposals, which show the different impacts on companies of different sizes (Attachment Four-F2). Mr. Barlow said his recommendation is that the Working Group request that the ACLI/Moody’s Analytics proposal use the discount rate of 3.47% that has been suggested by the Academy instead of 4.32% in their proposal. Mr. Carmello agreed with this recommendation.

Nancy Bennett (Academy) stated that she had considered using a different type of model instead of the economic state model but noted that in earlier discussion at the Investment Risk-Based Capital (E) Working Group, the more sophisticated model was found to be too complex for risk-based capital (RBC).

Mr. Chou suggested holding two additional meetings, one meeting to further discuss the economic state model and a second meeting to discuss risk premium.

Mr. Carmello asked about how the Academy had established the risk premium. Ms. Bennett stated that it was at the mean, which is approximately the 60th percentile. Mr. Carmello asked how this compares to the ACLI/Moody’s Analytics proposal. Mr. Levy stated that the ACLI/Moody’s Analytics proposal is approximately 70th percentile.
3. Exposed the Bond Proposal Factors

Mr. Barlow directed NAIC staff to expose the Academy’s proposal (Attachment Four-F3) and the ACLI/Moody’s Analytics proposal, with the update to change the discount rate to 3.47% and any resulting factor changes (Attachment Four-F4), for a 30-day public comment period.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Preliminary Proposed Updates to RBC C1 Bond Factors

1. Overview of Impactful Targeted Improvements
2. Economic State Model and the MA Proposed Correlation Model
3. Default Rates
4. Risk Premium
5. Discount Rate and Tax Rate
6. Recap

Agenda

© 2021 National Association of Insurance Commissioners
Economic State Model Initially Outside Scope

Two material limitations:
- Economic state model is calibrated to default rates across contraction and expansion states, but it implies default correlations of ~0% for IG issuers, oversimplifying diversification across issuers relative to that observed empirically, resulting in:
  - C1 base factors that reflect empirically observed default correlations and issuer diversification benefits
  - Correlation Economic Scalars average 2.7495 across contraction states
  - MA proposed correlation model results in higher 96 percentile loss

Corporate default rate term structures estimated to historical experience of the company’s holdings:
- The Academy’s 10-year simulation model was adopted
- Default rate Economic Scalars set to 1 (this effectively disables the economic state model)
- MA proposed correlation model is calibrated to default correlations observed empirically
  - Default correlations, consistent with empirically observed default correlations and issuer diversification benefits
  - Several benchmarks for default correlation
    - Joint default events
    - CDS implied
    - MIS ratings implied
    - Equity market and financial statement

MA Proposed Correlation Model
Calibrated to default correlations observed empirically:
- The Academy’s 10-year simulation model was adopted
- Correlation Economic Scalars set to 1 (this effectively disables the economic state model)
- MA proposed correlation model results in:
  - C1 base factors that reflect empirical default correlations and are more differentiated across IG issuers relative to that implied by the economic state model, and
  - PAFs that more accurately reflect issuer diversification benefits, and that are less punitive (lenient) to portfolios with a smaller (larger) number of holdings, relative to those from Academy’s proposal

Economic State Model and the MA Proposed Correlation Model

MA’s Proposed C1 Factors
Targeted improvements with largest impact

© 2021 National Association of Insurance Commissioners
Proposed Updates to the RBC C1 Bond Factors

Incremental effects of replacing the economic state model with MA's proposed correlation model

MA's proposed correlation model generally increases C1 base factors

- In part, the economic state model and MA's proposed correlation model are different. MA's proposed correlation model:
  - Increases C1 factors for high yield by 27%
  - Increases C1 factors for investment grade by 23%

Economic Scalars lead to non-monotonic C1 base factors under some parameterizations, e.g., 4.794% for Ba3 to 4.778% for B1

Proposed PAF – MA’s Findings

Implications of MA’s proposed correlation model

- PAF’s calibrated to the economic state model overstate issuer diversification benefits.
- MA’s proposed correlation model is calibrated to default correlations and issuer diversification benefits observed empirically.

Safety levels under MA’s proposed factors:

- 96 percentile safety level under MA’s proposed factors
- 95.25 percentile safety level under MA’s proposed factors
MA Proposed 10-Year Cumulative Default Rates

More closely reflect historical experience of life companies' corporate holdings

- Incremental effects of MA-proposed default rates
- Different rating structures representing experience of life insurance holdings tend to be more differentiated across risk factors than Academy proposed, and more aligned to benchmarks.
- The resulting C1 base factors under MA's proposed default rates are generally more differentiated across the Aa3 to Baa3 range.
- The ratio of the Aa3 factor to the Aa3 factor is approximately 2.9X under MA's proposed factors being approximately 15% larger on average than under Academy proposed default rates.

Proposed C1 Base Factors

Risk Premium

Holdings Composition Differ from Overall Issuance

Aligning parameters with Historical Experience

- Institutional features drive life insurers' holdings, with historical experience aligned with issuers holding longer dated financing issues (Maturity remaining maturity).
- Insurers hold a varying proportion of debt across the rating scale.
- Recent is an estimation of:
  - Default rates
  - LGD

Proposed Updates to the RBC C1 Bond Factors

© 2021 National Association of Insurance Commissioners
Risk Premium Updates

Aligning with reserves
- C1 RBC is the minimum required capital above statutory reserves to buffer against a tail loss.
- Risk Premium acts as an offset to C1 RBC; it is the part of statutory reserves provisioned against default loss.
- Variation in industry reserving standards:
  - Both VM-20 and VM-22 explicitly require that reserves cover CTE 70, or approximately 88th percentile default loss.
  - VM-20 only applies to new life products after 2017. Most existing policies follow industry reserving standards that are commonly understood to cover moderately adverse conditions.
- Recognizing variation in industry reserving standards and to closer align with PBR and reserving standards generally aim to cover moderately adverse conditions, Risk Premium is proposed to be set at expected loss plus 0.5 standard deviation.
  - At higher Risk Premium levels, C1 base factors are higher due to lower Moody’s and S&P ratings and should better identify weakly capitalized firms and mitigate risk shifting incentives with new bond purchases.
- On average, as we decrease (increase) the risk premium by 0.5 standard deviation from MA’s proposed level, the C1 base factors increase (decrease) around 20% for investment grade and around 15% for high yield factors.
- A transition to expected loss plus one standard deviation once VM-20 become more widely applicable and VM-22 is formally updated and widely applicable.

Discount Rate and Tax Rate

Discount rate
- Used to calculate the net present value of projected cash flows.
- MA recognizes the need to parameterize the discount rate with a long-term perspective of long-term interest rates, and the desire for this parameter to be relatively stable while also allowing a closer reflection of the current, low-rate, environment.
- 1993−2020 (4.32%) used in developing MA proposed C1 base factors.
- Compared with the discount rate of 5.25% (1993−2013) used by the Academy (8% increases C1 base factors by 0-4% for investment grade, 0-3% for high yield), 2000−2020 (3.47%) increases C1 base factors by 2-7% for investment grade, 2-3% for high yield.
- 2010−2020 (2.25%) increases C1 base factors by 7-13% for investment grade, 5-8% for high yield.

Tax rate
- Was updated from 35% to 21%.
- Used to calculate the net present value of projected cash flows.
- MA recognizes the need to parameterize the discount rate with a long-term perspective of long-term interest rates, and the desire for this parameter to be relatively stable while also allowing a closer reflection of the current, low-rate, environment.

Possible candidates

Discount and Tax Rate

Recap
**Post-PAF C1 RBC Industry Impact – Complete Portfolio Holdings**

Post-PAF RBC proposed by MA is higher than the current level.

- Total Industry
- Post-PAF C1 RBC (Pre-Tac)
- Post-PAF C1 RBC (Pre-Tac) for Life-Companies Holdings by Issuer Count

**Summary of MA Proposed C1 Factors and their Impact**

- Impact on post-PAF C1 RBC:
  - Higher post-PAF RBC, on average, across the life industry compared to current formula
  - Life- and PAF RBCs decrease compared to current formula, on average, for insurers with small and medium number of issuers, but much less so than for
    default-factors in a proposed formula.

- Limitations of economic state model and their impact on accuracy of C1 base factors & PAFs:
  - The economic state model captures diversification across issuers, as estimated empirically, resulting in higher expected default rates, as
    compared to C1 base factors and, all else equal, in a more lenient risk assessment on underwriting of small and medium-sized issuers, all else equal.
  - The economic state model does not capture issuer diversification, as estimated empirically, resulting in higher expected default rates, as
    compared to C1 base factors and, all else equal, in a more lenient risk assessment on underwriting of small and medium-sized issuers, all else equal.

- Higher post-PAF RBC, on average, across the life industry compared to current formula: MA proposed correlation model more accurately reflects empirically observed default correlations and issuer diversification benefits, and that addresses all limitations of the economic state model.

- Understated credit losses in C1 base factors, all else equal: MA proposed PAFs more accurately reflect issuer diversification benefits and are less punitive (lenient) to portfolios with a small number of issuers, relative to those from the Academy’s proposal.

- [ ] Life and Fraternal RBC Instructions
- [ ] Health RBC Instructions
- [ ] Property/Casualty RBC Instructions
- [ ] Life and Fraternal RBC Blanks
- [ ] OTHER ____________________________

### DESCRIPTION OF CHANGE(S)

This proposal incorporates bond factors proposed by the American Academy of Actuaries (Academy) for the expanded presentation of bond designation categories in the annual statement and risk-based capital (RBC) schedules.

### REASON OR JUSTIFICATION FOR CHANGE **

The expanded presentation of bonds is a result of the work of the Investment Risk-Based Capital (E) Working Group. The factors represent the Academy’s work on this project. The Academy’s proposed factors had been previously discussed and exposed for comment at the Investment Risk-Based Capital (E) Working Group in the Academy’s 2015 and 2017 reports. The factors included in this proposal have been updated for tax changes that occurred after the initial factors were presented.

**Addition Staff Comments:**

- 4-22-21: Proposal was exposed for comments (DBF)

**This section must be completed on all forms.** Revised 2-2019

**Note:** For the intermediate category of hedging, we recommend that the risk mitigation and resulting RBC credit be determined as if each specific security common to both the index basket hedge and the portfolio is a basic hedge with the entire basic hedge methodology applied to each matching name. This includes the application of the maturity mismatch formula and the maximum RBC credit of 94% of the C-1 asset charge for fixed income hedges.

BONDS
LR002

Basis of Factors

The bond factors are based on cash flow modeling using historically adjusted default rates for each bond category. For each of 2,000 trials, annual economic conditions were generated for the 10-year modeling period. Each bond of a 400-bond portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by designation category and that year’s economic environment. When a default takes place, the actual loss considers the expected principal loss by category, the time until the sale actually occurs and the assumed tax consequences.

Actual surplus needs are reduced by incorporating anticipated annual contributions to the asset valuation reserve (AVR) as offsetting cash flow. Required surplus for a given trial is calculated as the amount of initial surplus funds needed so that the accumulation with interest of this initial amount and subsequent cash flows will not become negative at any point throughout the modeling period. The factors chosen for the proposed formula produce a level of surplus at least as much as needed in 92 percent of the trials by category and a 96 percent level for the entire bond portfolio.

The factor for NAIC 6 bonds recognizes that the book/adjusted carrying value of these bonds reflects a loss of value upon default by being marked to market.

Specific Instructions for Application of the Formula

Lines (1) through (7)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For long-term bonds, these classifications are found on Lines 1 through 7 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (8)
The total should equal long-term bonds and other fixed-income instruments reported on Page 2, Column 3, Line 1 plus Schedule DL Part 1, Column 6, Line 7099999.

Lines (9) through (15)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For short-term bonds, these classifications are found on Lines 18 through 24 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (16)
The total should equal short-term bonds reported on Schedule DA, Part 1, Line 8399999 plus Schedule DL Part 1, Column 6, Line 8999999 plus LR012 Miscellaneous Assets Column (1) Line (2.2).

Line (22)
Class 1 bonds (highest quality) issued by a U.S. government agency that are not backed by the full faith and credit of the U.S. government should be reported on this line. The loan-backed securities of the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC) would be examples of the securities reported on this line. Line (22) should not be larger than the sum of Lines (2) and (10). Exempt obligations should not be included on this line.

Line (24)
Bonds should be aggregated by issuer (the first six digits of the CUSIP number can be used). Exempt U.S. government bonds and bonds reported on Line (22) are not counted in determining the size factor. The RBC for those bonds will not be included in the base to which the size factor is applied. If this field is left blank, the maximum size factor adjustment of 2.5 will be used.
The size factor reflects the higher risk of a bond portfolio that contains relatively fewer bonds. The overall factor decreases as the portfolio size increases. Portfolios with more than 1,300 issuers will receive a discount. The size factor is based on the weighted number of issuers. (The calculation shown below will not appear on the RBC filing software but will be calculated automatically.)

Total Number of Issuers from Line (23)

Total Weighted Issuers

Size Factor = Total Weighted Issuers divided by Total Number of Issuers
ASSET CONCENTRATION FACTOR
LR010

Basis of Factors

The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an individual issuer of a security or a holder of a mortgage, etc.) The concentration factor doubles the risk-based capital pre-tax factor (with a maximum of 45 percent pre-tax) of the 10 largest asset exposures excluding various low-risk categories or categories that already have a maximum factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, the asset concentration factor only serves to add in the additional risk-based capital required. The calculation is completed on a consolidated basis; however, the concentration factor is reduced by amounts already included in the concentration factors of subsidiaries to avoid double-counting.

Specific Instructions for Application of the Formula

The 10 largest asset exposures should be developed by consolidating the assets of the parent with the assets of the company’s insurance and investment subsidiaries. The concentration factor component on any asset already reflected in the subsidiary’s RBC for the concentration factor should be deducted from Column (4). This consolidation process affects higher tiered companies only. Companies on the lowest tier of the organizational chart will prepare the asset concentration on a “stand alone” basis.

The 10 largest exposures should exclude the following: affiliated and non-affiliated common stock, affiliated preferred stock, home office properties, policy loans, bonds for which AVR and RBC are zero, NAIC 1 bonds, NAIC 1 unaffiliated preferred stock, NAIC 1 Hybrids, CM 1 Commercial and Farm Mortgages and any other asset categories with RBC factors less than 0.8 percent post-tax (this includes residential mortgages in good standing, insured or guaranteed mortgages, and cash and short-term investments).

In determining the assets subject to the concentration factor for both C-1o and C-1cs, the ceding company should exclude any asset whose performance inures primarily (>50 percent) to one reinsurer under modified coinsurance or funds withheld arrangements. The reinsurer should include 100 percent of such asset. Any asset where no one reinsurer receives more than 50 percent of its performance should remain with the ceding company.

Assets should be aggregated by issuer before determining the 10 largest exposures. Aggregations should be done separately for bonds and preferred stock (the first six digits of the CUSIP number can be used as a starting point) (please note that the same issuer may have more than one unique series of the first six digits of the CUSIP), mortgages and real estate. Securities held within Schedule BA partnerships should be aggregated by issuer as if the securities are held directly. Likewise, where joint venture real estate is mortgaged by the insurer, both the mortgage and the joint venture real estate should be considered as part of a single exposure. Tenant exposure is not included. For bonds and unaffiliated preferred stock, aggregations should be done first for classes 2 through 6. After the 10 largest issuer exposures are chosen, any NAIC 1 bonds, NAIC 1 unaffiliated preferred stock or NAIC 1 hybrids from any of these issuers should be included before doubling the risk-based capital. For some companies, following the above steps may generate less than 10 “issuer” exposures. These companies should list all available exposures.

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

The book/adjusted carrying value of each asset is listed in Column (2).

The RBC factor will correspond to the risk-based capital category of the asset reported previously in the formula before application of the size factor for bonds. The RBC filing software automatically allows for an overall 45 percent RBC cap.
Lines (17) through (22)
The Asset Concentration RBC Requirement for a particular property plus the Real Estate RBC Requirement for a particular property cannot exceed the book/adjusted carrying value of the property. Any properties exceeding the book/adjusted carrying value must be adjusted down to the book/adjusted carrying value in Column (6) of the Asset Concentration.

Line (18), Column (4) is calculated as Line (17), Column (2) multiplied by 0.2300 plus Line (18), Column (2) multiplied by 0.2000, but not greater than Line (17), Column (2).

Line (20), Column (4) is calculated as Line (19), Column (2) multiplied by 0.1500 plus Line (20), Column (2) multiplied by 0.1200, but not greater than Line (19), Column (2).

Line (22), Column (4) is calculated as Line (21), Column (2) multiplied by 0.2300 plus Line (22), Column (2) multiplied by 0.2000, but not greater than Line (21), Column (2).

Lines (23) through (54)
The Asset Concentration RBC Requirement for a particular mortgage plus the LR004 Mortgages RBC Requirement or LR009 Schedule BA Mortgages RBC Requirement for a particular mortgage cannot exceed 45 percent of the book/adjusted carrying value of the mortgage. Any mortgages exceeding 45 percent of the book/adjusted carrying value must be adjusted down in Column (6) of the Asset Concentration.

Line (32), Column (4) is calculated as the greater of 0.1800 multiplied by [(Line (31) plus Line (32)] less Line (32) or Line (31) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (34), Column (4) is calculated as the greater of 0.0140 multiplied by [(Line (33) plus Line (34)] less Line (34) or Line (33) multiplied by 0.0068.

Line (36), Column (4) is calculated as the greater of 0.1800 multiplied by [(Line (35) plus Line (36)] less Line (36) or Line (35) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (38), Column (4) is calculated as the greater of 0.2200 multiplied by [(Line (37) plus Line (38)] less Line (38) or Line (37) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (40), Column (4) is calculated as the greater of 0.0270 multiplied by [(Line (39) plus Line (40)] less Line (40) or Line (39) multiplied by 0.0068.

Line (42), Column (4) is calculated as the greater of 0.2200 multiplied by [(Line (41) plus Line (42)] less Line (42) or Line (41) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (43), Column (4) is calculated as Line (43) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (52), Column (4) is calculated as the greater of 0.1800 multiplied by [(Line (51) plus Line (52)] less Line (52) or Line (51) multiplied by the appropriate factor for the CM class to which the loan is assigned.

Line (54), Column (4) is calculated as the greater of 0.2200 multiplied by [(Line (53) plus Line (54)] less Line (54) or Line (53) multiplied by the appropriate factor for the CM class to which the loan is assigned.
HEDGED ASSET BOND AND COMMON STOCK SCHEDULES
LR014 and LR015

(Instructions related to intermediate hedges are in italics.)

Hedging

The concept of hedging credit, equity and other risks is widely accepted and understood among insurers and their regulators. In order for regulators to distinguish between insurers that have effectively reduced their risks from those insurers that have not, the risk based capital computation should be sensitive to such differences. Increasing or decreasing exposure to different asset classes in relation to a benchmark asset allocation tailored to meet the long term obligations to policy owners is critical to successfully managing an insurance company. Hedging is the process of using derivative instruments to most efficiently limit risk associated with a particular asset in a manner consistent with the insurer’s long term objectives. The relative advantage of using cash market transactions versus derivative market transactions depends upon market conditions.

The NAIC model investment laws and regulations establish specific constraints on the use of derivatives. Governance of derivative use starts with approved and documented authorities from the insurer’s Board of Directors to management. These authorities are coordinated with and enhanced by limits established by the insurer’s domiciliary state.

Hedging strategies currently employed by insurers range from straightforward relationships between the hedged asset and the derivative instrument (the hedge) to more complex relationships. The purpose of this section of the RBC calculation is to measure and reflect in RBC the risk reduction achieved by an insurer’s use of the most straightforward types of hedges involving credit default and equity C-1 risks.

To avoid the possible double counting of RBC credits, excluded from this section are any RBC credits arising from hedges that are part of the Clearly Defined Hedging Strategy (CDHS) required for C-3 cash flow testing or other risk mitigation techniques (e.g. reinsurance) which produce reduced levels of RBC by operation of other parts of the RBC formula.

RBC and Measuring the Risk Reduced by Hedging

To measure the risks reduced by hedging and reflect the effects in RBC it is important to understand the characteristics and purpose of the hedge. A portfolio manager seeking to hedge a particular asset or portfolio risk must determine if the derivative instruments available will do a suitable job of risk mitigation.

Default risk - A portfolio manager may determine that the default risk of a particular debt security which matures in 8 years needs to be hedged because of a near term credit concern which may resolve before the debt matures. A credit default swap (CDS) would be the most effective hedging instrument. In some circumstances the manager may purchase a CDS with 8 years to maturity which fully mitigates the default risk and shall result in an RBC credit which fully offsets the C-1 default risk charge on the debt security. However, seeking the most liquid and cost efficient market for the purchase of such an instrument may lead to the purchase of a 5 year CDS which the manager plans to renew (roll) as the credit circumstances evolve in the coming years. In this case there is a 3 year maturity mismatch between the debt security and the hedging instrument. To account for the difference between insurers that have hedged the debt security to full maturity versus those with a mismatched position, the determination of the RBC credit shall be made in accordance with the following formula which limits the results to a fraction of the C-1 charge for the hedged asset.
RBC Credit As % of C1 Asset Charge = \( \text{Min} \left( 1 - \frac{\text{Time to Maturity of CDS}}{\text{Time to Maturity of Bond}} \right) \times (94\% - 10\%) + 10\% \)

This accounts for mismatched maturities and provides a regulatory margin of safety within a range of 94%-10% of the C-1 asset charge.

There may also be circumstances where default risk is reduced by hedging specific portfolios using a basket or index-based derivative (e.g. CDX family of derivatives) with the same or very similar components as the portfolio. For these hedges the risk reduction shall be measured based on the number of issuers common to both the insurer’s portfolio and the index/basket CDS. A minimum of 50% overlap of the derivative instrument notional amount and the book/adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit. Additionally, if the insurer hedges an index, each bond must be listed (e.g. if the insurer acquires a CDX that hedges 125 names equally, then the insurer must list all 125 names on the schedule), regardless if the insurer owns all the bonds in the index.

As RBC is currently measured and reported annually and to an extent provides a regulator with an indicator of capital sufficiency for the near term future; default risk protection as provided by CDS (based on a specific security or an index of securities) shall have more than 1 year remaining to maturity in order to receive any RBC credit, provided that the remaining maturity of the hedged debt security or average maturity of the hedged portfolio is greater than 1 year. When both the default risk protection and the hedged debt security have less than one year to maturity, full RBC credit shall be allowed provided that the maturity of the protection is later than the maturity of the debt security; otherwise no RBC credit is allowed.

Equity market risk - A portfolio manager may determine that the market risk of holding a particular common stock needs to be reduced. Because an outright sale at that point in time might be disadvantageous to the insurer and/or policy owners, a short futures contract may be purchased to eliminate the current market risk by establishing a sale price in the future. The C-1 RBC equity risk credit shall be limited to 94%.

There may also be circumstances where equity market risk is reduced by hedging equity portfolios using derivatives based on equity market indices (e.g. S&P 500 futures contracts). Unless the equity portfolio is exactly matched to the index, the hedge will not provide precise one-to-one protection from fluctuations in value. The insurer must list all positions in the equity index individually (e.g. all 500 common stocks that are part of the S&P 500), regardless if the insurer owns all the stocks in the index.

Definitions and Instructions for the Spreadsheet Computation of Risk Reduction

(Numeric references represent spreadsheet columns)

Bonds

(1) Description - Reported on Schedule DB.

(2) Notional Amount - Amount reported on Schedule DB.

(3) Relationship Type of the Hedging Instrument and Hedged Asset. There are two categories; Basic and Intermediate relationships. Basic relationship = Single issuer credit default swap on a single issuer name to hedge the credit risk of a specific hedged asset. Intermediate relationship = A portfolio of insurer assets paired with a basket or index based hedging instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit.

(4) Maturity Date - Date reported on Schedule DB.
(5) Description - Bond description found in Schedule D. *For intermediate relationships, each bond must be listed (e.g. if the insurer acquires a credit default index that hedges 125 names equally, then the insurer must list all 125 names on the schedule.)*

(6) CUSIP Identification - Bond unique identifier found in Schedule D.

(7) Book Adjusted Carrying Value - Value found on Schedule D.

(8) Overlap with Insurer’s Bond Portfolio – The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book Adjusted Carrying Value. This amount cannot exceed Column (7) Book Adjusted Carrying Value.

(9) Maturity Date - The date is found in Schedule D.

(10) NAIC Designation - Designation found in Schedule D. Necessary to determine correct RBC Factor for the Bonds.

(11) RBC Factor - Factor based on Column (10) NAIC Designation and NAIC C-1 RBC factors table.

(12) Gross RBC Charge – This is the C-1 RBC charge based on holdings at the end of the year. Calculation: Columns (7) Book Adjusted Carrying Value multiplied by (11) RBC Factor.

(13) RBC Credit for Hedging Instruments – If Column (8) Overlap with Insurer’s Bond Portfolio is zero; the RBC Credit would also be zero. The Hedging Instrument must have more than 1 year remaining to maturity in order to receive any RBC credit provided that the remaining time to maturity of the Hedged Asset - Bonds is greater than 1 year. If both the Hedging Instrument and the Hedged Asset - Bonds maturity dates are less than 1 year, the maximum RBC credit determined using the formula below shall be allowed provided that the maturity of the hedging instrument is equal to or later than the maturity of the bond. Calculation is Column (8) Overlap with Insurer’s Bond Portfolio multiplied by RBC Credit as % of C-1 Asset Charge formula (formula listed below) multiplied by Column (11) RBC Factor.

\[
\text{RBC Credit as } \% \text{ of C1 Asset Charge} = \min\left\{1, \frac{\text{Time to Maturity of Hedging Instrument}}{\text{Time to Maturity of Bond}}\right\} \times (94\% - 10\%) + 10\%
\]

Time to Maturity of Hedging Instrument divided by Time to Maturity of Bond cannot exceed 1.

(14) Net RBC Charge – Column (12) Gross RBC Charge minus (13) RBC Credit for Hedging Instruments.

Common Stocks

(1) Description - Reported on Schedule DB.

(2) Notional Amount - Amount reported on Schedule DB.

(3) Relationship Type of the Hedging Instrument and Hedged Asset. There are two categories; Basic relationships or Intermediate relationships. Basic relationship = Single name equity Hedging Instrument paired with a specific common stock. Intermediate relationship = A portfolio of common stocks paired with a basket or index based Hedging Instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged common stocks shall be required to qualify for any RBC credit.
For intermediate relationships, each common stock must be listed (e.g., if the insurer acquires a short futures contract that hedges the S&P 500, then the insurer must list all 500 stocks on the schedule).

OFF-BALANCE SHEET COLLATERAL
(Including any Schedule DL, Part 1 Assets not Included in the Asset Valuation Reserve)
LR018

Basis of Factors

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements, and incur C-1 risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

Annual Statement Schedule DL, Part 1, Securities Lending Collateral Assets reported on the balance sheet (Assets Page, Line 10) should be included on the schedule with the Off-Balance Sheet Collateral if they are not already reflected in the Asset Valuation Reserve and are reflected in another portion of the Life RBC formula.

The collateral in these accounts is maintained by a third-party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/carrying value, and maturity date. The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Off-balance sheet collateral included in General Interrogatories, Part 1, Lines 24.05 and 24.06 of the annual statement should agree with Line (19).

Lines (1) through (8) – Bonds
Bond factors are described on page LR002 Bonds.

Line (9) through (15) – Preferred Stocks
Preferred stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (16) – Common Stock
Common stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (17) – Schedule BA – Other Invested Assets
Other invested assets factors are described on page LR008 Other Long Term Assets.

Line (18) – Aggregate Write-ins for Other Invested Assets
Aggregate write-ins for other invested assets factors are described on page LR012 Miscellaneous Assets.
March 11, 2021

Philip Barlow
Chair
Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Dear Philip,

On behalf of the American Academy of Actuaries' C1 Work Group (C1WG), we present to the Life Risk-Based Capital (E) Working Group updated base bond factors and a companion portfolio adjustment formula to reflect corporate tax rates enacted by the Tax Cuts and Jobs Act of 2017 for the Life Risk-Based Capital (LRBC) formula. The C1WG’s most recent recommendation on updated bond factors was provided to the NAIC’s Investment Risk-Based Capital Working Group on October 10, 2017. No other changes have been made to the October 17, 2017, recommendation.

As we have done in previous reports to the NAIC, we are providing direct model output for the base factors. As is the case with the current capital requirements for bonds, we recommend capping the base factor for the lowest-quality bond designation at 30%. Note that this approach caps the capital requirement for bonds at the base factor for unaffiliated common stock. In addition to capping the factor, we have not rounded any of the factors, as was done for the current bond factors.

A. UPDATED BASE FACTORS

The table below shows updated bond factors using a 21% corporate tax rate and the factors recommended in October 2017. These factors are used in the first step in calculating the basic capital requirements for bonds. These factors have been established at the statistical safety level specified by regulators. These factors in combination with the portfolio adjustment are expected to establish required capital at the 96th percentile over a 10-year time horizon. The assumptions used in developing these factors are based on expected loss given default experience for a portfolio of bonds that is representative of a typical life insurer’s bond portfolio.

In the development of the capital requirements for credit risk, recall that the tax rate affects the net loss flowing through statutory surplus. The factor is based on a discounted after-tax cash flows. As such, an after-tax discount is used in the calculation. In the October 2017 recommendation, the after-tax cash flows were discounted at 3.25%. The updated bond factors are based on after-tax cash flows discounted at

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

3.95%. Note that both sets of factors are based on a 5% pre-tax rate; only the after-tax discount rate has changed.

### B. UPDATED PORTFOLIO ADJUSTMENT FORMULA

The table below shows an updated portfolio adjustment formula, as developed for the updated base factors above. As a reminder, the purpose of the adjustment is to modify the base calculation for the diversification of the insurer’s bond portfolio, relative to the representative portfolio. The portfolio adjustment increases or decreases the base capital requirement (equal to the arithmetic sum of the base factor times the statutory carrying value of each bond) based on the number of issuers in the insurer’s portfolio.
The representative bond portfolio used in developing the base factors contained 824 issuers. As per the October 2017 recommended portfolio adjustment, the updated portfolio adjustment is neutral or approximately equal to 1.0 for an average portfolio (i.e., a portfolio with the same number of bonds as contained in the representative portfolio.) The updated approach meets that criterion because the exact percentile confidence level of the base factors was selected to reproduce aggregate industry C1 requirements when the base factors are applied to each company portfolio. That said, the confidence level for the base factors is close to the 96th percentile for each rating class, and the portfolio adjustment only captures differences in a company’s diversification risk relative to the representative portfolio.

### C. COMMENTS ON THE AGE OF ASSUMPTIONS

The C1WG began its work on the C1 Bond Capital Requirements in 2011. With input from regulators (NAIC’s C1 Factor Review Subgroup, NAIC’s Investment RBC Working Group, and the NAIC’s Life Risk-Based Capital Working Group), the C1WG updated the capital requirements to be used within the U.S. Solvency framework.

Many of the assumptions used in these factors, such as the bond default and recovery assumptions, are based on the experience for corporate bonds through 1983–2012. Other assumptions, notably the discount rate, are also based on data from a similar time period.

We understand that regulators are intent on adopting updated bond factors for the 2021 Life Risk-Based Capital calculation, particularly given the shortfall of the current requirements to meet regulators’ desired statistical safety level for credit risk. However, we would be remiss in not stating our concern about adopting a set of factors based on outdated assumptions.

While we have not modeled any assumption changes, we are concerned that the factors in this letter may be lower than what an analysis of updated data would produce. The base factors recommended in 2017
for bonds, exclusive of the impact of increased requirements from the tax change, increase the capital requirements for credit risk approximately 15-20% for the industry, on average. Updated assumptions might indicate that capital requirements should be increased further. We understand the desire to now adopt factors that move the capital requirements closer to the desired statistical level but encourage regulators to consider more frequent reviews of the assumptions and the resulting factors.

We appreciate your consideration of this update. Please contact Nancy Bennett, senior life fellow (bennett@actuary.org), or Khloe Greenwood, life policy analyst (greenwood@actuary.org), with any questions.

Sincerely,

Nancy Bennett, MAAA, FSA, CERA

[ ] REFERRED TO OTHER NAIC GROUP
[ X ] EXPOSED 4/22/21
[ ] OTHER (SPECIFY)

DESCRIPTION OF CHANGE(S)
This proposal incorporates bond factors proposed by the American Council of Life Insurers (ACLI) for the expanded presentation of bond designation categories in the annual statement and risk-based capital (RBC) schedules.

REASON OR JUSTIFICATION FOR CHANGE **
The expanded presentation of bonds is a result of the work of the Investment Risk-Based Capital (E) Working Group. This proposal presents alternative factors to those proposed by the American Academy of Actuaries (Academy).

Additional Staff Comments:
- 4-22-21: Proposal was exposed for comments (DBF)

### Notes:
- For the intermediate category of hedging, we recommend that the risk mitigation and resulting RBC credit be determined as if each specific security common to both the index/basket hedge and the portfolio is a basic hedge with the entire basic hedge methodology applied to each matching name. This includes the application of the maturity mismatch formula and the maximum RBC credit of 94% of the C-1 asset charge for fixed income hedges.
- Columns are derived from investment schedules.
- The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book / Adjusted Carrying Value. This amount cannot exceed Column (7) Book / Adjusted Carrying Value.
- Factor based on Column (10) NAIC Designation and NAIC C-1 RBC Factors table.
- Column (7) Book Adjusted Carrying Value multiplied by Column (11) RBC Factor.
- Column (13) is calculated according to the risk-based capital instructions.
- Column (12) Gross RBC Charge minus Column (13) RBC Credit for Hedging Instruments.

Denotes manual entry items that do not come directly from the annual statement.

† The factor for common stock can vary depending on the type of stock. The factor would be subject to a minimum of 22.5 percent and a maximum of 45 percent.
Bonds LR002

Basis of Factors

The bond factors are based on cash flow modeling using historically adjusted default rates for each bond category. For each of 2,000 trials, annual economic conditions were generated for the 10-year modeling period. Each bond of a 400-bond portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by designation category and that year’s economic environment. When a default takes place, the actual loss considers the expected principal loss by category, the time until the sale actually occurs and the assumed tax consequences.

Actual surplus needs are reduced by incorporating anticipated annual contributions to the asset valuation reserve (AVR) as offsetting cash flow. Required surplus for a given trial is calculated as the amount of initial surplus funds needed so that the accumulation with interest of this initial amount and subsequent cash flows will not become negative at any point throughout the modeling period. The factors chosen for the proposed formula produce a level of surplus at least as much as needed in 92 percent of the trials by category and a 96 percent level for the entire bond portfolio.

The factor for NAIC 6 bonds recognizes that the book/adjusted carrying value of these bonds reflects a loss of value upon default by being marked to market.

Specific Instructions for Application of the Formula

Lines (1) through (7)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For long-term bonds, these classifications are found on Lines 1 through 7 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (8)
The total should equal long-term bonds and other fixed-income instruments reported on Page 2, Column 3, Line 1 plus Schedule DL Part 1, Column 6, Line 7099999.

Lines (9) through (15)
The book/adjusted carrying value of all bonds and related fixed-income investments should be reported in Column (1). The bonds are split into seven different risk classifications. For short-term bonds, these classifications are found on Lines 18 through 24 of the Asset Valuation Reserve Default Component, Page 30 of the annual statement.

Line (16)
The total should equal short-term bonds reported on Schedule DA, Part 1, Line 8399999 plus Schedule DL Part 1, Column 6, Line 8999999 plus LR012 Miscellaneous Assets Column (1) Line (2.2).

Line (22)
Class 1 bonds (highest quality) issued by a U.S. government agency that are not backed by the full faith and credit of the U.S. government should be reported on this line. The loan-backed securities of the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC) would be examples of the securities reported on this line. Line (22) should not be larger than the sum of Lines (2) and (10). Exempt obligations should not be included on this line.

Line (24)
Bonds should be aggregated by issuer (the first six digits of the CUSIP number can be used). Exempt U.S. government bonds and bonds reported on Line (22) are not counted in determining the size factor. The RBC for those bonds will not be included in the base to which the size factor is applied. If this field is left blank, the maximum size factor adjustment of 2.5 will be used.
The size factor reflects the higher risk of a bond portfolio that contains relatively fewer bonds. The overall factor decreases as the portfolio size increases. Portfolios with more than 1,300 issuers will receive a discount. The size factor is based on the weighted number of issuers. (The calculation shown below will not appear on the RBC filing software but will be calculated automatically.)

ASSET CONCENTRATION FACTOR
LR010

Basis of Factors

The purpose of the concentration factor is to reflect the additional risk of high concentrations in single exposures (represented by an individual issuer of a security or a holder of a mortgage, etc.) The concentration factor doubles the risk-based capital pre-tax factor (with a maximum of 45 percent pre-tax) of the 10 largest asset exposures excluding various low-risk categories or categories that already have a maximum factor. Since the risk-based capital of the assets included in the concentration factor has already been counted once in the basic formula, the asset concentration factor only serves to add in the additional risk-based capital required. The calculation is completed on a consolidated basis; however, the concentration factor is reduced by amounts already included in the concentration factors of subsidiaries to avoid double-counting.

Specific Instructions for Application of the Formula

The 10 largest asset exposures should be developed by consolidating the assets of the parent with the assets of the company’s insurance and investment subsidiaries. The concentration factor component on any asset already reflected in the subsidiary’s RBC for the concentration factor should be deducted from Column (4). This consolidation process affects higher tiered companies only. Companies on the lowest tier of the organizational chart will prepare the asset concentration on a “stand alone” basis.

The 10 largest exposures should exclude the following: affiliated and non-affiliated common stock, affiliated preferred stock, home office properties, policy loans, bonds for which AVR and RBC are zero, NAIC 1 bonds, NAIC 1 unaffiliated preferred stock, NAIC 1 Hybrids, CM 1 Commercial and Farm Mortgages and any other asset categories with RBC factors less than 0.8 percent post-tax (this includes residential mortgages in good standing, insured or guaranteed mortgages, and cash and short-term investments).

In determining the assets subject to the concentration factor for both C-1o and C-1cs, the ceding company should exclude any asset whose performance inures primarily (>50 percent) to one reinsurer under modified coinsurance or funds withheld arrangements. The reinsurer should include 100 percent of such asset. Any asset where no one reinsurer receives more than 50 percent of its performance should remain with the ceding company.

Assets should be aggregated by issuer before determining the 10 largest exposures. Aggregations should be done separately for bonds and preferred stock (the first six digits of the CUSIP number can be used as a starting point) (please note that the same issuer may have more than one unique series of the first six digits of the CUSIP), mortgages and real estate. Securities held within Schedule BA partnerships should be aggregated by issuer as if the securities are held directly. Likewise, where joint venture real estate is mortgaged by the insurer, both the mortgage and the joint venture real estate should be considered as part of a single exposure. Tenant exposure is not included. For bonds and unaffiliated preferred stock, aggregations should be done first for classes 2 through 6. After the 10 largest issuer exposures are chosen, any NAIC 1 bonds, NAIC 1 unaffiliated preferred stock or NAIC 1 hybrids from any of these issuers should be included before doubling the risk-based capital. For some companies, following the above steps may generate less than 10 “issuer” exposures. These companies should list all available exposures.

Replicated assets other than synthetically created indices should be included in the asset concentration calculation in the same manner as other assets.

The book/adjusted carrying value of each asset is listed in Column (2).

The RBC factor will correspond to the risk-based capital category of the asset reported previously in the formula before application of the size factor for bonds. The RBC filing software automatically allows for an overall 45 percent RBC cap.
Lines (17) through (22)
The Asset Concentration RBC Requirement for a particular property plus the Real Estate RBC Requirement for a particular property cannot exceed the book/adjusted carrying value of the property. Any properties exceeding the book/adjusted carrying value must be adjusted down to the book/adjusted carrying value in Column (6) of the Asset Concentration.

Line (54), Column (4) is calculated as the greater of 0.2200 multiplied by [(Line (53) plus Line (54))] less Line (54) or Line (53) multiplied by the appropriate factor for the CM class to which the loan is assigned.
HEDGED ASSET BOND AND COMMON STOCK SCHEDULES
LR014 and LR015

(Instructions related to intermediate hedges are in italics.)

Hedging

The concept of hedging credit, equity and other risks is widely accepted and understood among insurers and their regulators. In order for regulators to distinguish between insurers that have effectively reduced their risks from those insurers that have not, the risk based capital computation should be sensitive to such differences. Increasing or decreasing exposure to different asset classes in relation to a benchmark asset allocation tailored to meet the long term obligations to policy owners is critical to successfully managing an insurance company. Hedging is the process of using derivative instruments to most efficiently limit risk associated with a particular asset in a manner consistent with the insurer’s long term objectives. The relative advantage of using cash market transactions versus derivative market transactions depends upon market conditions.

The NAIC model investment laws and regulations establish specific constraints on the use of derivatives. Governance of derivative use starts with approved and documented authorities from the insurer’s Board of Directors to management. These authorities are coordinated with and enhanced by limits established by the insurer’s domiciliary state.

Hedging strategies currently employed by insurers range from straightforward relationships between the hedged asset and the derivative instrument (the hedge) to more complex relationships. The purpose of this section of the RBC calculation is to measure and reflect in RBC the risk reduction achieved by an insurer’s use of the most straightforward types of hedges involving credit default and equity C-1 risks.

To avoid the possible double counting of RBC credits, excluded from this section are any RBC credits arising from hedges that are part of the Clearly Defined Hedging Strategy (CDHS) required for C-3 cash flow testing or other risk mitigation techniques (e.g. reinsurance) which produce reduced levels of RBC by operation of other parts of the RBC formula.

RBC and Measuring the Risk Reduced by Hedging

To measure the risks reduced by hedging and reflect the effects in RBC it is important to understand the characteristics and purpose of the hedge. A portfolio manager seeking to hedge a particular asset or portfolio risk must determine if the derivative instruments available will do a suitable job of risk mitigation.

Default risk - A portfolio manager may determine that the default risk of a particular debt security which matures in 8 years needs to be hedged because of a near term credit concern which may resolve before the debt matures. A credit default swap (CDS) would be the most effective hedging instrument. In some circumstances the manager may purchase a CDS with 8 years to maturity which fully mitigates the default risk and shall result in an RBC credit which fully offsets the C-1 default risk charge on the debt security. However, seeking the most liquid and cost efficient market for the purchase of such an instrument may lead to the purchase of a 5 year CDS which the manager plans to renew (roll) as the credit circumstances evolve in the coming years. In this case there is a 3 year maturity mismatch between the debt security and the hedging instrument. To account for the difference between insurers that have hedged the debt security to full maturity versus those with a mismatched position, the determination of the RBC credit shall be made in accordance with the following formula which limits the results to a fraction of the C-1 charge for the hedged asset.

\[
\text{RBC Credit} = \min\left(\frac{\text{Maturity of CDS}}{\text{Maturity of Debt Security}}, 1\right) \times \text{C-1 Charge}
\]
RBC Credit As % of C-1 Asset Charge $= \min\left(1, \frac{\text{Time to Maturity of CDS}}{\text{Time to Maturity of Bond}}\right) \times (94\% - 10\%) + 10\%$

This accounts for mismatched maturities and provides a regulatory margin of safety within a range of 94%-10% of the C-1 asset charge.

There may also be circumstances where default risk is reduced by hedging specific portfolios using a basket or index-based derivative (e.g. CDX family of derivatives) with the same or very similar components as the portfolio. For these hedges the risk reduction shall be measured based on the number of issuers common to both the insurer’s portfolio and the index/basket CDS. A minimum of 50% overlap of the derivative instrument notional amount and the book/adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit. Additionally, if the insurer hedges an index, each bond must be listed (e.g. if the insurer acquires a CDX that hedges 125 names equally, then the insurer must list all 125 names on the schedule), regardless if the insurer owns all the bonds in the index.

As RBC is currently measured and reported annually and to an extent provides a regulator with an indicator of capital sufficiency for the near term future; default risk protection as provided by CDS (based on a specific security or an index of securities) shall have more than 1 year remaining to maturity in order to receive any RBC credit, provided that the remaining maturity of the hedged debt security or average maturity of the hedged portfolio is greater than 1 year. When both the default risk protection and the hedged debt security have less than one year to maturity, full RBC credit shall be allowed provided that the maturity of the protection is later than the maturity of the debt security; otherwise no RBC credit is allowed.

Equity market risk - A portfolio manager may determine that the market risk of holding a particular common stock needs to be reduced. Because an outright sale at that point in time might be disadvantageous to the insurer and/or policy owners, a short futures contract may be purchased to eliminate the current market risk by establishing a sale price in the future. The C-1 RBC equity risk credit shall be limited to 94%.

There may also be circumstances where equity market risk is reduced by hedging equity portfolios using derivatives based on equity market indices (e.g. S&P 500 futures contracts). Unless the equity portfolio is exactly matched to the index, the hedge will not provide precise one-to-one protection from fluctuations in value. The insurer must list all positions in the equity index individually (e.g. all 500 common stocks that are part of the S&P 500), regardless if the insurer owns all the stocks in the index.

Definitions and Instructions for the Spreadsheet Computation of Risk Reduction

(Numeric references represent spreadsheet columns)

Bonds

(1) Description - Reported on Schedule DB.

(2) Notional Amount - Amount reported on Schedule DB.

(3) Relationship Type of the Hedging Instrument and Hedged Asset. There are two categories; Basic and Intermediate relationships. Basic relationship = Single issuer credit default swap on a single issuer name to hedge the credit risk of a specific hedged asset. Intermediate relationship = A portfolio of insurer assets paired with a basket or index based hedging instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged bonds shall be required to qualify for any RBC credit.

(4) Maturity Date - Date reported on Schedule DB.
(5) Description - Bond description found in Schedule D. For intermediate relationships, each bond must be listed (e.g. if the insurer acquires a credit default index that hedges 125 names equally, then the insurer must list all 125 names on the schedule.)

(6) CUSIP Identification - Bond unique identifier found in Schedule D.

(7) Book Adjusted Carrying Value - Value found on Schedule D.

(8) Overlap with Insurer’s Bond Portfolio – The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book Adjusted Carrying Value. This amount cannot exceed Column (7) Book Adjusted Carrying Value.

(9) Maturity Date - The date is found in Schedule D.

(10) NAIC Designation - Designation found in Schedule D. Necessary to determine correct RBC Factor for the Bonds.

(11) RBC Factor - Factor based on Column (10) NAIC Designation and NAIC C-1 RBC factors table.

(12) Gross RBC Charge – This is the C-1 RBC charge based on holdings at the end of the year. Calculation: Columns (7) Book Adjusted Carrying Value multiplied by (11) RBC Factor.

(13) RBC Credit for Hedging Instruments – If Column (8) Overlap with Insurer’s Bond Portfolio is zero, the RBC Credit would also be zero. The Hedging Instrument must have more than 1 year remaining to maturity in order to receive any RBC credit provided that the remaining time to maturity of the Hedged Asset - Bonds is greater than 1 year. If both the Hedging Instrument and the Hedged Asset - Bonds maturity dates are less than 1 year, the maximum RBC credit determined using the formula below shall be allowed provided that the maturity of the hedging instrument is equal to or later than the maturity of the bond. Calculation is Column (8) Overlap with Insurer’s Bond Portfolio multiplied by RBC Credit as % of C-1 Asset Charge formula (formula listed below) multiplied by Column (11) RBC Factor.

\[ \text{RBC Credit as } \% \text{ of C-1 Asset Charge} = \min \left( 1, \frac{\text{Time to Maturity of Hedging Instrument}}{\text{Time to Maturity of Bond}} \right) \times (94\% - 10\%) + 10\% \]

Time to Maturity of Hedging Instrument divided by Time to Maturity of Bond cannot exceed 1.

(14) Net RBC Charge – Column (12) Gross RBC Charge minus (13) RBC Credit for Hedging Instruments.

Common Stocks

(1) Description - Reported on Schedule DB.

(2) Notional Amount - Amount reported on Schedule DB.

(3) Relationship Type of the Hedging Instrument and Hedged Asset. There are two categories; Basic relationships or Intermediate relationships. Basic relationship = Single name equity Hedging Instrument paired with a specific common stock. Intermediate relationship = A portfolio of common stocks paired with a basket or index based Hedging Instrument with the same or very similar components as the portfolio. For intermediate relationships, a minimum of 50% overlap of the derivative instrument notional amount and the book adjusted carrying value of the hedged common stocks shall be required to qualify for any RBC credit.
For intermediate relationships, each common stock must be listed (e.g. if the insurer acquires a short futures contract that hedges the S&P 500, then the insurer must list all 500 stocks on the schedule).

Overlap with Insurer’s Stock Portfolio – The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (6) Book/Adjusted Carrying Value. This amount cannot exceed the Column (6) Book Adjusted Carrying Value.

RBC Credit for Hedging Instruments - RBC credit for equity market risk reduction is limited to 94% of the C-1 Asset charge. Calculation: Column (7) Overlap with Insurer’s Stock Portfolio multiplied by (8) RBC Factor multiplied by 94%.

Net RBC Charge - Column (9) Gross RBC Charge minus (10) RBC Credit for Hedging Instruments.

OFF-BALANCE SHEET COLLATERAL
(Including any Schedule DL, Part 1 Assets not Included in the Asset Valuation Reserve)
LR018

Basis of Factors

Security lending programs are required to maintain collateral. Some entities post the collateral supporting security lending programs on their financial statements, and incur C-1 risk charges on those assets. Other entities have collateral that is not recorded on their financial statements. While not recorded on the financial statements of the company, such collateral has risks that are not otherwise captured in the RBC formula.

Annual Statement Schedule DL, Part 1, Securities Lending Collateral Assets reported on the balance sheet (Assets Page, Line 10) should be included on the schedule with the Off-Balance Sheet Collateral if they are not already reflected in the Asset Valuation Reserve and are reflected in another portion of the Life RBC formula.

The collateral in these accounts is maintained by a third-party (typically a bank or other agent). The collateral agent maintains on behalf of the company detail asset listings of the collateral assets, and this data is the source for preparation of this schedule. The company should maintain such asset listings, at a minimum CUSIP, market value, book/carrying value, and maturity date. The asset risk charges are derived from existing RBC factors for bonds, preferred and common stocks, other invested assets, and invested assets not otherwise classified (aggregate write-ins).

Specific Instructions for Application of the Formula

Off-balance sheet collateral included in General Interrogatories, Part 1, Lines 24.05 and 24.06 of the annual statement should agree with Line (19).

Lines (1) through (8) – Bonds
Bond factors are described on page LR002 Bonds.

Line (9) through (15) – Preferred Stocks
Preferred stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (16) – Common Stock
Common stock factors are described on page LR005 Unaffiliated Preferred and Common Stock.

Line (17) – Schedule BA – Other Invested Assets
Other invested assets factors are described on page LR008 Other Long Term Assets.

Line (18) – Aggregate Write-ins for Other Invested Assets
Aggregate write-ins for other invested assets factors are described on page LR012 Miscellaneous Assets.
Moody's (NYSE:MCO) is a global integrated risk assessment firm that empowers organizations to make better decisions. Its data, analytical solutions and insights help decision-makers identify opportunities and manage the risks of doing business with others. We believe that greater transparency, more informed decisions, and fair access to information open the door to shared progress. With over 11,400 employees in more than 40 countries, Moody's combines an international presence with local expertise and more than a century of experience in financial markets. Learn more at moody.com/about.

Moody's Corporation is comprised of two separate companies: Moody's Investors Service (MIS) and Moody's Analytics (MA).

Moody's Investors Service (MIS) provides investors with a comprehensive view of global debt markets through credit ratings and research. Moody's Analytics (MA) provides data, analytics, and insights to equip leaders of financial, non-financial, and government organizations with effective tools to understand a range of risks.

Throughout this document, “MIS rating” refers to a MIS credit rating. And while references to MIS are made, the views and opinions in this document are solely of MA.
1. Executive Summary
2. Comparison of C1 Factors and C1 RBC Industry Impact
3. Impact of Proposed Targeted Improvements
Proposed Updates to the RBC C1 Bond Factors

Executive Summary

Proposing RBC C1 bond factors using data and methodologies that better reflect economic risks with capital requirements, across NAIC ratings and across number of issuers in portfolio, allowing for better identification of weakly capitalized firms; C1 factors should not incentivize poor business decisions that can adversely impact solvency.

Methodologies and data rely entirely on public sources that are accessible and reproducible by NAIC and industry.

Articulated limitations.

NAIC to use at its discretion in setting the final C1 factors.

Challenges:
- C1 factors are cardinal, a function of MA's default rates estimated for each MIS ratings that are opinions on ordinal, horizon-free credit risk, rather than cardinal ratings over time, across ratings and asset classes, resulting in a potential misalignment between the C1 factors and the underlying risks of varied holdings in insurers' portfolios.
- Applied to range of credit assets, based on the second lowest NRSRO rating with statistical properties that can be different from MIS ratings.

How We’re Doing It

Heuristic Performance Criteria

Scope

Proposing RBC C1 bond factors using data and methodologies that better reflect economic risks with capital requirements, across NAIC ratings and across number of issuers in portfolio, allowing for better identification of weakly capitalized firms; C1 factors should not incentivize poor business decisions that can adversely impact solvency.

Challenges:
- C1 factors are cardinal, a function of MA's default rates estimated for each MIS ratings that are opinions on ordinal, horizon-free credit risk, rather than cardinal ratings over time, across ratings and asset classes, resulting in a potential misalignment between the C1 factors and the underlying risks of varied holdings in insurers' portfolios.
- Applied to range of credit assets, based on the second lowest NRSRO rating with statistical properties that can be different from MIS ratings.

© 2021 National Association of Insurance Commissioners
Executive Summary

Findings

What We Found

MA proposed C1 factors result in a general overall C1 RBC increase across the industry:
- C1 base factors are more differentiated across ratings (i.e., steeper slope) than the current C1 base factors or those proposed by the Academy
- Portfolio adjustment factors (PAF) for portfolios with small number of issuers are significantly less punitive than those under the Academy’s proposal, and sit between the current PAFs and those proposed by the Academy

Next

Immediate Next Steps

- Achieve consensus on data and methodology
- Provide transparency on approaches and resulting impact
- Provide guidance on limitations of use and best practice
Comparison of C1 Factors and C1 RBC Industry Impact
Comparison of C1 Base Factors

MA proposed base factors have a steeper slope

Targeted improvements with largest impact on C1 base factors

- **Economic state model**, initially outside scope, limitations viewed to be sufficiently material that MA recommends replacing with correlation model parameterized to default correlations observed empirically
  - Economic state scalars in the economic state model are generally more punitive for higher MIS ratings, resulting in a counterfactual flattening of risk across MIS ratings, and possible non-monotonic C1 base factors
  - MA proposed correlation model results in C1 base factors that are more conservative and differentiated across MIS ratings, while also correcting for PAF issues described subsequently under PAF section.

- **Corporate default rate term structures** are estimated to represent the historical experience of life insurance holdings
  - Life holdings differ from overall issuance; e.g., life portfolio holdings have less weight on financial institutions that tend to issue shorter term debt
  - MA proposed default rates tend to have a steeper slope (more separated across MIS ratings) than those proposed by the Academy, with separation more closely aligning with benchmarks

- **Risk Premium** conservatively set at expected loss plus 0.5 standard deviation recognizing variation in industry reserving standards and to closer align with PBR and reserving standards generally aiming to cover moderately adverse conditions. A higher Risk Premium lowers the C1 base factors and mildly increases the cross-sectional variation (or slope) and should be set to better identify of weakly capitalized firms identify and mitigate risk shifting incentives with new bond purchases.
Proposed Portfolio Adjustment Factor (PAF)

Most impacted by replacing the economic state model with MA correlation model

Initially outside scope, economic state model limitations viewed to be sufficiently material that MA recommends replacing with correlation model that reflects diversification benefits observed empirically.

**The economic state model:**

- While calibrated to the level of defaults observed in economic contractions and recessions
- Implies more issuer diversification benefits (i.e., lower default correlations) than observed empirically
- Implies PAFs that are overly punitive (lenient) to portfolios with small (larger) number of issuers

**MA proposes a correlation model** calibrated to default correlations observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits

Post-PAF C1 RBC Industry Impact – Complete Portfolio Holdings

Post-PAF RBC proposed by MA is higher than the current level

*Data on ~85% life companies in US that have reported as of 03/19/2021
Proposed Updates to the RBC C1 Bond Factors

Post-PAF C1 RBC Impact by Life Company

Complete portfolio holdings

- MA proposed correlation model is parameterized to default correlations observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits.

- MA’s proposal are generally higher than current. The difference is relatively constant across life companies of different sizes.

- Academy’s proposal are generally higher for portfolios with a small or medium number of issuers, often several times higher than under the current formula, driven largely by the economic state model implying more issuer diversification benefits (i.e., lower default correlations) than observed empirically.

Note: Life companies with Current Post-PAF RBC below $100K are not displayed in this figure.
Summary of Proposed Targeted Improvements to the C1 Factors
### Part 1 of 2: Most Impactful Targeted Improvements

</tbody>
</table>

The economic state scalars are generally more punitive for higher MIS ratings, resulting in a counterfactual flattening of risk across MIS ratings. Default rate term structures representing experience of life insurance holdings tend to be more separated across MIS ratings than Academy proposed, and closer aligned to benchmarks. A higher Risk Premium lowers the C1 base factors and mildly increases their cross-sectional variation (or slope).

---

**MOODY’S ANALYTICS**

**Proposed Updates to the RBC C1 Bond Factors**

15
Proposed Updates to the RBC C1 Bond Factors 16

Impact on post-PAF C1 RBC
- Higher post-PAF RBC, on average, across the life industry compared to current
- Larger post-PAF RBC increase compared to current, on average, for insurance companies with small and medium number of issuers, but much less so than that under Academy’s proposal

Identification of weakly capitalized firms
- MA’s proposed C1 base factors are more differentiated across MIS ratings (i.e., have a steeper slope) compared to both the current and Academy proposed, in the investment grade range in particular, more accurately reflecting the underlying economic risks
  - Correlation model overcomes an undesirable property of the economic state model resulting in C1 base factors not sufficiently differentiated across MIS ratings and may even result in non-monotonic factors (higher for higher MIS rating categories)
- MA’s proposed PAFs are more conservative than the Academy proposed
  - Sit between the current PAFs and the Academy proposed
  - MA proposed correlation model
    - calibrated to default correlations and diversification benefits observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits
    - overcomes an undesirable property of the economic state model resulting in more issuer diversification benefits (i.e., lower default correlations) than observed empirically. The economic state model implies PAFs that are overly punitive (lenient) to portfolios with small (larger) number of issuers

Summary of MA Proposed C1 Factors and their Impact
- Improved solvency; Better identified weakly capitalized firms; Reduce risk shifting
- More accurate C1 base factors and PAF
- Data and methodologies to better capture economic risks

Proposed Updates to the RBC C1 Bond Factors 16
Timeline
Phase 1

» By March 31
  – V1 proposed factors, iterating with NAIC and ACLI
    • Consensus on methodology, data, and performance criteria
    • Consensus on target probability
  – V1 light documentation
  – V1 initial industry impact analysis
  – Focus group discussions

» By April 30
  – Proposed factors for public comment
  – Initial documentation and validation
  – Impact analysis, iterating with NAIC and ACLI
    • Consensus on methodology, data, and limitations
    • Consensus on target probability
  – Continued focus group discussions

» By mid-June - June 30
  – Iterating with NAIC and ACLI as needed
    • Final proposed factors
    • Final documentation and validation of factors that meet financial industry standards
  – Continued focus group discussions

» Through August
  – Continued focus group discussions
MOODY'S ANALYTICS

Proposed Updates to the RBC C1 Bond Factors
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 15, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak and Carrie Mears (IA); John Robinson (MN); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed Comment Letters on the Academy’s Proposed Bond Factors

Jim Hodges (National Alliance of Life Companies—NALC) stated that his company provided a comment letter (Attachment Four-G1). He recommended that the Working Group provide real-world examples of the impact that the bond factor changes would have on smaller companies. He noted that the NALC primarily represents smaller life insurance companies. He said that the NALC conducted a survey of its member companies, and of the 12 companies that responded, all but one reported the new factors would require a change of company capital between 7% and 17% and noted a negative impact on their risk-based capital (RBC) ratio between 6.6% and 11.14%. He said this would have an adverse impact on the capital position of smaller life insurance companies without any change in portfolio or risk.

Mr. Hodges stated that commercial transactions—such as loan documents, reinsurance agreements and other agreements—contain RBC covenants that provide for defaults to be declared if RBC covenants are violated. He stated that he is concerned that the proposed changes would force some companies into noncompliance with financial covenants, triggering a material and adverse impact on these companies.

Mr. Barlow noted that it is likely that the affected calculations were related to the portfolio adjustments and said that the Working Group is willing to modify these. He said that the Working Group’s focus is on identifying weakly capitalized companies and not on covenants that are based on RBC. He stated that RBC is not static and would change over time, so there is a risk for companies that use RBC in various financial covenants.

Mr. Robinson asked if there has been a calculation that shows the impact of the new factors when applied to all companies. Dave Fleming (NAIC) said that he had sent a preliminary calculation to Mr. Barlow for his review, which will be sent to the Working Group.

Steve Clayburn (American Council of Life Insurers—ACLI) stated that his company provided a comment letter (Attachment Four-G2), which lists his five main issues. He stated that his concerns are primarily with the portfolio adjustment factor and that this can be punitive for smaller and mid-sized life insurers. He noted that he believes that the issues that he has noted in his comment letter are addressed by the Moody’s Analytics proposal.

Nancy Bennett (Academy) stated that the Academy has given consideration to the age of assumptions used to develop the factors.

2. Discussed the Moody’s Analytics Updated Report on Bonds

Amnon Levy (Moody’s Analytics) provided a presentation (Attachment Four-G3) on Moody’s Analytics recommended approach to updating the bond factors. He noted that he believes that his proposed C1 factors will allow data and methodologies to better capture economic risk, provide more accurate C1 base factors and portfolio adjustment factors, and improve solvency by better identifying weakly capitalized firms.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
April 8, 2021

Mr. Philip Barlow
Chair, Life Risked Based Capital E Working Group
National Association of Insurance Commissioners
Kansas City, Missouri

Re: Bond Factors and Companion Portfolio Adjustment Formulas

Dear Mr. Barlow:

I am the Executive Director of the National Alliance of Life Companies (the NALC), a trade group of more than fifty (50) members and associates that represents the interests of small life insurance companies in the United States. We have closely followed the work of the American Academy of Actuaries regarding proposed changes in the bond factors and the portfolio adjustment factors (herein new bond factors) for investments held by life insurance companies. We have also read the preliminary report of Moody’s Analytics commissioned by the American Council of Life Insurers (the ACLI) on the impact of such changes.

We felt it would be helpful for the Working Group to hear real-world examples of the impact of these proposed bond factor changes, so we surveyed a number of small life insurance companies around the country to better assess the impact. In our survey, we looked at the Required Change in Company Capital Level based on new bond factors, as well as the RBC Ratio Percentage Change using the new bond factors. The survey was done prior to the Academy update for the decrease in the corporate tax rate.

Of the twelve companies responding to the survey, all but one reported the new factors would require a change of company capital between 7% and 17%. Those same companies reported a negative impact on their RBC Ratio of between 6.6% and 11.14%. This clearly demonstrates that the proposed bond factor changes would have a significant adverse impact on the capital position of smaller life insurance companies without any change in portfolio or risk.

One other important point is worth making - it does not appear that the impact of these proposed changes on commercial transactions for life insurance companies has been adequately explored. Many commercial transactions, such as loan documents, reinsurance agreements and other agreements, contain RBC covenants which provide for defaults to be declared if RBC covenants are violated. Of course, those provisions were negotiated and agreed to under current bond factors and RBC calculations. We are very concerned that the proposed changes would force some companies into non-compliance with those covenants, triggering a material and adverse impact on these companies. We would note further that this an issue for companies of all sizes with such covenants in place.
Based upon these and other considerations, the NALC urges the Task Force to closely examine the potential adverse business consequences of the proposed changes on small life insurance companies and their policyholders. We appreciate the positive comments that have been made about regulatory discretion as a means to mitigate the adverse effects of these changes. That approach could reduce the negative impact of the changes on a company by company basis. An additional approach would be to allow a generous phase in period that would allow companies sufficient time to make the necessary adjustments to their bond portfolios.

Thank you for allowing us to comment. We are happy to provide summary details regarding our surveys if helpful.

Sincerely,

Jim Hodges
Executive Director
NALC

RE: Updated Corporate Bond Risk-Based Capital (RBC) Factors with 21% Tax Rate

Dear Philip:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on the most recent RBC C-1 factors and portfolio adjustment factors provided by the American Academy of Actuaries (“Academy”) dated March 11, 2021, which were updated to reflect the current corporate tax rate of 21%.

As stated in several previous comment letters¹, ACLI has concerns with the underlying model and are not supportive of the implementation of the proposed factors. Of greatest concern are the following:

1. Default correlations and the resulting portfolio adjustment. The Academy’s economic state model implies very low default correlations, leading to a portfolio adjustment factor that is overly punitive to portfolios with a small number of holdings and overly lenient to portfolios with a large number of holdings. A near-zero assumption of default correlations runs counter to historical observations and may tend to overstate diversification benefits.

2. Modeling approach and the resulting slope of factors. The proposed factors are based on a projection of defaults for each rating category, leading to a misstated assessment of risk for bond portfolios as a whole. This modeling choice leads to an overestimation of projected losses on investment-grade bonds relative to below-investment-grade bonds.

¹https://content.naic.org/sites/default/files/nine-files/Academy%27s%20August%202015%20Report_Comment%20Letters.pdf (p 1-7);
https://content.naic.org/sites/default/files/nine-files/Academy%27s%20June%202017%20Report_Comment%20Letters.pdf (p 5-12);
https://content.naic.org/sites/default/files/nine-files/Academy%27s%20October%202017%20Report_Comment%20Letters.pdf
3. **LGD approach and resulting misestimated factors.** The underlying model’s approach to loss given default (LGD) uses issue-level data, which tends to overweight outlier data points. This approach gives undue influence to defaulted issuers that had many issues.

4. **Risk premium assumption.** The underlying model’s assumed risk premium, which is set equal to the expected loss, is inconsistent with the statutory reserving framework. The risk premium assumption should reflect the fact that reserves make provision for more than mean expected loss. This is explicit at a CTE 70 level in Principle-Based Reserves (PBR) and is implicitly evident in pre-PBR reserves. As the Academy stated in its 2015 report on its proposal, “The general consensus in the actuarial community is that statutory policy reserves (tabular plus additional reserves due to cash flow testing) at least cover credit losses up to one standard deviation (approximately 67th percentile).” We note that one standard deviation above the mean is actually closer to the 83rd percentile in a Normal distribution, as all of the losses below the mean are covered (rather than just being within one standard deviation both below and above the mean).

5. **Omission of recent historical data.** The underlying model does not include historical default and recovery data more recent than 2012. As the Academy states in the exposed letter, “While we have not modeled any assumption changes, we are concerned that the factors in this letter may be lower than what an analysis of updated data would produce.” It is important to include as much recent and relevant experience as possible.

Aside from these direct model limitations, the underlying model has characteristics that may not produce valid factors for certain asset classes.

ACLI has consistently conveyed its concerns with the modeling for the proposed factors. Corporate bonds are the largest life industry asset class (over $3 trillion), and it is important for the regulatory capital requirements to reflect the risk appropriately. We appreciate the willingness of the Financial Condition (E) Committee and the Life RBC Working Group to consider an alternative set of factors currently being developed by Moody’s Analytics. We look forward to discussing the Moody’s Analytics proposal with the Working Group in the near future.

Sincerely,

Steven Clayburn

2 Model Construction and Development of RBC Factors for Fixed Income Securities for the NAIC’s Life Risk-Based Capital Formula, American Academy of Actuaries C1 Work Group, August 3, 2015
1. Executive Summary
2. Comparison of C1 Factors and C1 RBC Industry Impact
3. Impact of Proposed Targeted Improvements
Executive Summary

Scope

Proposing C1 factors to reflect economic risks with capital requirements across NAIC ratings and sectors of insurers' portfolios, aiming to cover moderately adverse conditions. A higher risk premium lowers the C1 base factors and mildly increases the cross-sectional range within ratings, resulting in a counterfactual flattening of risk across NAIC ratings, while also correcting for PAF issues described in Step 1.

New Metrics:

- MA proposed default rates tend to have a steeper slope (more separated across MIS ratings) than those proposed by the Academy, with separation more closely aligning with financial institutions that tend to issue shorter term debt under PAF section.
- MA proposed C1 factors are more differentiated across ratings, while also correcting for PAF issues described in Step 1.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed default rates tend to have a steeper slope (more separated across MIS ratings) than those proposed by the Academy, with separation more closely aligning with financial institutions that tend to issue shorter term debt under PAF section.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.

Findings

- MA proposed C1 factors are more differentiated across ratings, while also correcting for PAF issues described in Step 1.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed C1 factors are more differentiated across ratings, while also correcting for PAF issues described in Step 1.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.
- MA proposed correlation model results in C1 base factors that are more conservative and mitigate risk shifting incentives with new bond purchases.

Immediate Next Steps

- Provide guidance on approaches and data and methodology best practice
- Provide proposals for development of actuarial standards and forms

Performance

- Provide guidance on approaches and data and methodology best practice
- Provide proposals for development of actuarial standards and forms
Initially outside scope, economic state model limitations viewed to be sufficiently material that MA recommends replacing with correlation model that reflects diversification benefits observed empirically.

The economic state model:
- While calibrated to the level of defaults observed in economic contractions and recessions
- Implies more issuer diversification benefits (i.e., lower default correlations) than observed empirically
- Implies PAFs that are overly punitive (lenient) to portfolios with small (larger) number of issuers

MA proposes a correlation model calibrated to default correlations observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits.

### Post-PAF C1 RBC Industry Impact – Complete Portfolio Holdings

Post-PAF RBC proposed by MA is higher than the current level.

#### Post-PAF C1 RBC Impact by Life Company

Complete portfolio holdings

- MA proposed correlation model is parameterized to default correlations observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits.
- MA's proposal are generally higher than current. The difference is relatively constant across life companies of different sizes.
- Academy's proposal are generally higher for portfolios with a small or medium number of issuers, often several times higher than current levels. This is driven largely by the economic state model implying more issuer diversification benefits (i.e., lower default correlations) than observed empirically.

Life companies with Current Post-PAF RBC below $100K are not displayed in this figure.

### Summary of Proposed Targeted Improvements to the C1 Factors

- MA's proposal are generally higher than current. The difference is relatively constant across life companies of different sizes.
- Academy's proposal are generally higher for portfolios with a small or medium number of issuers, often several times higher than current levels. This is driven largely by the economic state model implying more issuer diversification benefits (i.e., lower default correlations) than observed empirically.

Summary of MA Proposed C1 Factors and their Impact

- Impact on post-PNC C1-RBC
  - Higher post-PNC RBC, on average, across the life industry compared to current
  - Lower post-PNC RBC, increase compared to current, an average, for insurance companies with small and medium number of issuers, but much less so than that under Academy’s proposal

- Identification of weakly capitalized firms
  - MA’s proposed C1 base factors are more differentiated across MIS ratings (i.e., have a steeper slope) compared to both the current and Academy proposal. In the investment grade range in particular, more accurately reflecting the underlying economic risks
  - Correlation model overcomes an underestimation property of the economic state model resulting in C1 base factors not sufficiently differentiated across MIS ratings and may even result in non-monotonic factors (higher for higher MIS rating categories)
  - MA’s proposed PAFs are more differentiated than the Academy proposal
  - B2 between the current PAFs and the Academy proposal
  - MA proposed correlation model
  - Calibration to default correlations and diversification benefits observed empirically allowing for a more accurate and conservative reflection of issuer diversification benefits
  - Overcomes an undesirable property of the economic state model resulting in more issuer diversification benefits (i.e., lower default correlation) than observed empirically

  - Final documentation and validation of factors that meet financial industry standards
  - Continual focus group discussions

- Through August
  - Continual focus group discussions

© 2021 National Association of Insurance Commissioners
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 6, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); and Mike Boerner and Rachel Hemphill (TX).

1. Discussed the ACLI Real Estate Proposal

John Bruins (American Council of Life Insurers—ACLI) stated that there are three attachments that he would be discussing: 1) a summary of the edits (Attachment Four-H1); 2) proposal 2021-06-L (Instructions and Factors); and 3) proposal 2021-01-L (Structure).

Mr. Bruins stated that the intent of the revisions was to add in conservatism to the factors. He noted that the proposal will keep the Schedule A factor at 11%, will increase the Schedule BA factor from 12% to 13%, decrease the amount of the excess of fair value over book value from two-thirds to one-half, and retain the factor for encumbrances at 1.75%.

Mr. Barlow asked if there were any questions or comments from members of the Working Group regarding the decrease in the amount of the excess of fair value over book value from two-thirds to one-half. Mr. Robinson stated that there may be other asset classes that deserve a similar treatment. Mr. Barlow stated that it is unlikely that the Working Group would address that issue at this time, but it may be addressed next year.

Edward Toy (Risk & Regulatory Consulting) noted that the fair value reporting instructions come from the statutory accounting principles. He noted that the guidance is general and vague, that the guidance does not require an independent third-party to do the appraisal, can use an internal appraiser and only requires that an appraisal be done every five years.

Mr. Barlow stated that the market value of real estate, as it is reported now, only serves as information and does not affect the financial statements and does not affect anything outside of risk-based capital (RBC).

Julie Gann (NAIC) stated that she agrees with Mr. Barlow and noted that the fair value that is reported is used as a proxy for the entity to use when assessing other the temporary impairment for statutory accounting, but it is not used for anything else unless there are impairment issues noted. She stated that her data reviews agree with the comments from Mr. Toy.

Mr. Carmello said he believes making a structural change during the COVID-19 pandemic is a mistake, and Mr. Leung and Mr. Reedy agreed. Mr. Tsang stated that when these revisions are exposed, he would like to hear comments related to whether the decrease in the amount of the excess of fair value over book value from two-thirds to one-half is adequate.

Ms. Mears suggested a referral be sent to the Statutory Accounting Principles (E) Working Group. Ms. Gann agreed and suggested a referral also be sent to the Examination Oversight (E) Task Force. Dave Fleming (NAIC) suggested that a referral be sent to the Risk-Focused Surveillance (E) Working Group.

Mr. Barlow asked if the Working Group should consider different factors for different types of real estate. Mr. Tsang stated that he believes one factor for all real estate reported on Schedule A is adequate. Mr. Barlow asked if there were any objections to there being different factors for assets reported on Schedule A versus Schedule BA, and no objections were noted.

Mr. Barlow directed NAIC staff to expose the proposal 2021-06-L (Instructions and Factors) from the ACLI for a 45-day public comment period.

Mr. Bruins noted that in the earlier exposure of Proposal 2021-01-L, the note at the bottom of Figure 7 needed to be revised to clarify that it cannot go below zero.
Mr. Robinson made a motion, seconded by Ms. Mears, to adopt the real estate structure that was previously exposed (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Two-A), with the revision to the note to clarify that Column 7 cannot go below zero. The motion passed unanimously.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
A. Proposal Modifications

We are proposing to add further conservatism to the proposal in two aspects to address any ongoing concerns:

a. retain the proposed factor for Schedule A real estate of 11%
b. increase the proposed factor for Schedule BA real estate from 12% to 13%
c. decrease the amount of the excess of fair value over book value used to recognize reduced risk from 2/3 to ½
d. retain the factor for encumbrances of 1.75%

B. Floor of zero on adjusted factor

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 30, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheck and Carrie Mears (IA); Vincent Tsang (IL); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed the Academy’s Bond Factors Updated for Tax

Nancy Bennett (American Academy of Actuaries—Academy) presented the Academy’s latest set of bond factors. She stated that the Academy used its recommended bond factors from Oct. 17, 2017, and updated the model for the 21% corporate tax rate. She noted that there may be a need to round the factors or to include a cap for the factors at 30%, similar to that used for common stock. She noted that the proposal includes updates to the portfolio adjustment formula for the two base factors and provides a statistical safety level in the 96th percentile.

Jerry Holman (Academy) stated the Working Group could adjust the factors for smaller companies to reduce the potential for a negative impact. Scott Harrison (National Alliance of Life Companies—NALC) stated that his group will provide comments with alternative factors for smaller companies.

Mr. Barlow noted that the Working Group has two potential tracks to completing the bond factors project by the end of 2021. First is the work that the Academy has done on bonds that have been reviewed by the Investment Risk-Based Capital (E) Working Group. Second is to consider the American Council of Life Insurers (ACLI) project, with Moody’s Analytics, which is an alternative to the Academy’s approach.

Mr. Barlow directed NAIC staff to expose the Academy’s updated bond factors, included in the Academy’s March 11 letter, (Attachment Four-I1) for a 10-day public comment period ending on April 9.

2. Received an Update on the Moody’s Analytics Bond Report

Amnon Levy (Moody’s Analytics) provided a report on Moody’s Analytics (Attachment Four-I2) recommended approach to updating the bond factors. He stated that Moody’s Analytics included a modification to fix an error with ratings where the default rates and loss given default can be drawn from separate states in simulation. He also stated that the Moody’s Analytics update provided several updates to the input parameters, including evaluating a range of discount rates with the updated tax rates, updating the loss given default distribution to align with empirical patterns, updating the risk premium to align with reserving, updating baseline default rates to utilize Moody’s historical data and internal benchmarks, and updating the portfolio adjustment factors.

Mr. Chou asked for clarification on the approach that was being presented and how this would work with the Working Group’s current schedule. Mr. Levy stated that the Moody’s Analytics proposal would follow the Working Group’s schedule. Mr. Tsang stated the risk premium item will need more discussion. Mr. Barlow asked if Mr. Levy can do additional sensitivity analysis on the risk premium. Mr. Carmello asked for clarification on the Academy’s assumptions. Mr. Holman stated that the Academy’s expected losses is approximately the 60th percentile. Ms. Bennett noted that the Academy had considered the issue of moving loss given default from issue to issuer but had found this caused issues with reporting.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

March 11, 2021

Philip Barlow
Chair
Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Dear Philip,

On behalf of the American Academy of Actuaries\(^1\) C1 Work Group (C1WG), we present to the Life Risk-Based Capital (E) Working Group updated base bond factors and a companion portfolio adjustment formula to reflect corporate tax rates enacted by the Tax Cuts and Jobs Act of 2017 for the Life Risk-Based Capital (LRBC) formula. The C1WG’s most recent recommendation on updated bond factors was provided to the NAIC’s Investment Risk-Based Capital Working Group on October 10, 2017.\(^2\) No other changes have been made to the October 17, 2017, recommendation.

As we have done in previous reports to the NAIC, we are providing direct model output for the base factors. As is the case with the current capital requirements for bonds, we recommend capping the base factor for the lowest-quality bond designation at 30%. Note that this approach caps the capital requirement for bonds at the base factor for unaffiliated common stock. In addition to capping the factor, we have not rounded any of the factors, as was done for the current bond factors.

### A. UPDATED BASE FACTORS

The table below shows updated bond factors using a 21% corporate tax rate and the factors recommended in October 2017. These factors are used in the first step in calculating the basic capital requirements for bonds. These factors have been established at the statistical safety level specified by regulators. These factors in combination with the portfolio adjustment are expected to establish required capital at the 96\(^{th}\) percentile over a 10-year time horizon. The assumptions used in developing these factors are based on expected loss given default experience for a portfolio of bonds that is representative of a typical life insurer’s bond portfolio.

In the development of the capital requirements for credit risk, recall that the tax rate affects the net loss flowing through statutory surplus. The factor is based on a discounted after-tax cash flows. As such, an after-tax discount is used in the calculation. In the October 2017 recommendation, the after-tax cash flows were discounted at 3.25%. The updated bond factors are based on after-tax cash flows discounted at

### B. UPDATED PORTFOLIO ADJUSTMENT FORMULA

The table below shows an updated portfolio adjustment formula, as developed for the updated base factors above. As a reminder, the purpose of the adjustment is to modify the base calculation for the diversification of the insurer’s bond portfolio, relative to the representative portfolio. The portfolio adjustment increases or decreases the base capital requirement (equal to the arithmetic sum of the base factor times the statutory carrying value of each bond) based on the number of issuers in the insurer’s portfolio.
The representative bond portfolio used in developing the base factors contained 824 issuers. As per the October 2017 recommended portfolio adjustment, the updated portfolio adjustment is neutral or approximately equal to 1.0 for an average portfolio (i.e., a portfolio with the same number of bonds as contained in the representative portfolio.) The updated approach meets that criterion because the exact percentile confidence level of the base factors was selected to reproduce aggregate industry C1 requirements when the base factors are applied to each company portfolio. That said, the confidence level for the base factors is close to the 96th percentile for each rating class, and the portfolio adjustment only captures differences in a company’s diversification risk relative to the representative portfolio.

### C. COMMENTS ON THE AGE OF ASSUMPTIONS

The C1WG began its work on the C1 Bond Capital Requirements in 2011. With input from regulators (NAIC’s C1 Factor Review Subgroup, NAIC’s Investment RBC Working Group, and the NAIC’s Life Risk-Based Capital Working Group), the C1WG updated the capital requirements to be used within the U.S. Solvency framework.

Many of the assumptions used in these factors, such as the bond default and recovery assumptions, are based on the experience for corporate bonds through 1983–2012. Other assumptions, notably the discount rate, are also based on data from a similar time period.

We understand that regulators are intent on adopting updated bond factors for the 2021 Life Risk-Based Capital calculation, particularly given the shortfall of the current requirements to meet regulators’ desired statistical safety level for credit risk. However, we would be remiss in not stating our concern about adopting a set of factors based on outdated assumptions.

While we have not modeled any assumption changes, we are concerned that the factors in this letter may be lower than what an analysis of updated data would produce. The base factors recommended in 2017
for bonds, exclusive of the impact of increased requirements from the tax change, increase the capital requirements for credit risk approximately 15-20% for the industry, on average. Updated assumptions might indicate that capital requirements should be increased further. We understand the desire to now adopt factors that move the capital requirements closer to the desired statistical level but encourage regulators to consider more frequent reviews of the assumptions and the resulting factors.

We appreciate your consideration of this update. Please contact Nancy Bennett, senior life fellow (bennett@actuary.org), or Khloe Greenwood, life policy analyst (greenwood@actuary.org), with any questions.

Sincerely,

Nancy Bennett, MAAA, FSA, CERA

Moody’s (NYSE:MCO) is a global integrated risk assessment firm that empowers organizations to make better decisions. Its data, analytical solutions and insights help decision-makers identify opportunities and manage the risks of doing business with others. We believe that greater transparency + more informed decisions = fair access to information open the door to shared progress. With over 11,000 employees in more than 40 countries, Moody’s combines an international presence with local expertise and more than a century of experience in financial markets. Learn more at moodys.com.

Moody’s Corporation is comprised of two separate companies: Moody’s Investors Service and Moody’s Analytics.

Moody’s Investors Service (MIS) provides investors with a comprehensive view of global debt markets through credit ratings and research. Moody’s Analytics provides data, analytics, and insights to equip leaders in financial, non-financial, and government organizations with effective tools to understand a range of risks.

Throughout this document, “Moody’s” refers to an MIS rating, and while references to MIS are made, the views and opinions in this document are solely of Moody’s Analytics.

**Scope**
Moody’s Analytics to provide default probability term structures for each Moody’s corporate rating and resulting C1 Bond Factors, with articulated limitations providing transparency using data and methodologies accessible and repeatable to the NAIC and industry on an ongoing basis.
- NAIC to use as they choose in setting the final C1 factors that are applied to a broad set of credit assets with NAIC ratings.
- Moody’s Analytics is not “certifying”/”validating” default rates for each NAIC rating.

**Heuristic Performance Criteria:**
Align default rates (and C1 factors) with economic risks, mitigating incentives for “regulatory arbitrage”.
- Arbitrage opportunities arise when expected spread-to-capital ratios diverge across ratings.

**Challenges**
- Expected spreads change over time at different magnitudes across ratings and asset classes.
- C1 factors will be applied to a broad range of credit assets, based on the second lowest NRSROs ratings which can have different statistical properties than Moody’s corporate ratings.
- Moody’s credit ratings are opinions of ordinal, horizon-free credit risk, rather than cardinal measures.

**C1 Bond Factors (C1 Factors)**
Scope and performance criteria

- In addition, Moody’s Analytics to provide C1 Bond Factors that can leverage Moody’s expertise and methodologies.
- NAIC to use as they choose in setting the final C1 factors that are applied to a broad set of credit assets with NAIC ratings.
- Moody’s Analytics is not “certifying”/”validating” default rates for each NAIC rating.

**Heuristic Performance Criteria:**
Align default rates (and C1 factors) with economic risks, mitigating incentives for “regulatory arbitrage”.
- Arbitrage opportunities arise when expected spread-to-capital ratios diverge across ratings.

**Challenges**
- Expected spreads change over time at different magnitudes across ratings and asset classes.
- C1 factors will be applied to a broad range of credit assets, based on the second lowest NRSROs ratings which can have different statistical properties than Moody’s corporate ratings.
- Moody’s credit ratings are opinions of ordinal, horizon-free credit risk, rather than cardinal measures.

**Targeted C1 Base Factors Updates**

**Engine & Input Updates**
- **Modifications** to simulation engine that replicated Academy’s factors
  - Error fix for Baa-Caa ratings, where default rates and Loss Given Default (LGD) can be drawn from separate economic states in simulation
  - Assessed impact of simulation noise by increasing the number of simulation trials
- **Updates to input parameters**
  - A. Updated LGD distribution to more closely align with empirical patterns
  - B. Updated Risk Premium to more closely align with reserving
  - C. Updated economic state models and updated baseline default rates to utilize Moody’s historic data and internal benchmarks
  - D. Updated portfolio adjustment factors
  - E. Updated concentration factor (doubling of top-ten holdings)

© 2021 National Association of Insurance Commissioners
A

Explored range of discount rates based on several time windows

Moody's Analytics recognizes the need to parameterize the discount rate with a long-term perspective of long-term interest rates, and the desire for this parameter to be relatively stable while also allowing a closer reflection of the current, low-rate, environment. Several possible candidate windows are considered with sensitivity analysis presented later in the deck:

- 1993−2020 (4.32%)
- 2000−2020 (3.47%)
- 2010−2020 (2.25%)

Discount rate used to calculate the net present value of projected cash flows.

The Academy's model sets the Discount Rate at (5.02%), the average 10-year LIBOR swap rate from 1993−2013. The exact source is not referenced, and the time-series data is not made available to Moody's Analytics.

B

Updated LGD distribution to more closely align with empirical patterns

LGD Distribution

Moody's Analytics estimates using the Default & Recovery Database (DRD)

- Expand the time window to 1967−2019.
  2020 is excluded for two reasons: (1) some bonds may still be at the early stage of recovery due to the lengthy process; (2) current economic state has not yet been officially declared at time of writing.
- Estimate bond LGD to align ultimate recovery with Moody's analyst's recommendation for each default (e.g., settlement, liquidity, or trading price).
- Use issuer-level LGD to construct empirical distribution instead of bond-level LGD, to rule out undue influence of issuers that had many defaults.
- Group issuer-level LGD data into expansion years and contraction years by the year of default rather than the year of emergence.
- Moody's Analytics proposed LGD is higher than the current or the LGD proposed by the Academy.

Tax rate was updated from 35% to 21%.
Updated Risk Premium to align more closely with reserving

**Measuring the Risk Premium**

Within the context of Risk Based Capital:

- **C1 RBC** is the minimum required capital beyond statutory reserves to buffer against a tail loss credit loss scenario.
- Statutory reserves are liabilities ensuring policy claims can be paid off under a moderate downturn scenario.
- Risk Premium is an offset to RBC; it is part of statutory reserves provisioned against default loss under a moderate downturn scenario.

**Default Loss Under Statutory Reserves**

VM-20 coverage exceeds expected loss.

Under VM-20 DR and SR CTE 70, default loss (baseline Default Cost Factor) is subtracted from investment return in the asset model:

- **CTE70** represents the mean between the 70th and 100th percentiles.
- CTE70 can be approximated by the 88th percentile default loss.

Under VM-21 (applicable to all in force), the Variable Annuity asset model also reflects default cost prescribed by VM-20. In addition, VM-22, the Payout Annuity asset model, is being updated with the same framework in mind.

If we strictly follow these rules, the Risk Premium can be set at around the 88th percentile or mean plus one standard deviation of the default loss distribution (as shown in the next slide).

Separately, C3 Phase 1 will be applicable to all in force Fixed and Indexed Annuities and includes updated to include a similar default cost. Once finalized, the Risk Premium should be reevaluated to avoid double counting of credit risk.

**Revisited economic state models and updated baseline default rates to utilize Moody’s historic data and internal benchmarks.**
Moody's credit ratings are opinions of ordinal, horizon-free credit risk.*
- They do not target specific default rates or expected loss rates.

Assessments of relative credit risk rather than cardinal risk measures.*

"If ratings targeted specific default and loss rates, this would likely require frequent widespread rating actions in anticipation of economic and market changes that might broadly push default and loss rates sharply higher or lower for a set period of time. Due to the inherent volatility of general credit and market conditions, such widespread rating changes would likely soon need to be reversed. Therefore, the use of cardinal targets would result in much higher rating volatility and disruption for investors without meaningfully improving the cardinal predictive power of ratings over medium and long-term horizons."

Rating Symbols and Definitions 26 January 2021.

Moody's Investor Service Annual Default Study provides historical default rate term structures.
- Raw empirical term structures are useful, but not appropriate in raw form, and in this context:
  - While default rates along the ratings scale are highly monotonic, instances of non-monotonicity will flow into non-monotonicity in capital along the ratings scale. These instances are observed across horizons ranging from 1-10 years, thus requiring subjective overrides to ensure monotonicity in cumulative default rate term structures across ratings.
  - Have point estimates with limited statistical reliability at higher end of the credit rating scale.
- There have been 6 defaults within 10 years of being assigned a Aaa rating since 1983.
  - Getty Oil and Texaco were the two issuers that defaulted within 10-years of Aaa rating, and they experienced extremely high recovery (~97% and ~88%).

Idealized default rates from Rating Symbols and Definitions.
- Used as benchmarks by Moody's analysts across asset classes and recognized as having a relationship with actual default rates that has varied over time. Moody's ongoing use of the Idealized Rates for modeling purposes does not depend on the strength of that relationship over any particular time horizon.
- In addition, it is recognized that different asset classes are driven by different risk factors, attributed to different fundamental strengths, weaknesses, and the inherent nature of each sector.
- While originally constructed in 1989, Moody's Investors Service has periodically reviewed its idealized default rate tables and has no plans to revise them at the time of this writing.
- 10-year idealized default rates based on historic defaults from 1970-1989 for all but Aaa and Aa, that were set lower than their historical default rates.
  - At upper end of the credit spectrum, death of defaults and possibly high recovery makes default events difficult to use in isolation given the context. Between 1970-1989:
    - Getty Oil and Texaco were the two issuers that defaulted within 10 years of Aaa rating, and they experienced extremely high recovery (~97% and ~88%).
  - There were 10 Aa defaults.
Broader Set of Pre-Tax Factors
Considerations when setting C1 bond factors

C1 bond factors should align with the broader set of C1 factors, to avoid unintended risk-shifting incentives.

- C1 RBC factors that may be worth considering on the lower bound:
  - Cash, cash equivalent, short-term investment 0.40%
  - Federal guaranteed low-income housing tax credits 0.14%
  - Receivables for securities 0.14%
  - Residential mortgages — insured or guaranteed 0.14%
  - Government full-faith bonds 0%

- C1 RBC factors that may be enter into considerations on the upper bound:
  - Common stock 30%
  - Hedge fund, private equity 30%

Considerations when setting C1 bond factors

Updated portfolio adjustment factors

Portfolio Adjustment Factors (PAF)
Overview of Moody's Analytics findings

- Moody's Analytics has been able to closely replicate the Academy's PAF when the framework is parametrized to the PD, LGD, and Risk Premium proposed by the Academy.
- The economic state model implies investment grade default correlations at approximately zero (within simulation noise), and much lower than those observed empirically.
- This suggests adjustment factors calibrated to the economic state model is not appropriate for use as it overstates name diversification benefits.
- Intuitively, if assets are perfectly correlated, diversification is achieved with a single asset.
- The lower the correlation, the more assets are needed to hit an asymptote, suggesting the adjustment function calibrated to the economic state model is overly punitive (lenient) to portfolios with a small (larger) number of holdings.
- Using a benchmark framework calibrated to empirical default correlations suggests an adjustment function that sits somewhere in between the current adjustment factors and those proposed by the Academy.
- A full update to align the entire framework with empirical default correlations is beyond Phase 1 scope.
necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable.

What RBC Pages Should Be Submitted?

For year-end 2021 life and fraternal risk-based capital (RBC), submit hard copies of pages LR001 through LR049 to any state that requests a hard copy in addition to the electronic filing. Starting with year-end 2007 RBC, a hard copy was not required to be submitted to the NAIC. However, a portable document format (PDF) file representing the hard copy filing is part of the electronic filing.

If any actuarial certifications are required per the RBC instructions, those should be included as part of the hard copy filing. Starting with year-end 2008 RBC, the actuarial certifications were also part of the electronic RBC filing as PDF files, similar to the financial annual statement actuarial opinion.

Other pages, such as the mortgage and real estate worksheets, do not need to be submitted. However, they still need to be retained by the company as documentation.

Real Estate Factors

The Capital Adequacy (E) Task Force adopted proposal 2021-06-L during its June 30 meeting. This proposal was developed by the American Council of Life Insurers (ACLI) to update the RBC calculation for real estate to reflect the updated experience and analysis since RBC was first developed. A proposed adjustment based on fair value was not adopted and is set to zero for year-end 2021.

Bond Factors

The Capital Adequacy (E) Task Force adopted proposal 2021-11-L during its June 30 meeting. This proposal incorporates bond factors proposed by the ACLI, which are based on the work of Moody’s Analytics for the expanded presentation of bond designation categories in the annual statement and RBC schedules. This includes factors on the Bonds page (LR002), Asset Concentration page (LR010), Hedged Asset Bond Schedule (LR014), Off Balance Sheet Collateral page (LR017), and Calculation of Tax Effect (LR030). In addition to the base factors on LR002, the bond size adjustment factors were modified.

Longevity Risk Factors

As a result of the adoption of proposal 2021-13-L by the Capital Adequacy (E) Task Force during its June 30 meeting, factors for a longevity risk charge were incorporated into the life RBC formula.

Reinsurance

The Capital Adequacy (E) Task Force adopted proposal 2021-12-L during its June 30 meeting. This proposal changes the description on line 15 on LR016 to allow for the inclusion of amounts held for reciprocal jurisdiction reinsurance, and it is to avoid having both the total adjusted capital decreased by amounts reestablished as liabilities and the authorized control level (ACL) increased for the charge on reserve credit and recoverable amounts.

ACA Sensitivity Test

The Capital Adequacy (E) Task Force adopted proposal 2020-02-CA during its Nov. 19, 2020, meeting to delete the ACA Fee Sensitivity Test from the RBC formulas.

Incentives—Managed Care Credit

As a result of the adoption of proposal 2021-02-CA by the Capital Adequacy (E) Task Force during its April 29 meeting, the term “incentives” was incorporated into the managed care instructions and blanks as “Bonuses/Incentives.”
Investment Income Adjustment to Underwriting Risk Factors

As a result of the adoption of proposal 2021-04-CA by the Capital Adequacy (E) Task Force during its June 30 meeting, a 0.5% investment income adjustment was incorporated into the Underwriting Risk factors for comprehensive medical, Medicare Supplement, and dental and vision.

RBC Forecasting and Instructions

The Life and Fraternal RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2021 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies, and it is available to download from the NAIC Account Manager. The 2021 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies publication is available for purchase in electronic format through the NAIC Publications Department. This publication is available on or about November 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

WARNING: The RBC Forecasting Spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted and the RBC will not have been filed.

| 9 | Life RBC WG | 1 | 2021 | Discuss and determine the need to adjust the real estate factors. | Referral from Investment RBC, July/2020 | |
| 10 | Life RBC WG | 1 | 2021 or later | Work with the Life Actuarial (A) Task Force and Conning to develop the economic scenario generator for implementation. | | |
| **New Items – Life** | | | | | | |
| 6 | Life RBC WG | 1 | 2021 | Develop guidance for regulators as it relates to the potential impact of the bond factor changes on 2021 RBC results and the trend test | | |
| 7 | Life RBC WG | 1 | 2021 or later | Review companies at action levels, including previous years, to determine what drivers of the events are and consider whether changes to the RBC statistics are warranted. | | |
Draft: 7/26/21

Property and Casualty Risk-Based Capital (E) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Summer National Meeting)
July 22, 2021

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 22, 2021. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna (NY); Miriam Fisk (TX); and Randy Milquet (WI).

1. **Adopted its June 9 and April 27 Minutes**

Mr. Botsko said the Working Group met June 9 and April 27 and took the following action: 1) adopted proposal 2021-05-P (Underwriting Risk Line 1 Factors); 2) adopted proposal 2021-08-P (P/C Bond Factors and Instructions); 3) adopted proposal 2021-03-P (Credit Risk Instruction Modification); 4) forwarded the response to the Restructuring Mechanisms (E) Subgroup; and 5) heard a presentation on property/casualty (P/C) risk-based capital (RBC) underwriting risk factors from the American Academy of Actuaries (Academy).

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt the Working Group June 9 (Attachment Five-A) and April 27 minutes (Attachment Five-B). The motion passed unanimously.

2. **Adopted the Report of the Catastrophe Risk (E) Subgroup**

Mr. Chou said the Subgroup met July 15 (Attachment Five-C) and took the following action: 1) adopted its June 1 and April 26 minutes, which included the following action: a) exposed and forwarded the response to a request for proposed changes to the P/C RBC catastrophe component; b) heard an update from its Catastrophe Model Technical Review Ad Hoc Group; and c) discussed the possibility of allowing additional third-party models or adjustments to the vendor models; 2) adopted its 2021 working agenda items; 3) received an update from its Catastrophe Model Technical Review Ad Hoc Group and 4) heard a presentation from AIR Worldwide on the wildfire model.

Mr. Chou made a motion, seconded by Ms. Smosna, to adopt the report of the Catastrophe Risk (E) Subgroup. The motion passed unanimously.

3. **Adopted the 2021 P/C RBC Newsletter**

Mr. Botsko said each year, NAIC staff incorporate all adopted current year proposals into the current year (RBC) formula. The 2021 changes have been incorporated into the P/C RBC newsletter.

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt the 2021 P/C RBC newsletter (Attachment Five-D). The motion passed unanimously.

4. **Discussed 2020 P/C RBC Statistics**

Mr. Botsko said the results of the 2020 P/C RBC report compiled by NAIC staff were fairly consistent with prior years. There were 24 companies that triggered the trend test; only 1.7% of the total companies fell under the 200% RBC ratio, which is slightly less than the historical failing percentage of around 2.3%. Overall, the asset risk has slightly increased over time.

The Working Group unanimously approved the 2020 P/C RBC statistics to be posted to the Working Group’s web page.

5. **Discussed its 2021 Working Agenda**

Mr. Botsko summarized the changes to the Working Group’s 2021 working agenda, which included the following substantial changes: 1) changing the completion date of the “evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses,” “evaluate if changes should be made to the P/C formula to better assess companies in runoff,” “evaluate the underwriting risk line 1 factors in the P/C formula,” and “evaluate R3 adjustment for operational risk charge” items; and 2) deleting the “consider eliminating the different treatment of uncollateralized reinsurance recoverable from authorized versus unauthorized, unrated reinsurers” and “remove the embedded...
3% operational risk component contained in the reinsurance contingent credit risk factor of $R_{cat}$ items from the working agenda.

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt the Working Group’s 2021 working agenda (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Seven). The motion passed unanimously.

6. **Heard Updates on P/C RBC Underwriting Risk Projects from the Academy**

David Traugott (Academy) provided a status on different projects being conducted by the Academy that all related to calibrating various components of the premium risk and reserve risk in the P/C RBC formula. He said all the Academy projects are described in three different reports. The first report, which was distributed during the Spring National Meeting provided indicated premium and reserve risk line 4 factors based on an analysis of data through 2017. Mr. Traugott also said the second report, which will be shared with the Working Group by the end of 2021, related to updating the investment income adjustment factors (IIAs) in the RBC formula line 7 and line 8 for premium risk and reserve risk, respectively. As many of the line 4 factors are decreasing, Mr. Traugott said the Academy recommended the Working Group consider implementing the line 4 factors along with updated investment income adjustment factors to offset the decreases. Lastly, Mr. Traugott stated that the concentration factors for the underwriting premium and reserve risks have not been reviewed since the RBC formula was first implemented. The Academy planned to provide the last report, which is related to updating these factors during the first half of 2022. Furthermore, Mr. Traugott said there are two additional analyses requested by the Working Group, which are related to catastrophe adjustment factors and industry average development/loss ratios. Scott Williamson (Reinsurance Association of America—RAA) thanked the Academy for the improvements made to the calibration methodology for the R4 and R5 line 4 factors. Those improvements resolved the concerns RAA raised several years ago about the prior methodology. Mr. Williamson said the results from the recent update of the factors underscore that the improvements are working, as evidenced by the decreased volatility in the indicated change by line. He also asked the Academy to continue working to prevent double counting of CAT losses between underwriting risk and $R_{cat}$. With respect to proposed changes to the investment income adjustment factors, he recommended that the Academy consider using the discount method, corporate bond index yield curve segment rates, and payment patterns that are now prescribed for tax loss reserve discounting under the federal Tax Cuts and Jobs Act. He said these rates better approximate the industry’s investment yield and bond portfolio duration. Ralph Blanchard (Travelers) advised the Academy that the preliminary estimate of losses from Property Claims Services (PCS) may not be the same as the final estimate of losses. Mr. Traugott anticipated that the Academy will complete the review before mid-2022.

Mr. Botsko said he appreciates what all the Academy does for the Working Group. He said the Working Group will provide the needed support to ensure the projects are completed in time.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.
The following Working Group members participated: Tom Botsko, Chair (OH); Richard Ford (AL); Wanchin Chou (CT); Nicole Altieri Crockett (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna and Gloria Huberman (NY); Will Davis (SC); Miriam Fisk and Rebecca Armon (TX); and Randy Milquet (WI).

1. **Adopted Proposal 2021-05-P (Underwriting Risk Line 1 Factors)**

Mr. Botsko said the purpose of this proposal is to provide a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He also stated that the Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Davis, to adopt proposal 2021-05-P (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-H). The motion passed unanimously.

2. **Adopted Proposal 2021-08-P (P/C Bond Factors and Instructions)**

Mr. Botsko said the purpose of this proposal is to modify the P/C RBC forecasting and instructions to: 1) incorporate 20 NAIC designation category bond factors; 2) modify the bond size factor formula; and 3) reclassify hybrid securities in PR006, PR011 and PR015. He also stated that the expansion of 20 NAIC designation categories will provide more robust and accurate results, primarily as it increases the granularity of the formula and reduces the cliffs between the different factors for the different categories. Mr. Botsko also stated that the Working Group received no comments during the exposure period. Mr. Chou said since the number of issuers for the first and second category of the bond size portfolio will change from first 50 and next 50 to first 10 and next 90, he asked the Working Group to consider updating the P/C formula to be consistent with the Life formula in the near future. Mr. Botsko agreed.

Mr. Chou made a motion, seconded by Mr. Davis, to adopt proposal 2021-08-P (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-J). The motion passed unanimously.

3. **Forwarded the Response to the Restructuring Mechanisms (E) Subgroup**

Mr. Botsko said the Runoff Ad Hoc Group met June 1 to continue discussing the best course of treatment of run-off companies. He stated that a response letter to request input regarding the definition of run-off companies was exposed for a 30-day public comment period ending May 26. The drafted response indicated that a run-off company should include the following characteristics: 1) no renewing of policies for at least 12 months; and 2) no new direct or assumed business. Mr. Botsko also said the Ad Hoc Group is currently investigating whether: 1) companies in run-off have a higher risk than other ongoing companies; and 2) the RBC calculation should be modified for these kinds of companies. Lastly, he indicated that findings will be shared with other RBC working groups, as each group may have different risk exposures that require individual group consideration. Mr. Botsko said the Working Group received a comment letter from the National Conference of Insurance Guaranty Funds (NCIGF) during the exposed period. Roger Schmelzer (NCIGF) said the NCIGF supports the efforts of the Working Group currently made on this issue. He also provided the following observations: 1) develop a specific process to identify companies in run-off; 2) require companies in run-off to file annual and quarterly statements up through any rehabilitation period; 3) modify the financial solvency mechanisms to monitor the unique risks for the run-off companies; 4) ensure the annual and quarterly statements should always be available for the public regardless of the status of the company; and 5) review the issue of run-off companies that may have written noncancellable health insurance as these companies may have continuing renewals of these policies. Mr. Botsko said the ad hoc group will review the suggestions and share this information with the different appropriate RBC working groups for further considerations.

Mr. Milquet made a motion, seconded by Mr. Chou, to forward the response to the Restructuring Mechanisms (E) Subgroup. The motion passed unanimously.
4. **Heard a Presentation on P/C RBC Underwriting Risk Factors from the Academy**

Mr. Botsko said during the Working Group’s last meeting on April 27, the American Academy of Actuaries (Academy) provided a brief overview of its report *Update to Property and Casualty Risk-Based Capital Underwriting Factors Experience Through December 31, 2017*. He stated that the Academy presented the impact of the Line 4 risk factors indicated by the 2017 data. It also began a presentation of the significant assumptions underlying the indicated risk factors. Mr. Botsko also said that the Academy plans to continue with further discussion of the significant assumptions and features of the data that affect the results. Allan Kaufman (Academy) provided an overview of the development history, data source and data filtering of the premium and reserve risk factor methodology. He explained the methods and procedures used by the Academy in its analysis. Mr. Kaufman was thorough in his remarks to make sure the members and interested parties were informed enough to help contribute to a robust discussion as they review the report for a detailed discussion during the Working Group’s next meeting. After the presentation, Mr. Botsko encouraged all the interested parties to review the report and provide thoughts to the Working Group during the comment period.

The Working Group agreed to expose the Academy report for a 30-day public comment period ending July 9.

Mr. Botsko said he plans to schedule another meeting in July to further discuss the received comments and other Working Group outstanding items.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

W:\National Meetings\2021\Summer\TF\CapAdequacy\PCRBC\Att01_06_09propertyrbwg.doc
The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 27, 2021. The following Working Group members participated: Tom Botsko, Chair (OH); Richard Ford (AL); Wanchin Chou and Susan Andrews (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna and Sak-man Luk (NY); Miriam Fisk (TX); and Randy Milquet (WI).

1. **Adopted Proposal 2021-03-P (Credit Risk Instruction Modification)**

Mr. Botsko said the purpose of this proposal is to provide examples to clarify how the reporting companies should select the designation in the Annual Statement Schedule F, Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies. He also stated that the Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt proposal 2021-03-P (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment One-H). The motion passed unanimously.

2. **Exposed Proposal 2021-05-P (Underwriting Risk Line 1 Factors)**

Mr. Botsko said this proposal provided a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He also stated that the American Academy of Actuaries (Academy) is currently in the process of reviewing the Line 1 calculation methodology; recommendations will be provided in the near future.

The Working Group agreed to expose proposal 2021-05-P for a 30-day public comment period ending May 26.

3. **Exposed a Memorandum to the Restructuring Mechanisms (E) Subgroup**

Mr. Botsko said the Runoff Ad Hoc Group met early this month to discuss the best course of treatment of run-off companies. He stated that a response letter to request for input regarding the definition of run-off companies was drafted. The drafted response indicated that a run-off company should include the following characteristics: 1) no renewing of policies for at least 12 months; and 2) no new direct or assumed business. Mr. Botsko also said the ad hoc group is currently investigating whether: 1) companies in run-off have a higher risk than other ongoing companies; and 2) the RBC calculation should be modified for these kinds of companies. Lastly, he indicated that findings will be shared with other RBC working groups, as each group may have different risk exposures that require individual group consideration.

The Working Group agreed to expose the memorandum to the Restructuring Mechanism (E) Subgroup for a 30-day public comment period ending May 26.

4. **Exposed Proposal 2021-08-P (P/C Bond Factors and Instructions)**

Mr. Botsko said the purpose of this proposal is to modify the Property and Casualty Risk-Based Capital Forecasting and Instructions to: 1) incorporate 20 NAIC designation category bond factors; 2) modify the bond size factor formula; and 3) reclassify hybrid securities in PR006, PR011 and PR015. He also stated that the expansion of 20 NAIC designation categories will provide more robust and accurate results, primarily as it increases the granularity of the formula and reduces the cliffs between the different factors for the different categories. Mr. Luk said while there could be larger percentage changes in RBC ratio by individual companies under the proposed risk factors and bond size factor formula, the impact analysis indicated that the change will only move one company from no action to trend test. Mr. Botsko encouraged all the interested parties to review the materials and provide thoughts to the Working Group during the comment period.

The Working Group agreed to expose proposal 2021-08-P for a 30-day public comment period ending May 26.
5. **Heard a Presentation on P/C RBC Underwriting Risk Factors from the Academy**

David Traugott (Academy) said the Academy report *Update to Property and Casualty Risk-Based Capital Underwriting Factors Experience Through December 31, 2017* (Attachment Five-B1) was based on data from annual statements reporting between 1989 and 2017 and RBC filings between 1997 and 2017. He also said this report is the first of three reports on underwriting risk factors that the Academy described to the Working Group in May 2019. The other two reports, which deal with investment income adjustment factors and the loss/premium concentration factors, will be presented at a later date. In addition, Mr. Traugott stated that the approach in this report is broadly the same as the approach in the 2016 report, with some refinements. Moreover, he indicated that this presentation would focus on results and methodology. First, he compared the risk factors in the 2020 Formula, the risk factors indicated based on Annual statements and other data through 2017 (2017 indications) and the risk factors based on Annual Statement and other data through 2014, as presented in the 2016 Academy Report (2014 indication). He stated that the Authorized Control Level RBC would: 1) increase 2% by comparing the 2014 indication risk charge and the 2020 formula; 2) decrease 0.7% by comparing 2014 indicated factors and 2017 indicated factors; and 3) increase 2.1% by comparing 2017 indicated factors and the 2020 formula. Allan Kaufman (Academy) began an overview of the development history, data source and data filtering of the premium and reserve risk factor methodology. He also said the Academy plans to devote more time to discuss this report in the upcoming Working Group meeting, as the results of this report will affect the investment income adjustment factors analysis.

Mr. Botsko said he plans to schedule another meeting to further discuss this report and other Working Group outstanding items next month.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

1. INTRODUCTION

The American Academy of Actuaries Property and Casualty Risk-Based Capital Committee (“Committee” or “We”) prepared this Report (“Report”) at the request of the National Association of Insurance Commissioners’ (“NAIC”) Property and Casualty (P&C) Risk-Based Capital (RBC) Working Group (“NAIC Working Group” or “Working Group”).

In this Report, we present indicated Line of Business (“LOB”) Underwriting (“UW”) Risk Factors for the P&C RBC Formula (“RBC Formula” or “Formula”), specifically, RBC Line 4 on pages PR017 and PR018 for the Formula. We refer to these LOB UW Risk Factors as the “Reserve Risk Factor” (“RRF”) and the “Premium Risk Factor” (“PRF”), respectively, or “Risk Factors,” generically.

This is the first in a series of three reports. The results of this review will be input to subsequent Reports 2 and 3 that will address the following:

- Report 2—Investment Income Adjustment (“IIA”)—RBC Line 8 on page PR017 (R4 UW Risk - Reserves) and Line 7 on page PR018 (R5 – UW Risk – Net Written Premium), by LOB.
- Report 3—Loss Concentration Factor (“LCF”) and Premium Concentration Factor (“PCF”)—RBC Line 14 on PR017 and PR018 respectively.

We describe the full scope of this three-part project in a letter to the NAIC Working Group dated May 9, 2019, that is attached as Appendix 15 in this Report. We plan to issue Reports 2 and 3 later this year.

We provide these indicated Risk Factors for the information of the NAIC Working Group. Report 2—Investment Income Adjustment, to be provided later this year, may also be useful in informing NAIC Working Group action related to the indicated UW Risk Factors in this Report.²

This work by the Committee builds on prior American Academy of Actuaries reports on UW Risk Factors, most recently in 2010 and 2016, which we refer to as the 2010 Report and the 2016 Report, respectively. We also use Casualty Actuarial Society (CAS) RBC research prepared by the CAS Dependency and Calibration Working Party (DCWP). We list this American Academy of Actuaries and CAS material in the Reference Section, Appendix 14.

The analysis presented in this Report is based on data evaluated through December 31, 2017. The analysis in the 2016 report was based on data evaluated through December 31, 2014.

² The IIA Report will address the fact that the current IIA’s are based on a 5% interest rate, even though current interest rates are much lower. It is likely that the effect of reflecting lower interest rates will increase the overall risk charges.
2. FINDINGS

Indicated Risk Factors

Using the data and methodology described in this Report, we calculate the indicated Risk Factors. We compare the indicated factors to (a) indicated Risk Factors from the 2016 Report and (b) the Risk Factors in the 2020 RBC Formula in tables below:

- In Tables 1a and 1b we compare the Risk Factors indicated by the current analysis to the Risk Factors indicated in the 2016 Report. This comparison shows us the effects of changes in methodology and additional data for this Report compared to the 2016 Report.

- In Tables 1c-1e we show the effect on RBC values of moving from the Risk Factors in the 2020 RBC Formula to the Risk Factors indicated by this analysis. Appendix 13 provides further details on the effect of that change, and also the effects of “capping” the changes, using the capping rules the NAIC Working Group considered in evaluating the 2016 Report.

Table 1a shows the following information:

- Columns 2 and 5—The factors in the “2020 RBC Formula” column are those used in the 2020 RBC Formula, except that, for catastrophe exposed LOBs, we increase the 2020 Risk Factors to their values before the NAIC catastrophe risk adjustments.

- Columns 3 and 6—The Risk Factors in the “Indicated (2014 Data)” columns are the indicated factors presented in the 2016 Committee Report, using data evaluated through December 31, 2014.

- Columns 4 and 7—The Risk Factors in the “Indicated (2017 Data)” columns are the indicated Risk Factors from this study, using data evaluated through December 31, 2017.

The all-lines average indicated Risk Factors in the analysis are relatively close to the all-lines average indicated Risk Factors from the 2016 analysis. Nonetheless, there are some notable changes in Risk Factors by LOB.

---

3 While we provide this detailed information, as noted in the Introduction, the results of our IAA Report may provide more context for any changes in Line 4 Risk Factors.

4 Beginning in 2016, the RBC Formula includes a new risk component, RCat, covering earthquake and hurricane components of the total premium risk. The indicated PRFs in this Report and in the 2016 Report have been calibrated with data that included earthquake and hurricane losses. Therefore, to avoid double counting of catastrophe risk, the NAIC developed a procedure to reduce the otherwise applicable Risk Factors for the affected LOBs. The factors that reduce the indicated PRFs to an ex-cat basis by LOB are as follows: Homeowners (0.971), CMP (0.980), Special Liability (0.983), Special Property (0.982), and Reinsurance: Nonproportional Assumed Property and Reinsurance: Nonproportional Assumed Financial, collectively called (“Reinsurance Property”) (0.944).

5 The indicated Risk Factors do not reflect the transition rules, often referred to as ‘capping’, that the NAIC requested.

6 The NAIC has adopted a portion of the indicated Risk Factors from the 2016 Report in several steps from 2016 to 2019. The remaining differences between the 2019 Risk Factors and the indicated Risk Factors contained in the 2016 Report are due to NAIC capping for those LOBs that has not yet been removed.

7 These indicated Risk Factors do not reflect any transition rules, often referred to as “capping,” that the NAIC might request.
If the NAIC Working Group decides to update the current factors based on this research, we can provide “capping” alternatives if so requested.

</table>

Note 1: Average Risk Factors are based on 2017 industry total net written premium and net unpaid loss and loss adjustment expense reserves, by LOB, for PRFs and RRFs, respectively.

Note 2: The company risk charge depends on not only the Risk Factors, above, but also depends on adjustments for company experience, investment income, loss sensitive contracts, company expenses (for premium risk) and a concentration adjustment. The change in Risk Factor is not representative of the change in RBC value for any particular company, as the Risk Factor does not include all elements of the RBC Formula and as distribution of premium/reserves by LOB differs widely among companies. Tables 1c-1e provide further details on the effect of the indicted Risk Factors on overall RBC values.
Note 3: Our indications are based on data from 1989–2017 Annual Statements, Schedule P Parts 1, 2 and 3 for “Ten-Year LOBs” and from 1997–2017 confidential RBC Filings for Two-Year LOBs. The NAIC compiled the data from the RBC Filings so that the available experience reflected 10 years for all LOBs.

Note 4: The shaded lines represent factors which are based on a limited amount of data.

As our data sources and methods somewhat different between Two-Year LOBs and Ten-Year LOBs, the table shows the average indicated Risk Factors for all-lines combined and, also, separately for Two-Year LOBs and Ten-Year LOBs. Ten-Year LOBs are the LOBs for which Schedule P shows 10 accident years (AYs) of data. Two-Year LOBs are those for which Schedule P shows only two AYs of data.

Table 1b, below, supplements Table 1a, showing the premium risk charges assuming industry average expenses and showing the percentage change in Premium Risk Charge percentage (PRC%) and Reserve Risk Charge percentage (RRC%). Note that the percentage change in RBC charge is higher than the change in Risk Factor as a percentage of premium or reserves.

---

8 Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.

9 The Two-Year LOBs include Special Property, Automobile Physical Damage, Fidelity/Surety, Other (Including Credit, Accident and Health), Financial/Mortgage Guaranty, and Warranty.

10 The analysis uses less than $50 billion in 2017 NEP or less than $50 billion in 2017 reserves after filtering, using Annual Statement data for all LOBs.

11 PRC% = PRF + 2017 industry average expense ratio by LOB -100%. RRC% = RRF. Column (4) = column (3)/column (2). Column (7) = column (6)/column (5).

Effect of Indicated Risk Factors on RBC by Company
The NAIC has provided the information in Appendix 13, which summarizes the company-by-company changes in RBC values implied by the indicated RBC factors, for all companies with RBC Filings in 2019. These calculations include the effect of all elements of the RBC Formula.

Tables 1c – 1e, below, compare the RBC values based on the indicated Risk Factors with the 2017 data, in this Report, to the RBC values based on the indicated Risk Factors with the 2014 data, in the 2016 Report.

Table 1c shows that, overall, the 2017 indicated Risk Factors produce very little change in UW RBC Values for reserve risk, premium risk, or total Authorized Control Level (ACL) RBC. The average effect is a change of -0.6% for ACL.

Table 1e shows the effect on RBC value by Type of Company.12

The largest change is for the Type of Company “NOC”. The LOBs that predominate for that Type of Company are Fidelity/Surety, Special Liability,13 and Other Liability. The variation in changes by Type of Company are larger for reserve risk than for premium risk. Appendix 13 contains more details on Type of Company and the distribution of LOBs within each Type of Company.

In the next section, we discuss the changes in data and methodology that influence those observations.

12 Each LOB is categorized as being typical of a particular Type of Company, e.g., Private Passenger Automobile Liability is typical of Personal Lines companies. For each company, the category with the largest amount of premium determines the Type for that company. For example, a company with more of its premium in Private Passenger Automobile Liability, Homeowners, or Automobile Physical Damage than in any of the other groups of LOBs is categorized as Personal. Appendix 13, Part 4 provides the complete definition.

13 For example, Boiler and Machinery and Ocean Marine LOBs.

NOC = Not otherwise classified.

Elements Driving Differences Between 2017 Indicated Risk Factors and 2014 Indicated Risk Factors

The changes in indicated Risk Factors from the 2016 Report to the current Report result from additional data and from some refinements in methodology. The sections below discuss the factors driving the major changes by Type of Company.

1. Zero Interior Anomaly—RRFs

We find that in the RBC Filings, there are companies that do not complete the interior of loss triangles, perhaps because these values are not required in the RBC calculation. For these companies, in the incurred and paid development triangle of the RBC Filing, all points are zero or blank, other than (a) initial evaluations by AY on the diagonal of the triangle, and (b) current evaluations of each AY, on the last column. We refer to these as “Zero Interior” triangles. Appendix 4, Table A-5b, contains an illustration of a zero interior triangle.

For Two-Year LOBs, in this Report, we remove Zero Interior triangle data from our analysis. That is a change compared to the 2016 Report, and that is the largest source of change in indicated RRFs for Two-Year LOBs. Four of those Two-Year LOBs are typical lines for the Type of Company “NOC” which shows the largest change in reserve risk RBC value as follows: Fidelity/Surety, “Other,” Financial/Mortgage Guaranty, and Warranty.

In the 2016 Report we addressed the potential for zero interior data by excluding Reserve Runoff Ratios (RRR) with absolute value greater than 5. In this report we applied the zero interior filter in addition to excluding RRRs with absolute value greater than 5. Appendix 11, Table A-8a shows the effect of zero interior filter, by LOB.

2. Refined Minor Lines Definition—RRFs

We exclude risk data points where the premium for the LOB represents a small portion of a company’s all lines premium as defined below. We call these data points “Minor Lines.”
For Reserve Risk, the Minor Lines filter compares the NEP for the LOB for a period of years to the corresponding all-lines premium. To the extent the appropriate data are available, we use a rolling Ten-Year period for this calculation. As there are variations in the data available from year-to-year, the “window” varies by LOB. Appendix 5 provides further details on this approach.

The use of Ten-Year “windows” differs from the approach in 2016 Report, where the reserve risk Minor Lines definition was based on all-years premium. With the increase in the number of years of premium in our data set, we determined that a change in procedure should be considered, and we adopted this approach.

This change in methodology reduces RRFs by about 1% overall, but by larger amounts for the reinsurance LOBs, for Financial/Mortgage Guaranty, for Other, and for Special Property LOBs. The change drives much of the change for the reserve risk RBC values for the Reinsurance Type of Company. Appendix 11, Table A-8a shows the effect of the revised minor lines definition, by LOB.

3. Absolute (RRR)>5—RRFs—Two-Year LOBs Based on RBC Data

In the 2016 Report, we excluded RRR values greater than 5 for both Ten-Year LOBs and Two-Year LOBs from Annual Statement and RBC data, respectively, because we were concerned that the ratios reflected data quality issues.

We have reviewed this issue, and for the Two-Year LOBs from confidential RBC data, we continue to exclude data if the absolute value of RRR is greater than 5, as many such values appear to be due to data anomalies. For the Ten-Year LOBs, however, in this review, we use RRR values, regardless of size.

If large RRR values were data errors, then we might expect an impact across all LOBs. However, for Ten-Year LOBs, to the contrary, we find a wide range of impacts, as a percentage of reserves, from a low 0.000 to a high of 0.195. There are nine of thirteen Ten-Year LOBs affected by less than 1% of reserves and only two affected by more than 5% of reserves. As such, we see no need for an all-lines exclusion.

Table A-5a, in Appendix 4, below, shows the effect of removing this filter by LOB. It shows that the weighted average effect on the RRFs for Ten-Year LOBs is an increase of 0.9% of reserves. It shows the Ten-Year LOBs most affected by removing the exclusion are as follows: Products Liability (19% of reserves) and International (20% of reserves). The LOB effects are not apparent in the Type of Company summary because Products Liability is usually a small part of business for a Commercial Type of Company and International is a relatively small LOB.

The change tends to increase the indicated RRF for reinsurance liability, which mitigates the effect of other changes in RRF for that LOB, e.g., the change in the Minor Lines procedure.

4. Other Changes

We describe the nature of the changes in more detail in the remainder of the Report, and we show all the components of change in the following Appendices:
Issues Related to Certain LOBs
Various considerations that might affect the selection of Risk Factors for certain LOBs are as follows:

- **Low Credibility LOBs**—The International, Financial/Mortgage Guaranty, and Warranty LOBs have relatively few data points for our analysis—900, 200, and 100 respectively—after filtering for reserve risk and similar amounts for premium risk. That compares to over 10,000 data points for the Private Passenger Liability, Homeowners, and Workers’ Compensation LOBs. As such, indicated Risk Factors are more subject to variation from year-to-year because of even small changes in methodology and because of random variations in emerging data, than is the case for other LOBs.

- **Financial/Mortgage Guaranty**—There are many single state/monoline companies that provide data in the Annual Statements, but that are exempt from RBC requirement. The data for the single state/monoline mortgage/financial guaranty companies are not included in the data used to develop the indicated Risk Factors in Table 1.14

- **Warranty**—This LOB was separated from the Fidelity/Surety LOB in 2008. Some companies provided a complete history for Accident Year (“AY”) including prior AYs. Other companies provided the separate data only for AYs 2008 and subsequent. As such, RBC data for the Warranty LOB in Annual Statements prior to 2017 is very limited.

- **International**—As noted in the first bullet, the volume of data in this LOB is relatively low. Moreover, proportionally more of the historical experience for this LOB arises from earlier Annual Statements than from more recent Annual Statements. As such, the relevance of indicated Risks Factors for current LOB M business is less certain than for other LOBs.

- **Products**—Asbestos and Environmental claim emergence affects reserve development from each of the over 30 years of Annual Statements in our analysis. It is possible that this ongoing emergence results in over-stated indicated RRFs.15,16

- **Minimum Risk Charges**—For some LOBs, the indicated risk charges will be negative, after the investment income adjustment, for a company with industry average expenses and with average loss ratio/reserve development experience (Medical Professional Claims Made and Financial/Mortgage Guaranty RRFs). Also, for one LOB, the indicated risk charge will be zero or above, but below 5%, (Automobile Physical Damage-PRF). The NAIC Working Group may want to consider the use minimum risk factors.

---

14 This RBC Risk Factor analysis does not consider the solvency risk aspects of Statutory Contingency Reserves that might be provided for Financial/Mortgage Guaranty LOBs or the implications of large unearned premium reserves (viewed as a percentage of written premium) for longer duration policies in Warranty, Financial/Mortgage, and health (included in “Other”) LOBs.

15 It is less obvious in the PRF indicated Risk Factors, but asbestos and environmental claim emergence might also affect Reinsurance Liability, Other Liability, and (to a lesser degree) Commercial Multi peril LOBs.

16 To the extent that the NAIC Working Group implements changes in risk factors with caps, as it has done in the past, this risk of over-stated Product Liability RRFs is mitigated.
Effect of 2017 Risk Factors Compared to Risk Factors in 2020 RBC Formula

If the NAIC Working Group were to implement Risk Factor changes based on the indicated Risk Factors, Table 1f, below, shows the percentage change in reserve Risk Charge, premium Risk Charge and ACL that would result, using capped and uncapped scenarios shown.

Table 1f

</table>

Table 1f shows the following:

- **Row 2**—The change in risk charges that would result from implementing the 2014 indicated Risk Factors in the 2016 Report is not zero, because those factors have been partially, but not fully implemented.

- **Row 3**—The change in Risk Factors that would result from implementing the 2017 indicated Risk Factors are lower than from implementing the 2014 indicated Risk Factors, because, as shown in Table 1c, the 2017 indicated Risk Factors are lower than the 2014 indicated Risk Factors.

- **Row 4**—If we apply a minimum risk charge, after investment income adjustments, of 5%, the change in risk charges is slightly higher than if that were not applied, i.e., 2.2% of ACL rather than 2.1% of ACL.

- **Rows 5-7**—If we apply the 2017 indicated Risk Factors, but capped to produce a maximum change in risk charge by LOB, after investment income adjustment, the changes in ACL are 0.0%, 0.4%, and 0.7% for caps of 10%, 20%, and 35% respectively. The caps are applied to the absolute value of the risk charge change, i.e., no more than 10% upward or 10% downward. The 5% minimum is applied in each of the examples.
3. METHODOLOGY

We determine the indicated Risk Factors as outlined below in Appendices 1-9. In Appendices 10 and 11, we analyze the movement in indicated Risk Factors from the values in the 2016 Report to the values in this Report.

Risk Factor Overview
We describe the basis for the PRF and RRF indications below.

PRF Indications
The PRF for a LOB is a component of the premium risk charge, which reflects the risk that a subsequent year of company premium, net of reinsurance, will produce an adverse UW result.

The indicated PRF for each LOB is derived from loss and loss adjustment expense (“LAE”) ratios, for each LOB/company/year in the selected experience period. We refer to the net earned premium (“NEP”) and the loss ratio (“LR”) for an AY/company/LOB as a premium risk data point.

The indicated PRF is the 87.5th percentile of the LR after the filtering described in the Data Selection section below.

RRF Indications
The RRF for a LOB is a component of the reserve risk charge, which reflects the risk that currently reported reserves for loss and all loss adjustment expense, net of reinsurance, will develop adversely from the initial reserve date to ultimate.17, 18

The indicated RRF for each LOB is derived from RRRs by company/year in the selected experience period. The denominator of that ratio is the company carried loss reserve, for all AYs combined, at the initial reserve date.19 The numerator of the ratio is the increase/decrease in the company estimated incurred losses for all AYs combined from that initial reserve date to the latest available evaluation date. Appendix 12—Examples 1, 2, and 3 illustrate the RRR calculation. We refer to the initial reserve amount and the RRR for an initial reserve date/company/LOB as a reserve risk data point. We refer to premium and reserve risk data points, generically, as risk data points.

The indicated RRF is the 87.5th percentile of the RRRs after the filtering described below.

---

17 The development to ultimate is often referred to as a “runoff” time horizon, in contrast to a “one year” time horizon that considers adverse development over a one-year period. This is intended to be the development to ultimate, but implementation of that intention is limited by the available data.

18 The RRF does not measure the adequacy of a company’s carried reserves. The company experience adjustment, not part of this analysis, partially reflects company historical reserve adequacy, relative to the industry.

19 The amounts in this calculation are gross of nontabular discount.
Data
We obtain our data from:

- Annual Statements, Schedule P, Parts 1, 2, and 3, for all LOBs, for years 1989–2017, and
- Confidential RBC Filings, for Two-Year LOBs, for years 1994–2017.

Compared to the 2016 Report, the data available for this Report include three “new” Annual Statement and RBC Filings (2015–2017), and eight “older” Annual Statements (1989–1996). These additional data are desirable because they include more data points, contain more developed data for recent years, reflect a wider range of UW and economic conditions, include more recent data, and provide some data for AY 1988 and subsequent that were not available in the data used for the 2016 Report.

Data Filtering
Consistent with the 2016 Report methodology, our indicated Risk Factors use the data described above and filtering rules itemized below. The filtering rules address the following features of the data:

1. Experience period
2. Pooling
3. Anomalous data, including Zero Interior filter
4. Minor lines
5. Age
6. Size
7. Maturity

In this analysis we refine the use of filters compared to the 2016 Report, as follows:

For both Premium and Reserve Risk:

- Enhanced the size threshold calculation (Appendix 7)
- Age based on “pool” age rather than “oldest company” age (Appendix 6)
- In the 2016 Report we selected the most mature LR and RRR after we consolidated company data into pools, as appropriate, (“Pooling First”). In this Report, we select the most mature LRs and RRRs by company, before consolidation into pools, as appropriate (“Maturity First”). (Appendix 3).

---

20 Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.
21 RBC Forms PC111-114 and 121-122 for premium and RBC Forms 211-214, 221-222, and 301-304, for reserves.
22 RBC Filing data compiled by regulators who provide summary results to this Committee.
23 For example, there are companies with 1996 Annual Statements that include data on AY 1988, or reserve year ending December 31, 1988, that did not file Annual Statements after 1996. In this case, the 1988 experience of these companies are not part of the 2016 Report analysis, because data from 1996 and prior Annual Statements were not available.
For Reserve Risk Factors:

- Revise the treatment of RRRs with absolute value greater than 5 for Ten-Year LOBs (Appendix 4)
- Revised definition of “Minor Lines” (Appendix 5)
- Zero Interior filter for reserve risk data for confidential RBC Filings, used for Two-Year LOBs, and from Annual Statement, for all LOBs (Appendix 4)
- Minor lines categorization and LOB-age for RBC RRRs based on Annual Statement data (Appendix 5—Minor Lines and Appendix 6—LOB-age)

We identify the changes with the largest effects, by Type of Company, in the Findings section above.

We outline the nature of these filters, and the impact of the changes, in the sections immediately below, and we further describe them in Appendices 1-9. Except as noted, we applied the same methods in our analysis of Annual Statement data and confidential RBC data.

1. Experience Period (Appendix 2)

In this Report, we use LRs for AYs 1988–2017 and RRRs for initial reserve years ending 1988–2016.\(^{24}\) For Ten-Year LOBs, we obtain this data from Annual Statements. For Two-Year LOBs, we obtain the data from confidential RBC Filings. For the 2016 Report, the data covered LRs and RRRs from AY 1988–2014 and initial reserve years ending December 31, 1988–2013.

**Exclude AYs and Initial Reserve Years Prior to 1988**

For this Report, we have experience for AYs/Reserve Years 1980 to 1987 that was not available for the 2016 Report. Looking at indicated Risk Factors by decade, we find that for nearly all the liability LOBs, this oldest block of years shows the highest indicated PRFs and RRFs.

This pattern may be due to factors that might not be applicable to current conditions. For example, the 1993 Report on Reserve and Underwriting Risk Factors by the American Academy of Actuaries Property/Casualty Risk-Based Capital Task Force (page 4)\(^{25}\) identified four reasons why the experience of the 1980’s might not be suitable for projection of the future. These are:

- **The tort liability explosion, particularly in respect to asbestos and environmental liabilities.**
- **A great deal of naïve capacity, focused especially on general liability and reinsurance lines.**
- **High interest rates, creating intense pressures to engage in cash flow underwriting**
- **High inflation rates**

---

\(^{24}\) Note that the most recent AY is 2017, but the most recent initial reserve date is December 2016. The most recent initial reserve year is always one year older than the most recent AY, as for the latest year, the reserve development is zero and not useful for our analysis.

Other considerations include:

- Company loss reserving practices may have improved because of required actuarial opinions and increased regulatory, rating agency and management attention to reserving.
- The adverse experience in these years triggered expansion in the use of claims-made policies, pollution exclusions, asbestos exclusions, and other policy changes.
- Company pricing discipline and pricing methodology may have improved since the 1980’s.

Therefore, in this Report, we do not use the experience prior to 1988, because these early years may not be sufficiently relevant to the present conditions.

2. Pooling (Appendix 3)
We combine risk data points from intercompany pool participants into a single pool-wide risk data point. Two features of the pooling process are new in this Report.

- First, in the 2016 Report we selected the most mature LR and RRR after we consolidated company data into pools, as appropriate, (“Pooling First”). In this Report, we select the most mature LRs and RRRs by company, before consolidation into pools, as appropriate (“Maturity First”). We example the reasons for this change in Appendix 3.
- Second, while we generally apply the filter to the pooled data points, we apply the new zero interior filter before pooling.

3. Anomalous values (Appendix 4)

**Premium Risk**
For PRFs, we exclude risk data points with anomalous values, i.e., negative values for premiums, incurred losses. We exclude zero incurred losses, as these can represent unusual financial transactions or other data anomalies.

**Reserve Risk**
For RRFs, we exclude the entire company/LOB/statement year data triangle, before pooling, if:

- Any calendar year\(^{26}\) has negative cumulative incurred losses, all AYs combined
- Any calendar year has negative total cumulative paid losses, all AYs combined
- Any calendar year has a negative total reserve, all AYs combined
- The interior of the development triangle is entirely zero values

Also, for both Annual Statement and RBC data, we exclude risk data points where the initial reserve is zero. In the Pooling First approach, this can have has the effect of excluding the entire company/LOB/statement year. In the Maturity First approach, even if there is a zero initial reserve at one valuation date, we might construct RRR values from data points in the statement year for other maturities that have non-zero initial reserves.

---

\(^{26}\) A calendar year in the Annual Statement or RBC development triangle is the sum of values for all AYs within a column of the data triangle. The test means examining the sum of the incurred losses over all AYs plus the prior year row, for a development column in Schedule P, Part 2, or the corresponding amounts for RBC incurred loss schedules, and similarly for paid losses in Schedule P Part 3.
Absolute (RRR)>5

As discussed in the Findings section, we exclude RBC risk data with absolute values of RRR>5 for Two-Year LOBs. In the 2016 Report, we excluded RRR values greater than 5 for both Ten-Year LOBs and Two-Year LOBs because we were concerned that the ratios reflected data quality issues.

4. Minor Lines (Appendix 5)

We exclude risk data points where the premium for the LOB represents a small portion of a company’s all lines premium as defined below. (‘Minor Lines’)

For premium risk, the Minor Lines filter compares the LOB premium to the all-lines NEP for each AY separately. This is the same method that was used in the 2016 Report. As described in the Findings section above, for Reserve Risk, the Minor Lines filter compares the NEP for the LOB for a period of years—10 years where practical—to the corresponding all-lines premium.

For both reserve risk and premium risk, the threshold boundary for Minor Lines is as follows:

<table>
<thead>
<tr>
<th>LOBs (NAIC Code)</th>
<th>Minor Lines Threshold</th>
</tr>
</thead>
<tbody>
<tr>
<td>All lines other than those listed below</td>
<td>5.0%</td>
</tr>
<tr>
<td>Other Liability and Products Liability combined</td>
<td>5.0%</td>
</tr>
<tr>
<td>Special Liability, Fidelity/Surety, Warranty</td>
<td>2.5%</td>
</tr>
<tr>
<td>International, Financial/Mortgage Guaranty</td>
<td>No Filter</td>
</tr>
</tbody>
</table>

These thresholds in Table 2 are the same as in the 2016 Report.

We determine the Minor Line status of each reserve risk data point using Annual Statement data. We apply that status to the corresponding RBC reserve risk data point.27

5. Age—Years of LOB NEP > 0 (Appendix 6)

We exclude premium and reserve risk data points where, for a particular company/LOB, there are less than five years28 of NEP greater than zero.

This is the same filter that we used in the 2016 Report, although (1) with additional years of experience, there are some “young” LOBs excluded by this age filter in the 2016 Report that are not excluded in this Report, and (2) in this Report we determined age by pool while in the 2016 Report pool age equaled the age of the oldest company within the pool. This change may have excluded some data points that had been included in the 2016 Report.

6. LOB Size (Appendix 7)

We exclude risk data points where, for a LOB, NEP (or initial reserve) is less than the 15th percentile for the AY or initial reserve year. We smooth the 15th percentile size threshold in one of several ways that we discuss in Appendix 7.

27 This simplifies the calculation effort required of the regulatory working with the confidential RBC data.
28 Consecutive or non-consecutive years.
7. Maturity (Appendix 8)
We exclude the least mature risk data points, as we did in the 2016 Report. We exclude risk data points with maturity less than the number of years shown in Table 3 below.

Table 3—Maturity Filtering
“na” means there is no filter, i.e., use all years regardless of maturity

8. Overall Effect of Filtering
Table 4 below shows the volume of NEP/reserve used in the filtered data set compared to the total volume. This table shows that the proposed filtered data set uses most of the NEP and reserve volume available in the data, after removing anomalous data.

Table 4—Data Used in Filtered Data Set^20^ 1988–2017 AYs and Initial Reserve Years

</tbody>
</table>

^20^ Data from 1988–2017, reflecting the effect of all filtering (items 1-7).
In the 2016 Report, these ratios had similar values. For premium and reserve amounts, the all-lines ratios were 93% and 80% for premium and reserves, respectively. For number of data points, the ratios were 53% and 43% for premium and reserves, respectively.
9. Safety Level
Consistent with prior Committee reports and NAIC Working Group, decisions, the indicated Risk Factors are based on an 87.5th percentile of reserve risk data points and premium risk data points for Reserve Risk and Premium Risk, respectively, subject to the filtering discussed previously.30

4. OTHER CONSIDERATIONS AND FUTURE RESEARCH

This Report does not address the following issues:

1. Catastrophe Loss Adjustment—The indicated PRFs shown in this Report reflect the inclusion of earthquake and hurricane catastrophe losses. We have not separated the Risk Factors into the non-catastrophe and catastrophe components used in the RBC Formula.

2. Workers’ Compensation Discount—Our scope does not include estimating the effect that unwinding Workers’ Compensation tabular reserves might have on the indicated Risk Factors.

3. Line 3 Company Experience Adjustment—The RBC formula includes an adjustment for the company loss ratio for premium risk (or runoff ratio for reserve risk) in relation to the corresponding industry ratios in pages PR0017 and PR0018, lines 1, 2, and 3. Consistent with the proposed calibration of PRFs and RRFs, the NAIC P&C RBC Working Group should consider changes to the calculation of the industry loss ratio and/or reserve ratio (Line 1 on PR0017 and PR0018) to reflect the filtering of the Risk Factor calibration discussed above. This could include:31
   - Excluding risk data points when premiums (reserves) are below the 15th percentile for that AY/LOB (“Size”).
   - Combining risk data points from intercompany pool participants into a single pool-wide risk data point (“Pooling”).
   - Excluding risk data points where the NEP for the LOB represents a small portion of a company’s total NEP (“Minor Lines”).
   - Excluding LOB/company risk data points if there are less than five years of NEP for that LOB (“Age”).
   - Assess the need for change to reflect that calibration data exclude certain immature risk data points.32

4. The current RBC formula structure—Our indicated Risk Factors assume the current structure of the RBC Formula. For example,33 while indicated UW Risk Factors vary by line of business volume, the Committee provides a single factor for each LOB.

30 In the next report, we plan to further discuss the safety level reflecting both Line 4 safety level and the effect of the investment income offset.
31 We believe the NAIC method of developing the factors excludes anomalous data, i.e., unexpected zero or negative values.
32 Adjustment possibilities include (a) revising own-company calculation to use only the more mature risk data points, or (b) making no adjustment because the company data and industry data are at the same maturity.
33 This is one example. There are other variations in the RBC Formula.
5. As discussed earlier in the report, in the Findings section, for several LOBs, there are particular issues that might affect selected Risk Factors and/or might be the subject of future analysis.

6. The zero interior aspect of the RBC Filing data that we use for our calibration indicates that additional data quality assessment for past data, and/or clarification of RBC Filing requirements, might be useful. Assessment of data quality is problematic because the RBC data is confidential, and not available in detail to this Committee.

7. As we were completing this analysis, we realized that it is possible to obtain two data points from the loss triangles provided for two-year lines of business in the Annual Statement. Because it contains a reserve valued one year prior to two individual accident years provided in the triangle, it is possible to calculate a reserve risk ratio from solely the prior year row and this would provide one additional year of development.

5. APPENDIX 1―DATA

We obtain our data from 1989–2017 Annual Statements, Parts 1, 2, and 3 for all LOBs, and from 1994–2017 confidential RBC Filings for Two-Year LOBs.

Compared to the 2016 Report, the following additional data is available for this Report:

- The eight older Annual Statements (1989–1996) provide data for additional older AYs, and initial reserve dates, i.e.:
  - AYs 1980–1987 and December 31, 1980–1987 initial reserve dates for Ten-Year LOBs, and
  - AY 1988 and December 31, 1987, initial reserve dates for Two-Year LOBs, from Annual Statements.

These additional data are desirable, because they include more data points, contain more developed data for recent years, and reflect the effects of a wider range of UW and economic conditions. Moreover, the Annual Statement Filings for years prior to 1997 provide additional data for initial

---

34 This issue does not relate to the quality of RBC Filing data used for RBC calculations. Rather, because our calibrations use RBC Filing data that is not used for RBC Filing calculations, some data submission

35 Electronic data for Part 1 is available for some earlier years, but, for the earlier annual statement years, the LOB definitions in Schedule P were not the same as the current LOB definitions.

36 LRs for AYs 2006–2014 in the 2016 Report were valued at ages 9, 8, …, 1, respectively. In the current report, LRs for AYs 2006–2008 are valued as of 10 years, and LRs for AYs 2009–2014 are valued at ages 9, 8, …, 4, respectively. Reserve development data are similarly more mature.
reserve years ending 1988 and subsequent, for those companies with 1988 and subsequent experience that did not file Annual Statements after 1996.37

**Lines of Business**
Schedule P currently contains information on 22 LOBs.

For the RBC Formula, and in our analysis, those 22 LOBs are combined into 19 LOBs.38 Other Liability Claims-Made is combined with Other Liability: Occurrence, (collectively “Other Liability”) Products Liability: Claims Made is combined with Products Liability: Occurrence, (collectively “Products Liability”) and Reinsurance: Nonproportional Assumed Property is combined with Reinsurance Nonproportional Assumed Financial (collectively “Reinsurance Property”).

**Two-Year and Ten-Year LOBs**
For six of the 19 LOB combinations, Schedule P contains premium and claim information on the most recent two AYs and reserve development information on prior years combined. We refer to these as “Two-Year LOBs.” These six lines are Special Property, Automobile Physical Damage, Fidelity/Surety, Other (Including Credit, Accident and Health), Financial/Mortgage Guaranty, and Warranty.

For the remaining LOBs, Schedule P contains information on the most recent 10 AYs and reserve development on prior years. We refer to these as “Ten-Year LOBs.”

Thus, in our Annual Statement data, for Ten-Year LOBs, we have AY LRAs and RRRs evaluated at maturities up to 10 years, and for Two-Year LOBs, we have AY LRAs and RRRs evaluated at maturities up to two years. The RRRs from Two-Year LOBs cover the development of only the most recent two calendar years, for all accident years, including those prior to the most recent two accident years.

**Premium and Reserve Risk Data**
For the analysis of premium risk, for each LOB, we obtain (a) earned premium net of reinsurance, (b) incurred loss and loss adjustment expenses net of reinsurance, and (c) the related LR, for each LOB, AY, company, and annual statement year.

For the analysis of reserve risk, we obtain (a) loss and defense and cost containment expense (“DCCE”) reserves at each year end, for all AYs combined, net of reinsurance (b) the increase/decrease in reserve estimate to the latest available maturity, for all AYs combined, net of reinsurance, and (c) the ratio of (a) and (b) that we call the RRR.39

---

37 For example, there are companies with 1996 Annual Statements that include data on AY 1988, or reserve year ending December 31, 1988, that did not file Annual Statements after 1996. In this case, the 1988 experience of these companies are not part of the 2016 Report analysis, because data from 1996 and prior Annual Statements were not available.

38 The LOB definitions had a major revision in the 1989 Annual Statement. There have been some changes in LOB definitions in the years from 1989 to present. As needed, in the section below, we note those that affect analysis.

39 All values gross of non-tabular discount. Reserves and payments are net of salvage and subrogation, as reported in the Annual Statement.
Note that the calibration is based on runoff of loss + DCCE, but the resulting Risk Factor is applied to loss + all LAE. This assumes that development for adjusting and other expenses follows the same pattern as loss + DCCE.

Appendix 12, Examples 1, 2, and 3 below illustrate how we calculate RRRs for Ten-Year LOBs and Two-Year LOBs, from Annual Statement data and RRRs for Two-Year LOBs from RBC Filings.

Confidential Information in RBC Filings
The RBC Filings provide incurred loss and DCCE development draw from Schedule P Part 2, for all LOBs, and paid loss and DCCE development drawn from Schedule P Part 3, for Two-Year LOBs.

The differences between Annual Statement data and confidential RBC Filing data for reserve risk, for Two-Year LOBs, include the following:

- Annual Statement Schedule P Parts 2 and 3 contains the latest two calendar years of development data. For example, the 2017 Annual Statement shows the incurred and paid values for the following:
  - AY 2017 evaluated at December 31, 2017,
  - AY 2016 evaluated at December 31, 2016, and December 31, 2016,
  - The reserve at December 31, 2015, for accident years 2015 and prior and the change in incurred and paid values for AYs 2015 and prior (combined) in calendar year 2016 and in calendar year 2017.

- RBC data includes up to 10 individual AYs of development, over 10 calendar years, but it does not include any development information on AYs prior to those 10. Because RBC data does not include development information on AYs prior to year 10, the most mature runoff ratio from RBC data includes only one AY, i.e., the most mature AY, which provides maturities from one to 10.

Thus, for the most mature RRRs from Annual Statement data we have two calendar years of development for all AYs, while for RBC data we have up to 10 calendar years of development, but for only one AY. Neither type of data is as complete as the development history available for Ten-Year LOBs from the Annual Statement, which provides ten calendar years of development for all AYs.

AY Indicated Risk Factors—Annual Statement Data Compared to RBC Data
For Two-Year LOBs, we have data from Annual Statements and from RBC Filings. We calculate indicated PRFs and RRFs from each source.

---

40 RBC Forms PC111-114 and 121-122 for premium and RBC Forms 211-214, 221-222, and 301-304, for reserves.
Table A-1 below shows the differences between PRF indications using Annual Statement data and PRFs indications using RBC Filing data, and the differences between RRF indications using Annual Statement data and RRF indications using RBC Filing data.

In interpreting the differences indicated Risk Factors between the Annual Statement data and RBC data, we note the following, with respect to both PRFs and RRFs:

- Warranty—This LOB was separated from the Fidelity/Surety LOB in 2008. Some companies provided a complete history for all AYs, including AYs prior to 2008. Other companies provided the separate data only for AYs 2008 and subsequent. As such, only Annual Statement 2017 and RBC Filing 2017 contains complete development and reserve runoff data, and, overall, there are too few points, i.e., under 100, to provide reliable indicated Risk Factors. Hence, variations between Annual Statement and RBC indicated Risk Factors are not surprising.
- Financial/Mortgage Guaranty—There are many single state/monoline companies that provide data in the Annual Statements, but who are exempt from RBC requirement. As they do not make RBC Filings, the experience for the single state/monoline mortgage/financial guaranty companies is not included in the data used to develop the indicated Risk Factors in Table 1. Hence there is substantially more data in the Annual Statement data than the RBC data, and differences between Annual Statement and RBC indicated Risk Factors are not surprising.

With respect to PRFs, for the other four Two-Year LOBs, the RBC data produces lower indicated Risk Factors. We interpret this to be the effect of favorable AY LR development that is reflected in the 10-year development in the RBC Filing data but is not reflected in the two-year development in the Annual Statement data.

With respect to RRFs, the direction of the differences between the RRFs based on Annual Statement data and RRFs based on RBC data vary by LOB, and we note the following:

- The RBC data includes both favorable and unfavorable reserve development that may not reflected in the two-calendar year window reflected in the Annual Statement data.
  - For Automobile Physical Damage, it appears that the balance of favorable and unfavorable produces a lower RRF from the RBC data than from the Annual Statement data.
  - For Fidelity and Surety, it appears that adverse economic environments in the 1999–2002 period and the 2008–2009 period generate adverse development on initial reserves established at year-ends prior to those dates, but not reflected for several years after those periods.

- RBC reserve risk data includes fewer data points for all the Two-Year LOBs, and the differences are proportionally larger for some LOBs than for others. As the company-by-company RBC data is confidential, and not available to us, we have not explored that in detail.

6. APPENDIX 2—EXPERIENCE PERIOD

We have Annual Statements premium risk data for AYs 1980–2017, for most Ten-Year LOBs and 1985–2017 from RBC Filings for most Two-Year LOBs.

We have RRRs for the same starting dates, but ending in 2016. Because Annual Statement LOB definitions change over time, there are fewer years of experience for the Medical Professional Liability, Warranty, and Financial/Mortgage Guaranty LOBs. Table A-2, below, shows the LRss and RRRs available to us by year.

---

41 The most recent initial reserve year is always one year older than the most recent AY, as, for the latest year, we only have an initial estimate and no information on subsequent development.

Note 1: Earliest Annual Statement or RBC Filing for the MPL LOBs – 1993
Note 2: Earliest Annual Statement for the Financial/Mortgage LOB – 1994
Note 3: Earliest Annual Statement or RBC Filing for Warranty LOB – 2008, when the Warranty LOB was separated from the Fidelity/Surety LOB. RBC Filings for some companies show the new Warranty LOB for AYs 2008 and subsequent only, while some companies show RBC data for prior AYs as well.
Note 4: We did not use data from RBC filing years 1994-1996, as data for those years was collected for information purposes only, and might be subject to learning-curve errors.

Treatment of 1980–1987 AYs/RRRs
The current data set includes 1980–1987 AYs and RRRs that were not available for prior Committee reports, nor for the DCWP for its work.

Table A-3 below shows the indicated Risk Factors by decade, 1980–1989, 1990–1999, 2000–2009, and 2010–2017. We see that, for nearly all the liability LOBs, the oldest block of years, 1980–1989, shows the highest indicated PRFs and RRFs.

Table A-4, below, shows that including the oldest years (1980–1987) in the indicated Risk Factors produces significantly higher indicated RRFs and a somewhat higher PRFs, compared to the indicated Risk Factors excluding the oldest years. RRFs increase by more than 20% for many of the larger volume lines.

Therefore, for the reasons we discuss above, in the “1. Experience Period” subsection in the Methodology section, we believe the experience prior to 1988 may not be applicable to current conditions, and we do not include it in our indicated Risk Factors.

We plan to revisit this assumption when we review Investment Income Adjustments in our next report, where we will consider the effect of interest rate changes on risk charges over the entire period.

### 7. APPENDIX 3—POOLING METHODOLOGY

#### Pool Mapping
In determining the indicated UW Risk Factors, we combine the data from intercompany pool participants into a single pool-wide risk data point. Alternatively, if we were to treat these interrelated risk data points as independent, the same loss ratio value (or reserve runoff ratio) would appear multiple times, reducing the apparent variability in the LR (or RRR) across companies, and distorting the indicated 87.5th percentile LR/RRR value.42

42 See DCWP Report 6 pages 10-12, 16, and 77-80 for more details.

[https://www.casact.org/pubs/forum/13fforum/01-Report-6-RBC.pdf](https://www.casact.org/pubs/forum/13fforum/01-Report-6-RBC.pdf)
We identify intercompany pools by annual statement year using the following information, to the extent available, for each company and annual statement year:\footnote{The pool is defined separately for each statement year. For example, if two companies are in an intercompany pool for annual statement year 2013, then all data points from that annual statement year will be pooled. If the same two companies are no longer subject to intercompany pooling in 2014, the data points will not be pooled.}{43}

- NAIC group code from 2010, 2014, and 2017 analyses to identify member companies,
- Schedule P Intercompany Pooling Participation Percentage (Schedule P Part I Column 34),
- Schedule F Part 9 Note, and
- Notes to Financial Statements, Note 26\footnote{Currently Note 26. This information was in different Notes at different years in the past.}{44} (on Intercompany Pooling Arrangements).

Our current analysis includes 1984–1996 and 2015–2017 Annual Statements, which were not part of prior Academy or DCWP analysis. For the early years, 1984–1996, as we do not have the NAIC group assignments by company, we identify pool members as companies with identical or similar loss ratios across companies in combination with the oldest known NAIC group code. For the most recent years, 2015–2017, we had the 2017 NAIC group code to guide us. For 1997–2014 we make a few changes to the pool mapping based on an improved perspective on pooling, arising from the longer history of Annual Statements available to us.

Note that due to the limitations of the data and information available, our methodology is approximate, and might not necessarily identify all intercompany pooling arrangements and/or may combine some companies that are not actually pooled.\footnote{The pooling structure can also affect “LOB age” as we measure age based on number of years of NEP>0 for the pooled data.}{45} Group identification becomes more approximate for older annual statement years. However, we believe that the elimination of multiple identical records from the data set through this adjustment, even with the approximations, improves the quality of the Risk Factor analysis.

Selection of Most Mature Data Point—Maturity First vis-à-vis Pooling First

We have multiple evaluations of each initial reserve date-RRR and AY-LR for a given LOB/company. We remove data triangles that we classify as anomalous (see Appendix 4). Then, for each LOB, for each AY/Initial reserve year, before pooling, we determine the Annual Statement that had the most mature evaluation of the AY/initial reserve year. We calculate the LR/RRR from that Annual Statement. We pooled the resulting LRs/RRRs, using the pool associated with the annual statement year from which we calculated the LR/RRR. We refer to this approach as “Maturity First.”

In prior reviews, after removing company data triangles that we classified as anomalous, we then pooled Annual Statements, where appropriate, based on the annual statement year from which the data was derived.\footnote{This change is the latest in a series of refinements to the pooling calculation in the course of studies over the past 10 years, as described below.}{46} After pooling, for each LOB, we determined the most recent annual statement
year for each company or pool. We obtained up to 10 LRs or RRRs from that Annual Statement. We used earlier Annual Statements to obtain one LR/RRR using the most mature AY for LR and both the most mature AY and prior AYs for RRRs. We refer to this approach as “Pooling First.”

In the normal course, the Maturity First and Pooling First methods are the same. However, we find that there are companies where the most mature reading for an LR/RRR for a LOB does not appear in the expected Annual Statement. That might be because of new pool assignments, perhaps because the company was sold, the company ceased filing Annual Statements, reinsurance transactions reduced the LR/RRR data to zero, or for other reasons.

For a company subject to pooling, with the Pooling First approach, changes in pool assignment during the experience period can result in using of the same company data multiple times. Consider two companies, A and B, each with two statements (2016 and 2017) with data for each of the 10 AYs and for the prior years combined. Also suppose that A and B became part of Pool X in 2017. In the Pooling First approach, the 2017 statements for A and B are combined into a single statement for Pool X. We calculate 30 LRs (27 RRRs) for each LOB: 10 LRs (9 RRRs) for each of A, plus 10 LRs (9 RRRs) for B from statement year 2016, plus 10 LRs (9 RRRs) for Pool X from statement year 2017.

In the Maturity First approach, prior to pooling, we calculate 10 LRs (9 RRRs) for each of Companies A and B (for AYs 2008–2017, and for initial reserve years 2008–2016) from the 2017 Annual Statement and one LR/RRR from the 2016 Annual Statement (for LR/RRR 2007). These values are then pooled, resulting in 12 AY LRs (11 RRRs). The 20 LRs (18 RRRs) from the 2017 Annual Statement from Company A and Company B are pooled into Pool X and the remaining two LRs/RRRs from the 2016 Annual Statement remain unpooled. Hence, the total number of data points in the final dataset is reduced from 30/27 in the Pooling First Approach to 12/11 in the current Maturity First Approach.

The difference arises because, in the Pooling First approach, Pool X is considered a new company which results in some duplication of LR/RRRs. Hence, as expected, using the Maturity First approach somewhat reduces the number of data points.

8. APPENDIX 4—ANOMALOUS DATA

We describe the anomalous data treatment in the Methodology Section. In this Appendix we show Tables supporting the discussion of Absolute (RRR)>5 and Zero Interior anomalous data filters.

Prior to 2010, the pooling issue was identified, but there was no adjustment. DCWP introduced a pooling adjustment. The pooling adjustment assumed the pooling status was constant over the 1997–2010 Annual Statements available for its work. Based on that assumption, Pooling First or Maturity First were equivalent. The 2016 Report, with a longer Annual Statement history, examined the pooling history in more detail and reflected the changes in pooling from annual statement year to annual statement year. However, that analysis continued to calculate based on Pooling First approach. In this Report, with a still longer history of Annual Statements, we revised the Pooling First approach and modified the calculation as described.
**Absolute (RRR)>5**

Table A-5a, below, shows the effect, by LOB, of removing the Absolute (RRR)>5 filter. Table A-5a shows that the weighted average effect on the RRFs for Ten-Year LOBs is an increase of 2.4% of reserves, in RRFs, and there are important variations by LOB within the Ten-Year LOBs. The effect on indicated RRRs is most apparent in International (23% of reserves) and Products Liability (15% of reserves).

**“Zero Interior” Reserve Risk Data Anomalies**

As noted in the Methodology section, in our current review we exclude a LOB/Statement year if the interior of the development triangle is zero. Table A-5b below is an illustration of such data. We also observe some cases where some of, but not the entire interior of the data triangle has unexpected zero values.
With data of this type, we can calculate RRRs for individual AYs, for example, the 10-year development, for AY 2008. However, we cannot calculate RRRs for any full initial reserve year.

In the 2016 Report, we addressed this data anomaly in two ways. First, wherever possible we used the RRR based on development of the single most mature AY, row 2 that is not affected by the zero interior values. Second, we limited the impact of zero values by excluding data points where the absolute value of the RRR was greater than 500%.

In this Report, we exclude any data point where the entire interior is blank, which partly address the need for the Absolute (RRR)>500% limitation. However, we continue to exclude any data point with RRR >500%. We believe our current process has improved the identification of valid RBC data. However, there may be further steps we and/or NAIC could take to improve the data further, in future reviews.47

The Zero Interior issue predominately relates to RBC data for Two-Year LOBs, which are discussed above. There are also a small number of companies with Ten-Year LOB Annual Statement data that present zero interiors, typically showing non-zero values in the latest diagonal but having zero/blank data for all other values, including zero/blank in the latest evaluation column. We exclude that Ten-Year LOB data.

9. APPENDIX 5—MINOR LINES

We exclude risk data points where the volume for a LOB represents a small portion of a company’s volume as defined below (“Minor Lines”). The DWCP research48 reported, and the 2016 Report agreed, that “For certain [specialty] LOBs failure to exclude the Minor Lines risk data points

---

47 As the detailed data is confidential, there are limits on the extent to which this Committee can address this issue alone.
48 DCWP Reports 6 and 7.
appears to result in PRFs that are not representative of the risks for companies writing the bulk of the industry LOB premium.”

For premium risk, similar to the 2016 Report, the Minor Lines filter calculation compares the LOB NEP to the all-lines NEP for each AY separately.

For reserve risk, the Minor Lines filter compares the LOB NEP to the all-lines NEP for a range of years, usually 10 years ending at the initial reserve date. Because the Annual Statement LOB definitions vary over time, a 10-year range is not possible for all LOBs for all initial reserve data. Hence, our approach varies somewhat by LOB. Table A-6 shows our approach for all years.

<td>Ten Years, 2007-2016 (Note 3)</td>
</tr>
</tbody>
</table>

Note 1: We use a relatively long period because, in the early part of this time period, the all-lines total does not include Two-Year LOBs and overstates the ratio of LOB premium to all-lines premium.

Note 2: This table shows the methods we would apply to initial reserve years 1980-1987, but for the reasons discussed previously, we do not use those initial reserve dates in our indicated Risk Factors.

Note 3: These are the only years of available data for the Warranty LOB.

This Minor Lines approach differs from the approach in the 2016 Report, where the reserve risk Minor Lines definition was based on all-years premium. With the increase in the number of years of premium in our data set, we adopt the approach described above.

The thresholds for the LOB Minor Lines filters for both PRFs and RRFs are the same as those we used in the 2016 Report, and are as follows:

- Apply 5.0% filter for most lines with exceptions described below.
- Apply no Minor Lines exclusion for the International and Financial/Mortgage Guaranty lines of business due to the low volume in these lines.

49 DCWP Report 6, Page 5.
50 This is determined after pooling, so changes in pooling can affect Minor Line status.
- Apply 2.5% filter for the Special Liability, Fidelity/Surety, and Warranty lines of business, because a 5% filter for either PRFs or RRFs would exclude most premiums or initial reserves.\(^{51}\)
- Exclude risk data points where the combined Other Liability and Products Liability NEP is less than 5.0% of total NEP to avoid exclusion of too much Products Liability volume.\(^{52}\)

For RRFs, which require multiple years of premium data, we determine Minor Line status using Annual Statement data, and we apply that categorization to the RBC data. To the extent that the LOB/Company/Initial Reserve Date in the RBC data do not have a corresponding data point in the Annual Statement data,\(^{53}\) the data point is treated as a Minor Line. For PRFs, which require a single year of data, we determine Minor Line by comparing the RBC NEP by LOB/company/year to the all-lines total NEP from the Annual Statement data.

We find that the change in Minor Lines definition, from the all-year basis to the 10-year basis, decreases the indicated RRFs for nearly all LOBs. That result is consistent with (a) Minor Lines tend to have higher RRRs than non-Minor Lines, and (b) the new method better distinguishes between Minor Lines data and non-Minor Lines data.

10. APPENDIX 6—YEARS OF LOB NEP > 0 (“LOB Age” or “Age”)

The 2016 Report\(^{54}\) concluded that for most LOBs, PRFs and RRFs are smallest for companies with the longest experience period for a particular LOB. The 2016 Report presented an analysis of Risk Factors, by LOB by Age. The analysis in the 2016 report shows that the differential in Risk Factors by Age is most pronounced when comparing Risk Factors with a filter of Age equal to 5+ years\(^{55}\) when compared to companies with age less than 5 years. In addition, few risk data points are removed with a filter that removes Ages less than 5.

In this Report we calculate the age of the pool as the number of years of NEP>0 for the pool. In the 2016 Report, we calculated age as the maximum of the number of years of NEP>0 for any of the companies in the pool. This change somewhat reduces the number of data points after filtering.

11. APPENDIX 7—LOB-SIZE THRESHOLDS

Our indicated Risk Factors exclude risk data points with small premium/reserve LOB size, defined as the 15\textsuperscript{th} percentile of size. We exclude the risk data points with small size because the experience

\(^{51}\) In addition to the other considerations, for Warranty, a 2.5% filter was chosen due limited volume of warranty experience.
\(^{52}\) Correlation between NEP for PL and OL lines, for baseline PRF data with no Minor Lines exclusion, was 0.66.
\(^{53}\) Such mismatches can occur because, there are pooling changes by Annual Statement year and the data point might derive from one Annual Statement year in the RBC data and a different Annual Statement year in the Two-Year Annual Statement data.
\(^{54}\) This conclusion is consistent with the conclusion in DCWP, in Report 6, Section 7 and DCWP Report 7, Section 7.
\(^{55}\) Consecutive or nonconsecutive years.
of these companies/pools is not representative of the experience derived from the majority of risk data points.\textsuperscript{56} We apply the size threshold analysis to the data after filtering for Minor Lines and Age, as described in the earlier Appendices.

We consider four smoothing approaches to calculating the 15\textsuperscript{th} percentile, as follows: (1) 15\textsuperscript{th} percentile by year without adjustment, (2) smoothed 15\textsuperscript{th} percentile by year, (3) detrended 15\textsuperscript{th} percentile by year, and (4) all-year 15\textsuperscript{th} percentile.

\textbf{Raw and Smoothed 15\textsuperscript{th} Percentile by Year}
In method 1, we select the 15\textsuperscript{th} percentile by each LOB and accident/reserve year, for each company/pool as appropriate.

In method 2, to remove large discontinuities by year, we limit each point to be within 10\% of the prior and subsequent years. For the first accident/reserve year (1988), we limit each point to be within 10\% of the three-year average (1989–1991) and the subsequent year (1989). For the last accident/reserve year (2017/2016), we limit each point to be within 10\% of the three-year average (2014–2016/2013–2015) and the prior year (2016/2015).

\textbf{Detrended 15\textsuperscript{th} Percentile by Year}
We developed the third approach listed above in response to a suggestion for future research in the 2016 Report. For some LOBs, the 15\textsuperscript{th} percentile size varies randomly up and down so much that even the smoothed 15\textsuperscript{th} percentile had large variations in size threshold from year to year. To address that feature, we use regression to calculate the annual trend in the 15\textsuperscript{th} percentile company size by year. We use this trend to adjust the LOB premium for each company for each year to a common date, 1999 for premium and 1998 for reserves. We call the result of that calculation the “Adjusted LOB Size.”

We then determine the all-year LOB 15\textsuperscript{th} percentile of the Adjusted LOB Size values across all data points. We use the regression trend rate to detrend the all-year LOB 15\textsuperscript{th} percentile to the historical level for each year to determine the smoothed LOB 15\textsuperscript{th} percentile by year.

\textbf{Selected LOB Size Approaches}
For all RRF calculations and for PRF calculations with Annual Statement data, we select the smoothed 15\textsuperscript{th} percentile method for Homeowners, Private Passenger Auto Liability, Workers’ Compensation, Special Property, and Auto Physical Damage. For Warranty, we select the all-year overall 15\textsuperscript{th} percentile. For the other 13 LOBs, we select the detrended 15\textsuperscript{th} percentile method.

For PRF calculations with RBC data we select the smoothed 15\textsuperscript{th} percentile method for five of the six Two-Year LOBs, and for Warranty, we select the all-year overall 15\textsuperscript{th} percentile.

\textsuperscript{56} DCWP Reports 6 and 7 shows the extent to which indicated Risk Factors vary by LOB-size.
12. APPENDIX 8—MATURITY

The 2016 Report found that Risk Factors based on data grouped by age of development can increase as the age of development increases; the effect varies by LOB but is especially pronounced for LOBs such as WC and MPL-Occurrence.

The 2016 Report considered: (a) ways to adjust risk data points so that they reflected a 10 years maturity; and (b) the alternative of excluding risk data points that are not sufficiently mature. The 2016 Report used method (b). Our indicated Risk Factors are based on the same approach that was used in the 2016 Report.

Table 3, in the Methodology section, shows the maturity filters we use.

13. APPENDIX 9—ORDER OF POOLING, ANOMALIES, AND OTHER FILTERS

In this section we summarize the order in which we apply the filtering rules discussed above.

**PRF Analysis from Annual Statement Data**
1. Exclude AY/LOB/Company data points with negative premium or with zero or negative incurred loss amounts
2. Calculate LRs for each AY/company/LOB remaining in the data
3. Identify the data point with greatest maturity for each AY/company/LOB
4. Apply Pooling rules to combine AY/company/LOB data points, where appropriate
5. For each AY/company-pool/LOB data point we determine, and apply filters, for the following, on a pool basis:
   a. Minor Line status
   b. LOB Age
6. With the pool data, after the prior filtering, calculate size threshold by LOB/AY and identify whether the company size exceeds that threshold.
7. Apply Maturity filter.

**RRF Analysis from Annual Statement or RBC Data**
1. Exclude all company Annual Statement triangles with negative calendar year values or zero interior values. Also exclude potential data points with zero calendar reserves prior to the current valuation year of each Annual Statement.
2. Calculate RRRs for each initial reserve year/company/LOB from the remaining data.
3. Identify the RRR with the greatest maturity for each initial reserve year/company/LOB.
4. Apply pooling rules to company initial reserve year/company/LOB data points, where appropriate.

5. For each RRR/company-pool/LOB data point, we determine and apply filters, for the following, on pool basis:
   a. Minor Line status
   b. LOB Age

6. With the pool data, after the prior filtering, calculate size threshold by LOB/initial reserve year and identify whether the company size exceeds that threshold.

7. Apply Maturity filter.

For Two-Year LOBs, for indicated PRFs from RBC data, we determine age, maturity, and size thresholds from RBC data. We determine Minor Line status using RBC data by LOB combined with Annual Statement for all lines combined.

For Two-Year LOBs, for indicated RRFs from RBC data, we determine size thresholds from RBC data. We determine age and Minor Line status, which require matching premium information, from Annual Statement premium data. There is no maturity filter applicable to RRFs for Two-Year LOBs.

For pooled data risk data points, for both Two-Year and Ten-Year LOBs, we determine age and maturity on a pooled basis, rather than using maximum or average values by company. We also determine Minor Lines status on a pooled basis.

**14. APPENDIX 10—ANALYSIS OF CHANGE IN PRFs 2014 TO 2017 FOR TEN-YEAR LOBs**

In this section we show our analysis of the change in PRFs, from the results of the 2016 Report to the results in this Report, for Ten-Year LOBs. In this analysis of change, for each LOB, we begin with the results in the 2016 Report. We then calculate a series of indicated PRFs, each step applies additional changes in methodology/data from the 2016 Report to this Report. The change in indicated PRFs between steps constitutes our measure of the effect of the methodology/data change.

We believe this provides useful information on the relative effects of each change. However, the effects interact, so that if we calculate effects in a different order, then we might measure a different effect for each change. Hence, the changes should be interpreted as informative, but not definitive.

For Two-Year LOBs, developed from confidential RBC data, we did not have the detail data from the 2016 Report needed to perform a change analysis.57

---

57 We note that changes are small for the larger LOBs and that when the number of data points is small—e.g., Financial/Mortgage and Warranty—the movements from year to year are not unexpected.
In the subsections below we identify which of the methodology/data changes, each of which was discussed earlier in the report, is placed in each of the categories.

**Data and Maturity First**
This category covers the following:

- As we now have older Annual Statements, we have data points for AYs and initial reserve years 1988 and subsequent that were not included in our 2016 Report.
- As we discussed in the Appendix 3—Pooling Methodology, we now select the most mature data points and then combine individual companies into pools, rather than performing the calculation in the reverse order.
- Finally, with respect to data, in the normal course of an analysis update, there are changes in the NAIC database, which contains company reports as of the date that the information was extracted. In our current work, we use data extracted from the NAIC database as of the first quarter of 2019, which updates our entire data set. The 2016 Report used data extracted in 2015–2016.

**Filters**
This category covers the following:

- We implemented some changes in the way we calculate the Size filtering (Appendix 7).
- While we apply the same five-year age filter, as we have added older and newer AYs to our database, some companies that were “new” (age under five years) in the 2016 Report are not “new” in this Report.
- We based age on the pool age. In the 2016 Report age equaled the maximum age of any company in the pool. As a result, we may have excluded some data points that were included in the 2016 Report.

**Development and Recent Years**
As in every re-evaluation, there are changes due to increasing maturity of data for AYs and initial reserve years that have not yet reached maximum maturity available in our data and the addition of new AYs and initial reserve years.

**Effect of Changes**
Table A-7a—PRFs, below, shows the effect of these factors, by LOB. Table A-7b, below, shows the changes in the number of data points after each step of the analysis.

---

58 For example, we see more data from Annual Statement years and RBC years 2013 and 2014, in the 2017 data than in the 2014 data. We understand this to be because Annual Statements and RBC Filings for some companies were not included in the NAIC data when the 2014 data was downloaded.

</table>

**Notes:** Recent Years for MPL Occ., International, Reins. Liab., and PL are zero because the maturity filter excludes accident years 2015-2017 in the analysis of change.

For all Ten-Year LOBs combined, the change in indicated PRFs from 2014 to 2017 is relatively small, -0.1% of premium.

However, there are some LOBs with larger changes in indicated Risk Factors. The two Ten-Year LOBs with indicated PRF changes greater than ±5% of premium are the following:

- International PRF is increased due to the data changes.
- Reinsurance Liability PRF is reduced due to both data changes and the filter changes.
- Financial/Mortgage and Warranty LOB PRF changes by more than 5% of premium, but these are lines with limited data and the therefore more subject to variation in indicated Risk Factors due to random effects of new information and/or even small changes in methodology.
15. APPENDIX 11—ANALYSIS OF CHANGE IN RRFs 2014 TO 2017

In this section we show our analysis of the change in RRFs, for Ten-Year LOBs and Two-Year\textsuperscript{59} LOBs, comparing from the results of the 2016 Report to the results in this Report. We described the approach in Appendix 10, above.

We categorize the changes in indicated RRFs, from those in the 2016 Report to those in this Report, as follows:

1. New Minor Lines approach for reserves described in Appendix 5 (“Minor Line Filter”).
2. Other Filters including Age, LOB Size, and Maturity (“Other Filters”).
3. Updates in NAIC database\textsuperscript{60} (“New data”) and increased maturity of initial reserve years 1998-2013 (“New Data (< 2014), Development”).
5. New quality control test to remove triangles whose entire interior is blank, Zero Interior filter.
6. Calculate RRR values by company, and select the most mature company data point, before pooling (“Maturity First”).
7. Allow $|RRR|>500\%$ for Ten-Year LOBs (“Allow $|RRR|>500\%$”).

Table A-8a—RRFs shows the effects of each of these factors, by LOB. Table A-8b, below, shows the changes in the number of data points after each step of the analysis.

\textsuperscript{59} We were able to analyze the drivers of change in RRFs from RBC data, as the regulator working with our committee recreated, under our direction, the 2016 analysis, which enabled us to analyze the drivers of change for both Ten-Year and Two-Year LOBs.

\textsuperscript{60} As expected, we see additional data for Annual Statement Years 2013 and 2014. Also, for LOB “Other,” in addition to the expected changes due to updates, we observed a significant reduction in the number of data points in the 2001 Annual Statement Year. That might have been an error in the prior analysis.

</table>

Notes:

1. Recent Years for CMP and MPL C-M are zero due because the maturity filter excludes initial reserve years 2014–2016 in the analysis of change.
2. The effect shown in this column is the net result of several filters. First, prior to the impact of other filters, applying the zero interior filter caused data points to reduce in all lines. However, some number of RRRs from RBC triangles with zero interiors, have already been removed due to RRR>5 filter, so the net decrease in number of RRRs is less than the decrease due to the zero interior filter alone. Moreover, when we remove the RBC triangles with zero interior values, then to the extent that there are RBC triangles from later, less mature, valuations, unaffected by zero interior values, we use those triangles. The combined effect of those factors can produce an increase in RRRs.

For all Ten-Year LOBs combined, the change in indicated RRFs from 2014 to 2017 is 0.4% of reserves. However, there some Ten-Year LOBs with larger changes in indicated Risk Factors. The three LOBs with indicated RRF changes greater than ±5% of reserves are the following:

- The International indicated RRF increased by 34.9% overall due to Other Filters (company age) and allowing RRRs greater than 500%. International is one of the three smallest lines of business both in terms of company data points included in the analysis and reserve volume. Its sensitivity to the changes is not surprising.
- The Reinsurance Prop./Fin. indicated RRF decreased 7.2% of reserves, due primarily to changes in the Minor Line filter and the addition of recent years.
- The Products Liability indicated RRF increased 12.8% of reserves due primarily to the impact of allowing RRRs greater than 500%.
For all Two-Year LOBs combined, the change in indicated RRFs from 2014 to 2017 is more significant than the Ten-Year LOBs, at -12.6%. This was driven by the new zero interior filter. With the exception of automobile physical damage, all of the Two-Year LOBs had changes greater than ±5% of reserves.

16. APPENDIX 12—EXAMPLES

Example 1: Reserve Runoff Ratio—Ten-Year LOBs—Annual Statement Data

In this section, we show how the RRRs are calculated from Annual Statement data for Ten-Year LOBs.

To illustrate the runoff ratio calculation based on Annual Statement data, consider the following simulated example, Company XYZ’s Schedule P, Part 2 and 3 for a particular LOB for Annual Statement Year 2017.

<table>

</tbody>
</table>

We calculate nine RRRs from these data. The most mature is the RRR for the 2008 initial reserve year. The numerator of the Reserve Runoff Ratio is the incurred development for 2008 and prior AYs, combined, from the 2008 evaluation year to the 2017 evaluation year. These data come from Schedule P, Part 2 and we calculate this from the numbers in bold above as follows:

\[
(440 + 3,620) - (730 + 4,890) = -1,560
\]
The denominator of this ratio is the carried loss reserves at the 2008 evaluation date. We calculate this for all AYs combined using Schedule P, Parts 2 and 3, from the cells that are shaded above as follows:

\[(730 + 4,890) – (0 + 2,100) = 3,520\]

The value for Prior AYs in calendar year 2008 is zero because the Prior rows in Parts 2 and 3 of Schedule P are the amounts excluding the amounts paid through December 31, 2008, on AYs 2008 and prior.

The reserve runoff ratio is then simply the numerator divided by the denominator:

\[-1,560 ÷ 3,520 = -44.3\%\]

The reserve runoff ratios for reserve years 2009 through 2016 are calculated in the same manner. For initial reserve year 2009, the numerator of the RRR, Part 2, columns 2 and 12, is

\[(440+3,620+3,660) - (510+3,750+5,010) = -1,550\]

The denominator of the RRR, from Parts 2 and 3, column 2, is \((510+3,750+5,010) - (390+3,360+1,540) = 3,980\). The RRR is -38.9%.

**Example 2: Reserve Runoff Ratio—Two-Year LOBs—Annual Statement Data**

While our indicated RRFs for Two-Years LOBs is based on data from confidential RBC Filings, for comparison purposes, we also calculate indicated RRFs based on Annual Statement data. The RRR calculation for Two-Year LOBs from Annual Statement data is similar to the calculation for Ten-Year LOBs, but the calculation includes only two AY and the prior year data. The
following example from a 2017 Annual Statement illustrates the runoff ratio calculation based on Annual Statement data for sample Company XYZ Schedule P, Part 2 and 3.

**Table A10a**

<table>

</tr>
<tr>
<td>1 Prior</td>
</tr>
<tr>
<td>2 2016</td>
</tr>
<tr>
<td>3 2017</td>
</tr>
</tbody>
</table>

We calculate only one runoff ratio from these data, the runoff ratio for the 2016 reserve year. For this ratio, the numerator of the Reserve Runoff Ratio is the incurred development for 2016 and prior AYs, combined, from 2016 evaluation year to the 2017 evaluation year. These data come from Schedule P, Part 2 and we calculate this as follows:

\[(18,326 + 24,070) – (17,703 + 23,314) = 1,379\]

The denominator is the carried loss reserves at the 2016 evaluation date. We calculate this for all AYs combined using Schedule P, Parts 2 and 3, as follows:

\[(17,703 + 23,314) - (9,253 + 4,060) = 27,704\]

The reserve runoff ratio is then simply the numerator divided by the denominator:

\[1,379 ÷ 27,704 = 5.0\%\]

**Example 3: Reserve Runoff Ratio—Two-Year LOBs—RBC Data**

The tables below shows an example of RBC data. This data is the RBC data that is consistent with the Two-Year Annual Statement data shown in Example 2, above.

</tbody>
</table>

The RBC data differs from the Annual Statement data in that there is no data in the Prior row.

We calculate RRRs using the most mature runoff data available. Often that was age 10, corresponding to 2008 and prior. One feature of that calculation is that the runoff contains only one AY.

For example, the runoff for initial reserve year 2008 would be calculated as follows:

Incurred Movement = 1,231 – 1,875 = -645, using the “2008 row”.
The initial reserve = 1,875 – 92 = 1,783
The runoff ratio equals -645 ÷ 1,783 = -36.1%

Because there is no prior row, this constitutes the development of 2008 only.
## 17. APPENDIX 13—IMPACT OF ALTERNATIVE RISK FACTORS

Part 1: Change in P&C RBC Charges by Type of Company: R4 Alone, R5 Alone, and Total ACL

### Notes

- Amounts in Billions. Excluding Zero and Negative Size Companies
- “NOC,” standing for Not Otherwise Classified, means companies whose major line is one of the following: Special Liability, Fidelity/Surety, “Other,” International, Financial/Mortgage Guaranty, Warranty.
- Risk factors for “2014 Data” and “2017 Data” for catastrophe exposed LOBs, are reduced to reflect the fact that catastrophe risk is incorporated separately in the RBC Formula. We apply the multiplicative adjustment used by the NAIC. See footnote 4.

Part 4: Type of Company Definition
For each company, the company is assigned to one of six categories—Personal Lines, Commercial Lines, Medical Professional Liability, Reinsurance, Workers’ Compensation, or Other—by determining the amount of premium plus reserves (net written premium, plus net loss and LAE unpaid) for each of the six categories (using the table shown below), and then determining the category with the highest amount of premium plus reserves.

</tbody>
</table>

We see that the main LOBs within the category NOC are Fidelity/Surety, Other Liability and Special Liability, and we see that the Medical Professional Type of Company is predominantly Medical Professional Liability Claims Made.
18. APPENDIX 14—REFERENCES

19. APPENDIX 15—May 2019 Letter to NAIC
May 8, 2019

Tom Botsko, Chair
Property and Casualty Risk-Based Capital Working Group
National Association of Insurance Commissioners
(via email to Eva Yeung)

Dear Tom:

The American Academy of Actuaries\(^1\) Property and Casualty Risk-Based Capital (RBC) Committee plans to support the National Association of Insurance Commissioners’ efforts to update the calibration of factors used to calculate underwriting (UW) risk. This letter describes our plans. We appreciate this opportunity to describe those plans and solicit input from the NAIC Property and Casualty RBC Working Group.

1. Overview

We plan to analyze the following:

- Investment Income Adjustment (IIA)—RBC Line 8 on page PR017 (R4 Reserve risk) and Line 7 on page PR018 (R5 Premium risk), by Line of Business (LOB);

- Loss Concentration Factor (LCF) and Premium Concentration Factor (PCF)—RBC Line 14 on PR017 and PR018 respectively, which are used to calculate diversification credit in the RBC Formula; and

- LOB UW risk factors—RBC Line 4 on PR017 and PR018. We will use the results of this review as a starting point for the IIA and LCF/PCF analysis. This review will include the use of data not available to this Academy committee at the time the 2016 Academy Report\(^2\) was provided.

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policy makers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

APPENDIX 15 – May 2019 Letter to the NAIC

The remainder of this letter provides more details regarding our proposed analyses.

2. IIA Analysis (Line 8/7)

The IIA reduces the amount of UW risk charge to recognize that future investment income will be available to offset the cost of adverse UW (premium risk) or reserve development (reserve risk).

Evaluation approach

The IIAs are based on a 5% per annum interest rate assumption, which is not consistent with recent experience.

We will consider two ways to update the IIAs. First, the Line 4 risk factor and the IIA on Lines 8/7 are currently calibrated as independent parameters. We use the term Nominal Value Approach (NVA) to describe an approach that does not consider possible interactions between interest rates underlying the IIA and loss experience underlying the Line 4 risk factors.

Implementing NVA requires changing the IIAs to reflect changing interest rates over time. We will consider how that might be done in a manner that provides reasonable stability but remains responsive to current conditions.

Second, we note that there are reasons to expect that loss ratios (LRs) and reserve runoff ratios (RRRs) are higher when interest rates are higher. An alternative to NVA, which considers a possible interaction between UW risk and interest rates, is to calibrate UW risk factors (Line 4) using data discounted to present value based on historical interest rates. Risk factors and IIAs can be developed from that analysis. We refer to that alternative as the Present Value Approach (PVA).

With PVA, we would establish the combined effect of the underwriting risk factors (Line 4) and the IIA (Line 8/7). We would produce a single indicated risk factor that reflects both UW risk, Line 4, and IIA, Lines 8/7. If desired, for consistency with the current format of the RBC Formula, that combined risk factor can be split into its two components. However, future changes in interest rates will not necessarily require changes in the IIA values.

We plan to prepare indicated risk factors for IIAs based on both NVA and PVA.

Interaction with UW risk safety level

Consistent with prior calibrations, UW risk factor Line 4 calibrations prepared for the NAIC in the 2016 Report are based on an 87.5th percentile safety level. We understand
the 87.5th percentile is used because it appeared to be consistent with the UW risk safety level selected when the RBC Formula was first calibrated in the early 1990s.

The 5% interest rate was also selected in the initial RBC calibration in the early 1990s. At that time actual interest rates were higher than 5%. Therefore, the initial IIA calibration can be viewed as including an implicit interest rate safety margin—that being the difference between actual interest rates at the time and the 5% interest rate selected.

In the IIA analysis, we will use interest rates with and without the kind of implicit safety margin that was part of the RBC calibration in the early 1990s. In using interest rates with no implicit safety margin, we will consider the extent to which the UW risk safety level should be increased to a value above 87.5%, to reflect the combination of the current 87.5th percentile on UW risk and any implicit interest rate safety margin. We will provide the NAIC with alternative treatments on this issue.

3. LCF/PCF Analysis (Line 14)

The LCF/PCF uses the ratio of the reserve/premium amount for the company’s largest RBC LOB to the company’s all-lines total reserve/premium amount. This ratio is used to measure the spread of business by LOB, commonly called diversification. We refer to that ratio as the Company Line of Business Maximum% (CoMaxLine%).

The LCF/PCF equals CoMaxLine% times 0.3 plus 0.7. This produces a discount for diversification, up to a maximum somewhat less than 30%.

Evaluation of 30% Maximum Diversification Credit

The proposed work will review the extent to which the 30% maximum should be revised based on experience.

---

4 The maximum credit would be 30% if the number of LOBs were infinite. If premium/reserves were divided equally among the 19 LOBs, CoMaxLine% is 1/19, 5.26%, and the maximum credit is 28.4%.
Evaluation of other approaches

There are alternatives to the CoMaxLine% Approach in the RBC formula. One alternative approach is to use the largest LOB risk amount, rather than the largest reserve/premium amount. We refer to this as the CoMaxLine%-Risk approach. 5,6

Another alternative approach to evaluating diversification could be based on the Herfendahl-Hirschman Index (HHI). HHI is widely used by economists to measure concentration. The HHI index considers the relative proportions of all LOBs (largest, second-largest, third-largest, etc.) 7, whereas the CoMaxLine% approach only considers the relative proportion of the largest LOB.

We will evaluate these alternatives.

4. Update to UW factors

The UW factors presented in the 2016 Report are based on data for Annual Statement years 1997–2014. For this work, the NAIC has provided data for Annual Statement years 1984–2017. We plan to update UW factors to include the additional new years (2015–2017), and we will potentially use data from Annual Statement years prior to 1997 for specific LOBs.

Our indicated risk factors will include the effect of catastrophe events, net of reinsurance. We expect that the NAIC will continue to apply its current catastrophe adjustment

5 As an example of the difference between the risk maximum and the premium/reserve (volume) maximum, consider a hypothetical company that had $1 million of private passenger liability premium and $1 million of occurrence medical malpractice premium.

The private passenger automobile risk premium charge is about 15% and malpractice occurrence premium risk charge is about 60%, producing $150,000 of automobile premium risk, $600,000 of medical malpractice premium risk, and $750,000 in total premium risk (before diversification).

Using the CoMaxLine% approach in the RBC Formula, the CoMaxLine% is 0.50, and the credit for spread of business is 15%, half of the 30% maximum credit.

Based on risk, the maximum risk is the $600,000 for occurrence medical malpractice and the CoMaxLine%-Risk is 0.80 (600,000/750,000). The CoMaxLine%-Risk is much higher than CoMaxLine% because from the risk perspective the company is much less diversified. Measured this way, the credit for spread of business is reduced to 6%.

6 Using risk by LOB suggests the use of expenses by LOB. Expenses by LOB for the current year are in the Insurance Expense Exhibit, which is not filed until a month after the Annual Statement is filed. We will test options that use data that is available when the Annual Statement is filed, e.g., current year total expenses allocated by LOB based on prior year expenses by LOB, prior year expense by LOB with no adjustment to the current year, and current year company-wide expenses that does not vary by LOB.

7 HHI equals the sum of the squares of the relative proportions of each LOB compared to the total.

For example, if there is only one LOB, HHI is 1.0, as is the case for the CoMaxLine%. With two lines split 50% and 50% HHI and the CoMaxLine% are still the same, both 0.5.

With two lines split 25% and 75% HHI is 0.25^2 plus 0.75^2 or 0.625 compared to the CoMaxLine% of 0.750, i.e., HHI shows more diversification. With three lines split 50%, 25% and 25% HHI is 0.50^2 plus 0.25^2 plus 0.25^2 or 0.375, more diversification than the CoMaxLine% of 0.5.

The HHI is sometimes applied to only the n-th largest segments, e.g., the degree of diversification among the top five or 10 LOBs.

8 Annual Statements 1989 and subsequent for reserve risk data.
process to any updated UW risk factors it may choose to implement based on the results of our analysis.⁹

5. Timeline

NAIC staff have provided us with much of the necessary data. We greatly appreciate that assistance, without which this project would not be possible.

We are currently reviewing the data and organizing it for our analyses.

We will provide a timeline and milestones at future meetings and calls.

6. Directional Impacts of These Analyses on RBC Formula Values

While we currently have no results, based on the nature of the changes, we expect that:

- The IIA revision will indicate an increase in amount of UW risk charges for all companies; and
- The LCF/PCF analysis will generally indicate a decrease in amount of UW risk charges for diversified companies.

We expect to provide possible transition rules for implementation, consistent with past practice and/or if such rules appear warranted by features in the data.

Also, as we have in the past, we will ask NAIC to do an impact review of indicated changes.

* * * *

We appreciate this opportunity to assist the NAIC.

Regards,

Lauren Cavanaugh
Chairperson
Academy Property & Casualty
Risk-Based Capital Committee

---

⁹ The Academy P&C RBC Committee would be happy to discuss how we might assist the NAIC in calibration of the risk factors on a net-of-catastrophe basis, but we believe that should be a separate project, after we complete the projects we describe in this letter.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 15, 2021. The following Subgroup members participated: Wanchin Chou, Chair, and Susan Andrews (CT); Robert Ridenour, Vice Chair (FL); Susan Bernard, Lynne Wehmueller, and Kathryn Taras (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Halina Smosna and Gloria Huberman (NY); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk, Monica Avila, and Rebecca Armon (TX).

1. **Adopted its June 1 and April 26 Minutes**

The Subgroup met June 1 and April 26. During these meetings, the Subgroup took the following action: 1) forwarded the response to the Climate and Resiliency (EX) Task Force request for proposed changes to the property/casualty (P/C) risk-based capital (RBC) catastrophe component; 2) heard updates from its Catastrophe Model Technical Review Ad Hoc Group; and 3) discussed the possibility of allowing additional third-party models or adjustments to the vendor models.

Mr. Botsko made a motion, seconded by Ms. Krylova, to adopt the Subgroup’s June 1 (Attachment Five-C1) and April 26 minutes (Attachment Five-C2). The motion passed unanimously.

2. **Adopted its 2021 Working Agenda**

Mr. Chou summarized the changes of the 2021 working agenda, which included the following substantial changes: 1) changing the completion date of the “evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses” item to year-end 2022 or later; and 2) deleting the “remove the embedded 3% operational risk component contained in the reinsurance contingent credit risk factor of Rcat” item from the working agenda. He also provided a brief update on items 9 and 19.

Mr. Schallhorn made a motion, seconded by Mr. Ridenour, to adopt the Subgroup’s 2021 working agenda (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Seven). The motion passed unanimously.

3. **Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group**

Ms. Smosna said the ad hoc group met June 7 to discuss additional questions for AIR Worldwide and June 28 to review some technical questions with AIR Worldwide on its wildfire model. She said the ad hoc group gained a better understanding on: 1) event generation; 2) spread model; 3) damage estimation; and 4) insured loss calculation. Mr. Chou stated that there were 54 technical questions discussed with AIR Worldwide in May and June, and he indicated that the ad hoc group will meet next month with Risk Management Solutions (RMS) to review/discuss some technical questions. He also discussed further steps to develop the proper charge for wildfire.

4. **Heard a Presentation from AIR Worldwide Regarding the Wildfire Model**

Dr. Jeff Amthor (AIR Worldwide) provided a brief overview on wildfire in the western U.S. and stochastic wildfire modeling for risk assessment. He said most of the wildfires are caused by humans and lightning. He also stated that climate change is likely increasing the area burned. During the stochastic wildfire modeling for risk assessment section, he briefly mentioned: 1) large stochastic fire catalogs used to provide a robust view of possibilities and probabilities; 2) wildfire modeling begins with ignition; 3) physically based processes for simulating fire spread; and 4) key modeling challenges.

Mr. Chou encouraged all the interested parties to review this presentation. Thoughts and ideas on developing the wildfire charge are welcome in the upcoming meeting to complete this project effectively.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 1, 2021. The following Subgroup members participated: Wanchin Chou, Chair (CT); Robert Ridenour, Vice Chair (FL); Laura Clements, Giovanni Muzzarelli, and Lynne Wehmueller (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Halina Smosna and Sak-man Luk (NY); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk, Rebecca Armon and Monica Avila (TX).

1. **Forwarded the Response to a Request for Proposed Changes to the P/C RBC Catastrophe Component**

Mr. Chou said the Subgroup exposed the response to a request for proposed changes to the catastrophe risk component for a 30-day public comment period during its April 26 meeting. He stated that the Subgroup received no comments during the exposure period. Mr. Chou said the purpose of this response is to inform the Climate and Resiliency (EX) Task Force that due to the limited resources of the Subgroup, it is currently only focusing on developing the risk charge for the wildfire peril. However, the Subgroup plans to discuss the additional peril like flood when the models become more mature and with better underlined statistic in the future.

Ms. Clements made a motion, seconded by Ms. Mottar, to forward the response to the Climate and Resiliency (EX) Task Force. The motion passed unanimously.

2. **Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group**

Ms. Wehmueller said the ad hoc group met on May 10 to: 1) discuss data input and financial impact questions and responses; 2) review questions for model assumptions; and 3) discuss a referral letter from the Subgroup. She stated that some of the responses from AIR to the wildfire model questions posed by the ad hoc group were quite comprehensive and explanatory, while others were limited and require follow-up. Ms. Wehmueller also said the questions posed by the ad hoc group covered all components of the wildfire model generation, including hazard, vulnerability and financial modules, as well as some general questions about the model inputs, updates, model strengths and opportunities for improvement. She said the ad hoc group noticed that a reference document of data sources for the model inputs provided by AIR indicated different data inputs were based on different time periods and levels of resolution. In addition, Ms. Wehmueller said the Subgroup and its ad hoc group will need to work with the NAIC Legal department to establish a data use agreement between them and AIR. Moreover, she stated that Mr. Chou urged the ad hoc group members to review the AIR wildfire model documentation and provide additional technical question for AIR during the last ad hoc group meeting. Lastly, she said Mr. Chou asked every member of the ad hoc group to review and provide comments for the response to a request for proposed changes to the property/casualty (P/C) risk-based capital (RBC) catastrophe component.

Mr. Chou said the data use agreement has been set up; it allows the ad hoc group to share data via closed meetings. He also stated that additional questions provided by the ad hoc group members were received last week. Mr. Chou said he plans to discuss and finalize all the question by the upcoming ad hoc group meeting to ensure AIR has enough time to respond by the Subgroup’s next meeting.

3. **Discussed the Possibility of Allowing Additional Third-Party Models or Adjustments to the Vendor Models**

Mr. Chou said the Subgroup discussed the working agenda item to evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the catastrophe model losses during the last virtual meeting. He stated that the Subgroup discussed the possibility of modifying the PR027 catastrophe risk instructions to accommodate the three different kinds of catastrophe (CAT) models that deviate from the vendor models: 1) internal CAT models; 2) vendor CAT models with adjustments or different weight; and 3) derivative models based on the vendor models. Mr. Chou asked the Subgroup members and interested parties to discuss: 1) the appropriateness to categorize the internal CAT models and derivative models based on the vendor models as internal models and vendor CAT models with adjustments or different weight as a modified vendor models; and 2) modifying the PR027 instructions based on the discussion. Mr. Botsko commented that the Subgroup should consider the following issues while discussing this item: 1) resource limitation from the state to review the internal models; and 2) how to validate the immature models. Ralph Blanchard (Travelers) asked the Subgroup to review...
the current treatment of the second category—vendor CAT models with adjustments or different weight consistent with the current instructions. Scott Williamson (Reinsurance Association of America—RAA) said he thinks that the current PR027 instruction has addressed the treatment of the second category of the model. However, he asked the Subgroup to consider: 1) how to handle the proprietary type of models; and 2) developing a process for approving proprietary models. Mr. Chou said this is a complicated subject and that the Subgroup will take time to discuss during upcoming meetings.

Mr. Chou said the Subgroup will schedule another meeting in July to continue discussing all the outstanding issues.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 26, 2021. The following Subgroup members participated: Wanchin Chou, Chair, and Susan Andrews (CT); Robert Ridenour, Vice Chair (FL); Laura Clements, Giovanni Muzzarelli, Mitra Sanandajifar and Lynne Wehmueller (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Gloria Huberman, Halina Smosna and Sak-man Luk (NY); Tom Botsko (OH); Andrew Schallhorn (OK), Will Davis (SC); and Miriam Fisk and Monica Avila (TX).

1. Exposed the Response to a Request for Proposed Changes to the P/C RBC Catastrophe Component

Mr. Chou said the Subgroup received a referral letter from the Climate and Resiliency (EX) Task Force on March 15. He said the Task Force recommended the Subgroup to consider: 1) expanding the current catastrophe framework to include other perils such as wildfire, flood and/or convection storms that may experience a greater tail risk under projected climate-related trends; 2) implementing two perils in the risk-based capital (RBC) framework by year-end 2022 if possible; 3) revising the current criteria for all commercial modelers that are allowed to be used; and 4) ensuring all modeling information is documented and made available to NAIC staff and lead state regulators.

Mr. Chou said a response to the referral letter was drafted earlier. It stated that the Subgroup is focusing on developing the risk charge for the wildfire peril only due to the limited resources and modeling information for other perils. He said the Subgroup plans to discuss the additional perils such as flood when the model becomes more mature with better underlying statistics in the near future. Mr. Chou also indicated that the Subgroup is only the assessor, not the reviewer of the model. However, he said the Subgroup will take the appropriate time and steps to understand the models and assign an appropriate charge to each additional peril. Mr. Chou asked all the interested parties to review the draft response and submit comments during the exposure period. Any received comments will be discussed during an upcoming meeting.

The Subgroup agreed to expose the response to a request for proposed changes to the property/casualty (P/C) RBC catastrophe component for a 30-day public comment period ending May 25.

2. Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group

Mr. Chou said an ad hoc group to conduct a more in-depth review on different wildfire models was established earlier this month. He emphasized that the goal of this ad hoc group is not trying to approve the models. Rather, it is to perform a more in-depth technical study of different model assumptions, limitations and impact analysis in the upcoming months and ultimately provide a proper risk charge recommendation to the Subgroup for consideration. Ms. Smosna said the ad hoc group met for the first time early this month to discuss: 1) the development history of the current earthquake and hurricane risk charges; and 2) the possibility of developing an action plan to achieve phase 2 through phase 4 of wildfire model review phases. She also stated that the ad hoc group thinks that gaining some understanding on Florida’s catastrophe modeling approval process will be a good starting point to address this issue.

Mr. Ridenour said the Florida Commission on Hurricane Loss Projection Methodology (Florida Commission) establishes standards for model review every two years. Its hurricane loss projection methodology is based on certain switches being applied and a specific version of the model. He also stated that the Florida Commission approval process is only used in Florida; it is not something approved for NAIC purposes. Mr. Chou finally said that the ad hoc group will meet once a month until a proper wildfire charge is developed. He encouraged all interested parties to submit comments or questions to the ad hoc group for further discussion.

3. Discussed the Possibility of Allowing Additional Third-Party Models or Adjustments to the Vendor Models

Mr. Chou said the working agenda item to evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the catastrophe model losses was created in December 2019. He stated that the Subgroup discussed three different kinds of catastrophe (CAT) models that deviate from the vendor models: 1) internal CAT models; 2) vendor CAT models with adjustments or different weight; and 3) derivative models based on the vendor models at the Spring National Meeting.
Scott Williamson (Reinsurance Association of America—RAA) commented that the Subgroup should consider developing a basic approval process if the Subgroup decided to rely on models in order to ensure the use of models are consistent and comparable across companies. Ralph Blanchard (Travelers) said Subgroup decided earlier that a company should use the same data, modeling and assumptions that the insurer uses in its own internal catastrophe risk management process. Mr. Chou said unlike earthquake and hurricane models, wildfire models do not have consistent assumptions and switches. The Subgroup will need to take the appropriate time and steps to understand them. Mr. Chou said that valuable information will be able to assist the Subgroup on developing the instructions in the future. He then encouraged all the interested parties to provide input on revising the RBC catastrophe risk charge instructions on PR027.

Mr. Chou said the Subgroup will schedule another meeting in May to continue discussing all the outstanding issues.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
What RBC Pages Should Be Submitted?
For year-end 2021 property/casualty (P/C) risk-based capital (RBC), hard copies of Pages PR001—PR035, as well as Pages PR038 and PR039, should be submitted to any state that requests a hard copy. Beginning with the year-end 2011 RBC, a hard copy was not required to be submitted to the NAIC, but a portable document format (PDF) file representing the hard copy filing is part of the electronic filing with the NAIC.

Accident and Health Business
Affordable Care Act (ACA) Sensitivity Test
The Capital Adequacy (E) Task Force adopted proposal 2020-02-CA to delete the ACA Fee Sensitivity Test from the RBC formula during its Nov. 19, 2020, meeting.

Incentives—Managed Care Credit
As a result of the adoption of proposal 2021-02-CA by the Capital Adequacy (E) Task Force during its April 29, 2021, meeting, the term “incentives” was incorporated into the managed care instructions and blanks as “Bonuses/Incentives.”

Investment Income Adjustment to Underwriting Risk Factors
As a result of the adoption of proposal 2021-04-CA by the Capital Adequacy (E) Task Force during its June 30, 2021, meeting, a 0.5% investment income adjustment was incorporated into the Underwriting Risk factors for comprehensive medical, Medicare supplement, and dental and vision.

The revised factors are:

Catastrophe Risk
PR027 Interrogatories
As a result of the adoption of proposal 2020-08-CR by the Capital Adequacy (E) Task Force during its March 23, 2021, meeting, the PR027 interrogatories instructions were modified to clarify how insurers with no gross exposure to earthquake or hurricane should complete the interrogatories.

Remove Operational Risk Factor
The Capital Adequacy (E) Task Force adopted proposal 2020-11-CR to remove the embedded 3% operational risk component contained in the reinsurance contingent credit risk of Rcat component from the P/C RBC formula during its March 23, 2021, meeting.

Credit Risk

As a result of the adoption of proposal 2021-03-P by the Capital Adequacy (E) Task Force during its April 29, 2021, meeting, several examples were added to clarify how the reporting companies should select the designation in the Annual Statement Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies.

Bonds

Bond Designation Structure

The Capital Adequacy (E) Task Force adopted proposal 2020-10-CA to modify the bond structure for the 20 designation categories for bonds into the P/C RBC formula during its March 23, 2021, meeting. The structure for the 20 bond designation categories was modified for the Bonds page (PR006), Asset Concentration page (PR011), and Off-Balance Sheet Security Lending Collateral and Schedule DL, Part 1 Assets page (PR015).

Receivable for Securities

As a result of the adoption of proposal 2021-07-CA by the Capital Adequacy (E) Task Force during its June 30 meeting, the factor for the Receivables for Securities (Line (1), Page PR009) was updated from 0.025 to 0.020.

Bond Factors

During its June 30, 2021 meeting, the Capital Adequacy (E) Task Force adopted proposal 2021-08-P that: 1) revised factors for the 20 bond designation categories; 2) modified the bond size factor formula; 3) reclassified hybrid securities in PR006, PR007, PR011, and PR015; and 4) modified the instructions to incorporate references for the bonds. The factors for the 20 bond designation categories were incorporated in the Bond page (PR006), the Asset Concentration page (PR011), and Off-Balance Sheet Security Lending Collateral, and Schedule DL, Part 1 Assets page (PR015).

RBC Forecasting and Instructions
The P/C RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2021 NAIC Property & Casualty Risk-Based Capital Report Including Overview & Instructions for Companies. The entire RBC publication, including the Forecasting spreadsheet, is available to download from NAIC Account Manager through the NAIC Publications Department. The User Guide is no longer included in the RBC publications.

WARNING: The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual financial statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

- [x] Property/Casualty RBC Instructions
- [x] Life and Fraternal RBC Blanks
- [ ] OTHER ____________________________

**DESCRIPTION OF CHANGE(S)**

Incorporate investment income into the Underwriting Risk – Experience Fluctuation Risk factors for columns 1-3. The base underwriting factors would be adjusted for Comprehensive Medical, Medicare Supplement and Dental and Vision.

**MODIFICATION FOR ROUNDING:** All ratios in Columns 1, 2 and 3 on pages XR013, LR020 and PR020 will be adjusted to round to the fourth decimal place.

Lines that will be adjusted include:
- XR013 – 12, 13, and 15
- LR020 – 9, 10.3 and 12
- PR020 – 9, 10.3 and 12

**REASON OR JUSTIFICATION FOR CHANGE **

Incorporated investment income into Columns 1-3 on the Underwriting Risk – Experience Fluctuation Risk page. The American Academy of Actuaries provided recommended factors to the Working Group. The Academy found that due to no claims lag in Stand-Alone Medicare Part D coverage, the investment income adjustment would be negligible, and the RBC factors would not be impacted.

The Working Group will continue to work with the Academy to look at the potential to incorporate an investment income adjustment to the factors for the other health lines of business for 2022 or later.
MODIFICATION FOR ROUNDING: The UW Risk Fluctuation Factors on pages XR013, LR020 and PR020 were adjusted and adopted for 2021 reporting to go to the fourth decimal place. Due to the NAIC system constraints, the number of decimal places a ratio is displayed is determined by the column settings. Therefore, if one factor/ratio goes to four decimal places, all factors or ratios in that column must display at 4 decimal places.

As a result, the following lines will be impacted and need to be updated to round to four decimal places.

Lines that will be adjusted include:
XR013 – 12, 13, and 15. Lines 12 and 13 are formula based calculations which could result in slight differences to the amount. Line 15 is a direct pull from page XR018 and only goes to 3 decimal places so it would end in “0”
LR020 – 9, 10.3 and 12. Lines 9 and 10.3 are formula based calculations which could result in slight differences to the amount. Line 12 is a direct pull from page LR022 and only goes to 3 decimal places so it would end in “0”
PR020 – 9, 10.3 and 12. Lines 9 and 10.3 are formula based calculations which could result in slight differences to the amount. Line 12 is a direct pull from page PR022 and only goes to 3 decimal places so it would end in “0”

Additional Staff Comments:
These changes will also need to be incorporated into the Life and P/C formula.
3-17-21 cgb The Working Group exposed the proposal for 30-days with comments due back on April 16, 2021.
4-23-21 cgb Two comment letters were received during the comment period from UHG and AHIP/BCBSA. The WG discussed the comments and agreed to refer the proposal to the Capital Adequacy (E) Task Force with the 0.5% investment yield for exposure for all lines of business.
04-27-21 cgb The American Academy of Actuaries provided an updated letter that included the factors to two-digit rounding for each tier. A copy of the letter is included in the proposal.
4-29-21 cgb The TF exposed the proposal until 5/21/21.

** This section must be completed on all forms. Revised 2-2019

### ALTERNATE RISK CHARGE***

The Line (15) Alternate Risk Charge is calculated as follows:

- **LESSER OF:**
  - 1,500,000 or 2 x Maximum Individual Risk
  - 50,000 or 2 x Maximum Individual Risk
  - 50,000 or 2 x Maximum Individual Risk
  - 150,000 or 6 x Maximum Individual Risk
  - 50,000 or 2 x Maximum Individual Risk

† The Annual Statement Sources are found on page XR014

* This column is for a single result for the Comprehensive Medical & Hospital, Medicare Supplement and Dental/Vision managed care discount factor.

*** Limited to the largest of the applicable alternate risk adjustments, prorated if necessary.

† Source is company records unless already included in premiums.
‡ For Comprehensive Medical the Initial Premium Amount is $25,000,000 or the amount in Line (1.3) if smaller. For Medicare Supplement and Dental & Vision, the Initial Premium Amount is $3,000,000 or the amount in Line (1.3) if smaller. For Stand-Alone Medicare Part D the Initial Premium Amount is $25,000,000 or the amount in Line (1.3) if smaller.
§ Formula applies only to Column (1), for all other columns Line (14) should equal Line (13).
* The Line (16) Alternate Risk Charge is calculated as follows:

\[
\text{LESHER OF} \begin{cases} 
1,500,000 \\
2 \times \text{Maximum Individual Risk}
\end{cases}
\]

\[
\begin{array}{c|c|c|c|c|c}
\text{Columns} & 1 & 2 & 3 & 4 & \text{Maximum of Columns} \\
\hline
(1), (2), (3) & 20 & 20 & 20 & 20 & 20 \\
(4) & 20 & 20 & 20 & 20 & 20 \\
\hline
\end{array}
\]

£ Applicable only if Line (16) for a column equals Line (16) for Column (5), otherwise zero.

The formulas in Column 2 & 3 for Line 9 would be updated in a like manner. The cell is formatted to display four decimal places.

The factors in Lines 10.1 and 10.2 Columns 1-3 are hard coded.

The line 12 amount pulls from page LR022, therefore, only the formatting of the cell will change to display four decimal places.

The formulas in Column 2 & 3 for Line 10.3 would be updated in a like manner. The cell is formatted to display four decimal places.

Carry-Over Items Currently being Addressed – Task Force
EXAMINATION OVERSIGHT (E) TASK FORCE

Examination Oversight (E) Task Force Aug. 5, 2021, Minutes.......................................................................................................................... 10-1014
  Information Technology (IT) Examination (E) Working Group April 19, 2021, Minutes (Attachment Two) .... 10-1018
The Examination Oversight (E) Task Force met Aug. 5, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Dwight Radel (OH); Carter Lawrence, Vice Chair, represented by Joy Little (TN); Jim L. Ridling represented by Richard Ford (AL); Alan McClain represented by Mel Andersen (AR); Evan G. Daniels represented by Jon Savary (AZ); Ricardo Lara represented by Laura Clements (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by N. Kevin Brown (DC); Dean L. Cameron represented by Jessie Adamson (ID); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlorinda Lindley-Myers represented by Shannon Schmoeger (MO); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented by Justin Schrader (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by Diana Sherman (NJ); Russell Toal represented by Leatrice Geckler (NM); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by John Tudino (RI); Raymond G. Farmer represented by Linda Haralson (SC); Larry D. Deiter represented by Johanna Nickelson (SD); Doug Slape represented by Shawn Frederick (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Mike Kreidler represented by Melanie Anderson (WA); Mark Afable represented by Amy Malm and John Litweiler (WI); and Jeff Rude represented by Linda Johnson and Doug Melvin (WY).

1. **Adopted its Spring National Meeting Minutes**

Mr. Eft made a motion, seconded by Ms. Malm, to adopt the Task Force’s March 25 minutes (see NAIC Proceedings – Spring 2021, Examination Oversight (E) Task Force). The motion passed.

2. **Adopted the Reports of its Working Groups**

   a. **Electronic Workpaper (E) Working Group**

   Mr. Radel provided the report of the Electronic Workpaper (E) Working Group. He stated that the Working Group met July 13 and April 28 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

   b. **Financial Analysis Solvency Tools (E) Working Group**

   Mr. Radel provided the report of the Financial Analysis Solvency Tools (E) Working Group. He stated that the Working Group met June 21 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

   c. **Financial Examiners Coordination (E) Working Group**

   Mr. Radel provided the report of the Financial Examiners Coordination (E) Working Group. He stated that the Working Group met Aug. 3 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

   d. **Financial Examiners Handbook (E) Technical Group**

   Mr. Litweiler provided the report of the Financial Examiners Handbook (E) Technical Group. He stated that the Technical Group met July 28 (Attachment One) to discuss its 2021 project list. He said the Technical Group plans to prioritize updates to the Reserves/Claims Handling and Capital and Surplus examination repositories in the *Financial Condition Examiners Handbook* (Handbook) in 2021. The Technical Group will defer consideration of updates to Exhibit G – Fraud Consideration until 2022.

Mr. Litweiler said also that multiple NAIC working groups currently have ongoing projects that could result in revisions to guidance in the Handbook. Therefore, Technical Group members are encouraged to follow the work of those groups. These
projects include the following: 1) updates to salary range guidelines and per diem rates, as well as updates to incorporate guidance for evaluating appropriateness of market-based expense allocations (in development by the Risk-Focused Surveillance (E) Working Group); 2) updates to exam coordination guidance (in development by the Financial Examiners Coordination (E) Working Group); 3) updates to incorporate Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) elements into the examination process (in development by the Group Solvency Issues (E) Working Group); and 4) updates to procedures for evaluating the quality and portability of policyholder data to ensure the ability to transfer such data in the event of receivership or liquidation, and development of a mechanism for departments of insurance (DOIs) to respond to emerging cyber vulnerabilities or exposures during the period in between full scope exams (in development by Information Technology (IT) Examination (E) Working Group).

e. Information Technology (IT) Examination (E) Working Group

Mr. Ehlers provided the report of the IT Examination (E) Working Group. He stated that the Working Group met April 19 (Attachment Two) to discuss two recent referrals. He said the first referral came from the Chief Financial Regulator Forum and asked that the Working Group develop a mechanism that would allow for DOIs to respond to emerging cyber vulnerabilities and exposures during the period in between full scope exams. The second referral came from the Receivership Financial Analysis (E) Working Group and asked that the Working Group consider developing procedures for evaluating the quality and portability of policyholder data to ensure the ability to transfer such data in the event of receivership or liquidation. During this meeting, the Working Group formed a drafting group to develop a response to the referrals. Mr. Ehlers said the drafting group is finalizing a response to the first referral and beginning work on the second.

Having no further business, the Examination Oversight (E) Task Force adjourned.

Draft: 8/3/21

Financial Examiners Handbook (E) Technical Group
Virtual Meeting
July 28, 2021

The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met via Webex July 28, 2021. The following Technical Group members participated: Susan Bernard, Chair (CA); John Litweiler, Vice Chair (WI); Blase Abreo (AL); William Arfanis (CT); N. Kevin Brown (DC); Cindy Andersen (IL); Gracy Kelly (MN); Shannon Schmoeger (MO); Justin Schrader (NE); Colin Wilkins (NH); Nancy Chice (NJ); Tracy Snow (OH); Eli Snowbarger (OK); Matt Milford (PA); John Jacobson (WA).

1. Discussed and Prioritized 2021 Projects

Ms. Bernard said that the 2021 project list includes three items. The first topic on the list is consideration of enhancements to Exhibit G and the consideration of fraud during an examination. Exhibit G is currently structured in a way that is more conducive to the former exam approach in which examiners were doing more of a financial statement audit. As the exam approach evolved to become more risk-focused, there may be an opportunity to modify the fraud review procedures to be more in line with the risk-focused approach.

The second topic is consideration of enhancements to the reserves repositories, specifically related to the completeness and accuracy of claims and reserve data. The auditor’s approach to testing the completeness and accuracy of data has evolved and now consists of a broader range of testing procedures than are accounted for in the existing examination repositories, including greater reliance on control testing and performance of analytical procedures. Updates will help ensure that the examination repositories reflect examples of common controls that may be in place at the insurer, as well as provide examples of the type of testing that examiners may perform to address those risks or that may be available for the exam team to leverage in its assessment.

The final topic is consideration of enhancements to the capital and surplus repository to incorporate high-level internal capital model review procedures. These additional revisions to the capital and surplus repository would be expected to build upon Own Risk and Solvency Assessment (ORSA) guidance that was adopted in 2020.

Mr. Litweiler proposed that the Technical Group prioritize addressing the repository-related items for the current year as those tools are broadly used in supporting the assessment of solvency risks during an examination and hold off consideration of updates to Exhibit G until 2022. The Technical Group agreed with this approach. Ms. Bernard asked for those interested in assisting with reviewing the repositories and drafting updates to contact Bailey Henning (NAIC).

2. Received an Update on Related Working Group Activities

Ms. Bernard said that there are multiple projects currently led by other groups that will eventually affect the guidance in the Financial Condition Examiners Handbook (Handbook). Ms. Bernard said that many of these projects will ultimately be referred to the Technical Group to consider for adoption, but a few will go through the exposure and adoption process at the group that is developing the guidance. For example, the Information Technology (IT) Examination (E) Working Group is composed of subject-matter experts (SMEs) and has historically been granted the ability to adopt IT-related guidance directly into the Handbook without going through a separate public comment period at the Technical Group. Because of this dynamic, it is important that Technical Group membership is aware of these ongoing projects.

Ms. Henning summarized the projects being led by other working groups. She said that the Risk-Focused Surveillance (E) Working Group has two projects that will affect examination guidance. The first project is to update the salary range guidelines. She noted that NAIC staff preformed a high-level analysis to determine how much fluctuation has occurred in salary rates for similar positions in related industries and found that the change to salaries overall was not material. Therefore, the Risk-Focused Surveillance (E) Working Group anticipates applying an incremental increase across each of the salary ranges instead of conducting a more in-depth data collection and analysis. The Risk-Focused Surveillance (E) Working Group is also considering enhancements to examination guidance for evaluating the appropriateness of affiliated service agreements using a market-based expense allocation. A drafting group has been formed to develop guidance in this area.

Ms. Henning said that the Group Solvency Issues (E) Working Group is has been asked to incorporate elements of the Common...
Framework for the Supervision of Internationally Active Insurance Groups (COMFRAME) into the examination, analysis and ORSA guidance. The Working Group assembled three drafting groups to work on each of these areas. She said the examination drafting group has begun meeting and considering how best to incorporate these elements into the examination process. She said that many of the elements will most likely fit within the assessment of the insurer’s corporate governance structure during an examination.

Ms. Henning said that the Financial Examiners Coordination (E) Working Group has formed a drafting group to develop updates to coordination-related guidance in the Handbook. She said that enhancements to other coordination-related tools will follow once the proposed guidance revisions have been adopted. Other possible updates include the development of a webinar focused on responsibilities of the lead state in conducting a coordinated examination and future updates to the work program used for documenting examination work.

Ms. Henning said the IT Examination (E) Working Group has two projects that will affect Handbook guidance. The first relates to the development of a mechanism that would allow for the department of insurance (DOI) to respond to significant cybersecurity vulnerabilities or exposures during the period in between full scope examinations. The Working Group is also working on developing guidance to assist an IT examiner in evaluating the quality and portability of an insurer’s policyholder data and systems to help ensure that data can be transferred to a receiver or guaranty fund in the event the insurer is placed in receivership or liquidation.

Mr. Snow asked if revisions related to updating the salary range guidelines would include the per diem rates outlined in the Handbook. Ms. Henning said that although the process for updating these rates is separate from the salary range guidelines, the per diem rates in the Handbook will also be updated for inclusion in the 2022 Handbook.

Tom Finnell (America’s Health Insurance Plans—AHIP) asked if the proposed revisions to the capital and surplus repositories would result in an expectation that financial examiners conduct a detailed analysis of an insurer’s capital model and what those procedures might entail. Ms. Henning said that revisions would be high-level and are meant to provide guidance for the type of test procedures an examiner might consider when reviewing this key activity. Bruce Jenson (NAIC) said that there are a few DOIs that are piloting work in this area and have raised questions about where certain procedures performed during an evaluation of the ORSA should be referenced in the examination file. He said that revisions in this area will attempt to respond to that need, while preserving the examiner’s flexibility in customizing the approach taken to address risks in this area.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.
The IT Examination (E) Working Group of the Examination Oversight (E) Task Force met April 19, 2021. The following Working Group members participated: Jerry Ehlers, Chair (IN); Ber Vang, Vice Chair (CA); Blase Abreo (AL); Mel Anderson (AR); William Arfanis and Ken Roulier (CT); Ginny Godek (IL); Dmitriy Valekha (MD); Kim Dobbs and Cynthia Amann (MO); Justin Schrader (NE), Eileen Fox (NY); Metty Nyangoro (OH), Eli Snowbarger (OK); Melissa Greiner and Matt Milford (PA); and Dave Jensen and Eleanor Lu (WI).

1. Exposed Two Referrals Sent to the Working Group

Mr. Ehlers explained that the Working Group received two referrals in March. The first referral was received from the Receivership Financial Analysis (E) Working Group and asked the Working Group to consider additional guidance for evaluating an insurer’s systems and data—including storage, format and portability—as part of the IT review during an examination. The second referral was received from the facilitator of the Chief Financial Regulator Forum and asked the Working Group to consider additional guidance for addressing cyber vulnerabilities, particularly in response to emerging vulnerabilities arising outside of the full-scope examination.

Mr. Vang stated that the request from the Receivership Financial Analysis (E) Working Group falls outside the normal scope of what is typically included in Exhibit C in the Financial Condition Examiners Handbook (Handbook). He said Exhibit C procedures are designed to monitor controls related to insurer solvency, while the data transfer standards recommended in the referral are mainly applicable to insurers that are troubled or potentially troubled. Mr. Vang said the IT Examination (E) Working Group could possibly consider some more creative solutions to this referral outside of an Exhibit C procedure. Mr. Vang asked the Working Group for thoughts on potential responses to this referral outside of the addition of Exhibit C procedures.

Ms. Amann concurred that an Exhibit C procedure may not be the best or only solution. She continued that she believes the Receivership Financial Analysis (E) Working Group is looking for a definitive or measurable statement on what should be done regarding data transfer formats and that the Working Group should keep this goal in mind when determining a solution.

Ms. Fox asks how expensive or burdensome it would be for companies to convert their data to Uniform Data Standards (UDS) as mentioned in the referral, because the companies that this mainly applies to are also the companies that are probably struggling the most.

Jacob Steilen (NAIC) stated that it would depend on the pervasiveness of legacy or outdated systems at the company, but specific cost implications are not known. He further stated that it would probably be in the company’s best interest to move from a legacy system to a UDS system because the knowledge pool of people who know how to use that system is larger.

Bruce Jenson (NAIC) stated that the transfer of data from insurers to receivers and/or guaranty funds has become an increasingly significant issue in receiverships. He continued that the Receivership Financial Analysis (E) Working Group is flexible in what sort of solution is offered, but since the IT examination is a regulator’s primary opportunity to look at an insurer’s IT systems, a review of an insurer’s data format would be an acceptable procedure as part of this process.

Mr. Ehlers moved the discussion to the second referral regarding cyber vulnerabilities and asked the IT Examination (E) Working Group to offer thoughts on the referral and how it should be addressed.

Ms. Dobbs pointed out that the referral mentioned that procedures should be flexible enough to be incorporated into the analysis process for addressing cybersecurity risks. Ms. Dobbs said the analysts on her team are not sure how to address these cybersecurity risks, so additional procedures would be beneficial.

Mr. Vang agreed. He said that unlike other parts of the analysis process, there is no metric for objectively gauging the cybersecurity risk at a company. As a result, there cannot be a trigger mechanism implemented like other risks where there are action steps if the risk level gets below a certain point.
Mr. Steilen proposed that an informal drafting group be formed to consider an appropriate response to the referrals. Given the significance and scope of work related to the referral from the Chief Financial Regulator Forum, the Working Group determined that it would prioritize its response to that referral before addressing the Receivership Financial Analysis (E) Working Group referral. Ms. Fox requested that the drafting group also consider training opportunities related to these referrals. The group agreed. Angela Gleason (American Property Casualty Insurance Association—APCIA) asked if comments made by interested parties could be considered by the drafting group.

The working group exposed the two referrals for a 30-day public comment period ending May 20. Any comments for the drafting group to consider should be received within that time frame.

Having no further business, the IT Examination (E) Working Group adjourned.
FINANCIAL STABILITY (E) TASK FORCE

Financial Stability (E) Task Force May 12, 2021, Minutes (Attachment One)................................. 10-1024
Suggested Edits to the 2020 Liquidity Stress Test (LST) Framework (Attachment One-A)................. 10-1026
2020 LST Framework (Attachment One-B)....................................................................................... 10-1033
Proposal to Repurpose the Liquidity Assessment (E) Subgroup as the Macroprudential (E) Working Group and Revised Charges (Attachment Two)................................................................. 10-1078
The Financial Stability (E) Task Force met July 27, 2021. The following Task Force members participated: Marlene Caride, Chair, represented by David Wolf (NJ); Eric A. Cioppa, Vice Chair (ME); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais and Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers and John Rehagen (MO); Eric Dunning represented by Justin Schrader (NE); Linda A. Lacewell represented by Bill Carmello (NY); Jessica K. Altman represented by Kimberly Rankin (PA); Raymond G. Farmer represented by Michael Shull (SC); Carter Lawrence (TN); Doug Slaper represented by Jamie Walker (TX); and Scott A. White (VA).

1. **Heard Opening Remarks**

Superintendent Cioppa said materials for consideration and discussion for this meeting were sent by email to the member, interested state insurance regulator, and interested party distribution lists for the Task Force and the Liquidity Assessment (E) Subgroup, but they are also available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. **Adopted its May 12 and Spring National Meeting Minutes**

The Task Force met May 12 and Feb. 22. During its May 12 meeting, the Task Force took the following action: 1) heard an update on Financial Stability Oversight Council (FSOC) developments; 2) adopted its revised mission and charges; 3) adopted the 2020 Liquidity Stress Test (LST) Framework; 4) heard an international update; and 5) heard a macroprudential risk assessment update. During its Feb. 22 meeting, the Task Force took the following action: 1) adopted its Oct. 13, 2020, minutes; 2) announced the membership of the 2021 Liquidity Assessment (E) Subgroup and its charges; 3) received the report of the Receivership and Insolvency (E) Task Force; and 4) received an update from the Liquidity Assessment (E) Subgroup on progress in achieving its deliverables related to liquidity stress testing.

Commissioner White made a motion, seconded by Mr. Schrader, to adopt the Task Force’s May 12 (Attachment One) and Feb. 22 (see NAIC Proceedings – Spring 2021, Financial Stability (E) Task Force) minutes.

3. **Received an Update on the 2020 LST Framework and Lead State Guidance**

Superintendent Cioppa reported that a final version of the 2020 LST Framework was posted to the Task Force’s web page after its adoption on May 12. He added that draft versions from prior meetings should not be used. He said that the LST Study Group continues to issue Lead State Guidance as needed for the 23 in-scope insurers performing the 2020 LST. Superintendent Cioppa added that the most current version is posted to the Task Force’s web page titled “2020 LST Framework with Lead State Guidance,” which is in track changes notation with comments included to reference the guidance number. He summarized that these tracked changes will be incorporated into the base document for the 2021 LST Framework. Todd Sells (NAIC) added that updated Lead State Guidance was also recently posted on the Task Force’s website.

4. **Adopted the Liquidity Assessment (E) Subgroup’s Revised Mission and Charges**

Superintendent Cioppa said that earlier this year, the Task Force moved from the Executive (EX) Committee to the Financial Condition (E) Committee and as part of that move was charged with building out the NAIC macroprudential surveillance system. He reported that in response, the Task Force exposed the proposal to repurpose the Liquidity Assessment (E) Subgroup into an ongoing group with broader responsibilities by renaming it the Macroprudential (E) Working Group and revising its 2021 charges, which are now in tracked changes to facilitate consideration for adoption.

Before addressing comments received, Superintendent Cioppa provided some general comments and reminders. He summarized that the new charges specifically reference the remaining MPI work because of the following facts:

- The 2020 Liquidity Stress Test Framework was adopted, and though the ongoing charges include maintaining that project, it has been addressed for the MPI.
• The Receivership and Insolvency (E) Task Force addressed the Task Force referral letter, so that MPI item is complete.
• The Group Capital Calculation (E) Working Group has developed the Group Capital Calculation, but the MPI includes capital stress testing which has not yet been addressed.
• And though the Task Force performed a stock take of existing counterparty disclosures, this MPI item will be completed once we have performed the work of considering any gaps that exist and addressed any such gaps identified.

Superintendent Cioppa also reminded industry how the current legal entity and group insurance surveillance system has been shaped over the last thirty years, and most of the tools in that system are regulator only and use data from many regulatory filings. The macroprudential surveillance system the Task Force is building out will rely heavily on the same data and tools of the legal entity and group surveillance system, particularly in the early years of development.

Finally, Superintendent Cioppa stated that the NAIC is committed to working in an open manner where possible, ensuring our efforts include different ideas and opinions from regulators and all parties interested in the NAIC work. Though regulators may not always agree with interested parties on specific points and outcomes, this Task Force has worked very well with interested parties to date, and the Chair and Vice Chair intend to see that dynamic continue in the ongoing work.

Moving to address specific comments received, Superintendent Cioppa thanked the American Council of Life Insurers (ACLI), the National Association of Mutual Insurance Companies (NAMIC), and Travelers for their comments. He summarized the resolution of their comments:

• With respect to the ACLI comments, Superintendent Cioppa referenced his final general comment and agreed that the Liquidity Study Group has been a good model for dealing with complex and complicated work in a more focused, time-sensitive manner while ensuring those entities impacted are able to participate in the development work. He indicated the Macroprudential Working (E) Group will use other study groups with key state insurance regulator and industry participants to address some of the detail work included in its charges.

• To address NAMIC, Superintendent Cioppa referenced his general comments. The macroprudential surveillance system the Task Force is developing will have to review the existing data and tools from the legal entity and group insurance surveillance system. This will include assessing what works well for macroprudential purposes and considering ways to aggregate and manipulate existing data to tailor the outcomes for macroprudential needs. While the Task Force has no specific plans for new data collections across the entire industry, state regulators cannot guarantee they will not need to create a new data collection tool even in the near term. The Covid pandemic proved that state regulators must keep their options open. Since the existing charges already included language to develop data collection tools “as needed” and “leveraging existing data where feasible,” it is not appropriate to eliminate the term “develop,” and any cost/benefit analysis should be addressed for a specific proposal rather than included in the ongoing charges.

• With respect to the Travelers comments, the charges are drafted broadly to cover ongoing and future work of the Macroprudential (E) Working Group. Much of the microprudential and macroprudential financial analysis work uses historical data to identify potential issues. Thus, limiting the work to “activities” that lead to systemic risk would be too narrow of a charge. For Travelers’ remaining comments, Superintendent Cioppa reported that the Task Force sought feedback from the North American Chief Risk Officer (CRO) Council on the Macroprudential Risk Assessment document and noted that the Macroprudential (E) Working Group will take up that issue as work progresses.

Jonathan Rodgers (NAMIC) asked that the general discussion for this agenda item be made public. Mr. Sells responded that NAIC staff will include Superintendent Cioppa’s general comments in the posted minutes of the Task Force meeting on its website.

Commissioner Lindley-Myers made a motion, seconded by Mr. Spudeck, to adopt the revised charges for the Liquidity Assessment (E) Subgroup and renaming it the Macroprudential (E) Working Group (Attachment Two). The motion passed unanimously.

5. Heard an International Update

Mr. Nauheimer reported that the Individual Insurer Monitoring (IIM) and the Sector-Wide Monitoring (SWM) helped determine the scope for an annual collective discussion by the International Association of Insurance Supervisors (IAIS) on potential systemic risk issues. He added that the collective discussion will take place for the first time since the adoption of the Holistic Framework for Systemic Risk in the Insurance Sector (Holistic Framework) by the IAIS. Mr. Nauheimer explained that the collective discussion will focus on firms identified by a quantitative scoring, as well as some overarching themes related
to financial stability that were identified by expert judgment. He said that the collective discussion will take place at the Macroprudential Committee and Executive Committee meetings at the end of September.

Mr. Nauheimer reported on the following IAIS projects:

- IIM’s ninth annual exercise was completed.
- SWM’s qualitative and quantitative exercise was completed, but work is ongoing to compare to IIM data.
- Re-insurance data for two years is due July 31.
- Publication of the *Global Insurance Market Report* (GIMAR) on climate-affected investments has been delayed until September.
- The IAIS Liquidity Workstream reviewed comments received on the public consultation on the Development of Liquidity Metrics – Phase I and will be working on a Phase II approach that uses a company’s cash-flow projections.
- The IAIS Macroprudential Supervision Working Group reviewed comments received on a draft of the Application Paper on Macroprudential Supervision, and the paper will go to the parent committee for final approval in August.

Mr. Nauheimer said that the NAIC has submitted three sets of questionnaire responses to the IAIS as part of a targeted jurisdictional assessment (TJA) of the implementation of the Holistic Framework’s supervisory materials. He added that the next step in the TJA will be either virtual or in-person meetings by the IAIS with a few state insurance regulators.

6. **Heard a Macroprudential Risk Assessment Update**

Mr. Nauheimer reported that NAIC staff have started to work on the Macroprudential Risk Assessment, which is a risk dashboard outlining proposed risk categories, key risk indicators, and an assessment scale. He added that the Macroprudential (E) Working Group will continue to develop the dashboard, and it plans to submit a draft to the Task Force for input and approval. He explained that the dashboard was shared in a meeting with the CRO Council to obtain some preliminary high-level feedback with industry experts. He added that the NAIC plans to expose the Macroprudential Risk Assessment document more broadly with interested parties in the future with time to comment.

Superintendent Cioppa said that Mr. Nauheimer will also report on the LST template. Mr. Nauheimer announced that the LST template was sent to the ACLI for feedback and once final, it will then be posted on the Task Force’s website for use by the in-scope companies for the 2020 LST.

Having no further business, the Financial Stability (E) Task Force adjourned.
Financial Stability (E) Task Force
Virtual Meeting
May 12, 2021

The Financial Stability (E) Task Force met May 12, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Eric A. Cioppa, Vice Chair (ME); Alan McClain (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by John Rehagen (MO); Eric Dunning represented by Justin Schrader (NE); Linda A. Lacewell represented by Bill Carmello (NY); Jessica K. Altman represented by Melissa Greiner (PA); Raymond G. Farmer represented by Michael Shull (SC); Carter Lawrence (TN); Doug Slape represented by Jamie Walker (TX); and Scott A. White represented by Thomas J. Sanford (VA).

1. Heard Opening Remarks

Commissioner Caride said materials for consideration and discussion for this meeting were sent by email to the member, interested state insurance regulator, and interested party distribution lists for the Task Force and the Liquidity Assessment (E) Subgroup, but they are also available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. Heard an Update on FSOC Developments

Superintendent Cioppa reported that on March 21, the Financial Stability Oversight Council (FSOC) heard an update from the Office of Financial Research (OFR), which addressed hedge fund activities during the market stresses in March 2020, including the relationship between hedge funds’ deleveraging and price declines in certain financial markets. He added that the FSOC will reconvene its Hedge Fund Working Group that last reported in 2016 to enhance interagency data sharing and improve the FSOC’s ability to identify, assess and address potential risks to financial stability related to hedge funds.

Superintendent Cioppa said the FSOC heard a presentation from the Federal Reserve about climate change and its potential impact on financial stability. He added that he made remarks detailing the potential risks to the insurance sector and the work of the NAIC’s Climate and Resiliency (EX) Task Force. He also reported that the Federal Reserve released its semiannual financial stability report that raises concerns about increased leverage and liquidity risk in the life insurance sector, which highlights the importance of the Financial Stability (E) Task Force’s work on a liquidity stress test (LST) for insurers. He noted that the report can be found on the Federal Reserve website.

3. Considered Adoption of its Revised Mission and Charges

Commissioner Caride reported that the comment period for the proposed Task Force’s charges ended May 7. She added that he made remarks detailing the potential risks to the insurance sector and the work of the NAIC’s Climate and Resiliency (EX) Task Force. He also reported that the Federal Reserve released its semiannual financial stability report that raises concerns about increased leverage and liquidity risk in the life insurance sector, which highlights the importance of the Financial Stability (E) Task Force’s work on a liquidity stress test (LST) for insurers. He noted that the report can be found on the Federal Reserve website.

Mr. Schrader made a motion, seconded by Mr. Spudeck, to adopt the amended Task Force mission and charges including the IAIGs edit (see NAIC Proceedings – Summer 2021, Executive (EX) Committee and Plenary, Attachment One). The motion passed unanimously.

4. Considered Adoption of the 2020 LST Framework

Commissioner Caride reported that there are still a few open items to finalize the 2020 LST Framework that are captured in a spreadsheet (Attachment One-A), where it indicates that the American Council of Life Insurers (ACLI) is developing or refining proposals for basis point metrics for the Adverse Liquidity Stress scenario, as well as for the structured spread metrics. She suggested adopting the current version of the 2020 LST Framework document as final and directing the LST Study Group to continue working with the 23 insurers and their lead states, issuing lead state guidance for decisions that would otherwise have been included in the 2020 LST Framework. She clarified that the proposal would end the ability for the public to provide further comments on the 2020 LST Framework document, but she noted that there have been several public comment periods, which
established the concept, background and structure of the LST, including the two regulatory stress scenarios. She added that there will be an opportunity to comment on versions of the 2021 LST Framework document next year during its development.

Ms. Belfi made a motion, seconded by Mr. Schrader, to adopt the 2020 LST Framework (Attachment One-B) as final and direct the LST Study Group to develop lead state guidance as needed. The motion passed unanimously.

5. **Heard an International Update**

Mr. Nauheimer reported that the IAIS is in the process of conducting the following data calls:

- For Individual Insurer Monitoring (IIM): the fourth quarter 2020 COVID-19 and the annual Global Monitoring Exercise (GME).
- For Sector-Wide Monitoring (SWM): the fourth quarter 2020 COVID-19; the annual quantitative GME; the annual qualitative GME; reinsurance; and climate.

Mr. Nauheimer said after results continued to show resilience for the insurance industry, the IAIS decided to suspend quarterly COVID-19 data collections. He added that the IAIS intends to publish a Global Insurance Market Report (GIMAR) on stressed scenarios of climate data in June or July. He noted that NAIC staff are in close consultation with the Climate and Resiliency (EX) Task Force to coordinate both data submission and comments to the IAIS. He added that the IAIS Macroprudential Supervision Working Group (MSWG) released a draft Application Paper on Macroprudential Supervision with comments that were due May 7. He said the MSWG is now in the process of vetting all the comments received.

Mr. Nauheimer reported that the IAIS is conducting a targeted jurisdictional assessment (TJA) of the implementation of the Holistic Framework Supervisory materials on supervisors globally, including the NAIC and state insurance regulators. He explained that the TJAs involve three sets of questionnaires with different due dates for the NAIC to complete, followed by either virtual or in-person meetings, which is similar to an NAIC accreditation review.

6. **Heard a Macroprudential Risk Assessment Update**

Mr. Nauheimer announced the introduction of the Macroprudential Risk Assessment, which is a risk dashboard outlining proposed risk categories, key risk indicators, and an assessment scale. He added that the Liquidity Assessment (E) Subgroup will continue to develop the dashboard, and it plans to have a final draft by the end of the year. He explained that the dashboard will be used for top-down supervision, macro versus micro interplays, and a formal process for identifying systemic risk with input from various sources.

Mr. Nauheimer said the Subgroup plans to do the following:

- Publish the risk dashboard biannually along with existing Risk Alert publications.
- Publish one U.S. insurance industry risk dashboard and consider separate dashboards for life, health, and property/casualty (P/C).
- Publish the Summary and Executive Summary dashboards.

Having no further business, the Financial Stability (E) Task Force adjourned.

<tbody>
<tr>
<td>1. The source of the Baseline scenario should be identified consistently (Section 4.1 and Section 5.1.2). The exposed document appears to identify inconsistently the source of the Baseline scenario, most notably the economic assumptions within that scenario. We understand that the intent is for insurers to use their internal Baseline scenarios and assumptions, and the language of Section 4.1 is consistent with this intent. The references to the Fed’s Baseline scenario in Section 5.1.2, however, create potential confusion. We believe that the references to the Fed’s Baseline scenario are intended solely to determine the degree of stress within the Adverse scenario. Assuming that this is the case, we recommend appropriate clarifications within Section 5.1.2 and Annex 2i.</td>
<td>Add the references to the Fed’s Baseline scenario are intended solely to determine the degree of stress within the Adverse scenario.</td>
<td>ACLI</td>
</tr>
<tr>
<td>2. A provision permitting prudent modeling simplifications should be added (Section 5). For both the Adverse scenario and the Interest Rate Spike scenario, we request that regulators explicitly allow for a simplification whereby shocks may be reflected on day 1 of the stress period vs. at specific points in time during the stress period if the practice can be demonstrated or reasonably assumed to be more conservative.</td>
<td>Regulators are supportive of this concept.</td>
<td>ACLI</td>
</tr>
<tr>
<td>3. The degree of stress within the Adverse scenario should be described consistently (Section 5.1). The exposed document appears to characterize inconsistently the degree of stress to be applied under the Adverse scenario. In a couple of places, the level of stress is characterized as akin to the 2007-09 financial crisis. Our understanding, which is outlined in Section 5.1.2 and Annex 2i, is that regulators desire to utilize the 2017 Fed CCAR Adverse scenario, which applies a more moderated degree of stress. We would appreciate clarifications where appropriate and a single, harmonized approach to the Adverse scenario within the framework document.</td>
<td>Changed description.</td>
<td>ACLI</td>
</tr>
<tr>
<td>4. To promote consistency, the prescribed Fed-generated scenario stress should be translated into basis point shocks (Section 5.1.2). Section 5.1.2 requires insurers to run the Adverse liquidity stress scenario using specific values from the Fed’s stress-testing exercise for banks. It is our understanding that the intent is: (1) for the companies to use internal baselines for the Baseline scenario and (2) for the direction and magnitude of the Adverse stress scenario to be consistent with that of the prescribed Fed-generated scenario as measured from the original scenario date, and the direction and magnitude of the Adverse stress scenario would be applied to the Baseline scenario. We believe that the relevant economic and regulatory prescribed assumptions should be translated into basis point shocks to ensure more uniformity in insurers’ interpretations of the stressed economic environment. We understand that regulators have suggested that the projected path of ten-year Treasury rates should be translated to quarterly percentage increases, with a 10 bps minimum increase. Although this guidance is helpful, we have questions about the appropriateness of extending this construct to a variety of metrics. Overall, it would be helpful to establish a process that ensures that the Adverse stress scenario is constructed and applied consistently across the industry. We would be pleased to offer our assistance in this process.</td>
<td>ACLI is working on its proposal - we will finalize as lead state guidance for 2020 LST.</td>
<td>ACLI</td>

</tr>
<tr>
<td><strong>5. A provision directing companies to produce assumptions consistent with stated Moody’s values should be added for asset classes not covered by Moody’s (Sections 5.1.7, 5.1.8, 5.1.9).</strong> Sections 5.1.7, 5.1.8 and 5.1.9 refer to Moody’s tables for use in determining credit migrations, defaults, and recoveries. Other asset classes (structured credit, CMBS, MBS, other ABS, etc.) are not explicitly addressed. The framework document should more clearly direct companies to create “own” assumptions consistent with the Moody’s tables. This may be related to the requested clarification of “illustrative value” (see 9c, below).</td>
<td>Added language for companies to create “own” assumptions consistent with the Moody’s tables or reference Moody’s structured tables.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>6. Detailed specifications for the “What If” modification of the Adverse scenario should be provided (Section 5.1.10).</strong> Section 5.1.10 describes the “What If” modification of the Adverse scenario. The exposed framework document indicates that the “What If” modification “allows for insurers to use established funding commitments” including existing Home Loan Bank (FHLB) commitments. It further allows the rollover of expiring facilities “but eliminates the ability of the insurer to access additional extraordinary internal and external funding sources to satisfy any liquidity deficiency under stress.” We understand that, since the exposure, regulators would like to alter the “What If” modification to limit all external funding sources, including existing FHLB obligations and rollovers, and to prohibit any internal extraordinary transactions to make the scenario more stressful.</td>
<td>LST Study Group regulators emphasized the need for this “what if” data for macroprudential purposes. Again, the “What If” is not meant to represent how internal transfers would realistically play out during a crisis - that is what the adverse stress scenario itself is meant to represent. The “What If” variation is to establish quantitative concepts for “outer limits” asset sales by category to provide context for macroprudential concerns and discussions.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>7. The requirement to provide the insurer’s worst-case scenario information should be eliminated in future reporting (Section 5.3).</strong> Section 5.3 requires insurers to provide a narrative of their most severe internal liquidity stress scenario. We observe that companies will have provided essentially the same information on or before June 1st via the COVID-19 special reporting, but we understand the desire of regulators to have this information through the cashflow template at the group level for educational purposes. After this year, the educational purpose will have been largely fulfilled and regulators should consider that many companies provide information on their binding scenario(s) to their domestic regulators through ORSA and other means. We ask that this requirement be eliminated in future reporting after this year.</td>
<td>Regulators will consider when working on future LST requirements.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>8. Reporting for the What If modification of the Adverse scenario should be clarified (Section 7).</strong> For the “What If” modification of the Adverse scenario, the framework document is currently unclear as to which reporting templates are to be submitted and whether they are to be submitted at the legal entity or group level. Our understanding is that regulators want only the asset sales template at the group level. Assuming that our understanding is correct, we would appreciate appropriate clarifications within the framework document.</td>
<td>Clarified template reporting expectations in Section 7.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>B. Recommended Baseline and Adverse stress spreads for structured credit instruments.</strong> Section 5.1.4 directs the industry to recommend year-end Baseline structured spreads. There is also a need to include uniform structured spreads for the Adverse stress scenario. ACLI is still developing a recommendation, and we aim to deliver a proposal in the coming weeks.</td>
<td></td>
<td>ACLI</td>
</tr>
</tbody>
</table>
### C. Conclusion.

We believe that the LST framework may require a fair amount of refinement, even after it is "finalized" at the end of April. We recommend establishing a Q&A process whereby questions can be submitted and addressed throughout the course of the 2021 exercise. The LST Study Group will continue to meet as needed during 2021 to address any issues. Lead State guidance will be developed as needed once the LST Framework has been "finalized." 

Regarding the scope of companies to which the LST applies, you could consider whether some sort of exception application or exclusion testing may be appropriate. We support the option shown on page 10 indicating that the "lead state regulators should have the ability to consult with the Task Force and require the LST from an insurer not meeting the scope criteria," since an Annual Statement based scope definition may inadvertently miss companies with high liquidity risk exposure. The reverse may also be true, i.e., an insurer with a relatively low liquidity risk profile may be incorrectly included under this approach. 

We also support the specific requirements that the Chief Investment Officer provide oversight and commentary regarding the approach to determining asset market values upon sale in an adverse liquidity scenario (p. 27). This will be particularly important for illiquid securities, since market prices in a crisis will be hard to establish. You could also consider whether a certification from the CIO might also help ensure that careful consideration is given to the appropriateness of the asset valuation results. 

Companies are requesting a September 30, 2021 Filing Deadline. No specific date deadline has been discussed; only "3rd Quarter." Regulators support this request since we are "finalizing" the 2020 LST Framework doc in mid-May and there will likely still be Lead State guidance provided after that. However, they indicated that as a result, less flexibility will be able to be allowed for insurers needing more time given the need to review and assess results prior to the Dec. national meeting.

<tr>
<td>Various edits throughout the LST Framework for clarity and flow.</td>
<td>Edits were made and are marked in track changes.</td>
<td>Review</td>
</tr>
<tr>
<td><strong>9.a. Section 2.2, Time Horizons, includes the following statement:</strong> “We do acknowledge liquidity risk may exist in shorter time horizons, but this is viewed as a cash management/Treasury function as part of the daily operations of individual insurers that would not affect the industry as a whole. Many insurers do have shorter term time horizons (7-days for example) as part of their internal liquidity stress testing framework. A 7-day time horizon may be appropriately applied to specifically ‘identified activities’ within an entity, such as posting collateral.” We recommend removing the struck-through language as the NAIC has determined that a 7-day time horizon is inappropriate. The IAIS reached the same conclusion in their liquidity consultation.</td>
<td><em>Consider edited version as follows:</em> We do acknowledge liquidity risk does exist with respect to shorter time horizons and that many insurers do consider shorter time horizons (7-days for example) as part of their internal liquidity stress testing framework. This is viewed as a cash management/Treasury function impacting the daily operations of individual insurers, however, that would not affect the industry as a whole. Hence, these considerations are typically reviewed as part of individual/microprudential surveillance efforts in the U.S.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.b. In Section 4.1, Baseline Assumptions for Cash Flows,</strong> language in the framework document reads, “These cash flow projections should be consistent with those used for internal financial planning and analysis (FP&amp;A), risk management, etc.” We recognize the value of having consistency between assumptions in the Baseline scenario and assumptions that are used for internal purposes. However, we think the current language is overly specific in identifying the models with which the Baseline scenario should be consistent. We suggest the following clarification: “These cash flow projections should be consistent with those used for internal baseline liquidity forecasts, such as those used for financial planning and analysis (FP&amp;A), risk management, etc.”</td>
<td>Change made as requested.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.c. In Section 5, Introduction,</strong> the term “Illustrative value” is used in the following sentence: “If there is no specific value included in the 2020 LST Framework and instead there is an illustrative value, the company should use a value consistent with the illustrative value.” This term is not used elsewhere in the framework document and should be clarified or modified.</td>
<td>Inserted language: “For example, guidance is given below on using Moody’s values for migration, default and recoveries. However, insurers may use S&amp;P data or other appropriate data values.”</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.d. In Section 5.1.2,</strong> our understanding is that the intent is to use Q4 2020 actuals, with the first projection quarter being Q1 2021. This should be updated accordingly.</td>
<td>Agree. Added clarification to 5.1.2</td>
<td>ACLI</td>
</tr>
<tr>
<td>COMMENT</td>

<tr>
<td><strong>9.e. In Section 6, Available and Expected Asset Sales, new language in the framework reads “Regulators expect robust disclosures around the chief investment officer’s assumptions and decisions on expected asset sales.” Although we recognize the value of the involvement of senior investment professionals in the LST, we do not think it is necessary to require the involvement of a specific individual. We would appreciate more generic language on this topic, such as “the company’s assumptions...” or “the investment team’s assumptions...” or “the chief investment officer or CIO delegate’s assumptions...”</strong>.</td>
<td>Agree. Added clarification to 6.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.f. In Section 7, the reporting instructions should expressly indicate the scenarios for which the cash flow sources and uses templates are required. It is our understanding that the templates would be required for the Baseline scenario, for the Adverse scenario, and for the Interest Rate Spike scenario at both the individual entity level and the group level and for the “Worst Case” scenario at the group level only. As noted above, it would not be required for the “What If” modification of the Adverse scenario.</strong></td>
<td>Revised section 7 to spell out these expectations. Including for the &quot;what if&quot; variation of the adverse liquidity stress test for insurers scenario and the company's own worst case scenario. Further refinements to the templates, particularly for the company's own worst case scenario, will likely occur as lead state guidance.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.g. In Section 7, we do not understand why certain boxes are greyed out in the Liquidity Sources and Uses template.</strong></td>
<td>Inserted updated templates.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>9.h. The Section 7 description of the narrative requirements of internal stress testing systems and processes should be aligned with Section 2.3. Section 2.3 indicates that &quot;insurers should provide a narrative description of their internal liquidity stress testing system and processes, including for example their materiality thresholds for stressed cash flows and methodology for converting foreign currencies to US dollars (see Section 7 Reporting)&quot; [emphasis added]. The italicized portion of the sentence above is not found in the corresponding bullet in Section 7. More generally, our understanding is that regulators would like, where appropriate, to have some understanding of how FX rates are used in internal processes. We think that is appropriate and would not support mandated currency conversions.</strong></td>
<td>Added specific language from Section 2.3 in Section 7. Regulators indicated they would not specify FX methodologies - and thus insurers can use their own processes. However, regulators DID express the need for US dollar results.</td>
<td>ACLI</td>
</tr>

<tr>
<td>---------</td>
<td>-----------------------------------------------</td>
<td>--------</td>
</tr>
<tr>
<td>9.i. In Section 7, we request confirmation of the required practices around margin and collateral. For margin, the Sources and Uses template includes Initial Margin (IM) and Variation (VM) as a source. We request confirmation of this intent, noting that it is inconsistent with some internal practices, which exclude all margin received from sources unless trades are settled. For collateral, the reporting templates exclude “Other Collateral Received” (Sources) and “Other Collateral Sent” (Uses), and we would appreciate clarification and confirmation that non-cash collateral is to be excluded from the reporting templates.</td>
<td>The categories are included in the template because an insurer may consider these as sources and uses in the base case template. However in stress scenarios, these categories may not be considered as a source or use.</td>
<td>ACLI</td>
</tr>
<tr>
<td>9.j. Annex 1 outlines the original scope criteria with annual statement references. While these criteria are relevant for the current exercise, it may be appropriate to update the references for future iterations of the LST.</td>
<td>Agree, these references should be updated as needed for future LST iterations.</td>
<td>ACLI</td>
</tr>
<tr>
<td>9.k. Annex 2iii provides both placeholder categories and references for structured spreads. ACLI’s recommendation will be forthcoming. Once these are finalized, Annex 2iii should be updated.</td>
<td>ACLI is refining the recommendation per recent discussions - we will finalize as lead state guidance for 2020 LST.</td>
<td>ACLI</td>
</tr>
<tr>
<td>A provision permitting prudent modeling simplifications should be added (Section 5). For both the Adverse scenario and the Interest Rate Spike scenario, we request that regulators explicitly allow for a simplification whereby shocks may be reflected on day 1 of the stress period vs. at specific points in time during the stress period if the practice can be demonstrated or reasonably assumed to be more conservative.</td>
<td>Regulators agreed to allow this option.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>COMMENT</strong></td>
<td><strong>LST STUDY GROUP REGULATOR RESPONSE/CHANGE MADE</strong></td>
<td><strong>SOURCE</strong></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>Detailed specifications for the “What If” modification of the Adverse scenario should be provided (Section 5.1.10). Section 5.1.10 describes the “What If” modification of the Adverse scenario. The exposed framework document indicates that the “What If” modification “allows for insurers to use established funding commitments” including existing Federal Home Loan Bank (FHLB) commitments. It further allows the rollover of expiring facilities “but eliminates the ability of the insurer to access additional/extraordinary internal and external funding sources to satisfy any liquidity deficiency under stress.” We understand that, since the exposure, regulators would like to alter the “What If” modification to limit all external funding sources, including existing FHLB obligations and rollovers, and to prohibit any internal extraordinary transactions to make the scenario more stressful. We urge the regulators to reconsider this approach and, instead, maintain the language as drafted in the current framework exposure. Our view is that the suggested treatment of existing FHLB obligations, which would eliminate one of the primary tools that insurers have established to manage liquidity stresses, is not plausible even under a severe stress. Further, we believe all internal funding mechanisms, including extraordinary actions, should be allowed to the extent regulatory approval is not required, as that is how internal transfers would realistically play out during a crisis.</td>
<td>1. Prohibit any internal extraordinary transactions (i.e., actions taken in response to the stress rather than ongoing agreements or in response to a liquidity deficiency). Intragroup “Keep well” agreements would be considered extraordinary transactions. 2. Restrict ALL External Funding Sources including FHLB; thus no new FHLB draws/obligations and no rollovers of existing FHLB facilities.</td>
<td>ACLI</td>
</tr>
<tr>
<td><strong>Rationale for 1</strong>: The &quot;What If&quot; is not meant to represent how internal transfers would realistically play out during a crisis - that is what the adverse stress scenario itself is meant to represent. The &quot;What If&quot; variation is to establish quantitative concepts for &quot;outer limits&quot; asset sales by category to provide context for macroprudential concerns and discussions. We do not specify a stress scenario or event that precludes the internal transfer - we simply indicate the internal transfers are not able to occur (despite the unrealistic nature). Since the Group Level templates simply add up the Legal Entity Level templates (not required to be submitted for the 2020 LST), we need the Legal Entity Assets templates to reflect the asset sales using ONLY that Legal Entity’s existing resources in order to establish this outer limits asset sales figures for the group (and when aggregated, for the industry).</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Rationale for 2</strong>: Again, this is supposed to be the &quot;outer limit&quot; of asset sales that could occur - not a reasonable amount or including a reasonable use of FHLB resources. While amounts from existing FHLB sources will not be canceled, rollovers may not occur.</td>
<td></td>
<td></td>
</tr>

NAIC 2020 LIQUIDITY STRESS TEST FRAMEWORK
For Life Insurers Meeting the Scope Criteria

May 2021

DRAFT
Table of Contents
INTRODUCTION

Macroprudential Implications of a Liquidity Stress

Beginning mid-year 2017, the NAIC embarked on a project to develop a liquidity stress testing framework. While the NAIC has existing tools and processes for assessing liquidity risk at a legal entity level (i.e., ‘inward’ impacts to the insurer), there was recognition that the NAIC toolbox could be further enhanced with the addition of more granular data in the annual statement and a tool that would enable an assessment of macroprudential impacts on the broader financial markets (i.e., ‘outward’ impacts) of a liquidity stress impacting a large number of insurers simultaneously.

Post-financial crisis, there were several attempts to assess potential market impacts emanating from a liquidity stress in the insurance sector. Many of these analyses relied heavily on anecdotal assumptions and observations from behaviors of other financial sectors. To provide more evidence-based analyses, the NAIC decided to develop a Liquidity Stress Test (LST) Framework for large life insurers that would aim to capture the outward impacts on the broader financial markets of aggregate asset sales under a liquidity stress.

The stress test will be run annually and the findings, on an aggregate basis, reported annually as part of the NAIC’s continuous macroprudential monitoring efforts. The NAIC’s pursuit of the liquidity stress test should not suggest any pre-judgement of the outcomes. The NAIC believes there is value to the exercise whether it points to vulnerabilities of certain asset classes or markets or, alternatively, suggests that even a severe liquidity stress impacting the insurance sector is unlikely to have material impacts on financial markets. The NAIC liquidity stress testing framework is intended to supplement, not replace, a firm-specific liquidity risk management framework. The NAIC has not yet discussed steps that might be taken to address any identified vulnerabilities but acknowledges that any recommendations may require collaboration with other financial regulators.

The NAIC’s revised proposed liquidity stress testing framework is contained in the pages that follow. The NAIC recognizes that, at least in the early years, the stress testing process and
analyses will be iterative. We expect refinements as the framework is developed, especially after the first year’s implementation.

**BACKGROUND**

**NAIC Macroprudential Initiative**

The NAIC’s Macroprudential Initiative (MPI) commenced in 2017. It recognized the post-financial crisis reforms that became part of our Solvency Modernization Initiative (SMI) that continue to serve us well today. However, in the ensuing years since those reforms, insurers have had to contend with sustained low interest rates, changing demographics and rapid advancements in communication and technology. They have responded by offering new products, adjusting investment strategies, making structural changes, and expanding into new global markets. There are new market players, new distribution channels, and a complex web of interconnections between financial market players.

What has not changed since the financial crisis is the scrutiny on the insurance sector in terms of understanding how insurers react to financial stress, and how that reaction can impact, via various transmission channels, policyholders, other insurers, financial market participants, and the broader public.

The proposed work on macroprudential measures is reflective of the state insurance regulators’ commitment to ensure that the companies they regulate remain financially strong for the protection of policyholders, while serving as a stabilizing force to contribute to financial stability, including in stressed financial markets. To that end, the NAIC’s three-year strategic plan (2018-2020), “State Ahead”, reflects the objective of “Evaluating Gaps and regulatory opportunities arising from macroprudential surveillance, and develop appropriate regulatory responses.”

The NAIC’s work on macroprudential surveillance is overseen by the Financial Stability Task Force of the NAIC Executive Committee. In April 2017, the Task Force was asked to consider new and improved tools to better monitor and respond to both the impact of external financial and economic risks on supervised firms, as well as the risks emanating from or amplified by these
firms that might be transmitted externally. The Task Force, in turn, focused its efforts on potential enhancements to identify and monitor liquidity risk, among other areas. More specifically, the Task Force was requested to further develop the U.S. regulatory framework on liquidity risk with a focus on life insurers due to the long-term cash-build up involved in many life insurance contracts and the potential for large scale liquidation of assets.

**Liquidity Assessment Subgroup**

To carry out its work on assessing liquidity considerations, the Task Force established the Liquidity Assessment Subgroup (“Subgroup”) mid-year 2017.

**Mandate**

The charges and workplan of the Subgroup reflect the following assignments:

- Review existing public and regulator-only data related to liquidity risk, identify any gaps based on regulatory needs and determine the scope of application, and propose recommendations to enhance disclosures.

- Develop a liquidity stress testing framework proposal for consideration by the Financial Condition (E) Committee, including the proposed universe of companies to which the framework will apply (e.g., large life insurers).

- Once the stress testing framework is completed, consider potential further enhancements or additional disclosures.

In addition, a small informal study group comprised of regulators, industry participants and NAIC staff was formed to consider the specific data needs and technical aspects of the project. The study group is NOT an official NAIC working group. All recommendations from the study group must be vetted and considered by the Liquidity Assessment Subgroup and/or the Financial Stability (EX) Task Force according to NAIC procedures.
Data Gaps

Prior to undertaking work on the Liquidity Stress Test, the Subgroup constructed an inventory list of existing life insurer disclosures as of 2018 that contribute to an understanding of liquidity risk. When assessing the current state, the Subgroup recognized the availability of significant detailed investment-related disclosures but contrasted it to the relatively sparse liability-related disclosures. To remedy this imbalance, a blanks proposal was constructed to significantly increase the disclosures for life insurance products.

Specifically, the Analysis of Operations by Line of Business schedule was expanded from a single exhibit to five exhibits, one each for Individual Life, Group Life, Individual Annuity, Group Annuity, and Accident and Health. The Analysis of Increase in Reserves schedule was similarly expanded. Within each of the five new exhibits, columns were added for more detailed product reporting. For example, columns were added to the Individual and Group Life exhibits to capture universal life insurance and universal life insurance with secondary guarantees, and columns were added to the Individual and Group Annuity exhibits to capture variable annuities and variable annuities with guaranteed benefits. In addition, two new lines were added to the now five exhibits of the Analysis of Increase in Reserves schedule: one capturing the cash surrender value of the products outstanding and another capturing the amount of policy loans available (less amounts already loaned). A new addition was also proposed to the Life Notes to Financial Statement. The new Note 33 considered the type of liquidity concerns disclosed in Note 32 for annuities and deposit-type contracts and added disclosures for life insurance products not covered in Note 32.

These proposals were exposed and commented upon several times at the Liquidity Assessment Subgroup, the Financial Stability (EX) Task Force, and at the Blanks (E) Working Group. Ultimately, they were adopted by NAIC Plenary for inclusion in the 2019 Life Annual Statement Blank. As an interim step, The Financial Stability Task Force performed a data call requesting a few key lines of information from the newly adopted 2019 format of the Analysis of Operations by Line of Business schedule and the Analysis of Increase in Reserves schedule, as well as the new Note 33, but populated with 2018 year-end data. This data call was completed in July 2019.
Discussions with Insurers

During the latter part of 2017 and first quarter of 2018, the Subgroup conducted calls with several large life insurers who agreed to share their internal liquidity risk assessment processes. The dialogue provided extremely helpful input and informed the establishment of the initial direction of the Liquidity Stress Testing Framework. Feedback from these discussions include:

• Scope criteria should be risk-focused, not solely based on size.
• Stress test framework should align with internal management reporting and leverage the ORSA.
• Stress test should be principle-based and complement a company’s internal stress testing methodology.
• Regulatory guidance should be provided to help define liquidity sources and uses, products/activities with liquidity risk, time horizons, level of aggregation, reporting frequency, and establishing stress scenarios.
• Public disclosure of results should be carefully considered to avoid exacerbating a liquidity crisis.

Regarding the specifics of liquidity assessments/stress test approaches, significant diversity in practice exist. Key observations in this regard included:

• Liquidity tests are performed at the material entity level and at the holding company level. Definitions of material entities differ.
• Most firms determine some sort of coverage ratio (Liquidity Sources) / (Liquidity Uses), for Base and Stress scenarios and monitor results to ensure they align with the firm’s (internal) risk appetite. Categories of liquidity sources and uses differ across firms and assumptions vary depending on time horizon. Some insurers determine coverage ratios utilizing balance sheet values, applying different haircuts by asset class, time horizon and type of stress. Other insurers determine liquidity coverage gaps (Liquidity Inflows – Liquidity Outflows) utilizing a cash flow approach.
• Stress scenarios vary by company, reflecting a combination of market-driven, as well as idiosyncratic and insurer-specific scenarios.
- Time horizons tested also vary, typically ranging from 7 days to 1 year.

**Regulatory Goals of the Liquidity Stress Test**

- The primary goal of this liquidity stress testing, and the specific stress scenarios utilized, is for macroprudential uses – to allow the FSTF regulators to identify amounts of asset sales by insurers that could impact the markets under stressed environments. Thus, the selected stress scenarios are consciously focused on industry-wide stresses – those that can impact many insurers within a similar timeframe. These may not be the most stressful scenarios for specific legal entity insurers, or even their groups. Regulators have indicated the liquidity stress testing is also meant to assist regulators in their micro prudential supervision, in the context of being helpful for domiciliary and lead state regulators to better understand liquidity stress testing programs at those legal entities and groups. There is no intent to require these stress scenarios to be used by individual insurers for some sort of assessment or regulatory intervention mechanism. Similarly, there has not been any consideration given to requiring them in the management of any entities in receivership.

- Regulatory concerns regarding liquidity risk for legal entity insurers and/or groups is more about the stress scenarios of most concern to those entities (not those identified for macro prudential purposes). Similarly, when considering liquidity risk at a legal entity and/or group, regulators need to understand the insurer’s entire risk management framework. Much of this understanding may come from the ORSA filings. Thus, the LST is not meant to be a legal entity insurer requirement, or used as a ranking tool, etc. However, it is recognized that simply reviewing these LST results may help regulators better understand the role of liquidity stress testing within the entities – which may result in more questions and information requests regarding the entities’ own liquidity risk management framework and dynamics of their internal liquidity stress tests.

Section 1. Scope Criteria for Determining Groups Subject to 2020 LST

In determining the companies subject to the liquidity stress test (LST), consideration was given to activities assumed to be correlated with liquidity risk. Another consideration was the desirability of tying data used in the criteria back to the statutory financial statements. Ultimately six activities were identified. Those activities are Fixed and Indexed Annuities, Funding Agreements, Derivatives, Securities Lending, Repurchase Agreements and Borrowed Money. Minimum thresholds were established for each of these six activities. A life insurance legal entity or life insurance group exceeding the threshold for any of the six activities is subject to the stress test (see Annex 1 for more details).

While the scope criteria only utilize statutory annual statement data, the stress test is not similarly limited. Thus, the stress test will consider many more liquidity risk elements than the scope criteria, and internal company data will be the source for many of those elements.

Just as the liquidity stress test structure and methodology may change over time, the scope criteria may also be modified, for example, in response to new data points in the NAIC Annual Statement Blank. The scope criteria will be reviewed annually.

Using the agreed criteria, NAIC staff obtained the amounts for all life insurance legal entities from the 2018 annual statutory financial statements (filed by March 1, 2019). If two or more life insurers were part of an insurance group with an NAIC group code, then the numbers for each of those legal entity life insurers was summed together to represent an insurance group result. Thus, a legal entity life insurer not in an insurance group can meet the threshold on its own, or the sum of legal entity life insurers in a group could meet the threshold. Twenty-three insurance groups met the initial scope criteria.

In establishing whether an insurer or group met or exceeded the threshold criteria, the Subgroup members supported using the most current single year activity rather than a multi-year average.
This resulted in coverage amounts ranging from 60% to 80% of the industry total for each activity based on 2018 data. It was recognized that using single year activity could result in more instances of an insurance group being in scope one year and out of scope the next, but regulators viewed it more important to have the most recent financial data utilized for determining scope. To address concerns about insurers moving in and out of scope, regulatory judgment will be used to address an insurer’s exit from or entry to the scope of insurers subject to the liquidity stress test. The lead state regulator will consult with the Task Force in determining when it is appropriate to remove an insurer from the LST requirement if it no longer meets the scope criteria. Similarly, lead state regulators should have the ability to consult with the Task Force and require the LST from an insurer not meeting the scope criteria (e.g., an insurer close to triggering the scope criteria for more than one year).

Section 2. Liquidity Stress Test

2.1 Summary

The stress testing framework employs a company cash flow projection approach incorporating liquidity sources and uses over various time horizons under a baseline assumption and some number of stress scenarios (for 2020 there are 2 stress scenarios and also an insurer-specific request for information). The available assets are then recorded by asset category. The framework then calls for identification of expected asset sales by category, or other funding as allowed in the stress test, to cure any cash flow deficits (liquidity uses exceed liquidity sources) under the stress scenarios. The stress tests are to be performed at the legal entity level; the aggregated group does not perform the LST.

2.2 Time Horizons

The time horizons chosen by regulators are 30 days, 90 days, and 1 year, because, overall, insurance products are designed to be for the benefit of customers as risk protection over the long term and not designed to provide short term liquidity like other financial products. Historical experience in times of stress demonstrate slow policyholder reaction in short periods of time, as opposed to an event that occurs over months or years. Features designed to protect the long-
term nature of the product for the policyholders ultimately reduce the likelihood of policyholder reaction to short-term volatility in markets. Therefore, evaluating shorter than 30-day time horizons has been deemed not warranted for the overarching macroprudential purpose of gauging liquidity risk in the Life insurance industry.

Policyholders do not “run” from an insurer in times of economic stress to the extent depositors do from a bank, because insurance is purchased to obtain the protection insurance provides, not as a source of liquidity or discretionary funds. In the United States, life insurance and annuities are purchased primarily for long-term financial protections upon death or retirement. Surrendering a life insurance contract to harvest its cash surrender value would leave the policyholder without death benefit protection that would be expensive or impossible to replace at a future date. Surrendering a variable annuity contract would lock in potentially temporary decreases in account value and could result in the loss of living benefit protection that becomes more valuable when market conditions depress account values below trigger points. Further, mitigating contract features such as surrender charges and the insurer’s right to delay the processing of withdrawals and surrenders for up to 30 days are common.

There are also non-contractual mitigating factors at play, such as potential negative tax consequences, that further reduce the short-term nature of liquidity risk for life insurers.

Simply put, policyholders are highly disincentivized to give up the likely irreplaceable protection for which they have already paid. The run-like mass surrender of insurance policies would require large numbers of policyholders to act against their self-interest.

From a holistic risk perspective, liquidity stress is traditionally experienced on the asset side. One short-term consequence of market turmoil could be a requirement to post collateral in connection with existing derivative contracts. However, even in this scenario, collateral is typically posted in the form of securities, so a demand for cash is not generated.

We do acknowledge liquidity risk does exist with respect to shorter time horizons and that many insurers do consider shorter time horizons (7-days for example) as part of their internal liquidity stress testing framework. This is viewed as a cash management/Treasury function impacting the
daily operations of individual insurers, however, that would not affect the industry as a whole. Hence, these considerations are typically reviewed as part of individual/microprudential surveillance efforts in the U.S.

2.3 Insurer’s Internal Liquidity Stress Testing System

Insurers are to use their own internal liquidity stress testing system to perform the regulatory LST, adjusting for regulatory assumptions, metrics, etc., as specified in this document. For example, assessing materiality of stressed cash flows for inclusion in the liquidity uses and sources templates is per the insurer’s own internal methodology, but determining which legal entities are to perform the LST and report on those templates is specified in this document. Insurers should provide a narrative description of their internal liquidity stress testing system and processes, including for example their materiality thresholds for stressed cash flows and methodology for converting foreign currencies to US dollars (see Section 7. Reporting). The stress scenarios may vary from year-to-year and contain variations referred to as “What-if” scenarios. The following sections provide a further description of each of the key components of the framework.

Section 3. Legal Entities Required to Perform the LST for Insurers Meeting the Scope Criteria

The scope of entities included within an insurance group for the purposes of liquidity stress testing to assess the potential for large scale liquidation of assets (i.e., the legal entities within the group which should perform the LST), should include:

- U.S. Life insurance legal entities, including reinsurers, regardless of corporate structure, so including captive (regulators specifically want all U.S. life insurance/reinsurance legal entities to perform the 2020 LST for informational purposes – future LST iterations may see a materiality consideration added);
  - Non-guaranteed/market value separate accounts are not included in the 2020 LST. However, regulators may want to perform a separate account study in the future. The current thinking is that even though non-guaranteed/market value separate accounts may experience asset sales during stressed
environments, those sales are at the policyholder’s discretion and do not generate liquidity stress for the insurer/group. As such they are deemed other market activity rather than insurance entity activity. Thus, for annuities that provide both non-guaranteed and guaranteed benefits, insurers should only include the cash flow impact of the guaranteed benefits.

- Non-U.S. life insurance/reinsurance legal entities should perform the 2020 LST if they pose material liquidity risks to the U.S. group (see below on non-U.S. legal entities).

- Where applicable, holding companies that could be a source or draw of liquidity to the life insurance legal entities; and

- Non-life insurance entities and non-insurance entities with material sources of liquidity, or that carry out material liquidity risk-bearing activities and could, directly or indirectly, pose material liquidity risk to the U.S. group. This materiality consideration should occur within the context of the specific stress scenario (and “what if” modification if applicable). The materiality criteria and initial list of legal entities in scope should be reviewed by the lead state regulator and modified by the insurer as needed based on regulator direction.

  - Non-U.S. legal entities (including non-U.S. holding companies) are subject to this materiality consideration and should be subject to performing the LST if they pose material liquidity risk to the U.S. group.

  - U.S. non-life insurers and reinsurers are not automatically exempted. If the U.S. non-life insurer poses material liquidity risk, per the stress scenario, to the U.S. group, then that legal entity insurer should perform the LST.

- Legal entity asset managers and mutual funds (both U.S. and non-U.S.) are excluded from performing the 2020 LST.

  - However, those legal entities performing the LST (e.g., holding companies that could be a source or use of liquidity for the life insurers) must reflect any material stressed cash flows from/to the legal entity asset manager/mutual fund in their 2020 LST results (e.g., the liquidity sources and liquidity uses templates, as they
do with any other type of legal entity that has material stressed cash flows from/to the legal entities performing the LST).

- If such material stressed cash flows from/to the legal entity asset manager/mutual fund exist, the regulators want specific disclosures on those in the results (either by adjusting the templates to include a line for these and/or in the narrative/explanatory disclosures submitted along with the templates).

- Examples of when such legal entity asset manager/mutual fund considerations and disclosures would need to be made for a specific stress scenario include:
  - If the holding company or another legal entity(ies) in the group is expected to fund a material liquidity shortfall of a mutual fund/asset manager (i.e., redemptions exceed the ability to sell assets), then the expected cash flows must be reflected (especially where there are established inter-affiliate support agreements);
  - If the holding company or another legal entity(ies) in the group is expected to provide capital to the mutual fund/asset manager or is expecting dividends from them, the material expected cash flows must be reflected; and
  - If the asset manager manages financial instruments under which it retains some risk, such as new European CLOs, or has contractual risk retention agreements for US CLOs, the required risk retention limit (5% for Europe) must be reflected if sourced from the holding company or another legal entity(ies) in the group and considered material.

- Legal entity banks (both U.S. and non-U.S.) are excluded from performing the 2020 LST.

- However, those legal entities performing the LST (e.g., holding companies that could be a source or use of liquidity for the life insurers) must reflect any material stressed cash flows from/to the legal entity bank in their 2020 LST results (e.g., the liquidity sources and liquidity uses templates, as they do with any other type of legal entity that has material stressed cash flows from/to the legal entities performing the LST).
If such material stressed cash flows from/to the legal entity bank exist, the regulators want specific disclosures on those in the results (either by adjusting the templates to include a line for these and/or in the explanatory disclosures submitted along with the templates).

Examples of when such legal entity bank considerations and disclosures would need to be made for a specific stress scenario include:

- If the holding company or another legal entity(ies) in the group is expected to fund a material liquidity shortfall of a bank, then the expected cash flows must be reflected (especially where there are established inter-affiliate support agreements); and
- If the holding company or another legal entity(ies) in the group is expected to provide capital to the bank or is expecting dividends from them, the material expected cash flows must be reflected.

For 2020, the legal entities identified in the bullets above, per a Company’s ORSA and/or other materiality criteria applied to the specific stress scenario, must be considered as material or identified as carrying out material liquidity risk bearing activities and hence subject to internal liquidity stress testing requirements. Although a legal entity in the group may not be required to perform the stress test due to materiality considerations or exemptions, those entities’ material cash impacts on entities performing the stress test must be captured in the sources and uses templates of the entities performing the LST. The insurer will need to disclose the materiality criteria (agreed upon by the Lead State regulator) used in determining the legal entities subject to the 2020 LST in the submission of its results. Based on the results of the 2020 initial LST exercise, the Subgroup will determine if additional materiality criteria should be developed to ensure better comparability amongst insurers.

Section 4. Cash Flow Approach – Liquidity Sources and Uses

The Liquidity Stress Testing Framework is anchored by a cash flow approach, utilizing companies’ actual cash flow projections of sources and uses of liquidity over various time horizons based
upon experience and expectations. This contrasts with a Balance Sheet Approach, which employs static balance sheet amounts and generic assumptions about asset liquidity. While a Balance Sheet Approach is easier to apply and provides calculation consistency (and thus the perception of increased comparability), its ‘one-size fits all’ approach could result in a misleading assessment of liquidity risk and fail to capture certain asset activities or product features under different stress scenarios and time horizons. The cash flow approach is deemed more dynamic and hence to capture liquidity risk impacts more precisely.

The insurer should produce cash flow projections for sources of liquidity and uses of liquidity that cover: operating items, investments and derivatives, capital items, and funding arrangements. (See Liquidity Sources and Uses templates in Section 7). To clarify an issue regarding funding arrangements, the projected cash flows for liquidity sources and uses should include already existing funding arrangements such as FHLB draws outstanding in the current time period. Also, specific to the holding company, these projected cash flows for liquidity sources and uses should include material non-U.S. impacts as well.

The insurer will produce these liquidity sources and uses cash flow projections in a baseline, normal course of business scenario, for each time horizon. The insurer will also produce these cash flows for each time horizon for a specific number of required stress scenarios (for 2020 there are 2 stress scenarios and also an insurer-specific worst-case scenario).

4.1 Baseline Assumptions for Cash flows

Baseline (pre-stress) cash flows are the insurer-specific cash flows from normal expected operations. Insurers should prepare cash flow projections under normal operating conditions and report the net cash flows (projected liquidity sources less uses) for each time horizon. These cash flow projections should be consistent with those used for internal baseline liquidity forecasts, such as those used for financial planning and analysis (FP&A), risk management, etc. A positive net cash flow is presumed in the baseline cash flows since companies are usually not expected to be operating in a net cash flow deficiency state.
Section 5. Stress Scenarios and their Assumptions

For year-end 2020 there are two regulatory liquidity stress scenarios: an adverse liquidity stress scenario for insurers, and an interest rate spike scenario. There is also an insurer-specific information request for each group’s own most adverse liquidity stress scenario(s). The adverse liquidity stress scenario contains a regulator provided narrative, regulator-prescribed assumptions and company-specific assumptions. The interest rate spike scenario allows all other narrative description components and key metrics (including how much interest rates spike) to be provided by each company. The insurer-specific information request contains a company provided narrative and a description of key company metrics. The regulator provided narrative will be a qualitative description of the specified stress scenario to highlight the particular risks and sensitivities associated with that stress scenario. The regulator prescribed assumptions are specific parameters insurers should incorporate into their process for a particular stress scenario. Company-specific assumptions should be consistent with the information provided in the regulator provided narrative and regulator prescribed assumptions, and represent the detailed assumptions needed for a specific company’s liquidity stress testing process. Examples of where companies should provide their assumptions include: debt issuance, lapse sensitivity, new business sensitivity and mortality sensitivity. Regulators expect insurers to utilize policyholder behavior assumptions (e.g., surrenders and policy loan withdrawals, existence of new sales activity) as well as the insurer’s response (e.g., assuming delays in payment of policyholder benefits), consistent with the severity of the stress, and to provide very thorough explanatory information. All key business activities and product-type impacts to liquidity should be considered by the companies.

If the insurer’s internal model does not utilize a specific economic and/or company-specific assumption included in this document, the internal model does not need to be modified to incorporate it. However, if the insurer’s internal model does utilize a specific economic and/or company-specific assumption included in this document, the insurer must utilize the specific value for that assumption provided in this document. (This emphasizes the macro surveillance benefit of the 2020 LST, allowing for a level of consistency of assumptions across the industry. As
discussed previously, this is not meant to specify assumptions used by the insurers in their own internal liquidity stress testing work.) If there is no specific value included in the 2020 LST Framework and instead there is an illustrative value or suggested guidance, the company should use a value consistent with the illustrative value or suggested guidance. For example, guidance is given below on using Moody’s values for migration, default and recoveries. However, insurers may use S&P data or other appropriate data sources.

5.1 Adverse Liquidity Stress Scenario for Insurers

5.1.1 Narrative

Insurers are required to apply an adverse liquidity stress scenario as one of the two stress scenarios. The following is a summary of market conditions in the adverse scenario extracted from the Federal Reserve Board’s 2017 Supervisory Scenarios for Annual Stress Tests Required under the Dodd-Frank Act Stress Testing Rules and the Capital Plan Rule.

- The adverse scenario is characterized by weakening economic activity across all economies included in the scenario. This economic downturn is accompanied by a global aversion to long-term fixed-income assets that, despite lower short-term rates, brings about a near-term rise in long-term rates and steepening yield curves in the United States and the four countries/country blocks in the scenario. Macroeconomic
  - Real GDP falls slightly more than 2 percent from the pre-recession peak in the fourth quarter of 2016 to the recession trough in the first quarter of 2018.
  - Unemployment rate approaches 7.4%.
  - Headline CPI falls 1.6 %and rises to 2.1 % over the scenario period.
- Interest Rates and Credit Spreads
  - Short-term Treasury rates fall and remain near zero throughout the stress.
  - 10-year Treasury yields rise to 2.7%.
  - Investment Grade (IG) corporate credit spreads widen to approximately 3.75%.
- Asset Valuations
  - Equity prices decline by roughly 40%.
The Volatility Index (VIX) peaks at 34.4

Housing prices and commercial real estate prices decline by 12% and 15% respectively through 8 quarters.

- Description of International Market Conditions
  - Recessions and slowdowns in growth are experienced in the Euro area, United Kingdom, Japan, and developing Asia economies.
  - All foreign economies experience a decline in consumer prices.
  - U.S. Dollar appreciates against the Euro, British Pound, and developing Asia currencies.
  - U.S. Dollar depreciates modestly against the Japanese Yen, driven by flight-to-safety capital flow.

5.1.2 Regulator-Prescribed Assumptions

Insurers should utilize the specific values for the economic indicators from the Federal Reserve Board’s annual Supervisory Scenarios for Annual Stress Tests Required under the Dodd-Frank Act Stress Testing Rules and the Capital Plan Rule, Table A.1 Historical data and Table A.5 Supervisory adverse scenario. Insurers should use the version published in February 2017 (refer to the tables in Annex 2i). Specifically, insurers should run the adverse liquidity stress scenario using the values for the Treasury curve, Corporate spreads, GDP, Unemployment, U.S. Inflation (CPI), Housing Price Index (HPI), S&P 500 index (SPX SPOT), Commercial Real Estate Index (CREI) and VIX index to the extent these variables are included in their internal liquidity stress test process or models.

This scenario also requires a consistent baseline scenario to be employed. Insurers should apply the same change in economic variables experienced between Q4 2016 Table A.1 and the stress scenarios in Table A.5 to current economic variable levels. For example, insurers should use 2020 (or most recent year-end) 10 Yr. Treasury rates and apply the same % or b.p. change shown from Q4 2016 to the 2017 Table A.5 amounts in their 2021 stress scenarios. Projected values should be used for the 30-day, 90-day and 1-year horizons. The table is included in Annex 2i of this document.
Guidance on Select Economic Variables (TBD subsequent to small group deliberations)

10 Yr. Treasury
The projected path of 10-year Treasury rates should be translated to quarterly percentage increases, with a 10 b.p. minimum increase. The 10 b.p. minimum is to address a situation where current rates are zero or negative.

GDP
b.p.

CPI
b.p.

Unemployment
b.p.

FX

In addition, other market indicators are necessary for insurers to apply to stressed cash flows and to assess the impact on expected asset sales. These are as follows (with details to be found in Annex 2):

- Market Capacity Assumption
- Structured Spreads over Treasuries
- SWAP Spreads
- Swaption Volatility
- Credit Assumptions: Moody’s Transition Matrix/Migration Rates
- Credit Assumptions: Moody’s Default Table
- Credit Assumptions: Moody’s Recovery Rate Table

5.1.3 Market Capacity Assumption

The following is suggested guidance to determine market constraints on asset categories to be sold in times of stress. It represents standards followed by many insurers to estimate assets sales
by stress scenario, asset category and time horizon that can be sold without meaningfully impacting the entire market by widening bid-offer spreads. We recognize each company has its own individual methodology for determining potential asset sales under stress, and we request a written narrative be provided as to how they make their determination.

Once an asset class has been identified as available to be sold to satisfy a cash deficiency from cash flow stress testing, the insurer should calculate its percentage of the total amount issued and outstanding. Next the insurer should obtain average daily trading volumes (ADTV) and make an assumption for the haircut amount to apply to that volume to reflect stressed conditions (the “haircut ADTV”). Next, the insurer would apply its calculated percentage of total outstanding owned to the haircut ADTV, and the result would be divided by the number of days in the stress testing time horizon to arrive at a daily amount that can be sold. This daily amount able to be sold would be multiplied by the number of days in the prescribed time horizon: 30 days for the 30-day horizon, 60 days for the 90-day horizon (31-90 days) and 274 days for the 1-year horizon (91-365 days). An illustrative example best explains the above-described process.

**Illustrative example (also included in Appendix 2ii):**

**Step 1: Estimate Unconstrained Sales Per Day**

Insurer A has a $100 billion portfolio of investment-grade corporate bonds, priced at par. Insurer A estimates that it holds approximately 5% of outstanding corporate bonds. In the adverse liquidity stress scenario, Insurer A’s unconstrained liquidity stress testing model assumes that it can sell:

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>% Able to Be Sold</th>
<th>Sale Price</th>
<th>Total Sale</th>
<th>Sales / Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>10%</td>
<td>97</td>
<td>$9.7 B</td>
<td>$440 M</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>20%</td>
<td>94</td>
<td>$18.8 B</td>
<td>$430 M</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>50%</td>
<td>90</td>
<td>$45.0 B</td>
<td>$230 M</td>
</tr>
</tbody>
</table>

**Step 2: Add Market Capacity Constraint**
Assume the average daily trading volume in the secondary market for investment grade corporate bonds has been $13.0 Billion over the past year. Insurer A estimates that trading volumes would decline by 40% in the adverse liquidity stress scenario to $8.0 B per day. Since Insurer A is 5% of the market, Insurer A can only trade $400 M per day ($8B x 5%) without paying a significant illiquidity premium and impacting the overall market.

Insurer A then repeats this process for every asset class in its investment portfolio.

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>Unconstrained Sales / Day</th>
<th>Market Capacity Assumption</th>
<th>Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>$440 M</td>
<td>$400 M</td>
<td>($40 M)</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>$430 M</td>
<td>$400 M</td>
<td>($30 M)</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>$230 M</td>
<td>$400 M</td>
<td>$0</td>
</tr>
</tbody>
</table>

5.1.4 Structured Spreads Over Treasuries

Insurers should use Annex 2iii to assist in determining cash flows, asset values and the quantity of assets to be sold in stressed markets. For baseline values, the industry shall submit year-end spreads to the regulators shortly after year-end. The regulators will review and approve the values for use in the table for liquidity stress testing purposes. Regulators shall use structured spread data from the 2007-2009 period provided by JPMorgan added to baseline values to calculate stressed amounts for the 30-day, 90-day and 1-year horizons to complete the table.

Regulators ask industry members to agree on one set of structured spread values amongst themselves to submit for approval, not each insurer submitting values that each need to be approved. Regulators and/or the NAIC need to do a reasonableness check of current baseline/market levels of spreads insurers use before applying the stressed amounts in the JPMorgan spreadsheet. For example, if current spreads are already greater than the JPMorgan stressed spread amounts, regulators may have to consider alternatives or additional stressed levels. One agreed upon set of values will help provide uniformity, consistency, and comparability of stress testing results across insurers.
When utilizing these spreads, insurers should assume the percentage increase in spreads experienced in 2008-09 from the JPMorgan spreadsheet; and apply that percentage increase to the agreed upon December 31 spreads.

- 2020 LST and beyond - Since the reasonableness check is merely a check of current market rates, it is not anticipated that it will be burdensome for insurers to provide an agreed upon set of December 31 baseline values to regulators by January 31 of each year or for the regulators to be able to respond by February 28 of every year to allow insurers sufficient time to incorporate into their stress testing framework.
- For the 2020 LST – Industry agreed upon values will be established as Lead State guidance.

5.1.5 SWAP Spreads

Stressed spread levels may impact assets prices for expected sales calculations necessary for the stress scenarios. Insurers should complete the SWAP Spread table in Annex 2iv to document assumptions used in determining asset values and the quantity of assets to be sold in stressed markets. SWAP spread source data from the Federal Reserve’s H.15 FRED data should be incorporated into the SWAP Spread table. The H.15 FRED data is also included in Annex 4iv.

5.1.6 Swaption Volatility

Insurers should use the table in Annex 2v to assist in determining asset values and the quantity of assets to be sold in stressed markets. Insurers should obtain the information to populate the table using Bloomberg’s Swaption Volatility for various time horizons and expiry. For consistency, insurers should use the table found on Bloomberg at NSV [Go].

5.1.7 Moody’s Transition Matrix/Migration Rates

Insurers should use the table in Annex 2vi to assist in determining Corporate credit migrations, asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 39 - Average one-year alphanumeric rating migration rates, 1983-2019. If available, insurers should use the equivalent Moody’s tables for U.S. Public Finance for municipal bonds and the appropriate Moody’s tables for structured
/asset-backed securities. Alternative sources may be used but should be disclosed as well as the rationale for their use.

5.1.8 Moody’s Default Table

Insurers should use the table in Annex 2vii to assist in determining asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 45 - Average cumulative issuer-weighted global default rates by letter rating, 1983-2019. Insurers should use the equivalent Moody’s tables for U.S. Public Finance for municipal bonds and the appropriate Moody’s tables for structured /asset-backed securities. Alternative sources may be used but should disclosed as well as the rationale for their use.

5.1.9 Moody’s Recovery Rate Table

Insurers should use the table in Annex 2viii to assist in determining asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 8 - Average corporate debt recovery rates measured by ultimate recoveries, 1987-2019. Insurers should use the equivalent Moody’s tables for U.S. Public Finance for municipal bonds and the appropriate Moody’s tables for structured /asset-backed securities. Alternative sources may be used but should disclosed as well as the rationale for their use.

If relevant for a given insurer, the adverse liquidity stress scenario for insurers can be run considering sources other than expected asset sales (e.g., FHLB credit line draws, bank lines of credit and holding company contributions). Should that be the case, the insurer must clearly identify the sources other than asset sales utilized to meet expected liquidity deficiencies.

5.1.10 “What If” Modification

The “What if” modification to the adverse liquidity stress scenario removes the ability for insurers to use extraordinary internal and external funding sources to satisfy any liquidity deficiency under stress, i.e., no actions taken in response to the stress (as opposed to ongoing operational funding agreements included in the insurer’s baseline templates) or in response to a liquidity deficiency. Intragroup “keep well” agreements would be considered extraordinary transactions. Thus,
expected asset sales will be the primary source of meeting any liquidity deficiency for the “What if” scenario. Any existing funding such as commercial paper will not be assumed to roll, nor will FHLB facilities ability to roll upon maturity.

5.1.11 Company-Specific Assumptions

Insurers must construct the assumptions needed for their internal models to run the above adverse liquidity stress scenario for insurers. Company specific assumptions should be consistent with the above scenario as narrative and regulator prescribed assumptions. Examples include the inability to roll or issue new debt, potential increases in lapse rates, new business sensitivity, mortality experience and policyholder behavior (e.g., surrenders and policy loans).

5.2 Interest Rate Spike Scenario

5.2.1 Narrative

Insurers should run an interest rate spike stress test that resembles the late 70’s/early 80’s inflationary period as it most closely mirrors the regulatory desired interest rate spike scenario. Historical data from the late 70’s/early 80’s show the following economic conditions:

- Inflationary forces caused interest rates to rise quickly.
- Investors rotated out of fixed income and into equities, real estate, and commodities.
- Central bank responded by tightening monetary policy in tandem, eventually causing the yield curve to invert.

Insurers should provide a detailed narrative outlining their scenario and assumptions around general economic conditions bulleted above and specific assumptions for economic variables for each time horizon. The economic variables in the table below and the amount of expected movement in each variable should be fully described in the narrative to the extent are used in a company’s internal model. The table outlines the directional movement of the relevant economic indicators. Insurers should specify the amount of movement for each variable they consider to be part of the scenario for a severe interest rate spike. For example, insurers may indicate a parallel shift in Treasury rates up 100bps in the first 30 days, up 200bps in 90 days and 300bps over 12 months. The table is a guide and not to be interpreted as a strict template and may be
supplemented or customized by the insurer. **Narrative/Explanatory disclosures should explain these assumptions.**

### 5.2.2 Regulator-Prescribed Assumptions

Regulators did not adopt any regulator-prescribed assumption values for this stress scenario. Instead, they provided the below regulator guidance for insurers to use when establishing their own company specific assumptions for this stress scenario.

<table>

### 5.2.3 Company-Specific Assumptions

Insurers must construct the assumptions needed for their internal models to run the above stress scenario. Companies are encouraged to provide more information beyond these guidelines as they feel is appropriate to help regulators understand their assumptions for the scenario. Company specific assumptions should be consistent with the stress scenario’s narrative and regulator prescribed assumptions.
5.3 Insurer Specific Information Request - Worst-Case Scenario

5.3.1 Narrative

This information request requires insurers to provide a detailed narrative of their most severe liquidity stress scenario(s) to obtain greater insight to the drivers of liquidity risk for specific insurers. The most severe scenario should be one that results in the largest liquidity deficiency (liquidity sources less uses) from their existing internal liquidity stress testing process. The scenario should be focused on the insurers internal model scenario with the worst-case outcome for the group. Regulators may use this information to inform future prescribed stress scenarios. Insurers should provide a comprehensive narrative describing the stress scenario(s) and the economic environment(s). This stress scenario(s) could be a combination of multiple stressors.

Section 6. Available and Expected Asset Sales

Once the stressed sources and uses of liquidity have been established, and the net cash flows calculated, insurers then project the assets available at the end of the time horizon by asset category (please refer to the asset categories in the Assets Template in Section 7). The valuation of available assets for the baseline scenario utilizes current and projected asset values for a normal operating environment. The valuation of available assets for a stress scenario will be based upon fair value haircuts per the specific stress scenario narrative, its regulatory prescribed assumptions, and/or the company assumptions based on the narrative and regulatory prescribed assumptions (e.g., fair market value haircuts and capacity indicators). Note: Any securities pledged as part of institutional funding agreements (e.g., FHLB) should be excluded and considered encumbered. However, any pre-pledged assets that are not securing credit that has been extended and remains outstanding (i.e., excess) should be considered unencumbered.

To the extent that stressed cash inflows are insufficient to meet the anticipated cash outflows, the insurer must provide for cash flows to meet the deficiency. Unless a stress scenario (or “What-if” modification of a stress scenario) indicates otherwise, the insurer can utilize internal and external funding sources (e.g., FHLB new draws) as well as asset sales to satisfy a liquidity deficiency.
deficiency. Any expected asset sales must be reported in the appropriate column(s) of the template. Insurers decide which categories of available assets to sell, as well as the quantity to sell. (Please refer to the Assets Template in Section 7.)

Asset sales will appear in two different places - 1) within the liquidity sources template for expected/planned activity during the time horizon (pre-liquidity deficiency calculation), and 2) in the assets template for any amount of asset sales used to meet a liquidity deficiency (Liquidity Sources less Liquidity Uses). If an insurer has no liquidity deficiency, then there are no asset sales needed in the Assets Template (though available assets still apply). Similarly, if cash on hand was sufficient to meet the liquidity deficiency and the insurer chose to utilize that cash, then no asset sales would be reported in the Assets template.

The expected asset sales amounts calculated based on the insurer’s own models should also be subjected to portfolio manager and/or Chief Investment Officer (CIO) feedback. This feedback may take the form of “topside” adjustments to the expected asset sales. Regulators expect robust disclosures around the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales. The intent is for these asset sales to most accurately represent what actions the insurer could reasonably take in the given scenario, market conditions, and the company’s anticipated investment policy and/or strategy.

**Section 7. Reporting**

Insurers should submit data in the reporting template for liquidity sources, liquidity uses, and assets (available assets and expected asset sales) in US dollars. These templates utilize categories for 30-day, 90-day and 1-year time horizons. The assets template further illustrates available assets and final expected asset sales by asset sub-category to cover any liquidity deficiency (negative amounts of net liquidity sources less liquidity uses over the prescribed time horizons). Use of these consistent sub-categories of assets is critical for allowing the Task Force to aggregate the asset sales results.
A liquidity sources report and a liquidity uses report should be generated for each legal entity within the group that was subjected to liquidity stress testing, using the NAIC templates. These legal entity amounts should also be aggregated into a group liquidity sources report and a group liquidity uses report for submission (the LST is not performed at the group level; rather it is performed at the legal entity level and those results are aggregated to present a group level report).

- For the Baseline, the Adverse Liquidity stress scenario, and the Interest Rate Spike stress scenario, Liquidity Sources and Liquidity Uses templates at both the individual entity level and the aggregated group level are to be submitted.
- For the insurer’s own “Worst Case” scenario, only the group level Liquidity Sources and Liquidity Uses templates are required to be submitted, not the legal entity templates.
- For the “What If” Variation of the Adverse Liquidity stress scenario, a group level Liquidity Sources template and/or a group level Liquidity Uses template is only required if there is a material difference from the Adverse Liquidity stress scenario’s group level Liquidity Sources and Liquidity Uses templates.

Assets Template:
As with the Liquidity Uses and Liquidity Sources templates, the Assets template is to be generated for each legal entity performing the LST. For the 2020 LST, the insurer may submit the assets template at the group level only, without submission of the legal entity asset sales templates.

- A group level assets template is required for the Baseline and all stress scenarios, including the insurer’s own “Worst Case” scenario and the “What If” variation of the Adverse Liquidity stress scenario.

Modification of Templates:
Insurers are allowed to add lines to the templates to provide more detailed breakdown of existing categories (e.g., for cash flows to/from legal entity asset manager/mutual funds as well as banks), but deletions of existing lines(categories are highly discouraged.

Submission Deadline:
The reporting templates and many other narrative disclosures referenced in this document are to be submitted to the Lead State by September 30, 2021.
Liquidity Sources and Uses

Note: Certain flows could be settled in securities (e.g., margins on derivatives, capital contributions/dividends, etc.). Alternatively, eligible securities could be pledged to FHLB (or REPO with the street) to raise short-term funding.

<tr>
<td></td>
<td>Comments</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note 1: Insurers will enter “illiquid” in a data field for any asset category deemed such within a specific time horizon. (Regulators can then follow up with questions later if there are concerns, etc.)

Note 2: Any securities pledged as part of institutional funding agreements (e.g., FHLB) should be excluded and considered encumbered. However, any pre-pledged assets that are not securing credit that has been extended and remains outstanding (i.e., excess) should be considered unencumbered.

Note 3: Reminder that regulators want robust disclosures regarding the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales. Might need to supplement the template comments with additional narrative disclosures.

Note 4: Excluding the “What If” variation, insurers are to provide disclosures indicating when affiliated amounts are provided to assist a legal entity in addressing a liquidity deficiency.
Narrative/Explanatory Disclosures noted in the 2020 LST:

**Narrative/explanatory disclosures are expected to be in English.**

- **Insurers should provide a narrative description of their internal liquidity stress testing system and processes,** including for example their materiality thresholds for stressed cash flows and methodology for converting foreign currencies to US dollars.
- **Specific disclosures on material stressed cash flows to/from legal entity banks/asset managers/mutual funds if needed.**
- **Company-specific narrative on assumptions and metrics used for the adverse liquidity stress scenario for insurers,** for example the inability to roll or issue new debt, potential increases in lapse rates, new business sensitivity, mortality experience and policyholder behavior (e.g., surrenders and policy loans).
- **Company-specific narrative on the interest rate shock scenario,** assumptions around general economic conditions bulleted in 5.2.1 Narrative, and specific metrics for economic variables for each time horizon. The economic variables in the table in 5.2.2 Regulator-Prescribed Assumptions should be fully described in the narrative, to the extent they are use in the company’s internal model.
- **Insurers should provide a comprehensive narrative describing their worst-case liquidity stress scenario(s) and the economic environment(s),** including assumptions, key metrics and results.
- **Written narrative on the insurer’s own individual methodology for determining asset sales under stress.**
- **Robust disclosures regarding the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales,** if needed.
- **Excluding the “What If” variation,** disclosures to identify when affiliated amounts are contributed to assist a legal entity in addressing a liquidity deficiency.
- **Disclose when a regulatory prescribed variable is not used for the LST because it is not used in the internal liquidity stress testing process or models.**
Data Aggregation

Given the NAIC’s primary focus is on macroprudential impacts of a liquidity stress impacting the life insurance sector, the NAIC will aggregate final expected asset sales data across the insurance groups subject to the liquidity stress test. The aggregation will be done by asset category. The NAIC aims to compare the aggregated results against various benchmarks, potentially including normal and/or stressed trading volumes and asset values for various asset classes, to determine the impact such sales may have on the capital markets in times of stress. Findings from this analysis may also inform expected asset sale assumptions utilized in future runs of the liquidity stress test.

As part of its macroprudential surveillance, the insurance regulators and/or NAIC may reach out to other regulatory agencies to discuss aggregate results that may impact other regulated industries such as banks, securities brokers and asset managers. Insurance regulators may also coordinate with other agencies to identify appropriate and perhaps coordinated action they may take to prevent or minimize the effect large asset sales may have on the financial markets and overall economy.

Regulatory Authority

For the 2020 liquidity stress test, lead state regulators will utilize their examination authority to collect the reporting results from insurers and to keep the data confidential. A long-term solution was developed at the Financial Stability (EX) Task Force in coordination with addressing similar issues related to the Group Capital Calculation project, resulting in revisions to Model #440. However, it will take several years for states to adopt these revisions.

Confidentiality

For the 2020 liquidity stress test, lead state regulators will utilize their examination authority to collect the reporting results from insurers identified by the scope criteria. Existing protocols for collecting confidential/sensitive data for each state and insurer will be utilized. A long-term solution was developed at the Financial Stability (EX) Task Force in coordination with addressing
similar issues related to the Group Capital Calculation project, resulting in revisions to Model #440. However, it will take several years for states to adopt these revisions.

Timeline

- March 1, 2021 – FSTF call – exposed revised draft 2020 LST Framework
- May 12, 2021 – “finalize” revised draft 2020 LST Framework (LST Study Group will issue Lead State guidance as needed after this date)
- September 30, 2021 – receive submissions from 23 insurance groups
- January 2022 – Incorporate all appropriate Lead State Guidance into the 2020 LST Framework document as the starting place for the 2021 LST Framework and begin work on changes specific to the 2021 LST.
Annex 1: Original Scope Criteria with Annual Statement References

The Subgroup proposes to include in the scope of the Liquidity Stress Testing Framework any insurer/group that exceeds the following thresholds for any of the noted activities (or account balance as a proxy for that activity). The thresholds have been established taking into consideration both the account balance of the insurer/group to the total balance for the life insurance sector, as well as the aggregate account balance of insurers/groups within scope to the aggregate account balance for the life insurance sector.

</tr>
</tbody>
</table>
In performing the addition of the FHLB funding agreement amount to the GICs amount, NAIC staff discovered that the reporting of FHLB funding agreements is not consistent in Exhibit 7, Deposit-Type Contracts. The source of the FHLB amount is Note 11.B(4)(b):

Line: Funding agreements, current year, amount as of the reporting date, borrowing from FHLB, collateral pledged to FHLB Column: Funding Agreement Reserves Established

For some insurers, we were able to match amounts from the FHLB funding agreement footnote to the exact same amount in Exhibit 7, either Column 2 (GICs) or Column 6 (Premiums and Other Deposit Funds). For those insurers where the FHLB amount matched Exhibit 7, Column 2, we did not add the FHLB funding agreement amount to the GICs amount, because that would be double-counting the FHLB funding agreements. For other insurers, even though the amounts did not match exactly, we were able to assume the FHLB funding agreements were reported in either Column 2 or Column 6 (e.g., the amount in Exhibit 7, Column 2 was zero or much smaller than the FHLB note, while the Column 6 amount was larger). However, for several insurers, we were not able to make an informed assumption (e.g., both Column 2 and Column 6 amounts were larger than the FHLB funding agreement amount). To be conservative in these instances, we added the FHLB funding agreement amount to the GICs amount. Overall, for the $10 billion threshold, adding FHLB funding agreements to GICs does not result in a different list of insurance groups from the list with GICs of more than $10 billion.

However, for several insurers, we were not able to make an informed assumption (e.g., both Column 2 and Column 6 amounts were larger than the FHLB funding agreement amount). To be conservative in these instances, we added the FHLB funding agreement amount to the GICs amount. Overall, for the $10 billion threshold, adding FHLB funding agreements to GICs does not result in a different list of insurance groups from the list with GICs of more than $10 billion.

Source: 2017 Supervisory Scenarios for Annual Stress Tests Required under the Dodd-Frank Act Stress Testing Rules and the Capital Plan Rule
Annex 2ii. Market Capacity Assumption

Illustrative Example only

Step 1: Estimate Unconstrained Sales Per Day

Insurer A has a $100 billion portfolio of investment-grade corporate bonds, priced at par. Insurer A estimates that it holds approximately 5% of outstanding corporate bonds. In the adverse liquidity stress scenario, Insurer A’s unconstrained liquidity stress testing model assumes that it can sell:

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>% Able to Be Sold</th>
<th>Sale Price</th>
<th>Total Sale</th>
<th>Sales / Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>10%</td>
<td>97</td>
<td>$9.7 B</td>
<td>$440 M</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>20%</td>
<td>94</td>
<td>$18.8 B</td>
<td>$430 M</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>50%</td>
<td>90</td>
<td>$45.0 B</td>
<td>$230 M</td>
</tr>
</tbody>
</table>

Step 2: Add Market Capacity Constraint

Assume the average daily trading volume in the secondary market for investment grade corporate bonds has been $13.0 Billion over the past year. Insurer A estimates that trading volumes would decline by 40% in the adverse liquidity stress scenario to $8.0 B per day.

Since Insurer A is 5% of the market, Insurer A can only trade $400 M per day ($8B x 5%) without paying a significant illiquidity premium and impacting the overall market.

Insurer A then repeats this process for every asset class in its investment portfolio.

**Proposed Repurposing of the Liquidity Assessment Subgroup**

*From June 24 email:*

*Sent on behalf of Commissioner Caride (NJ), Chair of the Financial Stability (E) Task Force*

**Dear Members, Interested Regulators, and Interested Parties of the Financial Stability (E) Task Force and Liquidity Assessment (E) Subgroup,**

Now that we have the 2020 Liquidity Stress Test Framework document finalized, the Financial Stability (E) Task Force needs to address other areas of the NAIC Macro Prudential Initiative (MPI) and enhance and expand our macroprudential surveillance system. To ensure the Task Force has appropriate support for this work, I propose we rename and repurpose the Liquidity Assessment (E) Subgroup to be an ongoing group (named the Macroprudential (E) Working Group) to address the following charges:

A. Oversee the implementation and maintenance of the liquidity stress testing framework for 2020 data as well as future iterations;

B. Assist with the remaining MPI projects related to counterparty disclosures and capital stress testing as needed;

C. Continue to develop and administer data collection tools as needed, leveraging existing data where feasible, to provide the Financial Stability (E) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating the prevailing market conditions;

D. Oversee the development, implementation, and maintenance process for a new Macroprudential Risk Assessment system (i.e., policies, procedures, and tools) to enhance regulators’ ability to monitor industry trends from a macroprudential perspective;

E. Oversee the documentation of the NAIC’s macroprudential policies, procedures, and tools; and

F. Provide the Task Force with proposed responses to IAIS and other international initiatives as needed.

Re: NAIC Financial Stability Task Force’s proposal to repurpose the Liquidity Assessment (E) Subgroup as the Macroprudential (E) Working Group

Dear Commissioner Caride:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments in response to the NAIC Financial Stability Task Force’s proposal to repurpose the Liquidity Assessment (E) Subgroup as the Macroprudential (E) Working Group.

ACLI supports the formation of Macroprudential (E) Working Group (“MWG”) along with the proposed charges. Although continued development and ongoing maintenance of the liquidity stress testing is necessary, broadening the group’s scope to identify and review macroprudential risks, related and emerging risks, and other topics is sensible. ACLI recommends that the group consider using the operating model of the Liquidity Assessment Subgroup as a paradigm for the broader group. Leveraging the current membership of the Liquidity Assessment Subgroup in the MWG would maintain the strong momentum of the liquidity workstream and assist rapid progress in remaining macroprudential workstreams. It may take time for newer members of the MWG to gain the context needed to make meaningful contributions to the MWG’s success. Further, we encourage NAIC to continue the significant regulator and industry partnerships established under the Liquidity Assessment Subgroup via the Liquidity Stress Testing Study Group into the new...
This collaboration has produced meaningful and nuanced solutions to identifying and reviewing potential liquidity challenges and will continue to be a valuable tool to the NAIC as it evaluates other macroprudential and other emerging risks.

Thank you again for the opportunity to comment on the Task Forces proposal. The ACLI celebrates the success of the Liquidity Assessment Subgroup and looks forward to continuing discussions with the newly formed Working Group.

Sincerely,

Gabrielle Griffith

RE: Proposal for Macroprudential (E) Working Group  

Dear Ms. Caride and Task Force Members:

On behalf of the member companies of the National Association of Mutual Insurance Companies\(^1\) we respectfully submit these comments which are responsive to the proposal to enhance and expand the current macroprudential surveillance system through a new set of charges to be addressed by the Macroprudential (E) Working Group (“MWG”).

On June 24, an email from Commissioner Caride, acting as chair of the Financial Stability (E) Task Force was sent to members of the Task Force, interested regulators, and interested parties, proposing to rename and repurpose the Liquidity Assessment (E) Subgroup (“LAS”) as the MWG. With the work completed on the 2020 Liquidity Stress Test Framework document, the LAS has fulfilled its charges; however, the proposal indicates that other areas of the NAIC’s Macroprudential Initiative need to be addressed to enhance and expand the macroprudential surveillance system. In addition to renaming the subgroup, a set of five new charges were included in the proposal. They are as follows:

A. Oversee the implementation and maintenance of the liquidity stress testing framework for 2020 data as well as future iterations;

\(^1\) The National Association of Mutual Insurance Companies is the largest property/casualty insurance trade group with a diverse membership of more than 1,400 local, regional, and national member companies, including seven of the top 10 property/casualty insurers in the United States. NAMIC members lead the personal lines sector representing 66 percent of the homeowner’s insurance market and 53 percent of the auto market. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
B. Continue to develop and administer data collection tools as needed, leveraging existing data where feasible, to provide the Financial Stability (E) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating the prevailing market conditions;

C. Oversee the development, implementation, and maintenance process for a new Macroprudential Risk Assessment system (i.e., policies, procedures, and tools) to enhance regulators’ ability to monitor industry trends from a macroprudential perspective;

D. Oversee the documentation of the NAIC’s macroprudential policies, procedures, and tools; and

E. Provide the Task Force with proposed responses to IAIS and other international initiatives as needed.

When it was first initiated, the NAIC’s Macroprudential Initiative was viewed as the next logical step in the continuation of the Solvency Modernization Initiative to further enhance the credibility of the state system of insurance regulation. The MPI focused on four key areas to consider new or improved tools: liquidity risk, capital stress testing, recovery and resolution, and counterparty exposure/concentration. Over the last several years, the Task Force has developed tools in each of the four areas, including a new liquidity risk assessment tool and the adoption of the Group Capital Calculation which includes mechanisms to analyze capital at the group level and the ability to stress capital at the group level. Given all of the enhancements made to the existing financial solvency regime since MPI was initiated (and even back when SMI was being worked through), NAMIC members respectfully request the Task Force refrain from developing any new data-collection or risk assessment tools until more consideration can be given to the overall financial solvency surveillance regulatory structure that is currently in place.

Further, it would be prudent for regulators to consider how the tools created out of the MPI fit with existing tools such as risk-based capital, enterprise risk reports, or ORSA summary reports, which are much more individualized and completed in a timely fashion and provide valuable insight into the legal entities that are being regulated for financial solvency. Before creating a new data-collection tool or risk assessment framework, it is important to review and analyze how the tools that were in place prior to MPI interact with those created since MPI. It is not clear from the proposal if the Task Force desires additional filings of new information and who would be requesting and/or collecting this information and further whether the information being requested can be accessed from different sources. Additionally, if new information is to be required to be filed with the NAIC or the lead-state regulator, it is not clear whether this information would be proprietary in nature and therefore it is not clear if confidential information would be protected.

By pausing on the creation of new surveillance tools and assessment frameworks, it allows regulators to consider the existing solvency framework that has undergone significant changes since MPI was initiated. For this reason, NAMIC suggests the following changes to the proposed charges:
B. Continue to develop and administer existing data collection tools as needed, leveraging existing data where feasible, to provide the Financial Stability (E) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating the prevailing market conditions;

C. Conduct a needs assessment/cost benefit analysis to oversee the development, implementation, and maintenance process for a new Macroprudential Risk Assessment system (i.e., policies, procedures, and tools) to enhance regulators’ ability to monitor industry trends from a macroprudential perspective and consider how, if at all, those trends benefit the solvency regulation of a regulated entity.

We submit these comments in hopes that regulators will consider these views before taking action. While we do not oppose the concept of providing meaningful macroprudential information, it is important to first determine if the existing framework is adequate; however, additional time for these newer tools to mature is needed before an adequate assessment can be completed and a determination can be made on whether new macroprudential information is beneficial.

* * * * *

NAMIC appreciates the opportunity to take part in the process. Thank you for your consideration of these comments on this matter of importance to NAMIC, its member companies and their policyholders. If there are any questions, please feel free to contact me at 317-875-5250.

Sincerely,

Jonathan Rodgers
Director of Financial and Tax Policy

Re: Proposal to Create a Macroprudential (E) Working Group to succeed the Liquidity Assessment (E) Subgroup

Dear Commissioner:

The Travelers Companies, Inc. (Travelers) appreciates the opportunity to comment on the proposal to create a Macroprudential (E) Working Group to succeed the Liquidity Assessment (E) Subgroup. The charges to the new group would be:

A. Oversee the implementation and maintenance of the liquidity stress testing framework for 2020 data as well as future iterations;
B. Continue to develop and administer data collection tools as needed, leveraging existing data where feasible, to provide the Financial Stability (E) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating the prevailing market conditions;
C. Oversee the development, implementation, and maintenance process for a new Macroprudential Risk Assessment system (i.e., policies, procedures, and tools) to enhance regulators’ ability to monitor industry trends from a macroprudential perspective;
D. Oversee the documentation of the NAIC's macroprudential policies, procedures, and tools; and
E. Provide the Task Force with proposed responses to IAIS and other international initiatives as needed.

The NAIC is to be commended for your starting point here, correctly focusing resources on liquidity testing of large life insurers where systemic risk may occur. However, we believe there should be a focus on an “activities-based” perspective in this next step of the proposed new working group.
NAIC Financial Stability Task Force
Proposed Macroprudential Working Group
Page 2

We note that there is no mention of the identification of “activities” that lead to systemic risks in the charges to the proposed working group. There should be a study of emerging products and practices (i.e., “activities”) that lead to systemic risk. By the time some of the data is available for the analysis of new products or practices, the crisis is already upon us. As a result, we believe the working group should be looking at trends in products that lead to interconnectedness rather than trying to measure interconnectedness after-the-fact. The data will always be available on a lagged basis, sometimes by several months, so the analysis that would be available to the working group presents a significant risk of being reactive rather than proactive. To mitigate this impact, we recommend that an “activities-based” approach be employed to avoid being reactive to some extent.

We also note that in the Quantitative Review section of the draft NAIC Macroprudential Risk Assessment document there is no mention of a time horizon of the quantitative analysis. In addition, the interconnectedness analysis has no relevance without measuring cash movements instead of market values for the given timeframe. Interconnectedness also needs to have a material qualitative component to be useful. Similarly, market value changes have no meaning if they don’t impact cashflows, and mid-period volatility is far less important than quarter and year-end valuations if there are no cash implications of the mid-period movement. As a result, we recommend identifying a time horizon for the quantitative analysis and a requirement to measure cash movements.

The danger is that this next step becomes a checklist exercise, collecting data that has no relevance and reaching conclusions that have little value based on that data. Raw numbers with no relevant context are not helpful and can cause harm if used as the basis for action. We believe that taking into consideration the time horizon and the impact on cash flows adds context that is currently missing from the proposed approach to data collection and analysis.

Thank you for the opportunity to comment on the proposal to form a Macroprudential (E) Working Group to succeed the Liquidity Assessment (E) Subgroup. Please feel free to call me at (860) 277-0537 if you have any questions.

Regards,

D. Keith Bell

The Receivership and Insolvency (E) Task Force met July 27, 2021. The following Task Force members participated: Doug Slape, Chair, represented by James Kennedy (TX); James J. Donelon, Vice Chair, represented by Nick Lorusso (LA); Michael Conway and Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Dana Popish Severyinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); Gary D. Anderson represented by Cara Toomey (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by James Gerber (MI); Chlora Lindley-Myers and Shelley Forrest (MO); Mike Causey represented by Jeff Trendel (NC); Eric Dunning and Lindsay Crawford (NE); Russell Toal (NM); Glen Mulready represented by Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); and Raymond G. Farmer represented by Daniel Morris (SC).

1. **Adopted its May 20 Minutes**

The Task Force met May 20 and took the following action: 1) adopted its March 12 minutes; and 2) adopted amendments to the *Insurance Holding Company System Regulatory Act (#440)* and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450).*

Superintendent Toal made a motion, seconded by Mr. Baldwin, to adopt the Task Force’s May 20 minutes (Attachment One). The motion passed unanimously.

Ms. Wilson said the Receivership Financial Analysis (E) Working Group met March 1, in lieu of the Spring National Meeting, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership. The Working Group plans to meet Aug. 5, in lieu of the Summer National Meeting, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings.

Ms. Wilson made a motion, seconded by Mr. Kaumann, to adopt the Working Group’s report. The motion passed unanimously.

Mr. Baldwin said the Receiver’s Handbook (E) Subgroup met June 14 and May 26. During these meetings, the Subgroup formed drafting groups to begin work on developing edits to each chapter of the *Receiver’s Handbook for Insurance Company Insolvencies (Handbook)* to make it more user friendly and concise without diminishing its value to seasoned and new receivers. The drafting group has begun work drafting revisions to the first chapter.

Superintendent Toal made a motion, seconded by Ms. Wilson, to adopt the Subgroup’s report (Attachment Two). The motion passed unanimously.

Mr. Baldwin said the Receivership Law (E) Working Group met May 4 to adopt amendments to Model #440 and Model #450. The amendments address the Working Group’s charge related to the continuation of essential services by affiliates of an insurer in receivership, as well as receiver’s access to data and records held by affiliates belonging to the insurer in receivership. Given that the work of the Receiver’s Handbook (E) Subgroup has begun, the Working Group recommended the development of guidance related to the model changes by the Subgroup as part of its charge to update the Handbook. These actions complete the Working Group’s current charge related to the Macroprudential Initiative (MPI).

Mr. Baldwin made a motion, seconded by Ms. Slaymaker, to adopt the Working Group’s report (Attachment Three). The motion passed unanimously.
Mr. Kennedy said that once the Executive (EX) Committee and Plenary adopts the amendments to Models #440 and #450, the Financial Standards and Accreditation (F) Committee will ask the Task Force for a recommendation regarding the accreditation requirement for these models, which have a “substantially similar” standard. He said that NAIC staff will send out a memo requesting input from members after the Summer National Meeting.

Mr. Wake recommended that the Task Force continue to monitor the Penn Treaty Network America Insurance Company liquidation, given the recent opinion from the Pennsylvania court.

5. **Adopt its 2022 Proposed Charges**

Mr. Kennedy discussed the 2022 proposed charges of the Task Force and its working groups and subgroup. The proposed charges would remain the same, with one exception. The charges of the Receivership Law (E) Working Group related to the MPI will be deleted, as this has been completed.

Superintendent Toal made a motion, seconded by Ms. Wilson, to adopt the Task Force’s 2022 proposed charges (Attachment Four). The motion passed unanimously.

6. **Heard an Update on International Resolution Activities**

Mr. Kennedy said the International Association of Insurance Supervisors (IAIS) Resolution Working Group completed the *Application Paper on Resolution Powers and Planning*. The Working Group will begin work on an application paper on policyholder protection schemes in September.

7. **Heard an Update on the Status of MPI Recommendations**

a. **Training and Outreach to State Insurance Departments**

Mr. Kennedy said the Task Force will plan more training on receivership matters to educate state insurance departments, specifically their legal and legislative staff. He said the NAIC staff will include new model and guideline amendments in upcoming meetings with legislative liaisons. He asked for volunteers from Task Force members to present on these topics during zone meetings in the fall.

b. **Monitor the Work of Other NAIC Groups**

Mr. Kennedy said the Group Solvency Issues (E) Working Group is in the process of reviewing comments on draft updates to financial analysis guidance, including guidance regarding crisis management groups, recovery planning, and resolution planning for internationally active insurance groups (IAIGs). The Working Group is meeting Aug. 4, and will hear from commentors on the draft guidance.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
Draft: 6/1/21

Receivership and Insolvency (E) Task Force
Virtual Meeting
May 20, 2021

The Receivership and Insolvency (E) Task Force met May 20, 2021. The following Task Force members participated: Doug Slape, Chair, represented by James Kennedy (TX); James J. Donelon, Vice Chair, represented by Tom Travis (LA); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Doug Ommen represented by Kevin Clark (IA); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Justin McFarland (KS); Sharon P. Clark represented by Bill Clark (KY); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by James Gerber (MI); Chlora Lindley-Myers represented by Shelley Forrest (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Glen Mulready represented by Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); and Raymond G. Farmer represented by Gwen Fuller McGriff (SC).

1. **Adopted its March 12 Minutes**

The Task Force met March 12 to: 1) adopt its Nov. 19, 2020, minutes; 2) adopt the report of the Receivership Financial Analysis (E) Working Group; 3) adopt the report of the Receivership Law (E) Working Group; 4) adopt the Guideline for Definition of Reciprocal State in Receivership Laws; 5) form the Receiver’s Handbook (E) Subgroup and adopt its 2021 proposed charges; and 6) hear an update on the status of Macroprudential Initiative (MPI) recommendations.

Ms. Obusek made a motion, seconded by Mr. Kosky, to adopt the Task Force’s March 12 minutes (see NAIC Proceedings – Spring 2021, Receivership and Insolvency (E) Task Force). The motion passed unanimously.

2. **Adopted Amendments to Model #440 and Model #450**

Ms. Slaymaker said in 2020, the Receivership Law (E) Working Group was given the charge to provide recommendations for remedies to ensure the continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities and specifically for agreements with affiliated entities whose sole business purpose is to provide services to the insurance company. This charge came out of prior recommendations from the Task Force as part of the MPI that identified the continuation of essential services as an area where regulatory powers are implicit rather than explicit. Further, the experiences of state insurance regulators have shown that receivers continue to be challenged by this issue, as current remedies may not immediately address the need to continue services in receivership.

Ms. Slaymaker said the Working Group began meeting in 2020 to address the charge. It first conducted a survey to identify recommendations for how to address this issue, including amendments to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The draft amendments to Model #440 and Model #450 were exposed for public comment twice with subsequent revisions made to address comments. The amendments to Model #440 were exposed a third time following a final round of edits. The amendments were made to Section 5—Standards and Management of an Insurer Within an Insurance Holding Company System of Model #440 and Section 19—Transactions Subject to Prior Notice - Notice Filing (Form D) of Model #450. Ms. Slaymaker summarized the amendments as follows:

1. Books and records of the insurer are updated to specifically include data of the insurer, being the property of the insurer. The data and records should be identifiable and capable of segregation; i.e., available to the receiver in the event of insolvency, including the systems necessary to access them. The data is specifically defined in Model #450.
2. If the commissioner deems the insurer to be in a statutorily defined hazardous financial condition, he or she may require a bond or deposit, limited in amount, after consideration of whether there are concerns about the affiliated party’s ability to fulfill the contract in the event of a liquidation.
3. Premiums are the property of the insurer, with any right of offset subject to receivership law.
4. The affiliated entity is subject to the jurisdiction of the receivership court, and in certain circumstances, the commissioner may require the affiliate to agree to this in writing.
5. Provisions are included relating to the indemnification of the insurer in the event of gross negligence or willful misconduct by the affiliate.

6. In the event of receivership, which now includes supervision and conservatorship:
   a. The rights of the insurer extend to the receiver or guaranty fund.
   b. The affiliate will make available essential personnel.
   c. The affiliate will continue the services for a minimum time period, as specified in the agreement, with timely payment for post-receivership work.
   d. The affiliate will maintain necessary systems, programs or infrastructure and make them available to the receiver or commissioner for as long as the affiliate receives timely post-receivership payment, unless released by the receiver, commissioner or receivership court.

Ms. Slaymaker made a motion, seconded by Ms. Wilkerson, to adopt the amendments to Model #440 (Attachment One-A) and Model #450 (Attachment One-B). The motion passed unanimously.

3. Heard an Update on the Group Solvency Issues (E) Working Group

Mr. Kennedy said the Group Solvency Issues (E) Working Group exposed draft updates to guidance in the *Financial Analysis Handbook* regarding international standards under the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) for a 60-day public comment period ending July 16. He encouraged members, interested state insurance regulators, and interested parties to review the guidance specifically related to crisis management groups, recovery planning, and resolution planning.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
INSURANCE HOLDING COMPANY SYSTEM REGULATORY ACT

As used in this Act, the following terms shall have these meanings unless the context shall otherwise require:

A. “Affiliate.” An “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

B. “Commissioner.” The term “commissioner” shall mean the insurance commissioner, the commissioner’s deputies, or the Insurance Department, as appropriate.

C. “Control.” The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

D. “Group-wide supervisor.” The regulatory official authorized to engage in conducting and coordinating group-wide supervision activities who is determined or acknowledged by the commissioner under Section 7.1 to have sufficient significant contacts with the internationally active insurance group.
Insurance Holding Company System Regulatory Act

E. “Group Capital Calculation instructions” means the group capital calculation instructions as adopted by the NAIC and as amended by the NAIC from time to time in accordance with the procedures adopted by the NAIC.

F. “Insurance Holding Company System.” An “insurance holding company system” consists of two (2) or more affiliated persons, one or more of which is an insurer.

G. “Insurer.” The term “insurer” shall have the same meaning as set forth in Section [insert applicable section] of this Chapter, except that it shall not include agencies, authorities or instrumentalities of the United States, its possessions and territories, the Commonwealth of Puerto Rico, the District of Columbia, or a state or political subdivision of a state.

Drafting Note: References in this model act to “Chapter” are references to the entire state insurance code.

Drafting Note: States should consider applicability of this model act to fraternal societies and captives.

H. “Internationally active insurance group.” An insurance holding company system that (1) includes an insurer registered under Section 4; and (2) meets the following criteria: (a) premiums written in at least three countries, (b) the percentage of gross premiums written outside the United States is at least ten percent (10%) of the insurance holding company system’s total gross written premiums, and (c) based on a three-year rolling average, the total assets of the insurance holding company system are at least fifty billion dollars ($50,000,000,000) or the total gross written premiums of the insurance holding company system are at least ten billion dollars ($10,000,000,000).

I. “Enterprise Risk.” “Enterprise risk” shall mean any activity, circumstance, event or series of events involving one or more affiliates of an insurer that, if not remedied promptly, is likely to have a material adverse effect upon the financial condition or liquidity of the insurer or its insurance holding company system as a whole, including, but not limited to, anything that would cause the insurer’s Risk-Based Capital to fall into company action level as set forth in [insert cross reference to appropriate section of Risk-Based Capital (RBC) Model Act] or would cause the insurer to be in hazardous financial condition [insert cross reference to appropriate section of Model Regulation to define standards and commissioner’s authority over companies deemed to be in hazardous financial condition].

J. “NAIC” means the National Association of Insurance Commissioners.

K. “NAIC Liquidity Stress Test Framework.” The “NAIC Liquidity Stress Test Framework” is a separate NAIC publication which includes a history of the NAIC’s development of regulatory liquidity stress testing, the Scope Criteria applicable for a specific data year, and the Liquidity Stress Test instructions and reporting template being as adopted by the NAIC and as amended by the NAIC from time to time in accordance with the procedures adopted by the NAIC.

L. “Person.” A “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert, but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

M. “Scope Criteria.” The “Scope Criteria,” as detailed in the NAIC Liquidity Stress Test Framework, are the designated exposure bases along with minimum magnitudes thereof for the specified data year, used to establish a preliminary list of insurers considered scoped into the NAIC Liquidity Stress Test Framework for that data year.

N. “Securityholder.” A “securityholder” of a specified person is one who owns any security of such person, including common stock, preferred stock, debt obligations and any other security convertible into or evidencing the right to acquire any of the foregoing.

O. “Subsidiary.” A “subsidiary” of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries.
“Voting Security.” The term “voting security” shall include any security convertible into or evidencing a right to acquire a voting security.

Section 2. Subsidiaries of Insurers

A. Authorization. A domestic insurer, either by itself or in cooperation with one or more persons, may organize or acquire one or more subsidiaries. The subsidiaries may conduct any kind of business or businesses and their authority to do so shall not be limited by reason of the fact that they are subsidiaries of a domestic insurer.

Drafting Note: This bill neither expressly authorizes noninsurance subsidiaries nor restricts subsidiaries to insurance related activities. It is believed that this is a policy decision which should be made by each individual state. Attached as an appendix are alternative provisions which would authorize the formation or acquisition of subsidiaries to engage in diversified business activity.

B. Additional Investment Authority. In addition to investments in common stock, preferred stock, debt obligations and other securities permitted under all other sections of this Chapter, a domestic insurer may also:

(1) Invest, in common stock, preferred stock, debt obligations, and other securities of one or more subsidiaries, amounts which do not exceed the lesser of ten percent (10%) of the insurer’s assets or fifty percent (50%) of the insurer’s surplus as regards policyholders, provided that after such investments, the insurer’s surplus as regards policyholders will be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs. In calculating the amount of such investments, investments in domestic or foreign insurance subsidiaries and health maintenance organizations shall be excluded, and there shall be included:

(a) Total net monies or other consideration expended and obligations assumed in the acquisition or formation of a subsidiary, including all organizational expenses and contributions to capital and surplus of the subsidiary whether or not represented by the purchase of capital stock or issuance of other securities, and

(b) All amounts expended in acquiring additional common stock, preferred stock, debt obligations, and other securities; and all contributions to the capital or surplus of a subsidiary subsequent to its acquisition or formation;

Drafting Note: When considering whether to amend its Holding Company Act to exempt health maintenance organizations and other similar entities from certain investment limitations, a state should consider whether the solvency and general operations of the entities are regulated by the insurance department. In addition to, or in place of, the term “health maintenance organizations” in Paragraph (1) above, a state may include any other entity which provides or arranges for the financing or provision of health care services or coverage over which the commissioner possesses financial solvency and regulatory oversight authority.

(2) Invest any amount in common stock, preferred stock, debt obligations and other securities of one or more subsidiaries engaged or organized to engage exclusively in the ownership and management of assets authorized as investments for the insurer provided that each subsidiary agrees to limit its investments in any asset so that such investments will not cause the amount of the total investment of the insurer to exceed any of the investment limitations specified in Paragraph (1) or in Sections [insert applicable section] through [insert applicable section] of this Chapter applicable to the insurer. For the purpose of this paragraph, “the total investment of the insurer” shall include:

(a) Any direct investment by the insurer in an asset, and

(b) The insurer’s proportionate share of any investment in an asset by any subsidiary of the insurer, which shall be calculated by multiplying the amount of the subsidiary’s investment by the percentage of the ownership of the subsidiary;
(3) With the approval of the commissioner, invest any greater amount in common stock, preferred stock, debt obligations, or other securities of one or more subsidiaries; provided that after the investment the insurer’s surplus as regards policyholders will be reasonable in relation to the insurer’s outstanding liabilities and adequate to its financial needs.

C. Exemption from Investment Restrictions. Investments in common stock, preferred stock, debt obligations or other securities of subsidiaries made pursuant to Subsection B shall not be subject to any of the otherwise applicable restrictions or prohibitions contained in this Chapter applicable to such investments of insurers [except the following: ].

Drafting Note: The last phrase is optional in those states having certain special qualitative limitations, such as prohibitions on investments in stock of mining companies, which the state may wish to retain as a matter of public policy.

D. Qualification of Investment; When Determined. Whether any investment made pursuant to Subsection B meets the applicable requirements of that subsection is to be determined before the investment is made, by calculating the applicable investment limitations as though the investment had already been made, taking into account the then outstanding principal balance on all previous investments in debt obligations, and the value of all previous investments in equity securities as of the day they were made, net of any return of capital invested, not including dividends.

E. Cessation of Control. If an insurer ceases to control a subsidiary, it shall dispose of any investment therein made pursuant to this section within three (3) years from the time of the cessation of control or within such further time as the commissioner may prescribe, unless at any time after the investment shall have been made, the investment shall have met the requirements for investment under any other section of this Chapter, and the insurer has so notified the commissioner.

Section 3. Acquisition of Control of or Merger with Domestic Insurer

A. Filing Requirements.

(1) No person other than the issuer shall make a tender offer for or a request or invitation for tenders of, or enter into any agreement to exchange securities for, seek to acquire, or acquire, in the open market or otherwise, any voting security of a domestic insurer if, after the consummation thereof, such person would, directly or indirectly (or by conversion or by exercise of any right to acquire) be in control of the insurer, and no person shall enter into an agreement to merge with or otherwise to acquire control of a domestic insurer or any person controlling a domestic insurer unless, at the time the offer, request or invitation is made or the agreement is entered into, or prior to the acquisition of the securities if no offer or agreement is involved, such person has filed with the commissioner and has sent to the insurer, a statement containing the information required by this section and the offer, request, invitation, agreement or acquisition has been approved by the commissioner in the manner prescribed in this Act.

(2) For purposes of this section, any controlling person of a domestic insurer seeking to divest its controlling interest in the domestic insurer, in any manner, shall file with the commissioner, with a copy to the insurer, confidential notice of its proposed divestiture at least 30 days prior to the cessation of control. The commissioner shall determine those instances in which the party(ies) seeking to divest or to acquire a controlling interest in an insurer, will be required to file for and obtain approval of the transaction. The information shall remain confidential until the conclusion of the transaction unless the commissioner, in his or her discretion determines that confidential treatment will interfere with enforcement of this section. If the statement referred to in Paragraph (1) is otherwise filed, this paragraph shall not apply.

(3) With respect to a transaction subject to this section, the acquiring person must also file a pre-acquisition notification with the commissioner, which shall contain the information set forth in Section 3.1C(1). A failure to file the notification may be subject to penalties specified in Section 3.1E(3).
(4) For purposes of this section a domestic insurer shall include any person controlling a domestic insurer unless the person, as determined by the commissioner, is either directly or through its affiliates primarily engaged in business other than the business of insurance. For the purposes of this section, “person” shall not include any securities broker holding, in the usual and customary broker’s function, less than twenty percent (20%) of the voting securities of an insurance company or of any person which controls an insurance company.

B. Content of Statement. The statement to be filed with the commissioner shall be made under oath or affirmation and shall contain the following:

(1) The name and address of each person by whom or on whose behalf the merger or other acquisition of control referred to in Subsection A is to be effected (hereinafter called the “acquiring party”), and

(a) If the person is an individual, his or her principal occupation and all offices and positions held during the past five (5) years, and any conviction of crimes other than minor traffic violations during the past ten (10) years;

(b) If the person is not an individual, a report of the nature of its business operations during the past five (5) years or for the lesser period as the person and any predecessors shall have been in existence; an informative description of the business intended to be done by the person and the person’s subsidiaries; and a list of all individuals who are or who have been selected to become directors or executive officers of the person, or who perform or will perform functions appropriate to such positions. The list shall include for each individual the information required by Subparagraph (a) of this paragraph;

(2) The source, nature and amount of the consideration used or to be used in effecting the merger or other acquisition of control, a description of any transaction where funds were or are to be obtained for any such purpose (including any pledge of the insurer’s stock, or the stock of any of its subsidiaries or controlling affiliates), and the identity of persons furnishing consideration; provided, however, that where a source of consideration is a loan made in the lender’s ordinary course of business, the identity of the lender shall remain confidential, if the person filing the statement so requests;

(3) Fully audited financial information as to the earnings and financial condition of each acquiring party for the preceding five (5) fiscal years of each acquiring party (or for such lesser period as the acquiring party and any predecessors shall have been in existence), and similar unaudited information as of a date not earlier than ninety (90) days prior to the filing of the statement;

(4) Any plans or proposals which each acquiring party may have to liquidate the insurer, to sell its assets or merge or consolidate it with any person, or to make any other material change in its business or corporate structure or management;

(5) The number of shares of any security referred to in Subsection A which each acquiring party proposes to acquire, and the terms of the offer, request, invitation, agreement or acquisition referred to in Subsection A, and a statement as to the method by which the fairness of the proposal was arrived at;

(6) The amount of each class of any security referred to in Subsection A which is beneficially owned or concerning which there is a right to acquire beneficial ownership by each acquiring party;

(7) A full description of any contracts, arrangements or understandings with respect to any security referred to in Subsection A in which any acquiring party is involved, including but not limited to transfer of any of the securities, joint ventures, loan or option arrangements, puts or calls, guarantees of loans, guarantees against loss or guarantees of profits, division of losses or profits, or the giving or withholding of proxies. The description shall identify the persons with whom the contracts, arrangements or understandings have been entered into;
Insurance Holding Company System Regulatory Act

(8) A description of the purchase of any security referred to in Subsection A during the twelve (12) calendar months preceding the filing of the statement by any acquiring party, including the dates of purchase, names of the purchasers and consideration paid or agreed to be paid;

(9) A description of any recommendations to purchase any security referred to in Subsection A made during the twelve (12) calendar months preceding the filing of the statement by any acquiring party, or by anyone based upon interviews or at the suggestion of the acquiring party;

(10) Copies of all tender offers for, requests, or invitations for tenders of, exchange offers for, and agreements to acquire or exchange any securities referred to in Subsection A, and (if distributed) of additional soliciting material relating to them;

(11) The term of any agreement, contract or understanding made with or proposed to be made with any broker-dealer as to solicitation of securities referred to in Subsection A for tender, and the amount of any fees, commissions or other compensation to be paid to broker-dealers with regard thereto;

Drafting Note: An insurer required to file information pursuant to sub-sections 3B(12) and 3B(13) may satisfy the requirement by providing the commissioner with the most recently filed parent corporation reports that have been filed with the SEC, if appropriate.

(12) An agreement by the person required to file the statement referred to in Subsection A that it will provide the annual report, specified in Section 4L(1), for so long as control exists;

(13) An acknowledgement by the person required to file the statement referred to in Subsection A that the person and all subsidiaries within its control in the insurance holding company system will provide information to the commissioner upon request as necessary to evaluate enterprise risk to the insurer; and

(14) Such additional information as the commissioner may by rule or regulation prescribe as necessary or appropriate for the protection of policyholders of the insurer or in the public interest.

If the person required to file the statement referred to in Subsection A is a partnership, limited partnership, syndicate or other group, the commissioner may require that the information called for by Paragraphs (1) through (14) shall be given with respect to each partner of the partnership or limited partnership, each member of the syndicate or group, and each person who controls the partner or member. If any partner, member or person is a corporation or the person required to file the statement referred to in Subsection A is a corporation, the commissioner may require that the information called for by Paragraphs (1) through (14) shall be given with respect to the corporation, each officer and director of the corporation, and each person who is directly or indirectly the beneficial owner of more than ten percent (10%) of the outstanding voting securities of the corporation.

If any material change occurs in the facts set forth in the statement filed with the commissioner and sent to the insurer pursuant to this section, an amendment setting forth the change, together with copies of all documents and other material relevant to the change, shall be filed with the commissioner and sent to the insurer within two (2) business days after the person learns of the change.

C. Alternative Filing Materials.

If any offer, request, invitation, agreement or acquisition referred to in Subsection A is proposed to be made by means of a registration statement under the Securities Act of 1933 or in circumstances requiring the disclosure of similar information under the Securities Exchange Act of 1934, or under a state law requiring similar registration or disclosure, the person required to file the statement referred to in Subsection A may utilize the documents in furnishing the information called for by that statement.
D. Approval by Commissioner: Hearings.

(1) The commissioner shall approve any merger or other acquisition of control referred to in Subsection A unless, after a public hearing, the commissioner finds that:

(a) After the change of control, the domestic insurer referred to in Subsection A would not be able to satisfy the requirements for the issuance of a license to write the line or lines of insurance for which it is presently licensed;

(b) The effect of the merger or other acquisition of control would be substantially to lessen competition in insurance in this state or tend to create a monopoly. In applying the competitive standard in this subparagraph:

(i) The informational requirements of Section 3.1C(1) and the standards of Section 3.1D(2) shall apply;

(ii) The merger or other acquisition shall not be disapproved if the commissioner finds that any of the situations meeting the criteria provided by Section 3.1D(3) exist; and

(iii) The commissioner may condition the approval of the merger or other acquisition on the removal of the basis of disapproval within a specified period of time;

(c) The financial condition of any acquiring party is such as might jeopardize the financial stability of the insurer, or prejudice the interest of its policyholders;

(d) The plans or proposals which the acquiring party has to liquidate the insurer, sell its assets or consolidate or merge it with any person, or to make any other material change in its business or corporate structure or management, are unfair and unreasonable to policyholders of the insurer and not in the public interest;

(e) The competence, experience and integrity of those persons who would control the operation of the insurer are such that it would not be in the interest of policyholders of the insurer and of the public to permit the merger or other acquisition of control; or

(f) The acquisition is likely to be hazardous or prejudicial to the insurance-buying public.

(2) The public hearing referred to in Paragraph (1) shall be held within thirty (30) days after the statement required by Subsection A is filed, and at least twenty (20) days notice shall be given by the commissioner to the person filing the statement. Not less than seven (7) days notice of the public hearing shall be given by the person filing the statement to the insurer and to such other persons as may be designated by the commissioner. The commissioner shall make a determination within the sixty (60) day period preceding the effective date of the proposed transaction. At the hearing, the person filing the statement, the insurer, any person to whom notice of hearing was sent, and any other person whose interest may be affected shall have the right to present evidence, examine and cross-examine witnesses, and offer oral and written arguments and in connection therewith shall be entitled to conduct discovery proceedings in the same manner as is presently allowed in the [insert title] Court of this state. All discovery proceedings shall be concluded not later than three (3) days prior to the commencement of the public hearing.

(3) If the proposed acquisition of control will require the approval of more than one commissioner, the public hearing referred to in Paragraph (2) may be held on a consolidated basis upon request of the person filing the statement referred to in Subsection A. Such person shall file the statement referred to in Subsection A with the National Association of Insurance Commissioners (NAIC) within five (5) days of making the request for a public hearing. A commissioner may opt out of a consolidated hearing, and shall provide notice to the applicant of the opt-out within ten (10) days of the receipt of the statement referred to in Subsection A. A hearing conducted on a consolidated basis shall be public and shall be held within the United States before the commissioners of the states in which the insurers are domiciled. Such commissioners shall hear and receive evidence. A
Insurance Holding Company System Regulatory Act

commissioner may attend such hearing, in person or by telecommunication.

(4) In connection with a change of control of a domestic insurer, any determination by the commissioner that the person acquiring control of the insurer shall be required to maintain or restore the capital of the insurer to the level required by the laws and regulations of this state shall be made not later than sixty (60) days after the date of notification of the change in control submitted pursuant to Section 3A(1) of this Act.

(5) The commissioner may retain at the acquiring person’s expense any attorneys, actuaries, accountants and other experts not otherwise a part of the commissioner’s staff as may be reasonably necessary to assist the commissioner in reviewing the proposed acquisition of control.

E. Exemptions. The provisions of this section shall not apply to:

(1) [Any transaction which is subject to the provisions of Sections [insert applicable section] and [insert applicable section] of the laws of this state, dealing with the merger or consolidation of two or more insurers].

Drafting Note: Optional for use in those states where existing law adequately governs standards and procedures for the merger or consolidation of two or more insurers.

(2) Any offer, request, invitation, agreement or acquisition which the commissioner by order shall exempt as not having been made or entered into for the purpose and not having the effect of changing or influencing the control of a domestic insurer, or as otherwise not comprehended within the purposes of this section.

F. Violations. The following shall be violations of this section:

(1) The failure to file any statement, amendment or other material required to be filed pursuant to Subsection A or B; or

(2) The effectuation or any attempt to effectuate an acquisition of control of, divestiture of, or merger with, a domestic insurer unless the commissioner has given approval.

G. Jurisdiction, Consent to Service of Process. The courts of this state are hereby vested with jurisdiction over every person not resident, domiciled or authorized to do business in this state who files a statement with the commissioner under this section, and overall actions involving such person arising out of violations of this section, and each such person shall be deemed to have performed acts equivalent to and constituting an appointment by the person of the commissioner to be his true and lawful attorney upon whom may be served all lawful process in any action, suit or proceeding arising out of violations of this section. Copies of all lawful process shall be served on the commissioner and transmitted by registered or certified mail by the commissioner to the person at his last known address.

Section 3.1 Acquisitions Involving Insurers Not Otherwise Covered

A. Definitions. The following definitions shall apply for the purposes of this section only:

(1) “Acquisition” means any agreement, arrangement or activity the consummation of which results in a person acquiring directly or indirectly the control of another person, and includes but is not limited to the acquisition of voting securities, the acquisition of assets, bulk reinsurance and mergers.

(2) An “involved insurer” includes an insurer which either acquires or is acquired, is affiliated with an acquirer or acquired, or is the result of a merger.

B. Scope

(1) Except as exempted in Paragraph (2) of this subsection, this section applies to any acquisition in which there is a change in control of an insurer authorized to do business in this state.
(2) This section shall not apply to the following:

(a) A purchase of securities solely for investment purposes so long as the securities are not used by voting or otherwise to cause or attempt to cause the substantial lessening of competition in any insurance market in this state. If a purchase of securities results in a presumption of control under Section 1C, it is not solely for investment purposes unless the commissioner of the insurer’s state of domicile accepts a disclaimer of control or affirmatively finds that control does not exist and the disclaimer action or affirmative finding is communicated by the domiciliary commissioner to the commissioner of this state;

(b) The acquisition of a person by another person when both persons are neither directly nor through affiliates primarily engaged in the business of insurance, if pre-acquisition notification is filed with the commissioner in accordance with Section 3.1C(1) thirty (30) days prior to the proposed effective date of the acquisition. However, such pre-acquisition notification is not required for exclusion from this section if the acquisition would otherwise be excluded from this section by any other subparagraph of Section 3.1B(2);

(c) The acquisition of already affiliated persons;

(d) An acquisition if, as an immediate result of the acquisition,

(i) In no market would the combined market share of the involved insurers exceed five percent (5%) of the total market,

(ii) There would be no increase in any market share, or

(iii) In no market would

(I) The combined market share of the involved insurers exceeds twelve percent (12%) of the total market, and

(II) The market share increase by more than two percent (2%) of the total market.

For the purpose of this Paragraph (2)(d), a market means direct written insurance premium in this state for a line of business as contained in the annual statement required to be filed by insurers licensed to do business in this state;

(e) An acquisition for which a pre-acquisition notification would be required pursuant to this section due solely to the resulting effect on the ocean marine insurance line of business;

(f) An acquisition of an insurer whose domiciliary commissioner affirmatively finds that the insurer is in failing condition; there is a lack of feasible alternative to improving such condition; the public benefits of improving the insurer’s condition through the acquisition exceed the public benefits that would arise from not lessening competition; and the findings are communicated by the domiciliary commissioner to the commissioner of this state.

C. Pre-acquisition Notification; Waiting Period. An acquisition covered by Section 3.1B may be subject to an order pursuant to Section 3.1E unless the acquiring person files a pre-acquisition notification and the waiting period has expired. The acquired person may file a pre-acquisition notification. The commissioner shall give confidential treatment to information submitted under this subsection in the same manner as provided in Section 8 of this Act.

(1) The pre-acquisition notification shall be in such form and contain such information as prescribed by the National Association of Insurance Commissioners (NAIC) relating to those markets which, under Section 3.1B(2)(d), cause the acquisition not to be exempted from the provisions of this
Insurance Holding Company System Regulatory Act

section. The commissioner may require such additional material and information as deemed necessary to determine whether the proposed acquisition, if consummated, would violate the competitive standard of Section 3.1D. The required information may include an opinion of an economist as to the competitive impact of the acquisition in this state accompanied by a summary of the education and experience of such person indicating his or her ability to render an informed opinion.

(2) The waiting period required shall begin on the date of receipt of the commissioner of a pre-acquisition notification and shall end on the earlier of the thirtieth day after the date of receipt, or termination of the waiting period by the commissioner. Prior to the end of the waiting period, the commissioner on a one-time basis may require the submission of additional needed information relevant to the proposed acquisition, in which event the waiting period shall end on the earlier of the thirtieth day after receipt of the additional information by the commissioner or termination of the waiting period by the commissioner.

D. Competitive Standard

(1) The commissioner may enter an order under Section 3.1E(1) with respect to an acquisition if there is substantial evidence that the effect of the acquisition may be substantially to lessen competition in any line of insurance in this state or tend to create a monopoly or if the insurer fails to file adequate information in compliance with Section 3.1C.

(2) In determining whether a proposed acquisition would violate the competitive standard of Paragraph (1) of this subsection, the commissioner shall consider the following:

(a) Any acquisition covered under Section 3.1B involving two (2) or more insurers competing in the same market is prima facie evidence of violation of the competitive standards.

(i) If the market is highly concentrated and the involved insurers possess the following shares of the market:

<table>
<thead>
<tr>
<th>Insurer A</th>
<th>Insurer B</th>
</tr>
</thead>
<tbody>
<tr>
<td>4%</td>
<td>4% or more</td>
</tr>
<tr>
<td>10%</td>
<td>2% or more</td>
</tr>
<tr>
<td>15%</td>
<td>1% or more</td>
</tr>
</tbody>
</table>

(ii) Or, if the market is not highly concentrated and the involved insurers possess the following shares of the market:

<table>
<thead>
<tr>
<th>Insurer A</th>
<th>Insurer B</th>
</tr>
</thead>
<tbody>
<tr>
<td>5%</td>
<td>5% or more</td>
</tr>
<tr>
<td>10%</td>
<td>4% or more</td>
</tr>
<tr>
<td>15%</td>
<td>3% or more</td>
</tr>
<tr>
<td>19%</td>
<td>1% or more</td>
</tr>
</tbody>
</table>

A highly concentrated market is one in which the share of the four (4) largest insurers is seventy-five percent (75%) or more of the market. Percentages not shown in the tables are interpolated proportionately to the percentages that are shown. If more than two (2) insurers are involved, exceeding the total of the two columns in the table is prima facie evidence of violation of the competitive standard in Paragraph (1) of this subsection. For the purpose of this item, the insurer with the largest share of the market shall be deemed to be Insurer A.
(b) There is a significant trend toward increased concentration when the aggregate market share of any grouping of the largest insurers in the market, from the two (2) largest to the eight (8) largest, has increased by seven percent (7%) or more of the market over a period of time extending from any base year five (5) to ten (10) years prior to the acquisition up to the time of the acquisition. Any acquisition or merger covered under Section 3.1B involving two (2) or more insurers competing in the same market is prima facie evidence of violation of the competitive standard in Paragraph (1) of this subsection if:

(i) There is a significant trend toward increased concentration in the market;

(ii) One of the insurers involved is one of the insurers in a grouping of large insurers showing the requisite increase in the market share; and

(iii) Another involved insurer’s market is two percent (2%) or more.

(c) For the purposes of Section 3.1D(2):

(i) The term “insurer” includes any company or group of companies under common management, ownership or control;

(ii) The term “market” means the relevant product and geographical markets. In determining the relevant product and geographical markets, the commissioner shall give due consideration to, among other things, the definitions or guidelines, if any, promulgated by the NAIC and to information, if any, submitted by parties to the acquisition. In the absence of sufficient information to the contrary, the relevant product market is assumed to be the direct written insurance premium for a line of business, such line being that used in the annual statement required to be filed by insurers doing business in this state, and the relevant geographical market is assumed to be this state;

(iii) The burden of showing prima facie evidence of violation of the competitive standard rests upon the commissioner.

(d) Even though an acquisition is not prima facie violative of the competitive standard under Paragraphs (2)(a) and (2)(b) of this subsection, the commissioner may establish the requisite anticompetitive effect based upon other substantial evidence. Even though an acquisition is prima facie violative of the competitive standard under Paragraphs (2)(a) and (2)(b) of this subsection, a party may establish the absence of the requisite anticompetitive effect based upon other substantial evidence. Relevant factors in making a determination under this subparagraph include, but are not limited to, the following: market shares, volatility of ranking of market leaders, number of competitors, concentration, trend of concentration in the industry, and ease of entry and exit into the market.

(3) An order may not be entered under Section 3.1E(1) if:

(a) The acquisition will yield substantial economies of scale or economies in resource utilization that cannot be feasibly achieved in any other way, and the public benefits which would arise from such economies exceed the public benefits which would arise from not lessening competition; or

(b) The acquisition will substantially increase the availability of insurance, and the public benefits of the increase exceed the public benefits which would arise from not lessening competition.

E. Orders and Penalties

(1) If an acquisition violates the standards of this section, the commissioner may enter an order:
Insurance Holding Company System Regulatory Act

(i) Requiring an involved insurer to cease and desist from doing business in this state with respect to the line or lines of insurance involved in the violation; or

(ii) Denying the application of an acquired or acquiring insurer for a license to do business in this state.

(b) Such an order shall not be entered unless:

(i) There is a hearing;

(ii) Notice of the hearing is issued prior to the end of the waiting period and not less than fifteen (15) days prior to the hearing; and

(iii) The hearing is concluded and the order is issued no later than sixty (60) days after the date of the filing of the pre-acquisition notification with the commissioner.

Every order shall be accompanied by a written decision of the commissioner setting forth findings of fact and conclusions of law.

(c) An order pursuant to this paragraph shall not apply if the acquisition is not consummated.

(2) Any person who violates a cease and desist order of the commissioner under Paragraph (1) and while the order is in effect may, after notice and hearing and upon order of the commissioner, be subject at the discretion of the commissioner to one or more of the following:

(a) A monetary penalty of not more than $10,000 for every day of violation; or

(b) Suspension or revocation of the person’s license.

(3) Any insurer or other person who fails to make any filing required by this section, and who also fails to demonstrate a good faith effort to comply with any filing requirement, shall be subject to a fine of not more than $50,000.

F. Inapplicable Provisions. Sections 10B, 10C, and 12 do not apply to acquisitions covered under Section 3.1B.

Section 4. Registration of Insurers

A. Registration. Every insurer which is authorized to do business in this state and which is a member of an insurance holding company system shall register with the commissioner, except a foreign insurer subject to registration requirements and standards adopted by statute or regulation in the jurisdiction of its domicile which are substantially similar to those contained in:

(1) Section 4;

(2) Section 5A(1), 5B, 5D; and

(3) Either Section 5A(2) or a provision such as the following: Each registered insurer shall keep current the information required to be disclosed in its registration statement by reporting all material changes or additions within fifteen (15) days after the end of the month in which it learns of each change or addition.

Any insurer which is subject to registration under this section shall register within fifteen (15) days after it becomes subject to registration, and annually thereafter by [insert date] of each year for the previous calendar year, unless the commissioner for good cause shown extends the time for registration, and then within the extended time. The commissioner may require any insurer authorized to do business in the state which is a member of an insurance holding company system,
and which is not subject to registration under this section, to furnish a copy of the registration statement, the summary specified in Section 4C or other information filed by the insurance company with the insurance regulatory authority of its domiciliary jurisdiction.

**B. Information and Form Required.** Every insurer subject to registration shall file the registration statement with the commissioner on a form and in a format prescribed by the NAIC, which shall contain the following current information:

1. The capital structure, general financial condition, ownership and management of the insurer and any person controlling the insurer;
2. The identity and relationship of every member of the insurance holding company system;
3. The following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the insurer and its affiliates:
   - Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the insurer or of the insurer by its affiliates;
   - Purchases, sales or exchange of assets;
   - Transactions not in the ordinary course of business;
   - Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the insurer’s assets to liability, other than insurance contracts entered into in the ordinary course of the insurer’s business;
   - All management agreements, service contracts and all cost-sharing arrangements;
   - Reinsurance agreements;
   - Dividends and other distributions to shareholders; and
   - Consolidated tax allocation agreements;
4. Any pledge of the insurer’s stock, including stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system;
5. If requested by the commissioner, the insurer shall include financial statements of or within an insurance holding company system, including all affiliates. Financial statements may include but are not limited to annual audited financial statements filed with the U.S. Securities and Exchange Commission (SEC) pursuant to the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended. An insurer required to file financial statements pursuant to this paragraph may satisfy the request by providing the commissioner with the most recently filed parent corporation financial statements that have been filed with the SEC;
6. Other matters concerning transactions between registered insurers and any affiliates as may be included from time to time in any registration forms adopted or approved by the commissioner;
7. Statements that the insurer’s board of directors oversees corporate governance and internal controls and that the insurer’s officers or senior management have approved, implemented, and continue to maintain and monitor corporate governance and internal control procedures; and

**Drafting Note:** Neither option below is intended to modify applicable state insurance and/or corporate law requirements.
Alternative Section 4B(7):

(7) Statements that the insurer’s board of directors is responsible for and oversees corporate governance and internal controls and that the insurer’s officers or senior management have approved, implemented, and continue to maintain and monitor corporate governance and internal control procedures; and

(8) Any other information required by the commissioner by rule or regulation.

C. Summary of Changes to Registration Statement. All registration statements shall contain a summary outlining all items in the current registration statement representing changes from the prior registration statement.

D. Materiality. No information need be disclosed on the registration statement filed pursuant to Subsection B if the information is not material for the purposes of this section. Unless the commissioner by rule, regulation or order provides otherwise; sales, purchases, exchanges, loans or extensions of credit, investments, or guarantees involving one-half of one percent (0.5%) or less of an insurer’s admitted assets as of the 31st day of December next preceding shall not be deemed material for purposes of this section. The definition of materiality provided in this subsection shall not apply for purposes of the Group Capital Calculation or the Liquidity Stress Test Framework.

E. Reporting of Dividends to Shareholders. Subject to Section 5B, each registered insurer shall report to the commissioner all dividends and other distributions to shareholders within fifteen (15) business days following the declaration thereof.

F. Information of Insurers. Any person within an insurance holding company system subject to registration shall be required to provide complete and accurate information to an insurer, where the information is reasonably necessary to enable the insurer to comply with the provisions of this Act.

G. Termination of Registration. The commissioner shall terminate the registration of any insurer which demonstrates that it no longer is a member of an insurance holding company system.

H. Consolidated Filing. The commissioner may require or allow two (2) or more affiliated insurers subject to registration to file a consolidated registration statement.

I. Alternative Registration. The commissioner may allow an insurer which is authorized to do business in this state and which is part of an insurance holding company system to register on behalf of any affiliated insurer which is required to register under Subsection A and to file all information and material required to be filed under this section.

J. Exemptions. The provisions of this section shall not apply to any insurer, information or transaction if and to the extent that the commissioner by rule, regulation or order shall exempt the same from the provisions of this section.

K. Disclaimer. Any person may file with the commissioner a disclaimer of affiliation with any authorized insurer or a disclaimer may be filed by the insurer or any member of an insurance holding company system. The disclaimer shall fully disclose all material relationships and bases for affiliation between the person and the insurer as well as the basis for disclaiming the affiliation. A disclaimer of affiliation shall be deemed to have been granted unless the commissioner, within thirty (30) days following receipt of a complete disclaimer, notifies the filing party the disclaimer is disallowed. In the event of disallowance, the disclaiming party may request an administrative hearing, which shall be granted. The disclaiming party shall be relieved of its duty to register under this section if approval of the disclaimer has been granted by the commissioner, or if the disclaimer is deemed to have been approved.
L. Enterprise Risk Filings.

(1) The ultimate controlling person of every insurer subject to registration shall also file an annual enterprise risk report. The report shall, to the best of the ultimate controlling person’s knowledge and belief, identify the material risks within the insurance holding company system that could pose enterprise risk to the insurer. The report shall be filed with the lead state commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook adopted by the National Association of Insurance Commissioners;

(2) Group Capital Calculation. Except as provided below, the ultimate controlling person of every insurer subject to registration shall concurrently file with the registration an annual group capital calculation as directed by the lead state commissioner. The report shall be completed in accordance with the NAIC Group Capital Calculation Instructions, which may permit the lead state commissioner to allow a controlling person that is not the ultimate controlling person to file the group capital calculation. The report shall be filed with the lead state commissioner of the insurance holding company system as determined by the commissioner in accordance with the procedures within the Financial Analysis Handbook adopted by the NAIC. Insurance holding company systems described below are exempt from filing the group capital calculation:

(a) An insurance holding company system that has only one insurer within its holding company structure, that only writes business [and is only licensed] in its domestic state, and assumes no business from any other insurer;

(b) An insurance holding company system that is required to perform a group capital calculation specified by the United States Federal Reserve Board. The lead state commissioner shall request the calculation from the Federal Reserve Board under the terms of information sharing agreements in effect. If the Federal Reserve Board cannot share the calculation with the lead state commissioner, the insurance holding company system is not exempt from the group capital calculation filing;

(c) An insurance holding company system whose non-U.S. group-wide supervisor is located within a Reciprocal Jurisdiction as described in [insert cross-reference to appropriate section of Credit for Reinsurance Law] that recognizes the U.S. state regulatory approach to group supervision and group capital;

(d) An insurance holding company system:

(i) That provides information to the lead state that meets the requirements for accreditation under the NAIC financial standards and accreditation program, either directly or indirectly through the group-wide supervisor, who has determined such information is satisfactory to allow the lead state to comply with the NAIC group supervision approach, as detailed in the NAIC Financial Analysis Handbook, and

(ii) Whose non-U.S. group-wide supervisor that is not in a Reciprocal Jurisdiction recognizes and accepts, as specified by the commissioner in regulation, the group capital calculation as the world-wide group capital assessment for U.S. insurance groups who operate in that jurisdiction.

Drafting Note: On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements are considered to be a “covered agreement” entered into pursuant to Dodd-Frank Wall Street Reform and Consumer Protection Act, 31 U.S.C. §§ 313 and 314, that addresses the U.S. state regulatory approach to group supervision and group capital, and provides that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the commissioner or the commissioner of the domiciliary state and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group. Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to the EU and UK Covered Agreements treated as Reciprocal Jurisdictions, but any other Qualified Jurisdiction can also qualify as Reciprocal Jurisdiction if they provide written confirmation that they recognize and accept the U.S. state regulatory approach to group supervision and group capital.
Insurance Holding Company System Regulatory Act

Drafting Note: The phrase “Recognizes and accepts” does not require the non-U.S. group-wide supervisor to require the U.S. insurance groups to actually file the group capital calculation with the non-U.S. supervisor but rather does not apply its own version of a group capital filing to U.S. insurance groups.

(e) Notwithstanding the provisions of Sections 4L(2)(c) and 4L(2)(d), a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.

(f) Notwithstanding the exemptions from filing the group capital calculation stated in Section 4L(2)(a) through Section 4L(2)(d), the lead state commissioner has the discretion to exempt the ultimate controlling person from filing the annual group capital calculation or to accept a limited group capital filing or report in accordance with criteria as specified by the commissioner in regulation.

(g) If the lead state commissioner determines that an insurance holding company system no longer meets one or more of the requirements for an exemption from filing the group capital calculation under this section, the insurance holding company system shall file the group capital calculation at the next annual filing date unless given an extension by the lead state commissioner based on reasonable grounds shown.

(3) Liquidity Stress Test. The ultimate controlling person of every insurer subject to registration and also scoped into the NAIC Liquidity Stress Test Framework shall file the results of a specific year’s Liquidity Stress Test. The filing shall be made to the lead state insurance commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook adopted by the National Association of Insurance Commissioners:

(a) The NAIC Liquidity Stress Test Framework includes Scope Criteria applicable to a specific data year. These Scope Criteria are reviewed at least annually by the Financial Stability Task Force or its successor. Any change to the NAIC Liquidity Stress Test Framework or to the data year for which the Scope Criteria are to be measured shall be effective on January 1 of the year following the calendar year when such changes are adopted. Insurers meeting at least one threshold of the Scope Criteria are considered scoped into the NAIC Liquidity Stress Test Framework for the specified data year unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should not be scoped into the Framework for that data year. Similarly, insurers that do not trigger at least one threshold of the Scope Criteria are considered scoped out of the NAIC Liquidity Stress Test Framework for the specified data year, unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should be scoped into the Framework for that data year.

(i) Regulators wish to avoid having insurers scoped in and out of the NAIC Liquidity Stress Test Framework on a frequent basis. The lead state insurance commissioner, in consultation with the Financial Stability Task Force or its successor, will assess this concern as part of the determination for an insurer.

(b) The performance of, and filing of the results from, a specific year’s Liquidity Stress Test shall comply with the NAIC Liquidity Stress Test Framework’s instructions and reporting templates for that year and any lead state insurance commissioner determinations, in conjunction with the Financial Stability Task Force or its successor, provided within the Framework.

Drafting Note: The delay included in the change to the NAIC Liquidity Stress Test Framework or to the data year for which the Scope Criteria are to be measured being effective on January 1 of the year following the calendar year when such changes are adopted is present to: 1) allow sufficient time for states needing to adopt by rule the NAIC Liquidity Stress Test Framework for a given data year and 2) to ensure scoped in insurers have adequate time to comply with the requirements for a given data year.
M. Violations. The failure to file a registration statement or any summary of the registration statement or enterprise risk filing required by this section within the time specified for filing shall be a violation of this section.

Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System

A. Transactions Within an Insurance Holding Company System

(1) Transactions within an insurance holding company system to which an insurer subject to registration is a party shall be subject to the following standards:

(a) The terms shall be fair and reasonable;

(b) Agreements for cost sharing services and management shall include such provisions as required by rule and regulation issued by the commissioner;

(c) Charges or fees for services performed shall be reasonable;

(d) Expenses incurred and payment received shall be allocated to the insurer in conformity with customary insurance accounting practices consistently applied;

(e) The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties;

(f) The insurer’s surplus as regards policyholders following any dividends or distributions to shareholder affiliates shall be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs;

(g) If an insurer subject to this Act is deemed by the commissioner to be in a hazardous financial condition as defined by [insert citation for Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition] or a condition that would be grounds for supervision, conservation or a delinquency proceeding, then the commissioner may require the insurer to secure and maintain either a deposit, held by the commissioner, or a bond, as determined by the insurer at the insurer’s discretion, for the protection of the insurer for the duration of the contract(s) or agreement(s), or the existence of the condition for which the commissioner required the deposit or the bond.

In determining whether a deposit or a bond is required, the commissioner should consider whether concerns exist with respect to the affiliated person’s ability to fulfill the contract or agreement if the insurer were to be put into liquidation. Once the insurer is deemed to be in a hazardous financial condition or a condition that would be grounds for supervision, conservation or a delinquency proceeding, and a deposit or bond is necessary, the commissioner has discretion to determine the amount of the deposit or bond, not to exceed the value of the contract(s) or agreement(s) in any one year, and whether such deposit or bond should be required for a single contract, multiple contracts or a contract only with a specific person(s).

Drafting Note: This section is intended to apply to a broad range of affiliate managerial and support service contracts including, for example, general managerial services, financial accounting and other support services, data management, investment portfolio management and support and policy and policyholder services. Performance collateralization for reinsurance and other risk transfer or financial contracts with affiliates is typically addressed in the underlying contractual agreements and is beyond the scope of these deposit/bond requirements. The intent of the deposit or bond is to ensure the affiliated services provided under the contract(s) are fulfilled. In determining appropriate circumstances when a commissioner may require a deposit or bond to be determined by the insurer, and in specifying an amount, the commissioner should evaluate and consider whether an insurer subject to this act is in a hazardous financial condition or a condition that would be grounds for supervision, conservation or a delinquency proceeding. If it is, the deposit or bond requirement would be available as an additional regulatory remedy at the discretion of the commissioner. Note, the commissioner should consider whether the affiliated person is already required to post a deposit or bond under applicable laws regulating third-party administrators.
Insurance Holding Company System Regulatory Act

(b) All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation, at no additional cost to the insurer, from all other persons' records and data. This includes all records and data that are otherwise the property of the insurer, in whatever form maintained, including, but not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate. At the request of the insurer, the affiliate shall provide that the receiver can obtain a complete set of all records of any type that pertain to the insurer’s business; obtain access to the operating systems on which the data is maintained; obtain the software that runs those systems either through assumption of licensing agreements or otherwise; and restrict the use of the data by the affiliate if it is not operating the insurer’s business. The affiliate shall provide a waiver of any landlord lien or other encumbrance to give the insurer access to all records and data in the event of the affiliate’s default under a lease or other agreement; and,

Drafting Note: The “at no additional cost to the insurer” language is not intended to prohibit recovery of the fair and reasonable cost associated with transferring records and data to the insurer. Since records and data of the insurer are the property of the insurer, the insurer should not pay a cost to segregate commingled records and data from other data of the affiliates.

(i) Premiums or other funds belonging to the insurer that are collected by or held by an affiliate are the exclusive property of the insurer and are subject to the control of the insurer. Any right of offset in the event an insurer is placed into receivership shall be subject to [the receivership act of the state].

(2) The following transactions involving a domestic insurer and any person in its insurance holding company system, including amendments or modifications of affiliate agreements previously filed pursuant to this section, which are subject to any materiality standards contained in subparagraphs (a) through (g), may not be entered into unless the insurer has notified the commissioner in writing of its intention to enter into the transaction at least thirty (30) days prior thereto, or such shorter period as the commissioner may permit, and the commissioner has not disapproved it within that period. The notice for amendments or modifications shall include the reasons for the change and the financial impact on the domestic insurer. Informal notice shall be reported, within thirty (30) days after a termination of a previously filed agreement, to the commissioner for determination of the type of filing required, if any.

(a) Sales, purchases, exchanges, loans, extensions of credit, or investments, provided the transactions are equal to or exceed:

(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer’s admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer’s admitted assets as of the 31st day of December next preceding;

(b) Loans or extensions of credit to any person who is not an affiliate, where the insurer makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the insurer making the loans or extensions of credit provided the transactions are equal to or exceed:

(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer’s admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer’s admitted assets as of the 31st day of December next preceding;
(c) Reinsurance agreements or modifications thereto, including:

(i) All reinsurance pooling agreements;

(ii) Agreements in which the reinsurance premium or a change in the insurer’s liabilities, or the projected reinsurance premium or a change in the insurer’s liabilities in any of the next three years, equals or exceeds five percent (5%) of the insurer’s surplus as regards policyholders, as of the 31st day of December next preceding, including those agreements which may require as consideration the transfer of assets from an insurer to a non-affiliate, if an agreement or understanding exists between the insurer and non-affiliate that any portion of the assets will be transferred to one or more affiliates of the insurer;

(d) All management agreements, service contracts, tax allocation agreements, guarantees and all cost-sharing arrangements;

(e) Guarantees when made by a domestic insurer; provided, however, that a guarantee which is quantifiable as to amount is not subject to the notice requirements of this paragraph unless it exceeds the lesser of one-half of one percent (.5%) of the insurer’s admitted assets or ten percent (10%) of surplus as regards policyholders as of the 31st day of December next preceding. Further, all guarantees which are not quantifiable as to amount are subject to the notice requirements of this paragraph;

(f) Direct or indirect acquisitions or investments in a person that controls the insurer or in an affiliate of the insurer in an amount which, together with its present holdings in such investments, exceeds two and one-half percent (2.5%) of the insurer’s surplus to policyholders. Direct or indirect acquisitions or investments in subsidiaries acquired pursuant to Section 2 of this Act (or authorized under any other section of this Chapter), or in non-subsidiary insurance affiliates that are subject to the provisions of this Act, are exempt from this requirement; and

(g) Any material transactions, specified by regulation, which the commissioner determines may adversely affect the interests of the insurer’s policyholders.

Nothing in this paragraph shall be deemed to authorize or permit any transactions which, in the case of an insurer not a member of the same insurance holding company system, would be otherwise contrary to law.

(3) A domestic insurer may not enter into transactions which are part of a plan or series of like transactions with persons within the insurance holding company system if the purpose of those separate transactions is to avoid the statutory threshold amount and thus avoid the review that would occur otherwise. If the commissioner determines that separate transactions were entered into over any twelve-month period for that purpose, the commissioner may exercise his or her authority under Section 11.

(4) The commissioner, in reviewing transactions pursuant to Subsection A(2), shall consider whether the transactions comply with the standards set forth in Subsection A(1) and whether they may adversely affect the interests of policyholders.

(5) The commissioner shall be notified within thirty (30) days of any investment of the domestic insurer in any one corporation if the total investment in the corporation by the insurance holding company system exceeds ten percent (10%) of the corporation’s voting securities.

(6) Supervision, seizure, conservatorship or receivership proceedings.
Insurance Holding Company System Regulatory Act

(a) Any affiliate that is party to an agreement or contract with a domestic insurer that is subject to Subsection A(2)(d) shall be subject to the jurisdiction of any supervision, seizure, conservatorship or receivership proceedings against the insurer and to the authority of any supervisor, conservator, rehabilitator or liquidator for the insurer appointed pursuant to [supervision and receivership acts] for the purpose of interpreting, enforcing and overseeing the affiliate’s obligations under the agreement or contract to perform services for the insurer that:

(i) are an integral part of the insurer’s operations, including, but not limited to management, administrative, accounting, data processing, marketing, underwriting, claims handling, investment or any other similar functions; or

(ii) are essential to the insurer’s ability to fulfill its obligations under insurance policies.

(b) The commissioner may require that an agreement or contract pursuant to Subsection A(2)(d) for the provision of services described in (i) and (ii) above specify that the affiliate consents to the jurisdiction as set forth in this Section 5A(6).

Drafting Note: Section 5A(6) is not intended to subject affiliates, in particular those that may be subject to regulation in other jurisdictions, to the general jurisdiction of pending supervision, seizure, conservatorship or receivership court proceedings in this state or the general authority of a supervisor, conservator or receiver for a domestic insurer. Rather, the jurisdiction and authority conferred by this provision is limited to ensuring that a domestic insurer continues to receive essential services from an affiliate that it has contracted with to provide such services, in accordance with the terms of the contract and applicable law, during the aforementioned proceedings. Section 5A(6)(b) gives the commissioner discretion to require documentation of an affiliate’s consent to this jurisdiction in the agreement or contract. In determining appropriate circumstances when a commissioner may require such provision, the commissioner should consider the scope and materiality to the domestic insurer of the contract, the nature of the holding company system, and whether examination or investigation of the domestic insurer warrants requirement of such a provision.

B. Dividends and other Distributions

No domestic insurer shall pay any extraordinary dividend or make any other extraordinary distribution to its shareholders until thirty (30) days after the commissioner has received notice of the declaration thereof and has not within that period disapproved the payment, or until the commissioner has approved the payment within the thirty-day period.

For purposes of this section, an extraordinary dividend or distribution includes any dividend or distribution of cash or other property, whose fair market value together with that of other dividends or distributions made within the preceding twelve (12) months exceeds the lesser of:

(1) Ten percent (10%) of the insurer’s surplus as regards policyholders as of the 31st day of December next preceding; or

(2) The net gain from operations of the insurer, if the insurer is a life insurer, or the net income, if the insurer is not a life insurer, not including realized capital gains, for the twelve-month period ending the 31st day of December next preceding, but shall not include pro rata distributions of any class of the insurer’s own securities.

In determining whether a dividend or distribution is extraordinary, an insurer other than a life insurer may carry forward net income from the previous two (2) calendar years that has not already been paid out as dividends. This carry-forward shall be computed by taking the net income from the second and third preceding calendar years, not including realized capital gains, less dividends paid in the second and immediate preceding calendar years.

Notwithstanding any other provision of law, an insurer may declare an extraordinary dividend or distribution which is conditional upon the commissioner’s approval, and the declaration shall confer no rights upon shareholders until (1) the commissioner has approved the payment of the dividend or distribution or (2) the commissioner has not disapproved payment within the thirty-day period referred to above.
C. Management of Domestic Insurers Subject To Registration.

(1) Notwithstanding the control of a domestic insurer by any person, the officers and directors of the insurer shall not thereby be relieved of any obligation or liability to which they would otherwise be subject by law, and the insurer shall be managed so as to assure its separate operating identity consistent with this Act.

(2) Nothing in this section shall preclude a domestic insurer from having or sharing a common management or cooperative or joint use of personnel, property or services with one or more other persons under arrangements meeting the standards of Section 5A(1).

(3) Not less than one-third of the directors of a domestic insurer, and not less than one-third of the members of each committee of the board of directors of any domestic insurer shall be persons who are not officers or employees of the insurer or of any entity controlling, controlled by, or under common control with the insurer and who are not beneficial owners of a controlling interest in the voting stock of the insurer or entity. At least one such person must be included in any quorum for the transaction of business at any meeting of the board of directors or any committee thereof.

(4) The board of directors of a domestic insurer shall establish one or more committees comprised solely of directors who are not officers or employees of the insurer or of any entity controlling, controlled by, or under common control with the insurer and who are not beneficial owners of a controlling interest in the voting stock of the insurer or any such entity. The committee or committees shall have responsibility for nominating candidates for director for election by shareholders or policyholders, evaluating the performance of officers deemed to be principal officers of the insurer and recommending to the board of directors the selection and compensation of the principal officers.

(5) The provisions of Paragraphs (3) and (4) shall not apply to a domestic insurer if the person controlling the insurer, such as an insurer, a mutual insurance holding company, or a publicly held corporation, has a board of directors and committees thereof that meet the requirements of Paragraphs (3) and (4) with respect to such controlling entity.

(6) An insurer may make application to the commissioner for a waiver from the requirements of this subsection, if the insurer’s annual direct written and assumed premium, excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, is less than $300,000,000. An insurer may also make application to the commissioner for a waiver from the requirements of this subsection based upon unique circumstances. The commissioner may consider various factors including, but not limited to, the type of business entity, volume of business written, availability of qualified board members, or the ownership or organizational structure of the entity.

D. Adequacy of Surplus. For purposes of this Act, in determining whether an insurer’s surplus as regards policyholders is reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs, the following factors, among others, shall be considered:

(1) The size of the insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force and other appropriate criteria;

(2) The extent to which the insurer’s business is diversified among several lines of insurance;

(3) The number and size of risks insured in each line of business;

(4) The extent of the geographical dispersion of the insurer’s insured risks;

(5) The nature and extent of the insurer’s reinsurance program;
Insurance Holding Company System Regulatory Act

(6) The quality, diversification and liquidity of the insurer’s investment portfolio;

(7) The recent past and projected future trend in the size of the insurer’s investment portfolio;

(8) The surplus as regards policyholders maintained by other comparable insurers;

(9) The adequacy of the insurer’s reserves; and

(10) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a disallowed asset for purposes of determining the adequacy of surplus as regards policyholders whenever in the judgment of the commissioner the investment so warrants.

Section 6. Examination

A. Power of Commissioner. Subject to the limitation contained in this section and in addition to the powers which the commissioner has under Sections [insert applicable sections] relating to the examination of insurers, the commissioner shall have the power to examine any insurer registered under Section 4 and its affiliates to ascertain the financial condition of the insurer, including the enterprise risk to the insurer by the ultimate controlling party, or by any entity or combination of entities within the insurance holding company system, or by the insurance holding company system on a consolidated basis.

B. Access to Books and Records.

(1) The commissioner may order any insurer registered under Section 4 to produce such records, books, or other information papers in the possession of the insurer or its affiliates as are reasonably necessary to determine compliance with this Chapter.

(2) To determine compliance with this Chapter, the commissioner may order any insurer registered under Section 4 to produce information not in the possession of the insurer if the insurer can obtain access to such information pursuant to contractual relationships, statutory obligations, or other method. In the event the insurer cannot obtain the information requested by the commissioner, the insurer shall provide the commissioner a detailed explanation of the reason that the insurer cannot obtain the information and the identity of the holder of information. Whenever it appears to the commissioner that the detailed explanation is without merit, the commissioner may require, after notice and hearing, the insurer to pay a penalty of $[insert amount] for each day’s delay, or may suspend or revoke the insurer’s license.

C. Use of Consultants. The commissioner may retain at the registered insurer’s expense such attorneys, actuaries, accountants and other experts not otherwise a part of the commissioner’s staff as shall be reasonably necessary to assist in the conduct of the examination under Subsection A above. Any persons so retained shall be under the direction and control of the commissioner and shall act in a purely advisory capacity.

D. Expenses. Each registered insurer producing for examination records, books and papers pursuant to Subsection A above shall be liable for and shall pay the expense of examination in accordance with Section [insert applicable section].

E. Compelling Production. In the event the insurer fails to comply with an order, the commissioner shall have the power to examine the affiliates to obtain the information. The commissioner shall also have the power to issue subpoenas, to administer oaths, and to examine under oath any person for purposes of determining compliance with this section. Upon the failure or refusal of any person to obey a subpoena, the commissioner may petition a court of competent jurisdiction, and upon proper showing, the court may enter an order compelling the witness to appear and testify or produce documentary evidence. Failure to obey the court order shall be punishable as contempt of court. Every person shall be obliged to attend as a witness at the place specified in the subpoena, when subpoenaed, anywhere within the state. He or she shall be entitled to the same fees and mileage, if claimed, as a witness in [insert appropriate statutory reference to trial-level court in that state], which fees, mileage, and actual expense, if any, necessarily incurred in securing the attendance of witnesses, and their testimony, shall be itemized and charged against, and be
Section 7. Supervisory Colleges

A. Power of Commissioner. With respect to any insurer registered under Section 4, and in accordance with Subsection C below, the commissioner shall also have the power to participate in a supervisory college for any domestic insurer that is part of an insurance holding company system with international operations in order to determine compliance by the insurer with this Chapter. The powers of the commissioner with respect to supervisory colleges include, but are not limited to, the following:

1. Initiating the establishment of a supervisory college;
2. Clarifying the membership and participation of other supervisors in the supervisory college;
3. Clarifying the functions of the supervisory college and the role of other regulators, including the establishment of a group-wide supervisor;
4. Coordinating the ongoing activities of the supervisory college, including planning meetings, supervisory activities, and processes for information sharing; and
5. Establishing a crisis management plan.

B. Expenses. Each registered insurer subject to this section shall be liable for and shall pay the reasonable expenses of the commissioner’s participation in a supervisory college in accordance with Subsection C below, including reasonable travel expenses. For purposes of this section, a supervisory college may be convened as either a temporary or permanent forum for communication and cooperation between the regulators charged with the supervision of the insurer or its affiliates, and the commissioner may establish a regular assessment to the insurer for the payment of these expenses.

C. Supervisory College. In order to assess the business strategy, financial position, legal and regulatory position, risk exposure, risk management and governance processes, and as part of the examination of individual insurers in accordance with Section 6, the commissioner may participate in a supervisory college with other regulators charged with supervision of the insurer or its affiliates, including other state, federal and international regulatory agencies. The commissioner may enter into agreements in accordance with Section 8C providing the basis for cooperation between the commissioner and the other regulatory agencies, and the activities of the supervisory college. Nothing in this section shall delegate to the supervisory college the authority of the commissioner to regulate or supervise the insurer or its affiliates within its jurisdiction.

Section 7.1. Group-wide Supervision of Internationally Active Insurance Groups

A. The commissioner is authorized to act as the group-wide supervisor for any internationally active insurance group in accordance with the provisions of this section. However, the commissioner may otherwise acknowledge another regulatory official as the group-wide supervisor where the internationally active insurance group:

1. Does not have substantial insurance operations in the United States;
2. Has substantial insurance operations in the United States, but not in this state; or
3. Has substantial insurance operations in the United States and this state, but the commissioner has determined pursuant to the factors set forth in Subsections B and F that the other regulatory official is the appropriate group-wide supervisor.

An insurance holding company system that does not otherwise qualify as an internationally active insurance group may request that the commissioner make a determination or acknowledgment as to a group-wide supervisor pursuant to this section.

B. In cooperation with other state, federal and international regulatory agencies, the commissioner will...
identify a single group-wide supervisor for an internationally active insurance group. The commissioner may determine that the commissioner is the appropriate group-wide supervisor for an internationally active insurance group that conducts substantial insurance operations concentrated in this state. However, the commissioner may acknowledge that a regulatory official from another jurisdiction is the appropriate group-wide supervisor for the internationally active insurance group. The commissioner shall consider the following factors when making a determination or acknowledgment under this subsection:

1. The place of domicile of the insurers within the internationally active insurance group that hold the largest share of the group’s written premiums, assets or liabilities;
2. The place of domicile of the top-tiered insurer(s) in the insurance holding company system of the internationally active insurance group;
3. The location of the executive offices or largest operational offices of the internationally active insurance group;
4. Whether another regulatory official is acting or is seeking to act as the group-wide supervisor under a regulatory system that the commissioner determines to be:
   a. Substantially similar to the system of regulation provided under the laws of this state, or otherwise sufficient in terms of providing for group-wide supervision, enterprise risk analysis, and cooperation with other regulatory officials; and
5. Whether another regulatory official acting or seeking to act as the group-wide supervisor provides the commissioner with reasonably reciprocal recognition and cooperation.

However, a commissioner identified under this section as the group-wide supervisor may determine that it is appropriate to acknowledge another supervisor to serve as the group-wide supervisor. The acknowledgment of the group-wide supervisor shall be made after consideration of the factors listed in Paragraphs (1) through (5) above, and shall be made in cooperation with and subject to the acknowledgment of other regulatory officials involved with supervision of members of the internationally active insurance group, and in consultation with the internationally active insurance group.

C. Notwithstanding any other provision of law, when another regulatory official is acting as the group-wide supervisor of an internationally active insurance group, the commissioner shall acknowledge that regulatory official as the group-wide supervisor. However, in the event of a material change in the internationally active insurance group that results in:

1. The internationally active insurance group’s insurers domiciled in this state holding the largest share of the group’s premiums, assets or liabilities; or
2. This state being the place of domicile of the top-tiered insurer(s) in the insurance holding company system of the internationally active insurance group, the commissioner shall make a determination or acknowledgment as to the appropriate group-wide supervisor for such an internationally active insurance group pursuant to Subsection B.

D. Pursuant to Section 6, the commissioner is authorized to collect from any insurer registered pursuant to Section 4 all information necessary to determine whether the commissioner may act as the group-wide supervisor of an internationally active insurance group or if the commissioner may acknowledge another regulatory official to act as the group-wide supervisor. Prior to issuing a determination that an internationally active insurance group is subject to group-wide supervision by the commissioner, the commissioner shall notify the insurer registered pursuant to Section 4 and the ultimate controlling person within the internationally active insurance group. The internationally active insurance group shall have not less than thirty (30) days to provide the commissioner with additional information pertinent to the pending determination. The commissioner shall publish in the [insert name of state administrative record] and on its Internet website the identity of internationally active insurance groups that the commissioner has determined are subject to group-wide supervision by the commissioner.
E. If the commissioner is the group-wide supervisor for an internationally active insurance group, the commissioner is authorized to engage in any of the following group-wide supervision activities:

1. Assess the enterprise risks within the internationally active insurance group to ensure that:
   a. The material financial condition and liquidity risks to the members of the internationally active insurance group that are engaged in the business of insurance are identified by management, and
   b. Reasonable and effective mitigation measures are in place;

2. Request, from any member of an internationally active insurance group subject to the commissioner’s supervision, information necessary and appropriate to assess enterprise risk, including, but not limited to, information about the members of the internationally active insurance group regarding:
   a. Governance, risk assessment and management,
   b. Capital adequacy, and
   c. Material intercompany transactions;

3. Coordinate and, through the authority of the regulatory officials of the jurisdictions where members of the internationally active insurance group are domiciled, compel development and implementation of reasonable measures designed to ensure that the internationally active insurance group is able to timely recognize and mitigate enterprise risks to members of such internationally active insurance group that are engaged in the business of insurance;

4. Communicate with other state, federal and international regulatory agencies for members within the internationally active insurance group and share relevant information subject to the confidentiality provisions of Section 8, through supervisory colleges as set forth in Section 7 or otherwise;

5. Enter into agreements with or obtain documentation from any insurer registered under Section 4, any member of the internationally active insurance group, and any other state, federal and international regulatory agencies for members of the internationally active insurance group, providing the basis for or otherwise clarifying the commissioner's role as group-wide supervisor, including provisions for resolving disputes with other regulatory officials. Such agreements or documentation shall not serve as evidence in any proceeding that any insurer or person within an insurance holding company system not domiciled or incorporated in this state is doing business in this state or is otherwise subject to jurisdiction in this state; and

6. Other group-wide supervision activities, consistent with the authorities and purposes enumerated above, as considered necessary by the commissioner.

F. If the commissioner acknowledges that another regulatory official from a jurisdiction that is not accredited by the NAIC is the group-wide supervisor, the commissioner is authorized to reasonably cooperate, through supervisory colleges or otherwise, with group-wide supervision undertaken by the group-wide supervisor, provided that:

1. The commissioner's cooperation is in compliance with the laws of this state; and

2. The regulatory official acknowledged as the group-wide supervisor also recognizes and cooperates with the commissioner's activities as a group-wide supervisor for other internationally active insurance groups where applicable. Where such recognition and cooperation is not reasonably reciprocal, the commissioner is authorized to refuse recognition and cooperation.

G. The commissioner is authorized to enter into agreements with or obtain documentation from any insurer registered under Section 4, any affiliate of the insurer, and other state, federal and international regulatory
Insurance Holding Company System Regulatory Act

agencies for members of the internationally active insurance group, that provide the basis for or otherwise clarify a regulatory official's role as group-wide supervisor.

H. The commissioner may promulgate regulations necessary for the administration of this section.

I. A registered insurer subject to this section shall be liable for and shall pay the reasonable expenses of the commissioner's participation in the administration of this section, including the engagement of attorneys, actuaries and any other professionals and all reasonable travel expenses.

Section 8. Confidential Treatment

A. Documents, materials or other information in the possession or control of the Department of Insurance that are obtained by or disclosed to the commissioner or any other person in the course of an examination or investigation made pursuant to Section 6 and all information reported or provided to the Department of Insurance pursuant to Section 3B(12) and (13), Section 4, Section 5 and Section 7.1 are recognized by this state as being proprietary and to contain trade secrets, and shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties. The commissioner shall not otherwise make the documents, materials or other information public without the prior written consent of the insurer to which it pertains unless the commissioner, after giving the insurer and its affiliates who would be affected thereby notice and opportunity to be heard, determines that the interest of policyholders, shareholders or the public will be served by the publication thereof, in which event the commissioner may publish all or any part in such manner as may be deemed appropriate.

(1) For purposes of the information reported and provided to the Department of Insurance pursuant to Section 4L(2), the commissioner shall maintain the confidentiality of the group capital calculation and group capital ratio produced within the calculation and any group capital information received from an insurance holding company supervised by the Federal Reserve Board or any U.S. group wide supervisor.

(2) For purposes of the information reported and provided to the [Department of Insurance] pursuant to Section 4L(3), the commissioner shall maintain the confidentiality of the liquidity stress test results and supporting disclosures and any liquidity stress test information received from an insurance holding company supervised by the Federal Reserve Board and non-U.S. group wide supervisors.

Drafting note: This group capital calculation and group capital ratio includes confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. Similarly, the liquidity stress test may include confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. The confidential treatment afforded to group capital calculation filings includes any Federal Reserve Board group capital filings and information.

B. Neither the commissioner nor any person who received documents, materials or other information while acting under the authority of the commissioner or with whom such documents, materials or other information are shared pursuant to this Act shall be permitted or required to testify in any private civil action concerning any confidential documents, materials, or information subject to Subsection A.

C. In order to assist in the performance of the commissioner’s duties, the commissioner:

(1) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Subsection A, including proprietary and trade secret documents and materials with other state, federal and international regulatory agencies, with the NAIC, and with any third-party consultants designated by the commissioner, with state, federal, and international law enforcement authorities, including members of any supervisory college described in Section 7, provided that the recipient agrees in writing to maintain the confidentiality and privileged status of the document, material or other information, and has verified in writing the legal authority to maintain confidentiality.
(2) Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) with commissioners of states having statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.

(3) May receive documents, materials or information, including otherwise confidential and privileged documents, materials or information, including propriety and trade-secret information from the NAIC and its affiliates and subsidiaries and from regulatory and law enforcement officials of other foreign or domestic jurisdictions, and shall maintain as confidential or privileged any document, material or information received with notice or the understanding that it is confidential or privileged under the laws of the jurisdiction that is the source of the document, material or information; and

(4) Shall enter into written agreements with the NAIC and any third-party consultant designated by the commissioner governing sharing and use of information provided pursuant to this Act consistent with this subsection that shall:

(a) Specify procedures and protocols regarding the confidentiality and security of information shared with the NAIC or a third-party consultant designated by the commissioner pursuant to this Act, including procedures and protocols for sharing by the NAIC with other state, federal or international regulators. The agreement shall provide that the recipient agrees in writing to maintain the confidentiality and privileged status of the documents, materials or other information and has verified in writing the legal authority to maintain such confidentiality;

(b) Specify that ownership of information shared with the NAIC or a third party consultant pursuant to this Act remains with the commissioner and the NAIC’s or a third-party consultant’s, as designated by the commissioner, use of the information is subject to the direction of the commissioner;

(c) Excluding documents, material or information reported pursuant to Section 4L(3), prohibit the NAIC or third-party consultant designated by the commissioner from storing the information shared pursuant to this Act in a permanent database after the underlying analysis is completed;

(d) Require prompt notice to be given to an insurer whose confidential information in the possession of the NAIC or a third-party consultant designated by the commissioner pursuant to this Act is subject to a request or subpoena to the NAIC or a third-party consultant designated by the commissioner for disclosure or production; and

(e) Require the NAIC or a third-party consultant designated by the commissioner to consent to intervention by an insurer in any judicial or administrative action in which the NAIC or a third-party consultant designated by the commissioner may be required to disclose confidential information about the insurer shared with the NAIC or a third-party consultant designated by the commissioner pursuant to this Act.

(f) For documents, material or information reporting pursuant to Section 4L(3), in the case of an agreement involving a third-party consultant, provide for notification of the identity of the consultant to the applicable insurers.

D. The sharing of information by the commissioner pursuant to this Act shall not constitute a delegation of regulatory authority or rulemaking, and the commissioner is solely responsible for the administration, execution and enforcement of the provisions of this Act.

E. No waiver of any applicable privilege or claim of confidentiality in the documents, materials or information shall occur as a result of disclosure to the commissioner under this section or as a result of sharing as authorized in Subsection C.

F. Documents, materials or other information in the possession or control of the NAIC or a third-party...
consultant designated by the commissioner pursuant to this Act shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action.

G. The group capital calculation and resulting group capital ratio required under Section 4L(2) and the liquidity stress test along with its results and supporting disclosures required under Section 4L(3) are regulatory tools for assessing group risks and capital adequacy and group liquidity risks, respectively, and are not intended as a means to rank insurers or insurance holding company systems generally. Therefore, except as otherwise may be required under the provisions of this Act, the making, publishing, disseminating, circulating or placing before the public, or causing directly or indirectly to be made, published, disseminated, circulated or placed before the public in a newspaper, magazine or other publication, or in the form of a notice, circular, pamphlet, letter or poster, or over any radio or television station or any electronic means of communication available to the public, or in any other way as an advertisement, announcement or statement containing a representation or statement with regard to the group capital calculation, group capital ratio, the liquidity stress test results, or supporting disclosures for the liquidity stress test of any insurer or any insurer group, or of any component derived in the calculation by any insurer, broker, or other person engaged in any manner in the insurance business would be misleading and is therefore prohibited; provided, however, that if any materially false statement with respect to the group capital calculation, resulting group capital ratio, an inappropriate comparison of any amount to an insurer’s or insurance group’s group capital calculation or resulting group capital ratio, liquidity stress test result, supporting disclosures for the liquidity stress test, or an inappropriate comparison of any amount to an insurer’s or insurance group’s liquidity stress test result or supporting disclosures is published in any written publication and the insurer is able to demonstrate to the commissioner with substantial proof the falsity of such statement or the inappropriateness, as the case may be, then the insurer may publish announcements in a written publication if the sole purpose of the announcement is to rebut the materially false statement.

Drafting Note: In Section 8C(4) above, the exclusions in sub-items (ii), (iii) and (vi) are the result of the Liquidity Stress Test primary purpose, which is to be used as a tool for assessing macroprudential risks by the NAIC Financial Stability Task Force assisted by NAIC staff, including trend analysis over time. Provisions against the NAIC owning the information, databasing the results and disclosures, and obtaining written consent from the insurer when a consultant is involved were deemed inappropriate.

Section 9. Rules and Regulations

The commissioner may, upon notice and opportunity for all interested persons to be heard, issue such rules, regulations and orders as shall be necessary to carry out the provisions of this Act.

Section 10. Injunctions, Prohibitions Against Voting Securities, Sequestration of Voting Securities

A. Injunctions. Whenever it appears to the commissioner that any insurer or any director, officer, employee or agent thereof has committed or is about to commit a violation of this Act or of any rule, regulation or order issued by the commissioner hereunder, the commissioner may apply to the [insert title] Court for the county in which the principal officer of the insurer is located or if the insurer has no office in this state then to the [insert title] Court for [insert county] County for an order enjoining the insurer or director, officer, employee or agent thereof from violating or continuing to violate this Act or any rule, regulation or order, and for such other equitable relief as the nature of the case and the interest of the insurer’s policyholders, creditors and shareholders or the public may require.

B. Voting of Securities; When Prohibited. No security which is the subject of any agreement or arrangement regarding acquisition, or which is acquired or to be acquired, in contravention of the provisions of this Act or of any rule, regulation or order issued by the commissioner hereunder may be voted at any shareholder’s meeting, or may be counted for quorum purposes, and any action of shareholders requiring the affirmative vote of a percentage of shares may be taken as though the securities were not issued and outstanding; but no action taken at any such meeting shall be invalidated by the voting of the securities, unless the action would materially affect control of the insurer or unless the courts of this state have so ordered. If an insurer or the commissioner has reason to believe that any security of the insurer has been or is about to be acquired in contravention of the provisions of this Act or of any rule, regulation or order issued by the commissioner hereunder; the insurer or the commissioner may apply to the [insert title] Court for the
county in which the insurer has its principal place of business to enjoin any offer, request, invitation, agreement or acquisition made in contravention of Section 3 or any rule, regulation or order issued by the commissioner thereunder to enjoin the voting of any security so acquired, to void any vote of the security already cast at any meeting of shareholders and for such other equitable relief as the nature of the case and the interest of the insurer’s policyholders, creditor and shareholders or the public may require.

C. Sequestration of Voting Securities. In any case where a person has acquired or is proposing to acquire any voting securities in violation of this Act or any rule, regulation or order issued by the commissioner hereunder, the [insert title] Court for [insert county] County or the [insert title] Court for the county in which the insurer has its principal place of business may, on such notice as the court deems appropriate, upon the application of the insurer or the commissioner, seize or sequester any voting securities of the insurer owned directly or indirectly by the person, and issue such order as may be appropriate to effectuate the provisions of this Act.

Notwithstanding any other provisions of law, for the purposes of this Act the situs of the ownership of the securities of domestic insurers shall be deemed to be in this state.

Section 11. Sanctions

A. Any insurer failing, without just cause, to file any registration statement as required in this Act shall be required, after notice and hearing, to pay a penalty of $[insert amount] for each day’s delay, to be recovered by the commissioner of Insurance and the penalty so recovered shall be paid into the General Revenue Fund of this state. The maximum penalty under this section is $[insert amount]. The commissioner may reduce the penalty if the insurer demonstrates to the commissioner that the imposition of the penalty would constitute a financial hardship to the insurer.

B. Every director or officer of an insurance holding company system who knowingly violates, participates in, or assents to, or who knowingly shall permit any of the officers or agents of the insurer to engage in transactions or make investments which have not been properly reported or submitted pursuant to Section 4A, 5A(2), or 5B, or which violate this Act, shall pay, in their individual capacity, a civil forfeiture of not more than $[insert amount] per violation, after notice and hearing before the commissioner. In determining the amount of the civil forfeiture, the commissioner shall take into account the appropriateness of the forfeiture with respect to the gravity of the violation, the history of previous violations, and such other matters as justice may require.

C. Whenever it appears to the commissioner that any insurer subject to this Act or any director, officer, employee or agent thereof has engaged in any transaction or entered into a contract which is subject to Section 5 of this Act and which would not have been approved had the approval been requested, the commissioner may order the insurer to cease and desist immediately any further activity under that transaction or contract. After notice and hearing the commissioner may also order the insurer to void any contracts and restore the status quo if the action is in the best interest of the policyholders, creditors or the public.

D. Whenever it appears to the commissioner that any insurer or any director, officer, employee or agent thereof has committed a willful violation of this Act, the commissioner may cause criminal proceedings to be instituted by the [insert title] Court for the county in which the principal office of the insurer is located or if the insurer has no office in this state, then by the [insert county] Court for [insert title] County against the insurer or the responsible director, officer, employee or agent thereof. Any insurer which willfully violates this Act may be fined not more than $[insert amount]. Any individual who willfully violates this Act may be fined in his or her individual capacity not more than $[insert amount] or be imprisoned for not more than one to three (3) years or both.

E. Any officer, director or employee of an insurance holding company system who willfully and knowingly subscribes to or makes or causes to be made any false statements or false reports or false filings with the intent to deceive the commissioner in the performance of his or her duties under this Act, upon conviction shall be imprisoned for not more than [insert amount] years or fined $[insert amount] or both. Any fines imposed shall be paid by the officer, director or employee in his or her individual capacity.

F. Whenever it appears to the commissioner that any person has committed a violation of Section 3 of this Act
Insurance Holding Company System Regulatory Act

and which prevents the full understanding of the enterprise risk to the insurer by affiliates or by the insurance holding company system, the violation may serve as an independent basis for disapproving dividends or distributions and for placing the insurer under an order of supervision in accordance with [insert appropriate statutory reference related to orders of supervision.]

Section 12. Receivership

Whenever it appears to the commissioner that any person has committed a violation of this Act which so impairs the financial condition of a domestic insurer as to threaten insolvency or make the further transaction of business by it hazardous to its policyholders, creditors, shareholders or the public, then the commissioner may proceed as provided in Section [insert applicable section] of this Chapter to take possession of the property of the domestic insurer and to conduct its business.

Section 13. Recovery

A. If an order for liquidation or rehabilitation of a domestic insurer has been entered, the receiver appointed under the order shall have a right to recover on behalf of the insurer, (i) from any parent corporation or holding company or person or affiliate who otherwise controlled the insurer, the amount of distributions (other than distributions of shares of the same class of stock) paid by the insurer on its capital stock, or (ii) any payment in the form of a bonus, termination settlement or extraordinary lump sum salary adjustment made by the insurer or its subsidiary to a director, officer or employee, where the distribution or payment pursuant to (i) or (ii) is made at any time during the one year preceding the petition for liquidation, conservation or rehabilitation, as the case may be, subject to the limitations of Subsections B, C, and D of this section.

B. No distribution shall be recoverable if the parent or affiliate shows that when paid the distribution was lawful and reasonable, and that the insurer did not know and could not reasonably have known that the distribution might adversely affect the ability of the insurer to fulfill its contractual obligations.

C. Any person who was a parent corporation or holding company or a person who otherwise controlled the insurer or affiliate at the time the distributions were paid shall be liable up to the amount of distributions or payments under Subsection A which the person received. Any person who otherwise controlled the insurer at the time the distributions were declared shall be liable up to the amount of distributions that would have been received if they had been paid immediately. If two (2) or more persons are liable with respect to the same distributions, they shall be jointly and severally liable.

D. The maximum amount recoverable under this section shall be the amount needed in excess of all other available assets of the impaired or insolvent insurer to pay the contractual obligations of the impaired or insolvent insurer and to reimburse any guaranty funds.

E. To the extent that any person liable under Subsection C of this section is insolvent or otherwise fails to pay claims due from it, its parent corporation or holding company or person who otherwise controlled it at the time the distribution was paid, shall be jointly and severally liable for any resulting deficiency in the amount recovered from the parent corporation or holding company or person who otherwise controlled it.

Section 14. Revocation, Suspension, or Nonrenewal of Insurer’s License

Whenever it appears to the commissioner that any person has committed a violation of this Act which makes the continued operation of an insurer contrary to the interests of policyholders or the public, the commissioner may, after giving notice and an opportunity to be heard, suspend, revoke or refuse to renew the insurer’s license or authority to do business in this state for such period as the commissioner finds is required for the protection of policyholders or the public. Any such determination shall be accompanied by specific findings of fact and conclusions of law.

Section 15. Judicial Review, Mandamus

A. Any person aggrieved by any act, determination, rule, regulation or order or any other action of the commissioner pursuant to this Act may appeal to the [insert title] Court for [insert county] County. The court shall conduct its review without a jury and by trial de novo, except that if all parties, including the commissioner, so stipulate, the review shall be confined to the record. Portions of the record may be
introduced by stipulation into evidence in a trial de novo as to those parties so stipulating.

B. The filing of an appeal pursuant to this section shall stay the application of any rule, regulation, order or other action of the commissioner to the appealing party unless the court, after giving the party notice and an opportunity to be heard, determines that a stay would be detrimental to the interest of policyholders, shareholders, creditors or the public.

C. Any person aggrieved by any failure of the commissioner to act or make a determination required by this Act may petition the [insert title] Court for [insert county] County for a writ in the nature of a mandamus or a peremptory mandamus directing the commissioner to act or make a determination.

Section 16. Conflict with Other Laws

All laws and parts of laws of this state inconsistent with this Act are hereby superseded with respect to matters covered by this Act.

Section 17. Separability of Provisions

If any provision of this Act or the application thereof to any person or circumstances is held invalid, the invalidity shall not affect other provisions or applications of this Act which can be given effect without the invalid provisions or application, and for this purpose the provisions of this Act are separable.

Section 18. Effective Date

This Act shall take effect thirty (30) days from its passage.
Alternative Section 1. Findings

A. It is hereby found and declared that it may not be inconsistent with the public interest and the interest of policyholders and shareholders to permit insurers to:

1. Engage in activities which would enable them to make better use of management skills and facilities;

2. Diversify into new lines of business through acquisition or organization of subsidiaries;

3. Have free access to capital markets which could provide funds for insurers to use in diversification programs;

4. Implement sound tax planning conclusions; and

5. Serve the changing needs of the public and adapt to changing conditions of the social, economic and political environment, so that insurers are able to compete effectively and to meet the growing public demand for institutions capable of providing a comprehensive range of financial services.

B. It is further found and declared that the public interest and the interests of policyholders and shareholders are or may be adversely affected when:

1. Control of an insurer is sought by persons who would utilize such control adversely to the interests of policyholders or shareholders;

2. Acquisition of control of an insurer would substantially lessen competition or create a monopoly in the insurance business in this state;

3. An insurer which is part of an insurance holding company system is caused to enter into transactions or relationships with affiliated companies on terms which are not fair and reasonable; or

4. An insurer pays dividends to shareholders which jeopardize the financial condition of such insurers.

C. It is hereby declared that the policies and purposes of this Act are to promote the public interest by:

1. Facilitating the achievement of the objectives enumerated in Subsection A;

2. Requiring disclosure of pertinent information relating to changes in control of an insurer;

3. Requiring disclosure by an insurer of material transactions and relationships between the insurer and its affiliates, including certain dividends to shareholders paid by the insurer; and

4. Providing standards governing material transactions between the insurer and its affiliates.

D. It is further declared that it is desirable to prevent unnecessary multiple and conflicting regulation of insurers. Therefore, this state shall exercise regulatory authority over domestic insurers and unless otherwise provided in this Act, not over nondomestic insurers, with respect to the matters contained herein.
Alternative Section 2. Subsidiaries of Insurers

A. Authorization. Any domestic insurer, either by itself or in cooperation with one or more persons, may organize or acquire one or more subsidiaries engaged in the following kinds of business:

(1) Any kind of insurance business authorized by the jurisdiction in which it is incorporated;

(2) Acting as an insurance broker or as an insurance agent for its parent or for any of its parent’s insurer subsidiaries;

(3) Investing, reinvesting or trading in securities for its own account, that of its parent, a subsidiary of its parent, or an affiliate or subsidiary;

(4) Management of an investment company subject to or registered pursuant to the Investment Company Act of 1940, as amended, including related sales and services;

(5) Acting as a broker-dealer subject to or registered pursuant to the Securities Exchange Act of 1934, as amended;

(6) Rendering investment advice to governments, government agencies, corporations or other organizations or groups;

(7) Rendering other services related to the operations of an insurance business, such as actuarial, loss prevention, safety engineering, data processing, accounting, claims, appraisal and collection services;

(8) Ownership and management of assets which the parent corporation could itself own or manage;

Drafting Note: The aggregate investment by the insurer and its subsidiaries acquired or organized pursuant to this paragraph should not exceed the limitations applicable to such investments by the insurer.

(9) Acting as administrative agent for a governmental instrumentality that is performing an insurance function;

(10) Financing of insurance premiums, agents and other forms of consumer financing;

(11) Any other business activity determined by the commissioner to be reasonably ancillary to an insurance business; and

(12) Owning a corporation or corporations engaged or organized to engage exclusively in one or more of the businesses specified in this section.

Section 1. Authority

These regulations are promulgated pursuant to the authority granted by Sections [insert applicable sections] and [insert applicable section] of the Insurance Law.

Note: Optional for those states in which similar provisions are normally used.

Section 2. Purpose

The purpose of these regulations is to set forth rules and procedural requirements which the Commissioner deems necessary to carry out the provisions of the NAIC Insurance Holding Company System Regulatory Act [insert applicable sections] of the Insurance Code hereinafter referred to as “the Act.” The information called for by these regulations is hereby declared to be necessary and appropriate in the public interest and for the protection of the policyholders in this State.

Editor’s Note: Insert the title of the chief insurance regulatory official wherever the term “commissioner” appears.
Drafting Note: Optional for those states in which similar provisions are normally used.

Section 3. Severability Clause

If any provision of these regulations, or the application thereof to any person or circumstance, is held invalid, such determination shall not affect other provisions or applications of these regulations which can be given effect without the invalid provision or application, and to that end the provisions of these regulations are severable.

Drafting Note: Optional for those states in which similar provisions are normally used.

Section 4. Forms - General Requirements

A. Forms A, B, C, D, E and F are intended to be guides in the preparation of the statements required by Sections 3, 3.1, 4, and 5 of the Act. They are not intended to be blank forms which are to be filled in. The statements filed shall contain the numbers and captions of all items, but the text of the items may be omitted provided the answers thereto are prepared in such a manner as to indicate clearly the scope and coverage of the items. All instructions, whether appearing under the items of the form or elsewhere therein, are to be omitted. Unless expressly provided otherwise, if any item is inapplicable or the answer thereto is in the negative, an appropriate statement to that effect shall be made.

B. [Insert number] complete copies of each statement including exhibits and all other papers and documents filed as a part thereof, shall be filed with the Commissioner by personal delivery or mail addressed to: Insurance Commissioner of the State of [insert state and address], Attention: [insert name - title]. At least one of the copies shall be signed in the manner prescribed on the form. Unsigned copies shall be conformed. If the signature of any person is affixed pursuant to a power of attorney or other similar authority, a copy of the power of attorney or other authority shall also be filed with the statement.

C. If an applicant requests a hearing on a consolidated basis under Section 3D(3) of the Act, in addition to filing the Form A with the commissioner, the applicant shall file a copy of Form A with the National Association of Insurance Commissioners (NAIC) in electronic form.

D. Statements should be prepared electronically. Statements shall be easily readable and suitable for review and reproduction. Debits in credit categories and credits in debit categories shall be designated so as to be clearly distinguishable as such on photocopies. Statements shall be in the English language and monetary values shall be stated in United States currency. If any exhibit or other paper or document filed with the statement is in a foreign language, it shall be accompanied by a translation into the English language and any monetary value shown in a foreign currency normally shall be converted into United States currency.

Drafting Note: Section 4 may be omitted if it is included as instructions on Forms A, B, C, D, E and F.

Section 5. Forms - Incorporation by Reference, Summaries and Omissions

A. Information required by any item of Form A, Form B, Form D, Form E or Form F may be incorporated by reference in answer or partial answer to any other item. Information contained in any financial statement, annual report, proxy statement, statement filed with a governmental authority, or any other document may be incorporated by reference in answer or partial answer to any item of Form A, Form B, Form D, Form E or Form F provided the document is filed as an exhibit to the statement. Excerpts of documents may be filed as exhibits if the documents are extensive. Documents currently on file with the Commissioner which were filed within three (3) years need not be attached as exhibits. References to information contained in exhibits or in documents already on file shall clearly identify the material and shall specifically indicate that such material is to be incorporated by reference in answer to the item. Matter shall not be incorporated by reference in any case where the incorporation would render the statement incomplete, unclear or confusing.
B. Where an item requires a summary or outline of the provisions of any document, only a brief statement shall be made as to the pertinent provisions of the document. In addition to the statement, the summary or outline may incorporate by reference particular parts of any exhibit or document currently on file with the Commissioner which was filed within three (3) years and may be qualified in its entirety by such reference. In any case where two (2) or more documents required to be filed as exhibits are substantially identical in all material respects except as to the parties thereto, the dates of execution, or other details, a copy of only one of the documents need be filed with a schedule identifying the omitted documents and setting forth the material details in which the documents differ from the documents, a copy of which is filed.

Drafting Note: Section 5 may be omitted if it is included as instructions on Forms A, B, D, E, and F.

Section 6. Forms-Information Unknown or Unavailable and Extension of Time to Furnish

If it is impractical to furnish any required information, document or report at the time it is required to be filed, there shall be filed with the Commissioner a separate document:

A. Identifying the information, document or report in question;
B. Stating why the filing thereof at the time required is impractical; and
C. Requesting an extension of time for filing the information, document or report to a specified date. The request for extension shall be deemed granted unless the Commissioner within [XX] days after receipt thereof enters an order denying the request.

Drafting Note: Section 6 may be omitted if it is included as instruction on Forms A, B, C, D, E, and F.

Section 7. Forms - Additional Information and Exhibits

In addition to the information expressly required to be included in Form A, Form B, Form C, Form D, Form E and Form F, the Commissioner may request such further material information, if any, as may be necessary to make the information contained therein not misleading. The person filing may also file such exhibits as it may desire in addition to those expressly required by the statement. The exhibits shall be so marked as to indicate clearly the subject matters to which they refer. Changes to Forms A, B, C, D, E or F shall include on the top of the cover page the phrase: “Change No. [insert number] to” and shall indicate the date of the change and not the date of the original filing.

Drafting Note: Section 7 may be omitted if it included as instructions on Forms A, B, C, D, E, and F.

Section 8. Definitions

A. “Executive officer” means chief executive officer, chief operating officer, chief financial officer, treasurer, secretary, controller, and any other individual performing functions corresponding to those performed by the foregoing officers under whatever title.

B. “Ultimate controlling person” means that person which is not controlled by any other person.

C. Unless the context otherwise requires, other terms found in these regulations and in Section 1 of the Act are used as defined in the Act. Other nomenclature or terminology is according to the Insurance Code, or industry usage if not defined by the Code.

Drafting Note: If regulation Section 2 is not adopted by the state, the following definition should be added to this section:

Insurance Holding Company System Model Regulation  
With Reporting Forms and Instructions

Section 9. Subsidiaries of Domestic Insurers

The authority to invest in subsidiaries under Section 2B of the Act is in addition to any authority to invest in subsidiaries which may be contained in any other provision of the Insurance Code.

Section 10. Acquisition of Control - Statement Filing

A person required to file a statement pursuant to Section 3 of the Act shall furnish the required information on Form A, hereby made a part of this regulation. Such person shall also furnish the required information on Form E, hereby made a part of this regulation and described in Section 13 of this regulation.

Section 11. Amendments to Form A

The applicant shall promptly advise the Commissioner of any changes in the information furnished on Form A arising subsequent to the date upon which the information was furnished but prior to the Commissioner’s disposition of the application.

Section 12. Acquisition of Section 3A(4) Insurers

A. If the person being acquired is deemed to be a “domestic insurer” solely because of the provisions of Section 3A(4) of the Act, the name of the domestic insurer on the cover page should be indicated as follows:

“ABC Insurance Company, a subsidiary of XYZ Holding Company.”

B. Where a Section 3A(4) insurer is being acquired, references to “the insurer” contained in Form A shall refer to both the domestic subsidiary insurer and the person being acquired.

Section 13. Pre-Acquisition Notification

If a domestic insurer, including any person controlling a domestic insurer, is proposing a merger or acquisition pursuant to Section 3A(1) of the Act, that person shall file a pre-acquisition notification form, Form E, which was developed pursuant to Section 3.1C(1) of the Act.

Additionally, if a non-domiciliary insurer licensed to do business in this state is proposing a merger or acquisition pursuant to Section 3.1 of the Act, that person shall file a pre-acquisition notification form, Form E. No pre-acquisition notification form need be filed if the acquisition is beyond the scope of Section 3.1 as set forth in Section 3.1B(2).

In addition to the information required by Form E, the Commissioner may wish to require an expert opinion as to the competitive impact of the proposed acquisition.

Section 14. Annual Registration of Insurers - Statement Filing

An insurer required to file an annual registration statement pursuant to Section 4 of the Act shall furnish the required information on Form B, hereby made a part of these regulations.

Section 15. Summary of Registration - Statement Filing

An insurer required to file an annual registration statement pursuant to Section 4 of the Act is also required to furnish information required on Form C, hereby made a part of these regulations.
Section 16. Amendments to Form B

A. An amendment to Form B shall be filed within fifteen (15) days after the end of any month in which there is a material change to the information provided in the annual registration statement.

B. Amendments shall be filed in the Form B format with only those items which are being amended reported. Each amendment shall include at the top of the cover page “Amendment No. [insert number] to Form B for [insert year]” and shall indicate the date of the change and not the date of the original filings.

Drafting Note: Section 16 may be omitted if Section 5A(2) of the Model Act has been adopted and amendments to the registration statement are therefore not required by the Act.

Section 17. Alternative and Consolidated Registrations

A. Any authorized insurer may file a registration statement on behalf of any affiliated insurer or insurers which are required to register under Section 4 of the Act. A registration statement may include information not required by the Act regarding any insurer in the insurance holding company system even if the insurer is not authorized to do business in this State. In lieu of filing a registration statement on Form B, the authorized insurer may file a copy of the registration statement or similar report which it is required to file in its State of domicile, provided:

(1) The statement or report contains substantially similar information required to be furnished on Form B; and

(2) The filing insurer is the principal insurance company in the insurance holding company system.

B. The question of whether the filing insurer is the principal insurance company in the insurance holding company system is a question of fact and an insurer filing a registration statement or report in lieu of Form B on behalf of an affiliated insurer, shall set forth a brief statement of facts which will substantiate the filing insurer’s claim that it, in fact, is the principal insurer in the insurance holding company system.

C. With the prior approval of the Commissioner, an unauthorized insurer may follow any of the procedures which could be done by an authorized insurer under Subsection A above.

D. Any insurer may take advantage of the provisions of Section 4H or 4I of the Act without obtaining the prior approval of the Commissioner. The Commissioner, however, reserves the right to require individual filings if he or she deems such filings necessary in the interest of clarity, ease of administration or the public good.

Section 18. Disclaimers and Termination of Registration

A. A disclaimer of affiliation or a request for termination of registration claiming that a person does not, or will not upon the taking of some proposed action, control another person (hereinafter referred to as the “subject”) shall contain the following information:

(1) The number of authorized, issued and outstanding voting securities of the subject;

(2) With respect to the person whose control is denied and all affiliates of such person, the number and percentage of shares of the subject’s voting securities which are held of record or known to be beneficially owned, and the number of shares concerning which there is a right to acquire, directly or indirectly;

(3) All material relationships and bases for affiliation between the subject and the person whose control is denied and all affiliates of such person;

(4) A statement explaining why the person should not be considered to control the subject.
B. A request for termination of registration shall be deemed to have been granted unless the Commissioner, within thirty (30) days after receipt of the request, notifies the registrant otherwise.

Section 19. Transactions Subject to Prior Notice - Notice Filing

A. An insurer required to give notice of a proposed transaction pursuant to Section 5 of the Act shall furnish the required information on Form D, hereby made a part of these regulations.

B. Agreements for cost sharing services and management services shall at a minimum and as applicable:

1. Identify the person providing services and the nature of such services;
2. Set forth the methods to allocate costs;
3. Require timely settlement, not less frequently than on a quarterly basis, and compliance with the requirements in the Accounting Practices and Procedures Manual;
4. Prohibit advancement of funds by the insurer to the affiliate except to pay for services defined in the agreement;
5. State that the insurer will maintain oversight for functions provided to the insurer by the affiliate and that the insurer will monitor services annually for quality assurance;
6. Define records and data of the insurer to include all records and data developed or maintained under or related to the agreement, that are otherwise the property of the insurer, in whatever form maintained, including, but not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate; and

Drafting Note: The “at no additional cost to the insurer” language is not intended to prohibit recovery of the fair and reasonable cost associated with transferring records and data to the insurer. Since records and data of the insurer are the property of the insurer, the insurer should not pay a cost to segregate commingled records and data from other data of the affiliate.

7. Specify that all records and data of the insurer are and remain the property of the insurer, and:
   a. are subject to control of the insurer,
   b. are identifiable, and
   c. are segregated from all other persons’ records and data, or are readily capable of segregation at no additional cost to the insurer;

8. State that all funds and invested assets of the insurer are the exclusive property of the insurer, held for the benefit of the insurer and are subject to the control of the insurer;
9. Include standards for termination of the agreement with and without cause;
10. Include provisions for indemnification of the insurer in the event of gross negligence or willful misconduct on the part of the affiliate providing the services and for any actions by the affiliate that violate provisions of the agreement required in Subsections 19B(11), 19B(12), 19B(13), 19B(14) and 19B(15) of this regulation;
11. Specify that if the insurer is placed in supervision, seizure, conservatorship or receivership pursuant to [supervision and receivership acts],
   a. all of the rights of the insurer under the agreement extend to the receiver or commissioner to the extent permitted by [law of the state],
   b. all records and data of the insurer shall be identifiable and segregated from all other
persons’ records and data or readily capable of segregation at no additional cost to the receiver or the commissioner;

Drafting Note: The “at no additional cost to the receiver or the commissioner” language is not intended to prohibit recovery of the fair and reasonable cost associated with transferring records and data to the receiver or the commissioner. Since records and data of the insurer are the property of the insurer, the receiver or commissioner should not pay a cost to segregate commingled records and data from other data of the affiliate.

(c) a complete set of records and data of the insurer will immediately be made available to the receiver or the commissioner, shall be made available in a usable form, and shall be turned over to the receiver or commissioner immediately upon the receiver or the commissioner’s request, and the cost to transfer data to the receiver or the commissioner shall be fair and reasonable; and,

Drafting Note: The fair and reasonable cost to transfer data to the receiver or commissioner refers to the cost associated with physically or electronically transferring records and data files to the receiver or commissioner. This cost does not include costs to separate commingled data and records that should have been segregated or readily capable of segregation.

(d) The affiliated person(s) will make available all employees essential to the operations of the insurer and the services associated therewith for the immediate continued performance of the essential services ordered or directed by the receiver or commissioner;

(12) Specify that the affiliate has no automatic right to terminate the agreement if the insurer is placed into supervision, seizure, conservatorship or receivership pursuant to [supervision and receivership acts];

(13) Specify that the affiliate will provide the essential services for a minimum period of time [specified in the agreement] after termination of the agreement, if the insurer is placed into supervision, seizure, conservatorship or receivership pursuant to [supervision and receivership acts], as ordered or directed by the receiver or commissioner. Performance of the essential services will continue to be provided without regard to pre-receivership unpaid fees, so long as the affiliate continues to receive timely payment for post-receivership services rendered, and unless released by the receiver, commissioner or supervising court;

(14) Specify that the affiliate will continue to maintain any systems, programs or other infrastructure notwithstanding supervision, seizure, conservatorship or receivership pursuant to [supervision and receivership acts], and will make them available to the receiver or commissioner as ordered or directed by the receiver or commissioner. Performance of the essential services will continue to be provided without regard to pre-receivership unpaid fees, so long as the affiliate continues to receive timely payment for post-receivership services rendered, and unless released by the receiver, commissioner or supervising court;

(15) Specify that, in furtherance of the cooperation between the receiver and the affected guaranty association(s) and subject to the receiver’s authority over the insurer, if the insurer is placed into supervision, seizure, conservatorship or receivership pursuant to [supervision and receivership acts], and portions of the insurer’s policies or contracts are eligible for coverage by one or more guaranty associations, the affiliate’s commitments under Subsections 19B(11), 19B(12), 19B(13) and 19B(14) of this regulation will extend to such guaranty association(s).

Section 20. Enterprise Risk Report

The ultimate controlling person of an insurer required to file an enterprise risk report pursuant to Section 4L(1) of the Act shall furnish the required information on Form F, hereby made a part of these regulations.

Section 21. Group Capital Calculation

A. Where an insurance holding company system has previously filed the annual group capital calculation at least once, the lead state commissioner has the discretion to exempt the ultimate controlling person from filing the annual group capital calculation if the lead state commissioner makes a determination based upon that filing that the insurance holding company system meets all of the following criteria:
Insurance Holding Company System Model Regulation
With Reporting Forms and Instructions

(1) Has annual direct written and unaffiliated assumed premium (including international direct and assumed premium), but excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, of less than $1,000,000,000;

(2) Has no insurers within its holding company structure that are domiciled outside of the United States or one of its territories;

(3) Has no banking, depository or other financial entity that is subject to an identified regulatory capital framework within its holding company structure;

(4) The holding company system attests that there are no material changes in the transactions between insurers and non-insurers in the group that have occurred since the last filing of the annual group capital; and

(5) The non-insurers within the holding company system do not pose a material financial risk to the insurer’s ability to honor policyholder obligations.

B. Where an insurance holding company system has previously filed the annual group capital calculation at least once, the lead state commissioner has the discretion to accept in lieu of the group capital calculation a limited group capital filing if:

(1) The insurance holding company system has annual direct written and unaffiliated assumed premium (including international direct and assumed premium), but excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, of less than $1,000,000,000; and all of the following additional criteria are met:

(a) Has no insurers within its holding company structure that are domiciled outside of the United States or one of its territories;

(b) Does not include a banking, depository or other financial entity that is subject to an identified regulatory capital framework; and

(c) The holding company system attests that there are no material changes in transactions between insurers and non-insurers in the group that have occurred since the last filing of the report to the lead state commissioner and the non-insurers within the holding company system do not pose a material financial risk to the insurers ability to honor policyholder obligations.

C. For an insurance holding company that has previously met an exemption with respect to the group capital calculation pursuant Section 21A or 21B of this regulation, the lead state commissioner may require at any time the ultimate controlling person to file an annual group capital calculation, completed in accordance with the NAIC Group Capital Calculation Instructions, if any of the following criteria are met:

(1) Any insurer within the insurance holding company system is in a Risk-Based Capital action level event as set forth in [insert cross-reference to appropriate section of Risk-Based Capital (RBC) Model Act] or a similar standard for a non-U.S. insurer; or

(2) Any insurer within the insurance holding company system meets one or more of the standards of an insurer deemed to be in hazardous financial condition as defined in [insert cross-reference to appropriate section of Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition]; or

(3) Any insurer within the insurance holding company system otherwise exhibits qualities of a troubled insurer as determined by the lead state commissioner based on unique circumstances including, but not limited to, the type and volume of business written, ownership and organizational structure, federal agency requests, and international supervisor requests.

D. A non-U.S. jurisdiction is considered to “recognize and accept” the group capital calculation if it satisfies the following criteria:
(1) With respect to the [insert cross-reference to Section 4L(2)(d) of the Model Act]

(a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such jurisdiction, that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction; or

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a).

(2) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force.

E. A list of non-U.S. jurisdictions that “recognize and accept” the group capital calculation will be published through the NAIC Committee Process:

(1) A list of jurisdictions that “recognize and accept” the group capital calculation pursuant to [insert cross-reference to Sections 4L(2)(d)], is published through the NAIC Committee Process to assist the lead state commissioner in determining which insurers shall file an annual group capital calculation. The list will clarify those situations in which a jurisdiction is exempted from filing under [insert cross-reference to Sections 4L(2)(d)]. To assist with a determination under 4L(2)(e), the list will also identify whether a jurisdiction that is exempted under either [insert cross-reference to Sections 4L(2)(c) and 4L(2)(d)] requires a group capital filing for any U.S. based insurance group’s operations in that non-U.S. jurisdiction.

(2) For a non-U.S. jurisdiction where no U.S. insurance groups operate, the confirmation provided to meet the requirement of Section 21D(1)(b) will serve as support for recommendation to be published as a jurisdiction that “recognizes and accepts” the group capital calculation through the NAIC Committee Process.

(3) If the lead state commissioner makes a determination pursuant to Section 4L(2)(d) that differs from the NAIC List, the lead state commissioner shall provide thoroughly documented justification to the NAIC and other states.

(4) Upon determination by the lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the group capital calculation, the lead state commissioner may provide a recommendation to the NAIC that the non-U.S. jurisdiction be removed from the list of jurisdictions that “recognize and accepts” the group capital calculation.

Section 22. Extraordinary Dividends and Other Distributions

A. Requests for approval of extraordinary dividends or any other extraordinary distribution to shareholders shall include the following:
Insurance Holding Company System Model Regulation
With Reporting Forms and Instructions

(1) The amount of the proposed dividend;

(2) The date established for payment of the dividend;

(3) A statement as to whether the dividend is to be in cash or other property and, if in property, a description thereof, its cost, and its fair market value together with an explanation of the basis for valuation;

(4) A copy of the calculations determining that the proposed dividend is extraordinary. The work paper shall include the following information:

   a) The amounts, dates and form of payment of all dividends or distributions (including regular dividends but excluding distributions of the insurer’s own securities) paid within the period of twelve (12) consecutive months ending on the date fixed for payment of the proposed dividend for which approval is sought and commencing on the day after the same day of the same month in the last preceding year;

   b) Surplus as regards policyholders (total capital and surplus) as of the 31st day of December next preceding;

   c) If the insurer is a life insurer, the net gain from operations for the 12-month period ending the 31st day of December next preceding;

   d) If the insurer is not a life insurer, the net income less realized capital gains for the 12-month period ending the 31st day of December next preceding and the two preceding 12-month periods; and

   e) If the insurer is not a life insurer, the dividends paid to stockholders excluding distributions of the insurer’s own securities in the preceding two (2) calendar years;

(5) A balance sheet and statement of income for the period intervening from the last annual statement filed with the Commissioner and the end of the month preceding the month in which the request for dividend approval is submitted; and

(6) A brief statement as to the effect of the proposed dividend upon the insurer’s surplus and the reasonableness of surplus in relation to the insurer’s outstanding liabilities and the adequacy of surplus relative to the insurer’s financial needs.

B. Subject to Section 5B of the Act, each registered insurer shall report to the Commissioner all dividends and other distributions to shareholders within fifteen (15) business days following the declaration thereof, including the same information required by Subsection A(4).

Section 23. Adequacy of Surplus

The factors set forth in Section 5D of the Act are not intended to be an exhaustive list. In determining the adequacy and reasonableness of an insurer’s surplus no single factor is necessarily controlling. The Commissioner instead will consider the net effect of all of these factors plus other factors bearing on the financial condition of the insurer. In comparing the surplus maintained by other insurers, the Commissioner will consider the extent to which each of these factors varies from company to company and in determining the quality and liquidity of investments in subsidiaries, the Commissioner will consider the individual subsidiary and may discount or disallow its valuation to the extent that the individual investments so warrant.
FORM A

STATEMENT REGARDING THE ACQUISITION OF CONTROL OF OR MERGER WITH A DOMESTIC INSURER

____________________________________
Name of Domestic Insurer

BY

____________________________________
Name of Acquiring Person (Applicant)

Filed with the Insurance Department of

_____________________________________________________
(State of domicile of insurer being acquired)

Dated:________________________, 20_____

Name, Title, address and telephone number of Individual to Whom Notices and Correspondence Concerning this Statement Should be Addressed:

____________________________________________________________________________________________
____________________________________________________________________________________________
____________________________________________________________________________________________
____________________________________________________________________________________________

ITEM 1. METHOD OF ACQUISITION

State the name and address of the domestic insurer to which this application relates and a brief description of how control is to be acquired.

ITEM 2. IDENTITY AND BACKGROUND OF THE APPLICANT

(a) State the name and address of the applicant seeking to acquire control over the insurer.

(b) If the applicant is not an individual, state the nature of its business operations for the past 5 years or for such lesser period as such person and any predecessors thereof shall have been in existence. Briefly describe the business intended to be done by the applicant and the applicant’s subsidiaries.

(c) Furnish a chart or listing clearly presenting the identities of the interrelationships among the applicant and all affiliates of the applicant. Indicate in such chart or listing the percentage of voting securities of each such person which is owned or controlled by the applicant or by any other such person. If control of any person is maintained other than by the ownership or control of voting securities, indicate the basis of such control. As to each person specified in such chart or listing indicate the type of organization (e.g. corporation, trust, partnership) and the state or other jurisdiction of domicile. If court proceedings involving a reorganization or liquidation are pending with respect to any such person, indicate which person, and set forth the title of the court, nature of proceedings and the date when commenced.
ITEM 3. IDENTITY AND BACKGROUND OF INDIVIDUALS ASSOCIATED WITH THE APPLICANT

On the biographical affidavit, include a third party background check, and state the following with respect to (1) the applicant if (s)he is an individual or (2) all persons who are directors, executive officers or owners of 10% or more of the voting securities of the applicant if the applicant is not an individual.

(a) Name and business address.

(b) Present principal business activity, occupation or employment including position and office held and the name, principal business and address of any corporation or other organization in which such employment is carried on.

(c) Material occupations, positions, offices or employment during the last 5 years, giving the starting and ending dates of each and the name, principal business and address of any business corporation or other organization in which each such occupation, position, office or employment was carried on; if any such occupation, position, office or employment required licensing by or registration with any federal, state or municipal governmental agency, indicate such fact, the current status of such licensing or registration, and an explanation of any surrender, revocation, suspension or disciplinary proceedings in connection therewith.

(d) Whether or not such person has ever been convicted in a criminal proceeding (excluding minor traffic violations) during the last 10 years and, if so, give the date, nature of conviction, name and location of court, and penalty imposed or other disposition of the case.

ITEM 4. NATURE, SOURCE AND AMOUNT OF CONSIDERATION

(a) Describe the nature, source and amount of funds or other considerations used or to be used in effecting the merger or other acquisition of control. If any part of the same is represented or is to be represented by funds or other consideration borrowed or otherwise obtained for the purpose of acquiring, holding or trading securities, furnish a description of the transaction, the names of the parties thereto, the relationship, if any, between the borrower and the lender, the amounts borrowed or to be borrowed, and copies of all agreements, promissory notes and security arrangements relating thereto.

(b) Explain the criteria used in determining the nature and amount of such consideration.

(c) If the source of the consideration is a loan made in the lender’s ordinary course of business and if the applicant wishes the identity of the lender to remain confidential, he must specifically request that the identity be kept confidential.

ITEM 5. FUTURE PLANS OF INSURER

Describe any plans or proposals which the applicant may have to declare an extraordinary dividend, to liquidate the insurer, to sell its assets to or merge it with any person or persons or to make any other material change in its business operations or corporate structure or management.

ITEM 6. VOTING SECURITIES TO BE ACQUIRED

State the number of shares of the insurer’s voting securities which the applicant, its affiliates and any person listed in Item 3 plan to acquire, and the terms of the offer, request, invitation, agreement or acquisition, and a statement as to the method by which the fairness of the proposal was arrived at.

ITEM 7. OWNERSHIP OF VOTING SECURITIES

State the amount of each class of any voting security of the insurer which is beneficially owned or concerning which there is a right to acquire beneficial ownership by the applicant, its affiliates or any person listed in Item 3.
ITEM 8.  CONTRACTS, ARRANGEMENTS, OR UNDERSTANDINGS WITH RESPECT TO VOTING SECURITIES OF THE INSURER

Give a full description of any contracts, arrangements or understandings with respect to any voting security of the insurer in which the applicant, its affiliates or any person listed in Item 3 is involved, including but not limited to transfer of any of the securities, joint ventures, loan or option arrangements, puts or calls, guarantees of loans, guarantees against loss or guarantees of profits, division of losses or profits, or the giving or withholding of proxies. Such description shall identify the persons with whom the contracts, arrangements or understandings have been entered into.

ITEM 9.  RECENT PURCHASES OF VOTING SECURITIES

Describe any purchases of any voting securities of the insurer by the applicant, its affiliates or any person listed in Item 3 during the 12 calendar months preceding the filing of this statement. Include in the description the dates of purchase, the names of the purchasers, and the consideration paid or agreed to be paid therefor. State whether any shares so purchased are hypothecated.

ITEM 10.  RECENT RECOMMENDATIONS TO PURCHASE

Describe any recommendations to purchase any voting security of the insurer made by the applicant, its affiliates or any person listed in Item 3, or by anyone based upon interviews or at the suggestion of the applicant, its affiliates or any person listed in Item 3 during the 12 calendar months preceding the filing of this statement.

ITEM 11.  AGREEMENTS WITH BROKER-DEALERS

Describe the terms of any agreement, contract or understanding made with any broker-dealer as to solicitation of voting securities of the insurer for tender and the amount of any fees, commissions or other compensation to be paid to broker-dealers with regard thereto.

ITEM 12.  FINANCIAL STATEMENTS AND EXHIBITS

(a)  Financial statements, exhibits, and three-year financial projections of the insurer(s) shall be attached to this statement as an appendix, but list under this item the financial statements and exhibits so attached.

(b)  The financial statements shall include the annual financial statements of the persons identified in Item 2(c) for the preceding 5 fiscal years (or for such lesser period as such applicant and its affiliates and any predecessors thereof shall have been in existence), and similar information covering the period from the end of such person’s last fiscal year, if the information is available. The statements may be prepared on either an individual basis, or, unless the Commissioner otherwise requires, on a consolidated basis if consolidated statements are prepared in the usual course of business.

The annual financial statements of the applicant shall be accompanied by the certificate of an independent public accountant to the effect that such statements present fairly the financial position of the applicant and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the applicant is an insurer which is actively engaged in the business of insurance, the financial statements need not be certified, provided they are based on the Annual Statement of the person filed with the insurance department of the person’s domiciliary state and are in accordance with the requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of the state.

(c)  File as exhibits copies of all tender offers for, requests or invitations for, tenders of, exchange offers for, and agreements to acquire or exchange any voting securities of the insurer and (if distributed) of additional soliciting material relating thereto, any proposed employment, consultation, advisory or management contracts concerning the insurer, annual reports to the stockholders of the insurer and the applicant for the last two fiscal years, and any additional documents or papers required by Form A or regulation Sections 4 and 6.
ITEM 13. AGREEMENT REQUIREMENTS FOR ENTERPRISE RISK MANAGEMENT

Applicant agrees to provide, to the best of its knowledge and belief, the information required by Form F within fifteen (15) days after the end of the month in which the acquisition of control occurs.

ITEM 14. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:

SIGNATURE

Pursuant to the requirements of Section 3 of the Act ________________ has caused this application to be duly signed on its behalf in the City of ___________ and State of on the __________ day of __________, 20____.

(SEAL)

Name of Applicant

BY

(Name) (Title)

Attest:

____________________

(Signature of Officer)

____________________

(Title)

CERTIFICATION

The undersigned deposes and says that (s)he has duly executed the attached application dated __________, 20____, for and on behalf of __________ (Name of Applicant); that (s)he is the __________ (Title of Officer) of such company and that (s)he is authorized to execute and file such instrument. Deponent further says that (s)he is familiar with the instrument and the contents thereof, and that the facts therein set forth are true to the best of his/her knowledge, information and belief.

INSURANCE HOLDING COMPANY SYSTEM ANNUAL REGISTRATION STATEMENT

Filed with the Insurance Department of the State of________________________

By

______________________________

Name of Registrant

On Behalf of Following Insurance Companies

Name  Address

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

Date:____________________, 20_____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

____________________________________________________________________________________________

____________________________________________________________________________________________

ITEM 1.  IDENTITY AND CONTROL OF REGISTRANT

Furnish the exact name of each insurer registering or being registered (hereinafter called “the Registrant”), the home office address and principal executive offices of each; the date on which each registrant became part of the insurance holding company system; and the method(s) by which control of each registrant was acquired and is maintained.

ITEM 2.  ORGANIZATIONAL CHART

Furnish a chart or listing clearly presenting the identities of and interrelationships among all affiliated persons within the insurance holding company system. The chart or listing should show the percentage of each class of voting securities of each affiliate which is owned, directly or indirectly, by another affiliate. If control of any person within the system is maintained other than by the ownership or control of voting securities, indicate the basis of control. As to each person specified in the chart or listing indicate the type of organization (e.g., corporation, trust, partnership) and the state or other jurisdiction of domicile.

© 2021 National Association of Insurance Commissioners
ITEM 3. THE ULTIMATE CONTROLLING PERSON

As to the ultimate controlling person in the insurance holding company system furnish the following information:

(a) Name;
(b) Home office address;
(c) Principal executive office address;
(d) The organizational structure of the person, i.e., corporation, partnership, individual, trust, etc.;
(e) The principal business of the person;
(f) The name and address of any person who holds or owns 10% or more of any class of voting security, the class of such security, the number of shares held of record or known to be beneficially owned, and the percentage of class so held or owned; and
(g) If court proceedings involving a reorganization or liquidation are pending, indicate the title and location of the court, the nature of proceedings and the date when commenced.

ITEM 4. BIOGRAPHICAL INFORMATION

If the ultimate controlling person is a corporation, an organization, a limited liability company, or other legal entity, furnish the following information for the directors and executive officers of the ultimate controlling person: the individual’s name and address, his or her principal occupation and all offices and positions held during the past 5 years, and any conviction of crimes other than minor traffic violations. If the ultimate controlling person is an individual, furnish the individual's name and address, his or her principal occupation and all offices and positions held during the past 5 years, and any conviction of crimes other than minor traffic violations.

ITEM 5. TRANSACTIONS AND AGREEMENTS

Briefly describe the following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the registrant and its affiliates:

(a) Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the Registrant or of the Registrant by its affiliates;
(b) Purchases, sales or exchanges of assets;
(c) Transactions not in the ordinary course of business;
(d) Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the Registrant’s assets to liability, other than insurance contracts entered into in the ordinary course of the registrant’s business;
(e) All management agreements, service contracts and all cost-sharing arrangements;
(f) Reinsurance agreements;
(g) Dividends and other distributions to shareholders;
(h) Consolidated tax allocation agreements; and
(i) Any pledge of the registrant’s stock and/or of the stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system.

No information need be disclosed if such information is not material for purposes of Section 4 of the Act.

Sales, purchases, exchanges, loans or extensions of credit, investments or guarantees involving one-half of 1% or less of the registrant’s admitted assets as of the 31st day of December next preceding shall not be deemed material.

**Drafting Note:** Commissioner may by rule, regulation or order provide otherwise.

The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include at least the following: the nature and purpose of the transaction, the nature and amounts of any payments or transfers of assets between the parties, the identity of all parties to the transaction, and relationship of the affiliated parties to the registrant.

**ITEM 6. LITIGATION OR ADMINISTRATIVE PROCEEDINGS**

A brief description of any litigation or administrative proceedings of the following types, either then pending or concluded within the preceding fiscal year, to which the ultimate controlling person or any of its directors or executive officers was a party or of which the property of any such person is or was the subject; give the names of the parties and the court or agency in which the litigation or proceeding is or was pending:

(a) Criminal prosecutions or administrative proceedings by any government agency or authority which may be relevant to the trustworthiness of any party thereto; and

(b) Proceedings which may have a material effect upon the solvency or capital structure of the ultimate holding company including, but not necessarily limited to, bankruptcy, receivership or other corporate reorganizations.

**ITEM 7. STATEMENT REGARDING PLAN OR SERIES OF TRANSACTIONS**

The insurer shall furnish a statement that transactions entered into since the filing of the prior year’s annual registration statement are not part of a plan or series of like transactions, the purpose of which is to avoid statutory threshold amounts and the review that might otherwise occur.

**ITEM 8. FINANCIAL STATEMENTS AND EXHIBITS**

(a) Financial statements and exhibits should be attached to this statement as an appendix, but list under this item the financial statements and exhibits so attached.

(b) If the ultimate controlling person is a corporation, an organization, a limited liability company, or other legal entity, the financial statements shall include the annual financial statements of the ultimate controlling person in the insurance holding company system as of the end of the person’s latest fiscal year.

If at the time of the initial registration, the annual financial statements for the latest fiscal year are not available, annual statements for the previous fiscal year may be filed and similar financial information shall be filed for any subsequent period to the extent such information is available. Such financial statements may be prepared on either an individual basis; or, unless the Commissioner otherwise requires, on a consolidated basis if consolidated statements are prepared in the usual course of business.

Other than with respect to the foregoing, such financial statement shall be filed in a standard form and format adopted by the National Association of Insurance Commissioners, unless an alternative form is accepted by the Commissioner. Documentation and financial statements filed with the Securities and Exchange Commission or audited GAAP financial statements shall be deemed to be an appropriate form and format.
Unless the Commissioner otherwise permits, the annual financial statements shall be accompanied by the certificate of an independent public accountant to the effect that the statements present fairly the financial position of the ultimate controlling person and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the ultimate controlling person is an insurer which is actively engaged in the business of insurance, the annual financial statements need not be certified, provided they are based on the Annual Statement of the insurer’s domiciliary state and are in accordance with requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of that state.

Any ultimate controlling person who is an individual may file personal financial statements that are reviewed rather than audited by an independent public accountant. The review shall be conducted in accordance with standards for review of personal financial statements published in the Personal Financial Statements Guide by the American Institute of Certified Public Accountants. Personal financial statements shall be accompanied by the independent public accountant’s Standard Review Report stating that the accountant is not aware of any material modifications that should be made to the financial statements in order for the statements to be in conformity with generally accepted accounting principles.

(c) Exhibits shall include copies of the latest annual reports to shareholders of the ultimate controlling person and proxy material used by the ultimate controlling person; and any additional documents or papers required by Form B or regulation Sections 4 and 6.

ITEM 9. FORM C REQUIRED

A Form C, Summary of Changes to Registration Statement, must be prepared and filed with this Form B.

ITEM 10. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:

SIGNATURE

Pursuant to the requirements of Section 4 of the Act, Registrant has caused this annual registration statement to be duly signed on its behalf of the City of _________________ and State of ______________ on the __________ day of ______________, 20 ___.

____________________________________________________________________________________________

Furnish a brief description of all items in the current annual registration statement which represent changes from the prior year’s annual registration statement. The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include specific references to Item numbers in the annual registration statement and to the terms contained therein.

Changes occurring under Item 2 of Form B insofar as changes in the percentage of each class of voting securities held by each affiliate is concerned, need only be included where such changes are ones which result in ownership or holdings of 10% or more of voting securities, loss or transfer of control, or acquisition or loss of partnership interest.

Changes occurring under Item 4 of Form B need only be included where an individual is, for the first time, made a director or executive officer of the ultimate controlling person; a director or executive officer terminates his or her responsibilities with the ultimate controlling person; or in the event an individual is named president of the ultimate controlling person.

If a transaction disclosed on the prior year’s annual registration statement has been changed, the nature of such change shall be included. If a transaction disclosed on the prior year’s annual registration statement has been effectuated, furnish the mode of completion and any flow of funds between affiliates resulting from the transaction.

The insurer shall furnish a statement that transactions entered into since the filing of the prior year’s annual registration statement are not part of a plan or series of like transactions whose purpose it is to avoid statutory threshold amounts and the review that might otherwise occur.

PRIOR NOTICE OF A TRANSACTION

Filed with the Insurance Department of the State of______________________

By

_____________________________________

Name of Registrant

On Behalf of Following Insurance Companies

Name            Address

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

Date:__________________________, 20_____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

____________________________________________________________________________________________

____________________________________________________________________________________________

____________________________________________________________________________________________

ITEM 1.      IDENTITY OF PARTIES TO TRANSACTION

Furnish the following information for each of the parties to the transaction:

(a) Name;

(b) Home office address;

(c) Principal executive office address;

(d) The organizational structure, i.e. corporation, partnership, individual, trust, etc.;

(e) A description of the nature of the parties’ business operations;

(f) Relationship, if any, of other parties to the transaction to the insurer filing the notice, including any ownership or debtor/creditor interest by any other parties to the transaction in the insurer seeking approval, or by the insurer filing the notice in the affiliated parties;

(g) Where the transaction is with a non-affiliate, the name(s) of the affiliate(s) which will receive, in whole or in substantial part, the proceeds of the transaction.
ITEM 2. DESCRIPTION OF THE TRANSACTION

Furnish the following information for each transaction for which notice is being given:

(a) A statement as to whether notice is being given under Section 5A(2)(a), (b), (c), (d), or (e) of the Act;

(b) A statement of the nature of the transaction;

c) A statement of how the transaction meets the ‘fair and reasonable’ standard of Section 5A(1)(a) of the Act; and

(d) The proposed effective date of the transaction.

ITEM 3. SALES, PURCHASES, EXCHANGES, LOANS, EXTENSIONS OF CREDIT, GUARANTEES OR INVESTMENTS

Furnish a brief description of the amount and source of funds, securities, property or other consideration for the sale, purchase, exchange, loan, extension of credit, guarantee, or investment, whether any provision exists for purchase by the insurer filing notice, by any party to the transaction, or by any affiliate of the insurer filing notice, a description of the terms of any securities being received, if any, and a description of any other agreements relating to the transaction such as contracts or agreements for services, consulting agreements and the like. If the transaction involves other than cash, furnish a description of the consideration, its cost and its fair market value, together with an explanation of the basis for evaluation.

If the transaction involves a loan, extension of credit or a guarantee, furnish a description of the maximum amount which the insurer will be obligated to make available under such loan, extension of credit or guarantee, the date on which the credit or guarantee will terminate, and any provisions for the accrual of or deferral of interest.

If the transaction involves an investment, guarantee or other arrangement, state the time period during which the investment, guarantee or other arrangement will remain in effect, together with any provisions for extensions or renewals of such investments, guarantees or arrangements. Furnish a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given if the maximum amount which can at any time be outstanding or for which the insurer can be legally obligated under the loan, extension of credit or guarantee is less than (a) in the case of non-life insurers, the lesser of 3% of the insurer’s admitted assets or 25% of surplus as regards policyholders, or (b) in the case of life insurers, 3% of the insurer’s admitted assets, each as of the 31st day of December next preceding.

ITEM 4. LOANS OR EXTENSIONS OF CREDIT TO A NON-AFFILIATE

If the transaction involves a loan or extension of credit to any person who is not an affiliate, furnish a brief description of the agreement or understanding whereby the proceeds of the proposed transaction, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase the assets of, or to make investments in, any affiliate of the insurer making such loans or extensions of credit, and specify in what manner the proceeds are to be used to loan to, extend credit to, purchase assets of or make investments in any affiliate. Describe the amount and source of funds, securities, property or other consideration for the loan or extension of credit and, if the transaction is one involving consideration other than cash, a description of its cost and its fair market value together with an explanation of the basis for evaluation. Furnish a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given if the loan or extension of credit is one which equals less than, in the case of non-life insurers, the lesser of 3% of the insurer’s admitted assets or 25% of surplus as regards policyholders or, with respect to life insurers, 3% of the insurer’s admitted assets, each as of the 31st day of December next preceding.
ITEM 5. REINSURANCE

If the transaction is a reinsurance agreement or modification thereto, as described by Section 5A(2)(c)(ii) of the Act, or a reinsurance pooling agreement or modification thereto as described by Section 5A(2)(c)(i) of the Act, furnish a description of the known and/or estimated amount of liability to be ceded and/or assumed in each calendar year, the period of time during which the agreement will be in effect, and a statement whether an agreement or understanding exists between the insurer and non-affiliate to the effect that any portion of the assets constituting the consideration for the agreement will be transferred to one or more of the insurer’s affiliates. Furnish a brief description of the consideration involved in the transaction, and a brief statement as to the effect of the transaction upon the insurer’s surplus.

No notice need be given for reinsurance agreements or modifications thereto if the reinsurance premium or a change in the insurer’s liabilities, or the projected reinsurance premium or change in the insurer’s liabilities in any of the next three years, in connection with the reinsurance agreement or modification thereto is less than 5% of the insurer’s surplus as regards policyholders, as of the 31st day of December next preceding. Notice shall be given for all reinsurance pooling agreements including modifications thereto.

ITEM 6. MANAGEMENT AGREEMENTS, SERVICE AGREEMENTS AND COST-SHARING ARRANGEMENTS.

For management and service agreements, furnish:

(a) A brief description of the managerial responsibilities, or services to be performed;

(b) A brief description of the agreement, including a statement of its duration, together with brief descriptions of the basis for compensation and the terms under which payment or compensation is to be made.

For cost-sharing arrangements, furnish:

(a) A brief description of the purpose of the agreement;

(b) A description of the period of time during which the agreement is to be in effect;

(c) A brief description of each party’s expenses or costs covered by the agreement;

(d) A brief description of the accounting basis to be used in calculating each party’s costs under the agreement;

(e) A brief statement as to the effect of the transaction upon the insurer’s policyholder surplus;

(f) A statement regarding the cost allocation methods that specifies whether proposed charges are based on “cost or market.” If market based, rationale for using market instead of cost, including justification for the company’s determination that amounts are fair and reasonable; and

(g) A statement regarding compliance with the NAIC Accounting Practices and Procedure Manual regarding expense allocation.

ITEM 7. SIGNATURE AND CERTIFICATION

Signature and certification required as follows:

FORM E
PRE-ACQUISITION NOTIFICATION FORM
REGARDING THE POTENTIAL COMPETITIVE IMPACT
OF A PROPOSED MERGER OR ACQUISITION BY A
NON-DOMICILIARY INSURER DOING BUSINESS IN THIS
STATE OR BY A DOMESTIC INSURER

Name of Applicant

Name of Other Person
Involved in Merger or
Acquisition

Filed with the Insurance Department of

Dated: ________________________, 20 ____________

Name, title, address and telephone number of person completing this statement:

ITEM 1. NAME AND ADDRESS
State the names and addresses of the persons who hereby provide notice of their involvement in a pending acquisition or change in corporate control.

ITEM 2. NAME AND ADDRESSES OF AFFILIATED COMPANIES
State the names and addresses of the persons affiliated with those listed in Item 1. Describe their affiliations.

ITEM 3. NATURE AND PURPOSE OF THE PROPOSED MERGER OR ACQUISITION
State the nature and purpose of the proposed merger or acquisition.

ITEM 4. NATURE OF BUSINESS
State the nature of the business performed by each of the persons identified in response to Item 1 and Item 2.
ITEM 5. MARKET AND MARKET SHARE

State specifically what market and market share in each relevant insurance market the persons identified in Item 1 and Item 2 currently enjoy in this state. Provide historical market and market share data for each person identified in Item 1 and Item 2 for the past five years and identify the source of such data. Provide a determination as to whether the proposed acquisition or merger, if consummated, would violate the competitive standards of the state as stated in Section 3.1D of the Act. If the proposed acquisition or merger would violate competitive standards, provide justification of why the acquisition or merger would not substantially lessen competition or create a monopoly in the state.

For purposes of this question, market means direct written insurance premium in this state for a line of business as contained in the annual statement required to be filed by insurers licensed to do business in this state.

Drafting Note: State Insurance Departments may additionally choose to make these calculations using their own data or data provided by the National Association of Insurance Commissioners.

Date:______________, 20____

Name, Title, Address and telephone number of Individual to Whom Notices and Correspondence Concerning This Statement Should Be Addressed:

ITEM 1. ENTERPRISE RISK

The Registrant/Applicant, to the best of its knowledge and belief, shall provide information regarding the following areas that could produce enterprise risk as defined in [insert cross reference to definition of Enterprise Risk in Section 1F of the Act], provided such information is not disclosed in the Insurance Holding Company System Annual Registration Statement filed on behalf of itself or another insurer for which it is the ultimate controlling person:

- Any material developments regarding strategy, internal audit findings, compliance or risk management affecting the insurance holding company system;
- Acquisition or disposal of insurance entities and reallocating of existing financial or insurance entities within the insurance holding company system;
- Any changes of shareholders of the insurance holding company system exceeding ten percent (10%) or more of voting securities;
- Developments in various investigations, regulatory activities or litigation that may have a significant bearing or impact on the insurance holding company system;
- Business plan of the insurance holding company system and summarized strategies for the next 12 months;
- Identification of material concerns of the insurance holding company system raised by supervisory college, if any, in the last year;
Identification of insurance holding company system capital resources and material distribution patterns;

Identification of any negative movement, or discussions with rating agencies which may have caused, or may cause, potential negative movement in the credit ratings and individual insurer financial strength ratings assessment of the insurance holding company system (including both the rating score and outlook);

Information on corporate or parental guarantees throughout the holding company and the expected source of liquidity should such guarantees be called upon; and

Identification of any material activity or development of the insurance holding company system that, in the opinion of senior management, could adversely affect the insurance holding company system.

The Registrant/Applicant may attach the appropriate form most recently filed with the U.S. Securities and Exchange Commission, provided the Registrant/Applicant includes specific references to those areas listed in Item 1 for which the form provides responsive information. If the Registrant/Applicant is not domiciled in the U.S., it may attach its most recent public audited financial statement filed in its country of domicile, provided the Registrant/Applicant includes specific references to those areas listed in Item 1 for which the financial statement provides responsive information.

ITEM 2: OBLIGATION TO REPORT.

If the Registrant/Applicant has not disclosed any information pursuant to Item 1, the Registrant/Applicant shall include a statement affirming that, to the best of its knowledge and belief, it has not identified enterprise risk subject to disclosure pursuant to Item 1.
The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force met June 14, 2021. The following Subgroup members participated: Kevin Baldwin, Chair (IL); Toma Wilkerson, Vice Chair (FL); Joe Holloway (CA); Jared Kosky (CT); James Gerber (MI); Donna Wilson and Jamin Dawes (OK); Laura Lyon Slaymaker and Crystal McDonald (PA); and Brain Riewe (TX).

1. **Adopted its May 26 Minutes.**

The Subgroup met May 26 and took the following action: 1) discussed its charges; and 2) planned the review process for the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook). Mr. Baldwin noted that the minutes from the May meeting were in the meeting materials.

Mr. Gerber made a motion, seconded by Ms. Wilkerson, to adopt the Subgroup’s May 26 minutes (Attachment Two-A). The motion passed unanimously.

2. **Discussed the Drafting Group Volunteers and Process**

Mr. Baldwin thanked the volunteers that have agreed to participate in the drafting group and discussed the process for the drafting group. He said that the drafting group would have a primary drafter for specific pages of Chapter 1. The other group members would add comments and/or revisions to the Word document. The drafting group would schedule a meeting(s) to discuss the comments or revisions. Once completed, the drafting group would present the document to the Subgroup for public exposure. Once the document has been publicly exposed, the public comments received would be considered by the Subgroup and the document would be revised as warranted. After public exposure, the Subgroup would consider adoption of Chapter 1. This would be the same process for all the other chapters of the Receiver’s Handbook.

3. **Demonstrated SharePoint Collaboration Software for Drafting Groups**

Mr. Baldwin introduced Sherry Flippo (NAIC) and Amy Lopez (NAIC). They demonstrated the SharePoint website that would be used for collaboration among the drafting group members.

Having no further business, the Receiver’s Handbook (E) Subgroup adjourned.

W:\National Meetings\2021\Summer\TF\RHS 061421 Minutes.docx
The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force met May 26, 2021. The following Subgroup members participated: Kevin Baldwin, Chair (IL); Toma Wilkerson, Vice Chair (FL); Jared Kosky (CT); James Gerber (MI); Leatrice Geckler (NM); Donna Wilson and Jamin Dawes (OK); Laura Lyon Slaymaker and Crystal McDonald (PA); and Brain Riewe (TX).

1. **Reviewed its Charge**

   Mr. Baldwin reviewed the Subgroup’s charge to “Review the Receiver’s Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook.” He noted that the charge is to be completed by the 2022 Fall National Meeting.

2. **Reviewed the Chapters of the Receiver’s Handbook and Considered the Assignment of Drafting Groups**

   Mr. Baldwin reviewed the current chapters of the Receiver’s Handbook for Insurance Company Insolvencies (Receiver’s Handbook). After discussions concerning making the Receiver’s Handbook more user friendly and concise by the participants, he noted that the Subgroup would form two drafting groups. The drafting groups would perform the drafting, editing and writing of the first two chapters. Then, the draft of the chapters would be sent to the Subgroup for public exposure and comment. Mr. Baldwin invited Subgroup members, interested state insurance regulators, and interested parties to volunteer for any chapters in which they are interested by contacting Sherry Flippo (NAIC) or Erin Arscott (NAIC).

Having no further business, the Receiver’s Handbook (E) Subgroup adjourned.
The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met May 4, 2021. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynnowycz (AR); Jack Hom (CA); Jared Kosky (CT); Toma Wilkerson (FL); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Justin Schrader (NE); James Kennedy (TX); and Melanie Anderson (WA).

1. **Adopted Amendments to Model #440 and Model #450**

   Ms. Slaymaker said on the Working Group’s March 5 meeting, additional revisions to Section 5A(1)(g) of the *Insurance Holding Company System Regulatory Act* (#440) were released for a 30-day public comment period ending April 9.

   Ms. Slaymaker said one comment letter was received from the American Council of Life Insurers (ACLI) (Attachment Three-A). Wayne Mehlman (ACLI) said the addition to the drafting note for Section 5A(1)(g) is to clarify that the section applies to managerial and support service agreements, and it does not apply to reinsurance or risk transfer. Ms. Slaymaker said she agrees with the ACLI’s suggested addition. Hearing no objection, she said the additional wording will be included in the amendments.

   Mr. Kennedy made a motion, seconded by Ms. Wilkerson, to adopt the amendments to Model #440 (see NAIC Proceedings – Summer 2021, Receivership and Insolvency (E) Task Force, Attachment One-A) and the *Insurance Holding Company System Regulation with Reporting Forms and Instructions* (#450) (see NAIC Proceedings – Summer 2021, Receivership and Insolvency (E) Task Force, Attachment One-B). The motion passed unanimously.

2. **Discussed Updating Related Regulatory Guidance**

   Mr. Baldwin said the original survey to gather ideas to address the issue of the continuation of services and issues with access to books and records, in addition to the model amendments, included two general recommendations to update pre-receivership analysis, examination guidance, and guidance in the *Receiver’s Handbook for Insurance Company Insolvencies* (Handbook).

   Mr. Baldwin said as analysis and examination guidance is outside the scope of this Working Group, after the NAIC has adopted the Model #440 and Model #450 amendments, the appropriate NAIC groups can address related updates to pre-receivership analysis and examination guidance.

   Mr. Baldwin said at the 2020 Spring National Meeting, the NAIC adopted charges to form the Receiver’s Handbook (E) Subgroup, which will review and draft updates to the Handbook. He said he will serve as the Subgroup’s chair, and Ms. Wilkerson will serve as vice chair. He said the Subgroup will review the existing guidance, including aspects of service agreements and the books and records of the estate. He said he recommends that the Subgroup address aligning Handbook guidance to the Model #440 and Model #450 amendments, once adopted, as part of the normal process of completing its charge. Ms. Wilkerson and Mr. Kosky agreed. Hearing no objection, Mr. Baldwin said guidance will be drafted by the Subgroup under its charge to update the Handbook.

Having no further business, the Receivership Law (E) Working Group adjourned.
Wayne Mehlman
Senior Counsel
(202) 624-2135
waynemehlman@acli.com

April 6, 2021

Dear Co-Chairs Baldwin and Slaymaker:

The American Council of Life Insurers (“ACLI”)\(^1\) appreciates this opportunity to provide comments to the Receivership Law Working Group on Section 5.A.(1)(g) of Model #440. We respectfully suggest that the following underlined language be added to that subsection’s Drafting Note.

**Drafting Note:** This section is intended to apply to a broad range of affiliate managerial and support service contracts including, for example, general managerial services, financial accounting and actuarial services, data management, investment portfolio management and support and policy and policyholder services. (Performance collateralization for reinsurance and other risk transfer or financial contracts with affiliates is typically addressed in the underlying contractual agreements and is beyond the scope of these deposit/bond requirements.) The intent of the deposit or bond is to ensure the affiliated services provided under the contract(s) are fulfilled. In determining appropriate circumstances when a commissioner may require a deposit or bond, to be determined by the insurer, and in specifying an amount, the

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
commissioner should evaluate and consider whether an insurer subject to this act is in a hazardous financial condition or a condition that would be grounds for substantial regulatory action, including supervision, conservation or a delinquency proceeding. If it is, the deposit or bond requirement would be available as an additional regulatory remedy at the discretion of the commissioner. Note, the commissioner should consider whether the affiliated person is already required to post a deposit or bond under applicable laws regulating third-party administrators.

Thanks again for this opportunity to provide comments. If you have any questions, feel free to contact me at waynemehlman@acli.com or 202-624-2135.

Sincerely,

Wayne A. Mehlman
Senior Counsel, Insurance Regulation
2022 Proposed Charges

Receivership and Insolvency (E) Task Force

The mission of the Receivership and Insolvency (E) Task Force shall be administrative and substantive as it relates to issues concerning insurer insolvencies and insolvency guarantees. Such duties include, without limitation, monitoring the effectiveness and performance of state administration of receiverships and the state guaranty fund system; coordinating cooperation and communication among regulators, receivers and guaranty funds; monitoring ongoing receiverships and reporting on such receiverships to NAIC members; developing and providing educational and training programs in the area of insurer insolvencies and insolvency guarantees to regulators, professionals and consumers; developing and monitoring relevant model laws, guidelines and products; and providing resources for regulators and professionals to promote efficient operations of receiverships and guaranty funds.

The Receivership and Insolvency (E) Task Force will:

A. Monitor and promote efficient operations of insurance receiverships and guaranty associations.
B. Monitor and promote state adoption of insurance receivership and guaranty association model acts and regulations, and monitor other legislation related to insurance receiverships and guaranty associations.
C. Provide input and comments to the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB) or other related groups on issues regarding international resolution authority.
D. Monitor, review and provide input on federal rulemaking and studies related to insurance receiverships.
F. Monitor the work of other NAIC committees, task forces and working groups to identify and address any issues that affect receivership law and/or regulatory guidance.
G. Perform additional work as directed by the Financial Condition (E) Committee and/or received through referral by other groups.

The Receivership Financial Analysis (E) Working Group will:

1. Monitor receiverships involving nationally significant insurers/groups to support, encourage, promote and coordinate multistate efforts in addressing problems.
2. Interact with the Financial Analysis (E) Working Group, domiciliary regulators, and lead states to assist and advise as to what might be the most appropriate regulatory strategies, methods and/or action(s) regarding potential or pending receiverships.

The Receivership Law (E) Working Group will:

1. Review and provide recommendations on any issues identified that may affect states’ receivership and guaranty association laws (e.g., any issues that arise as a result of market conditions; insurer insolvencies; federal rulemaking and studies; international resolution initiatives; or as a result of the work performed by or referred from other NAIC committees, task forces and/or working groups).
2. Discuss significant cases that may impact the administration of receiverships.
The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force will:

1. Review the Receiver’s Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook. Complete by the 2022 Fall National Meeting.

Deleted: Complete work as assigned from the Receivership and Insolvency (E) Task Force to address recommendations from the Financial Stability (E) Task Force’s Macroprudential Initiative (MPI) referral:

- Complete work related to qualified financial contracts (QFCs), including: 1) explore if bridge institutions could be implemented under regulatory oversight pre-receivership to address an early termination of QFCs and, if appropriate, develop applicable guidance; 2) develop enhancements to the Receiver’s Handbook guidance on QFCs; and 3) identify related pre-receivership considerations related to QFCs and, if necessary, make referrals to other relevant groups to enhance pre-receivership planning, examination and analysis guidance.

- Review and provide recommendations for remedies to ensure the continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Among other solutions, this will encompass a review of the Insurance Holding Company System Regulatory Act (0440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (0450) to provide proposed revisions to address the continuation of essential services through affiliated intercompany agreements in a receivership.

- Consult with and/or make referrals to other NAIC working groups, as deemed necessary, as the topic relates to affiliated intercompany agreements and pre-receivership considerations. Complete by the 2021 Fall National Meeting.

The Reinsurance (E) Task Force met July 27, 2021. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Daniel Morris (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Richard Ford (AL); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Dave Lonchar (DE); David Altmaier represented by Robert Ridenour (FL); Doug Ommen represented by Kevin Clark (IA); Dana Popish Severinghaus represented by Eric Moser and Susan Berry (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy and Rodney Hugle (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Mike Causey represented by Monique Smith (NC); Jon Godfried represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by John Tirado (NJ); Russell Toal (NM); Linda A. Lacewell represented by Michael Campanelli (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Doug Slape represented by Jamie Walker (TX); Jonathan T. Pike represented by Natasha Robinson (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Michael S. Pieciak represented by David Provost (VT); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its Spring National Meeting Minutes**

Superintendent Toal made a motion, seconded by Ms. Crawford, to adopt the Task Force’s March 23 minutes (see NAIC Proceedings – Spring 2021, Reinsurance (E) Task Force). The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

Superintendent Toal made a motion, seconded by Ms. Smith, to adopt the 2022 proposed charges of the Task Force and the Reinsurance Financial Analysis (E) Working Group (Attachment One). The motion passed unanimously. Mr. Rehagen noted that the Qualified Jurisdiction (E) Working Group was renamed to be the Mutual Recognition of Jurisdictions (E) Working Group and now reports directly to the Financial Condition (E) Committee.

Mr. Kaumann provided the report of the Reinsurance Financial Analysis (E) Working Group. He stated that the Working Group met April 13 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss proposed revisions to the Reinsurance Financial Analysis (E) Working Group Procedures Manual (ReFAWG Manual). He noted that the ReFAWG Manual is a regulator-only document that is being updated to reflect the 2019 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). He noted that the Working Group also plans to meet several more times during 2021 to complete the reviews of the certified reinsurers and to discuss any new applications.

Mr. Kaumann made a motion, seconded by Ms. Macaluso, to adopt the Working Group’s report. The motion passed unanimously.

4. **Adopted the Draft Revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions**

Mr. Rehagen stated that the draft revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions incorporate provisions for terminating the status of a qualified jurisdiction or reciprocal jurisdiction and create a passporting process for reciprocal jurisdictions. He noted that these revisions were discussed on March 17 by the Qualified Jurisdiction (E) Working Group in regulator-only session and were exposed for a 30-day public comment period on March 23, and four comment letters (Attachment Two) were received.

Mr. Rehagen stated that the renamed Mutual Recognition of Jurisdictions (E) Working Group then met on May 27 and incorporated the suggested revisions from the comment letters and made some minor revisions related to the name change. He
noted that NAIC staff met with the Federal Insurance Office (FIO), which provided several suggested revisions that were included in an additional handout sent out before this meeting (Attachment Three). Mr. Wake provided a summary of the revisions and recommended that the Task Force adopt the updated *Process for Evaluating Qualified and Reciprocal Jurisdictions*, with the FIO suggested revisions. Dan Schelp (NAIC) noted that these revisions are nonsubstantive in nature and are consistent with the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement), as well as with Model #785 and Model #786. Ms. Macaluso and Mr. Kaumann stated that they agree with Mr. Schelp.

Mr. Wake made a motion, seconded by Superintendent Toal, to adopt the revisions to the *Process for Evaluating Qualified and Reciprocal Jurisdictions* (Attachment Four), with the additional revisions included in Attachment Three. The motion passed unanimously.

5. Discussed the Draft ReFAWG Review Process

Mr. Rehagen stated that the ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (ReFAWG Review Process) (Attachment Five) was created to aid in the implementation process of the 2019 revisions to Model #785 and Model #786 and intends to clarify the processes for the passporting of certified reinsurers and reciprocal jurisdiction reinsurers. He noted that the document was released for initial exposure on June 17 for 30 days, and six comment letters (Attachment Six) were received. Mr. Rehagen noted that because of the comments received, the Task Force will refer the document to the Working Group, which will evaluate the comments and recommend any revisions back to the Task Force.

Suzanne Williams-Charles (Association of Bermuda Insurers and Reinsurers—ABIR) stated she supports the passporting processes and recommends updating the ReFAWG Review Process to eliminate the need for duplicate information for reciprocal jurisdiction reinsurers that are also certified reinsurers. She also recommended consistent filing dates for both reciprocal jurisdiction reinsurers and certified reinsurers and suggested permitting reciprocal jurisdiction reinsurers to submit evidence of their minimum capital and surplus and minimum solvency or capital ratio requirement status directly to state insurance regulators on behalf of their supervisory regulators.

Thomas Dawson (on behalf of the International Underwriting Association of London—IUA) stated that he agrees with Ms. Williams-Charles’ statements and emphasized the importance of a consistent filing date and requirements for both certified and reciprocal jurisdiction reinsurers. He noted that some reinsurers will have a different lead state for its certified reinsurer status and its reciprocal jurisdiction reinsurer status.

Steve Clayburn (American Council of Life Insurers—ACLI) recommended that the process use efficiencies for situations where the certified reinsurer status and reciprocal jurisdiction reinsurer status have overlapping requirements.

Karalee Morrell (Reinsurance Association of America—RAA) stated that she would like the process document to clarify which aspects of the process applied to certified reinsurers, which applied to reciprocal jurisdiction reinsurers, and which applied to both types. She also recommended revising the process document to clarify between the requirements imposed by a lead state and those imposed by a state where an applicant is seeking to do business, and she added that she supports the passporting process.

6. Discussed the Republic of Korea Application to Become a Qualified Jurisdiction

Mr. Rehagen stated that on May 27, the Mutual Recognition of Jurisdictions (E) Working Group recommended the Republic of Korea be approved as a qualified jurisdiction and exposed the *Republic of Korea: Final Evaluation Report* (Attachment Seven) for a 30-day public comment period. He noted that one comment letter (Attachment Eight) was received from the American Property Casualty Insurance Association (APCIA) and the ACLI that noted an issue with Korea requiring localization of data that may create extra obstacles for U.S. reinsurers looking to do business in Korea. Mr. Rehagen referred this issue back to the Mutual Recognition of Jurisdictions (E) Working Group to further evaluate and remediate this issue, and to report back to the Task Force.

7. Received a Status Report on the States’ Implementation of the 2019 Revisions to Model #785 and Model #786

Mr. Rehagen stated that as of July 16, 42 U.S. jurisdictions have adopted the 2019 revisions to Model #785, while four jurisdictions have action under consideration. He noted that 15 states have adopted the revisions to Model #786, and seven
jurisdictions currently have action under consideration. He stated that the maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Nine).

Mr. Rehagen stated that the 2019 revisions to the models must be adopted by the states prior to Sept. 1, 2022, which is the date at which the FIO must complete its federal preemption reviews under the EU Covered Agreement. He stated that the Task Force will provide support to the states to meet this deadline, and it will communicate with the U.S. Department of the Treasury (Treasury Department) and the FIO as necessary. He noted that there have not been any specific conversations with either the FIO or the European Union (EU) about extending this deadline, but there have been some preliminary discussions with the FIO on the status of state adoptions. Mr. Rehagen recommended that all states and jurisdictions adopt the 2019 revisions to Model #785 and Model #786 as soon as possible and no later than July 1, 2022, in order to give the FIO time for its federal preemption analysis.

Mr. Rehagen stated that the current adoption maps can be found on the Task Force’s web page. He noted that Mr. Schelp and Jake Stultz (NAIC) can answer any technical questions during the legislative process, and Holly Weatherford (NAIC) is working directly with the states on the adoption of the 2019 revisions to Model #785 and Model #786.

8. Received a Status Report on the States’ Implementation of Model #787

Mr. Rehagen stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787) becomes an accreditation standard on Sept. 1, 2022, with enforcement beginning on Jan. 1, 2023. He noted that as of June 22, five jurisdictions have adopted Model #787, with another six jurisdictions with action under consideration. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment Ten) and added that the adoption of Model #787 is unrelated to the covered agreements and is not potentially subject to federal preemption. Mr. Schelp noted that Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48), and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline, and that AG 48 would likely be considered to be substantially similar to Model #787. Mr. Schelp noted that if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785.

Mr. Clayburn asked if a state may adopt Section 5B(4) of Model #785 into its state’s regulation, and Mr. Schelp stated that such an approach should be acceptable.

9. Discussed Other Matters

John Huff (Association of Bermuda Insurers and Reinsurers—ABIR) stated that the Bermuda Monetary Authority (BMA) had announced on July 26 that Bermuda reinsurers had provided up to $2.7 billion worth of support to the Texas insurers because of the widespread winter storm in early 2021.

Having no further business, the Reinsurance (E) Task Force adjourned.
Proposed 2022 Charges of the
Reinsurance (E) Task Force

2022 Charges

The **Reinsurance (E) Task Force** will:

A. Provide a forum for the consideration of reinsurance-related issues of public policy.

C. Monitor the implementation of the 2011, 2016 and 2019 revisions to the Credit for Reinsurance Model Law (#785); and the 2011 and 2019 revisions to the Credit for Reinsurance Model Regulation (#786) and the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

D. Communicate and coordinate with the Federal Insurance Office (FIO), other federal authorities, and international regulators and authorities on matters pertaining to reinsurance.

E. Consider any other issues related to the revised Model #785, Model #786 and Model #787.

F. Monitor the development of international principles, standards and guidance with respect to reinsurance. This includes, but is not limited to, monitoring the activities of various groups within the International Association of Insurance Supervisors (IAIS), including the Reinsurance and Other Forms of Risk Transfer Subcommittee, the Reinsurance Mutual Recognition Subgroup and the Reinsurance Transparency Group.

G. Consider the impact of reinsurance-related federal legislation, including, but not limited to, the federal Nonadmitted and Reinsurance Reform Act (NRRA) and the Federal Insurance Office Act, and coordinate any appropriate NAIC action.

H. Continue to monitor the impact of reinsurance-related international agreements, including the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement).

The **Reinsurance Financial Analysis (E) Working Group** will:

A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing certified reinsurance topics and policy issues, such as amendments to the Uniform Application for Certified Reinsurers.

B. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.

C. Provide a forum for discussion among NAIC jurisdictions of reinsurance issues related to specific companies, entities or individuals.

D. Support, encourage, promote and coordinate multistate efforts in addressing issues related to certified reinsurers, including, but not limited to, multistate recognition of certified reinsurers.

E. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.

F. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.

G. Ensure the public passporting website remains current.

H. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.
April 23, 2021

Ms. Chlora Lindley-Myers
Chair
NAIC Reinsurance (E) Task Force

RE: Updated Process for Evaluating Qualified and Reciprocal Jurisdictions

Greetings:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on the updated Process for Evaluating Qualified and Reciprocal Jurisdictions document.

During our review, we did not notice any new additional language that seemed to be incorrect or caused confusion in reading. We do note that throughout the document that “Qualified Jurisdiction Working Group” is utilized. With that working group being renamed to “Mutual Recognition of Jurisdictions Working Group”, we would suggest updating the document with the new name of the working group.

Sincerely,

Steven Clayburn

cc: Jake Stultz, Senior Accounting and Reinsurance Policy Advisor
    Dan Schelp, Chief Counsel, Regulatory Affairs
NAIC Consultation on Qualified & Reciprocal Jurisdiction Process

The Association of Bermuda Insurers and Reinsurers ("ABIR") kindly thanks the National Association of Insurance Commissioners ("NAIC") for the opportunity to comment on its consultation on revisions to the Qualified and Reciprocal Jurisdiction Process. ABIR represents the public policy interests of Bermuda’s leading insurers and reinsurers and make up over 35% of the global reinsurance market based on property & casualty net premiums earned. ABIR members employ over 43,000 Americans in the U.S. and protect consumers around the world by providing affordable and accessible insurance protection and peace of mind. From our review of the revised draft, the changes appear to be focused on two areas, which are new procedures for termination of the status of a qualified and/or reciprocal jurisdictions and the passporting process for reciprocal jurisdictions. The following are ABIR’s comments.

Termination of Status as Qualified ("QJ") and/or Reciprocal ("RJ") Jurisdiction

If a QJ is found to be out of compliance with the requirements to be a QJ, the QJ Working Group will report the details of the non-compliance to the Task Force and ultimately, the QJ may then be placed on probation or have its designation suspended or revoked. The process is the same for a RJ except for those RJs entitled to automatic recognition. The revised process notes that it is intended that compliance with the covered agreement for an RJ will ultimately be determined by the Joint Committee established under the covered agreement, or through termination of the covered agreement by the parties to the covered agreement.

If a QJ or RJ’s status is revoked by a state, then those Certified Reinsurers and/or Reciprocal Jurisdiction Reinsurers domiciled in that jurisdiction must post within three months of this determination one hundred percent (100%) collateral on all their liabilities assumed from ceding insurers domiciled in that state. Due to the potential significant financial impact to a reinsurer of this change in status, ABIR is concerned that the proposed three-month time frame to establish the required collateral in the event of the revocation of a jurisdiction’s status, may not be reasonable.

Additionally, the revision notes “Both Qualified Jurisdictions and Reciprocal Jurisdictions that are not subject to a covered agreement are obligated to provide notice to the Qualified Jurisdiction Working Group of any applicable changes to their reinsurance supervisory system” or any adverse developments with respect to enforcement of final U.S. judgments. States and U.S. ceding insurers may also provide notice of such changes to the Working Group. ABIR would like additional information on this process, highlighting the potential for unintended consequences of allowing ceding insurers to report changes to a jurisdiction’s reinsurance supervisory systems.

Passporting Process for Reciprocal Jurisdiction

The proposed revisions describe the NAIC process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to the requirements for both Certified
Reinsurers and Reciprocal Jurisdiction Reinsurers. It notes that passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process.

ABIR supports a process to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the States. In addition, we would recommend that states are strongly encouraged to collaborate to facilitate uniformity, reduce friction and increase efficiency.

I am willing to make myself available, if you wish to discuss any of these matters further.

Kind regards
Suzanne Williams-Charles

Re: Proposed Revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions

Dear Mr. Stultz and Mr. Schelp:

We are writing on behalf of the International Underwriting Association of London (“IUA”), a trade association that represents international insurers and reinsurers operating in the London Insurance Market. A number of IUA members are currently registered as certified reinsurers and it is anticipated that those companies, and perhaps additional IUA members, will seek reciprocal jurisdiction reinsurer status in the future.

We greatly appreciate the opportunity to comment on the proposed revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions.

Proposed Revisions to New Section III, Paragraph 15

Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) requires the supervisory authority of an assuming insurer domiciled in a Reciprocal Jurisdiction (a “Reciprocal Reinsurer”) to confirm on an annual basis to the relevant state insurance regulator that such Reciprocal Reinsurer complies with the minimum capital and surplus and minimum solvency or capital ratio requirements set forth in the Credit for Reinsurance Model Regulation (#786). To that end, the new Section III, Paragraph 15 of the Process for Evaluating Qualified and Reciprocal Jurisdictions creates a process for Reciprocal Jurisdictions to make annual filings of the relevant financial information.
To make such a filing, the supervisory authority in a Reciprocal Jurisdiction would need to: (1) track on an annual basis which Reciprocal Reinsurers domiciled in their jurisdiction had obtained such status and file the required information on behalf of multiple reinsurers in potentially1 multiple states; (2) collect the relevant financial information from the Reciprocal Reinsurers domiciled in their jurisdiction; and (3) develop a system for filing such information with U.S. insurance regulators. This filing process would clearly impose considerable burdens on Reciprocal Jurisdictions. The process, however, could be streamlined by adding as an option allowing individual Reciprocal Reinsurers to file the required financial information directly with U.S. insurance regulators.

A Reciprocal Jurisdiction should be permitted to either make an annual filing as reflected in the proposed draft or, alternatively, issue a document to the Reciprocal Reinsurers confirming the information required by Section 9C(7) of the Credit for Reinsurance Model Regulation (#786), similar to a certificate of good standing, which the Reciprocal Reinsurers would then annually file directly with state insurance regulators (e.g., as part of a Reciprocal Reinsurer’s application for or renewal of status as a Reciprocal Reinsurer).

Given that the Reciprocal Reinsurers are more likely to already have developed systems of making filings with supervisory authorities in general, allowing those Reciprocal Reinsurers to make the required filings with U.S. insurance regulators directly would likely be more efficient than asking supervisory authorities in Reciprocal Jurisdictions to establish whole new systems and procedures for making financial filings on behalf of the Reciprocal Reinsurers domiciled in those Reciprocal Jurisdictions.

Attached hereto as Appendix A are proposed revisions to the new Section III, Paragraph 15 of the Process for Evaluating Qualified and Reciprocal Jurisdictions that would allow for a more streamlined approach. Specifically, with respect to the changes reflected in the attached document:

1. The first proposed change to paragraph 15.c. is to permit a Reciprocal Jurisdiction to satisfy the requirements of Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) by either making a filing itself or providing to a Reciprocal Reinsurer domiciled in that Reciprocal Jurisdiction a document confirming the required information, which the assuming insurer would then file with relevant state insurance regulators.

2. The second proposed change to paragraph 15.c. is to address the fact that Reciprocal Jurisdictions do not do business in the U.S. and in many cases, neither do the Reciprocal Reinsurers from those Reciprocal Jurisdictions. Therefore, we propose that filings of financial information be required in those states where the Reciprocal Reinsurer has reinsured ceding

---

1 We say potentially because, although the hope is that states adopt the passporting process, states are not required to follow the passporting process, and so such filings may be required in multiple states.
insurers domiciled in such states, subject to the alternative options of making the filings with its Lead State or the NAIC.

* * *

**Additional Comments on Procedures Related to Reciprocal Jurisdiction Designation**

We would like to offer some additional comments on how this new designation of a Reciprocal Reinsurer will be used.

Once this process is adopted and implemented, the Reinsurance Financial Analysis (E) Working Group (“ReFAWG”) will be evaluating two kinds of reinsurers – Certified Reinsurers and Reciprocal Reinsurers. Generally, these two categories of reinsurers are similar and differ mainly based on the status of the regulatory authority where they are domiciled. For example, both types of reinsurers are required to have minimum capital and surplus of $250 million.

Given the similarity of the standards to be considered by individual states and ReFAWG with respect to both types of reinsurers, it would make the process more efficient for everyone if the evaluation of Reciprocal Reinsurers were treated in a similar manner to Certified Reinsurers. More specifically, to simplify the process and ensure consistent application of standards, we recommend the following:

1. There should be uniform timing for the application and renewal dates for Certified Reinsurer and Reciprocal Reinsurer status – we suggest June 30th, a date that is currently commonly used by states.

2. The effect of obtaining Certified Reinsurer and Reciprocal Reinsurer status is prospective (i.e., only applies to new business written). Therefore, even after the application and renewal process for Reciprocal Reinsurer status is established, some reinsurers may have designations as a Certified Reinsurer for some business and a Reciprocal Reinsurer for other business. Such reinsurers would have status renewal obligations with respect to both designations. Given the similarity of the financial standards, as discussed above, we recommend that in the case where a reinsurer has both statuses in a given state, such reinsurer should only be obligated to file one set of information to renew both statuses.

3. We strongly support the proposed passporting process for Reciprocal Jurisdictions and Reciprocal Reinsurers.

We ask that the ReFAWG consider these suggestions when the ReFAWG Manual is revised.
Thank you once again for the opportunity to share these comments, which we would be happy to discuss further at your request.

Sincerely,

John Finston

JFF/yf

    Yuliya Feldman, McDermott Will & Emery LLP
APPENDIX A

Proposed Revisions to Section III, Paragraph 15 of the Process for Evaluating Qualified and Reciprocal Jurisdictions

15. Passporting Process for Reciprocal Jurisdictions

a. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to the requirements for both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

b. The passporting process is facilitated through the Reinsurance Financial Analysis (E) Working Group (ReFAWG). It is intended that ReFAWG will help facilitate multi-state recognition of Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and address issues of uniformity among the states, both with respect to initial application and subsequent changes in rating or status. The ReFAWG Review Process is set forth in the ReFAWG Procedures Manual.

c. Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) provides that the “assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the requirements set forth in Paragraphs (2) [i.e., minimum capital and surplus of no less than $250] and (3) [i.e., minimum solvency or capital ratio] of this subsection.” Section 9E(1) of Model #786 then provides that “The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of the requirements of Subsection C.” A Reciprocal Jurisdiction may satisfy the requirements of Section 9C(7) of Model #786 by either providing the information required by Section 9C(7) itself, or by providing to an assuming insurer domiciled in that Reciprocal Jurisdiction a document confirming the required information, which the assuming insurer would file annually. With respect to either filing method, the required information would be filed with each state in which such assuming insurer has reinsured a ceding insurer domiciled in that state it is doing business, or with the Lead State or the NAIC, which will share this documentation with the other states through the ReFAWG Review Process. Each state may accept financial documentation filed with the Lead State or with the NAIC.
April 23, 2021

Director Chlora Lindley-Myers, Chair
Reinsurance (E) Task Force
National Association of Insurance Commissioners

Re: NAIC Request for Comments on Draft Process for Evaluating Qualified and Reciprocal Jurisdictions

Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA) appreciates the opportunity to submit comments on the NAIC’s exposure draft of its revised Process for Evaluating Qualified and Reciprocal Jurisdictions. The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates.

We appreciate the Reinsurance Task Force’s continued thoughtful engagement with respect to implementation of its 2019 revisions to the NAIC Credit for Reinsurance Model Law and Model Regulation, including its continued work on the draft of its Process for Evaluating Qualified and Reciprocal Jurisdictions. This is another important step in the implementation process for the U.S./EU and U.S./UK covered agreements and in the NAIC’s expressed goal to revise the credit for reinsurance framework in the U.S. to create an equal playing field for all reinsurers that meet the legal requirements and commitments from the new category of “Reciprocal Jurisdictions.” The Process for Evaluating Qualified and Reciprocal Jurisdictions provides the framework through which U.S. and non-U.S. jurisdictions will be evaluated as Reciprocal Jurisdictions, principles for that evaluation and a structure for review of Reciprocal Jurisdiction status.

Termination of Status as a Qualified and/or Reciprocal Jurisdiction

We appreciate the changes to provide a process for termination of status as a Qualified and/or Reciprocal Jurisdiction. Having a clear process for termination or re-evaluation of a jurisdiction’s status is critical. In addition, we appreciate the inclusion of the clarification that a U.S. ceding insurer may provide notice to the Qualified Jurisdiction Working Group if they receive notice of any material change in the applicable reinsurance supervisory system or any adverse developments with respect to enforcement of final U.S. judgments. Active engagement with companies in addition to regulators will help to enhance timely and effective review, if needed. We also appreciate the specificity with respect to the process for reinstatement of a Reciprocal Jurisdiction. The Task Force may wish to include a provision that the Qualified Jurisdiction Working Group affirmatively survey those U.S. companies doing business in the relevant jurisdiction about their
experience there or to have a clearer process through which issues experienced by U.S. companies can be handled.

Passporting Process for Reciprocal Jurisdictions

We also welcome the additional clarity with respect to the passporting process for Reciprocal Jurisdictions, including recognition between U.S. jurisdictions. In addition to the process set forth in the framework, we urge the Task Force and NAIC staff to work with those states that already have passed the 2019 Model Law and Regulation to communicate publicly when they are prepared to accept applications for reinsurers from Reciprocal Jurisdictions.

Conclusion

Thank you for your continued work and engagement with us in this important process. We would be happy to answer any questions or discuss any concerns.

Sincerely,

Karalee C. Morell
SVP and General Counsel
Reinsurance Association of America
II. Principles for the Evaluation of Non-U.S. Jurisdictions

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models. Under the Credit for Reinsurance Model Law (as adopted by a state) the state must recognize the Reciprocal Jurisdiction status of jurisdictions subject to an in-force Covered Agreement.

8. Both Qualified Jurisdictions and Reciprocal Jurisdictions have agreed to share specific information and cooperate with the state with respect to all applicable reinsurers domiciled within that jurisdiction, in accordance with the Credit for Reinsurance Models, as adopted by the state. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

III. Procedure for Evaluation of Non-U.S. Jurisdictions

14. Termination of Status as Qualified and/or Reciprocal Jurisdiction

a. If the Mutual Recognition of Jurisdictions (E) Working Group finds a Qualified Jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review. The Mutual Recognition of Jurisdictions (E) Working Group would then report any concerns to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities. The status as a Qualified Jurisdiction may be placed on probation, suspended or revoked by the NAIC. If a Qualified Jurisdiction is also a Reciprocal Jurisdiction subject to a Covered Agreement, the Mutual Recognition of Jurisdictions (E) Working Group and the NAIC will initiate communications and consult with FIO, USTR and any other relevant federal and/or international authorities before any action is taken with respect to that Qualified Jurisdiction’s status.

b. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions. If cause is found to question the
fitness of a Reciprocal Jurisdiction that is subject to an in-force Covered Agreement, or its compliance with applicable requirements of the covered agreement, the Mutual Recognition of Jurisdictions (E) Working Group would report any concerns to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities. It is intended that compliance with the covered agreement will be addressed through the Joint Committee process established under the covered agreement, or through termination of the covered agreement by the parties to the covered agreement. The NAIC, individual state regulators and interested parties may raise these issues directly with FIO, USTR or other relevant federal authorities.
Note: The draft revisions to the *Process for Evaluating Qualified and Reciprocal Jurisdictions* were originally exposed at the Reinsurance (E) Task Force’s March 23 meeting, and four comment letters were received. The Mutual Recognition of Jurisdictions (E) Working Group then discussed this document and the comment letters on its May 27 regulator-only call and revised the document accordingly. All revisions that were made after the initial public exposure on March 23 are included in this document and are tracked with yellow highlights.

I. Preamble

Purpose

The revised Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the Credit for Reinsurance Models) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes. In 2012, the NAIC Reinsurance (E) Task Force was charged to develop an NAIC process to evaluate the reinsurance supervisory systems of non-U.S. jurisdictions, for the purposes of developing and maintaining a list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. This charge was extended in 2019 to encompass the recognition of Reciprocal Jurisdictions in accordance with the 2019 amendments to the Credit for Reinsurance Models, including the maintenance of a list of recommended Reciprocal Jurisdictions. The purpose of the Process for Evaluating Qualified and Reciprocal Jurisdictions is to provide a documented evaluation process for creating and maintaining these NAIC lists.

Background

On November 6, 2011, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions serve to reduce reinsurance collateral requirements for certified reinsurers that are licensed and domiciled in Qualified Jurisdictions. Under the previous version of the Credit for Reinsurance Models, in order for U.S. ceding insurers to receive reinsurance credit, the reinsurance was required to be ceded to U.S.-licensed reinsurers or secured by collateral representing 100% of U.S. liabilities for which the credit is recorded. When considering revisions to the Credit for Reinsurance Models, the Reinsurance (E) Task Force contemplated establishing an accreditation-like process, modeled on the current NAIC Financial Regulation Standards and Accreditation Program, to review the reinsurance supervisory systems of non-U.S. jurisdictions. Under the revised Credit for Reinsurance Models, the approval of Qualified Jurisdictions is left to the authority of the states; however, the models provide that a list of Qualified Jurisdictions will be created through the NAIC committee process, and that individual states must consider this list when approving jurisdictions.

The enactment in 2010 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in 2010. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into “covered agreements” on behalf of the United States. These are bilateral or multilateral agreements with foreign governments, authorities or regulators relating to insurance prudential measures, which can preempt contrary state insurance laws or regulatory measures. The Dodd-Frank Act also created the Federal Insurance Office (FIO), which has the following authority: (1) coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters; (2) assist the Secretary of the U.S. Department of the Treasury in negotiating covered agreements (as defined in the Dodd-Frank Act); (3) determine whether the states’ insurance measures are preempted by covered agreements; and (4) consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into covered agreements on behalf of the United States. It is the NAIC’s intention to communicate and coordinate with the FIO and related federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.

On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and
Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

Reciprocal Jurisdictions

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions were intended to conform the Models to the relevant provisions of the Covered Agreements. The Covered Agreements would eliminate reinsurance collateral requirements for EU and UK reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II, among other conditions. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or UK or post reinsurance collateral. Under the revised Credit for Reinsurance Models, jurisdictions that are subject to in-force Covered Agreements are considered to be Reciprocal Jurisdictions, and reinsurers that have their head office or are domiciled in a Reciprocal Jurisdiction are not required to post reinsurance collateral if they meet all of the requirements of the Credit for Reinsurance Models.

Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to Covered Agreements treated as Reciprocal Jurisdictions for reinsurance collateral purposes, but any other Qualified Jurisdictions can also has a pathway to qualify for collateral elimination as a Reciprocal Jurisdictions States that meet the requirements of the NAIC Financial Standards and Accreditation Program are also considered to be Reciprocal Jurisdictions.

The NAIC has updated and revised this Process for Evaluating Qualified and Reciprocal Jurisdictions to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.

---

1 The hypothetical possibility that a future covered agreement might not relate to reinsurance is addressed in Section 2P(1)(a)(i) of Model #785, which limits automatic Reciprocal Jurisdiction status to a covered agreement that “addresses the elimination, under specified conditions, of collateral requirements as a condition for entering into any reinsurance agreement with a ceding insurer domiciled in this state or for allowing the ceding insurer to recognize credit for reinsurance.”
II. Principles for the Evaluation of Non-U.S. Jurisdictions

1. The NAIC model revisions applicable to certified reinsurers are intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. To be eligible for certification, a reinsurer must be domiciled and licensed in a Qualified Jurisdiction as determined by the domestic regulator of the ceding insurer. A Qualified Jurisdiction not subject to an in-force Covered Agreement under the Dodd-Frank Act may also be determined to be a Reciprocal Jurisdiction, and reinsurers that have their head office or are domiciled in any such Reciprocal Jurisdiction will not be required to post reinsurance collateral, provided they meet the minimum capital and financial strength requirements and comply with the other requirements of the Credit for Reinsurance Models.

2. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions and Reciprocal Jurisdictions will be conducted in accordance with the provisions of the Credit for Reinsurance Models and any other relevant guidance developed by the NAIC.

3. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program (Accreditation Program), adherence to international supervisory standards, and relevant international guidance for recognition of reinsurance supervision. It is not intended as a prescriptive comparison to the NAIC Accreditation Program. In order for a Qualified Jurisdiction that is not subject to an in-force Covered Agreement to be evaluated as a Reciprocal Jurisdiction, that Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, and other such requirements as provided under the Credit for Reinsurance Models.

4. The states shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the Qualified Jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of Qualified Jurisdiction status is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

5. Each state may evaluate a non-U.S. jurisdiction to determine if it is a Qualified Jurisdiction. A list of Qualified Jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of Qualified Jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Qualified Jurisdictions contained in the Credit for Reinsurance Models. The creation of this list does not constitute a delegation of regulatory authority to the NAIC. The regulatory authority to recognize a Qualified Jurisdiction resides solely in each state and the NAIC List of Qualified Jurisdictions is not binding on the states.

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models.

7. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting,” as discussed more fully below in paragraph 15 of Section...
III-under which the commissioner has the discretion to defer to another state’s determination that a jurisdiction is a Qualified or Reciprocal Jurisdiction. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings. The NAIC Lists of Qualified and Reciprocal Jurisdictions are intended to facilitate the passporting process.

8. Both Qualified Jurisdictions and Reciprocal Jurisdictions must agree to share information and cooperate with the state with respect to all applicable reinsurers domiciled within that jurisdiction. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

9. The determination of Qualified Jurisdiction status can only be made with respect to the reinsurance supervisory system in existence and applied by a non-U.S. jurisdiction at the time of the evaluation.

10. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
III. Procedure for Evaluation of Non-U.S. Jurisdictions

   a. Priority will be given to requests from the states and from those jurisdictions specifically requesting an evaluation by the NAIC.
   b. Formal notification of the NAIC’s intent to initiate the evaluation process will be sent by the NAIC to the reinsurance supervisory authority in the jurisdiction selected, with copies to the FIO and other relevant federal authorities as appropriate. The NAIC will issue public notice on the NAIC website upon confirmation that the jurisdiction is willing to participate in the evaluation process. The NAIC will at this time request public comments with respect to consideration of the jurisdiction as a Qualified Jurisdiction. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document, subject to a preliminary confidentiality and information sharing agreement between the NAIC, relevant states and the applicant jurisdiction.
   c. Relevant U.S. state and federal authorities will be notified of the NAIC’s decision to evaluate a jurisdiction.

2. Evaluation of Jurisdiction
   a. Evaluation Materials. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will initiate evaluation of a jurisdiction’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will begin by undertaking a review of the most recent Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), including the Technical Note on Insurance Sector Supervision, and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will also invite each jurisdiction or its designee to provide information relative to Section A through Section G of the Evaluation Methodology in order to update, complete or supplement publicly available information. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group may also request or accept relevant information from reinsurers domiciled in the jurisdiction under review.
   b. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will notify the jurisdiction of any information upon which the Working Group is relying. In that communication, the NAIC will invite the supervisory authority to compare the materials identified by the NAIC to the materials described in Appendix A and Appendix B, and provide information required to update the identified public information or supplement the public information, as required, to address the topics identified in Section A through Section G of the Evaluation Methodology. The use of publicly available information (e.g., the FSAP Report and/or the Insurance Sector Technical Note) is intended to lessen the burden on applicant jurisdictions by requiring the production of information that is readily available, while still addressing substantive areas of inquiry detailed in the Evaluation Methodology. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group’s review at this stage will be focused on how the jurisdiction’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial solvency of its domestic reinsurers in comparison to key
principles underlying the U.S. financial solvency framework\(^2\) and other factors set forth in the Evaluation Methodology.

c. After reviewing the Evaluation Materials, the **Qualified Jurisdiction Working Group**\(^2\) may request that the applicant jurisdiction submit supplemental information as necessary to determine whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. The Working Group will address specific questions directly with the jurisdiction related to items detailed in the Evaluation Methodology that are not otherwise addressed in the Evaluation Materials.

d. The NAIC will request that all responses from the jurisdiction being evaluated be provided in English. Any responses submitted with respect to a jurisdiction’s laws and regulations should be provided by a person qualified in that jurisdiction to provide such analyses and, in the case of statutory analysis, qualified to provide such legal interpretations, to ensure that the jurisdiction is providing an accurate description.

e. The NAIC does not intend to review confidential company-specific information in this process, and has focused the procedure on reviewing publicly available information. No confidential company-specific information shall be disclosed or disseminated during the course of the jurisdiction’s evaluation unless specifically requested, subject to appropriate confidentiality safeguards addressed in a preliminary confidentiality and information-sharing agreement. If no such agreement is executed or the jurisdiction is unable to enter into such an agreement under its regulatory authority, the NAIC will not accept any confidential company-specific information.

3. **NAIC Review of Evaluation Materials**

a. NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise will review the jurisdiction’s Evaluation Materials.

b. Expenses with respect to the evaluations will be absorbed within the NAIC budget. This will be periodically reviewed.

c. Timeline for review. A project management approach will be developed with respect to the overall timeline applicable to each evaluation.

d. Upon completing its review of the Evaluation Materials, the internal reviewer(s) will report initial findings to the **Qualified Jurisdiction Working Group**\(^2\), including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to FIO and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

4. **Discretionary On-site Review**

a. The NAIC may ask the jurisdiction under consideration for the opportunity to perform an on-site review of the jurisdiction’s reinsurance supervisory system. Factors that the **Qualified Jurisdiction Working Group**\(^2\) will consider in determining whether an on-site review is appropriate include the completeness of the information provided by the jurisdiction under

\(^2\) The U.S. financial solvency framework is understood to refer to the key elements provided in the NAIC Financial Regulation Standards and Accreditation Program. Appendix A and Appendix B are derived from this framework.
review, the general familiarity of the jurisdiction by the NAIC staff or other state regulators participating in the review based on prior conduct or dealings with the jurisdiction, and the results of other evaluations performed by other regulatory or supervisory organizations. If the review is performed, it will be coordinated through the NAIC, utilizing personnel with the appropriate knowledge, experience and expertise. Individual states may also request that representatives from their state be added to the review team.

b. The review team will communicate with the supervisory authority in advance of the on-site visit to clearly identify the objectives, expectations and procedures with respect to the review, as well as any significant issues or concerns identified within the review of the Evaluation Materials. Information to be considered during the on-site review includes, but is not limited to, the following:
   i. Interviews with supervisory authority personnel.
   ii. Review of organizational and personnel practices.
   iii. Any additional information beneficial to gaining an understanding of document and communication flows.

c. Upon completing the on-site review, the reviewer(s) will report initial findings to the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation.

5. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

6. Additional Information to be Considered as Part of Evaluation

The NAIC may also consider information from sources other than the jurisdiction under review. This information includes:
   a. Documents, reports and information from appropriate international, U.S. federal and U.S. state authorities.
   b. Public comments from interested parties.
   c. Rating agency information.
   d. Any other relevant information.

8.7 Preliminary Evaluation Report

   a. NAIC staff and/or outside consultants will prepare a Preliminary Evaluation Report for review by the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group. This
preliminary report will be private and confidential (i.e., may only be reviewed by Working Group members, designated NAIC staff, consultants, the states, the FIO and other relevant federal authorities that specifically request to be kept apprised of this information, provided that such entities have entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction. Any outside consultants retained by the NAIC will be required to enter into a confidentiality and nondisclosure agreement.).

b. The report will be prepared in a consistent style and format to be developed by NAIC staff. It will contain detailed advisory information and recommendations with respect to the evaluation of the jurisdiction’s reinsurance supervisory system and the documented practices and procedures thereunder. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a Qualified Jurisdiction.

c. All workpapers and reports, including supporting documentation and data, produced as part of the evaluation process are the property of the NAIC and shall be maintained at the NAIC Central Office. In the event that the NAIC shall come into possession of any confidential information, the information shall be held subject to a confidentiality and information-sharing agreement, which will outline the appropriate actions necessary to protect the confidentiality of such information.

a. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group’s review of the Preliminary Evaluation Report will be held in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings.

b. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will make a preliminary determination as to whether the jurisdiction under consideration satisfies the Standard of Review and is deemed acceptable to be included on the NAIC List of Qualified Jurisdictions. If the preliminary determination is that the jurisdiction should not be included on the NAIC List of Qualified Jurisdictions, the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will set forth its specific findings and identify those areas of concern with respect to this determination.

c. The results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review.

10.9. Opportunity to Respond to Preliminary Evaluation Report
a. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. This is not intended to be a formal appeals process that would initiate U.S. state administrative due process requirements.

b. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings. This report will be approved upon an affirmative vote of a majority of the members in attendance at this meeting.

c. Upon approval of the Final Evaluation Report, the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings
with respect to its determination. At this time, the Working Group will release the summary for public comment. The detailed report will be a confidential, regulator-only document. The report may be shared with any state indicating that it is considering relying on the NAIC List of Qualified Jurisdictions and has entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction.

11.10. NAIC Determination Regarding List of Qualified Jurisdictions

a. Once the Qualified Jurisdiction Working Group has adopted its Final Evaluation Report, it will submit the summary of its findings and its recommendation to the Reinsurance (E) Task Force at an open meeting. Upon approval by the Reinsurance (E) Task Force, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the FIO, USTR and other relevant federal authorities for consultation purposes. Upon approval as a Qualified Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Qualified Jurisdictions. The NAIC will maintain the List of Qualified Jurisdictions on its public website and in other appropriate NAIC publications.

b. In the event that a jurisdiction is not approved as a Qualified Jurisdiction, the supervisory authority will be eligible for reapplication at the discretion of the NAIC.

c. Upon final adoption of the Qualified Jurisdiction Working Group’s determination with respect to a jurisdiction, the Final Evaluation Report will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential.

12.11. Memorandum of Understanding (MOU)

a. A Qualified Jurisdiction must agree to share information and cooperate on a confidential basis with the U.S. state insurance regulatory authority with respect to all certified reinsurers domiciled within that jurisdiction.

b. The International Association of Insurance Supervisors (IAIS) Multilateral Memorandum of Understanding (MMoU) is the recommended method under which a Qualified Jurisdiction will agree to share information and cooperate with U.S. state insurance regulatory authorities. However, until such time as a state has been approved as a signatory to the MMoU by the IAIS, the state may rely on an MOU entered into by a “Lead State” designated by the NAIC. This Lead State will act as a conduit for information between the Qualified Jurisdiction and other states that have certified a reinsurer domiciled and licensed in that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the NAIC Master Information Sharing and Confidentiality Agreement, and, as applicable, in the applicable IAIS MMoU, or in a bilateral MOU between the Lead State and the Qualified Jurisdiction, and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this Lead State to act as the contact for purposes of obtaining information concerning its certified reinsurers, provided the Lead State share that information with the other states requesting the information only in a manner consistent with the terms governing the further sharing of information included as in the applicable, in the IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction.
c. If a Qualified Jurisdiction has not been approved by the IAIS for use as a party to the MMoU, it must enter into an MOU with a Lead State. The MOU must provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

d. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.

a. The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group to be appropriate. It shall include a review of the jurisdiction’s status as a Reciprocal Jurisdiction if the jurisdiction has been recognized by the NAIC as a Reciprocal Jurisdiction through the process established in paragraph 13.

b. Qualified Jurisdictions must provide the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group with notice of any material change in the applicable reinsurance supervisory system that may affect the status of the Qualified Jurisdiction. A U.S. jurisdiction should also notify the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group if it receives notice of any material change in the applicable reinsurance supervisory system, or any adverse developments with respect to enforcement of final U.S. judgments, that may affect the status of the Qualified Jurisdiction. U.S. ceding insurers may also initiate notice to the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group if they receive notice of any material change in the applicable reinsurance supervisory system or any adverse developments with respect to enforcement of final U.S. judgments. Upon receipt of any such notice, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction. Any review will be conducted in accordance with the procedure set forth in paragraph 14.

c. If the Qualified Jurisdiction Working Group finds the jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked.

d. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will monitor those jurisdictions that have been approved as Qualified or Reciprocal Jurisdictions by individual states, but are not included on the applicable NAIC List of Qualified Jurisdictions.

14.13. Review of Qualified Jurisdictions as Potential Reciprocal Jurisdictions

a. In undertaking the evaluation of whether to designate a Qualified Jurisdiction as a Reciprocal Jurisdiction, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group shall utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section

b. A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions, unless it has undergone the Evaluation Methodology outlined in Section IV, and remains in good standing with the NAIC as a Qualified Jurisdiction. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group may, if it determines an extended review period to be appropriate after its initial approval of a new Qualified Jurisdiction, defer consideration of that jurisdiction as a possible Reciprocal Jurisdiction until there has been sufficient United States experience with that jurisdiction and its Certified Reinsurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination. Nothing in this process requires a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group may base its determination on all relevant information, which may include factors not specifically included in this Process for Evaluating Qualified and Reciprocal Jurisdictions.

c. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the NAIC List of Reciprocal Jurisdictions. In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group shall undertake the following analysis in making its evaluation:

i. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as the same insurer would receive credit for reinsurance assumed by an assuming insurers domiciled in that jurisdiction is received by United States ceding insurers;

ii. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

iii. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in
The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

v. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in in Section 9C(2) and (3) of Model #786; i.e., must maintain, on an ongoing basis, minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

d. In order to satisfy the requirements of subsection (c) above, the chief insurance supervisor of the Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction may provide the NAIC with a written letter confirming, as follows:

[Jurisdiction] is a Qualified Jurisdiction under the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), and is currently in good standing on the NAIC List of Qualified Jurisdictions. As the lead insurance regulatory supervisor for [Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- An insurer which has its head office or is domiciled in [Jurisdiction] shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit would be granted for reinsurance assumed by insurers domiciled in [Jurisdiction]. [Jurisdiction] does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by [Jurisdiction] or as a condition to allow the ceding insurer to recognize credit for such reinsurance.

- [Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurance groups that are domiciled or maintain their worldwide headquarters in jurisdictions accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision including
worldwide group governance, solvency and capital, and reporting, as applicable, and will
not be subject to group supervision at the level of the worldwide parent undertaking of the
insurance or reinsurance group by the [Jurisdiction].

- [Jurisdiction] confirms that information regarding insurers and their parent, subsidiary, or
affiliated entities, if applicable, shall be provided to the states in accordance with a
memorandum of understanding or similar document between a state and the [Jurisdiction].

- [Jurisdiction] will annually provide to the states confirmation that applicable assuming
insurers domiciled in [Jurisdiction] maintain minimum capital and surplus of no less than
$250,000,000, and maintain on an ongoing basis the required minimum solvency or capital
ratio, as applicable.

- Finally, I confirm that [Jurisdiction] will immediately notify the NAIC upon any changes
to the assurances provided in this letter.

e. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group
will perform a due diligence review of available public and confidential documents to confirm that to the best
of its determination, the representations in the letter are true and accurate, and will prepare for the review
by the Reinsurance Task Force a Summary of Findings and Determination recommending that the Qualified
Jurisdiction be recognized as a Reciprocal Jurisdiction. Upon approval by the Task Force, the Summary of
Findings and Determination must be adopted by the NAIC Executive (EX) Committee and Plenary for inclusion on the List of Reciprocal Jurisdictions.

f. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group,
working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E)
Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers
licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies
without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an
effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three
hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency
capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union,
giving due consideration to any applicable equivalency assessment conducted by the European Insurance
and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

14. Termination of Status as Qualified and/or Reciprocal Jurisdiction

a. If the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group finds
the Qualified Jurisdiction to be out of compliance at any time with the requirements to be a Qualified
Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review. The
Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group would then
report any concerns to its parent the Reinsurance (E) Task Force for further discussion and communication
with appropriate federal and/or international authorities, and the status as a Qualified Jurisdiction may be
placed on probation, suspended or revoked by the NAIC.
b. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions under paragraph 12. If cause is found to question the fitness of a Reciprocal Jurisdiction that is subject to an in-force Covered Agreement, or its compliance with applicable requirements of the covered agreement, the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group would report any concerns to its parent the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities. It is intended that compliance with the covered agreement will ultimately be determined by the Joint Committee established under the covered agreement, or through termination of the covered agreement by the parties to the covered agreement.

c. Both Qualified Jurisdictions and Reciprocal Jurisdictions that are not subject to a covered agreement are obligated to provide notice to the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group of any applicable changes to their reinsurance supervisory system or changes to the assurances provided in the letter set forth in paragraph 13. States and U.S. ceding insurers may also provide notice of such changes to the Working Group. Upon notice of any such material changes, the Working Group will meet in regulator-only session to determine if these changes are in fact material to continuing recognition by the NAIC as either a Qualified or Reciprocal Jurisdiction. The Working Group will work directly with the jurisdiction to address any issues that have been identified. If these issues cannot be resolved through this regulator-only dialogue, then the Working Group will report its recommendation to the Reinsurance Task Force, which will consider a suspension of the jurisdiction’s status as a Qualified or Reciprocal Jurisdiction in open session. The Task Force will then make a recommendation to the NAIC Plenary on the action, if any, to be taken, which may include placing the Qualified or Reciprocal Jurisdiction’s status on probation, or suspending or revoking its status.

d. If a Qualified or Reciprocal Jurisdiction’s status is placed on probation by the NAIC, the material change will be noted in an update to its Summary of Finding and Determination in order to provide notice to the states and U.S. ceding insurers of this material change. If the NAIC decides to suspend or revoke its status, the jurisdiction may be given a reasonable time period, no more than 18 months, to rectify its noncompliance with the standards and return it to good standing. Once the NAIC’s suspension or revocation takes effect, it is expected that the same action will be taken by the respective states that have recognized the jurisdiction as a Qualified or Reciprocal Jurisdiction.

e. There is no administrative right to appeal the decision of the NAIC with respect to the revocation of status as a Qualified or Reciprocal Jurisdiction, but the jurisdiction can apply for reinstatement after a one-year period.

b.f. During the period in which a Qualified or Reciprocal Jurisdiction’s status has been suspended by a state, any new reinsurance assumed by a reinsurer domiciled in that jurisdiction from a ceding insurer domiciled in that state will not be eligible for credit unless the transaction qualifies for credit on the basis of security posted by the ceding insurer or some other basis that does not depend on recognition of the jurisdiction as a Qualified or Reciprocal Jurisdiction. However, suspension does not affect credit for reinsurance that was already in force.
g. If a Qualified or Reciprocal Jurisdiction’s status is revoked by a state, then those Certified Reinsurers and/or Reciprocal Jurisdiction Reinsurers domiciled in that jurisdiction no longer qualify for that status, which generally must obligates them to post within three months of this determination one hundred percent (100%) collateral on all their liabilities assumed from ceding insurers domiciled in that state. The state has the option to suspend a reinsurer’s certification indefinitely, in lieu of revocation, in which case the obligation to post collateral applies prospectively to all new, renewed and amended reinsurance agreements. If the reinsurer’s eligibility is revoked, it must be granted at least three months after the effective date of the revocation to cure any deficiency in collateral, unless exceptional circumstances make a shorter period is necessary for policyholder and other consumer protection.

h. The factors used in the evaluation of Reciprocal Jurisdictions are not the same as are utilized in the evaluation of Qualified Jurisdictions. A Qualified Jurisdiction that has been approved by the NAIC as a Reciprocal Jurisdiction may have its status as a Reciprocal Jurisdiction either suspended or revoked but still meet the requirements to be a Qualified Jurisdiction. However, if a Reciprocal Jurisdiction that is not subject to a covered agreement has its status as a Qualified Jurisdiction revoked, it cannot maintain its status as a Reciprocal Jurisdiction, because it must be a Qualified Jurisdiction to meet the requirements of a Reciprocal Jurisdiction.

15. Passorting Process for Certified and Reciprocal Jurisdiction Reinsurers

a. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to the requirements for both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

b. The passporting process is facilitated through the Reinsurance Financial Analysis (E) Working Group (ReFAWG). It is intended that ReFAWG will help facilitate multi-state recognition of Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and address issues of uniformity among the states, both with respect to initial application and subsequent changes in rating or status. The ReFAWG Review Process is set forth in the ReFAWG Procedures Manual.

c. Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) provides that the “assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the requirements set forth in Paragraphs (2) [i.e., minimum capital and surplus of no less than $250 million] and (3) [i.e., minimum solvency or capital ratio] of this subsection.” Section 9E(1) of Model #786 then provides that “The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of the requirements of Subsection C.” A Reciprocal Jurisdiction may satisfy the requirements of Section 9C(7) of Model #786 either by providing the information required by Section 9C(7) itself, or by providing an assuming insurer domiciled in that Reciprocal Jurisdiction with a document confirming the required information, which the assuming insurer would file annually, annually filing. With either filing method, in lieu of filing the required information directly with the domiciliary states of each of the reinsurer’s U.S. ceding companies, the information
may be filed with each state in which such assuming insurer has reinsured a ceding insurer domiciled in that state it is doing business, or with either its Lead State or the NAIC, which will share this documentation with the other states through the ReFAWG Review Process in satisfaction of their respective filing requirements. Each state may accept financial documentation filed with the Lead State or with the NAIC.
IV. Evaluation Methodology

The Evaluation Methodology was developed to be consistent with the provisions of the NAIC Credit for Reinsurance Models. It is intended to provide an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. Although the methodology includes a comparison of the jurisdiction’s supervisory system to a number of key elements from the NAIC Accreditation Program, it is not intended as a prescriptive assessment under the NAIC Accreditation Program. Rather, the NAIC Accreditation Program simply provide the framework for the outcomes-based analysis. The NAIC will evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the jurisdiction and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of a Qualified Jurisdiction is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

The Evaluation Methodology consists of the following:

- Section A: Laws and Regulations
- Section B: Regulatory Practices and Procedures
- Section C: Jurisdiction’s Requirements Applicable to U.S.-Domiciled Reinsurers
- Section D: Regulatory Cooperation and Information Sharing
- Section E: History of Performance of Domestic Reinsurers
- Section F: Enforcement of Final U.S. Judgments
- Section G: Solvent Schemes of Arrangement

This information will be the basis for the Final Evaluation Report and the determination of whether the jurisdiction will be included on the NAIC List of Qualified Jurisdictions.
Section A: Laws and Regulations

The NAIC will review publicly available information, as well as information provided by an applicant jurisdiction with respect to its laws and regulations, in an effort to evaluate whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. This will include a review of elements believed to be basic building blocks for sound insurance/reinsurance regulation. A jurisdiction’s effectiveness under Section A may be demonstrated through law, regulation or established practice that implements the general authority granted to the jurisdiction, or any combination of laws, regulations or practices that meet the objective.

The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will initiate evaluation of a jurisdiction’s regulatory system by gathering and undertaking a review of the most recent FSAP Report, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will simultaneously invite each jurisdiction (or its designee) to provide information relative to Section A (and other sections, as relevant) to assist the NAIC in evaluating its laws and regulations. The NAIC will review this information in conjunction with Appendix A, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix A is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction is requested to address the following information, which the NAIC will consider, at a minimum, in determining whether the outcomes achieved by the jurisdiction’s laws and regulations meet an acceptable level of effectiveness for the jurisdiction to be included on the NAIC List of Qualified Jurisdictions:

1. Confirmation of the jurisdiction’s most recent FSAP Report, including relevant updates with respect to descriptions or elements of the FSAP Report in which changes have occurred since the assessment or where information might otherwise be outdated.

2. Confirmation of the jurisdiction’s ROSC, including relevant updates with respect to descriptions or elements of the ROSC in which changes have occurred since the report was completed or where information might otherwise be outdated.

3. If materials responsive to the topics under review have been provided in response to information exchanges between the jurisdiction under review and the NAIC, such prior responses may be cross-referenced provided updates are submitted, if required to address changes in laws or procedures.

4. Any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix A.

The NAIC will review the information provided by the applicant jurisdiction and determine whether it is adequate to reasonably conclude whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in

---

3 The basic considerations under this section are derived from Model #786, Section 8C(2), which include: (a) the framework under which the assuming reinsurer is regulated; (b) the structure and authority of the jurisdiction’s reinsurance supervisory authority with regard to solvency regulation requirements and financial surveillance; (c) the substance of financial and operating standards for reinsurers domiciled in the jurisdiction; and (d) the form and substance of financial reports required to be filed or made publicly available by reinsurers domiciled in the jurisdiction and the accounting principles used.

© 2021 National Association of Insurance Commissioners
an effective manner. After reviewing the initial submission, the NAIC may request that the applicant jurisdiction submit supplemental information as necessary in order to make this determination. An applicant jurisdiction is strongly encouraged to provide thorough, detailed and current information in its initial submission in order to minimize the number and extent of supplemental information requests from the NAIC with respect to Section A of this Evaluation Methodology. The NAIC will provide a complete description in the Final Evaluation Report of the information provided in the Evaluation Materials, and any updates or other information that have been provided by the applicant jurisdiction.

Section B: Regulatory Practices and Procedures

Section B is intended to facilitate an evaluation of whether the jurisdiction effectively employs baseline regulatory practices and procedures to supplement and support enforcement of the jurisdiction’s financial solvency laws and regulations described in Section A. This evaluation methodology recognizes that variation may exist in practices and procedures across jurisdictions due to the unique situations each jurisdiction faces. Jurisdictions differ with respect to staff and technology resources that are available, as well as the characteristics of the domestic industry regulated. A determination of effectiveness may be achieved using various financial solvency oversight practices and procedures. This evaluation is not intended to be prescriptive in nature.

The NAIC will utilize the information provided by the jurisdiction as outlined under Section A in completing this section of the evaluation. The NAIC will review this information in conjunction with Appendix B, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix B is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction should also provide any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix B.

Section C: Jurisdiction’s Requirements Applicable to U.S. Domiciled Reinsurers

The jurisdiction is requested to describe and explain the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. supervisory authority to reinsurers licensed and domiciled in the U.S.

Section D: Regulatory Cooperation and Information-Sharing

The Credit for Reinsurance Models require the supervisory authority to share information and cooperate with the U.S. state insurance regulators with respect to all certified reinsurers domiciled within their jurisdiction. The jurisdiction is requested to provide an explanation of the supervisory authority’s ability to cooperate, share information and enter into an MOU with U.S. state insurance regulators and confirm that they are willing to enter into an MOU. This should include information with respect to any existing MOU with U.S. state and/or federal authorities that pertain to reinsurance. Both the jurisdiction and the states may rely on the IAIS MMoU to satisfy this requirement, and any states that have not yet been approved by the IAIS as a signatory to the MMoU may rely on an MOU entered into by a Lead State with the jurisdiction until such time that the state has been approved as a signatory to the IAIS MMoU. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.
Section E: History of Performance of Domestic Reinsurers

The jurisdiction is requested to provide a general description with respect to the historical performance of reinsurers domiciled in the jurisdiction. The NAIC does not intend to review confidential company-specific information under this section. Rather, it is intended that any information provided would be publicly available, unless specifically addressed with the jurisdiction under review. This discussion should address, at a minimum, the following information:

a. Number of reinsurers domiciled in the jurisdiction, and a list of any reinsurers domiciled in the jurisdiction that have and maintain, on an ongoing basis, minimum capital and surplus, or its equivalent, of no less than $250,000,000.

b. Up to a 10-year history of any regulatory actions taken against specific reinsurers.

c. Up to a 10-year history listing any reinsurers that have gone through insolvency proceedings, including the size of each insolvency and a description of the related outcomes (e.g., reinsurer rehabilitated or liquidated, payout percentage of claims to priority classes, payout percentage of claims to domestic and foreign claimants).

d. Up to a 10-year history of any significant industry-wide fluctuations in capital or profitability with respect to domestic reinsurers.

Drafting Note: The NAIC will determine the appropriate time period for review on a case-by-case basis with respect to this information.

Section F: Enforcement of Final U.S. Judgments

The NAIC has previously collected information from a number of jurisdictions with respect to enforcement of final U.S. judgments. The jurisdiction is also requested to provide a current description or explanation of any restrictions with respect to the enforcement of final foreign judgments in the jurisdiction. Based on the foregoing information, the NAIC will make an assessment of the effectiveness of the ability to enforce final U.S. judgments in the jurisdiction. This will include a review of the status, interpretations, application and enforcement of various treaties, conventions and international agreements with respect to final judgments, arbitration and choice of law. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will monitor the enforcement of final U.S. judgments and the Qualified Jurisdiction is requested to notify the NAIC of any developments in this area.

Section G: Solvent Schemes of Arrangement

The jurisdiction is requested to provide a description of any legal framework that allows reinsurers domiciled in the jurisdiction to propose or participate in any solvent scheme of arrangement or similar procedure. In addition, the jurisdiction is requested to provide a description of any solvent scheme of arrangement or similar procedure that a domestic reinsurer has proposed or participated in and the outcome of such procedure.
V. Appendices: Specific Guidance with Respect to Section A and Section B

It is important to note that Part IV, Section A: Laws and Regulations, and Part IV, Section B: Regulatory Practices and Procedures, are derived from the NAIC Financial Regulation Standards and Accreditation Program, which is intended to establish and maintain standards to promote sound insurance company financial solvency regulation among the U.S. states. As such, the NAIC Accreditation Program requires the states to employ laws, regulations and administrative policies and procedures substantially similar to the NAIC accreditation standards in order to be considered an accredited state.

However, it is not the intent of the Evaluation Methodology to require applicant jurisdictions to meet the standards required by the NAIC for accreditation. Instead, Section A and Section B (and their corresponding appendices) are intended to provide a framework to facilitate an outcomes-based evaluation by the NAIC and state insurance regulators of the effectiveness of the jurisdiction’s supervisory authority. This framework consists of a description of the jurisdiction’s laws, regulations, practices and procedures applicable to the supervision of its domestic reinsurers. The amount of detail provided within these appendices should not be interpreted as specific requirements that must be met by the applicant jurisdiction. Rather, the information is intended to provide direction to the applicant jurisdiction in an effort to facilitate a complete response and increase the efficiency and timeliness of the evaluation process.
Appendix A: Laws and Regulations

1. **Examination Authority**

   Does the jurisdiction have the authority to examine its domestic reinsurers? This description should address the following:
   
   a. Frequency and timing of examinations and reports.
   
   b. Guidelines for examination.
   
   c. Whether the jurisdiction has the authority to examine reinsurers whenever it is deemed necessary.
   
   d. Whether the jurisdiction has the authority to have complete access to the reinsurer’s books and records and, if necessary, the records of any affiliated company.
   
   e. Whether the jurisdiction has the authority to examine officers, employees and agents of the reinsurer when necessary with respect to transactions directly or indirectly related to the reinsurer under examination.
   
   f. Whether the jurisdiction has the authority to share confidential information with U.S. state insurance regulatory authorities, provided that the recipients are required, under their law, to maintain its confidentiality.

2. **Capital and Surplus Requirement**

   Does the jurisdiction have the authority to require domestic reinsurers to maintain a minimum level of capital and surplus to transact business? This description should address the following:
   
   a. Whether the jurisdiction has the authority to require reinsurers to maintain minimum capital and surplus, including a description of such minimum amounts.
   
   b. Whether the jurisdiction has the authority to require additional capital and surplus based on the type, volume and nature of reinsurance business transacted.
   
   c. Capital requirements for reinsurers, including reports and a description of any specific levels of regulatory intervention.

3. **Accounting Practices and Procedures**

   Does the jurisdiction have the authority to require domestic reinsurers to file appropriate financial statements and other financial information? This description should address the following:
   
   a. Description of the accounting and reporting practices and procedures.
   
   b. Description of any standard financial statement blank/reporting template, including description of content/disclosure requirements and corresponding instructions.

4. **Corrective Action**

   Does the jurisdiction have the authority to order a reinsurer to take corrective action or cease and desist certain practices that, if not corrected or terminated, could place the reinsurer in a hazardous financial condition? This description should address the following:
   
   a. Identification of specific standards which may be considered to determine whether the continued operation of the reinsurer might be hazardous to the general public.
   
   b. Whether the jurisdiction has the authority to issue an order requiring the reinsurer to take corrective action when it has been determined to be in hazardous financial condition.
5. **Regulation and Valuation of Investments**

What authority does the jurisdiction have with respect to regulation and valuation of investments? This description should address the following:

a. Whether the jurisdiction has the authority to require a diversified investment portfolio for all domestic reinsurers as to type, issue and liquidity.

b. Whether the jurisdiction has the authority to establish acceptable practices and procedures under which investments owned by reinsurers must be valued, including standards under which reinsurers are required to value securities/investments.

6. **Holding Company Systems**

Does the jurisdiction have laws or regulations with respect to supervision of the group holding company systems of reinsurers? This description should address the following:

a. Whether the jurisdiction has access to information via the parent or other regulated group entities about activities or transactions within the group involving other regulated or non-regulated entities that could have a material impact on the operations of the reinsurer.

b. Whether the jurisdiction has access to consolidated financial information of a reinsurer’s ultimate controlling person.

c. Whether the jurisdiction has the authority to review integrity and competency of management.

d. Whether the jurisdiction has approval and intervention powers for material transactions and events involving reinsurers.

e. Whether the jurisdiction has authority to monitor, or has prior approval authority over:
   
   i. Change in control of domestic reinsurers.

   ii. Dividends and other distributions to shareholders of the reinsurer.

   iii. Material transactions with affiliates.

7. **Risk Management**

Does the jurisdiction have the authority to require its domestic reinsurers to maintain an effective risk-management function and practices? This description should address the following:

a. Whether the jurisdiction has Own Risk and Solvency Assessment (ORSA) requirements and reporting.

b. Any requirements regarding the maximum net amount of risk to be retained by a reinsurer for an individual risk based on the reinsurer’s capital and surplus.

c. Whether the jurisdiction has authority to monitor enterprise risk, including any activity, circumstance, event (or series of events) involving one or more affiliates of a reinsurer that, if not remedied promptly, is likely to have a material adverse effect on the financial condition or liquidity of the reinsurer or its insurance holding company system as a whole.

d. Whether the jurisdiction has corporate governance requirements for reinsurers.
8. **Liabilities and Reserves**

Does the jurisdiction have standards for the establishment of liabilities and reserves (technical provisions) resulting from reinsurance contracts? This description should address the following:

a. Liabilities incurred under reinsurance contracts for policy reserves, unearned premium, claims and losses unpaid, and incurred but not reported (IBNR) claims (including whether discounting is allowed for reserve calculation/reporting).

b. Liabilities related to catastrophic occurrences.

c. Whether the jurisdiction requires an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist for all domestic reinsurers, and the frequency of such reports.

9. **Reinsurance Ceded**

What are the jurisdiction’s requirements with respect to the financial statement credit allowed for reinsurance retroceded by its domestic reinsurers? This description should address the following:

a. Credit for reinsurance requirements applicable to reinsurance retroceded to domestic and non-domestic reinsurers.

b. Collateral requirements applicable to reinsurance contracts.

c. Whether the jurisdiction requires a reinsurance agreement to provide for insurance risk transfer (i.e., transfer of both underwriting and timing risk).

d. Requirements applicable to special purpose reinsurance vehicles and insurance securitizations.

e. Affiliated reinsurance transactions and concentration risk.

f. Disclosure requirements specific to reinsurance transactions, agreements and counterparties, if such information is not provided under another item.

10. **Independent Audits**

Does the jurisdiction require annual audits of domestic reinsurers by independent certified public accountants or similar accounting/auditing professional recognized in the applicant jurisdiction? This description should address the following:

a. Requirements for the filing of audited financial statements prepared in conformity with accounting practices prescribed or permitted by the supervisory authority.

b. Contents of annual audited financial reports.

c. Requirements for selection of auditor.

d. Allowance of audited consolidated or combined financial statements.

e. Notification of material misstatements of financial condition.

f. Supervisor’s access to auditor’s workpapers.

g. Audit committee requirements.

h. Requirements for reporting of internal control-related matters.

11. **Receivership**

Does the jurisdiction have a receivership scheme for the administration of reinsurers found to be insolvent? This should include a description of any liquidation priority afforded to policyholders and the liquidation priority of
reinsurance obligations to domestic and non-domestic ceding insurers in the context of an insolvency proceeding of a reinsurer.

12. Filings with Supervisory Authority

Does the jurisdiction require the filing of annual and interim financial statements with the supervisory authority? This description should address the following:
   a. The use of standardized financial reporting in the financial statements, and the frequency of relevant updates.
   b. The use of supplemental data to address concerns with specific companies or issues.
   c. Filing format (e.g., electronic data capture).
   d. The extent to which financial reports and information are public records.

13. Reinsurance Intermediaries

Does the jurisdiction have a regulatory framework for the regulation of reinsurance intermediaries?

14. Other Regulatory Requirements with respect to Reinsurers

Any other information necessary to adequately describe the effectiveness of the jurisdiction’s laws and regulations with respect to its reinsurance supervisory system.
Appendix B: Regulatory Practices and Procedures

1. Financial Analysis

What are the jurisdiction’s practices and procedures with respect to the financial analysis of its domestic reinsurers? Such description should address the following:

   a. **Qualified Staff and Resources**
      The resources employed to effectively review the financial condition of all domestic reinsurers, including a description of the educational and experience requirements for staff responsible for financial analysis.

   b. **Communication of Relevant Information to/from Financial Analysis Staff**
      The process under which relevant information and data received by the supervisory authority are provided to the financial analysis staff and the process under which the findings of the financial analysis staff are communicated to the appropriate person(s).

   c. **Supervisory Review**
      How the jurisdiction’s internal financial analysis process provides for supervisory review and comment.

   d. **Priority-Based Analysis**
      How the jurisdiction’s financial analysis procedures are prioritized in order to ensure that potential problem reinsurers are reviewed promptly.

   e. **Depth of Review**
      How the jurisdiction’s financial analysis procedures ensure that domestic reinsurers receive an appropriate level or depth of review commensurate with their financial strength and position.

   f. **Analysis Procedures**
      How the jurisdiction has documented its financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic reinsurer.

   g. **Reporting of Material Adverse Findings**
      The process for reporting material adverse indications, including the determination and implementation of appropriate regulatory action.

   h. **Early Warning System/Stress Testing**
      Whether the jurisdiction has an early warning system and/or stress testing methodology that is utilized with respect to its domestic reinsurers.

2. Financial Examinations

What are the jurisdiction’s practices and procedures with respect to the financial examinations of its domestic reinsurers? Such description should address the following:

   a. **Qualified Staff and Resources**
      The resources employed to effectively examine all domestic reinsurers. This should include whether the jurisdiction prioritizes examination scheduling and resource allocation commensurate with the financial strength and position of each reinsurer, and a description of the educational and experience requirements for staff responsible for financial examinations.
b. **Communication of Relevant Information to/from Examination Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the examination staff and the process under which the findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**
   Whether the supervisory authority’s examination staff includes specialists with appropriate training and/or experience or whether the supervisory authority otherwise has available qualified specialists that will permit the supervisory authority to effectively examine any reinsurer.

d. **Supervisory Review**
   Whether the supervisory authority’s procedures for examinations provide for supervisory review.

e. **Examination Guidelines and Procedures**
   Description of the policies and procedures the supervisory authority employs for the conduct of examinations, including whether variations in methods and scope are commensurate with the financial strength and position of the reinsurer.

f. **Risk-Focused Examinations**
   Does the supervisory authority perform and document risk-focused examinations and, if so, what guidance is utilized in conducting the examinations? Are variations in method and scope commensurate with the financial strength and position of the reinsurer?

g. **Scheduling of Examinations**
   Whether the supervisory authority’s procedures provide for the periodic examination of all domestic reinsurers, including how the system prioritizes reinsurers that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**
   Description of the format in which the supervisory authority’s reports of examinations are prepared, and how the reports are shared with other jurisdictions under information-sharing agreements.

i. **Action on Material Adverse Findings**
   What are the jurisdiction’s procedures regarding supervisory action in response to the reporting of any material adverse findings.

3. **Information Sharing**

   Does the jurisdiction have a process for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with U.S. state regulatory officials, provided that the recipients are required, under their law, to maintain its confidentiality?

4. **Procedures for Troubled Reinsurers**

   What procedures does the jurisdiction follow with respect to troubled reinsurers?

5. **Organization, Licensing and Change of Control of Reinsurers**

   What processes does the supervisory authority use to identify unlicensed or fraudulent activities? The description should address the following:
a. **Licensing Procedure**
   Whether the supervisory authority has documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

b. **Staff and Resources**
   The educational and experience requirements for staff responsible for evaluating company licensing.

c. **Change in Control of a Domestic Reinsurer**
   Procedures for the review of key pieces of information included in filings with respect to a change in control of a domestic reinsurer.
ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Reinsurance Financial Analysis (E) Working Group
ReFAWG Review Process for Passporting
Certified and Reciprocal Jurisdiction Reinsurers
(“ReFAWG Review Process”)

1. ReFAWG Review Process

The Reinsurance Financial Analysis (E) Working Group (ReFAWG) normally operates in Executive Session, in accordance with the NAIC Policy Statement on Open Meetings and in open session when addressing policy issues. The authority of the Working Group is limited to that of an advisory body. This authority is derived from the 2011 Preface to Credit for Reinsurance Models, which provided that the purpose of the Working Group is “to provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.”

a. In November 2011, the NAIC adopted revisions to its Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) which reduce the prior reinsurance collateral requirements for non-U.S. licensed reinsurers that are licensed and domiciled in Qualified Jurisdictions and establish a certification process for reinsurers under which a Certified Reinsurer is eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification. The authority to issue individual ratings of certified reinsurers is reserved to the NAIC member jurisdictions under their respective statutes and regulations. While this forum is intended to strengthen state regulation and prevent regulatory arbitrage, it is not within the authority of the Working Group to assign collateral requirements for individual reinsurers.

b. On June 25, 2019, the NAIC adopted further revisions to the models, which implement the reinsurance collateral provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK). These revisions create a new type of jurisdiction, which is called a Reciprocal Jurisdiction and eliminates reinsurance collateral requirements and local presence requirements for EU and UK reinsurers that maintain a minimum amount of own-funds equivalent to $250 million USD and a solvency capital requirement (SCR) of 100% under Solvency II. The revisions also provide Reciprocal Jurisdiction status for accredited U.S. jurisdictions and Qualified Jurisdictions if they meet certain requirements in the credit for reinsurance models. ReFAWG has also been given additional responsibilities with respect to these “Reciprocal Jurisdiction Reinsurers.” ReFAWG will coordinate its efforts with the Mutual Recognition of Jurisdictions (E) Working Group (formerly known as the Qualified Jurisdictions (E) Working Group).

c. Issues upon which the Working Group may provide advisory support and assistance include but are not limited to:

i. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.

ii. Provide a forum for discussion, among NAIC jurisdictions, of reinsurance issues related to specific companies, entities or individuals.
iii. Support, encourage, promote and coordinate multi-state efforts in addressing issues related to
certified reinsurers, including but not limited to multi-state recognition of certified reinsurers.
iv. Provide analytical expertise and support to the states with respect to certified reinsurers and
applicants for certification.
v. Interact with domiciliary regulators of ceding insurers and certifying states to assist and advise on
the most appropriate regulatory strategies, methods and actions with respect to certified reinsurers.
vi. Provide advisory support with respect to issues related to the determination of qualified
jurisdictions.
vii. Ensure the public passporting website remains current.
viii. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective
approaches for the financial solvency surveillance to assist the states in their work to protect the
interests of policyholders.

2. **Lead States and Passporting Process**

   a. A reinsurer seeking recognition as either a Certified Reinsurer or a Reciprocal Jurisdiction Reinsurer must
      submit certain information to the state in which it seeks such recognition. Under the ReFAWG Review
      Process, ReFAWG will assist the states with the initial review of this information and provide guidance to
      the states in making their review of the reinsurer to determine whether it has met the regulatory requirements
      to be recognized as a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer.

   b. In addition to this assistance to individual states, ReFAWG will also assist with a passporting process for
      the states. “Passporting” refers to the process under which a state has the discretion to defer to the
      certification of a reinsurer (and the rating assigned to that certified reinsurer) by another state. Under this
      process, a reinsurer will apply to an initial state for certification, referred to as the “Lead State,” which will
      begin its analysis of the reinsurer and notify ReFAWG of the application. The Lead State will complete its
      initial analysis and will submit filing information and other documentation to ReFAWG for a peer review.
      Upon completion of the confidential peer review process, ReFAWG will make its recommendation
      concerning both the certified status of the reinsurer and its rating. The Lead State then makes the final
determination regarding certification, upon which the Lead State notifies ReFAWG and the certified
      reinsurer is eligible to apply for passporting into other states.

   c. A similar Passporting Process is in place with respect to Reciprocal Jurisdiction Reinsurers. In order to
      facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the
      NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer
      to another state’s determination with respect to compliance with this section. Passporting is based upon
      individual state regulatory authority, and states are encouraged to act in a uniform manner in order to
      facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the
      amount of documentation filed with the states and reduce duplicate filings.

   d. If an NAIC accredited jurisdiction has determined that the conditions set forth for recognition as a
      Reciprocal Jurisdiction Reinsurer have been met, the commissioner has the discretion to defer to that
      jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions
      shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or
      with the NAIC. ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate
efforts to obtain and disseminate to the states financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers.

e. The ReFAWG Review Process is designed to facilitate communication of relevant information with respect to individual reinsurers or reinsurance related issues by allowing interested state insurance regulators the opportunity to monitor the ReFAWG meetings and discussion. It should be noted that the process for engaging ReFAWG in the consideration of an application is intended to be flexible. Specific circumstances may necessitate discussion between ReFAWG and any states that have received any application in order to determine an appropriate lead state on a case-by-case basis.

f. Change of Lead State - The Lead State may change based upon mutual agreement between the current lead state and any other state where the reinsurer is certified, with input to be provided by ReFAWG. Upon a change in lead state, NAIC staff will provide timely notification to all states. In order to facilitate a change of lead state from one state to another, both states should discuss the rationale for the change during a regulator-only ReFAWG meeting. NAIC Staff will update the lead state and note such change on NAIC systems and send notice to ReFAWG and interested regulators.

3. ReFAWG Review Process for Certified Reinsurers

ReFAWG makes available to the states a Uniform Application Checklist for Certified Reinsurers (Exhibit 1) for certification of reinsurers based upon the requirements of the Credit for Reinsurance Model Law and Regulation. It is intended that the checklist be used by lead states for the initial/renewal application review and by ReFAWG in its review of Passporting requests.

The following provide a timeline for filings:

In order to be eligible for certification, the assuming insurer shall meet the following requirements:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction. The applicant must be in good standing and provide a copy of the certificate of authority or license to transact insurance and/or reinsurance business.

b. **Capital and Surplus** - The assuming insurer must maintain capital and surplus of no less than $250,000,000 as reported within its audited financial statement. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital
and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

c. **Financial Strength Ratings** - The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. The applicant must provide the rating agency report. If the rating is a group rating, the rationale for the group rating must be provided. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date. Acceptable rating agencies include: A.M. Best, Fitch Ratings, Moody’s, Standard & Poor’s or any other Nationally Recognized Statistical Rating Organization by the SEC. Kroll is not recognized as an acceptable rating organization in Model #786 but has been recognized as an acceptable rating organization by the Reinsurance (E) Task Force.

d. The following table outlines the necessary ratings needed to meet a secure level:

<table>

e. **Protocol for Considering a Group Rating** - Section 8B(4) of the Credit for Reinsurance Model Regulation (#786) provides, in relevant part: “Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate.” Understanding the rating agency basis for utilizing a group rating is a key factor in determining whether an applicant’s group rating may be considered appropriate. The recommended protocol for understanding the rationale involves one or more of the following protocol steps:
i. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency utilizes the group rating as a consequence of finding that the company had sufficient interconnectivity with the group;

ii. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency enhances the group rating due to the subsidiary’s potential benefit of capital support from one or more affiliated companies;

iii. The group rating was utilized because the subsidiary derives benefit from its inclusion within a financially strong and well-capitalized insurance group;

iv. The lead state has contacted the rating agency and was provided a written explanation for the use of the group rating;

v. Other factors deemed appropriate by the Reinsurance Financial Analysis (E) Working Group; or

vi. To assist the Lead State in the assessment of the appropriateness of the use of a group rating, applicants are encouraged to provide their rational for the use of a group rating.

f. Changes in Ratings

Section 8(B)(7)(a) of Model #786 provides that a certified reinsurer is required to notify the Commissioner of a certifying state within 10 days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons. Upon receipt of any such notification, a certifying state should immediately notify ReFAWG in order to facilitate communication of the information to other states. ReFAWG will subsequently send notification to all applicable regulators and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

Changes requiring action by a certifying state in accordance with statute and/or regulation may include but are not limited to: deterioration in financial condition; downgrade in a financial strength rating; change in the status of its domiciliary license; change in the qualification status of its domestic jurisdiction; and the triggering of certain thresholds with respect to reinsurance obligations to U.S. ceding insurers that are past due (in accordance with Section 8(B) of Model #786). While such changes may require action under statute or regulation, the ReFAWG process is intended to facilitate communication and coordination with respect to the date upon which changes in a certified reinsurer’s rating/status are effective, as well as discussion of any other relevant issues.

As part of the ongoing review process, other information may come to the attention of a certifying state and/or ReFAWG that warrants consideration with respect to a certified reinsurer’s rating/status. While ReFAWG cannot require a state to delay any action with respect to a certified reinsurer’s rating/status, certifying states are strongly encouraged to notify ReFAWG prior to taking any related action, as the ReFAWG process will serve to provide a proactive regulatory mechanism for communication of such information, discussion among regulators with respect to changes being considered on the basis of subjective rating criteria, and possible coordination of applicable effective dates if such changes are enacted. Upon receipt of any such information, ReFAWG will send notification to the NAIC Chief
Financial Regulators listing and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

g. **Schedule F/S (Ceded Reinsurance)** – Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. must provide Form CR-F (property/casualty) and/or Form CR-S (life and health), completed in accordance with the instructions.

h. **Disputed and/or Overdue Reinsurance Claims** - The applicant must provide a detailed explanation regarding reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due that exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year or reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent. The applicant must then provide a description of its business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers.

i. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

j. **Regulatory Actions** – The applicant must provide a description of any regulatory actions taken against the applicant. Include details on all regulatory actions, fines, and penalties. Further, a description of any changes in with respect to the provisions of the applicant’s domiciliary license should be provided.

k. **Audited Financial Report and Actuarial Opinion** – As filed with its non-U.S. jurisdiction supervisor, with a translation into English, the applicant must file audited financial statement for the current and prior year and an actuarial opinion (must be stand-alone, or the functional equivalent under the Supervisor’s applicable Actuarial Function Holder Regime).

l. **Solvent Schemes of Arrangement** - The applicant must provide a description of any past, present, or proposed future participation in any solvent scheme of arrangement, or similar procedure, involving U.S. ceding insurers.

m. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

n. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, the applicant must provide a statement that it agrees to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.
o. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.

4. **Certified Reinsurers – Certified by Another NAIC Accredited Jurisdiction**

If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the state has the discretion to defer to that jurisdiction’s certification and assigned rating (i.e., passporting) as provided in the Uniform Application Checklist for Certified Reinsurers (Exhibit 1). To assist in the determination to defer to another jurisdiction’s certification the following documents are required:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction.

b. **Verification of Certification Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, rating and collateral percentage assigned, effective date, lines of business, and the applicant’s statement on compliance.

c. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

d. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

e. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, they must provide a statement that they agree to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

f. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
5. **Reciprocal Jurisdiction Process - Initial Application to Lead State**

Pursuant to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), the “Lead State” will uniformly require assuming insurers to provide the following documentation so that other states may rely upon the Lead State’s determination:

a. **Status of Reciprocal Jurisdiction** - The assuming insurer must be licensed to write reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction that is listed on the *NAIC List of Reciprocal Jurisdictions*: (1) a non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; (2) a U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; or (3) a Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction.

b. **Minimum Capital and Surplus** - The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction: no less than $250,000,000 (USD); or if the assuming insurer is an association, including incorporated and individual unincorporated underwriters: minimum capital and surplus equivalents (net of liabilities) or own funds of the equivalent of at least $250,000,000 (USD); and a central fund containing a balance of the equivalent of at least $250,000,000 (USD). The assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis according to the methodology of its domiciliary jurisdiction that the assuming insurer complies with this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

c. **Minimum Solvency or Capital Ratio** - The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio. The ratio specified in the applicable in-force Covered Agreement where the assuming insurer has its head office or is domiciled; or if the assuming insurer is domiciled in an accredited state, a risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, calculated in accordance with the formula developed by the NAIC; or if the assuming insurer is domiciled in a Reciprocal Jurisdiction that is a Qualified Jurisdiction, such solvency or capital ratio as the commissioner determines to be an effective measure of solvency. The assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

d. **Form RJ-1** - The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

e. **Audited Financial Report** - The assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report as provided under Section 9C(5)(a) of Model #786.
f. **Solvency and Financial Condition Report or Actuarial Opinion** – The applicant must submit a solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor as provided under Section 9C(5)(b) of Model #786.

g. **Overdue Reinsurance Claims** – The applicant must submit a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States as provided under Section 9C(5)(c) of Model #786.

h. **Assumed and Ceded Reinsurance Schedules** – The applicant must submit information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer as provided under Section 9C(5)(d) of Model #786. Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. may provide this information using Form CR-F (property/casualty) and/or Form CR-S (life and health), which ReFAWG considers sufficient to meet this requirement. This is for purposes of evaluating Prompt Payment of Claims.

i. **Prompt Payment of Claims** - The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met: (1) more than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; (2) more than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a Covered Agreement; or (3) the aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a Covered Agreement.

6. **Reciprocal Jurisdiction Process – Passporing States**

Per the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), if an NAIC accredited jurisdiction has determined that the conditions set forth under the *Filing Requirements for Lead States* have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following document is required to be filed with the state:

a. **Form RJ-1** - The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

b. **Verification of Determination Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, effective date, and lines of business.
7. **NAIC Staff Review of Reinsurers**

The reinsurer will file this information with the initial reviewing state and such Lead State will submit the information to ReFAWG in accordance with the applicable information sharing process. This submission by the Lead State will also facilitate other states’ access to the information. NAIC staff shall prepare a report for review by ReFAWG intended to provide information regarding whether the Lead State’s submission meets the requirements of the ReFAWG Review Process, and to determine whether there are any deficiencies in the application. This report will be considered confidential but may be made available to states through the NAIC’s information sharing process.

NAIC Staff will assist in the review of the filings and in monitoring the ongoing condition of the reinsurers. If during the review process or during an interim period ReFAWG determines that a reinsurer’s assigned rating or status may warrant reconsideration, notice will be sent to the Lead State. The specific issues identified will be presented for discussion during the next ReFAWG meeting.

8. **Process for Ongoing Monitoring of Certified Reinsurers**

Certified and reciprocal reinsurers are required to file specific information to a certifying state on an ongoing basis. NAIC Staff and ReFAWG will review this information in an effort to assist states with the ongoing monitoring of the reinsurers. All information submitted by reinsurers which is not otherwise public information subject to disclosure shall be exempted from disclosure under the state’s law equivalent of its Freedom of Information Act and shall be withheld from public disclosure.

9. **Withdrawal/Termination of a Certified or Reciprocal Jurisdiction Reinsurer**

When a reinsurer requests to withdraw its status or the lead state terminates the reinsurer’s status as a certified or reciprocal reinsurer, notice of this action should be promptly conveyed to the appropriate NAIC Staff. Once NAIC Staff receives notification of withdrawal or termination, the Passported Certified Reinsurers List(s) will be updated to reflect this status change. The Passported reinsurer will follow the lead state’s laws regarding its withdrawal or termination regarding any active reinsurance contracts.

10. **Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers**

   a. Under Section 8A(5) Model #786, credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the *Credit for Reinsurance Model Law* (#785), credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

   b. It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have
c. With respect to those reinsurers that are currently Certified Reinsurers but are seeking recognition by ReFAWG as Reciprocal Jurisdiction Reinsurers for passporting purposes, the same process as outlined in paragraphs 3-6 of this ReFAWG Review Process must be followed. A Form RJ-1 must be filed with each state in which the reinsurer seeks recognition as a Reciprocal Jurisdiction Reinsurer, and the reinsurer must meet all other applicable requirements. However, states may share this information with other states through the NAIC and the ReFAWG Review Process, and previously filed information used in the review of the reinsurer as a Certified Reinsurer may also be utilized in its review as a Reciprocal Jurisdiction Reinsurer. ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.

11. Commissioner Shall Create and Publish Lists

Section 2E(3) of Model #785 and Section 8C(1) of Model #786 require the commissioner to publish a list of Qualified Jurisdictions, while Section 2E(4) of Model #785 and Section 8B(2) of Model #786 require the commissioner to publish a list of all Certified Reinsurers and their ratings. Section 2F(2) & (3) of Model #785 and Section 9D and E of Model #786 require the commissioner to (a) timely create and publish a list of Reciprocal Jurisdictions; and (b) timely create and publish a list of Reciprocal Jurisdiction Reinsurers. It is expected that the commissioner will publish these respective lists on the insurance department’s website, along with special instructions or other guidance as to how Certified Reinsurers and Reciprocal Jurisdiction Reinsurers may meet the applicable filing requirements under the models. There currently are no specific requirements as to the format in which these lists must be published, but ReFAWG and NAIC staff will assist the states with questions on the publication of these lists. In addition, ReFAWG will maintain links on its NAIC webpage to the lists published on the insurance departments’ webpages.

Re: ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdictions

Dear Mr. Rehagen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit these comments on the NAIC’s proposed “ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdictions” (hereafter the “Review Process”). The Review Process and accompanying guidance to states and reinsurers is a critical component of the 2019 amendments to the NAIC’s Credit for Reinsurance Model Law (#785) and Model Regulation (#786). Although the 2019 amendments have been passed into law by 40 states and promulgated in approximately 15 states and the Uniform Checklist has been available on the NAIC’s website for over a year, we hope that those states that have completed the updates will begin accepting applications from reinsurers to be recognized as reciprocal jurisdictions. We hope that the publication of the Review Process will lead to even more states to begin accepting applications for reciprocal reinsurer status.

ACLI generally supports the proposed Review Process, although we encourage the drafters to clarify section 10(c). We think states and reinsurers would benefit from additional guidance on this point. Section 10(c) notes that

“…previously filed information used in the review of the reinsurer as a Certified Reinsurer may also be utilized in its review as a Reciprocal Jurisdiction Reinsurer… ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.” (p. 12).

This provision is mentioned in passing in the document, but it is an important point. There is significant overlap in the documents required for Certified Reinsurers and Reciprocal Jurisdictions. Given the overlap between the materials, if a reinsurer applies for reciprocal jurisdiction status in a state where the applicant is already recognized as a certified reinsurer, does the applicant need to...
provide the full package of materials (financial statements, actuarial opinions, etc.), or can the applicant cross reference the previous Certified Reinsurer application filed with the state? While we expect that the decision to allow cross-referencing previous applications may vary by state, it would be helpful if the NAIC could provide more definitive guidance on the point that information provided by a certified reinsurer can be used in a reciprocal jurisdiction application. We believe that allowing the reinsurer to cross-reference it’s certified reinsurer application, without having to re-file voluminous, duplicative filings, is in line with the section 10(c)’s objectives of reducing the amount of documentation filed with states and reducing duplicate filings.

Conclusion

Thank you, as always, for the opportunity to provide these comments and your consideration of our suggestion to provide more detailed guidance in section 10(c). As always, we would be happy to discuss our comments in greater detail if you or your staff have any additional questions.

Sincerely,

Steve Clayburn

Mariana Gomez
NAIC Consultation on Review Process for Passporting Certified and Reciprocal Jurisdiction
Reinsurers

The Association of Bermuda Insurers and Reinsurers ("ABIR") kindly thanks the National Association of
Insurance Commissioners ("NAIC") for the opportunity to comment on its consultation on the review process
for passporting certified and reciprocal insurers. ABIR represents the public policy interests of Bermuda’s
leading insurers and reinsurers and make up over 35% of the global reinsurance market based on property &
casualty net premiums earned. ABIR members employ over 43,000 Americans in the U.S. and protect
consumers around the world by providing affordable and accessible insurance protection and peace of mind.

ABIR also would like to thank the NAIC for effecting revisions to the Credit for Reinsurance Model Law (#785)
and Credit for Reinsurance Model Regulation (#786), which implemented the reinsurance collateral
provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK), thus
providing a mechanism for Qualified Jurisdictions, if they meet certain requirements in the credit for
reinsurance models, to be afforded the same elimination of collateral requirements as insurers domiciled in
the EU and UK.

We acknowledge the areas that the Reinsurance Financial Analysis Working Group (ReFAWG) anticipates
providing advisory support and assistance relating to the passporting process, such as:

- Support, encourage, promote and coordinate multi-state efforts in addressing issues related to
certified reinsurers, including but not limited to multi-state recognition of certified reinsurers.
- Provide analytical expertise and support to the states with respect to certified reinsurers and
applicants for certification.
- Ensure the public passporting website remains current.

ABIR supports a process to facilitate multi-state recognition of assuming insurers and to encourage
uniformity among the states. For insurance groups that have multiple entities with Certified Reinsurer
status across several states and that plan to apply for Reciprocal Reinsurer status for all entities, then such
reinsurer should have the ability to file one set of supporting documents to renew both (as there is a lot of
proposed duplication). As per above, having the ability to streamline this submission of the same
documentation for both processes would be beneficial not only to the Reciprocal Reinsurers, but to those
individuals reviewing applications in the state insurance regulators’ offices.

In addition, we would recommend that states are strongly encouraged to collaborate to facilitate uniformity,
reduce friction and increase efficiency. More specifically, we encourage the consideration of consistent
filing dates (e.g., June 30th) across states for applications & renewals for each of Certified and Reciprocal
Reinsurer status. We also encourage the use of a streamlined process as the ReFAWG coordinates with
individual states in support of the review process.

We would ask the NAIC to continue efforts to encourage states to adopt passporting, as it is not currently
mandatory. We believe that consistency is key, while acknowledging states’ ‘sovereignty’ to manage the
application process as they deem appropriate. Utilization of the passporting process does not remove
states’ ability to make enquiries if there are specific details they wish to obtain about an applicant.
Finally, we would ask that the NAIC consider permitting Reciprocal Reinsurers to submit evidence of their minimum capital and surplus and minimum solvency or capital ratio requirements status (as required by Section 9C(7)) directly to the state insurance regulator on behalf of their supervisory regulators instead of requiring the submission to be made directly by their respective supervisory regulators. This could prove to be a heavy burden on the supervisory regulator to track and collect information, create new forms of ‘confirmation’ letters, and then actually file with various state insurance regulators. Reciprocal Reinsurers are more likely to have the relevant financial information and systems in place to facilitate this kind of filing.

I am willing to make myself available, if you wish to discuss any of these matters further.

Kind regards
Suzanne Williams-Charles

RE: Feedback on the NAIC's ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

The Reinsurance Task Force has requested comments on the ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (“ReFAWG Review Process”). Thank you for the opportunity to comment on the exposure.

We support the development of the ReFAWG Review Process pursuant to the NAIC’s Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). This process is an important step forward in the implementation of collateral reform that will allow for more equitable application of credit for reinsurance and compliance with the Covered Agreements. We offer a few particular comments on the exposure.

I. Role of NAIC Staff in Reciprocal Jurisdiction Review:

We would request clarification on a key point in the process – the role of NAIC staff in Reciprocal Jurisdiction review, addressed in Section 7 of the proposal. If the Lead State has already made its determination at the time it submits information to the NAIC, then we are not sure what further role there is for staff. Alternatively, if staff will be assisting the Lead State in making its determination, that role is straightforward and may help maintain consistency. In order for the passporting process to work effectively and have credibility with the non-Lead States, it will help for Lead States to follow the same process when reviewing applications.

II. Application of Review Process:

We also note in Section 7 that it is unclear whether this section applies to both Certified Reinsurers and Reciprocal Jurisdictions. We recommend adding language to clarify its applicability.

III. Confidentiality:

Section 8 of the exposure addresses confidentiality, but only in the context of “ongoing monitoring” information. We recommend making the second sentence, related to information submitted by reinsurers, a separate section of the document. The confidentiality provisions indicated should be the approach for all information submitted during the process, not specific just to “ongoing monitoring” information.
IV. Other Comments and Suggestions:

We have a number of additional comments that we suggest will contribute to clarity and consistency in the document for your consideration:

Section 1 – ReFAWG Review Process

- On page 2, section 1.b, we recommend the following clarifying changes:

On June 25, 2019, the NAIC adopted further revisions to the models, which implement the reinsurance collateral provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK). These revisions create a new type of jurisdiction, which is called a Reciprocal Jurisdiction and eliminates reinsurance collateral requirements and local presence requirements for EU and UK reinsurers that maintain a minimum amount of own-funds equivalent to $250 million USD and a solvency capital requirement (SCR) of 100% under Solvency II. The revisions also incorporate the “Reciprocal Jurisdiction” concept. Reciprocal Jurisdiction status is afforded to: 1) jurisdictions subject to an in-force Covered Agreement within the U.S.; 2) accredited U.S. jurisdictions; and 3) Qualified Jurisdictions if they meet certain requirements in the credit for reinsurance models. ReFAWG has also been given additional responsibilities with respect to these “Reciprocal Jurisdiction Reinsurers.” ReFAWG will coordinate its efforts with the Mutual Recognition of Jurisdictions (E) Working Group (formerly known as the Qualified Jurisdictions (E) Working Group).

Section 3 – ReFAWG Review Process for Certified Reinsurers

- It is unclear whether the timeline on page 4 applies also to Reciprocal Jurisdictions. We recommend clarifying.

Section 5 – Reciprocal Jurisdiction Process – Initial Application to Lead State

- In section 5.a on page 9, we recommend the following corrections and clarifying language:

The assuming insurer must be licensed to write reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction that is listed on the NAIC List of Reciprocal Jurisdictions: A “Reciprocal Jurisdiction” is a jurisdiction, as designated by the commissioner, that meets one of the following: (1) a non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; (2) a U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; or (3) a Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction.

- In sections 5.b (page 9) and 5.c (page 10), we recommend replacing “complies with” with “satisfies”.

- In section 5.c, we recommend ending the first sentence with a colon instead of a period.

- We recommend the following change to section 5.d on page 10 to eliminate both ambiguity and redundancy about what is required in submitting a Form RJ-1:
Page 3. BILTIR response to Feedback on the NAIC’s ReFAWG Review Process for Passorting Certified and Reciprocal Jurisdiction Reinsurers

The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

Section 6 – Reciprocal Jurisdiction Process – Passorting States

- We recommend the following change to section 6.a on page 11, again regarding the submission of Form RJ-1:

  The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

- In section 6.b on page 11, we suggest the following clarifying edits:

  The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the approving state, effective date, and approved lines of business.

Section 8 – Process for Ongoing Monitoring and Certified Reinsurers

- For consistency, we recommend the following changes to the first sentence:

  Certified and Reciprocal Jurisdiction Reinsurers are required to file specific information to a certifying state on an ongoing basis.

Section 10 – Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

- If the NAIC Blanks have already been amended, we recommend the following change to the last sentence of section 10.b on page 12:

  The NAIC Blanks will be have been amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

Thank you again for the opportunity to comment on the ReFAWG Review Process.

Sincerely,

BILTIR

CC BILTIR Board of Directors

Mr. Daniel Schelp  
Chief Counsel, Regulatory Affairs  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

Dear Mr. Stultz and Mr. Schelp:

Thank you for the opportunity to submit comments on the ReFAWG Review Process. The IUA represents more than 70 re/insurers active in the London Insurance Market and has been fully engaged in NAIC debates and discussions regarding changes in U.S. reinsurance regulation for the past two decades. Many IUA members or their affiliates accept U.S. risks both as insurers and as reinsurers. Accordingly, a number of IUA members or their affiliates are well known to the NAIC, being listed by International Insurers Department and are therefore eligible as surplus lines insurers in every U.S. jurisdiction. Similarly, some of those same insurers, functioning as reinsurers, have either established multi-beneficiary reinsurance trusts in the U.S. pursuant to Section 2.D. of the Credit for Reinsurance Model Act (#785) or have qualified as Certified Reinsurers, or both. The IUA understands that some members are applying now for Reciprocal Reinsurer status to various lead states and expects that a number of its members and their affiliates will be applying for reciprocal reinsurer status in the future— and will be seeking Reciprocal Reinsurer approvals in multiple states via the passport process that ReFAWG is fine-tuning now.

The IUA’s comments with respect to June 17th draft of the ReFAWG Review Process center on the following goals, all designed to build upon the NAIC’s excellent June 17th draft:

- Maximize and leverage ReFAWG’s knowledge and expertise with respect to both Certified and Reciprocal Reinsurers in order to assist in the collection, maintenance and sharing of reinsurers’ financial information with both Lead and Passport States
• Promote uniformity and consistency with respect to the passport processes for both Certified and Reciprocal Reinsurers—with the goal that, to the maximum extent possible, these processes should be virtually the same, pursuant to a single Uniform Checklist—particularly since for some period of time the same reinsurer may hold both certified and reciprocal statuses.

• Centralize and streamline the communication between insurance regulators in Qualified and Reciprocal Jurisdictions and state insurance regulators (and ReFAWG) with respect to the required annual (i) confirmation of minimum capital and surplus levels and (ii) confirmation of solvency/capital ratios for Reciprocal Reinsurers.

We note preliminarily that due to the likelihood that certain Certified Reinsurers that desire to obtain Reciprocal Reinsurer status will have two lead states—one for certified status and the other for reciprocal status—the ReFAWG’s support for both Certified and Reciprocal Reinsurer status will prove to be indispensable. Similarly, with the addition of Section 2. f. Change of Lead State, ReFAWG’s experience and leadership should assist with such changes in the future.

Our specific comments on the ReFAWG Review Process are as follows:

1. As just noted, since we believe that many of today’s Certified Reinsurers will also seek to be recognized as Reciprocal Reinsurers and since reciprocal reinsurance “zero collateral” can only be prospective, “old” reinsurance liabilities secured on a reduced collateral basis will remain, perhaps for some years. Reinsurers will need to maintain both statuses. Indeed, we understand that today there are U.S. reinsurance buyers that do not accept certified status or that accept it only for certain classes of business or for reinsurers that meet financial metrics (e.g. minimum policyholders’ surplus of $5 billion) acceptable to the buyers. We assume, therefore, that there will continue to be reinsurance buyers that will not accept zero collateral. So, for years to come, some reinsurers will continue to be making annual filings to maintain both statuses.

And again it is conceivable that a single non-U.S. reinsurer will have two lead states—one for Certified Reinsurer status and the other for Reciprocal status.

The importance of having the same compliance filing deadlines for both statuses cannot be overstated but we believe that is the intent of all parties. And this should be coupled with an instruction that both Certified and Reciprocal Reinsurers file—ideally either via a single lead state or with ReFAWG directly—only a single set of the same renewal documents each year.

Required minimum capital and surplus ($250 million) levels are the same, of course, for both statuses. Many elements of initial and annual requalification filings are also the same for both statuses, eg. multiple letters confirming compliance, audited financials, actuarial certifications, etc. The same disclosures as to assumed and ceded reinsurance—CR-F, Parts 1 and 2—are required for both statuses.
It would be extremely helpful if the states would agree that ReFAWG could be the repository for Certified and Reciprocal Reinsurer filing information, data and documents—at least for annual requalification and for passporting purposes. We again note that the emerging phenomenon of two lead states, one for Certified Reinsurer purposes, one for Reciprocal Reinsurer purposes, highlights the benefit of having ReFAWG be the repository of documents, data and information for both certified and reciprocal reinsurers.

2. Many IUA members and clients that are not IUA members have commented to us about required disclosures/confirmations with respect to disputed or overdue balances owed to cedents. One overarching concern is to confirm that these disclosures are confined to obligations owed to U.S. cedents only and can be made by reinsurers without having to obtain data from U.S. cedents.

Both the US-EU and US-UK Covered Agreements (in Article 3. Paragraph 4. (h)(iii)) have the identical straightforward claims disclosure filing requirement for Reciprocal Reinsurers:

“….prior to entry into the reinsurance agreement and not more than semi-annually thereafter, an updated list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers of the jurisdiction of the ceding insurer…”

Beyond this, for reinsurers with both Certified and Reciprocal Reinsurer status, the process is unclear. Will such reinsurers supply only a Certified Reinsurer disclosure? Only a Reciprocal Reinsurer disclosure with respect to overdue and/or disputed claims? Or both Certified and Reciprocal Reinsurer disclosures?

Currently and for a number of years, Certified Reinsurers have become familiar with the following elaboration in the NAIC’s Checklist for Certified Reinsurers on disputed or overdue reinsurance recoverables:

<table>
<thead>
<tr>
<th>Disputed and/or Overdue Reinsurance Claims / Business Practices:</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Commissioner may consider the applicant’s business practices in dealing with its ceding insurers, including compliance with contractual terms and obligations. The applicant must provide the following if 1) applicant’s reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year; or 2) the applicant’s reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent,</td>
</tr>
</tbody>
</table>
Then, in either case, the applicant will provide:

a. Notice of that fact to the Commissioner and a detailed explanation regarding the reason(s) for the amount of disputed or overdue claims exceeding the levels noted above; and.

b. A description of the applicant’s business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers.

Upon receipt of such notice and explanation, the Commissioner may request additional information concerning the applicant’s claims practices with regard to any or all U.S. ceding insurers.

But in the ReFAWG Review Process, Section 5. i. (for Reciprocal Reinsurers) the disputed and overdue claim metrics change:

“i. **Prompt Payment of Claims** - The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met: (1) more than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; (2) more than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a Covered Agreement; or (3) the aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a Covered Agreement. “

While we understand that the Reciprocal Reinsurer disclosure formulation track the criteria evidencing “lack of prompt payment” in Article 3, Paragraph 4. (i) of both the US-EU and US-UK Covered Agreements, for reinsurers that are both Certified and Reciprocal, a single set of “disputed or overdue” metrics that evidence “lack of prompt payment” would be greatly appreciated. IUA members that plan to have both Certified and Reciprocal Reinsurer status have a strong preference that the current set of metrics in use for Certified Reinsurers be carried through for Reciprocal Reinsurers as well—at least for the reinsurer’s annual requalification filings for both Certified and Reciprocal Reinsurer status.

Then, assuming that the Certified/Reciprocal Reinsurer making a filing triggers either of the Certified Reinsurer disputed and overdue metrics—one for individual cedents (more than 10% of obligations owed to any Top 10 cedent) and the other for the reinsurer’s portfolio of assumed reinsurance from U.S. cedents (5% of all U.S. reinsurance obligations), the Lead State or ReFAWG could then require preparation of a Reciprocal Reinsurer-specific disputed or overdue claims report using the metrics in the two Covered Agreements and in Section 5.i. of the ReFAWG Review Process. Specifically, for the reinsurer’s book of U.S. reinsurance business overall are the disputed or overdue obligations in excess of
15% of the reinsurer’s total book? And for individual reinsureds, if more than 15% of them have overdue (undisputed) recoverables, does the reinsurer owe more than $100,000 to each of them?

We believe that this two stage approach would be workable ---at least for a transition period when it can be expected that many, if not all, of today’s Certified Reinsurers will be seeking Reciprocal Reinsurer status as well.

3. As we commented with respect to the Process for Evaluating Qualified and Reciprocal Jurisdictions in our April 23, 2021 letter it would be incredibly helpful to avert a situation in which non-U.S. regulators are asked to prepare and send multiple certifications as to minimum capital and surplus and minimum solvency ratios (i.e. when the reinsurer is approved in multiple jurisdictions). Could ReFAWG be the repository for such certifications, able to confirm to states that request a copy that the “original” confirmation from the overseas regulator is on file with the NAIC? At the absolute minimum, we would urge the states to permit Reciprocal Reinsurers to obtain a single certification from their domiciliary regulator and then supply certified copies to the individual states that require copies—just as non-U.S. insurers do now with customary “good standing” certificates. As the IUA commented earlier this year:

“Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) requires the supervisory authority of an assuming insurer domiciled in a Reciprocal Jurisdiction (a “Reciprocal Reinsurer”) to confirm on an annual basis to the relevant state insurance regulator that such Reciprocal Reinsurer complies with the minimum capital and surplus and minimum solvency or capital ratio requirements set forth in the Credit for Reinsurance Model Regulation (#786). To that end, the new Section III, Paragraph 15 of the Process for Evaluating Qualified and Reciprocal Jurisdictions creates a process for Reciprocal Jurisdictions to make annual filings of the relevant financial information.

To make such a filing, the supervisory authority in a Reciprocal Jurisdiction would need to: (1) track on an annual basis which Reciprocal Reinsurers domiciled in their jurisdiction had obtained such status and file the required information on behalf of multiple reinsurers in potentially multiple states; (2) collect the relevant financial information from the Reciprocal Reinsurers domiciled in their jurisdiction; and (3) develop a system for filing such information with U.S. insurance regulators. This filing process would clearly impose considerable burdens on Reciprocal Jurisdictions. The process, however, could be streamlined by adding as an option allowing individual Reciprocal Reinsurers to file the required financial information directly with U.S. insurance regulators [or with ReFAWG].

A Reciprocal Jurisdiction should be permitted to either make an annual filing as reflected in the proposed draft or, alternatively, issue a document to the Reciprocal Reinsurers confirming the information required by Section 9C(7) of the Credit for Reinsurance Model Regulation (#786), similar to a certificate of good standing, which the Reciprocal Reinsurers would then annually file directly with state insurance regulators (e.g., as part of a Reciprocal Reinsurer’s application for or renewal of status as a Reciprocal Reinsurer). [or with ReFAWG]
Given that the Reciprocal Reinsurers are more likely to already have developed systems of making filings with supervisory authorities in general, allowing those Reciprocal Reinsurers to make the required filings with U.S. insurance regulators [or a single filing with ReFAWG]* directly would likely be more efficient than asking supervisory authorities in Reciprocal Jurisdictions to establish whole new systems and procedures for making [multiple] financial filings on behalf of the Reciprocal Reinsurers domiciled in those Reciprocal Jurisdictions. “

* Pursuant to Section 2. d. of the ReFAWG Review Process:
“The commissioner may accept financial documentation filed with the Lead State or with the NAIC. ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate efforts to obtain and disseminate to the states financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers.” [emphasis added]

We applaud Section 10 of the ReFAWG Review Process, particularly this passage that underscores the desirability of having a single renewal process for both Certified and Reciprocal Reinsurers pursuant to a single Uniform Checklist:

“….states may share this information with other states through the NAIC and the ReFAWG Review Process, and previously filed information used in the review of the reinsurer as a Certified Reinsurer may also be utilized in its review as a Reciprocal Jurisdiction Reinsurer. ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.”

On behalf of the IUA many thanks again for the opportunity to submit comments on the proposed ReFAWG Review Process. Please let us know if you or ReFAWG members have any questions or need additional information.

Sincerely,

Thomas M. Dawson

Colorado Division of Insurance

Re: ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Dear Mr. Kaumann,

This comment letter is submitted on behalf of Underwriters at Lloyd’s, London (“Lloyd’s”). Lloyd’s is one of the largest non-US domiciled providers of reinsurance capacity to the US insurance industry. In 2020, the Lloyd’s market assumed over $6.4 billion in reinsurance premiums from US ceding insurers.

Lloyd’s very much appreciates the effort that was put into the ReFAWG Review Process document. Having a clear and documented process will help regulators and reinsurers and result in more efficient evaluations of reinsurer applications. We look forward to working with ReFAWG as the Reciprocal Reinsurer regime comes into effect.

Regards,

Re: NAIC Request for Comments on ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA) appreciates the opportunity to submit comments on the NAIC’s exposure draft of the ReFAWG Review process for Passporting Certified and Reciprocal Jurisdiction Reinsurers. The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates and insurance-linked securities (ILS) fund managers and market participants that are engaged in the assumption of property/casualty risks. The RAA represents its members before state, federal and international bodies.

We appreciate the Reinsurance Task Force’s continued thoughtful engagement with respect to implementation of its 2019 revisions to the NAIC Credit for Reinsurance Model Law and Model Regulation, including its continued work on the passporting process for Certified and Reciprocal jurisdiction reinsurers. This is another important step in the implementation process for the U.S./EU and U.S./UK covered agreements and in the NAIC’s expressed goal to revise the credit for reinsurance framework in the U.S. to create an equal playing field for all reinsurers that meet the legal requirements and commitments from the new category of “Reciprocal Jurisdictions.”

General Comments

As detailed more specifically below, in general the current draft does not always clearly specify where it applies to Certified Reinsurers and where it applies to Reciprocal Reinsurers, or both. More clarity is needed with respect to whether the guidance is applicable to both categories or is limited to one. In addition, there are differences in the requirements imposed by a lead state Commissioner and a non-lead state commissioner and more clarity as to the requirements of each of those two categories would be helpful.

Also, before the document moves from the initial overview into the specifics relating to individual company applications, it would be useful for this document to provide a summary of or cross-reference to the process for becoming a Qualified or Reciprocal Jurisdiction, as that process is a necessary precursor for the Certified or Reciprocal Reinsurer application and/or passporting process.
The NAIC ReFAWG passporting process – along with other NAIC resources relating to Certified and Reciprocal Reinsurers and Qualified and Reciprocal Jurisdictions should be noted on state websites. In addition, each state should specify on its website its process for entertaining applications for Reciprocal Reinsurers, including whether they are open to passporting so that a company seeking to do business through this process knows and understands the process it must complete in that jurisdiction. Further, we believe ReFAWG and the NAIC should draft sample document(s) that states could evaluate, use or adapt in developing their own websites and related processes for Certified and Reciprocal reinsurers. This would help ensure clarity, consistency and expediency in the process for both state regulators and applicants.

Specific comments relevant to the exposure draft are set forth below.

Section 1: ReFAWG Review Process

Section 1. provides a list of issues upon which the Working Group may provide advisory support and assistance. A number of the subcategories make specific reference to Certified Reinsurers, but only one expressly relates to reinsurers domiciled in Reciprocal Jurisdictions. In our view, each of the categories relevant to Certified Reinsurers would also apply to reinsurers from Reciprocal Jurisdictions. We suggest revising this list to reflect application to both Certified and Reciprocal reinsurers.

Section 2: Lead States and Passporting Process

As noted above, to help make the passporting process smoother and more transparent for applicants, it would be extremely helpful if each state would include information on their process on their website. For example, in Section 2.a., it states that a reinsurer seeking recognition as either a Certified or Reciprocal Jurisdiction reinsurer must submit certain information to the state in which it seeks such recognition. Clear guidance on the state’s website about the process for an initial application (i.e., seeking to have that state designated as its Lead State) or through passporting is needed, including to whom information should be submitted. If the Commissioner is willing to accept financial documentation filed with the Lead State or with the NAIC (as referenced in Section 2.d.), or to waive requirements for submission of information that is available through the NAIC, it would be very helpful to have that set forth on the state’s website.

Section 2.a. should include a reference that makes clear there is a distinction between submitting information to a state as a Lead State for purposes of passporting and submitting a complete application to a state. We recommend the following amendment:

A reinsurer seeking recognition as either a Certified Reinsurer or a Reciprocal Jurisdiction Reinsurer must submit certain information to each the state in which it seeks such recognition. A reinsurer may decide to make a filing with a Lead State and use the NAIC Passporting process to facilitate multi-state recognition or a reinsurer may decide to submit the information to each state as a separate application. Under the ReFAWG Review Process, ReFAWG will assist states with the initial review of this information and provide
guidance to the states in making their review of the reinsurer to determine whether it has met the regulatory requirements to be recognized as a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer.

Sections 2.b. and 2.c. apply to Certified and Reciprocal Reinsurers, respectively. For clarity’s sake, we suggest that you include a subheading at the beginning of both paragraphs indicating that the first applies to Certified Reinsurers and the second applies to Reciprocal Reinsurers.

Section 2.d. should be revised to clarify which state may decide whether to rely on the determination of another state. We suggest the following amendment:

If an NAIC accredited jurisdiction has determined that the conditions set forth for recognition as a Reciprocal Jurisdiction Reinsurer have been met, the commissioner of any other state has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC and is encouraged to support a uniform submission and approval process among the states the NAIC, ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate efforts to obtain and disseminate to the states financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers.

Section 3: ReFAWG Review Process for Certified Reinsurers

To provide clarity between the roles of ReFAWG and NAIC staff as set forth in the timeline, it may be useful to cross-reference Section 7 in this section.

In Section 3.f., the draft states that a Certified Reinsurer is required to notify the Commissioner of a “certifying state” of any regulatory actions, changes in its license or ratings. We suggest modifying this paragraph to make clear that the required notice would be made to the Lead State and then that information distributed through the NAIC or ReFAWG to other relevant states.

Section 4: Certified Reinsurers – Certified by Another NAIC Accredited Jurisdiction

Section 4.b. references the process for verification of certification issued by an NAIC accredited jurisdiction. If this information is also available through the NAIC and ReFAWG processes, then verification through accessing that information also should be referenced.

Section 5: Reciprocal Jurisdiction Process – Initial Application to Lead State

The lead-in paragraph to Section 5 states that reinsurers may provide documentation so that other states may rely on the Lead State’s determination. Section 5.a., however, does not specifically refer to any documentation. As a result, the type of documentation that must be provided to the Lead State or to the NAIC is not clear. Cross-reference to the checklist and/or enumeration of what documentation is required would be helpful.
In Section 5.h., ReFAWG should clarify that information should be provided regarding claims to U.S. cedents only. The administrative burden to the applicant of compiling information regarding worldwide claims payments outweighs the regulatory relevance for U.S. regulators regarding these claims payments.

Section 8: Process for Ongoing Monitoring of Certified Reinsurers

Section 8 (as with Sections 9-11) appears to apply substantively to both Certified and Reciprocal reinsurers. If that is correct, then we suggest that the title of that section be modified to reflect that it applies to both categories.

We agree with the substantive intent of the reference to non-public information in this Section. However, we suggest making it clear that the Commissioner is required to maintain the confidentiality of any information submitted by reinsurers that is not otherwise public and not just to withhold that information from public disclosure.

Section 10: Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

Section 10.b. states that it is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of “in-force business”. This section should be modified to reflect that such status is not limited just to in-force business but may also apply to the run-off of existing business written under its Certified Reinsurer status.

Section 10.c. states that information previously submitted by a reinsurer can be shared with other states through the NAIC and the ReFAWG review process and previously filed information used in the review of a reinsurer may also be utilized in its review as a Reciprocal Reinsurer. We suggest that the draft should go farther to reflect that states should be encouraged to waive the requirements for documents to be separately filed if they can be accessed through the NAIC.

Section 10.d. should address the likely situation where a lead state has adopted the new model law and regulations and a passporting state has not fully adopted them (or vice versa). The guidance should permit a reinsurer that has been approved as a Reciprocal Reinsurer to be approved for passporting by ReFAWG and accepted by a state even if that state has not yet completed the process to implement Reciprocal Jurisdiction/Reinsurer status.
Conclusion

Thank you for your continued work and engagement with us in this important process. We would be happy to answer any questions or discuss any concerns.

Sincerely,

[Signature]

Reinsurance Association of America
Final Evaluation Report

REPUBLIC OF KOREA: FINANCIAL SERVICES COMMISSION (FSC) & FINANCIAL SUPERVISORY SERVICE (FSS)

Approved By:

Mutual Recognition of Jurisdictions (E) Working Group

May 27, 2021
I. Evaluation of Financial Services Commission (FSC) and the Financial Supervisory Service of the Republic of Korea

The Mutual Recognition of Jurisdictions (E) Working Group of the National Association of Insurance Commissioners (NAIC) has completed this Preliminary Evaluation Report with respect to the Financial Services Commission (FSC) and the Financial Supervisory Service (FSS), the lead insurance supervisors for the Republic of Korea. It is the recommendation of the Working Group that the NAIC recognize the Republic of Korea as a Qualified Jurisdiction and place it on the NAIC List of Qualified Jurisdictions, to be effective upon approval by the NAIC Executive (EX) Committee and Plenary. Further, the Working Group recommends that California be designated the Lead State for purposes of regulatory cooperation and information sharing with the FSC and FSS. These recommendations are based on the following analysis:

II. Procedural History

The NAIC adopted the Process for Evaluating Qualified and Reciprocal Jurisdictions (Qualified Jurisdiction Process) on August 27, 2013, with the current revisions effective December 10, 2019. The 2011 revisions to the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the “Credit for Reinsurance Models”) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes.

The purpose of the Qualified Jurisdiction Process is to provide a documented evaluation process for creating and maintaining an NAIC list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. Toward this end, the Qualified Jurisdiction Process designates key elements believed to be basic building blocks for sound (re)insurance regulation. Each jurisdiction under consideration to be included on the NAIC List of Qualified Jurisdictions is requested to submit detailed information in support of these criteria. In addition, the NAIC review will also rely on publicly available reports evaluating the reinsurance regulatory practices of each jurisdiction.

The Korean FSC/FSS submitted an application to the NAIC to be considered a Qualified Jurisdiction on September 28, 2020, along with a voluminous amount of supporting documentation. The Working Group met in regulator-to-regulator session on March 17, 2021, to review initial findings prepared by NAIC staff to determine whether the FSC/FSS should be approved as a Qualified Jurisdiction. The Working Group requested additional supplementary information from the FSC/FSS with respect to specific questions raised during this meeting, which the FSC/FSS provided to the Working Group on April 2, 2021.
Notice of the Republic of Korea’s application was sent to the Federal Insurance Office (FIO) and the United States Trade Representative (USTR) on May 5, 2021. The Working Group met in regulator-to-regulator session on May 27, 2021, and voted to recommend the Republic of Korea FSC/FSS for approval as a Qualified Jurisdiction.

### III. Review of Evaluation Materials

Under the requirements of the Qualified Jurisdiction Process, the Working Group performed an initial evaluation of the FSC/FSS’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Working Group began by undertaking a review of the most recent Detailed Assessment of Observance on Insurance Core Principles under the International Monetary Fund (IMF)/World Bank Financial Sector Assessment Program (FSAP Report), Report on Observance for Standards and Codes (ROSC), and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system.

The Working Group also reviewed information the FSC/FSS provided relative to Section A through Section G of the Evaluation Methodology. The Working Group’s review was focused on how the Republic of Korea’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial solvency of its domestic reinsurers in comparison to key principles underlying the U.S. financial solvency framework and other factors set forth in the Evaluation Methodology.

The Working Group considered the following information with respect to the evaluation of the FSC/FSS:

1. **Republic of Korea FSC/FSS 2020 Qualified Jurisdiction Application Submission (Confidential)**
IV. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

V. Evaluation Recommendation

The Working Group finds that it has performed the required review of the Evaluation Materials, including review of the publicly available information, and that the FSC/FSS provided the Working Group with information relative to Section A through Section G of the Evaluation Methodology to update and supplement the identified public information. The Working Group further finds that interested parties will be given an opportunity to provide public comments on the FSC/FSS application. Further, appropriate notice was provided to the FIO and the USTR. Based on the information provided by the FSC/FSS and the review of the Evaluation Materials, the Working Group has determined that there is no indication that the Republic of Korea fails to adequately and promptly enforce final U.S. judgments and arbitration awards.

Finally, the Working Group notes that the FSC/FSS and the California Department of Insurance are signatories to the IAIS Multilateral Memorandum of Understanding (MMoU), and that California has consented to act as the Lead State for purposes of regulatory cooperation and information sharing under the Qualified Jurisdiction Process, and further that the FSC/FSS has consented to the designation of California as the Lead State. This Lead State designation for purposes of regulatory cooperation and information sharing should not be confused with the Lead State designation by the Reinsurance Financial Analysis (E) Working Group for individual certified reinsurers for passporting purposes.

The Working Group has reached the conclusion that the FSC/FSS’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that the FSC/FSS’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that its laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.
Models. Therefore, it is the recommendation of the Working Group that the NAIC recognize the Republic of Korea as a Qualified Jurisdiction with respect to reinsurance companies regulated by the FSC/FSS and place it on the *NAIC List of Qualified Jurisdictions*, to be effective upon approval by the NAIC Executive (EX) Committee and Plenary. This designation as a Qualified Jurisdiction shall be valid on an ongoing basis, absent a material change in circumstances.
John Rehagen (MO)  
Chair of the Reinsurance (E) Task Force  
National Association of Insurance Commissioners  
NAIC Staff: Jake Stultz and Dan Schelp

On behalf of the American Property Casualty Insurance Association and American Council of Life Insurers, we appreciate the opportunity to comment on the Republic of Korea Final Evaluation Report as to whether to designate Korea as a Qualified Jurisdiction.

Local Korean branches of U.S. reinsurers are hindered in conducting business because they are required to localize all personal data onshore and are not permitted to transfer such data outside of Korea, even to their headquarters and affiliates. These rules impede foreign reinsurers’ ability to underwrite, manage risk, comply with regulatory requirements like OFAC rules, and transfer risk to other reinsurers, all of which are activities that are in the ordinary course of reinsurance business.

Korea has been interpreting its laws to prohibit offshore transfer of personal information unless the reinsurer obtains specific, prior consent from the policyholder, rather than allowing the reinsurer to rely on the consent obtained by the insurance (ceding) company. Reinsurers have no relationship with policyholders and are generally unable to obtain such consent.

We believe Korea’s actions are in contravention of their commitments under the Korea-U.S. Free Trade Agreement (KORUS), which went into effect in 2012. The KORUS stipulates in Annex 13B, Section B that each party shall allow a financial institution of the other party to transfer information in electronic or other form, into and out of its territory, for data processing where such processing is required in the institution’s ordinary course of business. The U.S. government (in particular, USTR and Treasury) has been working for years to persuade Korea to change these restrictions and allow financial services companies, including reinsurers, to transfer personal data offshore, as provided in the KORUS.

Under Korea’s current interpretation of its law and pursuant the standard consent form provided to insurers by the Korean government, insurance companies are permitted to transfer data to reinsurers located onshore in Korea, but those reinsurers are not permitted to transfer that data offshore, even to an affiliate. Thus, it is unduly difficult and inefficient for U.S. reinsurers to provide reinsurance to Korean insurers.

Korea has recently advised the U.S. government that it plans to change this policy to comply with KORUS, but as of now, reinsurers are still required to localize all personal and sensitive data in Korea. We understand that Korea has indicated that it will revise the standard policyholder consent forms for new business and to change its interpretation of existing consent forms to allow reinsurers to transfer personal data offshore to their headquarters, affiliates, and third-party service providers, as envisioned in the KORUS. We also understand that Korea will...
not extend this new interpretation to transfers to retrocessionaires, even though retrocessions are just reinsurance for reinsurers.

Until these issues are resolved and U.S. companies with reinsurers in Korea are permitted to conduct business freely and as intended by the KORUS, we request that Korea not be granted preferential treatment by being designated as a Qualified Jurisdiction.

We understand that this is a complicated issue and not explicitly encompassed in any “reinsurance” specific regulation, but the effect of Korea’s policies is to deny U.S. reinsurers reciprocal treatment. The Credit for Reinsurance Model Regulation requires U.S. regulators to consider the extent of reciprocal recognition afforded by the non-U.S. jurisdiction to reinsurers licensed and domiciled in the U.S. We are happy to provide additional information and discuss this issue further.

Sincerely,

Robert Woody

Risk Retention Group (E) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Summer National Meeting)
July 26, 2021

The Risk Retention Group (E) Task Force met July 26, 2021. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Karima M. Woods, Vice Chair, represented by Sean O’Donnell (DC); Andrew N. Mais represented by Fenhua Liu (CT); Sharon P. Clark represented by Russell Coy (KY); Troy Downing represented by Steve Matthews (MT); Barbara D. Richardson (NV); Marlene Caride represented by David Wolf (NJ); and Raymond G. Farmer represented by Eva Conley (SC).

1. **Adopted its May 25 Minutes**

The Task Force met May 25 to discuss the results of the 2021 risk retention group (RRG) survey and discuss applicability to RRGs of the 2020 revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450).

Mr. O’Donnell made a motion, seconded by Mr. Matthews, to adopt the Task Force’s May 25 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

Ms. Bigglestone discussed a memorandum that includes the Risk Retention Group (E) Task Force’s 2022 proposed charges, noting the proposed charges are unchanged from the Task Force’s 2021 charges.

Commissioner Richardson made a motion, seconded by Mr. O’Donnell, to adopt the Task Force’s 2022 proposed charges (Attachment Two). The motion passed unanimously.

3. **Discussed the RRG Task List**

Ms. Bigglestone summarize the updated RRG task list. She stated there is a section for items that are 2019 and prior, as well as a section for 2021 results of the RRG survey. While a lot of work has been completed on the items gathered in 2019 and prior, some items may still warrant consideration and, therefore, remain on the list. However, the focus will likely be on the new information learned from the survey to direct where the next impact should be.

Ms. Bigglestone stated that the first issue that came out of the survey is the issue of incomplete and/or inaccurate registration forms. To address this concern, some simple instructions or additional guidance to supplement the registration form may be developed and is one area that could be addressed sooner rather than later. The second concern is limited information available for new RRGs registering in other states. Concerns were raised about how little information is available to a non-domiciliary regulator when it initially starts and may begin registering in other states prior to its first financial statement filings. While it is the domestic regulator’s responsibility to oversee this type of information for an RRG, transparency and communication among state insurance regulators is encouraged. To address this issue, a template with some basic information that could be provided by the domestic regulator in this situation could be drafted and included in the best practices document previously adopted by the Task Force. This is another item the Task Force could address sooner rather than later.

Ms. Bigglestone said the next two items related to training and communication are both ongoing items that will continue to be addressed as opportunities present. One recent opportunity for training was the RRG session at the NAIC Insurance Summit, and an upcoming opportunity for communication is to participate in the regulator licensing forum on Aug. 25.

Ms. Bigglestone said the final item added as a result of the survey relates to licensing best practices for domestic regulators. The survey indicated most states already have processes in place that are similar. However, more research is likely needed and, therefore, may be a good project for a future time.

Mr. O’Donnell and Ms. Richardson agreed that the first two items related to registration forms and better information for new RRGs need more immediate attention, and the Task Force should concentrate on them first. The Task Force agreed to move forward with drafts for these items, and volunteers to help with the drafting process were asked to notify NAIC staff of their interest.
4. Received Updates on Related NAIC and/or Federal Act

Ms. Bigglestone reminded everyone that at the Summer National Meeting, the Financial Regulation Standards and Accreditation (F) Committee will discuss inclusion of the group capital calculation (GCC) as part of the accreditation standards under the Insurance Holding Company Systems standard. The exposure recommends that a GCC be required for every group with an insurer and affiliate. The model allows an exemption for certain multistate insurers, but only if the group files the GCC at least once initially. Comment letters were received related to extending the commissioner’s ability to allow exemptions and, therefore, will be a topic of discussion at the meeting. The next step for the Committee is to expose the recommendation, along with any revisions to the recommendation, for a one-year exposure period beginning Jan. 1, 2022. The Task Force expects to consider the proposal and provide a comment letter regarding application to RRGs during that one-year period.

Chrys Lemon (Vermont Captive Insurance Association—VCIA) stated that there is a lot of interest in this issue as far as the exemptions possible under the GCC and that the VCIA will be submitting some information in anticipation of the comment period.

Joseph Deems (National Risk Retention Association—NRRA) stated the NRRA will be providing some anecdotal examples of items that should be considered as part of the Task Force’s due diligence.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
The Risk Retention Group (E) Task Force met May 25, 2021. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Karima M. Woods, Vice Chair, represented by Sean O’Donnell (DC); Andrew N. Mais represented by Fenhua Liu (CT); Troy Downing represented by Steve Matthews (MT); Russell Toal represented by Leatrice Geckler (NM); and Raymond G. Farmer represented by Daniel Morris (SC).

1. **Adopted its Feb. 24 Minutes**

The Task Force met Feb. 24 to discuss the applicability to risk retention groups (RRGs) of the 2020 revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450).

Mr. O’Donnell made a motion, seconded by Mr. Matthews, to adopt the Task Force’s Feb. 24 minutes *(see NAIC Proceedings – Spring 2021, Risk Retention Group (E) Task Force).* The motion passed unanimously.

2. **Discussed the 2021 RRG Survey Results**

Ms. Bigglestone said that 32 states completed the survey, which was conducted to identify what is working well and what areas the Task Force can improve related to non-domiciliary and domiciliary regulation of RRGs.

Becky Meyer (NAIC) summarized the survey results (Attachment One-B). She noted that the new tools the Task Force developed—including the frequently asked questions (FAQ), best practices, and revisions to the NAIC Uniform Registration Form (registration form)—were well received. However, nine states reported they were not aware of the revised registration form, indicating a potential opportunity for the Task Force to increase communication. There were also several recommendations related to additional training, which could include the registration process, but also general information about RRGs, their structure, and the related risks.

Ms. Bigglestone highlighted a few items in the survey, noting it brought to light some ideas to consider as the Task moves forward. Comments on completion of the registration form were encouraging but also indicated that some additional improvements may be needed. Ms. Bigglestone said she was pleased to know that communication between domiciliary and non-domiciliary states is occurring, and it is important to continue to encourage and improve that communication. She noted there were comments regarding electronic signatures, which is a hot topic for many filings and a topic the Task Force can follow through the work of other groups including work surrounding the Uniform Certificate of Authority Application (UCAA). Ms. Bigglestone noted one concern is the lack of information available to a non-domiciliary state on a newly formed RRG that is registering in that state and does not yet have an Insurer Profile Summary (IPS). She noted there may be room for development of alternative documents to supplement when no IPS is available, such as a summary prepared by the domiciliary state of their recommendation for approval of the license. She also noted that best practices surrounding domestic licensing could be developed to encourage transparency of practices and procedures. Overall, more communication and education of RRGs will be helpful to continue to support the work being done.

Mr. O’Donnell agreed that the survey results were useful and that additional education and awareness are areas the Task Force can consider. There are also ideas the Task Force can explore to add to the FAQ or best practices.

Ms. Bigglestone encouraged Task Force members, interested state insurance regulators and interested parties to review the survey and provide additional comments to NAIC staff. She asked that NAIC staff use the results of the survey to update the task list for discussion during the Task Force’s next meeting.
3. Discussed the Applicability of Revisions to Model #440 and Model #450 Related to the GCC as an Accreditation Standard for RRGs

Ms. Bigglestone provided an update on the revisions to Model #440 and Model #450. The relevant changes relate to applying a group capital calculation (GCC) to groups with at least one insurer and one affiliate and are currently under consideration as an update to the accreditation standards. The Financial Regulation Standards and Accreditation (F) Committee exposed a referral on the revised standard at the Spring National Meeting. The exposure recommends that the GCC applies to all groups with an effective date for accreditation of Jan. 1, 2026. To fulfill the Task Force’s charge to assess whether and how accreditation changes should apply to RRGs, the Task Force will continue to follow the work of the Committee and consider providing a comment letter during the upcoming one-year exposure period. Ms. Bigglestone encouraged states to begin considering the potential implications on their domestic RRGs, including any concerns in applying the GCC, as well as potential benefits of obtaining the GCC for ongoing analysis.

3. Referred an Update to the Quarterly Non-Troubled Company Procedures to the Financial Analysis Solvency Tools (E) Working Group

Ms. Bigglestone stated that the quarterly non-troubled procedures contained within the NAIC Financial Analysis Handbook (Handbook) generate a set of indicators for any company not considered troubled by the domestic regulator. The results of the indicators help the analyst determine the depth of procedures necessary to perform in the first, second and third quarters. Two indicators—prior year risk-based capital (RBC) and prior year trend test—have an exclusion for RRGs. However, as the indicators are applicable to RRGs, the exclusions are no longer necessary. While RRG regulators have added flexibility in applying actions related to RBC, RBC is still calculated and can be a useful indicator when looking at the overall financial position of an RRG. The referral (Attachment One-B) recommends removing the exclusion for RRGs in items B.2 and B.3 of the quarterly non-troubled procedures.

Mr. O’Donnell made a motion, seconded by Mr. Matthews, to send the referral to the Financial Analysis Solvency Tools (E) Working Group. The motion passed unanimously.

5. Discussed Training Initiatives

Ms. Bigglestone stated that one element of the Task Force’s charges is to consider educational opportunities that relate to RRG resources for both domiciliary and non-domiciliary states. One educational opportunity offered to help satisfy this element of the charges is the development of an RRG session at the 2021 Insurance Summit. The session is designed for both domiciliary and non-domiciliary state insurance regulators.

Having no further business, the Risk Retention Group (E) Task Force adjourned.
MEMORANDUM

TO:    Risk Retention Group (E) Task Force
FROM:  NAIC Staff
DATE:  May 17, 2021
RE:    2021 Risk Retention Group Survey Results

In February 2021, the Risk Retention Group (E) Task Force conducted a survey to identify what is working well and what areas the Task Force can improve related to both non-domiciliary and domiciliary regulation of risk retention groups. 32 states responded to the survey.

1) Does your state license domestic risk retention groups?

![Licensed Domestic RRGs](image)

Many states commented that while they have the structure to license an RRG as a traditional insurer, they do not currently have any RRGs licensed in their state.

2) Has your state implemented and provided access to the Best Practices and FAQs for Risk Retention Groups to: 1) - employees in your state responsible for registering or licensing RRGs; 2) - RRGs licensed or registered in your state; 3) - the general public? (referenced documents can be found on the RRGTF webpage under Related Documents [https://content.naic.org/cmte_e_risk_retention_group_tf.htm](https://content.naic.org/cmte_e_risk_retention_group_tf.htm))
Further revisions were in reference to the DOI website, without specific mention of revisions to the Best Practices or FAQ.

3) (Non-Domiciliary Regulators) Has your state implemented the NAIC’s revised Uniform Risk Retention Group Registration Form adopted in 2020 by the C Committee?

Generally, those that don’t intend to implement the updated form indicated they will incorporate the revisions into their state-specific registration forms.
4) (Non-Domiciliary Regulators) Describe your state’s requirements and procedures/processes for the registration of a non-domiciliary RRG in your state.

Most responses referenced the state’s registration form (see question #3 regarding how many states implemented the revised NAIC registration form). Another common theme in the states’ processes was to reach out to the domestic state if needed.

5) (Non-Domiciliary Regulators) As a result of the NAIC’s revised Uniform Risk Retention Group Registration Form, and the Best Practices and FAQ documents, has your state implemented new or additional means of communicating/making inquiries with RRG domiciliary regulators as part of the registration process or annual review process?

<p>| | |</p>
<table>

<tbody>
<tr>
<td>Yes</td>
<td>9</td>
</tr>
<tr>
<td>No</td>
<td>23</td>
</tr>
<tr>
<td>N/A</td>
<td>0</td>
</tr>
</tbody>
</table>

Many no answers commented that they already had procedures to reach out to the domiciliary regulator as needed. One noted they will consider incorporating this communication in the future.

6) (Non-Domiciliary Regulators) Do you believe RRGs applying for registration in your state are properly completing the registration form and providing all required information?

<p>| | |</p>
<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Yes</td>
<td>25</td>
</tr>
<tr>
<td>No</td>
<td>4</td>
</tr>
<tr>
<td>NA</td>
<td>3</td>
</tr>
</tbody>
</table>

States answering “no” generally indicated the forms were complete, but lacked supporting documentation, particularly the plan of operations or feasibility study.
7) (Non-Domiciliary Regulators) When communicating with a domiciliary regulator, did you receive timely responses and were the responses satisfactory?

[Diagram showing Timely / Satisfactory Responses]

8) (Domiciliary Regulators) Have you seen an increase in communication received from non-domiciliary states regarding RRGs?

[Diagram showing Increase in Communication Received from Non-domiciliary States]

*Respondents who reported communication was unchanged generally noted they already received communication and that communication continues.*
9) (Domiciliary Regulators) If an RRG becomes troubled or potentially troubled do you notify the states it is registered in?

<p>| | |</p>
<table>
<thead>
<tr>

<tr>
<td>Unsure</td>
<td>0</td>
</tr>
<tr>
<td>NA</td>
<td>20</td>
</tr>
</tbody>
</table>

RRGs are subject to the same accreditation requirements as traditional insurers regarding troubled companies. This includes a requirement to notify other states of a troubled or potentially troubled company.

10) (Domiciliary Regulators) If an RRG is no longer eligible to write in other states (voluntary or involuntary liquidation, regulatory action, etc.) do you notify the states it is registered in?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>

</tr>
<tr>
<td>No</td>
<td>0</td>
</tr>
<tr>
<td>Unsure</td>
<td>1</td>
</tr>
<tr>
<td>NA</td>
<td>20</td>
</tr>
</tbody>
</table>

All domiciliary RRG states noted that they do provide communication for an involuntary action, although communications are often informal. The unsure response specified a voluntary withdrawal may not prompt communication, but involuntary action will always prompt communication.

11) What areas of the updated tools (NAIC’s revised Uniform Risk Retention Group Registration Form, and the Best Practices and FAQ documents) do you find most beneficial in your regulatory role (what is working well)?

There was an overall positive response to the new tools including improved communication (better understanding of non-domiciliary vs domiciliary role), comments that the new registration form is more useful, and comments about improved accessibility of the information that the new tools provide.

12) What parts of the registration process for non-domestic RRGs do you feel need further clarification, improvement, expanded guidance (what is not working well)?

Following is a summary of the suggestions regarding the registration of non-domiciliary RRGs.

- Consider a format for electronic signatures.
- Consider asking what other states the RRG is registered in and if there are any issues.
- Improve awareness as it seems some non-domestic states still require approval prior to conducting business similar to the UCAA application and contrary to the Liability Risk Retention Act (LRRA).
- Continue improving communication, including resolving Issues receiving initial capitalization information from domestic regulator.
- **RRGs controlled by MGAs are known to be especially risky; consider additional safeguards for these types of RRGs.**
- **One challenge is that newly formed RRGs often don’t have financial information available when registering (including not having an Insurer Profile Summary—IPS) and the projections or business plan often do not address all regulatory concerns in the depth an IPS would.**
- **Response times from domiciliary states should be timely.**
- **Registration forms, even if complete, can lack clarity in certain areas such as commonality of risk among members, who owns the RRG, identity of members of corporate subsidiaries or corporate entities (as members of the RRG).**

13) **Do you have suggestions for the NAIC RRG Task Force to consider focusing on to keep moving forward with improvements or additional tools and resources (for example – communication considerations, common problem areas, information gaps with other states or the industry, etc.)?**

Following is a summary of suggested next steps:
- **Increased communication via webinars, education sessions, panel discussions, etc.**
- **Increased education on LRRA – especially to non-domiciliary states.**
- **Communicate licensure stipulations and requirements of the RRG to registered states – include licensure stipulations, capital requirements, etc. on the registration form to reduce need to reach out to domiciliary state.**
- **Consider best practices to reduce differences in regulatory response when an RRG is having financial difficulty.**

14) **What other topics should the NAIC RRG Task Force focus on to further improve and bring more uniformity to the licensing and registration processes, improve the ongoing regulation of RRGs, and/or further improve the understanding of RRGs?**

Responses often focused on more education, including in the area of licensing and a need to reach not only domiciliary states, but also non-domiciliary states. In addition to education, there were comments about how to provide better financial information to non-domiciliary states when registering as a new company or a company with very little history, reviewing the Model Risk Retention Act (#705) to ensure consistency with LRRA, and the ability to electronically file a registration statement with multiple states.
15) Would individuals from your state participate if a webinar or other training is offered covering RRG registration, licensing or other RRG hot topics?

![Training Opportunity chart]

The comments indicated some awareness of the current NAIC online RRG course, but noted they would take advantage of other training as well. One area of training that is currently lacking is training on risks specific to RRGs for both examiners and analysts responsible for domiciliary state oversight.

16) What suggestions do you have to best disseminate information on RRG regulation to state regulators (both domiciliary and non-domiciliary)?

The most common recommendations were:
- Email notifications
- Webinars

Other suggestions include:
- Maintain state contact list (note this is already included in the RRPG Handbook, but this recommendation demonstrates it may not be widely known)
- NAIC newsletter updates to regulators
- Ensure inclusion of product regulation staff
- Encourage at least one rep from each state to follow the RRGT (or at least be on the distribution list)
- Education efforts should include outreach and topics specific to non-domiciliary regulators
- In addition to notification by the domestic state when an RRG is troubled or potentially troubled, encourage conference calls with the states where the RRG is registered
- Create something similar to the UCAA specific to RRG primary licensing
17) Do you utilize the NAIC Risk Retention and Purchasing Group Handbook?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>23</td>
</tr>
<tr>
<td>No</td>
<td>9</td>
</tr>
</tbody>
</table>

18) Do you have suggestions for updating and improving the NAIC Risk Retention and Purchasing Group Handbook?

Improvement suggestions include:
- more guidance on RRG’s ownership structures, corporate structures and the different ways an RRG can define members or structure their membership
- include the FAQ and Best Practices documents (or reference to these documents)
- discuss the impact of cyber risk on the utilization of service providers
- more guidance on entrepreneurial RRGs including case studies/steps to evaluate holding companies and/or influence of non-owner parties in these types of RRGs

19) (Domiciliary Regulators) Do you utilize the UCAA for licensing new Risk Retention Groups?

<p>| | |</p>
<table>
<thead>
<tr>

<td>6</td>
</tr>
<tr>
<td>Review of feasibility study, including financial projections</td>
<td>6</td>
</tr>
<tr>
<td>Require the RRG to list the states the RRG proposes to register in</td>
<td>6</td>
</tr>
<tr>
<td>Require the RRG to include a description of any permitted practice requests</td>
<td>5</td>
</tr>
<tr>
<td>Review of the reinsurance program and creditworthiness of proposed reinsurers</td>
<td>6</td>
</tr>
<tr>
<td>Review of the investment policy and custodial arrangement/agreement</td>
<td>6</td>
</tr>
<tr>
<td>Review of the capital structure, and if applicable, form of surplus note or letter of credit</td>
<td>6</td>
</tr>
<tr>
<td>Review of ownership (including financial information of owners/members) and form of shareholder/subscriber agreements</td>
<td>6</td>
</tr>
<tr>
<td>Review of rates, policy forms and underwriting guidelines, and if applicable, comparison of rates in states proposed to operate in</td>
<td>6</td>
</tr>
<tr>
<td>Review of risk mitigation and loss prevention measures</td>
<td>5</td>
</tr>
<tr>
<td>Review of prospective risks</td>
<td>5</td>
</tr>
<tr>
<td>Review for compliance with the Federal Liability Risk Retention Act</td>
<td>6</td>
</tr>
<tr>
<td>Review for compliance with holding company regulations</td>
<td>6</td>
</tr>
<tr>
<td>Review of marketing materials</td>
<td>4</td>
</tr>
</tbody>
</table>

Practices appear generally consistent across all states that do not utilize the UCAA. Of the few deviations, one state indicated formal background checks are not currently required (but they would consider doing them if needed), but they do require and review biographical affidavits for all proposed directors and officers. Another deviation noted that they require a feasibility study by a credentialed actuary, but not a review.
MEMORANDUM

TO: Financial Analysis Solvency Tools (E) Working Group

FROM: Risk Retention Group (E) Task Force

DATE: May 25, 2021

RE: Quarterly Quantitative Assessment of Non-Troubled Insurers

Revisions to the NAIC Financial Analysis Handbook (the Handbook) were adopted in 2020 to better incorporate RRG-specific procedures within the risk assessment worksheet and to remove outdated guidance that risk-based capital (RBC) is not applicable for risk retention groups (RRGs). Following these changes, further review of the Handbook identified the Quarterly Quantitative Assessment of Non-Troubled Insurers as another area to consider updates related to RRGs. This section of the Handbook, which contains indicators to assist regulators in determining the need and extent of quarterly procedures, excludes RRGs from two indicators within the overall assessment. The two indicators are (a) prior year risk-based capital (RBC) less than 250% and (b) prior year triggered the RBC Trend Test.

Because RBC is calculated for RRGs and can be a useful indicator when looking at the financial position of an RRG, the Task Force recommends that this exclusion is no longer necessary and should be removed for both indicators. The Task Force further observed that removing the exclusion aligns with current regulatory practices for RRGs, which take RBC into consideration in the ongoing analysis process.

The Task Force requests that the Working Group consider the proposed revisions shown tracked on the attached excerpt from the Analysis Handbook to remove the exclusion for RRGs from the applicable indicators.

If there are any questions regarding the recommendation, please feel free to contact Sandy Bigglestone, Chair of the Risk Retention Group (E) Task Force, or NAIC staff support (Becky Meyer) for clarification. Thank you for your consideration.

G:\ACCREDITATION\Data\RRGTF Emails\Conference Calls\Troubled Company Worksheet and RRGs Referral.docx
III.A.3. Risk Assessment (All Statement Types) – Quarterly Quantitative Assessment of Non-Troubled Insurers

Quantitative Risk Assessment

A. Non-troubled insurers will receive the following automated review each quarter. Troubled insurers will receive a full risk assessment analysis each quarter.

Each quarter, non-troubled insurers should be assessed based on the results of the following automated system. Based on the results of the automated system, you may need to proceed with a full risk assessment analysis. Also consider any other information that may not be reflected in the quarterly statement but may be known or noted in the analysis file or Insurer Profile Summary (IPS), which could impact the company on a prospective basis prior to relying solely on an automated review.

B. If any of the following criteria is met, the insurer may be assigned a full quarterly risk assessment analysis:
   1. The insurer is a troubled insurer
   2. Prior year risk-based capital (RBC) is less than 250% \((\text{excluding title insurers and risk-retention-groups RRGs})\) (ST)
   3. Prior year triggered the RBC Trend Test \((\text{excluding title insurers and RRGs})\) (ST)
   4. Scoring System result greater than or equal to (excluding title insurers):
      - 450 for property/casualty (P/C) insurers
      - 350 for life or fraternal insurers
      - 300 for accidental and health (A&H) insurers
      - 325 for health entities

C. Based on the results of the automated system calculations, a full quarterly risk assessment analysis may be completed if the insurer has the following number of “yes” responses from the automated calculations:
   1. Four or more for P/C insurers, title insurers and health entities or
   2. Three or more for life/A&H/fraternal insurers

Special Notes: Any automated results in D where the denominator is 0 return a “yes” response.

A default “no” response will be returned for insurers with no net retention for automated results #8 and #9.

For companies that have not filed a prior year-end or quarterly statement (e.g., either a new start-up insurer or exempt from filing), all responses in section D will default to a “yes.” In this scenario, it is recommended the analyst perform a full quarterly risk assessment analysis.

D. Automated system calculations:
   1. Are unassigned funds negative? (ST)
   2. Has surplus/capital and surplus (based on business type) increased ≥ 12.5% (for first quarter), 25% (for second quarter), or 37.5% (for third quarter)? (ST)
   3. Has surplus/capital and surplus (based on business type) decreased ≥ 5% (for first quarter), 10% (for second quarter), or 15% (for third quarter)? (ST)
III.A.3. Risk Assessment (All Statement Types) – Quarterly Quantitative Assessment of Non-Troubled Insurers

4. Has any individual asset category that is greater than 5% of surplus/capital and surplus (based on business type) changed by more than +/- 10% from the prior year-end? (CR, MK, LQ)

5. Has any individual liability category that is greater than 5% of surplus/capital and surplus (based on business type) changed by more than +/- 10% from the prior year-end? (RV, OP, ST)

6. Are affiliated investments greater than or equal to 75% of surplus/capital and surplus (based on business type), OR unrealized capital loss more than -15% of prior year-end surplus/capital and surplus (based on business type)? (CR, LQ)

7. Does the net loss exceed 20% of surplus/capital and surplus (based on business type)? (OP)

8. For property/casualty insurers, title insurers and health entities, is the combined ratio greater than or equal to 100%? (PR/UW, OP)

9. Has net premiums written changed by more than +/- 5% (for first quarter), +/- 10% (for second quarter), or +/- 15% (for third quarter) from the prior year-to-date? (PR/UW)

Follow-up Analysis

If any of the following supplemental filings, information or analyses are received during the quarter, review and assess any risks, and document material risks in the IPS.

- Management Discussion & Analysis (MD&A)
- Audited Financial Statement Report
- Impact of the group on the domestic insurer from the analysis of the Holding Company Analysis (as completed by or received from the lead state)
- Risks related to the insurer from the analysis of the ORSA Summary Report Analysis (as completed by or received from the lead state)
- Business Plan and Projections
- Communications from the insurer, other departments or other regulators

Recommendation for Further Analysis

Does the automated system indicate a full quarterly risk assessment analysis should be performed?

- If “yes,” complete a full risk assessment analysis, or if a full risk assessment analysis was not completed, justify and document the reason(s) on the Quarterly Procedures for Non-Troubled Insurers.
- If “no,” no further actions are required.
2022 Proposed Charges

RISK RETENTION GROUP (E) TASK FORCE

The mission of the Risk Retention Group (E) Task Force is to stay apprised of the work of other NAIC groups as it relates to financial solvency regulation and the NAIC Financial Regulation Standards and Accreditation Program. The Task Force may make referrals to the Financial Regulation Standards and Accreditation (F) Committee and/or other NAIC groups, as deemed appropriate.

Ongoing Support of NAIC Programs, Products or Services

1. The Risk Retention Group (E) Task Force will:
   A. Monitor and evaluate the work of other NAIC committees, task forces and working groups related to risk retention groups (RRGs). Specifically, if any of these actions affect the NAIC Financial Regulation and Accreditation Standards Program, assess whether and/or how the changes should apply to RRGs and their affiliates.
   B. Monitor and analyze federal actions, including any U.S. Government Accountability Office (GAO) reports. Consider any action necessary as a result of federal activity.
   C. Monitor the impacts of recent tools and resources made available to domiciliary and non-domiciliary state insurance regulators pertaining to RRGs. Consider whether additional action is necessary, including educational opportunities, updating resources and further clarifications.

   Dated Sept. 10, 2020 (Attachment Seven) .......................................................................................................... 10-1315
The Valuation of Securities (E) Task Force met July 15, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Chut Tee (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Doug Slape represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Jim Everett (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its May 24 and Spring National Meeting Minutes**

Mr. Fry said the Task Force met May 24 and took the following action: 1) discussed comments received and adopted proposed amendments to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)* for the following: a) require the filing of private rating letter rationale reports; and b) permit filing exemption (FE) for credit tenant loan (CTL) and ground lease financing transactions; and 2) received and discussed the Securities Valuation Office (SVO) referral response to the Statutory Accounting Principles (E) Working Group on CTLs.

Mr. Thomas made a motion, seconded by Ms. Clements, to adopt the Task Force’s May 24 (Attachment One) and March 22 (see NAIC Proceedings – Spring 2021, Valuation of Securities (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

Mr. Fry said the Task Force’s 2022 proposed charges remain unchanged from 2021.

Ms. Doggett made a motion, seconded by Mr. Kozak, to adopt the Task Force’s 2022 proposed charges (Attachment Two). The motion passed unanimously.

3. **Adopted a P&P Manual Amendment to Add Additional Instructions to the Review of Funds**

Mr. Fry said the next agenda item is to discuss and consider for adoption an amendment to the P&P Manual to add additional instructions to review of funds. The original amendment was received by the Task Force during the Spring National Meeting and exposed for a 45-day public comment period ending May 6. This updated amendment reflects technical comments and recommendations that were received from interested parties (Attachment Three). The revised amendment was received and approved for exposure through a Task Force e-vote on June 1 and exposed for a 30-day public comment period ending July 1. There was one supportive joint comment letter received on the updated amendment from the American Council of Life Insurers (ACLI), the North American Securities Valuation Association (NASVA), and the Private Placement Investors Association (PPIA).

Marc Perlman (NAIC) said the new proposal would adhere much more closely than the previous one to Rule 18f-4 under the U.S. Securities and Exchange Commission’s (SEC) Investment Company Act of 1940 related to the use of derivatives by registered investment companies, including funds, which the SEC adopted in October 2020. Unlike the previous amendment, which had two separate tests for derivatives depending on the NAIC Fund List on which a fund is listed, this amendment would create a single test. Pursuant to the new proposal, a fund’s exposure to: 1) derivatives under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payments or otherwise; 2) short sale borrowings; and 3) reverse repurchase agreements or similar financing would be limited to 10% of the fund’s net assets in normal market conditions. Exposure would be calculated based on the gross notional amounts of derivatives, the value of assets sold short for short sale borrowings, and the proceeds received by the fund but not repaid for reverse repurchase agreements. Consistent with the SEC Rule, interest rate derivatives and option contracts exposure could be calculated with other defined methods consistent with market practice.
with the rule, certain currency and interest rate derivatives that hedge currency or interest rate risk associated with one or more specific equity or fixed-income investments of the fund would be excluded from the 10% exposure calculation.

One difference between this proposal and the SEC Rule is that the P&P Manual’s methodology requires a look-through assessment of all funds which, in turn, includes a requirement that a fund “predominantly hold” bonds or preferred stock, as applicable. As defined in the P&P Manual, “predominantly hold” means that a fund holds at least 80% of its assets in bonds or preferred stock, depending on the type of fund, in normal market conditions. This existing requirement, therefore, limits total derivatives, short sale borrowing, and reverse repurchase agreement exposure in any fund to 20%, exclusive of the excluded currency and interest rate derivatives. The amendment proposes calculating that exposure as previously explained, using gross notional amount for the derivatives. However, for derivatives under which a fund is not or a fund shall not be required to make any future payment or delivery of cash or other assets, exposure would be calculated based on the derivative’s market value, a less conservative measure than gross notional, due to diminished risk of loss to the fund. These derivatives would include, for example, certain options pursuant to which the fund would have no possible future payment obligation following the initial premium payment. The Credit Risk Assessment portion of the existing methodology would also be updated to include a calculation of derivative exposure and, if analytically appropriate, the inclusion of derivatives in the weighted average rating factor (WARF) analysis. Derivative documentation can be complex and its review time-consuming. To expedite reviews of funds with derivatives while ensuring that the fund does not breach the proposed exposure thresholds, the proposal includes a new filing requirement to include certain derivatives information in the schedule of portfolio securities and assets, which is provided to the SVO for its review. Such additional information would include: 1) derivative type; 2) whether the derivative will require the fund to make a future payment or delivery of cash or other assets; 3) whether the derivative is an “excluded derivative transaction;” 4) the counterparty credit rating; and 5) the derivative exposure and how it is calculated. The expectation is that a complete and accurate summary of derivatives in the schedule will prevent the need for the SVO to review derivative legal documentation, but the SVO will reserve the right to request it if it deems it necessary.

Based on comments received from interested parties, the SVO removed the initially proposed management assessment from this amendment. Interested parties expressed concern that the management assessment could further weaken market clarity and predictability.

Mr. Fry said this will add a lot of transparency and understanding of the use of derivatives, and it will be a welcome addition to the P&P Manual.

Mike Reis, representing the ACLI, the NASVA, and the PPiA, said this provides clarity. He said industry appreciates the thought that went into the proposal and fully supports the exposure. It serves multiple purposes that are beneficial to everyone. One thing that was highlighted in the comment letter was that for some of the funds that get a designation, the risk-based capital (RBC) does not flow through from that designation, specifically, those funds in Statement of Statutory Accounting Principles (SSAP) No. 30R—Unaffiliated Common Stock. There has been talk in the past of potentially getting the RBC to be reflective of the NAIC designation on those funds. That change may have to go to the Capital Adequacy (E) Task Force and industry is certainly supportive of that change. There are certain things happening in the bond project at the Statutory Accounting Principles (E) Working Group, and there may be a population of other securities that would also benefit from some type of look through for RBC treatment as well.

Eric Hovey (Payden & Rygel) said Payden & Rygel had commented on the earlier version and appreciates that the input was taken, supports the new version, and appreciates the continued movement forward in looking at ways to treat bond mutual funds with look through for capital treatment more aligned to the holdings of securities. Also, the SEC rule that is being mentioned here is not in force until August 2022 for the investment industry. There is a little bit of timing mismatch as far as the industry coming to terms exactly with what will be done for that rule versus this proposal being put forth today.

Ms. Mears made a motion, seconded by Mr. Milquet, to adopt the updated proposed amendment to the P&P Manual to add additional instructions to the review of funds (Attachment Four). The motion passed unanimously.

4. Adopted an Amendment to the P&P Manual to Permit FE for CTLs and Ground Lease Financing Transactions.

Mr. Fry said the next item on the agenda is to discuss and consider for adoption an amendment to the P&P Manual to permit FE for CTLs and ground lease financing transactions. This is a change from the existing policy where these transactions had to be filed with the SVO for a legal, structure and credit assessment and only allow the residual asset exposure up to 5% of the original loan amount. This amendment was exposed on May 28 for a 30-day public comment period ending June 28. The Task Force has received three comment letters (Attachment Five).
Charles A. Therriault (NAIC) said the Statutory Accounting Principles (E) Working Group chairs proposed updating the definition of CTL and ground lease financing (GLF) transactions in the P&P Manual to limit them to only those investments that would meet the definition of a mortgage loan under SSAP No. 37—Mortgage Loans. Investments that are securities (which are expressly excluded from SSAP No. 37) that fall under the definition of SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities would no longer meet the definition of a CTL and ground lease financing transactions in the P&P Manual and would, therefore, become eligible for FE, which includes private rating letters. The SVO can still review these transactions and refer to the CTL and GLF methodologies for any unrated security that is CTL-like or ground lease financing-like that requires filing with the SVO, as would any other unrated security. If this amendment is adopted by the Task Force, the SVO will look to see if there are any rated CTL or GLF transactions in the VISION application, remove the SVO assigned NAIC designation from them, and permit them to flow through FE.

Mr. Fry said that originally this was created for transactions that were mortgage loans that wanted to be on Schedule D, and over time, these types of structures made their way into being securities. The policy in the past has been that even if it was a security, it still had to be filed with the SVO and looked at for those characteristics. The Task Force recognizes that there are other securities that do not have to go through this type of criteria. There is also the SSAP No. 43R—Loan-Backed and Structured Securities project at the Statutory Accounting Principles (E) Working Group that will complement this in the future if it gets adopted.

John Garrison (Lease-Backed Securities Working Group) said the Lease-Backed Securities Working Group appreciates the consideration and thought that went into this proposal.

Mike Reese (Northwestern Mutual), representing the ACLI, NASVA and PPIA, said this has had a lot of discussion over the past year. Industry is happy that these securities will receive similar treatment to other securities, and this change dovetails with the SSAP No. 43R—Loan-Backed and Structured Securities project at the Statutory Accounting Principles (E) Working Group.

Mr. Thomas made a motion, seconded by Mr. Fletcher, to adopt the proposed amendment to the P&P Manual permitting securities similar to CTL and GLF transactions to use NAIC credit rating provider (CRP) ratings through the FE policy (Attachment Six). The motion passed unanimously.

5. Adopted Guidance for WCFIs Consistent with the Statutory Accounting Principles (E) Working Group’s Adopted of Changes to SSAP No. 105R and Exposed an Amendment Permitting the SVO to Rely Upon the Unrated Subsidiaries of a CRP-Rated Parent Entity for Only WCFIs

Mr. Fry said the next item on the agenda deals with working capital finance investments (WCFIs). This was last exposed on Nov. 18, 2020, during the Fall National Meeting. There are two separate amendments. One amendment deals with the changes that the Statutory Accounting Principles (E) Working Group made to SSAP No. 105R—Working Capital Finance Investments and brings the P&P Manual into alignment with those changes. No comments were received on those changes. The second amendment deals with unrated subsidiaries, and it was exposed in November too but there were comments and updates made to that amendment. It is likely that the second amendment will be re-exposed and also referred to the Statutory Accounting Principles (E) Working Group.

Marc Perlman (NAIC) said the first WCFI amendment the SVO is proposing is unchanged since it was exposed in November 2020. It is intended to remove from the P&P Manual inconsistencies that arose when SSAP No. 105R was revised.

Under the second proposed WCFI amendment, when a WCFI obligor is unrated, cannot be designated by the SVO and is not guaranteed by its parent, the Task Force would direct the SVO to rely on the rating or NAIC designation of an obligor’s parent based on its implied support. With this second iteration of the policy amendment, the SVO is recommending certain changes.

First, the initial test for whether the SVO should be able to rely on the parent’s rating required that the obligor constitute a “substantial portion of its parent’s operations representing at least 25% or greater of the parent entity’s assets, revenue and net income.” The SVO proposes removing this requirement since it was deemed too restrictive and could prevent, for example, a 5% subsidiary, which manufactures a crucial component for its parent’s product, from benefiting from the policy. Additionally, interested parties explained that they did not think it would always be possible to determine the percentage of the parent’s operations because it is not always clear from the parent’s financial statements, and the subsidiary often lacks financial statements.

Second, the initial proposal allowed the SVO to notch the designation down from that of the parent based on several subjective factors related to the parent/obligor relationship. The notching provisions were removed so that, according to the policy, the
SVO will only imply the parent’s rating on the obligor without notching. However, under the policy, the SVO expressly retains its right, in its sole analytic discretion, to notch the designation or choose not to assign a designation to a WCFI program for reasons unrelated to the relationship between the obligor and its parent.

Lastly, there is one clerical correction to the amendment. Where it currently references “eligible NAIC CRP rating” throughout, the word “eligible” was removed because an eligible NAIC CRP credit rating specifically refers in the P&P Manual to ratings assigned to securities eligible for Schedule D reporting. Since the rating on a parent could be an issuer rather than an issue rating, it might not meet the definition of “eligible NAIC CRP credit rating.”

Mr. Fry said it would be easiest to consider the two amendments separately. The first amendment brings the P&P Manual into alignment with SSAP No. 105R. It has been previously exposed, and Mr. Fry asked if the ACLI, whose comment letter discussed both amendments, would like to specifically address this first amendment,

Mike Monahan (ACLI) said that the ACLI supports amending the language to agree with SSAP No. 105R and moving forward with the first amendment.

Mr. Fry ask Mr. Therriault for the SVO’s recommendation. He recommended adoption of the first amendment to align the P&P Manual to the adopted changes with SSAP No. 105R. Mr. Monahan said the ACLI supports that recommendation.

Mr. Fry said that the second amendment deals with the unrated subsidiary piece and asked if there were any comments on it. Mr. Monahan said the ACLI is supportive of what the Task Force has done and will comment on the exposure. He said it is a safe asset class for large insurers.

Mr. Everett asked if industry might be able to address in their comments some questions he had, and that is that SSAP No. 105R now requires an obligor rating, and the parent will not be the obligor. The SVO indicated that a methodology for these kinds of things is lacking and, in light of the Greensill supply chain financing situation, it has become clear that not even generally accepted accounting principles (GAAP) has any standards for supplier finance programs. Standard & Poor’s (S&P) just had a seminar and released a research paper on supply chain finance disruptions. Mr. Everett said if possible, if industry could distinguish the situation from Greensill and address the standards issue in their comment letter, it would be appreciated.

Mr. Monahan said they are on top of what happened with Greensill and have been working with the Financial Standards Accounting Board (FASB) on disclosures so that it is more transparent to users of financial statements.

Mr. Thomas made a motion, seconded by Ms. Doggett, to adopt proposed amendments to the P&P Manual to conform the WCFI guidance to reflect the changes adopted by the Statutory Accounting Principles (E) Working Group to SSAP No. 105R (Attachment Seven). The motion passed unanimously.

The Task Force also directed the SVO to expose the amendment to direct the SVO to rely upon the unrated subsidiaries of a CRP rated parent entity for only WCFI for a 30-day public comment period and refer it to the Statutory Accounting Principles (E) Working Group for comment.

6. Received a Report on Projects Before the Statutory Accounting Principles (E) Working Group

Julie Gann (NAIC) said the Statutory Accounting Principles (E) Working Group has three meetings scheduled for the near future. The Working Group plans to meet July 29 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings, to hear state insurance regulator reports regarding financial statement information from the 2020 financial filings. The Statutory Accounting Principles (E) Working Group usually does that in conjunction with the national meetings, but since those have been hybrid sessions, there has not been the opportunity to do so. Any state insurance regulator who would like to have information on any disclosure can contact NAIC staff. There are a handful of items planned for presentation with regard to information that the Working Group has gathered from the financial statements. Some examples are the Federal Home Loan Bank (FHLB) disclosure, the SVO-identified exchange-traded funds (ETFs), the new cash pooling, and permitted practices. Ms. Gann said if anyone wants anything specific, let NAIC staff know.

Additionally, the Working Group plans to meet Aug. 10 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings, to discuss comments received on the Schedule -D project and on the SSAP No. 97—Investments in Subsidiaries, Controlled and Affiliated Entities exposure. It also plans to meet Aug. 26 to hear comments on proposed items.
Ms. Gann said with the action taken today on CTLs, Interpretation (INT) 2010 will be reviewed. It formally expires Oct. 1, but with the action that occurred today, that interpretation may no longer be needed. She said the Statutory Accounting Principles (E) Working Group will look at that and hopes to have an update for its Aug. 26 meeting.

7. Discussed Other Matters

Mr. Fry said there is an update from Eric Kolchinsky (NAIC) on updating the structured securities reporting for the legacy and non-legacy changes adopted this spring along with planning for the recently adopted updated RBC factors.

Mr. Kolchinsky said there are two broad categories of updates. The first is the announcement of the selection for the financial modelling request for proposal (RFP). It was a long and tough RFP, and the Structured Securities Group (SSG) selected BlackRock Solutions. There were some excellent bidders, and it was an interesting RFP. Mr. Kolchinsky said the SSG looks forward to working with BlackRock Solutions on many of the issues that are going to be discussed next.

Mr. Kolchinsky said the second issue is that the SSG has a number of overlapping changes that are happening with modeled securities: 1) there is BlackRock Solutions, a vendor that has worked with the SSG before; 2) there is the change from breakpoints to designations for non-legacy securities that requires a technical change; 3) there is through-the-cycle modeling; and 4) there are the changes to the RBC factors from Capital Adequacy (E) Task Force. The SSG and the SVO received a letter from the ACLI discussing many of these issues on financially modeled securities that the SSG will look at with the SVO. The SSG staff are in general agreement with the ACLI letter as to how to prioritize the rollout of all these changes and appreciates the letter in general. The letter has not been exposed yet. There are some issues that are short on details that the SSG needs to work out such as implementation of the zero-loss framework. Mr. Kolchinsky said the SSG may come back to the Task Force to discuss these issues, and there may be a need for some minor changes to the P&P Manual. The biggest issues is moving the implementation of both the breakpoints and on the new 20 designation categories using the new RBC factors into 2022. The rationale for moving this into 2022 is that it will give the SSG the opportunity to think through these changes and bring it to Valuation of Securities (E) Task Force for approval instead of rushing it in for year-end 2021, given all these other changes.

Francisco Paez (MetLife) said, there are a number of changes that are happening on the RBC front, not only on the bond side, but also in other parts of the business, and structured securities is part of that equation. It was important to keep that in consideration. There are changes that industry hoped would get done on the modelled security side to address the issues encountered last year. There is also an operational component, and one thing that industry wanted to make sure of is that things are managed in a way that do not lend themselves to any kind of last-minute operational complexities or risks that are not necessary. The letter recommends prioritizing the orderly adoption of these changes and makes suggestions in terms of which changes are most meaningful to industry to achieve some balance.

Mr. Fry asked if when mentioning year-end 2021 and the 20 designations, is this considering only the six designations for this year-end and then going with 20 designations for next year, 2022.

Eric Kolchinsky said that is correct. He said what would occur is that the reporting would still be as currently defined in the P&P Manual. There is already a provision for reporting the NAIC designation categories. In terms of calculating the breakpoints between the layers, as well as for the designations, that is a process the SSG would like to do on a more interactive basis with the Valuation of Securities (E) Task Force and not do it hastily, considering everything else that needs to be done for this year-end. He said the SSG would also like to run a few more scenarios, given the extra granularity that will be seen now in the 20 versus the six designations. SSG staff are concerned that having just four scenarios will force the results to bunch up in just a few categories, which understates or overstates the risk to the securities. SSG staff would like to take the year of 2022 to discuss these issues with Task Force and report for the current year with the existing designation categories.

Mr. Paez said what was done last year in terms of mapping of securities is a little bit of a road map that could be used again this year. That way, there can be six categories but still mapping on to the new designation categories where they map to the middle of the designation category. The only point that is going to be important for industry is that those bonds that meet the highest quality definition can make it to the 1.A category. There may be a need for enhancements to the scenarios in order to capture all the granularity. Thinking specifically about this year-end and the path that was used last year could be replicable this year. Mr. Paez said all that would be needed to do is figure out a way to address that 1A category, which, in the absence of more detail, the methodology for the zero loss could be that indicator that allows the mapping to the 1.A category. It should capture really what it is supposed to capture because most of those securities are going to be AAA securities.

Eric Kolchinsky said, in general, SSG staff agreed, but they need to work through it and the operational concerns. The new breakpoint file will need 19 columns instead of five. Vendors on the industry side will need to figure out how to take in the
new files, and not having to rush is a huge benefit. Mr. Therriault said the SVO will expose the ACLI comment letter on the Task Force web page.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

G:\SECVAL\DATA\Vos-tf\Meetings\2021\07 July SUMMER NATIONAL MEETING\2021 Summer National Meeting\Meeting Minutes \VOSTF 2021 Summer National Meeting Minutes .docx
The Valuation of Securities (E) Task Force met May 24, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan and Ray Spudeck (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Clara Lindley-Myers represented by Debbie Doggett (MO); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Nakia Reid and John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Doug Slape represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by David Smith (VA); Mike Kreidler represented by John Jacobson (WA); and Mark Afable represented by Randy Milquet (WI). Also participating was: Dale Bruggeman (OH).

1. **Adopted an Amendment to the P&P Manual to Require the Filing of a Private Rating Letter Rationale Report**

Mr. Fry said the first item on the agenda is to discuss comments and updates to a proposed amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to require the filing of a private rating analysis report. The Task Force has discussed this amendment several times, most recently at the Spring National Meeting. The Securities Valuation Office (SVO) staff has been working closely with the American Council of Life Insurers (ACLI), the North American Securities Valuation Association (NASVA), and the Private Placement Investors Association (PPIA) to address concerns regarding confidentiality restrictions and potential operational issues since this amendment was first exposed at the 2020 Fall National Meeting on Nov. 18, 2020. As reflected in their supportive joint comment letter (Attachment One-A), this collaboration has resulted in the amendment before the Task Force today that addresses those outstanding issues. The amendment requires the filing of private rating letter rationale reports beginning Jan. 1, 2022. There is a provision for deferring the submission for private letter rating securities in certain situations. The Task Force was informed of a typo in the last section of paragraph 22; the word “Filing Exception” should be changed to “Filing Exemption.” Mr. Fry thanked industry and staff on their close collaboration on developing this amendment.

Sasha Kamper, representing the ACLI, the PPIA and the NASVA, said industry's concerns with the Bespoke Securities proposal was always twofold. Industry wanted to provide the transparency that state insurance regulators are asking for so they can understand what insurers are investing in and minimize the amount of disruption that any sort of change could potentially cause in capital markets. The private placement market not only is an opportunity to provide incremental yield to insurers at a time when interest rates are quite low, but it also provides incremental downside protection through financial covenants and collateral packages in many of these deals. The U.S. private placement market is a very important market for several insurers and something to preserve. Industry believes that this exposure really strikes that right balance. There was extensive work over the last several months to get through some of the operational details and get the timing right in this proposal. The proposal is somewhat retroactive, and the first stage takes place for securities issued beginning Jan. 1, 2018. It was important not to expect rating agencies to go back and reopen commercial contracts with borrowers and need to amend the terms of those contracts. The SVO staff were very understanding of that and worked to accommodate these concerns; if there was a ratings rationale and it was allowed to be shared, if required to do so, they would not expect insurers and borrowers to renegotiate deals that were done a few years ago. Industry also worked with the SVO staff to explain that certain rating agencies, even some of the larger more established rating agencies, do less surveillance work on certain types of structured securities. There will be an initial study and publication put forth that describes the transactions and the ratings rationale in great detail. If nothing changes with the structure and things are performing about as expected, the annual surveillance reports are light. This is true, both on the public and private side. The SVO staff understood that and were only looking for similar work product to what is produced in the public sector. Industry believes this is something that all the rating agencies should be able to comply with, and they are being given enough time to put things in place. There are still some operational details to work out with the SVO, and the rating agencies specifically, about the delivery mechanism, but these ratings rationales will be provided to the SVO.

Ms. Doggett made a motion, seconded by Mr. Thomas, to adopt the amendment to the P&P Manual to require the filing of private rating letter rationale reports. The motion passed unanimously.
2. Discuss and Receive an Amendment to the P&P Manual to Permit FE for CTLs and GLF Transactions

Mr. Fry said the next item on the agenda is to discuss and receive an amendment to the P&P Manual to permit filing exemption (FE) for credit tenant loans (CTLs) and ground lease financing (GLF) transactions that exceed a 5% residual exposure. This amendment would give insurers the option to submit either CTLs or GLF transactions to the SVO for their review, or they could use the NAIC FE process. After exposing this amendment, the Task Force received a referral from the Statutory Accounting Principles (E) Working Group chairs with an alternative P&P Manual amendment recommendation to achieve the same outcome, but without what the chairs saw as a possible overstep of the Task Force and possible conflict in guidance.

Mr. Bruggeman said that part of this challenge has always been the term “CTL.” It has been used in a lot of different ways than what was originally introduced back in the ‘90s. A CTL, by statutory accounting definition, is a direct mortgage to someone that is backed by whoever is leasing the property and backed by those lease payments. It is a mortgage that is following Statement of Statutory Accounting Principles (SSAP) No. 37—Mortgage Loans, and if those credit tenant financings are being provided at least 95% (one minus the 5% the Task Force has been talking about), that can move from Schedule B (the mortgage schedule) to Schedule D-1 (the bond schedule). All of those had to be reviewed by the SVO. Over the years, these CTLs have been put inside securities. Those securities are also called CTLs. Therein lies part of this confusion; i.e., when that CTL ends up inside of a security and that security issues debt, now that debt is a security, and it is now covered under SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities. If there are multiples of these inside a structure, that goes to SSAP No. 43R; otherwise, it will stay in SSAP No. 26R. Those are the statutory accounting definitions. The challenge is that when statutory accounting staff see CTLs, they immediately assume the mortgage SSAP No. 37 definition, but it has been utilized more than that. The memo that was sent out to the Task Force from the Working Group chairs tries to go through that process. The memo tried to highlight the terms “security” and “mortgage.” The memo proposes changes in the P&P Manual in Part Three, paragraph 4, in the “FE Securities” section, changing the sentence from, "[a] CTL is a mortgage loan …" to, “[a] CTL is a mortgage loan, in scope of SSAP No. 37….” because by definition, SSAP No. 37 excludes securities that would be covered under SSAP No. 26R or SSAP No. 43R. There is a similar change in Part One, paragraph 100; any change to the residual percentage on the securities side does not affect the SSAP No. 37 CTLs. CTLs really fit into three different buckets—a mortgage bucket under SSAP No. 37, a bond bucket under SSAP No. 26R, and a structured bucket SSAP No. 43R.

Julie Gann (NAIC) said the Working Group chairs are recommending exposing the very limited proposed changes to the P&P Manual to clarify that the references of the CTL are mortgage loans in scope of SSAP No. 37. That separates the conversation between what is a direct mortgage loan and what is a security. This guidance would then refer to the Accounting Practices and Procedures Manual (AP&P Manual) to SSAP No. 26R and SSAP No. 43R on defining what should be in scope and reported on Schedule D. It was anticipated that this would eliminate the inconsistency and the confusion that currently exists regarding the different named structures that could perhaps have underlying real estate risk. From information that the SVO has provided, some companies have called those CTLs, some have called them lease-backed securities, and some companies call them other names. Anything that meets the current definition of a bond would continue to be in scope of SSAP No. 26R or SSAP No. 43R, as applicable. As the bond proposal continues, if there is concern about some of these investments and the ultimate residual risk, they would also be captured within that bond proposal and perhaps need be relocated to a different schedule once that project is done; but it would eliminate the inconsistency that currently exists and clarify that the current reference to mortgage loans is specific to those non-security structures that are in scope of SSAP No. 37. This came about Thursday evening after the Working Group call. The Working Group took action to expose modifications to Interpretation (INT) 20-10: Reporting Nonconforming Credit Tenant Loans. Contingently, in response to the original proposal that was suggested to the Task Force, if the Task Force moves forward with the limited edits that are reflected in the chair memo that was submitted, that exposure would be pulled back, and the Working Group would be informed of this change and work on the next way forward with regards to INT 20-10. If these proposed revisions to clarify the scope of the CTLs go through, INT 20-10 may no longer be applicable.

Mr. Fry said operationally, if there is a security that has a lot of CTL characteristics and under 5%, as defined in the P&P Manual, the SVO can still designate those; even though they are a security, they would not lose their standing in that regard. Mr. Everett questioned how the proposal interacts with the proposal that was sent out for the P&P Manual on Friday. Mr. Fry said the exposure in the materials has an amendment that would have created a similar effect. The Task Force will expose a new version, the simplified version that Mr. Bruggeman and Ms. Gann explained, and take comments on it. If the Task Force adopts that exposure, it would be the smoother, or at least disruptive path, and complement the SSAP No. 43R project. It would put a natural guard rail around those investments as everyone begins understanding those principles. If there are a lot of residual risks and securities start looking and acting like something else, there is a risk of possibly not falling into the new principles-based SSAP No. 43R. The Task Force has got some work to do regarding looking at how it is using ratings and private letter rating. The Task Force can always look at ways to accomplish accounting for these risks through its processes.
John Garrison (Leased-Backed Securities Working Group) said this is an elegant and simple solution to the confusion that has been existing in the market. CTLs would stay in the P&P Manual, as they always have with all their guidelines and so forth. They would be preserved as an asset class with just a clarification that they would be deals that would normally be in the scope of SSAP No. 37. The clarification would be that any deal that is done in the form of a security would be FE, just like any bond. Investors would have the option, depending on the characteristics of the deal, to either do them under FE or submit them to the SVO for a NAIC Designation. This also applies to GLF transactions that are a security, and they would be FE. Mr. Fry confirmed that interpretation.

Ms. Mears said insurers should be thoughtful about those types of security characteristics that currently have large residual values in relation to the bond project and the bond proposal. As the residual values get higher and higher, more of an analysis needs to occur to show that those still produce bond like cash flows under the proposal. Should that proposal move forward the detail, securities with CTL like characteristics, along with any other investments that have those high residual values, would fall under that definition and its requirements.

Ms. Mears made a motion, seconded by Mr. Everett, directing the SVO staff to expose a new amendment to the P&P Manual following the suggestions proposed by the Working Group chairs permitting CTLs and GLF transactions that are securities to be FE for a 30-day public comment period. The motion passed unanimously.

3. Discussed the SVO Referral Response to the Statutory Accounting Principles (E) Working Group on CTLs

Mr. Fry said the next item on the agenda is to hear a summary from the SVO on the referral it received from the Statutory Accounting Principles (E) Working Group on CTLs. The referral asked the SVO some basic questions about CTLs.

Mr. Therriault said a lot has changed, given the new direction just discussed, but the Working Group asked the SVO a number of questions related to CTLs centered around the appropriateness of the 5% residual exposure and whether it is appropriate to revisit the 5% risk threshold restrictions for conforming CTLs. The SVO agreed that it makes sense to revisit that threshold. It sounds like the bond definition project will be covering that issue, so it is not necessary to do that here. Also, with the change in definition just discussed, it seems like it will no longer be necessary for the P&P Manual instructions.

Another question was for a recommendation of an appropriate residual risk threshold. That is where the SVO response went into some detail on the various risks that it has observed. The SVO staff did not think it was appropriate for the SVO to weigh in on the residual risk threshold, as that was more of a regulatory policy decision. The SVO staff assumed that the Task Force would come back and make a recommendation to the Working Group in that regard as to what it believes is the appropriate residual risk for the bond project.

Mr. Therriault said there was a question regarding other mechanisms for compensating controls beyond a residual risk insurance policy that could be incorporated to mitigate those factors for CTLs. The residual risk insurance is the most common mitigant that the SVO is seeing, but other mitigants that would be acceptable include non-cancelable guarantees, cash escrows and reserves, excess rent set asides, and recourse to the lessee. The SVO did not have an all-encompassing list, because it was anticipated that there could be other mitigants, and it did not want to exclude them.

The other question from the Working Group was for a listing of the nonconforming CTLs that had been filed with the SVO and some characteristics about them. The SVO received 61 CTLs since the time INT 20-10 was issued through April 21. There were 16 conforming CTLs, 27 nonconforming CTLs, and 18 transactions where documentation was still pending. Typical outstanding documentation include the primary legal agreement, the CTL evaluation form, the mortgage, residual value insurance, lease agreement, condemnation insurance, appraisal, and assignment of lease and rents. For the nonconforming CTLs, 20 had balloon payments in excess of 5%, six involved a lack of casualty or condemnation gap insurance, and one involved a keep-well agreement that would not be adequate for credit substitution purposes. The Working Group was sent a regulator-only list of those nonconforming CTLs, as it had requested.

Mr. Fry said the Task Force would likely preserve the 5% residual risk for the things that otherwise would be on the mortgage loan schedule that want to go over to Schedule D. It may no longer be relevant how much over the 5% limitation the Task Force would suggest to the Working Group because there is no limit now for any other asset class. The new SSAP No. 43R principles will probably end up setting that benchmark.

Mr. Bruggeman asked Mr. Therriault if all the CTLs listed were structured as securities. Mr. Therriault said that is correct; CTLs structured as securities is what the SVO has traditionally received. The SVO has not received a mortgage type CTL in a
long time. Mr. Therriault said the comments in the SVO’s response to the Working Group highlighted risks that were generic to any lease-backed securities. The SVO wanted to make the Working Group and Task Force aware of those risks without making any policy recommendations. Mr. Bruggeman said he appreciated the SVO memo sent to the Working Group, as it broke out CTLs from the old definition and how they are being used now in securities.

Ms. Belfi asked for clarification regarding whether the Task Force should take up the policy questions from the Working Group, such as whether the residual exposure percentage should increase from 5% to something else now that it would not apply anymore, because the Working Group is going to be looking at the risk factors within SSAP No. 43R. Mr. Fry said a lot of these CTLs were not mortgage loans. They were a security, and like any other security, such as collateralized fund obligations (CFOs), they have different characteristics; and the Task Force does not really highlight those and create a special process for them, but they are just part of the FE universe. Everything is being put into that basket, then someday the new SSAP No. 43R principles will serve a useful purpose to keep that in check.

Mr. Bruggeman said for the bond definition project, most of these are already there, but there might be a few that fall outside of that principle in the bond definition. Those that are outside of the principles would have to move off Schedule D as securities, not as mortgages that are on Schedule D, but the second two buckets described earlier.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
May 6, 2021

Mr. Kevin Fry, Chair
NAIC Valuation of Securities (E) Task Force
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Ms. Carrie Mears, Vice Chair
NAIC Valuation of Securities (E) Task Force
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Fry and Ms. Mears,

The American Council of Life Insurers (“ACLI”)¹, Private Placement Investors Association (“PPiA”)², and North American Securities Valuation Association (“NASVA”)³ (collectively, the “undersigned”) appreciate the opportunity to comment on the above-referenced proposed amendment to the P&P Manual. We continue to appreciate the SVO’s willingness to meet with industry and have open, meaningful, and collaborative dialogue on complex and important changes, while also being responsive to practical constraints that, if left unaddressed, would potentially needlessly disrupt important markets.

The undersigned support the proposed amendment to the P&P Manual and remain committed to full transparency surrounding securities currently benefiting from private letter ratings. We believe this...
transparency is important and will give regulators greater insight, via the SVO, regarding securities (and the related rating methodologies) with private letter ratings.

The approach taken, as laid out in the exposure, is also accommodating to practical constraints on immediately obtaining all rating rationale reports, and therefore will minimize disruption to the private placement market. The private placement market is extremely important to insurance companies, and therefore, both policyowners and regulators, as private placement bonds consistently outperform the public market.

We continue to look forward to working with the SVO and regulators on this very important topic and continue to be fully committed to transparency, as it pertains to both industry and the SVO, regarding the securities deemed appropriate for Schedule D bond treatment as well as the ratings and designations applied.

****

We thank the SVO, and regulators, for their continued dialogue on these and other important issues. We continue to stand ready and offer our assistance and input as needed.

Sincerely,

Mike Monahan
American Council of Life Insurer

G:\SECVAL\DATA\Vos-tf\Meetings\2021\May\VOSTF 2021-05-24\03 - SVO Referral Response to SAPWG on CTLs\2020.023.06 ACLINASVAPPiA_Rating Rationale_final1.docx
VALUATION OF SECURITIES (E) TASK FORCE
PROPOSED 2022 CHARGES

The mission of the Valuation of Securities (E) Task Force is to provide regulatory leadership and expertise to establish and maintain all aspects of the NAIC’s credit assessment process for insurer-owned securities, as well as produce insightful and actionable research and analysis regarding insurer investments.

Ongoing Support of NAIC Programs, Products or Services

1. The Valuation of Securities (E) Task Force will:

   A. Review and monitor the operations of the NAIC Securities Valuation Office (SVO) and the NAIC Structured Securities Group (SSG) to ensure they continue to reflect regulatory objectives.

   B. Maintain and revise the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to provide solutions to investment-related regulatory issues for existing or anticipated investments.

   C. Monitor changes in accounting and reporting requirements resulting from the continuing maintenance of the Accounting Practices and Procedures Manual, as well as financial statement blanks and instructions, to ensure that the P&P Manual continues to reflect regulatory needs and objectives.

   D. Consider whether improvements should be suggested to the measurement, reporting and evaluation of invested assets by the NAIC as the result of: 1) newly identified types of invested assets; 2) newly identified investment risks within existing invested asset types; or 3) elevated concerns regarding previously identified investment risks.

   E. Identify potential improvements to the credit filing process, including formats and electronic system enhancements.

   F. Provide effective direction to the NAIC’s mortgage-backed securities modeling firms and consultants.

   G. Coordinate with other NAIC working groups and task forces—including, but not limited to, the Capital Adequacy (E) Task Force, the Investment Risk-Based Capital (E) Working Group, the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group—to formulate recommendations and to make referrals to such other NAIC regulator groups to ensure expertise relative to investments, or the purpose and objective of guidance in the P&P Manual, is reflective in the guidance of such other groups and that the expertise of such other NAIC regulatory groups and the objectives of their guidance is reflected in the P&P Manual.

   H. Identify potential improvements to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC’s financial solvency objectives.

Re: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Add Additional Instructions to the Review of Funds

Dear Mr. Fry and Ms. Mears,

The American Council of Life Insurers ("ACLI")\(^1\), Private Placement Investors Association ("PPiA")\(^2\), and North American Securities Valuation Association ("NASVA")\(^3\) (collectively, the "undersigned") appreciate the opportunity to comment on the above-referenced proposed amendment to the P&P Manual.

The undersigned are supportive of the Valuation of Securities Task Force’s ("VOSTF") goal to provide greater clarity and predictability to fund sponsors and investors regarding the acceptable use of derivatives in funds and permit some funds to have greater flexibility in their use of derivatives. We are also supportive of the Securities Valuation Office’s ("SVO") well thought out and appropriately targeted changes to the P&P Manual that achieve that end.

---

\(^1\) The American Council of Life Insurers ("ACLI") is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

\(^2\) The Private Placement Investors Association ("PPiA") is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPiA serves 63 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace. Learn more at www.usppia.com.

\(^3\) The North American Securities Valuation Association ("NASVA") is an association of insurance company representatives who interact with the National Association of Insurance Commissioners Securities Valuation Office to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC’s ISIS electronic security filing system, and commenting on year-end processes. Find more information here.
We greatly appreciate both the VOSTF’s and SVO’s continued efforts to expand the universe of funds where the SVO can appropriately assess a fund’s portfolio to determine if it will generate predictable and periodic cash flows so similar to a bond (or a preferred stock) that it can be assigned an NAIC Designation and obtain an applicable risk-based capital charge.

We, therefore, continue to support any further efforts to obtain bond-like risk-based capital charges for an SEC registered fund on the NAIC Fixed Income-Like SEC Registered Funds List in the scope of SSAP No. 30R—Unaffiliated Common Stock and reported on Schedule D, Part 2, Section 2 with an NAIC Designation. Similar treatment may also be warranted for certain funds that issue debt securities, that may not meet the definition of a bond because the debt security is “stapled” together with the equity tranche, per Example 1 of Appendix 1, of SAPWG’s recently exposed bond definition for purposes of Schedule D reporting.

We again sincerely thank the VOSTF, SVO, and regulators for their efforts on this important matter and we continue to stand ready to offer our assistance and input as needed.

Sincerely,

Mike Monahan

Re: Comments on Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Add Additional Instructions to the Review of Funds

Dear Mr. Fry and Task Force Members:

In reviewing the captioned Proposal, it is clear that insufficient attention has been paid to the derivative instruments that staff has recently stated are present in many, perhaps most, of the ETFs on the SVO's ETF Bond List. Derivatives held in any form deserve extra scrutiny, particularly when present in portfolios held by insurance companies. This letter discusses that phenomenon and makes recommendations regarding five specific provisions of the proposed language. The Proposal quotes selectively from the Securities and Exchange Commission's guidelines in Rule 18f-4 and contorts and redefines those guidelines. Rather than better controlling or monitoring the use of riskier derivative instruments in ETFs, the Proposal allows for greater freedom to use leverage to boost returns while increasing risk. I believe that a few key changes will make this Proposal far more effective in protecting insurance companies and hence policy holders. Derivatives have a very bad reputation for good reason and the SVO’s Proposal must be improved to take this into account.

281 Derivative Transactions This section of the Proposal defines what exactly constitutes a derivative transaction. The staff is clearly using the SEC’s Rule 18f-4. The wording in this section of the Proposal is a verbatim copy of SEC 18f-4, with two words changed. However, the staff does not disclose that it changed these words from the SEC rule, and this change literally inverts the SEC rule. Please see the difference highlighted below:

SEC Rule 18f-4:

“means any swap, security-based swap, futures contract, forward contract, option, any combination of the foregoing, or any similar instrument (“derivatives instrument”), under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise ... ”
¶281 of the Proposal:

“means any swap, security-based swap, futures contract, forward contract, option, any combination of the foregoing, or any similar instrument (“derivatives instrument”), under which a fund is or **may shall not** be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise ...”

By changing these words, staff completely inverts the SEC definition in such a way as to cause it to include certain instruments that the SEC was purposefully trying to exclude. The goal of the definition in ¶281, according to the Proposal itself, is to limit funds from "...magnify(-ing) its gains and losses compared to the fund’s investment, while also obligating the fund to make a payment or deliver assets to counterparty under specified future conditions." This is a reasonable and understandable goal. But by changing the SEC’s language, this modified definition does exactly the opposite.

As an example, let us imagine two different derivative instruments:

In the chart above, the red line shows the payout from a derivative that "may" (the actual SEC18f-4 definition) cause its owner to make a future payment. As we can see, such derivatives are inherently riskier as their possible future losses are unknown and limitless. In fact, this is exactly the type of derivative owned by Archegos. It **did** cause its owner to make a future payment, in an amount greater than the company could pay. The same type of derivative brought down Barings Bank. This is precisely why derivatives that “may” force ETFs to make future payments are given greater scrutiny by the SEC under Rule 18f-4.

On the other hand, the blue derivative has defined and controlled downside risk that limits the risk to the market value of position. There is no obligation by the ETF to make a future payment.
Additionally, it is noted that staff used the unaltered language from SEC 18f-4 (reverting to the use of “may” in place of “shall not”) in ¶289, thereby making the change here in ¶281 seem even more out of place. In essence, the Proposal literally contradicts itself by defining a derivative in diametrically different ways in two places. Yet, there is no acknowledgement of or justification for this very material modification which literally flips the meaning of 18f-4 on its head, even while retaining the actual SEC rule later in the document.

**Recommendation:** Adopt the SEC language without alteration in ¶281 just as staff has done in ¶289, because instruments that can cause magnification of gains/losses should continue to be defined as derivatives and those that are out of scope should be excluded as the SEC has determined.

### ¶282. Exempt Derivative

This section seeks to define which derivatives would be exempt from the Proposal. It is somewhat confusing as “derivative transactions” were just defined in the immediately preceding ¶281 and derivatives that do not contain obligations in the future are already exempted by virtue of that definition.

**Recommendation #1:** Adopting the SEC language as written (as recommended for ¶281) would eliminate the need for this provision.

**Recommendation #2:** Staff should ensure that “exempt derivatives” are truly exempt. The SVO is uniquely positioned to make sure that ETF portfolios with exempt derivatives are able to document how their hedges are applied to other positions. For now, there appears to be little or no scrutiny at the position level to determine if “exempt derivatives” truly are complying with this language.

### ¶287 Management Assessment

This is a completely new provision, and it should be eliminated for several reasons.

First, given the priorities of the VOSTF it is difficult to imagine how directing the SVO to conduct management analyses of funds is a reasonable use of scarce resources. Management assessments are commonplace for rating agencies and examiners and they can assist significantly in the credit evaluation process. To the best of my knowledge, however, that the SVO does not perform such assessments currently and has not done so in the past at least not on any significant scale. If the SVO had the capacity, expertise and guidelines to begin these assessments, it would be far more logical to do so for "issuer obligations" where the role of management is much more significant and impactful than for funds.

Second, the SVO proposes for itself a new role evaluating the experience, management, compliance, and operations of ETF managers. All listed ETF Bond Funds are '40 Act Funds under the regulatory purview of the SEC, which has a vast staff with the resources, expertise and enforcement powers to evaluate management companies in a much more rigorous way. The SEC already monitors and evaluates all listed ETF managers for experience, management, compliance, and operations. It is unlikely that a review by the SVO would be anywhere near as thorough as an SEC examination. It would, however, divert staff and resources to a new mission which is already being performed by a regulatory agency with much greater investigative authority and capacity for this work.

Third, allowing the SVO “in its sole discretion” to override its own rules and procedures opens the NAIC and the entire process of rating funds up to legal risks. If the NAIC has gone through the trouble to write the P&P Manual, it should insist that its rules be followed. Either the rules are applied fairly and evenly to all, or they are...
not rules. Allowing the SVO to make a determination “in its sole discretion” without standards or review provisions is clearly bad policy and governance.

**Recommendation #1:** Remove ¶287. Developing an entirely new set of standards, mechanisms, review processes and controls to evaluate the managements of funds is unnecessary when such work is already done by the SEC. If the SVO believes its role is to evaluate management, it should first develop its methodology in other asset classes in which management plays a far more consequential role and submit them to the VOSTF for review and approval.

**Recommendation #2:** Additionally, remove the sentence “Conduct a management assessment” from ¶290 Methodology for conformity.

¶291 Documentation

Staff proposes that it be permitted to consider funds with derivatives to be considered as "Highly Customized Transactions". The SVO has been evaluating funds on the ETF Bond list for many years and recently acknowledged that "...most, if not all, ETFs have provisions in their prospectus allowing them (derivatives)." The effect of classifying an asset as a HCT is to exempt it from the SVO's published and approved fee schedule. In other words, under this Proposal the SVO may, on its own authority and with no review process, subject a filing to whatever fee it determines.

**Recommendation:** This new SVO authority should be reviewed very carefully by the VOSTF to determine whether, after many years of reviewing these transactions on a standard fee schedule, they should be subjected to new unpredictable fees solely because they contain derivative instruments. The SVO should consider specifying under which conditions it treats funds with derivatives as HCTs. It would be bad and risky policy simply to apply different fees to issuers without reasonable bases for doing so.

¶289 Speculative Characteristics Analysis

In the last paragraph of this Analysis section, it is observed that staff proposes a prohibition on the use of "...derivative instruments, under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise and (b) any short sale borrowing or other borrowings, except for exempt derivatives..." It is noted that that is an exact recitation of SEC 18f-4 as written.

This is a very reasonable proposal that will likely reduce the risk of ETFs on the bond list and reduce the use of risky, highly speculative instruments.

**Recommendation:** This provision is supported. Staff should be specifically charged to review the prospectus of each ETF fund on the bond list with regard to the specific derivative instruments that are authorized so that this provision will be effectively enforced. Is very likely that there are dozens of ETFs currently on the NAIC bond list which are in violation of this proposed rule and which may own Archegos-type derivatives in their portfolios. The SVO is uniquely positioned and qualified to monitor and enforce this provision.
In summary, I hope these suggestions will be received as the constructive comments they are intended to be and look forward to discussing them in any venue.

Sincerely,

[Signature]

Charles Therriault, Director, NAIC Securities Valuation Office (SVO)

Re: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Add Additional Instructions to the Review of Funds

Dear Messrs. Fry and Therriault,

We appreciate the opportunity to comment on the proposal exposed by the VOSTF with a deadline of May 6, 2021. On behalf of Payden & Rygel and our insurance clients, we appreciate the general thesis of the proposal, but we do have some general concerns and comments.

The SVO references SEC Rule 18f-4 and their definition of a limited user of derivatives. This rule was adopted on October 28, 2020 and came into effect February 19, 2021. However, Fund companies do not need to fully comply until August 19, 2022. At this time, investment managers of the sponsored Funds are formulating best practices and have not fully digested the new rule. We recommend the VOSTF delay the final amendments to the P&P Manual until those best practices are determined.

In regards to Management Assessment, more concrete measurements are appreciated. The introduction of subjective measures into an NAIC Designation invites confusion and room for discrepancies. Additional detail related to what the SVO believes are best practices or deficiencies will help set expectations for Fund companies. Similarly, we would recommend the SVO create an outcome report related to their Management Assessment, especially if it leads to notching of the final NAIC Designation. Lastly, what is the resolution process if a filer disagrees with this notching?

If VOSTF and SVO are open to further consideration, we are happy to gather additional Fund management companies to formalize detailed feedback and ideas for your consideration.

Thank you,

Erinn R. King, CFA
Principal, Payden & Rygel

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Add Additional Instructions to the Review of Funds

DATE: May 27, 2021

1. Overview – At the request of the Task Force to provide greater clarity and predictability to fund sponsors and investors regarding the acceptable use of derivatives in funds and permit some funds to have greater flexibility in their use of derivatives, the SVO proposed several amendments to the P&P Manual fund guidelines at the Spring National Meeting of the Task Force on March 22, 2021. The Task Force voted to receive the proposal and expose it for 45 days. The Task Force received comments from interested parties during the exposure period, aspects of which the SVO has incorporated into a new proposed amendment to the P&P Manual fund guidelines.

2. Recommendation Summary – The new proposal would adhere much more closely to Rule 18f-4 (the Rule) under the Investment Company Act of 1940 related to the use of derivatives by registered investment companies, including funds, which the Securities Exchange Commission (SEC) adopted in October 2020. Unlike the previous amendment which had two separate tests for derivatives depending on the NAIC Fund List on which a fund is listed, this amendment would create a single test. Pursuant to the new proposal a fund’s exposure to: (i) derivatives under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payments or otherwise, (ii) short sale borrowings and (iii) reverse repurchase agreements or similar financing, would be limited to 10% of the fund’s net assets in normal market conditions. Exposure would be calculated based on the gross notional amounts of derivatives, the value of assets sold short for short sale borrowings, and the proceeds received by the fund but not repaid for reverse repurchase agreements. Consistent with the Rule, interest rate derivatives and option contracts exposure could be calculated with other defined methods consistent with market practice. Also consistent with the Rule, certain currency...
and interest rate derivatives that hedge currency or interest rate risk associated with one or more specific equity or fixed-income investments of the fund would be exempt from the 10% exposure calculation.

One difference between our proposal and the SEC Rule is that the P&P Manual’s methodology requires a look-through assessment of all funds which, in turn, includes a requirement that a fund “predominantly hold” bonds or preferred stock, as applicable. As defined in the P&P Manual, “Predominantly Hold” means, in part, “The fund will hold at least 80% of its assets in bonds if the fund is a bond fund or at least 80% of its assets in preferred stock if the fund is a preferred stock fund, in normal market conditions.” This existing requirement, therefore, limits total derivatives, short sale borrowing and reverse repurchase agreement exposure in any fund to 20%, exclusive of the currency and interest rate derivatives mentioned above. We propose calculating that exposure as explained above. However, for derivatives under which a fund shall not be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payments or otherwise, exposure would be calculated based on the derivative’s market value. These derivatives would include, for example, certain options pursuant to which the fund would have no possible future payment obligation following the initial premium payment. Due to diminished risk of loss to the fund it is more appropriate to calculate the exposure based on the less conservative market value measure rather than the gross notional amount. The Credit Risk Assessment portion of our existing methodology would also be updated to include a calculation of derivative exposure and, if analytically appropriate, the inclusion of derivatives in the WARF analysis.

Derivative documentation can be complex and its review time consuming. To expedite reviews of funds with derivatives while ensuring that the fund does not breach the proposed exposure thresholds, we propose a new filing requirement to include certain derivatives information in the schedule of portfolio securities and assets which is provided to the SVO for its review. Such additional information would include (i) derivative type, (ii) might the derivative require the fund to make a future payment or delivery of cash or other assets, (iii) is the derivative an “excluded derivative transaction,” (iv) the counterparty credit rating, and (v) the derivative exposure and how it is calculated. Our expectation is that a complete and accurate summary of derivatives in the schedule will obviate the need for the SVO to review derivative legal documentation, but we would reserve the right to request it if we deem it necessary.

Based on comments we received from interested parties, we have decided to remove the initially proposed management assessment from this amendment. Interested parties expressed concern that the management assessment could further weaken market clarity and predictability.

2. Proposed Amendment – The text referencing the Investments in Funds is shown below, edits in red, as it would appear in the 2020 P&P Manual format.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
NAIC FUND LISTS

... 

NAIC FIXED INCOME-LIKE SEC REGISTERED FUNDS LIST

Description

269. This section encompasses SEC registered funds issued by any type of investment-company registered with the SEC under the Investment Company Act of 1940 that sponsors a fund that will predominantly hold bonds or preferred stock. This listing excludes money market mutual funds as those securities are subject to different accounting treatment.) Different type of investment companies can be considered to have business models that operate differently as to redemption of shares, the life of the fund, whether the portfolio is held to maturity or traded over the life of the fund. The four types of investment companies are summarized below:

- **Open End Management Company (OEMC)** – An OEMC sell redeemable shares, directly or through a broker, on a continuous basis at the fund’s approximate net asset value (NAV) per share and invests the proceeds in highly liquid bonds. Investors redeem shares of an OEMC fund by selling them back to the fund or to a broker. OEMC’s may include exchange-traded funds.

- **Closed End Fund (CEFC)** – A CEFC lists its shares on a stock exchange or trades in the over-the-counter market. The assets of a CEFC are professionally managed in accordance with the fund’s investment objectives and policies. The market price of a CEFC share is determined by supply and demand in the marketplace. Because a CEFC does not maintain cash reserves or sell securities to meet redemptions, it can invest in less-liquid portfolio securities. A CEFC has a stated termination date.

- **Unit Investment Trust (UIT)** – A UIT issues a fixed number of securities called “units” in a public offering and uses the proceeds to buy a diversified professionally selected portfolio of securities. UITs have a preset termination date tied to its portfolio investments and investment goals. The portfolio is held for the life of the UIT; but is not actively managed or traded. Although UIT’s are required by law to redeem outstanding units, the UIT sponsor usually maintains a secondary market so investors can sell units back and other investors can buy units. UIT’s may include exchange-traded funds.
- **Exchange-Traded Fund (ETF)** – An ETF is an investment company that is registered under the Investment Company Act of 1940 either as an OEMC or as a UIT. An ETF combines the valuation feature of an OEMC or UIT, which can be bought or sold at the end of each trading day for its net asset value, with the tradability feature of a closed-end fund, which trades throughout the trading day at prices that may be more or less than its net asset value.

### Regulatory Treatment of Eligible Funds

270. An SEC registered fund on the NAIC Fixed Income-Like SEC Registered Funds List is in the scope of SSAP No. 30R—Unaffiliated Common Stock and reported on Schedule D, Part 2, Section 2 with an NAIC Designation. **These investments are reported at fair value although reporting at net asset value is permitted if there is no readily determinable fair value.**

### REQUIRED DOCUMENTATION, ANALYTICAL PROCEDURES AND ELIGIBILITY CRITERIA

#### Objective

277. The objective of the SVO’s review is to assess whether for NAIC regulatory purposes discussed above, the fund's portfolio will generate predictable and periodic cash flows so similar to a bond (or a preferred stock) that it should be assigned an NAIC Designation and obtain applicable risk-based capital charges.

#### Definitions

278. **Bond** – For fund investment purposes, Bond means debt securities defined or encompassed within SSAP No. 26R–Bonds and SSAP No. 43R–Loan-Backed and Structured Securities.

279. **Credit Risk Assessment** – A calculation of the credit risk of a fund’s underlying investment portfolio using a weighted average rating factor methodology (WARF). The WARF factor for each portfolio security (issue/security specific) is determined by first translating its NAIC CRP rating into an NAIC Designation. For securities that are unrated but have an NAIC Designation, the Designation is used. The WARF factor for that NAIC Designation is then market value-weighted. The weighted factor for each investment is summed to determine the fund’s credit rating which is then translated into the equivalent NAIC Designation. **For funds which use any derivatives instrument or derivatives transaction, the WARF analysis may incorporate each derivative counterparty and the credit risk assessment may include a determination of derivatives exposure.**
280. **Derivatives Exposure** – means the sum of the gross notional amounts of the fund’s derivatives transactions, described in clause (1) of the definition, below, of the term “derivatives transaction”; in the case of short sale borrowings, the value of the assets sold short; and, in the case of reverse repurchase agreements or similar financing transactions, the fund’s derivatives exposure also includes, for each transaction, the proceeds received but not yet repaid or returned, or for which the associated liability has not been extinguished, in connection with the transaction. Consistent with Securities Exchange Commission Rule 18f-4 under the Investment Company Act of 1940, in determining derivatives exposure a fund may convert the notional amount of interest rate derivatives to 10-year bond equivalents and delta adjust the notional amounts of options contracts and exclude any closed-out positions, if those positions were closed out with the same counterparty and result in no credit or market exposure to the fund.

281. **Derivatives Transaction** – means: (1) any swap, security-based swap, futures contract, forward contract, option, any combination of the foregoing, or any similar instrument (“derivatives instrument”), under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise; (2) any short sale borrowing; and (3) any reverse repurchase agreement or similar financing transaction.

282. **Financial Commitment Transactions** – Refers to reverse repurchase agreements, short sale borrowing, any firm or standby commitment or similar agreement as these terms are defined and as they may be subsequently amended by the SEC as part of proposed Rule 18f-4.

283. **Fixed Income Like** – An SVO determination that a fund will generate predictable and periodic cash flows in a manner broadly similar to a situation where the holdings of bonds or of preferred stock of a known credit quality were held individually. A fund’s use of derivatives shall be deemed fixed income like if it meets the guidelines in this section.

284. **Fundamental Policy** – A policy adopted by a fund that requires shareholder approval to change or a policy to provide at least 60 days’ notice to fund shareholders of an intended change of a stated policy. The subject of the policy is that under normal circumstances the fund will invest at least 80% of its net assets plus any leverage for investment purposes in the type of bonds indicated by its name in compliance with Section 13 (a) of the Investment Company Act of 1940 and/or Rule 35d-1 of the 1940 Act. If the fund’s prospectus does not state that this investment objective is a fundamental policy for the fund, the SVO will assume it is not.
285. **Look-through Assessment** – A qualitative and quantitative evaluation of the fund, encompassing the following criteria:

- Verify that the fund’s portfolio, in the case of a bond fund or, preferred stock, in the case of a preferred stock fund *predominantly holds* bonds or preferred stock.
- Confirm that the fund has adopted its investment objective as part of its *fundamental policy* and that other policies are consistent with fixed income investment.
- Review the fund’s stated investment objective to ensure it is consistent with a fixed income investment, and evaluate the fund’s investment policies and investment strategies for consistency with the investment objective and the fund’s portfolio.
- Evaluate the extent to which the composition of the fund’s portfolio can vary under normal market conditions given the fund’s policies and investment strategies and the extent to which the composition of the fund’s portfolio may vary under abnormal market conditions and the extent to which changes in composition of the fund’s portfolio in abnormal market conditions may persist given the fund’s leverage profile or other relevant factors.

*Note:* A fund that invests in another fund will need to have that other underlying fund approved by the SVO and maintained on the appropriate fund list, if not already done.

286. **Predominantly Hold** – The fund will hold *at least 80%* of its assets in bonds if the fund is a bond fund or at least 80% of its assets in preferred stock if the fund is a preferred stock fund, *in normal market conditions* and will deviate from this policy only temporarily to respond to abnormal market conditions. In the case of an ETF, predominantly hold also means that the fund will track a specified bond or preferred stock index, if passively managed, or refers to the bond or preferred stock portfolio the fund will actually hold, if actively managed—under normal market conditions. The *derivatives exposure of derivatives transactions* (exclusive of excluded derivatives transactions, as defined in “Speculative Characteristics Analysis”), and the market value of all other assets will be used when determining whether a fund predominantly holds bonds or preferred stock, as applicable, according to this clause.
287. **Speculative Characteristics Analysis** – Means: (a) an assessment of the fund’s use of leverage, including, but not limited to, its use of derivatives, financial commitment derivatives transactions and borrowings, to examine the impact they may have on the fund’s portfolio cash flow as assessed under the credit risk assessment under normal and abnormal market conditions; and (b) a review and evaluation of the fund’s policy and approaches to covering leverage obligations in relation to current and potential future guidance on the issue provided by the SEC. As used herein potential future guidance refers to proposed SEC Rule 18-f-4, “Use of Derivatives by Registered Investment Companies and Business Development Companies, ICA Release No. 31933 (December 11, 2015) [17 CFR Parts 270 and 274] Proposed Rule 18-f-4.”, the resulting derivatives exposure not to exceed 10% of the fund’s net assets in normal market conditions, excluding, for this purpose, currency or interest rate derivatives that hedge currency or interest rate risks associated with one or more specific (i) equity or fixed-income investments held by the fund (which must be foreign-currency-denominated in the case of currency derivatives), or (ii) the fund’s borrowings, provided that the currency or interest rate derivatives are entered into and maintained by the fund for hedging purposes and that the notional amounts of such derivatives do not exceed the value of the hedged investments (or the par value thereof, in the case of fixed-income investments, or the principal amount, in the case of borrowing) by more than 10 percent (each, an “excluded derivatives transaction”).

**NOTE:** For the avoidance of doubt, Funds on the NAIC U.S. Government Money Market Fund List are not permitted to use any derivatives transaction or other derivatives instrument. Examples of speculative characteristics may include the need to sell assets to meet leverage obligations at a loss; instability in the cash flow introduced by the use of leverage; the need to employ alternative portfolio management strategies as a result of the need to meet payment obligations; the extent to which changes in the composition of the fund’s portfolio in response to abnormal market conditions may persist given the fund’s leverage profile or other relevant factors. The purpose of an analysis of speculative characteristics is to determine whether the fund’s cash flow is inconsistent with a fixed income like determination.

**Methodology**

288. The SVO shall:

- Conduct a look-through assessment
- Conduct a credit-risk assessment to determine the credit risk of the fund’s cash flows.
- Conduct a speculative characteristics analysis.
- Determine whether the fund’s cash flow can or cannot be appropriately characterized as fixed income like for regulatory purposes.
If the SVO determines that the fund’s cash flow can be appropriately characterized as fixed income for regulatory purposes, it assigns an NAIC Designation to reflect the credit risk associated with the fund’s cash flow and includes the name of the fund on the appropriate NAIC List.**

If the SVO determines that the fund’s cash flow cannot be appropriately characterized as fixed income for regulatory purposes it shall communicate the determination to the insurance company or fund sponsor in writing.

*NOTE:* *Italicized text* indicates that the term used is a defined term. Please refer to the definition of the term for a description of SVO criteria associated with the methodology component being described.

**NOTE:** The NAIC Designation does not address the fund’s ability to meet payment obligations because the insurer/shareholder does not own the bonds in the portfolio; the NAIC Designation instead conveys the credit risk/quality of the fixed income like cash flow generated by the ETF.

**Documentation**

289. An insurance company or the sponsor of a bond or preferred stock fund that requests that the SVO conduct the look through and credit assessment submits the following required documentation to the SVO:

- A completed RTAS Application (Information about the RTAS process is contained here: [www.naic.org/documents/svo_rtas_app.pdf](http://www.naic.org/documents/svo_rtas_app.pdf)). A fund with derivatives transactions or other derivative instruments may be considered a Highly Customized Transaction if the SVO determines it necessary to review a derivative’s operative legal documentation.

- For all funds subject to look-through and credit risk assessment and to speculative characteristics analysis: the Prospectus and Statement of Additional Information (SAI) for the fund.

- For funds which use derivatives transactions or other derivative instruments, the applicable operative legal documentation, if requested by the SVO.

- In the case of an ETF, copies of the Application, Notice and Order associated with the fund sponsor’s request for Exemptive Relief from the SEC or a link to the SEC’s EDGAR where the SVO can obtain the documents.

- In the case of a private equity fund, the Private Placement Memorandum, Limited Partnership Agreement or Limited Liability Company Agreement, the Subscription Agreement and the Form D, if one has been filed.
Schedules of the fund’s portfolio securities and assets with a description of the security, the CUSIP or other security identifier and NRSRO credit ratings for the last four quarters of the fund’s existence. For funds which use derivative transactions or other derivative instruments, the schedule shall include for each derivative:

- The derivative type (e.g. ISDA swap, purchase call option, written put option, short sale borrowing, reverse repurchase agreement);
- Is or may the fund be required, pursuant to the derivative, to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise;
- Is the derivative a derivatives transaction (as defined above), an excluded derivatives transaction (as defined in “Speculative Characteristics Analysis”) or neither;
- The counterparty credit rating;
- (i) The derivative exposure or market value, as applicable, both as a dollar amount and converted to a percentage of the fund’s net assets in normal market conditions, and (ii) a summary of how the amount is calculated (e.g. gross notional amount, convert the notional amount of interest rate derivative to 10-year bond equivalent, delta adjust the notional amount of option contract, market value, value of assets sold short, proceeds received but not yet paid or returned).

**NOTE:** The documentation provided must enable the SVO to conduct the analysis described below. Applicants are free to provide any supplemental material they believe will assist the SVO to:

- Verify that the fund has adopted a fundamental (stated) policy to predominantly hold bonds (or preferred stock).
- Evaluate the fund’s use of leverage in relation to the management of portfolio risk and in relation to other purposes relevant to the speculative characteristics analysis.
- Understand the fund’s policy and approaches to coverage of obligations arising from the use of leverage, in relation to SEC guidance on the subject.
- Schedules of the fund’s portfolio securities and assets with a description of the security, the CUSIP or other security identifier and NRSRO credit ratings for the last four quarters of the fund’s existence.
A description of likely changes in the fund’s composition under normal market conditions given the fund’s investment objective and the strategies to be employed to attain it.

RE: Proposed VOSTF Attachment B – Filing Exemption for CTLs

DATE: May 21, 2021

After a detailed review of the proposed revisions within Attachment B of the Valuation of Securities (E) Task Force meeting materials for Monday, May 24, it appears that the proposed revisions go beyond providing a filing exemption to allow non-SVO assigned designations. Rather, the edits also appear to modify the structural requirements for credit tenant loans (CTLs), and would thus permit direct mortgage loans, in scope of SSAP No. 37 and reported on Schedule B—Mortgage Loans, to be reclassified from Schedule B to Schedule D-1—Long-Term Bonds with up to 50% residual risk and a CRP rating, without any SVO structural assessments.

From prior review of the history of the CTL provisions, the original intent was to permit mortgage loans, captured on Schedule B, to be reclassified to Schedule D-1 based on the credit standing of a major tenant, but only if there was very limited residual risk (5%). Over time, the structure of these investments has shifted, but not the name used, and it is believed that most designs now meet the definition of a security and not a mortgage loan. Further, since the scope of SSAP No. 37—Mortgage Loans specifically excludes securities, these revised investment designs would not be captured in scope of SSAP No. 37 and not reported on Schedule B. Rather, under the existing guidance in the Accounting Practices and Procedures Manual, securities that reflect a creditor relationship, whereby there is a fixed schedule for one or more future payments, are captured in scope of SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities and reported on Schedule D-1.

Although the process to assess whether securities with underlying real estate risk shall be subject to filing exempt provisions or be submitted to the NAIC SVO for a credit assessment is a decision of the Task Force, as noted above, the current proposed revisions do not appear to be limited to that aspect. To prevent inadvertent application of the proposed revisions to direct mortgage loans, and to clarify that securities (SSAP No. 26R/SSAP No. 43R) shall be reported in accordance with existing AP&P Manual guidance, it is suggested that the Task Force reconsider the proposed exposure of Attachment B. Instead, it is recommended that the Task Force expose proposed edits to the Purposes and Procedures Manual to clarify that in all instances in which a CTL is defined, it is noted to be a mortgage loan “in scope of SSAP No. 37.” It is noted that this limited edit would clarify that the application of the structural assessment of CTLs is limited to direct mortgage loans and relates to the potential reclassification from Schedule B to Schedule D for those investments. Furthermore, it would clarify that securities are not subject to the CTL structural assessments and
should continue to be reported in accordance with the scope provisions of the guidance within the AP&P Manual.

Examples of the proposed recommendations are shown below:

P&P Manual, Page 101 – FE Securities:

**Credit Tenant Loan (CTL)** – A CTL is a mortgage loan, in scope of SSAP No. 37, made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien. This Manual identifies four categories of CTLs as eligible for reporting on Schedule D conditioned on an SVO determination that the transaction meets the criteria specified by the VOS/TF for Schedule D treatment. A transaction that purports to be a Credit Tenant Loan, including one that is assigned a credit rating by an NAIC CRP, is not eligible for Schedule D reporting unless the SVO confirms that the transaction is eligible for Schedule D reporting and assigns the transaction an NAIC Designation.

P&P Manual, Page 29 – Credit Tenant Loans:

**CTL Categories**

100. Mortgage loans, in scope of SSAP No. 37, that are made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien, are referred to as a Credit Tenant Loan. Four categories of CTLs are recognized as eligible for reporting on Schedule D: Bond Lease Based CTLs; Credit Lease Based CTLs; Acceptable CTL Variants (ACVs); and Multiple Property Transactions (MPTs).

If the limited edits, as shown above, are incorporated, than further revisions to the P&P Manual, particularly to the structural assessment for CTLs and the existing 5% residual risk threshold, are not expected to be needed at this time. It is also believed that this will resolve the current uncertainty and inconsistency with regards to the reporting of securities that have underlying elements of mortgage loan or real estate risk. Although these revisions will clarify the current ability to report securities that represent a creditor relationship under the existing bond definition, it is noted that a current project is underway to establish principles to clarify what should be considered a bond for reporting on Schedule D-1. Once that project is finalized, security structures that do not qualify under those bond principles will be reclassified to a more appropriate schedule.

Thank you for considering this revised proposal. Please contact Dale Bruggeman, or Carrie Mears, SAPWG Chair and Vice Chair, with any questions on this memorandum.

Re: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) on Filing Exemption for Real Estate Lease-Backed Securities

Dear Mr. Fry and Ms. Mears,

The American Council of Life Insurers (“ACLI”)1, Private Placement Investors Association (“PPiA”)2, and North American Securities Valuation Association (“NASVA”)3 (collectively, the “undersigned”) appreciate the opportunity to comment on the above-referenced proposed amendment to the P&P Manual.

The undersigned appreciate all the effort of the Valuation of Securities Task Force (“VOSTF”) and Securities Valuations Office (“SVO”) on Credit Tenant Loans and other Real Estate Lease-Backed Securities over the last several years.

As these securities are valuable investments for insurers, and ultimately regulators and policyowners, we would like to offer our full support for the proposed changes as outlined in the exposure. We believe the exposure is the culmination of a years’ long joint effort, in both collaboration and information sharing,

---

1 The American Council of Life Insurers (“ACLI”) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

2 The Private Placement Investors Association (“PPiA”) is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPiA serves 63 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace. Learn more at www.usppia.com.

3 The North American Securities Valuation Association (“NASVA”) is an association of insurance company representatives who interact with the National Association of Insurance Commissioners Securities Valuation Office to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC’s ISIS electronic security filing system, and commenting on year-end processes. Find more information here.
that appropriately treats these securities consistent with other similar securities and is also consistent with Statutory Accounting Principles Working Group’s (SAPWG’s) recently exposed definition of a bond for purposes of Schedule D reporting.

We again sincerely thank the VOSTF, SVO, and regulators for their sustained dialogue on this important matter and we continue to stand ready to offer our assistance and input as needed.

Sincerely,

Mike Monahan Tracey Lindsey John Petchler
American Council of Life Insurer NASVA on behalf of PPiA Board of Directors

June 25, 2012

The members of the Lease-Backed Securities Working Group wholly support the changes which have been proposed to the Purposes and Procedures Manual of the NAIC Investment Office (P&P Manual) clarifying that any real-estate lease-backed transactions issued in the form of securities are eligible for Filing Exempt status in a manner similar to any other bonds.

We strongly agree with the comments which have been submitted in a joint letter from ACLI, the PPIA and NASVA regarding this exposure, which appropriately treats these securities consistent with other similar securities, and is also consistent with Statutory Accounting Principles Working Group’s (SAPWG’s) recently exposed definition of a bond for purposes of Schedule D reporting.

This exposure is the culmination of a years’ long joint effort, in both collaboration and information sharing between regulators and the investment community. We applaud the work that has been done by the members of both the Statutory Accounting Principles Working Group and the Valuation of Securities Task Force, as well as the staff at the Securities Valuation Office, to bring about these changes, which we believe will provide much-needed clarity to the investor community and allow markets which are essential to providing capital to mission critical facilities and infrastructure to reopen once again.

We greatly appreciate your continued time, efforts, and consideration of the proposed changes and clarifications to the P&P Manual and look forward to their speedy adoption.

Sincerely,

JMGarrison

RE: Filing Exemption for Real Estate Lease-Backed Securities

DATE: May 27, 2021

Summary – The SVO staff drafted the attached amendment at the request of the Task Force, based on a proposal referred to the Task Force by the Statutory Accounting Principles (E) Working Group (the Working Group) chairs, intended to clarify the difference between Credit Tenant Loans and real estate lease-backed securities for purposes of amending the Filing Exemption eligibility for each. Initially, at the Task Force’s request, the SVO drafted an amendment to the P&P to permit Credit Tenant Loan (CTL) and Ground Lease Financing (GLF) transactions to use NAIC Credit Rating Provider ratings in the Filing Exemption process and update the residual asset exposure from the current 5% limitation to 50%. If these transactions have greater than a 50% residual asset exposure, they would be ineligible for Filing Exemption. The Working Group chairs proposed an alternate amendment intended to achieve a similar outcome but without requiring the Task Force to opine on acceptable residual thresholds, which is under the purview of the Working Group.

The Working Group chairs contend that the original intent of the CTL provisions when adopted in the 1990s was to allow certain mortgage loans, as currently defined in SSAP No. 37, to be reported on Schedule D-1 as opposed to Schedule B due to the reliance on the creditworthiness of a credit tenant. CTLs have evolved from direct “mortgage loan” structures to “securities” which are expressly excluded from the definition of “mortgage loan” in SSAP No. 37. As such, the Working Group chairs proposed modifying the P&P definition of CTL by clarifying that CTLs only refer to “mortgage loans in scope of SSAP No. 37,” and, by default, not “securities,” which would be in scope of SSAP Nos. 26R or 43R. Real estate lease-backed securities would include CTL-like transactions which meet all the CTL guidelines in the P&P but for a feature making it a security, such as a trust issued certificate, CTL-like securities with balloon payments in excess of 5%, and ground lease financings which do not include a direct mortgage loan from the investor.
Pursuant to the proposed amendment the Working Group would not need to opine on a residual threshold at this time and the Task Force could make its own determination about the Filing Exempt status of these transactions. At the request of the Task Force the amendment would only require CTLs with mortgage loans in scope of SSAP No. 37 to be filed with the SVO for review and potential assignment of an NAIC Designation. All other real estate lease-backed transactions which meet the definition of a “security” would be eligible for Filing Exemption, and have the option to file with the SVO.

**Proposed Amendment** - The text impacting Credit Tenant Loan and Ground Lease Financing Transactions is shown below, addition edits in red underline and deletions in red strikethrough, as it would appear in the 2020 P&P Manual format.
PART ONE

POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK FORCE
CTL Categories

100. Mortgage loans, in the scope of SSAP No. 37, that are made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien, are referred to as a Credit Tenant Loan. Four categories of CTLs are recognized as eligible for reporting on Schedule D: Bond Lease Based CTLs; Credit Lease Based CTLs; Acceptable CTL Variants (ACVs); and Multiple Property Transactions (MPTs).

GROUN D LEASE FINANCING TRANSACTIONS

108. The ground lease itself typically meets the Credit Tenant Loan (CTL) criteria for Bond Lease Based or Credit Lease Based CTLs in this Manual and is in scope of SSAP No. 37 – Mortgage Loans. Additionally, there can be one or several space tenants or business operators (which (a) may or may not be NAIC CRP rated entities or (b) whose credit worthiness can or cannot be evaluated by the SVO) making lease payments under separate space leases (which may or may not meet the CTL criteria) or a business operation. As such, the SVO cannot rely solely on the CTL criteria for its analysis of GLF transactions and instead must rely on a combination, as necessary and available, of the CTL criteria, the CMBS criteria, the documented analysis of NAIC CRPs, and the SVOs own analytic judgement.
PART THREE
SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
PROCEDURE APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES

... FE SECURITIES

Filing Exemption

3. Bonds, within the scope of SSAP No. 26R and SSAP No. 43R (excluding RMBS and CMBS subject to financial modeling) and Preferred Stock within scope of SSAP No. 32, that have been assigned an Eligible NAIC CRP Rating, as described in this Manual, are exempt from filing with the SVO (FE securities) with the exception of Bonds and/or Preferred Stock explicitly excluded below.

Specific Populations of Securities Not Eligible for Filing Exemption

4. The filing exemption procedure does not apply to:

   - **Credit Tenant Loan (CTL)** – A CTL is a mortgage loan, in scope of SSAP No. 37, made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien. This Manual identifies four categories of CTLs as eligible for reporting on Schedule D conditioned on an SVO determination that the transaction meets the criteria specified by the VOS/TF for Schedule D treatment. A transaction that purports to be a Credit Tenant Loan, including one that is assigned a credit rating by an NAIC CRP, is not eligible for Schedule D reporting unless the SVO confirms that the transaction is eligible for Schedule D reporting and assigns the transaction an NAIC Designation. A security which resembles a CTL but is not in scope of SSAP No. 37 – Mortgage Loans, can be filed with the SVO for an NAIC Designation and, if appropriate, the SVO can apply the CTL guidelines in this Part to its review.

...
Ground Lease Financing Transactions – A Ground Lease Financing (GLF) transaction typically has two components: (a) a ground lease for a long period (e.g., 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land; and (b) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc., in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g., 5–15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc., under a franchise agreement or other arrangement. GLF transactions, in scope of SSAP No. 37 – Mortgage Loans, are not eligible for filing exemption. The GLF section in this Part provides further guidance on how the SVO analyzes GLF transactions for purposes of determining Schedule D eligibility and whether the SVO can assign an NAIC Designation. A security which resembles a GLF transaction but is not in scope of SSAP No. 37 – Mortgage Loans, can be filed with the SVO for an NAIC Designation and, if appropriate, the SVO can apply the GLF guidelines in this Part to its review.
CREDIT TENANT LOANS

...
GROUND LEASE FINANCING TRANSACTIONS

... 

DEFINITION AND OVERVIEW

Ground Lease Financing Transaction – Definition and Overview

108. A ground lease financing (GLF) transaction is in scope of SSAP No. 37 – Mortgage Loans and typically has two components: (a) a ground lease for a long period (e.g., 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land; and (b) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc., in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g., 5–15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc., under a franchise agreement or other arrangement.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
   Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
       Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

DATE: September 10, 2020

1. **Summary** – The Statutory Accounting Principles (E) Working Group adopted updates to SSAP No. 105R Working Capital Finance Investments on May 20, 2020. Key revisions are summarized as follows:
   - Functionally Equivalent Foreign Regulators - Removed the requirement that the Securities Valuation Office (SVO) determine if the International Finance Agent is the functional equivalent of the U.S. regulator.
   - Commingling Prohibitions - Removed the finance agent prohibitions on commingling.
   - Investor Rights Edit - Removed duplicative text regarding exercising of investor rights.
   - Requirements for filer to Certify Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if a first priority perfected interest has been obtained.
   - Finance Agent Validation Requirements – Broadened the independent review requirements to allow independent review of the finance agent by either audit or through an internal control report.
   - Default Date - Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent.
   - Possible Domestic Regulator Approval – Removed the statement that the reporting entity may need to seek approval from the domestic regulator.
2. **Revisions** - The SVO submitted a proposed amendment to the Valuation of Securities (E) Task Force (the Task Force), dated June 15, 2020, to amend the Working Capital Finance Investments (WCFI) section of the P&P Manual to remove any inconsistencies with SSAP No. 105R, as revised. The proposed amendment was received and exposed on July 1, 2020 for a 45-day public comment period that ended on August 17, 2020. The American Council of Life Insurers (ACLI) submitted a detailed comment letter, dated August 17, 2020, recommending additional updates to this section. The SVO staff has reviewed the ACLI’s recommendations and has attached an updated proposed amendment that reflects where the SVO agrees with the ACLI and, as explained below, where it does not.

Generally, the ACLI’s recommendations fall into two categories: (1) those which remove inconsistencies between SSAP No. 105R and the WCFI section of the P&P Manual, thereby adhering to the original purpose of this amendment and, (2) those which would amend WCFI provisions in the P&P Manual which are not identified in SSAP No. 105R and which would impede the SVO’s ability to assess investment risk in WCFI transactions. These analytic provisions were intentionally included in the P&P Manual’s WCFI guidelines to enable the SVO to more accurately assess investment risk in WCFI transactions and they reflect the functional differences between the Accounting Practices & Procedures Manual (AP&P), which is intended to define accounting standards, and the P&P Manual, which is intended guide the assessment of investment risk. The AP&P is not intended to be a substitute for the P&P Manual as only the Task Force is charged to, “… establish and maintain all aspects of the NAIC’s credit assessment process for insurer-owned securities.” The SVO staff has identified the analytical issues below that should be retained in the P&P Manual. These changes are outside of the scope of the SSAP 105R revisions and are necessary for the SVO to perform its responsibility to assess investment risk.

a. **A Certification** (paragraph 102, bullet 5) from the insurance company Investment Officer that the insurance company, in its capacity as an Investor, is not affiliated with the Obligor or with any Supplier in the Working Capital Finance Program, and that the Working Capital Finance Program does not include any insurance or insurance related assets. *This certification relates to the requirements of SSAP No. 105R, paragraph 19 and provides a means by which the SVO can verify that a transaction meets those requirements.*

b. **Process and Methodology** (paragraphs 121) - An NAIC Designation shall be assigned to a Working Capital Finance Program on the basis of a thorough assessment of credit, dilution, operational and other risks, an assessment of protections provided by operative documents to the Investor and the quality of transaction participants. *The assessments of credit, dilution and operational risk are core components of the SVO investment risk assessment for WCFI transactions and none of them conflict with SSAP No. 105R.*

c. **Credit Risk** (paragraphs 122) – The NAIC Designation for a Working Capital Finance Program shall be linked to the credit quality of the Obligor, which may be determined by reference to a credit rating assigned by a NAIC CRP or by an NAIC Designation assigned by the SVO. Credit risk is assessed by the SVO analyst in accordance with any permitted methodology set forth in this Manual for corporate obligors. *The assessments of credit is a core component of the SVO investment risk assessment for WCFI transactions and does not conflict with SSAP No. 105R.*

d. **Dilution Risk** (paragraphs 107, 121, and 123) – This element of the SVO’s analysis is crucial for an accurate assessment of investment risk because it is necessary for the SVO to consider the risk that disputes or certain contractual provisions may reduce the amount of the obligation owed by the obligor to the supplier and thereby impact the insurance company investor.
3. **Recommendation** – The SVO staff recommends re-exposure of this amendment with the changes recommended by the ACLI, excluding the analytically necessary items identified above, to align with the adopted updates to SSAP No. 105R – *Working Capital Finance Investments*.

4. **Proposed Amendment** – The following shows the proposed revisions in Part Three with text in red identifying the changes proposed on July 15, 2020 and additional revisions and comment letter responses in yellow highlight.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
WORKING CAPITAL FINANCE INVESTMENTS

Initial Filing Requirements

102. An insurance company requesting an analysis of a proposed Working Capital Finance Program shall provide the SVO with the documentation described in this subparagraph:

- An RTAS Application.
- The Obligor’s Audited Financial Statements, if the Obligor is not rated for credit risk by a NAIC CRP.
- The insurance company’s Investment Committee Memorandum for the proposed Working Capital Finance Program.
- The audited consolidated financial statements of the group of which the Finance Agent for the Working Capital Finance Program is a part, and one of the following:
  - An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment.
  - An annual audit of the financial statement and internal controls of the consolidated group of which the Finance Agent is part, which does not note any material weakness related to servicing working capital financial investments.
- A Certification from the insurance company’s Chief Investment Officer that the insurance company, in its capacity as an Investor, is not affiliated with the Obligor or with any Supplier in the Working Capital Finance Program, and that the Working Capital Finance Program does not include any insurance or insurance related assets.
- A Certification from the insurance company’s Legal Counsel.
- In the case of a participation, that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code’s standards for creating and preserving first priority security interests in the payments due and in the Confirmed Supplier Receivables.
• In the case of a certificate, note or other manifestation, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, that it has a commercially reasonable belief that the documents establishing and governing the Working Capital Finance Program create and preserve interests in the Confirmed Supplier Receivables capable of being enforced by the trustee or other entity holding Confirmed Supplier Receivables as first priority perfected security interests under the Uniform Commercial Code.

NOTE: Please refer to SSAP No. 105—Working Capital Finance Investments for the definition of a “commercially reasonable belief.”

A copy of:

- The document(s) that create the Working Capital Finance Investments (i.e., the short-term receivables) that is the subject of the RTAS – Emerging Investment Vehicle Service Application, and establishes the obligations of the Obligor to, and the protection afforded owners of, Working Capital Finance Investments (including the Investors). This agreement is sometimes referred to as the Invoice Payment Terms Acknowledgement, the Payable Services Agreement or the Paying Services Agreement.

  NOTE: Please refer to “The Regulatory Treatment Analysis Service – Emerging Investment Vehicle” in Part Two for guidance regarding the filing of an RTAS Application with the SVO.

- The agreement(s) between the Obligor and the Finance Agent governing the administration of the Working Capital Finance Program and the Working Capital Finance Investments issued thereunder. These agreements may be included in the documents mentioned above or may be a stand-alone agreement which are sometimes referred to as the Settlement Services Agreement or the Invoice-Related Electronic Services Agreement.

- The agreement governing the sale of the Working Capital Finance Investments from the Supplier to the Finance Agent. This agreement is sometimes referred to as the Receivables Purchase Agreement or the Supplier Agreement. The agreement governing the ongoing purchase of Working Capital Finance Investments or an interest in Working Capital Finance Investments by the Investor from the Finance Agent. This agreement is sometimes referred to as the Agency Agreement, the Participation Agreement or the Program Trust Agreement.
Subsequent Filing Requirements

103. Subsequent filing requirements include:

- Copies of any of the documents originally submitted with the RTAS Application subsequently amended.

- The audited consolidated financial statements of the group of which the Finance Agent for the Working Capital Finance Program is a part, and one of the following:
  - An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment; or
  - An annual audit of the financial statements and internal controls of the consolidated group of which the Finance Agent is part, which does not note any material weakness related to servicing working capital financial investments.

Definitions in *SSAP No. 105R—Working Capital Finance Investments*

104. Please refer to *SSAP No. 105R—Working Capital Finance Investments*, for the definitions and associated definitional guidance insurance companies must understand and comply with before applying for a NAIC Designation for Working Capital Finance Programs that would permit them to purchase Working Capital Finance Investments.

105. With the exception of the definitions for Dilution Risk and Operational Risk below, the definitions shown below are summaries of those contained in *SSAP No. 105R—Working Capital Finance Investments* intended only to facilitate a discussion and in all cases subordinate to the definitions in SSAP No. 105R.
Summary of Key Definitions

106. **Confirmed Supplier Receivable** – A receivable sold by a Supplier to a Finance Agent or Investor (or by a Finance Agent to an Investor) under a Working Capital Finance Program designated by the SVO that requires the Obligor to confirm to the Finance Agent or Investor, prior to the sale of the receivable from the Supplier to the Finance Agent or Investor, that it has no defenses to payment of the monetary obligation represented by the receivable against the Supplier and, therefore, no defenses to payment of the same monetary obligation to the Finance Agent and/or Investor after such sale. The confirmation by the Obligor that it has no defenses to payment includes confirmation that the Obligor does not have a right to refuse payment that it may have acquired with respect to underlying commercial trade transaction and that, if it has such a right, it will not assert such defenses against the Finance Agent or Investor.

107. **Dilution Risk** – With respect to any Working Capital Finance Program, dilution risk refers to disputes or contractual provisions that may reduce the amount of the obligation owed by the Obligor to the Supplier under the original receivable or the obligation owed by the Obligor to the Finance Agent and/or Investor under the Confirmed Supplier Receivable. Examples of dilution risk are credit for returns of defective goods or an allegation of fraud, such as that the invoice is not legitimate or is a duplicate invoice.

108. **Finance Agent** – A bank, financial institution, financial intermediary or service provider that facilitates the Working Capital Finance Program that arranges the sale, assignment or transfer of the Confirmed Supplier Receivable to the Investor and administers payment.

109. **Investor** – The insurance company that files the RTAS Application with the SVO in order to obtain an NAIC Designation for a proposed Working Capital Finance Program.

110. **Obligor** – An entity that purchases the goods or services from the Supplier and thereby generates the original supplier receivable—and which Obligor has, or can be designated, **NAIC 1** or **NAIC 2** by the SVO or has been assigned an equivalent credit rating by a NAIC CRP.

111. **Operational Risk** – With respect to any Working Capital Finance Program, operational risk refers to the combined effect of the procedures and parties employed to implement the program and their responsibility under the documents and to the determination by the SVO of whether these procedures and parties will ensure full and timely performance by the Obligor of the payment obligation to the Investor. An example of an operational risk is the confirmation process employed to verify that the Obligor has no defenses to payment.
112. **Supplier** – The entity that sells the goods or services to the Obligor, obtains a receivable from the Obligor in exchange and subsequently chooses to sell the right to receive the payment associated with the receivable to the Finance Agent or Investor under the terms of a Working Capital Finance Program designated **NAIC 1** or **NAIC 2** by the SVO.

113. **Working Capital Finance Program** – The program created for the Obligor and its Suppliers by a Finance Agent the terms of which permits Suppliers to the Obligor to negotiate the sale of a right to receive payment from the Obligor (which is associated with and evidenced by a receivable) to the Finance Agent or an Investor.

114. **Working Capital Finance Investment** – The right to receive the payment associated with a Confirmed Supplier Receivable purchased by an Investor under a Working Capital Finance Program designated **NAIC 1** or **NAIC 2** by the SVO and is the subject of SSAP No. 105R—Working Capital Finance Investments.

**NOTE**: SSAP No. 105R—Working Capital Finance Investments imposes reporting and statutory accounting requirements on insurance company investments in Working Capital Finance Investments and specifies analytical procedures to be applied or analytical controls to be verified by the SVO that are not detailed above. Insurance companies are strongly advised to become familiar with SSAP No. 105R before filing an RTAS Application with the SVO.

**Direction and Program Parameters**

115. The SVO may assign an NAIC Designation to a Working Capital Finance Program that would generate Working Capital Finance Investment that meet the criterion and standards identified in this Section.

117. Upon completion of its risk assessment, the SVO will issue an RTAS Letter indicating a preliminary NAIC Designation; i.e., the NAIC Designation that would be assigned if the Investor enters into a Working Capital Finance Program with a Finance Agent and sought to report it to the SVO.

**NOTE**: A preliminary NAIC Designation cannot be used for statutory reporting purposes.

118. The SVO shall issue a final NAIC Designation to the Investor for the Working Capital Finance Program and the Working Capital Finance Investments generated thereunder upon receipt of fully executed final copies of the required documentation.
Variations in Structure

119. Working Capital Finance Programs may differ in structure and in the protection afforded the Investor. Structural strength and weaknesses of various structures in such programs will be reflected in the NAIC Designation assigned by the SVO.

Program Quality

120. The SVO shall only assign an NAIC Designation to Working Capital Finance Programs that can be designated NAIC 1 or NAIC 2. Credit quality is measured by reference to a NAIC CRP credit rating or an NAIC Designation assigned by the SVO. The SVO shall withdraw the NAIC Designation assigned to a Working Capital Finance Program on the date the Obligor’s NAIC CRP credit rating or NAIC Designation is downgraded to NAIC 3 or its NAIC CRP equivalent.

NOTE: SSAP No. 105R—Working Capital Finance Investments provides that Working Capital Finance Investments generated under a Working Capital Finance Program of an Obligor that falls below the equivalent of NAIC 1 or NAIC 2 becomes nonadmitted.

Process and Methodology

121. An NAIC Designation shall be assigned to a Working Capital Finance Program on the basis of a thorough assessment of credit, dilution, operational and other risks, an assessment of protections provided by operative documents to the Investor and the quality of transaction participants.

Risk-Assessment Process

122. Credit Risk – The NAIC Designation for a Working Capital Finance Program shall be linked to the credit quality of the Obligor, which may be determined by reference to a credit rating assigned by a NAIC CRP or by an NAIC Designation assigned by the SVO. Credit risk is assessed by the SVO analyst in accordance with any permitted methodology set forth in this Manual for corporate obligors.

123. Dilution Risk – To achieve an NAIC 1 or NAIC 2 Designation, the Working Capital Finance Program must eliminate dilution risk in the Working Capital Finance Investment proposed to be eligible for purchase by the Investor. The terms governing the Investor’s Working Capital Finance Investment must eliminate Obligor recourse to its Supplier as a condition to payment of the obligation to the Investor so as to result in an unconditional right to receive payment on a full and timely basis.

124. Operational Risk – To achieve an NAIC 1 or NAIC 2 Designation, all operational risks shall be identified and assessed. Key participants shall have a NAIC CRP credit rating or an NAIC Designation assigned by the SVO at a level at least that of the Obligor.
Legal, Structural and Regulatory Considerations

125. Events of default remedies should provide the Investor at least those rights and privileges, unimpaired, of a trade creditor upon default with no Obligor defenses that could cause dilution of principal.

126. The SVO shall verify that either, (i) the Finance Agent is must be an entity regulated or supervised by a financial regulator in one of the countries in the List of Foreign (non-US) Jurisdictions Eligible for Netting for Purposes of Determining Exposures to Counterparties for Schedule DB, Part D, Section 1 and that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency (OCC) or the Federal Deposit Insurance Corporation (FDIC). In the alternative, or (ii) the SVO shall verify that payments due the Investor are made directly by the Obligor (a) to the Investor or (b) into an account maintained by a regulated financial institution for the benefit of Investors in the Working Capital Finance Program, and, in either case, the Finance Agent cannot be the beneficiary of such payment with no commingling of funds or assets with those of the Obligor, Supplier, Servicer or Trust Administrator or other Investors.

127. The SVO will verify that the Certification from the insurance company's Chief Investment Officer confirms that the Investor is not affiliated with Obligor and that Working Capital Finance Investment excludes insurance or insurance-related assets.

128. The SVO will verify that the Certification from the insurance company’s Legal Counsel confirms the existence of a commercially reasonable belief that the documents establishing and governing the Working Capital Finance Program establishes the rights and UCC code standard for preserving first priority perfected interest in Confirmed Supplier Receivables.

129. The remedies available to the participants in the Working Capital Finance Program should be expressly identified in the documentation for the Working Capital Finance Investment.

130. Characteristics that shall be present in a proposed Working Capital Finance Investment include, but are not limited to, the following, or a substantial equivalent:

131. The Obligor makes payments directly to the (a) Investor; (b) Finance Agent; or (c) servicer for the Working Capital Finance Program.

132. The Investor must have the option, and not an obligation, to purchase subsequent Working Capital Finance Investment so as to ensure the Investor can exit the Working Capital Finance Investment by permitting existing investments to mature.
133. **SSAP No. 105R—Working Capital Finance Investments** provides that the documentation governing Working Capital Finance Programs must provide that disputes arising under the agreements shall be submitted to a court of competent jurisdiction in the U.S. or be subject to an alternative dispute resolution process sanctioned by state law. Given the nature of Working Capital Finance Programs, the SVO anticipates that documentation governing Working Capital Finance Investments will be subject to the laws and jurisdiction of the courts of California, Delaware or New York, or a similar legal jurisdiction with significant exposure to sophisticated institutional financial transactions.

134. Events of default must be clearly defined, and provide a mechanism that gives the Investor the ability to pursue collection unfettered by actions taken or not taken by participants such as the Servicer or Trustee, or other named persons performing similar functions.

Modified 2020 Revisions to Model #440 and Model #450 as an Update to the Accreditation Standards Exposure (Attachment Five)...................................................................................................................................................11-27
The Financial Regulation Standards and Accreditation (F) Committee met Aug. 14, 2021. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Lori K. Wing-Heier, Vice Chair (AK); Alan McClain (AR); Andrew N. Mais (CT); Colin M. Hayashida (HI); Sharon P. Clark (KY); Gary D. Anderson (MA); Eric A Cioppa (ME); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Larry D. Deiter (SD); Doug Slape (TX); Scott A. White (VA); and Jeff Rude (WY). Also participating was: Justin Schrader (NE).

1. **Adopted its Spring National Meeting Minutes**

Director Wing-Heier made a motion, seconded by Commissioner Mais, to adopt the Committee’s April 12 minutes (see NAIC Proceedings – Spring 2021, Financial Regulation Standards and Accreditation (F) Committee). The motion passed unanimously.

Superintendent Dwyer said the Committee met Aug. 13 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee voted to award continued accreditation to Arkansas, District of Columbia, Indiana, Michigan, and New Jersey.

2. **Adopted its 2022 Proposed Charges**

Superintendent Dwyer discussed a memorandum that includes the Committee’s 2022 proposed charges, noting the proposed charges are unchanged from the Committee’s 2021 charges.

Commissioner Clark made a motion, seconded by Superintendent Cioppa, to adopt the Committee’s 2022 proposed charges (Attachment One). The motion passed unanimously.

3. **Adopted Revisions to the Part A Preamble to Account for Inclusion of Model #787 as a New Accreditation Standard**

Superintendent Dwyer stated that at the 2019 Fall National Meeting, the Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787), more commonly referred to as the XXX/AXXX Model Regulation, as a new accreditation standard, and the decision was confirmed by Plenary at the 2020 Summer National Meeting. Model #787 establishes uniform standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees. Model development was prompted by concerns regarding the security held under these transactions and an interim solution, outlined by the XXX/AXXX Captive Reinsurance Framework, was included in the accreditation program through the Part A Preamble. With the adoption of Model #787, an update to the Part A Preamble to reference codification of the framework in the form of Model #787 was therefore exposed at the 2021 Spring National Meeting. There were no comment letters received during the exposure period.

In addition, the Preamble includes references to variable annuity and long-term care (LTC) captives, which both have to-be-determined effective dates. Previously, the Committee asked the Financial Condition (E) Committee to conduct some research into the extent these captives are now used. This information will help the Committee determine how to proceed regarding effective dates. That work is ongoing, and an update is expected at the Fall National Meeting.

Commissioner White made a motion, seconded by Commissioner McClain to adopt the revisions to the Part A Preamble to reference Model #787 (Attachment Two). The motion passed unanimously.

4. **Exposed 2020 Revisions to Model #440 and Model #450 as an Update to the Accreditation Standards**

Superintendent Dwyer stated that in December 2020, the NAIC adopted revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation (#450). These revisions implement a group capital calculation (GCC) for the purpose of group solvency supervision and a liquidity stress test (LST) for macroprudential surveillance. A referral was exposed for a 30-day comment period, which ended May 13 (Attachment Three). The exposure recommended that the accreditation standard be applicable to all states with an effective date of Jan. 1, 2026.
Superintendent Dwyer said there were five comment letters received during the exposure period from Louisiana, Mississippi, North Carolina, South Dakota, and Texas (Attachment Four). All five comment letters address the significant elements related to the exemptions to the GCC. Specifically, they recommend that commissioners should be allowed to grant exemptions to companies meeting the standards set forth in the regulation without requiring the GCC filing at least once. In addition, one comment letter recommends the LST requirements should only be applicable to states with a group subject to the LST. The Committee will consider whether to expose the revisions to the accreditation standards consistent with the initial referral or modify the significant elements for exposure to allow exemptions for qualifying groups meeting the standard set forth in Model #450, Section 21A and Section 21B without the requirement to file at least once.

Director Deiter stated he supports modifying the exposure to allow exemptions for qualifying groups meeting the standard set forth in Model #450, Section 21A and Section 21B without the requirement to file at least once. He said that the modifications satisfy the South Dakota Division of Insurance’s concerns noted in its letter and that South Dakota supports the revisions as an accreditation standard.

Chief Deputy Commissioner Slape stated that Texas is supportive of the GCC and LST, but it is not supportive of the modifications to the accreditation requirement because the modifications do not fully address the concerns laid out in the comment letter from Texas. He said a “no” vote from Texas is not a signal of not supporting the models, but is a no to the proposed accreditation standard.

Mr. Schrader stated that Nebraska is supportive of the proposed modification. He noted that the Financial Condition (E) Committee and the Group Capital Calculation (E) Working Group discussed this referral at great length and that this is an unusual situation where the Committee and accreditation is straying from the Financial Condition (E) Committee’s recommendation in its referral. He asked for confirmation that the modification to the accreditation requirement would still give the states the authority to be stricter and does not preclude the commissioner from asking for a GCC in a situation that warrants it on a specific basis, even if that threshold was not met once this becomes an accreditation standard. He also asked that the Committee provide language so that states that do adopt the referral as modified have something to give their legislature to ensure consistency among states.

Dan Schelp (NAIC) stated that accreditation standards are minimum standards for solvency requirements and that states can be more conservative in their requirements. He also stated that the NAIC legislative counsel will provide information to the states regarding these changes and what options are available.

Ms. Obusek stated that North Carolina is in favor of the exposure as modified.

Director Deiter made a motion, seconded by Commissioner Rude, to expose the Financial Condition (E) Committee referral (Attachment Three), as modified (Attachment Five), for the Insurance Holding Company Systems accreditation standard to include the 2020 revisions to Model #440 and Model #450 related to CGC and LST for a one-year public comment period beginning Jan. 1, 2022. The proposed effective date is Jan. 1, 2026. The proposed standards for the GCC are modified from the original referral to allow exemptions to qualifying groups meeting the standards set forth in Model #450 Section 21A and Section 21B without the requirement to file at least once. This will be done by adding a question that states: “Although not required for accreditation, in order to grant an exemption, is the filing required at least once.” The motion passed. Alaska, Arkansas, Connecticut, Hawaii, Kentucky, Maine, Massachusetts, Montana, Nebraska, North Carolina, South Dakota, Virginia, and Wyoming voted in favor. Texas voted against.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.
MEMORANDUM

TO: Members of the Financial Regulation Standards and Accreditation (F) Committee

FROM: Becky Meyer, Senior Accreditation Manager

DATE: July 26, 2021

RE: 2022 Proposed Charges

Below are the Financial Regulation Standards and Accreditation (F) Committee’s 2022 proposed charges. There have been no substantive changes from the Committee’s 2021 charges.

The mission of the Financial Regulation Standards and Accreditation (F) Committee is both administrative and substantive, as it relates to the administration and enforcement of the NAIC Financial Regulation Standards and Accreditation Program. This includes, without limitation: 1) the consideration of standards and revisions of standards for accreditation; 2) the interpretation of standards; 3) the evaluation and interpretation of the states’ laws and regulations, as well as departments’ practices, procedures, and organizations as they relate to compliance with standards; 4) the examination of members for compliance with standards; 5) the development and oversight of procedures for the examination of members for compliance with standards; 6) the selection of qualified individuals to examine members for compliance with standards; and 7) the determination of whether to accredit members.

Ongoing Support of NAIC Programs, Products or Services

1. The Financial Regulation Standards and Accreditation (F) Committee will:
   A. Maintain and strengthen the NAIC Financial Regulation Standards and Accreditation Program.
   B. Assist the states, as requested and as appropriate, in implementing laws, practices, and procedures and obtaining personnel required for compliance with the standards.
   C. Conduct a yearly review of accredited jurisdictions.
   D. Consider new model laws; new practices and procedures; and amendments to existing model laws, practices, and procedures required for accreditation. Determine the timing and appropriateness of the addition of new model laws, practices, procedures, and amendments.
   E. Render advisory opinions and interpretations of model laws required for accreditation and on substantial similarity of state laws.
   F. Review existing standards for effectiveness and relevancy, and make recommendations for change, if appropriate.
   G. Produce, maintain, and update the NAIC Accreditation Program Manual to provide guidance to state insurance regulators regarding the official standards, policies, and procedures of the program.
H. Maintain and update the “Financial Regulation Standards and Accreditation Program” pamphlet.

I. Perform enhanced pre-accreditation review services, including, but not limited to, additional staff support, increased participation, enhanced report recommendations, and informal feedback.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: NAIC Staff

DATE: March 15, 2021

RE: Part A Preamble Update for the Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

In 2019, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as a new Part A accreditation standard, effective Sept. 1, 2022, with enforcement to begin Jan. 1, 2023. Model #787 establishes uniform, national standards governing captive reinsurance agreements pertaining to term and universal life insurance policies with secondary guarantees. Prior to Model #787, Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model #830) (AG48) was adopted as an interim step to address concerns regarding such reserve financing transactions. Model #787 completes the XXX/AXXX Reinsurance Framework by codifying the concepts in AG 48.

The NAIC Reinsurance Framework is discussed in the Part A Preamble under the section for captive reinsurers. The current iteration includes reference to the Reinsurance Framework and the impact on compliance with accreditation for captive reinsurers regarding specific lines of business. The lines of business include policies applicable under Section 3 of Model #787, commonly referred to as XXX/AXXX policies. The applicable excerpt of the Preamble is attached and includes recommended tracked changes to reference Model #787. The updates are not considered substantive, but rather are to ensure consistency with the adoption of Model #787 as the new standard for compliance.

Following adoption of AG 48 and prior to the effective date of Model #787, NAIC staff have performed an annual review of all insurers with applicable transactions. The review is designed to ensure all applicable transactions comply with the Reinsurance Framework and, as a result, comply with the Part A accreditation standards. NAIC staff will continue this review until the effective date of Model #787, at which time enactment of the model will be the measure of compliance.
Excerpt from Accreditation Manual – Part A Preamble

Captive Reinsurers
The following Part A standards apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct (captive insurer) that reinsure business covering risks residing in at least two states, but only with respect to the following lines of business:

1) Term and universal life with secondary guarantee policies that are applicable under Section 3 of the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) required to be valued under Sections 6 or 7 of the Valuation of Life Insurance Policies Model Regulation (Model #830) (commonly referred to as XXX/AXXX policies). The application of this provision is intended to have a prospective-only effect, so that regulation of captive insurers, special purpose vehicles and any other entities that reinsure these types of policies will not be subject to the Part A standards if the policies assumed were both (1) issued prior to Jan. 1, 2015, and (2) ceded so that they were part of a reinsurance arrangement as of Dec. 31, 2014. [Drafting Note: This paragraph of the Preamble became effective Jan. 1, 2016]

2) Variable annuities valued under Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

3) Long term care insurance valued under the Health Insurance Reserves Model Regulation (Model #10). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

The NAIC Executive (EX) Committee adopted the XXX/AXXX Reinsurance Framework, and the NAIC is currently in the process of adopting actions necessary for its full implementation. With regard to a captive insurer, special purpose vehicle, or any other entity assuming XXX/AXXX business, regulation of the entity is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction complies with Model #787, satisfies the XXX/AXXX Reinsurance Framework requirements adopted by the NAIC.

[Drafting Note: The Part A standards with respect to entities assuming variable annuities and long term care reinsurance business are intended to be effective with respect to both currently in-force and future business. However, the effective dates for variable annuities and long term care insurance are not yet determined, and their application to in-force business need further discussion].
MEMORANDUM

To: Financial Regulation Standards and Accreditation (F) Committee

From: Financial Condition (E) Committee

Re: 2020 Revisions to Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance.

Please find attached, memorandums and proposed changes to the Accreditation (E) Committee as adopted by the Financial Condition (E) Committee related to these most recent changes to #440 and #450. Each of the memorandum’s summarize the basis for recommending that certain provisions of these model changes become part of the Accreditation program as well as suggested timing. With respect to timing, consistent with action taken by the Financial Regulation Standards and Accreditation (F) Committee to use an expedited process in 2019 with respect to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) due to the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), we recommend a similar expedited process with respect to states who are a Group Wide Supervisor of a group with operations in the EU or UK. The attached provide further details on the specifics of such recommendations.
MEMORANDUM

To: Financial Condition (E) Committee

From: Group Capital Calculation (E) Working Group

Date: February 25, 2021

Re: 2020 Revisions to Insurance Holding Company System Regulatory Model Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

Executive Summary

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance. This memorandum makes recommendations with respect to the accreditation standards that this Working Group believes is appropriate with respect to only the GCC and expect the Financial Stability (EX) Task Force to make separate recommendations to the Committee with respect to the LST.

The GCC was developed as a result of discussions which began in 2015. The GCC is a natural extension of work state insurance regulators had begun, in part by lessons learned from the most recent financial crisis, to better understand an insurance group’s financial risk profile for the purpose of enhancing policyholder protections. While state insurance regulators currently have the authority to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist state insurance regulators in identifying risks that may emanate from a holding company system. The GCC, and related financial reporting, will provide comprehensive transparency to state insurance regulators, making risks more easily identifiable and quantifiable. For these reasons, the Working Group recommends adoption of #440 and #450 as accreditation standards for all states with the normal accreditation timeline, which would result in an effective date of January 1, 2026.

In addition, the GCC is intended to comply with the requirements under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. On Dec. 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK). The GCC is intended to meet the requirement that the states have a “worldwide group capital calculation” in place by Nov. 7, 2022 in order to avoid the EU from imposing a group capital assessment or requirement at the level of the worldwide parent undertaking. Failure of any state to do so for any U.S. group operating in such jurisdiction raises the potential for any supervisor in the EU or UK to impose its own group capital calculation (e.g., Solvency II capital requirements) on that group and therefore all of the U.S. insurers within that group. Due to this agreement, the Working Group recommends that the accreditation standard become effective Nov. 7, 2022 for those states who are the Group Wide Supervisor of a group with operations in the EU or UK.
A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The current Insurance Holding Company Systems accreditation standard requires that state law shall contain the significant elements from Model #440 and Model #450. These models have provided state insurance departments the framework for insurance group supervision since the early 1970s. Following the 2008 financial crisis, state regulators identified group supervision as an area where improvements could be made to the U.S. system. In December 2010, the NAIC adopted changes to the models enhancing the domestic legal structure under which holding companies are supervised. In December 2014, the NAIC adopted revisions to clarify legal authority and powers to act as a group-wide supervisor for internationally active insurance groups. These changes are newly required elements of the NAIC Accreditation Program and have been satisfactorily adopted by nearly all accredited U.S. jurisdictions. As discussed in the preceding paragraphs, the GCC was designed to enhance these same standards that were previously included as accreditation standards.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The Group Capital Calculation (E) Working Group believes that all states that are the lead state for a group subject to the GCC should be required to adopt the model revisions. The GCC is a tool intended to help protect the policyholders in all states from the risk that can emanate from outside the domestic insurer and will be an input into the Group Profile Summary (GPS). After an initial filing by all insurance groups, the GCC is required for all U.S. insurance groups with greater than $1 billion in premium. The groups subject to the GCC are expected to have domestic insurers in most U.S. states. Therefore, it is recommended that the new significant elements apply to all states.

A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

We are not currently aware of any states that have adopted the 2020 revisions to Model #440 and Model #450, although we have been advised that many states have begun their legislative processes for adoption of these revisions.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

The current accreditation standard for Model #440 and Model #450 requires state adoption on a substantially similar basis. Therefore, the Group Capital Calculation (E) Working Group supports the attached proposed significant elements (Attachment A) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this standard. The Group Capital Calculation (E) Working Group recommends that the accreditation standard become effective Nov. 7, 2022, the end of the 60-month period contemplated under the Covered Agreement, with enforcement of the standard to commence Jan. 1, 2023. However, the Working Group is also supportive of the effective date being bifurcated to allow those states that are not the Group Wide Supervisor of a group with operations in the EU or UK to be subject to a later effective date in line with the normal accreditation timeline, which would result in an effective date of January 1, 2026.
There were also revisions made to Section 8 of Model #440 regarding Confidential Treatment. The Group Capital Calculation (E) Working Group strongly supports the use of language similar to that contained in Section 8G of Model #440. This language was considered very critical to the GCC as its very important that members of the insurance industry (or regulators) not be allowed to make the results of the GCC public in any way as they are designed as regulatory-only tools. Unlike RBC that has regulatory trigger points, the GCC does not, and the regulators of these groups believed it would be detrimental if these tools were used by insurers as a means to advertise their relative solvency strength.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to the 2020 revisions to Model #440 and Model #450, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, the possible exemptions allowed under Model #450 are specifically designed to consider the cost to complete the GCC by the insurance company and the benefits of the GCC to the lead-state commissioner. More specifically, all insurers are required to submit the GCC at least once, after which time the expectation is that the lead state commissioner will evaluate the added insight brought to the state from GCC; then, provided the group has premium less than $1 billion, no international business, no risky non-regulated entities and no banks or similar capital regulated entities in the group, the lead state commissioner can exempt the group from filing in the future.

In addition, the construction of the GCC also considers cost of completion and specifically provides a principle-based approach where the insurance company can exclude non-risky affiliates from the calculation and also provides the insurance company to group the information of multiple non-insurance/non-regulated affiliates as a means to further reduce the burden of completion. In short, the GCC is only as complex as the insurance group has structured itself, and therefore the GCC already inherently considers the cost to comply.
6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar, and the department should have adopted the NAIC Insurance Holding Company System Model Regulation (#450).

Insurance Holding Company Systems – continued

Changes to Existing

k. Filing requirements for the enterprise risk filing similar to those specified in Section 4L(1) of the Model #440?

New

l. Filing requirements for the group capital calculation filing similar to those specified in Section 4L(2) of Model #440?

i. The ultimate controlling person of every insurer subject to registration shall annually file a group capital calculation completed in accordance with the NAIC Group Capital Calculation Instructions as directed by the lead state commissioner similar to section 4L(2)?

ii. Provision for exempting an insurance holding company system that has only one insurer within its holding company structure, that only writes business [and is only licensed] in its domestic state and assumes no business from any other insurer, similar to 4L(2)(a)?

iii. Provision for exempting an insurance holding company system that is required to perform a group capital calculation specified by the U.S. Federal Reserve? If the Federal Reserve Board cannot share the calculation with the lead state commissioner, the insurance holding company system is not exempt from the GCC, similar to 4L(2)(b)?

iv. Provision for exempting an insurance holding company system whose non-U.S. group-wide supervisor is located within a Reciprocal Jurisdiction that recognizes the U.S. state regulatory approach to group supervision and group capital, similar to 4L(2)(c)?

v. Provision for exempting an insurance holding company system that provides information to the lead state that meets the requirements for accreditation under the NAIC financial standards and accreditation program and whose non-U.S. group-wide supervisor that is not in a Reciprocal Jurisdiction recognizes and accepts the GCC as the worldwide group capital assessment for U.S. insurance groups who operate in that jurisdiction, similar to 4L(2)(d)?

vi. Provision that gives the lead state the authority to require the GCC for U.S. operations of any non-U.S. based insurance holding company system where after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes, similar to 4L(2)(e)?

Changes to Existing

c. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

New

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?

n. Filing requirements for the group capital calculation filing similar to those specified in Section 21 of Model #450?

i. Provision that gives the lead state the authority to exempt the filing of the group capital calculation provided the criteria are similar to those allowed under Section 21A of Model #450?
ii. Provision that gives the lead state the authority to accept a limited group capital filing provided the criteria are similar to those allowed under Section 21B of Model #450?

iii. Provision that gives the lead state the authority to require the group capital calculation of any group that previously met an exemption or submitted a limited filing if any insurer in the holding company system either triggers an RBC action level event, is deemed in hazardous financial condition, or otherwise exhibits qualities of a troubled insurer, similar to those allowed under Section 21C of Model #450?

iv. Provision that sets forth the criteria for a jurisdiction to be included on the NAIC listing that “recognize and accept the group capital calculation” similar to that required under Section 21D and Section 21E of Model #450?
MEMORANDUM

To: Financial Condition (E) Committee

From: Financial Stability (E) Task Force

Date: February 22, 2021

Re: 2020 Revisions to Insurance Holding Company System Regulatory Act (#440)

Executive Summary

On Dec. 9, 2020, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implemented a Group Capital Calculation (GCC) for the purpose of group solvency supervision and Liquidity Stress Test (LST) for macroprudential surveillance. This memorandum makes recommendations with respect to the accreditation standards that this Task Force believes is appropriate with respect to only the LST and expect the Group Capital Calculation (E) Working Group to make separate recommendations to the Committee with respect to the GCC.

Post-financial crisis, regulators from all financial sectors across the globe recognized the need for macroprudential surveillance and tools to address macroprudential risks. While the solvency framework established and managed by the Financial Condition (E) Committee thoroughly addresses legal entity insurers and insurance groups, there was no group with a macroprudential scope. This Task Force was created to fill this gap, and in 2017 was charged to “analyze existing post-financial crisis regulatory reforms for their application in identifying macroprudential trends, including identifying possible areas of improvement or gaps, and propose . . . enhancements and/or additions to further improve the ability of state insurance regulators and industry to address macroprudential impacts.” The Task Force created the NAIC Macroprudential Initiative (MPI) to focus its efforts in four key areas: liquidity risk, recovery and resolution, capital stress testing, and exposure concentrations. Liquidity risk was consistently recognized as a key macroprudential risk by federal and international regulatory agencies, and there were several attempts to assess potential market impacts emanating from a liquidity stress in the insurance sector. Many of these analyses relied heavily on anecdotal assumptions and observations from behaviors of other financial sectors.

In order to provide more evidence-based analyses, the Task Force decided to develop a LST for large life insurers that would aim to capture the impact on the broader financial markets of aggregate asset sales under a liquidity stress event. Unlike capital adequacy, which has risk-based capital as a standardized legal entity capital assessment tool and the newly created Group Capital Calculation to provide a capital analysis tool at the group level, there is no regulatory liquidity assessment or stress tool. The Task Force focused on large life insurers due to the long-term cash buildup involved in many life insurance contracts and the potential for large scale liquidation of assets, not because liquidity risk does not exist in other insurance segments. Thus, the primary goal of the LST is to provide quantitative as well as qualitative insights for macroprudential surveillance, such as identifying the amount of asset sales that could occur during a specific stress scenario; but it will also aid micro prudential regulation as well. Because this stress testing is complex and resource-intensive, a set of scope criteria were developed to identify life insurers with large balances of activities assumed to be highly correlated with liquidity risk; thus, many life insurers will not be subject to the LST.
A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The current Insurance Holding Company Systems accreditation standard requires that state law shall contain the significant elements from Model #440 and Model #450. These models have provided state insurance departments the framework for insurance group supervision since the early 1970s. Following the 2008 financial crisis, state regulators identified group supervision as an area where improvements could be made to the U.S. system. In December 2010, the NAIC adopted changes to the models enhancing the domestic legal structure under which holding companies are supervised. In December 2014, the NAIC adopted revisions to clarify legal authority and powers to act as a group-wide supervisor for internationally active insurance groups. These changes are newly required elements of the NAIC Accreditation Program and have been satisfactorily adopted by nearly all accredited U.S. jurisdictions. As discussed in the preceding paragraphs, the LST was designed to enhance these same standards that were previously included as accreditation standards.

Macroprudential risks can directly impact regulated legal entity insurers and groups, and/or can emanate from or be amplified by these insurers and transmitted externally. The NAIC solvency surveillance framework must address macroprudential risks to ensure that the companies states regulate remain financially strong for the protection of policyholders, while serving as a stabilizing force to contribute to financial stability, including in stressed financial markets. The LST is the first new tool developed for the macroprudential program within the financial solvency framework.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The Financial Stability Task Force believes that all states that are the lead state for a group subject to the LST should be required to adopt the model revisions. The LST is a tool intended to help assess the impacts the life insurance industry can have on the broader financial markets in a time of stress. Ideally, the tool would have been required of all life insurance groups, but this was not possible due to the complexity and resources required to accomplish such liquidity stress testing. Thus, the LST uses a set of scope criteria to identify those life insurers with significant amounts in activities assumed to have high liquidity risk, thus representing the larger portion of the life insurance industry in terms of liquidity risk rather than representing the entire life insurance industry. If a scoped-in life insurance group was not subject to the LST because a state did not adopt the model revisions, this would significantly reduce the ability of the NAIC to represent the results as truly macroprudential and reflective of the majority of risks of the life insurance sector. Additionally, the LST results will be helpful to the lead states in their group supervision efforts as well.

Though not every state will be the lead state of a scoped-in group, the Task Force still believes the model revisions for the LST should be adopted in every state. It is fairly common for legal entity insurers to move from one group to another, impacting the group dynamics including the lead state determination, and each state should have the LST in their statutes to ensure they will be prepared for any future appointment as lead state. Also, even without legal entities changing groups, business acquisition and operational changes within existing groups might subject a previously excluded group to the LST. Therefore, it is recommended that that the new significant elements apply to all states.

A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

We are not currently aware of any states that have adopted the 2020 revisions to Model #440, although we have been advised that many states have begun their legislative processes for adoption of these revisions.
A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

The current accreditation standard for Model #440 and Model #450 requires state adoption on a substantially similar basis. Therefore, the Financial Stability (E) Task Force supports the attached proposed significant elements (Attached) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this standard. The Financial Stability (E) Task Force recommends that the accreditation standard become effective Nov. 7, 2022, concurrent with the Group Capital Calculation revisions to the model, with enforcement of the standard to commence Jan. 1, 2023.

There were also revisions made to Section 8 of Model #440 regarding Confidential Treatment. The Financial Stability (E) Task Force strongly supports the use of language similar to that contained in Section 8G of Model #440. This language was considered very critical to the LST as its very important that members of the insurance industry (or regulators) not be allowed to make the results of the LST public in any way as they are designed as regulatory-only tools using complex assumptions for potential future stress events and the results could easily be misinterpreted and misrepresented by other users, causing true financial harm to the insurers.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to the 2020 revisions to Model #440, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, the LST scope criteria selects the larger, more complex life insurers, and all of these already perform some form of internal liquidity stress tests. While there are regulatory requirements for inputs and outputs, truly significant costs are avoided by using their existing internal stress testing systems instead of specifying a regulatory model.
6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar.

Insurance Holding Company Systems – continued

Changes to Existing

k. Additions to the filing requirements for the enterprise risk filing specified in Section 4L(1) of the Model #440 (see next item).

New

c. Define “NAIC Liquidity Stress Test Framework” similar to that in Section 1K?

d. Define “Scope Criteria” similar to that in Section 1M?

l. Filing requirements for the liquidity stress test filing similar to those specified in Section 4L(3) of Model #440:

i. The ultimate controlling person of every insurer subject to registration and also scoped into the NAIC Liquidity Stress Test Framework shall file the results of a specific year’s Liquidity Stress Test to the lead state insurance commissioner of the insurance holding company system as determined by the procedures within the Financial Analysis Handbook similar to Section 4L(3)?

ii. Insurers meeting at least one threshold of the Scope Criteria for a specific data year are scoped into that year’s NAIC Liquidity Stress Test Framework unless the lead state, after consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should not be scoped into the Framework for that data year similar to Section 4L(3)(a)? Insurers that do not trigger at least one threshold of the Scope Criteria are considered scoped out of the NAIC Liquidity Stress Test Framework for the specified data year, unless the lead state insurance commissioner, in consultation with the NAIC Financial Stability Task Force or its successor, determines the insurer should be scoped into the Framework for that data year?

iii. Provision requiring compliance with the NAIC Liquidity Stress Test Framework’s instructions and reporting templates for the specific data year and any lead state insurance commissioner determinations in consultation with the Financial Stability Task Force or its successor, provided within the Framework similar to Section 4L(3)(b)?

Changes to Existing

cc. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?

RE: Group Capital Calculation (“GCC”) - (F) Committee Exposure – Louisiana Comments

Dear Superintendent Dwyer,

The Louisiana Department of Insurance is writing in response to the current exposure by the Financial Regulation Standards and Accreditation (F) Committee regarding the group capital calculation (“GCC”) and the liquidity stress test (“LST”), as additions to the accreditation standards for insurance holding company systems. The accreditation standard items are included in the 2020 revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and the NAIC Insurance Holding Company System Model Regulation (#450).

My comments are regarding Model Regulation #450, Section 21, A and B. Louisiana agrees that GCC should become an accreditation standard and believes that GCC will be a valuable tool for regulators. However, Louisiana does not support the inclusion of Model Regulation #450, Section 21, A and B, as an accreditation standard, which provides that the Commissioner may only grant exemptions “where an insurance holding company system has previously filed the annual GCC at least once”.

I believe that the commissioners should be allowed to grant exemptions to companies meeting the standards set forth in Model Regulation #450, Section 21, A and B, regardless of whether the holding company system has previously filed the GCC. This is based upon the following:

- The cost benefit must be taken into consideration for our small insurance holding company systems and that can only be done on a case-by-case basis by the lead state Commissioner.

- Obtaining the information only once will not provide significant value because it will lack comparability.

- As the ultimate controlling person for their insurance holding company system, many small mutual insurers already provide their own RBC calculation that quantifies the risk for the entire holding company system. As such, the addition of the GCC does not provide significant value but does increase their cost of doing business.

RE: Group Capital Calculation ("GCC") - (F) Committee Exposure-MID Comments

Dear Superintendent Dwyer:

The Mississippi Department of insurance is writing in response to the group capital calculation exposure by the Financial Regulation Standards and Accreditation (F) Committee regarding the group capital calculation ("GCC") and the liquidity stress test ("LST"), as additions to the accreditation standards for insurance holding company systems. The accreditation standard items are included in the 2020 revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and the NAIC Insurance Holding Company System Model Regulation (#450).

Our comments are regarding Model Regulation #450, Section 21, A and B. Mississippi agrees that GCC should become an accreditation standard and believes that GCC will be a valuable tool for regulators. However, Mississippi does not support the inclusion of Model Regulation #450, Section 21, A and B, as an accreditation standard, which provides that the Commissioner may only grant exemptions "where an insurance holding company system has previously filed the annual GCC at least once".

Mississippi believes that the commissioners should have discretion to grant exemptions to small Holding Companies without the first year filing requirement, if the Holding Company does not have a covered agreement and has less than one billion aggregate premium for the group. This follows similar adopted language for ORSA.

Many small insurers provide their own RBC calculation that quantifies the risk for the entire holding company system. Adoption of the Committee Exposure would be an increase cost of doing business.

Thank you for the opportunity to comment on this important topic.

Sincerely,

Mike Chaney, Commissioner

RE: Group Capital Calculation ("GCC") - (F) Committee Exposure – NCDOI Comments

Dear Superintendent Dwyer:

The North Carolina Department of Insurance is writing in response to the current exposure by the Financial Regulation Standards and Accreditation (F) Committee regarding the group capital calculation ("GCC") and the liquidity stress test ("LST"), as additions to the accreditation standards for insurance holding company systems. The accreditation standard items are included in the 2020 revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and the NAIC Insurance Holding Company System Model Regulation (#450).

Our comments are regarding Model Regulation #450, Section 21, A and B. North Carolina agrees that GCC should become an accreditation standard and believes that GCC will be a valuable tool for regulators. However, North Carolina does not support the inclusion of Model Regulation #450, Section 21, A and B, as an accreditation standard, which provides that the Commissioner may only grant exemptions “where an insurance holding company system has previously filed the annual GCC at least once”.

North Carolina believes that the commissioners should be allowed to grant exemptions to companies meeting the standards set forth in Model Regulation #450, Section 21, A and B, regardless of whether the holding company system has previously filed the GCC. This is based upon the following:

- The cost benefit must be taken into consideration for our small insurance holding company systems and that can only be done on a case-by-case basis by the lead state Commissioner.
- Obtaining the information only once will not provide significant value because it will lack comparability.
- As the ultimate controlling person for their insurance holding company system, many small mutual insurers already provide their own RBC calculation that quantifies the risk for the entire holding company system. As such, the addition of the GCC does not provide significant value but does increase their cost of doing business.
We appreciate the opportunity to comment on this important topic. Please let us know if you need any additional information or would like to discuss our comments.

RE: Group Capital Calculation ("GCC") - (F) Committee Exposure – SDDOI Comments

Dear Superintendent Dwyer:

The South Dakota Division of Insurance is writing in response to the current exposure by the Financial Regulation Standards and Accreditation (F) Committee regarding the group capital calculation ("GCC") and the liquidity stress test ("LST"), as additions to the accreditation standards for insurance holding company systems. The accreditation standard items are included in the 2020 revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and the NAIC Insurance Holding Company System Model Regulation (#450).

Our comments are regarding Model Regulation #450, Section 21, A and B. South Dakota agrees that GCC should become an accreditation standard in general and believes that GCC will be a valuable tool for regulators. South Dakota however does not support the inclusion of the provision in the standard which provides that the Commissioner may only grant exemptions “where an insurance holding company system has previously filed the annual GCC at least once”.

South Dakota believes that the commissioners should be allowed to grant exemptions to companies meeting the standards set forth in Model Regulation #450, Section 21, A and B, regardless of whether the holding company system has previously filed the GCC. A few reasons for this justification are listed below.

- The cost benefit must be taken into consideration for small insurance holding company systems and that can only be done on a case-by-basis by the lead state Commissioner.
- Obtaining the information only once will not provide significant value because it will lack comparability.
- As the ultimate controlling person for their insurance holding company system, many small mutual insurers already provide their own RBC calculation that quantifies the risk for the entire holding company system. As such, the addition of the GCC does not provide significant value but does increase their cost of doing business.
- State legislation that includes an exemption “only where previously filed” will cause this important regulatory standard to fail in multiple states.

We appreciate the opportunity to comment on this topic. Please let us know if you need any additional information or would like to discuss our comments.

Sincerely,

Larry Deiter
Director
South Dakota Division of Insurance

Hon. Elizabeth Kelleher Dwyer, Chair  
Financial Regulation Standards and Accreditation (F) Committee

Dear Superintendent Dwyer:

RE: Exposed accreditation standards for Models 440 and 450

Texas appreciates the opportunity to provide comments on the exposed accreditation standard modifications associated with the group capital calculation (GCC) and the liquidity stress test framework (LST) amendments to Models 440 and 450. Our comments are as follows:

**Group Capital Calculation**

**Exposed Language:**

i. Filing requirements for the group capital calculation filing similar to those specified in Section 4L(2) of Model #440?

   i. The ultimate controlling person of every insurer subject to registration shall annually file a group capital calculation completed in accordance with the NAIC Group Capital Calculation Instructions as directed by the lead state commissioner similar to section 4L(2)?

n. Filing requirements for the group capital calculation filing similar to those specified in Section 21 of Model #450?

   i. Provision that gives the lead state the authority to exempt the filing of the group capital calculation provided the criteria are substantially similar to those allowed under Section 21A of Model #450?

**Comments:**

Texas is opposed to the broad requirement that every group file a GCC as an accreditation requirement. The accreditation standard to file a GCC should be limited to those with international operations and provide the lead state commissioner the discretion to require any group file a GCC.
For years the states debated the merits of group capital. We focused upon our windows and walls approach and enhanced our windows into groups including enhancing Forms B, implementing group supervision and supervisory colleges, enhancing Schedule Y reporting, specifically authorizing holding company examinations, and requiring the filing of enterprise risk reports, ORSA, and Corporate Governance Annual Disclosures. These tools used correctly already give us great insight into most US groups.

Only after it was clear the states' approach would not protect US companies operating internationally from the imposition of international capitals standards did we pivot to developing the GCC. The need for the GCC for groups operating internationally was cemented in the covered agreements.

A state's accreditation status should not be threatened if all groups are not required to file the GCC once. As currently contemplated, if all groups are required to seek an exemption from the lead state commissioner, valuable resources that could be used to monitor solvency will be used in a bureaucratic process that does not enhance solvency oversight of companies. The added filing of the GCC should only be required in situations where the lead state commissioner believes that it would add valuable insight and information to group oversight, not just because it is an accreditation requirement.

Through the supervisory college framework, other regulators would be able to raise concerns about a group's operations and discuss whether a GCC should be required. Because this approach would "achieve the objective of the standard," this approach should be accepted as substantially similar in effect.

Liquidity Stress Test

Exposed Language:

The Financial Stability Task Force believes that all states that are the lead state for a group subject to the LST should be required to adopt the model revisions.

Though not every state will be the lead state of a scoped-in group, the Task Force still believes the model revisions for the LST should be adopted in every state.
Comments:

Less than 15 states are currently the lead state for a scoped-in groups. The requirement that all states adopt the law regardless of whether the state will ever be the lead state for a scoped-in group does not enhance the overall regulation of insurance groups.

The point of adding provisions to Part A of the accreditation standards is to create a floor of solvency regulation that can be relied upon by other states. Threatening a state’s accreditation for not having an unnecessary law on the books puts the state in a position of requesting new laws with the only rationale being the NAIC is telling elected officials what legislation they must pass. This is not a message that will be well received in state capitals.

We anticipate that some states that are not currently lead states for scoped-in groups would adopt the model in order to make their jurisdiction a more attractive domiciliary regulator, but that should be their choice, not a mandate. There is no regulatory reason for all states to be required to adopt these changes.

Conclusion

Texas opposes requiring GCC filings to be prepared by groups when the filing is not needed to understand group operations. A state’s accreditation should not be affected if:

- the state enacts a GCC law that requires filings from all groups with international operations and provides the lead state commissioner discretion to require all other groups file; and,
- aligns with the language included in the covered agreements.

Texas also opposes the application of the LST requirements to all states. There are less than 15 states that are the lead regulators for scoped-in groups. The states that should be subject to those standards should be limited to those that would be required to require LST filings.

Thank you for the opportunity to provide these comments.

Respectfully,

Doug Slape
Chief Deputy Commissioner
Group Capital Calculation (GCC) significant elements as modified and exposed by F Committee on August 14, 2021.

Exposure period is for one year beginning January 1, 2022. Proposed effective date is January 1, 2026.

6. Insurance Holding Company Systems

State law should contain the NAIC Insurance Holding Company System Regulatory Act (#440), or an act substantially similar, and the department should have adopted the NAIC Insurance Holding Company System Model Regulation (#450).

Insurance Holding Company Systems – continued

Changes to Existing

k. Filing requirements for the enterprise risk filing similar to those specified in Section 4L(1) of the Model #440?

New

l. Filing requirements for the group capital calculation filing similar to those specified in Section 4L(2) of Model #440?

i. The ultimate controlling person of every insurer subject to registration shall annually file a group capital calculation completed in accordance with the NAIC Group Capital Calculation Instructions as directed by the lead state commissioner similar to section 4L(2)?

ii. Provision for exempting an insurance holding company system that has only one insurer within its holding company structure, that only writes business [and is only licensed] in its domestic state and assumes no business from any other insurer, similar to 4L(2)(a)?

iii. Provision for exempting an insurance holding company system that is required to perform a group capital calculation specified by the U.S. Federal Reserve? If the Federal Reserve Board cannot share the calculation with the lead state commissioner, the insurance holding company system is not exempt from the GCC, similar to 4L(2)(b)?

iv. Provision for exempting an insurance holding company system whose non-U.S. group-wide supervisor is located within a Reciprocal Jurisdiction that recognizes the U.S. state regulatory approach to group supervision and group capital, similar to 4L(2)(c)?

v. Provision for exempting an insurance holding company system that provides information to the lead state that meets the requirements for accreditation under the NAIC financial standards and accreditation program and whose non-U.S. group-wide supervisor that is not in a Reciprocal Jurisdiction recognizes and accepts the GCC as the worldwide group capital assessment for U.S. insurance groups who operate in that jurisdiction, similar to 4L(2)(d)?

vi. Provision that gives the lead state the authority to require the GCC for U.S. operations of any non-U.S. based insurance holding company system where after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes, similar to 4L(2)(e)?

Changes to Existing

cc. Provisions for protecting confidential information submitted to the commissioner, including provisions maintaining confidentiality for information shared with state, federal and international regulators similar to Section 8? If sharing confidential information with the NAIC and third-party consultants is permitted, appropriate confidentiality protections should be included.

New

m. Provision prohibiting the making, publishing, disseminating, circulating or placing before the public in any way the group capital calculation and resulting group capital ratio under Section 4L(2) and/or the liquidity stress test along with its results and supporting disclosures required under Section 4L(3), by any insurer, broker, or other person engaged in any manner of the insurance business, except if the sole purpose of the announcement is to rebut a materially false statement, similar to Section 8G of Model #440?
n. Filing requirements for the group capital calculation filing similar to those specified in Section 21 of Model #450?
   
   i. Provision that gives the lead state the authority to exempt the filing of the group capital calculation provided the criteria are similar to those allowed under Section 21A of Model #450?
      
      o Although not required for accreditation, in order to grant an exemption, is the filing required at least once?

   ii. Provision that gives the lead state the authority to accept a limited group capital filing provided the criteria are similar to those allowed under Section 21B of Model #450?
      
      o Although not required for accreditation, in order to grant an exemption, is the filing required at least once?

   iii. Provision that gives the lead state the authority to require the group capital calculation of any group that previously met an exemption or submitted a limited filing if any insurer in the holding company system either triggers an RBC action level event, is deemed in hazardous financial condition, or otherwise exhibits qualities of a troubled insurer, similar to those allowed under Section 21C of Model #450?

   iv. Provision that sets forth the criteria for a jurisdiction to be included on the NAIC listing that “recognize and accept the group capital calculation” similar to that required under Section 21D and Section 21E of Model #450?

© 2021 National Association of Insurance Commissioners
The International Insurance Relations (G) Committee met in Columbus, OH, Aug. 16, 2021. The following Committee members participated: Gary D. Anderson, Chair (MA); Raymond G. Farmer, Vice Chair (SC); Evan G. Daniels (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmair (FL); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Eric Dunning (NE); Marlene Caride (NJ); Andrew R. Stolfi (OR); and Jessica K. Altman (PA).

1. **Adopted its May 5 and Spring National Meeting Minutes**

The Committee met May 5 and April 7 and took the following action: 1) approved submission of NAIC comments on the International Association of Insurance Supervisors’ (IAIS’s) draft *Application Paper on Macroprudential Supervision*; 2) heard a presentation on Scalar Methodologies from the American Academy of Actuaries (Academy); 3) heard an update on upcoming IAIS committee meetings and activities; and 4) heard an update on the Sustainable Insurance Forum (SIF), the Organisation for Economic Co-operation and Development (OECD), and other supervisory cooperation activities.

Commissioner Caride made a motion, seconded by Commissioner Mais, to adopt the Committee’s May 5 (Attachment One) and April 7 (see NAIC Proceedings – Spring 2021, International Insurance Relations (G) Committee) minutes. The motion passed unanimously.

2. **Discussed NAIC Comments on the IAIS Draft Issues Paper on Insurer Culture and the Draft Revised Application Paper on Supervisory Colleges**

Commissioner Anderson explained that the IAIS draft *Issues Paper on Insurer Culture* explores the concept of insurer culture as a point of intersection for prudential and conduct risks, with examples to illustrate the broader role of culture in managing these risks. He also explained that the IAIS draft revised *Application Paper on Supervisory Colleges* is a revision of the one published in October 2014, and it aims to foster an understanding of the work of supervisory colleges and explain the role and involvement insurers may have in supervisory colleges.

Ryan Workman (NAIC) gave an overview of the NAIC’s comments on the application paper (Attachment Two), noting that most were editorial or for clarification. He provided more detail on those comments that were more substantial.

David F. Snyder (American Property Casualty Insurance Association—APCIA) noted that the APCIA is coordinating comments on the application paper for industry organizations through the Global Federation of Insurance Associations (GFIA). The GFIA’s comments will focus on the importance of ongoing dialogue with the insurer’s senior management as part of groupwide supervision; the purpose of proportionality, which helps to support competitive markets; and the importance of confidentiality in protecting trade secret information.

Mr. Workman noted that there were no NAIC comments on the issues paper. Mr. Snyder discussed a comment submitted to the Committee (Attachment Three), noting that the subjectivity of the culture discussion should not become an additional layer of regulation beyond current regulations. He remarked on an example in the issues paper of the culture of a U.S.-based bank, which was a federally regulated financial institution and not state regulated. Commissioner Anderson said the introduction of the issues paper makes it clear that the topic of culture is a subjective matter, and the issues paper does not suggest that culture be treated as an additional layer, but rather another consideration as part of prudential and market conduct supervision.

Commissioner Altmair made a motion, seconded by Director Farmer, to approve submission of the NAIC comments. The motion passed unanimously.

3. **Heard an Update on Key 2021 Projects and Priorities of the IAIS**

Commissioner Anderson reported on recent IAIS activities, starting with an update on the insurance capital standard (ICS) monitoring period, noting that work continues on developing criteria to assess whether the aggregation method (AM) provides comparable outcomes to the ICS. Development of the criteria will take place throughout 2021, with a consultation expected by year-end.
Commissioner Anderson said another important area of work underway is the targeted jurisdictional assessment (TJA), which is the second phase of the current implementation assessment of the Holistic Framework for Systemic Risk. He added that the U.S. is taking part in the TJA, which includes a series of in-depth written questionnaires followed by onsite meetings planned for early next year and builds off information provided in the first phase—the baseline assessment—which was completed last summer. He also noted that the global monitoring exercise (GME) is underway, and the IAIS has reviewed data received as part of the individual insurer monitoring and sector wide monitoring to determine the scope of collective discussions on potential systemic risks, which will take place towards the end of September.

Commissioner Anderson reported that the IAIS has launched its peer review process among members on insurance core principle (ICP) 9 (Supervisory Review and Reporting) and 10 (Preventative Measures, Corrective Measures and Sanctions), with an objective of a better understanding of the observance of, and implementation challenges related to, IAIS standards.

Commissioner Anderson noted that strategic planning initiatives at the IAIS for 2022 and 2023 were underway, saying that commitments on projects related to group capital and systemic risk will continue, while also focusing on and addressing emerging topics such as climate risk, diversity and inclusion, innovation and technology, and cyber.

3. **Heard an Update on International Activities**

   a. **Regional Supervisory Cooperation**

   Director Farmer reported that the Latin American Association of Insurance Supervisors (ASSAL), the Financial Stability Institute (FSI), and the IAIS jointly held a webinar to exchange views on the main insurance risks that currently concern supervisors in the Latin American region. Nina Chen (NY) from the New York Department of Financial Services (DFS) participated on a panel on the insurance supervisor’s role in climate change. The next ASSAL meeting is scheduled for later this fall, which may be held in person in Costa Rica.

   Director Farmer said the NAIC met virtually in April with the Bermuda Monetary Authority (BMA) to discuss issues of mutual importance, including climate risk and resilience, COVID-19, the NAIC reciprocal jurisdiction framework, and ICS comparability. The NAIC met with the Financial Services Agency (FSA) of Japan for a biannual bilateral dialogue on June 3. The NAIC and the FSA discussed various topics and developments, including climate risk and resilience, liquidity stress testing, results of the recent Financial Sector Assessment Program (FSAP) of the U.S., and market developments in response to COVID-19.

   Director Farmer said the work of the European Union (EU)-U.S. Insurance Dialogue Project (Project) continues with the working groups and the Project’s Steering Committee meeting in the last few months to wrap up the work of the workstreams on cybersecurity, cyberinsurance, and big data/artificial intelligence (AI). He reported that the Project will host a public virtual webinar on Oct. 19 on its continued progress and future priorities, with representatives of the NAIC, including Commissioner Birrane and Commissioner Ommen; the Federal Insurance Office (FIO) of the U.S. Department of the Treasury (Treasury Department); and the European Insurance and Occupational Pensions Authority (EIOPA) leading the webinar.

   Director Farmer highlighted other upcoming activities, including remarks to be given by Commissioner Altmaier as part of the Asian Forum of Insurance Regulators (AFIR) annual meeting, and the creation of recurring bilateral discussions with the United Kingdom (UK) on areas of mutual interest.

   Director Farmer reported that the Fall 2021 NAIC International Fellows Program will be held in a virtual format Oct. 22–28. Applications are due Oct. 1, and a diverse group of participants from most major regions are expected to participate, including from Western and Eastern Europe, Latin America, the Caribbean, Asia, Africa, and the Middle East. He noted that following the success of the last few virtual Fellows Programs, it has been decided to take a hybrid approach to the program going forward, with all Spring sessions being held virtually and the Fall sessions to continue to be offered in person.

   b. **OECD**

   Director Farmer reported that the OECD’s Insurance and Private Pensions Committee (IPPC) met virtually in June and covered updates on various initiatives underway at the IPPC, which included: 1) International Financial Reporting Standard (IFRS) 17 implementation challenges and benefits; 2) a draft of “Insurance Market in Figures 2021” and a review of the OECD Global Insurance Statistics exercise; 3) an online survey on risk management for health and long-term care insurance (LTCI); 4) issues related to risks that are difficult to insure, including pandemics and catastrophes; and 5) leveraging digitalization for risk prevention and mitigation in the insurance sector in Asia. He noted that Commissioner Mais participated virtually in the OECD-
Asian Development Bank (ADB) Institute Roundtable on Insurance and Retirement Savings in Asia on June 29, sharing the U.S. state insurance regulatory experience regarding AI and concerns around inappropriate uses of big data, including those that may disadvantage people of color and/or historically underrepresented groups.

c. SIF

Director Farmer said the NAIC, alongside individual state SIF members—California, New York, and Washington—will participate in the next virtual call in October. The group will discuss progress relative to the three workstreams agreed to in its workplan: 1) impacts of climate-related risks on insurability of assets; 2) broader sustainability issues beyond climate change; and 3) climate risks in the actuarial processes.

4. Discussed Other Matters

Commissioner Anderson reminded attendees about the EU-U.S. Project webinar on Oct. 19. He noted that registration for the event will open in mid-September, and additional details will follow.

Having no further business, the International Insurance Relations (G) Committee adjourned.
The International Insurance Relations (G) Committee met May 5, 2021. The following Committee members participated: Gary D. Anderson, Chair (MA); Raymond G. Farmer, Vice Chair (SC); Evan G. Daniels (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Anitu G. Fox represented by Steve Mayhew (MI); Chlora Lindley-Myers (MO); Eric Dunning (NE); Marlene Caride represented by Dave Wolf (NJ); Andrew R. Stolfi (OR); and Jessica K. Altman (PA).

1. Discussed NAIC Comments on the IAIS Draft Application Paper on Macroprudential Supervision

Commissioner Anderson explained that the International Association of Insurance Supervisors (IAIS) draft Application Paper on Macroprudential Supervision aims to assist supervisors with the practical application of supervisory material related to macroprudential supervision under Insurance Core Principle (ICP) 24, Macroprudential Surveillance and Insurance Supervision. He noted that as part of developing the holistic framework for systemic risk, ICP 24 was revised to better articulate the elements of macroprudential supervision and to address more explicitly the build-up and transmission of systemic risk at the individual insurer and sector-wide levels.

Ryan Workman (NAIC) gave an overview of the NAIC’s comments on the draft application paper, noting that most were editorial or for clarification. He provided more detail on those comments that were more substantial.

Steve Broadie (American Property Casualty Insurance Association—APCIA) noted APCIA’s general concerns on the draft paper, including an overemphasis on looking at whether individual insurers are systemically important, rather than focusing on an activities-based approach (ABA) to looking at systemic risk in the insurance sector. He suggested that the current recommendation of horizontal reviews of individual insurers’ Own Risk and Solvency Assessment (ORSA) reports should be taken out of the paper given that ORSA reports are not intended for such a purpose, as well as for confidentiality issues. Mr. Workman suggested that the focus on individual insurers may be a result of the IAIS having drawn from material related to the global systemically important insurer (G-SII) that took an entities-based approach (EBA), whereas the ABA is still being articulated.

David Leifer (American Council of Life Insurers—ACLI) spoke about similar concerns to the APCIA, noting that its comments to the IAIS will highlight the paper’s emphasis on an EBA instead of an ABA. He said the ACLI has concerns with Section 4.1.3, which describes a reduced form approach for identifying systemically important insurers. He noted the paper gives too much attention to the approach, which has not been properly vetted elsewhere and may not be appropriate for insurers. He said that the use of risk dashboards gets a lot of attention throughout the paper, but while it is a useful tool, it should not be overly relied upon. The ACLI’s comments will also focus on reigning in what it believes to be overly prescriptive language throughout the paper.

Commissioner Altmaier made a motion, seconded by Director Farmer, to approve submission of the NAIC comments on the draft Application Paper on Macroprudential Supervision (Attachment One-A).

2. Discussed Other Matters

Commissioner Anderson provided an update on planning currently underway for the 2021 NAIC International Insurance Forum scheduled for May 25–26. He encouraged everyone to join the virtual event for the robust panel discussions and featured speaker presentations that are scheduled to take place over the course of the two days.

Mr. Broadie noted that the IAIS has recently sent out an invitation to a June 8 virtual stakeholder session on the insurance capital standard (ICS) and that the APCIA plans to participate and welcomes the opportunity to work with “Team USA” to prepare for the event. Mr. Workman said the stakeholder session is most likely to be an update on results from the 2020 monitoring period data collection and upcoming work.
Robert Neill (ACLI) noted that the IAIS put forth results of the comparability assessment public consultation, leaving in place the high-level principles that will be used to develop the assessment criteria later this year. He said the ACLI submitted comments and suggested having a conversation to better understand where regulators stand on the topic. Commissioner Anderson said he would be open to having a dialogue with interested parties along with federal colleagues involved at the IAIS, noting the Committee has had similar meetings in the past, which have been helpful as this work progresses.

Having no further business, the International Insurance Relations (G) Committee adjourned.

</table>
In this regard, ICP 25 also recognises the role...

Footnote 29, there is a typo – should be ICP 25.7.8 rather than 27.7.8

Editorial: Supervisory colleges college meetings should be well organised to support the effectiveness of the supervisory colleges...

The latter part of the sentence seems like an example of what group-wide Senior Management may be asked to do; suggest for clarification:

For example, group-wide Senior Management can be asked to provide...
Distinguished Chair and Members of the NAIC International Insurance Relations (G) Committee:

Thank you for your engagement in international standard setting bodies and in holding public discussions on comments to IAIS papers, including the Draft Issues Paper on Insurer Culture. We plan to submit comments on that paper and are coordinating the comments of the Global Federation of Insurance Associations, as well.

There is one key point which we ask the NAIC to consider raising in general comments and/or as otherwise appropriate in comments on the insurer culture paper. It is to note that due to the subjectivity of the concept of culture, it should not be considered a regulatory or supervisory mandate above and beyond the particular standards for conduct and outcomes otherwise mandated by law and regulation.

Language such as this might be considered:

“NAIC agrees that the culture of insurers is important. However, due to the subjective nature of the concept of culture, it should be clear that culture is not intended to be an additional regulatory or supervisory layer beyond the legally established standards of conduct and outcomes.”

Thank you for your consideration.

Sincerely,

David F. Snyder,
Vice President
APCIA
NAIC/CONSUMER LIAISON COMMITTEE

The NAIC/Consumer Liaison Committee met Aug. 14, 2021. The following Committee members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair (OR); Lori K. Wing-Heier represented by Sarah Bailey (AK); Alan McClain (AR); Peni Itula Sapini Teo (AS); Ricardo Lara represented by Lucy Jabourian (CA); Andrew N. Mais (CT); Trinidad Navarro represented by Susan Jennette and Frank Pyle (DE); David Altmairer (FL); John F. King (GA); Dean L. Cameron (ID); Vicki Schmidt (KS); Sharon P. Clark represented by Rob Roberts (KY); Kathleen A. Birrane (MD); Chlora Lindley-Myers (MO); Mike Causey represented by Tracy Bieln (NC); Eric Dunning (NE); Barbara D. Richardson represented by David Cassetty (NV); Judith L. French represented by Jana Jarrett (OH); Glen Mulready (OK); Jessica K. Altman (PA); Doug Slape represented by Nancy Clark and Chris Herrick (TX); Jonathan T. Pike (UT); and Scott A. White represented by Don Beatty and Katie Johnson (VA). Also participating were: Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer (SC); James A. Dodrill (WV); and Jeff Rude (WY).

1. **Announced the Continuation of an E-Vote of its Spring National Meeting Minutes**

Commissioner Conway said the Committee met April 8. During this meeting, the Committee received presentations on health and non-health-related insurance issues from a consumer perspective. To save time for presentations by NAIC consumer representatives today, Commissioner Conway said an e-vote was distributed to Committee members prior to this meeting. He asked that members respond to roll call with their e-vote to Lois E. Alexander (NAIC). He also said as the chair of the Consumer Board of Trustees, he postponed the Aug. 13 Board meeting until after the Summer National Meeting, when the Board will discuss revisions to the Plan of Operation for the Consumer Participation Program suggested by NAIC consumer representatives.

2. **Heard a Presentation on Helping Consumers Avoid Getting Burned or Blown Away by Post-Disaster Fraud**

Matthew J. Smith (Coalition Against Insurance Fraud—CAIF) said there are wildfires raging across the nation, a tropical storm off the coast of Florida, and a depression forming in the Atlantic. He said the scariest part is that the official hurricane season has not yet begun. He said along with Amy Bach (United Policyholders—UP), he wants to present practical tips and solutions to state insurance regulators on how to protect their consumers from post-disaster fraud. Because disasters occur in every state, he said these are tips that every state can use to help their constituents. He said the Insurance Information Institute (III) estimated the cost of natural disaster fraud to be over $551 billion in insured losses only from 2011 through 2020. He said statistical data produced by the Battelle Seattle Research Center indicates that conservative estimates put property/casualty (P/C) insurance fraud at 10% of all claims paid or $55 billion every 10 years. He also said the percentage for natural disaster fraud is generally considered to be much higher at 18% or just under $100 billion each decade.

Mr. Smith said what is being seen following natural disasters is contractor and repair scams requiring upfront advances, then not showing up to do the work. He said fraudsters promise to absorb insurance deductibles; however, such practices have been rendered invalid by state insurance departments in recent years, which results in contractors and repair shops cutting corners and using subpar materials to recoup those expenses. He said incomplete work, shoddy work, and work never started are also the types of fraud that tend to follow natural disasters. He said the CAIF had video evidence of contractors damaging undamaged roofing by using hammers and tearing off shingles while consumers were displaced to increase the scope and cost of the work that needed to be done. He said on the opposite side of the spectrum, fraudsters claim to be Federal Emergency Management Agency (FEMA) housing inspectors when they are not; fake offers of local or federal assistance; seek your FEMA number or other personal or financial information; pose as adjusters, contractors, or attorneys to take assignment of insurance benefits then do no work; and charge to clean items that should be discarded or cannot be cleaned. He said storm chaser claims are another problem, and the first thing fake contractors do after a natural disaster is cross state lines to steal a license plate to put on their repair trucks to convince consumers they are dealing with a trustworthy local contractor. He said the next step is to buy a cheap burner cell phone with a local area code and go to Kinko’s for a magnetic sign with local naming conventions on it, such as Columbus Roofing, for the side of the truck, as well as to have business cards and billing statements printed with a local address. He said consumers are told the companies heard the storm was coming so they were waiting in a staging area for the storm to end so they could be the first on scene to help. After acquiring a down payment, he said fake contractors may show up the next day with a few materials and do a little work; however, within 72 hours following the disaster, they are long gone with a wad of consumer cash having left the license plate, magnetic sign, and fake paperwork in a dumpster. He said this happens in states that do not have a storm chaser law or storm chaser regulations in place. He said insurer actions can also lead
to insurance fraud when insurance companies employ inexperienced adjusters without adequate training; stand firm on an Xactimate estimate when it does not match up with local pricing on materials and labor; apply excessive depreciation when calculating actual cash value (ACV); discourage policyholders from hiring professional help; pressure policyholders to use an insurer preferred contractor that does not have a good track record or references; or bulk contracts with engineering firms that are not adequate to cover thorough inspections, resulting in “cookie cutter” reports. He said unintended or claim-motivated consumer fraud is the padding of a contents inventory, dwelling repair costs, or replacement estimates in anticipation of low-ball claim offers from insurers. He said intentional consumer fraud that is spreading across the country is the creation or cause of damage, such as claiming actual living expenses (ALEs) that were not incurred by faking receipts or claiming replacement cost values (RCVs) payable at 100% by purchasing new items, submitting the receipts for claim payment, and returning the items to stores for cash. He said it is important to educate consumers to avoid such practices that can lead to cancellation of insurance coverage because of the way the fraud language is written in the insurance contract. He said it is also important to talk about the disparate impact of natural disaster fraud as persons of color, persons of age, and those with language barriers are being targeted because they are likely to be more vulnerable, not aware of what the scams are, or not aware of what their rights are. He said insurer responses also exhibit disparate impact because the big, mobile disaster vehicles tend to be parked in high income, predominantly white neighborhoods rather than in low income neighborhoods predominantly with persons of color. He said insurers said they park such vehicles in locations where the most policyholders are; however, he said such vehicles and services should be available to all policyholders.

Mr. Smith said steps departments of insurance (DOIs) can take to better protect consumers include advance planning like having disaster plans in place to address fraud, emergency approval plans for adjusters and contractors, and Contractor State Licensing Board (CSLB) coordination. He said states could also provide consumer warnings about fraudsters in advance of and post-disaster and require insurers to utilize response plans and anti-fraud plans. He said actively prosecuting disaster fraudsters is also an important action to take. He said legislative advocacy for storm chaser laws and regulations as deterrents to those contemplating fraudulent insurance activities is also very important.

3. Heard a Presentation on the Impact of the COVID-19 Pandemic on Consumer Credit Scores and Insurance Underwriting

Birny Birnbaum (Center for Economic Justice—CEJ) said he is speaking for the nearly 300 consumers represented by the Consumer Federation of America (CFA) in showing that the use of consumer credit scores for insurance underwriting became completely unfair and discriminatory, especially during the pandemic. He said this is important to state insurance regulators and consumers, as it highlights the use of average credit scoring by industry for historical purposes. He said average credit scoring experienced a shift due to the pandemic. He also said after hearing his presentation, state insurance regulators would agree that state laws and regulations on rating and unfair trade practices require implementation of a moratorium to pause this practice until the credit scoring environment has a chance to catch up and normalize following the pandemic. He said statutory provisions regarding fair and unfair discrimination are generally found in two parts of insurance statutes: rating and unfair trade practices. He said there are two types of unfair discrimination—i.e., actuarial and protected classes—which means distinctions among groups defined by certain characteristics (e.g., race, religion, national origin, etc.) are prohibited regardless of actuarial basis. He said it is unfair discrimination to treat consumers who are similarly situated differently. He said for rates and trade practices to be considered fair and adequate and to be part of the not excessive, not inadequate, and not unfairly discriminatory rate standard, there must be an actuarial basis for distinction among groups of consumers. He said credit-based insurance scores—CBISs are algorithms derived from individual consumer credit reports matched to the insurance outcomes of those insureds. He said a credit scoring model vendor can generate hundreds of possible data points from consumer credit reports to use as predictive factors in a scoring algorithm. He also said the vendor selects those factors that best predict the outcome and produce the greatest difference between consumers. He said outcome variables might be average claim costs per exposure (pure premium), loss ratio, likelihood of fraud, consumer lifetime value, or others. He said insurers argue that CBISs are predictive of claims and support this with data showing higher claim costs for insureds with poor scores and lower claim costs for insureds with good scores. He said CBISs are intended to help insurers group insureds by their relative claim costs (or some other outcome metric). Unlike some rating factors used for discounts, which reflect an actual reduction in claims, like an anti-theft device in the vehicle or home, he said CBISs redistribute premium from one group of consumers to another. He said stated differently, if lots of drivers suddenly installed anti-theft devices in their cars, the discounts would be paid for by a reduction in theft claims and not by an increase in premium for other drivers. He said this is not so with CBISs, where one insured’s discount is another’s surcharge.

As a result of the pandemic and starting in March 2020, Mr. Birnbaum said many businesses were forced to close and unemployment skyrocketed. He said the federal government instituted a series of actions to help individuals and businesses devastated by the pandemic, including: 1) a moratorium on foreclosures; 2) a moratorium on rental evictions; 3) a moratorium on student debt repayment; and 4) a requirement for lenders to offer “forbearance” for other than non-student loans with such forbearance being any kind of assistance to borrowers that would typically be deferring loan payments. He said these provisions
affected millions of consumers and the information in their credit reports. He said the Coronavirus Aid, Relief, and Economic Security (CARES) Act set out specific provisions directly related to credit reporting to help consumers, and one CARES Act provision was to require credit reporting agencies to report any loan in forbearance as current. He said two similarly situated consumers took out loans in 2018 and were current until February 2020; then, the first consumer had a late payment in 2020, which showed up in their credit report because it was not eligible for forbearance. He said the second consumer also had a late payment, but it was in March, so the second consumer was eligible for and obtained forbearance. He said pre-pandemic, both consumers would have received the same credit score through 2020, but because of the CARES Act provisions, these two similarly situated consumers are now treated differently, which resulted in unfair discrimination in insurance rating. He said CBISs used from March 2020 to the present were developed with data from 2016 to 2019 or earlier, when there were stable economic conditions and a stable relationship between consumer credit information and consumer insurance outcomes. He said that actuarial relationship changed significantly as economic conditions, consumer behavior, and insurance claims changed massively from March 2020 forward. He said it is therefore logical and reasonable to conclude that the segmentation produced by the 2016 to 2019 experience no longer remains actuarially valid for the period starting in March 2020. He also said absent new evidence, which will take time for claims to develop, it is unreasonable to believe CBISs based on pre-pandemic experience remain actuarially sound in the pandemic era.

Mr. Birnbaum said the expiration of pandemic protections will unfairly affect CBISs, as millions of consumers will see loans in forbearance become delinquent, a resumption of foreclosures and evictions, and a resumption in student loan payments becoming due. He said the pandemic has also disproportionately affected communities of color, as they have experienced higher rates of COVID-19 infections and deaths; higher rates of unemployment; and less savings or wealth to withstand the financial stress. He said before the pandemic, numerous studies documented the racial bias in credit scores, generally as well as CBISs, specifically. He said the pandemic has exacerbated that racial bias. He said state insurance regulators have the statutory responsibility and authority to place a moratorium on insurers’ use of consumer credit information. He said a temporary moratorium was needed to enforce unfair discrimination laws for three years following the end of pandemic protections because credit report information and CBISs will be affected for several years following the end of pandemic protections. He suggested that state insurance regulators use an approach that prohibits insurers from raising rates on policyholders due to deteriorating credit score.

4. Heard a Presentation on Regulatory Possibilities for Promoting Equity Through Telehealth

Rachel Klein (The AIDS Institute) said the COVID-19 pandemic led states to rapidly increase the scope of telehealth services through public and private payers. She said initial reports suggested that telehealth services during COVID-19 did more to preserve access for existing patients than to alleviate access disparities and may even have exacerbated these disparities. She said the rapid scaling up of telehealth capabilities among providers across the country offers lessons about what more needs to be done to ensure that telehealth realizes its promise as a tool for advancing equity. She said telehealth promises include increased access to care for people: 1) in a variety of underserved communities; 2) in areas with geographic or transportation challenges; 3) in areas that lacked providers; 4) of racial and ethnic minorities; 5) that were unstably housed or homeless; and 6) with stigma-related barriers. She said flexibility is the key to promoting equity through telehealth with: 1) more flexible scheduling to accommodate people with jobs that do not offer paid leave; 2) more flexible opportunities to literally “meet people where they are”; 3) more flexible access to providers who are not nearby; 4) more flexible access to specialists; 5) more flexible means to overcome stigma-related barriers; and 6) faster connection to care. She said access has expanded rapidly during the pandemic, largely due to state insurance regulators relaxing the restrictions related to: 1) cost-sharing through parity or free services; 2) provider reimbursement; 3) coverage of audio-only telehealth; 4) origination and distant sites; and 5) pre-authorization requirements. She said the good news is telehealth capacity has increased dramatically and quickly. She said patients and providers have more experience and are more comfortable with the system. She also said evidence of lessons learned and the data to support them are still emerging, but state insurance regulators should support payors to build on these systems to help telehealth fulfill its promise.

Karen Siegel (Health Equity Solutions—HES) discussed evaluating utilization data, assessing barriers to telehealth, preserving consumer choice, and safeguarding against unnecessary requirements or cost barriers for in-person care. She said telehealth services have the potential to reduce avoidable emergency department utilization (EDU) and create access for people who lack transportation or dependent care or who face stigma in their communities. She said these benefits will be limited if telehealth services only reach populations who already had access to in-person care. She said what is still needed is access to affordable broadband, unlimited data and minutes, access to the necessary devices, and on the ground training for tech literacy. She said other barriers to consumer access include insurance illiteracy and the inability to connect to providers. She said one issue still to be addressed is cultural or situational appropriateness and the consumer’s right to opt out. She said this right is necessary due to cultural concerns over privacy, safety, language barriers, and personal comfort.

5. **Heard a Presentation on the Implementation of the NSA and Implications for Consumer Protections**

Natasha Kumar (Families USA) provided an overview of the long-standing abusive practice of surprise medical billing and the protections passed into law through the federal No Surprises Act (NSA) in December 2020. As the release of the first of three interim final rules (IFRs) came out in July, she said consumer representatives wanted to present ways in which insurance commissioners could be sure consumers have the tools they need to ensure comprehensive protections when this law takes effect in January 2022. She said surprise billing occurs when a consumer is unknowingly, and through no fault of their own, charged an out-of-network fee for medical services obtained, such as emergency services, non-emergency services, ambulatory care, or air ambulance. She said almost 20% of emergency department (ED) visits result in a surprise bill; an average surprise bill is $600, but bills can exceed $100,000; and 10% of health plan spending can be attributed to surprise medical bills. She said 17 states have no balance billing protection; 16 states have partial balance billing protection; and 18 states have comprehensive balance billing protection. She said under the NSA, consumers are held harmless in surprise billing situations by cost-sharing at in-network rates; they are protected in emergency situations for ancillary services; and in certain non-emergency situations are required to be given notice and consent for certain out-of-network care. She said the initial payment is negotiated by the insurer and provider or facility. Otherwise, the insurer pays the qualifying payment amount (QPA). She said if the provider and payer do not agree on payment, they can initiate Independent Dispute Resolution (IDR), whereby the arbiter assesses each case based on certain criteria and awards a “win” to either the insurer and the plan or the provider and the facility. She said under IFR 1, the definition of facilities includes hospital, hospital outpatient department, critical access hospital, or an ambulatory surgical center; and consumers are seeking comment on urgent care facilities and retail clinics to be included and procedural considerations as to when the notice and consent are being provided to consumers. She said the payment mechanism indicates that the initial payment to the provider is the “recognized amount,” which gives deference to state payment rates. She said if state rates are not applicable, payment is the greater of billed charges or QPA, which is determined by the median of in-network contracted rates for the service in the geographical area. However, she said there are concerns that this may result in inflation associated with highly concentrated markets. She said geographic region, as defined by the NAIC, is taken to mean a metropolitan statistical area (MSA), but the air ambulance “geographic region” is considered to be all MSAs in a state.

Ms. Kumar said recommendations for insurance commissioners would include consumer education through an “About” section on websites and ensuring this is available to all linguistic groups; helping consumers obtain and understand advance notices of their potential liability; proactively reaching out to consumers, especially those in Black, Indigenous, and People of Color (BIPOC) communities, on new consumer protections. She said recommendations would also include a complaints process that would provide phone assistance, including referrals to other agencies that are enforcing this law; helping uninsured consumers open an arbitration case for a medical bill; helping consumers challenge and take enforcement action to address bills that consumers did not consent to and that should have been covered under the NSA. She also said recommendations would ensure that notice and consent forms reflect the correct set of protections that apply to the specific case of the patient, as state preemption applies in most cases, and in conjunction with other agencies, monitor the provision of consumer notices and consent forms.

6. **Heard Survey Results from the Consumer Representatives Survey**

In Spring 2021, consumer representatives commissioned a survey of state and local grassroots consumer organizations to broaden their perspective on insurance issues represented at the NAIC. This presentation described the survey’s goal, methodology, and preliminary results with the aim to bring the expertise, perspectives, and stories from these organizations to state insurance regulators and other NAIC stakeholders. Brenda J. Cude (University of Georgia—UGA) said the Disparities in Insurance Access online survey fielded May 17 to June 16 was funded by the Robert Wood Johnson Foundation (RWJF). She said the objective of the survey was to: 1) inform the work of state insurance regulators and the NAIC, especially the Special (EX) Committee on Race and Insurance; 2) focus on disparities and inequities in intersectional and overlapping systems of oppression; 3) assess common themes and patterns across demographic groups; and 4) assess the familiarity of community organizations with state DOIs.

Yosha Dotson (Georgians for a Healthy Future—GHF) said the survey sample consisted of 72 unique respondents who are leaders or senior employees of consumer organizations, primarily at the state, local, and regional level who were identified via grassroots sampling, seeking leaders or senior employees of nonprofit and community consumer organizations. She said collectively, the sample represented a mix of focus areas across different lines of insurance, geographic diversity, population focus diversity, as well as robust state and local contact lists. She said the organizational profile was primarily statewide health Black or African American and Latino or Hispanic in low income racial or ethnic groups. She said the challenges that were most commonly identified were around insurance affordability and literacy. She said the source of discrimination and bias was income, race, and ethnicity, as demonstrated by discriminatory or biased algorithms in rating. She said recommendations to
state insurance regulators were to develop more expansive partnership networks with community organizations in areas that represent diverse populations and embrace active, ongoing engagement with community partners. She said recommendations to the NAIC were to: 1) identify, promote, and replicate best practices across states; 2) create minimum community engagement standards; 3) collect more data to better assess and address systemic inequities; 4) examine current industry practices and public policies that disproportionately and negatively affect certain groups; 5) prioritize enhanced data collection and reporting of demographic data; and 6) conduct a deeper review of the algorithms used to set rates.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
