   Commissioner Donelon summarized that last summer, he introduced the potential reopening of the Nonadmitted Insurance Model Act (#870) to bring it up to date regarding the implementation of the federal Dodd-Frank Nonadmitted and Reinsurance Reform Act of 2010. As a result, he directed NAIC staff to form a drafting group to study Model #870 and determine if it required modernization. He stated that as a result of that study, a Request for NAIC Model Law Development was drafted and presented to the Task Force and subsequently approved by the Task Force during the Nov. 18 meeting. He indicated that on April 14, 2021, the Request for NAIC Model Law Development was approved by the Executive (EX) Committee. Commissioner Donelon stated that work should begin on the draft amendments to the model. He indicated that Illinois, Louisiana, Texas, and Washington have volunteered to be drafting group members, and he asked for any additional volunteer states. Hearing none, he asked Andy Daleo (NAIC) to begin organizing meetings of the drafting group.

   John Meetz (Wholesale & Specialty Insurance Association—WSIA) stated that he is pleased with the comments within the redlined draft of Model #870 (Attachment Three) and indicated that he submitted a comment letter for consideration (Attachment Four). Bob Woody (American Property Casualty Insurance Association—APCIA) asked if the drafting group...
meetings would be open to interested parties. Commissioner Donelon stated that the drafting group meetings would be held in open session.

Having no further business, the Surplus Lines (C) Task Force adjourned.

SURPLUS LINES (C) TASK FORCE

The mission of the Surplus Lines (C) Task Force is to monitor the surplus lines market and regulation, including the activity and financial condition of U.S. and alien surplus lines insurers by providing a forum for discussion of issues and to develop or amend relevant NAIC model laws, regulations and/or guidelines.

Ongoing Support of NAIC Programs, Products or Services

1. The Surplus Lines (C) Task Force will:
   A. Provide a forum for discussion of current and emerging surplus lines-related issues and topics of public policy and determine appropriate regulatory response and action.
   B. Review and analyze quantitative and qualitative data on U.S. domestic and alien surplus lines industry results and trends.
   C. Monitor federal legislation related to the surplus lines market and ensure all interested parties remain apprised.
   D. Develop or amend relevant NAIC model laws, regulations and/or guidelines.
   E. Oversee the activities of the Surplus Lines (C) Working Group.

2. The Surplus Lines (C) Working Group will:
   A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing surplus lines topics and policy issues, such as amendments to the International Insurers Department (IID) Plan of Operation.
   B. Maintain and draft new guidance within the IID Plan of Operation regarding standards for admittance and continued inclusion on the NAIC Quarterly Listing of Alien Insurers.
   C. Review and consider appropriate decisions regarding applications for admittance to the NAIC Quarterly Listing of Alien Insurers.
   D. Analyze renewal applications of alien surplus lines insurers on the NAIC Quarterly Listing of Alien Insurers and ensure solvency and compliance per the IID Plan of Operation guidelines for continued listing.
   E. Provide a forum for surplus lines-related discussion among jurisdictions.

NAIC Support Staff: Andy Daleo
The Surplus Lines (C) Working Group of the Surplus Lines (C) Task Force met July 7, 2021. The following Working Group members participated: Stewart Guerin, Chair (LA); Eli Snowbarger, Vice Chair (OK); David Phifer (AK); Michelle Lo (CA); Rolf Kaumann (CO); Virginia Christy (FL); Scott Sanders (GA); Marcy Savage (IL); William Leach (NJ); Jose Joseph (NY); Amy Garcia (TX); and Melanie Anderson (WA).

1. Discussed Draft Amendments to the NAIC Standard Form - Trust Agreement for Alien Excess or Surplus Lines Insurers

Andy Daleo (NAIC) summarized the proposed changes to the NAIC Standard Form – Trust Agreement for Alien Excess or Surplus Lines Insurers (Trust). He stated that the proposed changes are meant to be prospective beginning in 2022; therefore, should the amendments be adopted, companies currently on the NAIC Quarterly Listing of Alien Insurers (Listing) are not required to execute an amended Trust. He outlined the following draft amendments to the Trust:

**Article 2.1 – Duration of the Trust**
- The current termination language within Article 2 of the Trust was modified to remove the five-year waiting period as a requirement for termination. The proposed language of the notification of termination remains; however, the five-year period has been amended to a 90-day period if one of the following three criteria is met. First, is an option for an insurer to provide evidence that no outstanding claims or liabilities related to the U.S. business written remains on the books. This option is only available to companies that have not written occurrence policies. The second criterion indicates that the quarterly listed insurer becomes a licensed U.S. domiciled insurer. This criterion has a 60-day notification period. The last criterion states that the insurer can enter into an assumption reinsurance agreement with a U.S. licensed insurer, an accredited reinsurer, or an insurer that is currently on the Listing. Mr. Daleo explained that the proposed amendments to Article 2 are a result of several issues that NAIC staff have addressed regarding insurers that did not or forgot to provide notification to the trustee, which meant the five-year waiting period clock also did not begin. Further, he stated that if quarterly listed companies opt to not amend and replace the Trust, the original Trust language with the five-year waiting period would be required.

**Article 1 - Definitions**
- Qualified U.S. Financial Institution – Amendments were drafted to bring the definition in alignment with the NAIC International Insurers Department (IID) Plan of Operation.
- Readily Marketable Security – Modifications were drafted to align the definition with the Credit for Reinsurance Model Regulation (#786).
- Receiver – The definition was drafted to align with the Insurer Receivership Model Act (#555).

**Article 2.7 – Trust Fund Minimum Amount and Quality**
- The drafted modifications to the California provision included in the materials should be rejected per the California Department of Insurance (DOI), and the original language in the Trust will be exposed.

Thomas M. Dawson (McDermott Will & Emery) questioned the inclusion of the California investment provision in the Trust, which conflicts with the intent that there be one list of alien insurers eligible to write business in the U.S. per the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). He commented that California can require that insurers listed on the List of Approved Surplus Line Insurers (LASLI) to abide by the investment criteria. However, insurers not listed on the LASLI should not have to abide by California’s investment criteria. Mr. Dawson stated that this could lead to other states requesting that their investment criteria be included in the Trust. Ms. Lo indicated that the California DOI will review Mr. Dawson’s comment and provide a response. Mr. Guerin suggested that Dan Schelp (NAIC) coordinate with California to see if any future changes are warranted. Mr. Dawson also questioned the involvement of the domiciliary commissioner in the termination of the Trust as outlined in Article 2, Section 2.1. He indicated that Article 2, Section 2.14 requires the insurer to provide evidence of no outstanding liability through an actuarial and/or audit report with respect to termination. He stated that it is not the domiciliary commissioner that enters into the active oversight of the termination process. He indicated that the NAIC IID and the trustee address the reporting and analysis of the termination.
Mr. Dawson stated that the last occurrence policies were written in 1986, and he questioned whether it is necessary to include that language in the Trust. He indicated that the professionals could help inform whether there are any liabilities remaining under policies issued by a company.

Andrea T. Best (McDermott Will & Emery) indicated that the new language in Article 2, Section 2.1 removed the option for an assignment agreement, and she questioned if this would prevent the option for Part VII transfers that have been frequent in the United Kingdom (UK). Mr. Daleo and Mr. Guerin had no objections to adding the assignment agreement language back into the Trust.

Mr. Guerin requested the exposure of the draft Trust. Mr. Snowbarger made a motion, seconded by Mr. Joseph, to expose the draft Trust for a 30-day public comment period. The motion passed unanimously.

2. Discussed Proposed Modifications to the Quarterly Listing of Alien Insurers

Bree Wilson (NAIC) summarized proposed changes to the Listing. She stated that the trustee and financial data were added to the Listing in April 2001 and January 2012, respectively. She indicated that providing additional information outside the approved Listing could potentially influence a user to pick one company over another, which is not the intent of the Listing. She outlined the following modifications to the Listing:

- Hyperlinks were added that direct the user to the IID Plan of Operation, the Working Group web page, and the latest Listing.
- The criteria to be admitted to the Listing were removed, given that they are available within the Plan of Operation.
- The Trust and financial information were removed and replaced by contact information to eliminate the need for a separate contact listing.
- The Trustee appendix was removed from the publication, given the recommendation to remove the company specific trustee detail.

Mr. Guerin requested the exposure of the Listing modifications. Ms. Lo made a motion, seconded by Mr. Kaumann, to expose the Listing modification for a 30-day public comment period. The motion passed unanimously.

3. Discussed Other Matters

Mr. Dawson introduced Clark Fitz-Hugh (International Sureties) to speak to the potential of surety bonds as a funding device for surplus lines, and he indicated that this topic has previously been discussed with the Working Group as early as the 90s. Mr. Fitz-Hugh indicated that the reason he is bringing this issue before the Working Group is that many of the insurers that are on the Listing are clients of his, and many of the insurers have asked him to explore this avenue of funding the Trust. He stated that the use of surety bonds would be cheaper, provide less maintenance, and be easier to move assets and monitor. He also said a surety company is in essence a financial institution that is the same as a bank. The wording of a surety bond can be identical to a letter of credit with the same payment terms, conditions, and length of obligation. Mr. Fitz-Hugh also included that a surety bond is regulated by the federal government through the Circular 570 list. Mr. Guerin asked Mr. Fitz-Hugh to put together a packet for the Working Group to add to a future agenda. He also asked Mr. Daleo to refer to the Working Group archives to see what was previously discussed on this topic.

Having no further business, the Surplus Lines (C) Working Group adjourned.
NONADMITTED INSURANCE MODEL ACT

Table of Contents

Section 1. Short Title
Section 2. Purpose—Necessity for Regulation
Section 3. Definitions
Section 4. Placement of Insurance Business
Section 5. Surplus Lines Insurance
Section 6. Insurance Independently Procured—Duty to Report and Pay Tax
Section 7. Penalties
Section 8. Violations
Section 9. Service of Process
Section 10. Legal or Administrative Procedures
Section 11. Enforcement
Section 12. Suits by Nonadmitted Insurers
Section 14. Effective Date

Section 1. Short Title

This Act shall be known and may be cited as “The Nonadmitted Insurance Act.”

Section 2. Purpose—Necessity for Regulation

This Act shall be liberally construed and applied to promote its underlying purposes which include:

A. Protecting persons seeking insurance in this state;
B. Permitting surplus lines insurance to be placed with reputable and financially sound nonadmitted insurers and exported from this state pursuant to this Act;
C. Establishing a system of regulation which will permit orderly access to surplus lines insurance in this state and encourage admitted insurers to provide new and innovative types of insurance available to consumers in this state;
D. Providing a system through which persons may purchase insurance other than surplus lines insurance, from nonadmitted insurers pursuant to this Act;
E. Protecting revenues of this state; and
F. Providing a system pursuant to this Act which subjects nonadmitted insurance activities in this state to the jurisdiction of the insurance commissioner and state and federal courts in suits by or on behalf of the state.

Section 3. Definitions

As used in this Act:

A. “Admitted insurer” means an insurer licensed to do an insurance business in this state;
B. ________________________________
C. “Commissioner” means the insurance commissioner of [insert name of state], or the commissioner’s deputies or staff, or the Commissioner, Director or Superintendent of Insurance in any other state.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the term “commissioner” appears.
D. “Eligible surplus lines insurer” means a nonadmitted insurer with which a surplus lines licensee may place surplus lines insurance pursuant to Section 5 of this Act.

E. “Export” means to place surplus lines insurance with a nonadmitted insurer.

F. “Foreign decree” means any decree or order in equity of a court located in any United States jurisdiction, including a federal court of the United States, against any person engaging in the transaction of insurance in this state.

G. “Insurer” means any person, corporation, association, partnership, reciprocal exchange, interinsurer, Lloyds insurer, insurance exchange syndicate, fraternal benefit society, and any other legal entity engaged in the business of insurance.

H. “Kind of insurance” means one of the types of insurance required to be reported in the annual statement which must be filed with the commissioner by admitted insurers.

I. “Nonadmitted insurer” means an insurer not licensed to do an insurance business in this state.

J. “Person” means any natural person or other entity, including, but not limited to, individuals, partnerships, associations, trusts or corporations.

K. “Policy” or “contract” means any contract of insurance, including but not limited to annuities, indemnity, medical or hospital service, workers’ compensation, fidelity or suretyship.

L. “Reciprocal state” means a state that has enacted provisions substantially similar to:

(1) Sections 5F, 5I(5), 5Q(10), 5R(4) and Section 6; and

(2) The allocation schedule and reporting form contained in [cite the regulation on surplus lines taxation].

M. “Surplus,” as used in the financial requirements of Section 5, means funds over and above liabilities and capital of the company for the protection of policyholders.

N. “Surplus lines insurance” means any property and casualty insurance in this state on properties, risks or exposures, located or to be performed in this state, permitted to be placed through a surplus lines licensee with a nonadmitted insurer eligible to accept such insurance, pursuant to Section 5 of this Act.

Drafting Note: If a state chooses to adopt the alternative Section 5B, this definition of “surplus lines insurance” should be consistent with the acceptable coverage listed in Section 5B. States may choose to extend the definition of “surplus lines insurance” beyond property/casualty insurance.

O. “Surplus lines licensee” means an individual, firm or corporation licensed under Section 5 of this Act to place insurance on properties, risks or exposures located or to be performed in this state with nonadmitted insurers eligible to accept such insurance.

P. “Transaction of insurance”

(1) For purposes of this Act, any of the following acts in this state effected by mail or otherwise by a nonadmitted insurer or by any person acting with the actual or apparent authority of the insurer, on behalf of the insurer, is deemed to constitute the transaction of an insurance business in or from this state:

(a) The making of or proposing to make, as an insurer, an insurance contract;

(b) The making of or proposing to make, as guarantor or surety, any contract of guaranty or suretyship as a vocation and not merely incidental to any other legitimate business or activity of the guarantor or surety.
The taking or receiving of an application for insurance;

The receiving or collection of any premium, commission, membership fees, assessments, dues or other consideration for insurance or any part thereof;

The issuance or delivery in this state of contracts of insurance to residents of this state or to persons authorized to do business in this state;

The solicitation, negotiation, procurement or effectuation of insurance or renewals thereof;

The dissemination of information as to coverage or rates, or forwarding of applications, or delivery of policies or contracts, or inspection of risks, the fixing of rates or investigation or adjustment of claims or losses or the transaction of matters subsequent to effectuation of the contract and arising out of it, or any other manner of representing or assisting a person or insurer in the transaction of risks with respect to properties, risks or exposures located or to be performed in this state;

The transaction of any kind of insurance business specifically recognized as transacting an insurance business within the meaning of the statutes relating to insurance;

The offering of insurance or the transacting of insurance business;

Offering an agreement or contract which purports to alter, amend or void coverage of an insurance contract.

The provisions of this subsection shall not operate to prohibit employees, officers, directors or partners of a commercial insured from acting in the capacity of an insurance manager or buyer in placing insurance on behalf of the employer, provided that the person’s compensation is not based on buying insurance.

The venue of an act committed by mail is at the point where the matter transmitted by mail is delivered or issued for delivery or takes effect.

Drafting Note: States may need to alter this subsection to reflect their decision as to whether they intend to permit citizens to directly purchase coverage within the state from a nonadmitted insurer, or if self-purchasing of coverage will be permitted only when it occurs outside the state. States electing to allow direct procurement will need to insert an appropriate exemption in Section 4A of this Act. Additionally, states should consider whether the preceding definition of “transaction of insurance” is consistent with other statutory definitions of this phrase in the state. Finally, states may want to consider whether group insurance purchases or the maintenance of insurance books and records in this state should fall within the scope of the definition of “transaction of insurance.”

Q. “Type of insurance” means coverage afforded under the particular policy that is being placed.

R. “Wet marine and transportation insurance” means:

(1) Insurance upon vessels, crafts, hulls and other interests in them or with relation to them;

(2) Insurance of marine builder’s risks, marine war risks and contracts of marine protection and indemnity insurance;

(3) Insurance of freight and disbursements pertaining to a subject of insurance within the scope of this subsection; and

Nonadmitted Insurance Model Act

(4) Insurance of personal property and interests therein, in the course of exportation from or importation into any country, or in the course of transportation coastwise or on inland waters, including transportation by land, water or air from point of origin to final destination, in connection with any and all risks or perils of navigation, transit or transportation, and while being prepared for and while awaiting shipment, and during any incidental delays, transshipment, or reshipment; provided, however, that insurance of personal property and interests therein shall not be considered wet marine and transportation insurance if the property has:

(a) Been transported solely by land; or

(b) Reached its final destination as specified in the bill of lading or other shipping document; or

(c) The insured no longer has an insurable interest in the property.

Comment: The language added in 1994 to the end of the definition of “wet marine and transportation insurance” (Subparagraphs 4(a), 4(b), and 4(c)) is intended to clarify the scope of the definition, which ultimately affects the exemption of certain risks from this Act. The 1994 amendments address current regulatory concerns and concerns raised by those who drafted the 1983 amendments to the Model Surplus Lines Law. The 1983 drafters wrote: “Several [drafters] felt the term ‘storage’ should not appear in... [the wet marine definition] to ensure that warehousemen and other types of insurance covering risks of storage are not interpreted to be within the purview of this definition. The term ‘delays’ is sufficiently broad to cover temporary storage while in the course of transit.”

Drafting Note: In addition to the definitions provided in this section, individual states may wish to consider adopting definitions for “agent,” “broker” or “producer” in a manner consistent with its other laws. Additionally, states may want to cross-reference the definition of “insurance” as it appears elsewhere in the state insurance code. The definition of insurance should reach illegal unauthorized activities.

Section 4. Placement of Insurance Business

A. An insurer shall not engage in the transaction of insurance unless authorized by a license in force pursuant to the laws of this state, or exempted by this Act or otherwise exempted by the insurance laws of this state.

B. A person shall not engage in a transaction of insurance or shall in this state directly or indirectly act as agent for, or otherwise represent or aid on behalf of another, a nonadmitted insurer in the solicitation, negotiation, procurement or effectuation of insurance, or renewals thereof, or forwarding of applications, or delivery of policies or contracts or inspection of risks, or fixing of rates, or investigation or adjustment of claims or losses, or collection or forwarding of premiums, or in any other manner represent or assist the insurer in the transaction of insurance.

C. A person who represents or aids a nonadmitted insurer in violation of this section shall be subject to the penalties set forth in Section 7 of this Act. No insurance contract entered into in violation of this section shall preclude the insured from enforcing his rights under the contract in accordance with the terms and provisions of the contract of insurance and the laws of this state, to the same degree those rights would have been enforceable had the contract been lawfully procured.

D. If the nonadmitted insurer fails to pay a claim or loss within the provisions of the insurance contract and the laws of this state, a person who assisted or in any manner aided directly or indirectly in the procurement of the insurance contract, shall be liable to the insured for the full amount under the provisions of the insurance contract.

E. Section 4B or 4D shall not apply to a person in regard to an insured who independently procures insurance as provided under Section 6. This section shall not apply to a person, properly licensed as an agent or broker in this state who, for a fee and pursuant to a written agreement, is engaged solely to offer to the insured advice, counsel or opinion, or service with respect to the benefits, advantages or disadvantages promised under any proposed or in-force policy of insurance if the person does not, directly or indirectly, participate in the solicitation, negotiation or procurement of insurance on behalf of the insured;

Drafting Note: If a state collects tax on unlicensed transactions which violate this Act, it may consider imposing liability for payment of those taxes on persons who violate this Act by assisting in the procurement of nonadmitted insurance.

Drafting Note: Some states permit other licensed professionals to engage in these activities as provided in their insurance statutes or other state statutes. Those states may want to amend Section 4E to include those professionals, to the extent they act within the scope of their licenses.
F. This section shall not apply to a person acting in material compliance with the insurance laws of this state in the placement of the types of insurance identified in Paragraphs (1), (2), (3) and (4) below:

(1) Surplus lines insurance as provided in Section 5. For the purposes of this subsection, a licensee shall be deemed to be in material compliance with the insurance laws of this state, unless the licensee committed a violation of Section 5 that proximately caused loss to the insured;

(2) Transactions for which a certificate of authority to do business is not required of an insurer under the insurance laws of this state;

Drafting Note: A number of states exempt from licensing and premium taxation nonprofit educational insurers insuring only nonprofit educational institutions and their employees. Some states require certificates of authority while others require licensing, and the appropriate language should be used in Paragraph (2) above. Additionally, some states may want to consider adding language to establish an option of allowing persons to file for an exemption with the Department of Insurance.

(3) Reinsurance provided that, unless the commissioner waives the requirements of this subsection:

(a) The assuming insurer is authorized to do an insurance or reinsurance business by its domiciliary jurisdiction and is authorized to write the type of reinsurance in its domiciliary jurisdiction; and

(b) The assuming insurer satisfies all legal requirements for such reinsurance in the state of domicile of the ceding insurer;

(4) The property and operation of railroads or aircraft engaged in interstate or foreign commerce, wet marine and transportation insurance;

(5) Transactions subsequent to issuance of a policy not covering properties, risks or exposures located, or to be performed in this state at the time of issuance, and lawfully solicited, written or delivered outside this state.

Drafting Note: States may also wish to consider exempting from Section 4A of this Act self-procured insurance or industrial insurance purchased by a sophisticated buyer who does not necessarily require the same regulatory protections as an average insurance buyer. Additionally, some states allow other insurance transactions with nonadmitted insurers. Examples include certain aviation and railroad risks. Other states may want to narrow the scope of the exemptions above or reserve the right to approve exemptions on a case-by-case basis.

Section 5. Surplus Lines Insurance

A. Surplus lines insurance may be placed by a surplus lines licensee if:

(1) Each insurer is an eligible surplus lines insurer; and

(2) Each insurer is authorized to write the type of insurance in its domiciliary jurisdiction; and

(3) The full amount or type of insurance cannot be obtained from insurers who are admitted to do business in this state. The full amount or type of insurance may be procured from eligible surplus lines insurers, provided that a diligent search is made among the insurers who are admitted to transact and are actually writing the particular type of insurance in this state if any are writing it; and

(4) All other requirements of this Act are met.

Drafting Note: States may prefer to reference “kind of insurance” rather than “type of insurance” in Section 5A(3). The term utilized should be defined within the Act.

The diligent search requirement of Section 5A(3) must be satisfied in accordance with the statutes and regulations of the governing state. Such statutes and regulations might vary from state to state in terms of the number of declinations required and the person designated to conduct the search.

Section 5A(3) does not prohibit a regulatory system in which a surplus lines licensee may place with an eligible nonadmitted insurer any coverage listed on a current “export list” maintained by the commissioner. The export list would identify types of insurance for which no admitted market exists. The commissioner may waive the diligent search requirement for any such type of insurance.
Nonadmitted Insurance Model Act

Drafting Note: Utilizing the “full amount” standard in Section 5A(3) of this Act may have certain market implications. An alternative to this approach would be to require that whatever part of the coverage is attainable through the admitted market be placed in the admitted market and only the excess part of the coverage may be exported.

B. Subject to Section 5A(3) of this Act, a surplus lines licensee may place any coverage with a nonadmitted insurer eligible to accept the insurance, unless specifically prohibited by the laws of this state.

[Alternative Subsection B]

B. Subject to Section 5A(3) of this Act, a surplus lines licensee may place only the following types of coverage with a nonadmitted insurer eligible to accept insurance: [list acceptable coverage].

Drafting Note: The two statutory alternatives described in Section 5B represent different regulatory approaches to defining those coverages which may be placed in the nonadmitted market and they would impact the admitted market in different manners.

C. A surplus lines licensee shall not place coverage with a nonadmitted insurer, unless, at the time of placement, the surplus lines licensee has determined that the nonadmitted insurer:

(1) Has established satisfactory evidence of good repute and financial integrity, and

(2) Qualifies under one of the following subparagraphs:

(a) Has capital and surplus or its equivalent under the laws of its domiciliary jurisdiction which equals the greater of:

   (I) The minimum capital and surplus requirements under the law of this state; or

   (II) $15,000,000;

Drafting Note: States that have not previously increased capital and surplus requirements may wish to consider implementation of the capital and surplus requirements in this subparagraph in a series of phases over a period of up to three (3) years. In some circumstances, implementation of a $15,000,000 capital and surplus requirement may represent a dramatic increase over existing requirements. States may wish to allow insurers which are eligible under existing law some period of time to increase their capital and surplus to meet the new standards.

(ii) The requirements of Subparagraph (a)(i) may be satisfied by an insurer’s possessing less than the minimum capital and surplus upon an affirmative finding of acceptability by the commissioner. The finding shall be based upon such factors as quality of management, capital and surplus of any parent company, company underwriting profit and investment income trends, market availability and company record and reputation within the industry. In no event shall the commissioner make an affirmative finding of acceptability when the nonadmitted insurer’s capital and surplus is less than $4,500,000; or

D. Insurance procured under this section shall be valid and enforceable as to all parties.

E. Withdrawal of Eligibility as a Surplus Lines Insurer

If at any time the commissioner has reason to believe that a surplus lines insurer:

No longer meets standards set forth in Section 5C of this Act;

Drafting Note: Individual states should consider whether such declarations of uneligibility are appropriate in view of the state’s other due process and administrative procedure requirements.

F. Surplus Lines Tax

(1) In addition to the full amount of gross premiums charged by the insurer for the insurance, every person licensed pursuant to Section 5H of this Act shall collect and pay to the commissioner a sum...
equal to [insert number] percent of the gross premiums charged, less any return premiums, for surplus lines insurance provided by the licensee pursuant to the license. Where the insurance covers properties, risks or exposures located or to be performed both in and out of this state, the sum payable shall be computed on that portion of the gross premiums allocated to this state pursuant to Paragraph (4) of this subsection less the amount of gross premiums allocated to this state and returned to the insured. The tax on any portion of the premium unearned at termination of insurance having been credited by the state to the licensee shall be returned to the policyholder directly by the surplus lines licensee or through the producing broker, if any. The surplus lines licensee is prohibited from rebating, for any reason, any part of the tax.

(2) At the time of filing the [insert monthly, quarterly, annual] report as set forth in Subsection R of this section, each surplus lines licensee shall pay the premium tax due for the policies written during the period covered by the report.
Nonadmitted Insurance Model Act (3)

(4)

Deleted: If a surplus lines policy procured through a surplus lines licensee covers properties, risks or exposures only partially located or to be performed in this state, the tax due shall be computed on the portions of the premiums which are attributable to the properties, risks or exposures located or to be performed in this state. In determining the amount of premiums taxable in this state, all premiums written, procured or received in this state shall be considered written on properties, risks or exposures located or to be performed in this state, except premiums which are properly allocated or apportioned and reported as taxable premiums of a reciprocal state. In no event shall the tax payable to this state be less than the tax due pursuant to Paragraph (4) of this subsection; provided, however, in the event that the amount of tax due under this provision is less than $50 in any jurisdiction, it shall be payable in the jurisdiction in which the affidavit required in Subsection K of this section is filed. The commissioner shall, at least annually furnish to the commissioner of a reciprocal state, as defined in Section 3L, a copy of all filings reporting an allocation of taxes as required by this subsection.

Deleted: Risks or exposures located or to be performed in this state.

In determining the amount of premiums taxable in this state, all premiums written, procured or received in this state shall be considered written on properties, risks or exposures located or to be performed in this state, except premiums which are properly allocated or apportioned and reported as taxable premiums of a reciprocal state. In no event shall the tax payable to this state be less than the tax due pursuant to Paragraph (4) of this subsection; provided, however, in the event that the amount of tax due under this provision is less than $50 in any jurisdiction, it shall be payable in the jurisdiction in which the affidavit required in Subsection K of this section is filed. The commissioner shall, at least annually furnish to the commissioner of a reciprocal state, as defined in Section 3L, a copy of all filings reporting an allocation of taxes as required by this subsection.

Deleted: In determining the amount of gross premiums taxable in this state for a placement of surplus lines insurance covering properties, risks or exposures only partially located or to be performed in this state, the tax due shall be computed on the portions of the premiums which are attributable to properties, risks or exposures located or to be performed in this state and which relates to the kinds of insurance being placed as determined by reference to an allocation schedule duly promulgated in a regulation by the commissioner.

(a) If a policy covers more than one classification:

(i) For any portion of the coverage identified by a classification on the Allocation Schedule, the tax shall be computed by using the Allocation Schedule for the corresponding portion of the premium.

(ii) For any portion of the coverage not identified by (i) above.

Deleted: Drafting Note: Subparagraph (b) above may be included in the Act or in a separate regulation at the option of the state. It is highly recommended that the model Allocation Schedule and reporting form be adopted by regulation in conjunction with the adoption of the above language. In order for the model law to work effectively, the allocation schedules used by the states should be as uniform as possible.
G. Collection of Tax

If the tax owed by a surplus lines licensee under this section has been collected and is not paid within the time prescribed, the same shall be recoverable in a suit brought by the commissioner against the surplus lines licensee and the surety on the bond filed under Subsection H of this section. The commissioner may charge interest at the rate of [insert number] percent per year for the unpaid tax.

H. Surplus Lines Licenses

(1) A person shall not procure a contract of surplus lines insurance with a nonadmitted insurer unless the person possesses a current surplus lines insurance license issued by the commissioner.

(2) The commissioner may issue a surplus lines license to a qualified holder of a current property and casualty agent’s or broker’s or general agent’s license but only when the broker or agent has:

(a) Remitted the [insert amount] annual fee to the commissioner;
(b) Submitted a completed license application on a form supplied by the commissioner;
(c) Passed a qualifying examination approved by the commissioner, except that all holders of a license prior to the effective date of this Act shall be deemed to have passed such an examination;
(d) In the case of a resident agent, filed with the commissioner, and continues to maintain during the term of the license, in force and unimpaired, a bond in favor of this state in the penal sum of [insert amount] aggregate liability, with corporate sureties approved by the commissioner. The bond shall be conditioned that the surplus lines licensee will conduct business in accordance with the provisions of this Act and will promptly remit the taxes as provided by law. No bond shall be terminated unless at least thirty (30) days prior written notice is given to the licensee and commissioner;
(e) If a resident, established and continues to maintain an office in this state; and
(f) Designated the commissioner as agent for service of process, thereby designating the commissioner to be the licensee’s true and lawful attorney upon whom may be served all lawful process in a proceeding instituted by or on behalf of an insured or beneficiary arising out of any contract of insurance, and shall signify its agreement that such service of process is of the same legal force and validity as personal service of process in this state upon the licensee.

(3) A nonresident person shall receive a nonresident surplus lines license if:

(a) The person is currently licensed as a surplus lines licensee and in good standing in his or her home state;
(b) The person has submitted the proper request for licensure and has paid the fees required by [insert appropriate reference to state law or regulation];
(c) The person has submitted or transmitted to the insurance commissioner the application for licensure that the person submitted to his or her home state, or in lieu of the same, a completed Uniform Application; and

Drafting note: Under Public Law No. 106-102 (the “Gramm-Leach-Bliley Act”), it is believed that a requirement for a nonresident agent to file a bond may contravene the reciprocity provisions. The requirement for a resident agent to file a bond would not, seemingly, contravene these provisions, and there may be methodologies whereby such resident bonds could become reciprocal between states. Some states have expressed concern that their bonding requirements constitute important consumer protections, and that elimination of these simply to comply with Gramm-Leach-Bliley may result in unintended consequences, and a lack of control over possibly unscrupulous nonresident agents.
Nonadmitted Insurance Model Act

(d) The person’s home state awards nonresident surplus lines licenses to residents of this state on the same basis.

Drafting Note: In accordance with Public Law No. 106-102 (the “Gramm-Leach-Bliley Act”) states should not require any additional attachments to the Uniform Application or impose any other conditions on applicants that exceed the information requested within the Uniform Application.

(4) The insurance commissioner may verify the person’s licensing status through the Producer Database maintained by the National Association of Insurance Commissioners, its affiliates or subsidiaries.

(5) A nonresident surplus lines licensee who moves from one state to another state or a resident surplus lines licensee who moves from this state to another state shall file a change of address and provide certification from the new resident state within thirty (30) days of the change of legal residence. No fee or license application is required.

(6) The insurance commissioner shall waive any requirements for a nonresident surplus lines license applicant with a valid license from his or her home state, except the requirements imposed by this subsection, if the applicant’s home state awards nonresident surplus lines licenses to residents of this state on the same basis.

(7) Each surplus lines license shall expire on [insert date] of each year, and an application for renewal shall be filed before [insert date] of each year upon payment of the annual fee and compliance with other provisions of this section. A surplus lines licensee who fails to apply for renewal of the license before [insert date] shall pay a penalty of $[insert amount] and be subject to penalties provided by law before the license will be renewed.

Drafting Note: States may wish to reference their specific licensing statutes in this section.

Drafting Note: Some states allow surplus lines licensees to hold binding authorities on behalf of eligible surplus lines insurers. States which allow such binding authorities might want to establish minimum standards for the related agreements. In addition, states might want to consider requiring surplus lines licensees with such binding authorities to submit the related agreements to state regulators for review and approval.

I. Suspension, Revocation or Nonrenewal of Surplus Lines Licensee’s License

The commissioner may suspend, revoke or refuse to renew the license of a surplus lines licensee after notice and hearing as provided under the applicable provision of this state’s laws upon one or more of the following grounds:

(1) Removal of the resident surplus lines licensee’s office from this state;

(2) Removal of the resident surplus lines licensee’s office accounts and records from this state during the period during which the accounts and records are required to be maintained under Subsection Q of this section;

(3) Closing of the surplus lines licensee’s office for a period of more than thirty (30) business days, unless permission is granted by the commissioner;

(4) Failure to make and file required reports;

(5) Failure to transmit required tax on surplus lines premiums to this state or a reciprocal state to which a tax is owing;

(6) Failure to maintain required bond;

(7) Violation of any provision of this Act; or

(8) For any cause for which an insurance license could be denied, revoked, suspended or renewal refused under Sections [insert applicable citation].

Commented [Model 87022]: Consider redrafting given the NRRA provision (Section 523) regarding the requirements to participate in NAIC National Producer Database.
J. Actions Against Eligible Surplus Lines Insurers Transacting Surplus Lines Business

(1) An eligible surplus lines insurer may be sued upon a cause of action arising in this state under a surplus lines insurance contract made by it or evidence of insurance issued or delivered by the surplus lines licensee. A policy issued by the eligible surplus lines insurer shall contain a provision stating the substance of this section and designating the person to whom the commissioner shall mail process.

(2) The remedies provided in this section are in addition to any other methods provided by law for service of process upon insurers.

K. Duty to File Evidence of Insurance and Affidavits

Within [insert number] days after the placing of any surplus lines insurance, each producing broker shall execute and each surplus lines licensee shall execute where appropriate, and file a written report regarding the insurance which shall be kept confidential by the commissioner, including the following:

(1) The name and address of the insured;

(2) The identity of the insurer or insurers;

(3) A description of the subject and location of the risk;

(4) The amount of premium charged for the insurance;

(5) Such other pertinent information as the commissioner may reasonably require; and

(6) An affidavit on a standardized form promulgated by the commissioner, as to the diligent efforts to place the coverage with admitted insurers and the results of that effort. The affidavit shall be open to public inspection. The affidavit shall affirm that the insured was expressly advised in writing prior to placement of the insurance that:

(a) The surplus lines insurer with whom the insurance was to be placed is not licensed in this state and is not subject to its supervision; and

(b) In the event of the insolvency of the surplus lines insurer, losses will not be paid by the state insurance guaranty fund.

Drafting Note: Surplus lines licensees will frequently communicate with the insured through a producing broker rather than communicate with the insured directly. In preparing affidavit forms, states may wish to recognize that, as a result of communications passing through the producing broker, the surplus lines licensee may not be in a position to affirm, based upon personal knowledge, that the insured received from the producing broker the written information required by this subsection.

L. Surplus Lines Advisory Organizations

(1) There is hereby created a nonprofit association to be known as the [insert name]. All surplus lines licensees shall be deemed to be members of the association. The association shall perform its functions under the plan of operation established pursuant to Paragraph (3) of this subsection and must exercise its powers through a board of directors established under Paragraph (2) of this subsection. The association shall be supervised by the commissioner. The association shall be authorized and have the duty to:

Drafting Note: The preceding paragraph provides that all surplus lines licensees are “deemed” to be members of the association. Some states, however, may choose not to establish a surplus lines advisory organization; in those states Subsection L would not be necessary.

(a) Receive, record, and subject to Subparagraph (b) of this paragraph, stamp all surplus lines insurance documents which surplus lines brokers are required to file with the association pursuant to the plan of operation;
Drafting Note: Subparagraph (a) of this paragraph authorizes the association to receive, record and stamp all surplus lines documents which must be submitted to the association pursuant to the plan of operation. Documents to be submitted to the association for stamping are likely to vary by state.

(b) Refuse to stamp submitted insurance documents, if the association determines that a nonadmitted insurer does not meet minimum state financial standards of eligibility, or the commissioner orders the association not to stamp insurance documents pursuant to Paragraph (9) of this subsection. The association shall notify the commissioner and provide an explanation for any refusal to stamp submitted insurance documents other than a refusal based upon the order of the commissioner;

(c) Prepare and deliver annually to each licensee and to the commissioner a report regarding surplus lines business. The report shall include a delineation of the classes of business procured during the preceding calendar year, in the form the board of directors prescribes;

(d) Encourage compliance by its members with the surplus lines law of this state and the rules and regulations of the commissioner relative to surplus lines insurance;

(e) Communicate with organizations of agents, brokers and admitted insurers with respect to the proper use of the surplus lines market;

(f) Employ and retain persons as necessary to carry out the duties of the association;

(g) Borrow money as necessary to effect the purposes of the association;

(h) Enter contracts as necessary to effect the purposes of the association; and

(i) Provide such other services to its members as are incidental or related to the purposes of the association.

(2) The association shall function through a board of directors elected by the association members, and officers who shall be elected by the board of directors.

(a) The board of directors of the association shall consist of not less than five (5) nor more than nine (9) persons serving terms as established in the plan of operation. The plan of operation shall provide for the election of a board of directors by the members of the association from its membership. The plan of operation shall fix the manner of voting and may weigh each member’s vote to reflect the annual surplus lines insurance premium written by the member.

(b) The board of directors shall elect officers as provided for in the plan of operation.

(3) The association shall establish a plan of operation. The plan of operation shall provide for the formation, operation and governance of the association. The plan and any amendments shall be effective upon approval by the commissioner, which shall not be unreasonably withheld or delayed. All association members shall comply with the plan of operation or any amendments to it. Failure to comply with the plan of operation or any amendments shall constitute a violation of the insurance law and the commissioner may issue an order requiring discontinuance of the violation.

(4) The association shall file with the commissioner:

(a) A copy of its plan of operation and any amendments to it;

(b) A current list of its members revised at least annually;
(c) The name and address of a resident of this state upon whom notices or orders of the commissioner or processes issued at the direction of the commissioner may be served; and

(d) An agreement that the commissioner may examine the association in accordance with the provisions of Paragraph (5) of this subsection.

(5) The commissioner shall, at least once in [insert number] years, make or cause to be made an examination of the association. The reasonable cost of an examination shall be paid by the association upon presentation to it by the commissioner of a detailed account of each cost. The officers, managers, agents, and employees of the association may be examined at any time, under oath, and shall exhibit all books, records, accounts, documents or agreements governing its method of operation. The commissioner shall furnish a copy of the examination report to the association and shall notify the association that it may request a hearing within thirty (30) days on the report or on any facts or recommendations contained in it. If the commissioner finds the association to be in violation of this section, the commissioner may issue an order requiring the discontinuance of the violation. A director may be removed from the association’s board of directors by the commissioner for cause, stated in writing, after an opportunity has been given to the director to be heard.

(6) There shall be no liability on the part of and no causes of action of any nature shall arise against the association, its directors, officers, agents or employees for any action taken or omitted by them in the performance of their powers and duties under this section, absent gross negligence or willful misconduct.

(7) Within [insert number] days after a surplus lines policy is procured, a licensee shall submit to the association for recording and stamping all documents which surplus lines brokers are required to file with the association. Every insurance document submitted to the association pursuant to this subsection shall set forth:

(a) The name and address of the insured;
(b) The gross premium charged;
(c) The name of the nonadmitted insurer; and
(d) The class of insurance procured.

Drafting Note: The appropriate time limits for submitting documents required for stamping will vary by state.

(8) It shall be unlawful for an insurance agent, broker or surplus lines broker to deliver in this state any insurance document which surplus lines brokers are required to file with the association unless the insurance document is stamped by the association or is exempt from such requirements. However, a licensee’s failure to comply with the requirements of this subsection shall not affect the validity of the coverage.

(9) The services performed by the association shall be funded by a stamping fee assessed for each premium-bearing document submitted to the association. The stamping fee shall be established by the board of directors of the association from time to time. The stamping fee shall be paid by the insured.

(10) The commissioner may declare a nonadmitted insurer ineligible and order the association not to stamp insurance documents issued by the nonadmitted insurer and issue any other appropriate order.
Nonadmitted Insurance Model Act

Evidence of the Insurance and Subsequent Changes to the Insurance

(1) Upon placing surplus lines insurance, the surplus lines licensee shall promptly deliver to the insured or the producing broker the policy, or if the policy is not then available, a certificate as described in Paragraph (4) of this subsection, cover note, binder or other evidence of insurance. The certificate described in Paragraph (4) of this subsection, cover note, binder or other evidence of insurance shall be executed by the surplus lines licensee and shall show the description and location of the subject of the insurance, coverages including any material limitations other than those in standard forms, a general description of the coverages of the insurance, the premium and rate charged and taxes to be collected from the insured, and the name and address of the insured and surplus lines insurer or insurers and proportion of the entire risk assumed by each, and the name of the surplus lines licensee and the licensee’s license number.

(2) A surplus lines licensee shall not issue or deliver any evidence of insurance or purport to insure or represent that insurance will be or has been written by any eligible surplus lines insurer, or a nonadmitted insurer pursuant to Section 5C(4), unless the licensee has authority from the insurer to cause the risk to be insured, or has received information from the insurer in the regular course of business that the insurance has been granted.

(3) If, after delivery of any evidence of insurance, there is any change in the identity of the insurers, or the proportion of the risk assumed by any insurer, or any other material change in coverage as stated in the surplus lines licensee’s original evidence of insurance, or in any other material as to the insurance coverage so evidenced, the surplus lines licensee shall promptly issue and deliver to the insured or the original producing broker an appropriate substitute for, or endorsement of the original document, accurately showing the current status of the coverage and the insurers responsible for the coverage.

(4) As soon as reasonably possible after the placement of the insurance, the surplus lines licensee shall deliver a copy of the policy or, if not available, a certificate of insurance to the insured or producing broker to replace any evidence of insurance previously issued. Each certificate or policy of insurance shall contain or have attached a complete record of all policy insuring agreements, conditions, exclusions, clauses, endorsements or any other material facts that would regularly be included in the policy.

(5) A surplus lines licensee who fails to comply with the requirements of this subsection shall be subject to the penalties provided in this Act.

(6) The surplus lines licensee shall give the following consumer notice to every person applying for insurance with a nonadmitted insurer. The notice shall be printed in 16-point type on a separate document affixed to the application. The applicant shall sign and date a copy of the notice to acknowledge receiving it. The surplus lines licensee shall maintain the signed notice in its file for a period of five (5) years from expiration of the policy. The surplus lines licensee shall tender a copy of the signed notice to the insured at the time of delivery of each policy the licensee transacts with a nonadmitted insurer. The copy shall be a separate document affixed to the policy.

"Notice: 1. An insurer that is not licensed in this state is issuing the insurance policy that you have applied to purchase. These companies are called "nonadmitted" or "surplus lines" insurers. 2. The insurer is not subject to the financial solvency regulation and enforcement that applies to licensed insurers in this state. 3. These insurers generally do not participate in insurance guaranty funds created by state law. These guaranty funds will not pay your claims or protect your assets if the insurer becomes insolvent and is unable to make payments as promised. 4. Some states maintain lists of approved or eligible surplus lines insurers and surplus lines brokers may use only insurers on the lists. Some states issue orders that particular surplus lines insurers can not be used. 5. For additional information about the above matters and about the insurer, you should ask questions of your insurance agent, broker or surplus lines broker. You may also contact your insurance department consumer help line."

Commented [Model 87024]: Revise based on current state requirements.
N. Licensee’s Duty to Notify Insured

(1) No contract of insurance placed by a surplus lines licensee under this Act shall be binding upon the insured and no premium charged shall be due and payable until the surplus lines licensee or the producing broker shall have notified the insured in writing, in a form acceptable to the commissioner, a copy of which shall be maintained by the licensee or the producing broker with the records of the contract and available for possible examination, that:

(a) The insurer with which the licensee places the insurance is not licensed by this state and is not subject to its supervision; and

(b) In the event of the insolvency of the surplus lines insurer, losses will not be paid by the state insurance guaranty fund.

Drafting Note: To ensure the meaningfulness of the notice required by this subsection, the commissioner might want to establish criteria related to readability, type-face and type-size of the notice.

O. Effect of Payment to Surplus Lines Licensee

A payment of premium to a surplus lines licensee acting for a person other than itself in procuring, continuing or renewing any policy of insurance procured under this section shall be deemed to be payment to the insurer, whatever conditions or stipulations may be inserted in the policy or contract notwithstanding.

P. Surplus Lines Licensees May Accept Business from Other Producers

A surplus lines licensee may originate surplus lines insurance or accept such insurance from any other producing broker duly licensed as to the kinds of insurance involved, and the surplus lines licensee may compensate the producing broker for the business.

Q. Records of Surplus Lines Licensee

Each surplus lines licensee shall keep in this state a full and true record of each surplus lines insurance contract placed by or through the licensee, including a copy of the policy, certificate, cover note or other evidence of insurance showing each of the following items applicable:

(1) Amount of the insurance, risks and perils insured;

(2) Brief description of the property insured and its location;

(3) Gross premium charged;

(4) Any return premium paid;

(5) Rate of premium charged upon the several items of property;

(6) Effective date and terms of the contract;

(7) Name and address of the insured;

(8) Name and address of the insurer;
Nonadmitted Insurance Model Act

(9) Amount of tax and other sums to be collected from the insured;

(10) Allocation of taxes by state as referred to in Subsection F of this section; and

(11) Identity of the producing broker, any confirming correspondence from the insurer or its representative, and the application.

The record of each contract shall be kept open at all reasonable times to examination by the commissioner without notice for a period not less than five (5) years following termination of the contract. In lieu of maintaining offices in this state, each nonresident surplus lines licensee shall make available to the commissioner any and all records that the commissioner deems necessary for examination.

Drafting Note: States may wish to extend the five-year period prescribed for open access to insurance records because of the long-term nature of this business.

R. Reports—Summary of Exported Business

On or before the end of the month following each [insert month, quarter, year], each surplus lines licensee shall file with the commissioner, on forms prescribed by the commissioner, a verified report in duplicate of all surplus lines insurance transacted during the preceding period, showing:

(1) Aggregate gross premiums written;

(2) Aggregate return premiums;

(3) Amount of aggregate tax remitted to this state; and

(4) Amount of aggregate tax due or remitted to each other state for which an allocation is made pursuant to Subsection F of this section.

Drafting Note: States desiring to have taxes remitted annually may call for more frequent detailed listing of business.

Section 6. Insurance Independently Procured—Duty to Report and Pay Tax

A. Each insured in this state who procures or continues or renews insurance with a nonadmitted insurer on properties, risks or exposures located or to be performed in whole or in part in this state, other than insurance procured through a surplus lines licensee, shall, within [insert number] days after the date the insurance was so procured, continued or renewed, file a written report with the commissioner, upon forms prescribed by the commissioner, showing the name and address of the insured or insureds, name and address of the insurer, the subject of the insurance, a general description of the coverage, the amount of premium currently charged, and additional pertinent information reasonably requested by the commissioner.

For the purposes of this subsection, properties, risks or exposures only partially located or to be performed in this state, which are covered under a multi-state policy placed by a surplus lines licensee in another state, shall be deemed to be insurance independently procured unless the insurer is an admitted insurer.

Drafting Note: Subsection A may need to be revised in those states exempting from taxation insurance procured by nonprofit educational institutions and their employees, from nonprofit educational insurers.

B. Gross premiums charged for the insurance, less any return premiums, are subject to a tax at the rate of [insert number] percent. At the time of filing the report required in Subsection A of this section, the insured shall pay the tax to the commissioner, who shall transmit the same for distribution as provided in this Act.

Drafting Note: Existing state laws and procedures may require that the tax report be forwarded to another state agency, such as the Department of the Treasury, rather than to the commissioner. In addition, some states may require the tax to be paid on a periodic basis (e.g. annually) rather than at the time of the filing required by Subsection A. Subsections A and B may need to be revised in these states.
C. If an independently procured policy covers properties, risks or exposures only partially located or to be performed in this state, the tax payable shall be computed on the portion of the premium properly attributable to the properties, risks or exposures located or to be performed in this state, as set forth in Sections 5F(3) and 5F(4) of this Act.

D. Delinquent taxes hereunder shall bear interest at the rate of [insert number] percent per year.

E. This section does not abrogate or modify, and shall not be construed or deemed to abrogate or modify any other provision of this Act.

Section 7. Penalties

A. A person who in this state represents or aids a nonadmitted insurer in violation of this Act may be found guilty of a criminal act and subject to a fine not in excess of $[insert amount].

Drafting Note: Some states might want to specify "misdemeanor" or "felony" rather than "criminal act" in Section 7A.

B. In addition to any other penalty provided herein or otherwise provided by law, including any suspension, revocation or refusal to renew a license, any person, firm, association or corporation violating any provision of this Act shall be liable to a civil penalty not exceeding $[insert amount] for the first offense, and not exceeding $[insert amount] for each succeeding offense.

C. The above penalties are not exclusive remedies. Penalties may also be assessed under [insert citation to trade practices and fraud statute] of the insurance code of this state.

Section 8. Violations

Whenever the commissioner believes, from evidence satisfactory to him or her, that a person is violating or about to violate the provisions of this Act, the commissioner may cause a complaint to be filed in the [insert appropriate court] Court for restitution and to enjoin and restrain the person from continuing the violation or engaging in or doing any act in furtherance thereof. The court shall have jurisdiction of the proceeding and shall have the power to make and enter an order of judgment awarding such preliminary or final injunctive relief and restitution as in its judgment is proper.

Section 9. Service of Process

A. Any act of transacting insurance by an unauthorized person or a nonadmitted insurer is equivalent to and shall constitute an irrevocable appointment by the unauthorized person or insurer, binding upon it, its executor or administrator, or successor in interest of the [insert title of appropriate state official] or his or her successor in office, to be the true and lawful attorney of the unauthorized person or insurer upon whom may be served all lawful process in any action, suit or proceeding in any court by the commissioner or by the state and upon whom may be served any notice, order, pleading or process in any proceeding before the commissioner and which arises out of transacting insurance in this state by the unauthorized person or insurer. Any act of transacting insurance in this state by a nonadmitted insurer shall signify its acceptance of its agreement that any lawful process in such court action, suit or proceeding and any notice, order, pleading or process in such administrative proceeding before the commissioner so served shall be of the same legal force and validity as personal service of process in this state upon the unauthorized person or insurer.

B. Service of process in the action shall be made by delivering to and leaving with the [insert title of appropriate state official] of the fee prescribed by law. Service upon the [insert title of appropriate state official] as attorney shall be service upon the principal.

Drafting Note: Existing state laws and procedures may require that service of process be made upon either the commissioner or another state official.
Nonadmitted Insurance Model Act

C. The [insert title of appropriate state official] shall forward by certified mail one of the copies of the process or notice, order, pleading or process in proceedings before the commissioner to the defendant in the court proceeding or to whom the notice, order, pleading or process in the administrative proceeding is addressed or directed at its last known principal place of business and shall keep a record of all process so served on the commissioner which shall show the day and hour of service. Service is sufficient, provided:

(1) Notice of service and a copy of the court process or the notice, order, pleading or process in the administrative proceeding are sent within ten (10) days by certified mail by the plaintiff or the plaintiff’s attorney in the court proceeding or by the commissioner in the administrative proceeding to the defendant in the court proceeding or to whom the notice, order, pleading or process in the administrative proceeding is addressed or directed at the last known principal place of business of the defendant in the court or administrative proceeding; and

(2) The defendant’s receipt or receipts issued by the post office with which the letter is registered, showing the name of the sender of the letter and the name and address of the person or insurer to whom the letter is addressed, and an affidavit of the plaintiff or the plaintiff’s attorney in a court proceeding or of the commissioner in an administrative proceeding, showing compliance are filed with the clerk of the court in which the action, suit or proceeding is pending or with the commissioner in administrative proceedings, on or before the date the defendant in the court or administrative proceeding is required to appear or respond, or within such further time as the court or commissioner may allow.

D. A plaintiff shall not be entitled to a judgment or a determination by default in any court or administrative proceeding in which court process or notice, order, pleading or process in proceedings before the commissioner is served under this section until the expiration of forty-five (45) days from the date of filing of the affidavit of compliance.

E. Nothing in this section shall limit or affect the right to serve any process, notice, order or demand upon any person or insurer in any other manner now or hereafter permitted by law.

F. Each nonadmitted insurer assuming insurance in this state, or relative to property, risks or exposures located or to be performed in this state, shall be deemed to have subjected itself to this Act.

G. Notwithstanding conditions or stipulations in the policy or contract, a nonadmitted insurer may be sued upon any cause of action arising in this state, or relative to property, risks or exposures located or to be performed in this state, under any insurance contract made by it.

H. Notwithstanding conditions or stipulations in the policy or contract, a nonadmitted insurer subject to arbitration or other alternative dispute resolution mechanism arising in this state or relative to property, risks or exposures located or to be performed in this state under an insurance contract made by it shall conduct the arbitration or other alternative dispute resolution mechanism in this state.

Drafting Note: Provisions of a state’s constitution, statutes, regulations, and public policy may necessitate amendment of the prior subsection.

I. A policy or contract issued by the nonadmitted insurer or one which is otherwise valid and contains a condition or provision not in compliance with the requirements of this Act is not thereby rendered invalid but shall be construed and applied in accordance with the conditions and provisions which would have applied had the policy or contract been issued or delivered in full compliance with this Act.

Section 10. Legal or Administrative Procedures

A. Before any nonadmitted insurer files or causes to be filed any pleading in any court action, suit or proceeding or in any notice, order, pleading or process in an administrative proceeding before the commissioner instituted against the person or insurer, by services made as provided in this Act, the insurer shall either:
(1) Deposit with the clerk of the court in which the action, suit or proceeding is pending, or with the Commissioner of Insurance in administrative proceedings before the commissioner, cash or securities, or file with the clerk or commissioner a bond with good and sufficient sureties, to be approved by the clerk or commissioner in an amount to be fixed by the court or commissioner sufficient to secure the payment of any final judgment which may be rendered in the action or administrative proceeding; or

(2) Procure a certificate of authority to transact the business of insurance in this state. In considering the application of an insurer for a certificate of authority, for the purposes of this paragraph the commissioner need not assert the provisions of [insert sections of insurance laws relating to retaliation] against the insurer with respect to its application if the commissioner determines that the company would otherwise comply with the requirements for a certificate of authority.

B. The Commissioner of Insurance, in any administrative proceeding in which service is made as provided in this Act, may in the commissioner’s discretion, order such postponement as may be necessary to afford the defendant reasonable opportunity to comply with the provisions of Subsection A of this section and to defend the action.

C. Nothing in Subsection A of this section shall be construed to prevent a nonadmitted insurer from filing a motion to quash a writ or to set aside service thereof made in the manner provided in this Act, on the ground that the nonadmitted insurer has not done any of the acts enumerated in the pleadings.

D. Nothing in Subsection A of this section shall apply to placements of insurance which were lawful in the state in which the placement took place and which were not unlawful placements under the laws of this state. Without limiting the generality of the foregoing, nothing in Subsection A shall apply to a placement made pursuant to Section 5 of this Act.

Section 11. Enforcement

The commissioner shall have the authority to proceed in the courts of this state or any other United States jurisdiction to enforce an order or decision in any court proceeding or in any administrative proceeding before the commissioner of Insurance.

A. Filing and Status of Foreign Decrees

A copy of a foreign decree authenticated in accordance with the statutes of this state may be filed in the office of the clerk of any [insert proper court] Court of this state. The clerk, upon verifying with the commissioner that the decree or order qualifies as a “foreign decree” shall treat the foreign decree in the same manner as a decree of a [insert proper court] Court of this state. A foreign decree so filed has the same effect and shall be deemed a decree of a [insert proper court] Court of this state, and is subject to the same procedures, defenses and proceedings for reopening, vacating or staying as a decree of a [insert proper court] Court of this state and may be enforced or satisfied in like manner.

B. Notice of Filing

(1) At the time of the filing of the foreign decree, the plaintiff shall make and file with the clerk of the court an affidavit setting forth the name and last known post office address of the defendant.

(2) Promptly upon the filing of the foreign decree and the affidavit, the clerk shall mail notice of the filing of the foreign decree to the defendant at the address given and to the commissioner of this state and shall make a note of the mailing in the docket. In addition, the plaintiff may mail a notice of the filing of the foreign decree to the defendant and to the commissioner of this state and may file proof of mailing with the clerk. Lack of mailing notice of filing by the clerk shall not affect the enforcement proceedings if proof of mailing by the plaintiff has been filed.
Nonadmitted Insurance Model Act

(3) No execution or other process for enforcement of a foreign decree filed hereunder shall issue until thirty (30) days after the date the decree is filed.

Drafting Note: This section presumes that the commissioner has authority to proceed without the cooperation of the state’s attorney general. Governing state laws might require that a person other than the commissioner or the attorney general serve as the plaintiff. The title of that person shall be substituted for “commissioner” or “plaintiff” in Section 11 whenever required by state law.

C. Stay of the Foreign Decree

(1) If the defendant shows the [insert proper court] Court that an appeal from the foreign decree is pending or will be taken, or that a stay of execution has been granted, the court shall stay enforcement of the foreign decree until the appeal is concluded, the time for appeal expires, or the stay of execution expires or is vacated, upon proof that the defendant has furnished the security for the satisfaction of the decree required by the state in which it was rendered.

(2) If the defendant shows the [insert proper court] Court any ground upon which enforcement of a decree of any [insert proper court] Court of this state would be stayed, the court shall stay enforcement of the foreign decree for an appropriate period, upon requiring the same security for satisfaction of the decree which is required in this state.

D. It shall be the policy of this state that the insurance commissioner shall cooperate with regulatory officials in other United States jurisdictions to the greatest degree reasonably practicable in enforcing lawfully issued orders of such other officials subject to public policy and the insurance laws of the state. Without limiting the generality of the foregoing, the commissioner may enforce an order lawfully issued by other officials provided the order does not violate the laws or public policy of this state.

Section 12. Suits by Nonadmitted Insurers

A nonadmitted insurer may not commence or maintain an action in law or equity, including arbitration or any other dispute resolution mechanism, in this state to enforce any right arising out of any insurance transaction except with respect to:

A. Claims under policies lawfully written in this state;
B. Liquidation of assets and liabilities of the insurer (other than collection of new premium), resulting from its former authorized operations in this state;
C. Transactions subsequent to issuance of a policy not covering domestic risks at the time of issuance, and lawfully procured under the laws of the jurisdiction where the transaction took place;
D. Surplus lines insurance placed by a licensee under authority of Section 5 of this Act;
E. Reinsurance placed under the authority of [insert citations of state’s reinsurance intermediary act and other reinsurance laws];
F. The continuation and servicing of life insurance, health insurance policies or annuity contracts remaining in force as to residents of this state where the formerly authorized insurer has withdrawn from the state and is not transacting new insurance in the state;
G. Servicing of policies written by an admitted insurer in a state to which the insured has moved but in which the company does not have a certificate of authority until the term expires;
H. Claims under policies covering wet marine and transportation insurance;
I. Placements of insurance which were lawful in the jurisdiction in which the transaction took place and which were not unlawful placements under the laws of this state.

Drafting Note: Provisions of a state’s constitution, statutes, regulations, and public policy may necessitate amendment of the opening paragraph of this section.

If any provisions of this Act, or the application of the provision to any person or circumstance, shall be held invalid, the remainder of the Act and the application of the provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

Section 14. Effective Date

This Act shall take effect [insert appropriate date].

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

1994 Proc. 3rd Quarter 14, 16-17, 24, 28-46 (adopted).
1999 Proc. 3rd Quarter 25, 26, 1080, 1135, 1151-1153 (amended).

This model draws from and replaces three earlier NAIC models:

Model Surplus Lines Law

Unauthorized Insurers Model Act

Model Nonadmitted Insurance Act

November 18, 2020

Commissioner Jim Donelon, Chair  
Director Larry Deiter, Vice Chair  
Surplus Lines (C) Task Force  
National Association of Insurance Commissioners  

Re: Comments on Nonadmitted Insurance Model Act

Dear Commissioner Donelon and Director Deiter:

The Wholesale & Specialty Insurance Association1 (WSIA) appreciates the opportunity to comment on proposed changes to the Nonadmitted Insurance Model Act (#870) which was last amended in 2002, prior to the passage of the federal Nonadmitted and Reinsurance Reform Act (NRRA). While all states have already undertaken legislative and/or administrative changes to implement the provisions of the NRRA, we applaud the Task Force for undertaking the process of updating the model to correspond with NRRA requirements and for looking at additional modernizations to state surplus lines law.

We appreciate and agree with many of the suggestions addressed in the Drafting Group’s findings within Attachment Two of the materials for the November 18, 2020 Surplus Lines Task Force meeting. Many of these are in line with WSIA’s Uniformity and Regulatory Principles that we recently updated in May of 2020 and have provided as Attachment A of this letter. We look forward to discussing these principles with you over the course of the review of Model 870. We will keep our initial comments on these findings brief, knowing that we will have a future opportunity to provide more specific comments and draft language and therefore our intent is to outline some of the key areas we see an opportunity to address through this process.

**Home state taxation principle**

The NRRA provides a consistent, uniform structure for the regulation and taxation of a surplus lines insurance policy, where the insured’s home state is the exclusive jurisdiction to regulate and tax the policy. Surplus lines premium tax should be calculated by taxing 100% of the premium based on the tax rate and rules of the insured’s home state. We believe it is appropriate to revise the model to include the critical NRRA definitions related to

---

1 The Wholesale & Specialty Insurance Association (WSIA) is a world-class member service organization representing the entirety of the wholesale, specialty and surplus lines industry. WSIA was formed in 2017 through the merger of the American Association of Managing General Agents (AAMGA) and the National Association of Professional Surplus Lines Offices (NAPSLO). WSIA members strive to build profitable business relationships in the wholesale, specialty and surplus lines insurance industry. WSIA is comprised of approximately 735 member firms, including U.S. Wholesale, U.S. Insurance Market, Associate and Service members, representing tens of thousands of individuals brokers, insurance company professionals, underwriters and insurance professionals worldwide conducting business in the U.S. surplus lines market.
taxation, including affiliate, affiliated group, control and home state and clarify that the home state has sole authority to tax and regulate a surplus lines transaction.

**Insurer eligibility**
Under the NRRA, surplus lines insurers are deemed to be an eligible surplus lines insurer in the insured’s home state when they meet the insurer eligibility provision of the NRRA. We believe it is appropriate to revise the Model Law to remove all extraneous language to avoid confusion and to simply reflect the NRRA’s Uniform Standards for Surplus Lines Eligibility. We would support a drafting note that states may maintain voluntary listings of eligible surplus lines insurers, where the insurer elects to provide additional information beyond the criteria in the NRRA, and conversely, encourage elimination of mandatory eligibility requirements that exceed those contained in the NRRA.

We would also suggest that it is appropriate for the model to include references to Domestic Surplus Lines Insurers (DSLI) status, which is now permitted by 21 states, to promote general clarity and understanding. The eligibility of DSLI’s is the same under the NRRA as carriers without the status but it is may be helpful to include the definition in this model.

**Exempt commercial purchaser**
The NRRA provided a streamlined ability for commercial purchasers to procure surplus lines insurance without meeting diligent search requirements if the insured meets specified qualifications as a sophisticated buyer. We believe it is appropriate that the model include the NRRA definition of exempt commercial purchaser and a provision for the streamlined procurement of surplus lines insurance for these insureds.

**Encourage further modernization**
Several provisions of the current model have been made obsolete through the enhanced uniformity of the NRRA. We encourage revising or adding the following provisions in an effort to further modernize state surplus lines laws:

- **Allocation reporting**
  We agree with the drafting group comment that under home state taxation, allocation of premium for tax purposes is obsolete and we encourage eliminating any such references.

- **Evidence of diligent search**
  We encourage the drafting group to consider amendments to Section 5K that assist in modernizing the reporting process for surplus lines brokers. The term “affidavit” can often imply a notarization requirement and we would request that that term be revised to “signed statement” to more accurately reflect the majority of the requirements. We also encourage a drafting note suggesting states should eliminate notarization requirements for these documents. Additionally we encourage states to consider their revising their requirements for filing evidence of a diligent search in general as several states have recently undertaken. Rather than require individual signed statements for every surplus lines transaction to be filed directly with the department of insurance, we suggest a more streamlined approach that many states have taken which is requiring the surplus lines broker to maintain evidence of a diligent search in their own files, subject to review by the commissioner upon request. We would encourage the group to consider a drafting note that encourages this process.

- **Eliminate zero premium reports**
  We would encourage the group to consider an amendment and/or drafting note regarding the elimination of zero premium reports. Brokers should not be required to report to a state that they have
collected zero dollars in premium during a period they maintain an active surplus lines license. These reports are obsolete because the pre-NRRA system requiring the broker to remit a portion of the tax to each exposure state has now been eliminated.

- **Producer Licensing**
  We support including the NRRA definition and sections referencing surplus lines producer licensing. We are pleased that the Producer Licensing (D) Task Force agreed to undertake work this year to analyze and recommend areas that, in the absence of the National Association of Registered Agents & Brokers (NARAB) becoming operational in the immediate future, there may be ways the states can increase uniformity and efficiencies in this area.

- **Penalties**
  Several states have recently taken legislative action to allow their Commissioner discretion in assessing penalties for certain actions, most notably in late filings. This provides the Commissioner the opportunity to determine if certain fines should be adjusted or waived, whereas in some situations they have no option but to follow mandatory fine schedules. We believe it may be appropriate to consider including model language to allow Commissioner discretion when appropriate.

In general, we think the most critical changes to Model 870 are those that address and incorporate the NRRA. We believe there is an opportunity to also work to further modernize some of the processes that interact with this model, which we outlined in our recent comment letter to the Innovation & Technology (EX) Task Force. As we noted above, WSIA has adopted principles that we believe can serve as guidance for additional uniformity in the regulation of surplus lines and increase the efficiency of the transaction for the consumer, regulator and industry. As the drafting group moves forward with its work, we welcome the opportunity to provide further perspective and support.

Thank you for the opportunity to comment and your consideration of these matters. Please let us know if we can answer any questions.

Sincerely,

Keri A. Kish    John H. Meetz    Brady R. Kelley

WSIA Regulatory Principles

Adopted May 1, 2020

WSIA believes the below principles are necessary to maintaining an effective and efficient regulatory environment for the wholesale, specialty and surplus lines insurance industry to operate within in order to provide consumers with appropriate insurance solutions.

I. Freedom from Regulation of Surplus Lines Rates and Forms
Freedom from regulation of rates and forms distinguishes the surplus lines market from the admitted market and is the essential element that enables the surplus lines industry to serve the consumer and function as a market for hard to place risks. It should be defended at all times in all states, even for seemingly minor infringements.

II. Deference to Terms Negotiated in Insurance Contracts
Insurance policies should not be retroactively mandated to cover claims that were not originally anticipated as a term of the contract. Legislative and regulatory activity mandating insurance policy interpretation to include specific coverage, regardless of clear wording of the policy, violates well-established constitutional and legal precedent. Any attempt to require insurers to pay for coverage that was never sold or to cover claims never intended when the policy was underwritten and priced, must be firmly opposed.

III. Primacy of Surplus Lines
State based residual market mechanisms should not be given risk placement preference before surplus lines. The sequence of risk placement should be as follows: admitted market > surplus lines market > state based residual market.

IV. The Principle of Export
The principle of export means that surplus lines transactions involve state regulated surplus lines brokers, exporting business to nonadmitted companies not licensed by the state. This principle forms the regulatory framework of the surplus lines market and defines the role of the surplus lines broker in the transaction as the regulated entity. It separates the company from direct, 50 state regulation – including rates and forms and establishes context of the taxation of the transaction.

V. Uniform and Reciprocal Licensing of Surplus Lines Brokers Between the States
A uniform and reciprocal 50 state licensing system for surplus lines brokers is essential to effectively operate within the wholesale, specialty and surplus lines insurance industry. Implementation of the National Association of Registered Agents and Brokers (NARAB) is critical to achieve a 50-state system.

VI. Nonadmitted and Reinsurance Reform Act of 2010 (NRRA)
The Nonadmitted and Reinsurance Reform Act of 2010 (NRRA) provided a foundation for an effective national system based on the home state approach, leading to a modern regulatory framework and improved uniformity. The intent and clear mandates of the NRRA and the resulting uniformity and efficiencies in the regulation of multistate surplus lines transactions must be preserved. Any changes to the original law, at either the state or federal level, that may jeopardize the significant improvements, efficiencies, and uniformity, must be opposed.

VII. State Regulation
WSIA is committed to maintaining the state-based system of insurance regulation because it is the most favorable system for the wholesale, specialty and surplus lines market. The surplus lines marketplace is an essential part of
the national insurance market and operates best in the state-based regulatory system. However, WSIA believes the current state-based system must implement additional uniformity in order to continue to effectively operate in a state-based system. Uniformity among and reciprocity between the states in areas of producer licensing and taxation is critical. The implementation of national standards would improve the efficiency and effectiveness of the state regulatory system; however, no standard, state or federal, should be enacted that curtails, hinders or otherwise prevents the surplus lines market from performing its vital role as a safety-valve and supplemental market for insurance consumers.

VIII. Export Lists and Commercial Lines Deregulation – Automatic Export
State export lists provide states effective and efficient means to regulate the flow of surplus lines business in and out of the state based on the known underwriting appetite of the standard market. All states with diligent effort requirements should utilize Export Lists. In states where transactions involving commercial policyholders have implemented commercial lines deregulation and/or NRRA exempt commercial purchaser laws, risk should automatically qualify for export to the surplus lines market without conducting a diligent search.

IX. Elimination of Carrier/Broker Reconciliation
The NRRA directs the taxation of all surplus lines premium to the home state of the insured where the full amount of tax paid can be directly and effectively audited by the state. States should rely on broker filings, with brokers remitting 100% of the tax to the home state on 100% of the premium for the home state of the insured. Additional auditing and comparisons of broker and carrier information is unnecessary and does not yield appropriate comparisons for purposes of accurate audit results.

X. Federal Regulation
WSIA does not believe that a federal based system of regulation can be effective in the oversight of an industry established to address a state-based system of compensations. Proponents of Optional Federal Charter (OFC) believe that regulation of rates and forms will be eliminated by securing such charters. A system of OFCs would be an unproven regulatory system and wouldn’t provide the best regulatory structure for the wholesale, specialty and surplus lines market and distribution system. If OFCs were to be implemented, it would be essential that the regulatory structure permit a holding company to simultaneously hold federal and state charters so that the insurance could be placed under the regulatory system that offers rates, terms and conditions most consistent with the policyholder’s needs. WSIA is supportive of the role of the Federal Insurance Office (FIO) in studying and overseeing the efficiency and modernization of the system of insurance regulation in the United States; however, we believe any federal policy regarding insurance regulation must continue a course aimed at strengthening state insurance regulation and coordinating the efforts of federal agencies with state regulatory systems. FIO’s federal subpoena authority as it relates to insurance data should be eliminated because federal entities should secure such data through the appropriate state insurance regulator.

XI. Guaranty Fund
Surplus lines guaranty funds are unnecessary for the following reasons:
- They promote false security because the coverage is typically inadequate for commercial lines;
- They promote the use of financially weak companies;
- Potential premium assessments are an unfair burden on surplus lines consumers; and
- The surplus lines marketplace is financially secure and dominated by companies with ratings that average significantly higher than the overall market.
WSIA Guidelines for Uniform State-Based Regulatory Requirements of the Surplus Lines Market

Adopted May 1, 2020

The surplus lines insurance market provides coverages and capacity that are crucial to the national insurance market. With years of sophisticated underwriting experience and highly-stable, proven financial solvency records, the market acts as both a safety-valve and incubator for hard-to-place, unique and emerging risks and ensures these risks are maintained in the private market.

Surplus lines insurance operates most effectively in a state-based system of regulation. As consumers’ needs become more complex, and reliance on the surplus lines market increases, so does the need for efficient and uniform regulation for surplus lines transactions. The Nonadmitted and Reinsurance Reform Act (NRRA) sought to achieve a simpler and more efficient system of regulation and taxation of the industry by establishing the “home state” as the only jurisdiction to regulate and tax surplus lines transactions. State implementation of the following regulatory requirements will maintain the intent of the NRRA and establish a uniform, nationwide approach to the regulation and taxation of the surplus lines industry.

The uniformity brought about by the home state tax approach should be implemented in other regulatory requirements to enhance the already effective system. WSIA members seek to maintain individual state based regulation with nationwide uniform treatment of the following regulatory compliance requirements.

I. Taxation and insurer eligibility in the insured’s home state

The NRRA provides a consistent, uniform structure for the regulation and taxation of a surplus lines insurance policy, where the insured’s home state is the exclusive jurisdiction to regulate and tax the policy. While all states recognize and regulate the surplus lines transaction under the NRRA, not all provisions are uniformly applied.

A. Taxation
   1. Home state of the insured
      Determination of an insured’s home state should be made exclusively as defined in the NRRA for all surplus lines policies. When the insured is a member of an unaffiliated group, the home state should be the state in which the group is domiciled.

   2. Risks located outside of the United States
      Surplus lines premium taxes should only be collected for risks that reside within the United States. A state should exclude any portion of risk that is outside of the U.S. in determination of the amount of surplus lines tax to be collected. If 100% of a U.S. insured’s policy resides outside of the United States, the state should not collect surplus lines premium tax.

   3. Home state tax calculation
      Surplus lines premium tax should be calculated by taxing 100% the premium based on the tax rate and rules of the insured’s home state.
4. **Taxable premium**

States should implement one uniform definition of “premium tax” for determining taxable premium so that surplus lines premium taxes are calculated and treated uniformly. A consistent definition would ensure a more efficient process for consumers, states and the industry.

**B. Insurer Eligibility**

Strong solvency review by domiciliary states for U.S. surplus lines carriers, and by the NAIC International Insurers Department (IID) and its members for non-U.S. surplus lines carriers, is critical to the continued success of the surplus lines marketplace. U.S. domestic and non-U.S. carriers should have the same standard for doing business and demonstrate strong solvency history to support a robust surplus lines industry. All U.S. insureds purchasing surplus lines coverage should feel confident in the strength and solvency of the surplus lines market. Industry and consumers alike benefit from strong carrier solvency.

1. **Eligibility criteria**

Surplus lines insurers should be deemed eligible in any state where they meet the insurer eligibility provision of the NRRA.

2. **Mandatory eligibility criteria and listings**

Mandatory eligibility listings and criteria exceeding those set by the NRRA conflict with the NRRA and should be suspended.

3. **Voluntary eligibility criteria and listings**

States may maintain voluntary listings of eligible surplus lines insurers, where the insurer elects to provide additional information beyond the criteria in the NRRA. States implementing voluntary listings with additional solvency review should be limited to information readily available through the domiciliary state or NAIC database. No additional information beyond data collected for domiciliary state solvency regulation should be required.

**II. Tax payment dates**

A. States should choose an annual, biannual or quarterly requirement for the “due by” date for surplus lines premium tax. The required dates should be limited to four potential dates throughout the year, including the first day of March, June, September or December. States may require estimated quarterly tax payment for three dates and a “true up” or “final” on the fourth date. States should continue to accept payments on a monthly basis and should not limit when a payment can be remitted.

**III. Treatment of surplus lines fees**

A. **Surplus lines broker policy fees**

A surplus lines broker should be allowed to charge a reasonable fee for the placement of a surplus lines policy as recognition for services performed as part of securing a surplus lines policy from a nonadmitted carrier that are unique to the surplus lines transaction. The fee should be made transparent to the consumer.

B. **Surplus lines policy fees taxation**

While we believe surplus lines policy fees are not premium and should not be subject to surplus lines premium tax, states should clearly indicate if taxes are to be applied to surplus lines policy fees.
Attachment A

IV. Elimination of zero premium reporting
   A. Brokers should not be required to report to a state that they have collected zero dollars in premium during a period they maintain an active surplus lines license. These reports are obsolete because the pre-NRRA system requiring the broker to remit a portion of the tax to each exposure state has now been eliminated.

V. Electronic Distribution of Insurance Materials and Payments
   A. States should accept all required reports and filings electronically. In states unable to immediately implement electronic filing, the electronic and hard-copy form should be the same.
   B. States should allow surplus lines premium tax payments through electronic means.
   C. Electronic and digital signatures should be permitted by all states to acknowledge agreement, acceptance and notice for any documentation required of an insurer, producer or insured.
   D. Electronic notification to an insured by an insurer or producer should be permitted by all states.
   E. All states should permit electronic or digital notarization.

VI. Forms
   A. Diligent effort recordings (affidavits)
      If required by a state, a record of diligent effort should be maintained in a surplus lines broker’s file and available to the state upon request or during an audit. It should not be necessary to notarize or file these records with a state.
   B. Premium reports
      States should implement one uniform form and report format for use by all states for purposes of reporting and remitting surplus lines premium tax.

VII. Automatic Export
Implementing uniform processes and procedures and increasing state reliance upon Export Lists is desired. Export lists are an efficient and effective way for risks to enter the surplus lines market but are currently only utilized by 18 states. Commissioners should be made aware when there is not an adequate standard market and s/he should have the ability to designate that risk for automatic export in order to ensure the greatest efficiency for her/his consumers and the overall insurance market. In the absence of Export Lists, statutory declarations for automatic export are desired (e.g., exemption from diligent effort for private flood insurance placements).

VIII. Notice to Insureds
   A. States should require one, uniform notice to surplus lines insureds, in the same font size and color, with the same required information.

   “This insurance policy is permitted to be placed in this state on a nonadmitted basis by an insurer meeting the criteria within [insert insured’s home state surplus lines code section]. The insurer is not licensed in this state and does not participate in the State Guaranty Fund. For additional information about this insurer, contact your insurance general agent, broker or surplus lines broker. You may also contact your insurance department consumer help line.”
TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force July 13, 2021, Minutes
Title Insurance (C) Task Force June 7, 2021, Minutes (Attachment One)
Title Insurance Consumer Shopping Tool Template Revisions (Attachment Two)
The Title Insurance (C) Task Force met July 13, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Jeffrey Joseph (FL); Lori K. Wing-Heier represented by Alex Romero (AK); Colin M. Hayashida represented by Paul Yuen (HI); Vicki Schmidt represented by Heather Droge (KS); James J. Donelon represented by Warren Byrd (LA); Kathleen A. Birrane represented by Erica Baily (MD); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Causey represented by Timothy Johnson (NC); Marlene Caride represented by Randall Currier (NJ); Russell Toal and Mickey VanCuren (NM); Barbara D. Richardson represented by Hermoliva Abejar (NV); Jessica K. Altman represented by Michael McKenney (PA); Larry D. Deiter represented by Maggie Dell (SD); Scott A. White represented by Mike Beavers (VA); and Michael S. Pieciak represented by Kevin Gaffney (VT). Also participating were: Steven Giampaolo (CO); and Stephanie Noren (OR).

1. **Adopted its June 7 Minutes**

   The Task Force met June 7 to expose revisions to the *Title Insurance Consumer Shopping Tool Template* (Shopping Tool) for a public comment period ending July 5.

   Mr. Byrd made a motion, seconded by Mr. Joseph, to adopt the Task Force’s June 7 minutes (Attachment One). The motion passed unanimously.

2. **Adopted Revisions to the *Title Insurance Consumer Shopping Tool Template***

   Ms. Rafeld stated that revisions are specific to the Task Force’s 2021 charge to revise the Shopping Tool to include questions and answers about title insurance-related fraud topics, including but not limited to, closing protection letters (CPLs) and wire fraud. The Shopping Tool with revisions red lined (Attachment Two) was exposed on June 7 for a public comment period ending July 5. No comments on the exposed revisions were received. Ms. Rafeld asked if there are any verbal comments anyone might have but did not have time to submit in a letter.

   Ronald J. Blitenthal (Old Republic) suggested “relaying” be replaced with “claiming” on page 11. Brenda J. Cude (University of Georgia and NAIC Consumer Representative) concurred.

   Mr. Byrd made a motion, seconded by Mr. Johnson, to adopt the Shopping Tool revisions, with the additional edit of replacing “relaying” with “claiming” on page 11. The motion passed unanimously.

3. **Heard a Presentation on Business Email Compromises and Other Cybercrimes**

   Amanda Fritz and Katrina Pistun (Federal Bureau of Investigation—FBI) stated that cyberattacks are becoming more common, and it is really about what we can do to protect ourselves. Back in 2005, mobile phones were not commonplace. Eight years later, almost everyone has a mobile device. Today, just about everything you can think of, from doorbells to thermostats to smart watches, is attached to the internet. All these devices open a larger attack field, placing us in a more vulnerable state. The cybercriminals that are in it for financial gain are the hardest hackers to defend against because they are trusted individuals within a company that usually become disgruntled. Cybercriminals target all business types, including financial organizations (37%); retail (24%); manufacturing, utilities, and transportation (20%); and information and professional services (20%). Cybercrime is expected to cost the world $1 trillion this year. The FBI Internet Crime Complaint Center (IC3) Database received almost 800,000 cybercrime and fraud complaints in 2020, with losses over $4.2 billion. There have been $13.3 billion in losses since 2016, with business email compromises accounting for the largest share of losses. Business email compromise occurs when an email is reporting to be from a known source making a legitimate request but is actually coming from compromised email accounts where the email is being sent by a bad actor. Recent trends include targeting real estate transactions (e.g., title companies, real estate agents, attorneys) and spoof emails; i.e., one small piece of a familiar email address is changed to trick someone. For example, a vendor that regularly interacts with a company sends an invoice, but the bank account number has been modified, tricking the homebuyer receiving the message to wire their down payment. The bad actor will set the emails that are of interest to this particular actor to be auto forwarded to a different email address controlled by the bad actor. Then, they are automatically deleted from the sender’s legitimate inbox, allowing the bad actor to then go
ahead and respond to those emails without the victim having any idea what is going on. Ransomware, a form of malware that
denies the availability of critical data systems by encrypting the data, is a growing threat. The ransom criminal actors’ demand
has increased from hundreds of dollars to millions of dollars. The increase in ransom is due to the added threat of having an
organization’s sensitive data released to the public. To avoid infection, systems should be locked down and backed up often.
Systems can be rebuilt without paying a ransom if the backup data was encrypted. The FBI was able to seize about half of
Colonial Pipeline’s $4.4 million ransom payment. Reports from Microsoft and Google say that multi-factor authentication will
stop nine out of 10 cyberattacks. The victim should, after experiencing business email compromise: 1) immediately notify their
bank and request a recall of the transfer; 2) submit a complaint to the FBI so the IC3 Recovery Asset Team can take action;
and 3) reset passwords, use multi-factor authentication, and review logs. That deals with ransomware, but it denies the
availability of critical data systems by encrypting the data.

Mr. Byrd asked how one could set up multi-factor identification. Ms. Fritz said most email providers have a setting option for
multi-factor identification. For instance, an email or text is sent with another code that must be entered, in addition to the
username and password, before access is granted to the account.

4. Heard from State Insurance Regulators About Title Insurance Fraud Trends

Ms. Rafeld stated that a request was sent out on Jan. 28 to Antifraud (D) Task Force members asking them to share reports of
title insurance fraud and/or mortgage fraud trends in their state. This item relates to the Task Force’s charge to assist the
Antifraud (D) Task Force in combating fraud.

Ms. Noren stated that before Oregon cracked down, it was seeing a rise in fraudulent settlement activity. In one case shortly
before Christmas in 2018, a family purchasing a home received an email they presumed was from their title insurance company
with instructions to wire $123,000. The email address looked exactly like that of its title insurance company. By the time the
consumer figured out it was a scam, the money had been transferred to five different banks and then out of the country. The
title insurance company actually hired the consumer to be a spokesperson for their campaign against cybercrime. The
investigation revealed that the title company’s email was actually clear and had not been hacked. It was likely a personal email
address from someone within the company who was involved in it somehow. The email accounts of the financial services
company were protected, but it appears it came from a cell phone.

Ms. Rafeld stated that Ohio had a similar case approximately two years ago where the consumer’s email had been hacked. The
funds were traced to a bank in Texas where they were frozen and then returned to the consumer.

Ms. Couch stated that Missouri is seeing a downward trend, but a couple months ago it had an incident with a title company
that issued a check to the seller in an in-person closing. By the time the seller tried to deposit the check at the bank, the title
company received an email asking for a stop payment to be put on the check because it had been wired to another account. The
excuse in the email was that they were doing an audit on the seller's bank account. The title company automatically placed the
stop payment and wired the funds without contacting the seller. The seller tried to contact the title company to resolve the
matter when their checks started bouncing. The Department of Insurance (DOI) became involved after the consumer was
unsuccessful with the title company. The title company suffered the loss and had to make the seller whole. In most cases, the
extra step of calling somebody and confirming the requested transaction was not taken. The title company had cyber coverage
but was unable to make a claim, as it had not taken those extra verification steps. There was also an instance where a seller
contacted the DOI from Australia saying he had never received funds from the sale of a piece of property. It appeared that the
email account of the real estate agent that was involved had been hacked, and instructions were included to send money to a
different bank account. Educating agents and closers on the need to be diligent about following up with phone calls is very
important.

Ms. Rafeld stated that she agreed, and she has found that many titles and real estate agents do not use secure email accounts.

Mr. VanCuren stated that $1.2 million has been stolen from consumers in New Mexico. There was $300,000 taken out of New
Mexico from a closing deal in a small town. In another case, an agent in a small county lost thousands of dollars and now has
to sell the company to cover the loss. Another agent incurred substantial costs, getting their systems running again after a
cyberattack.

Mr. Giampaolo stated that Colorado has been concerned with defalcations. In April 2020, the DOI issued advisories on its
website and emailed title insurance underwriters to encourage the offering of CPLs to both buyers and sellers of real estate
transactions. The market has been robust, and defalcations have not been an issue.
Ms. Rafeld stated that even though it is mandated, CPLs are not always offered in Ohio. The proactive steps Colorado took were a good idea, given the high number of home purchases and refinances in the current market.

Having no further business, the Title Insurance (C) Task Force adjourned.

W:\National Meetings\2021\Spring\TF\Title\7.13-TitleTF.docx
Title Insurance (C) Task Force
E-Vote
June 7, 2021

The Title Insurance (C) Task Force conducted an e-vote that concluded June 7, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Anoush Brangaccio (FL); Peni Itula Sapini Teo (AS); Karima M. Woods represented by Angela King (DC); Colin M. Hayashida represented by Martha Im (HI); Vicki Schmidt represented by Heather Droge (KS); James J. Donelon represented by Warren Byrd (LA); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Troy Downing (MT); Mike Causey represented by Timothy Johnson (NC); Russell Toal represented by Jennifer Catechis (NM); Jessica K. Altman represented by Mark Lersch (PA); and Scott A. White represented by Mike Beavers (VA).

1. Exposed the Proposed Revisions to the Title Insurance Consumer Shopping Tool Template

The Task Force considered exposing revisions to the Title Insurance Consumer Shopping Tool Template. The revisions include questions and answers (Q&As) about title insurance-related fraud topics, including, but not limited to, closing protection letters (CPLs) and wire fraud.

The motion passed, with a majority of the Task Force members voting in favor of exposing revisions to the Title Insurance Consumer Shopping Tool Template for a public comment period ending July 5.

Having no further business, the Title Insurance (C) Task Force adjourned.
How to Buy Title Insurance in [Insert State]

This guide:
- Covers the basics of title insurance.
- Explains the need for title insurance.
- Offers tips to shop for title insurance and closing services.
- Gives you questions you should ask before you buy title insurance.

Introduction

A real estate transaction may be one of the largest investments you’ll ever make. Because the decisions you make when you buy or refinance a home can have effects for years to come, it’s important to take time to learn about the process so you can make good decisions.

You may want to hire a licensed professional to help you with the many steps to buy or refinance a home or piece of property. Before you agree to do business with anyone, however, be sure the individual is qualified and licensed.

Buying or Refinancing a Home or Property

So you’re ready to buy or refinance a home or piece of property. Now what?

If you’ve found the perfect home or property and the seller has accepted your offer, the next steps will most likely be:

- You’ll get a loan from a mortgage lender.
- A professional will inspect and appraise the home or property.
- You’ll choose an individual or business, known as a closing agent, to organize and finalize your real estate transaction.
- You’ll choose a “closing date” to sign paperwork and take ownership of your new home.
- You’ll buy homeowners insurance through a licensed property and casualty insurance agent.
- You’ll decide if you need flood and/or earthquake insurance, which you can buy through a licensed property and casualty agent.
- You’ll decide if you’ll need title insurance, which you can buy through a licensed title agent or company.
- A professional may “survey” the property. A survey is a professional drawing of the property’s boundaries. It also shows where a home is located on the property.
- You may be able to buy a home warranty that covers the mechanical breakdown of individual parts of a home, such as the electrical and plumbing systems. A warranty doesn’t cover the home’s structure, may or may not cover appliances, ends at a specific point in time (for example, one year) and has exclusions and limitations that you should review. Home warranties might not be regulated as insurance in your state.
- A final walk through of the home you’re buying will be scheduled.
- You’ll sign legal paperwork to finalize your new loan.

If you’re refinancing your home or property:

- You’ll get a new loan from a mortgage lender.
- A professional may inspect and appraise your home or property.
- You’ll give the lender information about your homeowners, flood and/or earthquake insurance coverage.
- You’ll decide if you need title insurance, which you can buy from a licensed title agent or company.
- A closing date will be selected.
- You’ll sign legal paperwork to finalize your new loan.

When you buy or refinance a home or piece of property, you’ll need to decide whether to buy title insurance.

What is title insurance? Why do you need it? This guide will answer those questions and more.
What is Title Insurance, and What Does it Cover?

A title documents your legal ownership or interest in property.

Title insurance is an insurance policy that covers past title problems that come up after you buy or refinance a property.

Lost, forged or incorrectly filed deeds, property access issues and liens on a property are just a few of the title problems that could come up after you buy or refinance a home or piece of land.

For example, if you received a letter telling you there’s an unpaid mortgage on the property you just bought, you could submit a claim to your title insurance company. The title insurance company would pay the legal costs to settle the dispute and/or to resolve the problem.

Without title insurance, you might have to pay all of the legal costs to settle the dispute. And if you lose the dispute, you could lose money, the equity you have in your home, and possibly ownership.

Two Types of Title Insurance—Owner’s and Lender’s Policies

There are two types of title insurance policies:

- **An Owner’s Policy**
- **A Lender’s Policy**

An owner’s policy protects you for the full price you paid for the home plus legal costs if a past title or ownership issue comes up after you buy your home. An owner’s policy is issued for the amount you paid to buy your home, and the policy will cover you as long as you own an interest in the property. You are not required to purchase an owner’s policy, but if you choose not to, you may lose the money you’ve paid for your home.

If a basic owner’s policy doesn’t cover a specific title issue, often you can add coverage, known as a policy endorsement. For example, if you’re buying a new home and the owner’s policy doesn’t cover claims (often known as a mechanic’s lien), you can add a policy endorsement to ensure you are covered. Some endorsements are free while others can be added for an additional fee.

An enhanced owner’s policy, which has a higher level of coverage than a standard owner’s policy, also may be available in your area. Enhanced owner’s policies cost about 20% more than a standard owner’s policy, but they cover extra risks. An enhanced owner’s policy also may continue to provide coverage after a property has been transferred.

If you borrow money to buy your home or property, your lender is likely to require you to buy a lender’s policy. A lender’s policy only protects the lender if a title or ownership problem comes up after the property is purchased. A lender’s policy is issued for the amount of the mortgage, and the coverage goes down as you pay down your loan. Unlike an owner’s policy, the lender’s policy ends when you pay off your mortgage. You may be expected to pay the premium for a lender’s policy.

Because a lender’s policy only protects the lender from title problems, you’ll also need an owner’s policy if you want to protect yourself.

What Doesn’t Title Insurance Cover?

Title insurance policies do not cover ownership issues that come about after you’ve bought a home.

For example, if your neighbor builds a fence on your property after you’ve bought your home, your title insurance policy will not cover the costs to settle the dispute.
Also, most title insurance policies don’t cover issues such as easements, boundary line disputes, zoning violations and air or mineral rights. 

Your title insurance policy may spell out other issues that won’t be covered. And if there’s a title issue specific to the home you’re buying or refinancing, your title policy may not cover it. Ask for a list of what will and will not be covered, and be sure to read your policy.

Who Sells Title Insurance?

Only licensed title insurance companies, agencies and agents can sell title insurance in [INSERT STATE]. 

Drafting Note: If a state permits other individuals and entities to sell title insurance, this sentence should be amended to include those parties.

You can buy title insurance directly from a title insurance company or a title agent who sells title insurance for a company.

The Right to Choose Your Own Title Agent/Company

You have the right to shop for and choose your provider of title insurance and settlement services.

A good time to shop for title insurance is when you choose a real estate agent, and a lender has prequalified you for a loan. You’ll have an idea of the price you can pay for a home/property and a title insurance agent or company can use that information to estimate your title insurance costs.

There are several ways you can find a title insurance agent or company:

- You can ask the sellers who they used when they bought the home.
- You can check the [INSERT NAME OF DOI] website, [INSERT WEB ADDRESS].
- You can check online for title insurance agents, agencies and companies in your area.
- You can ask for recommendations from your real estate agent, attorney, mortgage lender, financial institution or builder.

If your real estate agent, attorney, builder or lender offers to arrange title insurance for you, or suggests you use a specific title agent or company, ask if they have a business arrangement with the title company or agent they’re recommending and if they’ll make money from the referral. Federal law requires real estate professionals, title agents and lenders to tell you about any business arrangements they may have.

Also, beware of statements such as:

- “Everyone charges the same price.”
- “We’ll give you a discount on something else if you use our title agent.”
- “If you choose another title agent, your purchase may be delayed.”

These types of statements may be used to convince you to give up your right to choose a title agent or company, and you may pay more for title insurance than if you had shopped around.

Who Pays for Title Insurance?

If you’re buying a home, who pays for title insurance depends in part on local custom. It may be something, however, that you can negotiate with the seller of the property. When buying a home, be sure to ask your real estate agent what the custom is in your area and if you’ll likely be the one to pay for title insurance.
If you’re refinancing your home, it’ll be your responsibility to buy and pay for the title insurance policy.

A title insurance policy is paid for with a one-time premium payment.

What Does Title Insurance Cost?

The cost of title insurance is usually tied to the value of the home.

If you’re buying an owner’s policy, the price of your policy will depend on the home’s selling price.

The price of title insurance also can include more than just insurance. One cost included in the price is a title search. When a title search is conducted, a title agent or company reviews local records, such as deeds, mortgages, wills, divorce decrees, court judgments and tax records looking for any title issues with the property. In [INSERT STATE NAME], a title search must be done before a company can issue a title insurance policy.

If you’re buying a lender’s policy, the price of title insurance will depend on your loan amount.

Ask if You’re Eligible for Discounts

When you buy title insurance, ask if you’re eligible for any discounts.

If there was a previous title policy on the home (because the home changed owners or you’re refinancing), you may get a discount known as a “reissue rate.”

If you decide to buy both an owner’s and lender’s policy, you may get a discount if you buy both policies together.

The Difference Between Title and Homeowners Insurance

Title insurance is different from homeowners insurance.

- Title insurance protects you against past title problems. Homeowners insurance protects you against future issues that cause damage to your home or personal property. Homeowners insurance also limits your personal legal responsibility (or liability) if someone is injured while they’re on your property.
- Licensed title agents and companies sell title insurance. Insurance agents licensed to sell property, and casualty insurance sell homeowners insurance.
- You pay the premium for title insurance with a one-time payment, when you buy or refinance a home. A homeowners insurance policy is paid for on an ongoing basis and is up for renewal each year.
- Homeowners insurance does not protect your ownership in the property and does not replace the need for title insurance.

Questions to Ask Before You Buy Title Insurance

When you shop for title insurance, be sure to ask the title agent or company the following questions:

- How long have you been licensed to sell title insurance in [INSERT STATE]?
- What title insurance company do you sell policies for?
- Are title insurance premiums regulated in [INSERT STATE]?
- Are any discounts available?
- Are you related or affiliated in any way with my real estate agent, mortgage lender, builder, or attorney?
- Will anyone be paid a referral fee or commission or be compensated if I buy title insurance from you or a company you represent?
- In addition to title insurance premiums, what other fees and charges will I pay?
- What policy endorsements are available?
- Do you charge a cancellation fee if I don’t buy title insurance from you after you do a title search?
Will I need to pay for a survey before you can sell me title insurance?

The Real Estate Closing

The last step to buying or refinancing a home / property is known as the closing.

Shortly after the seller accepts your offer to buy their home or the lender approves your refinancing, a closing date will be set.

A closing can be done in person, electronically or by mail. As part of the closing, you’ll be asked to sign the legal paperwork required to finalize the real estate transaction. On the day of the closing, you (as well as the seller) will be expected to pay any money owed.

If an in person closing is scheduled, expect the closing to last an hour or two. In addition to you, the seller, real estate agent(s), attorney, title agent and lender may attend the closing.

During the closing, you’ll be signing documents that are legal binding contracts. Take time to understand what they mean. If you don’t understand something, ask someone to explain it to you, or ask for time to contact a trusted friend, family member, attorney or advisor for help.

One document you’ll be asked to review and sign is the closing disclosure. The closing disclosure shows all of the money to be paid to complete the transaction. Some of the costs listed on the closing disclosure will include:

- Outstanding mortgages to be paid.
- Money to be exchanged between the buyer and seller.
- The amount of the new loan(s).
- Loan origination charges.
- Property appraisal fees.
- Credit report fees.
- Real estate agent fees.
- Tax preparation fees.
- Property taxes owed.
- Escrow funds.
- Title insurance premiums.
- Courier fees.
- Settlement or closing fees.
- Closing protection fees.
- Document or recording fees.

Federal law gives you the right to see the closing disclosure at least three business days before closing. It’s highly recommended that you ask for a copy of the closing disclosure ahead of time so you have a chance to review it and ask questions.

If everything isn’t in order by your scheduled closing date, your closing date may be moved to another date.

After the closing, you’ll be given copies of all the documents you signed.
Closing Agents

_Closing agents_ handle real estate closings and coordinate all of the steps required to make the real estate transaction official. They’re responsible for getting mortgage and loan pay-off amounts from the seller’s lender(s) and the amount of property taxes owed. They also give instructions to the buyer and seller, hold money until the home’s title is transferred, prepare documents for the buyer and seller to sign, pay out money owed and file documents with the county recorder, who updates records to show a property has changed owners.

Some title agents do more than just sell title insurance. They also conduct real estate closings by serving as a closing agent. Their responsibilities as a closing agent are separate from what they do as a title agent.

Other professionals, such as attorneys, also can be closing agents.

**Questions to Ask When You Choose a Closing Agent**

When you choose a closing agent, be sure to ask the following questions:

- Can you give me a list of all the fees and charges I would pay if you were my closing agent?
- What fees and charges are negotiable?
- Are your closing staff licensed title insurance agents?
- How and when do you conduct closings?
- Who will handle my closing?
- When will you give me a copy of the settlement statement? ¹
- Do you have references or testimonials available?
- Do you offer closing protection coverage?
- How much does closing protection cost?

_Closing Protection Letters_

Title insurance doesn’t protect the lender or buyer against mistakes made during the closing, or if money is stolen or paid to the wrong parties. For an added fee, title insurance agents and companies that conduct real estate closings offer closing protection letters. If you buy a closing protection letter, the title insurance company will reimburse you for any money you lose from negligence, fraud, theft of funds or errors the closing agent made. Without this, you’d have to sue the agent to get back any money lost.

If you buy closing protection coverage, be sure to ask for a copy of the closing protection letter for your records.

_Drafting Note:_ States who do not require closing protection should delete this section.

**Shop Around for Title Insurance and Closing Services**

As rates and fees for title insurance and closing services may vary, you should shop for title insurance and closing services. Use the chart that follows to learn how much you’ll be charged for certain rates, fees and services.

**Beware Of Real Estate Wire Fraud Schemes**

Money often needs to change hands quickly in a real estate transaction. One way to move money quickly is to have a financial institution wire it. Your real estate broker or agent, the title and closing agent, or an attorney will give you the details you need for a wire transfer.

Criminals can hack into professionals’ email systems to send emails that look as though they are coming from someone you’re working with. The emails can have fake instructions about wiring money for your upcoming closing. If you follow these instructions, your money will go to the scammer’s bank account. If that happens, you could lose your money.

To avoid being a victim of real estate wire fraud, you should:

- Call or personally meet with the professionals who will conduct the closing to learn how the closing will take place and how funds will be transferred.
- Get the names, telephone numbers, and mailing and email addresses for all of the professionals who will be involved with your closing.
- Be suspicious of all telephone or email messages about a change in the closing process. If you get such a message, call the professional you’re working with. Use the contact information they gave you, not the contact information in the message.
- Carefully examine all email addresses and telephone numbers associated with a message about your closing to verify the message really came from an individual you’ve been dealing with.
- Never respond to a message or click on a link if you’re asked to verify or provide bank account information.

**What To Do If You Believe You’re The Victim of a Real Estate Wire Fraud Scheme**

Report suspected wire fraud immediately!

- Contact your bank or wire transfer company to report your suspicions and ask for a wire recall.
- Ask your bank to notify the financial institution that received your funds.
- Call your local Federal Bureau of Investigation (FBI) office and report the crime.
- File a report with the FBI’s Internet Crime Complaint Center by visiting www.ic3.gov

*Drafting note: States who have Fraud units who investigate real estate wire fraud may wish to add a Step 5. Consumers should contact the Department of Insurance.*

**Final Tips to Remember**

- Deal only with licensed professionals who’re in good standing in [INSERT STATE].
- As soon as you make an offer on a house or choose a lender to refinance with, start shopping for title insurance.
- Decide up front who’ll pay for the title insurance policies.

© 2021 National Association of Insurance Commissioners
• Whoever buys the title insurance policy has the right to choose the title agent or title company.
• A professional who recommends a title insurance company or agent to you may receive a commission or referral fee.
• Ask the seller which title insurance company they used.
• Ask friends or family who recently bought a home if they would recommend their title agent/company.
• If you buy an owner’s policy, be sure the coverage is equal to the price you paid for your home.
• Comparison shop, and get at least three quotes before you buy title insurance and closing services.
• Ask about available discounts.
• Ask title and closing agents for an itemized list of their fees and charges.
• Ask for a copy of the title commitment at least three weeks before your closing date.
• Know exactly what your title insurance policy will cover.
• If your title agent also will be the closing agent, ask if closing protection coverage is available.
• Ask the closing agent for a settlement statement at least one business day before your scheduled closing.
• Be suspicious of all communications relying there’s been a change to the closing process.
• Knowledge is power, so don’t be afraid to ask questions!
• Read and understand all documents before signing them.
• Request copies of all documents.
• Keep a copy of your title insurance policy for as long as you own your property.
• Immediately report suspected real estate wire fraud.

How to File a Title Insurance Claim

If an issue arises about your home’s title, contact your title insurance company as soon as possible. If you don’t know the name of your title insurance company, check the paperwork you signed when you bought or refinanced your home. You also can contact your title agent or closing agent for help.

DRAFT: 3-23-215-25-21
WORKERS’ COMPENSATION (C) TASK FORCE

Workers’ Compensation (C) Task Force July 21, 2021, Minutes
The Workers’ Compensation (C) Task Force of the Property and Casualty Insurance (C) Committee met virtually July 21, 2021. The following Working Group members participated: Lori K. Wing-Heier, Chair, represented by Anna Latham (AK); Glen Mulready, Vice Chair represented by Kim Bailey, Cuc Nguyen, Andrew Schallhorn (OK); Jim L. Ridling represented by Jennifer Brown, Jimmy Gunn and Eric Wright (AL); Alan McClain and Crystal Phelps (AR); Evan G. Daniels represented by Erin Klug Tom Zuppan (AZ); Ricardo Lara represented by Yvonne Hauscarriague, Giovanni Muzzarelli and Mitra Sanandajifar (CA); Andrew N. Mais represented by Susan Gozzo Andrews, and Amy Waldbauer (CT); David Altmaier represented by Greg Jaynes and Sandra Starnes (FL); John F. King represented by Steve Manders (GA); Colin M. Hayashida represented by Grant Shintaku (HI); Dean L. Cameron represented by Michele MacKenzie and Randy Pipal (ID); Dana Popish Severingham represented by Reid McClintock, Judy Mottar and Julie Rachford (IL); Vicki Schmidt represented by James Norman (KS); James J. Donelon represented by Warren Byrd and Tom Travis (LA); Eric A. Cioppa represented by Brock Bubar and Robert Wake (ME); Grace Arnold represented by Steve Klebba, Tammy Lohmann and Phil Vigliaturo (MN); Chlora Lindley-Myers represented by LeAnn Cox; (MO); Mike Causey represented by Tracy Bieln and Fred Fuller (NC); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Russell Toal represented by Bogdanka Kurahovic (NM); Barbara D. Richardson and Gennady Stolyarov (NV); Andrew Stolfi represented by Brian Fordham and T.K. Keen (OR); Jessica K. Altman represented by Mark Lersch and Mike McKenney (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Raymond G. Farmer represented by Will Davis (SC); Larry D. Deiter and Maggie Dell (SD); Michael S. Pieciak represented by Kevin Gaffney and Pat Murray (VT); and James A. Dodrill (WV). Also participating were: Robert Lutton (MI); Bob Biskupiak (MT); Nicole Elliott (TX); Tracy Klausmeier (UT); and Rebecca Nichols (VA).

1. **Adopted its March 15 Minutes**

Mr. Travis made a motion, seconded by Ms. Bailey, to adopt the Task Force’s March 15 minutes (see NAIC Proceedings—Spring 2021, Workers’ Compensation (C) Task Force). The motion passed.

2. **Heard a Presentation on Regarding the Classification of Telecommuters and the Potential Implications of an Increase in Telecommuting on Workers’ Compensation**

Jeff Eddinger (National Council on Compensation Insurance—NCCI) said in 2019 less than 6% of American workers worked primarily from home, although 25% of workers did some work from home. He said that most remote workers in 2019 were not eligible to be classified as telecommuters in workers’ compensation. Mr. Eddinger said less than 1% of the payroll fell into the clerical telecommuting class code, which is 8871, where a clerical employee telecommutes at least 50% of the time. He said by comparison the clerical class code 8810 accounts for almost 30% of total payroll.

Mr. Eddinger said in May 2020, about 35% of the employed work force reported that they had worked from home in the previous four weeks due to COVID-19. At the time there was a McKinsey study done that estimated that about 29% of the work done in the U.S. would be done remotely with no loss in productivity, and that an additional 10% of the work could be done remotely if necessary.

Mr. Eddinger said most of the remote work was done in business and professional occupations. He said by December 2020 the remote working population dropped to about 24%. Mr. Eddinger said during 2020 the NCCI did not observe any significant change or shift from 8810 to the telecommuting class code.

Mr. Eddinger said a 2020 survey found that more than 80% of employees that can work from home would like to do so at least one day a week and 32% would prefer to work remotely full-time. He said a survey of U.S. companies found that employers expect 19% of their workforce to be fully remote after the pandemic, compared to 7% of the workforce being fully remote prior to the pandemic. Mr. Eddinger said that businesses that support traditional office work, such as transportation, leisure, hospitality and energy, are likely the ones that would be impacted to employees showing up to their work locations.

Mr. Eddinger said there may not be a dramatic shift in payroll to the telecommuting class code since many clerical jobs are embedded in other governing class codes. He said for example, insurance company workers who have been working remotely, or who may telecommute in the future, will still be classified under the insurance company class code, 8723. Mr. Eddinger said the jobs most likely to be performed remotely tend to have lower injury rates. He said there were however some important
workers’ compensation implications. Mr. Eddinger said home offices are less likely to be ergonomically compliant, which could lead to an increase in repetitive stress injuries. He said additionally workers in improvised offices may be more prone to slip and falls. However, workers that are not driving are at less risk for work-related car accidents.

Mr. Eddinger said if more permanent changes do occur there could be some payroll that would shift from 8810 to the telecommuting class code. He said that since clerical jobs have relatively low frequency, there would have to be a significant shift in the mix of claims in order for any measurable impact to overall workers’ compensation costs. Mr. Eddinger said even if the number of repetitive stress injuries doubled, there would be a negligible impact in the office and clerical industry group. He said there are still a lot of unknowns, but NCCI does not expect to see any significantly large impacts to workers’ compensation even if remote does catch on as expected. NCCI will continue to monitor remote work.

Mr. Stolyarov said he was interested in NCCI’s assessment of the impact due to a lot more business being conducted remotely. He said not only are more workers telecommuting currently but will continue to telecommute. Mr. Stolyarov said there have been many discoveries, such as one does not necessarily have to fly to another city to conduct certain types of business. He said with less car travel and less air travel by these workers, would NCCI expect for this to have a favorable impact on workers’ compensation loss costs in the long term.

Mr. Eddinger said in his opinion the less traveling that is necessary will reduce work-related travel injuries. He said motor vehicle accidents are one of the worst workers’ compensation injuries and one of the riskiest temporary jobs that any employee in the U.S. could hold and sees downward pressure in travel injuries.

Commissioner Richardson asked if employers would see a push in providing home office equipment as part of a telework process or is it the opinion of NCCI that the claims will be low enough that this is not a mitigation effort that needs to take place. Mr. Eddinger said he did not have an answer as to what employers might do for their remote employees; however, he would not rule out this possibility. He said employers did a lot of education in the past when repetitive injuries were in the headlines regarding employee workstations, taking breaks and walking and making sure their posture was good, so he believes we are in a better position today than we were in the past. Mr. Eddinger said education regarding home office ergonomics will go a long way in mitigating an increase in these types of losses.

Commissioner Richardson said the federal government has concluded that remote work does not require an employee to come into the office at all. She asked if NCCI believed there would be any uptick in fraud claims because you do not know where workers are, what they are doing, or how the fit into the workers’ compensation controls. Mr. Eddinger said he has no way of knowing this and would not want to guess if it would be an issue; however, employers will probably want to think about how they handle claims from home versus claims that occurred in the office.

Having no further business, the Workers’ Compensation (C) Task Force adjourned.

© 2021 National Association of Insurance Commissioners
The Market Regulation and Consumer Affairs (D) Committee met in Columbus, OH, Aug. 16, 2021. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair (KY); Alan McClain (AR); Evan G. Daniels (AZ); Trinidad Navarro (DE); Dana Popish Severinghaus represented by Erica Weyhenmeyer (IL); Chlora Lindley-Myers and Cynthia Aman (MO); Chris Nicolopoulos (NH); Jon Godfread (ND); Carter Lawrence (TN); Jonathan T. Pike (UT); and Michael S. Pieciak (VT). Also participating were: Damion Hughes (CO); Elizabeth Kelleher Dwyer (RI); Mike Kreidler and John Haworth (WA); and Rebecca Rebholz (WI).

1. **Adopted its July 27 Minutes**

The Committee met July 27 and took the following action: 1) adopted it Spring National Meeting minutes; 2) adopted revised charges for the Antifraud (D) Task Force; 3) adopted the short-term, limited-duration Market Conduct Annual Statement (MCAS) data call and definitions; 4) adopted the Travel Insurance MCAS data call and definitions; 5) adopted digital claims data in the private passenger auto and homeowners data call and definitions; and 6) heard presentations from a state insurance regulator, an NAIC funded consumer representative, and an industry trade representative on the benefits and challenges of collecting market conduct data annually on a transactional level.

Commissioner Clark made a motion, seconded by Commissioner Godfread, to adopt the Committee’s July 27 minutes (Attachment One). The motion passed unanimously.

2. **Heard a Presentation from the UConn School of Law on Claim Optimization and the Insurance Promise**

Peter Kochenburger (UConn School of Law) said the insurance promise includes insurers paying the full value of covered claims without exceeding the policy limits. He noted there are disparities in knowledge and economic power between insurers and most insureds. He said the insurance company cannot use the claim process to rewrite the policy to leverage lower payments than the value of what the claim is worth.

Mr. Kochenburger said artificial intelligence (AI) has provided insurers with the potential to evaluate the willingness of insureds or claimants to accept values less than the fair and equitable amount. He said this would violate the *Unfair Claims Settlement Practices Act* (#900). While Mr. Kochenburger admitted that it is unknown if claim optimization is occurring, he said it is used in other consumer transactions; it has been used in underwriting for price optimization; and the marketing by InsurTech vendors suggests this is being built into InsurTech tools. Mr. Kochenburger encouraged state insurance regulators to determine the extent of use of predictive analytics in claim settlements and require insurers to report on the algorithmic models used in claim handling.

Angela Gleason (American Property Casualty Insurance Association—APCIA) said the term “claim optimization” is leveraging the negative connotations of price optimization to imply consumers are being harmed. She said insurance companies go above and beyond to treat their insureds and claimants fairly. She said consumers are always encouraged to question how claims are valued by the insurance company and always have the recourse to shop for other insurance.

Birny Birnbaum (Center for Economic Justice—CEJ) said shopping for other insurance is not an option after filing a claim. He asked if the implication of claim optimization is that insureds in similar situations are being treated differently according to factors unrelated to the claim. Mr. Kochenburger said that is correct. Mr. Birnbaum also asked if a publicly owned insurance company would be failing its investors if it did not use claim optimization. Mr. Kochenburger said that was the case because the company would be operating illegally if it did do so and that was not in the best interest of investors. Finally, Mr. Birnbaum asked if the collection of more granular data would assist state insurance regulators in monitoring and assessing the use of claim settlement models in claim settlements. Mr. Kochenburger said it would. He noted that it is not easy to evaluate whether a claim is settled fairly and that there are always good faith disputes, so the more granular data that is available, the better.

Erica Eversman (Automotive Education & Policy Institute—AEPI) said the ability to shop around for other insurance coverage is not an option for a consumer after the claim. She noted that the three major claim evaluation vendors are beholden to the insurance companies.
3. **Adopted its Task Force and Working Group Reports**

Commissioner Richardson said the Market Information Systems (D) Task Force adopted a proposal for coding changes to the Regulatory Information Retrieval System (RIRS). She said when the Committee votes to approve the Working Group and Task Force reports, it will also be voting to adopt the RIRS coding changes proposal. She also noted that the Market Actions (D) Working Group and the Advisory Organization Examination Oversight (D) Working Group met in regulator-to-regulator session due to the nature of their discussions focusing on specific company practices. She said there are no written or verbal reports for these two working groups.

a. **Antifraud (D) Task Force**

Commissioner Navarro said the Antifraud (D) Task Force met July 26 and took the following action: 1) heard an update from the Antifraud Education Enhancement (D) Working Group. He said the Working Group held a webinar on Feb. 11 regarding the mobile capabilities CARCO can provide state departments of insurance (DOIs) to assist in fighting insurance fraud. He said the Working Group also conducted an insurance fraud investigator safety course on June 2.

Commissioner Navarro said Task Force also received a report from the Antifraud Technology (D) Working Group. He said the Working Group advised that the adopted revisions to the Antifraud Plan Guideline (#1690) was the first step in its charge to create an antifraud plan repository that will be used by insurers to create and store an electronic fraud plan for distribution to states. He said the Working Group formed a subject matter expert (SME) group to create a template for industry to use when creating their antifraud plans. The SME group expects to complete its work by October.

Commissioner Navarro said the Task Force received an update on the NAIC Online Fraud Reporting System (OFRS) redesign. He said beta testing began with a small group of state insurance fraud directors. The beta testing will be opened to additional state insurance regulators and industry representatives to finalize the testing period.

Commissioner Navarro said the Task Force also received reports from the National Insurance Crime Bureau (NICB) and the Coalition Against Insurance Fraud (CAIF).

b. **Market Information Systems (D) Task Force**

Commissioner Kreidler said the Market Information Systems Task Force met July 28 and took the following action: 1) adopted its Spring National Meeting minutes; and 2) reviewed the status of outstanding User System Enhancement Requests (USER).

Commissioner Kreidler said the Task Force also heard the report of the Market Information Systems Research and Development (D) Working Group. He said the Working Group is researching the potential of incorporating AI into the NAIC Market Information Systems (MIS). The Working Group heard a presentation from NAIC financial regulation staff regarding their testing of the use of AI to construct predictive models of insolvency risk, and it also heard from CEJ regarding how AI can be used in market analysis. Commissioner Kreidler said the Working Group’s next step is to form an SME group to develop recommendations for incorporating AI into the MIS.

Commissioner Kreidler said that prior to the Spring National Meeting, the Market Information Systems Research and Development (D) Working Group adopted RIRS coding changes proposal. He said the RIRS coding changes include: 1) a new field to distinguish routine administrative actions from actions that are a result of an infraction or financial impairment; 2) a new field to link related to RIRS records; 3) a new Line of Business field; and 4) revisions to the Origin of Action, Reason for Action, and Disposition for Action codes to create a more logical data structure. Commissioner Kreidler said the Task Force adopted the proposal.

c. **Producer Licensing (D) Task Force**

Superintendent Dwyer said the Producer Licensing (D) Task Force met Aug. 4 and adopted its March 21 minutes. She also said the Task Force discussed state implementation of online examinations with 40 jurisdictions offering online examinations for producer licensing. She said this is a significant change as only Washington offered online examinations prior to the COVID-19 pandemic. She said states are reporting similar pass rates for online and in-person examinations and that approximately 35% to 40% of examinations are now taken through the online format. Notably, she said Washington reported that 80% of its examinations are administered through the online format. Superintendent Dwyer said the Task Force also discussed security concerns with online examinations and will be obtaining additional information from the examination vendors on what percentage of online examinations had security concerns.

© 2021 National Association of Insurance Commissioners 2
Superintendent Dwyer said the Task Force discussed the pending referral from the Special (EX) Committee on Race and Insurance regarding the elimination of bias in producer licensing examinations. She said examination vendors have been solicited on the processes they follow to eliminate bias in examinations. She said the Task Force is also reaching out to continuing education (CE) providers and will have additional discussions on this topic at its next meeting.

Superintendent Dwyer said the Task Force discussed the review of the NAIC’s Guidelines for State Insurance Regulators to the Violent Crime Control and Law Enforcement Act of 1994 and the need to revise the guidelines to make them more useful in the state’s day-to-day review of 1033 waiver requests.

Superintendent Dwyer said the Task Force also heard an update on a new program in Pennsylvania for prospective insurance agents with criminal records and how their specific convictions, history, and background may affect their ability to successfully obtain a producer license. He said the Pennsylvania program allows a person with a criminal conviction to provide this information to the Pennsylvania DOI through an electronic portal. The DOI then reviews the information and provides non-binding feedback to the prospective applicant on how the criminal conviction might affect their ability to obtain an insurance producer license before the applicant spends the time and effort with pre-licensing education and taking a producer licensing exam.

Superintendent Dwyer said the Task Force briefly discussed the draft procedure for amending NAIC Uniform Producer Licensing Applications. He said the procedures are being developed to ensure the consideration of changes to the uniform applications support the NAIC members’ goal of providing stable applications and encourage the use of electronic technology for licensing. She said the Task Force is seeking comments on the procedures through Sept. 3.

Finally, Superintendent Dwyer said the Task Force discussed the status of the Producer Licensing Uniformity (D) Working Group and the Uniform Education (D) Working Group. She noted that the chair position for the Producer Licensing Uniformity (D) Working Group remains open and that the leadership for both Working Groups continues to be in a state of flux.

d. Market Conduct Examination Guidelines (D) Working Group

Mr. Hughes said the Market Conduct Examination Guidelines (D) Working Group met June 10 and took the following action: 1) reviewed and discussed its 2021 charges; 2) prioritized potential Working Group tasks; and 3) identified NAIC models acts and model laws adopted in 2020. Mr. Hughes said the Working Group also asked for state insurance regulators to volunteer to review the adopted model laws and model acts to determine whether revisions to the corresponding sections of the NAIC Market Regulation Handbook are warranted.

Finally, Mr. Hughes said the Working Group discussed a new title insurance in-force policy standardized data request (SDR) for inclusion in the Market Regulation Handbook.

e. Market Analysis Procedures (D) Working Group

Mr. Haworth said the Market Analysis Procedures (D) Working Group met July 1 and took the following action: 1) adopted its Spring National Meeting minutes; and 2) continued its discussion on the training needs for market analysts. He said ideas include: 1) having monthly analysis groups to share techniques and tips; 2) leveraging the materials from the NAIC’s Market Analysis Techniques online course and adapt them for new analysts; 3) creating more and better tutorials and help in i-Site+; 4) incorporating Tableau visuals into the Market Analysis Review System (MARS) and other market analysis tools; and 5) providing more training on analyzing financial information and MCAS ratios.

Mr. Haworth said the Working Group also opened discussions on the next line of business to add to the MCAS and is asking for written and verbal suggestions. Additionally, Mr. Haworth said the Working Group began discussions on its members’ initial impressions of the current MCAS submissions. He said the conversations are on a high-level aggregated level.

Finally, Mr. Haworth said the Working Group considered whether MCAS submissions should be required to be reported by the residency of the policyholder or by where the policy was issued. He said the current MCAS instructions specify the data should be reported in the same manner as the company reports its financial annual statement. He the Working Group agreed to continue with these instructions without amendment.
f. **Market Conduct Annual Statement Blanks (D) Working Group**

Ms. Rebholz said that since the Spring National Meeting, the Market Conduct Annual Statement Blanks (D) Working Group met five times.

Ms. Rebholz said that during those meetings, the Working Group adopted the travel MCAS data call and definitions and the short-term, limited-duration (STLD) MCAS data call and definitions on May 25—prior to the June 1 deadline. She said the first MCAS due date for the travel MCAS blank will be on April 30, 2023, and the STLD MCAS blank will be June 30, 2023. She said both will cover the 2022 data year.

Ms. Rebholz said the Working Group also adopted the addition of digital claim data to the auto and homeowners (HO) MCAS blanks. She said these were adopted on June 30. The first due date for the data will be April 30, 2024, covering the 2023 data year.

Ms. Rebholz said the Working Group is continuing its development of accelerated underwriting data elements to the life and annuity MCAS blanks. She said the Working Group is monitoring the work of the Accelerated Underwriting (A) Working Group so it can coordinate the MCAS definition of accelerated underwriting with the definition they adopt.

Ms. Rebholz said the Working Group has spent considerable time drafting revisions to the definition of “lawsuit” in the various MCAS blanks. She said this includes adding non-claims-related lawsuits to the auto and HO MCAS blanks and editing the definition to conform to the type of product being reported on. She said that due to the continued discussions, the Working Group postponed collection of non-claims-related lawsuit information to the 2023 data year. Ms. Rebholz also said that due to the complexity of the lawsuit reporting issues, the Working Group formed an SME drafting group to consider options to present to the Working Group. She said the SME group is also tasked with considering the best way to collect vendor information on the digital claims data elements.

Finally, Ms. Rebholz said that because the STLD MCAS blank was adopted by the Committee in July, the Working Group will continue the development of MCAS blanks for other health products not covered in the current health or STLD MCAS data call and definitions.

g. **Privacy Protections (D) Working Group**

Ms. Amann said that since the Spring National Meeting the Privacy Protections (D) Working Group met July 12, June 14, and May 10.

Ms. Amann said that during its May 10 meeting, the Working Group took the following action: 1) adopted its Spring National Meeting minutes; 2) reviewed the 2021 NAIC strategy for consumer data privacy protections; 3) discussed the verbal gap analysis of consumer issues; 4) discussed the draft of the initial privacy policy statement; and 5) requested comments in the form of parameters and examples on the privacy policy statement.

Ms. Amann said that during its June 14 meeting, the Working Group took the following action: 1) adopted it May 10 minutes; and 2) discussed the comments received from America’s Health Insurance Plans (AHIP), the Blue Cross and Blue Shield Association (BCBSA), and the Coalition of Health Companies on the privacy policy statement.

Ms. Amann said that during its July 12 meeting, the Working Group took the following action: 1) adopted its June 14 minutes; 2) received comments from the American Council of Life Insurers (ACLI) about the six consumer privacy rights identified in the NAIC strategy for consumer data privacy protections; 3) heard a presentation from NAIC funded consumer representatives on the consumer perspective on consumer data privacy rights; 4) requested comments on the private policy statement.

Ms. Amann said the privacy policy statement template located on the Working Group web page is being combined with the received comments into a draft for exposure. She said there will be an accelerated review by the Working Group.

Mr. Birnbaum asked how the Working Group will be addressing the data ownership issue referred to the Working Group by the Innovation and Technology (EX) Task Force. Ms. Amann said the Working Group first needs to receive permission from the Committee before it can act on the referral.

Commissioner Godfread made a motion, seconded by Commissioner Navarro, to adopt the following reports, including the proposal for coding changes to the RIRS (Attachment Two) adopted by the Market Information Systems (D) Task Force:

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

W:/National Meetings/2021/Summer/Cmte/D/Draft 8-D Cmte.dotx
The Market Regulation and Consumer Affairs (D) Committee met July 27, 2021. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair (KY); Alan McClain represented by Russ Galbraith (AR); Evan G. Daniels represented by Maria Ailor (AZ); Trinidad Navarro (DE); Dana Popish Severyinghaus represented by Erica Weyhenmeyer (IL); Chlora Lindley-Myers represented by Jo LeDuc (MO); Chris Nicolopoulos represented by Edwin Pugsley (NH); Carter Lawrence represented by Vickie Trice (TN); and Jonathan T. Pike represented by Tanji J. Northrup (UT). Also participating were: Hermoliva Abejar (NV); Matt Gendron (RI); and Rebecca Rebholz (WI).

1. **Adopted its Spring National Meeting Minutes**

   Mr. Pugsley made a motion, seconded by Ms. Trice, to adopt the Committee’s April 13 minutes (see *NAIC Proceedings – Spring 2021, Market Regulation and Consumer Affairs (D) Committee*). The motion passed unanimously.

2. **Adopted Revised Charges for the Antifraud (D) Task Force**

   Commissioner Richardson said at the Spring National Meeting, Commissioner Navarro discussed the issue of the improper marketing of health insurance plans and reported that the Antifraud (D) Task Force was considering a proposal to form a working group under the Task Force. She asked Commissioner Navarro for an update.

   Commissioner Navarro said the Task Force met May 25 to consider a motion for the creation of an Improper Marketing of Health Plans (D) Working Group with two charges:

   1) Coordinate with regulators, both on a state and federal level, to provide assistance and guidance monitoring the improper marketing of health plans, and coordinate appropriate enforcement actions, as needed, with other NAIC Committees, task forces, and working groups; and

   2) Review existing NAIC Models and Guidelines that address the use of lead generators for sales of health insurance products and identify models and guidelines that need to be updated or developed to address current marketplace activities.

   Commissioner Navarro said the Task Force unanimously adopted the creation of the new Working Group with the two charges.

   Commissioner Navarro made a motion, seconded by Ms. Northrup, to create the Improper Marketing of Health Plans (D) Working Group reporting to the Antifraud (D) Task Force with the two charges adopted by the Task Force. The motion passed unanimously.

3. **Adopted the STLD MCAS Data Call and Definitions**

   Ms. Rebholz said the Short-Term Limited-Duration (STLD) data call and definitions (Attachment One-A) were adopted by the Market Conduct Annual Statement Blanks (D) Working Group on May 26.

   Ms. Rebholz said the drafting group’s original intent was to develop a blank to cover all other health products that were not currently part of the Market Conduct Annual Statement (MCAS) Health blank; but because of interest in obtaining data on the STLD line of business in each state, the drafting group decided to focus only on STLD insurance to meet the June 1 deadline for adoption. She said the drafting group used the 2019 STLD data call as its jumping off point, but it significantly expanded the information to be collected.

   Ms. Rebholz said the STLD MCAS is divided into six sections: 1) interrogatories; 2) policy/certificate administration; 3) prior authorizations; 4) claims administration; 5) consumer complaints and lawsuits; and 6) marketing and sales. She said the data in each section will be reported in three categories: 1) STLD insurance products sold through associations used in the state; 2) STLD insurance products sold through associations not used in the state; and 3) STLD insurance products not sold through an association. Each of these categories are divided into: 1) products with a term of less than or equal to 90 days; 2) products with a term of less than or equal to 180 days; and 3) products with a term of 181 to 364 days.
Ms. Rebholz said the instructions specify that the threshold is $50,000 in premium within each jurisdiction, and the STLD products should be reported by the residency of the individual insured.

Ms. Rebholz noted that the STLD MCAS blank is the product of a large group of state insurance regulators, industry, and consumer representatives who put in many hours of work. She thanked Katie Dzurec (PA) for chairing the drafting group.

Ms. LeDuc recognized the need for the STLD blank and supported its creation, but she noted that there was not enough time between its exposure to the Working Group and its adoption on May 26. She said some of the information is confusing, and she said it could result in data that is not useful. Ms. Rebholz said the draft blanks were exposed as the work of the drafting group. Commissioner Richardson said if the blank was not adopted at this meeting, the initial collection of data would be delayed another year, and she suggested that any possible data issues that arise could be fixed in subsequent years. Commissioner Clark said the data collected is pertinent and should not be delayed.

Commissioner Clark made a motion, seconded by Commissioner Navarro, to adopt the STLD MCAS data call and definitions. The motion passed unanimously with Missouri abstaining.

4. **Adopted the Travel Insurance MCAS Data Call and Definitions**

Ms. Rebholz said the Market Conduct Annual Statement Blanks (D) Working Group adopted the Travel Insurance MCAS data call and definitions (Attachment One-B) on May 26.

Ms. Rebholz said the Working Group identified trip cancellation, trip interruption, trip delay, baggage loss or delay, emergency medical and dental, emergency transportation and repatriation, and other as the coverage breakouts for this MCAS blank, with additional breakouts for domestic and international coverages. She noted that emergency medical is broken out by primary and excess coverage.

Ms. Rebholz said the claims, underwriting, lawsuit, and complaint data elements are like other MCAS lines of business and, where possible, definitions from the *Travel Insurance Model Act* (#632) were used for consistency purposes.

Ms. Rebholz said since travel insurance is represented by a small number of companies and the policies are generally small in amount, there is no premium threshold for reporting. She said the Working Group decided to require reporting for all companies licensed and reporting for any travel insurance within any of the participating MCAS jurisdictions.

Commissioner Clark made a motion, seconded by Mr. Pugsley, to adopt the Travel Insurance MCAS data call and definitions. The motion passed unanimously.

5. **Adopted Digital Claims Data in the PPA and Homeowners MCAS**

Commissioner Richardson said she is asking the Committee to consider adoption of the digital claims data elements (Attachment One-C) and the effective date of the digital claims data elements.

Commissioner Richardson said the *MCAS Data Element Revision Process* states that for any revisions to be effective for the following calendar year, the revisions must be adopted by the Market Conduct Annual Statement Blanks (D) Working Group by June 1 and the Committee by Aug. 1. She said the purpose of the deadlines is to allow companies time to make systems adjustments prior to the need to track the data elements beginning the following calendar year.

Commissioner Richardson said in the case of the digital claims data, the Working Group was ready to adopt the changes prior to June 1, but a late series of questions and suggested revisions were received just before its May 27 conference call. She said the chair of the Working Group correctly decided that it was more important to fully address all the questions and suggestions rather than push through the adoption on May 27. The changes were adopted by the Working Group on June 30.

Commissioner Richardson noted that the data elements themselves were developed with contributions by industry, have been posted on the Working Group web page since May, and did not change significantly since they were considered for adoption by the Working Group in May. She said if the Committee adopted the changes, it would meet its Aug. 1 deadline, and she would ask the Committee to consider an exception to the *MCAS Data Element Process* to adopt the changes to be effective for the 2022 data year.
Ms. Rebholz said in the Private Passenger Auto (PPA) and Homeowners blanks, the claims related data elements are broken out into types of claims, such as collision, comprehensive, property damage, and uninsured motorists and underinsured motorists (UMPD) for the PPA blank and dwelling and personal property for the Homeowners blank. She said on June 30, the Working Group adopted new claims data elements to identify digital claims, hybrid claims, and non-digital claims.

Ms. Rebholz said the definitions of digital, hybrid, and non-digital claims are in the data call and definitions. She said a digital claim is defined as a claim involving a claim settlement determination, which was accepted by the insured or claimant without adjustment, whereby the entire claim was handled without human intervention on the part of the insurance company in the loss appraisal process, settlement determination, and/or the production of the initial loss settlement offer.

Ms. Rebholz said on June 30, two revisions were made to the digital claims data elements. She said the first change was to the interrogatories. She said the interrogatories originally asked the company to identify digital claim vendors. This was revised to add, “and for each vendor, identify the vendor’s specific role in the digital claims process” at the end of the interrogatory language. The Working Group decided it would later determine how to implement the reporting within this interrogatory. Ms. Rebholz said there was interest in receiving information for this interrogatory separately for each vendor being reported, but this poses an issue at the NAIC, since the MCAS data collection tool does not currently allow for a variable number of entries for a particular data element. She said the second change was to clarify the types of claims to be broken out between digital and traditional claims handling.

Ms. Abejar said there were discussions regarding the value of having vendor information and the value of the information. She noted that if the Working Group decides to ask for algorithms used in the digital claim settlement process, it should recognize that algorithms are code that are connected to insurance company databases and cybersecurity, and they would need to be protected.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she participated in the drafting of the digital claims data elements and definitions, and she commended the collaborative process. She said she disagreed with setting aside the June 1 deadline for the Working Group adoption of the new data elements. She said industry focused on the definitions of “lawsuit” because the digital claims data elements were not passed prior to June 1. She noted that the changes recommended to the digital claims data elements were proposed by the state insurance regulators.

Birny Birnbaum (Center for Economic Justice—CEJ) supported the new digital claims data elements. He said the additions are critical because of the significant increase in digital claims settlements since the COVID-19 pandemic. He said without the data, the MCAS claims ratios for the PPA and Homeowners blanks will be skewed if digital claims are not broken out. Regarding the effective date, he said the changes made by the Working Group after June 1 were editorial. The date that is relied on the most is the Aug. 1 date for the Committee adoption. He said there is no harm to industry, and they are not deprived of due process.

Ms. Brown agreed that there is an increase in digital claim settlements, but the defined due dates in the revision process do matter. She said after the June 1 deadline passed, industry turned its attention to other MCAS data discussions.

Commissioner Clark made a motion, seconded by Mr. Pugsley, to adopt the digital claims data elements for the PPA and Homeowners MCAS blanks. The motion passed unanimously.

Commissioner Richardson said the options for the effective date of the digital claims elements are to: 1) make an exception to the June 1 deadline of the Working Group and have the addition of the digital claims elements be effective for the 2022 data year; or 2) have the effective date be for the 2023 data year, in which case the data would not be reported until the following year on April 30, 2024.

Commissioner Clark made a motion to make an exception to the June 1 deadline of the Working Group and have the addition of the digital claims elements be effective for the 2022 data year. There was no second.

Commissioner Richardson said the effective date for the digital claims data elements will be the 2023 data year.
6. Discussed State Insurance Regulator, Consumer, and Industry Perspectives of Collecting Transaction-Level Market Conduct Data from Insurers

Commissioner Richardson said in 2020, the Market Conduct Annual Statement Blanks (D) Working Group considered options for the collection of transaction-level data. She said although the Working Group members expressed an interest in collecting transaction-level data, the Working Group determined that the collection of this type of data did not fit into the current structure of MCAS reporting, and review of this type of data at the state level would put a strain on available resources. Commissioner Richardson said the Working Group concluded its discussions on the topic and deferred further discussion to the Committee during the Committee’s 2020 Fall National Meeting conference call.

Commissioner Richardson said there was a brief discussion by the Committee during the 2020 Fall National Meeting, and it decided to defer the discussion on transaction-level data collection. She said that is the reason for this meeting’s discussion of the three perspectives on this issue. She said the Committee will hear from Ms. Brown, Mr. Gendron, and Mr. Birnbaum.

Ms. Brown said when the issue of transactional-level reporting was discussed at the Market Analysis Procedures (D) Working Group and the Market Conduct Annual Statement Blanks (D) Working Group, state insurance regulators decided they were not interested in pursuing data collection at that level of granularity.

Ms. Brown said market analysis is the beginning of the market regulation process. The current market analysis process allows market analysts to identify companies without deploying significant resources. In addition to the MCAS, she said market analysts also consider data from other sources such as complaints. She said the MCAS was created as a summary data tool, recognizing that if additional information was needed, more granular data could be requested. Asking for granular data at the beginning of the process is too burdensome. Ms. Brown said Mr. Birnbaum had spoken with NAIC staff, who assured him they were willing and able to collect transaction-level data, but the data is for the use of state insurance regulators, and they have concerns about their ability to use data at that granularity. She noted, as an example, the large amount of data generated by the addition and deletion of autos to all an insurer’s policies. She questioned its utility for state insurance regulators.

Ms. Brown said the burden on insurers to provide transactional data would be enormous. Currently, there are hundreds and thousands of MCAS filings prepared by companies. In addition to being a burden on companies, state insurance regulators say they do not have the resources to cull through the data. She said the costs outweigh the benefits.

Ms. Brown said data at the transaction level is usually done at the examination phase, where more protections are available for proprietary information. She said the reverse engineering of transactional data is a valid concern of companies.

Mr. Gendron said transactional data is valuable and has its place in market analysis and examinations, but this occurs after the initial baseline analysis to determine which companies need more in-depth analysis. He said after the baseline analysis is done, more detailed analysis is done on about 100 companies. This detailed analysis begins with summary-level data to see if the concerns can be identified without the need for more granular-level data. Mr. Gendron said MCAS data is a main source of the summary-level data. He said about half of those companies will have follow-ups, including records testing.

Mr. Gendron said market conduct teams have competing priorities, including doing baseline analysis, summary-level analysis, market conduct examinations, inquiries along the continuum of market actions, special projects, participating in NAIC working groups, continuing education (CE), and lending expert assistance to other departments.

Mr. Gendron identified the benefits of requesting transactional data as: 1) having that level of data ready when needed; 2) having consistent and comparable data by creating industry standards for data elements, definitions, and formats; 3) more opportunities to monitor MCAS data quality; and 4) more opportunities for novel data analysis by state insurance regulators. Mr. Gendron also cited concerns with requesting transactional data as: 1) additional information to filter; 2) the protection of the data; 3) the cost to companies being passed on to consumers; 4) the opportunity cost for states as they learn how to manage and analyze transactional data; 5) uncertainty about what analysis would warrant the increase in data collection; and 6) it being unclear what additional quality control steps would need to be undertaken.

Mr. Birnbaum defined transactional data as separate records for each sales transaction and each claims transaction. He noted that new data elements can always be added with disturbing existing data elements. He said for market analysis, transaction-level data is more effective for market analysis by: 1) providing more granular data enabling analysts to discover issues rather than confirm issues; 2) providing more timely analysis in contrast to MCAS data, which is often stale when received; 3)
providing opportunities for predictive analytics; 4) allowing the ability to identify proxy discrimination and disparate impact; 5) being more consistent; and 6) being more efficient for market analysis.

Mr. Birnbaum said providing transactional data is less costly for insurance companies and state insurance regulators. For companies, it is less costly because it has simpler data reports and is consistent with other insurers. It is also less costly to revise data elements. Mr. Birnbaum also noted that providing transaction-level data will result in fewer special data call and regulatory inquiries. For the state insurance regulators, Mr. Birnbaum said transaction-level data collection is less costly because the data is more reliable, and less time needs to be spent on data validation. It also allows for more refined analysis that allows for better deployment of resources. Mr. Birnbaum said there is less need for planning and executing special data calls. Finally, he said state insurance regulators can utilize an existing statistical agent framework instead of a new data infrastructure.

Mr. Birnbaum said since 2004, industry has increasingly used third-party data, predictive models, and generalized linear models. Currently, industry utilizes dozens of non-insurance sources and has enhanced, real-time consumer insurance data. Mr. Birnbaum said companies have real-time data access available for decision making. With the increase in data companies can apply micro-segmentation to marketing, pricing, claims settlements, and anti-fraud efforts. Mr. Birnbaum said today, companies are routinely using advanced data analytics, such as data mining, generalized additive models, neural networks, machine learning (ML), and artificial intelligence (AI).

Mr. Birnbaum said in contrast, the market analysis of today is essentially the same as the market analysis of 2004. It still utilizes complaints, enforcement actions, new reports, lawsuits, and summary-level MCAS data on a limited number of lines of business.

Mr. Birnbaum said in 2000, the NAIC said market analysis would move market regulation from the auditing model to a more data-driven, analytical approach; but by not incorporating more transaction-level data, it cannot fulfill that goal. He concluded by saying transaction data collection on consumer market outcomes is the most important action needed to fulfill the promise of market analysis.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.
Draft: 5/26/21

Adopted by the Executive (EX) Committee and Plenary, XX, XX, 2021
Adopted by the Market Regulation and Consumer Affairs (D) Committee, July, 27, 2021
Adopted by the MCAS Blanks (D) Working Group, May 26, 2021

**Short-Term Limited Duration Insurance Market Conduct Annual Statement**

**Data Call & Definitions**

**Line of Business:** Short-Term Limited Duration Insurance

**Reporting Period:** January 1, 2022 through December 31, 2022

**Filing Deadline:** June 30, 2023

**Contact Information**

| MCAS Administrator | The person responsible for assigning who may view and input company data. |
| MCAS Contact | The person most knowledgeable about the submitted MCAS data. This person can be the same as the MCAS Administrator. |
| MCAS Attestor | The person who attests to the completeness and accuracy of the MCAS data. |

**Schedule 1 - Interrogatories**

| 1-01 | List the states where your STLDI products are marketed | Comment |
| 1-02 | Does the company offer STLDI policies/certificates with up to a 90-day duration? | Yes/No |
| 1-03 | Does the company offer STLDI policies/certificates with 91- to 180-day duration? | Yes/No |
| 1-04 | Does the company offer STLDI policies/certificates with 181- to 364-day duration? | Yes/No |
| 1-05 | Number of STLDI forms offered to residents in this state | Comment |
| 1-06 | Number of STLDI forms offered in all states | Comment |
| 1-07 | Number of STLDI forms filed in this state | Comment |
| 1-08 | Number of STLDI forms filed in all states | Comment |
| 1-09 | List the states where your STLDI products are filed (provide SERFF tracking number and form number, if applicable). If a company issues the product in a state that does not require a filing, please identify the product and describe the basis for not filing | Comment |
| 1-10 | How many policy forms have waiting periods that apply to the entire policy/certificate? | Number |
| 1-11 | How many policy forms have waiting periods that apply per specific benefits? | Number |
| 1-12 | Do any waiting periods exceed the policy/certificate term? | Y/N |
| 1-13 | If the answer to #12 is yes, please explain | Comment |
| 1-14 | Does the company issue STLDI products through associations? If yes, list the associations | Yes/No |
| 1-15 | If #14 is yes, list the associations | Comment |
| 1-16 | If #14 is yes, do you have a contractual relationship with each Association? | Yes/No |

**Participation Requirements:** All companies licensed and reporting at least $50,000 of Short-Term Limited Duration Insurance (STLDI) premium for all coverages reportable in MCAS within any of the participating MCAS jurisdictions. (This threshold is subject to individual jurisdiction requirements.)
Draft: 5/26/21

Adopted by the Executive (EX) Committee and Plenary, XX, XX, 2021
Adopted by the Market Regulation and Consumer Affairs (D) Committee, July, 27, 2021
Adopted by the MCAS Blanks (D) Working Group, May 26, 2021

**Short-Term Limited Duration Insurance Market Conduct Annual Statement**

**Data Call & Definitions**

**Report by Residency**: This MCAS blank is designed to collect data from the perspective of individual insureds in each state that the form is marketed in. When reporting for forms issued to discretionary groups, associations, or trusts – data should be provided on each state of residence of the insureds, rather than only where the discretionary group, association or trust is sitused.
Short-Term Limited Duration Insurance Market Conduct Annual Statement
Data Call & Definitions

General Definitions:

**Short-Term Limited-Duration Insurance** - Health coverage provided pursuant to a contract with an issuer that has an expiration date specified in the contract that is less than 12 months after the original effective date of the contract. (state and federal government guidelines may have renewal duration limitations)

**Association** – For purposes of this MCAS blank, a non-employer group that secures benefits for its members.

**Individual STLDI Product** – Policies marketed, sold, and issued to individual consumers, regardless of whether or not the policy forms have been filed with any State’s department of insurance. An individual STLDI policy is not issued to a trust, association, or administrator.

**Group STLDI Product/Coverage** - Policies issued to a trust, association, or administrator for the purpose of marketing, selling, and issuing certificates to individual consumers, regardless of whether or not the policy forms have been filed with any State’s department of insurance and regardless of where the association, trust, or administrator is situated.

**New Policies/Certificates Issued** - STLDI policy/certificate issued to an individual or family for whom no prior short-term coverage has been placed with the same insurer within the previous 63 days

**Policies / Certificates** - Refers to the coverage documents provided to individuals or families (i.e., state residents) who are enrolled in coverage (not the association)

**Policyholder / Certificateholder** – Refers to the individual who is afforded benefits of the coverage according to the laws of the state in which they reside (i.e., not the association). Policyholder is the individual when purchased in the individual market. Certificateholder is the individual when purchased through an Association, which is the policyholder.

**Renewal / Reissue** - STLDI policy/certificate issued to an individual or family for whom prior short-term coverage has been placed with the same insurer within 63 days of the prior coverage. If a policy is re-underwritten based on health factors or provides different benefits, it should be reported as a new policy/certificate issued.

**Schedule 2 Definitions (Policy/Certificate Administration):**

**Rescission** – A rescission is a cancellation or discontinuance of coverage that is retroactive to the issue date. (Does not include cancellations for non-payment.)

**Written Premium** - Provide the total annual written premium for all policies and/or certificates issued to insureds residing in the state for which reporting is being completed.
Short-Term Limited Duration Insurance Market Conduct Annual Statement

Data Call & Definitions

Earned Premium – Total premium earned from all policies/certificates written by the insurer during the specified period.

Free Look – A set number of days provided in an insurance policy/certificate that allows time for the purchaser to review the contract provisions with the right to return the policy/certificate for a full refund of all premium paid. Report the number of policies/certificates that were returned by the insured under the free look provision during the period, regardless of the original issuance date.

Member months– The sum of total number of lives insured on policies/certificates issued on a pre-specified day of each month of the reported year. Reasonable approximations are allowed when exact information is not administratively available to the reporting entity.

Schedule 3 and 4 Definitions (Prior Authorization and Claims Administration):

Prior Authorization – A decision by a carrier or its designee in advance of the provision of a health care service that the service (including specialist care, habilitation and rehabilitation services, and mental health and substance use disorder services), treatment plan, or medical device and equipment is medically necessary or a covered service. Sometimes called preauthorization, prior approval or precertification, this includes any provision requiring the insured to notify the company prior to treatment.

Claim – For the purposes of this data call a claim means any individual line of service within a bill for services.

Claim Clarifications:
- Claims received, paid and denied should be reported according to the data year of the receipt, payment or denial.
- Claims are to be reported at the service line level.
- Capitated claims are to be reported if an Explanation of Benefits (EOB) is generated.
- Duplicate claims should not be reported.

 Claims Received - provide the total number of claims received during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed

 Claims Denied - provide the total number of claims denied during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed; includes rejected and returned claims, whether in whole or in part
Short-Term Limited Duration Insurance Market Conduct Annual Statement

Data Call & Definitions

Clarification:

- The nine claim denial reporting categories are not exhaustive. Claim denials reported in the categories should be a subset of the reported total denials.

Claims Paid - provide the total number of claims paid during the reporting period for individual policyholders and/or group certificateholders residing in the state for which reporting is being completed.

Waiting Period: Period of time a covered person who is entitled to receive benefits for sicknesses must wait before coverage is provided. This applies to waiting periods that are per policy or per condition.

Schedules 5 Definitions (Consumer Requested Reviews/Grievance/Complaints):

Lawsuit—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits for Short-Term Limited Duration Insurance products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or a claimant/beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides. Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.
Draft: 5/26/21

Adopted by the Executive (EX) Committee and Plenary, XX, XX, 2021
Adopted by the Market Regulation and Consumer Affairs (D) Committee, July, 27, 2021
Adopted by the MCAS Blanks (D) Working Group, May 26, 2021

Short-Term Limited Duration Insurance Market Conduct Annual Statement
Data Call & Definitions

Schedule 6 Definitions (Marketing and Sales)

**Commissions** - The total amount of compensation paid to any individual or entity for their consideration in marketing, selling, and attracting potential insureds, by whatever means this compensation is provided. Do not include monetary valuables paid to any individual or entity that is generally not able to be converted into actual money. NOTE: For products *not* related to the actual sale of a contract, do not include any amounts paid for the specific purpose of marketing, encouraging or promoting.

**Other Remuneration** - Any monetary consideration provided by the insurer through the course of the insurance transaction. This is not commissions and are separate amounts paid for as a result of the insurance transaction.

In determining what business to report for a particular jurisdiction, unless otherwise indicated
Property & Casualty Market Conduct Annual Statement
Travel Insurance Data Call & Definitions

in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Specifically, the business to be reported is the direct business of the reporting company. Reinsurance ceded is not deducted and reinsurance assumed is not included.

Participation Requirements: All companies licensed and reporting any travel insurance within any of the participating MCAS jurisdictions. (This threshold is subject to individual jurisdiction requirements.)
Property & Casualty Market Conduct Annual Statement
Travel Insurance Data Call & Definitions

Definitions:

Travel Insurance means insurance coverage for personal risks incident to planned travel.

Include:
- Interruption or cancellation of trip or event;
- Loss of baggage or personal effects;
- Damages to accommodations or rental vehicles;
- Sickness, accident, disability or death occurring during travel;
- Emergency evacuation;
- Repatriation of remains; or
- Any other contractual obligations to indemnify or pay a specified amount to the traveler upon determinable contingencies related to travel as approved by the Commissioner.

Exclude:
- major medical plans that provide comprehensive medical protection for travelers with trips lasting longer than six (6) months, including for example, those working or residing overseas as an expatriate, or any other product that requires a specific insurance producer license.

Blanket Travel Insurance means a policy of Travel Insurance issued to any Eligible Group providing coverage for specific classes of persons defined in the policy with coverage provided to all members of the Eligible Group without a separate charge to individual members of the Eligible Group.

Coverages
For the following terms, the NAIC asks that the insurer use definitions that meet industry standards. To the extent the insurer’s definitions differ from industry standards, the NAIC asks that the insurer provide those definitions.

Trip Cancellation
Trip Interruption
Trip Delay
Baggage Loss/Delay
Emergency Medical / Dental
Emergency Transportation/Repatriation
Primary Coverage
Excess/Secondary Coverage

Cancellations – Includes all cancellations of the policies/certificates where the cancellation was executed during the reporting year regardless of the date of placement of the coverage.
Property & Casualty Market Conduct Annual Statement

Travel Insurance Data Call & Definitions

Claim – A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy/certificate. Each claimant/insured reporting a loss is counted separately.

Exclude:
- An event reported for “information only.”
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment.”

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarifications:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims settled with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling additional payment on previously reported claim/subsequent supplemental payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on the supplemental payment from the time the request for supplemental payment was received to the date the final
Property & Casualty Market Conduct Annual Statement

Travel Insurance Data Call & Definitions

payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment.”

Include:

• All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
• Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
• A demand for payment for which it was determined that no relevant policy/certificate was in-force at the time of the loss if a claim file was set up and the loss was investigated.
• Claims that are closed because the amount claimed is below the insured’s deductible.
• Claims closed because primary coverage was available elsewhere.

Complaints Received Directly from any Person or Entity Other than the Department of Insurance – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the jurisdiction’s insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

• Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
• Complaints received from third parties

Complaints Received Directly from the Department of Insurance – All complaints:

• As identified by the DOI as a complaint.
• Sent or otherwise forwarded by the DOI to the reporting company.

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:

• If partial payments were made on the claim, the claim would be considered closed with payment if the final payment was made during the reporting period regardless of the date of loss or when the claim was received.
• Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.)
• If a claim remains open at the end of the reporting period (even though a final payment
Property & Casualty Market Conduct Annual Statement
Travel Insurance Data Call & Definitions

has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
  - The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
  - The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her claim to either the company or insurance agent.

Domestic Coverage: Coverage for travel originating and contained within the United States including travel directly to and from mainland United States to Hawaii, Alaska and United States territories.

Group Travel Insurance means Travel Insurance issued to any Eligible Group as defined by state law.

International Coverage: Coverage for any travel other than Domestic.

Premium Written During Period – The total premium written before any reductions for refunds for travel insurance during the reporting period.

In-force – A master policy, individual policy, or certificate in effect during the reporting period.

Lawsuit – An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits in the Travel MCAS blank:
- Include only lawsuits brought by an applicant for insurance or a policyholder or a claimant/beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies, count the action as three lawsuits;
Property & Casualty Market Conduct Annual Statement

Travel Insurance Data Call & Definitions

- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each jurisdiction in which a potential class member resides. Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer – A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant or policyholder in an amount greater than offered by the reporting company before the lawsuit was brought.

Median Days to Final Payment – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:
- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:
- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:
- Subrogation payments.

Calculation Clarification / Example:
- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

Median - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.
Consider the following simple example of the number of days it took to settle each of the following seven claims:

<table>
<thead>
<tr>
<th>Claim</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
<th>Nbr 7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

<table>
<thead>
<tr>
<th>Claim</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

Median Days to Final Payment = (5 + 6)/2 = 5.5

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

Closing Time # of Claims

<table>
<thead>
<tr>
<th>Closing Time</th>
<th># of Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 30</td>
<td>22</td>
</tr>
<tr>
<td>31-60</td>
<td>13</td>
</tr>
<tr>
<td>61-90</td>
<td>18</td>
</tr>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e. less than 61 or greater than 90) will indicate a data error.

**NAIC Company Code** – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

**NAIC Group Code** – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding

Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Schedule 2—Homeowners Claims Activity, Counts Reported by Claimant and by Coverage

Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two liability claimants, two medical payment claims, one dwelling claim for the insured, and one personal property claim for the insured, you would report as follows: Dwelling – 1; Personal Property – 1; Liability – 2; Medical Payments – 2. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Please note: In the Underwriting Section there are questions asking for policies in-force by type of policy. These are asking for a count of the policies in-force that meet the specifications to be included on the MCAS. Please use the following as a guide to determine which policy types should be reported for each question:

(3-45) Number of dwelling fire policies in force at the end of the period.
Include dwelling policies that meet the definition of a dwelling policy as defined within this document. This would typically include policies written on forms DP-1, DP-2 and DP-3.

(3-46) Number of homeowner policies in force at the end of the period.
Include homeowner policies that meet the definition of a homeowner policy as defined within this document. This would typically include policies written on forms HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8.

(3-47) Number of tenant/renter/condo policies in force at the end of the period.
Include tenant/renter/condo policies that meet the definition of a tenant/renter/condo policy as defined within this document. This would typically include policies written on forms HO-4 and HO-6.

(3-48) Number of all other residential property policies in force at the end of the period.
Include other policies that meet the specifics of MCAS reporting, but that do not fall into one of the categories requested in questions 3-45, 3-46 and 3-47. If your company only write policies that fall into the forms specified for questions 3-45, 3-46 and 3-47, this number will be 0.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of dwellings insured under the policy.

Report cancellations separately for:

- Policies cancelled for non-payment of premium or non-sufficient funds.
  - These should be reported every time a policy cancels for the above reasons. (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted.)
- Policies cancelled at the insured’s request.
- Policies cancelled for underwriting reasons.

Exclude:

- Policies cancelled for ‘re-write’ purposes where there is no lapse in coverage.
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Cancellations within the first 59 days – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations from 60 to 90 days – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations greater than 90 days – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Claim - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.

Include:

- Both first and third party claims.

Exclude:

- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarification:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims closed with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim / Subsequent Supplemental Payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on that supplemental payment from the time the request for supplemental payment was received to the date of the final payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:
- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured’s deductible.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Calculation Clarification:
- For each coverage identifier, the sum of the claims closed without payment across each closing time interval should equal the total number of claims closed without payment during the reporting period.

Complaint – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state’s insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.
Include:
- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

Coverage - Dwelling (includes – Other Structures) – Coverage for dwellings under Homeowners Policies and Dwelling Fire and Dwelling Liability Policies. It includes coverage for Other Structures.

Coverage - Loss of Use – Loss of Use provided under Homeowners Policies.

Coverage - Personal Property – Personal Property provided under Homeowners Policies.

Coverage - Liability – Liability insurance provided under Homeowners Policies.

Coverage - Medical Payments – Medical Payments provided under Homeowners Policies.

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:
- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment date was made during the reporting period regardless of the date of loss or when the claims was received.
- Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.
- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
  - The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

- The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

**Date the Claim was Reported** – The date an insured or claimant first reported his or her loss to either the company or insurance agent.
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claim Handling Process Level of Detail Breakdown:

**Digital Claim** – A claim involving a claim settlement determination which was accepted by the insured/claimant without adjustment whereby the entire claim was handled without human intervention on the part of the insurance company in the loss appraisal process, settlement determination, and/or in the production of the initial loss settlement offer. Digital claims utilize only digital information to establish the extent of damage and to produce a loss settlement determination through the application of one or more automated loss algorithms applied to digital information. No human inspection or appraisal of the damaged property is conducted by the insurance company, independent adjuster, or other person relied upon by the insurance company during the life cycle of the claim.

Examples of digital claim information include, but are not limited to, photos taken by a claimant or insured, photos taken by a plane or drone, and/or data provided by in-vehicle or in-property sensors.

**Hybrid Claim** – A claim whereby the initial loss settlement determination began as a digital claim, however, at some point in the claim life cycle required the use of human resources in the loss appraisal process, settlement determination, and/or in the production of the initial or subsequent loss settlement offer.

**Non-Digital Claim** – means any claim other than a Digital Claim or Hybrid Claim.

**Direct Written Premium** - The total amount of direct written premium for all polices covered by the market conduct annual statement (new and renewal) written during the reporting period.

**Calculation Clarification:**
- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Dwelling – A personally occupied residential dwelling.

Calculation Clarification:
  • A 2 or 3 family home covered under one policy would be considered 1 dwelling.

Dwelling Fire Policies – Coverage for dwellings and their contents. It may also provide liability coverage and is usually written when a residential property does not qualify according to the minimum requirements of a homeowner’s policy, or because of a requirement for the insured to select several different kinds of coverage and limits on this protection.

Include:
  • Dwelling Fire and Dwelling Liability policies should be included ONLY IF the policies written under these programs are for personally occupied residential dwellings, not policies written under a commercial program and/or on a commercial lines policy form.

Homeowners Policies – Policies that combine liability insurance with one or more other types of insurance such as property damage, personal property damage, medical payments and additional living expenses.

Include:
  • Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.
  • Renters insurance, Policies covering log homes, land homes, and site built homes are included.
  • Inland Marine or Personal Articles endorsements.
  • Include policies written on the HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8 policy forms.

Exclude:
  • Farmowners is not included as it is considered to be Commercial Lines for purposes of this project.
  • Umbrella policies.
  • Lender-placed or creditor-placed policies.

Inland Marine or Personal Articles Endorsements – Provides coverage via endorsement to a homeowners policy for direct physical loss to personal property as described in the endorsement.

Exclude:
  • Stand-alone Inland Marine Policies.
Adopted by the Executive (EX) Committee and Plenary, XX, XX, 2021
Adopted by the Market Regulation and Consumer Affairs (D) Committee, July, 27, 2021
Adopted by the MCAS Blanks (D) Working Group, June 30, 2021

Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Note: Revisions to the 2021 data year Lawsuits definitions were adopted by the Market Regulation and Consumer Affairs (D) Committee and NAIC EX/ Plenary during the 2020 NAIC Fall National Meeting.

Lawsuit – A court proceeding to recover a right to a claim, including lawsuits for arbitration cases.

Exclude:
- Subrogation claims where lawsuit is filed by the company against the tortfeasor.
- Non-lawsuit legal activity or litigation filed by an insurer, including, but not limited to: request to compel an independent medical examination, an examination under oath, and declaratory judgment actions filed by an insurer.

Calculation Clarification:
- Lawsuits should be reported on the same basis as claims. One lawsuit should be reported for each / claimant / coverage combination, regardless of the number of actual suits filed.
- One lawsuit with two claimants would be reported as two lawsuits as any awards/payments made would be made to the claimants individually.
- One lawsuit filed seeking damages for multiple coverages should be reported as one lawsuit for each applicable coverage.
- Lawsuits should be reported in the state in which the claim was reported on this statement.
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides. Include an explanatory note with your submission state the number of class action lawsuits included in the data and the general cause of the action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the claimant in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Liability Insurance – Coverage for all sums that the insured becomes legally obligated to pay because of bodily injury or property damage, and sometimes other torts to which an insurance policy applies.

Loss Of Use – Coverage for additional living expenses incurred by the insured or fair rental value when the insured dwelling becomes uninhabitable as the result of an insured loss or when access to the dwelling is barred by civil authority.
**Property & Casualty Market Conduct Annual Statement**

**Homeowner Data Call & Definitions**

**Median Days to Final Payment** – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:
- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:
- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:
- Subrogation payments.

Calculation Clarification / Example:
- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

**Median** - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

Consider the following simple example of the number of days it took to settle each of the following seven claims:

<table>
<thead>
<tr>
<th>Claim Nbr</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
<th>Nbr 7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Median Days to Final Payment = (5 + 6)/2 = 5.5

The median should be consistent with the paid claim counts reported in the closing time intervals.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Example: A carrier reports the following closing times for paid claims.

Closing Time # of Claims

<table>
<thead>
<tr>
<th>Closing Time</th>
<th># of Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 30</td>
<td>22</td>
</tr>
<tr>
<td>31-60</td>
<td>13</td>
</tr>
<tr>
<td>61-90</td>
<td>18</td>
</tr>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46\textsuperscript{th} claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e. less than 61 or greater than 90) will indicate a data error.

Medical Payments Coverage – Provides coverage for medical expenses resulting from injuries sustained by a claimant regardless of liability.

NAIC Company Code – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

NAIC Group Code – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

New Business Policy Written – A newly written agreement that puts insurance coverage into effect during the reporting period.

Exclude:
- ‘Re-written’ policies unless there was a lapse in coverage.

Non-Renewals – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the “non-renewal” clause of the policy.

Include:
- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:
- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

Calculation Clarification:
- The number of nonrenewals should be reported on a policy basis regardless of the number of dwellings insured under the policy.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

Other Structures – Structures on the residence premises (1) separated from the dwelling by a clear space or (2) connect to the dwelling by a fence, wall, wire, or other form of connection but not otherwise attached.

Personal Property Damage Coverage – Provides coverage for damage to dwelling contents or other covered personal property caused by an insured peril.

Personally Occupied – A dwelling in which the person owning the policy personally occupies the dwelling and lives there.

Property Damage Coverage – Provides coverage for damage to the dwelling and/or other insured structures caused by an insured peril.

Policy In-force – A policy in which the coverage is in effect as of the end of the reporting period.

Tenant/Renters/Condo Policies – Policies that provide coverage for the personal property of tenants, renters, condominium and cooperative unit owners. Include policies typically written on the HO-4 and HO-6 policy forms.

* Includes Digital Claims, Hybrid Claims and Non-Digital Claims (Applies only to claims related data elements)

Additionally, an “All” breakout will be included for the reporting of Median Days to Final Payment.

Schedule 2—Private Passenger Auto Claims Activity, Counts Reported by Claimant, by Coverage
Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two bodily injury claimants (one property damage claimant, one collision claim for the insured, and one medical payment claim for the insured), it would be reported as follows: Collision – 1, Bodily Injury – 2; Property Damage – 1; and Medical Payments – 1. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Data should be reported for both private passenger automobiles and motorcycles. Exclude antique vehicles and primarily off-road vehicles such as dune buggies or three-wheel ATVs.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of automobiles insured under the policy.

Report cancellations separately for:
- Policies cancelled for non-payment of premium or non-sufficient funds
  - These should be reported every time a policy cancels for the above reasons (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted).
- Policies cancelled at the insured’s request
- Policies cancelled for underwriting reasons.

Exclude:
- Policies cancelled for ‘re-write’ purposes where there is no lapse in coverage.

Cancellations within the first 59 days – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations from 60 to 90 days – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations greater than 90 days – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Claim - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.

Include:

- Both first- and third-party claims.

Exclude:

- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarifications:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims settled with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim/Subsequent Supplemental Payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count thereopened claim as a new claim. Calculate a separate aging on the supplemental payment from the time the request for supplemental payment was received to the date the final payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:

- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Complaint — any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

Coverage - Collision Insurance – Coverage to provide protection against physical contact of an automobile with another inanimate object resulting in damage to the insured automobile.

Clarification:

- Rental/transportation/tow expenses which are paid as a result or part of a collision claim should not be counted as separate claims.

Coverage - Comprehensive/Other than Collision Insurance – Coverage providing protection in the event of physical damage (other than collision), including theft of the insured automobile.

Clarification:

- Rental/transportation/tow expenses which are paid as a result or part of a comprehensive/other than collision claim should not be counted as separate claims.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

**Coverage - Bodily Injury** – Physical damage to one’s person. The purpose of liability (casualty) insurance is to cover bodily injury to a third party resulting from the negligent acts and omissions of an insured.

**Coverage - Property Damage Liability Insurance** – Coverage in the event that the negligent acts or omissions of an insured result in damage or destruction to another’s property.

Include:
- ‘Property Damage Rental’ coverage (i.e. amounts paid for a third party claimant’s rental car).

**Coverage - UMBI** – Includes both Uninsured Motorist Coverage and Underinsured Motorists Coverage for bodily injury claims.
- **Underinsured Motorist Coverage (UIM)** – Provides coverage for bodily injury sustained by an insured who is involved in an accident caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.
- **Uninsured Motorist Coverage (UM)** – Provides coverage for bodily injury sustained by an insured involved in an accident caused by an at-fault driver who does not have liability insurance.

**Coverage - UMPD** – Includes both Uninsured Motorist Property Damage Coverage and Underinsured Motorist Property Damage Coverage.
- **Underinsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.
- **Uninsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have liability insurance.

**Coverage - Medical Payments Coverage** – First party coverage for injuries incurred in a motor vehicle accident.

**Coverage - Combined Single Limit** – Bodily injury liability and property damage liability expressed as a single sum of coverage.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Coverage - Personal Injury Protection (PIP) – A first party benefit. coverage to pay basic expenses for an insured and his/her family in states with no fault automobile insurance laws. No-fault laws generally require drivers to carry personal injury protection coverage to pay for basic medical needs of the insured, such as medical expenses, in the event of an accident. For the purposes of this project, all PIP coverages (wage, funeral, death, medical, etc) that would correspond to first party coverages in the applicable participating states should be included.

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:
• If partial payments were made on the claim, the claim would be considered closed with payment if the final payment was made during the reporting period regardless of the date of loss or when the claims was received.
• Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.)
• If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
• A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
  o The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
  o The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her loss to either the company or insurance agent.

Digital Claim Handling Process Level of Detail Breakdown:

Digital Claim – A claim involving a claim settlement determination which was accepted by the insured/claimant without adjustment whereby the entire claim was handled without human intervention on the part of the insurance company.
Private Passenger Auto Data Call & Definitions

in the loss appraisal process, settlement determination, and/or in the production of the initial loss settlement offer. Digital claims utilize only digital information to establish the extent of damage and to produce a loss settlement determination through the application of one or more automated loss algorithms applied to digital information. No human inspection or appraisal of the damaged property is conducted by the insurance company, independent adjuster, or other person relied upon by the insurance company during the life cycle of the claim.

Examples of digital claim information include, but are not limited to, photos taken by a claimant or insured, photos taken by a plane or drone, and/or data provided by in-vehicle or in-property sensors.

**Hybrid Claim** – A claim whereby the initial loss settlement determination began as a digital claim, however, at some point in the claim life cycle required the use of human resources in the loss appraisal process, settlement determination, and/or in the production of the initial or subsequent loss settlement offer.

**Non-Digital Claim** – means any claim other than a Digital Claim or Hybrid Claim.

**Direct Written Premium** - The total amount of direct written premium for all policies covered by the market conduct annual statement (new and renewal) written during the reporting period.

Calculation Clarification:

- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

Note: Revisions to the 2021 data year Lawsuits definitions were adopted by the Market Regulation and Consumer Affairs (D) Committee and NAIC EX/ Plenary during the 2020 NAIC Fall National Meeting.

Lawsuit – A court proceeding to recover a right to a claim, including lawsuits for arbitration cases.

Exclude:
- Subrogation claims where lawsuit is filed by the company against the tortfeasor.
- Non-lawsuit legal activity or litigation filed by an insurer, including, but not limited to: request to compel an independent medical examination, an examination under oath, and declaratory judgment actions filed by an insurer.

Calculation Clarification:
- Lawsuits should be reported on the same basis as claims. One lawsuit should be reported for each claimant / coverage combination, regardless of the number of actual lawsuits filed.
- One lawsuit with two claimants would be reported as two lawsuits as any awards/payments made would be made to the claimants individually.
- One lawsuit filed seeking damages for multiple coverages should be reported as one lawsuit for each applicable coverage. If the lawsuit is seeking damages for bodily injury and property damage, one lawsuit should be reported for each of the two coverages.
- Lawsuits should be reported in the state in which the claim is reported on this statement.
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides. Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the claimant in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Median Days to Final Payment – The median value for all claims closed with payment during the period.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

Calculation for losses with one final payment date during the reporting period:
- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:
- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:
- Subrogation payments should not be included.

Calculation Clarification / Example:
- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

Median - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

Consider the following simple example of the number of days it took to settle each of the following seven claims:

<table>
<thead>
<tr>
<th>Claim</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
<th>Nbr 7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

<table>
<thead>
<tr>
<th>Days to Settle</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

Median Days to Final Payment = \( \frac{5 + 6}{2} = 5.5 \)

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

<table>
<thead>
<tr>
<th>Closing Time</th>
<th># of Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 30</td>
<td>22</td>
</tr>
<tr>
<td>31-60</td>
<td>13</td>
</tr>
<tr>
<td>61-90</td>
<td>18</td>
</tr>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e., less than 61 or greater than 90) will indicate a data error.

**NAIC Company Code** – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

**NAIC Group Code** – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

**New Business Policy Written** – A newly written agreement that puts insurance coverage into effect during the reporting period.

Exclude:
- Renewals or ‘re-written’ policies unless there was a lapse in coverage.

**Non-Renewals** – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the “non-renewal” clause of the policy.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Include:

- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:

- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

Calculation Clarification:

- The number of non-renewals should be reported on a policy basis regardless of the number of autos insured under the policy.

Policy In-force – A policy in which the coverage is in effect as of the end of the reporting period.

Private Passenger Auto Insurance – Those policies issued on automobiles owned or leased by an individual or by husband and wife resident in the same household that are reported on lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement.

Include:

- This covers four-wheel vehicles including station wagons, vans, or pick-up trucks with a gross vehicle weight up to 10,000 pounds or less and not customarily used in the occupation, profession, or business of the insured.
- Vehicles as defined above that are reported on Lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement which meet the definition of private passenger automobiles.
- Motorcycles
- Policies where the insured’s vehicle is titled privately to the insured but is used by the insured for work should be included, unless the coverage is written on a commercial auto form.
- Policies written on a volunteer basis and those written through a residual market mechanism such as assigned risk pools should be included.
- Policies written on RV’s and motor homes are included as they are licensed vehicles that fall under the various states’ Motor Vehicle Responsibility laws.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Exclude:
- Policies written on antiques, collectibles, all-terrain vehicles, snowmobiles, trailers, dune buggies.
- Miscellaneous vehicles written on Inland Marine policies.
- Other vehicles classified by ISO as miscellaneous that do not fall under the various states’ Motor Vehicle Responsibility laws.
- ‘Fleet’ policies are generally considered to be a commercial policy and would not be included unless the premium for these policies is being reported as ‘private passenger auto’ insurance on lines 19.1, 19.2 or 21.1 of the state page of the financial annual statement.
- Non-owned vehicle insurance policies.
- Lender-placed or creditor-placed policies.
- Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.

Telematics and Usage-Based Data – Data which is collected through devices installed in a vehicle, through mobile applications, or other method. These devices then transmit the data in real time back to insurers. Examples of usage-based data collected via telematics includes - but is not limited to - miles driven, time of day, where the vehicle is driven (Global Positioning System or GPS), rapid acceleration, hard braking, hard cornering and air bag deployment.
Regulatory Information Retrieval System (RIRS)  
Proposed Coding Structure Changes  

Overview  
Outlined below are the Market Information Systems Research and Development (D) Working Group proposed revisions to the Regulatory Information Retrieval System (RIRS) coding structure. These revisions address the serious deficiencies of the current coding structure. They are designed to render greater coherency to the data structure and make the system more compatible with other market information systems.  
In brief, this proposal consists of:
1) New Record Type field to distinguish routine administrative actions from actions that are a result of an infraction or financial impairment. This distinction is important for market analysis purposes.
2) New Modification Indicator field to link related RIRS records. Some RIRS records represent a termination, modification, or extension of a previous RIRS record. This new field can be used to eliminate duplicate records when counting unique actions.
3) New Line of Business field to reflect infractions that arise out of activity specific to a line of business.
4) Significant Revisions to the Origin of Action, Reason for Action, and Disposition for Action codes to provide a more logical overall data structure.

**Origin of Action (Revised)**

The Origin of Action field is meant to provide information about the origin (source) of the regulatory action. The code(s) used should be reflective of the source of information or activity that resulted in the regulatory action. Information about the reason (allegations) and/or disposition (outcome) of the action should be reported in those respective fields. (max 4)

## Code Name

### Definition

**Other Cancellation / Nonrenewal / Recession Issue***

Any other improper termination of coverage not described by any other reason code and/or combination of reason codes. Example: Rescissions made for non-material misrepresentations.

**Declination Notice – Inadequate / Not Timely / Not Provided**

Failure to issue notify an applicant or failure to timely notify an applicant that coverage is rejected as required by statute and/or regulation. This would include instance where notices where inadequate and/or did not contain information required by statutes and/or regulations.

**Other Declination Issue***

Other inappropriate declination not described by any other reason code and/or combination of reason codes. Example: Failure to adhere to internal underwriting guidelines.

**Other Underwriting Issue***

Any other violation related to the determination of eligibility for coverage, not described by any other reason code and/or combination of reason codes.

## Disposition for Action (Revised)

The Disposition field is meant to provide information about the disposition (outcome) of the regulatory action. The code(s) used should be reflective of the outcome of the action. In other words what happened as a result of the action. Information about the reason (allegations) and/or origin (source) of the action should be reported in those respective fields. (max 4)

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 10, 2021. The following Working Group members participated: Damion Hughes, Chair, and Dennis Newman (CO); Erica Weyhenmeyer, Vice Chair (IL); Mel Heaps, Teri Ann Mecca and Crystal Phelps (AR); Sarah Borunda and Catherine O’Neil (AZ); Kurt Swan (CT); Susan Jennette and Frank Pyle (DE); Sarah Crittenden (GA); Lindsay Bates and Daniel Mathis (IA); Lori Cunningham and Ron Kreiter (KY); Mary Lou Moran (MA); Isaac Kane (MI); Paul Hanson (MN); Cynthia Amann, Jo LeDuc and Win Nickens (MO); Laura Arp, Martin Swanson and Reva Vandevoorde (NE); Tracy Biehn (NC); Ralph Boeckman (NJ); Jennifer Catechis and Myra Morris (NM); Hermoliva Abejar and Barbara D. Richardson (NV); Sylvia Lawson, Sharon Ma, Mark McLeod and Elvis Soto (NY); Rodney Beech (OH); Landon Hubbard and Shelly Scott (OK); Alex Cheng, Brian Fordham and Tashia Sizemore (OR); Gary Jones and Chris Monahan (PA); Stacie Parker and Matthew Tarpley (TX); Julie Fairbanks, Joy Morton and Bryan Wachter (VA); Christopher Antoine and Mary Block (VT); Jeanette Plitt (WA); Barbara Belling, Diane Dambach, Darcy Paskey, Rebecca Rebholz, MaryKay Rodriguez and Jody Ullman (WI); and Desiree Mauller (WV). Also participating was: Matt Gendron (RI).

1. **Heard Opening Remarks**

   Mr. Hughes introduced himself as the new chair of the Working Group, and he also introduced Ms. Weyhenmeyer as the new vice chair of the Working Group. Mr. Hughes reminded all attendees that this Working Group is the successor Working Group to the 2020 Market Conduct Examination Standards (D) Working Group.

2. **Discussed New Draft Title Standardized Data Requests (SDRs) for Inclusion in the Reference Documents of the Market Regulation Handbook**

   Mr. Hughes said that comments were received on the new Title In Force and the Title Claims SDRs from Rhode Island, Nebraska, Colorado, the Center for Economic Justice—CEJ and the American Land Title Association—ALTA. Mr. Gendron presented his comments, indicating that since most states use the NPN field, the field should not be removed from the SDRs, as suggested by interested parties during the last call. Ms. Vandevoorde presented her comments, agreeing with Mr. Gendron that the NPN field should remain in the SDRs. Mr. Gendron reminded the Working Group that the purpose of the SDRs is that they are designed to be modified, and therefore, the SDRs are a listing of fields that might be requested, but not every single field may be requested by a state market conduct examiner. She said that states that do not need a NPN can remove it from the standardized data request. Mr. Hughes agreed, saying that SDRs are designed to be flexible to meet examiners’ needs.

   Mr. Newman presented his comments, indicating that he had no changes to the Title In Force SDR. He recommended reordering the fields in the Title Claims SDR as outlined in his comment letter, so that it has a more logical flow, with regard regarding date-related fields.

   Birny Birnbaum (CEJ) said that his written comments were fairly self-explanatory, and the highlights of those include the following. In the Title In Force SDR: 1) the field PolTyp should include the policy form identifier that the company is using, as it may provide valuable information about the type of policy and type of coverage issued (he suggested that the policy form identifier also be added to the Title Claims SDR); 2) in the description of the PolTyp2 field – “reissue” is a rate, not a type of a policy form; 3) in the description of the field “PropTyp” – “residential” typically means 1-4 family residential, but it is unclear if this field is needed if an examiner has requested a policy form identifier, which will indicate whether the policy is residential or commercial; 4) the fields “Closing Protection Letter,” “Closing Protection Letter Fee,” “Arbitration,” and “Base Premium” should be added; 5) the field “Endorse” should identify endorsements used, not just that there were endorsements; and a field “Endorsement Premium” should be added to reflect premium charges associated with each endorsement; and 6) Mr. Birnbaum suggested using codes “Purchase,” “Refinance,” and “Other” instead of yes/no fields.

   Mr. Birnbaum suggested that in the Title Claims SDR: the following fields be added: 1) a field “Arbitration” similar to the “Litigation” fields found in the SDR; 2) a field “Reason Codes for Claim Denials;” 3) the fields “Outcome of Litigation,” “Claim Settlement Expense,” and the fields “Litigation Expense” and “Arbitration Expense” (a subset of settlement expense). Mr. Birnbaum suggested changing yes/no in fields like “Is Claim Currently in Litigation” to data fields like “Date Litigation Initiated.” “Status of Litigation” (where in the description field he suggested the language “ongoing, settled, court verdict,
Steve Gottheim (ALTA) said the instructions that examiners provide to a regulated entity with these SDRs should allow for “Blank If None” on most fields, if not all fields, because the type of information requested on the Title In Force and Title Claims SDRs is above and beyond what title insurers routinely collect in their policy databases. Mr. Gottheim said since a title agent is not the insurer’s agent for the purpose of closing a loan, information such as “closing file number,” “address of subject property,” etc. are not available to the title insurer, and the insurer would therefore need to obtain the information from multiple sources, which has a significant associated cost, and additional time would be needed. Mr. Gottheim said that title insurers only have access to data that is on the face of the policy. Additionally, Mr. Gottheim said that a significant portion of the information requested in the Title SDRs which is accessible to title insurers, is not in a single consolidated system; thus to provide the information requested in the SDRs, the title insurer would need to utilize significant manual efforts. Mr. Gottheim said that in both SDRs, clarification is needed for several fields, regarding what type of information examiners are requesting the title insurer provide, and he said that some fields may be repetitive or ask for information not related to title insurance. Mr. Gottheim asked what timeline would be provided by examiners to an insurer who has to obtain information from external sources, and he asked if such information could be requested by examiners in a follow up inquiry, instead of up front. Mr. Gottheim added that information requested in an SDR may not be held in one database and would therefore not be easily condensed into a report.

Mr. Gendron said that Rhode Island market conduct examiners would have concerns regarding blank items appearing in a regulated entity’s response to an SDR. He said that the Rhode Island Division of Insurance requests that a regulated entity respond to a SDR with a signed Certificate of Completeness which indicates that their answer is complete. Mr. Gendron said when there is a blank in a response, when accompanied by a Certificate of Completeness, it indicates that the regulated entity either does not have the information or it does not have access to the information; it does not signify that the regulated entity will provide the information to RI at a later time. Mr. Gottheim said regarding blanks in regulated entity responses to SDRs, if the title insurer does not have the information to respond to a particular field in an SDR, they will leave it blank, and he suggested that it be acceptable to examiners if such missing information could be provided by a regulated entity at a later date.

Mr. Gottheim said with regard to endorsements, sometimes a title insurer may obtain from a title agent a total premium, but not its components (the base premium, a list of endorsements and their associated premiums). Mr. Birnbaum said that regarding endorsements and associated premium, which are not shown on the face of a title policy, it is reasonable for examiners to ask a title insurer regarding the endorsements and the premium for each, since it is a logical expectation that a title insurer would be able to provide information to examiners regarding how a total title insurance premium was derived and calculated. Mr. Birnbaum said that the data available to a title insurer would be dependent on what type of agent is being used, examiners would have a reasonable expectation that the title insurer would more readily be able to obtain data examiners are asking for, from a direct or affiliated agent, versus from an independent agent. Mr. Birnbaum said that given that the title industry is very much data driven, title insurers should be able to provide examiners with data on title transactions, since such data is the basis for the analytics that title insurers are using for automated underwriting purposes.

Peter Kochenburger (University of Connecticut School of Law) said that examiners should be collecting information in the SDRs from title insurers on arbitration and on litigation. Mr. Gottheim said that it was his understanding that the term “litigation” in the SDRs refers to the litigation regarding the defense of claims and not litigation between the insurer and the insured.

The Working Group asked the Title SDR regulator-only subject matter experts (SMEs) to reconvene, review all title insurance comments received, make revisions where needed to the SDRs, and submit the SDRs to the Working Group as revised exposure drafts for discussion at the next scheduled call.

3. Reviewed its Charges and Prioritized its Potential 2021 Tasks

Mr. Hughes said the charges of this Working Group, as adopted by the Market Regulation and Consumer Affairs (D) Committee, are to:

1. Develop market conduct examination standards, as necessary, for inclusion in the Market Regulation Handbook (Handbook).
Mr. Hughes said that he believes that charges 2, 5, and 6 are interrelated and that there is overlap between charges 1 and 3 and charges 4 and 7. Mr. Hughes said that at the last Working Group call, the following were identified as areas of possible revision to the Handbook: 1) the Suitability in Annuity Transactions Model Regulation (#275); 2) the Insurance Holding Company System Regulatory Act (#440); 3) the Health Maintenance Organization Model Act (#430); 4) the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651); and 5) the Standard Nonforfeiture Law for Individual Deferred Annuities (#805).

Mr. Hughes said additional Working Groups and areas the Working Group should monitor on a going forward basis regarding potential updates to the Handbook are the Mental Health Parity (B) Working Group, the Accelerated Underwriting (A) Working Group, the Big Data and Artificial Intelligence (EX) Working Group, the Long-Term Care Insurance Model Update (B) Subgroup, the Innovation and Technology (EX) Task Force (referenced in charge 5), and the yet to be adopted Pharmacy Benefit Manager Licensure and Regulation Model Act.

Mr. Hughes reminded the Working Group that the Group would not draft any guidance, exam standards, regulatory guidance, etc. based upon models or guidance that is yet to be adopted by the NAIC, but the Working Group is charged with monitoring developments in other NAIC groups and task forces for future development/inclusion in the Handbook.

Mr. Hughes asked for state insurance regulators to volunteer to: 1) review any of the models on the list of recently adopted models—i.e., Model #275, Model #430, Model #440, Model #651 and Model #805; 2) review any of the other identified areas of revision to the Handbook (such as Model #275, Model #880, etc.); 2) report to the Working Group regarding whether the Handbook should be updated in these subject areas; and 3) if revisions are deemed necessary, to work together as regulator-only subject matter expert (SME) volunteer groups to prepare an initial exposure draft for review and discussion by the Working Group. Mr. Hughes asked if any volunteers arose out of the March 30 Working Group call. Petra Wallace (NAIC) said that an individual from Kentucky had volunteered to review the Insurance Holding Company System Regulatory Act (#440).

Mr. Gendron asked that a standardized data request be developed to correspond to the Travel Insurance Model Act (#632). Mr. Gendron said that the revisions to the Suitability in Annuity Transactions Model Regulation would be a higher priority than a Travel insurance-related SDR, and, with regard to the Insurance Holding Company System Regulatory Act (#440) and the Standard Nonforfeiture Law for Individual Deferred Annuities (#805)—these two models may not impact the Handbook, however, the models should be reviewed to see if any corresponding revisions need to be made to the Handbook.

Ms. Rodriguez volunteered to review the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651). Ms. Amann said that if Kentucky does not wish to volunteer for the Insurance Holding Company System Regulatory Act (#440), Missouri can volunteer to review the model, and she said that Missouri would also volunteer to undertake Charge 7 regarding the discussion of the role of market conduct examiners in reviewing insurers’ corporate governance, as outlined in corporate governance models Corporate Governance Annual Disclosure Model Act (#305) and the
Corporate Governance Annual Disclosure Model Regulation (#306). Ms. Amann suggested, regarding charge 5, that the Working Group ask for a liaison (an individual member of the Working Group associated with charge 5) who can provide a 5–10-minute update or report at this Working Group’s future calls.

Mr. Hughes said that regarding other identified models for which there were no volunteers during the call, he will be reaching out to regulators to ask for assistance in the review of the models, to determine if corresponding changes to the Handbook should be made, and to form SME groups, as needed, to develop initial exposure drafts for review and discussion by the Working Group.

4. Discussed Other Matters

Mr. Hughes asked the Working Group members to participate in as many Working Group conference calls as possible this year so the Working Group can accomplish the tasks that are planned in 2021.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 1, 2021. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Teri Ann Mecca (AR); Maria Ailor (AZ); Don McKinley (CA); Susan Kurtz (CO); Kurt Swan (CT); Frank Pyle (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Ron Kreiter and Sandra Stumbo (KY); Mary Lou Moran (MA); Mariel Kaufman (MD); Timothy Schott (ME); Jill Huisken (MI); Teresa Kroll (MO); Paul Hanson (MN); Troy Smith (MT); Reva Vandevoorde (NE); Karen McAllister and Edwin Pugsley (NH); Ralph Boeckman (NJ); Leatrice Geckler (NM); Hermoliva Abejar (NV); Larry Wertel (NY); Guy Self (OH); Landon Hubbart (OK); Jeffrey Arnold (PA); Glynda Daniels and Rachel Moore (SC); Shelley Wiseman (UT); Will Felvey (VA); Christina Rouleau (VT); and Theresa Miller (WV). Also participating was: Jo LeDuc (MO).

1. Adopted its March 19 Minutes

Mr. Haworth said the Working Group met March 19 and took the following action: 1) adopted its Feb. 25 minutes; 2) adopted revisions to the MCAS Best Practices Guide; 3) adopted a 14-day limitation for Market Conduct Annual Statement (MCAS) extension requests; 4) adopted a requirement that companies identify their MCAS attestors by line of business and by jurisdiction; and 5) adopted revisions to the NAIC Market Regulation Handbook training opportunities for market regulation analysts.

Ms. Weyhenmeyer made a motion, seconded by Ms. Rebholz, to adopt the Working Group’s March 19 minutes (see NAIC Proceedings – Spring 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Three). The motion passed unanimously.

2. Discussed Market Analysis Training

Mr. Haworth said he would like the Working Group to have one more opportunity to discuss market analyst training needs, and he encouraged additional written suggestions be sent to Randy Helder (NAIC) by July 16. He said the suggestions will be compiled in time for the Working Group’s meeting at the Summer National Meeting. He said at that time, the Working Group will consider ways to meet the training needs of market analysts.

Mr. Haworth noted that some ideas for training may include additions to the Market Analysis Techniques online course offered by the NAIC Education and Training Department; the creation of manuals with descriptions and screenshots; or more in-person Zoom walk-through trainings like he recently led for the Market Actions (D) Working Group National Analysis project.

Ms. Daniels asked if there could be training on TeamMate. Mr. Haworth said not all states use TeamMate.

Ms. Abejar said it would be good to have training on common market risks for different lines of business. The training could be provided by line of business.

3. Discussed the Next Line of Business for the MCAS

Mr. Haworth said the Working Group does not have any written suggestions for adding a new line business, but he invited the Working Group and interested parties to submit any suggestions for the next line of business to be added to the MCAS.

Mr. Haworth said the process for suggesting a new line of business is located on the Working Group’s web page. He said the process says a written suggestion should include: 1) a description of how the collection of data for this line of business will assist market regulation and benefit the consumer, as well as why the MCAS is the best choice for collecting this data; 2) supporting data on the size of the market, such as the number of carriers, policyholders, and premium volume; and 3) whether data is collected on a periodic basis in any other jurisdiction or manner.

Mr. Haworth asked that any suggestions be sent to Mr. Helder.
4. **Discussed the Initial Aggregate Analysis of MCAS Data**

Mr. Haworth said he would like to give the Working Group an opportunity to consider any first impressions of the 2020 MCAS data that was reported in April. He said the scorecards were posted on the NAIC’s MCAS web page on July 1. He cautioned that the MCAS data is confidential, and the Working Group would not discuss specific companies. As an example, he said he has noticed that some insurers are reporting far fewer complaints in the MCAS than what the department of insurance (DOI) has for the company. He said the complaints reported in the MCAS exclude complaints received by the company from the DOI. He said the expectation is that a company would receive more complaints directly from consumers than they receive from the DOI. He said he is gathering additional data on this.

Ms. Ailor said there are still validations of the MCAS data ongoing, and she suggested that the discussion should wait for another month until the validation of the data is complete. She said the Arizona DOI is currently focused on non-filers and attempting to get all filings in.

5. **Discussed Residency/Issuance Reporting in the MCAS**

Mr. Haworth asked whether the Working Group wishes to provide any guidance in the MCAS Data Call and Definitions for each line of business to guide insurers on which data to report to which state. He said the Working Group has discussed this in the past, but it has not made any changes to the definitions. He said this issue has most relevance for life, annuity and long-term care (LTC) lines of business due to the much longer policy terms, which create a greater potential for insureds to move from the state where they originally purchased these policies.

Mr. Haworth said this year, carriers submitted waiver requests to a number of states citing that they did not have approval to write a specific line of business in the state but had reported premium in the state based on the current residency of the insureds. He said the company asked for a waiver based on not being authorized to write the specific product in the state. The waiver requests were approved, but perhaps they should not have been. Mr. Haworth also noted that at least one carrier incorrectly reported risk corridor payments as premiums in Washington but had no business written in Washington.

Ms. LeDuc said the original intention was to require the companies to report in the MCAS just as they reported in the Financial Annual Statement (FAS) so there would be a correspondence of reporting between the MCAS and the FAS. Therefore, the companies were told to report by residency, but only by how they reported in the FAS. Ms. LeDuc said even if a policy is not issued in Missouri, she would still want the company to report an MCAS if there is premium reported in the FAS due to residents in Missouri. She said she does not think the waiver should have been approved.

Ms. Ailor asked how this topic is related to the way complaints are handled if, for example, a policy is issued to an association group in one state, but the certificate holder is a different state. Mr. Haworth said complaints tracking is more situational and could include third parties to an insurance contract and not the insured. Ms. Ailor said she understands how the tracking of complaints can be situational, but she said there can be instances where the certificate holder lives outside of a state where a policy was issued. The certificate holder could file a complaint with the state where the policy was issued, but no premium would have been reported to the state if the premium is reported by residency. She said in that case, there could be no comparison premium to complaints. Mr. Haworth agreed and noted that complaint analysis is not an exact science.

Mr. Haworth said this is an issue that could benefit from some additional training.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 28, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Sarah Borunda (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Dawna Kokosinski (MD); Jill Huisken (MI); Teresa Kroll (MO); Reva Vandevoorde (NE); Hermoliva Abejar (NV); Guy Self (OH); Gary Jones (PA); Maggie Dell (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); and Letha Tate (WV).

1. Adopted its June 30 Minutes

The Working Group met June 30 and took the following action: 1) received an update on the life Market Conduct Annual Statement (MCAS) draft edits for accelerated underwriting (AU); 2) adopted edits to the draft homeowners and private passenger auto (PPA) MCAS on digital claims, and then adopted the amended digital claims MCAS; and 3) considered the lawsuit definitions and placement of the lawsuit data elements for the homeowners and PPA MCAS.

Ms. Nickel made a motion, seconded by Mr. Flott, to adopt the Working Group’s June 30 minutes (Attachment Five-A). The motion passed unanimously.

2. Received an Update on the Life MCAS Draft Edits for AU

Ms. Rebholz stated the Accelerated Underwriting (A) Working Group plans to meet on July 29 to review the latest draft of the educational paper that is currently out for comment. She stated the Working Group will take oral comments, and all written comments on the latest draft will be due by July 30. She stated the MCAS Blanks Accelerated Underwriting subject-matter expert (SME) group continues to wait for adoption of a definition of “accelerated underwriting” by the Accelerated Underwriting (A) Working Group, and that once that definition is adopted, the SME group will reconvene for further discussions.

3. Received an Update on the Other Health Drafting Group

Mr. Helder stated the Other Health Drafting Group is finishing up the work on the other types of health blanks and will be getting a date set up and sending notification to everyone who was involved in the short-term, limited-duration insurance (STLDI) blank discussions. He stated that anyone wanting to get involved in these discussions should let him know so they can be added to that distribution list.

4. Discussed the Lawsuit Definitions and Placement of the Lawsuit Data Elements for the Homeowners and PPA MCAS

Ms. Rebholz stated there are many details that go along with decisions that the Working Group needs to make related to the lawsuit reporting for the home and auto MCAS lines of business. She stated that as a result, she would like to form an SME group for these discussions so a proposal can be brought back to the Working Group for consideration. She stated there is a distribution list that was used for the Digital Claims proposal that should include property/casualty (P/C) representatives, which will be used to start the group. Ms. Rebholz stated that those who did not previously participate in the Digital Claims SME discussions and would like to participate in the lawsuit discussions should contact Teresa Cooper (NAIC) to be added to the distribution list. She stated anyone who wants to be removed from that distribution list should also let Ms. Cooper know. Ms. Rebholz asked for a state insurance regulator to lead the lawsuit discussions, and Ms. Nickel volunteered to do so.

5. Requested Submission of Suggested Edits to Existing MCAS Blanks and Data Call and Definitions

Ms. Rebholz stated there is a form to be used for the submission of suggested edits to existing MCAS blanks and data call and definitions, which is located on the Working Group’s web page. She stated any questions or issues with the form can be sent to Ms. Cooper. Ms. Rebholz stated the Working Group charges include reviewing existing MCAS lines of business, and this
will be a good way to make improvements where needed. She stated proposals for changes can be made by state insurance regulators or interested parties.

6. Discussed Other Matters

Ms. Rebholz stated that while adopting the Digital Claims edits in June, it was decided that the reporting structure for the added interrogatory would be discussed further. She asked that the SME group working on the lawsuit information for the homeowners and PPA MCAS also work on this during their discussions on the lawsuit information. She stated the data to be collected has already been determined, and that it is just the structure for reporting that needs to be discussed. There was no opposition to this approach.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 30, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Teri Ann Mecca (AR); Maria Ailor and Sarah Borunda (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyner (IL); Mary Lou Moran (MA); Mariel Kaufman (MD); Jo LeDuc and Teresa Kroll (MO); Martin Swanson (NE); Gary Jones (PA); Glynda Daniels (SC); Tony Dorschner (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); John Haworth and Ned Gaines (WA); and Letha Tate (WV).

1. **Adopted its May 27 and May 26 Minutes**

The Working Group met May 27 and May 26 and took the following action: 1) adopted its April 28 minutes; 2) adopted the Travel Market Conduct Annual Statement (MCAS); 3) considered the Other Health MCAS and adopted the draft as the Short-Term Limited-Duration (STLD) Insurance MCAS blank; 4) discussed digital claims MCAS edits to the Homeowners and Private Passenger Auto (PPA) MCAS lines of business; 5) discussed the draft edits to the Life MCAS to include reporting for accelerated underwriting; and 6) adopted the definition of “lawsuit.”

Mr. Flott made a motion, seconded by Mr. Haworth, to adopt the Working Group’s May 27 (Attachment Five-A1) and May 26 minutes (Attachment Five-A2). The motion passed unanimously.

2. **Received an Update on the Life MCAS Draft Edits for Accelerated Underwriting**

Ms. Rebholz stated that the subject matter expert (SME) group has not met since before the May Working Group meetings, but the drafting group under the Accelerated Underwriting (A) Working Group has been meeting weekly in June to review comments received for its released “Part 1” draft. She stated that the definition it is working on is for purposes of its paper only, and since it is still releasing drafts and receiving comments, it is likely to be some time before it is ready to adopt the paper, which will include the definition. She asked if there is any interest in bringing the drafting group back together to review definition options that were discussed during the May Working Group meetings, or if the Working Group should continue to wait for the Accelerated Underwriting (A) Working Group’s final adopted definition of “accelerated underwriting.” She stated that the definition the Accelerated Underwriting (A) Working Group adopts may not be appropriate for an MCAS in defining data to be submitted. Mr. Swanson stated that he is waiting for the Accelerated Underwriting (A) Working Group to get done with its work. Mr. Haworth stated that waiting for the Accelerated Underwriting (A) Working Group to complete its definition may be best; then, the Market Conduct Annual Statement Blanks (D) Working Group can determine how to adjust and edit it for MCAS purposes.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that the definition being worked on by the Accelerated Underwriting (A) Working Group is for the purposes of an educational paper and not for MCAS reporting purposes. He believes waiting for the Accelerated Underwriting (A) Working Group to adopt its definition of “accelerated underwriting” will delay the process. Ms. Rebholz stated that based on feedback from the Market Conduct Annual Statement Blanks (D) Working Group members, this topic will be discussed at future meetings and progress from the Accelerated Underwriting (A) Working Group on the “accelerated underwriting” definition will continue to be monitored and discussed.

3. **Adopted Edits to the Draft Homeowners and PPA MCAS on Digital Claims and Adopted the Amended Digital Claims MCAS**

Ms. Rebholz stated that the drafts for Homeowners and PPA MCAS edits on digital claims were included in attachments within the meeting materials. She stated that since the May Working Group meetings, comments related to the digital claim drafts were submitted by Missouri, which include a few additional areas for discussion.

Ms. Le Duc stated that Missouri has trouble with the interrogatory question for the listing of third-party vendors because it does not see where this information will add value or provide actionable information. She stated that Missouri’s preference would be not to include this information, as it would just be a list that provides a partial picture, and it leaves out algorithms or data sources that the company might be producing or using on an internal basis, not through a third-party vendor. She stated
that if there were indicators of problems with a company’s digital claims, they would have a conversation with them and get additional information at that point as opposed to collecting it up front as part of the MCAS.

Ms. Nickel stated that she believes the purpose of asking for the listing of third-party vendors is to avoid doing additional outreach to carriers, and if a company is using third-party vendors, state insurance regulators would then be aware of that initially.

Peter Kochenburger (University of Connecticut School of Law) stated that one of the problems he sees is that there is no question for determining whether third-party vendors are being used appropriately, and the most important aspect is that insurance carriers pay the full value of the claim up to the limits. He stated that it is difficult to easily determine if there is a predictive algorithm being used that limits the policyholder’s or claimant’s ability or willingness to negotiate or consistently undervalues claim values whether it is by accident or not. He believes without asking a carrier how they arrived at the settlement amount each time, it would be difficult to examine the issue without having the basic information up front.

Mr. Birnbaum stated that listing the third-party vendors in the interrogatories is similar to listing third-party administrators (TPAs) and managing general agents (MGAs), which state insurance regulators have deemed useful. He stated that if the concern is that third-party vendors are not tied to uses on the digital claims process, a possible solution would be editing the interrogatory to add at the end of the sentence, “and for each vendor, identify the vendor’s specific role in the digital claims process” to get the name of the vendor and their role. He stated that the fact that one interrogatory cannot address every possible concern is not a reason to eliminate it, as it can address a significant portion of regulatory and consumer concern, and he believes this interrogatory does that and should be included, with the addition of, “and for each vendor, identify the vendor’s specific role in the digital claims process” at the end of the sentence.

Ms. Ailor stated that she has referred to the Financial Annual Statement in the past when wanting to know what MGAs and TPAs a company is using, and she asked if Ms. Nickel has found that helpful in the past. Ms. Nickel stated that she believes this interrogatory goes beyond what is provided in the Financial Annual Statement, and it would be more efficient to have this information provided in the MCAS.

Ms. Moran made a motion, seconded by Ms. Nickel, to keep the interrogatory as it stands and add, “and for each vendor, identify the vendor’s specific role in the digital claims process” at the end of the sentence. Ms. LeDuc stated that she would then recommend that the question be restructured differently so that there would be one line per vendor rather than one large amount of information all together. Teresa Cooper (NAIC) asked for clarification on how the Working Group would like that to look. Ms. Nickel stated that including each vendor line by line would be helpful and she would support that. Ms. LeDuc stated that having each vendor on a separate line in the database with the vendor’s name and additional information would be helpful. Ms. Cooper stated that there is not a way to continue to add a line if there are more vendors to add, but it would be possible to add five lines for each vendor to be added on a separate line, but there is not a way to have a variable record count. Ms. Nickel suggested adding 20 lines and an additional line for carriers to write in if the 20 lines were insufficient so that it could be revised for the following data year. Ms. Moran stated that she would be willing to amend her motion to include adding 20 lines for vendor information to be entered separately. Ms. Cooper stated that if that many lines were needed, it may be better to add a separate schedule for the list of vendors. Mr. Birnbaum stated that the motion could still be voted on regarding the information to be reported, and then the NAIC could determine the details of how that would look. Ms. Cooper stated that this would work if the motion reflected that. Ms. Moran restated the motion, seconded by Ms. Nickel, to keep the interrogatory as it stands; add, “and for each vendor, identify the vendor’s specific role in the digital claims process” at the end of the sentence; and discuss how the details of the data will be reported at a later date. The motion passed unanimously.

Ms. LeDuc stated that she had a suggestion that was related more to appearance. She stated that the paragraph that listed what should or should not be reported regarding digital claims appeared cumbersome, and a table format seems like it would be clearer. Mr. Birnbaum stated that the suggestion makes it appear that only certain coverages are to be reported at the digital claims handling process level of detail, which could be confusing. He stated that he believes the current language is clearer. Ms. LeDuc stated that her understanding is that only dwelling and personal property coverages would be reported at the digital claims level, and perhaps there needs to be a rewording to reflect that those coverages would also need to be reported at the digital claims level. Ms. Nickel asked if the hybrid and traditional claims would still be broken out separately regarding dwelling and personal property. Ms. LeDuc stated that she has no intention of changing the level of detail being collected, and she is just trying to make it easier to read, as she found the description of other breakouts confusing. She asked whether it would be clearer if the phrase above the Xs was removed and replaced with “other breakouts” and what constitutes a digital claim was defined elsewhere. She stated that she does not see the need to report it in the portion of other breakouts.
Ms. LeDuc made a motion, seconded by Ms. Nickel, to implement the suggestion for a table format and add the word “also” so the table description reads, “reported also at the Digital Claim Handling Process Level of Detail.” The motion passed unanimously.

Ms. Rebholz stated that the next item to review relates to the reporting of the Median Days data element. She stated that this edit was discussed and already adopted during the May Working Group meetings. The suggested solution to the concerns raised is to add the sentence, “Additionally, an ‘All’ breakout will be included for the reporting of Median Days to Final Payment.” Ms. Nickel stated that she believes there was already a median day’s breakout for those particular lines. Ms. LeDuc stated that unlike when a claim is reported and you can add all the claims reported in each of the breakout buckets, with median days, you cannot add the median days and get an overall median day because mathematically it does not work. She stated that she is looking for the overall median days for all three digital buckets together. There were no concerns raised with this sentence being added.

Ms. Rebholz stated that the final suggestion to discuss is edits to the digital claims-related definitions submitted for review. Ms. LeDuc stated that she is just trying to simplify the definition based on previous discussions, so the definition stood on its own and was easily understood. Ms. Nickel stated that she would not be opposed to removing the examples and placing them in a separate clarifying document to be used as a guidance tool. Ms. Ailor stated that rather than create another document, maybe it could be worked into the frequently asked questions (FAQ) document that already exists. Mr. Birnbaum suggested that this type of editing and discussion take place in the SME group as opposed to on a Working Group call. He stated that the reason examples were provided was to address issues raised by industry stakeholders that participated in the Digital Claims MCAS SME group discussions. Lisa Brown (American Property Casualty Insurance Association—APCIA) stated that she gets frequent questions for clarification on specific scenarios from members, and she suggests keeping the information in the one Data Call and Definitions document, as she believes it is the best way to ensure the MCAS blanks are completed properly, as opposed to having people refer to more than one document when questions arise. Ms. Nickel stated that she believes examples would be better in an FAQ document, and questions that are not addressed in the Data Call and Definitions and FAQ documents will be handled by the NAIC.

Ms. Nickel made a motion, seconded by Ms. LeDuc, to accept the digital claims edits for the Data Call and Definitions document suggested by Ms. LeDuc and create an FAQ document for digital claims. The motion passed unanimously.

Ms. Nickel made a motion, seconded by Mr. Gaines, to adopt the Digital Claims MCAS with the amendments adopted during this Working Group call. Ms. Brown asked if the adoption of the Digital Claims MCAS would be for the collection of 2023 data to be reported in 2024 since it was not passed by the June 1 deadline. Ms. Rebholz stated that this would be moved to the Market Regulation and Consumer Affairs (D) Committee for approval and determining the data year for reporting. Ms. Cooper stated that the Committee would be made aware that it was not adopted by the June 1 deadline when this information is presented, and the data year was removed from the template and exposed draft, so it would be passed on for its consideration without a data year indicated. The motion passed unanimously.

4. Considered the Lawsuit Definitions and Placement of the Lawsuit Data Elements for the Homeowner and PPA MCAS

Ms. Rebholz stated that there is a situation with the Home and Auto lawsuit definitions and placement, and during the April Working Group meeting, the Working Group approved the expansion of MCAS lawsuit reporting for Home and Auto to include non-claims-related lawsuits. However, the Working Group did not have time to discuss the actual placement and definitions for this expanded reporting prior to the June 1 deadline, and it now needs to determine if there is a way to provide guidance for the already approved expanded reporting for the 2022 data year to be reported in 2023. She stated that an attachment within the meeting materials shows a proposed draft that was distributed for review on June 3, and the intent of the exposed draft was only to accommodate for the already approved, expanded reporting. Comments were received related to the draft from the APCIA, the CEJ, and Missouri.

Ms. Brown stated that based on the written procedures for the MCAS data element revision process, she does not believe the updates are just clarifying and providing guidance to industry. She believes the updates are new data elements, and based on NAIC procedures, they would have needed to be approved by June 1 to be effective for the next data reporting year for collection in 2023. She stated that she has concerns with how arbitrations are addressed in the definition of “lawsuit.” She stated that she believes they are not actions brought before a court of law and therefore should not be included, but if they are to be included, she suggests that the calculation clarification specifically exclude intercompany arbitrations, mutually agreed upon arbitrations, appraisals, and mediations. Mr. Birnbaum stated that arbitrations are not an action brought in a court of law, which is what the definition of “lawsuit” says. He stated that there are different types of arbitrations, and most of them are
mutually agreed upon, which is qualitatively different from a what a lawsuit is. He suggested that the reference to arbitrations either be deleted, or if it is included, that language be added stating, “include arbitrations demanded by the insurer or claimant pursuant to pre-dispute mandatory arbitration provisions in the insurance contract. Do not include mutually-agreed upon arbitrations, appraisals or mediations.” He stated that he believes the model bulletin adopted by the Market Regulation and Consumer Affairs (D) Committee in August 2018, specifically related to arbitration clauses, supports the CEJ and APCIA’s positions on this matter. Ms. Rebholz stated that one of the options available is to hold the approval of expanding the lawsuit reporting to non-claims-related suits until the 2023 data year reported in 2024, without updating the claims-related lawsuit definition for the 2022 data year. Ms. LeDuc stated that the proposal she suggested is more of a layout proposal to create a separate schedule so all the information would be contained in a single space and not in two different sections. She stated that it would be easier to work with and provide the whole picture related to all lawsuits in a single location, as opposed to splitting it across the underwriting and the claims schedule. She stated that it would just be the lawsuit data elements with the six buckets, five for the claims-related lawsuits and one for the non-claims-related lawsuits. Mr. Birnbaum stated that the CEJ made this suggestion a few months back, and it was rejected by the Working Group. He also asked the Working Group to consider whether it wants to collect the lawsuit data broken out by coverage as opposed to just claims-related and non-claims-related data. He stated that it is unclear how an insurer reports lawsuits if it involves multiple coverages and how that data would be interpreted. Ms. LeDuc stated that lawsuit data is currently collected by line of business for the claims. She stated that she looked at suggesting claims versus non-claims-related lawsuit buckets, and that would have been acceptable for Missouri; but in looking at the volume of lawsuits in other jurisdictions, she recognized that other states may continue to find value in the lawsuits broken down by coverage type, so it was kept in the proposal. Ms. Nickel stated that she believes having arbitration data would be valuable to have, whether it is separate of lawsuits or not. Ms. Cooper stated that another option is to discuss this further and then adopt for the following data year if the Working Group does not want to expand the definition, as was previously voted on for the 2022 data year.

Ms. Nickel made a motion, seconded by Ms. LeDuc, to hold on the approval of expanding the lawsuit reporting to non-claims-related lawsuits until the 2023 data year reported in 2024, without updating the claims-related lawsuit definition for 2022, and revert to the prior lawsuit definitions and continue this discussion further. The motion passed unanimously.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group  
Virtual Meeting  
May 27, 2021

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 27, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Crystal Phelps (AR); Maria Ailor (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Dawn Kokosinski (MD); Jill Huiskens and Randall Gregg (MI); Paul Hanson (MN); Cynthia Amann, Jo LeDuc and Teresa Kroll (MO); Laura Arp (NE); Hermoliva Abejar (NV); Todd Oberholtzer (OH); Gary Jones and Katie Dzurec (PA); Michael Bailes and Rachel Moore (SC); Maggie Dell (SD); Bill Huddleston and Shelli Isiminger (TN); Tanji J. Northrup and Tracy Klausmeier (UT); and John Haworth and Ned Gaines (WA). Also participating was: Kim Cross (IA).

1. Discussed Digital Claims Edits to the Homeowners and Private Passenger Auto MCAS Lines of Business

Ms. Rebholz stated that the meeting materials include the pages of the data call and definitions that contain edits for review. She stated that questions were received from Missouri state insurance regulators, and those questions and answers were posted for review on the Working Group’s web page. She asked if there were any follow up questions.

Ms. LeDuc asked for clarification on how the median days to pay would be calculated. She stated that the response was that they could estimate what the calculation is for median days to pay so there could be consistency in looking at how that played out from prior years, or they could request that the aggregate median be reported. Birny Birnbaum (Center for Economic Justice—CEJ) stated that companies could be directed to report the median days not only for the individual breakouts, but also for the total. Ms. LeDuc stated that this would mean a change to the proposal would need to be made. Mr. Birnbaum stated that this is correct, and he explained that a proposal could be made to amend the blank to include reporting for the median days not only for the breakouts by digital, but also for the total. Mr. Hanson asked how important it is to have the three categories for digital claims plus a separate column for the total, other than for transitional purposes. Ms. Abejar stated that she believes there would be value in having all four columns to identify trends for analysis purposes. Ms. Rebholz stated that one of the solutions would be to have columns for the three separate digital claims categories and then a fourth column for the total. Mr. Birnbaum stated that there was previous discussion about using the term “total” or the term “all,” and the term “all” was settled on because in some cases, the total is not needed, but rather the aggregate, so the term “all” for that fourth column would be recommended. Mr. Haworth clarified that his understanding of the four categories being discussed here are: digital claims, digital/traditional hybrid claims, traditional/other than digital claims, and all.

Ms. Ailor made a motion, seconded by Mr. Hanson, to add a total column for median days. The motion passed unanimously.

Ms. LeDuc asked for clarification on why the time frames were chosen of 0–30 days, 31–60 days and 61–90 days for claims closed with payment. Mr. Birnbaum stated that the primary reason for the time frames is consistency that companies are familiar with, and it would not require a new data element that would require programming change. He also explained that settling within 0–30 days is acceptable. He then stated that by breaking out the digital claims time frames this way, the data is more relevant and useful for the hybrid and traditional claims because they are going to be populating the other date ranges in a more accurate fashion, and the aggregate would not be skewed by digital claims.

Ms. LeDuc stated that she asked if digital claims applied to both first- and third-party claims, and the answer was yes. She asked if references to the term “insured” used in the Digital Claims MCAS example language should be changed to “insured/claimant” to be consistent with other MCAS lines of business.

Mr. Haworth made a motion, seconded by Ms. Nickel, to add “insured/claimant” in the Digital Claims MCAS example language. The motion passed unanimously.

Ms. LeDuc stated that the way the digital claims definition is currently written does not outline the requirement to have an algorithm applied for it to qualify as a digital claim. She believes the definition needs to stand on its own without having to provide examples. Ms. Abejar and Mr. Haworth agreed with this. Ms. Rebholz suggested adding “run through an algorithm” to the definition after “utilizing digital information.” Mr. Birnbaum suggested adding “through an algorithm” after “utilizing digital information only.”
Mr. Haworth made a motion, seconded by Mr. Flott, to add “through an algorithm” after “utilizing digital information only” to the digital claim settlement definition, which is also to be added to the definition of digital/traditional hybrid claim settlement. The motion passed unanimously.

Ms. Le Duc asked for clarification on a digital/traditional hybrid claim. She stated that her understanding is that the hybrid claim would be something that started off as a digital claim, then if human intervention later happened in the claim, it would be a hybrid claim. Ms. Rebholz confirmed that this was correct. Ms. Le Duc stated that she believes some clarity needs to be provided in this definition because an adjuster may look at a file without doing an in-person inspection or in-person appraisal; it does not sound like human intervention would be restricted to inspection or appraisal, but it becomes human intervention in the adjudication of the claim. Mr. Hanson stated that where it says the insurer then performs a visual inspection of the vehicle, it is unclear if that could mean a review done electronically by looking at photos or if it means in-person inspection needs to be completed. After some additional discussion among the Working Group about the three categories of digital claims, digital/traditional hybrid claims, and traditional/other than digital claims settlements, Ms. LeDuc stated that she believes more time is needed for everyone to review the draft and provide any additional comments, especially given that some revisions were made today. Mr. Birnbaum stated that the CEJ would strongly object to that, as it would mean the Digital Claims MCAS blank would not be implemented for 2022 reporting and would be pushed off for another year. He stated that these definitions were distributed two weeks ago or more for review and for people to raise any questions. Several state insurance regulators expressed interest in having more time to review the Digital Claims MCAS blank, including Ms. Cross, Ms. Moran, Ms. Arp, Ms. Abejar, Ms. Dell and Mr. Gregg; as such, the Digital Claims MCAS blank was not adopted at this time.

2. Discussed the Draft Edits to the Life MCAS to Include Reporting for Accelerated Underwriting

Ms. Rebholz stated that the draft for edits to the Life MCAS to include reporting for accelerated underwriting is included in the meeting materials. She stated that the accelerated underwriting draft is being brought before the Working Group with objection from industry to the definition of accelerated underwriting. She provided background that last year, the CEJ proposed that accelerated underwriting breakout reporting be added to the Life MCAS, and in September of last year, the Working Group voted to move forward with reviewing the proposed definitions with the intent to implement accelerated underwriting reporting. This was done to provide state insurance regulators with data related to life insurers’ use of non-traditional data sources, such as facial analytics, credit scores and social media for underwriting purposes, along with algorithms for faster underwriting turnaround. Ms. Rebholz stated that this data was intended to assist state insurance regulators with understanding the use of accelerated underwriting and monitoring the growth of the use of accelerated underwriting.

Ms. Rebholz stated that the Life Insurance and Annuities (A) Committee has a working group devoted to accelerated underwriting. This Accelerated Underwriting (A) Working Group is working on a definition of accelerated underwriting for the purposes of its white paper, but it is still in draft form. The subject matter expert (SME) group tried to wait for a definition of accelerated underwriting from the Accelerated Underwriting (A) Working Group; however, the SME group was unable to adopt a definition in time for the Market Conduct Annual Statement Blanks (D) Working Group to consider it prior to the June 1 deadline. Ms. Rebholz stated that with guidance from commissioners, it was agreed that the Accelerate Underwriting (A) Working Group would move forward with a definition, and a note was added to the definition stating the following, “[t]his definition is for MCAS reporting. In an ongoing effort to collaborate two workstreams at the NAIC, the definition will be reviewed and may be amended, as needed, upon the Accelerated Underwriting (A) Working Group’s adoption of a definition of Accelerated Underwriting.” She stated that if the accelerated underwriting edits and definitions are adopted today, that definition is subject to edits upon receipt of the Accelerated Underwriting (A) Working Group’s final definition. She stated that the SME group did not reach consensus on a definition, and the edits and most recent definition posted has been moved to the Accelerated Underwriting (A) Working Group for further discussion.

Ms. Rebholz noted that since posting the final SME group draft, proposed draft definitions were received from the American Council of Life Insurers (ACLI) and Nevada. She stated that the Accelerated Underwriting (A) Working Group also has a draft definition that they are working on, and a document was posted showing all four of the draft definitions in one document for easier review.

Ms. Rebholz stated that new interrogatories were added to indicate that whether accelerated underwriting is used by the company, and if so, to provide a listing of data categories and sources used for accelerated underwriting. She stated that no new data elements are added to the draft; instead, in addition to the existing breakouts for cash value and non-cash value products, breakouts were added for accelerated underwriting and other than accelerated underwriting for those data elements where it was deemed appropriate. The data elements that include an accelerated underwriting breakout are: 1) total number of new policies issued by the company during the period; 2) number of policies applied for during the period; 3) number of free looks.
Mr. Birnbaum stated that when the proposals for digital claims and accelerated underwriting were made, the motivation was consumer concerns and the work being done by the NAIC on big data and artificial intelligence (AI), specifically related to insurers’ use of new data sources and algorithms to speed up or replace traditional methods of pricing, claim settlement and antifraud. He stated that the industry term for the application of big data and AI for auto and home insurance claims is digital accelerated underwriting from the perspective of insurers marketing their practices to state insurance regulators and the public on the key consumer protection aspects of any big data and AI application and the consumer outcomes resulting from the use of new data sources and the new AI technology, not the benefits the insurer hopes to achieve. He stated that for those reasons, he does not believe the other definitions proposed are suitable for the purpose of MCAS reporting, as they seek to explain accelerated underwriting from the perspective of insurers marketing their practices to state insurance regulators and the public as something new the life insurance industry has invented. He stated that the reasons insurers use accelerated underwriting is not relevant, and the definition from the SME group provides very clear guidance on which criteria determine whether something is an accelerated underwriting transaction.

Ms. Abejar stated that the definition should support solving issues regarding the consumer risk that is associated with accelerated underwriting. She asked why data sets were not included for the use of medical data provided by an applicant, and the use of non-medical data provided by an applicant, and the use of medical data that is not provided by an applicant. She stated that these data sets can still be misused when there is an algorithm that is faulty or problematic. She stated that not including those data sets limits the definition. She stated that the second concern is that there is no question asking what methods, tools or systems companies are using to accelerate underwriting, because each step of the process carries a different consumer risk and probably a different regulatory approach. Mr. Birnbaum stated that the thrust of the accelerated underwriting is to focus on new data types used by insurers, and they are using those new types of data, not simply algorithms that speed up the analysis of traditional data. He provided an analogy of a property/casualty (P/C) insurance company that previously accepted accident records from a consumer in an application, now using a third-party data provider to get those reports and accident history, which speeds up a traditional underwriting process but is not introducing new types of data. He stated that regarding the second concern, the interrogatory asks for a list of vendors that provide the data or the algorithms that addresses the tools and methods used.

Ms. Rebholz stated that the SME group did not reach consensus on the definition for accelerated underwriting, and if the Market Conduct Annual Statement Blanks (D) Working Group feels there needs to be more time devoted to this with input from more state insurance regulators, it can be pushed back another year if needed. Mr. Flott stated that he believes the SME group should reconvene on this with more representatives from industry and state insurance regulators. Mr. Hanson stated his agreement with Ms. Abejar, and he believes additional time should be spent on the definition because there is a lot of information that can be obtained from the consumer and used in a manner that leads to accelerated underwriting. Mr. Huddleston, Ms. Crittenden, Ms. LeDuc, Ms. Weyhemeyer, Mr. Gregg, Ms. Huiskan, Mr. Bailes, Ms. Moran and Ms. Cross agreed that more time is needed. Ms. Cross stated that the Market Conduct Annual Statement Blanks (D) Working Group should refer to the Accelerated Underwriting (A) Working Group for a definition and not make this determination. Ms. Moran stated that she believes the Accelerated Underwriting (A) Working Group would seem to be the more appropriate working group to develop the definition.

Brendan Bridgeland (Center for Insurance Research—CIR) stated that he strongly supports Mr. Birnbaum’s recommendation, and he urged adoption of the proposed accelerated underwriting definition.

3. **Adopted the Definition of Lawsuit**

Ms. Rebholz stated that the decision was made by the Market Conduct Annual Statement Blanks (D) Working Group in April to expand the definition of lawsuits for home and auto to include non-claim related lawsuits. She stated that there are three options to consider in determining the level of granularity for reporting. She stated that the first option is to report all lawsuits at the coverage level, and it has been noted that this could be problematic since non-claims related lawsuits do not fit well into the separate coverage types. She stated that the data elements could be left in the claims reporting section, or they could be moved to a new section with reporting at that coverage level. The second option is to report lawsuits in total, either in the
underwriting section or in a new section. The third option is to report claims related lawsuits in the claims section and all other lawsuits in the underwriting section.

Ms. Rebholz asked if it would be an issue for the lawsuit language to go back to what it had been. Teresa Cooper (NAIC) stated that since the Working Group voted to expand the reporting to include non-claims related lawsuits, waiting could be an issue. She stated that it is critical to determine a lawsuit definition for the Travel and Short-Term Limited-Duration (STLD) lines of business that were recently adopted to move forward. Mr. Birnbaum suggested using the current definitions that were most recently developed for the other MCAS lines of business (Life and Annuity, Disability Income, Private Flood, Lender-Placed, Home and Auto, and Long-Term Care [LTC]), as they were vetted and straightforward. Ms. Cooper asked if Mr. Birnbaum is referring to the lawsuit definition on page 45 of the meeting materials. Mr. Birnbaum confirmed that he is and stated that the difference between agent or producer is editorial in nature, and clarification changes could be made if needed, since they would not be substantive between now and when the Market Regulation and Consumer Affairs (D) Committee considers this. Ms. Rebholz stated that if the current language is accepted, making an edit where it was previously suggested for “claimant/beneficiary” may be warranted. Ms. Crittenden asked if this is regarding option two. Ms. Cooper explained that the conversation switched from discussing Home and Auto to discussing Travel and STLD, and the question now is whether the lawsuit definition outlined on page 45 of the meeting materials, with the minor edit for “claimant/beneficiary,” should be accepted for the Travel and STLD MCAS lines of business.

Ms. Crittenden made a motion, seconded by Ms. Phelps, to adopt the definition for lawsuit as outlined on page 45 of the meeting materials, with the “claimant/beneficiary” language to be added. The motion passed unanimously.

Ms. Rebholz stated that this adopted definition of lawsuit will apply to the recently adopted Travel and STLD MCAS blanks.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
May 26, 2021

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 26, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Crystal Phelps (AR); Cheryl Hawley and Maria Ailor (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Dawna Kokosinski (MD); Chris Gleason (MI); Cynthia Amann, Jo LeDuc and Teresa Kroll (MO); Martin Swanson (NE); Leatrice Geckler (NM); Hermoliva Abejar (NV); Guy Self and Todd Oberholtzer (OH); Jeffrey Arnold (PA); Glynda Daniels (SC); Maggie Dell (SD); Shelli Isiminger (TN); Tanji J. Northrup (UT); John Haworth and Ned Gaines (WA). Also participating was: Kim Cross (IA).

1. **Adopted its April 28 Minutes**

The Working Group met April 28 and took the following action: 1) adopted its March 23 minutes; 2) heard an update on the Travel Market Conduct Annual Statement (MCAS); 3) heard an update on the Other Health MCAS; 4) heard an update on the Accelerated Underwriting and Digital Claims MCAS; 5) discussed the placement of complaint and lawsuit data elements within the Home and Auto MCAS reporting blanks; 6) and discussed the MCAS lawsuit definitions.

Mr. Flott made a motion, seconded by Mr. Gaines, to adopt the Working Group’s April 28 minutes (Attachment Five-A2a). The motion passed unanimously.

2. **Adopted the Travel MCAS Draft**

Ms. Rebholz stated that the Travel MCAS draft was provided for review in the meeting materials. She noted that the Travel MCAS subject matter expert (SME) group has identified Trip Cancellation, Trip Interruption, Trip Delay, Baggage Loss or Delay, Emergency Medical and Dental, Emergency Transportation and Repatriation, and Other as the coverage breakouts, with additional breakouts for Domestic versus International coverages. In addition, Emergency Medical is broken out by Primary versus Excess coverage. Ms. Rebholz stated that the Claims, Underwriting, Lawsuit and Complaint data elements are similar to other MCAS lines of business; and where possible, definitions from the *Travel Insurance Model Act* (#632) were used for consistency purposes. Since travel insurance is represented by a small number of companies and the policies are generally small in amount, it was decided by the SME group to require reporting for all companies licensed and reporting for any travel insurance within any of the participating MCAS jurisdictions. Ms. Rebholz stated that the SME group requested input from the Working Group regarding the definition of “lawsuit” for the Travel MCAS. She stated that lawsuit definitions will be discussed later in the meeting, the Travel MCAS draft could be adopted now, and the definition of “suits” could be amended, as needed.

Birny Birnbaum (Center for Economic Justice—CEJ) provided two proposed additions to the Travel MCAS draft. He stated that the first suggestion is to add a coverage breakout for cancel for any reason (CFAR) coverage, and the second is to add a data element for free-look cancellations. He stated that as a result of the pandemic, travel insurers have significantly increased the inclusion of CFAR coverage, and this breakout could provide relevant information about this new and growing benefit. He explained that CFAR coverage increases the cost dramatically for a travel insurance policy, and there are a number of features associated with it that could be confusing to a consumer. He stated that the CEJ is asking that CFAR coverage be broken out for Domestic versus International, but not by Primary versus Excess. Ms. Ailor asked if the definition for “cancel by the consumer” would need to be modified to exclude those CFAR if an addition were made for CFAR coverage. Mr. Birnbaum explained that cancel for any benefit is a coverage that allows the cancellation of a trip, but it is not the same as canceling a policy; it is using your policy to get a benefit. He explained that CFAR coverage is a different coverage that allows the cancellation of the policy for any reason, and the data element in the underwriting section is about cancelling a policy.

Mr. Birnbaum stated that the second suggestion is to add a data element in the underwriting table for free-look cancellations. This suggestion is made because the current data element does not break free-look cancellations out from other consumer-initiated cancellations and free-looks are included in travel insurance policies. He stated that this greatly limits the analytic value of the cancellation data since that element would likely include many free-look cancellations, and it is important to break them out not only to track free-look outcomes, but also to improve the value of the general cancellation data element. He pointed out that other MCAS lines of business that feature free-look periods include a free-look cancellation data element, including life insurance and long-term care insurance (LTCI) lines. The CEJ suggestion includes adding the data element for free-look cancellations during the period and the definition for “free-look” as used in the other MCAS blanks. Ms. Nickel stated that she supports the addition of the free-look cancellation data element. Michael Byrne (US Travel Insurance Association—
USTiA) stated that he believes there was a vote in the SME group on this, and he asked what the result of that vote was. Ms. Rebholz stated that it was a very close vote, and she believes there was only a one vote difference that tipped the vote toward not including this data element, with three for adding it and four for not adding it.

Ms. LeDuc stated that since this is a new blank, she believes now would be a good time to consider changing the word “states” to “jurisdictions” to be more inclusive of U.S. territories that may want to participate. She also noticed that the Travel MCAS blank has three schedules related to providing data—schedules two through four—and schedule one for interrogatories does not provide a specific line option for lawsuits and complaints where the insurance company reporting could provide additional comments related to the numbers they are reporting. She believes it would be helpful since the lawsuits and complaints are not attached to something else, and not having that separate line might not spur companies to provide information that could be helpful to analysts. She also asked why the number of complaints received directly from the department of insurance (DOI) was being asked for when that data is already available elsewhere. Ms. Nickel stated that the complaints reported by the carrier and the ones received by the DOI never seem to match up, so she believes it is helpful to have this data to be able to review and compare their information. Mr. Gaines agreed and said he sees discrepancies in this area as well, and it can be a red flag regarding data integrity.

Mr. Byrne stated that the USTiA objects to adding any new items, and it supports the template as presented by the SME group. He also stated that if additional elements are going to be added, the industry would like the opportunity to comment on them. Mr. Birnbaum stated that these issues were discussed in the SME group, and there was not consensus, which is why the request to make these additions is being asked of the Working Group. Lisa Brown (American Property Casualty Insurance Association—APCIA) stated that she would like more time to get feedback from companies, and she does not support adding the free look period, which her vote reflected in the SME group. Mr. Oberholtzer stated that Mr. Birnbaum has indicated that the majority of all cancellations are during free-look periods, so that information is already known. He stated if there were a high number of cancellations that state insurance regulators were curious about, they could ask the companies to provide additional information, as needed. Mr. Oberholtzer stated that Ohio does not support breaking out additional cancellation information. He stated that he supports the Travel MCAS blank as it was presented by the SME group, and that he wants to voice the position of state insurance regulators that voted not to add the additional data element. Ms. Nickel stated that while she believes it is important to have the additional data element, and a full premium return is important to differentiate in analysis, she would defer to Mr. Oberholtzer and his recommendation given his knowledge and expertise on this subject matter. Ms. Rebholz asked for a motion regarding Ms. LeDuc’s recommendations to change the term in the Travel MCAS draft from “states” to “jurisdictions” and to add the two interrogatory lines for any comments that companies might choose to add about lawsuits or complaints for the schedules to align.

Ms. Nickel made a motion, seconded by Ms. Isiminger, to edit the Travel MCAS draft to change the term from “states” to “jurisdictions” and to add the interrogatory lines for any comments that companies might choose to add about lawsuits or complaints. The motion passed unanimously. Ms. Rebholz then asked if there was a motion to adopt the Travel MCAS blank, and she explained that the motion could also include whether it includes adoption of the CEJ proposals.

Mr. Oberholtzer made a motion, seconded by Ms. Kroll, to adopt the Travel MCAS draft without adding the CEJ proposals. The motion passed with Idaho abstaining.

### 3. Considered the Other Health MCAS Draft

Randy Helder (NAIC) stated that the Other Health SME group has been meeting regularly and has focused on short-term limited-duration (STLD). The final draft of the Other Health STLD MCAS blank was provided in the meeting materials. This is the product of a large group of state insurance regulators, industry, and consumer representatives who put in many hours of work. He stated that when work on the Other Health MCAS blank began, the drafting group’s intention was to develop a blank to cover all the other health products that were not currently part of the Health MCAS blank. It was quickly realized that to meet the June 1 deadline for adoption, the group would have to concentrate on only one product, which was STLD insurance. If this blank is adopted by the Working Group, work on the remaining other health products will take place.

Mr. Helder stated the 2019 STLD insurance data call was used as the jumping off point, but it was significantly expanded. The blank is divided into six sections: 1) interrogatories; 2) policy/certificate administration; 3) prior authorizations; 4) claims administration; 5) consumer complaints and lawsuits, and 6) marketing and sales. Mr. Helder stated that the data will be reported in nine categories: STLD insurance products sold through associations used in the state; STLD insurance products sold through associations not used in the state; and STLD insurance products not sold through an association. Each of these categories are divided into products with a term of less than or equal to 90 days, less than or equal to 180 days, and 181–364 days. In the interrogatories, information is requested on where the products are filed and marketed; waiting periods; triggers
for pre-existing exclusions; renewals/reissues and re-underwriting upon renewal; associations and fees; the use of third-party administrators (TPAs); and other distribution channels, such as independent and captive agents or employees. The policy, claims, prior authorization, and complaints sections ask the typical questions found in the other MCAS blanks, such as: policies in-force; policies/certificates issued and renewed; covered lives and member months; cancellations by reason; claims received; claims paid; days to claims decisions; and claim denials or rejections by reason. The marketing and sales section asks for information on: applications received, approved and pending; the number of new applications denied by reason and renewal apps denied by reason; and how the applications were initiated and completed (whether by phone, face-to-face, mail or online); and information requested about commissions paid, unearned commissions returned to the company, and other fees charged to applicants and policyholders that the company collected. It is specified in the instructions that the threshold is $50,000 in premium within the jurisdiction, and the STLD insurance products should be reported by the residency of the individual insured. Mr. Helder stated that the drafting group left the definition of “lawsuit” unfinished. He stated that the intention is to have a definition of “lawsuit”, since this blank does ask for lawsuit information. It was determined that it would be best to allow the Working Group to finish its work on the definitions first and to proceed with adoption of this blank, as the data elements for lawsuits will not change regardless of the definition. The drafting group believes the Other Health STLD Insurance MCAS blank is ready for adoption.

Mr. Birnbaum stated the data element of 2-20 is for the number of policies/certificates cancelled during the free-look period, and he asked why the SME group felt this was an important data element. Mr. Helder stated that he did not recall the exact discussion, but he believes it was kept in the blank, as it was not something they wanted to exclude from the data collection.

Ms. Nickel stated that when the SME group was initially meeting, the idea was that this blank would encompass other health products, but then the focus changed to just STLD insurance. She suggested just calling this blank the STLD Insurance MCAS blank, and when work begins for the other health products, calling that the Other Health MCAS blank.

Ms. Nickel made motion, seconded by Mr. Oberholtzer, to adopt the draft as the STLD Insurance MCAS blank. Ms. Crittenden advised that in line 1-07 there is an extra “to” that needs to be deleted, in line 1-09 a period needs to be added after the parentheses, and there is a typo in line 2-26 that should be 2-28. Ms. Rebholz confirmed that those corrections would be made. Ms. Amann asked if there is a comment period after today if the blank is adopted. Mr. Helder stated that comments can be made between June 1 and Aug. 1, prior to the Market Regulation and Consumer Affairs (D) Committee reviewing this. The motion passed unanimously.

4. Considered the Digital Claims Edits to the Homeowners and PPA MCAS Lines of Business

Ms. Rebholz stated that Digital Claims edits to the Homeowners and Private Passenger Auto (PPA) lines of business need to be considered. She stated that two interrogatories related to Digital Claims were added for each line of business. For PPA, claims-related data elements for the Collision, Comprehensive/Other Than Collision, Property Damage and Uninsured Motorists and Underinsured Motorists (UMPD) coverages are broken out to identify Digital Claims, Digital/Traditional Hybrid Claims, and Traditional/Other than Digital Claims. For Homeowners reporting, the Digital claims breakouts apply to the Dwelling and Personal Property coverages. Definitions were also added for Digital Claim Settlement, Digital/Traditional Hybrid claim settlement, and Traditional/Other than Digital claim settlement.

Ms. Kroll stated that Ms. LeDuc had to step away, but she had some questions on this agenda item. The first question was why a list of vendors was being asked for in the interrogatories section. Ms. Nickel stated that digital claims are sometimes processed through drone companies; and at times, carriers just use a vendor to inspect vehicles or homes and make an analysis, so this question would provide more information on who the carrier is using to process their claims. Ms. Rebholz stated that there was some conversation in the SME group that there could be a possible correlation to specific vendors listed and high complaint numbers, which could be an indicator for state insurance regulators to take a closer look at the data. The next question asked was regarding the other breakout section and which lines are to be broken out; 2-26 through 2-46 for PPA and 2-23 through 2-39 for Homeowners. Mr. Birnbaum stated that the breakout applies to the claims-related data elements and only applies to those coverages that provide property damage benefits, so it does not apply to liability coverages. The additional questions on this agenda item will be discussed on the May 27 Working Group call.

Ms. Cross asked if the comments that are due by Aug. 1 for any proposals adopted will be reviewed by the Working Group or directly by the Market Regulation and Consumer Affairs (D) Committee. Ms. Rebholz confirmed that the comments would be reviewed by the Committee after adoption by the Working Group.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 28, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Crystal Phelps (AR); Cheryl Hawley (AZ); Scott Woods (FL); Sarah Crittenden (GA); October Nickel (ID); Erica Weyhenmeyer (IL); Dawna Kokosinski (MD); Jill Huisken (MI); Teresa Kroll (MO); Martin Swanson (NE); Leatrice Geckler (NM); Hermoliva Abejar (NV); Guy Self (OH); Katie Dzurec (PA); Rachel Moore (SC); Maggie Dell (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); Ned Gaines (WA); and Letha Tate (WV).

1. **Adopted its March 23 Minutes**

The Working Group met March 23 and took the following action: 1) adopted its Feb. 24 minutes; 2) heard an update on the Travel Market Conduct Annual Statement (MCAS); 3) heard an update on the Other Health MCAS; 4) heard an update on the Accelerated Underwriting and Digital Claims MCAS; 5) discussed the placement of complaint and lawsuit data elements within the Home and Auto MCAS reporting blanks; 6) discussed the MCAS lawsuit definitions; and 7) adopted a motion to add a note in the Disability Income blank clarifying that Schedule 3 is designed to only collect claims information about claims that have payment.

Mr. Flott made a motion, seconded by Ms. Kroll to adopt the Working Group’s March 23 minutes (see NAIC Proceedings – Spring 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Four). The motion passed unanimously.

2. **Heard an Update on the Travel MCAS**

Ms. Rebholz noted that the Travel MCAS subject matter expert (SME) group met March 29, April 19, and April 27. She stated that the most recent draft of the data call and definitions has been sent to the SME group for a final review, with any comments to be provided by the end of this week. Depending on comments received, the draft will be approved to pass along to the Working Group, or additional discussion will take place if needed to finalize the draft.

3. **Heard an Update on the Other Health MCAS**

Ms. Dzurec stated that the Other Health SME group is meeting regularly, and it is close to having a draft for the Working Group to review. Currently, definitions are being finalized to ensure that they support the questions and interrogatories, then ratios will be reviewed. Ms. Dzurec stated that one of the ongoing discussions related to short-term limited-duration (STLD) is the relationship between insurers and associations. The SME group is trying to ensure that the data that will be requested is data the companies will have, since associations are their own incorporated entities. Currently, the group is on iteration 5.6, which is posted on the Working Group’s web page in the “Current MCAS Blanks Discussions” if anyone wishes to review it. Ms. Dzurec stated that unlike the Health MCAS blank, cost sharing will not be in the Other Health blank.

4. **Heard an Update on the Accelerated Underwriting and Digital Claims Discussions**

Ms. Rebholz stated that the Accelerated Underwriting SME group met April 2, April 15, and April 20. Concerns with the definition of Accelerated Underwriting have been voiced by industry, and the SME group has had difficulty moving forward with the definition. Ms. Rebholz stated that to ensure coordination amongst committees and working groups, she met yesterday with the chair of the Market Regulation and Consumer Affairs (D) Committee and the chair of the Life Insurance and Annuities (A) Committee’s Accelerated Underwriting (A) Working Group. They discussed the Working Group’s need for a definition of Accelerated Underwriting for MCAS reporting purposes and also noted the June 1 deadline. Additional communication with the Accelerated Underwriting (A) Working Group will take place, and Ms. Rebholz hopes to have a definition available to review in time for the Market Conduct Annual Statement Blanks (D) Working Group to approve by the June 1 deadline.

Ms. Rebholz stated that the Digital Claims SME group met April 1, April 15, and April 21. Final drafts of the Home and Auto data call and definitions with the addition of the Digital Claims data element and definitions have been distributed to the SME group. Ms. Rebholz stated that some input was received, so the SME group is working to finalize the drafts and provide them to the Working Group for its approval in May.

5. Discussed the Placement of Complaint and Lawsuit Data Elements within the Home and Auto MCAS Reporting Blanks

Ms. Rebholz noted that attachment two in the meeting materials outlines the information for this agenda item. She stated that during its March meeting, the Working Group discussed the reporting of complaints within the Home and Auto MCAS submissions. Currently, complaints are reported within the Underwriting section of the blank, and they are reported in total only. No Working Group members have voiced interest in changing the complaint reporting for Home and Auto to report at the coverage level. Ms. Rebholz stated that the question for the Working Group is whether state insurance regulators need complaint data by coverage type to perform market analysis or are total complaint counts sufficient for analysis purposes. She stated that the options are: 1) no change, which means total Home and Auto complaint counts are sufficient for market analysis, and the complaints will continue to be reported in total within the Underwriting section of the blank; or 2) ask that Home and Auto complaints be reported by coverage, which means state insurance regulators need coverage level complaint data to perform market analysis. If option two is chosen, then the Home and Auto complaints data element will need to be moved to another section of the blank. Ms. Rebholz asked for input from Working Group members, other state insurance regulators, and interested parties, and there was no discussion. Teresa Cooper (NAIC) stated that if there was no discussion or motion on this topic, it is assumed that no change is needed. Ms. Rebholz confirmed that would be appropriate, and no change was made.

Ms. Rebholz stated that the next matter to discuss is lawsuit reporting for Home and Auto. Attachment two in the meeting materials outlined this discussion topic. Ms. Rebholz stated that the question to the Working Group is whether state insurance regulators need lawsuit counts that include non-claims-related lawsuits to perform market analysis for the Home and Auto lines of business or is it sufficient to collect only lawsuit counts that are claims-related. She outlined the options as: 1) no change, which means only claims-related lawsuit counts are needed for market analysis purposes, and Home and Auto lawsuits will continue to be reported by coverage type within the Claims section of the blank and capture lawsuit data for claims-related suits only; or 2) include non-claims-related suits, which means lawsuit counts would include non-claims-related lawsuits for market analysis purposes. She stated that option two aligns with reporting used in other MCAS lines.

Mr. Gaines made a motion, seconded by Ms. Crittenden, to include non-claims-related lawsuit data in the Home and Auto MCAS blanks reporting. The motion passed unanimously.

6. Discussed the MCAS Lawsuit Definitions

Ms. Rebholz stated that there are comments in attachment three of the meeting materials for the Working Group to discuss. Each bullet under the lawsuit definition for the lines of business of Life and Annuity, Disability Income, Private Flood, Lender-Placed Home and Auto, and Long-Term Care (LTC) was reviewed. The issue raised for the first bullet was whether producers should be excluded, or clarification be added for the term “agent” and whether the term “agent” refers to a conservator or power of attorney. Ms. Rebholz stated that concern was raised that some companies may not track lawsuits against agents, so asking for that kind of reporting may not be helpful. Ms. Crittenden asked if the term “representative” would be a better term instead of “agent.” Mr. Gaines stated that “representative” may be a better term. Mr. Birnbaum stated that he has concern with using the term “representative” since it is an undefined term and changing “agent” to “producer” might be better since “producer” is the broader term. He stated that if a lawsuit was filed against a company’s employee, then it would be a lawsuit against the company also, so capturing that information is covered. Ms. Rebholz noted that there were comments received suggesting that another option would be to keep the definition and just add clarification to the terms in the definition. She stated that a decision on this will be considered at a later date.

Ms. Rebholz stated that the next item to review is whether the second bullet should be removed, because comments were received stating that it becomes unclear when it is combined with the first bullet. A decision on this will be reviewed at a later date, as there was no discussion suggesting the need for a change here. Ms. Rebholz stated that the third bullet question to consider is whether there should be separate reporting for arbitrations. A decision on this will be reviewed at a later date, as there was no discussion suggesting the need for a change here. Ms. Rebholz clarified that absent feedback on these bullet points, the wording will stay the same. She encouraged anyone that feels changes need to be made to share their thoughts verbally, in the chat or even after the call, if preferred.

© 2021 National Association of Insurance Commissioners 2
The next bullet discussed was regarding the use of the term “complainant.” The question is whether the intent was for this to refer to plaintiffs in a lawsuit rather than complainants. Mr. Gaines stated that he believes “plaintiff” would be clearer than “complainant.” Ms. Kroll stated that she agrees that “plaintiff” is clearer than “complainant” regarding lawsuits. The last bullet discussed was regarding whether clarification needed to be added for what a general cause of action is. Mr. Bates stated that he has concerns with this bullet because having to basically restate a claim in an explanatory note regarding class action lawsuits could be problematic. Ms. Rebholz stated that this is the current definition, and she was not aware of any concerns or issues companies were having in listing a general cause of action; but she noted her interest in hearing from industry representatives if there have been issues with earlier reporting in providing this information. She stated that a decision does not need to be made right now, and comments will be included for future discussion as to whether state insurance regulators find this information useful.

Ms. Cooper stated that she reviewed previous call minutes, and the comment raised on the issue regarding the first bullet was that it states, “include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant.” The second bullet states, “include all lawsuits whether or not a hearing a proceeding before the court occurred.” The comment stated that these bullets together seem unclear. Ms. Weyhenmeyer suggested removing “or its agent” from the first bullet and then making bullet two a sub-bullet to the first as a clarification. Mr. Birnbaum suggested removing the second bullet and leaving the first bullet as it currently reads. Mr. Bates stated that when a producer that acts on behalf of a company is sued, the company is also named in the lawsuit. He also stated that the lawsuit could be a human resources (HR) action against the producer and have nothing to do with the company, or it could be that the producer did not explain the policy terms as well as were needed, and the company may or may not be included on lawsuits like that. Ms. Nickel stated that she believes it is important to focus on what the company is involved in rather than the agent, since that could encompass a broad range of different relationships. Mr. Birnbaum stated that he believes the HR example is misplaced since an applicant for insurance, policyholder or beneficiary is unlikely to bring an action against an HR policy of an agent. He stated that if a lawsuit is brought against an agent, the company is going to know since it would have to be reported to the company. Michael Byrne (McDermott Will & Emery LLP) stated that he does not believe that was always the case under every contract of an agent to report all lawsuits against the agent if it has nothing to do with the product being sold on behalf of the insurer. Ms. Rebholz stated that after hearing the comments on this topic, some proposed draft language options will be created to review and consider on a future call. She asked that Working Group members think about what data they would like to capture here and whether or not capturing lawsuits naming agents as a defendant is necessary in the context of this reporting.

Ms. Rebholz stated that the next topic to discuss is the Lender-Placed Home and Auto MCAS lawsuit definition and reporting. The question is whether the Lender-Placed insurance should use the same reporting approved in the last agenda for Home and Auto. The issue with Lender-Placed insurance is that the approved definition aligns with the Life, Annuity, Disability Income, Private Flood and LTC definition instead of aligning with the Home and Auto definition. Ms. Rebholz stated that this does not need to be decided on today, and she asked that this question be given some thought so a decision can be made in May.

7. **Discussed Other Matters**

Ms. Rebholz stated that in May, the Working Group will have two meetings to allow for ample time to consider all proposals before the June 1 deadline. She stated that drafts will be posted and/or distributed for review prior to the May meetings.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Privacy Protections (D) Working Group
Virtual Meeting
July 12, 2021

The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 12, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Chris Aufenthie (ND); Teresa Green (OK); Raven Collins (OR); and Don Beatty and Katie Johnson (VA). Also participating was: Hermoliva Abejar (NV).

1. ** Adopted its June 14 Minutes **

The Working Group met July 12 and took the following action: 1) adopted its June 14 minutes; 2) discussed the draft of the initial privacy policy statement; and 3) requested comments in the form of parameters and examples on the initial privacy policy statement by June 7 for discussion during the next Working Group meeting scheduled for June 14.

Mr. Beatty made a motion, seconded by Ms. Collins, to adopt the Working Group’s June 14 minutes (Attachment Six-A). The motion passed unanimously.

2. ** Discussed Comments Received on the Initial Privacy Policy Statement **

Ms. Amann said the Working Group will continue to discuss its latest draft of the privacy policy statement with separate outline sections for each of the six consumer categories on the minimum consumer data privacy protections that are appropriate for the business of insurance was distributed prior to this meeting.

In accordance with its November 2019 work plan, Ms. Amann said the Working Group is currently focused on consumer data privacy protections other than those already in the *NAIC Insurance Information and Privacy Protection Model Act* (#670), the *Privacy of Consumer Financial and Health Information Regulation* (#672), and the *Insurance Data Security Model Law* (#668). She said following a delay due the COVID-19 pandemic, the Working Group identified six consumer data privacy protections as gaps per the analysis in this work plan, posted them, and discussed them during its meetings in November 2020, as well as in March, May, and June 2021. Ms. Amann said sections in the NAIC models concerning federal acts like the federal Gramm-Leach-Bliley Act (GLBA) and the federal Health Insurance Portability and Accountability Act (HIPAA) will be considered, if necessary, after the six consumer categories identified by the gap analysis and NAIC leadership have been addressed.

As a reminder, she said the six consumer categories identifying corresponding consumer rights that attach to notice requirements and how insurers may be subject to these requirements are: 1) the right to opt-out of data sharing; 2) the right to opt-in of data sharing; 3) the right to correct information; 4) the right to delete information; 5) the right of data portability; and 6) the right to restrict the use of data.

Ms. Amann said that while the titles of these categories are listed as rights, they are not to be interpreted as guarantees. She said the Working Group will not focus on changing the titles of the six consumer protection categories as they were given to the Working Group by NAIC members. However, it will provide recommendations and examples for additional clarification. For example, the right to delete data would not include the deletion of factual data such as that contained in court documents.

Ms. Amann said the Working Group will discuss today comments received since its June 14 meeting. She said the Working Group will not focus on changing the titles of the six consumer protection categories as they were given to the Working Group by NAIC members. However, it will provide recommendations and examples for additional clarification. For example, the right to delete data would not include the deletion of factual data such as that contained in court documents.

Ms. Amann said the Working Group will discuss today comments received since its June 14 meeting. She said the Working Group will not focus on changing the titles of the six consumer protection categories as they were given to the Working Group by NAIC members. However, it will provide recommendations and examples for additional clarification. For example, the right to delete data would not include the deletion of factual data such as that contained in court documents.
3. **Heard a Presentation on Consumer Data Privacy from the University of Texas at Austin and the University of Georgia**

Ms. Amann said the Working Group will hear a presentation from NAIC consumer representatives Karrol Kitt (University of Texas at Austin) Brenda J. Cude (University of Georgia) on data privacy from a consumer’s perspective.

Ms. Kitt said her comments stem from a micro perspective that state insurance regulators and the insurance industry have primary responsibility for the privacy of insurance consumers’ data. She said consumers typically underestimate the range and extent of data being collected on them. She also said that studies have shown the average consumer has 27 online accounts and that there is a relentless pursuit of consumers through social media advertising. Ms. Kitt said there is no easy way for consumers to track the use of their data and that consumers simply do not understand. She said what consumers need is an easy way to track and control their own data. Ms. Kitt said a DataGrail Inc. study indicated that four out of five consumers surveyed expect to have control over their data and that two out of three expect to be able to opt out of data sharing. She asked how much money the average company makes from selling third-party information. Ms. Kitt said she prefers to opt in like HIPAA requires as she is comfortable with where and how her medical data is used or shared. She also said something this important should be easy to use, especially with the demands of regular life. Ms. Kitt said consumers tend to have knowledge deficiencies and they lack motivation because there is an informational imbalance between industry and consumers. She said industry lives on the daily consumption of data and uses its own jargon to earn profit, but this is not the case for consumers who feel they are at a disadvantage, so they simply do not bother to learn or investigate the accuracy or use of their data. Ms. Kitt said in 2020, DataGrail’s survey found that 80% of consumers want to control their own data; that 82% reported concerns over protections that do not work; and that 62% said unsubscribe links do not work. She also said that consumers have a right to be forgotten after their relationship with an insurance company ends.

Ms. Cude said there are common themes (not just for insurance, in the U.S., or globally) of data. She said: 1) consumers do not distinguish insurance data from other business data; 2) consumers want rights, but they do not have the technical expertise to use them effectively; 3) getting consumers’ attention is difficult, as is getting them to learn and understand privacy issues; 4) greater transparency is needed in the language they do get; and 5) consumers have no opportunity to understand if privacy terms are written in legalese. Ms. Cude said consumers need to understand what personal data is and how it is used in all the devices in our homes, via the Internet of Things (IoT) data, shopping habits, vacuums, thermostats, TVs, etc. She said consumers need to know who is monitoring their data, what type of algorithmic capability those monitoring data have, and that consumers can suffer discrimination and harm.

Ms. Amann asked if they had any recommendations for the Working Group. Ms. Cude said the Working Group needs to be aware that the common consumer does not separate insurance data from any other type of financial business data. Ms. Kitt said one example is that a consumer cannot be charged for a credit card not being accepted for a purchase as Congress made such charges opt in only. Ms. Amann asked if it made any difference whether opt in or opt out should be used when the subject was data sharing versus data receiving of information. Dr. Kitt said opt in reduces costs for notices and opt out costs more. She also said the USAA has an easy privacy notice: It does not share data, period.

With that, Ms. Amann said the next Working Group meeting is scheduled for Aug. 9.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 14, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Erica Weyhenmeyer (IL); LeAnn Crow (KS); T.J. Patton (MN); Chris Aufenthie (ND); Martin Swanson (NE); Teresa Green (OK); Gary Jones (PA); and Don Beatty and Katie Johnson (VA). Also participating was: Hermoliva Abejar (NV).

1. Adopted its May 10 Minutes

The Working Group met May 10 and took the following action: 1) adopted its March 29 minutes; 2) discussed the draft of the initial privacy policy statement; and 3) requested comments in the form of parameters and examples on the initial privacy policy statement by June 7 for discussion during the next Working Group meeting scheduled for June 14.

Mr. Beatty made a motion, seconded by Mr. Swanson, to adopt the Working Group’s May 10 minutes (Attachment Six-A1). The motion passed unanimously.

2. Discussed Comments Received on the Initial Privacy Policy Statement

Ms. Amann said the Working Group would continue to discuss the privacy policy statement on the minimum consumer data privacy protections that are appropriate for the business of insurance. She said the Working Group would focus on consumer data privacy protections other than those already in the NAIC Insurance Information and Privacy Protection Model Act (#670), the Privacy of Consumer Financial and Health Information Regulation (#672), and the Insurance Data Security Model Law (#668). She also said sections in these NAIC models concerning federal acts like the Gramm-Leach-Bliley Act (GLBA) and the Health Insurance Portability and Accountability Act of 1996 (HIPAA) will be considered, if necessary, after the six consumer categories identified by the gap analysis and NAIC leadership have been addressed.

Ms. Amann said the six consumer categories identifying corresponding consumer rights that attach to notice requirements and how insurers may be subject to these requirements are:

1. The right to opt out of data sharing.
2. The right to opt into data sharing.
3. The right to correct information.
4. The right to delete information.
5. The right of data portability.
6. The right to restrict the use of data.

Ms. Amann said the titles of these categories are listed as rights, as that is the way these categories were received from NAIC members; however, these titles are not to be interpreted as guarantees but as points of discussion. She also said the Working Group will not change the titles of the six consumer protection categories; rather, the Working Group would provide recommendations and examples for additional clarification to these categories. For example, she said the right to delete data would not include the deletion of factual data, such as that contained in court documents. She said the Working Group would discuss comments received since the May 10 call, which is when the Working Group requested comments from Working Group members, interested state insurance regulators, and interested parties in the form of parameters and examples on the initial privacy policy statement.

Ms. Amann said comments in the form of parameters and examples on the initial privacy policy statement received by June 7 would be discussed following some brief comments by the attendees who submitted them. She said the templates that she made will be coming out soon with functional definitions that would be used not to highlight potential areas of concern, but to point to areas where the Working Group could make recommendations to fix, reinterpret, reword, explain, or clarify.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) said to summarize the comments submitted, he suggested that the Working Group retain the HIPAA safe harbor contained in Model #672 because it is pervasive in that it has permeated the entire health insurance world since 2002. He said companies have worked diligently on complying, and it affects more than
just insurance. He said it also affects doctors, providers, companies, third-party administrators (TPAs), as well as those who do business with them. He said other business associates follow them regarding how to submit and process electronic claims. He said HIPAA and the GLBA exempts or carves out insurance. He also said California has this as well, with the California Consumer Privacy Act (CCPA) covering other companies. He said HIPAA already addresses all six rights in that for opt-out or opt-in, companies are prohibited from sharing data except for treatment or payment, health care operations, or special needs. He said the opt-in had to be signed indicating what data would be shared and how. He said HIPAA is already extensive as to how to correct data. Much like the General Data Protection Regulation (GDPR), he said the right to delete is not in HIPAA because a patient’s medical history is very important when considering the care a patient will need in the future. He said access to one’s data is not a concern, as patients can get a copy of their own medical records and take them elsewhere whenever they like. He said portability means the right to accounting for old data and where health information can be sent, such as to an attorney, requires a HIPAA release. He said a recent U.S. Department of Health and Human Services (HHS) rule about the disclosure of health information will serve to restrict the use of data under 45 CFR 164.522.

Ms. Amann said it was helpful to have HIPAA citations that address health care insurance, but the Working Group would also want to address concerns state insurance regulators are hearing from consumers regarding the six categories identified, and she recommended that the Market Regulation and Consumer Affairs (D) Committee address these concerns. When Ms. Abejar asked how record retention was affected by HIPAA, Mr. Ridgeway said typical record retention was 3–5 years, but claim processing was required to be kept for a very long time. Chris Petersen (Arbor Strategies LLC) added that the coordination of benefits and proving continuity of coverage also required records to be kept indefinitely in some instances. Ms. Amann said state insurance regulators need data to be retained as well for market conduct exams, so the Working Group would need to include explanations for consumers as to why some of their data could not be deleted, removed, or created as well as how its use could be limited by the consumer. Ms. Abejar asked about cyber insurance and was given the same answer. She asked if health insurers notify consumers that the requested change has been made. Mr. Ridgeway and Mr. Petersen said the company would have to show the consumer where the change they requested had been made in the consumer’s records. Mr. Swanson asked that the cybersecurity question be revisited. He said the state’s Attorney General’s office may have to be notified, and other state laws may kick in for the consumers’ protection. As an example, he said he recently got a letter about a breach from a company that he had not dealt with in many years, so the system worked as it was intended. Mr. Ridgeway asked how consumers know companies are doing this as required by state bulletins. He suggested that such bulletins be cross referenced with the Information Technology (IT) Examination (E) Working Group, including the changes made to the Financial Condition Examiners Handbook to ensure that companies do it. Ms. Amann said consumer rights come with limitations.

Randi Chapman (Blue Cross Blue Shield Association—BCBSA) said HIPAA clearly exempts health insurance, which can be confusing; and she recommended a clarification that if health insurance companies are not exempt by HIPAA, wording should be added to NAIC models so they conform with HIPAA. She said the Working Group should not add more requirements to HIPAA.

Mr. Petersen, speaking on behalf of the Coalition of Health Insurers, said he concurs with everything Mr. Ridgeway and Ms. Chapman said. He said HIPAA was specific to the insurance industry and its uniqueness to the health insurance industry. He said HIPAA was concerned about doing harm to consumers by adding to the safe harbor already in the GLBA. He said it is necessary to recognize HIPAA as a leader and allow deletion only to correct inaccurate data, not to delete all data, as medical history is needed (especially in the emergency room) and required by record retention laws. He said portability had been addressed in California and the European Union (EU) because it is needed to move one’s data from one internet to another one so it is required there, but it is not required generally in the U.S. He said one can share a copy with state insurance regulators and law enforcement, but one cannot move the data permanently. Ms. Amann said consumer disclosure notices are not just about what information but how it is distributed or shared. She said maybe notices should only be required when a change is made. She said the Insurance Holding Company System Regulatory Act (#440) and the IT Examination (E) Working Group addressed the issue of third-party vendors by referring to them as Essential Services Providers. She said Insurtech is where she expects problems and where she has concerns because of third-party vendors or business associates, which have HIPAA responsibilities as well and are required by HIPAA to comply via their contractual relationships. She said there are anecdotal problems where the law needs more umph. Mr. Petersen said that is not realistic because people give away their information at the pharmacy and at Safeway all the time just for discounts. Ms. Amann said state insurance regulators can warn consumers, but they cannot stop consumers from making their own decisions about such trade-offs of data for discounts. She said this conversation affects all other lines of business trades, not just health insurance.

Mr. Swanson asked if most states had adopted HIPAA. Mr. Ridgeway said most states had a HIPAA carve-out or something like that already. Mr. Petersen said states had adopted Model #670, which amends access to HIPAA; Model #672, which
provides a safe harbor for health information; or some combination of the two models. Mr. Swanson asked if the Market Regulation Handbook had been examined for HIPAA compliance already. Mr. Petersen said after the GLBA was added, it asserted market conduct over privacy and examined 100 companies. Ms. Amann said underwriting and claims are useful because if states see something during the examination, they can do a privacy review at the same time. She said new situations require an understanding of how current requirements can be applied; i.e., how it can be better for consumers. Mr. Swanson said homeowners insurance is different than health insurance. He said if states do not enforce HIPAA, then the federal government will. Ms. Amann said she does not want to give the American Council of Life Insurers (ACLI) a heart attack, but she wants to put them on notice that the Working Group is moving forward with its current framework, and it will include suggested definitions and requirements or revisions where it is deemed necessary. She said the Working Group would love to have input from other trades and companies representing other lines of business, but it will move forward without it if necessary. She said NAIC staff would distribute the privacy policy statement (not a model and not a white paper) for comment. Mr. Beatty said he saw Sonja Larkin-Thorne (Consumer Advocate – Retired) on the participants lists, and he said any observations she might have for the Working Group would be useful. He said the Working Group had not heard from the Life and Annuity or Property/Casualty (P/C) folks, and he encouraged them to provide input in the form of comments, examples, etc. to avoid unintended consequences with what the Working Group comes up with on their own. Ms. Larkin-Thorne said she had been following this work personally and for the state of Connecticut. Ms. Amann said it would be great to have more input from consumer representatives and on other lines of business. She also asked Lois E. Alexander (NAIC) to reach out to them. Shelby Schoensee (ACLI) said she was just assigned by the ACLI to work with this Working Group recently. She also said she planned to submit comments soon. Ms. Amann said the Working Group would be moving quickly, as it truly wants to help consumers understand their privacy issues sooner rather than later.

Ms. Amann said the next Working Group call is scheduled for July 12.

Having no further business, the Privacy Protections (D) Working Group adjourned.
Privacy Protections (D) Working Group
Virtual Meeting
May 10, 2021

The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 10, 2021. The following Working Group members participated: Cynthia Amann, Chair, (MO); Ron Kreiter, Vice Chair (KY); LeAnn Crow (KS); T.J. Patton (MN); Chris Aufenthie and Johnny Palsgraaf (ND); Martin Swanson (NE); Teresa Green (OK); Gary Jones (PA); and Don Beatty and Katie Johnson (VA).

1. **Approved its March 29 Minutes**

   The Working Group met March 29 and took the following action: 1) adopts its 2020 Fall National Meeting minutes; 2) receive status reports on federal and state privacy legislation; 3) review the 2021 NAIC Member-Adopted Strategy for Consumer Data Privacy Protections; 4) discuss comments received on the 2020 Fall National Meeting verbal gap analysis; and 5) announce the Consumer Privacy Protections Panel at the NAIC Virtual Insurance Summit.

   Mr. Beatty made a motion, seconded by Mr. Swanson, to adopt the Working Group’s March 29 minutes (see NAIC Proceedings – Spring 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Six). The motion passed unanimously.

2. **Discussed the Draft of the Initial Privacy Policy Statement**

   Ms. Amann said the Working Group completed its work plan in 2020. She said the Working Group received additional guidance through the Market Regulation and Consumer Affairs (D) Committee in the form of the following NAIC Member-Adopted Strategy for Consumer Data Privacy Protections. She said the Working Group is currently working on item C because item A and item B have already been completed.

   **NAIC Member-Adopted Strategy for Consumer Data Privacy Protections**

   1. Charge the Market Regulation and Consumer Affairs (D) Committee with:
      a. Summarizing consumer data privacy protections found in existing NAIC models—the Health Information Privacy Model Act (#55), the NAIC Insurance Information and Privacy Protection Model Act (#670), and the Privacy of Consumer Financial and Health Information Regulation (#672).
      b. Identifying notice requirements of states, the European Union’s (EU’s) General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA), and how insurers may be subject to these requirements.
      c. Identifying corresponding consumer rights that attach to notice requirements, such as the right to opt-out of data sharing, the right to correct or delete information, the right of data portability and the right to restrict the use of data, and how insurers may be subject to these requirements.
      d. Setting forth a policy statement on the minimum consumer data privacy protections that are appropriate for the business of insurance.
      e. Delivering a report on items (a–d) above by the NAIC Fall National Meeting.

   2. Engage with state attorneys general (AGs), Congress and federal regulatory agencies on state and federal data privacy laws to minimize preemption provisions and maximize state insurance regulatory authority.

   3. Reappoint the Privacy Protections (D) Working Group to revise NAIC models, as necessary, to incorporate minimum consumer data privacy protections that are appropriate for the business of insurance. Complete by the NAIC Fall National Meeting.

   Ms. Amann said Minnesota, Nevada, Oregon, and Virginia submitted comments on the initial privacy policy statement drafted in accordance with item D as a framework on which to build minimum consumer data privacy protections that are appropriate for the business of insurance. She said states on the state insurance regulator subject matter expert (SME) group agreed that all six categories identified in the statement should stay. Ms. Johnson said Virginia might be including portability in its Uniform Electronic Transactions Act (UETA), as Virginia said a consumer had to opt-in, meaning that companies could post a disclosure online, but the company must mail the disclosure to the consumer if the consumer asks for a hard copy of the document. Mr. Beatty asked Brooke Stringer (NAIC) if the categories listed were sufficient to address federal issues, topics, and concerns. Ms. Stringer said preemption and private rights of action are two of the top federal issues, so she said the categories identified are within the realm of federal expectations. Mr. Patton asked how consumers could opt-in and opt-out, as these two categories seem to be opposites. Ms. Amann said the Working Group’s approach right now would be to consider both and recommend...
one following its discussions. Mr. Patton said the chart should be updated, as Minnesota did address the bill listed even though the bill did not move.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Insurers, said general statements, such as those in the Unfair Trade Practices Act (#880), require companies only to maintain records. He said if the right to delete is allowed, it would be impossible for the company to maintain those records. He said the Health Insurance Portability and Accountability Act (HIPAA) only allowed the right to request, not to delete. He also said adding examples to recommendations would be helpful as guidance. Ms. Amann said the six categories will serve as the topics to be discussed at a high level, and examples would be a good idea. She said verbiage would be drafted as a point of discussion, as well as perhaps to specify that it is for the insurance sector only. Kate Kiernan (Public Policy Consulting) said in Minnesota, opt-in and opt-out are not mutually exclusive. She said the same law can have opt-in for more sensitive information and opt-out for less sensitive information.

Angela Gleason (American Property Casualty Insurance Associations—APCIA) suggested that the Working Group not discuss already regulated issues. Ms. Amann said this general discussion is for today’s call only. She said HIPAA is so controlling that the Working Group may not be able to change or revise it, the Gramm-Leach-Bliley Act (GLBA), etc., so these are to be put aside for now to be folded in later as consumers, industry, and state insurance regulators refine the draft. Bob Ridgeway (Americas Health Insurance Plans—AHIP) asked why Section A of the draft is separate from Section B. Ms. Amann said she envisions: 1) Section A to mean why the consumer has the right to correct with policy reasons in favor of it and why; 2) Section B to mean how an insured could do this, and as a practical matter that the consumer could not correct information fraudulently—i.e., change information that is proven to be true via public records (arrest records, court documents, etc.)—and the right to correct could only be within or after 180 days; and 3) Section C to mean how state insurance regulators would enforce this. Ms. Johnson said states that had adopted Model #670 had accelerated underwriting notice; it says the consumer can correct or delete incorrect information if the company has taken an adverse action, and it has a limitation on timing of the information. Ms. Amann said existing limitations would still apply. She said new recommended revisions would not cover all carte blanche, and the policy statement would help to explain these situations. Mr. Petersen said non-insurance information should not be looked at by the Working Group, but the Working Group should only look at the insurance industry. He said HIPAA’s right to request is not absolute. Ms. Johnson said it would be helpful to have information from industry on where the rails should be, and Virginia would only look at information companies gather. Ms. Kiernan asked if the privacy policy statement would be final by the Fall National Meeting. Ms. Amann said it would be final and would recommend if a new model is needed or if revisions would be needed, as well as the parameters for the new model or changes.

Ms. Amann requested comments in the form of parameters and examples on the initial privacy policy statement by June 7 for discussion during the next Working Group meeting scheduled for June 14.

Ms. Alexander said she would attempt to schedule Working Group meetings every four to six weeks, while avoiding overlap with other groups working on interrelated issues.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Antifraud (D) Task Force met July 26, 2021. The following Task Force members participated: Trinidad Navarro, Chair (DE); Judith L. French, Vice Chair, represented by Michelle Brugh Rafeld (OH); Lori K. Wing-Heier represented by Alex Romero (AK); Alan McClain represented by Crystal Phelps and Paul Keller (AR); Evan G. Daniels represented by Kyson Johnson (AZ); Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Doug Ommen represented by Benjamin Olejnik (IA); Dean L. Cameron represented by Kyle Cammack (ID); Vicki Schmidt represented by Tate Flott (KS); Sharon P. Clark represented by Juan Garrett (KY); James J. Donelon represented by Matthew Stewart (LA); Anita G. Fox represented by Jill Huisken (MI); Grace Arnold represented by Michael Marben and Cam Jenkins (MN); Chlora Lindley-Myers represented by Carrie Couch and Jeana Thomas (MO); Troy Downing and David Dachs (MT); Mike Causey represented by Angela Hatchell, Della Shepherd and Tracy Biehn (NC); Jon Godfread represented by Laney Herauf (ND); Eric Dunning represented by Martin Swanson (NE); Chris Nicolopoulos represented by Brendan Harris (NH); Marlene Caride represented by Richard Besser (NJ); Glen Mulready represented by Rick Wagnon (OK); Andrew R Stolfi represented by Dorothy Bean (OR); Raymond G. Farmer represented by Chuck Myers and Michael Bailes (SC); Doug Slape represented by Chris Davis (TX); Jonathan T. Pike represented by Armand Glick (UT); Scott A. White represented by Mike Beavers (VA); and James A. Dodrill represented by Greg Elam (WV).

1. **Adopted its May 25 Minutes**

The Task Force met May 25 and took the following action: 1) adopted its March 24 minutes; and 2) appointed the Improper Marketing of Health Plans (D) Working Group.

Mr. Beavers made a motion, seconded by Ms. Biehn, to adopt the Task Force’s May 25 minutes (Attachment One). The motion passed unanimously.

2. **Discussed the Improper Marketing of Health Plans**

Commissioner Navarro said the Task Force has remained vigilant throughout this time with the COVID-19 pandemic. The communication and collaboration between states, antifraud organizations, and federal and state law enforcement agencies, as well as international counterparts, have continued to be a vital piece to fighting the insurance fraud taking place during this virtual environment.

Commissioner Navarro said the Task Force has continued to meet to specifically discuss and receive updates on potential insurance fraud taking place, whether it is due to COVID-19 or any other trend taking place. Commissioner Navarro said included with these meetings is the Improper Marketing of Health Plans group.

Commissioner Navarro said the Task Force has continued to meet to specifically discuss and receive updates on potential insurance fraud taking place, whether it is due to COVID-19 or any other trend taking place. Commissioner Navarro said included with these meetings is the Improper Marketing of Health Plans group.

Commissioner Navarro said the Task Force has continued to meet to specifically discuss and receive updates on potential insurance fraud taking place, whether it is due to COVID-19 or any other trend taking place. Commissioner Navarro said included with these meetings is the Improper Marketing of Health Plans group.

Commissioner Navarro said the Task Force has continued to meet to specifically discuss and receive updates on potential insurance fraud taking place, whether it is due to COVID-19 or any other trend taking place. Commissioner Navarro said included with these meetings is the Improper Marketing of Health Plans group.

Commissioner Navarro said during its May 25 meeting, a motion was presented to the Task Force for the creation of the Improper Marketing of Health Plans (D) Working Group, which would report to the Antifraud (D) Task Force. Commissioner Navarro said the motion passed unanimously and has been presented to the Market Regulation and Consumer Affairs (D) Committee. He said once it has passed through the Committee, it will be presented to Executive (EX) Committee and Plenary for consideration of adoption.

3. **Received an Update from the Antifraud Education Enhancement (D) Working Group**

Ms. Rafeld said the Working Group has held two webinars this year on: 1) outside resources for state insurance fraud departments; and 2) investigator safety training. Ms. Rafeld said as Working Group chair, she worked directly with NAIC staff regarding sessions for the NAIC Insurance Summit, which took place in June. Ms. Rafeld said the fraud sessions included: 1)

Ms. Rafeld said moving forward, the Working Group will continue to monitor emerging issues for new fraud schemes and provide the necessary training to assist with education on the various types of insurance fraud.

4. Received an Update from the Antifraud Technology (D) Working Group

Mr. Glick said the Working Group has not met formally this year. However, it is continuing to work on its new charge given to it in 2020: “Review and provide recommendations for the development of an Antifraud Plan repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions.” He said the Working Group’s first step was to review and revise the 2011 Antifraud Plan Guideline (#1690). Mr. Glick said the revisions were fully adopted by the Executive (EX) Committee and Plenary during the Spring National Meeting. He said the next step was for the Working Group to create a guideline template that can be used for the creation and submission of an Antifraud Fraud Plan. He said this template will also be used for developing the repository. Mr. Glick said the Working Group publicly reached out to form a subject-matter expert (SME) team that can work on creating this template. This small group will be meeting every other week through October to complete this task.

Mr. Glick said the NAIC is currently working on the Online Fraud Reporting System (OFRS) redesign. He said once this redesign is completed, the Working Group will resume its responsibilities concerning the review and management of enhancements for the OFRS.

5. Heard a Report from the Coalition

Matthew Smith (Coalition Against Insurance Fraud—Coalition) said the Coalition had 37 states participate in its COVID-19 Impact study. Mr. Smith said the result of study is on the Coalition’s web page at Insurancefraud.org. Mr. Smith said the Coalition is referring to this study as a trend study—not a research study. He said there was a lot of useful information taken from this study. Mr. Smith said some of the more interesting information was that the amount of fraud referral numbers from previous years remained consistent with this study even with the COVID-19 pandemic. He said this pandemic has contributed to the past year being the lowest usage of automobile on the roads. However, the automobile fraud referral has remained consistent. Mr. Smith said there was also a dramatic increase in arson, while workers’ compensation remained consistent. He said it is important to note that the study was a national trend study and not broken out by specific state.

Mr. Smith said the Coalition is working with several strategic partners to update a globalization of insurance fraud study. He said there are 45 nations that are contributing to this study. He said the study will close on Aug. 30, and on Nov. 15, the Coalition will hold a webinar updating its members of the findings. Mr. Smith said the Coalition will hold its annual end of the year meeting in person Dec. 6–7 in Washington, DC.

Mr. Smith said the Coalition has its infographics program on its web page, and he encouraged states to use the Coalition’s resources as they see fit. He said the Coalition is also working with strategic international partners on the Globalization of Insurance Fraud Conference. Mr. Smith said they plan to open up the conference to in person next year, and he encouraged states to participate.

6. Heard a Report from the NICB

Alan Haskins (National Insurance Crime Bureau—NICB) said the NICB just wrapped up its Contractor Fraud Awareness Week. Mr. Haskins said the NICB issued its third publication on tips to avoid natural disasters and contract fraud. He said the NICB has been monitoring any potential increases in trends and that it has seen a 9% increase in vehicle theft across the country.

Mr. Haskins said at this time, 90% of states have wrapped up their legislative session. He said the theft of catalytic converters has been high due to the price in metal found on the catalytic converters. Mr. Haskins said the NICB is working with states to monitor this activity and assist however needed. He said the NICB tracked more than 600 bills during the 2021 legislative sessions.
7. **Received an Update on the OFRS**

Mr. Welker said in 2018, the NAIC approved the redesign of the OFRS. He said the purpose of the redesign was to modernize interfaces for state insurance regulator, public and industry users. The redesign changes would support a new functionality for the system while also providing the means to create a series of reports that would provide states with detailed data that could be used for tracking fraud trends. Mr. Welker said there is an industry and consumer side to the OFRS. NAIC staff have focused on completing the industry side first. Once completed, it can be used to mirror the changes for the consumer. Mr. Welker said they are currently going through beta testing to help finalize this process. He said it is important for states and all other users to recognize that during the redesign process, the functionality of the OFRS has not been interrupted and that states are still receiving the fraud referral data. He said NAIC staff will continue to collaborate with the Working Group through the completion of the redesign.

Having no further business, the Antifraud (D) Task Force adjourned.
The Antifraud (D) Task Force met May 25, 2021. The following Task Force members participated: Trinidad Navarro, Chair (DE); Lori K. Wing-Heier represented by Alex Romero (AK); Alan McClain represented by Crystal Phelps, Pat O’Kelly, and Teri Ann Mecca (AR); Evan G. Daniels represented by Paul Hill (AZ); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Doug Ommen represented by Benjamin Olejnik (IA); Dean L. Cameron represented by Kyle Cammack (ID); Vicki Schmidt represented by Ryan Morton (KS); Sharon P. Clark represented by Juan Garrett (KY); James J. Donelon represented by Matthew Stewart (LA); Anita G. Fox represented Jill Huisken (MI); Grace Arnold represented by Michael Marben (MN); Chlora Lindley-Myers represented by Carrie Couch and Marjorie Thompson (MO); Troy Downing and Jeannie Keller (MT); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Dale Pittman (ND); Eric Dunning represented by Martin Swanson (NE); Chris Nicolopoulos represented by Brendan Harries (NH); Marlene Caride represented by Richard Besser (NJ); Glen Mulready represented by Rick Wagnon (OK); Andrew R Stolfi represented by Stephanie Noren (OR); Raymond G. Farmer represented by Chuck Myers and Michael Bailes (SC); Doug Slape represented by Chris Davis (TX); Jonathan T. Pike represented by Armand Glick (UT); Scott A. White represented by Mike Beavers (VA); and James A. Dodrill represented by Greg Elam (WV).

1. **Adopted its Spring National Meeting Minutes**

Mr. Beavers made a motion, seconded by Ms. Biehn, to adopt the Task Force’s March 24 minutes (see NAIC Proceedings – Spring 2021, Antifraud (D) Task Force). The motion passed unanimously.

2. **Adopted a Motion to Appoint the Improper Marketing of Health Plans (D) Working Group**

Commissioner Navarro said over the past several months, state insurance departments and officials from federal agencies have been meeting to discuss the improper marketing by various entities of health plans. He said this group was originally created to bring members of the Health Insurance and Managed Care (B) Committee and the Market Regulation and Consumer Affairs (D) Committee together in effort to share information regarding entities that were improperly marketing health insurance products Commissioner Navarro said these discussions included the use of lead generators, unsolicited phone calls, internet solicitation, and other marketing methods. He said due to the importance of these discussions, the state insurance regulators on these calls have also reached out to include members from federal government groups. Commissioner Navarro said the collaboration among this group has assisted with administrative action being taken against entities and schemes that have been identified.

Commissioner Navarro said in addition, these discussions and the actions taken have identified a need to look at and possibly update or create a new model to address the aggressive and improper marketing of health plans and the oversight of lead generators. He said all participating states have agreed.

Commissioner Navarro said that there was also a white paper on internet sales that would need to be updated in order to reflect the changes not only on how internet is used in today’s society, but also how some have used this to market plans improperly in ways that was not contemplated a few years ago.

Commissioner Navarro said the next step for the Task Force is to formalize this group as a new working group reporting to the Task Force. He said the Working Group will serve two purposes. He said the first would be to continue the facilitation and engage in discussions about the marketing of health plans that are improper, with the goal to have participation from state insurance regulators both at a state and federal level. Commissioner Navarro said the participation of interested state insurance regulators would not be limited to members of the Task Force but rather state insurance regulators from all areas of expertise, including health, market conduct, fraud, and legal divisions. Commissioner Navarro said the working group would meet only in regulator-to-regulator session.

Commissioner Navarro said the second purpose would be for the Working Group to look at either modifying existing models or creating a new model that addresses the usage of lead generators for sales of insurance products and to update marketing rules to modernize the regulation of those activities.
Commissioner Navarro said the Task Force was provided an email with the draft charges for the Working Group soliciting comments. There are two charges that were submitted: 1) coordinate with regulators, both on a state and federal level, to provide assistance and guidance monitoring the improper marketing of health plans, and coordinate appropriate enforcement actions, as needed, with other NAIC committees, task forces, and working and working groups; and 2) review existing NAIC models and guidelines that addresses the usage of lead generators for sales of health insurance products, and identify models and guidelines that need to be updated or developed to address current marketplace activities. Commissioner Navarro said no comments or suggestions were received prior to today’s meeting.

Ms. Biehn made a motion, seconded by Mr. Swanson, to appoint the Improper Marketing of Health Plans (D) Working Group, which would report to the Antifraud (D) Task Force. The motion passed unanimously.

Commissioner Navarro said the next step will be to present this motion to the Market Regulation and Consumer Affairs (D) Committee. He said once adopted by the Committee, it would then be presented to the Executive (EX) Committee and Plenary for consideration of adoption. Commissioner Navarro said once the Working Group is official, it will reach out to state insurance departments in order to establish the members.

Having no further business, the Antifraud (D) Task Force adjourned.
The Market Information Systems (D) Task Force met July 28, 2021. The following Task Force members participated: Mike Kreidler, Chair (WA); Chlora Lindley-Myers, Vice Chair (MO); Evan G. Daniels represented by Cheryl Hawley (AZ); Ricardo Lara represented by Pam O’Connell (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle (DE); Dana Popish Severinghaus represented by Erica Weyhenmeyer (IL); Vicki Schmidt represented by Tate Flott (KS); Grace Arnold represented by Paul Hanson (MN); Troy Downing represented by Troy Smith (MT); Marlene Caride represented by Ralph Boeckman (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Judith L. French represented by Rick Campbell (OH); Doug Slape represented by Leah Gillum (TX); James A. Dodrill represented by Jeannie Tincher (WV); and Mark Afable represented by Rebecca Rebholz (WI). Also participating was: Brent Kabler (MO).

1. **Adopted its Spring National Meeting Minutes**

   Director Lindley-Myers made a motion, seconded by Ms. O’Connell, to adopt the Task Force’s March 22 minutes (see NAIC Proceedings – Spring 2021, Market Information Systems (D) Task Force). The motion passed unanimously.

   Mr. Kabler said the Working Group met July 21, July 15, and June 16. During these meetings, the Working Group reviewed the progress of the implementation of the Market Information Systems (MIS) metric report recommendations for metric updates and methods to improve metric result reporting and data quality.

   Mr. Kabler said the Working Group heard presentations from NAIC staff and the Center for Economic Justice (CEJ) regarding the use of artificial intelligence (AI) in market analysis. He said NAIC staff retained a consultant to develop both AI, as well as more traditional statistical techniques, to construct predictive models of insolvency risk. He said NAIC staff believe the methods show promise and could significantly advance financial risk surveillance. Among AI and statistical models explored were decision tree analysis, generalized linear models (GLMs), and logistic regression. Birny Birnbaum (CEJ) encouraged the Working Group to adopt a long-term perspective and develop a multiyear plan to explore AI techniques that might be beneficial to market analysis. Mr. Birnbaum also indicated state insurance regulators have failed to acquire granular transactional data that could be leveraged by AI methods to provide a much more robust surveillance system to reduce consumer harm.

   Mr. Kabler said the Working Group reviewed comments received on the proposed changes to the Regulatory Information Retrieval System (RIRS) coding structure.

   Mr. Kabler said the Working Group reviewed outstanding Uniform System Enhancement Requests (USER) and approved a request to add the complaint subject code to i-Site+ and the Consumer Insurance Search (CIS). The RIRS coding change and restructure has been the most ambitious project of the Market Information Systems Research and Development (D) Working Group. He said he has been working on it even before the Working Group was formed.

   Superintendent Toal made a motion, seconded by Director Lindley-Myers, to adopt the Market Information Systems Research and Development (D) Working Group report. The motion passed unanimously.

3. **Adopted the RIRS Coding Change Proposal**

   Commissioner Kreidler said the Market Information Systems Research and Development (D) Working Group adopted the RIRS proposal prior to the Spring National Meeting and reported on its adoption to the Task Force during the Spring National Meeting. He said that at that time, the Task Force agreed to expose the proposal on the Task Force web page, receive comments, and consider its adoption during the Summer National Meeting.

   Commissioner Kreidler said the Working Group reviewed the proposal with representatives of the Financial Analysis Solvency Tools (E) Working Group and the state producer licensing directors and their feedback were incorporated into the proposal. He said the proposal was also reviewed with the state back-office system vendors, who made a recommendation to create a user’s
guide for the new codes, and the vendors do not anticipate any additional cost to implement the necessary system changes to support the proposal.

Commissioner Kreidler said comments were received from the California Department of Insurance (DOI) and the CEJ. Mr. Birnbaum said he supports the proposed changes to RIRS coding. He said his comments were focused on prioritization of origin of action codes and disposition codes. He said multiple codes are allowed on RIRS entries and it would be useful to prioritize them when inputting to show the relative importance. Mr. Kabler said that was a good suggestion but noted that analysts will generally use their own subjective prioritization when reviewing an action with multiple codes.

Superintendent Toal made a motion, seconded by Commissioner Richardson, to adopt the RIRS coding change proposal. The motion passed unanimously.

4. Heard a Report on Outstanding USER Forms

Chris Witt (NAIC) said USER Form 10082 is the request to add a Complaints Database System (CDS) subject code for “pandemic” and a coverage code for “business interruption.” He said while completing this request, it was discovered that subject codes are not displayed. He said the USER Form 10082 is complete, and the Working Group approved a new USER Form 10083.1 to display the subject codes in i-Site+ and CIS.

Mr. Witt explained the first page of the USER Form Status Update identifies other market regulation projects that are outside the USER form process. These are projects arising from State Ahead initiatives or that are needed to maintain and update existing systems such as the Market Conduct Annual Statement (MCAS) submission tool. This information is included to assist the Task Force and the Working Group in their prioritization.

Having no further business, the Market Information Systems (D) Task Force adjourned.
The Producer Licensing (D) Task Force met Aug. 4, 2021. The following Task Force members participated: Elizabeth Kelleher Dwyer, Co-Chair (RI); Larry D. Deiter, Co-Chair (SD); Ricardo Lara represented by Charlene Ferguson and Tyler McKinney (CA); Michael Conway represented by Steven Giampaolo (CO); Trinidad Navarro represented by Ashley Webb (DE); David Altmaier represented by Matt Guy and Matt Tamplin (FL); Doug Ommen represented by Jackie Russo and Andria Seip (IA); Sharon P. Clark (KY); James J. Donelon represented by Barry Ward (LA); Mike Causey represented by Angela Hatchell (NC); Eric Dunning represented by Kevin Schlautman and Martin Swanson (NE); Chris Nicolopoulos represented by Joan Lacourse (NH); Judith L. French represented by Tynesia Dorsey (OH); Andrew R. Stolfi represented by Kirsten Anderson (OR); Jessica K. Altman represented Christopher Monahan (PA); Doug Slape represented by Chris Herrick (TX); Scott A. White represented by Richard Tozer (VA); Mike Kreidler represented by Jeff Baughman (WA); Mark Afable represented by Rebecca Rebholz and Melody Esquivel (WI); and James A. Dodrill represented by Greg Elam and Robert Grishaber (WV).

1. **Adopted its March 26 Minutes**

Commissioner Clark made a motion, seconded by Ms. Ferguson, to adopt the Task Force’s March 26 minutes (see NAIC Proceedings – Spring 2021, Producer Licensing (D) Task Force). The motion passed unanimously.

2. **Heard an Update on the State Implementation of Online Examinations**

Director Deiter said 40 jurisdictions offer online examinations. He said South Dakota implemented online examinations in April, and 28% of the exams since April have been administered online. He said the pass rate for online examinations is a little higher than in-person examinations. Mr. Tozer said Virginia implemented online examinations in June 2020, and approximately 40% of its examinations are administered online. Ms. Ferguson said California administers 35–40% of its examinations in the online format and has not seen any difference in pass rates from in-person examinations. She said the online format has provided candidates with greater access to examinations with online examinations being available seven days a week and 24 hours a day. Mr. Baughman said Washington began offering online examinations in October 2019 and has not seen any difference in pass rates from in-person examinations. He said 80% of Washington’s exams are administered online. Superintendent Dwyer said Rhode Island has had a similar experience, and she questioned if any states have had security issues.

Joel Norris (Pearson VUE) said the security of online examinations is very important, and while a camera and microphone can pick up what can be seen and heard in view of the camera, there are instances where a candidate leaves the view of the camera. He said there are also instances where a candidate does not follow the proctor’s instructions, and there is the possibility that an applicant has another person present outside the view of the camera. He said the physical management of the remote exam environment is very important, and the proctor can revoke the administration of an exam if the candidate leaves the view of the camera and does not follow the proctor’s instructions. He said proctors have escalated issues, and Pearson VUE has both an incident level response and a broader review of how to curtail certain behavior for all online exams. He said incidents are reported to the client, and the client can then share the information with other states. He said Pearson VUE supports transparency, but it also has contract obligations with clients.

In response to Commissioner Clark’s question about what percentage of candidates have their online exam revoked, Mr. Norris said Pearson VUE keeps track of specific incidents and reports, and exams may also be revoked due to technology issues. Commissioner Clark said she would like to know what percentage of all online exams are revoked because of security concerns.

3. **Discussed a Referral from the Special (EX) Committee on Race and Insurance**

Superintendent Dwyer said she anticipates the Special (EX) Committee on Race and Insurance to refer the following change to the Producer Licensing (D) Task Force: “The Producer Licensing (D) Task Force will receive a report on the availability of producer licensing exams in foreign languages, the steps exam vendors have taken to mitigate cultural bias, and the number and location of producers by company compared to demographics in the area.”

Superintendent Dwyer said the Task Force has solicited examination vendors on the processes they follow to eliminate bias in examinations. She said the Task Force does not plan to circulate information about specific vendors. She said information is being sought from continuing education (CE) providers. She said there would be more detail shared at the next Task Force
meeting. Mr. Tozer said Virginia reviews examinations for bias on an annual basis and works with their examination vendor to identify questions that should be revised.

Superintendent Dwyer suggested that the Task Force review the guidelines to create a more user-friendly resource for states to create greater consistency in how states review 1033 waiver requests. She said the Task Force should also be reviewing how criminal convictions affect producer licensing applicants, and she referenced a new pilot program implemented by the Pennsylvania Department of Insurance (DOI) for prospective insurance agents with criminal records.

Mr. Monahan said the Pennsylvania DOI allows a person with a criminal conviction to voluntarily provide criminal record information through an electronic portal. The Pennsylvania licensing and legal teams review the information and provide non-binding feedback on how the criminal activity might affect his/her ability to obtain a producer license. This helps the person determine if he/she should spend time and effort with pre-licensing education. Mr. Monahan said Pennsylvania had 10–20 people use this service in the first two weeks. He said the service is free, and nobody, to date, has had a conviction that would have prohibited the issuance of a license. Superintendent Dwyer said Rhode Island has had a similar program for 10 years, and she said the program in Pennsylvania is very nicely done.

David Leifer (American Council of Life Insurers—ACLI) said the ACLI is supportive of the NAIC looking at how criminal background checks and the 1033 waiver process affects applicants for producer licenses. He said the ACLI also supports the implementation of online examinations, and this has benefited applicants in geographic areas where there is not easy access to examinations centers. He said the ACLI supports licensing standards that ensure qualified producers, but he believes it is important to look at licensing practices that create unnecessary barriers to individuals seeking a producer license.

Mr. Tozer said Virginia has a 1033 waiver process and is working with other states that contract with Sircon to develop best practices for the review of 1033 requests. He said Virginia does not require a separate application for a 1033 waiver if the disclosure of the criminal information is part of the normal, electronic application process. He said the NAIC Uniform Producer Licensing Applications have a question relevant to 1033 waivers, and Virginia can review court records without requiring the resident applicant to submit additional information to Virginia. If needed, he said Virginia may look at a non-resident candidate if there is a 1033 waiver concern and the resident state did not issue a waiver. Superintendent Dwyer encouraged Mr. Tozer to provide additional information on the recommendations from the states that contract with Sircon.

5. **Discussed Procedures for Amending Uniform Applications**

Director Deiter said the draft procedures are being developed to ensure that the consideration of changes to the uniform applications support the NAIC members’ goal of providing stable applications and encourage the use of electronic technology for licensing. The Task Force is seeking comments on the procedures through Sept. 3.

6. **Received Reports from the Producer Licensing Uniformity (D) Working Group and the Uniform Education (D) Working Group**

Superintendent Dwyer said the chair position for the Producer Licensing Uniformity (D) Working Group remains open, and the leadership for both working groups continues to be in a state of flux. She said Director Deiter and she are working to transition to new leadership for the working groups.

Having no further business, the Producer Licensing (D) Task Force adjourned.
FINANCIAL CONDITION (E) COMMITTEE

Financial Condition (E) Committee July 8, 2021, Minutes (Attachment One) .............................................. 10-4
Group Capital Calculation (E) Working Group July 26, 2021, Minutes (Attachment Two) ......................... 10-6

Financial Condition (E) Committee
Columbus, Ohio
August 14, 2021

The Financial Condition (E) Committee met Aug. 14, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, (CO); Dana Popish Severinghaus (IL); Amy L. Beard represented by Roy Eft (IN); Eric A. Cioppa (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Chaney (MS); Russell Toal (NM); Linda A. Lacewell represented by Sud Sumit (NY); Judith L. French, Dale Bruggeman, and Tom Botsko (OH); Raymond G. Farmer (SC); Doug Slape and Jamie Walker (TX); Mark Afable (WI); and Jeff Rude (WY).

1. **Adopted its July 8 and Spring National Meeting Minutes**

Commissioner White said the Committee met July 8 and took the following action: 1) adopted changes to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) that are intended to make explicit, rather than implicit, the regulatory authority that a commissioner should have relative to the continuation of essential services of an insurance company from an affiliate during a receivership; and 2) updated the life risk-based capital (RBC) bond factors effective for the 2021 reporting period.

Director Farmer made a motion, seconded by Commissioner Rude, to adopt the Committee’s July 8 (Attachment One), and April 13 (see NAIC Proceedings – Spring 2021, Financial Condition (E) Committee) minutes. The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner White stated that the Committee usually takes one motion to adopt the Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial. He reminded members of the Committee that subsequent to the Committee adoption of its votes, all the technical items included within the reports adopted will be sent to the NAIC members for review shortly after the conclusion of the Summer National Meeting as part of the E-Committee Technical Changes Report. Pursuant to the Technical Changes Report process previously adopted by the NAIC Plenary, the members will have 10 days to comment, otherwise the technical changes will be considered adopted by the NAIC and effective immediately. With respect to the task force and working group reports, Commissioner White asked the Committee: 1) whether there were any items that should be discussed further before being considered for adoption and sent to the members for consideration as part of the E-Committee Technical Changes Report; and 2) whether there were other issues not up for adoption that are currently being considered by task forces or workings groups reporting to this Committee that require further discussion. The response to both questions was no.

In addition to presenting the reports for possible adoption, Commissioner White also noted that the Financial Analysis (E) Working Group met July 14, June 16, May 18–19, and April 19 in regulator-to-regulator sessions, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met July 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies

Commissioner Slape made a motion, seconded by Director French, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Risk Retention Group (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Two); Group Solvency Issues (E) Working Group (Attachment Three); Mortgage Guaranty Insurance (E) Working Group (Attachment Four and Five); Mutual Recognition of Jurisdictions (E) Working Group (Attachment Six); NAIC/American Institute of Certified Public Accountants (AICPA) (E) Working Group (Attachment Seven); and National Treatment and Coordination (E) Working Group (Attachment Eight).
3. **Adopted a Referral to the Statutory Accounting Principles (E) Working Group**

Commissioner White directed the Committee to a draft memorandum, which he explained was drafted by NAIC staff at his direction, as a means to start a conversation about modifying some of the terminology within the statutory accounting maintenance process. He noted that during the course of discussing *Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions*, there was confusion about the term “non-substantive.” He suggested that while everyone was aware that the SSAP No. 71 issue was debated extensively at the Statutory Accounting Principles (E) Working Group, and therefore a deliberative discussion equivalent of what occurs for a new accounting pronouncement took place, the term “non-substantive” was still confusing. He asked members of the Committee to consider where they agreed with the concept of referring the issues to the Statutory Accounting Principles (E) Working Group so that it could further develop the final language. No objections or questions were raised.

Superintendent Cioppa made a motion, seconded by Commissioner Conway, to refer the memorandum to the Statutory Accounting Principles (E) Working Group (Attachment Nine). The motion passed unanimously.

4. **Adopted Revisions to the Process for Evaluating Qualified and Reciprocal Jurisdictions**

Mr. Rehagen described that the *Process for Evaluating Qualified and Reciprocal Jurisdictions* (process document) was first adopted by the NAIC in 2013, and its purpose was to provide a documented evaluation process for creating and maintaining the NAIC List of Qualified Jurisdictions. She noted that the process document was updated to incorporate the 2019 revisions to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786) addressing reciprocal jurisdictions, and to make some revisions to the requirements for the re-evaluation of qualified jurisdictions. He emphasized how it was considered important to amend the process quickly in order to complete the reciprocal jurisdiction reviews for Bermuda, Japan, and Switzerland by the end of 2019. However, it was necessary to further improve the document in order to incorporate provisions for terminating the status of a qualified or reciprocal jurisdiction, and for creating a passporting process for reciprocal jurisdictions. A new draft was exposed for a 30-day public comment period on March 23, and four comment letters were received from interested parties.

Mr. Rehagen noted that the newly repurposed Mutual Recognition of Jurisdictions (E) Working Group met on May 27 and incorporated the suggested revisions from the comment letters. In addition, NAIC staff met with the Federal Insurance Office (FIO) on July 23 and incorporated some of the FIO’s suggestions, which added some clarifications to the process document. The Reinsurance (E) Task Force then adopted the revised process document on July 27.

Mr. Rehagen made a motion, seconded by Director Farmer, to adopt the revisions to the *Process for Evaluating Qualified and Reciprocal Jurisdictions* (Attachment Ten) and refer it to Plenary after this meeting for consideration of adoption. The motion passed unanimously.

5. **Adopted Revised Charges for the Renamed Macroprudential (E) Working Group**

Commissioner White described how the Financial Stability (E) Task Force was just now beginning its work on its macroprudential surveillance system, and with that there is a need to modify the charges to focus the Liquidity Stress Test Working Group on the elements of such a system, and at the same time, change the name to reflect that fact.

Mr. Rehagen made a made a motion, seconded by Mr. Eft, to adopt the revised charge for the renamed Macroprudential (E) Working Group (Attachment Eleven). The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.
The Financial Condition (E) Committee met July 8, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, (CO); Dana Popish Severinghaus and Eric Moser (IL); Eric A. Cioppa (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Chaney represented by Mark Cooley (MS); Marlene Caride (NJ); Russell Toal represented by Leatrice Geckler (NM); Linda A. Lacewell represented by My Chi To (NY); Judith L. French and Tom Botisko (OH); Raymond G. Farmer represented by Mike O'Shual (SC); Doug Slape represented by Jamie Walker and James Kennedy (TX); and Jeff Rude (WY). Also participating were Philip Barlow (DC); and Mark Afable (WI).

1. **Adopted Changes Model #440 and Model #450**

Mr. Kennedy described how in 2020, the Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force was given the charge to provide recommendations for remedies to ensure the continuity of essential services and functions to an insurer in receivership by affiliated entities. This includes nonregulated entities and specifically for agreements with affiliated entities whose sole business purpose is to provide services to the insurance company. This charge came out of prior recommendations from the Receivership and Insolvency (E) Task Force as part of the Macroprudential Initiative (MPI) that identified continuation of essential services as an area where regulatory powers are implicit rather than explicit. He said the experiences of state insurance regulators have shown that receivers continue to be challenged by this issue as current remedies may not immediately address the need to continue services in receivership. He described how the NAIC adopted a Request for NAIC Model Law Development in 2020 to open the Insurance Holding Company System Regulatory Act (Model #440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (Model #450) for this purpose and how the Working Group began meeting in 2020. He described how they first conducted a survey to identify recommendations for how to address this issue, including amendments to the models. The draft amendments to both models were exposed for public comment twice with subsequent revisions made to address comments. The amendments to Model #440 were exposed a third time following a final round of edits and in all discussions that was active participation by state insurance regulators and interested parties.

Mr. Kennedy described the specific changes to Model #440, which are within Section 5, Standards and Management of an Insurer Within an Insurance Holding Company System, and within Model #450 as found in Section 19, Transactions Subject to Prior Notice. They are specific to the provisions of affiliated cost sharing and management services agreements. He explained that includes requirements that the books and records of the insurer be updated to specifically include data of the insurer, being the property of the insurer. The data and records should be identifiable and capable of segregation—essentially, available to the receiver in the event of insolvency, including the systems necessary to access them. The data is specifically defined in Model #450. If the insurance commissioner deems the insurer to be in a statutorily defined hazardous financial condition, he or she may require a bond or deposit, limited in amount, after consideration of whether there are concerns about the affiliated party’s ability to fulfill the contract in the event of a liquidation. The premiums are the property of the insurer, with any right of offset subject to receivership law. The affiliated entity is subject to jurisdiction of receivership court, and in certain circumstances, the insurance commissioner may require the affiliate to agree to this in writing. The models include provisions relating to indemnification of the insurer in the event of gross negligence or willful misconduct by the affiliate. Finally, in the event of receivership, including supervision and conservatorship, the rights of the insurer extend to the receiver or guaranty fund. Also, the affiliate will make available essential personnel. The affiliate will continue the services for a minimum period of time as specified in the agreement with timely payment for post-receivership work. Finally, the affiliate will maintain necessary systems, programs or infrastructure and make them available to the receiver or insurance commissioner for as long as the affiliate receives timely post-receivership payment unless released by the receiver, insurance commissioner, or receivership court.

Mr. Kennedy noted that the Working Group and the Task Force adopted the amendments on May 4 and May 20, respectively.

Mr. Kennedy made a motion, seconded by Commissioner Conway, to adopt the changes to Model #440 and Model #450 as presented to the Committee. The motion passed unanimously.
2. **Adopted the Life RBC Bond Factors (2021-1L)**

Mr. Botsko described how the proposed changes to the life risk-based capital (RBC) bond factors have had a difficult road to get to this point. He noted that after years of discussion, state insurance regulators believed they have reached an acceptable set of factors that will be effective for the 2021 reporting period. He described how state insurance regulators had learned many things from this process, including to have a more inclusive discussion about what assumptions to consider in the model for the analysis. He described how the American Academy of Actuaries (Academy) and Moody’s each prepared a set of life RBC bond factors from their individual models. While each set of factors provided a similar impact to the total RBC for the companies, there were some slight differences. He said that as is the case with many models, some are informative, but most are wrong. However, in this case, state insurance regulators believed the results of each model provided a better reflection of the risks associated with bonds for RBC purposes. He described how the adopted factors by both the Life Risk-Based Capital (E) Working Group and Capital Adequacy (E) Task Force represent years of discussion and work by state insurance regulators, the Academy, and industry. He stated that state insurance regulators agree that these factors are a better reflection of bond risk for the robust set of bond categories.

Mr. Botsko repeated that state insurance regulators learned many important things from this process. One item in particular is to spend more time determining the specifics of the analysis, as well as discussing the assumptions with industry before beginning the modeling procedure (or analysis) for projects. While regulators have shared potential projects in the past, state insurance regulators learned that for projects of this nature, they need to have better discussions with all involved parties, particularly in the early stages. He stated that while the various parties involved may not agree on everything, they need to reach a consensus and move forward. He stated that as the RBC working groups continue with their current and future projects, they will provide transparent processes and analysis to all parties involved. While these groups believe they have done this in the past, they will make a better effort to achieve this. Mr. Barlow described the degree of work involved but the good product that resulted. He noted they had two viable alternatives, and while they went with the proposal submitted by Moody’s, there was overlap in the methods and the assumptions, although ultimately the one selected was based upon the assumptions and not methods.

Commissioner White provided a special thanks to Mr. Botsko; the chair of the Life Risk-Based Capital (E) Working Group, Mr. Barlow; all the members of that Working Group; members of the Academy; and members of the industry who helped to complete this project. He stated that while the project has taken some time, he appreciates the effort from the people involved.

Commissioner Caride made a motion, seconded by Commissioner Rude, to adopt the proposed changes to the life RBC bond factors as presented to the Committee. The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met July 26, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Ray Spudeck and Virginia Christy (FL); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver and Steve Mayhew (MI); Barbara Carey (MN); Jessica Price (NC); Justin Schrader (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Greg Lathrop (OR); Kimberly Rankin (PA); Hui Wattanaskolpant (TN); Amy Garcia (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating was: Tom Botsko (OH).

1. **Adopted its May 27, May 17, April 27, and March 10 Minutes**

During its May 27, May 17, April 27, and March 10 meetings, the Working Group took the following action: 1) adopted a revised template for use in the 2021 group capital calculation (GCC) trial implementation, including changes to gather data on a stress scenario; 2) adopted clarifying edits to the GCC instructions that will be used for the 2021 GCC trial implementation; and 3) exposed proposed changes to the *Financial Analysis Handbook* (Handbook) for the GCC.

Mr. Eft made a motion, seconded by Mr. Schrader, to adopt the Working Group’s May 27 (Attachment Two-A), May 17 (Attachment Two-B), April 27 (Attachment Two-C), and March 10 (see NAIC Proceedings – Spring 2021, Financial Condition (E) Committee, Attachment Two) minutes. The motion passed unanimously.

2. **Exposed Draft Maintenance Documents**

Mr. Rehagen suggested that the Working Group develop certain maintenance documents related to the GCC and directed participants to draft documents that could meet such needs. He described how these documents would allow the same kind of process as used by other groups, which is to allow anyone (state insurance regulator, industry, consumer, etc.) that wants to present proposed changes to the GCC to do so by first completing a form. He noted that the specific forms developed involved NAIC staff basically taking similar forms for risk-based capital (RBC) forms and updating them for what would be needed for the GCC.

Mr. Rehagen suggested that the main purpose of these forms is to establish some rules so that everyone understands the timeline for when changes need to be adopted by the Working Group to be effective that year. He noted that initially, the forms use the same dates as used for RBC, which means that any change to the template must be adopted by April 30, and all other changes need to be adopted by June 30.

The Working Group agreed to expose GCC maintenance documents for a 60-day public comment period ending Sept. 24.

3. **Exposed a Draft Referral to the Capital Adequacy (E) Task Force**

Mr. Rehagen directed participants to a draft referral to the Capital Adequacy (E) Task Force. He described that the main purpose of the referral is to make the RBC working groups aware of differences between the GCC and RBC and whether RBC working groups believe making changes to RBC for consistency would be appropriate.

Dan Daveline (NAIC) provided more details regarding differences between the GCC and RBC as documented in the draft memorandum. He described how in developing the GCC, most of the discussions were revolved around the treatment of non-insurance and non-financial related entities to achieve consistency between the GCC and RBC. Specifically, the desire by all parties is for the same GCC treatment, whether entities are owned by an insurer or by a sister company. Mr. Daveline noted that in the end, the GCC adopted a factor that mirrored the result within the RBC post-covariance factor. He stated that because of that, there were fewer differences between the GCC and RBC than what was originally envisioned, but he noted how NAIC staff still believe it is appropriate to present a list of such items to the extent that RBC working groups want to consider changes for consistency purposes. He described how there are three types of entities for consideration, but ultimately, the question is whether the RBC working groups want to modify their formulas to be more consistent with the GCC.
Mr. Daveline described that the first item on the list deals with how the GCC treats insurance companies, most of which are foreign insurance companies. The GCC brings in the minimum capital required by the regulator for a foreign insurance company. This is to show respect for the authority of that regulator, as state insurance regulators would like to receive a reciprocal response on the U.S. basis, but also because this is the most relevant measure of capital at risk. Mr. Daveline noted that the second item on the list is similar in terms of the GCC treatment, but it pertains to other regulated entities such as banks. The last item on the list shows how the GCC treats other financial entities such as asset managers, investment advisors, and other financial entities. In the GCC, a factor is applied to their average revenues, while in RBC, a different factor is applied to the book/adjusted carrying value (BACV) for these entities. Mr. Daveline pointed out that as has been argued in the past, the RBC approach of using BACV as the base instead of average revenue may make more sense since RBC pertains to directly owned subsidiaries where the BACV may be the most relevant measure.

Mariana Gomez-Vock (American Council of Life Insurers—ACLI) noted support for a memo that summarizes the differences between the GCC and RBC. However, the ACLI expressed concern regarding whether the RBC groups should modify the RBC formulas to be more consistent with the GCC when a trial implementation of the GCC has not yet been completed. Specifically, she noted that the GCC approach for investment advisors and asset managers is new and has never been tested before. Therefore, she suggested removing the last sentence in the second paragraph of the memo so that the adoption of the GCC approach would not be proposed for considerations by the RBC working groups. Mr. Daveline stated that it is not going to be problematic to have this sentence stricken if the Working Group agreed. Mr. Eft agreed with striking this sentence, and the Working Group is not opposed; therefore, it was stricken as requested.

Mr. Botsko, chair of the Capital Adequacy (E) Task Force, stated his appreciation for the groups responsible for the GCC and RBC sharing information on a regular basis. Acknowledging many parallels between the two, he considered it extremely important to be consistent with each other as much as possible. Except for those items with different approaches where appropriate, both groups should take into consideration those items that could be changed by either the GCC or RBC and determine whether their formulas are appropriate.

Lou Felice (NAIC) recommended identifying categories in RBC that are different from the GCC and having an actual structure of formulas ready for those areas that could be changed for consistency purposes.

The Working Group agreed to expose the draft referral document for a 90-day public comment period ending Oct. 25.

4. Discussed Other Matters

The trial implementation is approaching its deadline at the end of the week. NAIC staff can be reached for questions. The draft Handbook guidance is being exposed for comment. Once comments are received, there will likely be another call. NAIC staff may make additional edits based on comments, run them by the state insurance regulators or the drafting group, and re-expose them again.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met May 27, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Ray Spudeck (FL); Carrie Mears (IA); Susan Berry (IL); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); Barbara Carey (MN); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Kimberly Rankin (PA); Trey Hancock (TN); Jamie Walker (TX); David Smith (VA); and Levi Olson (WI).

1. Adopted a Stress Scenario in the GCC Trial Implementation Instructions and Template

Mr. Rehagen introduced the first agenda item by stating that the purpose of the meeting is to select a standardized percentage to be used for all groups as a stress scenario and adopt the stress scenario instructions and related template changes. He added that in addition to the standard approach, the group capital calculation (GCC) filer manually adds entity categories not adjusted in the standard approach if it is believed that would assist in analyzing the impact of a change in debt allowance on the GCC ratio. The manual entries are not required, but all companies will report at least one GCC result using the standard approach. Mr. Rehagen stated that both the standardized stress tabs and the narrative are intended to be part of the Trial only, and they will not be carried forward. However, there may be some role in the future in the analysis guidance that was recently exposed for reviewing how the group assesses stress scenarios. Mr. Rehagen added that the purpose of the standardized stress scenario is to evaluate its impact on the amount of senior and hybrid debt that can be included as additional capital. If no debt allowance is requested, then the GCC filer can state that such is the case in the separate narrative that is included in the Trial template.

Mr. Rehagen stated that a comment letter from America’s Health Insurance Plans (AHIP) was received and included in the materials (Attachment Two-A1) on the revised stress scenario instructions and separate narrative, along with several emails requesting clarifications. He stated that in response, revisions were made to pages 44, 47, 53 and 54 of the instructions (Attachment Two-A2). Tom Finnell (AHIP) suggested some further revisions to the instructions, and he questioned whether the standard stress scenario was connected to the separate narrative. Lou Felice (NAIC) explained the changes commented on and agreed that some revisions could be made. He also stated that the separate narrative is not necessarily related only to looking at debt. Mr. Finnell stated that the Own Risk and Solvency Assessment (ORSA) is a better way to assess capital adequacy than a simplistic narrative. Mr. Rehagen restated that the stress scenario and the narrative are only for the Trial, and other methods would continue via analysis going forward. Mr. Belfi stated that she would use the narrative to assess the impact on the debt allowance. Mr. Rehagen noted that the stress scenario and narrative are optional. Mr. Felice noted that if the filer supports a different level of stress than is selected for the standardized stress scenario, the lead-state can adjust the percentage in the template as part of its analysis to assess the impact on the debt allowance. He presented some additional language to address the comments by Mr. Finnell and Ms. Belfi. There were no objections or further comments on the new language.

Mr. Felice summarized the remaining revisions made prior to today’s meeting, noting that there are some optional entries that can be added by the filer to adjust the calculated capital for entity types not adjusted in the standardized stress scenario. These entries are optional but if utilized, must be made at the standardized stress percentage; i.e., 30%. Mr. Felice stated that the standardized stress scenario will otherwise be populated and summarized automatically regardless of whether there was a debt allowance included in the Trial template. Ned Tyrrell (NAIC) agreed that this method is preferable to having two different Trial templates. Mr. Felice presented revisions discussed earlier, and there were no comments on those revisions.

Mariana Gomez-Vock (American Council of Life Insurers—ACLI) expressed her organization’s support for a 30% standard stress level based on the impact of such a stress level on the potential movement from current industry risk-based capital (RBC) operating levels to an RBC action level. Kevin Mackay (MetLife) said MetLife supports the 30% standard stress level as a point where procyclicality would materially affect the debt allowance, noting that balance sheet valuation can be affected differently for different entities, such as foreign insurers. Mr. Rehagen asked if there are any objections to using 30% as the standardized stress level. There were no objections or further comments.

Mr. Rehagen asked if any revisions are required to the Trial template. Mr. Tyrrell stated that the now selected standardized stress scenario of 30% will be added to the Trial template.
Ms. Belfi made a motion, seconded by Mr. Spudeck, to adopt the GCC stress scenario instructions with today’s edits along with the template for the Trial Implementation. The motion passed unanimously.

2. **Discussed Next Steps Toward the Start of the 2021 GCC Trial Implementation**

Mr. Rehagen announced that a GCC Trial volunteer call will be held June 17, and a notice will go out soon about the steps to get to the start of the Trial. He stated that NAIC staff can now start taking questions and will provide a question and answer (Q&A) process. Mr. Felice stated that he will check on the status of the confidentiality agreements and work to get them out to the lead-states with volunteers participating in the Trial as soon as possible.

3. **Discussed Other Matters**

Mr. Rehagen and Ms. Belfi recognized the contributions to the GCC project by Mr. Felice, who will be retiring later this year. He also introduced Jane Ren (NAIC), who will be transitioning into her NAIC support staff roll for the Working Group.

Having no further business, the Group Capital Calculation (E) Working Group adjourned

**Re: Further Comments - Revisions to Instructions and Stress Testing Proposal for the 2021 GCC Trial Implementation**

Gentlemen:

America’s Health Insurance Plans (AHIP) is pleased to offer these further comments to the Group Capital Calculation (E) Working Group’s exposure of proposed revisions to the GCC Instructions and Template relating to stress scenarios. Following are a few overarching comments, then some detailed comments accompanying the highlighted excerpts from the GCC Instructions that are subject of the current exposure process. We would be pleased to discuss these comments with you and GCCWG members at your convenience.

**Overarching Comments:**

1. **Relation to ORSA:** While we appreciate the interest in what may be a “reasonably likely” stress scenario, our members believe that is a topic that would be better addressed in the ORSA than in the GCC. Our members currently provide ample information about stress testing and related analysis of capital adequacy in their ORSAs, which include numerous scenarios (not just one) and at levels which exceed what might be deemed “reasonably likely.” There is also much that currently exists in the ORSA that provides underlying context to evaluate stress scenarios. By contrast, the very brief instruction and requested input about a single stress scenario as proposed in the GCC lacks that context, and risks being at conflict with the ORSA. Our members support inclusion of a standardized stress/shock for the purpose of evaluating the appropriateness of the GCC in respect of the possibility of procyclical impact of stress on the debt allowance. However, they believe that
delving into what may be a “reasonably likely” stress would be better addressed through ORSAs than the GCC and its Instructions.

2. Required v. optional inputs: Recent discussion of the GCCWG sought to clarify what may be required or optional in respect of quantitative data elements as well as narrative text to be provided in the GCC template. However, our members find the verbiage in the exposed sections of text to remain unclear; please see detail comments that follow.

3. “Trial Implementation v. actual implementation of the GCC: It is our understanding that the initial stress test proposal which had as its specific purpose to evaluate the appropriateness of the GCC in respect of the debt allowance would be for the upcoming “Trial Implementation” only, i.e., that the stress test would not be included in the template that would be used for reporting to the Lead State once the GCC had been implemented by the state by law or regulation. Could you please confirm our understanding? And would that also be the case for the inputs sought by the current exposure, i.e., a narrative description of a reasonably likely stress for the group (and accompanying group-specific calculations, if applicable)? If not, AHIP and its members would have further concerns.

Detailed Comments:
In the sections that follow, we have excerpted from the exposed documents the relevant highlighted text that is open for exposure, together with AHIP’s comments thereon.

Page 44:
(Note: the highlighted language below would be added to a section of the Instructions that pertains to an “Input 6” tab with other narrative responses and questions. That tab now has a text box with the following instruction: “[Placeholder question on stress scenario] Please provide a high-level narrative of what level or reduction in available capital is reasonable for the Group, potential risk factors leading to the loss (e.g., interest rate changes, catastrophe, etc.) and how calculated capital may be impacted.)”

Stress Scenario Narrative – Provide a high-level description of the anticipated market conditions or other reasonably likely group specific drivers that would lead to the group’s own specified level of stress results (i.e., the group specific potential adjustments to available capital and calculated capital). These may or may not align with the standardized adjustments calculated in the Stress Summary tab. In addition, provide any comments relating to the potential for procyclical GCC ratio results in specific areas of the calculation.

AHIP Comments:
1. It was not clear from the call on May 17 as to how much of the group-specific inputs (as opposed to the standardized calc) and related narrative would be optional on the part of the participating group. Upon seeing the proposed text, the matter seems to
remain unclear. The template ("stress inputs" tab) makes it appear that any inputs to columns Y: AH are "optional." In contrast, the text above suggests a group-specific result is required because a narrative is required to describe it.

a. Does the word "optional" above columns Y: AH mean it does not need to be completed at all? However, if a trial implementation participant left all those cells blank would it imply to the lead state that one of the standardized tests is "appropriate" for its business model?

i. And, if the latter, would the narrative that is requested above ask to describe a specific scenario that could reasonably result in the outcome shown by that standardized calcs? Would any narrative be required if the company submits only the standard calc, thus implying it represents a reasonable stress for the group? Note: AHIP’s view is that neither an omission of input data nor of narrative text should imply anything about stress levels impacting a group; if the firm preparing the template is of the view that the standardized calc is reasonable, the instructions should ask for the preparer to so state in its response.

ii. If a company believes the standard calculation does not represent a reasonable stress, could they (1) explain that in the narrative and describe what may be a reasonable stress, and (2) omit entry in any of the cells in columns Y:AH, i.e., the alternative calculation would be optional, but the narrative is nonetheless required? Alternatively, is the company required to show custom changes in Y:AH to document a result that it believes to be reasonably likely?

iii. If changes were made in Y:AH such that the calculation differs to some degree from the standardized calc, then the narrative is intended to describe a corresponding scenario that could lead to that result instead?

2. The above paragraph is hard to fully grasp without a more complete understanding of the complete stress proposal which is included as an appendix that appears 6-7 pages later in the document. Sequentially, it would be better to completely explain the stress test earlier in the document, i.e., to move the appendix from pages 52-53 ahead of this paragraph. Then, the reader would have the overall context to better understand this more specific instruction dealing with the stress test inputs. At a minimum, the paragraph here should refer the reader to the appendix for a fuller description of the stress test.

3. Please see also the marked text correction in the highlighted text above.
Stress Inputs

93. All entries in columns D:W of this tab are either calculation cells using data from within
the tab or using data populated from elsewhere in the template in a standardized approach.
Available capital and calculated capital for all entities using the standardized stress level
of xx% will be reported in this tab. The calculated values will be summarized in the “Stress
Summary” tab.

94. The filer may use the available Company Input section in the tab (columns Y:AH) that
allows data entry in order to apply the standardized stress level to additional entity
categories not covered in the standardized approach (e.g., foreign insurers subject to scalars
in the sensitivity analysis). The inputted values will be summarized in the “Stress
Summary” tab.

95. A separate text narrative describing the group’s own assumptions on potential stress drivers
should be included in the Input 6 tab as specified in the instructions for the Input 6 tab.
NOTE: Also see Appendix 2 for more detail

Stress Summary

96. Summarized results by entity type will be reported in this tab.

AHIP Comments:

- See suggested changes in marked text above
- Para 94 seems to conflict with AHIP’s comments about Page 44 (included above).
  Whereas there seems to be the ability to make optional changes to any of the
  standardized results, para 53 says that data entry here would only “apply the
  standardized stress level to additional entity categories not covered in the
  standardized approach…” It does not ask for any other group-specific entries that
  could be inconsistent with the standardized approach.
- With regard to para 94 as to “entity categories not covered in the standardized
  approach”, the parenthetical starts with “e.g.” (for example). If that is the only such
  case, it should be “i.e.” Alternatively, if there are other cases of entity categories that
  are not covered in the standardized approach, they should be listed or, at a minimum,
  a reference should be made to the location in the document where it is clear what
  entities are and are not covered.
- Paragraph 95 – See AHIP’s overarching comments, above, in relation to ORSA.

Page 52:

Data for industrywide U.S RBC ratios is sourced from the aggregate RBC
Statistics maintained by the NAIC. Data for industrywide capital ratios for
foreign insurance jurisdictions was derived from publicly available aggregate
industry data where available. If this scalar methodology is retained, then the data will require periodic updating.

AHIP Comments:

- See suggestions in marked text.

Page 53:

(ATF note: there were a couple of insertions of the word “standardized” on page 52; the text from page 52 text is not included as those insertions appeared fine.

112. (continuation of para 112): Further adjustments to the calculated capital based on scalars used in the Sensitivity analysis and other selected adjustments to calculated capital can also be considered (see Company Input section in the “Stress Inputs” tab). Other potential user driven adjustments may be added to the template using the Optional Inputs section in the Stress Inputs tab. Desired inputs will automatically be brought into in the new Stress Summary tab

113. Outputs: The GCC template will be configured to automatically calculate outputs and resulting GCC ratios using the inputs above at various additional standardized levels of stress (e.g., 20%, 30% etc.) including the impact on the allowance for qualifying debt. This can be presented on an additive basis (e.g. start with reduction in available capital alone and then add the impact on each entity type’s calculated capital one at a time building to the full scenario outlined in the chart, above.

Additional Information:

114. Although the impact on adjusted carrying value in this scenario is standardized, such generic assumptions cannot be prescribed. Assumptions vary by industry and product mix as the underlying cause and the effect on the adjusted carrying value varies group to group. Therefore, each group submitting data should provide a high-level narrative in the space provided in the “Input 6” tab, describing the unique assumptions and corresponding stress levels (% adjustments) in available capital and calculated capital considered appropriate by the group. The assumptions provided in the narrative are NOT required to align with the standardized adjustments reported in the “Stress Inputs” tab.

AHIP Comments:

- Para 112: Does the second sentence shown (“Other potential user driven adjustments….”) relate to the first sentence and adjustments based on scalars only? Or is it a separate item altogether? If the latter, it would be better shown as a separate paragraph.
Para 114: This seems to mandate the company to effectively assert that a standard calc is “appropriate” or to define and show one that is. It remains unclear if anything is optional at all, which seems at odds with some of the statements made by working group members and NAIC staff on the May 17 call.

We hope that you find our comments as helpful and directed toward making the entire Group Capital Calculation project a better one. As always, we would be glad to address any questions you may have.

Sincerely,

Bob Ridgeway

I. Background

1. In 2015, the ComFrame Development and Analysis (G) Working Group held discussions regarding developing a group capital calculation (GCC) tool. The discussions revealed that developing a GCC was a natural extension of work state insurance regulators had already begun, in part driven by lessons learned from the 2008 financial crisis which include better understanding the risks to insurance groups and their policyholders. While insurance regulators currently have authorities to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist regulators in identifying risks that may emanate from a holding company system.

2. More specifically, the GCC and related reporting provides more transparency to insurance regulators regarding the insurance group and make risks more identifiable and more easily quantified. In this regard, the tool assists regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies may be supporting the operations of non-insurance entities, potentially adversely impacting the insurance company’s financial condition or policyholders. This calculation provides an additional analytical view to regulators so they can begin working with a group to resolve any concerns in a manner that will ensure that policyholders of the insurers in the group will be protected. The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide Lead State Regulators with further insights to allow them to reach informed conclusions on the financial condition of the group and the need for further information or discussion.

3. State insurance regulators currently perform group analysis on all U.S. insurance groups, including assessing the risks and financial position of the insurance holding company system based on currently available information; however, they do not have the benefit of a consolidated statutory accounting system and financial statements to assist them in these efforts. It was noted prior to development that a consistent method of calculating group capital for typical group risks would provide a useful tool for state financial regulators to utilize in their group assessment work. It was also noted that a GCC could serve as a baseline quantitative measure to be used by regulators in to compliment the view of group-specific risks and stresses provided by the Own Risk and Solvency Assessment (ORSA) Summary Report filings and in Form F filings that may not be captured in legal entity filings.

4. During the course of several open meetings and exposure periods, the ComFrame Development and Analysis (G) Working Group considered a discussion draft which included three high-level methodologies for the GCC: a risk-based capital (RBC) aggregation approach; a statutory accounting principles (SAP) consolidated approach; and a generally accepted accounting principles (GAAP) consolidated approach. On Sept. 11, 2015, Working Group members unanimously approved a motion to move forward with developing a recommendation for a GCC and directed an appropriate high-level methodology for the recommendation.
5. At a ComFrame Development and Analysis (G) Working Group meeting held Sept. 24, 2015, pros and cons for each methodology were discussed, and a consensus quickly developed in support of using an RBC aggregation approach if a GCC were to be developed. The Executive (EX) Committee and Plenary ultimately adopted the following charge for the Financial Condition (E) Committee:

“Construct a U.S. group capital calculation using an RBC aggregation methodology; liaise as necessary with the ComFrame Development and Analysis (G) Working Group on international capital developments and consider group capital developments by the Federal Reserve Board, both of which may help inform the construction of a U.S. group capital calculation.”

6. The RBC aggregation approach is intended build on existing legal entity capital requirements where they exist rather than developing replacement/additional standards. In selecting this approach, it was recognized as satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions’ existing capital regimes. In order to capture the risks associated with the entire group, including the insurance holding company, RBC calculations would need to be developed in those instances where no RBC calculations currently exist.

7. In early 2016, the Financial Condition (E) Committee appointed the Group Capital Calculation (E) Working Group, which began to address its charge and various details of the items suggested by the ComFrame Development and Analysis (G) Working Group. The instructions included herein represent the data, factors, and approaches that the Working Group believed were appropriate for achieving such an objective. The GCC instructions and template are intended to be modified, improved, and maintained by the NAIC in the future as are the Accounting Practices and Procedures Manual, the Annual Statement Instructions and the Risk-Based Capital Formula and Instructions. This includes, but is not limited to, future disclosure of additional items developed or referred by other NAIC committees, task forces and/or working groups.

8. In December 2020, amendments to NAIC Model Law (#440) and Model Regulation (#450) were adopted to provide States with legislative language to fully implement the GCC as an annual filing. The Model specifies what groups are exempted from the GCC filing requirement and the circumstance under which a limited filing may be submitted. For such information reference should be made not to these instructions, rather to the models and, more specifically, to how they are implemented into laws and regulations of a Lead State.

II. Definitions

9. **Affiliate**: As used in Model #440, an “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified. For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are insurers or other financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates. All other Schedule A and Schedule BA investments will remain as investments of a Parent insurer will be reported as Parent of the value and capital calculation of the Parent insurer. A full list of Schedule A and BA entities will be reported as described in the instructions for Input 6 – Questions and Other Information. Any entities that would otherwise qualify as Schedule BA affiliates as described above but are
owned by other entities (e.g., foreign insurers or other type of Parent entity) should be treated in the same way.

10. **Broader Group**: The entire set of legal entities that are controlled by the Ultimate Controlling Person of insurers within a corporate group. When consider the use of this term, all entities included in the Broader Group should be included in Schedule 1 and the Inventory, but only those that are denoted as “included” in the Schedule 1 will be considered in the actual GCC.

11. **Control**: As used in the Model #440, the term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K of Model #440 that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

12. **Cross-Support Mechanism**: A cross-support mechanism is an agreement or transaction that creates a financial interdependence. Depending on the nature of the transaction and the specific circumstances, these mechanisms may pose material risk. These may include corporate guarantees, capital maintenance agreements (regulatory or ratings based), letters of credit, intercompany indebtedness, bond repurchase agreements, securities lending or other agreements or transactions that create a financial interdependence or link between entities in the group.

13. **Entity Not Subject to A Regulatory Capital Requirement**: This is a financial entity other than an entity that is subject to a specified regulatory capital requirement.

14. **Financial Entity**: A non-insurance entity that engages in or facilitates financial intermediary operations (e.g., accepting deposits, granting of credits, or making loans, managing, or holding investments, etc.). Such entities may or may not be subject to specified regulatory capital requirements of other sectoral supervisory authorities. For purposes of the GCC, entities that are not regulated by an insurance or banking authority [e.g., the U.S. Securities and Exchange Commission (SEC) or the Financial Industry Regulatory Authority (FINRA)] will be considered as not subject to a specified regulatory capital requirement.

The primary examples of financial entities are commercial banks, intermediation banks, investment banks, saving banks, credit unions, savings and loan institutions, swap dealers, and the portion of special purpose and collective investment entities (e.g., investment companies, private funds, commodity pools, and mutual funds) that represents the Broader Group’s aggregate ownership in such entities, whether or not any member of the Broader Group is involved in that entity’s management responsibilities (e.g., via investment advisory or broker-dealer duties) for those entities.

For purposes of this definition, a subsidiary of an insurance company whose predominant purpose is to manage or hold investments or act as a broker-dealer for those investments on
behalf of the insurance company and its affiliated insurance (greater than 90% of all such investment subsidiaries’ assets under management or held are owned by or for the benefit of these insurance affiliates) should NOT be considered a Financial Entity. In the case where an insurer sets up multiple subsidiaries for this purpose, the 90% may be measured in the aggregate for all such entities. Similarly, in the case of collective investment pools (e.g., private funds, commodity pools, and mutual funds) the 90% may be measured individually, or in the aggregate for each subtype (e.g., private funds, commodity pools, and mutual funds).

In addition, other financial entities without a regulatory capital requirement include those which are predominantly engaged in activities that depending on the nature of the transaction and the specific circumstances, could create financial risks through the offering of products or transactions outside the group such as a mortgage, other credit offering or a derivative.

15. **Insurance Group**: For purposes of the GCC, a group that is comprised of two or more entities of which at least one is an insurer, and which includes all insurers in the Broader Group. Another (non-insurance) entity may exercise significant influence on the insurer(s); i.e., a holding company or a mutual holding company; in other cases, such as mutual insurance companies, the mutual insurer itself may be the Ultimate Controlling Person. The exercise of significant influence is determined based on criteria such as (direct or indirect) participation, influence and/or other contractual obligations; interconnectedness; risk exposure; risk concentration; risk transfer; and/or intragroup agreements, transactions and exposures.

An Insurance Group may include entities that facilitate, finance or service the group’s insurance operation, such as holding companies, branches, non-regulated entities, and other regulated financial institutions. An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control, and includes all members of the Broader Group that exercise significant influence on the insurance entities and/or facilitate, finance or service the insurance operations.

An Insurance Group could be headed by:
- An insurance legal entity;
- A holding company; or
- A mutual holding company.

An Insurance Group may be:
- A subset/part of bank-led or securities-led financial conglomerate; or
- A subset of a wider group.

An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control.

16. **Insurance Subgroup/U.S. Operations**: Refers to all U.S. insurers within a Broader Group where the groupwide supervisor is in a non-U.S. jurisdiction. It includes all the directly and indirectly held subsidiaries of those U.S. insurers. For purposes of subgroup reporting, capital instruments, loans, reinsurance, guarantees would only include those that exist within the U.S. insurers. Amounts included for the U.S. insurers shall include all amounts contained within the financial statements of those entities included in the subgroup reporting, whether those amounts are directly attributable or allocated to a company in the subgroup from an affiliate outside of the U.S. insurers and its direct or indirect subsidiaries.
17. **Lead State Regulator:** As defined in the *Financial Analysis Handbook*, i.e., generally considered to be the one state that “takes the lead” with respect to conducting groupwide supervision within the U.S. solvency system.

18. **Limited Group Capital Filing:** Refers to a GCC filing that includes sufficient data or information to complete the “Input 4 Analytics” tab and the “Summary 3 – Analytics” tab of the GCC template. This includes Schedule 1 of the template and may include limited data from other input tabs as deemed necessary for purposes of the analytics.

19. **Material Risk:** Risk emanating from a non-insurance/non-financial entity not owned by an insurer in the Insurance Group or is part of the Broader Group that is of a magnitude that could adversely impact the financial stability of the group as a whole such that the ability of insurers within a group to pay policyholder claims or make other policy related payments (e.g., policy loan requests or annuity distributions) may be impacted.

To determine whether an entity within the Broader Group poses material risks to the Insurance Group, the totality of the facts and circumstances must be considered. The determination of whether risk posed by an entity is material requires analysis of various aspects pertaining to the subject entity. A determination that a non-insurance/non-financial entity does not pose material risk allows the filer to request exclusion of that entity from the calculation of the GCC ratio in the “Inventory” tab. A number of items as listed below should be considered in making such a determination, to the extent they apply.

Caution is necessary, however. The fact that one or more of these items may apply does not necessarily indicate risk to the Insurance Group is, or is not, material. The group should be able to support its determination of material risk if requested by the Lead State Regulator. This should not be used as a checklist or as a scorecard. Rather, the list is intended to illuminate relevant facts and circumstances about a subject entity, the risk it poses, how the Insurance Group might be exposed to that risk and means to mitigate that risk.

Primary Considerations:

- Past experience (i.e., the extent to which risk from the entity has impacted the Insurance Group over prior years/cycles).
- The degree to which capital management across the Broader Group has historically relied on funding by the Insurance Group to cover losses of the subject entity.
- The existence of intragroup cross-support mechanisms (as defined below) between the entity and the Insurance Group.
- The means by which risk can be transmitted; i.e., the existence of sufficient capital within the entity itself to absorb losses under stress and/or if adequate capital is designated elsewhere in the Broader Group for that purpose.
- The degree of risk correlation or diversification between the subject entity and the Insurance Group (e.g., where risks of one or more entities outside the Insurance Group are potentially offset (or exacerbated) by risks of other entities) and whether the corporate structure or agreements allow for the benefits of such diversification to protect the Insurance Group.
- The existence and relative strength or effectiveness of structural safeguards that could minimize the transmission of risk to the Insurance Group (e.g., whether the corporate shell can be broken).
Other Considerations (if primary considerations suggest exclusion may be reasonable, these can be used to further support exclusions):

- The location of the entity in relation to the Insurance Group within the Broader Group’s corporate structure and how direct or indirect the linkage, if any, to the Insurance Group may be.
- The activities of the entity and the degree of losses that the entity could pose to the group under the current economic environment or economic outlook.

The guidance above recognizes that there are diverse structures and business models of insurers that make it impracticable to apply a one-size-fits-all checklist that would work for materiality determinations across all groups. Strict or formulaic quantitative measures based on size of the entity or its operations of a non-insurance affiliate are an insufficient proxy for materiality of risk to the insurance operations. The GCC Instructions thus consider the unique circumstances of the relevant entity and group and uses an interactive process whereby the group brings forward its suggestions as to entities that should be excluded from the scope of application for a discussion with the lead state, ultimately culminating in an agreement on the scope of application. The guidance in this section helps to facilitate that process and discussion with criteria for cross-support mechanisms that can potentially transmit material risk, as defined, to the Insurance Group as well as safeguards that can mitigate such risk or its transfer.

20. **Person**: As used in Model #440, a “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

21. **Reciprocal Jurisdiction**: As defined in the *Credit for Reinsurance Model Law* (#785).

22. **Scope of Application**: Refers to the entities that meet the criteria listed herein for inclusion in the GCC ratio. The application of material risk criteria may result in the Scope of Application being the same as, or a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s).

**NOTE**: U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator, otherwise in as much as they are already included in a reporting legal entity, they are already in the scope of application and there is no need for any additional reporting.

23. **Ultimate Controlling Person**: As used in the *Insurance Holding Company System Regulatory Act* (#440). This is the entity that exercises control directly or indirectly over all entities within the Broader Group.
III. Determining the Scope of Application

A. Groups Exempted from the GCC

24. Refer to changes to Model #440 for guidance on groups that are exempted from filing a GCC. Instead, instructions are provided to ensure Lead State Regulators receive the information necessary to evaluate the Scope of Application.

B. Scope of Application – Legal Entity Inventory

25. When considering the scope of application, preparers of the GCC must first understand the information to be included in Schedule 1 of the template. When developing an initial inventory of all potential entities, the preparers of the GCC shall complete Schedule 1, which, except in the case of an Insurance Subgroup (as defined in Section II), requests data for all of the entities within the Broader Group that are directly or indirectly owned by the Ultimate Controlling Person (including the Ultimate controlling Person) that are listed in the insurer’s most recent Schedule Y or in relevant Holding Company Filings. GCC preparers should provide basic information about each such entity in Schedule 1, including its total assets, and total revenue and net income for this specific year identified. Additionally, the initial filing will require some further information for the prior year (e.g., prior year equity or surplus to policyholders). The primary purpose of the Schedule 1 is to: 1) assist the lead state in making an assessment on the entities within the group that should be included in the Scope of Application; and 2) provide the lead state with valuation information to better understand the group. This valuable information produces various ratios and other financial metrics that will be used in the analysis of the GCC and the group by the lead state for their holding company analysis.

26. To assist the Lead State Regulator in assessing the Scope of Application, the Schedule 1 and the “Inventory” tab of the template will be completed by each preparer to provide information and certain financial data on all the entities in the group. Each preparer will also use the include/exclude column in Schedule 1 to request its own set of entities to be excluded from the calculation after applying criteria for material risk (as defined in Section II). The requests for exclusion will be described by the preparer in the template and evaluated by the Lead State Regulator. A second column will be used by the regulator to reflect entities that the regulator agrees should be excluded.

27. Although all entities must be listed in Schedule 1 and in the “Inventory” tab, the preparer is allowed to group data for certain financial entities not subject to a regulatory capital requirement and certain non-insurance and non-financial entities. Thus, while the Schedule 1 would include the full combined financial results/key financial information (for all entities directly or indirectly owned by the Ultimate Controlling Person, such data may be reported based on major groupings of entities to maximize its usefulness, reduce the number of numeric entries, and allow the Lead State Regulator to better understand the group, its structure, and trends at the sub-group as well as group level. Criteria for grouping are further described in Section V, paragraph 55. Prior to completing the GCC annually, the Insurance Group should determine if the proposed grouping is satisfactory to the lead state or if there are certain non-insurance and non-financial entities (such entities are required to be broken out and reported separately) that should be broken out and reported separately.

C. General Process for Determining the Scope of Application

28. The starting point for “Scope of Application” (i.e., for purposes of the GCC specifically) is the entire group except in the case of an Insurance Subgroup (as defined in Section II). However, in the case of groups with material diverse non-insurance/non-financial activities isolated from the financial/Insurance Group and without cross-support mechanisms as defined in Section II, the preparer may request a narrower scope starting at the entity that controls all insurance and
financial entities within the group [i.e., comprise a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s) (Broader Group)]. However, the adjustments as to the Scope of Application suggested by the preparer in consultation and in agreement with the Lead State Regulator should include consideration of guidance in paragraph 31 (“Identify and Include all Financial Entities”) the totality of the facts and circumstances, as described in paragraph 19 (“Definition of material risk”). The rationale and criteria applied in allowing the reduced scope should be documented and made available to non-lead states if requested. The decision on reduced scope should be revisited when changes in the group structure or activities occur.

The fundamental reason for state insurance regulation is to protect American insurance consumers. Therefore, the objective of the GCC is to assess quantitatively the collective risks to, and capital of, the entities within the Scope of Application. This assessment should consider risks that originate within the Insurance Group along with risks that emanate from outside the Insurance Group but within the Broader Group. The overall purpose of this assessment is to better understand the risks that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims consistent with the primary focus of insurance regulators.

D. Guiding Principles and Steps to Determine the Scope of Application

29. For most groups, the Scope of Application is initially determined by the preparer in a series of steps, listed here and then further explained as necessary in the text that follows:
   
   - Develop a full inventory of potential entities using the Inventory of the Group template (Schedule 1). This should correspond to Annual Statement Schedule Y, Part 1A
   
   - Denote in Schedule 1 for each non-financial entity whether it is to be “included in or excluded from” the Scope of Application” using the criteria in the “Identify Risks from the Broader Group” subsection below.
   
   - All non-financial entities, whether to be included in or excluded from the Scope of Application are to be reported in the “Inventory” tab of the template. Information to be provided for excluded entities will be limited to Schedule 1B and the corresponding columns in the Inventory tab. See paragraph 55 for additional information on treatment of non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity.
   
   - Non-financial entities may qualify for grouping on this Inventory tab as described elsewhere in these instructions.

E. Steps for Determining the Scope of Application

30. Identify and list all entities in the Insurance Group or Insurance Subgroup (where required).

   Include all entities that meet the definition of an affiliate in Section II, above and that fit the criteria identified in the definition of the Insurance Group or Insurance Subgroup (if applicable), in Section II, above except as modified in paragraph 32 (Identify Risks from the Broader Group), below. All insurance entities and entities owned directly or indirectly by the insurance
entities in the group shall be included in the Scope of Application and reported in the Schedule 1 and Inventory of the Group template. Other non-insurance/nonfinancial entities within the Insurance Group may be designated as “exclude” as described in paragraph 30.

31. Identify and include all Financial Entities.

Financial Entities (as defined in Section II) within the Inventory of the Group template shall be included in (i.e., may not be designated as “excluded from”) the Scope of Application, regardless of where they reside within the Broader Group.

As learned from the 2008 financial crisis, U.S. insurers were not materially impacted by their larger group issues; however, materiality of either equity or revenue of an entity might not be an adequate determinant of potential for risk transmission within the group. Furthermore, risks embedded in financial entities are not often mitigated by the activities of the insurers in the group and may amplify their (the insurers’) risks.

Any discretion in evaluating the ultimate risk generated by a defined financial entity that is not subject to a regulatory capital requirement should be applied via review of the material risk definitions/principles included in paragraph 19 to set the level of risk as low, medium or high and not to exclude such entities from the calculation. The rationale should be documented, and all data required in Schedule 1 must be provided for the entity for purposes of analysis and trending.

32. Identify Risks from the Broader Group

An Insurance Group or Insurance Subgroup may be a subset of a Broader Group, such as a larger diversified conglomerate with insurance legal entities, financial entities, and nonfinancial entities. In considering the risks to which the Insurance Group or Insurance subgroup is exposed, it is important to take account of those material risks (as defined in Section II) to the Insurance Group from the Broader Group within which the Insurance Group operates. All non-insurance/non-financial entities included within the Insurance Group or Insurance Subgroup that pose material risk to the insurers in the group should be included within (i.e., may not be designated as “excluded from”) the Scope of the Application. Similarly, all non-financial entities within the Broader Group but outside the Insurance Group that pose material risks to the Insurance Group should be included within (i.e., may not be designated as “excluded from”) the Scope of Application; non-material non-insurance/non-financial entities within the Broader Group or within the Insurance Group (as both terms are defined in Section II) other than those entities owned by entities subject to a specified regulatory capital requirement should be reported as “excluded.” However, no such entities outside an Insurance Subgroup (as defined in Section II) should be included in the GCC. When determining which non-financial entities from the Broader Group to include in the Scope of Application, the preparer must include any entity that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims or provide services to policyholders consistent with the primary focus of insurance regulators.
33. Review of Submission

The Lead State Regulator should review the inventory of entities provided in the Group template to determine if there are entities excluded by the preparer using the criteria above that the Lead State Regulator agrees do not pose material risk (as defined herein) to its insurance operations. Additional information may be requested by the Lead State Regulator to facilitate this analysis. For entities where the Lead State Regulator agrees with the request to exclude, the GCC may exclude the data for such entities. Ultimately, the decision to include or exclude entities from the GCC will occur based on the Lead State Regulator’s knowledge of the group and related information or filings available to the Lead State and whether they believe an applicable entity would not adversely impact the entities within the Scope of Application to pay policyholder claims.

The template’s sensitivity analysis tab includes a calculation to reflect the impact of excluded entities requested, but not approved for exclusion by the lead state. (see instructions for Input 5 herein).

34. The preparer, together with the Lead State Regulator, would use the above steps, which includes considering the Lead State Regulator’s understanding of the group, including inputs such as Form F, ORSA and other information from other involved regulators, to determine the reasonableness of the suggested Scope of Application.

35. Updating the Scope of Application

The Scope of Application could be re-assessed by the preparer and the Lead State Regulator each successive annual filing of the GCC provided there has been substantial changes in corporate structure or other material changes from the previous year’s filing. Any updates should be driven by the assessment of material risk and changes in group structure as they impact the exclusion or inclusion of entities within the Scope of Application based on material risk considerations.

IV. General Instructions

36. The GCC template consists of a number of tabs (sections) within one workbook. The following provides general instructions on each of these tabs.

37. **Attestation**: This tab is intended to work similar to the annual financial statement and RBC attestations, which are both intended to give the regulator greater comfort that the company has completed in accordance with its (these) instructions. It will also indicate whether the group consists of predominantly life, P/C, or health insurers and whether the submission is a full or limited group capital filing.

38. **Input 1 – Schedule 1**: This tab is intended to provide a full inventory of the group, including the designation by the filer of any non-financial entities to be included in, or excluded from, the Scope of Application and include sufficient data or information on each affiliated entity (see Schedule A and Schedule BA exception as described in paragraph 39) within the group so as to allow for analyzing multiple options for scope, grouping and sensitivity criteria, as well as, allowing the Lead State Regulator to make a determination as to whether the entities to be included in the scope of application or excluded from the scope of application meet the aforementioned criteria. This tab is also used to maximize the value of the calculation by
including various information on the entities in the group that allow the lead state to better understand the group as a whole, the risks of the group, capital allocation, and overall strengths and weaknesses of the group.

39. Except as noted, equity method investments reported in the Section 1B in the Inventory tab that are accounted for based on Statement of Statutory Accounting Principles (SSAP) No. 48—Joint Ventures, Partnerships and Limited Liability Companies are not required to be de-stacked (separately listed) in Schedule 1; i.e., their value would be included in amounts reported by the Parent insurer within the calculation. The basis for this approach is predicated on the purpose of the entire GCC, which is to produce an expected level of capital and a corresponding level of available capital that are derived by aggregating the amounts reported of capital of the individual entities under the GCC methodology. The available capital for such joint ventures, partnerships and limited liability companies is already considered in Schedule 1 by its inclusion in its Parent’s financial statements and can be excluded from an inventory (not separately listed) because the Parent also already receives a corresponding capital charge within its RBC.

NOTE: Data for this tab is required for a Limited Group Capital filing.

40. Input 2 – Inventory: This tab is intended to be used by the consolidated group to provide information on the value and capital calculation for all the entities in the group before any de-stacking of the entities. While some of this information is designed to “pull” information from Schedule 1, other cells (blue cells) require input from the group. This tab will then apply the adjustments for investment in subsidiary other than where an exception is described in these instructions and adjust for intragroup arrangements. This tab is set up to subtract those adjustments from capital and therefore should be entered as: 1) a positive figure if the adjustment currently has a positive impact on the available capital or the capital calculation; or 2) a negative figure if the adjustment currently has a negative impact on the available capital or the capital calculation. It will also be used to add relevant insurance or other financial entities included as equity investments in Schedule A and Schedule BA and to aggregate the resulting adjusted values for use in the actual GCC.

NOTE: For a Limited Group Capital filing, data will be presented in a summarized format in a limited version of the “Inventory” tab in lieu of completing the full “Inventory” tab (see below).

Limited Group Capital Filing Only: Input 2 – Inventory: Manually enter data in Inventory B, Column 8 and Inventory C, Column 8 to report a single aggregated value for each entity category in the group. This will require that eliminations and adjustments normally found in a “full” Inventory B, Column 2 through Column 7 and Inventory C, Column 2 through Column 7 to be addressed offline.

41. Input 3 – Capital Instruments: This tab is intended to be used to gather necessary information to that will be used to calculate an allowance for additional available capital based on the concept of structural subordination applied to senior or other subordinated debt issued by a holding company that is within the scope of application of the GCC filing. It will also provide information on all debt issued by entities within the scope of application.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

42. Input 4 – Analytics: In recognizing a primary purpose of the GCC is to enhance groupwide financial analysis, this tab includes or draws from entity-category-level inputs reported in the tab or elsewhere in the GCC template to be used in GCC analytics. Separate guidance for Lead
State Regulators to reference in analysing the data provided in the GCC template (reference applicable location of the guidance; e.g., Financial Analysis Handbook).

NOTE: Data for this tab is required for a Limited Group Capital filing.

43. **Input 5 – Sensitivity Analysis and Inputs**: This tab includes inputs and/or describes informational sensitivity analysis for other than XXX/AXXX captives, permitted and prescribed practices, debt designated as “Other,” unscaled foreign insurer values and other designated sensitivity analysis. The inputs are intended to simply be a disclosure, similar to the disclosure required under Note 1 of the statutory financial statements. The analysis will be applied in the “Summary 2” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

44. **Input 6 – Questions and Other Information**: This tab will provide space for participants to describe or explain certain entries in other tabs. Examples include the materiality method applied to exclude entries in Schedule 1 and narrative on adjustments for intragroup debt and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

45. **Calc 1 – Scaling (Ins)**: This tab list countries predetermined by NAIC and provides the necessary factors for scaling available and required capital from non-US insurers to be used in sensitivity analysis to a comparable basis relative to the U.S. RBC figures. It also allows for set scaling options (which vary by insurance segment such as life, P/C, and health).

NOTE: This tab is NOT required for a Limited Group Capital filing.

46. **Calc 2 – Scaling (Non-Insurance)**: This tab is used to determine calculated capital for non-insurance entities.

NOTE: This tab is NOT required for a Limited Group Capital filing.

47. **Summary 1 – Entity Category Level**: This tab provides a summary of aggregated available capital and calculated capital for each entity category before the application of capital instruments.

NOTE: This tab is NOT required for a Limited Group Capital filing.

48. **Summary 2 – Top Level**: This tab calculates various informational GCC ratios resulting from applying “on top” and entity level adjustments to adjusted carrying value and adjusted calculated capital and are described in the “Sensitivity Inputs and Analysis” tab. These “what if” scenario analysis will not be part of the GCC ratio.

NOTE: This tab is NOT required for a Limited Group Capital filing.

49. **Summary 3 – Analytics**: Provides a summary of various GCC analytics.

NOTE: This tab is required for a Limited Group Capital filing.
50. **Summary 4 – Grouping Alternatives:** This tab currently calculates and displays a selected grouping option for organizing the structure of the group consistent with the way that the entities are managed.

**NOTE:** This tab is NOT required for a Limited Group Capital filing.

51. All cells in the template are color-coded based on the chart below. Inputs should only be made in blue cells. Do not add/delete rows, columns or cells or change the structure of the template in any way. If there appears to be an error in the formulas in the template, contact the NAIC.

The following set of colors is used to identify cells:

<table>

**V. Detailed Instructions** *(insert link to template)*

**Input 1 – Schedule 1**

52. Schedule 1A indicates the version of the template being prepared.

53. More detailed information on each legal entity should be reported in Schedule 1B through Schedule 1D. The order of the entries in Schedule 1 should match that in the “Inventory” tab. The first entity listed should be the ultimate controlling party.

54. U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator. They should be reported under the appropriate entity category in [Sch 1B Col 6].

55. Entries are required for every entity within the scope of the group. However, while recognizing that Lead State Regulator retain the discretion to ask for greater detail, the following simplifications may be applied as long as information for every entity is entity is listed in Schedule 1B:

- A single numerical entry for like Financial Entities would be allowed at the intermediate holding company level, assuming that the like entities are owned by a common Parent that does not own other entity types, all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. The entity at which the total data is provided must be assigned an “Entity Category” in Schedule 1 that corresponds to the instructed carrying value and capital calculation for which the entry is made (e.g., an entity that would otherwise be categorized as a non-operating holding company but holds asset managers would be categorized as an asset manager). Entries
for the remaining individual entities in the grouping will be reported in Schedule 1B only as “included.”

• In addition, a single numerical entry would be allowed for all included non-insurance/non-financial entities at the intermediate holding company level assuming that the intermediate holding company owns only non-insurance/non-financial entities (i.e., does not own other entity types), all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. This would include any positive residual value of the holding company itself. Entries for all individual entities in the grouping will be reported in Schedule 1B only as “included,” but no stand-alone values for each entity would be required.

• Values for, non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity may remain with their Parent insurers and will not be de-stacked. Entries for these individual entities in the grouping will be reported individually in Schedule 1B Columns 1 and 2 only as “included.” along with other required entries in Schedule 1B, but no stand-alone values for each entity would be required in Schedules 1C or 1D.

• Mutual Insurance Groups may use the Total Adjusted Capital and amount of required capital from the top-level Insurer’s RBC Report at 200% x ACL RBC further adjusted to de-stack foreign insurers and other financial entities owned directly or indirectly (on a look-through basis) via RBC filing subsidiaries. Such foreign insurance subsidiaries or other financial subsidiaries shall be reported at the carrying values and capital calculations as described later herein.

• Data for U.S. Branches of Foreign insurers may be omitted from Schedule 1 if they are otherwise included in the entries, values, and capital requirements of a foreign insurer.

NOTE: These simplifications will be treated in a similar manner in Input 2 – Inventory.

56. Any financial entity owned by a Parent insurer and listed in Schedule A or Schedule BA, and any insurance or financial entity that is owned indirectly through a Schedule BA affiliate should be listed in Schedule 1 and in the Inventory and assigned the appropriated identifying information. (See also the instructions for Part B of the Inventory). These entities will be de-stacked from the values for the Parent insurer. The same treatment for these entities will be afforded when they owned by a foreign insurer or other non-insurance entities.

57. Schedule 1B contains descriptions of each entity. Make selections from drop-down menu where available.

• [Sch 1B Col 1] Include/Exclude (Company) – This column is to select entities where a request is made for exclusion. The filer will indicate which non-insurance/non-financial entities not owned directly or indirectly by an insurer that should be excluded from the GCC as not posing material risk to the group. The filer’s definition of material risk will be reported in the “Other Information” tab.

• [Sch 1B Col 2] Include/Exclude (Supervisor) – Column to be filled in by supervisor. These are entities where the Supervisor agrees with the filer’s assessment of material risk
and these entities will be excluded from the GCC and may be included in a sensitivity analysis later in the template.

**NOTE:** This column may also be completed by the filer after advance consultation with the Lead State Regulator.

- **[Sch 1B Col 3] Include/Exclude (Selected)** – Formula to determine treatment of data for later sensitivity analysis. If supervisor has made a determination of include/exclude in the prior column, that will be used. If not, company’s selection will be used.

- **[Sch 1B Col 4] Entity Grouping** – Column denotes whether this is an insurance or non-insurance/non-financial entity and is also automatically populated based on the entry in Column 8.

- **[Sch 1B Col 5] Entity Identifier** – Provide a unique string for each entity. This will be used as a cross-reference to other parts of the template. If possible, use a standardized entity code such as NAIC Company Code (CoCode) or Insurance Services Office (ISO) Legal Entity Identifier. CoCodes should be entered as text and not number (e.g., if CoCode is 01234, then the entry should be “01234” and not “1234”). If there is a different code that is more appropriate (such as a code used for internal purposes), please use that instead. If no code is available, then input a unique string or number in each row in whatever manner is convenient (e.g., A, B, C, D, … or 1, 2, 3, 4…). Do not leave blank.

- **[Sch 1B Col 6] Entity Identifier Type** – Enter the type of code that was entered in the “Entity Identifier” column. Choices include “NAIC Company Code,” “ISO Legal Entity Identifier,” “Volunteer Defined” and “Other.”

- **[Sch 1B Col 7] Entity Name** – Provide the name of the legal entity.

- **[Sch 1B Col 8] Entity Category** – Select the entity category that applies to the entity from the following choices (all U.S. life captives shall select the option for “RBC Filing Captive,” complete the calculation using the life RBC formula in accordance with instructions below regarding “Additional clarification on capital requirements where a U.S. formula (RBC) is not required,” regardless of whether the company is required by their captive state to complete the RBC formula. Insurers or financial entities that are de-stacked from an insurer’s Schedule A or Schedule BA should be assigned the corresponding insurer or financial entity category:
If the GCC group’s Japanese insurer health business (referred to as “Third Sector”) is greater than 60% of total life business (referred to as “First Sector”) and health business combined, as reflected by annualized premium for the year reported, then that group may elect to use the Japan health scalar set rather than the life scalar set.

**NOTE:** All U.S. captives are required to complete the applicable RBC formula template. In addition, any insurer, other than U.S. captive, that submits an RBC filing to either the state of domicile or the NAIC will be considered an RBC filer.
• [Sch 1B Col 9] Alternative Grouping – This is an optional input field. This field should be used if you wish to show similar entities aggregated into a single line in Summary 4-Alternative Grouping. Exhibit. For example, if you have a dozen small dental HMO businesses, you may wish to show them as a single line called “Dental HMOs,” as opposed to listing each entity separately. This is a level of granularity below “Entity Category” but above individual entities. No entity should be put in the same “Alternative Grouping” as its Parent. It is acceptable to put only one entity in a grouping. If any entries are left blank then, in Column 17, the “Entity Name” will be selected as the grouping. This will not impact the order of the entities for which data is entered in Schedule 1 or the “Inventory” tab.

• [Sch 1B Col 10] Parent Identifier – Provide the Entity Identifier of the immediate Parent legal entity for each entity, as applicable. If there are multiple Parents, select the Parent entity with the largest ownership percentage. Only include one entry. For the top holding company, enter “N/A.”

• [Sch 1B Col 11] Parent Name – This will be populated by a formula, so input is not required.

• [Sch 1B Col 12] % Owned by Parent – Enter the percentage of the entity that is owned by the Parent identified earlier in the worksheet. Percentages of ownership should be based on the percentage of voting class securities (unless ownership is maintained other than by control of voting securities) consistent with what is reported pursuant to state holding company regulation filings (Form B or equivalent).

• [Sch 1B Col 13] % Owned within Group Structure – Enter the percentage of the entity that is owned in the aggregate by any affiliate within the Group.

• [Sch 1B Col 14] State/Country of Domicile – Enter state of domicile for U.S. insurance entities and country of domicile for all other entities. (Use references that are consistent with those use on Schedule Y, where available.)

• [Sch 1B Col 15] Zero Valued and Not Admitted Entities – Report for U.S. Insurers Only. Select the treatment of the entity from following options: “Zero Valued for RBC” or “Nonadmitted for Accounting and RBC (Direct or Indirect).”

Zero Valued for RBC are affiliated insurance and financial entities that are otherwise reported in the RBC filer’s annual financial statement at their accounting value (i.e., per SAP) but are reported at zero value and zero capital requirements for RBC purposes. Examples include non-Canadian foreign insurers directly owned by U.S. life RBC filers. The carrying value and capital calculation specified in these instructions for the specific insurance or financial entity type should be reported in Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column.

Nonadmitted for Accounting and RBC (Direct or Indirect) are insurance or other financial affiliates that owned directly indirectly by an RBC filer via a downstream non-financial entity or holding companies that are reported at zero value per SAP and are also reported
at zero value and zero capital requirements for RBC purposes. Examples include U.S. insurers indirectly owned by a U.S. RBC filer through a nonadmitted holding company that has not been subject to an independent audit. The carrying values and capital calculations specified herein associated with the specific insurance or financial indirectly owned entity type should be reported Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column. The excess value in the nonadmitted Parent entity may be reported at zero value.

No entry is required in this column for any nonadmitted directly or indirectly owned non-insurance/non-financial subsidiary. Report zero for these affiliates in Column 2 of Inventory B and Inventory C.

- **[Sch 1B Col 16] Is Affiliate on Schedule A or Schedule BA an Insurer or Other Financial Entity?** – Column is meant to identify an entity with an insurer or financial entity identifier in Column 8 that is reported on Schedule A or Schedule BA but is being de-stacked and also reported on the Inventory tab. Provide a “Y” response where that is applicable. Otherwise leave blank.

- **[Sch 1B Col 17] Selected Alternative Grouping** – This will be populated by a formula, so input is not required. If there are any blank entries in Column 9 (Alternative Grouping), this column will set them equal to the name of the entity.

58. Schedule 1C contains financials for each entity:

- **[Sch 1C Col 1] Basis of Accounting** – Enter basis of accounting used for the entity’s financial reporting.

- **[Sch 1C Col 6] Book Assets** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total assets as reported in the basic financial statements before eliminations (because that is presumed to be less burdensome on the insurance holding company). Other financial data should
similarly be prepared using financial data before eliminations. However, insurance holding companies are allowed to present such figures after eliminations if they do so for all figures and consistently for all years.

- **[Sch 1C Col 7] Book Liabilities** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total liabilities as reported in the basic financial statements.

- **[Sch 1C Col 8] Gross Paid-in and contributed Capital and Surplus (U.S. Insurers Only)** – For U.S. insurers, report the current year end amounts from annual financial statement Page 3 as follows:
  
  a. Life Insurers: lines 29, 30 and 33.
  
  b. P/C Insurers: lines 30, 31 and 34.
  
  c. Health Insurers: lines 26, 27 and 28.

59. Generally, Schedule 1D will include entries from regulatory filings or entity specific GAAP financial statements as of the reporting date. The amounts reported should be the entity value on a stand-alone (fully de-stacked) or grouped basis (where applicable). This may require use of company records in certain cases. The amounts should be reported at 100% for the entity listed. Any required adjustments for percentage of ownership will be applied later, if necessary, to calculate a capital charge.

- **[Sch 1D Col 1] Prior Year Entity Identifier** – Report the Legal Entity Identifier, NAIC company code or other identifier used for the entity in the prior year GCC filing for the prior calendar year.

- **[Sch 1D Col 2] Prior Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone balance sheet. This will generally be the same as what is reported in the current year column in the prior year GCC filing. Where grouping is permitted, the balance reported may be on a grouped basis.

- **[Sch 1D Col 3] Net Income** – The final reported income figure from the income statement, and therefore is the figure reported after interest, taxes, extraordinary items, etc. For entities with accounting and reporting requirements that specify that dividends paid or received will be part of “net income,” report the dividends received in this column. Report dividends to policyholders here as a reduction to net income if required by local accounting or reporting requirements.

- **[Sch 1D Col 4] Dividends Paid and Received (Net)** – All entity types report the net amount of dividends paid and received in reporting year to/from and affiliate, a Parent shareholder, public shareholders, or policyholders (if not required to be a reduction/increase in net income by local accounting or reporting requirements). All entity types that are subject to accounting and reporting requirements that specify that dividends paid or received will be reported as a surplus adjustment, will report dividends received in reporting year from affiliates in this column.
• **[Sch 1D Col 5] Capital and Surplus Contributions Received from Affiliates** – All entity types. Report sum of capital contribution (other than via surplus notes) during the reporting year received from any affiliated entity.

• **[Sch 1D Col 6] All Other Changes in Capital and Surplus** – Include total for all adjustments not listed above. This would include any investment income not already reported in Column 3 or Column 5. Also, report all stock repurchases or redemptions in this column.

  NOTE: Greater detail may be made available upon request.

• **[Sch 1D Col 7] Current Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone Balance Sheet for the current year. This will generally be the same as what is reported for the entity in the Inventory B, Column 2. Where grouping is permitted, the balance reported may be on a grouped basis.

• **[Sch 1D Col 8] Capital and Surplus Contributions Paid to Affiliates** – All entity types report the total of capital contributions (other than via surplus notes) during the reporting year paid to any affiliated entity.

• **[Sch 1D Col 9] Dividends Declared and Unpaid** – For all applicable entities report the amount of dividends declared or approved but not yet distributed.

• **[Sch 1D Col 10] Dividends Received and Not Retained** – All holding companies, insurers and financial entities with regulatory capital requirements indicate by “Y” or “N” if part or all of dividends received reported in Column 5 have been paid (passed through) to a Parent company, to public shareholders, or used to repurchase or redeem shares of stock.
Input 2 – Inventory

60. Columns in Inventory A are being pulled from Schedule 1:

- [Column 1] Insurance/Non-Insurance
- [Column 2] Entity Identifier
- [Column 3] Entity Identifier Type
- [Column 4] Entity Name
- [Column 5] Entity Category
- [Column 6] Parent Identifier
- [Column 7] Parent Name
- [Column 8] Basis of Accounting

Columns Requiring Input

61. Enter information on adjustments to carrying value. Considerations specific to different types of entities are located at the end of this subsection.

- **[Inv B Col 1] Carrying Value (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. In general, carrying values utilized should represent: 1) the subsidiary valuation required by the insurance or other sectoral regulator if the Parent is a regulated entity; or 2) in the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then a subsidiary valuation based U.S. GAAP or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. No entry is required for the Ultimate Controlling Person (UCP)

The value in this column will include a zero value for entities not admitted per SAP or other jurisdictional regulatory rules. A single entry for all entities that qualify under the grouping criteria described in Input 1, herein may be made in lieu of individual entries on the line for the affiliate that holds the qualifying entities. This column will include double-counting.

The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group.

- **[Inv B Col 2] Carrying Value (Local Regime)** – Record the carrying value recognized by the legal entity’s jurisdictional insurance or other sectoral supervisor. This will include the value of capital instruments (e.g., U.S. insurer issued surplus notes) that are specifically recognized by statute, regulation or accounting rule and included in the carrying value of the entity. In the case where the entity is not subject to insurance or other sectoral regulatory valuation, then U.S. GAAP equity (including OCI) or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. If an agreed-upon change in local carrying value should become effective by 2021, Volunteer Groups are expected to report on that basis. If the group is comprised entirely of U.S.-based entities under a U.S.-based Parent company, the entries in this column will be the same as in Column 1 except in cases where the Parent owns not admitted (or otherwise zero valued financial affiliates that
would be reported as not admitted in the Parent Regime column but fully admitted (per SAP valuation) in the Local Regime column. (See instructions for [Sch 1B Col 15].) However, if such an entity has been listed in the [Sch 1B Col 2] Include/Exclude (Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then a value will be reported here, but the ultimate calculation will show the results without the excluded entity’s value. The carrying value for affiliates that are U.S. RBC filers will be the amount reported TAC on entity’s RBC report. This column will include double-counting. The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group. The entry here should generally be the same as the value reported in Inventory B, Column 1, except where TAC for RBC filers differs from their BACV. A single entry for all entities that qualify under the grouping criteria described exceptions described herein under Input 1, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries.

A sensitivity analysis is included to calculate the impact of excluded entities requested but not approved for exclusion by the lead state.

</table>

*Subject to Grouping
In cases where a U.S. life RBC filer owns a foreign insurer and the BACV value reported for the foreign insurer in the Parent U.S. insurers financial statement is adjusted to zero for RBC purposes, then report zero in Inventory B, Column 1 and Column 3 for that foreign insurance entity.

- **[Inv B Col 3] Investment in Subsidiary** – Enter an adjustment to remove the investment carrying value of any directly owned subsidiary(ies) from Parent’s carrying value. This is intended to prevent double-counting of available capital when regulated entities are stacked. The carrying value to be removed should be the investment value carried by the Parent from which the entity is being de-stacked (i.e., the value in Column 1 in Inventory B adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at zero value by the Parent. Where entities are owned partially by entities outside of the group, then the Parent’s percentage of ownership will be calculated based on the value owned within the group.

Generally, for all non-financial affiliates, Schedule A and Schedule BA assets will remain in the value of the Parent insurer and not entered in this column. However, if the Schedule A or Schedule BA asset is an insurance or financial entity as described herein, the value of that entity will be included in this column. For indirectly owned Schedule A or Schedule BA insurance or financial entities, only the value of that entity will be included in this column and the remaining value of the downstream Schedule BA Parent will remain with the Parent insurer. Similarly, the carrying value of U.S. branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the value of the foreign insurer so that the Parent entity may eliminate double-counting of that available capital which will now be reported by the stand-alone Branch listed in the inventory.

**NOTE:** The “Sum of Subsidiaries” column may provide a useful check against this entry, but it will not necessarily be equal.

When utilizing public accounting (e.g., GAAP) equity values that differ from regulatory values (e.g., SAP), it is the **GAAP equity** of the insurers must be eliminated from the GAAP Parent in this column, not the SAP (regulated capital). This is necessary in order to allow the calculation to appropriately represent SAP capital of regulated entities and GAAP equity of non-regulated entities. Data on the accounting differences between Parent and Local carrying values will be collected in **[Inventory B, Column 9]** and further detail provided in the “Questions and Other Information” tab.

**NOTE:** Values for Schedule A and Schedule BA affiliates that are required to be reported in the “Inventory” tab will be adjusted out of the value reported by the U.S. insurer in this column.

- **[Inv B Col 4] Intragroup Capital Instruments** – This column is automatically calculated from inputs to the “Capital Instruments” tab. It reflects an adjustment to remove carrying value for intragroup financial instruments that are treated as capital by the issuer and consequently create additional capital within the group upon issuance (most notably U.S. surplus notes). Example for surplus notes: In both intragroup and unaffiliated transactions, treat the assets transferred to the issuer of the surplus note as available capital. If the purchaser is an affiliate, eliminate the investment value from the affiliated purchaser of the surplus note in this column. If the purchaser is an insurer or other regulated entity, eliminate the purchaser’s capital charge (e.g., RBC charge) on the
surplus note investment in the corresponding adjustment column for the capital calculation. No adjustments are made for any intragroup capital instrument that is treated as a liability by the issuer.

- **[Inv B Col 5] Reported Intragroup Guarantees, LOCs and Other** – Enter an adjustment to reflect the notional value weighted for expected utilization for reported intragroup guarantees (including solvency insurance and capital maintenance agreements). Enter the notional value for letters of credit, or other intragroup financial support mechanisms. Explain each intragroup arrangement in the “Questions and Other Information” tab.

- **[Inv B Col 6] Other Intragroup Assets** – Enter the amounts to adjust for and to remove double-counting of carrying value for other intragroup assets, which could include intercompany balances, such as (provide an explanation of each entry in the “Questions and Other Information” tab):
  a. Loans, receivables and arrangements to centralize the management of assets or cash;
  b. Derivative transactions;
  c. Purchase, sale or lease of assets; and
  d. Other (describe).

- **[Inv B Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Other Information” tab.

- **[Inv B Col 8] Adjusted Carrying Value** – Stand-alone value of each entity per the calculation to eliminate double-counting. This value includes permitted and prescribed practices.

- **[Inv B Col 9] Accounting Adjustments (e.g., GAAP to SAP)** – Report the total difference between the carrying value reported in Column 1 (and Column 3) and the value reported in Column 2. This column will apply to regulated entities where the stand-alone carrying value is based on regulatory accounting (e.g., SAP) while the value reported for that entity by the Parent is carried at a financial accounting (e.g., GAAP) value. Further detail is reported in the “Questions and Other Information” tab.

- **[Inv B Col 13] Average Revenue over 3-years (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities)** – This column is populated from data in Column 10, Column 11 and Column 12.
This column will support the capital calculation for asset managers, broker-dealers and other Financial Entities without Regulatory Capital Requirements.

62. “Adjusted Capital Calculation” is reported in a similar manner to the “Adjusted Carrying Value” above. The columns are in the same order, although it is likely that fewer entries will be needed for Column 4 through Column 7. Further guidance is below.

- **[Inv C Col 1] Entity Required Capital (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. No entry is required for the Ultimate Controlling Person. In general, entity required capital should represents the capital requirements of the Parent’s insurance or other sectoral regulator:
  
a. For subsidiaries of foreign insurers or other non-U.S. financial entities, the unscaled capital required by the Parent’s regulator of the regulated entity based on the equivalent of a Prescribed Capital Requirement (PCR) level.
  
b. For subsidiaries, including applicable Schedule A and Schedule BA subsidiaries, of U.S. insurance entities that are subject to RBC, except where the subsidiary is also an RBC filer, the entry should be equivalent of what would be required in the Parent’s RBC, adjusted for covariance where applicable (calculated by the preparer) reported at company action level (or two times authorized control level RBC) for that entity. Where the subsidiary is also an RBC filer, then the amount reported will be at company action level RBC (or two times authorized control level RBC) after covariance.
  
c. For subsidiaries of U.S. insurers that do not file RBC, report the actual amount of capital required in the Parent’s capital requirement (if any) for the subsidiary entity.
  
d. In the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then use zero where applicable. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the specified capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group. A single entry for all entities that qualify under the grouping criteria described in Section V, herein may be made on the line for the affiliate that holds the qualifying entities in lieu of individual entries.

- **[Inv C Col 2] Entity Required Capital (Local Regime)** – Enter required capital for each de-stacked entity, as applicable entity description below. For U.S. RBC filing subsidiaries under a U.S. RBC filing Parent the amounts will be the same in both the Parent and Local Regime columns, except where the RBC filing subsidiary is subject to an operational risk charge. In such cases the amount reported in this column for the subsidiary will include the operational risk charge while the amount reported in Column 1 will exclude the subsidiary’s operational risk charge. However, for some entity types his will result in entries for the entities under a U.S.-based insurance Parent to be different from what U.S. RBC would dictate. In addition, where a U.S. insurer directly or indirectly owns not admitted (or otherwise zero valued) financial affiliates, those affiliates would be reported with zero value in the Parent Regime column but at the specified regulatory value described below for that financial entity type in this column. However, if such an
entity has been listed in [Sch1B Col 2] Include/Exclude (Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then report the capital calculation in accordance with entity instructions below, but the ultimate calculation will show the results without the excluded entity’s capital calculation. Directly or indirectly owned non-financial entities that were not admitted or otherwise carried at a zero value in the Parent Regime, may be reported at zero value in this column. A single entry for all entities that qualify under the grouping criteria described herein under Input 1, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group.

63. Additional clarification on capital requirements where a formula is required:

- **U.S. RBC filing Insurers**: Report RBC at Company Action Level including operational risk (200% x ACL)

- **Foreign Insurance Entities**: The local capital requirement as specified below for each jurisdiction should be reported, by legal entity, at a Prescribed Capital Requirement (PCR) level. This treatment is different than what U.S. RBC would require and recognizes other regulators view of adequate capital for insurers within another jurisdiction. It is more reflective of risk within the group context. A sensitivity analysis will be included in the “Sensitivity Analysis” tab using the jurisdictional PCR scaled per the Excess Relative Ratio method (see Appendix 1) for insurers in foreign jurisdictions that are subject to scaling.

- **European Union subsidiaries**: Use the Solvency II Solo Solvency Capital Requirement (SCR) as the PCR.

- **U.S. RBC filing subsidiaries**: The RBC Company Action Level including operational risk of each insurer should be reported.

- **Australia subsidiaries**: The PCR is the target capital as set by the insurer/group in accordance with APRA requirements. Effectively, this would be “Target capital under ICAAP.” PCR is not a set multiple of MCR.

- **Bermuda subsidiaries**: The Legal Entity PCR in Bermuda for medium and large commercial insurers is called the “Enhanced Capital Requirement” (ECR) and is calibrated to Tail VaR at 99% confidence level over a one-year time horizon.

- **Hong Kong subsidiaries**: Under the current rule-based capital regime, if applied similar to the concept of PCR, the regime’s PCR would be 150% of MCR for life insurers and 200% of MCR for non-life insurers.

- **Japan subsidiaries**: The PCR is the solvency margin ratio of 200%.

- **Korea subsidiaries**: The PCR is 100% of risk-based solvency margin ratio.
• **Singapore subsidiaries**: The PCR is 120% of total risk requirement (i.e., capital requirement).

• **China Taipei subsidiaries**: The PCR is 200% of RBC ratio.

• **Canada life entities**: The baseline PCR should be stated to be “100% of the LICAT Base Solvency Buffer.” The carrying value should include surplus allowances and eligible deposits.

• **Canada P/C entities**: The PCR should be the MCT capital requirement at the target level.

• **South Africa subsidiaries**: The PCR is 100% of the SAM SCR.

• For any entities that cannot be mapped to the above categories, scaling will be at 100%

64. **Additional clarification on capital requirements where a U.S. formula (RBC) is not required:**

• For those U.S. insurers that do not have an RBC formula, the minimum capital per state law should be used as the basis for what is used for that insurer in the GCC. This may differ from what U.S. RBC would require. It is more reflective of the regulatory view of risk in the group context. The following requirements should be used in other specified situations where an RBC does not exist:

• **Mortgage Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the Mortgage Guaranty Insurance Model Act (#630).

• **Financial Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the Financial Guaranty Insurance Guideline (#1626), specifically considering Section 2B (minimum capital requirements) and Section 3 (Contingency, Loss and Unearned Premium Reserves) and the other requirements of that guideline that impact capital (e.g., specific limits).

• **Title Companies**: The minimum capital requirement shall represent 200% of the required level of reserves carried by the insurance company.

• **Other Companies**: A selected basis for minimum capital requirements derived from a review of state laws. Where there is a one-off treatment of a certain type of insurer that otherwise would file RBC (e.g., HMOs domiciled in California), the minimum capital required by their respective regulator could be considered in lieu of requiring the entity to complete an RBC blank.

• **Captives**: U.S. insurers that have captives should complete the applicable RBC formula regardless of whether the captive is required to complete it in their captive state. The amounts input into RBC by the captive shall be based on the actual assets and liabilities utilized in the regulatory reporting used by the captive. Captives used exclusively for self-insurance (either by U.S. life insurers or any other type of insurer) or insurance provided exclusively to its own employees and/or its affiliates, should not complete an RBC calculation and the entire entity should be treated as non-insurers and receive the same charge as a non-regulated entity.

65. **Non-insurance financial entities subject to a specified regulatory capital requirement:**
• All banks and other depository institutions – The unscaled minimum required by their regulator. For U.S. banks, that is the Office of the Comptroller of the Currency (OCC) Tier 1 or other applicable capital requirement. This is understood to be consistent with how the Federal Reserve Board would apply its Building Block Approach.

• Any other financial entity that is determined to be subject to a specified regulatory capital requirement will bring that requirement in the GCC at the first level of regulator intervention (if applicable).

• This differs from what U.S. RBC would require. It recognizes the sectoral regulator’s view of risk for a particular financial entity type. It is more reflective of risk in the group context.

66. Non-insurance financial entities NOT subject to a specified regulatory capital requirement:

• All asset managers and registered investment advisors and all other financial entities as defined in Section II: Use the capital calculation specified below based the level of risk assigned to the entity by applying the material risk principles defined in Section II. However, asset managers and investment affiliates (not qualifying to be treated as non-financial entities per paragraph 9) will be reported at either medium or high risk. In certain cases, these entities may be subject to a layer of regulation (e.g., SEC or FINRA) but are not generally subject to a specified capital requirement.

   High Risk: 10% x 3-year average revenue

   NOTE: A Basel Charge of 15% will be used for the IAIS ICS.

   Medium Risk: 5.0% x 3-year average revenue.

   Low Risk: 2.5% x 3-year average revenue

   NOTE: Medium risk could be used as a starting point while the stratified methodology is further developed.

67. Other non-insurance, non-financial entities with material risk:

• Non-insurance, non-financial entities may not be as risky as financial entities. For non-insurance, non-financial entities not owned by RBC filers or other such entities where there is not a regulatory capital charge for the entity in the capital formula, use an equity charge of 10.5% (post tax) for predominantly life Insurance Groups 9.5% for predominantly P/C Insurance Groups and 3.5% for predominantly health Insurance Groups x BACV. If the entity is not subject to a capital charge or is included in the capital charge of another financial entity, then enter zero in Column 1 and the charge specified in this paragraph in Column 2. These factors are based on average after covariance RBC charges for the respective insurer types and are calibrated at 200% x ACL RBC. This is meant to be consistent with how the entity would be treated if owned by an RBC filer while recognizing that the entity may be excluded from the GCC if it does not pose material risk to the insurers in the group.

   Non-insurance/non-financial entities owned by RBC filing insurers (or owned by other entities where a regulatory capital charge applied to the non-insurance/non-financial affiliate) will remain in the Parent’s capital charge and reported at that value in Column 1
but will be reported as zero in Column 2. These non-financial entities may not be excluded from the GCC.

One additional informational capital calculation for all non-financial entities will be applied in the Sensitivity Analysis tab using current year gross revenue from Inventory B, Column 12 with the calculation occurring and results available in the “Calc 2” tab as follows: 5% of reporting year gross revenue based on a medium level risk for a financial entity.

68. Non-operating holding companies:

- Non-operating holding companies will be treated the same as other non-insurance/non-financial entities with material risk. Unless reported on a grouped basis (see paragraph 55), for purposes of applying the capital calculation, the carrying value of stand-alone positive valued and negative valued non-operating holding companies will be netted. If the net value is zero or less (floored at zero for purposes of applying a charge), the charge applied will be zero. If the filer chooses to designate the non-operating holding company as a non-insurance/non-financial entity without material risk and requests exclusion, then no allowance for debt issued by that holding company may be included in the calculation.

</table>
Capital Calculation Adjustments

- **[Inv C Col 3] Investment in Subsidiary** – Enter an adjustment to remove the required capital of the directly owned subsidiary(ies) from Parent’s required capital. The capital requirement to be removed should be the capital requirement carried by the Parent from which the entity is being de-stacked (i.e., the value reported in Column 1 in Inventory C adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at a capital calculation of zero value by the parent. This is intended to prevent double counting required capital when regulated entities are stacked. [Example: When de-stacking an RBC filer from another RBC filer, the amount entered on the Parent line would be the RBC of the subsidiary. When de-stacking financial entities that are subject to diversification in a capital formula (e.g., RBC) the amount entered on the Parent line is the post-diversified capital requirement as calculated by the preparer (which is also the amount to be reported for the de-stacked entity on the entity’s line).

Generally the capital requirements for Schedule A and BA affiliates and other non-financial affiliates will remain in the capital requirements of the Parent insurer and not entered in this column, except that the capital requirements for any financial entity reported in a Parent’s Schedule A and BA, any financial entity indirectly owned through another Schedule A or BA affiliate listed in Schedule 1 and in this section should be entered in this column in the row of the entity that directly or indirectly owns that Schedule A and BA affiliate so that the parent entity may eliminate double counting of that capital requirement capital which will now be reported by the stand-alone Schedule A or BA affiliate listed in the inventory.

For indirectly owned Schedule A and BA financial entities, only the capital requirements for that entity will be included in this column and the remaining capital requirement of the downstream BA Parent will remain with the Parent insurer. Similarly, the capital requirement for any U.S. Branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the capital requirement of the foreign insurer so that the parent entity may eliminate double counting of that capital requirement which will now be reported by the stand-alone Branch listed in the inventory. The amounts entered in this column for a Parent must correspond to the capital required by the parent entity which is being de-stacked from that Parent.

Capital calculations for Schedule A and Schedule BA indirectly owned financial entities that are owned by Schedule A or Schedule BA assets are reported in the Inventory Tab and will be adjusted out of the value reported by the U.S. insurer in this column (since the non-financial direct parent Schedule A or BA affiliate is not listed in the Inventory Tab.

In the “Questions and Other Information” tab, a capital requirement should be reported for the value of the indirectly owned insurance of other financial entity based on the insurers Schedule A or Schedule BA charge rather than a charge (which would be zero) attributable to the Schedule A or Schedule BA entity that directly owns the insurance or other financial entity. As indicated earlier, the remaining capital requirement of the entity that directly owns the insurance or other financial entity will remain with the Parent insurer.

- **[Inv C Col 4] Intragroup Capital Instruments** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on surplus notes purchased by an affiliated U.S. insurer from a U.S. insurer issuer).
• **[Inv C Col 5] Reported Intragroup Guarantees, LOCs and Other** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on guarantees or LOCs).

• **[Inv C Col 6] Other Intragroup Assets** – This column is not intended to be used for required capital but is included in case an entity believes it is necessary from reporting an inaccurate required capital figure.
  
  a. Loans, receivables and arrangements to centralize the management of assets or cash.
  b. Derivative transactions.
  c. Purchase, sale or lease of assets.
  d. Other (describe in “Questions and Other Information” tab).

• **[Inv C Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Questions and Other Information” tab. Use this column is for adjustments related to required capital that correspond to adjustments in Inventory B, Column 7 and in cases where an entity believes it is necessary to adjust an inaccurate regulatory required capital figure (e.g., the RBC calculation applied as a permitted practice).

  **NOTE:** Consider whether this column should be used rather than Column 2 for zero value entities.

• **[Inv C Col 8] Adjusted Capital Calculation** – Stand-alone capital calculation for each entity per the calculation to eliminate double-counting. This value includes the impact of permitted and prescribed practices.

• Inventory D is for “Reference Calculations Checks.” These are calculations that can serve as checks on the reasonability/consistency of entries.

  a. **[Inv D Col 1 – 3] Sum of Subsidiaries (Carrying Value)** – This automatically generated column calculates the value of the carrying value of the underlying subsidiaries. It is provided for reference when filling out the “Investment in Subsidiary” column. This sum will often, but not always, be equal to the “Investment in Subsidiary” column.

  b. **[Inv D Col 4 – 6] Sum of Subsidiaries (Calculated Capital)** – Similar to above but for calculated capital.

  c. **[Inv D Col 7 – 8] Carrying Value/Adj Calc Cap** – This is a capital ratio on the adjusted and unadjusted figures. Double-check entities with abnormally large/small/negative figures to make sure that adjustments were done correctly.

**Input 3 – Capital Instruments**

69. Provide all relevant information pertaining to paid-up (i.e., any receivables for non-paid-in amounts would not be included for purposes of calculating the allowance) financial instruments issued by the Group (including senior debt issued by a holding company), except for common or ordinary shares and preferred shares. This worksheet aims to capture all financial instruments such as surplus notes, senior debt, hybrid instruments and other subordinated debt. Where a Volunteer Group has issued multiple instruments, the Volunteer Group should not use a single
row to report that information; one instrument per row should be reported (multiple instruments
issued under the same terms may be combined on a single line). All qualifying debt should be
reported as follows.

70. Debt issued by U.S.-led groups:

- Surplus Notes – Report the outstanding value of all surplus notes in Column 8 whether
  issued to purchasers within or outside the group. The outstanding value of surplus notes
  issued to entities outside the group and that is already recognized by state insurance
  regulators and reported 100% as capital in the carrying value of U.S. insurer issuers in
  “Inventory B” will not be included in the calculation for an additional capital allowance.
  Surplus notes issued within the group generally result in double-counting and will not be
  included in the additional capital allowance. (See instructions below.)

- Subordinated Senior Debt and Hybrid Debt Issued (e.g., debt issuances that receive an
  amount of equity credit from rating agencies) – The outstanding value will be reported in
  Column 8. Recognition for structurally subordinated debt will be allowed to increase
  available capital. For purposes of qualifying for recognition as additional capital, both of
  the following criteria must be met:
    a. The instrument has a fixed term (a minimum of five years at the date of issue or
       refinance, including any call options other than make whole provisions\(^1\). However,
       if the instrument is callable within the first five years from the date of issue it may be
       considered qualifying debt if any such call is at the option of the issuer only (the
       instrument is not retractable by the holder) AND it is the intent of management to
       replace the called instrument in full before or at redemption by a new issuance of the
       same or higher quality instrument.
    b. Supervisory review or approval is required for any ordinary* or extraordinary
       dividend respectively or distribution from any insurance subsidiary to fund the
       repurchase or redemption of the instrument. Supervisory approval of ordinary
       dividends is met if the supervisor has in place direct or indirect supervisory controls
       over distributions, including the ability for the supervisor to limit, defer and/or
       disallow the payment of any distributions should it find that the insurer is presently,
       or may potentially become, financially distressed. There shall be no expectation,
       either implied or through the terms of the instrument, that such approval will be
       granted without supervisory review.

*The concept of approval for ordinary dividends is for GCC purposes and is met as described
in subparagraph b, above. It is not intended to require explicit regulatory approval or in any
way alter current provisions of Model #440 or the Insurance Holding Company System Model
Regulation (#450).

- “Other” Debt – The outstanding value will be reported in Column 8 and will be further
  described in the “Other Information” tab and will be reported in a manner that is

\(^1\) NAIC staff have been informed that make whole provisions are a form of a call feature that can be exercised by the issuer
at any time; that they nonetheless are most frequently utilized near the end of the term of the instrument, generally in
connection with refinancing; and that the cost to the issuer to exercise the make whole provision and associated financial
reporting impacts, combined with the very low interest rate environment, make it much less likely that such provisions will
be triggered, particularly within five years of issuance. Staff will continue their research, and assuming these observations
are confirmed, the referenced criteria will continue to scope out make whole provisions.
consistent with Senior Subordinated Debt, as described above. Such debt will not initially be included in the additional capital allowance for the GCC. An additional allowance of this debt as additional capital will be calculated in this tab and reported as a sensitivity analysis in the “Summary” 2 tab, subject to future determination on whether it will become part of the GCC calculation.

- **Foreign Debt** – Report the outstanding value of Non-U.S. senior debt issued to entities outside the group in Column 8. Debt specifically recognized by statute, regulation or accounting rule as additional capital resources by the lead jurisdiction based on contractual subordination or where a regulatory regime proactively enforces structural subordination through appropriate regulatory/supervisory controls over distributions from insurers in the group will not be included in the calculation of an additional capital allowance if it is already reported as capital in the carrying value of the issuer in “Inventory B”. It will be included in the calculation of an additional capital allowance if recognized by the local jurisdiction and NOT already included in the value of the issuer in “Inventory B”. Cases where the value of debt instruments issued to purchasers outside the group has not been recognized by the legal entity’s insurance or other sectoral supervisor will not be included in the additional capital allowance.

71. Please fill in columns in Section 3A as follows for all capital instruments:

- **[Sec 3A Col 1] Name of Issuer** – Name of the company that issued the capital financial instrument. Will populate automatically from the “Entity Identifier” column in this subsection.

- **[Sec 3A Col 2] Entity Identifier** – Provide the reference number that was input in Schedule 1.

- **[Sec 3A Col 3] Type of Financial Instrument** – Select type from the drop-down menu. Selections include Senior Debt, Surplus Notes (or similar), Hybrid Instruments and “Other” Subordinated Debt.

- **[Sec 3A Col 4] Instrument Identifier** – Provide a unique security identifier (such as CUSIP). ALL debt instruments must include an internal identifier if not external identifier is available.

- **[Sec 3A Col 5] Entity Category** – Links automatically to selection made on the “Inventory” tab worksheet.

- **[Sec 3A Col 6] Year of Issue** – Provide the year in which the financial instrument was issued or refinanced.

- **[Sec 3A Col 7] Year of Maturity** – Enter the year in which the financial instrument will mature.

- **[Sec 3A Col 8] Balance as of Reporting Date** – Enter the principal balance outstanding as reported in the general-purpose financial statements of the issuer.
• **[Sec 3A Col 9] Intragroup Issuance** – Select whether the instrument was issued on an intragroup basis (that is, issued to a related entity within the group). This column will be used to remove “double-counting.” This column is a drop-down menu box with options “Y” and “N.”

• **[Sec 3A Col 10] Treatment in Inventory B** – Select option that applies:

  a. **Capital** – This instrument is recognized by the applicable regulator or credited as capital in local regulatory regime and reported as part of the adjusted carrying value of the issuer and was not purchased by an affiliate. This includes the value of qualifying senior and hybrid debt instruments (if recognized as capital) and U.S. surplus notes (or similar local regime instruments) that are issued to entities outside the group and included in the issuing entity’s value in the “Inventory B” tab. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital.

  b. **Liability** – This instrument is reflected by the issuer as a liability in the adjusted carrying value in the “Inventory B” tab and was not purchased by an affiliate. This would apply to all qualifying senior and hybrid debt issued to purchasers outside the group that is not recognized as capital by the local regulator and therefore is not included in the issuing entity’s value in the “Inventory B” tab. The value will be included in the calculation of a proxy allowance for additional capital.

  c. **Liability designation** would also apply to all non-qualifying senior and hybrid instruments and all debt categorized as “Other” issued to purchasers outside the group that is not recognized as capital by the local regulator. The value of these instruments will NOT be included the calculation for the in the calculation of a proxy allowance for additional capital.

  d. **Intragroup** – This would apply to all qualifying instruments purchased by an affiliate within the group. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital. If the financial instrument is recognized or credited as part of the issuer’s available capital in Inventory B, then an adjustment for intragroup capital instruments is made in Inventory B, Column 4 and Inventory C adjustments (if necessary to eliminate an associated capital requirement). If the financial instrument is treated as a liability by the issuer, then no intragroup capital instrument adjustment is required in Inventory B or Inventory C.

  e. The outstanding value of all non-qualifying senior and hybrid instruments and financial instruments categorized as “Other Debt” whether issued to purchasers inside or outside the group will not be included in the calculation of a proxy allowance for additional capital and no other adjustments are required in the template. However, in the unlikely event that the instrument is treated as available capital to the issuer in Inventory B, an adjustment in Inventory B, Column 4 to remove the available capital would be required.

**NOTE**: Additional information on instruments categorized as “Other Debt” in the Type of Financial Instrument Column will require additional information to be provided in the “Questions and Other Information” tab.
For intragroup surplus notes, the adjustment will impact the carrying value and associated capital calculation of the purchasing affiliated entity.

- **[Sec 3A Col 11] Intragroup Purchaser Identifier** – Enter the entity identify for the affiliate entity that purchased the instrument.

- **[Sec 3A Col 12] Description of Other Debt Instruments** – Provide a description of instruments designated as “Other.”

- **[Sec 3A Col 13] Call Provisions Criteria** – Respond “Y” or “N” as to whether the instrument is subject to a call provision (other than a make whole provision) in the first five years AND it is management’s intent to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument. Respond “X” if the instrument has a maturity of greater than five years including any call provisions.

- **[Sec 3A Col 14] Potentially Recognized Instrument** – This is an automatic calculation to determine if this instrument has potential to be recognized as additional capital in the GCC and/or in sensitivity analysis. The column will show “Y” if each of the following is true: 1) it is Senior Debt, Hybrid or Other instrument; 2) the instrument is not intragroup; and 3) the instrument is treated as liability on Inventory B. These are calculated using Column 3, Column 9, and Column 10, respectively.

- **[Sec 3A Col 15] Other Criteria Met** – This is an automatic calculation to determine if instrument qualifies due to criteria beyond those in Column 14. The column will show “Y” if: 1) the instrument has initial maturity of greater than five years including any call provision (i.e., “X” is reported in Column 13); and 2) it meets the “Call provisions criteria” in Column 13 (i.e., “Y” is reported in Column 13).

- **[Sec 3A Col 16] Qualified Debt** – This column is calculated automatically using data from the entries in Column 14 and Column 15. To qualify, an instrument needs a “Y” in both columns. It represents the amount of qualifying debt that will be used in the calculation of an allowance for addition capital under the alternate subordination method and the proxy allowance method. This amount will be carried into Section 3C, Column 1, Line 3.

72. Section 3C will be auto-filled, with the exception of Column 1, Line 2.

- **[Sec 3C Col 1, Line 1] Total Paid-In and Contributed Capital and Surplus** – This is the amount reported on Page 3 of the annual financial statement submitted to regulators by a U.S. insurer.

- **[Sec 3C Col 1, Line 2] Alternate Subordination Calculation** – This manual entry is the excess of qualifying debt issued over liquid assets held by the issuing consolidated holding company as reported in the consolidated financial statements. No entry is expected for a mutual group.

- **[Sec 3C Col 1, Line 4] Downstream Estimate** - The total reported under the alternate subordination approach will be compared to the total amount of gross paid-in or contributed capital and surplus reported by the insurance entities within the group as
reported in Schedule 1. The greater value will be carried into the calculation for an additional capital allowance.

**NOTE:** No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 5] Proxy Calculation for Additional Capital Allowance** – A calculation will be made in this tab in Section 3B that will apply 30% of available capital plus the value of all qualifying debt to become part of the proxy allowance for additional capital for qualifying senior subordinated. An additional amount of 15% of available capital plus the value of all qualifying debt will be calculated to become part of a proxy allowance for additional capital be for hybrid debt.

  **Summary Formula:** Proxy Amount = (30% x (Available Capital + Qualifying Senior and Hybrid Debt)) + (15% x (Available Capital + Qualifying Senior and Hybrid Debt)).

  **NOTE:** No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 6 through Line 8]** – The greater of the proxy calculation or the larger of paid in capital or alternate subordination calculation will be allowed as additional capital in **[Sec 3C Col 6]**. However, an overall limit of no more than 75% of the total adjusted carrying value in Inventory B will be applied in **[Sec 3C Col 7]**. Adjustments to increase available capital will be calculated from data on this page. The summary results of the components of the calculation (paid in capital and surplus, alternate subordination, proxy calculation and limitations) are populated as titled in the calculation columns in this section. The final amount recognized as additional capital is shown in **[Sec 3C Col 8]**.

  - The additional capital allowance recognized for capital instruments will be shown as an “on-top” adjustment in the “Summary 1 – Entity Level” tab.

**Summary Calculation for Debt Allowed as Additional Capital:**

Step 1: Calculate the following amounts:
- a) The greater of Total paid-in capital and surplus of U.S. insurers or the alternative subordination calculation (defined above)
- b) A proxy value (defined above)

Step 2: Take the greater of a) or b) from Step 1, and subject that amount to two limitations:
- First, the total amount to qualify as capital cannot exceed 100% of the total outstanding value of qualified senior and hybrid debt.
- Second, the total amount to qualify as capital cannot exceed 75% of the total adjusted carrying value in Inventory B.

After applying the two limitations in Step 2, the remaining amount is allowed as additional capital.
73. **Informational calculation to include “Other Subordinated Debt”** – A sensitivity analysis will be applied in [Sec 3C Col 2, Line 1 through Line 8] and carried into the “Summary 2” tab to adjust the amount of additional capital in the proxy calculation by the amount of “Other Debt” reported in [Sec 3C Col 8] issued to purchasers outside the group. This informational sensitivity analysis will include an additional allowance for such debt up to 15% of available capital plus the value of all qualifying debt including qualifying “Other” debt subject to the same limitations noted for the proxy allowance in general.

**Input 4 – Analytics**

74. The entity type information supporting analytics summarized in Summary 3 – Analytics are pulled into this tab from data or information reported in other tabs in the GCC template. That data is exported into summaries in the “Summary 3 – Analytics” tab. Only 2020 data is currently to be populated. However, it is contemplated that going forward, data for prior years will also be populated such that it will provide the Lead State Regulator with metrics to identify trends over time.

**Input 5 – Sensitivity Analysis and Inputs**

75. All sensitivity analysis is ultimately calculated in the “Summary 2” tab. Inputs for Analysis 1, 2, 5, 6, and 7 are not required in this tab. They are populated from other tabs as described below and automatically calculated in the “Summary 2” tab. However certain analysis requires inputs from this tab. Inputs are required in this tab for Analysis 3, Analysis 4, Analysis 8, and Analysis 9. Those inputs are automatically pulled into the calculation in the Summary 2 tab. Sensitivity Analysis are intended to provide the Lead State Regulator additional information that helps them better understand the financial condition of the group. Similar to the sensitivity analysis included in the legal entity RBC, it provides the regulator with additional information and allows them to consider “what-if” scenarios to better understand the impact of such items. The results of these analysis will not impact the GCC ratio.

- **[Analysis 1]: GCC overall sensitivity analysis** – No additional data is needed in the tab. The overall GCC ratio will be presented at 300% x ACL level. This calculation will increase the calculated capital for most entity types by a factor of 1.5. However, entities with existing regulatory capital requirements (e.g., foreign insurers and banks) will be reported at the same level specified in these instructions for both the GCC and the sensitivity analysis (i.e., at 100% of the jurisdictional or sectoral PCR requirements).

- **[Analysis 2]: Excluded non-insurance/non-financial entities without material risk** – No additional data is needed in the tab. The data for entities where exclusion has been requested and the lead state does not agree will be populated based on entries in [Sch 1B Col 3] and data in Inventory B, Column 2 and Inventory C, Column 2. This analysis will be applied and reported in the “Summary 2” tab. It will provide the regulator with the impact of excluding non-agreed-upon entities on the GCC ratio.

- **[Analysis 3 and Analysis 4]: Permitted practices** – This information shows the amount of U.S. permitted practices as described in the Preamble of the *Accounting Practices and
Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio.

- **Prescribed Practices** – This information to be entered on this tab shows the amount of U.S. prescribed and prescribed practices as described in the Preamble of the Accounting Practices and Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio. This analysis will be applied and reported in the “Summary 2” tab.

- **Permitted and Prescribed Practices** – Report values from annual financial statement Note 1 (excluding those pertaining to XXX/AXXX captives):
  a. Entity identifier
  b. Value of permitted practice
  c. Capital Requirement attributable to permitted practice (if any)
  d. Description of permitted practice
  e. Value of prescribed practice
  f. Capital requirement attributable to permitted practice (if any)
  g. Description of prescribed practice

- **[Analysis 5]: Foreign Insurer Capital Requirements Scaled** – No additional data is needed in the tab. This information shows the amount of foreign insurer capital calculations scaled by applying scalars using the Excess Relative Ratio approach at a 200% x ACL RBC calibration level and at 300% x ACL for all non-U.S. jurisdictions where scalar data is available (see Appendix 1). The sensitivity analysis allows the state to understand the impact of this specific scaling method on the GCC ratio. This information is populated from the “Scalar” tab. This analysis will be applied and reported in the “Summary 2” tab.

- **[Analysis 6]: Debt Classified as “Other”** – No additional data is needed in the tab. The analysis data will be populated from the “Capital Instruments” tab and the analysis and will be applied and reported in the “Summary 2” tab.

- **[Analysis 7]: Alternative Capital Calculation for Non-Financial Entities** – No additional data is needed in the tab. The values reported will represent the alternative revenue-based values for capital calculation that is being captured in the template. The data will be populated from Schedule 1 and Inventory B and the analysis will be applied and reported in the “Scaling Non-Insurance” tab (Calc 2).

- **[Analysis 8]** For captives other than XXX/AXXX, all other U.S. captives shall make an asset adjustment as described below;
Asset Impact

76. For the asset impact, it is ONLY required for the assets included in a captive or an entity not required to follow the statutory accounting guidance in the Accounting Practices and Procedures Manual. It is not required for assets for those groups that retain such business in a non-captive traditional insurance company(ies) already required to follow the Accounting Practices and Procedures Manual.

NOTE: Variations for state prescribed and permitted practices are captured in the separate sensitivity analysis.

77. The asset impact amount shall be determined based on a valuation that is equivalent to what is required by the Accounting Practices and Procedures Manual (SAP). For this purpose, “equivalent” means that, at a minimum the listed adjustments (as follows) be made with the intent of deriving a valuation materially equivalent to what is required by the Accounting Practices and Procedures Manual, however, without requiring adjustments that are overly burdensome (e.g., mark-to market bonds used by some captives under U.S. GAAP versus full SAP that considers NAIC designations). To be more specific, the asset impact shall be developed by accumulating the impact on surplus because of an accumulation of all the following in paragraph 78 and paragraph 79 combined.

NOTE: Letters of credit or other financial instruments that operate in a manner like a letter of credit, which are not designated as an asset under either SAP or U.S. GAAP and are required to be adjusted out of the available assets (i.e., the asset reduction is recorded as a negative figure in the template).

78. To achieve the above, accumulate the effect of making the following impact and record as a negative figure in the template, an asset adjustment for all the following explicit assets not allowed to be admitted under SAP:

- Assets specifically not allowed under the Accounting Practices and Procedures Manual in accordance with paragraph 9 of SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.
- SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers.
- SSAP No. 16R—Electronic Data Processing Equipment and Software.
- SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements.
- SSAP No. 20—Nonadmitted Assets.
- SSAP No. 21—Other Admitted Assets (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP).
- SSAP No. 29—Prepaid Expenses.
- Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the Accounting Practices and Procedures Manual (e.g., deferred policy acquisition costs, pre-operating, development and research costs, etc.).
Depreciation for certain assets in accordance with the following SSAPs:
  o SSAP No. 16R—Electronic Data Processing Equipment and Software.
  o SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements.
  o SSAP No. 68—Business Combinations and Goodwill.

- The amount of goodwill of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- The amount of the net deferred tax assets (DTAs) of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- Any surplus notes held by the SCA issued by the reporting entity.

79. In addition, record as a negative figure, an asset impact for any assets that are not recognized as an admitted asset under the principles of SSAP No. 4—Assets and Nonadmitted Assets, including:

- Letters of credit, or other similar instruments, that operate in a manner like a letter of credit and, therefore, do not meet the definition of “asset” as required under paragraph 2.
- Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets that are unavailable due to encumbrances or other third-party interests, should not be recognized on the balance sheet and are, therefore, considered nonadmitted.
- Assets of an insurance entity pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, such assets shall not be recognized as an admitted asset on the balance sheet.

[Analysis 9]: Other Regulator Discretion – This analysis is designed to reflect other regulator adjustments including for transactions other than XXX/AXXX reinsurance where there are differences in regulatory regimes exist and there is a desire to fully reflect U.S. Statutory Accounting treatment or to reflect the lead state’s view of risk posed by financial entities without specified regulatory capital requirements or risk posed by non-insurance/non-financial entities that have been included in the GCC. This will be a post-submission item completed by the Lead State Regulator. Enter the following information here:

a. Entity identifier.
b. Amount of adjustment.
c. Description of regulatory issue.

NOTE: This column may also be completed by the filer after advance consultation with the Lead State Regulator.
Input 6 – Questions and Other Information

80. This tab provides space for participants to describe or provide greater detail for specified entries in other tabs (as noted in the instructions for the columns in those tabs) or additional relevant information not captured in the template. Examples include; adjustments for intragroup debt, description of permitted practices; and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab. Specified items are included in the tab. Other information that the filer believes is relevant should be added freeform in this tab.

Information or Detail for Items Not Captured in the Template

- Intercompany Guarantees – Provide requested information:
  a. Entity identifier issuing the guarantee.
  b. Entity identifier of entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the guarantee.
  d. Describe the nature of the guarantee.

- Capital Maintenance Agreements – Provide requested information:
  a. Entity identifier obligated under the agreement.
  b. Entity identifier for entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the agreement.
  d. Describe the nature of the agreement.

- Value of intangible assets included in non-insurance Holding Companies – Provide the requested information for all entities designated in the non-operating holding company entity category.
  a. Entity identifier.
  b. All goodwill.
  c. All intangibles related to health care services acquisitions included in local carrying value column in Inventory B. Examples include, but are not limited to, customer relationships (policy retention, long-term health services contracts) and technology/patents/trade names and provider network contracts.
  d. All other intangible assets included in local carrying value column in Inventory B.
  e. Total of line b, line c and line d.*
  f. A description of each intangible asset included in line d.
  
* Auto populated.

Further detail on amounts reported for specific intangibles other than goodwill may be requested by the Lead State Regulator during review of the GCC template.

Information or Detail for Items Captured in the Template

- Currency Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 2 is different than the amount in Inventory B, Column 1 due to currency conversion.
a. Entity identifier.
b. Currency type reported in Inventory B, Column 1 and Inventory C, Column 1 (foreign currency).
c. Conversion rate applied.
d. Source of conversion rate applied.

- Intragroup Assets – Description of Adjustments for intragroup assets reported in Inventory B, Column 6 and Inventory C, Column 6. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 6.
  c. Description of adjustment.

- Other Adjustments – Description of adjustments reported in Inventory B, Column 7 and Inventory C, Column 7. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 7.
  c. Description of adjustment.

- Accounting Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 1 is different than the amount in Inventory B, Column 2 due to differences in accounting basis
  a. Entity identifier.
  b. Value reported in Inventory B, Column 1.*
  c. Value reported in Inventory B, Column 2.*
  d. Total amount of adjustments related to difference in accounting basis.*
  e. Nature of adjustment (e.g., GAAP to SAP).
  * Auto populated.

- Stress Scenario Narrative – If the participating group believes that the standard stress scenario represents a reasonable adverse scenario, they can state so in the narrative and no further work is required. However, to further inform the GCC and lead state regulators and to enhance the value of the Trial, participating groups may provide a high-level description of the anticipated market conditions or other reasonably likely group-specific drivers that would lead to the group’s own specified level of stress results (i.e., the group specific potential adjustments to available capital and calculated capital) with focus on the impact on the debt allowance. These are independent assumptions from those automatically calculated in the Stress inputs tab (as described in the Stress Inputs section and in Appendix 2). The group assumed percentage adjustment may or may not align with the standardized thirty percent in general or any entity specific adjustments calculated in the Stress Summary tab. In addition, provide any comments relating to the potential for procyclical or otherwise unintended GCC ratio results in specific areas of the calculation.

- The tab also includes a listing of all Schedule A and Schedule BA affiliates, along with the following information:
a. Parent identifier (if available) – This is the same information as is included in Schedule 1 [Sch 1B Col 3] as would be entered for non-Schedule A/Schedule BA affiliates.

b. Parent Name – Enter the Name of the Parent.

c. Is Parent a Schedule A or Schedule BA Asset? – This column is only required for financial entities that are Directly owned by a Schedule A or Schedule BA Affiliate. No other downstream affiliates owned by Schedule A or Schedule BA entities need to be listed. These entities are not normally independently reported in Schedule A and Schedule BA so are extra entries.

d. Financial? (Y/N) – If the entity meets the criteria as being a financial entity, indicate with a “Yes” response. A “No” response is not required for other entities listed. “Yes” entries should correspond to “Yes” entries in Schedule 1 [Sch 1B Col 16].

e. Carrying Value of Immediate Parent – Report the value listed in Schedule A and Schedule BA of the Parent insurer. For those cases where an indirect financial entity is reported use the value used by the direct Parent.

f. Capital Requirement for Immediate Parent – Report the value listed in the RBC report of the Parent insurer (pre-tax where applicable). For those cases where an indirect financial entity is listed, report the value of the capital requirement attributable to the Insurer rather than the direct non-financial Schedule BA Parent. The capital requirement reported in this column for the immediate Schedule BA Parent should be adjusted to deduct the amount moved to Schedule 1 and Inventory C.

Calc 1 – Scaling (Insurance Entities)

81. All entries in this tab are calculation cells populated using data from within the tab or using data from elsewhere in the template. Scaled values for calculated capital will become part of the GCC ratio. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab. The concept of a scalar was first introduced to address the issue of comparability of accounting systems and capital requirements between insurance regulatory jurisdictions. The idea is to scale capital requirements imposed on non-U.S. insurers so as to be comparable to an RBC-based requirement. Two approaches for scaling related to foreign insurers were presented, and others are being explored and will be reviewed. A decision on the scaling methodology to be adopted into the GCC template will be made at the end of the review. In the interim a scalar of 100% of the jurisdictional PCR will be applied to all jurisdictions where a risk-sensitive capital requirement is in place.

82. Information on the Excess Relative Ratio (ERR) scalar methodology will be collected and applied in the “Sensitivity Analysis” tab.

NOTE: See Appendix 1 for more information and examples on how the ERR scalars are calculated.

83. For jurisdictions without risk-sensitive capital requirements a 100% charge will be applied to adjusted carrying value.
Calc 2 – Capital Calculations for Non-insurance Entities

84. All entries in this tab are either calculation cells using data from within the tab or using data populated from elsewhere in the template. Calculated capital for all entities except insurers will be reported in this tab. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab.

85. In addition, one informational option for calculated capital for financial entities without an existing regulatory capital requirement and one informational option for calculated capital for non-financial entities will be reported in this tab. Those calculation will not be carried into the “Summary 1 – Entity Level” tab and will not be part of the GCC ratio.

86. Only amounts for entities that the filer and the Lead State Regulator agree should not be excluded [Sch 1B Col 2] will be brought into the calculation in this tab and the “Summary 1 – Entity Level” tab. Entities where the Lead State Regulator does not agree with the filer’s request to exclude an entity will be part of the GCC ratio.

Summary 1 – Entity Level GCC Summary

87. Summarized results by entity type for the GCC ratio will be reported in this tab. An on top adjustment for debt allowed as additional capital will be added at the bottom of the table. All informational sensitivity analysis will be reported in Summary 2 and will not impact the GCC ratio.

Summary 2 – Informational Sensitivity Tests

88. Summary results for each informational sensitivity analysis described in the “Sensitivity Analysis Inputs” tab will be shown here. Each sensitivity analysis will be shown on a stand-alone basis. It is expected that each informational sensitivity analysis will run automatically in the background and the results for each displayed in this tab. The results for the informational sensitivity analysis will not be included in the “Summary 1 – Entity Level” tab.

Summary 3 – Analytics

89. Summary results for metrics described in the Analytics Guidance [insert attachment or appendix reference] and utilizing data collected in the “Input 4 – Analytics” tab or other tabs in the GCC will be calculated and presented here.

Summary 4 – Alternative Grouping Option(s)

90. One sample alternative structure for grouping by entity type or jurisdiction in the GCC is displayed based on a suggested method. It can be modified, or other suggestions can be accommodated based on combining data from Schedule 1 and the Inventory in defined ways.
This tab is intended to be an additional analytical tool. The tool summarizes the GCC based on how a reporting entity views its organization, and provides regulators that view, to align it with regulatory information, other than what is reported elsewhere in the GCC template, that the reporting entity has submitted such as current filings, communications, etc. In this summary view, entities are organized into like regimes (e.g., RBC filers, foreign insurers, banks, financial, or non-financial entities) and multiple entities may be grouped together, in order to create a view of capital that is easy to review and analyze within each grouping. The intent of this approach is to provide an additional analytical tool designed to enhance dialogue between the Lead State Regulator and the company contemplated by the GCC filing. This view is transparent (no scalers, no adjustments, no de-stacking) so that financial information may be cross-walked to other financial submissions such as RBC filings. However, it does contain double counting of available and required capital “(i.e., intra-company investments and transactions are not eliminated) and cannot be used to create a GCC ratio.

91. The results are dependent on how the reporting entity populated. Input 1 – Schedule 1, Column 9 Alternative Grouping. For example, if you have a dozen small dental HMO businesses, you may wish to collapse the results to a single line called “Dental HMOs,” by populating Input 1 – Schedule 1, Column 9 Alternative Grouping for each dental HMO as “Dental HMOs.” Then right-click and select “Refresh” to see the results with the “Dental HMOs” combined.

92. For reference, the data for the Summary 4 – Grouping Alternative is from Calc 1 – Scaling (Ins, Bank), which is fed by the inputs made in Input 1 – Schedule 1, Input 2 – Inventory, etc.

**Stress Inputs**

93. All entries in this tab (Columns D thru W) are either calculation cells using data from within the tab or using data populated from elsewhere in the template in a standardized approach. Available capital and calculated capital for all entities using the standardized stress level of 30% will be reported in this tab. The calculated values will be summarized in the “Stress Summary” tab.

93-94. The filer may use the available Company Input section in the tab (Columns Y thru AH) that allows data entry in order to apply the standardized 30% stress level to additional entity categories not adjusted in the standardized approach (e.g., foreign insurers subject to scalars in the sensitivity analysis). If utilized, the additional adjustments are considered the group’s view on enhancements to the standardized approach. As with the standardized stress scenario generally, these are independent of the text narrative included in the Input 6 tab. Completion of these columns is not required and would be used for review purposes. The inputted values will be summarized in the “Stress Summary tab.

**NOTE:** This tab is not required for groups that are not including an allowance for qualifying debt as additional capital. However, automated entries will appear in the tab as currently constructed.
94.54. Separate from this standardized stress scenario, a text narrative describing the group’s own assumptions on potential stress drivers should be included in the Input 6 tab as specified in the instructions for the Input 6 tab.

**NOTE:** Also see Appendix 2 for more detail related to the Stress inputs and separate narrative.

**Stress Summary**

96. Summarized results by entity type will be reported in this tab.
Appendix 1 – Explanation of Scalars

95.97. The concept of a scalar is to equate the local capital requirement to an adjusted required capital level that is comparable to U.S. levels. The purpose of a scalar is to address the issue of comparability of accounting systems and capital requirements between jurisdictions. The following provides details on how the scalars were calculated by the NAIC, or how they are to be used when the NAIC has not developed a scalar for a country due to lack of public data.

Excess Relative Ratio Approach

96.98. Included below are various steps to be taken in calculating the excess relative ratio approach to developing jurisdiction-specific scalars. In order to numerically demonstrate how this approach could work, hypothetical capital requirements and financial amounts have been developed for Country A. Based on preliminary research that has been performed by NAIC staff, it appears that the level of conservatism built into accounting and capital requirements within a jurisdiction may differ significantly for life insurers and non-life insurers. Therefore, ideally each jurisdiction would have two different scalars based on the type of business. The example below includes information related to life insurers in the U.S. and Country A.

Step 1: Understand the Jurisdiction’s Capital Requirements and Identify the First Intervention Level

a. The first step in the process is to gain an understanding of the jurisdiction’s capital requirements. This can be done in a variety of ways including reviewing publicly available information on the regulator’s website, reviewing the jurisdiction’s Financial Sector Assessment Program (FSAP) reports and discussions with the regulator.

In Country A, assume that the capital requirements for life insurers are based on a capital ratio, which is calculated as follows:

\[
\text{Capital ratio} = \frac{\text{Total available capital}}{\text{Base required capital (BRC)}}
\]

In the U.S., capital requirements are related to the insurer’s RBC ratio. For purposes of the Relative Ratio Approach, an Anchor RBC ratio is used and calculated as follows:

\[
\text{Anchor RBC ratio} = \frac{\text{Total adjusted capital}}{100\% \text{ Company Action Level RBC}^*}
\]

* 100% Company Action Level RBC is equal to the Total RBC After Covariance including operational risk, without adjustment or 200% Authorized Control Level RBC.

b. Similar to legal entity RBC requirements in the U.S., Country A utilizes an early intervention approach by establishing target capital levels above the prescribed minimums that provide an early signal so that intervention will be timely and for there to be a reasonable expectation that actions can successfully address difficulties. Presume that this target capital level is similar to the U.S. Company Action Level (CAL) event, both of which can be considered the first intervention level in which some sort of action—either on the part of the insurer or the regulator—is mandated.
A separate sensitivity calculation will be applied in the GCC template using trend test level RBC.

c. For Country A, the target capital level is presumed to be a capital ratio of 150%. That is, the insurer’s ratio of total available capital to its BRC should be above 150% to avoid the first level of regulatory intervention. Again, this is similar to the U.S. CAL event, which is usually represented as an RBC ratio of 200% of Authorized Control Level (ACL) RBC (ignoring the RBC trend test). In the Relative Ratio approach, the Anchor RBC ratio represents the Company Action Level event (or first level of regulatory intervention) as 100% CAL RBC (instead of 200% ACL RBC), because CAL RBC is the reference point that is used to calibrate against other regimes. The Anchor RBC Ratio (Total Adjusted Capital ÷ 100% CAL RBC) tells us how many “multiples of trigger level capital” that the company holds. Conceptualizing the CAL event as 100% CAL RBC allows the consistent definition of local capital ratios that are calibrated against a “multiples of the trigger level” approach, to ensure an “apples-to-apples” comparison.3

Step 2: Obtain Aggregate Industry Financial Data

The next step is to obtain aggregate industry financial data, and many jurisdictions include current aggregate industry data on their websites. Included below are the financial amounts for use in this exercise.

<table>
<thead>
<tr>
<th>U.S. Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Adjusted Capital = $495B</td>
</tr>
<tr>
<td>Authorized Control Level RBC = $51B</td>
</tr>
<tr>
<td>Company Action Level RBC = $102B</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Country A Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital = $83B</td>
</tr>
<tr>
<td>BRC = $36B</td>
</tr>
</tbody>
</table>

Step 3: Calculate a Jurisdiction’s Industry Average Capital Ratio

To calculate a jurisdiction’s average capital ratio, the aggregate total available capital for the industry would be divided by the minimum or base capital requirement for the industry in computing the applicable capital ratio. In Country A, this would be the BRC. In the U.S., this base or minimum capital requirement is usually seen as the ACL RBC, but because the Relative Ratio Approach is using 100% CAL RBC as a reference point to calibrate other regimes to, the Relative Ratio formula uses 100% CAL RBC as the baseline and the first-intervention level to calculate the Average Capital Ratio and Excess Capital Ratio. As a result, the scaled ratio of a non-U.S. company should inform regulators how many multiples of first-intervention level

---

While it is mathematically equivalent to use 200% ACL RBC as the denominator, the Approach is designed to use the representation of first-intervention level capital levels as the conceptual underpinning of the Relative Ratio Approach, where 100% CAL RBC is the reference point to calibrate against other regimes.
capital the non-U.S. company holds. Included below is the formula to calculate a jurisdiction’s industry average capital ratio:

<table>
<thead>
<tr>
<th>Calculation of U.S. Industry Average Capital Ratio – Life Insurers</th>
</tr>
</thead>
<tbody>
<tr>
<td>$495B (Total Adjusted Capital)</td>
</tr>
<tr>
<td>$102B (CAL RBC)</td>
</tr>
<tr>
<td>$495B - $102B = 485%</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Calculation of Country A Industry Average Capital Ratio – Life Insurers</th>
</tr>
</thead>
<tbody>
<tr>
<td>$83B (Total Available Capital)</td>
</tr>
<tr>
<td>$36B (BRC)</td>
</tr>
<tr>
<td>$83B - $36B = 231%</td>
</tr>
</tbody>
</table>

**Step 4: Calculate a Jurisdiction’s Excess Capital Ratio**

The next step is to understand the level of capital the industry is holding above the first intervention level. Therefore, to calculate a jurisdiction’s excess capital ratio, one would first need to calculate the amount of the capital ratio carried in excess of the capital ratio required at the first intervention level. This amount would then need to be divided by the capital ratio required at the first intervention level.

**General Excess Capital Ratio Formula**

\[
\frac{\text{Average Capital Ratio} - \text{Capital Ratio at the First Intervention Level}}{\text{Capital Ratio at the First Intervention Level}} = \text{Excess Capital Ratio}
\]

Based on the formula above and information provided in Step 2 and Step 3, included below are how to calculate each jurisdiction’s excess capital ratio.

**NOTE:** The first intervention level in the U.S. is defined in the Relative Ratio Approach as 100% CAL RBC, while the first intervention level in Country A is a capital ratio of 150%.

<table>
<thead>
<tr>
<th>Calculation of U.S. Excess Capital Ratio – Life Insurers</th>
</tr>
</thead>
<tbody>
<tr>
<td>485% (Average Capital Ratio) – 100% (Capital Ratio at the First Intervention Level)</td>
</tr>
<tr>
<td>485% - 100% = 385%</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Calculation of Country A Excess Capital Ratio – Life Insurers</th>
</tr>
</thead>
<tbody>
<tr>
<td>231% (Average Capital Ratio) – 150% (Capital Ratio at the First Intervention Level)</td>
</tr>
<tr>
<td>231% - 150% = 54%</td>
</tr>
</tbody>
</table>

---

4 100% CAL RBC translates to an ACL RBC level of 200%, but for conceptual purposes, the Relative Ratio Approach refers to the U.S. first intervention level as 100% CAL RBC, as 100% CAL RBC is the reference point to which the Relative Ratio Approach calibrates other regimes. In other words, 100% CAL RBC ensures that the scaled ratio of Country A results in a ratio that determines how many multiples of first-intervention level capital that the company in Country A is holding.
Step 5: Compare a Jurisdiction’s Excess Capital Ratio to the U.S. Excess Capital Ratio to Develop the Scalar

101.103. Based on the information above, the U.S. excess capital is 385%. In other words, life insurers in the U.S. carry approximately 385% more capital than what is needed over the first intervention level. Country A’s excess capital ratio is 54%. That is, life insurers in Country A carry approximately 54% more capital than what is needed over the first intervention level.

102.104. To calculate the scalar, one would divide a jurisdiction’s excess capital ratio by the U.S. excess capital ratio. Therefore, the calculation of Country A’s scalar for life insurers would be 54% ÷ 385% = 14%. Therefore, Country A’s scalar for life insurers would be 14%.

Step 6: Apply to the Scalar to the Non-U.S. Insurer’s Amounts in the GCC

103.105. In order to demonstrate how the calculation of the scalar works, it would be best to provide a numerical example. For purposes of this memo, assume that a life insurer in Country A reports required capital of $341,866 and total available capital of $1,367,463. (These are the amounts previously used in a hypothetical calculation example that was discussed by the Working Group during its July 20, 2016, conference call.) As noted previously, the above information and calculation suggests that U.S. life insurers carry capital far above the minimum levels, while life insurers in Country A carry capital far closer to the minimum. Therefore, in order to equate the company’s $341,866 of required capital, we must first calibrate the BRC to the first regulatory intervention level by multiplying it by 150%, or Country A’s capital ratio at the first intervention level. The resulting amount of $512,799 is then multiplied by the scalar of 14% to get a scaled minimum required capital of $71,792.

104.106. Further, the above rationale suggests that the available capital might also be overstated (because it does not use the same level of conservatism in the reserves) by the difference between the calibrated required capital of $512,799 and the required capital after scaling of $71,792, or $441,007. Therefore, we should now deduct the $441,007 from the total available capital of $1,367,463 for a new total available capital of $926,456. These two recalculated figures of required capital of $71,792 and total available capital of $926,456 is what would be included in the group’s capital calculation for this insurer. These figures are further demonstrated below.
Calculation of Scaled Amounts for GCC

Amounts as Reported by the Insurer in Country A

Total available capital = 1,367,463

Minimum required capital (BRC) = 341,866

Calibration of BRC to 1st Regulatory Intervention Level

341,866 (BRC) * 150% = 512,799

Scaling of Calibrated Minimum Required Capital

512,799 (Calibrated BRC) * 14% (Scalar) = 71,792 (Difference of 441,007)

Scaled Total Available Capital

1,367,463 (Total Available Capital) – 441,007 (Difference in scaled required capital) = 926,456

105.107. Given these scaled amounts, one can calculate the numerical effect on the company’s relative capital ratio by using the unscaled and scaled amounts included below.

<table>
<thead>
<tr>
<th></th>
<th>Unscaled Amounts from Table Above</th>
<th>Scaled Amounts from Table Above</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital (TAC)</td>
<td>1,367,463</td>
<td>926,456</td>
</tr>
<tr>
<td>Base Required Capital (BRC)</td>
<td>341,866</td>
<td>71,792</td>
</tr>
<tr>
<td>Capital Ratio (= TAC ÷ BRC)</td>
<td>400%</td>
<td>1290%</td>
</tr>
</tbody>
</table>

106.108. Considering the fact that life insurers in Country A hold much lower levels of capital over the first intervention level as compared to U.S. life insurers, the change in the capital ratio from 400% (unscaled) to 1290% (scaled) appears reasonable and consistent with the level of conservatism that we understand is built into the U.S. life RBC formula driven primarily from the conservative reserve valuation.

Note: In the above example, the company has an unscaled ratio (400%) that is above the industry average in Country A (231%) and a scaled ratio (1290%) that is higher than the US life industry average (485%). If the company had unscaled ratio that was lower than the industry average in Country A, its scaled ratio would be lower than the US life industry average. company with an unscaled ratio equal to its own country’s industry average will have a scaled ratio equal to the anchor RBC ratio.”

Data for industrywide U.S RBC ratios is sourced from the aggregate RBC Statistics maintained by the NAIC. Data for industrywide capital ratios for foreign insurance jurisdictions was derived from publicly available aggregate industry data. If this scalar methodology is retained, then the data will require periodic updating.
Appendix 2 – Stress Scenario

107.109. What follows is a proposal for a 30% standardized stress to be applied to the GCC to test how the limits on recognition of capital instruments as capital behave under stress. In designing this stress, an emphasis was placed on simplicity. The proposed scenario requires no input or calculation on the part of volunteers beyond that already necessary for completing the GCC template. Further scenarios, if any, could follow this same structure:

- (1) A scenario that includes one (or more) stresses to a Group’s financial position
- (2) Specification of how each stress impacts the available capital and calculated capital for each type of legal entity
- (3) Input of the adjusted carrying value and adjusted calculated capital after the impact of the stress(es)
- (4) Re-calculation of the same calculations (e.g., application of limits on debt and scaling) and summary tables (including sensitivity tests)

Proposal

108.110. Scenario: A standardized loss event that results in a proportional reduction in available capital across the Group’s entire operations. What follows is a description based on a 10% reduction.

109.111. Specification: The scenario should result in 30% reduction in the adjusted available capital for all non-holding company entities. For entities where calculated capital is a fixed percentage of available capital (e.g., non-insurance / nonfinancial entities and foreign insurers in jurisdictions without a risk-based capital requirements) and for entities where capital is a fixed percentage of revenue, 30% reductions in calculated capital are assumed to result as well. As an approximation of the impact of the impact of this scenario on revenue, the calculated capital for financial entities with revenue-based exposure should reduce by 30% as well.

110.112. Inputs: No direct input needed. Instead, the inputs will be automatically calculated in the new Stress Inputs tab and summarized in the new Stress summary tab as follows:

<table>
<thead>
<tr>
<th>Type of Entity</th>
<th>Impact on Adj Carrying Value</th>
<th>Impact on Adj Calc Capital</th>
</tr>
</thead>
<tbody>
<tr>
<td>US Insurance Entities</td>
<td>30% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Banking and Other W Cap Req)</td>
<td>30% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Asset Mgmt and Other W/O Req)</td>
<td>30% reduction</td>
<td>10% reduction based on corresponding revenue reduction</td>
</tr>
<tr>
<td>Non-US (w/ Risk Based CC)</td>
<td>30% reduction</td>
<td>No Impact on unscaled GCC though XS Relative Ratio factors should be adjusted for sensitivity test</td>
</tr>
<tr>
<td>Non-US (non-Risk Based))</td>
<td>30% reduction</td>
<td>10% reduction based on corresponding reduction in equity value</td>
</tr>
<tr>
<td>HoldCo</td>
<td>No Impact</td>
<td>No Impact</td>
</tr>
<tr>
<td>Other</td>
<td>30% reduction</td>
<td>10% Reduction based on corresponding reduction in equity value</td>
</tr>
</tbody>
</table>
Further adjustments to the calculated capital based on scalars used in the Sensitivity analysis and other selected adjustments to calculated capital can also be considered (see Company Input section in the “Stress Inputs” tab). Other potential user driven adjustments may be added to the template using the optional Inputs section in the Stress Inputs tab in columns Y thru AH. Such adjustments will be at the standardized 30% stress level. Any user inputs will automatically be brought into in the new Stress Summary tab.

### Outputs:
The GCC template will be configured to automatically calculate outputs and resulting GCC ratios using the inputs above, at various additional stress levels (e.g., 20%, 30%, etc.). Various additional levels of stress can be tested during the review. All will include the impact on the allowance for qualifying debt. This can be presented on an additive basis (e.g., start with reduction in available capital alone and then add the impact on each entity type’s calculated capital one at a time building to the full scenario outlined in the chart, above.

### Additional Information:

Although the impact on adjusted carrying value in this scenario is standardized, such generic assumptions cannot be prescribed. Assumptions vary by industry and product mix as the underlying cause and the effect on the adjusted carrying value varies group to group. Therefore, in addition to completing the Stress Input tab, each group submitting data may provide its own independent high-level narrative in the space provided in the “Input 6” tab, describing the unique assumptions and corresponding stress levels (% adjustments) in available capital and calculated capital considered appropriate by the group. The assumptions provided in the narrative are NOT required to align with the standardized adjustments reported in the “Stress Inputs” tab.

The narrative should be submitted with the completed template.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met May 17, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); Barbara Carey (MN); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. Adopted Instructions for the GCC Trial Implementation

Mr. Rehagen stated that no additional comments specifically addressing the text of the instructions were during the most recent exposure. He further stated that there were several places where new language was added, but mainly for the addition of a stress scenario to the group capital calculation (GCC) instructions and template. He directed the meeting participants to a copy of the instructions included in the materials, which highlighted only the new language (Attachment Two-B1). He added that new language related to the stress scenario will be covered under agenda item #2, and he asked Lou Felice (NAIC) to go through the few other places where some additional language was added. Mr. Felice described the new language, which was mostly related to how risk-based capital (RBC) for operational risk RBC will be treated in the GCC for U.S. insurers. Ralph Blanchard (Travelers) stated that the Excess Relative Ratio (ERR) scaling sensitivity analysis may overstate the required capital, and more clarity on the source of data used for the data supporting the scalars is needed. Mr. Felice responded that the U.S. RBC data came from the publicly available aggregated RBC statistics, which will include some double counting; and the required data for the foreign jurisdictions subject to scaling was similarly sourced from publicly available aggregated data, which also includes some double counting. Mr. Blanchard stated that the scalars were directionally correct but could be off by several percentage points. Mr. Rehagen asked Mr. Felice to add some additional clarifying language regarding the data sources for the ERR scalars. Tom Finnell (America’s Health Insurance Plans—AHIP) noted that AHIP members will have questions during the Trial Implementation, but they have no specific comments at this time.

Ms. Belfi made a motion, seconded by Mr. Eft, to adopt the GCC instructions for the Trial Implementation with the exception of language related to the stress scenario. The motion passed unanimously.

2. Exposed Revised Language for a Proposed Scenario Test in the 2021 GCC Trial Implementation

Mr. Rehagen stated that comment letters were received from AHIP and the American Council of Life Insurers (ACLI) (Attachment Two-B2) related to the proposed stress scenarios. He asked the commenters to present their comments.

Mr. Finnell stated that he is not clear how the company specific assumptions requested in the narrative coordinate with the hypothetical capital adjustments in the stress scenario data calculated in the template. He added that AHIP members were not comfortable providing assumptions for a hypothetical approach.

Mr. Felice stated that he understood that the starting point was a standardized approach—i.e., a template specified percentage adjustment to available and calculated capital—for the stress scenario calculation in the template, but there was a desire to tailor the adjustment to align with the separate narrative with some opportunities for adding adjustments for specific entity types. Ned Tyrrell (NAIC) stated that he understood that the level of stress adjustment was prescribed and some entity specific adjustments could be made by the group to the prescribed stress, but the narrative would be distinct and based on the group’s own assumptions as to stress level and drivers. Ms. Belfi stated that her thinking is along the lines of what Mr. Tyrrell stated with some potential for tailoring, but she believes that a group could forego the tailoring in the template. She said the narrative is meant to add value for state insurance regulators. Mr. Rehagen agreed. Mariana Gomez-Vock (ACLI) stated that the ACLI is generally aligned with Mr. Finnell’s comments, but she questioned whether the purpose of the stress scenario had shifted from the primary goal of identifying the impact of the prescribed stress on the amount of qualifying debt that can be counted as additional capital. Mr. Rehagen stated that the narrative was added, rather than the purpose shifted. Ms. Gomez-Vock said she supports the narrative, but it should be distinct from the prescribed scenario.
Keith Bell (Travelers) stated that some clarity should be added to the instructions to explain how the prescribed approach works in conjunction with the narrative. Mr. Felice explained that as currently drafted, the selected level of stress in the stress scenario calculation can be by the group to align with the narrative, but that is not required. Ms. Belfi said she supports aligning the narrative with a prescribed stress scenario only where the group believes they are aligned, and if not, then the group can use its own assumed stress level in the narrative without changing the standardized stress in the template. She added that all groups should use a standardized level of stress in the template calculation. Mr. Rehagen, Ms. Belfi, Mr. Bell and Mr. Finnell agreed. Mr. Rehagen asked Mr. Felice to make the required changes to the instructions. Mr. Felice stated that the instructions could be revised within a day to achieve that end, but the standardized percentage adjustment would need to be finalized (e.g., 10% or 20%, etc.). He suggested a brief exposure for any additional comments.

Mr. Rehagen asked if there were objections to exposing the revised language in the instructions for the stress scenario until May 25. There were no objections, and NAIC staff were directed to expose the document through the close of business on May 25.

Mr. Rehagen referred to two documents in the materials related to GCC guidance to be included in the Financial Analysis Handbook. He stated that early in 2020, the Working Group formed a very small drafting group consisting of a handful of state insurance regulators and industry members, and they were asked to bring to the Working Group draft regulatory guidance of “how the GCC was planned to be used.” He added that the two documents consist of: 1) the actual step-by-step procedures; and 2) what is referred to as “the analyst reference guide” that provides more detail on the purpose of each procedure generally and how the procedures are intended to be utilized. He said he would like to expose the documents and send them to the Financial Analysis Solvency Tools (E) Working Group, which will be asked to comment upon it to the Group Capital Calculation (E) Working Group during the same exposure period. He further stated that states could use this during the Trial Implementation, so there should be an extended comment period to coincide with the timing for the Trial Implementation. Mr. Finnell supported the extended period, noting that AHIP participated in the initial drafting of the guidance. Ms. Belfi said she also supports an extended comment period.

Mr. Rehagen asked if there were objections to exposing the documents stress scenario until July 31. There were no objections, and NAIC staff were directed to expose the document through the close of business on July 31.

4. Discussed Next Steps Toward the Start of the 2021 GCC Trial Implementation

Mr. Rehagen outlined the steps to get to the start of the Trial. He stated that the Working Group will finalize the stress scenario issue on its next call. He added that the confidentiality agreement templates will be going out soon, but that should not affect the Trial start date of June 1, since data will not be shred until the submissions are received by the lead states and certainly not before the agreements are in place. He mentioned that a question and answer (Q&A) process will be established and maintained by NAIC staff. He noted that the overall timing for the Trial is to receive the template submissions by July 31 and complete the Trial by Oct. 31.

5. Discussed Other Matters

Mr. Rehagen asked if there is value in a call with volunteers at the beginning of the Trial or after the volunteers have a few weeks with the final Trial template and instructions. John Dubois (Mass Mutual) asked that the call be held before July 1. Mr. Rehagen suggested mid-June. Mr. Bell agreed.

Mr. Rehagen stated that the next Working Group call would be scheduled later this month or in early June.

Having no further business, the Group Capital Calculation (E) Working Group adjourned

I. **Background**

1. In 2015, the ComFrame Development and Analysis (G) Working Group held discussions regarding developing a group capital calculation (GCC) tool. The discussions revealed that developing a GCC was a natural extension of work state insurance regulators had already begun, in part driven by lessons learned from the 2008 financial crisis which include better understanding the risks to insurance groups and their policyholders. While insurance regulators currently have authorities to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist regulators in identifying risks that may emanate from a holding company system.

2. More specifically, the GCC and related reporting provides more transparency to insurance regulators regarding the insurance group and make risks more identifiable and more easily quantified. In this regard, the tool assists regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies may be supporting the operations of non-insurance entities, potentially adversely impacting the insurance company’s financial condition or policyholders. This calculation provides an additional analytical view to regulators so they can begin working with a group to resolve any concerns in a manner that will ensure that policyholders of the insurers in the group will be protected. The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide Lead State Regulators with further insights to allow them to reach informed conclusions on the financial condition of the group and the need for further information or discussion.

3. State insurance regulators currently perform group analysis on all U.S. insurance groups, including assessing the risks and financial position of the insurance holding company system based on currently available information; however, they do not have the benefit of a consolidated statutory accounting system and financial statements to assist them in these efforts. It was noted prior to development that a consistent method of calculating group capital for typical group risks would provide a useful tool for state financial regulators to utilize in their group assessment work. It was also noted that a GCC could serve as a baseline quantitative measure to be used by regulators in to compliment the view of group-specific risks and stresses provided by the Own Risk and Solvency Assessment (ORSA) Summary Report filings and in Form F filings that may not be captured in legal entity filings.

4. During the course of several open meetings and exposure periods, the ComFrame Development and Analysis (G) Working Group considered a discussion draft which included three high-level methodologies for the GCC: a risk-based capital (RBC) aggregation approach; a statutory accounting principles (SAP) consolidated approach; and a generally accepted accounting principles (GAAP) consolidated approach. On Sept. 11, 2015, Working Group members unanimously approved a motion to move forward with developing a recommendation for a GCC and directed an appropriate high-level methodology for the recommendation.
5. At a ComFrame Development and Analysis (G) Working Group meeting held Sept. 24, 2015, pros and cons for each methodology were discussed, and a consensus quickly developed in support of using an RBC aggregation approach if a GCC were to be developed. The Executive (EX) Committee and Plenary ultimately adopted the following charge for the Financial Condition (E) Committee:

“Construct a U.S. group capital calculation using an RBC aggregation methodology; liaise as necessary with the ComFrame Development and Analysis (G) Working Group on international capital developments and consider group capital developments by the Federal Reserve Board, both of which may help inform the construction of a U.S. group capital calculation.”

6. The RBC aggregation approach is intended to build on existing legal entity capital requirements where they exist rather than developing replacement/additional standards. In selecting this approach, it was recognized as satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions’ existing capital regimes. In order to capture the risks associated with the entire group, including the insurance holding company, RBC calculations would need to be developed in those instances where no RBC calculations currently exist.

7. In early 2016, the Financial Condition (E) Committee appointed the Group Capital Calculation (E) Working Group, which began to address its charge and various details of the items suggested by the ComFrame Development and Analysis (G) Working Group. The instructions included herein represent the data, factors, and approaches that the Working Group believed were appropriate for achieving such an objective. The GCC instructions and template are intended to be modified, improved, and maintained by the NAIC in the future as are the Accounting Practices and Procedures Manual, the Annual Statement Instructions and the Risk-Based Capital Formula and Instructions. This includes, but is not limited to, future disclosure of additional items developed or referred by other NAIC committees, task forces and/or working groups.

8. In December 2020, amendments to NAIC Model Law (#440) and Model Regulation (#450) were adopted to provide States with legislative language to fully implement the GCC as an annual filing. The Model specifies what groups are exempted from the GCC filing requirement and the circumstance under which a limited filing may be submitted. For such information reference should be made not to these instructions, rather to the models and, more specifically, to how they are implemented into laws and regulations of a Lead State.

II. Definitions

9. **Affiliate**: As used in Model #440, an “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified. For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are insurers or other financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates. All other Schedule A and Schedule BA investments will remain as investments of a Parent insurer will be reported as Parent of the value and capital calculation of the Parent insurer. A full list of Schedule A and BA entities will be reported as described in the instructions for Input 6 – Questions and Other Information. Any entities that would otherwise qualify as Schedule BA affiliates as described above but are...
owned by other entities (e.g., foreign insurers or other type of Parent entity) should be treated in the same way.

10. **Broader Group**: The entire set of legal entities that are controlled by the Ultimate Controlling Person of insurers within a corporate group. When considering the use of this term, all entities included in the Broader Group should be included in Schedule 1 and the Inventory, but only those that are denoted as “included” in the Schedule 1 will be considered in the actual GCC.

11. **Control**: As used in the Model #440, the term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K of Model #440 that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

12. **Cross-Support Mechanism**: A cross-support mechanism is an agreement or transaction that creates a financial interdependence. Depending on the nature of the transaction and the specific circumstances, these mechanisms may pose material risk. These may include corporate guarantees, capital maintenance agreements (regulatory or ratings based), letters of credit, intercompany indebtedness, bond repurchase agreements, securities lending or other agreements or transactions that create a financial interdependence or link between entities in the group.

13. **Entity Not Subject to A Regulatory Capital Requirement**: This is a financial entity other than an entity that is subject to a specified regulatory capital requirement.

14. **Financial Entity**: A non-insurance entity that engages in or facilitates financial intermediary operations (e.g., accepting deposits, granting of credits, or making loans, managing, or holding investments, etc.). Such entities may or may not be subject to specified regulatory capital requirements of other sectoral supervisory authorities. For purposes of the GCC, entities that are not regulated by an insurance or banking authority [e.g., the U.S. Securities and Exchange Commission (SEC) or the Financial Industry Regulatory Authority (FINRA)] will be considered as not subject to a specified regulatory capital requirement.

The primary examples of financial entities are commercial banks, intermediation banks, investment banks, saving banks, credit unions, savings and loan institutions, swap dealers, and the portion of special purpose and collective investment entities (e.g., investment companies, private funds, commodity pools, and mutual funds) that represents the Broader Group’s aggregate ownership in such entities, whether or not any member of the Broader Group is involved in that entity’s management responsibilities (e.g., via investment advisory or broker-dealer duties) for those entities.

For purposes of this definition, a subsidiary of an insurance company whose predominant purpose is to manage or hold investments or act as a broker-dealer for those investments on
behalf of the insurance company and its affiliated insurance (greater than 90% of all such investment subsidiaries’ assets under management or held are owned by or for the benefit of these insurance affiliates) should NOT be considered a Financial Entity. In the case where an insurer sets up multiple subsidiaries for this purpose, the 90% may be measured in the aggregate for all such entities. Similarly, in the case of collective investment pools (e.g., private funds, commodity pools, and mutual funds) the 90% may be measured individually, or in the aggregate for each subtype (e.g., private funds, commodity pools, and mutual funds).

In addition, other financial entities without a regulatory capital requirement include those which are predominantly engaged in activities that depending on the nature of the transaction and the specific circumstances, could create financial risks through the offering of products or transactions outside the group such as a mortgage, other credit offering or a derivative.

15. **Insurance Group**: For purposes of the GCC, a group that is comprised of two or more entities of which at least one is an insurer, and which includes all insurers in the Broader Group. Another (non-insurance) entity may exercise significant influence on the insurer(s); i.e., a holding company or a mutual holding company; in other cases, such as mutual insurance companies, the mutual insurer itself may be the Ultimate Controlling Person. The exercise of significant influence is determined based on criteria such as (direct or indirect) participation, influence and/or other contractual obligations; interconnectedness; risk exposure; risk concentration; risk transfer; and/or intragroup agreements, transactions and exposures.

An Insurance Group may include entities that facilitate, finance or service the group’s insurance operation, such as holding companies, branches, non-regulated entities, and other regulated financial institutions. An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control, and includes all members of the Broader Group that exercise significant influence on the insurance entities and/or facilitate, finance or service the insurance operations.

An Insurance Group could be headed by:
- An insurance legal entity;
- A holding company; or
- A mutual holding company.

An Insurance Group may be:
- A subset/part of bank-led or securities-led financial conglomerate; or
- A subset of a wider group.

An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control.

16. **Insurance Subgroup/U.S. Operations**: Refers to all U.S. insurers within a Broader Group where the groupwide supervisor is in a non-U.S. jurisdiction. It includes all the directly and indirectly held subsidiaries of those U.S. insurers. For purposes of subgroup reporting, capital instruments, loans, reinsurance, guarantees would only include those that exist within the U.S. insurers. Amounts included for the U.S. insurers shall include all amounts contained within the financial statements of those entities included in the subgroup reporting, whether those amounts are directly attributable or allocated to a company in the subgroup from an affiliate outside of the U.S. insurers and its direct or indirect subsidiaries.
17. **Lead State Regulator**: As defined in the *Financial Analysis Handbook*; i.e., generally considered to be the one state that “takes the lead” with respect to conducting groupwide supervision within the U.S. solvency system.

18. **Limited Group Capital Filing**: Refers to a GCC filing that includes sufficient data or information to complete the “Input 4 Analytics” tab and the “Summary 3 – Analytics” tab of the GCC template. This includes Schedule 1 of the template and may include limited data from other input tabs as deemed necessary for purposes of the analytics.

19. **Material Risk**: Risk emanating from a non-insurance/non-financial entity not owned by an insurer in the Insurance Group or is part of the Broader Group that is of a magnitude that could adversely impact the financial stability of the group as a whole such that the ability of insurers within a group to pay policyholder claims or make other policy related payments (e.g., policy loan requests or annuity distributions) may be impacted.

To determine whether an entity within the Broader Group poses material risks to the Insurance Group, the totality of the facts and circumstances must be considered. The determination of whether risk posed by an entity is material requires analysis of various aspects pertaining to the subject entity. A determination that a non-insurance/non-financial entity does not pose material risk allows the filer to request exclusion of that entity from the calculation of the GCC ratio in the “Inventory” tab. A number of items as listed below should be considered in making such a determination, to the extent they apply.

Caution is necessary, however. The fact that one or more of these items may apply does not necessarily indicate risk to the Insurance Group is, or is not, material. The group should be able to support its determination of material risk if requested by the Lead State Regulator. This should not be used as a checklist or as a scorecard. Rather, the list is intended to illuminate relevant facts and circumstances about a subject entity, the risk it poses, how the Insurance Group might be exposed to that risk and means to mitigate that risk.

**Primary Considerations:**

- Past experience (i.e., the extent to which risk from the entity has impacted the Insurance Group over prior years/cycles).
- The degree to which capital management across the Broader Group has historically relied on funding by the Insurance Group to cover losses of the subject entity.
- The existence of intragroup cross-support mechanisms (as defined below) between the entity and the Insurance Group.
- The means by which risk can be transmitted; i.e., the existence of sufficient capital within the entity itself to absorb losses under stress and/or if adequate capital is designated elsewhere in the Broader Group for that purpose.
- The degree of risk correlation or diversification between the subject entity and the Insurance Group (e.g., where risks of one or more entities outside the Insurance Group are potentially offset (or exacerbated) by risks of other entities) and whether the corporate structure or agreements allow for the benefits of such diversification to protect the Insurance Group.
- The existence and relative strength or effectiveness of structural safeguards that could minimize the transmission of risk to the Insurance Group (e.g., whether the corporate shell can be broken).
Other Considerations (if primary considerations suggest exclusion may be reasonable, these can be used to further support exclusions):

- The location of the entity in relation to the Insurance Group within the Broader Group’s corporate structure and how direct or indirect the linkage, if any, to the Insurance Group may be.
- The activities of the entity and the degree of losses that the entity could pose to the group under the current economic environment or economic outlook.

The guidance above recognizes that there are diverse structures and business models of insurers that make it impracticable to apply a one-size-fits-all checklist that would work for materiality determinations across all groups. Strict or formulaic quantitative measures based on size of the entity or its operations of a non-insurance affiliate are an insufficient proxy for materiality of risk to the insurance operations. The GCC Instructions thus consider the unique circumstances of the relevant entity and group and uses an interactive process whereby the group brings forward its suggestions as to entities that should be excluded from the scope of application for a discussion with the lead state, ultimately culminating in an agreement on the scope of application. The guidance in this section helps to facilitate that process and discussion with criteria for cross-support mechanisms that can potentially transmit material risk, as defined, to the Insurance Group as well as safeguards that can mitigate such risk or its transfer.

20. **Person**: As used in Model #440, a “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

21. **Reciprocal Jurisdiction**: As defined in the Credit for Reinsurance Model Law (#785).

22. **Scope of Application**: Refers to the entities that meet the criteria listed herein for inclusion in the GCC ratio. The application of material risk criteria may result in the Scope of Application being the same as, or a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s).

NOTE: U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator, otherwise in as much as they are already included in a reporting legal entity, they are already in the scope of application and there is no need for any additional reporting.

23. **Ultimate Controlling Person**: As used in the Insurance Holding Company System Regulatory Act (#440). This is the entity that exercises control directly or indirectly over all entities within the Broader Group.

© 2021 National Association of Insurance Commissioners
III. Determining the Scope of Application

A. Groups Exempted from the GCC

24. Refer to changes to Model #440 for guidance on groups that are exempted from filing a GCC. Instead, instructions are provided to ensure Lead State Regulators receive the information necessary to evaluate the Scope of Application.

B. Scope of Application – Legal Entity Inventory

25. When considering the scope of application, preparers of the GCC must first understand the information to be included in Schedule 1 of the template. When developing an initial inventory of all potential entities, the preparers of the GCC shall complete Schedule 1, which, except in the case of an Insurance Subgroup (as defined in Section II), requests data for all of the entities within the Broader Group that are directly or indirectly owned by the Ultimate Controlling Person (including the Ultimate controlling Person) that are listed in the insurer’s most recent Schedule Y or in relevant Holding Company Filings. GCC preparers should provide basic information about each such entity in Schedule 1, including its total assets, and total revenue and net income for this specific year identified. Additionally, the initial filing will require some further information for the prior year (e.g., prior year equity or surplus to policyholders). The primary purpose of the Schedule 1 is to: 1) assist the lead state in making an assessment on the entities within the group that should be included in the Scope of Application; and 2) provide the lead state with valuation information to better understand the group. This valuable information produces various ratios and other financial metrics that will be used in the analysis of the GCC and the group by the lead state for their holding company analysis.

26. To assist the Lead State Regulator in assessing the Scope of Application, the Schedule 1 and the “Inventory” tab of the template will be completed by each preparer to provide information and certain financial data on all the entities in the group. Each preparer will also use the include/exclude column in Schedule 1 to request its own set of entities to be excluded from the calculation after applying criteria for material risk (as defined in Section II). The requests for exclusion will be described by the preparer in the template and evaluated by the Lead State Regulator. A second column will be used by the regulator to reflect entities that the regulator agrees should be excluded.

27. Although all entities must be listed in Schedule 1 and in the “Inventory” tab, the preparer is allowed to group data for certain financial entities not subject to a regulatory capital requirement and certain non-insurance and non-financial entities. Thus, while the Schedule 1 would include the full combined financial results/key financial information (for all entities directly or indirectly owned by the Ultimate Controlling Person, such data may be reported based on major groupings of entities to maximize its usefulness, reduce the number of numeric entries, and allow the Lead State Regulator to better understand the group, its structure, and trends at the sub-group as well as group level. Criteria for grouping are further described in Section V, paragraph 55. Prior to completing the GCC annually, the Insurance Group should determine if the proposed grouping is satisfactory to the lead state or if there are certain non-insurance and non-financial entities (such entities are required to be broken out and reported separately) that should be broken out and reported separately.

C. General Process for Determining the Scope of Application

28. The starting point for “Scope of Application” (i.e., for purposes of the GCC specifically) is the entire group except in the case of an Insurance Subgroup (as defined in Section II). However, in the case of groups with material diverse non-insurance/non-financial activities isolated from the financial/Insurance Group and without cross-support mechanisms as defined in Section II, the preparer may request a narrower scope starting at the entity that controls all insurance and
financial entities within the group [i.e., comprise a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s) (Broader Group)]. However, the adjustments as to the Scope of Application suggested by the preparer in consultation and in agreement with the Lead State Regulator should include consideration of guidance in paragraph 31 (“Identify and Include all Financial Entities”) the totality of the facts and circumstances, as described in paragraph 19 (“Definition of material risk”). The rationale and criteria applied in allowing the reduced scope should be documented and made available to non-lead states if requested. The decision on reduced scope should be revisited when changes in the group structure or activities occur.

The fundamental reason for state insurance regulation is to protect American insurance consumers. Therefore, the objective of the GCC is to assess quantitatively the collective risks to, and capital of, the entities within the Scope of Application. This assessment should consider risks that originate within the Insurance Group along with risks that emanate from outside the Insurance Group but within the Broader Group. The overall purpose of this assessment is to better understand the risks that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims consistent with the primary focus of insurance regulators.

D. Guiding Principles and Steps to Determine the Scope of Application

29. For most groups, the Scope of Application is initially determined by the preparer in a series of steps, listed here and then further explained as necessary in the text that follows:

- Develop a full inventory of potential entities using the Inventory of the Group template (Schedule 1). This should correspond to Annual Statement Schedule Y, Part 1A

- Denote in Schedule 1 for each non-financial entity whether it is to be “included in or excluded from” the Scope of Application” using the criteria in the “Identify Risks from the Broader Group” subsection below.

- All non-financial entities, whether to be included in or excluded from the Scope of Application are to be reported in the “Inventory” tab of the template. Information to be provided for excluded entities will be limited to Schedule 1B and the corresponding columns in the Inventory tab. See paragraph 55 for additional information on treatment of non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity.

- Non-financial entities may qualify for grouping on this Inventory tab as described elsewhere in these instructions.

E. Steps for Determining the Scope of Application

30. Identify and list all entities in the Insurance Group or Insurance Subgroup (where required).

Include all entities that meet the definition of an affiliate in Section II, above and that fit the criteria identified in the definition of the Insurance Group or Insurance Subgroup (if applicable), in Section II, above except as modified in paragraph 32 (Identify Risks from the Broader Group), below. All insurance entities and entities owned directly or indirectly by the insurance
entities in the group shall be included in the Scope of Application and reported in the Schedule 1 and Inventory of the Group template. Other non-insurance/nonfinancial entities within the Insurance Group may be designated as “exclude” as described in paragraph 30.

31. Identify and include all Financial Entities.

Financial Entities (as defined in Section II) within the Inventory of the Group template shall be included in (i.e., may not be designated as “excluded from”) the Scope of Application, regardless of where they reside within the Broader Group.

As learned from the 2008 financial crisis, U.S. insurers were not materially impacted by their larger group issues; however, materiality of either equity or revenue of an entity might not be an adequate determinant of potential for risk transmission within the group. Furthermore, risks embedded in financial entities are not often mitigated by the activities of the insurers in the group and may amplify their (the insurers’) risks.

Any discretion in evaluating the ultimate risk generated by a defined financial entity that is not subject to a regulatory capital requirement should be applied via review of the material risk definitions/principles included in paragraph 19 to set the level of risk as low, medium or high and not to exclude such entities from the calculation. The rationale should be documented, and all data required in Schedule 1 must be provided for the entity for purposes of analysis and trending.

32. Identify Risks from the Broader Group

An Insurance Group or Insurance Subgroup may be a subset of a Broader Group, such as a larger diversified conglomerate with insurance legal entities, financial entities, and non-financial entities. In considering the risks to which the Insurance Group or Insurance subgroup is exposed, it is important to take account of those material risks (as defined in Section II) to the Insurance Group from the Broader Group within which the Insurance Group operates. All non-insurance/non-financial entities included within the Insurance Group or Insurance Subgroup that pose material risk to the insurers in the group should be included within (i.e., may not be designated as “excluded from”) the Scope of the Application. Similarly, all non-financial entities within the Broader Group but outside the Insurance Group that pose material risks to the Insurance Group should be included within (i.e., may not be designated as “excluded from”) the Scope of Application; non-material non-insurance/non-financial entities within the Broader Group or within the Insurance Group (as both terms are defined in Section II) other than those entities owned by entities subject to a specified regulatory capital requirement should be reported as “excluded.” However, no such entities outside an Insurance Subgroup (as defined in Section II) should be included in the GCC. When determining which non-financial entities from the Broader Group to include in the Scope of Application, the preparer must include any entity that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims or provide services to policyholders consistent with the primary focus of insurance regulators.
33. Review of Submission

The Lead State Regulator should review the inventory of entities provided in the Group template to determine if there are entities excluded by the preparer using the criteria above that the Lead State Regulator agrees do not pose material risk (as defined herein) to its insurance operations. Additional information may be requested by the Lead State Regulator to facilitate this analysis. For entities where the Lead State Regulator agrees with the request to exclude, the GCC may exclude the data for such entities. Ultimately, the decision to include or exclude entities from the GCC will occur based on the Lead State Regulator’s knowledge of the group and related information or filings available to the Lead State and whether they believe an applicable entity would not adversely impact the entities within the Scope of Application to pay policyholder claims.

The template’s sensitivity analysis tab includes a calculation to reflect the impact of excluded entities requested, but not approved for exclusion by the lead state. (see instructions for Input 5 herein).

34. The preparer, together with the Lead State Regulator, would use the above steps, which includes considering the Lead State Regulator’s understanding of the group, including inputs such as Form F, ORSA and other information from other involved regulators, to determine the reasonableness of the suggested Scope of Application.

35. Updating the Scope of Application

The Scope of Application could be re-assessed by the preparer and the Lead State Regulator each successive annual filing of the GCC provided there has been substantial changes in corporate structure or other material changes from the previous year’s filing. Any updates should be driven by the assessment of material risk and changes in group structure as they impact the exclusion or inclusion of entities within the Scope of Application based on material risk considerations.

IV. General Instructions

36. The GCC template consists of a number of tabs (sections) within one workbook. The following provides general instructions on each of these tabs.

37. **Attestation:** This tab is intended to work similar to the annual financial statement and RBC attestations, which are both intended to give the regulator greater comfort that the company has completed in accordance with its (these) instructions. It will also indicate whether the group consists of predominantly life, P/C, or health insurers and whether the submission is a full or limited group capital filing.

38. **Input 1 – Schedule 1:** This tab is intended to provide a full inventory of the group, including the designation by the filer of any non-financial entities to be included in, or excluded from, the Scope of Application and include sufficient data or information on each affiliated entity (see Schedule A and Schedule BA exception as described in paragraph 39) within the group so as to allow for analyzing multiple options for scope, grouping and sensitivity criteria, as well as, allowing the Lead State Regulator to make a determination as to whether the entities to be included in the scope of application or excluded from the scope of application meet the aforementioned criteria. This tab is also used to maximize the value of the calculation by
including various information on the entities in the group that allow the lead state to better understand the group as a whole, the risks of the group, capital allocation, and overall strengths and weaknesses of the group.

39. Except as noted, equity method investments reported in the Section 1B in the Inventory tab that are accounted for based on Statement of Statutory Accounting Principles (SSAP) No. 48—Joint Ventures, Partnerships and Limited Liability Companies are not required to be de-stacked (separately listed) in Schedule 1; i.e., their value would be included in amounts reported by the Parent insurer within the calculation. The basis for this approach is predicated on the purpose of the entire GCC, which is to produce an expected level of capital and a corresponding level of available capital that are derived by aggregating the amounts reported of capital of the individual entities under the GCC methodology. The available capital for such joint ventures, partnerships and limited liability companies is already considered in Schedule 1 by its inclusion in its Parent’s financial statements and can be excluded from an inventory (not separately listed) because the Parent also already receives a corresponding capital charge within its RBC.

NOTE: Data for this tab is required for a Limited Group Capital filing.

40. **Input 2 – Inventory:** This tab is intended to be used by the consolidated group to provide information on the value and capital calculation for all the entities in the group before any de-stacking of the entities. While some of this information is designed to “pull” information from Schedule 1, other cells (blue cells) require input from the group. This tab will then apply the adjustments for investment in subsidiary other than where an exception is described in these instructions and adjust for intragroup arrangements. This tab is set up to subtract those adjustments from capital and therefore should be entered as: 1) a positive figure if the adjustment currently has a positive impact on the available capital or the capital calculation; or 2) a negative figure if the adjustment currently has a negative impact on the available capital or the capital calculation. It will also be used to add relevant insurance or other financial entities included as equity investments in Schedule A and Schedule BA and to aggregate the resulting adjusted values for use in the actual GCC.

NOTE: For a Limited Group Capital filing, data will be presented in a summarized format in a limited version of the “Inventory” tab in lieu of completing the full “Inventory” tab (see below).

**Limited Group Capital Filing Only: Input 2 – Inventory:** Manually enter data in Inventory B, Column 8 and Inventory C, Column 8 to report a single aggregated value for each entity category in the group. This will require that eliminations and adjustments normally found in a “full” Inventory B, Column 2 through Column 7 and Inventory C, Column 2 through Column 7 to be addressed offline.

41. **Input 3 – Capital Instruments:** This tab is intended to be used to gather necessary information to that will be used to calculate an allowance for additional available capital based on the concept of structural subordination applied to senior or other subordinated debt issued by a holding company that is within the scope of application of the GCC filing. It will also provide information on all debt issued by entities within the scope of application.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

42. **Input 4 – Analytics:** In recognizing a primary purpose of the GCC is to enhance groupwide financial analysis, this tab includes or draws from entity-category-level inputs reported in the tab or elsewhere in the GCC template to be used in GCC analytics. Separate guidance for Lead
State Regulators to reference in analyzing the data provided in the GCC template (reference applicable location of the guidance; e.g., *Financial Analysis Handbook*).

NOTE: Data for this tab is required for a Limited Group Capital filing.

43. **Input 5 – Sensitivity Analysis and Inputs**: This tab includes inputs and/or describes informational sensitivity analysis for other than XXX/AXXX captives, permitted and prescribed practices, debt designated as “Other,” unscaled foreign insurer values and other designated sensitivity analysis. The inputs are intended to simply be a disclosure, similar to the disclosure required under Note 1 of the statutory financial statements. The analysis will be applied in the “Summary 2” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

44. **Input 6 – Questions and Other Information**: This tab will provide space for participants to describe or explain certain entries in other tabs. Examples include the materiality method applied to exclude entities in Schedule 1 and narrative on adjustments for intragroup debt and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

45. **Calc 1 – Scaling (Ins)**: This tab list countries predetermined by NAIC and provides the necessary factors for scaling available and required capital from non-US insurers to be used in sensitivity analysis to a comparable basis relative to the U.S. RBC figures. It also allows for set scaling options (which vary by insurance segment such as life, P/C, and health).

NOTE: This tab is NOT required for a Limited Group Capital filing.

46. **Calc 2 – Scaling (Non-Insurance)**: This tab is used to determine calculated capital for non-insurance entities.

NOTE: This tab is NOT required for a Limited Group Capital filing.

47. **Summary 1 – Entity Category Level**: This tab provides a summary of aggregated available capital and calculated capital for each entity category before the application of capital instruments.

NOTE: This tab is NOT required for a Limited Group Capital filing.

48. **Summary 2 – Top Level**: This tab calculates various informational GCC ratios resulting from applying “on top” and entity level adjustments to adjusted carrying value and adjusted calculated capital and are described in the “Sensitivity Inputs and Analysis” tab. These “what if” scenario analysis will not be part of the GCC ratio.

NOTE: This tab is NOT required for a Limited Group Capital filing.

49. **Summary 3 – Analytics**: Provides a summary of various GCC analytics.

NOTE: This tab is required for a Limited Group Capital filing.
50. **Summary 4 – Grouping Alternatives**: This tab currently calculates and displays a selected grouping option for organizing the structure of the group consistent with the way that the entities are managed. 

   **NOTE**: This tab is NOT required for a Limited Group Capital filing.

51. All cells in the template are color-coded based on the chart below. Inputs should only be made in blue cells. Do not add/delete rows, columns or cells or change the structure of the template in any way. If there appears to be an error in the formulas in the template, contact the NAIC.

### V. Detailed Instructions (insert link to template)

#### Input 1 – Schedule 1

52. Schedule 1A indicates the version of the template being prepared.

53. More detailed information on each legal entity should be reported in Schedule 1B through Schedule 1D. The order of the entries in Schedule 1 should match that in the “Inventory” tab. The first entity listed should be the ultimate controlling party.

54. U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator. They should be reported under the appropriate entity category in [Sch 1B Col 6].

55. Entries are required for every entity within the scope of the group. However, while recognizing that Lead State Regulator retain the discretion to ask for greater detail, the following simplifications may be applied as long as information for every entity is entity is listed in Schedule 1B:

   - A single numerical entry for like Financial Entities would be allowed at the intermediate holding company level, assuming that the like entities are owned by a common Parent that does not own other entity types, all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. The entity at which the total data is provided must be assigned an “Entity Category” in Schedule 1 that corresponds to the instructed carrying value and capital calculation for which the entry is made (e.g., an entity that would otherwise be categorized as a non-operating holding company but holds asset managers would be categorized as an asset manager). Entries
for the remaining individual entities in the grouping will be reported in Schedule 1B only as “included.”

- In addition, a single numerical entry would be allowed for all included non-insurance/non-financial entities at the intermediate holding company level assuming that the intermediate holding company owns only non-insurance/non-financial entities (i.e., does not own other entity types), all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. This would include any positive residual value of the holding company itself. Entries for all individual entities in the grouping will be reported in Schedule 1B only as “included.”, but no stand-alone values for each entity would be required.

- Values for, non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity may remain with their Parent insurers and will not be de-stacked. Entries for these individual entities in the grouping will be reported individually in Schedule 1B Columns 1 and 2 only as “included.” along with other required entries in Schedule 1B, but no stand-alone values for each entity would be required in Schedules 1C or 1D.

- Mutual Insurance Groups may use the Total Adjusted Capital and amount of required capital from the top-level Insurer’s RBC Report at 200% x ACL RBC further adjusted to de-stack foreign insurers and other financial entities owned directly or indirectly (on a look-through basis) via RBC filing subsidiaries. Such foreign insurance subsidiaries or other financial subsidiaries shall be reported at the carrying values and capital calculations as described later herein.

- Data for U.S. Branches of Foreign insurers may be omitted from Schedule 1 if they are otherwise included in the entries, values, and capital requirements of a foreign insurer.

NOTE: These simplifications will be treated in a similar manner in Input 2 – Inventory.

56. Any financial entity owned by a Parent insurer and listed in Schedule A or Schedule BA, and any insurance or financial entity that is owned indirectly through a Schedule BA affiliate should be listed in Schedule 1 and in the Inventory and assigned the appropriated identifying information. (See also the instructions for Part B of the Inventory). These entities will be de-stacked from the values for the Parent insurer. The same treatment for these entities will be afforded when they owned by a foreign insurer or other non-insurance entities.

57. Schedule 1B contains descriptions of each entity. Make selections from drop-down menu where available.

- [Sch 1B Col 1] Include/Exclude (Company) – This column is to select entities where a request is made for exclusion. The filer will indicate which non-insurance/non-financial entities not owned directly or indirectly by an insurer that should be excluded from the GCC as not posing material risk to the group. The filer’s definition of material risk will be reported in the “Other Information” tab.

- [Sch 1B Col 2] Include/Exclude (Supervisor) – Column to be filled in by supervisor. These are entities where the Supervisor agrees with the filer’s assessment of material risk...
and these entities will be excluded from the GCC and may be included in a sensitivity analysis later in the template.

**NOTE:** This column may also be completed by the filer after advance consultation with the Lead State Regulator.

- **[Sch 1B Col 3] Include/Exclude (Selected)** – Formula to determine treatment of data for later sensitivity analysis. If supervisor has made a determination of include/exclude in the prior column, that will be used. If not, company’s selection will be used.

- **[Sch 1B Col 4] Entity Grouping** – Column denotes whether this is an insurance or non-insurance/non-financial entity and is also automatically populated based on the entry in Column 8.

- **[Sch 1B Col 5] Entity Identifier** – Provide a unique string for each entity. This will be used as a cross-reference to other parts of the template. If possible, use a standardized entity code such as NAIC Company Code (CoCode) or Insurance Services Office (ISO) Legal Entity Identifier. CoCodes should be entered as text and not number (e.g., if CoCode is 01234, then the entry should be “01234” and not “1234”). If there is a different code that is more appropriate (such as a code used for internal purposes), please use that instead. If no code is available, then input a unique string or number in each row in whatever manner is convenient (e.g., A, B, C, D, … or 1, 2, 3, 4…). Do not leave blank.

- **[Sch 1B Col 6] Entity Identifier Type** – Enter the type of code that was entered in the “Entity Identifier” column. Choices include “NAIC Company Code,” “ISO Legal Entity Identifier,” “Volunteer Defined” and “Other.”

- **[Sch 1B Col 7] Entity Name** – Provide the name of the legal entity.

- **[Sch 1B Col 8] Entity Category** – Select the entity category that applies to the entity from the following choices (all U.S. life captives shall select the option for “RBC Filing Captive,” complete the calculation using the life RBC formula in accordance with instructions below regarding “Additional clarification on capital requirements where a U.S. formula (RBC) is not required,” regardless of whether the company is required by their captive state to complete the RBC formula. Insurers or financial entities that are de-stacked from an insurer’s Schedule A or Schedule BA should be assigned the corresponding insurer or financial entity category:
If the GCC group’s Japanese insurer health business (referred to as “Third Sector”) is greater than 60% of total life business (referred to as “First Sector”) and health business combined, as reflected by annualized premium for the year reported, then that group may elect to use the Japan health scalar set rather than the life scalar set.

**NOTE**: All U.S. captives are required to complete the applicable RBC formula template. In addition, any insurer, other than U.S. captive, that submits an RBC filing to either the state of domicile or the NAIC will be considered an RBC filer.

* If the GCC group’s Japanese insurer health business (referred to as “Third Sector”) is greater than 60% of total life business (referred to as “First Sector”) and health business combined, as reflected by annualized premium for the year reported, then that group may elect to use the Japan health scalar set rather than the life scalar set.

**NOTE**: All U.S. captives are required to complete the applicable RBC formula template. In addition, any insurer, other than U.S. captive, that submits an RBC filing to either the state of domicile or the NAIC will be considered an RBC filer.
- **[Sch 1B Col 9] Alternative Grouping** – This is an optional input field. This field should be used if you wish to show similar entities aggregated into a single line in Summary 4-Alternative Grouping. Exhibit. For example, if you have a dozen small dental HMO businesses, you may wish to show them as a single line called “Dental HMOs,” as opposed to listing each entity separately. This is a level of granularity below “Entity Category” but above individual entities. No entity should be put in the same “Alternative Grouping” as its Parent. It is acceptable to put only one entity in a grouping. If any entries are left blank then, in Column 17, the “Entity Name” will be selected as the grouping. This will not impact the order of the entities for which data is entered in Schedule 1 or the “Inventory” tab.

- **[Sch 1B Col 10] Parent Identifier** – Provide the Entity Identifier of the immediate Parent legal entity for each entity, as applicable. If there are multiple Parents, select the Parent entity with the largest ownership percentage. Only include one entry. For the top holding company, enter “N/A.”

- **[Sch 1B Col 11] Parent Name** – This will be populated by a formula, so input is not required.

- **[Sch 1B Col 12] % Owned by Parent** – Enter the percentage of the entity that is owned by the Parent identified earlier in the worksheet. Percentages of ownership should be based on the percentage of voting class securities (unless ownership is maintained other than by control of voting securities) consistent with what is reported pursuant to state holding company regulation filings (Form B or equivalent).

- **[Sch 1B Col 13] % Owned within Group Structure** – Enter the percentage of the entity that is owned in the aggregate by any affiliate within the Group.

- **[Sch 1B Col 14] State/Country of Domicile** – Enter state of domicile for U.S. insurance entities and country of domicile for all other entities. (Use references that are consistent with those use on Schedule Y, where available.)

- **[Sch 1B Col 15] Zero Valued and Not Admitted Entities – Report for U.S. Insurers Only.** Select the treatment of the entity from following options: “Zero Valued for RBC” or “Nonadmitted for Accounting and RBC (Direct or Indirect).”

Zero Valued for RBC are affiliated insurance and financial entities that are otherwise reported in the RBC filer’s annual financial statement at their accounting value (i.e., per SAP) but are reported at zero value and zero capital requirements for RBC purposes. Examples include non-Canadian foreign insurers directly owned by U.S. life RBC filers. The carrying value and capital calculation specified in these instructions for the specific insurance or financial entity type should be reported in Inventory B, Column 2 and Inventory C, Column 2, respectively.

**NOTE:** Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column.

Nonadmitted for Accounting and RBC (Direct or Indirect) are insurance or other financial affiliates that owned directly indirectly by an RBC filer via a downstream non-financial entity or holding companies that are reported at zero value per SAP and are also reported...
at zero value and zero capital requirements for RBC purposes. Examples include U.S. insurers indirectly owned by a U.S. RBC filer through a nonadmitted holding company that has not been subject to an independent audit. The carrying values and capital calculations specified herein associated with the specific insurance or financial indirectly owned entity type should be reported Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column. The excess value in the nonadmitted Parent entity may be reported at zero value.

No entry is required in this column for any nonadmitted directly or indirectly owned non-insurance/non-financial subsidiary. Report zero for these affiliates in Column 2 of Inventory B and Inventory C.

- **[Sch 1B Col 16] Is Affiliate on Schedule A or Schedule BA an Insurer or Other Financial Entity?** – Column is meant to identify an entity with an insurer or financial entity identifier in Column 8 that is reported on Schedule A or Schedule BA but is being de-stacked and also reported on the Inventory tab. Provide a “Y” response where that is applicable. Otherwise leave blank.

- **[Sch 1B Col 17] Selected Alternative Grouping** – This will be populated by a formula, so input is not required. If there are any blank entries in Column 9 (Alternative Grouping), this column will set them equal to the name of the entity.

58. Schedule 1C contains financials for each entity:

- **[Sch 1C Col 1] Basis of Accounting** – Enter basis of accounting used for the entity’s financial reporting.

- **[Sch 1C Col 4] Reinsurance Assumed from Affiliates** – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 1 and life and health Schedule S, Part 1, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available.[FL3]

- **[Sch 1C Col 5] Reinsurance Ceded to Affiliates** – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 3 and life and health Schedule S, Part 3, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available. [FL4]

- **[Sch 1C Col 6] Book Assets** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total assets as reported in the basic financial statements before eliminations (because that is presumed to be less burdensome on the insurance holding company). Other financial data should
similarly be prepared using financial data before eliminations. However, insurance holding companies are allowed to present such figures after eliminations if they do so for all figures and consistently for all years.

- **[Sch 1C Col 7] Book Liabilities** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total liabilities as reported in the basic financial statements.

- **[Sch 1C Col 8] Gross Paid-in and contributed Capital and Surplus (U.S. Insurers Only)** – For U.S. insurers, report the current year end amounts from annual financial statement Page 3 as follows:
  a. Life Insurers: lines 29, 30 and 33.
  b. P/C Insurers: lines 30, 31 and 34.
  c. Health Insurers: lines 26, 27 and 28. [FL5]

59. Generally, Schedule 1D will include entries from regulatory filings or entity specific GAAP financial statements as of the reporting date. The amounts reported should be the entity value on a stand-alone (fully de-stacked) or grouped basis (where applicable). This may require use of company records in certain cases. The amounts should be reported at 100% for the entity listed. Any required adjustments for percentage of ownership will be applied later, if necessary, to calculate a capital charge.

- **[Sch 1D Col 1] Prior Year Entity Identifier** – Report the Legal Entity Identifier, NAIC company code or other identifier used for the entity in the prior year GCC filing for the prior calendar year.

- **[Sch 1D Col 2] Prior Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone balance sheet. This will generally be the same as what is reported in the current year column in the prior year GCC filing. Where grouping is permitted, the balance reported may be on a grouped basis.

- **[Sch 1D Col 3] Net Income** – The final reported income figure from the income statement, and therefore is the figure reported after interest, taxes, extraordinary items, etc. For entities with accounting and reporting requirements that specify that dividends paid or received will be part of “net income,” report the dividends received in this column. Report dividends to policyholders here as a reduction to net income if required by local accounting or reporting requirements.

- **[Sch 1D Col 4] Dividends Paid and Received (Net)** – All entity types report the net amount of dividends paid and received in reporting year to/from and affiliate, a Parent shareholder, public shareholders, or policyholders (if not required to be a reduction/increase in net income by local accounting or reporting requirements). All entity types that are subject to accounting and reporting requirements that specify that dividends paid or received will be reported as a surplus adjustment, will report dividends received in reporting year from affiliates in this column.
• **[Sch 1D Col 5] Capital and Surplus Contributions Received from Affiliates** – All entity types. Report sum of capital contribution (other than via surplus notes) during the reporting year received from any affiliated entity.

• **[Sch 1D Col 6] All Other Changes in Capital and Surplus** – Include total for all adjustments not listed above. This would include any investment income not already reported in Column 3 or Column 5. Also, report all stock repurchases or redemptions in this column.

NOTE: Greater detail may be made available upon request.

• **[Sch 1D Col 7] Current Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone Balance Sheet for the current year. This will generally be the same as what is reported for the entity in the Inventory B, Column 2. Where grouping is permitted, the balance reported may be on a grouped basis.

• **[Sch 1D Col 8] Capital and Surplus Contributions Paid to Affiliates** – All entity types report the total of capital contributions (other than via surplus notes) during the reporting year paid to any affiliated entity.

• **[Sch 1D Col 9] Dividends Declared and Unpaid** – For all applicable entities report the amount of dividends declared or approved but not yet distributed.

• **[Sch 1D Col 10] Dividends Received and Not Retained** – All holding companies, insurers and financial entities with regulatory capital requirements indicate by “Y” or “N” if part or all of dividends received reported in Column 5 have been paid (passed through) to a Parent company, to public shareholders, or used to repurchase or redeem shares of stock.
Input 2 – Inventory

60. Columns in Inventory A are being pulled from Schedule 1:

- [Column 1] Insurance/Non-Insurance
- [Column 2] Entity Identifier
- [Column 3] Entity Identifier Type
- [Column 4] Entity Name
- [Column 5] Entity Category
- [Column 6] Parent Identifier
- [Column 7] Parent Name
- [Column 8] Basis of Accounting

Columns Requiring Input

61. Enter information on adjustments to carrying value. Considerations specific to different types of entities are located at the end of this subsection.

- **[Inv B Col 1] Carrying Value (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. In general, carrying values utilized should represent: 1) the subsidiary valuation required by the insurance or other sectoral regulator if the Parent is a regulated entity; or 2) in the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then a subsidiary valuation based U.S. GAAP or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. No entry is required for the Ultimate Controlling Person (UCP)

The value in this column will include a zero value for entities not admitted per SAP or other jurisdictional regulatory rules. A single entry for all entities that qualify under the grouping criteria described in Input 1, herein may be made in lieu of individual entries on the line for the affiliate that holds the qualifying entities. This column will include double-counting.

The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group.

- **[Inv B Col 2] Carrying Value (Local Regime)** – Record the carrying value recognized by the legal entity’s jurisdictional insurance or other sectoral supervisor. This will include the value of capital instruments (e.g., U.S. insurer issued surplus notes) that are specifically recognized by statute, regulation or accounting rule and included in the carrying value of the entity. In the case where the entity is not subject to insurance or other sectoral regulatory valuation, then U.S. GAAP equity (including OCI) or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. If an agreed-upon change in local carrying value should become effective by 2021, Volunteer Groups are expected to report on that basis. If the group is comprised entirely of U.S.-based entities under a U.S.-based Parent company, the entries in this column will be the same as in Column 1 except in cases where the Parent owns not admitted (or otherwise zero valued financial affiliates that
would be reported as not admitted in the Parent Regime column but fully admitted (per SAP valuation) in the Local Regime column. (See instructions for **Sch 1B Col 15**.) However, if such an entity has been listed in the **Sch 1B Col 2 Include/Exclude (Supervisor)** column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then a value will be reported here, but the ultimate calculation will show the results without the excluded entity’s value. The carrying value for affiliates that are U.S. RBC filers will be the amount reported TAC on entity’s RBC report. This column will include double-counting. The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group. The entry here should generally be the same as the value reported in Inventory B, Column 1, except where TAC for RBC filers differs from their BACV. A single entry for all entities that qualify under the grouping criteria described exceptions described herein under Input 1, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries.

A sensitivity analysis is included to calculate the impact of excluded entities requested but not approved for exclusion by the lead state.

</table>

*Subject to Grouping
In cases where a U.S. life RBC filer owns a foreign insurer and the BACV value reported for the foreign insurer in the Parent U.S. insurers financial statement is adjusted to zero for RBC purposes, then report zero in Inventory B, Column 1 and Column 3 for that foreign insurance entity.

- **[Inv B Col 3] Investment in Subsidiary** – Enter an adjustment to remove the investment carrying value of any directly owned subsidiary(ies) from Parent’s carrying value. This is intended to prevent double-counting of available capital when regulated entities are stacked. The carrying value to be removed should be the investment value carried by the Parent from which the entity is being de-stacked (i.e., the value in Column 1 in Inventory B adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at zero value by the Parent. Where entities are owned partially by entities outside of the group, then the Parent’s percentage of ownership will be calculated based on the value owned within the group.

Generally, for all non-financial affiliates, Schedule A and Schedule BA assets will remain in the value of the Parent insurer and not entered in this column. However, if the Schedule A or Schedule BA asset is an insurance or financial entity as described herein, the value of that entity will be included in this column. For indirectly owned Schedule A or Schedule BA insurance or financial entities, only the value of that entity will be included in this column and the remaining value of the downstream Schedule BA Parent will remain with the Parent insurer. Similarly, the carrying value of U.S. branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the value of the foreign insurer so that the Parent entity may eliminate double-counting of that available capital which will now be reported by the stand-alone Branch listed in the inventory.

**NOTE:** The “Sum of Subsidiaries” column may provide a useful check against this entry, but it will not necessarily be equal.

When utilizing public accounting (e.g., GAAP) equity values that differ from regulatory values (e.g., SAP), it is the **GAAP equity** of the insurers must be eliminated from the GAAP Parent in this column, not the SAP (regulated capital). This is necessary in order to allow the calculation to appropriately represent SAP capital of regulated entities and GAAP equity of non-regulated entities. Data on the accounting differences between Parent and Local carrying values will be collected in **[Inventory B, Column 9]** and further detail provided in the “Questions and Other Information” tab.

**NOTE:** Values for Schedule A and Schedule BA affiliates that are required to be reported in the “Inventory” tab will be adjusted out of the value reported by the U.S. insurer in this column.

- **[Inv B Col 4] Intragroup Capital Instruments** – This column is automatically calculated from inputs to the “Capital Instruments” tab. It reflects an adjustment to remove carrying value for intragroup financial instruments that that are treated as capital by the issuer and consequently create additional capital within the group upon issuance (most notably U.S. surplus notes). Example for surplus notes: In both intragroup and unaffiliated transactions, treat the assets transferred to the issuer of the surplus note as available capital. If the purchaser is an affiliate, eliminate the investment value from the affiliated purchaser of the surplus note in this column. If the purchaser is an insurer or other regulated entity, eliminate the purchaser’s capital charge (e.g., RBC charge) on the
surplus note investment in the corresponding adjustment column for the capital calculation. No adjustments are made for any intragroup capital instrument that is treated as a liability by the issuer.

- **[Inv B Col 5] Reported Intragroup Guarantees, LOCs and Other** – Enter an adjustment to reflect the notional value weighted for expected utilization for reported intragroup guarantees (including solvency insurance and capital maintenance agreements). Enter the notional value for letters of credit, or other intragroup financial support mechanisms. Explain each intragroup arrangement in the “Questions and Other Information” tab.

- **[Inv B Col 6] Other Intragroup Assets** – Enter the amounts to adjust for and to remove double-counting of carrying value for other intragroup assets, which could include intercompany balances, such as (provide an explanation of each entry in the “Questions and Other Information” tab):
  a. Loans, receivables and arrangements to centralize the management of assets or cash;
  b. Derivative transactions;
  c. Purchase, sale or lease of assets; and
  d. Other (describe).

- **[Inv B Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Other Information” tab.

- **[Inv B Col 8] Adjusted Carrying Value** – Stand-alone value of each entity per the calculation to eliminate double-counting. This value includes permitted and prescribed practices.

- **[Inv B Col 9] Accounting Adjustments (e.g., GAAP to SAP)** – Report the total difference between the carrying value reported in Column 1 (and Column 3) and the value reported in Column 2. This column will apply to regulated entities where the stand-alone carrying value is based on regulatory accounting (e.g., SAP) while the value reported for that entity by the Parent is carried at a financial accounting (e.g., GAAP) value. Further detail is reported in the “Questions and Other Information” tab.

- **[Inv B Col 13] Average Revenue over 3-years (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities)** – This column is populated from data in Column 10, Column 11 and Column 12.
This column will support the capital calculation for asset managers, broker-dealers and other Financial Entities without Regulatory Capital Requirements.

62. “Adjusted Capital Calculation” is reported in a similar manner to the “Adjusted Carrying Value” above. The columns are in the same order, although it is likely that fewer entries will be needed for Column 4 through Column 7. Further guidance is below.

- **[Inv C Col 1] Entity Required Capital (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. No entry is required for the Ultimate Controlling Person. In general, entity required capital should represent the capital requirements of the Parent’s insurance or other sectoral regulator:
  
a. For subsidiaries of foreign insurers or other non-U.S. financial entities, the unscaled capital required by the Parent’s regulator of the regulated entity based on the equivalent of a Prescribed Capital Requirement (PCR) level.

b. For subsidiaries, including applicable Schedule A and Schedule BA subsidiaries, of U.S. insurance entities that are subject to RBC, except where the subsidiary is also an RBC filer, the entry should be equivalent of what would be required in the Parent’s RBC, adjusted for covariance where applicable (calculated by the preparer) reported at company action level (or two times authorized control level RBC) for that entity. Where the subsidiary is also an RBC filer, then the amount reported will be at company action level RBC (or two times authorized control level RBC) after covariance.

c. For subsidiaries of U.S. insurers that do not file RBC, report the actual amount of capital required in the Parent’s capital requirement (if any) for the subsidiary entity.

d. In the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then use zero where applicable. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the specified capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group. A single entry for all entities that qualify under the grouping criteria described in Section V, herein may be made on the line for the affiliate that holds the qualifying entities in lieu of individual entries.

- **[Inv C Col 2] Entity Required Capital (Local Regime)** – Enter required capital for each de-stacked entity, as applicable entity description below. For U.S. RBC filing subsidiaries under a U.S. RBC filing Parent the amounts will be the same in both the Parent and Local Regime columns, except where the RBC filing subsidiary is subject to an operational risk charge. In such cases the amount reported in this column for the subsidiary will include the operational risk charge while the amount reported in Column 1 will exclude the subsidiary’s operational risk charge. However, for some entity types his will result in entries for the entities under a U.S.-based insurance Parent to be different from what U.S. RBC would dictate. In addition, where a U.S. insurer directly or indirectly owns not admitted (or otherwise zero valued) financial affiliates, those affiliates would be reported with zero value in the Parent Regime column but at the specified regulatory value described below for that financial entity type in this column. However, if such an
entity has been listed in [Sch1B Col 2] Include/Exclude (Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then report the capital calculation in accordance with entity instructions below, but the ultimate calculation will show the results without the excluded entity’s capital calculation. Directly or indirectly owned non-financial entities that were not admitted or otherwise carried at a zero value in the Parent Regime, may be carried at zero value in this column. A single entry for all entities that qualify under the grouping criteria described herein under Input 1, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group.

63. Additional clarification on capital requirements where a formula is required:

- **U.S. RBC filing Insurers**: Report RBC at Company Action Level including excluding operational risk (200% x ACL)

- **Foreign Insurance Entities**: The local capital requirement as specified below for each jurisdiction should be reported, by legal entity, at a Prescribed Capital Requirement (PCR) level. This treatment is different than what U.S. RBC would require and recognizes other regulators view of adequate capital for insurers within another jurisdiction. It is more reflective of risk within the group context. A sensitivity analysis will be included in the “Sensitivity Analysis” tab using the jurisdictional PCR scaled per the Excess Relative Ratio method (see Appendix 1) for insurers in foreign jurisdictions that are subject to scaling.

- **European Union subsidiaries**: Use the Solvency II Solo Solvency Capital Requirement (SCR) as the PCR.

- **U.S. RBC filing subsidiaries**: The RBC Company Action Level including operational risk of each insurer should be reported.

- **Australia subsidiaries**: The PCR is the target capital as set by the insurer/group in accordance with APRA requirements. Effectively, this would be “Target capital under ICAAP.” PCR is not a set multiple of MCR.

- **Bermuda subsidiaries**: The Legal Entity PCR in Bermuda for medium and large commercial insurers is called the “Enhanced Capital Requirement” (ECR) and is calibrated to Tail VaR at 99% confidence level over a one-year time horizon.

- **Hong Kong subsidiaries**: Under the current rule-based capital regime, if applied similar to the concept of PCR, the regime’s PCR would be 150% of MCR for life insurers and 200% of MCR for non-life insurers.

- **Japan subsidiaries**: The PCR is the solvency margin ratio of 200%.

- **Korea subsidiaries**: The PCR is 100% of risk-based solvency margin ratio.
- **Singapore subsidiaries**: The PCR is 120% of total risk requirement (i.e., capital requirement).

- **China Taipei subsidiaries**: The PCR is 200% of RBC ratio.

- **Canada life entities**: The baseline PCR should be stated to be “100% of the LICAT Base Solvency Buffer.” The carrying value should include surplus allowances and eligible deposits.

- **Canada P/C entities**: The PCR should be the MCT capital requirement at the target level.

- **South Africa subsidiaries**: The PCR is 100% of the SAM SCR.

- For any entities that cannot be mapped to the above categories, scaling will be at 100%

64. Additional clarification on capital requirements where a U.S. formula (RBC) is not required:

- For those U.S. insurers that do not have an RBC formula, the minimum capital per state law should be used as the basis for what is used for that insurer in the GCC. This may differ from what U.S. RBC would require. It is more reflective of the regulatory view of risk in the group context. The following requirements should be used in other specified situations where an RBC does not exist:

  - **Mortgage Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the *Mortgage Guaranty Insurance Model Act* (#630).

  - **Financial Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the *Financial Guaranty Insurance Guideline* (#1626), specifically considering Section 2B (minimum capital requirements) and Section 3 (Contingency, Loss and Unearned Premium Reserves) and the other requirements of that guideline that impact capital (e.g., specific limits).

  - **Title Companies**: The minimum capital requirement shall represent 200% of the required level of reserves carried by the insurance company.

  - **Other Companies**: A selected basis for minimum capital requirements derived from a review of state laws. Where there is a one-off treatment of a certain type of insurer that otherwise would file RBC (e.g., HMOs domiciled in California), the minimum capital required by their respective regulator could be considered in lieu of requiring the entity to complete an RBC blank.

  - **Captives**: U.S. insurers that have captives should complete the applicable RBC formula regardless of whether the captive is required to complete it in their captive state. The amounts input into RBC by the captive shall be based on the actual assets and liabilities utilized in the regulatory reporting used by the captive. Captives used exclusively for self-insurance (either by U.S. life insurers or any other type of insurer) or insurance provided exclusively to its own employees and/or its affiliates, should not complete an RBC calculation and the entire entity should be treated as non-insurers and receive the same charge as a non-regulated entity.

65. Non-insurance financial entities subject to a specified regulatory capital requirement:
• All banks and other depository institutions – The unscaled minimum required by their regulator. For U.S. banks, that is the Office of the Comptroller of the Currency (OCC) Tier 1 or other applicable capital requirement. This is understood to be consistent with how the Federal Reserve Board would apply its Building Block Approach.

• Any other financial entity that is determined to be subject to a specified regulatory capital requirement will bring that requirement in the GCC at the first level of regulator intervention (if applicable).

• This differs from what U.S. RBC would require. It recognizes the sectoral regulator’s view of risk for a particular financial entity type. It is more reflective of risk in the group context.

66. Non-insurance financial entities NOT subject to a specified regulatory capital requirement:

• All asset managers and registered investment advisors and all other financial entities as defined in Section II: Use the capital calculation specified below based the level of risk assigned to the entity by applying the material risk principles defined in Section II. However, asset managers and investment affiliates (not qualifying to be treated as non-financial entities per paragraph 9) will be reported at either medium or high risk. In certain cases, these entities may be subject to a layer of regulation (e.g., SEC or FINRA) but are not generally subject to a specified capital requirement.

High Risk: 10% x 3-year average revenue

NOTE: A Basel Charge of 15% will be used for the IAIS ICS.

Medium Risk: 5.0% x 3-year average revenue.

Low Risk: 2.5% x 3-year average revenue

NOTE: Medium risk could be used as a starting point while the stratified methodology is further developed.

67. Other non-insurance, non-financial entities with material risk:

• Non-insurance, non-financial entities may not be as risky as financial entities. For non-insurance, non-financial entities not owned by RBC filers or other such entities where there is not a regulatory capital charge for the entity in the capital formula, use an equity charge of 10.5% (post tax) for predominantly life Insurance Groups 9.5% for predominantly P/C Insurance Groups and 3.5% for predominantly health Insurance Groups x BACV. If the entity is not subject to a capital charge or is included in the capital charge of another financial entity, then enter zero in Column 1 and the charge specified in this paragraph in Column 2. These factors are based on average after covariance RBC charges for the respective insurer types and are calibrated at 200% x ACL RBC. This is meant to be consistent with how the entity would be treated if owned by an RBC filer while recognizing that the entity may be excluded from the GCC if it does not pose material risk to the insurers in the group.

Non-insurance/non-financial entities owned by RBC filing insurers (or owned by other entities where a regulatory capital charge applied to the non-insurance/non-financial affiliate) will remain in the Parent’s capital charge and reported at that value in Column 1.
but will be reported as zero in Column 2. These non-financial entities may not be excluded from the GCC.

One additional informational capital calculation for all non-financial entities will be applied in the Sensitivity Analysis tab using current year gross revenue from Inventory B, Column 12 with the calculation occurring and results available in the “Calc 2” tab as follows: 5% of reporting year gross revenue based on a medium level risk for a financial entity.

68. Non-operating holding companies:

- Non-operating holding companies will be treated the same as other non-insurance/non-financial entities with material risk. Unless reported on a grouped basis (see paragraph 55), for purposes of applying the capital calculation, the carrying value of stand-alone positive valued and negative valued non-operating holding companies will be netted. If the net value is zero or less (floored at zero for purposes of applying a charge), the charge applied will be zero. If the filer chooses to designate the non-operating holding company as a non-insurance/non-financial entity without material risk and requests exclusion, then no allowance for debt issued by that holding company may be included in the calculation.

</table>
Capital Calculation Adjustments

- **[Inv C Col 3] Investment in Subsidiary** – Enter an adjustment to remove the required capital of the directly owned subsidiary(ies) from Parent’s required capital. The capital requirement to be removed should be the capital requirement carried by the Parent from which the entity is being de-stacked (i.e., the value reported in Column 1 in Inventory C adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at a capital calculation of zero value by the parent. This is intended to prevent double counting required capital when regulated entities are stacked. [Example: When de-stacking an RBC filer from another RBC filer, the amount entered on the Parent line would be the RBC of the subsidiary. When de-stacking financial entities that are subject to diversification in a capital formula (e.g., RBC) the amount entered on the Parent line is the post-diversified capital requirement as calculated by the preparer (which is also the amount to be reported for the de-stacked entity on the entity’s line).

Generally the capital requirements for Schedule A and BA affiliates and other non-financial affiliates will remain in the capital requirements of the Parent insurer and not entered in this column, except that the capital requirements for any financial entity reported in a Parent’s Schedule A and BA, any financial entity indirectly owned through another Schedule A or BA affiliate listed in Schedule 1 and in this section should be entered in this column in the row of the entity that directly or indirectly owns that Schedule A and BA affiliate so that the parent entity may eliminate double counting of that capital requirement capital which will now be reported by the stand-alone Schedule A or BA affiliate listed in in the inventory.

For indirectly owned Schedule A and BA financial entities, only the capital requirements for that entity will be included in this column and the remaining capital requirement of the downstream BA Parent will remain with the Parent insurer. Similarly, the capital requirement for any U.S. Branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the capital requirement of the foreign insurer so that the parent entity may eliminate double counting of that capital requirement which will now be reported by the stand-alone Branch listed in the inventory. The amounts entered in this column for a Parent must correspond to the capital required by the parent entity which is being de-stacked from that Parent.

Capital calculations for Schedule A and Schedule BA indirectly owned financial entities that are owned by Schedule A or Schedule BA assets are reported in the Inventory Tab and will be adjusted out of the value reported by the U.S. insurer in this column (since the non-financial direct parent Schedule A or BA affiliate is not listed in the Inventory Tab.

In the “Questions and Other Information” tab, a capital requirement should be reported for the value of the indirectly owned insurance of other financial entity based on the insurers Schedule A or Schedule BA charge rather than a charge (which would be zero) attributable to the Schedule A or Schedule BA entity that directly owns the insurance or other financial entity. As indicated earlier, the remaining capital requirement of the entity that directly owns the insurance or other financial entity will remain with the Parent insurer.

- **[Inv C Col 4] Intragroup Capital Instruments** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on surplus notes purchased by an affiliated U.S. insurer from a U.S. insurer issuer).
• [Inv C Col 5] Reported Intragroup Guarantees, LOCs and Other – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on guarantees or LOCs).

• [Inv C Col 6] Other Intragroup Assets – This column is not intended to be used for required capital but is included in case an entity believes it is necessary from reporting an inaccurate required capital figure.
  a. Loans, receivables and arrangements to centralize the management of assets or cash.
  b. Derivative transactions.
  c. Purchase, sale or lease of assets.
  d. Other (describe in “Questions and Other Information” tab).

• [Inv C Col 7] All Other Adjustments – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Questions and Other Information” tab. Use this column is for adjustments related to required capital that correspond to adjustments in Inventory B, Column 7 and in cases where an entity believes it is necessary to adjust an inaccurate regulatory required capital figure (e.g., the RBC calculation applied as a permitted practice).

  NOTE: Consider whether this column should be used rather than Column 2 for zero value entities.

• [Inv C Col 8] Adjusted Capital Calculation – Stand-alone capital calculation for each entity per the calculation to eliminate double-counting. This value includes the impact of permitted and prescribed practices.

• Inventory D is for “Reference Calculations Checks.” These are calculations that can serve as checks on the reasonability/consistency of entries.
  a. [Inv D Col 1 – 3] Sum of Subsidiaries (Carrying Value) – This automatically generated column calculates the value of the carrying value of the underlying subsidiaries. It is provided for reference when filling out the “Investment in Subsidiary” column. This sum will often, but not always, be equal to the “Investment in Subsidiary” column.
  b. [Inv D Col 4 – 6] Sum of Subsidiaries (Calculated Capital) – Similar to above but for calculated capital.
  c. [Inv D Col 7 – 8] Carrying Value/Adj Calc Cap – This is a capital ratio on the adjusted and unadjusted figures. Double-check entities with abnormally large/small/negative figures to make sure that adjustments were done correctly.

Input 3 – Capital Instruments

69. Provide all relevant information pertaining to paid-up (i.e., any receivables for non-paid-in amounts would not be included for purposes of calculating the allowance) financial instruments issued by the Group (including senior debt issued by a holding company), except for common or ordinary shares and preferred shares. This worksheet aims to capture all financial instruments such as surplus notes, senior debt, hybrid instruments and other subordinated debt. Where a Volunteer Group has issued multiple instruments, the Volunteer Group should not use a single
row to report that information; one instrument per row should be reported (multiple instruments issued under the same terms may be combined on a single line). All qualifying debt should be reported as follows.

70. Debt issued by U.S.-led groups:

- Surplus Notes – Report the outstanding value of all surplus notes in Column 8 whether issued to purchasers within or outside the group. The outstanding value of surplus notes issued to entities outside the group and that is already recognized by state insurance regulators and reported 100% as capital in the carrying value of U.S. insurer issuers in “Inventory B” will not be included in the calculation for an additional capital allowance. Surplus notes issued within the group generally result in double-counting and will not be included in the additional capital allowance. (See instructions below.)

- Subordinated Senior Debt and Hybrid Debt Issued (e.g., debt issuances that receive an amount of equity credit from rating agencies) – The outstanding value will be reported in Column 8. Recognition for structurally subordinated debt will be allowed to increase available capital. For purposes of qualifying for recognition as additional capital, both of the following criteria must be met:
  
a. The instrument has a fixed term (a minimum of five years at the date of issue or refinance, including any call options other than make whole provisions\(^1\)). However, if the instrument is callable within the first five years from the date of issue it may be considered qualifying debt if any such call is at the option of the issuer only (the instrument is not retractable by the holder) AND it is the intent of management to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument.

  b. Supervisory review or approval is required for any ordinary* or extraordinary dividend respectively or distribution from any insurance subsidiary to fund the repurchase or redemption of the instrument. Supervisory approval of ordinary dividends is met if the supervisor has in place direct or indirect supervisory controls over distributions, including the ability for the supervisor to limit, defer and/or disallow the payment of any distributions should it find that the insurer is presently, or may potentially become, financially distressed. There shall be no expectation, either implied or through the terms of the instrument, that such approval will be granted without supervisory review.

*The concept of approval for ordinary dividends is for GCC purposes and is met as described in subparagraph b, above. It is not intended to require explicit regulatory approval or in any way alter current provisions of Model #440 or the Insurance Holding Company System Model Regulation (#450).

- “Other” Debt – The outstanding value will be reported in Column 8 and will be further described in the “Other Information” tab and will be reported in a manner that is

---

\(^1\) NAIC staff have been informed that make whole provisions are a form of a call feature that can be exercised by the issuer at any time; that they nonetheless are most frequently utilized near the end of the term of the instrument, generally in connection with refinancing; and that the cost to the issuer to exercise the make whole provision and associated financial reporting impacts, combined with the very low interest rate environment, make it much less likely that such provisions will be triggered, particularly within five years of issuance. Staff will continue their research, and assuming these observations are confirmed, the referenced criteria will continue to scope out make whole provisions.
consistent with Senior Subordinated Debt, as described above. Such debt will not initially be included in the additional capital allowance for the GCC. An additional allowance of this debt as additional capital will be calculated in this tab and reported as a sensitivity analysis in the “Summary” tab, subject to future determination on whether it will become part of the GCC calculation.

- Foreign Debt – Report the outstanding value of Non-U.S. senior debt issued to entities outside the group in Column 8. Debt specifically recognized by statute, regulation or accounting rule as additional capital resources by the lead jurisdiction based on contractual subordination or where a regulatory regime proactively enforces structural subordination through appropriate regulatory/supervisory controls over distributions from insurers in the group will not be included in the calculation of an additional capital allowance if it is already reported as capital in the carrying value of the issuer in “Inventory B”. It will be included in the calculation of an additional capital allowance if recognized by the local jurisdiction and NOT already included in the value of the issuer in “Inventory B”. Cases where the value of debt instruments issued to purchasers outside the group has not been recognized by the legal entity’s insurance or other sectoral supervisor will not be included in the additional capital allowance.

71. Please fill in columns in Section 3A as follows for all capital instruments:

- [Sec 3A Col 1] Name of Issuer – Name of the company that issued the capital financial instrument. Will populate automatically from the “Entity Identifier” column in this subsection.

- [Sec 3A Col 2] Entity Identifier – Provide the reference number that was input in Schedule 1.

- [Sec 3A Col 3] Type of Financial Instrument – Select type from the drop-down menu. Selections include Senior Debt, Surplus Notes (or similar), Hybrid Instruments and “Other” Subordinated Debt.

- [Sec 3A Col 4] Instrument Identifier – Provide a unique security identifier (such as CUSIP). ALL debt instruments must include an internal identifier if not external identifier is available.

- [Sec 3A Col 5] Entity Category – Links automatically to selection made on the “Inventory” tab worksheet.

- [Sec 3A Col 6] Year of Issue – Provide the year in which the financial instrument was issued or refinanced.

- [Sec 3A Col 7] Year of Maturity – Enter the year in which the financial instrument will mature.

- [Sec 3A Col 8] Balance as of Reporting Date – Enter the principal balance outstanding as reported in the general-purpose financial statements of the issuer.
• [Sec 3A Col 9] **Intragroup Issuance** – Select whether the instrument was issued on an intragroup basis (that is, issued to a related entity within the group). This column will be used to remove “double-counting.” This column is a drop-down menu box with options “Y” and “N.”

• [Sec 3A Col 10] **Treatment in Inventory B** – Select option that applies:

  a. **Capital** – This instrument is recognized by the applicable regulator or credited as capital in local regulatory regime and reported as part of the adjusted carrying value of the issuer and was not purchased by an affiliate. This includes the value of qualifying senior and hybrid debt instruments (if recognized as capital) and U.S. surplus notes (or similar local regime instruments) that are issued to entities outside the group and included in the issuing entity’s value in the “Inventory B” tab. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital.

  b. **Liability** – This instrument is reflected by the issuer as a liability in the adjusted carrying value in the “Inventory B” tab and was not purchased by an affiliate. This would apply to all qualifying senior and hybrid debt issued to purchasers outside the group that is not recognized as capital by the local regulator and therefore is not included in the issuing entity’s value in the “Inventory B” tab. The value will be included in the calculation of a proxy allowance for additional capital.

  c. **Liability designation** would also apply to all non-qualifying senior and hybrid instruments and all debt categorized as “Other” issued to purchasers outside the group that is not recognized as capital by the local regulator. The value of these instruments will NOT be included the calculation for the in the calculation of a proxy allowance for additional capital.

  d. **Intragroup** – This would apply to all qualifying instruments purchased by an affiliate within the group. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital. If the financial instrument is recognized or credited as part of the issuer’s available capital in Inventory B, then an adjustment for intragroup capital instruments is made in Inventory B, Column 4 and Inventory C adjustments (if necessary to eliminate an associated capital requirement). If the financial instrument is treated as a liability by the issuer, then no intragroup capital instrument adjustment is required in Inventory B or Inventory C.

  e. The outstanding value of all non-qualifying senior and hybrid instruments and financial instruments categorized as “Other Debt” whether issued to purchasers inside or outside the group will not be included in the calculation of a proxy allowance for additional capital and no other adjustments are required in the template. However, in the unlikely event that the instrument is treated as available capital to the issuer in Inventory B, an adjustment in Inventory B, Column 4 to remove the available capital would be required.

**NOTE:** Additional information on instruments categorized as “Other Debt” in the Type of Financial Instrument Column will require additional information to be provided in the “Questions and Other Information” tab.
For **intragroup surplus notes**, the adjustment will impact the carrying value and associated capital calculation of the purchasing affiliated entity.

- **[Sec 3A Col 11] Intragroup Purchaser Identifier** – Enter the entity identify for the affiliate entity that purchased the instrument.

- **[Sec 3A Col 12] Description of Other Debt Instruments** – Provide a description of instruments designated as “Other.”

- **[Sec 3A Col 13] Call Provisions Criteria** – Respond “Y” or “N” as to whether the instrument is subject to a call provision (other than a make whole provision) in the first five years AND it is management’s intent to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument. Respond “X” if the instrument has a maturity of greater than five years including any call provisions.

- **[Sec 3A Col 14] Potentially Recognized Instrument** – This is an automatic calculation to determine if this is an instrument that has potential to be recognized as additional capital in the GCC and/or in sensitivity analysis. The column will show “Y” if each of the following is true: 1) it is Senior Debt, Hybrid or Other instrument; 2) the instrument is not intragroup; and 3) the instrument is treated as liability on Inventory B. These are calculated using Column 3, Column 9, and Column 10, respectively.

- **[Sec 3A Col 15] Other Criteria Met** – This is an automatic calculation to determine if the instrument qualifies due to criteria beyond those in Column 14. The column will show “Y” if: 1) the instrument has initial maturity of greater than five years including any call provision (i.e., “X” is reported in Column 13); and 2) it meets the “Call provisions criteria” in Column 13 (i.e., “Y” is reported in Column 13).

- **[Sec 3A Col 16] Qualified Debt** – This column is calculated automatically using data from the entries in Column 14 and Column 15. To qualify, an instrument needs a “Y” in both columns. It represents the amount of qualifying debt that will be used in the calculation of an allowance for addition capital under the alternate subordination method and the proxy allowance method. This amount will be carried into Section 3C, Column 1, Line 3.

72. Section 3C will be auto-filled, with the exception of Column 1, Line 2.

- **[Sec 3C Col 1, Line 1] Total Paid-In and Contributed Capital and Surplus** – This is the amount reported on Page 3 of the annual financial statement submitted to regulators by a U.S. insurer.

- **[Sec 3C Col 1, Line 2] Alternate Subordination Calculation** – This manual entry is the excess of qualifying debt issued over liquid assets held by the issuing consolidated holding company as reported in the consolidated financial statements. No entry is expected for a mutual group.

- **[Sec 3C Col 1, Line 4] Downstream Estimate** - The total reported under the alternate subordination approach will be compared to the total amount of gross paid-in or contributed capital and surplus reported by the insurance entities within the group as
reported in Schedule 1. The greater value will be carried into the calculation for an additional capital allowance.

**NOTE:** No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 5]** Proxy Calculation for Additional Capital Allowance – A calculation will be made in this tab in Section 3B that will apply 30% of available capital plus the value of all qualifying debt to become part of the proxy allowance for additional capital for qualifying senior subordinated. An additional amount of 15% of available capital plus the value of all qualifying debt will be calculated to become part of a proxy allowance for additional capital be for hybrid debt.

  **Summary Formula:** Proxy Amount = \((30\% \times (\text{Available Capital} + \text{Qualifying Senior and Hybrid Debt})) + (15\% \times (\text{Available Capital} + \text{Qualifying Senior and Hybrid Debt}))\)\text{.}

  **NOTE:** No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 6 through Line 8]** – The greater of the proxy calculation or the larger of paid in capital or alternate subordination calculation will be allowed as additional capital in **[Sec 3C Col 6]**. However, an overall limit of no more than 75% of the total adjusted carrying value in Inventory B will be applied in **[Sec 3C Col 7]**. Adjustments to increase available capital will be calculated from data on this page. The summary results of the components of the calculation (paid in capital and surplus, alternate subordination, proxy calculation and limitations) are populated as titled in the calculation columns in this section. The final amount recognized as additional capital is shown in **[Sec 3C Col 8]**.

  The additional capital allowance recognized for capital instruments will be shown as an “on-top” adjustment in the “Summary 1 – Entity Level” tab.

**Summary Calculation for Debt Allowed as Additional Capital:**

Step 1: Calculate the following amounts:
  a) The greater of Total paid-in capital and surplus of U.S. insurers or the alternative subordination calculation (defined above)
  b) A proxy value (defined above)

Step 2: Take the greater of a) or b) from Step 1, and subject that amount to two limitations:
  - First, the total amount to qualify as capital cannot exceed 100% of the total outstanding value of qualified senior and hybrid debt.
  - Second, the total amount to qualify as capital cannot exceed 75% of the total adjusted carrying value in Inventory B.

After applying the two limitations in Step 2, the remaining amount is allowed as additional capital.
73. **Informational calculation to include “Other Subordinated Debt”** – A sensitivity analysis will be applied in [Sec 3C Col 2, Line 1 through Line 8] and carried into the “Summary 2” tab to adjust the amount of additional capital in the proxy calculation by the amount of “Other Debt” reported in [Sec 3C Col 8] issued to purchasers outside the group. This informational sensitivity analysis will include an additional allowance for such debt up to 15% of available capital plus the value of all qualifying debt including qualifying “Other” debt subject to the same limitations noted for the proxy allowance in general.

**Input 4 – Analytics**

74. The entity type information supporting analytics summarized in Summary 3 – Analytics are pulled into this tab from data or information reported in other tabs in the GCC template. That data is exported into summaries in the “Summary 3 – Analytics” tab. Only 2020 data is currently to be populated. However, it is contemplated that going forward, data for prior years will also be populated such that it will provide the Lead State Regulator with metrics to identify trends over time.

**Input 5 – Sensitivity Analysis and Inputs**

75. All sensitivity analysis is ultimately calculated in the “Summary 2” tab. Inputs for Analysis 1, 2, 5, 6, and 7 are not required in this tab. They are populated from other tabs as described below and automatically calculated in the “Summary 2” tab. However certain analysis requires inputs from this tab. Inputs are required in this tab for Analysis 3, Analysis 4, Analysis 8, and Analysis 9. Those inputs are automatically pulled into the calculation in the Summary 2 tab. Sensitivity Analysis are intended to provide the Lead State Regulator additional information that helps them better understand the financial condition of the group. Similar to the sensitivity analysis included in the legal entity RBC, it provides the regulator with additional information and allows them to consider “what-if” scenarios to better understand the impact of such items. The results of these analysis will not impact the GCC ratio.

- **[Analysis 1]: GCC overall sensitivity analysis** – No additional data is needed in the tab. The overall GCC ratio will be presented at 300% x ACL level. This calculation will increase the calculated capital for most entity types by a factor of 1.5. However, entities with existing regulatory capital requirements (e.g., foreign insurers and banks) will be reported at the same level specified in these instructions for both the GCC and the sensitivity analysis (i.e., at 100% of the jurisdictional or sectoral PCR requirements).

- **[Analysis 2]: Excluded non-insurance/non-financial entities without material risk** – No additional data is needed in the tab. The data for entities where exclusion has been requested and the lead state does not agree will be populated based on entries in [Sch 1B Col 3] and data in Inventory B, Column 2 and Inventory C, Column 2. This analysis will be applied and reported in the “Summary 2” tab. It will provide the regulator with the impact of excluding non-agreed-upon entities on the GCC ratio.

- **[Analysis 3 and Analysis 4]: Permitted practices** – This information shows the amount of U.S. permitted practices as described in the Preamble of the *Accounting Practices and
Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio.

- **Prescribed Practices** – This information to be entered on this tab shows the amount of U.S. prescribed and prescribed practices as described in the Preamble of the Accounting Practices and Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio. This analysis will be applied and reported in the “Summary 2” tab.

- **Permitted and Prescribed Practices** – Report values from annual financial statement Note 1 (excluding those pertaining to XXX/AXXX captives):
  a. Entity identifier
  b. Value of permitted practice
  c. Capital Requirement attributable to permitted practice (if any)
  d. Description of permitted practice
  e. Value of prescribed practice
  f. Capital requirement attributable to permitted practice (if any)
  g. Description of prescribed practice

- **[Analysis 5]: Foreign Insurer Capital Requirements Scaled** – No additional data is needed in the tab. This information shows the amount of foreign insurer capital calculations scaled by applying scalars using the Excess Relative Ratio approach at a 200% x ACL RBC calibration level and at 300% x ACL for all non-U.S. jurisdictions where scalar data is available (see Appendix 1). The sensitivity analysis allows the state to understand the impact of this specific scaling method on the GCC ratio. This information is populated from the “Scalar” tab. This analysis will be applied and reported in the “Summary 2” tab.

- **[Analysis 6]: Debt Classified as “Other”** – No additional data is needed in the tab. The analysis data will be populated from the “Capital Instruments” tab and the analysis and will be applied and reported in the “Summary 2” tab.

- **[Analysis 7]: Alternative Capital Calculation for Non-Financial Entities** – No additional data is needed in the tab. The values reported will represent the alternative revenue-based values for capital calculation that is being captured in the template. The data will be populated from Schedule 1 and Inventory B and the analysis will be applied and reported in the “Scaling Non-Insurance” tab (Calc 2).

- **[Analysis 8]** For captives other than XXX/AXXX, all other U.S. captives shall make an asset adjustment as described below;
**Asset Impact**

76. For the asset impact, it is ONLY required for the assets included in a captive or an entity not required to follow the statutory accounting guidance in the *Accounting Practices and Procedures Manual*. It is not required for assets for those groups that retain such business in a non-captive traditional insurance company(ies) already required to follow the *Accounting Practices and Procedures Manual*.

**NOTE**: Variations for state prescribed and permitted practices are captured in the separate sensitivity analysis.

77. The asset impact amount shall be determined based on a valuation that is equivalent to what is required by the *Accounting Practices and Procedures Manual* (SAP). For this purpose, “equivalent” means that, at a minimum the listed adjustments (as follows) be made with the intent of deriving a valuation materially equivalent to what is required by the *Accounting Practices and Procedures Manual*, however, without requiring adjustments that are overly burdensome (e.g., mark-to-market bonds used by some captives under U.S. GAAP versus full SAP that considers NAIC designations). To be more specific, the asset impact shall be developed by accumulating the impact on surplus because of an accumulation of all the following in paragraph 78 and paragraph 79 combined.

**NOTE**: Letters of credit or other financial instruments that operate in a manner like a letter of credit, which are not designated as an asset under either SAP or U.S. GAAP and are required to be adjusted out of the available assets (i.e., the asset reduction is recorded as a negative figure in the template).

78. To achieve the above, accumulate the effect of making the following impact and record as a negative figure in the template, an asset adjustment for all the following explicit assets not allowed to be admitted under SAP:

- **Assets specifically** not allowed under the *Accounting Practices and Procedures Manual* in accordance with paragraph 9 of SSAP No. 97—*Investments in Subsidiary, Controlled and Affiliated Entities*.
- **SSAP No. 6**—*Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers*.
- **SSAP No. 16R**—*Electronic Data Processing Equipment and Software*.
- **SSAP No. 19**—*Furniture, Fixtures, Equipment and Leasehold Improvements*.
- **SSAP No. 20**—*Nonadmitted Assets*.
- **SSAP No. 21**—*Other Admitted Assets* (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP).
- **SSAP No. 29**—*Prepaid Expenses*.
- **SSAP No. 105**—*Working Capital Finance Investments*.
- Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs, pre-operating, development and research costs, etc.).
- Depreciation for certain assets in accordance with the following SSAPs:
  - SSAP No. 16R—Electronic Data Processing Equipment and Software.
  - SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements.
  - SSAP No. 68—Business Combinations and Goodwill.
- The amount of goodwill of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- The amount of the net deferred tax assets (DTAs) of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- Any surplus notes held by the SCA issued by the reporting entity.

79. In addition, record as a negative figure, an asset impact for any assets that are not recognized as an admitted asset under the principles of SSAP No. 4—Assets and Nonadmitted Assets, including:

- Letters of credit, or other similar instruments, that operate in a manner like a letter of credit and, therefore, do not meet the definition of “asset” as required under paragraph 2.
- Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets that are unavailable due to encumbrances or other third-party interests, should not be recognized on the balance sheet and are, therefore, considered nonadmitted.
- Assets of an insurance entity pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, such assets shall not be recognized as an admitted asset on the balance sheet.

- [Analysis 9]: Other Regulator Discretion – This analysis is designed to reflect other regulator adjustments including for transactions other than XXX/AXXX reinsurance where there are differences in regulatory regimes exist and there is a desire to fully reflect U.S. Statutory Accounting treatment or to reflect the lead state’s view of risk posed by financial entities without specified regulatory capital requirements or risk posed by non-insurance/non-financial entities that have been included in the GCC. This will be a post-submission item completed by the Lead State Regulator. Enter the following information here:
  a. Entity identifier.
  b. Amount of adjustment.
  c. Description of regulatory issue.

NOTE: This column may also be completed by the filer after advance consultation with the Lead State Regulator.
Input 6 – Questions and Other Information

80. This tab provides space for participants to describe or provide greater detail for specified entries in other tabs (as noted in the instructions for the columns in those tabs) or additional relevant information not captured in the template. Examples include; adjustments for intragroup debt, description of permitted practices; and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab. Specified items are included in the tab. Other information that the filer believes is relevant should be added freeform in this tab.

Information or Detail for Items Not Captured in the Template

- Intercompany Guarantees – Provide requested information:
  a. Entity identifier issuing the guarantee.
  b. Entity identifier of entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the guarantee.
  d. Describe the nature of the guarantee.

- Capital Maintenance Agreements – Provide requested information:
  a. Entity identifier obligated under the agreement.
  b. Entity identifier for entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the agreement.
  d. Describe the nature of the agreement.

- Value of intangible assets included in non-insurance Holding Companies – Provide the requested information for all entities designated in the non-operating holding company entity category.
  a. Entity identifier.
  b. All goodwill.
  c. All intangibles related to health care services acquisitions included in local carrying value column in Inventory B. Examples include, but are not limited to, customer relationships (policy retention, long-term health services contracts) and technology/patents/trade names and provider network contracts.
  d. All other intangible assets included in local carrying value column in Inventory B.
  e. Total of line b, line c and line d.*
  f. A description of each intangible asset included in line d.

* Auto populated.

Further detail on amounts reported for specific intangibles other than goodwill may be requested by the Lead State Regulator during review of the GCC template.

Information or Detail for Items Captured in the Template

- Currency Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 2 is different than the amount in Inventory B, Column 1 due to currency conversion.
a. Entity identifier.
b. Currency type reported in Inventory B, Column 1 and Inventory C, Column 1 (foreign currency).
c. Conversion rate applied.
d. Source of conversion rate applied.

- Intragroup Assets – Description of Adjustments for intragroup assets reported in Inventory B, Column 6 and Inventory C, Column 6. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 6.
  c. Description of adjustment.

- Other Adjustments – Description of adjustments reported in Inventory B, Column 7 and Inventory C, Column 7. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 7.
  c. Description of adjustment.

- Accounting Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 1 is different than the amount in Inventory B, Column 2 due to differences in accounting basis
  a. Entity identifier.
  b. Value reported in Inventory B, Column 1.*
  c. Value reported in Inventory B, Column 2.*
  d. Total amount of adjustments related to difference in accounting basis.*
  e. Nature of adjustment (e.g., GAAP to SAP).
  * Auto populated.

- Stress Scenario Narrative – Provide a high-level description of the anticipated market conditions or other reasonably likely company specific drivers that would lead to the selected level of stress results (i.e., the percentage adjustments) calculated in the Stress Summary tab. In addition, provide any comments relating to the potential for procyclical GCC ratio results in specific areas of the calculation.

- The tab also includes a listing of all Schedule A and Schedule BA affiliates, along with the following information:
  a. Parent identifier (if available) – This is the same information as is included in Schedule 1 [Sch 1B Col 3] as would be entered for non-Schedule A/Schedule BA affiliates.
  b. Parent Name – Enter the Name of the Parent.
  c. Is Parent a Schedule A or Schedule BA Asset? – This column is only required for financial entities that are Directly owned by a Schedule A or Schedule BA Affiliate. No other downstream affiliates owned by Schedule A or Schedule BA entities need
to be listed. These entities are not normally independently reported in Schedule A and Schedule BA so are extra entries.

d. Financial? (Y/N) – If the entity meets the criteria as being a financial entity, indicate with a “Yes” response. A “No” response is not required for other entities listed. “Yes” entries should correspond to “Yes” entries in Schedule 1 [Sch 1B Col 16].

e. Carrying Value of Immediate Parent – Report the value listed in Schedule A and Schedule BA of the Parent insurer. For those cases where an indirect financial entity is reported use the value used by the direct Parent.

f. Capital Requirement for Immediate Parent – Report the value listed in the RBC report of the Parent insurer (pre-tax where applicable). For those cases where an indirect financial entity is listed, report the value of the capital requirement attributable to the Insurer rather than the direct non-financial Schedule BA Parent. The capital requirement reported in this column for the immediate Schedule BA Parent should be adjusted to deduct the amount moved to Schedule 1 and Inventory C.

Calc 1 – Scaling (Insurance Entities)

81. All entries in this tab are calculation cells populated using data from within the tab or using data from elsewhere in the template. Scaled values for calculated capital will become part of the GCC ratio. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab. The concept of a scalar was first introduced to address the issue of comparability of accounting systems and capital requirements between insurance regulatory jurisdictions. The idea is to scale capital requirements imposed on non-U.S. insurers so as to be comparable to an RBC-based requirement. Two approaches for scaling related to foreign insurers were presented, and others are being explored and will be reviewed. A decision on the scaling methodology to be adopted into the GCC template will be made at the end of the review. In the interim a scalar of 100% of the jurisdictional PCR will be applied to all jurisdictions where a risk-sensitive capital requirement is in place.

82. Information on the Excess Relative Ratio (ERR) scalar methodology will be collected and applied in the “Sensitivity Analysis” tab.

NOTE: See Appendix 1 for more information and examples on how the ERR scalars are calculated.

83. For jurisdictions without risk-sensitive capital requirements a 100% charge will be applied to adjusted carrying value.

Calc 2 – Capital Calculations for Non-insurance Entities

84. All entries in this tab are either calculation cells using data from within the tab or using data populated from elsewhere in the template. Calculated capital for all entities except insurers will be reported in this tab. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab.

85. In addition, one informational option for calculated capital for financial entities without an existing regulatory capital requirement and one informational option for calculated capital for
non-financial entities will be reported in this tab. Those calculation will not be carried into the “Summary 1 – Entity Level” tab and will not be part of the GCC ratio.

86. Only amounts for entities that the filer and the Lead State Regulator agree should not be excluded [Sch 1B Col 2] will be brought into the calculation in this tab and the “Summary 1 – Entity Level” tab. Entities where the Lead State Regulator does not agree with the filer’s request to exclude an entity will be part of the GCC ratio.

**Summary 1 – Entity Level GCC Summary**

87. Summarized results by entity type for the GCC ratio will be reported in this tab. An on top adjustment for debt allowed as additional capital will be added at the bottom of the table. All informational sensitivity analysis will be reported in Summary 2 and will not impact the GCC ratio.

**Summary 2 – Informational Sensitivity Tests**

88. Summary results for each informational sensitivity analysis described in the “Sensitivity Analysis Inputs” tab will be shown here. Each sensitivity analysis will be shown on a stand-alone basis. It is expected that each informational sensitivity analysis will run automatically in the background and the results for each displayed in this tab. The results for the informational sensitivity analysis will not be included in the “Summary 1 – Entity Level” tab.

**Summary 3 – Analytics**

89. Summary results for metrics described in the Analytics Guidance [insert attachment or appendix reference] and utilizing data collected in the “Input 4 – Analytics” tab or other tabs in the GCC will be calculated and presented here.

**Summary 4 – Alternative Grouping Option(s)**

90. One sample alternative structure for grouping by entity type or jurisdiction in the GCC is displayed based on a suggested method. It can be modified, or other suggestions can be accommodated based on combining data from Schedule 1 and the Inventory in defined ways.

This tab is intended to be an additional analytical tool. The tool summarizes the GCC based on how a reporting entity views its organization, and provides regulators that view, to align it with regulatory information, other than what is reported elsewhere in the GCC template, that the reporting entity has submitted such as current filings, communications, etc. In this summary view, entities are organized into like regimes (e.g., RBC filers, foreign insurers, banks, financial, or non-financial entities) and multiple entities may be grouped together, in order to create a view of capital that is easy to review and analyze within each grouping. The intent of this approach is to provide an additional analytical tool designed to enhance dialogue between the Lead State Regulator and the company contemplated by the GCC filing. This view is transparent (no scalers, no adjustments, no de-stacking) so that financial information may be
cross-walked to other financial submissions such as RBC filings. However, it does contain double counting of available and required capital “(i.e., intra-company investments and transactions are not eliminated) and cannot be used to create a GCC ratio.

91. The results are dependent on how the reporting entity populated. Input 1 – Schedule 1, Column 9 Alternative Grouping. For example, if you have a dozen small dental HMO businesses, you may wish to collapse the results to a single line called “Dental HMOs,” by populating Input 1 – Schedule 1, Column 9 Alternative Grouping for each dental HMO as “Dental HMOs.” Then right-click and select “Refresh” to see the results with the “Dental HMOs” combined.

92. For reference, the data for the Summary 4 – Grouping Alternative is from Calc 1 – Scaling (Ins, Bank), which is fed by the inputs made in Input 1 – Schedule 1, Input 2 – Inventory, etc.

**Stress Inputs**

93. All entries in this tab are either calculation cells using data from within the tab or using data populated from elsewhere in the template in a standardized approach. Available capital and calculated capital for all entities using a selected stress level will be reported in this tab. The calculated values will be summarized in the “Stress Summary tab.

94. The filer or the analyst may use the available section in the tab that allows data entry in order to apply stress to additional entity categories not covered in the standardized approach (e.g., foreign insurers subject to scalrs in the sensitivity analysis). The inputted values will be summarized in the “Stress Summary tab.

95. A separate narrative describing potential drivers of the selected stress level should be submitted.

**NOTE:** See Appendix 2 for more detail

**Stress Summary**

96. Summarized results by entity type will be reported in this tab.
Appendix 1 – Explanation of Scalars

93.97. The concept of a scalar is to equate the local capital requirement to an adjusted required capital level that is comparable to U.S. levels. The purpose of a scalar is to address the issue of comparability of accounting systems and capital requirements between jurisdictions. The following provides details on how the scalars were calculated by the NAIC, or how they are to be used when the NAIC has not developed a scalar for a country due to lack of public data.

Excess Relative Ratio Approach

94.98. Included below are various steps to be taken in calculating the excess relative ratio approach to developing jurisdiction-specific scalars. In order to numerically demonstrate how this approach could work, hypothetical capital requirements and financial amounts have been developed for Country A. Based on preliminary research that has been performed by NAIC staff, it appears that the level of conservatism built into accounting and capital requirements within a jurisdiction may differ significantly for life insurers and non-life insurers. Therefore, ideally each jurisdiction would have two different scalars based on the type of business. The example below includes information related to life insurers in the U.S. and Country A.

Step 1: Understand the Jurisdiction’s Capital Requirements and Identify the First Intervention Level

a. The first step in the process is to gain an understanding of the jurisdiction’s capital requirements. This can be done in a variety of ways including reviewing publicly available information on the regulator’s website, reviewing the jurisdiction’s Financial Sector Assessment Program (FSAP) reports and discussions with the regulator.

In Country A, assume that the capital requirements for life insurers are based on a capital ratio, which is calculated as follows:

\[
\text{Capital ratio} = \frac{\text{Total available capital}}{\text{Base required capital (BRC)}}
\]

In the U.S., capital requirements are related to the insurer’s RBC ratio. For purposes of the Relative Ratio Approach, an Anchor RBC ratio is used and calculated as follows:

\[
\text{Anchor RBC ratio} = \frac{\text{Total adjusted capital}}{100\% \text{ Company Action Level RBC}^*}
\]

* 100% Company Action Level RBC is equal to the Total RBC After Covariance before including operational risk, without adjustment or 200% Authorized Control Level RBC.

b. Similar to legal entity RBC requirements in the U.S., Country A utilizes an early intervention approach by establishing target capital levels above the prescribed minimums that provide an early signal so that intervention will be timely and for there to be a reasonable expectation that actions can successfully address difficulties. Presume that this target capital level is similar to the U.S. Company Action Level (CAL) event, both of which can be considered the first intervention level in which some sort of action—either on the part of the insurer or the regulator—is mandated.
A separate sensitivity calculation will be applied in the GCC template using trend test level RBC.

c. For Country A, the target capital level is presumed to be a capital ratio of 150%. That is, the insurer’s ratio of total available capital to its BRC should be above 150% to avoid the first level of regulatory intervention. Again, this is similar to the U.S. CAL event, which is usually represented as an RBC ratio of 200% of Authorized Control Level (ACL) RBC (ignoring the RBC trend test). In the Relative Ratio approach, the Anchor RBC ratio represents the Company Action Level event (or first level of regulatory intervention) as 100% CAL RBC (instead of 200% ACL RBC), because CAL RBC is the reference point that is used to calibrate against other regimes. The Anchor RBC Ratio (Total Adjusted Capital ÷ 100% CAL RBC) tells us how many “multiples of trigger level capital” that the company holds. Conceptualizing the CAL event as 100% CAL RBC allows the consistent definition of local capital ratios that are calibrated against a “multiples of the trigger level” approach, to ensure an “apples-to-apples” comparison.  

Step 2: Obtain Aggregate Industry Financial Data

The next step is to obtain aggregate industry financial data, and many jurisdictions include current aggregate industry data on their websites. Included below are the financial amounts for use in this exercise.

<table>
<thead>
<tr>
<th>U.S. Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Adjusted Capital = $495B</td>
</tr>
<tr>
<td>Authorized Control Level RBC = $51B</td>
</tr>
<tr>
<td>Company Action Level RBC = $102B</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Country A Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital = $83B</td>
</tr>
<tr>
<td>BRC = $36B</td>
</tr>
</tbody>
</table>

Step 3: Calculate a Jurisdiction’s Industry Average Capital Ratio

To calculate a jurisdiction’s average capital ratio, the aggregate total available capital for the industry would be divided by the minimum or base capital requirement for the industry in computing the applicable capital ratio. In Country A, this would be the BRC. In the U.S., this base or minimum capital requirement is usually seen as the ACL RBC, but because the Relative Ratio Approach is using 100% CAL RBC as a reference point to calibrate other regimes to, the Relative Ratio formula uses 100% CAL RBC as the baseline and the first-intervention level to calculate the Average Capital Ratio and Excess Capital Ratio. As a result, the scaled ratio of a non-U.S. company should inform regulators how many multiples of first-intervention level capital

While it is mathematically equivalent to use 200% ACL RBC as the denominator, the Approach is designed to use the representation of first-intervention level capital levels as the conceptual underpinning of the Relative Ratio Approach, where 100% CAL RBC is the reference point to calibrate against other regimes.
capital the non-U.S. company holds. Included below is the formula to calculate a jurisdiction’s industry average capital ratio:

**Calculation of U.S. Industry Average Capital Ratio – Life Insurers**

\[
\frac{\$495B \text{ (Total Adjusted Capital)}}{\$102B \text{ (CAL RBC)}} = 485\%
\]

**Calculation of Country A Industry Average Capital Ratio – Life Insurers**

\[
\frac{\$83B \text{ (Total Available Capital)}}{\$36B \text{ (BRC)}} = 231\%
\]

**Step 4: Calculate a Jurisdiction’s Excess Capital Ratio**

The next step is to understand the level of capital the industry is holding above the first intervention level. Therefore, to calculate a jurisdiction’s excess capital ratio, one would first need to calculate the amount of the capital ratio carried in excess of the capital ratio required at the first intervention level. This amount would then need to be divided by the capital ratio required at the first intervention level.

**General Excess Capital Ratio Formula**

\[
\frac{\text{Average Capital Ratio} - \text{Capital Ratio at the First Intervention Level}}{\text{Capital Ratio at the First Intervention Level}}
\]

Based on the formula above and information provided in Step 2 and Step 3, included below are how to calculate each jurisdiction’s excess capital ratio.

**NOTE**: The first intervention level in the U.S. is defined in the Relative Ratio Approach as 100% CAL RBC, while the first intervention level in Country A is a capital ratio of 150%.

**Calculation of U.S. Excess Capital Ratio – Life Insurers**

\[
485\% \text{ (Average Capital Ratio)} - 100\% \text{ (Capital Ratio at the First Intervention Level)} = 385\%
\]

**Calculation of Country A Excess Capital Ratio – Life Insurers**

\[
231\% \text{ (Average Capital Ratio)} - 150\% \text{ (Capital Ratio at the First Intervention Level)} = 54\%
\]

---

4 100% CAL RBC translates to an ACL RBC level of 200%, but for conceptual purposes, the Relative Ratio Approach refers to the U.S. first intervention level as 100% CAL RBC, as 100% CAL RBC is the reference point to which the Relative Ratio Approach calibrates other regimes. In other words, 100% CAL RBC ensures that the scaled ratio of Country A results in a ratio that determines how many multiples of first-intervention level capital that the company in Country A is holding.
Step 5: Compare a Jurisdiction’s Excess Capital Ratio to the U.S. Excess Capital Ratio to Develop the Scalar

99.103. Based on the information above, the U.S. excess capital is 385%. In other words, life insurers in the U.S. carry approximately 385% more capital than what is needed over the first intervention level. Country A’s excess capital ratio is 54%. That is, life insurers in Country A carry approximately 54% more capital than what is needed over the first intervention level.

100.104. To calculate the scalar, one would divide a jurisdiction’s excess capital ratio by the U.S. excess capital ratio. Therefore, the calculation of Country A’s scalar for life insurers would be 54% ÷ 385% = 14%. Therefore, Country A’s scalar for life insurers would be 14%.

Step 6: Apply to the Scalar to the Non-U.S. Insurer’s Amounts in the GCC

101.105. In order to demonstrate how the calculation of the scalar works, it would be best to provide a numerical example. For purposes of this memo, assume that a life insurer in Country A reports required capital of $341,866 and total available capital of $1,367,463. (These are the amounts previously used in a hypothetical calculation example that was discussed by the Working Group during its July 20, 2016, conference call.) As noted previously, the above information and calculation suggests that U.S. life insurers carry capital far above the minimum levels, while life insurers in Country A carry capital far closer to the minimum. Therefore, in order to equate the company’s $341,866 of required capital, we must first calibrate the BRC to the first regulatory intervention level by multiplying it by 150%, or Country A’s capital ratio at the first intervention level. The resulting amount of $512,799 is then multiplied by the scalar of 14% to get a scaled minimum required capital of $71,792.

102.106. Further, the above rationale suggests that the available capital might also be overstated (because it does not use the same level of conservatism in the reserves) by the difference between the calibrated required capital of $512,799 and the required capital after scaling of $71,792, or $441,007. Therefore, we should now deduct the $441,007 from the total available capital of $1,367,463 for a new total available capital of $926,456. These two recalculated figures of required capital of $71,792 and total available capital of $926,456 is what would be included in the group’s capital calculation for this insurer. These figures are further demonstrated below.
**Calculation of Scaled Amounts for GCC**

**Amounts as Reported by the Insurer in Country A**

Total available capital = 1,367,463

Minimum required capital (BRC) = 341,866

**Calibration of BRC to 1st Regulatory Intervention Level**

341,866 (BRC) * 150% = 512,799

**Scaling of Calibrated Minimum Required Capital**

512,799 (Calibrated BRC) * 14% (Scalar) = 71,792 (Difference of 441,007)

**Scaled Total Available Capital**

1,367,463 (Total Available Capital) – 441,007 (Difference in scaled required capital) = 926,456

403.107. Given these scaled amounts, one can calculate the numerical effect on the company’s relative capital ratio by using the unscaled and scaled amounts included below.

<table>
<thead>
<tr>
<th></th>
<th>Unscaled Amounts from Table Above</th>
<th>Scaled Amounts from Table Above</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital (TAC)</td>
<td>1,367,463</td>
<td>926,456</td>
</tr>
<tr>
<td>Base Required Capital (BRC)</td>
<td>341,866</td>
<td>71,792</td>
</tr>
<tr>
<td>Capital Ratio (= TAC ÷ BRC)</td>
<td>400%</td>
<td>1290%</td>
</tr>
</tbody>
</table>

404.108. Considering the fact that life insurers in Country A hold much lower levels of capital over the first intervention level as compared to U.S. life insurers, the change in the capital ratio from 400% (unscaled) to 1290% (scaled) appears reasonable and consistent with the level of conservatism that we understand is built into the U.S. life RBC formula driven primarily from the conservative reserve valuation.

"Note that in the above example, the company has an unscaled ratio (400%) that is above the industry average in Country A (231%) and a scaled ratio (1290%) that is higher than the US life industry average (485%). If the company had unscaled ratio that was lower than the industry average in Country A, its scaled ratio would be lower than the US life industry average. Company with an unscaled ratio equal to its own country’s industry average will have a scaled ratio equal to the anchor RBC ratio."
Appendix 2 – Stress Scenario

105.109. What follows is a proposal for a stress to be applied to the GCC to test how the limits on recognition of capital instruments as capital behave under stress. In designing this stress, an emphasis was placed on simplicity. The proposed scenario requires no input or calculation on the part of volunteers beyond that already necessary for completing the GCC template.

Further scenarios, if any, could follow this same structure:
- (1) A scenario that includes one (or more) stresses to a Group’s financial position
- (2) Specification of how each stress impacts the available capital and calculated capital for each type of legal entity
- (3) Input of the adjusted carrying value and adjusted calculated capital after the impact of the stress(es)
- (4) Re-calculation of the same calculations (e.g., application of limits on debt and scaling) and summary tables (including sensitivity tests)

Proposal

110. Scenario: A group specific loss event that results in a proportional reduction in available capital across the Group’s entire operations. What follows is a description based on a 10% reduction. Other levels of adjustments may be applied by the group. A variation based on a 20% reduction will be tested as well.

106-111. Specification: The scenario should result in X% reduction (10% used in the example below) in the adjusted available capital for all non-holding company entities. For entities where calculated capital is a fixed percentage of available capital (e.g., non-insurance / nonfinancial entities and foreign insurers in jurisdictions without a risk-based capital requirements) and for entities where capital is a fixed percentage of revenue, reductions in calculated capital are assumed to result as well. As an approximation of the impact of the impact of this scenario on revenue, the calculated capital for financial entities with revenue-based exposure should reduce by X% as well.

107-112. Inputs: No direct input needed. Instead, the inputs will be automatically calculated in the new Stress Inputs tab and summarized in the new Stress summary tab as follows:

<table>
<thead>
<tr>
<th>Type of Entity</th>
<th>Impact on Adj Carrying Value</th>
<th>Impact on Adj Calc Capital</th>
</tr>
</thead>
<tbody>
<tr>
<td>US Insurance Entities</td>
<td>10% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Banking and Other W Cap Req)</td>
<td>10% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Asset Mgmt and Other W/O Req)</td>
<td>10% reduction</td>
<td>10% reduction based on corresponding reduction in revenue</td>
</tr>
<tr>
<td>Non-US (w/ Risk Based CC)</td>
<td>10% reduction</td>
<td>No Impact on unscaled GCC though XS Relative Ratio factors should be adjusted for sensitivity test</td>
</tr>
<tr>
<td>Non-US (non-Risk Based))</td>
<td>10% reduction</td>
<td>10% reduction based on corresponding reduction in equity value</td>
</tr>
<tr>
<td>HoldCo</td>
<td>No Impact</td>
<td>No Impact</td>
</tr>
<tr>
<td>Other</td>
<td>10% reduction</td>
<td>10% Reduction based on corresponding reduction in equity value</td>
</tr>
<tr>
<td>-----------------------</td>
<td>---------------</td>
<td>---------------------------------------------------------------</td>
</tr>
<tr>
<td>Capital Instruments</td>
<td>No Impact</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Further adjustments to the calculated capital based on scalars used in the Sensitivity analysis and other selected adjustments to calculated capital can also be considered (see Company Input section). Other potential user driven adjustments may be added to the template using the Optional Inputs section in the Stress Inputs tab. Desired inputs will automatically be brought into in the new Stress Summary tab.

**108.113. Outputs:** The GCC template will be configured to automatically calculate outputs and resulting GCC ratios using the inputs above at varying levels of stress (e.g., 10%, 20% etc.) including the impact on the allowance for qualifying debt. This can be presented on an additive basis (e.g. start with reduction in available capital alone and then add the impact on each entity type’s calculated capital one at a time building to the full scenario outlined in the chart, above.

**Additional Information:**

**114.** Although the impact on adjusted carrying value in this scenario is generic in nature, generic assumptions cannot be prescribed. Assumptions vary by industry and product mix as the underlying cause and the effect on the adjusted carrying value varies group to group. Therefore, each group submitting data should provide a high-level narrative describing the unique assumptions used in conjunction with the corresponding stress level applied to decrease in available capital and calculated capital.

**109.115.** The narrative should be submitted with the completed template.

**Note:** a placeholder has been added to Input 6 in the GCC Template to capture the narrative.
May 10, 2021

Mr. John Rehagen
Chair of the NAIC Group Capital Calculation (“E”) Working Group

Jefferson City, MO 65101
[via e-mail to lfelice@naic.org; ddaveline@naic.org]

Re: Feedback on the Stress/Scenario Proposal for the GCC Trial Implementation (Attachment B)

Dear Mr. Rehagen,

The ACLI appreciates the opportunity to respond to the NAIC Group Capital Calculation (“GCC”) working group’s Stress/Scenario Proposal for the GCC Trial Implementation (Attachment B). ACLI is grateful for the efforts the NAIC has gone to perform a trial implementation period this summer. We believe that an appropriate quantitative analysis on how the limits on capital instruments operate in stress environment may provide insight on whether linking the limits to available capital could generate procyclical effects. Our comments are intended to provide constructive feedback on both the quantitative and qualitative elements of the stress/scenario proposal. If adopted, we believe that our feedback has the potential to strengthen value that regulators receive from the data collected in the quantitative stress analysis and the qualitative narrative. At a high-level, our recommendations include:

- Adding a 30% quantitative stress to simulate a decline from, 400% CAL RBC to 275% CAL RBC.
- Aligning the qualitative narrative with the quantitative stress test by using it to identify other circumstances when elements of the GCC may behave procyclically.

Feedback on the quantitative stress / scenario test – include a 30% stress to better approximate a severe economic stress event

Attachment B proposes a simple quantitative “stress test” to the GCC template. To run the test, the template automatically decreases the amount of available capital in an entity by 10 to 20% to determine how the GCC’s limits on the recognition of capital instruments as capital behave under stress. Some, including ACLI, have expressed concern that tying the limits to available capital could generate a procyclical effect in times of stress. In a stressed environment, a decline in available capital will reduce the level of the

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial well-being through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 95 percent of industry assets in the United States.
recognized capital instruments at the same time companies may need to rely on them to weather the market volatility.

We are concerned that a 10-20% decrease may not capture the impact of a stress event. We recommend adding a 30% decrease in available capital into the template because it is more likely to capture the impact of a stressed environment that leads to a significant drop in available capital. A 30% decrease in available capital corresponds more closely with a drop from 400% CAL RBC to 275% CAL RBC.\(^1\) This would put the stress about halfway from 400% to the trend test level of 150% CAL (or 300% ACL RBC). Based on our analysis, we believe that a 30% decrease is more likely to correspond with a real-life economic shock or severe market downturn. We are concerned that the proposed stressors of 10-20% is unlikely to demonstrate how the limits on capital instruments will perform during periods of severe economic stress. Thus, we strongly recommending either resetting the stressed factor to 30%, or at a minimum, adding a 30% decline to the template.

**Recommendations regarding the qualitative narrative**

We recommend the qualitative narrative be used as a vehicle for companies to:

- Expand on the data provided in the quantitative stress analysis, and/or
- Identify any other elements of the GCC that they believe may behave in a procyclical fashion, and provide examples of the circumstances when the procyclicality was likely to occur, as well as any suggested improvements.

We think our approach would provide regulators with more meaningful data, than the current proposal which appears to be requesting companies to provide examples of events/scenarios could cause the company to suffer a symmetrical decline in available capital.

**Conclusion**

Thank you for your time and consideration. As always, we would be happy to discuss our comments with you or your staff, at your convenience.

Sincerely,

Kristin Abbott

Mariana Gomez

The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met April 27, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Carrie Mears (IA); Kevin Fry (IL); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); Barbara Carey (MN); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Bob Kasinow (NY); Tim Biler (OH); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Mike Boerner (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Discussed Comment Letters Received for Edits to the GCC Instructions

Mr. Rehagen stated that three comment letters had been received (Attachment Two-C1) from interested parties, and he asked Lou Felice (NAIC) to first summarize the process for addressing the comments and then the commenters to briefly summarize any remaining concerns. Mr. Felice stated that the letter from Mariana Gomez-Vock (American Council of Life Insurers—ACLI) focused on the ACLI’s continued support for developing scalars for foreign insurers. He stated that Ms. Gomez-Vock will elaborate. The other two letters from America’s Health Insurance Plans (AHIP) and The Travelers Companies Inc. (Travelers) contained some initial general comments and several specific revisions to the existing language in the instructions. Mr. Felice stated that the commenters will elaborate on the general comments, but most of the specific comments were addressed and sent to the commenters for their review, resulting in the version of the instructions that is included in the meeting materials (Attachment Two-C2). One additional requested revision was received from Travelers and will be accepted.

Ms. Gomez-Vock stated that the ACLI letter was to confirm deletion of the opportunity to submit group specific scalars and express support for the NAIC’s activities toward recommending scalars for foreign insurers in both the group capital calculation (GCC) and the Insurance Capital Standard (ICS) – Aggregation Method (AM) being developed by the International Association of Insurance Supervisors (IAIS). Tom Finnell (AHIP) stated that the majority of its specific comments were addressed, but a few remain. With regard to AHIP’s overarching comment, he stated that the instructions should be improved in response to questions from groups participating in the Trial Implementation. He stated that the use of examples would enhance the clarity of the instructions. Mr. Rehagen stated that using input from the Trial participants is a good way to make improvements to the instructions. Mr. Felice agreed that questions could be used to embed examples as the Trial is going on. Mr. Finnell also suggested that the process for getting the comments needs to be set up before the Trial begins. Mr. Felice stated that a question and answer (Q&A) process could be established along the line of the prior GCC Field Test. Ralph Blanchard (Travelers) stated that the Excess Relative Ratio sensitivity analysis may overstate the required capital, and more clarity on the source of Authorized Control Level risk-based capital (RBC) and examples are needed. Ned Tyrrell (NAIC) stated that the examples are forthcoming.

Mr. Rehagen provided an update on the International Insurance Relations (G) Committee’s work on scalars, which was raised in the ACLI letter. He stated that work continues on the development of an appropriate scalar approach for use in the AM ICS and in the GCC. Further evaluation is required, including the review of a recently released paper by the American Academy of Actuaries (Academy) and developments at the IAIS regarding comparability of the AM. Mr. Rehagen noted that it is unlikely that the scalar methodology will be finalized this year; consequently, there is currently nothing to add to the GCC Trial template. The GCC Trial Implementation will continue to be based on an unscaled calculation at 200% of the Authorized Control Level. Sensitivity tests will include the GCC ratio scaled using the Excess Relative Ratio approach at both 200% and 300% of the Authorized Control Level.

Mr. Rehagen asked if there were objections to exposing the latest version of the edited GCC instructions and template until May 10. There were no objections, and NAIC staff were directed to expose the document through the close of business on May 10.

2. Discussed a Proposed Scenario Test in 2021 GCC Trial Implementation

Mr. Rehagen relayed that himself and Ms. Belfi held two calls with several insurance trade groups and some of their members to discuss their concerns and expectations for stress scenarios to be applied in the template to address procyclicality and other
concerns about how the adopted GCC would behave under stressed conditions. During the first call, most of the participants focused on how the allowance for qualifying debt reacts to financial stress, leaving RBC required capital unadjusted, and applying stress scenarios that are not complex and could easily be incorporated into the GCC Trial template prior to the start of the Trial Implementation. As a result, the proposed stress scenario document in the materials (Attachment Two-C3) represents what NAIC staff suggest so far for inclusion in the Trial template, and it was presented during the second call with the expectation that there would be further comments today. Mr. Felice outlined the logic behind adjusting available and calculated capital by a specified percentage in a simplified and standardized approach. He stated that to avoid complexity, specific scenarios that may drive changes in available or calculated capital are not included. Via WebEx, Mr. Tyrrell presented the exhibits to be used in the GCC template to add the stress scenarios. He stated that the percentage of adjustment could be varied, and the necessary data would be populated from other parts of the template with no additional direct data entry required.

Mr. Rehagen asked Ms. Belfi to offer some state insurance regulator comments. She agreed that the work done so far was designed to avoid any additional burden on the groups preparing the template, but it provided little value to state insurance regulators without additional narrative information. She proposed that a high-level narrative would accompany the standardized stress scenario to indicate what each group sees as the potential drivers behind the change in available and calculated capital without requiring additional data. Mr. Blanchard agreed that as set up, the stress scenario would not account for differences in the drivers for adjustments to capital, which vary by group. Ms. Belfi responded that the narrative would address the unique drivers for each group.

Mr. Rehagen asked if there were objections to exposing the stress scenario document and related additions to the GCC template additions concurrently with the instructions until May 10. Mr. Finnell asked if the narrative concept will be included in the exposure, possibly with a later due date for comments on that issue. In response to Mr. Rehagen’s question on whether the narrative could be added to the exposed materials, Mr. Felice stated that several sentences could be added to the proposal document to cover the narrative, and a tentative place to capture the narrative could be added to the template in the next day or two after consulting with Ms. Belfi on the wording for requesting the narrative. Comments could then be submitted on that issue as well. Mr. Rehagen stated that comments on whether the narrative can be shared with the NAIC can be included as well. There were no further comments or objections. NAIC staff were directed to expose the materials through the close of business on May 10.

3. **Discussed Next Steps Toward the Start of the 2021 GCC Trial Implementation**

Mr. Rehagen outlined the steps to get to the start of the Trial. He stated that first, the instructions need to be finalized based on the discussion under agenda item #1, and whether stress scenarios will be included in the Trial template per the discussion under agenda item #2 needs to be determined. He added that currently, 24 volunteers willing to have the state share data on a confidential basis with the NAIC have been identified by state insurance regulators in 12 lead-states thus far. He stated that it needs to be known soon if there are any more volunteers out there. Confidentiality agreement templates will be going out to the lead-states in the next week or so for their review and other edits (e.g., statutory confidentiality provisions). Mr. Rehagen stated that it was previously agreed that the submissions will be due by July 31, and the goal is to have everything in place for the Trial no later than the end of May.

4. **Discussed Other Matters**

Mr. Rehagen stated that the next Working Group call would be held on or about May 17.

Having no other business, the Group Capital Calculation (E) Working Group adjourned.

Re: Clarifying edits to the Group Capital Calculation (“GCC”) instructions and template

Dear Mr. Rehagen,

The ACLI appreciates the opportunity to respond to the NAIC Group Capital Calculation (“GCC”) working group’s proposed edits to the GCC instructions and templates (dated March 22, 2021). ACLI supports the ongoing work by GCC Working Group members and NAIC staff to refine the instructions and template, as well as the Working Group’s decision to perform a quantitative analysis of the GCC methodology during the "trial implementation period."

Our comments are limited to the proposed elimination of the option for companies to report data in the template that would support of the creation of jurisdiction-specific scalars for risk-sensitive regimes (GCC Instructions, section 79, p. 42). The ACLI is writing to express support for the ongoing collaboration of the NAIC “G” Committee and GCC Working Group regarding the development of scalars for as many risk-sensitive insurance regimes, as possible. We encourage the G Committee and GCC Working Group to expose the scalar methodology for comment prior to adoption into the GCC.

ACLI supports the development of scalars for risk-sensitive insurance regimes.

Scalars are a critical component of an aggregated group capital calculation, because they are necessary to equate the local capital requirement to an adjusted capital level that is comparable to U.S. levels. In plain language, jurisdiction-specific scalars are needed to create meaningful results in an aggregation method, like the GCC. The template provides jurisdiction-specific scalars for 7 jurisdictions: Australia; Bermuda; Canada; the European Union (Solvency II); Japan; Switzerland; and the United Kingdom.
(Solvency II). However, some ACLI members have significant insurance operations in risk-sensitive jurisdictions outside of those 7 jurisdictions. Companies with insurance operations in other non-U.S. jurisdictions will enter 1.0 (100%) as a placeholder scalar, which is unlikely to fully reflect differences in accounting, conservatism in reserves, or available capital. The lack of a scalar for these jurisdictions could have a meaningful impact on these companies GCC ratios. As such, ACLI continues to support the development of scalars for all risk-sensitive regimes. If publicly available industry data is not readily available but is necessary to calculate a scalar, then we encourage the NAIC to consider the use of credible, non-public data.

ACLI supports the coordination between the GCC Working Group and G Committee and the exposure of the final selected scalar methodology prior to incorporation into the GCC.

In March 2021, the GCC template was modified to eliminate the option for companies to provide scalar suggestions for risk-sensitive jurisdictions that currently lack a jurisdiction-specific scalar in the GCC template. It is our understanding that the removal of this option to submit data for additional jurisdiction-specific scalars is not intended to foreclose the development of scalars for additional jurisdictions. Instead, the change was made to remove optionality from the template, as well as to clarify that further work on scalars is dependent on the decisions made by the G Committee with respect to scalars incorporated into the U.S. Aggregation Method. The G Committee has partnered with the American Academy of Actuaries to produce a white paper examining the strengths and weaknesses of a variety of different scalar options. ACLI looks forward to hearing the results of the Academy’s research. We strongly encourage the G Committee and GCC Working Group to expose the proposed scalar methodology for review and comment by stakeholders prior to final adoption by the pertinent NAIC Committee. Depending on the methodology selected, we also encourage the NAIC to invite stakeholders to submit recommendations identifying additional jurisdictions with risk-based regimes, that should be considered for scalar development.

Thank you, again for the opportunity to comment on the revisions to the GCC Instructions and Template. As always, we are happy to answer any questions you may about our comments.

Sincerely,

Mariana Gomez-Vock

Re: Revisions to the Instructions and Template for the 2021 GCC Trial Implementation

Gentlemen:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to comment on the draft revisions to the Group Capital Calculation (GCC) Instructions and Template which, when finalized, will be used for the upcoming 2021 “Trial Implementation” exercise.

AHIP’s comments on the proposed revisions to the Instructions are included in “comment bubbles” in the attached version of the document, where they can best be read in the full context of the passages to which they relate. We hope these are self-explanatory, but also emphasize an overarching point: Where possible, the instructions should clearly state where the data needs to reconcile to, or match with, data included in other NAIC-filed documents. In some cases, the instructions do offer that degree of specificity, e.g., for some of the entries described in paragraph 57, as well as the tables shown in paragraphs 60 and 67. However, a similar level of detail is not stated in other cases (for example, also in paragraph 57, are the exact sources and line items for premiums written and “book assets” which are not stated, even in the case of U.S. insurers).

There is another overarching comment that we would like to offer. As you are aware, several of AHIP’s members participated in the prior field test exercise and in closely monitoring the changes to the instructions that were made by the GCC Working Group leading up to the NAIC’s adoption of the GCC late last year. Based on that experience, they observed that the instructions could benefit from a more thorough review and restructuring to better organize the flow of the material presented and to make it easier for all to read and to clearly understand. For an example, organization of the instructions should enable easy cross-reference between the instructions and
the template, with guidance for the source(s) of individual inputs easily referenced (while there are examples where this has been done in the instructions, it has not been consistently followed throughout).

Some members also offer that a documented example/case study populated with anonymized data would be very helpful to illustrate the points that are made in the text.

In contrast, the proposed revisions which are the subject of the current exposure appear to be more “incremental” in nature, addressing the clarity of specific passages in the text; they do not rise to the level of a more comprehensive restructuring as envisioned by our members. That said, it is not pragmatic to attempt such a comprehensive review effort without simultaneously using the instructions to populate the template, e.g., as would occur with the upcoming Trial Implementation exercise. This is consistent with AHIP’s comment to the GCC Working Group on its call of January 28, 2021, i.e., that additional clarity to the instructions should be an additional stated purpose of the 2021 GCC data collection.

Such an effort for a lengthy technical document such as the GCC Instructions would be a huge task for any individual. On the other hand, having all Trial Implementation participants participate in a drafting effort would be unwieldy. Like some other efforts undertaken by the NAIC, it would seem appropriate to identify a smaller subgroup to do the drafting. We suggest a subgroup that is jointly comprised of regulator and industry representatives.

However, for such a subgroup to successfully fulfill its task we would propose there be a process in place as part of the Trial Implementation whereby comments or questions about the clarity or meaning of the instructions, from any participant – whether staff of a participating insurance group or a lead state – and resulting from their attempt to complete, approve, or otherwise use the template and its information, be funneled to a central source, reviewed, and redacted as need be to assure anonymity, and then made available to the subgroup. Drafting would likely occur after the Trial Implementation is completed, but with the objective to have an improved document available for actual implementation based on year-end 2022 reporting.

AHIP suggests that the GCC Working Group consider such a comprehensive re-draft effort and, if a subgroup is appointed, AHIP would be glad to be represented, directly as well as through participation by some of our members.

We hope that you will find our comments constructive as intended and would be glad to address any questions you may have.

Sincerely,

Bob Ridgeway  Tom Finnell

RE: Exposed revisions to the Draft Group Capital Calculation (GCC) Instructions and Template

Dear Mr. Rehagen:

The Travelers Companies, Inc. (Travelers) appreciates the opportunity to comments on the draft GCC Instructions and Template and thanks the Working Group for their continuing progress in making the GCC an effective tool for analyzing the solvency of an insurance group.

General Comments

When discussing the use of the Company Action Level (CAL), the instructions should clarify that the CAL with the operational risk charge included is being used. RBC filings show two different CAL values, one with and one without the operational risk charge. Additionally, there should be a description as to which “industry” results will be used. The straight sum of industry values for Total Adjusted Capital and Authorized Control Level (ACL) or CAL will include double counting of values for subsidiaries of RBC filers. This will be more of an issue for property & casualty(P&C) companies, as they are more likely to have numerous subsidiaries in their groups. We estimate that the industry RBC ratio for the U.S. P&C industry may be 3.5% to 4% overstated due to this double-counting.

We believe it would be helpful to provide a discussion of the Excess Relative Ratio (ERR) so that both regulators who are reviewing a GCC filing and insurers that are completing the GCC template understand the conceptual intent of the ERR. Our understanding of the ERR is as follows:

- The main assumption is that the amount of capital held in excess of the requirement will be the same for all countries.
• The first step is to adjust the other country’s capital requirement to an equivalent “first level of intervention” stage as the US. (This can be very judgmental, as witnessed by the debate as to whether or not this is the trend test level for the U.S. The first intervention level may be subject to interpretation for both the U.S. and for the other country.)

• From here on, the basic premise is that even though the industry average in all countries is capitalized at the same sufficiency level (as measured by the excess over the requirement), the “requirement” that is being looked at is impacted by differences in local jurisdictional accounting/reporting rules. The assumption is that these differences are a function of risk size and not capital size, i.e., the amount of required capital and held capital is impacted by the same dollar amount by this accounting conservatism for a given risk size. As a result, the ERR calculates a fixed amount to subtract from (or add to) both held capital and required capital so that an average company in the other jurisdiction would have the same RBC ratio as the average in the U.S.

• The actual conservatism may in fact not be a fixed amount for a given risk size but may also vary by the amount of capital.

We don’t believe this concept is intuitive as shown in the instructions and recommend that the instructions illustrate that, if applied to a company with the same ratios as the industry average in the Country A example, the resulting capital ratio after these adjustments would be the same as the U.S. life average.

Detailed Comments

We also offer the following detailed comments on the instructions:

• Paragraph 8 – Please clarify or re-word the following sentence:

  “In general Schedule A and Schedule BA affiliates will otherwise remain as investments of a Parent insurer will be reported as Parent of the value and capital calculation of the Parent insurer.”

• Paragraph 18 – We suggest the following edit for clarification:

  “Risk emanating from a non-insurance/non-financial entity not owned by an insurer but part of the Broader Group that is of a magnitude that could adversely impact the financial stability of the group as a whole such that the ability of insurers within a group to pay policyholder claims or make other policy related payments (e.g., policy loan requests or annuity distributions) may be impacted.”
• Paragraph 22 – We suggest the following edit:

“This is the entity that exercises control directly or indirectly over all entities within the Broader Group.”

• Paragraph 29 – We suggest the following edits:

“Include all entities that meet the definition of an affiliate in Section II above and that fit the criteria…”

• Paragraph 38 – We suggest the following edits:

“Except as noted inon the “Inventory” tab, equity method investments that are…”

• Paragraph 51 – In the Schedule 1 instructions, paragraph 51 refers to the completion of Schedule 1A. However, Schedule 1A does not contain any of the blue-shaded preparer input cells.

• Paragraph 56 [Sch 1B Col 16] “Is Affiliates on Schedule A or Schedule BA” – This paragraph includes the following instruction: “Column is meant to identify an entity with a financial entity identifier in Column 8 that is otherwise reported on Schedule A or Schedule BA but is being moved to this Schedule.” Please clarify the phrase “being moved to this Schedule” (i.e., please explain where these are being moved from).

In addition, the Instructions are not clear as to whether non-financial/non-insurance Schedule A and Schedule BA affiliates should or should not be included in any of the input areas of the GCC template. Paragraph 8 states: “For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates.” It would be helpful to include the following general instruction:

“Non-financial/noninsurance Schedule A and Schedule BA affiliated are excluded from the scope of the GCC and are not required to be captured in any of the SCC template tabs.”

However, if that is not the intent, the GCC instructions need to clarify specifically where data pertaining to such entities must be input in the GCC template.

• Paragraph 57 – We do not understand why affiliated assumed and ceded reinsurance needs to be captured in the GCC template, especially if such data does not impact the GCC ratio.

• Paragraph 57 [Sch 1C Col 8] “Gross Paid-in and contributed Capital and Surplus” – As the title of this instruction uses statutory accounting terminology, we assume that...
the column should only be completed for U.S. Insurance entities. Therefore, the GCC instructions should clarify the scope of this column.

- **Paragraph 58 [Sch 1D Col 2] Prior Year Equity or Capital and Surplus** – This paragraph includes the following instruction: “Do not report values for non-insurance/non-financial entities owned directly or indirectly by RBC filers or owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity.” Paragraph 54 states: “Values for, non-insurance/non-financial subsidiaries of U.S. RBC filers may remain with their Parent insurers and will not be de-stacked. Entries for these individual entities in the grouping will be reported in Schedule 1B only as “included.”, but no stand-alone values for each entity would be required.”

One can read the paragraph 54 instruction as requiring entries for non-insurance/non-financial subsidiaries of U.S. RBC in Schedule 1B only, and not required in Schedules 1C or 1D. However, it is confusing to see the above instruction that scopes out these entities in Paragraph 58 [Sch 1D Col 2] but not in other column instructions in paragraph 58. We believe that further clarification is needed as to where in the GCC template data is required for such non-insurance/non-financial subsidiaries.

- **Paragraph 60** – The following sentence appears to contain extraneous words or a grammatical error: “A sensitivity analysis is included to calculate to reflect the impact of excluded entities requested but not approved for exclusion by the lead state.”

- **Paragraph 61 [Inv C Col 2] Entity Required Capital (Local Regime)** - We suggest the following edit for clarification:

  “However, if such an entity has been listed in [Sch1B Col 2] Include/Exclude (Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then report the capital calculation in accordance with entity instructions (per the “Additional clarification on capital requirements where a formula is required” instructions below), but the ultimate calculation will show the results without the excluded entity’s capital calculation.”

- **Paragraph 74** - For the Sensitivity Analysis tab, it is not clear which entities’ information is required to be entered in this tab. The scope related to this tab should be clarified. Based on the instructions in this section, it appears that data is only needed for entities which have prescribed or permitted practices, as well as captive entities. To avoid confusion and ensure consistency in application, this should be clarified.
• Paragraph 74 - We suggest the following edit for clarification:

“The sensitivity analysis is calculated in the “Summary 2” tab. Most inputs for the analysis are populated from other tabs as described below and carried into the analysis which are reported in the “Summary 2” tab. However certain analysis requires inputs from this tab. Inputs are required in this tab for Analysis 3, Analysis 4, Analysis 8, and Analysis 9 automatic calculations in the “Summary 2” tab.”

• Paragraph 79 – This paragraph includes the following instruction: “The tab also includes a listing of all Schedule A and Schedule BA affiliates, along with the following information…” Paragraph 8 states: “For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates.” Therefore, it appears that only Schedule A and Schedule BA entities that are “financial” affiliates are required to be included in this section. Therefore, we recommend the following clarification:

“The tab also includes a listing of all Schedule A and Schedule BA financial affiliates, along with the following information…”

• Paragraph 90 – the first line of paragraph 90 has a “.” after “populated” that should be deleted.

Summary

In summary, we support the Working Group’s effort to complete the GCC Instructions and Template and look forward to the discussion of comments during the Group’s next meeting. If you have any questions or would like to discuss our comments, please feel free to call me at (860) 277-0537.

Sincerely,

D. Keith Bell

cc: Dan Daveline, NAIC staff
NAIC GROUP CAPITAL CALCULATION INSTRUCTIONS

I. Background

1. In 2015, the ComFrame Development and Analysis (G) Working Group held discussions regarding developing a group capital calculation (GCC) tool. The discussions revealed that developing a GCC was a natural extension of work state insurance regulators had already begun, in part driven by lessons learned from the 2008 financial crisis which include better understanding the risks to insurance groups and their policyholders. While insurance regulators currently have authorities to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist regulators in identifying risks that may emanate from a holding company system.

2. More specifically, the GCC and related reporting provides more transparency to insurance regulators regarding the insurance group and make risks more identifiable and more easily quantified. In this regard, the tool assists regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies may be supporting the operations of non-insurance entities, potentially adversely impacting the insurance company’s financial condition or policyholders. This calculation provides an additional analytical view to regulators so they can begin working with a group to resolve any concerns in a manner that will ensure that policyholders of the insurers in the group will be protected. The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide Lead State Regulators with further insights to allow them to reach informed conclusions on the financial condition of the group and the need for further information or discussion.

3. State insurance regulators currently perform group analysis on all U.S. insurance groups, including assessing the risks and financial position of the insurance holding company system based on currently available information; however, they do not have the benefit of a consolidated statutory accounting system and financial statements to assist them in these efforts. It was noted prior to development that a consistent method of calculating group capital for typical group risks would provide a useful tool for state financial regulators to utilize in their group assessment work. It was also noted that a GCC could serve as a baseline quantitative measure to be used by regulators in to compliment the view of group-specific risks and stresses provided by the Own Risk and Solvency Assessment (ORSA) Summary Report filings and in Form F filings that may not be captured in legal entity filings.

4. During the course of several open meetings and exposure periods, the ComFrame Development and Analysis (G) Working Group considered a discussion draft which included three high-level methodologies for the GCC: a risk-based capital (RBC) aggregation approach; a statutory accounting principles (SAP) consolidated approach; and a generally accepted accounting principles (GAAP) consolidated approach. On Sept. 11, 2015, Working Group members unanimously approved a motion to move forward with developing a recommendation for a GCC and directed an appropriate high-level methodology for the recommendation.
5. At a ComFrame Development and Analysis (G) Working Group meeting held Sept. 24, 2015, pros and cons for each methodology were discussed, and a consensus quickly developed in support of using an RBC aggregation approach if a GCC were to be developed. The Executive (EX) Committee and Plenary ultimately adopted the following charge for the Financial Condition (E) Committee:

“Construct a U.S. group capital calculation using an RBC aggregation methodology; liaise as necessary with the ComFrame Development and Analysis (G) Working Group on international capital developments and consider group capital developments by the Federal Reserve Board, both of which may help inform the construction of a U.S. group capital calculation.”

6. The RBC aggregation approach is intended build on existing legal entity capital requirements where they exist rather than developing replacement/additional standards. In selecting this approach, it was recognized as satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions’ existing capital regimes. In order to capture the risks associated with the entire group, including the insurance holding company, RBC calculations would need to be developed in those instances where no RBC calculations currently exist.

7. In early 2016, the Financial Condition (E) Committee appointed the Group Capital Calculation (E) Working Group, which began to address its charge and various details of the items suggested by the ComFrame Development and Analysis (G) Working Group. The instructions included herein represent the data, factors, and approaches that the Working Group believed were appropriate for achieving such an objective. The GCC instructions and template are intended to be modified, improved, and maintained by the NAIC in the future as are the Accounting Practices and Procedures Manual, the Annual Statement Instructions and the Risk-Based Capital Formula and Instructions. This includes, but is not limited to, future disclosure of additional items developed or referred by other NAIC committees, task forces and/or working groups.

8. In December 2020, amendments to NAIC Model Law (#440) and Model Regulation (#450) were adopted to provide States with legislative language to fully implement the GCC as an annual filing. The Model specifies what groups are exempted from the GCC filing requirement and the circumstance under which a limited filing may be submitted. For such information reference should be made not to these instructions, rather to the models and, more specifically, to how they are implemented into laws and regulations of a Lead State.

II. Definitions

8.9. **Affiliate**: As used in Model #440, an “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified. For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are insurers or other financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates. In general, All other Schedule A and Schedule BA affiliates, investments will otherwise remain as investments of a Parent insurer will be reported as Parent of the value and capital calculation of the Parent insurer. A full list of Schedule A and BA entities will be reported as described in the instructions for Input 6 – Questions and Other Information. Any entities that would otherwise qualify as Schedule BA affiliates as described above but are owned by other entities (e.g., foreign insurers or other type of Parent entity) should be treated in the same way.
9.10. **Broader Group**: The entire set of legal entities that are controlled by the Ultimate Controlling Person of insurers within a corporate group. When considering the use of this term, all entities included in the Broader Group should be included in Schedule 1 and the Inventory, but only those that are denoted as “included” in the Schedule 1 will be considered in the actual GCC.

9.11. **Control**: As used in the Model #440, the term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K of Model #440 that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

9.12. **Cross-Support Mechanism**: For purposes of evaluating material risk, depending on the nature of the transaction and the specific circumstances, evaluating material risk. A cross-support mechanism is an agreement or transaction that creates a financial interdependence. Depending on the nature of the transaction and the specific circumstances, these mechanisms may pose material risk. These may include corporate guarantees, capital maintenance agreements (regulatory or ratings based), letters of credit, intercompany indebtedness, bond repurchase agreements, securities lending or other agreements or transactions that create a financial interdependence or link between entities in the group.

9.13. **Entity Not Subject to A Regulatory Capital Requirement**: This is a financial entity other than an entity that is subject to a specified regulatory capital requirement.

9.14. **Financial Entity**: A non-insurance entity that engages in or facilitates financial intermediary operations (e.g., accepting deposits, granting of credits, or making loans, managing, or holding investments, etc.). Such entities may or may not be subject to specified regulatory capital requirements of other sectoral supervisory authorities. For purposes of the GCC, entities that are not regulated by an insurance or banking authority [e.g., the U.S. Securities and Exchange Commission (SEC) or the Financial Industry Regulatory Authority (FINRA)] will be considered as not subject to a specified regulatory capital requirement.

The primary examples of financial entities are commercial banks, intermediation banks, investment banks, saving banks, credit unions, savings and loan institutions, swap dealers, and the portion of special purpose and collective investment entities (e.g., investment companies, private funds, commodity pools, and mutual funds) that represents the Broader Group’s aggregate ownership in such entities, whether or not any member of the Broader Group is involved in that entity’s management responsibilities (e.g., via investment advisory or broker-dealer duties) for those entities.

For purposes of this definition, a subsidiary of an insurance company whose predominant purpose is to manage or hold investments or act as a broker-dealer for those investments on behalf of the insurance company and its affiliated insurance (greater than 90% of all such investment subsidiaries’ assets under management or held are owned by or for the benefit of these insurance affiliates) should NOT be considered a Financial Entity. In the case where an insurer sets up multiple subsidiaries for this purpose, the 90% may be measured in the aggregate for all such entities. Similarly, in the case of collective investment pools (e.g., private funds,
commodity pools, and mutual funds) the 90% may be measured individually, or in the aggregate for each subtype (e.g., private funds, commodity pools, and mutual funds).

In addition, other financial entities without a regulatory capital requirement include those which are predominantly engaged in activities that depending on the nature of the transaction and the specific circumstances, could create financial risks through the offering of products or transactions outside the group such as a mortgage, other credit offering or a derivative.

14.15. **Insurance Group:** For purposes of the GCC, a group that is comprised of two or more entities of which at least one is an insurer, and which includes all insurers in the Broader Group. Another (non-insurance) entity may exercise significant influence on the insurer(s); i.e., a holding company or a mutual holding company; in other cases, such as mutual insurance companies, the mutual insurer itself may be the Ultimate Controlling Person. The exercise of significant influence is determined based on criteria such as (direct or indirect) participation, influence and/or other contractual obligations; interconnectedness; risk exposure; risk concentration; risk transfer; and/or intragroup agreements, transactions and exposures.

An Insurance Group may include entities that facilitate, finance or service the group’s insurance operation, such as holding companies, branches, non-regulated entities, and other regulated financial institutions. An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control, and includes all members of the Broader Group that exercise significant influence on the insurance entities and/or facilitate, finance or service the insurance operations.

An Insurance Group could be headed by:
- An insurance legal entity;
- A holding company; or
- A mutual holding company.

An Insurance Group may be:
- A subset/part of bank-led or securities-led financial conglomerate; or
- A subset of a wider group.

An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control.

15.16. **Insurance Subgroup/U.S. Operations:** Refers to all U.S. insurers within a Broader Group where the groupwide supervisor is in a non-U.S. jurisdiction. It includes all the directly and indirectly held subsidiaries of those U.S. insurers. For purposes of subgroup reporting, capital instruments, loans, reinsurance, guarantees would only include those that exist within the U.S. insurers. Amounts included for the U.S. insurers shall include all amounts contained within the financial statements of those entities included in the subgroup reporting, whether those amounts are directly attributable or allocated to a company in the subgroup from an affiliate outside of the U.S. insurers and its direct or indirect subsidiaries.

16.17. **Lead State Regulator:** As defined in the Financial Analysis Handbook; i.e., generally considered to be the one state that “takes the lead” with respect to conducting groupwide supervision within the U.S. solvency system.

17.18. **Limited Group Capital Filing:** Refers to a GCC filing that includes sufficient data or information to complete the “Input 4 Analytics” tab and the “Summary 3 – Analytics” tab of the GCC template. This includes Schedule 1 of the template and may include limited data from other input tabs as deemed necessary for purposes of the analytics.
Material Risk: Risk emanating from a non-insurance/non-financial entity not owned by an insurer in the Insurance Group or is part of the Broader Group that is of a magnitude that could adversely impact the financial stability of the group as a whole such that the ability of insurers within a group to pay policyholder claims or make other policy related payments (e.g., policy loan requests or annuity distributions) may be impacted.

To determine whether an entity within the Broader Group poses material risks to the Insurance Group, the totality of the facts and circumstances must be considered. The determination of whether risk posed by an entity is material requires analysis of various aspects pertaining to the subject entity. A determination that a non-insurance/non-financial entity does not pose material risk allows the filer to request exclusion of that entity from the calculation of the GCC ratio in the “Inventory” tab. A number of items as listed below should be considered in making such a determination, to the extent they apply.

Caution is necessary, however. The fact that one or more of these items may apply does not necessarily indicate risk to the Insurance Group is, or is not, material. The group should be able to support its determination of material risk if requested by the Lead State Regulator. This should not be used as a checklist or as a scorecard. Rather, the list is intended to illuminate relevant facts and circumstances about a subject entity, the risk it poses, how the Insurance Group might be exposed to that risk and means to mitigate that risk.

Primary Considerations:

- Past experience (i.e., the extent to which risk from the entity has impacted the Insurance Group over prior years/cycles).
- The degree to which capital management across the Broader Group has historically relied on funding by the Insurance Group to cover losses of the subject entity.
- The existence of intragroup cross-support mechanisms (as defined below) between the entity and the Insurance Group.
- The means by which risk can be transmitted; i.e., the existence of sufficient capital within the entity itself to absorb losses under stress and/or if adequate capital is designated elsewhere in the Broader Group for that purpose.
- The degree of risk correlation or diversification between the subject entity and the Insurance Group (e.g., where risks of one or more entities outside the Insurance Group are potentially offset (or exacerbated) by risks of other entities) and whether the corporate structure or agreements allow for the benefits of such diversification to protect the Insurance Group.
- The existence and relative strength or effectiveness of structural safeguards that could minimize the transmission of risk to the Insurance Group (e.g., whether the corporate shell can be broken).

Other Considerations (if primary considerations suggest exclusion may be reasonable, these can be used to further support exclusions):

- The location of the entity in relation to the Insurance Group within the Broader Group’s corporate structure and how direct or indirect the linkage, if any, to the Insurance Group may be.
- The activities of the entity and the degree of losses that the entity could pose to the group under the current economic environment or economic outlook.

The guidance above recognizes that there are diverse structures and business models of insurers that make it impracticable to apply a one-size-fits-all checklist that would work for materiality determinations across all groups. Strict or formulaic quantitative measures based on size of the...
entity or its operations of a non-insurance affiliate are an insufficient proxy for materiality of risk to the insurance operations. The GCC Instructions thus consider the unique circumstances of the relevant entity and group and uses an interactive process whereby the group brings forward its suggestions as to entities that should be excluded from the scope of application for a discussion with the lead state, ultimately culminating in an agreement on the scope of application. The guidance in this section helps to facilitate that process and discussion with criteria for cross-support mechanisms that can potentially transmit material risk, as defined, to the Insurance Group as well as safeguards that can mitigate such risk or its transfer.

19.20. **Person:** As used in Model #440, a “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

20.21. **Reciprocal Jurisdiction:** As defined in the Credit for Reinsurance Model Law (#785).

24.22. **Scope of Application:** Refers to the entities that meet the criteria listed herein for inclusion in the GCC ratio. The application of material risk criteria may result in the Scope of Application being the same as, or a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s).

NOTE: U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator, otherwise in as much as they are already included in a reporting legal entity, they are already in the scope of application and there is no need for any additional reporting.

22.23. **Ultimate Controlling Person:** As used in the Insurance Holding Company System Regulatory Act (#440). This is the entity that exercises control directly or indirectly over all entities within the Broader Group.

III. Exemptions and Determining the Scope of Application

A. **Groups Exempted from the GCC**

23.24. These instructions do not address groups that are exempt from completing the GCC; those matters are addressed instead within proposed changes to Model #440 for guidance on groups that are exempted from filing a GCC. Instead, instructions are provided to ensure Lead State Regulators receive the information necessary to evaluate the Scope of Application.

B. **Scope of the Broader Group and Scope of Application – Legal Entity Inventory**

24.25. When considering the scope of application, preparers of the GCC must first understand the information to be included in Schedule 1 of the template. When developing an initial inventory of all potential entities, the preparers of the GCC shall complete Schedule 1, which, except in the case of an Insurance Subgroup (as defined in Section II), requests data for all of the entities within the Broader Group that are directly or indirectly owned by the Ultimate Controlling Person (including the Ultimate controlling Person) that are listed in the insurer’s most recent Schedule Y or in relevant Holding Company Filings. This will require the preparers of the GCC to provide complete basic information about each such entity in Schedule 1, including its total assets, and total revenue and net income for this specific year identified. Additionally, and the initial filing will require some further the same
information for the prior year (e.g., prior year equity or surplus to policyholders). The primary purpose of the Schedule 1 is to: 1) assist the lead state in making an assessment on the entities within the group that should be included in the Scope of Application; and 2) provide the lead state with valuation information to better understand the group. This valuable information produces various ratios and other financial metrics that will be used in the analysis of the GCC and the group by the lead state for their holding company analysis.

25.26. To assist the Lead State Regulator in assessing the Scope of Application, the Schedule 1 and the “Inventory” tab of the template will be completed by each preparer to provide information and certain financial data on all the entities in the group. Each preparer will also use the include/exclude column in Schedule 1 to request its own set of entities to be excluded from the calculation after applying criteria for material risk (as defined in Section II). The requests for exclusion which will be described by the preparer in the template and evaluated by the Lead State Regulator. A second column will be used by the regulator to reflect entities that the regulator agrees should be excluded.

26.27. Although all entities must be listed in Schedule 1 and in the “Inventory” tab, the preparer is allowed to group data for certain financial entities not subject to a regulatory capital requirement and certain non-insurance and non-financial entities. Thus, while the Schedule 1 would include the full combined financial results/key financial information (for all entities directly or indirectly owned by the Ultimate Controlling Person, such data may be reported based on major groupings of entities to maximize its usefulness, reduce the number of numeric entries, and allow the Lead State Regulator to better understand the group, its structure, and trends at the sub-group as well as group level. Criteria for grouping are further described in Section V, paragraph 55. Prior to completing the GCC annually, the Insurance Group should determine if the proposed grouping is satisfactory to the lead state or if there are certain non-insurance and non-financial entities (such entities are required to be broken out and reported separately) that should be broken out and reported separately.

C. General Process for Determining the Scope of Application

27.28. The starting point for “Scope of Application” (i.e., for purposes of the GCC specifically) is the entire group except in the case of an Insurance Subgroup (as defined in Section II). However, in the case of groups with material diverse non-insurance/non-financial activities isolated from the financial/Insurance Group and without cross-support mechanisms as defined in Section II, the preparer may request a narrower scope starting at the entity that controls all insurance and financial entities within the group [i.e., comprise a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s) (Broader Group)]. However, the adjustments as to the Scope of Application suggested by the preparer in consultation and in agreement with the Lead State Regulator should include consideration of guidance in paragraph 3129 (“Identify and Include all Financial Entities”) the totality of the facts and circumstances, as described in paragraph 19 (“Definition of material risk”). The rationale and criteria applied in allowing the reduced scope should be documented and made available to non-lead states if requested. The decision on reduced scope should be revisited when changes in the group structure or activities occur.

The fundamental reason for state insurance regulation is to protect American insurance consumers. Therefore, the objective of the GCC is to assess quantitatively the collective risks to, and capital of, the entities within the Scope of Application. This assessment should consider risks that originate within the Insurance Group along with risks that emanate from outside the Insurance Group but within the Broader Group. The overall purpose of this assessment is to better understand the risks that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims consistent with the primary focus of insurance regulators.
D. Guiding Principles and Steps to Determine the Scope of Application

28. 29. For most groups, the Scope of Application is initially determined by the preparer in a series of steps, listed here and then further explained as necessary in the text that follows:

- Develop a full inventory of potential entities using the Inventory of the Group template (Schedule 1). This should correspond to Annual Statement Schedule Y, Part 1A.

- Denote in Schedule 1 for each non-financial entity whether it is to be “included in or excluded from” the Scope of Application” using the criteria in the “Identify Risks from the Broader Group” subsection below.

- All non-financial entities, whether to be included in or excluded from the Scope of Application are to be reported in the “Inventory” tab of the template. Information to be provided for excluded entities will be limited to Schedule 1B and the corresponding columns in the Inventory tab. See paragraph 55 for additional information on treatment of non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity.

- Non-financial entities may qualify for grouping on this Inventory tab as described elsewhere in these instructions.

E. Steps for Determining the Scope of Application

29. 30. Identify and list all entities in the Insurance Group or Insurance Subgroup (where required).

Include all entities that meet the definition of an affiliate in Section II, above and that fit the criteria identified in the definition of the Insurance Group or Insurance Subgroup (if applicable), in Section II, above except as modified in paragraph 32 (Identify Risks from the Broader Group), below. All insurance entities and entities owned directly or indirectly by the insurance entities in the group shall be included in the Scope of Application and reported in the Schedule 1 and Inventory of the Group template. Other non-insurance/nonfinancial entities within the Insurance Group may be designated as “exclude” as described in paragraph 30.

30. 31. Identify and include all Financial Entities.

Financial Entities (as defined in Section II) within the Inventory of the Group template shall be included in (i.e., may not be designated as “excluded from”) the Scope of Application, regardless of where they reside within the Broader Group.

As learned from the 2008 financial crisis, U.S. insurers were not materially impacted by their larger group issues; however, materiality of either equity or revenue of an entity might not be an adequate determinant of potential for risk transmission within the group. Furthermore, risks embedded in financial entities are not often mitigated by the activities of the insurers in the group and may amplify their (the insurers’) risks.

Any discretion in evaluating the ultimate risk generated by a defined financial entity that is not subject to a regulatory capital requirement should be applied via review of the material risk definitions/principles included in paragraph 19 to set the level of risk as low, medium or high and not to exclude such entities from the calculation. The rationale should be documented, and all data required in Schedule 1 must be provided for the entity for purposes of analysis and trending.
32. Identify Risks from the Broader Group

An Insurance Group or Insurance Subgroup may be a subset of a Broader Group, such as a larger diversified conglomerate with insurance legal entities, financial entities, and non-financial entities. In considering the risks to which the Insurance Group or Insurance subgroup is exposed, it is important to take account of those material risks (as defined in Section II) to the Insurance Group from the Broader Group within which the Insurance Group operates. All non-insurance/non-financial entities included within the Insurance Group or Insurance Subgroup that pose material risk to the insurers in the group should be included within (i.e., may not be designated as “excluded from”) the Scope of the Application. Similarly, all non-financial entities within the Broader Group but outside the Insurance Group that pose material risks to the Insurance Group should be included within (i.e., may not be designated as “excluded from”) the Scope of Application; non-material non-insurance/non-financial entities within the Broader Group or within the Insurance Group (as both terms are defined in Section II) other than those entities owned by entities subject to a specified regulatory capital requirement should be reported as “excluded.” However, no such entities outside an Insurance Subgroup (as defined in Section II) should be included in the GCC. When determining which non-financial entities from the Broader Group to include in the Scope of Application, the preparer must include any entity that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims or provide services to policyholders consistent with the primary focus of insurance regulators.

33. Review of Submission

The Lead State Regulator should review the Group template to determine if there are entities excluded by the preparer using the criteria above that the Lead State Regulator agrees do not pose material risk (as defined herein) to its insurance operations. Additional information may be requested by the Lead State Regulator to facilitate this analysis. For entities where the Lead State Regulator agrees with the request to exclude, the GCC may exclude the data for such entities. Ultimately, the decision to include or exclude entities from the GCC will occur based on the Lead State Regulator’s knowledge of the group and related information or filings available to the Lead State and whether they believe an applicable entity would not adversely impact the entities within the Scope of Application to pay policyholder claims.

The template’s sensitivity analysis tab is included to calculate to reflect the impact of excluded entities requested, but not approved for exclusion by the lead state. (see instructions for Input 5 herein).

34. Updating the Scope of Application

The Scope of Application could be re-assessed by the preparer and the Lead State Regulator each successive annual filing of the GCC provided there has been substantial changes in corporate structure or other material changes from the previous year’s filing. Any updates should be driven by the assessment of material risk and changes in group structure as they impact the exclusion or inclusion of entities within the Scope of Application based on material risk considerations.
IV. General Instructions

35.36. The GCC template consists of a number of tabs (sections) within one workbook. The following provides general instructions on each of these tabs.

36.37. **Attestation**: This tab is intended to work similar to the annual financial statement and RBC attestations, which are both intended to give the regulator greater comfort that the company has completed in accordance with its (these) instructions. It will also indicate whether the group consists of predominantly life, P/C, or health insurers and whether the submission is a full or limited group capital filing.

37.38. **Input 1 – Schedule 1**: This tab is intended to provide a full inventory of the group, including the designation by the filer of any non-financial entities to be included in, or excluded from, the Scope of Application and include sufficient data or information on each affiliated entity (see Schedule A and Schedule BA exception as described in paragraph 39) within the group so as to allow for analyzing multiple options for scope, grouping and sensitivity criteria, as well as, allowing the Lead State Regulator to make a determination as to whether the entities to be included in the scope of application or excluded from the scope of application meet the aforementioned criteria. This tab is also used to maximize the value of the calculation by including various information on the entities in the group that allow the lead state to better understand the group as a whole, the risks of the group, capital allocation, and overall strengths and weaknesses of the group.

38.39. **Except as noted, in on the “Inventory” tab, equity method investments reported in the Section 1B in the Inventory tab that are accounted for based on Statement of Statutory Accounting Principles (SSAP) No. 48—Joint Ventures, Partnerships and Limited Liability Companies are not required to be de-stacked (separately listed) in Schedule 1; i.e., their value would be included in amounts reported by the Parent insurer within the calculation. The basis for this approach is predicated on the purpose of the entire GCC, which is to produce an expected level of capital and a corresponding level of available capital that are derived by aggregating the amounts reported of capital of the individual entities under the GCC methodology. The available capital for such joint ventures, partnerships and limited liability companies is already considered in Schedule 1 by its inclusion in its Parent’s financial statements and can thus be excluded from an inventory (not separately listed) because the Parent already receives a corresponding capital charge within its RBC.**

**NOTE**: Data for this tab is required for a Limited Group Capital filing.

39.40. **Input 2 – Inventory**: This tab is intended to be used by the consolidated group to provide information on the value and capital calculation for all the entities in the group before any de-stacking of the entities. While some of this information is designed to “pull” information from Schedule 1, other cells (blue cells) require input from the group. This tab will then apply include the adjustments for investment in subsidiary other than where an exception is described in these instructions and adjust for intragroup arrangements. This tab is set up to subtract those adjustments from capital and therefore should be entered as: 1) a positive figure if the adjustment currently has a positive impact on the available capital or the capital calculation; or 2) a negative figure if the adjustment currently has a negative impact on the available capital or the capital calculation. It will also be used to add relevant insurance or other financial entities included as equity investments in Schedule A and Schedule BA and to aggregate the resulting adjusted values for use in the actual GCC.

**NOTE**: For a Limited Group Capital filing, data will be presented in a summarized format in a limited version of the “Inventory” tab in lieu of completing the full “Inventory” tab (see below).
**Limited Group Capital Filing Only: Input 2 – Inventory:** Manually enter data in Inventory B, Column 8 and Inventory C, Column 8 to report a single aggregated value for each entity category in the group. This will require that eliminations and adjustments normally found in a “full” Inventory B, Column 2 through Column 7 and Inventory C, Column 2 through Column 7 to be addressed offline.

**Input 3 – Capital Instruments:** This tab is intended to be used to gather necessary information to that will be used to calculate an allowance for additional available capital based on the concept of structural subordination applied to senior or other subordinated debt issued by a holding company that is within the scope of application of the GCC filing. It will also provide information on all debt issued by entities within the scope of application of the group.\[TF28\][FL29]

**NOTE:** Data for this tab is NOT required for a Limited Group Capital filing.

**Input 4 – Analytics:** In recognizing a primary purpose of the GCC is to enhance groupwide financial analysis, this tab includes or draws from entity-category-level inputs reported in the tab or elsewhere in the GCC template to be used in GCC analytics. Separate guidance for Lead State Regulators to reference in analysing the data provided in the GCC template (reference applicable location of the guidance; e.g., *Financial Analysis Handbook*).

**NOTE:** Data for this tab is required for a Limited Group Capital filing.

**Input 5 – Sensitivity Analysis and Inputs:** This tab includes inputs and/or describes informational sensitivity analysis for other than XXX/AXXX captives, permitted and prescribed practices, debt designated as “Other,” unscaled foreign insurer values and other designated sensitivity analysis. The inputs are intended to simply be a disclosure, similar to the disclosure required under Note 1 of the statutory financial statements. The analysis will be applied in the “Summary 2” tab.

**NOTE:** Data for this tab is NOT required for a Limited Group Capital filing.

**Input 6 – Questions and Other Information:** This tab will provide space for participants to describe or explain certain entries in other tabs. Examples include the materiality method applied to exclude entities in Schedule 1 and narrative on adjustments for intragroup debt and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab.

**NOTE:** Data for this tab is NOT required for a Limited Group Capital filing.

**Calc 1 – Scaling (Ins):** This tab list countries predetermined by NAIC and provides the necessary factors for scaling available and required capital from non-US insurers to a comparable basis relative to the U.S. RBC figures. It also allows for set scaling options (which vary by insurance segment such as life, P/C, and health).

**NOTE:** This tab is NOT required for a Limited Group Capital filing.

**Calc 2 – Scaling (Non-Insurance):** This tab is used to determine calculated capital for non-insurance entities.

**NOTE:** This tab is NOT required for a Limited Group Capital filing.

**Summary 1 – Entity Category Level:** This tab provides a summary of aggregated available capital and calculated capital for each entity category before the application of capital instruments.
NOTE: This tab is NOT required for a Limited Group Capital filing.

47.48. **Summary 2 – Top Level**: This tab calculates various informational GCC ratios resulting from applying “on top” and entity level adjustments to adjusted carrying value and adjusted calculated capital and are described in the “Sensitivity Inputs and Analysis” tab. These “what if” scenario analysis will not be part of the GCC ratio.

NOTE: This tab is NOT required for a Limited Group Capital filing.

48.49. **Summary 3 – Analytics**: Provides a summary of various GCC analytics.

NOTE: This tab is required for a Limited Group Capital filing.

49.50. **Summary 4 – Grouping Alternatives**: This tab currently calculates and displays a selected grouping option for organizing the structure of the group consistent with the way that the entities are managed that was submitted by an interested party. [TF30][FL31]

NOTE: This tab is NOT required for a Limited Group Capital filing.

50.51. All cells in the template are color-coded based on the chart below. Inputs should only be made in blue cells. Do not add/delete rows, columns or cells or change the structure of the template in any way. If there appears to be an error in the formulas in the template, contact the NAIC.

V. **Detailed Instructions** (insert link to template)

**Input 1 – Schedule 1**[TF32]

52. Schedule 1A indicates the version of the template being prepared.

53. is a small table at the top for identification of the filer. Enter the “Name of Group,” name of the person the template is “Completed by,” and the “Date Completed.” Indicate the version number of the template if there are updates or multiple persons completing the template. All figures (in all tabs) should be converted to $'000s. For example, a book value of $123,450 should be entered as “123.45” in the template.[FL33]

54.53. More detailed information on each legal entity should be reported in Schedule 1B through Schedule 1D. The order of the entries in Schedule 1 should match that in the “Inventory” tab. The first entity listed should be the ultimate controlling party.
§§ 54. U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator. They should be reported under the appropriate entity category in [Sch 1B Col 6].

§§ 55. Entries are required for every entity within the scope of the group. However, while recognizing that Lead State Regulator retain the discretion to ask for greater detail, the following simplifications may be applied as long as information for every entity is entity is listed in Schedule 1B:

- A single numerical entry for like Financial Entities would be allowed at the intermediate holding company level, assuming that the like entities are owned by a common Parent that does not own other entity types, all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. The entity at which the total data is provided must be assigned an “Entity Category” in Schedule 1 that corresponds to the instructed carrying value and capital calculation for which the entry is made (e.g., an entity that would otherwise be categorized as a non-operating holding company but holds asset managers would be categorized as an asset manager). Entries for the remaining individual entities in the grouping will be reported in Schedule 1B only as “included.”

- In addition, a single numerical entry would be allowed for all included non-insurance/non-financial entities at the intermediate holding company level assuming that the intermediate holding company owns only non-insurance/non-financial entities assuming that the entities are owned by a common Parent that does (i.e., does not own other entity types), all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. This would include any positive residual value of the holding company itself. Entries for all the remaining individual entities in the grouping will be reported in Schedule 1B only as “included.” but no stand-alone values for each entity would be required.

- Values for, non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity may remain with their Parent insurers and will not be de-stacked. Entries for these individual entities in the grouping will be reported individually in Schedule 1B Columns 1 and 2 only as “included.” along with other required entries in Schedule 1B, but no stand-alone values for each entity would be required in Schedules 1C or 1D.

- Mutual Insurance Groups may use the Total Adjusted Capital and amount of required capital from the top-level Insurer’s RBC Report at 200% x ACL RBC, and further adjusted to de-stack foreign insurers and other financial entities owned directly or indirectly (on a look-through basis) via RBC filing subsidiaries. Such foreign insurance subsidiaries or other financial subsidiaries shall be reported at the carrying values and capital calculations as described later herein.

- Data for U.S. Branches of Foreign insurers may be omitted from Schedule 1 if they are otherwise included in the entries, values, and capital requirements of a foreign insurer.

**NOTE**: These simplifications will be treated in a similar manner in Input 2 – Inventory.

§§ 56. Any insurer or financial entity owned by a Parent insurer and listed in Schedule A or Schedule BA, and any insurance or financial entity that is owned indirectly through a Schedule BA affiliate should be listed in Schedule 1 and in the Inventory and assigned the
appropriated identifying information. (See also the instructions for Part B of the Inventory). These entities will be de-stacked from the values for the Parent insurer. The same treatment for these entities will be afforded when they owned by a foreign insurer or other non-insurance entities.

Schedule 1B contains descriptions of each entity. Make selections from drop-down menu where available.

- **[Sch 1B Col 1] Include/Exclude (Company)** – This column is to select entities where a request is made for exclusion. The filer will indicate which non-insurance/non-financial entities not owned directly or indirectly by an insurer that should be excluded from the GCC as not posing material risk to the group. The filer’s definition of material risk will be reported in the “Other Information” tab.

- **[Sch 1B Col 2] Include/Exclude (Supervisor)** – Column to be filled in by supervisor. These are entities where the Supervisor agrees with the filer’s assessment of material risk and these entities will be excluded from the GCC and may be included in a sensitivity analysis later in the template.

  **NOTE**: This column may also be completed by the filer after advance consultation with the Lead State Regulator.

- **[Sch 1B Col 3] Include/Exclude (Selected)** – Formula to determine treatment of data for later sensitivity analysis. If supervisor has made a determination of include/exclude in the prior column, that will be used. If not, company’s selection will be used.

- **[Sch 1B Col 4] Entity Grouping** – Column denotes whether this is an insurance or non-insurance/non-financial entity and is also automatically populated based on the entry in Column 8.

- **[Sch 1B Col 5] Entity Identifier** – Provide a unique string for each entity. This will be used as a cross-reference to other parts of the template. If possible, use a standardized entity code such as NAIC Company Code (CoCode) or Insurance Services Office (ISO) Legal Entity Identifier. CoCodes should be entered as text and not number (e.g., if CoCode is 01234, then the entry should be “01234” and not “1234”). If there is a different code that is more appropriate (such as a code used for internal purposes), please use that instead. If no code is available, then input a unique string or number in each row in whatever manner is convenient (e.g., A, B, C, D, … or 1, 2, 3, 4…). Do not leave blank.

- **[Sch 1B Col 6] Entity Identifier Type** – Enter the type of code that was entered in the “Entity Identifier” column. Choices include “NAIC Company Code,” “ISO Legal Entity Identifier,” “Volunteer Defined” and “Other.”

- **[Sch 1B Col 7] Entity Name** – Provide the name of the legal entity.
**[Sch 1B Col 8] Entity Category** – Select the entity category that applies to the entity from the following choices (all U.S. life captives shall select the option for “RBC Filing Captive,” complete the calculation using the life RBC formula in accordance with instructions below regarding “Additional clarification on capital requirements where a U.S. formula (RBC) is not required,” regardless of whether the company is required by their captive state to complete the RBC formula. Insurers or financial entities that are de-stacked from an insurer’s Schedule A or Schedule BA should be assigned the corresponding insurer or financial entity category:

</table>
* If the GCC group’s Japanese insurer health business (referred to as “Third Sector”) is greater than 60% of total life business (referred to as “First Sector”) and health business combined, as reflected by annualized premium for the year reported, then that group may elect to use the Japan health scalar set rather than the life scalar set.

NOTE: All U.S. captives are required to complete the applicable RBC formula template. In addition, any insurer, other than U.S. captive, that submits an RBC filing to either the state of domicile or the NAIC will be considered an RBC filer.

- **[Sch 1B Col 9] Alternative Grouping** – This is an optional input field. This field should be used if you wish to show similar entities aggregated into a single line in Summary 4-Alternative Grouping on the “Grouping Alternative Exhibit.” For example, if you have a dozen small dental HMO businesses, you may wish to show them as a single line called “Dental HMOs,” as opposed to listing each entity separately. This is a level of granularity below “Entity Category” but above individual entities. No entity should be put in the same “Alternative Grouping” as its Parent. It is acceptable to put only one entity in a grouping. If any entries are left blank then, in Column 17, the “Entity Name” will be selected as the grouping. This will not impact the order of the entities for which data is entered in Schedule 1 or the “Inventory” tab.

- **[Sch 1B Col 10] Parent Identifier** – Provide the Entity Identifier of the immediate Parent legal entity for each entity, as applicable. If there are multiple Parents, select the Parent entity with the largest ownership percentage. Only include one entry. For the top holding company, enter “N/A.”

- **[Sch 1B Col 11] Parent Name** – This will be populated by a formula, so input is not required.

- **[Sch 1B Col 12] % Owned by Parent** – Enter the percentage of the entity that is owned by the Parent identified earlier in the worksheet. Percentages of ownership should be based on the percentage of voting class securities (unless ownership is maintained other than by control of voting securities) consistent with what is reported pursuant to state holding company regulation filings (Form B or equivalent).

- **[Sch 1B Col 13] % Owned within Group Structure** – Enter the percentage of the entity that is owned in the aggregate by any/all affiliate entities within the Group structure.

- **[Sch 1B Col 14] State/Country of Domicile** – Enter state of domicile for U.S. insurance entities and country of domicile for all other entities. (Use references that are consistent with those use on Schedule Y, where available.)

- **[Sch 1B Col 15] Zero Valued and Not Admitted Entities – Report for U.S. Insurers Only**. Select the treatment of the entity from following options: “Zero Valued for RBC” or “Nonadmitted for Accounting and RBC (Direct or Indirect).”

Zero Valued for RBC are affiliated insurance and financial entities that are otherwise reported in the RBC filer’s annual financial statement at their accounting value (i.e., per SAP) but are reported at zero value and zero capital requirements for RBC purposes. Examples include non-Canadian foreign insurers directly owned by U.S. life RBC filers. The carrying value and capital calculation specified in these instructions for the specific insurance or financial entity type should be reported in Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column.
Nonadmitted for Accounting and RBC (Direct or Indirect) are insurance or other financial affiliates that owned directly indirectly by an RBC filer via a downstream non-financial entity or holding companies that are reported at zero value per SAP and are also reported at zero value and zero capital requirements for RBC purposes. Examples include U.S. insurers indirectly owned by a U.S. RBC filer through a nonadmitted holding company that has not been subject to an independent audit. The carrying values and capital calculations specified herein associated with the specific insurance or financial indirectly owned entity type should be reported Inventory B, Column 2 and Inventory C, Column 2, respectively.

**NOTE:** Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column. The excess value in the nonadmitted Parent entity may be reported at zero value.

No entry is required in this column for any nonadmitted directly or indirectly owned non-insurance/non-financial subsidiary. Report zero for these affiliates in Column 2 of Inventory B and Inventory C.

- **[Sch 1B Col 16]** Is Affiliate on Schedule A or Schedule BA an Insurer or Other Financial Entity? – Column is meant to identify an entity with an insurer or financial entity identifier in Column 8 that is otherwise-reported on Schedule A or Schedule BA but is being de-stacked and also reported on the Inventory tab moved to this Schedule.[FL46]

  Provide a “Y” response where that is applicable. Otherwise leave blank.

- **[Sch 1B Col 17]** Selected Alternative Grouping – This will be populated by a formula, so input is not required. If there are any blank entries in Column 9 (Alternative Grouping), this column will set them equal to the name of the entity.

50.58. Schedule 1C contains financials for each entity:

- **[Sch 1C Col 1]** Basis of Accounting – Enter basis of accounting used for the entity’s financial reporting.

- **[Sch 1C Col 4]** Reinsurance Assumed from Affiliates – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 1 and life and health Schedule S, Part 1, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available.[FL47]

- **[Sch 1C Col 5]** Reinsurance Ceded to Affiliates – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 3 and life and health Schedule S, Part 3, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available.[FL48][FL49]

- **[Sch 1C Col 6]** Book Assets – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total assets as reported in the basic financial statements before eliminations (because that is presumed to be less burdensome on the insurance holding company). Other financial data should
similarly be prepared using financial data before eliminations. However, insurance holding companies are allowed to present such figures after eliminations if they do so for all figures and consistently for all years.

- **[Sch 1C Col 7] Book Liabilities** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total liabilities as reported in the basic financial statements.

- **[Sch 1C Col 8] Gross Paid-in and contributed Capital and Surplus (U.S. Insurers Only)** – For U.S. insurers, report the current year end amounts from annual financial statement Page 3 as follows:
  a. Life Insurers: lines 29, 30 and 33.
  b. P/C Insurers: lines 30, 31 and 34.
  c. Health Insurers: lines 26, 27 and 28. [FL51]

Generally, Schedule 1D will include entries from regulatory filings or entity specific GAAP financial statements as of the reporting date. The amounts reported should be the entity value on a stand-alone (fully de-stacked) or grouped basis (where applicable). This may require use of company records in certain cases. The amounts should be reported at 100% for the entity listed. Any required adjustments for percentage of ownership will be applied later, if necessary, to calculate a capital charge.

- **[Sch 1D Col 1] Prior Year Entity Identifier** – Report the Legal Entity Identifier, NAIC company code or other identifier used for the entity in the prior year GCC filing for the prior calendar year.

- **[Sch 1D Col 2] Prior Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone balance sheet. This will generally be the same as what is reported in the current year column in the prior year GCC filing. Where grouping is permitted, the balance reported may be on a grouped basis. Do not report values for non-insurance/non-financial entities owned directly or indirectly by RBC filers, or owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity. [FL52]

- **[Sch 1D Col 3] Net Income** – The final reported income figure from the income statement, and therefore is the figure reported after interest, taxes, extraordinary items, etc. For entities with accounting and reporting requirements that specify that dividends paid or received will be part of “net income,” report the dividends received in this column. Report dividends to policyholders here as a reduction to net income if required by local accounting or reporting requirements.

- **[Sch 1D Col 4] Dividends Paid and Received (Net)** – All entity types report the net amount of dividends paid and received in reporting year to/from and affiliate, a Parent shareholder, public shareholders, or policyholders (if not required to be a reduction/increase in net income by local accounting or reporting requirements). All entity types that are subject to accounting and reporting requirements that specify that dividends paid or received will be reported as a surplus adjustment, will report dividends received in reporting year from affiliates in this column.
- **[Sch 1D Col 5] Capital and Surplus Contributions Received from Affiliates** – All entity types. Report sum of capital contribution (other than via surplus notes) during the reporting year received from any affiliated entity.

- **[Sch 1D Col 6] All Other Changes in Capital and Surplus** – Include total for all adjustments not listed above. This would include any investment income not already reported in Column 3 or Column 5. Also, report all stock repurchases or redemptions in this column.

  **NOTE**: Greater detail may be made available upon request.

- **[Sch 1D Col 7] Current Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone Balance Sheet for the current year. This will generally be the same as what is reported for the entity in the Inventory B, Column 2. Where grouping is permitted, the balance reported may be on a grouped basis. Do not report values for non insurance/non financial entities owned directly or indirectly by RBC-filers or owned by other financial entities with regulatory capital requirements for which the non insurance/non financial entity is included in the capital charges for the Parent entity.

- **[Sch 1D Col 8] Capital and Surplus Contributions Paid to Affiliates** – All entity types report the total of capital contributions (other than via surplus notes) during the reporting year paid to any affiliated entity.

- **[Sch 1D Col 9] Dividends Declared and Unpaid** – For all applicable entities report the amount of dividends declared or approved but not yet distributed.

- **[Sch 1D Col 10] Dividends Received and Not Retained** – All holding companies, insurers and financial entities with regulatory capital requirements indicate by “Y” or “N” if part or all of dividends received reported in Column 5 have been paid (passed through) to a Parent company, to public shareholders, or used to repurchase or redeem shares of stock.
Input 2 – Inventory

Columns in Inventory A are being pulled from Schedule 1:

- [Column 1] Insurance/Non-Insurance
- [Column 2] Entity Identifier
- [Column 3] Entity Identifier Type
- [Column 4] Entity Name
- [Column 5] Entity Category
- [Column 6] Parent Identifier
- [Column 7] Parent Name
- [Column 8] Basis of Accounting

Columns Requiring Input

Enter information on adjustments to carrying value. Considerations specific to different types of entities are located at the end of this subsection.

- **[Inv B Col 1] Carrying Value (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. In general, carrying values utilized should represent: 1) the subsidiary valuation required by the insurance or other sectoral regulator if the Parent is a regulated entity; or 2) in the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then a subsidiary valuation based U.S. GAAP or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. **No entry is required for the Ultimate Controlling Person (UCP)**

  The value in this column will include a zero value for entities not admitted per SAP or other jurisdictional regulatory rules. A single entry for all entities that qualify under the grouping criteria described in **Input 1**, herein may be made in lieu of individual entries on the line for the affiliate that holds the qualifying entities. This column will include double-counting.

  The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group.

- **[Inv B Col 2] Carrying Value (Local Regime)** – Record the carrying value recognized by the legal entity’s jurisdictional insurance or other sectoral supervisor. This will include the value of capital instruments (e.g., U.S. insurer issued surplus notes) that are specifically recognized by statute, regulation or accounting rule and included in the carrying value of the entity. In the case where the entity is not subject to insurance or other sectoral regulatory valuation, then U.S. GAAP equity (including OCI) or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. If an agreed-upon change in local carrying value should become effective by 2021, Volunteer Groups are expected to report on that basis.

  If the group is comprised entirely of U.S.-based entities under a U.S.-based Parent company, the entries in this column will be the same as in Column 1 except in cases where the Parent owns not admitted (or otherwise zero valued financial affiliates that would be reported as not admitted in the Parent Regime column but fully admitted (per SAP valuation) in the Local Regime column). (See instructions for **[Sch 1B Col 15]**.) However, if such an entity has been listed in the **[Sch 1B Col 2] Include/Exclude**
(Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then a value will be reported here, but the ultimate calculation will show the results without the excluded entity’s value. The carrying value for affiliates that are U.S. RBC filers, the value will be the amount reported TAC on entity’s RBC report. This column will include double-counting. The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group. The entry here should generally be the same as the value reported in Inventory B, Column 1, except where TAC for RBC filers differs from their BACV. A single entry for all entities that qualify under the grouping exceptions criteria described exceptions described herein under Input 1, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries.

A sensitivity analysis is included to calculate to reflect in the impact of excluded entities requested but not approved for exclusion by the lead state.

*Subject to Grouping

In cases where a U.S. life RBC filer owns a foreign insurer and the BACV value reported for the foreign insurer in the Parent U.S. insurers financial statement is adjusted to zero for RBC purposes, then report zero in Inventory B, Column 1 and Column 3 for that foreign insurance entity.
• **[Inv B Col 3] Investment in Subsidiary** – Enter an adjustment to remove the investment carrying value of any directly owned subsidiary(ies) from Parent’s carrying value. This is intended to prevent double-counting of available capital when regulated entities are stacked. The carrying value to be removed should be the investment value carried by the Parent from which the entity is being de-stacked (i.e., the value in Column 1 in Inventory B adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at zero value by the Parent. Where entities are owned partially by entities outside of the group, then the Parent’s percentage of ownership will be calculated based on the value owned within the group.

Generally, for all non-financial affiliates, Schedule A and Schedule BA assets will remain in the value of the Parent insurer and not entered in this column. However, if the Schedule A or Schedule BA asset is an insurance or financial entity, then the exceptions as described herein, the value of that entity will be included in this column. For indirectly owned Schedule A or Schedule BA insurance or financial entities, only the value of that entity will be included in this column and the remaining value of the downstream Schedule BA Parent will remain with the Parent insurer. Similarly, the carrying value of U.S. branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the value of the foreign insurer so that the Parent entity may eliminate double-counting of that available capital which will now be reported by the stand-alone Branch listed in the inventory.

**NOTE:** The “Sum of Subsidiaries” column may provide a useful check against this entry, but it will not necessarily be equal.

When utilizing public accounting (e.g., GAAP) equity values that differ from regulatory values (e.g., SAP), it is the **GAAP equity** of the insurers must be eliminated from the GAAP Parent in this column, not the SAP (regulated capital). This is necessary in order to allow the calculation to appropriately represent SAP capital of regulated entities and GAAP equity of non-regulated entities. Data on the accounting differences between Parent and Local carrying values will be collected in **[Inventory B, Column 9]** and further detail provided in the “Questions and Other Information” tab.

**NOTE:** Values for Schedule A and Schedule BA affiliates that are required to be reported in the “Inventory” tab will be adjusted out of the value reported by the U.S. insurer in this column.

• **[Inv B Col 4] Intragroup Capital Instruments** – This column is automatically calculated from inputs to the “Capital Instruments” tab. It reflects an adjustment to remove carrying value for intragroup financial instruments that are treated as capital by the issuer and consequently create additional capital within the group upon issuance (most notably U.S. surplus notes). Example for surplus notes: In both intragroup and unaffiliated transactions, treat the assets transferred to the issuer of the surplus note as available capital. If the purchaser is an affiliate, eliminate the investment value from the affiliated purchaser of the surplus note in this column. If the purchaser is an insurer or other regulated entity, eliminate the purchaser’s capital charge (e.g., RBC charge) on the surplus note investment in the corresponding adjustment column for the capital calculation. No adjustments are made for any intragroup capital instrument that is treated as a liability by the issuer.
• [Inv B Col 5] Reported Intragroup Guarantees, LOCs and Other – Enter an adjustment to reflect the notional value weighted for expected utilization for reported intragroup guarantees (including solvency insurance and capital maintenance agreements). Enter the notional value for letters of credit, or other intragroup financial support mechanisms. Explain each intragroup arrangement in the “Questions and Other Information” tab.

• [Inv B Col 6] Other Intragroup Assets – Enter the amounts to adjust for and to remove double-counting of carrying value for other intragroup assets, which could include intercompany balances, such as (provide an explanation of each entry in the “Questions and Other Information” tab):
   a. Loans, receivables and arrangements to centralize the management of assets or cash;
   b. Derivative transactions;
   c. Purchase, sale or lease of assets; and
   d. Other (describe).

• [Inv B Col 7] All Other Adjustments – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Other Information” tab.

• [Inv B Col 8] Adjusted Carrying Value – Stand-alone value of each entity per the calculation to eliminate double-counting. This value includes permitted and prescribed practices.

• [Inv B Col 9] Accounting Adjustments (e.g., GAAP to SAP) – Report the total difference between the carrying value reported in Column 1 (and Column 3) and the value reported in Column 2. This column will apply to regulated entities where the stand-alone carrying value is based on regulatory accounting (e.g., SAP) while the value reported for that entity by the Parent is carried at a financial accounting (e.g., GAAP) value. Further detail is reported in the “Questions and Other Information” tab.

• [Inv B Col 10] Gross Revenue 2nd Prior Year (Financial Entities without Regulatory Capital Requirements and Non-financial Entities) – Report gross revenue (excluding dividends from subsidiaries and affiliates).

• [Inv B Col 13] Average Revenue over 3-years (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities) – This column is populated from data in Column 10, Column 11 and Column 12. This column will support the capital calculation for asset managers, broker-dealers and other Financial Entities without Regulatory Capital Requirements.

“Adjusted Capital Calculation” is reported in a similar manner to the “Adjusted Carrying Value” above. The columns are in the same order, although it is likely that fewer entries will be needed for Column 4 through Column 7. Further guidance is below.
[Inv C Col 1] Entity Required Capital (Immediate Parent Regime) – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. No entry is required for the Ultimate Controlling Person. In general, entity required capital should represent the capital requirements of the Parent’s insurance or other sectoral regulator:

a. For subsidiaries of foreign insurers or other non-U.S. financial entities, the unscaled capital required by the Parent’s regulator of the regulated entity based on the equivalent of a Prescribed Capital Requirement (PCR) level.

b. For subsidiaries, including applicable Schedule A and Schedule BA subsidiaries, of U.S. insurance entities that are subject to RBC, except where the subsidiary is also an RBC filer, the entry should be equivalent of what would be required in the Parent’s RBC, adjusted for covariance where applicable (calculated by the preparer) reported at company action level (or two times authorized control level RBC) for that entity. Where the subsidiary is also an RBC filer, then the amount reported will be at company action level RBC (or two times authorized control level RBC) after covariance.

c. For subsidiaries of U.S. insurers that do not file RBC, report the actual amount of capital required in the Parent’s capital requirement (if any) for the subsidiary entity.

d. In the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then use zero where applicable. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the specified capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group. A single entry for all entities that qualify under the grouping exceptions described in Section V, herein may be made on the line for the affiliate that holds the qualifying entities in lieu of individual entries.

[Inv C Col 2] Entity Required Capital (Local Regime) – Enter required capital for each de-stacked entity, as applicable entity description below. For U.S. RBC filing subsidiaries under a U.S. RBC filing Parent the amounts will be the same in both the Parent and Local Regime columns, except where the RBC filing subsidiary is subject to an operational risk charge. In such cases the amount reported in this column for the subsidiary will include the operational risk charge while the amount reported in Column 1 will exclude the subsidiary’s operational risk charge. However, for some entity types his will result in entries for the entities under a U.S.-based insurance Parent to be different from what U.S. RBC would dictate. In addition, where a U.S. insurer directly or indirectly owns not admitted (or otherwise zero valued) financial affiliates, those affiliates would be reported with zero value in the Parent Regime column but at the specified regulatory value described below for that financial entity type in this column. However, if such an entity has been listed in [Sch1B Col 2] Include/Exclude (Supervisor) column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then report the capital calculation in accordance with entity instructions below but the ultimate calculation will show the results without the excluded entity’s capital calculation. Directly or indirectly owned non-financial entities that were not admitted or otherwise carried at a zero value in the Parent Regime, may be carried at zero value in this column. A single entry for all entities that qualify under the grouping exceptions described herein may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries. This column will include double-counting. The values recorded for all subsidiaries should be the 100% of the
capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group.

64. For financial entities without a regulatory capital requirement and for non-insurance/non-financial entity types, where additional options are noted below, the options are shown here for informational purposes only, and the calculations are described in the tab where the relevant data and calculations reside.

65. Additional clarification on capital requirements where a formula is required:

- **U.S. RBC filing Insurers**: Report RBC at Company Action Level excluding operational risk (200% x ACL)\(^{[FL57]}\)

- **Foreign Insurance Entities**: The local capital requirement as specified below for each jurisdiction should be reported, by legal entity, at a Prescribed Capital Requirement (PCR) level. This treatment is different than what U.S. RBC would require and recognizes other regulators’ view of adequate capital for insurers within another jurisdiction. It is more reflective of risk within the group context. A sensitivity analysis will be included in the “Sensitivity Analysis” tab using the jurisdictional PCR scaled per the Excess Relative Ratio method (see Appendix 1) for insurers in foreign jurisdictions that are subject to scaling.

- **European Union subsidiaries**: Use the Solvency II Solo Solvency Capital Requirement (SCR) as the PCR.

- **U.S. RBC filing subsidiaries**: The RBC Company Action Level including operational risk of each insurer should be reported.

- **Australia subsidiaries**: The PCR is the target capital as set by the insurer/group in accordance with APRA requirements. Effectively, this would be “Target capital under ICAAP.” PCR is not a set multiple of MCR.

- **Bermuda subsidiaries**: The Legal Entity PCR in Bermuda for medium and large commercial insurers is called the “Enhanced Capital Requirement” (ECR) and is calibrated to Tail VaR at 99% confidence level over a one-year time horizon.

- **Hong Kong subsidiaries**: Under the current rule-based capital regime, if applied similar to the concept of PCR, the regime’s PCR would be 150% of MCR for life insurers and 200% of MCR for non-life insurers.

- **Japan subsidiaries**: The PCR is the solvency margin ratio of 200%.

- **Korea subsidiaries**: The PCR is 100% of risk-based solvency margin ratio.

- **Singapore subsidiaries**: The PCR is 120% of total risk requirement (i.e., capital requirement).

- **China Taipei subsidiaries**: The PCR is 200% of RBC ratio.

- **Canada life entities**: The baseline PCR should be stated to be “100% of the LICAT Base Solvency Buffer.” The carrying value should include surplus allowances and eligible deposits.
- **Canada P/C entities**: The PCR should be the MCT capital requirement at the target level.
- **South Africa subsidiaries**: The PCR is 100% of the SAM SCR.
- For any entities that cannot be mapped to the above categories, scaling will be at 100%

66.64. Additional clarification on capital requirements where a U.S. formula (RBC) is not required:

- For those U.S. insurers that do not have an RBC formula, the minimum capital per state law should be used as the basis for what is used for that insurer in the GCC. This may differ from what U.S. RBC would require. It is more reflective of the regulatory view of risk in the group context. The following requirements should be used in other specified situations where an RBC does not exist:
  - **Mortgage Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the Mortgage Guaranty Insurance Model Act (#630).
  - **Financial Guaranty Insurers**: The minimum capital requirement shall be based on the NAIC’s requirements set forth in the Financial Guaranty Insurance Guideline (#1626), specifically considering Section 2B (minimum capital requirements) and Section 3 (Contingency, Loss and Unearned Premium Reserves) and the other requirements of that guideline that impact capital (e.g., specific limits).
  - **Title Companies**: The minimum capital requirement shall represent 200% of the required level of reserves carried by the insurance company.
  - **Other Companies**: A selected basis for minimum capital requirements derived from a review of state laws. Where there is a one-off treatment of a certain type of insurer that otherwise would file RBC (e.g., HMOs domiciled in California), the minimum capital required by their respective regulator could be considered in lieu of requiring the entity to complete an RBC blank.
  - **Captives**: U.S. insurers that have captives should complete the applicable RBC formula regardless of whether the captive is required to complete it in their captive state. The amounts input into RBC by the captive shall be based on the actual assets and liabilities utilized in the regulatory reporting used by the captive. Captives used exclusively for self-insurance (either by U.S. life insurers or any other type of insurer) or insurance provided exclusively to its own employees and/or its affiliates, should not complete an RBC calculation and the entire entity should be treated as non-insurers and receive the same charge as a non-regulated entity.

67.65. Non-insurance financial entities subject to a specified regulatory capital requirement:

- All banks and other depository institutions – The unscaled minimum required by their regulator. For U.S. banks, that is the Office of the Comptroller of the Currency (OCC) Tier 1 or other applicable capital requirement. This is understood to be consistent with how the Federal Reserve Board would apply its Building Block Approach.
- Any other financial entity that is determined to be subject to a specified regulatory capital requirement will bring that requirement in the GCC at the first level of regulator intervention (if applicable).
• This differs from what U.S. RBC would require. It recognizes the sectoral regulator’s view of risk for a particular financial entity type. It is more reflective of risk in the group context.

68.66. Non-insurance financial entities NOT subject to a specified regulatory capital requirement:

• All asset managers and registered investment advisors and all other financial entities as defined in Section II: Use the capital calculation specified below based the level of risk assigned to the entity by applying the material risk principles defined in Section II. However, asset managers and investment affiliates (not qualifying to be treated as non-financial entities per paragraph 9) will be reported at either medium or high risk. In certain cases, these entities may be subject to a layer of regulation (e.g., SEC or FINRA) but are not generally subject to a specified capital requirement.

High Risk: 10% x 3-year average revenue

NOTE: A Basel Charge of 15% will be used for the IAIS ICS.

Medium Risk: 5.0% x 3-year average revenue.

Low Risk: 2.5% x 3-year average revenue

NOTE: Medium risk could be used as a starting point while the stratified methodology is further developed.

69.67. Other non-insurance, non-financial entities with material risk:

• Non-insurance, non-financial entities may not be as risky as financial entities. For non-insurance, non-financial entities not owned by RBC filers or other such entities where there is not a regulatory capital charge for the entity in the capital formula, use an equity charge of 10.5% (post tax) for predominantly life Insurance Groups 9.5% for predominantly P/C Insurance Groups and 3.5% for predominantly health Insurance Groups x BACV. If the entity is not subject to a capital charge or is included in the capital charge of another financial entity, then enter zero in Column 1 and the charge specified in this paragraph in Column 2. These factors are based on average after covariance RBC charges for the respective insurer types and are calibrated at 200% x ACL RBC. This is meant to be consistent with how the entity would be treated if owned by an RBC filer while recognizing that the entity may be excluded from the GCC if it does not pose material risk to the insurers in the group.

Non-insurance/non-financial entities owned by RBC filing insurers (or owned by other entities where a regulatory capital charge applied to the non-insurance/non-financial affiliate) will remain in the Parent’s capital charge and reported at that value in Column 1 but will be reported as zero in Column 2. These non-financial entities may not be excluded from the GCC.

One additional informational capital calculation for all non-financial entities will be applied in the Sensitivity Analysis tab using current year gross revenue from Inventory B, Column 12 with the calculation occurring and results available in the “Calc 2” tab as follows: 5% of reporting year gross revenue based on a medium level risk for a financial entity.

70.68. Non-operating holding companies:
Non-operating holding companies will be treated the same as other non-insurance/non-financial entities with material risk. Unless reported on a grouped basis (see paragraph 5.24), for purposes of applying the capital calculation, the carrying value of stand-alone positive valued and negative valued non-operating holding companies will be netted. If the net value is zero or less (floored at zero for purposes of applying a charge), the charge applied will be zero. If the filer chooses to designate the non-operating holding company as a non-insurance/non-financial entity without material risk and requests exclusion, then no allowance for debt issued by that holding company may be included in the calculation.

**Capital Calculation Adjustments**

- **[Inv C Col 3] Investment in Subsidiary** – Enter an adjustment to remove the required capital of the directly owned subsidiary(ies) from Parent’s required capital. The capital requirement to be removed should be the capital requirement carried by the Parent from which the entity is being de-stacked (i.e., the value reported in Column 1 in Inventory C adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at a capital calculation of at zero value by the parent. This is intended to prevent double counting required capital when regulated entities are stacked. [Example: When de-stacking an RBC filer from another RBC filer, the amount entered on the Parent line would be the RBC of the subsidiary. When de-stacking financial entities that are subject to diversification in a capital formula (e.g., RBC) the amount entered on the Parent line is the post-diversified capital requirement as calculated by the preparer, which is also the amount to be reported for the de-stacked entity on the entity’s line.

Generally the capital requirements for Schedule A and BA affiliates and other non-financial affiliates will remain in the capital requirements of the Parent insurer and not entered in this column, except that the capital requirements for any financial entity reported in a Parent’s Schedule A and BA, any financial entity indirectly owned through another Schedule A or BA affiliate listed in Schedule 1 and in this section should be entered in this column in the row of the entity that directly or indirectly owns that Schedule A and BA affiliate so that the parent entity may eliminate double counting of that capital requirement capital which will now be reported by the stand-alone Schedule A or BA affiliate listed in in the inventory.

For indirectly owned Schedule A and BA financial entities, only the capital requirements for that entity will be included in this column and the remaining capital requirement of the downstream BA Parent will remain with the Parent insurer. Similarly, the capital requirement for any U.S. Branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the capital requirement of the foreign insurer so that the parent entity may eliminate double counting of that capital requirement which will now be reported by the stand-alone Branch listed in the inventory. The amounts entered in this column for a Parent must correspond to the capital required by the parent entity which is being de-stacked from that Parent.

Capital calculations for Schedule A and Schedule BA indirectly owned financial entities that are owned by Schedule A or Schedule BA assets are reported in the Inventory Tab and will be adjusted out of the value reported by the U.S. insurer in this column (since the non-financial direct parent Schedule A or BA affiliate is not listed in the Inventory Tab.

In the “Questions and Other Information” tab, a capital requirement should be reported for the value of the indirectly owned insurance of other financial entity based on the insurers Schedule A or Schedule BA charge rather than a charge (which would be zero) attributable to the Schedule A or Schedule BA entity that directly owns the insurance or other financial entity. As indicated earlier, the remaining capital requirement of the entity that directly owns the insurance or other financial entity will remain with the Parent insurer.

- **[Inv C Col 4] Intragroup Capital Instruments** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on surplus notes purchased by an affiliated U.S. insurer from a U.S. insurer issuer).

- **[Inv C Col 5] Reported Intragroup Guarantees, LOCs and Other** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on guarantees or LOCs).

- **[Inv C Col 6] Other Intragroup Assets** – This column is not intended to be used for required capital but is included in case an entity believes it is necessary from reporting an inaccurate required capital figure.
  a. Loans, receivables and arrangements to centralize the management of assets or cash.
  b. Derivative transactions.
  c. Purchase, sale or lease of assets.
  d. Other (describe in “Questions and Other Information” tab).

- **[Inv C Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Questions and Other Information” tab. Use this column is for adjustments related to required capital that correspond to adjustments in Inventory B, Column 7 and in cases where an entity believes it is necessary to adjust an inaccurate regulatory required capital figure (e.g., the RBC calculation applied as a permitted practice).
NOTE: Consider whether this column should be used rather than Column 2 for zero value entities.

- **[Inv C Col 8] Adjusted Capital Calculation** – Stand-alone capital calculation for each entity per the calculation to eliminate double-counting. This value includes the impact of permitted and prescribed practices.

- Inventory D is for “Reference Calculations Checks.” These are calculations that can serve as checks on the reasonability/consistency of entries.
  
  a. **[Inv D Col 1 – 3] Sum of Subsidiaries (Carrying Value)** – This automatically generated column calculates the value of the carrying value of the underlying subsidiaries. It is provided for reference when filling out the “Investment in Subsidiary” column. This sum will often, but not always, be equal to the “Investment in Subsidiary” column.

  b. **[Inv D Col 4 – 6] Sum of Subsidiaries (Calculated Capital)** – Similar to above but for calculated capital.

  c. **[Inv D Col 7 – 8] Carrying Value/Adj Calc Cap** – This is a capital ratio on the adjusted and unadjusted figures. Double-check entities with abnormally large/small/negative figures to make sure that adjustments were done correctly.

### Input 3 – Capital Instruments

21.69. Provide all relevant information pertaining to paid-up (i.e., any receivables for non-paid-in amounts would not be included for purposes of calculating the allowance) financial instruments issued by the Group (including senior debt issued by a holding company), except for common or ordinary shares and preferred shares. This worksheet aims to capture all financial instruments such as surplus notes, senior debt, hybrid instruments and other subordinated debt. Where a Volunteer Group has issued multiple instruments, the Volunteer Group should not use a single row to report that information; one instrument per row should be reported (multiple instruments issued under the same terms may be combined on a single line). All qualifying debt should be reported as follows.

22.70. Debt issued by U.S.-led groups:

- Surplus Notes – Report the outstanding value of all surplus notes in Column 8 whether issued to purchasers within or outside the group. The outstanding value of surplus notes issued to entities outside the group and that is already recognized by state insurance regulators and reported 100% as capital in the carrying value of U.S. insurer issuers in “Inventory B” and will not be included in the calculation for an additional capital allowance. Surplus notes issued within the group generally result in double-counting and will not be included in the additional capital allowance. (See instructions below.)

- Subordinated Senior Debt and Hybrid Debt Issued (e.g., debt issuances that receive an amount of equity credit from rating agencies) – The outstanding value will be reported in Column 8. Recognition for structurally subordinated debt will be allowed to increase available capital. For purposes of qualifying for recognition as additional capital, both of the following criteria must be met:
a. The instrument has a fixed term (a minimum of five years at the date of issue or refinance, including any call options other than make whole provisions\(^1\)). However, if the instrument is callable within the first five years from the date of issue it may be considered qualifying debt if any such call is at the option of the issuer only (the instrument is not retractable by the holder) AND it is the intent of management to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument.

b. Supervisory review or approval is required for any ordinary* or extraordinary dividend respectively or distribution from any insurance subsidiary to fund the repurchase or redemption of the instrument. Supervisory approval of ordinary dividends is met if the supervisor has in place direct or indirect supervisory controls over distributions, including the ability for the supervisor to limit, defer and/or disallow the payment of any distributions should it find that the insurer is presently, or may potentially become, financially distressed. There shall be no expectation, either implied or through the terms of the instrument, that such approval will be granted without supervisory review.

\*The concept of approval for ordinary dividends is for GCC purposes and is met as described in subparagraph b, above. It is not intended to require explicit regulatory approval or in any way alter current provisions of Model #440 or the Insurance Holding Company System Model Regulation (#450).

- “Other” Debt – The outstanding value will be reported in Column 8 and will be further described in the “Other Information” tab and will be reported in a manner that is consistent with Senior Subordinated Debt, as described above. Such debt will not initially be included in the additional capital allowance for the GCC. An additional allowance of this debt as additional capital will be calculated in this tab and reported as a sensitivity analysis in the “Summary” tab, subject to future determination on whether it will become part of the GCC calculation.

- Foreign Debt – Report the outstanding value of Non-U.S. senior debt issued to entities outside the group in Column 8. Debt specifically recognized by statute, regulation or accounting rule as additional capital resources by the lead jurisdiction based on contractual subordination or where a regulatory regime proactively enforces structural subordination through appropriate regulatory/supervisory controls over distributions from insurers in the group will not be included in the calculation of an additional capital allowance if it is already reported as capital in the carrying value of the issuer in “Inventory B”. It will be included in the calculation of an additional capital allowance if recognized by the local jurisdiction and NOT already included in the value of the issuer in “Inventory B”. Cases where the value of debt instruments issued to purchasers outside the group has not been recognized by the legal entity’s insurance or other sectoral supervisor will not be included in the additional capital allowance.

---

\(^1\) NAIC staff have been informed that make whole provisions are a form of a call feature that can be exercised by the issuer at any time; that they nonetheless are most frequently utilized near the end of the term of the instrument, generally in connection with refinancing; and that the cost to the issuer to exercise the make whole provision and associated financial reporting impacts, combined with the very low interest rate environment, make it much less likely that such provisions will be triggered, particularly within five years of issuance. Staff will continue their research, and assuming these observations are confirmed, the referenced criteria will continue to scope out make whole provisions.
Please fill in columns in Section 3A as follows for all capital instruments:

- **[Sec 3A Col 1] Name of Issuer** – Name of the company that issued the capital financial instrument. Will populate automatically from the “Entity Identifier” column in this subsection.

- **[Sec 3A Col 2] Entity Identifier** – Provide the reference number that was input in Schedule 1.

- **[Sec 3A Col 3] Type of Financial Instrument** – Select type from the drop-down menu. Selections include Senior Debt, Surplus Notes (or similar), Hybrid Instruments and “Other” Subordinated Debt.

- **[Sec 3A Col 4] Instrument Identifier** – Provide a unique security identifier (such as CUSIP). ALL debt instruments must include an internal identifier if not external identifier is available.

- **[Sec 3A Col 5] Entity Category** – Links automatically to selection made on the “Inventory” tab worksheet.

- **[Sec 3A Col 6] Year of Issue** – Provide the year in which the financial instrument was issued or refinanced.

- **[Sec 3A Col 7] Year of Maturity** – Enter the year in which the financial instrument will mature.

- **[Sec 3A Col 8] Balance as of Reporting Date** – Enter the principal balance outstanding as reported in the general-purpose financial statements of the issuer.

- **[Sec 3A Col 9] Intragroup Issuance** – Select whether the instrument was issued on an intragroup basis (that is, issued to a related entity within the group). This column will be used to remove “double-counting.” This column is a drop-down menu box with options “Y” and “N.”

- **[Sec 3A Col 10] Treatment in Inventory B** – Select option that applies:
  a. **Capital** – This instrument is recognized by the applicable regulator or credited as capital in local regulatory regime and reported as part of the adjusted carrying value of the issuer and was not purchased by an affiliate. This includes the value of qualifying senior and hybrid debt instruments (if recognized as capital) and U.S. surplus notes (or similar local regime instruments) that are issued to entities outside the group and included in the issuing entity’s value recognized in the “Inventory B” tab. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital.

  b. **Liability** – This instrument is reflected as the liability of the issuer in the adjusted carrying value in the “Inventory B” tab and was not purchased by an affiliate. This would apply to all qualifying senior and hybrid debt issued to purchasers outside the group that is not recognized as capital by the local regulator and therefore is not included in the issuing entity’s value recognized in the “Inventory B” tab. The value will be included in the calculation of a proxy allowance for additional capital.
c. **Liability designation** would also apply to all non-qualifying senior and hybrid instruments and all debt categorized as “Other” issued to purchasers outside the group that is not recognized as capital by the local regulator. The value of these instruments will NOT be included the calculation for the in the calculation of a proxy allowance for additional capital.

d. **Intragroup** – This would apply to all qualifying instruments purchased by an affiliate within the group. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital. If the financial instrument is recognized or credited as part of the issuer’s available capital in Inventory B, then an adjustment for intragroup capital instruments is made in Inventory B, Column 4 and Inventory C adjustments (if necessary to eliminate an associated capital requirement). If the financial instrument is treated as a liability by the issuer, then no intragroup capital instrument adjustment is required in Inventory B or Inventory C.

e. The outstanding value of all non-qualifying senior and hybrid instruments and financial instruments categorized as “Other Debt” whether issued to purchasers inside or outside the group will not be included in the calculation of a proxy allowance for additional capital and no other adjustments are required in the template. However, in the unlikely event that the instrument is treated as available capital to the issuer in Inventory B, an adjustment in Inventory B, Column 4 to remove the available capital would be required.

**NOTE**: Additional information on instruments categorized as “Other Debt” in the Type of Financial Instrument Column will require additional information to be provided in the “Questions and Other Information” tab.

For **intragroup surplus notes**, the adjustment will impact the carrying value and associated capital calculation of the purchasing affiliated entity.

- **[Sec 3A Col 11] Intragroup Purchaser Identifier** – Enter the entity identify for the affiliate entity that purchased the instrument.

- **[Sec 3A Col 12] Description of Other Debt Instruments** – Provide a description of instruments designated as “Other.”

- **[Sec 3A Col 13] Call Provisions Criteria** – Respond “Y” or “N” as to whether the instrument is subject to a call provision (other than a make whole provision) in the first five years AND it is management’s intent to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument. Respond “X” if the instrument has a maturity of greater than five years including any call provisions.

- **[Sec 3A Col 14] Potentially Recognized Instrument** – This is an automatic calculation to determine if this is instrument that has potential to be recognized as additional capital in the GCC and/or in sensitivity analysis. The column will show “Y” if each of the following is true: 1) it is Senior Debt, Hybrid or Other instrument; 2) the instrument is not intragroup; and 3) the instrument is treated as liability on Inventory B. These are calculated using Column 3, Column 9, and Column 10, respectively.

- **[Sec 3A Col 15] Other Criteria Met** – This is an automatic calculation to determine if instrument qualifies due to criteria beyond those in Column 14. The column will show “Y” if: 1) the instrument has initial maturity of greater than five years including any call
provision (i.e., “X” is reported in Column 13); and 2) it meets the “Call provisions criteria” in Column 13 (i.e., “Y” is reported in Column 13).

• [Sec 3A Col 16] Qualified Debt – This column is calculated automatically using data from the entries in Column 14 and Column 15. To qualify, an instrument needs a “Y” in both columns. It represents the amount of qualifying debt that will be used in the calculation of an allowance for addition capital under the alternate subordination method and the proxy allowance method. This amount will be carried into Section 3C, Column 1, Line 3.

Section 3C will be auto-filled, with the exception of Column 1, Line 2.

• [Sec 3C Col 1, Line 1] Total Paid-In and Contributed Capital and Surplus – This is the amount reported on Page 3 of the annual financial statement submitted to regulators by a U.S. insurer.

• [Sec 3C Col 1, Line 2] Alternate Subordination Calculation – This manual entry is the excess of qualifying debt issued over liquid assets held by the issuing consolidated holding company as reported in the consolidated financial statements. No entry is expected for a mutual group.

• [Sec 3C Col 1, Line 4] Downstream Estimate - The total reported under the alternate subordination approach will be compared to the total amount of gross paid-in or contributed capital and surplus reported by the insurance entities within the group as reported in Schedule 1. The greater value will be carried into the calculation for an additional capital allowance.

NOTE: No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

• [Sec 3C Col 1, Line 5] Proxy Calculation for Additional Capital Allowance – A calculation will be made in this tab in Section 3B that will apply 30% of available capital plus the value of all qualifying debt to become part of the proxy allowance for additional capital for qualifying senior subordinated. An additional amount of 15% of available capital plus the value of all qualifying debt will be calculated to become part of a proxy allowance for additional capital to be for hybrid debt.

Summary Formula: Proxy Amount = (30% x (Available Capital + Qualifying Senior and Hybrid Debt)) + (15% x (Available Capital + Qualifying Senior and Hybrid Debt)).

NOTE: No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.
• [Sec 3C Col 1, Line 6 through Line 8] – The greater of the proxy calculation or the larger of paid in capital or alternate subordination calculation will be allowed as additional capital in [Sec 3C Col 6]. However, an overall limit of no more than 75% of the total adjusted carrying value in Inventory B will be applied in [Sec 3C Col 7]. Adjustments to increase available capital will be calculated from data on this page. The summary results of the components of the calculation (paid in capital and surplus, alternate subordination, proxy calculation and limitations) are populated as titled in the calculation columns in this section. The final amount recognized as additional capital is shown in [Sec 3C Col 8].

• The additional capital allowance recognized for capital instruments will be shown as an “on-top” adjustment in the “Summary 1 – Entity Level” tab.

Summary Calculation for Debt Allowed as Additional Capital:

Step 1: Calculate the following amounts:
   a) The greater of Total paid-in capital and surplus of U.S. insurers or the alternative subordination calculation (defined above)
   b) A proxy value (defined above)

Step 2: Take the greater of a) or b) from Step 1, and subject that amount to two limitations:
   • First, the total amount to qualify as capital cannot exceed 100% of the total outstanding value of qualified senior and hybrid debt.
   • Second, the total amount to qualify as capital cannot exceed 75% of the total adjusted carrying value in Inventory B.

After applying the two limitations in Step 2, the remaining amount is allowed as additional capital.

25.73. Informational calculation to include “Other Subordinated Debt” – A sensitivity analysis will be applied in [Sec 3C Col 2, Line 1 through Line 8] and carried into the “Summary 2” tab to adjust the amount of additional capital in the proxy calculation by the amount of “Other Debt” reported in [Sec 3C Col 8] issued to purchasers outside the group. This informational sensitivity analysis will include an additional allowance for such debt up to 15% of available capital plus the value of all qualifying debt including qualifying “Other” debt subject to the same limitations noted for the proxy allowance in general.
Input 4 – Analytics

26.74. The entity type information supporting analytics summarized in Summary 3 – Analytics are pulled into this tab from data or information reported in other tabs in the GCC template. That data is exported into summaries in the “Summary 3 – Analytics” tab. Only 2020 data is currently to be populated. However, it is contemplated that going forward, data for prior years will also be populated such that it will provide the Lead State Regulator with metrics to identify trends over time.

Input 5 – Sensitivity Analysis and Inputs

27.75. All The sensitivity analysis is ultimately calculated in the “Summary 2” tab. Most inputs for the Analysis 1, 2, 5, 6, and 7 are not required in this tab. They are populated from other tabs as described below and automatically calculated into the analysis which are reported in the “Summary 2” tab. However, certain analysis requires inputs from this tab. Inputs are required in this tab for Analysis 3, Analysis 4, Analysis 8, and Analysis 9. Those inputs are automatically pulled into the calculation in the Summary 2 tab. Sensitivity Analysis are intended to provide the Lead State Regulator additional information that helps them better understand the financial condition of the group. Similar to the sensitivity analysis included in the legal entity RBC, it provides the regulator with additional information and allows them to consider “what-if” scenarios to better understand the impact of such items. The results of these analysis will not impact the GCC ratio.

- **[Analysis 1]: GCC overall sensitivity analysis** – No additional data is needed in the tab. The overall GCC ratio will be presented at 300% x ACL level. This calculation will increase the calculated capital for most entity types by a factor of 1.5. However, entities with existing regulatory capital requirements (e.g., foreign insurers and banks) will be reported at the same level specified in these instructions for both the GCC and the sensitivity analysis (i.e., at 100% of the jurisdictional or sectoral PCR requirements).

- **[Analysis 2]: Excluded non-insurance/non-financial entities without material risk** – No additional data is needed in the tab. The data for entities where exclusion has been requested and the lead state does not agree will be populated based on entries in [Sch 1B Col 3] and data in Inventory B, Column 2 and Inventory C, Column 2. This analysis will be applied and reported in the “Summary 2” tab. It will provide the regulator with the impact of excluding non-agreed-upon entities on the GCC ratio.

- **[Analysis 3 and Analysis 4]: Permitted practices** – This information shows the amount of U.S. permitted practices as described in the Preamble of the Accounting Practices and Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio.
  - **Prescribed Practices** – This information to be entered on this tab shows the amount of U.S. prescribed and prescribed practices as described in the Preamble of the Accounting Practices and Procedures Manual and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio. This analysis will be applied and reported in the “Summary 2” tab.
Permitted and Prescribed Practices – Report values from annual financial statement Note 1 (excluding those pertaining to XXX/AXXX captives):

a. Entity identifier
b. Value of permitted practice
c. Capital Requirement attributable to permitted practice (if any)
d. Description of permitted practice
e. Value of prescribed practice
f. Capital requirement attributable to permitted practice (if any)
g. Description of prescribed practice

- [Analysis 5]: Foreign Insurer Capital Requirements Scaled – No additional data is needed in the tab. This information shows the amount of foreign insurer capital calculations scaled by applying scalars using the Excess Relative Ratio approach at a 200% x ACL RBC calibration level and at 300% x ACL for all non-U.S. jurisdictions where scalar data is available (see Appendix 1). The sensitivity analysis allows the state to understand the impact of this specific scaling method on the GCC ratio. This information is populated from the “Scalar” tab. This analysis will be applied and reported in the “Summary 2” tab.

- [Analysis 6]: Debt Classified as “Other” – No additional data is needed in the tab. The analysis data will be populated from the “Capital Instruments” tab and the analysis and will be applied and reported in the “Summary 2” tab.

- [Analysis 7]: Alternative Capital Calculation for Non-Financial Entities – No additional data is needed in the tab. The values reported will represent the alternative revenue-based values for capital calculation that is being captured in the template. The data will be populated from Schedule 1 and Inventory B and the analysis will be applied and reported in the “Scaling Non-Insurance” tab (Calc 2).

- [Analysis 8] For captives other than XXX/AXXX, all other U.S. captives shall make an asset adjustment as described below;

Asset Impact

For the asset impact, it is ONLY required for the assets included in a captive or an entity not required to follow the statutory accounting guidance in the Accounting Practices and Procedures Manual. It is not required for assets for those groups that retain such business in a non-captive traditional insurance company(ies) already required to follow the Accounting Practices and Procedures Manual.

NOTE: Variations for state prescribed and permitted practices are captured in the separate sensitivity analysis.
79. The asset impact amount shall be determined based on a valuation that is equivalent to what is required by the Accounting Practices and Procedures Manual (SAP). For this purpose, “equivalent” means that, at a minimum the listed adjustments (as follows) be made with the intent of deriving a valuation materially equivalent to what is required by the Accounting Practices and Procedures Manual, however, without requiring adjustments that are overly burdensome (e.g., mark-to market bonds used by some captives under U.S. GAAP versus full SAP that considers NAIC designations). To be more specific, the asset impact shall be developed by accumulating the impact on surplus because of an accumulation of all the following in paragraph 78 and paragraph 79 combined.

NOTE: Letters of credit or other financial instruments that operate in a manner like a letter of credit, which are not designated as an asset under either SAP or U.S. GAAP and are required to be adjusted out of the available assets (i.e., the asset reduction is recorded as a negative figure in the template).

80. To achieve the above, accumulate the effect of making the following impact and record as a negative figure in the template, an asset adjustment for all the following explicit assets not allowed to be admitted under SAP:

- Assets specifically not allowed under the Accounting Practices and Procedures Manual in accordance with paragraph 9 of SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.
- SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers.
- SSAP No. 16R—Electronic Data Processing Equipment and Software.
- SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements.
- SSAP No. 20—Nonadmitted Assets.
- SSAP No. 21—Other Admitted Assets (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP).
- SSAP No. 29—Prepaid Expenses.
- Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the Accounting Practices and Procedures Manual (e.g., deferred policy acquisition costs, pre-operating, development and research costs, etc.).
- Depreciation for certain assets in accordance with the following SSAPs:
  o SSAP No. 16R—Electronic Data Processing Equipment and Software.
  o SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements.
  o SSAP No. 68—Business Combinations and Goodwill.
- The amount of goodwill of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- The amount of the net deferred tax assets (DTAs) of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
- Any surplus notes held by the SCA issued by the reporting entity.
In addition, record as a negative figure, an asset impact for any assets that are not recognized as an admitted asset under the principles of SSAP No. 4—Assets and Nonadmitted Assets, including:

- Letters of credit, or other similar instruments, that operate in a manner like a letter of credit and, therefore, do not meet the definition of “asset” as required under paragraph 2.
- Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets that are unavailable due to encumbrances or other third-party interests, should not be recognized on the balance sheet and are, therefore, considered nonadmitted.
- Assets of an insurance entity pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, such assets shall not be recognized as an admitted asset on the balance sheet.

[Analysis 9]: Other Regulator Discretion – This analysis is designed to reflect other regulator adjustments including for transactions other than XXX/AXXX reinsurance where there are differences in regulatory regimes exist and there is a desire to fully reflect U.S. Statutory Accounting treatment or to reflect the lead state’s view of risk posed by financial entities without specified regulatory capital requirements or risk posed by non-insurance/non-financial entities that have been included in the GCC. This will be a post-submission item completed by the Lead State Regulator. Enter the following information here:

a. Entity identifier.
b. Amount of adjustment.
c. Description of regulatory issue.

NOTE: This column may also be completed by the filer after advance consultation with the Lead State Regulator.

Input 6 – Questions and Other Information

This tab provides space for participants to describe or provide greater detail for specified entries in other tabs (as noted in the instructions for the columns in those tabs) or additional relevant information not captured in the template. Examples include:

- the materiality method applied to exclude entities in Schedule 1,
- adjustments for intragroup debt, description of permitted practices,
- scalars proposed, supporting information for jurisdiction without a prescribed scalar,
- and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab. Specified items are included in the tab. Other information that the filer believes is relevant should be added freeform in this tab.

Information or Detail for Items Not Captured in the Template

- Intercompany Guarantees – Provide requested information:

  a. Entity identifier issuing the guarantee.
  b. Entity identifier of entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the guarantee.
  d. Describe the nature of the guarantee.
• Capital Maintenance Agreements – Provide requested information:
  a. Entity identifier obligated under the agreement.
  b. Entity identifier for entity or entities that are covered by the guarantee.
  c. Indicate the notional or fixed value of the agreement.
  d. Describe the nature of the agreement.

Information or Detail for Items Captured in the Template

• Value of intangible assets included in non-insurance Holding Companies – Provide the requested information for all entities designated in the non-operating holding company entity category.
  a. Entity identifier.
  b. All goodwill.
  c. All intangibles related to health care services acquisitions included in local carrying value column in Inventory B. Examples include, but are not limited to, customer relationships (policy retention, long-term health services contracts) and technology/patents/trade names and provider network contracts.
  d. All other intangible assets included in local carrying value column in Inventory B.
  e. Total of line b, line c and line d.*
  f. A description of each intangible asset included in line d.

* Auto populated.

Further detail on amounts reported for specific intangibles other than goodwill may be requested by the Lead State Regulator during review of the GCC template.

Information or Detail for Items Captured in the Template

• Currency Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 2 is different than the amount in Inventory B, Column 1 due to currency conversion.
  a. Entity identifier.
  b. Currency type reported in Inventory B, Column 1 and Inventory C, Column 1 (foreign currency).
  c. Conversion rate applied.
  d. Source of conversion rate applied.

• Intragroup Assets – Description of Adjustments for intragroup assets reported in Inventory B, Column 6 and Inventory C, Column 6. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 6.
  c. Description of adjustment.

• Other Adjustments – Description of adjustments reported in Inventory B, Column 7 and Inventory C, Column 7. Provide the following information:
  a. Entity identifier.
  b. Amount reported in Inventory B, Column 7.
  c. Description of adjustment.
• Accounting Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 1 is different than the amount in Inventory B, Column 2 due to differences in accounting basis
  a. Entity identifier.
  b. Value reported in Inventory B, Column 1.*
  c. Value reported in Inventory B, Column 2.*
  d. Total amount of adjustments related to difference in accounting basis.*
  e. Nature of adjustment (e.g., GAAP to SAP).
  * Auto populated.

• The tab also includes a listing of all Schedule A and Schedule BA affiliates, along with the following information:
  a. Parent identifier (if available) – This is the same information as is included in Schedule 1 [Sch 1B Col 3] as would be entered for non-Schedule A/Schedule BA affiliates.
  b. Parent Name – Enter the Name of the Parent.
  c. Is Parent a Schedule A or Schedule BA Asset? – This column is only required for financial entities that are Directly owned by a Schedule A or Schedule BA Affiliate. No other downstream affiliates owned by Schedule A or Schedule BA entities need to be listed. These entities are not normally independently reported in Schedule A and Schedule BA so are extra entries.
  d. Financial? (Y/N) – If the entity meets the criteria as being a financial entity, indicate with a “Yes” response. A “No” response is not required for other entities listed. “Yes” entries should correspond to “Yes” entries in Schedule 1 [Sch 1B Col 16].
  e. Carrying Value of Immediate Parent – Report the value listed in Schedule A and Schedule BA of the Parent insurer. For those cases where an indirect financial entity is reported use the value used by the direct Parent.
  f. Capital Requirement for Immediate Parent – Report the value listed in the RBC report of the Parent insurer (pre-tax where applicable). For those cases where an indirect financial entity is listed, report the value of the capital requirement attributable to the Insurer rather than the direct non-financial Schedule BA Parent. The capital requirement reported in this column for the immediate Schedule BA Parent should be adjusted to deduct the amount moved to Schedule 1 and Inventory C.
Calc 1 – Scaling (Insurance Entities)

83.81. All entries in this tab are calculation cells populated using data from within the tab or using data from elsewhere in the template. Scaled values for calculated capital will become part of the GCC ratio. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab. The concept of a scalar was first introduced to address the issue of comparability of accounting systems and capital requirements between insurance regulatory jurisdictions. The idea is to scale capital requirements imposed on non-U.S. insurers so as to be comparable to an RBC-based requirement. Two approaches for scaling related to foreign insurers were presented, and others are being explored and will be reviewed. A decision on the scaling methodology to be adopted into the GCC template will be made at the end of the review. In the interim a scalar of 100% of the jurisdictional PCR will be applied to all jurisdictions where a risk-sensitive capital requirement is in place.

84.82. Information on the Excess Relative Ratio (ERR) scalar methodology will be collected and applied in the “Sensitivity Analysis” tab.

NOTE: See Appendix 1 for more information and examples on how the ERR scalars are calculated.

85.83. For jurisdictions without risk-sensitive capital requirements a 100% charge will be applied to adjusted carrying value.

Calc 2 – Capital Calculations for Non-insurance Entities

86.84. All entries in this tab are either calculation cells using data from within the tab or using data populated from elsewhere in the template. Calculated capital for all entities except insurers will be reported in this tab. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab.

87.85. In addition, one informational option for calculated capital for financial entities without an existing regulatory capital requirement and one informational option for calculated capital for non-financial entities will be reported in this tab. Those calculation will not be carried into the “Summary 1 – Entity Level” tab and will not be part of the GCC ratio.

88.86. Only amounts for entities that the filer and the Lead State Regulator agree should **not** be excluded [Sch 1B Col 2] will be brought into the calculation in this tab and the “Summary 1 – Entity Level” tab. Entities where the Lead State Regulator does not agree with the filer’s request to exclude an entity will be part of the GCC ratio.

Summary 1 – Entity Level GCC Summary

89.87. Summarized results by entity type for the GCC ratio will be reported in this tab. An on top adjustment for debt allowed as additional capital will be added at the bottom of the table. All informational sensitivity analysis will be reported in Summary 2 and will not impact the GCC ratio.
Summary 2 – Informational Sensitivity Tests

90.88. Summary results for each informational sensitivity analysis described in the “Sensitivity Analysis Inputs” tab will be shown here. Each sensitivity analysis will be shown on a stand-alone basis. It is expected that each informational sensitivity analysis will run automatically in the background and the results for each displayed in this tab. The results for the informational sensitivity analysis will not be included in the “Summary 1 – Entity Level” tab.

Summary 3 – Analytics

91.89. Summary results for metrics described in the Analytics Guidance [insert attachment or appendix reference] and utilizing data collected in the “Input 4 – Analytics” tab or other tabs in the GCC will be calculated and presented here.

Summary 4 – Alternative Grouping Option(s) (aka “Cigna Illustration”)

92.90. One sample alternative structure for grouping by entity type or jurisdiction in the GCC is displayed based on a suggested method. It can be modified, or other suggestions can be accommodated based on combining data from Schedule 1 and the Inventory in defined ways.

This tab is intended to be an additional analytical tool. The tool summarizes the GCC based on how a reporting entity views its organization, and provides regulators that view, to align it with regulatory information, other than what is reported elsewhere in the GCC template, that the reporting entity has submitted such as current filings, communications, etc. In this summary view, entities are organized into like regimes (e.g., RBC filers, foreign insurers, banks, financial, or non-financial entities) and multiple entities may be grouped together, in order to create a view of capital that is easy to review and analyze within each grouping. The intent of this approach is to provide an additional analytical tool designed to enhance dialogue between the Lead State Regulator and the company contemplated by the GCC filing. This view is transparent (no scalers, no adjustments, no de-stacking) so that financial information may be crosswalked to other financial submissions such as RBC filings. However, it does contain double counting of available and required capital (i.e., intra-company investments and transactions are not eliminated) and cannot be used to create a GCC ratio.

93.91. The results are dependent on how the reporting entity populated. Input 1 – Schedule 1, Column 9 Alternative Grouping. For example, if you have a dozen small dental HMO businesses, you may wish to collapse the results to a single line called “Dental HMOs,” by populating Input 1 – Schedule 1, Column 9 Alternative Grouping for each dental HMO as “Dental HMOs.” Then right-click and select “Refresh” to see the results with the “Dental HMOs” combined.

94.92. For reference, the data for the Summary 4 – Grouping Alternative is from Calc 1 – Scaling (Ins, Bank), which is fed by the inputs made in Input 1 – Schedule 1, Input 2 – Inventory, etc.
Appendix 1 – Explanation of Scalars

95.93 The concept of a scalar is to equate the local capital requirement to an adjusted required capital level that is comparable to U.S. levels. The purpose of a scalar is to address the issue of comparability of accounting systems and capital requirements between jurisdictions. The following provides details on how the scalars were calculated by the NAIC, or how they are to be used when the NAIC has not developed a scalar for a country due to lack of public data.

Excess Relative Ratio Approach

96.94 Included below are various steps to be taken in calculating the excess relative ratio approach to developing jurisdiction-specific scalars. In order to numerically demonstrate how this approach could work, hypothetical capital requirements and financial amounts have been developed for Country A. Based on preliminary research that has been performed by NAIC staff, it appears that the level of conservatism built into accounting and capital requirements within a jurisdiction may differ significantly for life insurers and non-life insurers. Therefore, ideally each jurisdiction would have two different scalars based on the type of business. The example below includes information related to life insurers in the U.S. and Country A.

Step 1: Understand the Jurisdiction’s Capital Requirements and Identify the First Intervention Level

a. The first step in the process is to gain an understanding of the jurisdiction’s capital requirements. This can be done in a variety of ways including reviewing publicly available information on the regulator’s website, reviewing the jurisdiction’s Financial Sector Assessment Program (FSAP) reports and discussions with the regulator.

In Country A, assume that the capital requirements for life insurers are based on a capital ratio, which is calculated as follows:

\[
\text{Capital ratio} = \frac{\text{Total available capital}}{\text{Base required capital (BRC)}}
\]

In the U.S., capital requirements are related to the insurer’s RBC ratio. For purposes of the Relative Ratio Approach, an Anchor RBC ratio is used and calculated as follows:

\[
\text{Anchor RBC ratio} = \frac{\text{Total adjusted capital}}{100\% \text{ Company Action Level RBC}^*}
\]

* 100% Company Action Level RBC is equal to the Total RBC After Covariance before operational risk, without adjustment or 200% Authorized Control Level RBC.

b. Similar to legal entity RBC requirements in the U.S., Country A utilizes an early intervention approach by establishing target capital levels above the prescribed minimums that provide an early signal so that intervention will be timely and for there to be a reasonable expectation that actions can successfully address difficulties. Presume that this target capital level is similar to the U.S. Company Action Level (CAL) event, both of which can be considered the first intervention level in which some sort of action—either on the part of the insurer or the regulator—is mandated. A separate sensitivity calculation will be applied in the GCC template using trend test level RBC.
c. For Country A, the target capital level is presumed to be a capital ratio of 150%. That is, the insurer’s ratio of total available capital to its BRC should be above 150% to avoid the first level of regulatory intervention. Again, this is similar to the U.S. CAL event, which is usually represented as an RBC ratio of 200% of Authorized Control Level (ACL) RBC (ignoring the RBC trend test). In the Relative Ratio approach, the Anchor RBC ratio represents the Company Action Level event (or first level of regulatory intervention) as 100% CAL RBC (instead of 200% ACL RBC), because CAL RBC is the reference point that is used to calibrate against other regimes. The Anchor RBC Ratio (Total Adjusted Capital ÷ 100% CAL RBC) tells us how many “multiples of trigger level capital” that the company holds. Conceptualizing the CAL event as 100% CAL RBC allows the consistent definition of local capital ratios that are calibrated against a “multiples of the trigger level” approach, to ensure an “apples-to-apples” comparison.3

Step 2: Obtain Aggregate Industry Financial Data

92.95. The next step is to obtain aggregate industry financial data, and many jurisdictions include current aggregate industry data on their websites. Included below are the financial amounts for use in this exercise.

<table>
<thead>
<tr>
<th>U.S. Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Adjusted Capital = $495B</td>
</tr>
<tr>
<td>Authorized Control Level RBC = $51B</td>
</tr>
<tr>
<td>Company Action Level RBC = $102B</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Country A Life Insurers – Aggregate Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital = $83B</td>
</tr>
<tr>
<td>BRC = $36B</td>
</tr>
</tbody>
</table>

Step 3: Calculate a Jurisdiction’s Industry Average Capital Ratio

98.96. To calculate a jurisdiction’s average capital ratio, the aggregate total available capital for the industry would be divided by the minimum or base capital requirement for the industry in computing the applicable capital ratio. In Country A, this would be the BRC. In the U.S., this base or minimum capital requirement is usually seen as the ACL RBC, but because the Relative Ratio Approach is using 100% CAL RBC as a reference point to calibrate other regimes to, the Relative Ratio formula uses 100% CAL RBC as the baseline and the first-intervention level to calculate the Average Capital Ratio and Excess Capital Ratio. As a result, the scaled ratio of a non-U.S. company should inform regulators how many multiples of first-intervention level capital the non-U.S. company holds. Included below is the formula to calculate a jurisdiction’s industry average capital ratio:

While it is mathematically equivalent to use 200% ACL RBC as the denominator, the Approach is designed to use the representation of first-intervention level capital levels as the conceptual underpinning of the Relative Ratio Approach, where 100% CAL RBC is the reference point to calibrate against other regimes.
### Calculation of U.S. Industry Average Capital Ratio – Life Insurers

<table>
<thead>
<tr>
<th>Total Adjusted Capital</th>
<th>CAL RBC</th>
<th>Capital Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>$495B</td>
<td>$102B</td>
<td>485%</td>
</tr>
</tbody>
</table>

### Calculation of Country A Industry Average Capital Ratio – Life Insurers

<table>
<thead>
<tr>
<th>Total Available Capital</th>
<th>BRC</th>
<th>Capital Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>$83B</td>
<td>$36B</td>
<td>231%</td>
</tr>
</tbody>
</table>

### Step 4: Calculate a Jurisdiction’s Excess Capital Ratio

The next step is to understand the level of capital the industry is holding above the first intervention level. Therefore, to calculate a jurisdiction’s excess capital ratio, one would first need to calculate the amount of the capital ratio carried in excess of the capital ratio required at the first intervention level. This amount would then need to be divided by the capital ratio required at the first intervention level.

**General Excess Capital Ratio Formula**

\[
\text{Excess Capital Ratio} = \frac{\text{Average Capital Ratio} - \text{Capital Ratio at the First Intervention Level}}{\text{Capital Ratio at the First Intervention Level}} \times 100\%
\]

### Calculation of U.S. Excess Capital Ratio – Life Insurers

\[
\frac{485\% \text{ (Average Capital Ratio)} - 100\% \text{ (Capital Ratio at the First Intervention Level)}}{100\% \text{ (Capital Ratio at the First Intervention Level)}} = 385\%
\]

### Calculation of Country A Excess Capital Ratio – Life Insurers

\[
\frac{231\% \text{ (Average Capital Ratio)} - 150\% \text{ (Capital Ratio at the First Intervention Level)}}{150\% \text{ (Capital Ratio at the First Intervention Level)}} = 54\%
\]

4 100% CAL RBC translates to an ACL RBC level of 200%, but for conceptual purposes, the Relative Ratio Approach refers to the U.S. first intervention level as 100% CAL RBC, while 100% CAL RBC is the reference point to which the Relative Ratio Approach calibrates other regimes. In other words, 100% CAL RBC ensures that the scaled ratio of Country A results in a ratio that determines how many multiples of first-intervention level capital that the company in Country A is holding.
Step 5: Compare a Jurisdiction’s Excess Capital Ratio to the U.S. Excess Capital Ratio to Develop the Scalar

101.99. Based on the information above, the U.S. excess capital is 385%. In other words, life insurers in the U.S. carry approximately 385% more capital than what is needed over the first intervention level. Country A’s excess capital ratio is 54%. That is, life insurers in Country A carry approximately 54% more capital than what is needed over the first intervention level.

102.100. To calculate the scalar, one would divide a jurisdiction’s excess capital ratio by the U.S. excess capital ratio. Therefore, the calculation of Country A’s scalar for life insurers would be 54% ÷ 385% = 14%. Therefore, Country A’s scalar for life insurers would be 14%.

Step 6: Apply to the Scalar to the Non-U.S. Insurer’s Amounts in the GCC

103.101. In order to demonstrate how the calculation of the scalar works, it would be best to provide a numerical example. For purposes of this memo, assume that a life insurer in Country A reports required capital of $341,866 and total available capital of $1,367,463. (These are the amounts previously used in a hypothetical calculation example that was discussed by the Working Group during its July 20, 2016, conference call.) As noted previously, the above information and calculation suggests that U.S. life insurers carry capital far above the minimum levels, while life insurers in Country A carry capital far closer to the minimum. Therefore, in order to equate the company’s $341,866 of required capital, we must first calibrate the BRC to the first regulatory intervention level by multiplying it by 150%, or Country A’s capital ratio at the first intervention level. The resulting amount of $512,799 is then multiplied by the scalar of 14% to get a scaled minimum required capital of $71,792.

104.102. Further, the above rationale suggests that the available capital might also be overstated (because it does not use the same level of conservatism in the reserves) by the difference between the calibrated required capital of $512,799 and the required capital after scaling of $71,792, or $441,007. Therefore, we should now deduct the $441,007 from the total available capital of $1,367,463 for a new total available capital of $926,456. These two recalculated figures of required capital of $71,792 and total available capital of $926,456 is what would be included in the group’s capital calculation for this insurer. These figures are further demonstrated below.

<table>
<thead>
<tr>
<th>Calculation of Scaled Amounts for GCC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amounts as Reported by the Insurer in Country A</td>
</tr>
<tr>
<td>Total available capital = 1,367,463</td>
</tr>
<tr>
<td>Minimum required capital (BRC) = 341,866</td>
</tr>
<tr>
<td>Calibration of BRC to 1st Regulatory Intervention Level</td>
</tr>
<tr>
<td>341,866 (BRC) * 150% = 512,799</td>
</tr>
<tr>
<td>Scaling of Calibrated Minimum Required Capital</td>
</tr>
<tr>
<td>512,799 (Calibrated BRC) * 14% (Scalar) = 71,792 (Difference of 441,007)</td>
</tr>
<tr>
<td>Scaled Total Available Capital</td>
</tr>
<tr>
<td>1,367,463 (Total Available Capital) – 441,007 (Difference in scaled required capital) = 926,456</td>
</tr>
</tbody>
</table>

© 2021 National Association of Insurance Commissioners
105.103. Given these scaled amounts, one can calculate the numerical effect on the company’s relative capital ratio by using the unscaled and scaled amounts included below.

<table>
<thead>
<tr>
<th></th>
<th>Unscaled Amounts from Table Above</th>
<th>Scaled Amounts from Table Above</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Available Capital (TAC)</td>
<td>1,367,463</td>
<td>926,456</td>
</tr>
<tr>
<td>Base Required Capital (BRC)</td>
<td>341,866</td>
<td>71,792</td>
</tr>
<tr>
<td>Capital Ratio (= TAC ÷ BRC)</td>
<td>400%</td>
<td>1290%</td>
</tr>
</tbody>
</table>

106.104. Considering the fact that life insurers in Country A hold much lower levels of capital over the first intervention level as compared to U.S. life insurers, the change in the capital ratio from 400% (unscaled) to 1290% (scaled) appears reasonable and consistent with the level of conservatism that we understand is built into the U.S. life RBC formula driven primarily from the conservative reserve valuation.
Stress / Scenario Proposal for GCC Trial Implementation

What follows is a proposal for a stress to be applied to the GCC to test how the limits on recognition of capital instruments as capital behave under stress. In designing this stress, an emphasis was placed on simplicity. The proposed scenario requires no input or calculation on the part of volunteers beyond that already necessary for completing the GCC template. Further scenarios, if any, could follow this same structure:

- (1) A scenario that includes one (or more) stresses to a Group’s financial position
- (2) Specification of how each stress impacts the available capital and calculated capital for each type of legal entity
- (3) Input of the adjusted carrying value and adjusted calculated capital after the impact of the stress(es)
- (4) Re-calculation of the same calculations (e.g. application of limits on debt and scaling) and summary tables (including sensitivity tests)

Proposal

Scenario: A generic loss event that results in a proportional reduction in available capital across the Group’s entire operations. What follows is a description based on a 10% reduction. A variation based on a 20% reduction will be tested as well.

Specification: The scenario should result in X% reduction (10% used in the example below) in the adjusted available capital for all non-holding company entities. For entities where calculated capital is a fixed percentage of available capital, there should be also reduction in calculated capital as well. As an approximation of the impact of the impact of this scenario on revenue, the calculated capital for financial entities with revenue-based exposure should reduce by X% as well.

Inputs: No direct input needed from Volunteers. Instead the inputs will be automatically calculated as follows—

<table>
<thead>
<tr>
<th>Type of Entity</th>
<th>Impact on Adj Carrying Value</th>
<th>Impact on Adj Calc Capital</th>
</tr>
</thead>
<tbody>
<tr>
<td>US Insurance Entities</td>
<td>10% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Banking and Other W Cap Req)</td>
<td>10% reduction</td>
<td>No Impact</td>
</tr>
<tr>
<td>Fin (Asset Mgmt and Other W/O Req)</td>
<td>10% reduction</td>
<td>10% reduction based on corresponding reduction in revenue</td>
</tr>
<tr>
<td>Non-US (w/ Risk Based CC)</td>
<td>10% reduction</td>
<td>No Impact on unscaled GCC though XS Relative Ratio factors should be adjusted for sensitivity test</td>
</tr>
<tr>
<td>Non-US (non-Risk Based))</td>
<td>10% reduction</td>
<td>10% reduction based on corresponding reduction in equity value</td>
</tr>
<tr>
<td>HoldCo</td>
<td>No Impact</td>
<td>No Impact</td>
</tr>
<tr>
<td>Other</td>
<td>10% reduction</td>
<td>10% Reduction based on corresponding reduction in equity value</td>
</tr>
<tr>
<td>Capital Instruments</td>
<td>No Impact</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Outputs: The GCC template will be configured to automatically calculate outputs using the inputs above. This can be presented on an additive basis (e.g. start with reduction in available capital alone and then add the impact on each entity type’s calculated capital one at a time building to the full scenario outlined in the chart, above.

Draft: 8/10/21

Group Solvency Issues (E) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Summer National Meeting)
August 4, 2021

The Group Solvency Issues (E) Working Group met Aug. 4, 2021. The following Working Group members participated: Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Kim Hudson (CA); Kathy Belfi (CT); Charles Santana (DE); Virginia Christy (FL); Kim Cross (IA); Cindy Andersen, Susan Berry and Eric Moser (IL); Roy Eft (IN); John Turchi (MA); Judy Weaver (MI); Shannon Schmoeger (MO); Diana Sherman (NJ); Margot Small (NY); Dale Bruggeman (OH); Doug Stolte (VA); and Amy Malm (WI).

Mr. Schrader stated that the primary purpose of the meeting is to discuss comments received on the public exposure of proposed revisions to the NAIC’s Financial Analysis Handbook (Handbook), which were developed by the ComFrame Financial Analysis Drafting Group. The proposed revisions are intended to incorporate elements of the International Association of Insurance Supervisors’ (IAIS’) Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) deemed appropriate for the U.S. system of solvency regulation.

Mr. Schrader stated that the proposed revisions were exposed for a 60-day public comment period and that five comment letters were received during the exposure. Mr. Schrader stated that the focus of the meeting will be to discuss the comments received at a high level, before asking the Drafting Group to consider the development of a revised draft in response to the comments received.

Robert Neill (American Council of Life Insurers—ACLI) provided an overview of the topics covered in the ACLI comment letter, which included concerns related to the scope of insurers that proposed procedures could be applied to, the appropriateness of placing guidance on determining the head of an internationally active insurance group (IAIG) in the Handbook, and concerns regarding references to IAIS Insurance Core Principles (ICPs) and application papers within the Handbook. In addition, Mr. Neill recommended that the Handbook language allow for more flexibility in approaches to governance, control, and risk management functions and expressed concerns over language referencing the IAIS’ insurance capital standard (ICS).

In response to the scoping issue, Mr. Schrader stated that the Drafting Group thinks that the newly proposed procedures should not restrict the existing ability of state insurance regulators to conduct holding company analysis and examination procedures as they see fit in accordance with a risk-focused approach to financial surveillance. Therefore, while they are primarily intended for use in conducting analysis of IAIGs, the proposed language states that analysts can use judgment in determining whether the procedures should be applied to a broader range of insurance groups. Mr. Schrader also stated that the Drafting Group is likely open to working on some additional clarifying language in this area.

Mr. Schrader stated that the intent of the Drafting Group behind including guidance on determining the head of the IAIG in the Handbook was to encourage state insurance regulators to consider applying the ComFrame considerations at a level below the ultimate controlling person, when appropriate. Mr. Schrader stated that the requirements and oversight outlined in the Insurance Holding Company System Regulatory Act (#440) generally apply at the ultimate controlling person or holding company registrant level. However, there may be situations in a conglomerate group where the insurance operations are overseen at a subsidiary or intermediate holding company level. Therefore, providing guidance to assist state insurance regulators in using discretion in determining the level of the group to focus on in conducting analysis procedures was deemed appropriate for inclusion in the Handbook.

© 2021 National Association of Insurance Commissioners 1
Mr. Schrader stated his agreement with the need to allow for flexibility in approaches to governance, control, and risk management functions within the Handbook guidance and believes that this was the intent of the Drafting Group. However, he stated that the Drafting Group can consider some additional clarifying language in that area. Mr. Schrader stated that the Drafting Group’s intent behind including references to the ICS in the Handbook was not to expect or require ICS reporting by IAIGs, but rather to encourage group-wide supervisor review and consideration if ICS reporting is being prepared on a voluntary basis by certain IAIGs during the monitoring period. Mr. Schrader stated that given the key role that the ICS plays within ComFrame guidance and the ongoing implementation in other jurisdictions, that Handbook guidance would be incomplete without some background information on ICS.

Steve Broadie (American Property Casualty Insurance Association—APCIA) stated that APCIA members endorse the comments made by the ACLI in this area and oppose references to the ICS in the Handbook as a tool for group capital assessment because it is developed for a different system of evaluating group solvency and based on a different accounting system. Mr. Schrader stated that as several IAIGs are currently filing an ICS with their group-wide supervisor during the monitoring period, those supervisors would be expected to review the filing, and the Handbook guidance should so indicate. Ms. Weaver stated that it may also be helpful for other state insurance regulators who are involved in supervising non-U.S.-based IAIGs to have some background information on the ICS so that they can understand how it is being used in other jurisdictions. Keith Bell (Travelers) stated that part of the issue here is that the ICS is currently in a monitoring period and not really a regulatory standard for anyone yet. As such, the Handbook should only address the ICS when and if it becomes a regulatory requirement for U.S.-based groups. Mr. Schrader stated that it is obvious that various interested parties have strong feelings on this topic and encouraged the Drafting Group to review and consider the comments received.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) provided an overview of the comment in the AHIP letter, which focused on the scope of companies that the proposed procedures could be applied to. He stated that the new guidance cites Section 7.1 of Model #440 as the authority to conduct the procedures, and that section of the act relates specifically to the group-wide supervision of IAIGs. Therefore, the law does not grant state insurance regulators to apply these measures to non-IAIG groups. Mr. Schrader stated that Section 7.1 is primarily focused on the identification of IAIGs and outlining the role of a group-wide supervisor but does highlight certain areas of group governance and risk exposures that should be assessed by the group-wide supervisor. However, Mr. Schrader said he does not interpret that to mean that these same areas cannot be reviewed for other groups, just that they are required to be reviewed for IAIGs. Ms. Belfi stated that other sections of Model #440, including Section 6 on examinations, provide broad authority to conduct procedures as deemed appropriate for all insurance holding company systems. Therefore, Ms. Belfi stated that such authority would allow such procedures to be performed on a broader range of insurers. Mr. Schrader asked NAIC staff to seek the opinion of its legal division on the regulatory authority outlined in Model #440 to conduct monitoring procedures for holding company groups and to return and report the results to the Working Group.

Mr. Broadie provided an overview of the APCIA letter and stated that it covers many of the same topics that were already discussed by the ACLI. Mr. Broadie stated that he will cover three topics from the letter that have not yet been discussed. First, he stated that APCIA members are opposed to including references to the IAIS ICPs and Application Papers within the Handbook as this could be seen as incorporating all IAIS standards by reference, which would not be appropriate for the U.S. system. Second, Mr. Broadie stated that proposed language in the Handbook appears to expect a group-wide Corporate Governance Annual Statement or Own Risk and Solvency Assessment (ORSA) Summary Report to be filed by IAIGs, which could exceed the authority granted by the existing legislation in those areas. Finally, Mr. Broadie stated that several areas in the proposed Handbook guidance appear to expect IAIGs to have group-wide processes or functions that are too prescriptive and would not allow appropriate flexibility for various types of corporate structures.

Mr. Schrader stated that the intent behind placing references to IAIS ICPs and Application Papers in the Handbook was to highlight additional background information and reference material to analysts and was not an attempt to incorporate by reference. Mr. Schrader stated that the Drafting Group should develop language to clarify the intent in this regard. Regarding the second comment, Mr. Schrader stated that it will be necessary for the supervisor to obtain information on group practices in certain areas to conduct the assessments outlined in ComFrame. As such, the Handbook guidance states that logical sources
for this information would be the Corporate Governance Annual Disclosure and the ORSA Summary Report, if they are
provided at the head of the IAIG level. However, the Handbook cannot and does not require filings to be made at that level, so
it will be up to the group-wide supervisor to determine the best way to obtain the necessary information. Mr. Schrader also
stated that this topic will likely be addressed in more detail as drafting work moves forward on the ORSA Guidance Manual,
which will be discussed later in the agenda. Regarding the third comment, Mr. Schrader stated that the Drafting Group’s intent
was to provide flexibility in approaches to group governance and processes, but that additional language can be considered to
make expectations clearer in this regard.

Joe Zolecki (Blue Cross and Blue Shield Association—BCBSA) stated his support for the comments made in the other letters
and focused his comments on the scope issue. Mr. Zolecki stated that his members would encourage the deletion of language
stating that the new procedures added to the Handbook could be performed in non-IAIG group analysis. However, if the
Drafting Group’s intent is to prepare companies that are approaching the IAIG threshold for that additional level of regulation,
then the BCBSA comment letter has some specific language recommendations to address this issue. Mr. Schrader stated that
the Drafting Group would review and consider this language in developing an updated draft.

Ms. Cross stated that Iowa had no additional comments to make on their letter. Mr. Schrader thanked the Iowa Department of
Insurance (DOI) for its comments and stated that the Drafting Group will consider them in developing an updated draft.

2. Received an Update on Other Drafting Efforts

Mr. Schrader stated that two other drafting groups have begun meeting to develop proposed revisions to the NAIC’s Financial
Condition Examiners Handbook and ORSA Guidance Manual to incorporate ComFrame elements as deemed appropriate for
the U.S. system of insurance regulation. Mr. Schrader stated that the intent of the Working Group will be to adopt the proposed
ComFrame revisions to all three NAIC publications together as a package later this year once they have all been fully developed
and vetted.

3. Discussed IAIS Consultation

Mr. Schrader stated the IAIS has released a revised Application Paper on Supervisory Colleges for public consultation.
Feedback on this Application Paper is due to the IAIS by Aug. 24. This paper has been updated to reflect subsequent
developments of IAIS supervisory materials, in particular revisions to ICP 3 (Information Sharing and Confidentiality
Requirements) and ICP 25 (Supervisory Cooperation and Coordination), and the adoption of ComFrame.

Mr. Schrader encouraged Working Group members to review the revised Application Paper and provide comments to the
International Insurance Relations (G) Committee for submission to the IAIS. Interested parties were also encouraged to review
the revised Application Paper and submit their own comments to the IAIS.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.
The Group Solvency Issues (E) Working Group met May 19, 2021. The following Working Group members participated: Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Susan Bernard and Kim Hudson (CA); Kathy Belfi (CT); Charles Santana (DE); Robert Ridenour (FL); Kim Cross (IA); Cindy Andersen, Susan Berry and Eric Moser (IL); Roy Eft (IN); Judy Weaver (MI); Shannon Schmoeger (MO); Diana Sherman (NJ); Margot Small (NY); Dale Bruggeman and Tim Biler (OH); Kimberly Rankin and Melissa Greiner (PA); Doug Stolte (VA); and Amy Malm (WI).

1. **Discussed Proposed Revisions to the Financial Analysis Handbook**

Mr. Schrader stated that the primary purpose of the meeting is to discuss proposed revisions to the NAIC’s *Financial Analysis Handbook*, which have been developed by the ComFrame Financial Analysis Drafting Group. He stated that the Working Group met in July 2020 and decided to form three separate drafting groups to develop revisions to the *Financial Analysis Handbook*, *Financial Condition Examiners Handbook*, and *NAIC Own Risk and Solvency Assessment Guidance Manual* (ORSA Guidance Manual) to incorporate elements of the International Association of Insurance Supervisors’ (IAIS’s) Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) deemed appropriate for the U.S. system of solvency regulation.

Several states volunteered to participate in the drafting groups, and an initial organizational call of volunteers was held in September 2020. During that call, the volunteers determined that the Drafting Group should proceed first in the development of its proposed revisions, as the *Financial Analysis Handbook* is expected to house many of the ComFrame elements deemed appropriate for the U.S. system.

Mr. Schrader stated that the Drafting Group, consisting of state insurance regulators from Illinois, Michigan, Missouri and Nebraska met eight times to work through discussions on various ComFrame elements. As a result of these discussions, an extensive set of edits were developed for the group-wide supervision section of the *Financial Analysis Handbook*, spanning almost 100 pages of guidance. Mr. Schrader stated that in addition to revisions, the Drafting Group developed a memorandum to describe the changes and map them to specific ComFrame elements.

Bruce Jenson (NAIC) provided an overview of the proposed edits, noting that the only sections of Chapter VI. Group-Wide Supervision that did not receive any proposed edits included Section VI.G. Form F – Enterprise Risk Report Procedures and Section VI.H. Periodic Meeting with Company Procedures. He also stated that the new guidance makes it clear that ComFrame additions are not intended to only apply to internationally active insurance groups (IAIGs), but they should also be considered for other large insurance groups that do not yet meet the IAIG criteria. He also stated that new guidance encourages the consideration of a team-based approach to IAIG supervision, recommending the integration of financial analysts, financial examiners, department supervisors and specialists into a cohesive unit that facilitates the ongoing supervision of an IAIG. As such, he stated that the proposed guidance addresses a similar recommendation received by the Working Group in response to the 2019/2020 Financial Sector Assessment Program (FSAP).

Ms. Weaver stated that Drafting Group members consisted of experienced state insurance regulators that participate as both home and host supervisors of IAIGs, which enabled the Drafting Group to incorporate practical experiences in determining the elements of ComFrame appropriate for the U.S. system of solvency regulation. She also stated that the proposed revisions will require judgment and customization in applying them to insurance groups, and they should not be seen as a set of prescriptive procedures to be performed for every group.

Robert Neill (American Council of Life Insurers—ACLI) thanked the Drafting Group for its efforts and for the overview of the proposed revisions, and he stated that interested parties are looking forward to reviewing and offering comments. Tom Finnell (America’s Health Insurance Plans—AHIP) asked whether the Working Group would consider exposing the proposed revisions for a 60-day public comment period to allow sufficient time to review the extensive revisions. Mr. Schrader, Mr. Jenson and Ms. Weaver stated that a 60-day public comment period should still allow the proposed revisions to be finalized and adopted ahead of the Fall National Meeting, which is the cutoff for adopting revisions for publication in next year’s *Financial Analysis Handbook*. 

© 2021 National Association of Insurance Commissioners
Ms. Berry made a motion, seconded by Ms. Rankin, to expose the proposed revisions to the Financial Analysis Handbook for a 60-day public comment period. The motion passed unanimously.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.
Mortgage Guaranty Insurance (E) Working Group
Virtual Meeting
May 18, 2021

The Mortgage Guaranty Insurance (E) Working Group of the Financial Condition (E) Committee met May 18, 2021. The following Working Group members participated: Kevin Conley, Chair, Jackie Obusek and Richard Kohan (NC); Kurt Regner (AZ); Monica Macaluso (CA); Robert Ballard (FL); Jay Buschmann (MO); Michael Campanelli (NY); Melissa Greiner (PA); Chris Miller (TX); and Amy Malm (WI).

1. **Heard an Update on the State Regulatory Mortgage Insurance Capital Standard Model (SRMICS)**

Mr. Conley commented that the mortgage insurers will be required to file the SRMICS on a direct basis and tabulate it within the schedules of the mortgage guaranty annual supplement (supplement), which will be available to all state insurance regulators as a monitoring tool. He indicated that SRMICS would not provide the ability to take regulatory action, similar to risk-based capital (RBC). Mr. Conley commented that the plan is to leave all the Milliman risk-based components in place. He commented that in the fall of 2019, when the mortgage insurers were asked to run the SRMICS against their 2018 data, the output did not create a high enough standard, which would necessitate state insurance regulators to default to the 25:1 risk-to-capital rule. Mr. Conley indicated that he used 10 years of data from his domestics to run stress scenarios to determine a change in the base rate. As a result of the stress testing, the base rate changed from 0.55 to 1.1. He indicated the Milliman was agnostic about the base rate as it knew it would require calibration to get it just right.

Mr. Conley stated that North Carolina is proposing to remove the 1% expense margin. Further, he indicated that SRMICS will follow the Private Mortgage Insurer Eligibility Requirements (PMIERS) by removing explicit premium credits and scaling down the seasoning factors. He commented that seasoning factors are required as reserves are booked and the mortgage insurer recognizes potential losses as the book years age. Mr. Conley commented that the economic factors require input from Moody’s Investors Service regarding the home price index and from the U.S. Bureau of Labor Statistics (BLS) for the consumer price index. He stated that he updated all the economic factors for each state and quarter for 2019 and 2020. Mr. Conley commented that William Meers (Arch Mortgage Insurance) confirmed the economic factors. Mr. Conley indicated that the updated SRMICS factors would be emailed to the mortgage insurers by the end of the week. The mortgage insurers would complete SRMICS based on 2020 data. Further, he indicated there would be no need to complete the premium credit triangle. Mr. Conley indicated that the goal is to put in place a capital standard that is less stringent than PMIERS.

The mortgage insurers agreed on returning the completed SRMICS to the Working Group by June 30. Tony Shore (Essent Guaranty) commented that the vintage earned premium table remains in the supplement. However, he said it is not being used in SRMICS. Mr. Conley commented that the Supplement will require the mortgage insurers to tabulate earned premiums on a book year basis historically for 20 years. He commented further that because the two-year premium credit is being removed, state insurance regulators would have access to premium growth and can project ultimate premium in order to tabulate future inflows. Mr. Shore commented that a non-historical aggregate value would serve the same purpose.

Since SRMICS will be used as a tool to assess capital, rather than integrating it into RBC, Ed Hartman (Genworth Financial) questioned how state insurance regulators would use SRMICS. Mr. Conley commented that there was discussion on relaxing the contingency reserve requirements with the reliance on SRMICS. Further, he commented that this is not being proposed now; it may be considered once state insurance regulators are more comfortable with the results of SRMICS. Mr. Conley commented that once the SRMICS filings are received and reviewed, he will provide the next steps to the Working Group.

Having no further business, the Mortgage Guaranty Insurance (E) Working Group adjourned.
The Mortgage Guaranty Insurance (E) Working Group of the Financial Condition (E) Committee conducted an e-vote that concluded April 9, 2021. The following Working Group members participated: Kevin Conley, Chair (NC); Kurt Regner (AZ); Monica Macaluso (CA); Robert Ballard (FL); John Rehagen (MO); Margot Small (NY); Melissa Greiner (PA); Chris Miller (TX); and Amy Malm (WI).

1. **Adopted the Mortgage Guaranty Insurance Exhibit and Instructions**

The Working Group conducted an e-vote to consider adoption of the 2020 Mortgage Guaranty Insurance Exhibit and Instructions *(see NAIC Proceedings – Spring 2021, Financial Condition (E) Committee, Attachment Four-B)*. The motion passed, with a majority of Working Group members voting in favor of adopting the document.

Having no further business, the Mortgage Guaranty Insurance (E) Working Group adjourned.
The Mutual Recognition of Jurisdictions (E) Working Group of the Financial Condition (E) Committee met in a joint session with the Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee July 20, 2021. The following Mutual Recognition of Jurisdictions (E) Working Group members participated: Robert Wake, Chair (ME); Monica Macaluso, Vice Chair (CA); Kathy Belfi (CT); Virginia Christy (FL); Tom Travis (LA); Shelley Woods and John Rehagen (MO); Lindsay Crawford (NE); Diana Sherman (NJ); Michael Campanelli (NY); Kimberly Rankin (PA); and Amy Garcia (TX). The following Group Capital Calculation (E) Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Ray Spudeck (FL); Carrie Mears (IA); Kevin Fry (IL); Gary D. Anderson (MA); Judy Weaver (MI); Kathleen Orth (MN); Jackie Obusek (NC); Justin Schrader (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Kimberly Rankin (PA); Trey Hancock (TN); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Discussed the Draft of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Mr. Wake stated that the Mutual Recognition of Jurisdictions (E) Working Group received a charge to prepare a list of foreign jurisdictions that recognize and accept the group capital calculation (GCC). Dan Schelp (NAIC) stated that the meeting materials contain a draft of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation (GCC Process) (Attachment Six-A) and the Appendix: Letter Templates (Attachment Six-B). He provided the background and an overview of the GCC Process document, and he recommended that the Mutual Recognition of Jurisdictions (E) Working Group expose the documents for a 30-day public comment period. Mr. Rehagen asked for clarification on when a letter must be sent to the International Association of Insurance Supervisors (IAIS). Mr. Schelp stated that in order to satisfy the requirements of Sections 21D(1)(b) and 21D(2) of the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), the competent regulatory authority of a non-U.S. jurisdiction in which no U.S. insurance groups operate shall provide the NAIC with a written letter, and a copy must be submitted to the IAIS.

Mr. Rehagen made a motion, seconded by Mr. Travis, for the Mutual Recognition of Jurisdictions (E) Working Group to expose the draft of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation with the Appendix: Letter Templates for a 30-day public comment period ending Aug. 20. The motion passed unanimously.

Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Mutual Recognition of Jurisdictions (E) Working Group
Process for Evaluating Jurisdictions that Recognize and Accept
the Group Capital Calculation

1. **Group Capital Calculation.** On December 9, 2020, the NAIC adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC’s GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions)\(^1\) if its group-wide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction. Likewise, a U.S. group subject to a group capital calculation specified by the Federal Reserve Board is exempt from the GCC. This process codifies the concepts of mutual recognition and one group/one group-wide supervisor.

2. **NAIC Listing Process.** Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

- If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction “recognizes the U.S. state regulatory approach to group supervision and group capital”;\(^2\) or

- If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Jurisdictions meeting either of these criteria will be referred to informally as “‘Recognize and Accept’ Jurisdictions.” Sections 21D and 21E of Model #450 provide a general framework for how the process to identify “Recognize and Accept” Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process. The purpose of this document is to provide a documented evaluation process for creating and maintaining this list of jurisdictions that recognize and accept the GCC.

---

\(^1\) Under Section 4L(2)(e) of Model #440, if the worldwide insurance operations of a non-U.S. group are exempt from the GCC, the group’s U.S. Lead State Commissioner may nevertheless require a GCC that is limited to the group’s U.S. operations if: “after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.” A group’s exemption is also contingent on the group providing sufficient information to the lead state, directly or through the group-wide supervisor, sufficient to enable the lead state to comply with the group supervision approach set forth in the *NAIC Financial Analysis Handbook*.

\(^2\) Model #440, § 4L(2)(c).
3. **Covered Agreements.** The GCC and the “recognize and accept” process are intended to comply with the requirements under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance”, which was signed on September 22, 2017. On December 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK) (collectively “Covered Agreements”). The Covered Agreements require the elimination of reinsurance collateral requirements for certain reinsurers licensed and domiciled in participating jurisdictions, and limit the worldwide application of prudential group insurance measures on insurance groups based in participating jurisdictions. Specifically, the Covered Agreements provide that U.S. insurers and reinsurers can operate in the EU and UK without subjecting the U.S. parent to the host jurisdiction’s group-level governance, solvency and capital, and reporting requirements, and also provide the same protections for EU and UK insurers and reinsurers operating in the U.S. However, the Covered Agreements only exempt U.S., EU and UK insurance groups from each other’s worldwide group capital requirements if the home supervisor performs worldwide group capital assessments on its own insurance groups and has the authority to impose preventive and corrective measures.

4. **Reciprocal Jurisdictions.** In response to the Covered Agreements, the NAIC also amended the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786) to provide that jurisdictions that are subject to in-force covered agreements are considered to be “Reciprocal Jurisdictions,” and large, financially strong reinsurers that are based in those jurisdictions are not required to post reinsurance collateral. In addition, a “Qualified Jurisdiction” under Section 2E of Model #785 may become a Reciprocal Jurisdiction if, among other requirements, it “recognizes the U.S. state regulatory approach to group supervision and group capital.” By the terms of the Covered Agreements, insurance groups based in EU Member States and the UK are entitled to exemption from the extraterritorial application of the U.S. GCC, and Section 4L(2)(c) of Model #440 recognizes that other Reciprocal Jurisdictions, which have made the same commitment, are entitled to the same treatment.

5. **Other Jurisdictions that Recognize and Accept.** In addition, because most of the requirements for Reciprocal Jurisdiction status are not relevant to group capital and group supervision, Section 4(L)(2)(d) of Model #440 provides an alternative pathway for the exemption. The ultimate controlling person of an insurance holding company system whose non-U.S. group-wide supervisor is not in a Reciprocal Jurisdiction is exempted from filing the GCC as long as the jurisdiction of its group-wide supervisor “recognizes and accepts” the GCC, as specified by the commissioner in regulation. Section 21D of Model #450 provides that a non-U.S. jurisdiction is considered to “recognize and accept” the GCC if it satisfies the following criteria:

(a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such
jurisdiction, that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a);

(c) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force;

(d) Notwithstanding these exemptions, Section 4L(2)(e) of Model #440 provides that a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system from a Reciprocal Jurisdiction or “Recognize and Accept” Jurisdiction where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 then provides that to assist with a determination under Section 4L(2)(e) of Model #440, the list will also identify whether a jurisdiction that is exempted under either Sections 4L(2)(c) and 4L(2)(d) requires a group capital filing for any U.S.-based insurance group’s operations in that non-U.S. jurisdiction.

6. Mutual Recognition of Jurisdictions (E) Working Group. On March 8, 2021, the Financial Condition (E) Committee repositioned the Qualified Jurisdiction (E) Working Group to report directly to the Committee and revised the name of the group to the Mutual Recognition of Jurisdictions (E) Working Group. The Working Group received the additional charge of developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the GCC ("Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation," or
“Recognize and Accept” Process). A separate process exists for evaluating Qualified and Reciprocal Jurisdictions (“Process for Evaluating Qualified and Reciprocal Jurisdictions”), and it is intended that the “Recognize and Accept” Process will closely mirror this process. The Committee charged this Working Group with developing and implementing the “Recognize and Accept” Process due to this Working Group’s experience and expertise in evaluating the insurance regulatory systems of non-U.S. jurisdictions and their recognition of U.S. group-wide supervision.

7. **List of Jurisdictions that Recognize and Accept the GCC.** The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with this “Recognize and Accept” Process. A list of “Recognize and Accept” Jurisdictions is published through the NAIC committee process (“NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation”; “Recognize and Accept’ List”; or “List”). The creation of the List does not constitute a delegation of regulatory authority to the NAIC. Although a state must consider this List under Section 21E(3) of Model #450 in its determination of whether a non-U.S. insurance group is exempt from filing an annual GCC, the List is not binding and the ultimate authority to designate a “Recognize and Accept” Jurisdiction resides solely in each state.

(a) The List will include all Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital. [See discussion in paragraph 9].

(b) The evaluation of non-U.S. jurisdictions that are non-Reciprocal Jurisdictions as “Recognize and Accept” Jurisdictions will be conducted in accordance with the provisions of Section 4L(2) of Model #440 and Section 21 of Model #450, and any other relevant guidance developed by the NAIC. [see discussion in paragraphs 10 and 11].

(c) As specified in Section 21E(1) of Model #450, the List will also identify which “Recognize and Accept” Jurisdictions require a group capital filing for a U.S.-based insurance group’s operations in that jurisdiction. [See discussion of Subgroup Capital Calculation in paragraph 12].

(d) Upon final inclusion of a jurisdiction on the List, any confidential documents reviewed by the Mutual Recognition of Jurisdictions (E) Working Group in its evaluation of the jurisdiction will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential. The NAIC will maintain the List on its public website and in other appropriate NAIC publications.

(e) If a non-US group’s lead state exempts the group from the GCC, and the group-wide supervisor is based in a jurisdiction that is not on the “Recognize and Accept” List, the state must thoroughly document the justification for the exemption.
8. **Procedure for Evaluation of Non-U.S. Jurisdictions.** In undertaking the evaluation of a non-U.S. Jurisdiction for inclusion on the “Recognize and Accept” List, the Mutual Recognition of Jurisdictions (E) Working Group shall utilize similar processes and procedures to those outlined in the *Process for Evaluating Qualified and Reciprocal Jurisdictions*. Specifically, the Working Group will undertake the following procedure in making its evaluation:

(a) **Initiation of Evaluation.** Formal notification of the Mutual Recognition of Jurisdictions (E) Working Group’s intent to initiate the evaluation process will be sent by the NAIC to the supervisory authority in the jurisdiction selected. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document. Upon receipt of confirmation by a competent regulatory authority of the non-U.S. jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group:

   i. Will review the materials received from the jurisdiction.

   ii. Will issue public notice on the NAIC website inviting public comments with respect to consideration of the jurisdiction as a “Recognize and Accept” Jurisdiction.

   iii. Will consider public comments from state regulators, U.S. insurance groups, and any other interested parties.

   iv. May review other public materials deemed relevant to making a determination.

   v. Will invite each non-U.S. jurisdiction, or its designee, to provide any additional information it deems relevant to making a determination.

   vi. Relevant U.S. state and federal authorities will be notified of the Mutual Recognition of Jurisdictions (E) Working Group’s decision to evaluate a jurisdiction.

(b) **Preliminary Evaluation Report.** NAIC staff will prepare a Preliminary Evaluation Report for review by the Mutual Recognition of Jurisdictions (E) Working Group. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a “Recognize and Accept” Jurisdiction. Upon review by the Working Group, the results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review. At that time, a copy of the Preliminary Evaluation Report will also be shared with the Group Capital Calculation (E) Working Group in regulator-to-regulator session. The Group Capital Calculation (E) Working Group will also be kept advised of any new developments in the evaluation of this jurisdiction.

(c) **Final Evaluation Report.** Upon receipt of the Preliminary Evaluation Report, the
supervisory authority will have an opportunity to respond to the initial findings and determination. The Mutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session.

(d) **Summary of Findings and Determination.** Upon approval of the Final Evaluation Report, the Mutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the Summary of Findings and Determination for public comment. Once the Working Group has finally adopted the Summary of Findings and Determination in open session after opportunity for public comment, it will submit the summary of its findings and its recommendation to the Financial Condition (E) Committee at an open meeting. Upon approval by the Committee, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the Federal Insurance Office (FIO), United States Trade Representative (USTR) and other relevant federal authorities for consultation purposes. Upon approval as a “Recognize and Accept” Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation.

9. **Evaluation of Reciprocal Jurisdictions.** Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a “recognize and accept” evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as “Recognize and Accept” Jurisdictions. Likewise, in accordance with the terms of the EU and UK Covered Agreements, all EU States and the UK are automatically designated “Recognize and Accept” Jurisdictions. If there is a material change to the terms of either Covered Agreement, or the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will rely upon its review and evaluation of the applicable covered agreement, in consultation with FIO and USTR, to determine whether automatic “Recognize and Accept” status is appropriate, or whether it is necessary to conduct a case-by-case review of the jurisdiction or jurisdictions in accordance with Paragraph 10 below.

10. **Evaluation of Non-Reciprocal Jurisdictions with U.S. Insurance Group Operations.** Under Section 21D(1)(a) of Model #450, a non-Reciprocal Jurisdiction, in which a U.S. insurance group has operations, that recognizes the U.S. state regulatory approach to group supervision and group capital may be included on the NAIC “Recognize and Accept” List. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction that insurers and insurance groups whose lead state is accredited by the NAIC under the
NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction. The process outlined in this Paragraph will also apply to a jurisdiction that is a Reciprocal Jurisdiction by virtue of a covered agreement, if the Mutual Recognition of Jurisdictions (E) Working Group has determined that the

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose. The NAIC will publish a form letter that a competent regulatory authority of a non-U.S. jurisdiction may use to provide confirmation pursuant to Section 21(D)(1)(a), Section 21(D)(1)(b) and 21(D)(2) of Model #450 as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. NAIC Staff will work with the jurisdiction to modify these forms if necessary for a particular jurisdiction.

11. Evaluation of Non-Reciprocal Jurisdictions with No U.S. Insurance Group Operations. Because the GCC embraces and encourages the concepts of mutual recognition and one group/one group-wide supervisor, a non-U.S. jurisdiction may be included on the “Recognize and Accept” List, enabling its insurance groups to do business in the U.S. without being subject to U.S group-wide supervision, even if no U.S. groups operate in that jurisdiction. Under Section 21D(1)(b) of Model #450, such a jurisdiction must document its recognition and acceptance by indicating formally in writing to the lead state of each of its insurance groups doing business in the U.S., with a copy to the International Association of Insurance Supervisors (IAIS), that the GCC is an acceptable international capital standard. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that, to the best of its determination, the representations in the written confirmation are true and accurate.
(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose.

12. Memorandum of Understanding. Section 21D(2) of Model #450 requires a non-Reciprocal Jurisdiction that “recognizes and accepts” the GCC to provide confirmation by a competent regulatory authority that information regarding insurers, and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and the jurisdiction. Acceptable MOUs include, but are not limited to, the International Association of Insurance Supervisors Multilateral Memorandum of Understanding (“IAIS MMoU”) or other multilateral memoranda of understanding coordinated by the NAIC. The Mutual Recognition of Jurisdictions (E) Working Group will review such memoranda of understanding and include an opinion in the Summary of Findings and Determination as to whether the jurisdiction has met this condition to be included on the “Recognize and Accept” List.

(a) The lead state will act as a conduit for information between the “Recognize and Accept” Jurisdiction and other states that have an insurer from that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the applicable MOU, and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this lead state to act as the contact for purposes of obtaining information concerning insurers.

(b) If a jurisdiction has not been approved by the IAIS as a signatory to the MMoU, it must enter into an MOU with the lead state. The MOU will also provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

(c) The same requirements and procedures will apply to a Reciprocal Jurisdiction that is subject to a case-by-case “recognize and accept” review, unless the necessary information-sharing procedures are already specified in the applicable covered agreement.

13. Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup”
calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm whether or not any “Recognize and Accept” Jurisdiction requires a subgroup group capital filing for a U.S.-based insurance group’s operations, and will attempt to obtain written confirmation from a competent regulatory authority in any such jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

14. Process for Periodic Evaluation. The process for determining whether a non-U.S. jurisdiction is a “Recognize and Accept” Jurisdiction is ongoing and subject to periodic review. The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation to determine whether there have been any significant changes over the prior year that might affect inclusion on the List. This yearly review shall follow such abbreviated process as may be determined by the Working Group to be appropriate.

(a) Upon determination by a lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the GCC, the lead state commissioner may provide a recommendation to the Working Group that the jurisdiction be removed from the “Recognize and Accept” List. Upon review and after consultation with the “Recognize and Accept” Jurisdiction, the Working Group may remove the jurisdiction from the List, which must then be confirmed by the Financial Condition (E) Committee and the NAIC Executive (EX) Committee and Plenary.

(b) Upon determination by a lead state commissioner that a non-U.S. jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that non-U.S. jurisdiction, the lead state commissioner may provide a recommendation to the Working Group that the non-U.S. jurisdiction be identified as such on the “Recognize and Accept” List. Upon receipt of any such notice, the Mutual Recognition of Jurisdictions (E) Working Group will also consider whether it is necessary to re-evaluate the jurisdiction’s “Recognize and Accept” status.

(c) The Mutual Recognition of Jurisdictions (E) Working Group will also give due consideration to any notice from a U.S.-based insurance group that it has been required to perform a group capital calculation, at either the group-wide or subgroup level, in a jurisdiction on the “Recognize and Accept” List.
(d) If a jurisdiction referred for re-evaluation under this Paragraph is a Reciprocal Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group shall conduct a concurrent review of the jurisdiction’s continuing status as a Reciprocal Jurisdiction, or, in the case of a jurisdiction entitled to that status by virtue of a covered agreement, shall refer the matter to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities, in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.
Appendix: Letter Templates

Paragraph 10(c) of the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation* provides that the NAIC will publish a form letter that a competent regulatory authority of a non-U.S. jurisdiction that is not a Reciprocal Jurisdiction may use to provide confirmation pursuant to Section 21(D)(1)(a), Section 21(D)(1)(b) and 21(D)(2) of the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)*, as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. The following template letters are designed to satisfy these requirements:

A. **Jurisdictions with U.S. Insurance Group Operations.** In order to satisfy the requirements of Sections 21D(1)(a) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- [Non-U.S. Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.
B. Jurisdictions with No U.S. Insurance Group Operations. In order to satisfy the requirements of Sections 21D(1)(b) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which no U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority and lead insurance regulatory supervisor for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- [Non-U.S. Jurisdiction] recognizes the Group Capital Calculation as defined under Section 4L(2) of the NAIC Insurance Holding Company System Regulatory Act (#440) as an acceptable international capital standard.

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

C. Jurisdictions with Subgroup Capital Requirements. Paragraph 13 of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation provides that the Mutual Recognition of Jurisdictions (E) Working Group will attempt to obtain written confirmation from a competent regulatory authority in any jurisdiction where the Working Group has evidence indicating that the jurisdiction requires a subgroup group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.
The NAIC/AICPA (E) Working Group of the Financial Condition (E) Committee conducted an e-vote that concluded May 17, 2021. The following Working Group members participated: Laura Clements (CA); Rylynn Brown (DE); Kevin Clark (IA); Judy Weaver (MI); Shannon Schmoegeer (MO); Doug Bartlett (NH); Dale Bruggeman (OH); and Greg Lathrop (OR).

1. **Adopted Revisions to the Implementation Guide**

The Working Group recently developed and exposed proposed revisions to the NAIC’s *Implementation Guide for the Annual Financial Reporting Model Regulation* (Implementation Guide) to facilitate the collection of information on the engagement partner leading the annual external audit of insurance entities. The revisions request that the lead engagement partner’s name and start date be provided in the annual internal control letter filed with the domestic insurance department to facilitate a review of engagement partner rotation and qualification requirements.

Having no further business, the NAIC/AICPA (E) Working Group adjourned.

W:\National Meetings\2021\Summer\Committee\E\AICPA.docx
The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met July 14, 2021. The following Working Group members participated: Debbie Doggett, Co-Chair (MO); Linda Johnson, Co-Chair (WY); Cindy Hathaway (CO); Joan Nakano and William Mitchell (CT); Alisa Pritchard (DE); Jason Reynolds (FL); Stewart Guerin and Mike Boutwell (LA); Kari Leonard (MT); Ursula Almada (NM); Cameron Piatt (OH); Greg Lathrop (OR); Cressinda Bybee (PA); Amy Garcia (TX); Jay Sueoka (UT); Ron Pastuch (WA); and Amy Malm (WI).

1. **Adopted its May 13 Minutes**

Ms. Doggett noted a few items for correction on the minutes: 1) items 1 and 2 need to be changed from adopted to discussed; and 2) item 5 includes a typo for “stipulates” to be changed to “stipulate.”

Mr. Lathrop made a motion, seconded by Mr. Piatt, to adopt the Working Group’s May 13 minutes with edits (Attachment Eight-A). The motion passed unanimously.

2. **Adopted Proposal 2021-01 (Primary Application and Instructions)**

Ms. Doggett summarized the comments received on proposal 2021-01 to modify the primary application for start-up company applications. Pennsylvania submitted comments that were incorporated into the current proposal, which included: 1) changing the order on Form 2 for Company Type and Sub-Type to mirror the order on the NAIC company code application form; 2) using the most current Form 3 Lines of Business form; and 3) including the word “notification” on page 51 of the materials.

Ms. Doggett added that further modifications were made to the instructions included on the agenda to indicate that if an application is deemed incomplete, a status will be provided by the application state with an explanation and instructions that the Applicant Company will be allowed to withdraw its application. She added that as work continues on the development of the electronic application, the instructions may be modified to include those enhancements, and those changes will be brought before the Working Group for consideration.

Mr. Piatt made a motion, seconded by Mr. Guerin, to adopt proposal 2021-01 (Attachment Eight-B) with suggested wording. The motion passed unanimously.

3. **Adopted Proposal 2021-02 (Redomestication Application and Instructions)**

Ms. Johnson summarized that proposal 2021-02 is in conjunction with the changes made to the primary application, to separate the redomestication application into its own application. She added that no comments were received on this proposal during the comment period.

Mr. Guerin made a motion, seconded by Mr. Lathrop, to adopt proposal 2021-02 (Attachment Eight-C). The motion passed unanimously.

4. **Adopted Proposal 2021-05 (Form A Review Guidance)**

Ms. Doggett summarized the purpose of proposal 2021-05 to add additional guidance when reviewing the articles of incorporation and limited partnership agreements for complex Form A transactions to determine the ultimate controlling party when not evident in the Form A filing regarding private equity type entities.

Mr. Guerin made a motion, seconded by Ms. Nakano, to adopt proposal 2021-05 (Attachment Eight-D). The motion passed unanimously.
5. Exposed Proposal 2021-06 (Disclaimer Form)

Ms. Johnson said the purpose of proposal 2021-06 is to provide a template for a disclaimer of affiliation or control of an individual, resulting from a survey conducted last fall regarding the primary application, where several states indicated that they allow a disclaimer in lieu of a biographical affidavit. This uniform template will be identified as Form 9, and it will be exposed for a 45-day public comment period ending Aug. 30. Ms. Johnson also noted that prior to exposure, clarifying language will be included in the heading of the proposal to identify that the use of this form is just for individuals.

6. Heard Updates on Ad Hoc Groups

Jane Barr (NAIC) said the NAIC is currently working on negotiations with third-party vendors to assist with the development of the electronic applications. She added that she will provide an update on the next scheduled meeting tentatively scheduled for mid-September.

Crystal Brown (NAIC) reported that the Surplus Lines Drafting Group met June 28 to review and discuss domestic surplus line statutes and regulations and comments submitted on a recent survey to develop a reference chart for industry and state use.

7. Discussed Other Matters

Ms. Barr said she received an email asking states to consider moving towards the elimination of hard copy requirements for their public records. With the development of the electronic application and tools available to the state insurance regulators, the need for hard copies could be greatly reduced. For those states whose statutes reference hard copy required, they may want to consider changing their wording to reference “original” since the term “original” could mean electronic filing.

Ms. Johnson said a Company Licensing Forum call will be scheduled for Aug. 25 to discuss these requirements. Ms. Barr added that she has been requested to add the new risk retention group (RRG) forms to the Forum agenda for those states that may be unaware of their existence.

The next Working Group meeting is tentatively set for September.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.
The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met May 13, 2021.

The following Working Group members participated: Debbie Doggett, Co-Chair (MO); Linda Johnson, Co-Chair (WY); Cindy Hathaway (CO); Joan Nakano and William Mitchell (CT); Alisa Pritchard (DE); Jason Reynolds (FL); Stewart Guerin and Mike Boutwell (LA); Kari Leonard (MT); Cameron Piatt (OH); Greg Lathrop (OR); Cressinda Bybee (PA); Robert Rudnai (TX); Jay Sueoka (UT); Ron Pastuch (WA); and Amy Malm (WI).

1. Discussed Proposal 2021-01 (Primary Application and Instructions)

Ms. Doggett summarized the purpose of proposal 2021-01 is to modify the primary application for start-up company applications only. All references to a redomestication were removed, and new forms were created to capture management information (Form 4P) and holding company debt to equity information (Form 5P). Ms. Doggett added that the proposal was exposed for a 45-day public comment period ending April 19. One minor editorial comment was made and is reflected in the PDF posted to the Working Group’s web page, which was to change the dollar sign to a percent sign on Question 6 of Form 8 (Questionnaire).

Janet Shemanske (Nautilus) asked whether traditional insurers should be listed in the section identified as “Applicant Company Formed As.” Ms. Doggett said during the last call, it was noted that other states use the Uniform Certificate of Authority Application (UCAA) forms to license other risk-bearing entities. Jane Barr (NAIC) confirmed this information will eventually be carried over to the company code application form when a primary application is approved, and the company is eligible for an NAIC company code. Mr. Boutwell said more states are moving forward with domestic surplus lines, Louisiana being one of those states. Ms. Doggett said it would depend on state law and whether the company becomes licensed as a property/casualty (P/C) insurer and then eventually writes as a surplus lines carrier. Lisa Brown (American Property Casualty Insurance Association—APCIA) asked whether the Applicant Company Formed As section should be clarified for traditional insurers because the list seems to include other non-traditional company types. Ms. Barr explained when the states were surveyed, they indicated the type of entities that could submit UCAA forms based on the list provided on the company code application. She further explained, this information would eventually populate into the company code application form. Ms. Shemanske asked for confirmation that this section may not need to be completed if the applicant company is a traditional insurer. Ms. Barr concurred and reiterated that the proposal was exposed for a 45-day public comment period, and no comments were submitted. The Working Group may want to consider re-exposure if additional edits are suggested.

Ms. Doggett said clarification is needed for the Applicant Company Formed As section. Ms. Malm concurred that clarification is needed so the section is completed, if necessary. Mr. Boutwell suggested adding “if applicable” in parentheses if other than a traditional insurer. Ms. Doggett said it could go at the beginning or end of the section in parenthetical. Ms. Johnson asked whether all insurance types should be listed. Mr. Boutwell said the company code application is labeled “company subtype” and includes the option for none. Ms. Doggett suggested changing the heading to mirror the company code application and adding an option for none. Ms. Barr said she will make the appropriate edits and circulate them to the Working Group members before sending the notice for re-exposure. She suggested a 30-day public comment period to give interested parties ample time to review and submit their comments timely. Ms. Barr reminded the Working Group that proposal 2021-02, which is the next item to consider, should have the same effective date as proposal 2021-01.

2. Discussed Proposal 2021-02 (Redomestication Application and Instructions)

Ms. Johnson summarized that proposal 2021-02 is in conjunction to the changes made to the original primary application, which combined both redomestication and start-up applications on one form. The two applications have been separated, and the focus of the redomestication application is for the initial application between the old and new domiciliary states. Although the forms may look similar, the redomestication forms will be identified with an “R” on each form page (e.g., 1R, 2R, etc.). Ms. Johnson said the redomestication application and instructions were also exposed for a 45-day public comment period ending April 19, and no comments were received. Ms. Shemanske asked whether the instructions should state that a rigorous review is required if the company is already licensed in the state where it plans to redomesticate. Mr. Piatt said Ohio would do a rigorous review because there could be several years between the initial application and the redomestication. Ms. Malm concurred Wisconsin would do the same to ensure that there is no regulatory arbitrage taking place.
The Working Group agreed to table consideration until the primary application is ready to be considered.

3. **Adopted Proposal 2021-03 (Cybersecurity Contact)**

Mr. Boutwell summarized that the purpose of proposal 2021-03 is to include a cybersecurity contact due to the recent adoption of a cybersecurity model law, and this contact information may be useful to the state insurance regulators for speed in contacting the appropriate person. He noted this addition to the list of company contacts on Form 14 may not necessitate an exposure period before consideration by the Working Group.

Ms. Boutwell made a motion, seconded by Mrs. Malm, to adopt proposal 2021-03 (Attachment Eight-A1). The motion passed unanimously.

Ms. Barr added once it is adopted by the Financial Condition (E) Committee, the developers will begin programming this update into the electronic application.

4. **Adopted Proposal 2021-04 (Biographical Affidavit Cover Letter)**

Ms. Johnson said the purpose of proposal 2021-04 is to ensure: 1) the biographical affidavit could be used for more than one application/purpose if the affiant’s signature is not more than six months old; and 2) the biographical affidavit form is not modified in any way to suit the applicant company’s purpose for submission.

Ms. Johnson further explained the cover letter allows information for holding company groups where an affiant may hold a position for multiple companies in a group. If the applicant company is using an affidavit, where the signature is less than six months old, for multiple company applications, the cover letter could be updated for a particular application if the affiant information on the biographical affidavit has not been updated/changed. The cover letter will need to be updated and signed by the applicant company contact for every application submission, and each biographical affidavit will need its own cover letter. Ms. Johnson added that proposal 2021-04 was exposed for a 45-day public comment period ending May 5, and no comments were received.

Ms. Brown asked how companies reuse a biographical affidavit when the applicant company information is changed without requiring a new signature and notarization. Ms. Barr explained the applicant company information on the cover letter should be updated to reflect which company within the group listed submitted the biographical affidavit. Ms. Brown asked whether one affiant can be submitted for multiple companies within the same group. Ms. Barr concurred. Mr. Boutwell said his state would expect to see “see attached” in reference to the applicant company name in the header of the biographical affidavit. Ms. Brown asked whether the UCAA chart reflects the only states that would allow this cover letter for multiple submissions within a group. Ms. Barr said once adopted, she will reach out to the states for confirmation and make the updates to the state charts accordingly.

Mr. Rudnai made a motion, seconded by Mr. Lathrop, to adopt proposal 2021-04 (Attachment Eight-A2). The motion passed unanimously.

5. **Discussed Form A – Private Equity Company**

Ms. Doggett said Missouri has received several Form A applications from private equity (PE) companies, and during the review of the operating agreements, partnership agreements, and articles of incorporation, it was determined the ultimate controlling party was different than the individual/party identified when the Form A was submitted. She suggested the Company Licensing Best Practices Handbook stipulate the importance of the review of operational agreements to identify the ultimate controlling party. She said she will work with NAIC staff to draft wording.

The next Working Group meeting is tentatively set for July.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.

IDENTIFICATION OF SOURCE AND FORM(S)/INSTRUCTIONS TO BE CHANGED

- UCAA Forms
- UCAA Instructions
- Enhancement to the Electronic Application Process
- Company Licensing Best Practices HB
- Forms:
  - Form 1 – Checklist
  - Form 6 - Certificate of Compliance
  - Form 8C- Corporate Amendment Questionnaire
  - Form 11-Biographical Affidavit
  - Form 12-Uniform Consent to Service of Process
  - Form 13- ProForma
  - Form 14- Change of Address/Contact Notification
  - Form 15 – Affidavit of Lost C of A
  - Form 16 – Voluntary Dissolution
  - Form 17 – Statement of Withdrawal

DESCRIPTION OF CHANGE(S)

Adding a contact type of "Cybersecurity Contact" with an explanation of "A person for the state departments to contact regarding data security and data breaches" to page 1 of Form 14

REASON OR JUSTIFICATION FOR CHANGE **

With the adoption of a cybersecurity model law and the current posture of the industry in electronic records, the addition of this contact might be useful for state regulators and help to save time in contacting the appropriate person.

Additional Staff Comments:

** This section must be completed on all forms. Revised 01-2019
Uniform Certificate of Authority Application (UCAA)
CHANGE OF MAILING ADDRESS/CONTACT NOTIFICATION FORM

NAME CHANGE

If there has been a name change, please complete the following:

Previous Applicant Company Name: ________________________________________________
Current Applicant Company Name: ________________________________________________

MAILING ADDRESS/CONTACT CHANGE

If there has been a mailing address or contact person change, please complete the following:

This form will notify regulatory officials of mailing address changes or contact person changes applicable to the Applicant Company or it may be completed as a supplemental filing in conjunction with other corporate amendment filings. Additional corporate amendment filings are required for Statutory Home Office, changes to articles or by-laws or for changes in the addresses related to the person authorized to receive Service of Process. These changes require a Corporate Amendment Application or a Uniform Consent to Service of Process. Check state specific requirements. For each change, please indicate the one or more areas for which the change is applicable:

DESCRIPTION OF CHANGE(S)
Create a template for a cover letter to accompany the biographical affidavit when the Applicant Company is part of a Holding Company and the affidavit is used for more than one applicant company and the affiant’s signature date is 6 months or less.

REASON OR JUSTIFICATION FOR CHANGE **
The purpose is to clarify that the Applicant Company cannot make any changes to the biographical affidavit once it is signed by the affiant, if the Applicant Company intends to use it for more than one insurer’s (within the same group) application.

**IDENTIFICATION OF SOURCE AND FORM(S)/INSTRUCTIONS TO BE CHANGED**

- [X] UCAA Forms     
- [X] UCAA Instructions    
- [X] Enhancement to the Electronic Application Process

**DESCRIPTION OF CHANGE(S)**

The primary application was updated to distinguish the difference between a “new” company (start-up) and a redomestication application in the development of the business rules used to create separate electronic applications. Two separate Forms have been added to include: Management Information (Form 4P) and Holding Company Debt to Equity Information (Form 5P)

**REASON OR JUSTIFICATION FOR CHANGE **

Eventually, all hard copy applications will move to an electronic format, during this process forms will be modified for specific licensing transaction in an effort to incorporate state specific requirements where necessary. The application is specifically for start-up only licensing applications which includes two new forms to separately capture management information and holding company debt to equity information if the Applicant Company is part of a holding company structure.
** Additional Staff Comments: **

3/4/21- Proposal was exposed for a 45-day comment period, ending 5/5/21

5/5/21- One editorial comment regarding a typo on Q6 of Form 8 was noted and corrected to change “$” to a “%”.

5/13/21- Comments during the NTCWG conference call suggesting clarifying language for the company sub-type section to include (if applicable).

5/17/21- Proposal re-exposed for a 30-day comment period, ending June 16th.

6/16/21 – Comments received and included for the Instructions.

** This section must be completed on all forms. **

Revised 01-2019
Uniform Certificate of Authority Application (UCAA)
Primary Application Checklist
For Primary Application Only

The application checklist is intended to help guide the insurer (herein after referred to as “Applicant Company”) with the assembly of a complete Primary Uniform Certificate of Authority Application (UCAA).

1. **Application Form, includes:**
   - UCAA Primary Application Checklist (Form 1P)
   - UCAA Primary Application executed and electronically signed (Form 2P)
   - Lines of insurance the Applicant Company is requesting authority to transact (Form 3).

2. **Filing Fee (pursuant to Section II Filing Requirements Item 2), includes:**
   - Electronic Payment of required filing fee or
   - Copy of check

3. **Minimum Capital and Surplus Requirements (pursuant to Section II Filing Requirements Item 3)**
   - Explanation of compliance with minimum capital & surplus requirements for state for which application is prepared

4. **Statutory Deposit Requirements (pursuant to Section II Filing Requirements Item 4)**
   - Provide financial source of deposit

5. **Name Approval (pursuant to Section II Filing Requirements Item 5)**
   - Evidence of name approval request
   - Copy of Secretary of State approval

6. **Plan of Operation (pursuant to Section II Filing Requirements Item 6)**
   - Completed questionnaire (Form 8)
   - Pro Forma Narrative

7. **Holding Company Act Filings (pursuant to Section II Filing Requirements Item 7)**
   - Ultimate Controlling Party information

8. **Statutory Membership(s)**
   - Attach documentation as listed in Section II Filing Requirements Item 8

9. **SEC Filings or Consolidated GAAP Financial Statement**
   - Attach documentation as listed in Section II Filing Requirements Item 9

10. **Debt-to-Equity Ratio Statement**
    - Attach documentation as listed in Section II Filing Requirements Item 10

11. **Custody Agreements**
    - Attach documentation as listed in Section II Filing Requirements Item 11
Proposed Applicant Company Name: _____________________________  FEIN: ____________________________

12. Public Records Package – Submit ALL items in chart in Section II Item 12, including:
   a. Articles of Incorporation, including:
      ☐ Original Articles
      ☐ Copy of Secretary of State approval
   b. Bylaws, including:
      ☐ Original certification by the Applicant Company’s corporate assistant
   c. Statement with attachments, including:
      ☐ Financial statement of Ultimate Controlling Party, 10K or 10Q
   d. Independent CPA Audit Report

13. NAIC Biographical Affidavit (Form 11) for the following individuals listed on the Management Information Form:
   ☐ Officers
   ☐ Directors
   ☐ Key managerial personnel (including heads of risk management, compliance, internal audit or other individuals who will control the operations of the Applicant Company or have binding authority over the Applicant Company)
   ☐ Any individual with 10% or greater ownership of the Applicant Company and/or the Applicant Company’s ultimate controlling entity. A disclaimer must be filed for any individual stating no control (verify with NAIC legal on language)
   ☐ Affidavit originally signed and notarized within six months of application date
   ☐ Affidavit certified by independent third party

14. State-Specific Information
   ☐ Some jurisdictions may have additional requirements that must be met before a Certificate of Authority can be issued. Before completing a UCAA Primary Application, the Applicant Company should review a listing of requirements for the state to which it is applying.
Uniform Certificate of Authority Application (UCAA)
Primary Application

To the Insurance Commissioner/Director/Superintendent of the State of:
(Select the appropriate state in which the Applicant Company is applying.)

The undersigned Applicant Company hereby certifies that the classes of insurance as indicated on the Lines of Insurance, Form 3, are the lines of business which the Applicant Company is applying to transact.

Uniform Certificate of Authority Application (UCAA)  
Lines of Insurance

Please complete the state information below which the Applicant Company is currently applying for authority to do business. As a result of statutory and regulatory requirements, each state has its own terminology for the lines of insurance. The Lines of Business Matrix was developed to assist the Applicant Company in completing this form. The matrix includes each line of business as it is reported on the NAIC’s annual statement blanks and corresponding state statute or regulation. The matrix is located on the UCAA website under State Charts.[B01]

This form will only show the lines of business for the state selected as the proposed domiciliary state.

**Monoline only:**

- Title – Section 1113(a)(18) & Article 64 of the N.Y. Ins. Law
- Mortgage Guaranty - Section 1113(a)(23) & Article 65 of the N.Y. Ins. Law
- Financial Guaranty - Section 1113(a)(25) & Article 69 of the N.Y. Ins. Law

**Note 1:** A company may only apply for the lines of insurance for which it is authorized in its state of domicile.

**Note 2:** The company must have transacted business for a minimum of three (3) years prior to seeking admission. If the company was recently acquired, at least three (3) years of operating experience under the new management is required. An affiliated insurer admitted in New York and operating under the same ownership/management team for at least three (3) years may satisfy this requirement. If the aforementioned situation applies, a written request for approval of a waiver must be submitted with the application.

• Disclaimer IF allowed by State.
Debt-to-Equity Ratio Statement

Members of a holding company system must complete debt-to-equity information. The comprehensive debt-to-equity ratio statement includes the following information.

A. Consolidated outside debt to consolidated equity ratio on a GAAP basis for the holding company. *

<table>
<thead>
<tr>
<th>Debt Duration</th>
<th>Debt Amount ($)</th>
<th>Debt to Consolidated Equity Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 5 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 10 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 20 years</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

B. Provide the most recent consolidated holding company financial statement.

C. State if the holding company, on a consolidated basis, has a tangible net worth:
   a) for the past three years;
   b) at present; and
   c) provide projections with assumptions for a three-year period.

D. The Applicant Company must clearly substantiate the sources of repayment of any debt, including, but not limited to, whether the source of repayment is independent from the future income of the insurers.

E. Calculate the debt service (as reported in D above) required of each insurer as a percentage of the Applicant Company’s capital and surplus.

F. List the assets of the holding company, if any, that are pledged to fund the debt service or debt repayment of an affiliate or parent (include the assets or stock of any insurer subsidiaries)

G. List any guarantees (personal or otherwise) from the shareholders for repayment of the debt.

*Some states may require re-statement based upon statutory equity.
Proposed Applicant Company Name: ____________________________ FEIN: ______________________

**Holding Company Questions**

**Lines of Business: Life**

**Uniform Certificate of Authority Application QUESTIONNAIRE**

All questions must be answered. Directions: Each "Yes" or "No" question is to be answered. Other answers and additional explanations or details should be attached to the questionnaire.

1. I hold the position(s) of ____________________________________________________ with the Applicant Company.

2. Has the Applicant Company transferred or encumbered any portion of its assets or business, or has its outstanding capital stock been directly or indirectly pledged?
   
   Yes ____ No ____
   
   If the answer is yes, attach explanation.

3. A. Will the Applicant Company be negotiating or inviting negotiations for any transaction that would transfer or encumber any portion of its assets or business or result in a merger or consolidation with another company in the foreseeable future?
   
   Yes ____ No ____

   B. Does the Applicant Company contemplate a change in management or any transaction that would normally result in a change of management within the reasonably foreseeable future?
   
   Yes ____ No ____

   If the answer to either question is yes, attach explanation.

4. Is the Applicant Company owned or controlled by a holding corporation?

   Yes ____ No ____

   If yes, attach and make a part hereof an affidavit by an executive officer of the Applicant Company who knows the facts listing the principal owners (10% or more of the outstanding shares) of such holding corporation by name and residence address, business occupation and business affiliations.

5. Is the Applicant Company owned, operated or controlled, directly or indirectly, by any other state or province, district, territory or nation or any governmental subdivision or agency?

   Yes ____ No ____

   If yes, provide the details in writing and attach to the Questionnaire

6. Has any person who is presently an officer or director of Applicant Company or an individual who directly or indirectly controls 10% or more of the Applicant Company;

   A. Been convicted on, or pleaded guilty or nolo contendere to, an indictment or information in any jurisdiction charging a felony for theft, larceny or mail fraud or, of violating any corporate securities statute or any insurance statute?

      Yes ____ No ____

   B. Presently engaged in a dispute with any state of federal regulatory agency?
Applicant Company Name: _____________________________
NAIC No. __________________________
FEIN: __________________________

Yes ____ No____

C. A plaintiff or defendant in any legal action other than one arising out of policy claims?
Yes ____ No____
If yes, provide a summary of each case and an estimate of the probable liability, if any, and attach.

7. Does the Applicant Company intend to purchase investment securities through any investment banking or brokerage house or firm from whom any of Applicant Company’s officers, directors, trustees, investment committee members or controlling stockholders receive a commission on such purchases?
Yes____ No____
If yes, provide the details and attach.

8. Is the Applicant Company a,
A. Bank
Yes ____ No____
B. Bank holding company, subsidiary or affiliate
Yes ____ No____
C. Financial holding company
Yes ____ No____
D. Other financial institution
Yes ____ No____
If yes, identify the bank(s), bank holding company(ies) or financial institution and the affiliation of the Applicant Company. Provide the details and attach.

9. Has the Applicant Company, since its inception, done any of the following:
A. Made a loan to an entity owned or controlled directly or through a holding corporation by one or more of Applicant Company’s officers, directors, trustees or investment committee members, or to any such person?
Yes ___ No____
B. Sold or transferred any of its assets or property, real or personal, to any such entity or person?
Yes ____ No____
C. Had its outstanding capital stock directly or indirectly pledged for the debt of an affiliate?
Yes _____ No _____
D. Purchased securities, assets or property of any kind from an entity owned or controlled by one or more of the Applicant Company’s officers, directors, trustees, or any persons who have authority in the management of the Applicant Company’s funds (including a controlling stockholder)?
Yes ____ No____
Applicant Company Name: _____________________________  
NAIC No.  
FEIN: __________________________

If the answer to any of the last four questions is affirmative, did any officer, director, trustee or any person who had authority in the management of the Applicant Company's funds (including a controlling stockholder) receive any money or valuable thing for negotiating, procuring, recommending or aiding in such transaction?

Yes ____ No ____

If yes, provide the details and attach.  

10. Attach an organizational depiction (in the format of a flow chart) showing the various executive management, directors and officers and related material functions that require internal control oversight of the Applicant Company, with the name and official title of those responsible for those offices/functions and the portions of the organization they oversee. Material functions should include, but are not limited to, underwriting, claims adjustment/payments, premium accounting, claims accounting, marketing, financial reporting, and investment management. Note any executive or key staff that has access to funds or bank accounts. Submit a map or narrative explaining where offices are or will be geographically located and the approximate number of employees at each location.

A. Designate any common facilities and/or any of the above functions that are shared with affiliates.
B. Designate any of the above office/functions that are delegated to third parties.
C. Attach copies of signed agreements for office functions delegated to either affiliates or third parties.
D. As applicable, attach a separate chart reflecting any other management positions (if different than what was noted above) that exercise control over insurance operations in other jurisdiction where the Applicant Company is seeking admission.
E. Attach any similar information that was submitted to lenders or investment partners.
F. Attach a copy of the Applicant Company’s investment policy (required for primary and redomestication applications only).

11. Provide a detailed description of the Applicant Company’s sales techniques. The description attached should include:

A. Information regarding recruitment and training of sales representatives.
B. Identification as to whether the Applicant Company will be a direct writer or will use agents, brokers or a combination thereof.
C. Explanation of the compensation and control to be provided by the Applicant Company to its agents, brokers or sales personnel.
D. Sample copies of any agreements entered into between the Applicant Company and its agents or brokers.
E. If the Applicant Company will use a specific agency or managing general agent, identification of the agency or managing general agent and a copy of the agreement for this arrangement.
F. Sample contract forms of all types used and remuneration schedule, including those for general agents, if any.

12. If a parent, subsidiary and/or affiliated insurer is admitted for the classes of insurance requested in the pending application, please differentiate the products and/or markets of the Applicant Company from those of the admitted insurer(s).
13. Attach a detailed description of the advertising that will be used by the Applicant Company to market its products in this state. Include a detailed explanation as to how the Applicant Company will develop, purchase, control and supervise its advertising.

14. Attach a detailed explanation of the following:
   A. How the Applicant Company’s policies will be underwritten, including the issuance of policies and endorsements,
   B. How policies will be cancelled,
   C. How premiums and other funds will be handled, and
   D. How personnel will be trained, supervised, and compensated.

15. Attach a detailed explanation how the Applicant Company will adjust and pay claims, include the following;
   A. Describe how the Applicant Company will train, supervise and compensate the personnel handling claims adjusting and claims payment.
   B. Provide detailed information as to how and by whom claim reserves will be set and modified.
   C. **Will** the Applicant Company pay any representative given discretion as to the settlement or adjustment of claims whether in direct negotiation with the claimant or in supervision of the person negotiating, a compensation which is in any way contingent upon the amount of settlement of such claims?

16. Is the Applicant Company a member of a group of companies that shares any of the following:
   A. Common facilities with another company or companies

   Yes ___ No ___

   B. Services (e.g. accounting personnel for financial statement preparation)

   Yes ___ No ___

   C. Or, is a party to a tax allocation agreement in common with another company

   Yes ___ No ___

   If the answer to any of the above is yes, explain the division of costs between participants. If costs are pro-rated, what is the basis for division? Attach a copy of relevant contracts and include a summary of any attached contract.

17. Will the Applicant Company be party to any reinsurance contracts which contracts that in effect provide that Applicant Company will reimburse or indemnify the Reinsurer for losses payable there under?

   Yes ___ No ___

   If yes, provide the details and attach.

18. Does any salaried employee or officer, exclusive of a director, presently have in force a license as an insurance broker issued by this Department of Insurance?
Applicant Company Name: _____________________________ NAIC No. ________________
FEIN: ________________

Yes ____ No____
If yes, attach a copy of his/her license and indicate position held with applicant.

19. Will any of the Applicant Company’s policies being sold in connection with a mutual fund or investment in securities?
   Yes ____ No____ Not Applicable ____
   If yes, attach detailed explanation, including all sales literature which refers to the insurance and mutual fund or other investment literature that refers to the insurance and mutual fund or other investment plan connection.

21. If the Applicant Company is applying for authority to write Variable Annuities, attach the following:
   A. Copy(ies) of any third-party management or service contracts
   B. Commission schedules
   C. Five-year sales and expense projections
   D. A statement from the Applicant Company’s actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract
   E. Statement of the investment policy of the separate account
   F. Copy of the variable annuity prospectus as filed with the SEC unless the separate account is not required to file a registration under the federal securities law
   G. Copies of the variable annuity laws and regulations of the state of domicile
   H. Copy(ies) of the variable annuity contract(s) and application(s)
   I. A description of any investment advisory services contemplated relating to Separate Accounts
   J. Board of Directors resolution authorizing the creation of the separate account

22. If the Applicant Company is applying for authority to write Variable Life Insurance, attach the following:
   A. Copy(ies) of variable life policy(ies) the Applicant Company intends to issue
   B. Name and experience of person(s) or firm(s) proposed to supply consulting, investments, administrative, custodial or distribution services to the Applicant Company
   C. Disclose whether each investment advisor i) is registered under the Investment Advisers Act of 1940, or ii) is an investment manager under the Employee Retirement Income Security Act of 1974, or iii) whether the Applicant Company will annually file required information and statements concerning each investment advisor as required by its domiciliary state
   D. Copy of the variable life prospectus as filed with the SEC unless the separate account is not required to file a registration under the federal securities law
   E. Statement of the investment policy of any separate account, and the procedures for changing such policy
   F. Copies of the variable life insurance laws and regulations of the state of domicile
G. A statement from the Applicant Company’s actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract

H. Standards of suitability or conduct regarding sales to policyholders

I. Statement specifying the standards of conduct with respect to the purchase or sale of investments of separate accounts (i.e. Board resolution)

J. Board of Directors resolution authorizing the creation of the separate account

23. Will the Applicant Company pay, directly or indirectly, any commission to any officer, director, actuary, medical director or any other physician charged with the duty of examining risks or applications?

Yes_____ No _____ Not Applicable____

If yes, attach the details.
The Primary Application to the Uniform Certificate of Authority Application (UCAA) is designed for use in the formation of a new insurer, or for an existing insurer to use in making application to redomesticate to another state. A Uniform State is one that is committed to using the UCAA review process for company licensing and admissions.

The UCAA Primary Application has four sections designed to guide the Applicant Company through the licensing process:

I. Application Review Process
II. Filing Requirements (New Insurers and Redomestications)
III. Filing Requirements (Redomestications Only)
IV. How to File

The goal of the UCAA is to provide a streamlined approval process. However, some states have state-specific filing requirements based on statutes or internal procedures. The uniform states are working to eliminate non-essential state-specific requirements. All Applicant Companies must be familiar with the insurance laws of the state to which they submit an application. Please see the UCAA charts for information related to obtaining a copy of the laws, regulations and bulletins for the state in which an application is filed.

If the Applicant Company has any questions about the uniform admission process, a list of contact information is provided on the Addresses and Contacts Information for Submission of Application chart. It is highly recommended that the Applicant Company review the state charts, the application instructions and review the Frequently Asked Questions (FAQs) prior to contacting each state with any questions before submitting the application for review.

Primary Application Section I
Application Review Process
Processing Goal: 90 Days

It is the goal of each Uniform State to process all Primary Applications within 90 calendar days with receipt of a complete electronic application. The 90-day review process includes two weeks to determine if the application is complete and acceptable for filing. A completed application includes all required information detailed in the primary application instructions, any state specific requirements and filing fees. During the remaining time-span, the application will receive a financial and operational review. A state may not achieve the 90-day processing goal in instances where the application requires substantial follow-up, or in states with limited resources, or in instances when the Applicant Company files an application during peak business periods such as year-end and annual statement filing periods. Due to varying levels of resources available in each state the review may take longer than 90 days to complete. Anytime the state requests additional information, the state suspends the 90-day goal until it receives the requested information.
Based on the circumstances of a particular application, it may be necessary for the reviewing state to request additional information. Typically, a state will request any additional information it needs within 30 days after the state accepts or acknowledges the application. For more detail regarding the review process, refer to the *Company Licensing Best Practices Handbook*.

**Proprietary Information**

Both regulators and the Applicant Company might deem confidential any communications with insurance regulatory agencies in conjunction with the Primary Application concerning proprietary information about the Applicant Company. States may only share information determined to be confidential with other persons as authorized by law. By law, the state will not disclose to the public any information determined to be proprietary and trade secret. Each applicant company needs to expressly identify all information, in the application and in any subsequent correspondence, that the Applicant Company considers proprietary or trade secret.

The Applicant Company should review the state chart information, and FAQs prior to contacting the appropriate state regulators with any questions before filing any electronic application.

**Step One: Filing An Electronic Application**

The Applicant Company may submit Primary Applications anytime during the year. The state immediately reviews Primary Applications to ensure that the Applicant Company submitted the application in the required format as outlined in the instructions.

Generally, within two weeks from the date the state accepts or acknowledges the application, the state will notify the Applicant Company whether or not the state has accepted the application as complete for filing. If the state accepts the application for filing, it will assign the status date as the official filing date.

If the state does not accept the application for filing due to a deficiency in the application’s format, the state will contact the Applicant Company. Depending upon the nature of the deficiency, the state may give the Applicant Company two weeks from the date of receipt of notification from the department reviewing the application submission date to correct the deficiency. Some states may return to the Applicant Company any applications that are deficient and not accepted for filing. The state will provide a “closed” status date for any application that is deficient and not accepted for filing.

**Step Two: Application Review**

A Primary Application will undergo a rigorous financial and operational review in the state to which the Applicant Company submitted the application. The purpose of the Primary Application is to streamline application processing and the state will make every effort to process a Primary Application as quickly as possible.

At the conclusion of the substantive review by the reviewing state, the state will grant the Applicant Company a Certificate of Authority as a domestic company, allow the Applicant Company to withdraw...
the application, or will deny the application. Notification will be done automatically when the state provides the appropriate status date for approval or denial, respectively.

If the application is denied, the state will notify the Applicant Company provide an appropriate status date and provide include a detailed explanation for the denial which will automatically generate an email notification to the Applicant Company. The Applicant Company can also choose to withdraw their application and must include an explanation for withdraw. After the denial, If the Applicant Company wishes to re-file a Primary Application, the state will require a new application and filing fee will need to be submitted.

If the application is approved and a Certificate of Authority is granted, the Applicant Company should can complete and submit the electronic Company Code Application form. The form can be submitted via email, fax or mail.

Primary Application Section II
Filing Requirements (New Insurers and Redomestications)

This section provides a guide to understanding the focus of each document requirement of the Primary Application. It is important that applications be complete.

All documents attachments submitted in support of the application must be current. However, in certain instances, some states have limited latitude to accept older documents, although generally no more than five (5) years old. Please contact the states individually if there are questions about a specific document.

All required forms required for the Primary Application are available provided under in the electronic Primary Application tab. The Applicant Company can download these documents for printing and submission. The Primary Application cannot be filed electronically via the NAIC/UCAA portal. It must be file directly with the state of domicile. Please contact the state for instructions on the preferred method/format for filing. State specific forms, if available, will be provided.

Table of Contents

1. Application Form and Attachments
2. Filing Fee
3. Minimum Capital and Surplus Requirements
4. Statutory Deposit Requirements
5. Name Approval
6. Plan of Operation
7. Holding Company Act Filings
8. Statutory Membership(s)
9. SEC Filings or Consolidated GAAP Financial Statement
10. Debt-to-Equity Ratio Statement
11. Custody Agreements
12. Public Records Package
13. NAIC Biographical Affidavits
14. State-Specific Information

1. Application Form and Attachments
The application must identify all lines of insurance (Form 3) the Applicant Company is requesting authority to transact, as identified by the Applicant Company’s plan of operation. Only the Applicant Company using this application for a redomestication filing need to complete the section listing the lines of business that the Applicant Company is currently licensed to transact and is transacting in all jurisdictions. Submit a completed checklist (Form 1P) is completed automatically when all required information is provided, and original executed application form (Form 2P) as Item 1 of the application must be electronically signed and notarized.
2. **Filing Fee**

The application must include a filing fee for the state in which an application is being submitted. The payee name and the instructions for submitting the filing fee are included in the *Filing Fees - Primary and Expansion Applications* chart. Submit a copy of the Applicant Company’s check as Item 2 of the application checklist.

3. **Minimum Capital and Surplus Requirements**

The application must show that the Applicant Company meets the state’s statutory minimum capital and surplus requirements. In some states, the minimum capital and surplus requirements are determined by the classes of insurance that the Applicant Company is requesting authority to transact and the classes of insurance the Applicant Company is authorized to transact in all other jurisdictions. The state will determine the level of surplus required after considering the Applicant Company’s product line, operating record and financial condition. Compliance with the statutorily prescribed minimum surplus requirement may not be sufficient for all applicants. Review the chart that identifies the *Minimum Capital and Surplus Requirements* for each *the submitted* Uniform State. This chart also provides a contact person or a link to a state-specific form or additional information regarding RBC requirements and instructions. Submit an explanation of the Applicant Company’s compliance with the capital and surplus requirements as Item 3 of the application checklist.

4. **Statutory Deposit Requirements**

The domiciliary state may require a statutory deposit. The *Statutory Deposit Requirements* chart provides state-specific requirements and identifies those states that require a Statutory Deposit. Submit as Item 4 of the Application checklist, documentation explaining how the Applicant Company meets or is meeting the statutory deposit requirements. Unless otherwise indicated, the Statutory Deposit is for the benefit of all policyholders.

5. **Name Approval**

Each state has different guidelines and procedures for name approval. The *Name Approval Requirements* chart is intended to serve as a guide for the various name approval requirements of each Uniform State. The Applicant Company should check with the state to ensure compliance with all applicable name approval requirements. Where applicable, submit evidence of name approval request as Item 5 of the application checklist.

6. **Plan of Operation**

The plan of operation has three components, a brief narrative, proforma financial statements/projections (Form 13) and a completed Questionnaire (Form 8P). The narrative should include significant information not captured as part of the Questionnaire that the Applicant Company submits in support of the application, such as the reason for redomiciliation/business plan. The proforma is one of the three (3) components in the Plan of Operation. The proforma is available for Life, Property/Casualty, Health and Title companies. Provide a company-wide, three-year proforma balance sheet and income statement. For the lines requested, provide three-year premium and loss projections by line for the application state. Projections must support all aspects of the proposed plan of operation, including reinsurance...
arrangements and any delegated function agreements. Include the assumptions used to arrive at these projections.

The proforma when applied to the primary redomestication application is projected data. The proforma workbook should be the same business type as the financial statement blank filed with the NAIC. As such, the projected amounts need not balance with historical NAIC financial filings. The projected data, however, should be relevant to the Applicant Company’s history of growth and losses as contemplated by the NAIC Accounting Practices and Procedures Manual.

The proforma should be completed by statutory accounting or financial reporting professionals that should be available to answer any questions or concerns from reviewing regulatory staff. The proforma is completed on an annual basis, typically for a full three-year time period, however, some states may require five years. The proforma should start with the first full year of operation that the Applicant Company anticipates actively writing business in the state(s) receiving the application. The proforma excel workbook is password protected and cannot be modified. When projecting five years, two workbooks will be required. Submit the completed electronic Questionnaire and all supporting attachments as Item 6 of the application checklist.

7. Holding Company Act Filings

If the Applicant Company is a member of a holding company system, the application must include either the most recent Holding Company Act (HCA) filings, including the Annual Form B Registration Statement and related Form F or a statement substantially similar to the NAIC Insurance Holding Company System Regulatory Act (440). The filing should include all attachments, exhibits and appendices referenced in the HCA filings. Submit Attach the HCA filings as Item 7 of the application checklist, include all attachments and any amendments up to the application filing date and include copies of all advisory, management and service agreements.

8. Statutory Memberships

In some states, the Applicant Company is required to join one or more rating, guarantee or other organizations before transacting insurance. Generally, the Applicant Company’s authorized lines of insurance govern statutorily mandated memberships. Review the Statutory Membership Requirements chart prior to contacting the licensure state about any required statutory memberships before transacting insurance. Submit Attach documentation supporting membership application(s) as indicated, in states where required, or acknowledgment of required memberships as Item 8 of the application checklist.

9. SEC Filings or Consolidated GAAP Financial Statement

If the Applicant Company, its parent or its ultimate holding company has made a filing or registration with the U.S. Securities and Exchange Commission (SEC) in connection with a public offering within the last three years, or filed an 8K, 10K or 10Q within the last 12 months, the application must note that the filing, including any supplements or amendments, is available electronically from the SEC. If the Applicant Company, its parent or its ultimate holding company is not publicly traded, the application must include attach a copy of the Applicant Company’s most recent Consolidated GAAP financial statement. Submit Attach the notice of SEC filings or copy of a Consolidated GAAP statement as Item 9 of the application checklist.
10. **Debt-to-Equity Ratio Statement**

Members of a holding company system must submit complete debt-to-equity information as Item 10 of the application checklist. The application must include a comprehensive debt-to-equity ratio statement that includes the following information.

A. Provide the consolidated outside debt to consolidated equity ratio on a GAAP basis for the holding company. *

<table>
<thead>
<tr>
<th>Debt Duration</th>
<th>Debt Amount ($)</th>
<th>Debt to Consolidated Equity Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 5 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 10 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 20 years</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

B. Provide the most recent consolidated holding company financial statement.

C. State if the holding company, on a consolidated basis, has a tangible net worth: a) for the past three years; b) at present; and c) provide projections with assumptions for a three-year period.

D. The Applicant Company must clearly substantiate the sources of repayment of any debt, including, but not limited to, whether the source of repayment is independent from the future income of the insurers.

E. Calculate the debt service (as reported in D above) required of each insurer as a percentage of the Applicant Company’s capital and surplus.

F. List the assets of the holding company, if any, that are pledged to fund the debt service or debt repayment of an affiliate or parent (include the assets or stock of any insurer subsidiaries)

G. List any guarantees (personal or otherwise) from the shareholders for repayment of the debt.

*Some states may require re-statement based upon statutory equity.

11. **Custody Agreements**

The Applicant Company should include a statement setting forth whether or not any of the Applicant Company’s stocks, bonds, or other physical or book entry securities are in the physical possession of another entity.

If any of the Applicant Company’s stocks, bonds or other securities are not in the Applicant Company’s actual physical possession or in a safe deposit box under the exclusive control of the Applicant Company (except as shown in the Schedule of Special Deposits in the Applicant Company’s Annual Statement), the application must include the written agreement with each entity holding and/or administering these securities. The written agreement should include appropriate safeguards for the handling of the securities, in accordance with those specified in the NAIC Financial Condition Examiners Handbook (Handbook).
Some states have additional requirements for these custody agreements, beyond those called for in the Handbook. Submit the statement and copies of the custody agreements as Item 11 of the application.

12. Public Records Package

Most states have requirements to disclose information to the public under a Public Records Act. To meet these public disclosure requirements certain items must be included with the application. While these documents may or may not be part of the substantive review, please be sure to include the required documents with the application. The Public Records Package chart contains requirements for financial and operational filings. An Applicant Company seeking to redomesticate should provide both financial and operational documents for the application state. An Applicant Company that is seeking to form a new insurer should include all documents listed in the operational section of the chart for the application state. Submit all documents required by the application state as Item 12 of the application checklist.

13. NAIC Biographical Affidavit (Biographical Affidavit)

A. The Applicant Company is required to submit an NAIC Biographical Affidavit (Form 11) in connection with pending or future application(s) for licensure or a permit to organize with a department of insurance in one or more states. The Applicant Company must submit an NAIC Biographical Affidavit on behalf of all officers, directors and key managerial personnel of the Applicant Company and individuals with a ten percent (10%) or more, beneficial ownership in the Applicant Company and the Applicant Company’s ultimate controlling person (“Affiant”).

B. The UCAA defines “Independent Third-Party” as:
   (i) A consumer reporting agency (“CRA”) overseen by the Federal Trade Commission (“FTC”) and, therefore, subject to the FCRA, which have been vetted and is currently on the approved list;
   (ii) Has the ability to perform international background investigations; and
   (iii) One whose officers and directors have no material affiliation with the Applicant Company other than stock ownership amounting to less than one percent (1%) of total stock outstanding, unless prior approval is given by the department of insurance to which application is being made.

C. The NAIC Biographical Affidavit requests information with respect to the Affiant’s employment history, education, personal information and character. The NAIC Biographical Affidavit also includes the Disclosure and Authorization Concerning Background Reports (the “Disclosure & Authorization Form”). The signature of the Affiant on the Disclosure & Authorization Form permits an Independent Third-Party to conduct an independent third-party verification on the Affiant.

D. The NAIC Biographical Affidavit includes three types of the Disclosure & Authorization Form. There are three different Disclosure & Authorization Forms since certain state laws, regulations and rules require different kinds of disclosures and wording within such form. An Affiant must sign the corresponding Disclosure & Authorization Form(s) for the
respective state(s) where the Affiant has lived or worked within the last ten (10) years. Refer to the Disclosure & Authorization Forms for further information.

E. The NAIC Biographical Affidavit is used to evaluate the suitability, competency, character and integrity of the Affiant in connection with an Applicant Company’s pending or future application(s) for licensure or a permit to organize with a department of insurance in one or more states.

The Independent Third-Party uses information contained in the NAIC Biographical Affidavit as a tool to perform an independent third-party verification to determine an individual’s fitness and propriety. The independent third-party verification may contain information bearing on the Affiant’s character, general reputation, personal characteristics, mode of living and credit standing (if required by the state). The Independent Third-Party Vendor shall use the independent third-party verification to create a background report (the “Background Report”).

F. The Disclosure & Authorization Form is valid for a maximum of six months. Additionally, an Affiant may revoke the authorization at any time by delivering a written revocation to the Applicant Company. Refer to the Disclosure & Authorization Form for further information.

G. The Background Reports are subject to the Fair Credit Reporting Act (“FCRA”). Pursuant to FCRA, the state departments of insurance and an Applicant Company who is seeking admission are “users” of consumer reports. The FCRA requires that the Applicant Company provide the Affiant with a copy of the “Summary of Your Rights Under the Fair Credit Reporting Act.” The Applicant Company should provide a copy of the “Summary of Your Rights under the Fair Credit Reporting Act” to each Affiant. This summary can be found at the Federal Trade Commission ("FTC") website. Background Reports are valid for six months from the signature date of the affidavit. Any alteration to the original biographical affidavit or updated signature will require a newly prepared background report.

H. The Applicant Company and state departments of insurance are required to comply with FCRA, especially as it relates to confidentiality of the information contained in such consumer reports. To the extent required by law, the states and Independent Third-Party Vendors should maintain the Background Reports procured under the Disclosure & Authorization Form as confidential. A copy of the FCRA is located here.

I. The department of insurance in the state where an Applicant Company files, or intends to file, an application and the Applicant Company may require the Background Report. An Affiant who desires a copy of their Background Report may request a copy from the Applicant Company or the CRA as indicated on the Disclosure & Authorization Form. Refer to the Disclosure & Authorization Form for further information.

J. Please check state requirements for those states that require additional background information, such as fingerprints, in place of, or in addition to, NAIC Biographical Affidavits. If applying in one of those states, necessary fingerprints and processing fees should be included.
Refer to the list of currently approved Independent Third-Party Vendors for Background Reports.

NAIC Biographical Affidavits must be completed on the most current form [Word | PDF], in effect at the time the affidavit was signed and the Affiant shall not sign the Affidavits more than six months before the date the Applicant Company files the application. Each question on the biographical affidavit must have a response. If an answer is “None”, then so state. Incomplete biographical affidavits could delay the background investigation report and result in a delay of the application review by the state.

Submit original Biographical Affidavits (Form 11 [Word | PDF]) that contain the Disclosure & Authorization Forms to the state department(s) of insurance as Item 13 of the application.

14. State-Specific Information

Some jurisdictions may have additional requirements before a Certificate of Authority is issued. Before completing a UCAA Primary Application, the Applicant Company should review the list of requirements on the State-Specific Requirements for the application state. Submit state-specific requirements as Item 14 of the application.

Forms:

[ X ] Form 1 – Checklist  [ X ] Form 2 - Application  [ X ] Form 3 – Lines of Business
[ ] Form 6- Certificate of Compliance  [ ] Form 7 – Certificate of Deposit  [ X ] Form 8 - Questionnaire
[ ] Form 8C- Corporate Amendment Questionnaire  [ ] Form 11-Biographical Affidavit  [ ] Form 12-Uniform Consent to Service of Process  [ ] Form 13- ProForma  [ ] Form 14- Change of Address/Contact Notification
[ ] Form 15 – Affidavit of Lost C of A  [ ] Form 16 – Voluntary Dissolution  [ ] Form 17 – Statement of Withdrawal

DESCRIPTION OF CHANGE(S)

Updated forms and instructions for domestic redomestications applications only. Identified the forms by placing a (R) after each form that was modified for the domiciliary redomestication application.

REASON OR JUSTIFICATION FOR CHANGE **

Updated the current hard-copy only option by creating an electronic version of the domiciliary state redomestication application. Removed all references and requirements for a start-up company to create this redomestication only electronic option. Only the forms that were modified are included in this proposal, forms not changed but are required for the application are included/referenced in the application instructions.

Additional Staff Comments:

5/13/21 NTCWG call, consideration tabled for re-exposure of primary application.

** This section must be completed on all forms.

Uniform Certificate of Authority Application (UCAA)

Domiciliary Redomestication Application Checklist

The application checklist is intended to help guide the insurer (herein after referred to as “Applicant Company”) with the assembly of a complete PrimaryRedomestication Uniform Certificate of Authority Application (UCAA). Please be sure to complete the checklist by appropriately marking the boxes on the left side of the page prior to submitting the application for review. The completed checklist should be attached to the top of their automatically completed within the application.

Regulator Use Only

1. Application Form, containing:
   - Completed UCAA PrimaryRedomestication Application Checklist (Form 1RP)
   - Original UCAA PrimaryRedomestication Application executed and signed (Form 2PR)
   - Include all lines of insurance the Applicant Company is licensed to transact, currently transacting, and requesting authority to transact in all the new domiciliary jurisdictions (Form 3).

2. Filing Fee (pursuant to Section II Filing Requirements Item 2), containing:
   - Payment of required filing fee
   - Copy of check

3. Minimum Capital and Surplus Requirements (pursuant to Section II Filing Requirements Item 3)
   - Provide explanation of compliance with minimum capital & surplus requirements for state for which application is prepared

4. Statutory Deposit Requirements (pursuant to Section II Filing Requirements Item 4)
   - An original Certificate of Deposit prepared by previous state of domicile (Form 7)

5. Name Approval (pursuant to Section II Filing Requirements Item 5)
   - Evidence of name approval request

6. Plan of Operation (pursuant to Section II Filing Requirements Item 6)
   - Completed questionnaire (Form 8R)
   - Pro Forma
   - Narrative

7. Holding Company Act Filings (pursuant to Section II Filing Requirements Item 7)
   - Include Holding Company Act Filings, including Form B, Form F or substantially similar Statement
   - Corporate Governance Annual Disclosure

8. Statutory Membership(s)
   - Submit documentation as listed in Section II Filing Requirements Item 8

9. SEC Filings or Consolidated GAAP Financial Statement
   - Submit documentation as listed in Section II Filing Requirements Item 9

10. Debt-to-Equity Ratio Statement
    - Submit documentation as listed in Section II Filing Requirements Item 10

11. Custody Agreements
    - Submit documentation as listed in Section II Filing Requirements Item 11
Applicant Company Name: _____________________________

FEIN:   __________________________  
Regulator Use Only

12. Public Records Package – Submit ALL items in chart in Section II Item 12, including:
   
a. Articles of Incorporation, including:
   [ ] Original certification by domiciliary state
   
b. Bylaws, including:
   [ ] Original certification by the Applicant Company’s corporate assistant
   
c. Statement with attachments, including:
   [ ] Current year annual statement*, verified and signed, including actuarial opinion
   [ ] Current year quarterly statements (one copy for each quarter), verified and signed
   
   *1. Updated statements should be submitted on a timely basis while application is pending.
   2. If annual statement for two preceding years has not been filed with the NAIC, one copy of each year must be submitted with the application.
   
   [ ] Risk-Based Capital Report
   [ ] Report of Examination
   
d. Independent CPA Audit Report

13. Certificate of Compliance (pursuant to Section III Filing Requirements Item 6)
   [ ] Original certification of compliance (Form 6) completed by domiciliary state insurance regulatory agency

14. NAIC Biographical Affidavit (Form 11) for the following:

   [ ] Officers (as listed on Jurat Page of most recent or upcoming financial statement)
   [ ] Directors (as listed on Jurat Page of most recent or upcoming financial statement)
   [ ] Key managerial personnel (including heads of risk management, compliance, internal audit or other individuals who will control the operations of the Applicant Company or have binding authority over the Applicant Company)
   [ ] Any individual (including management not represented of the Jurat Page or not in key managerial positions) with 10% or greater ownership of the Applicant Company and/or the Applicant Company’s ultimate controlling entity
   [ ] Affidavit originally signed and notarized within six months of application date
   [ ] Affidavit certified by independent third party

15. State-Specific Information
   [ ] Some jurisdictions may have additional requirements that must be met before a Certificate of Authority can be issued. Before completing a UCAA PrimaryRedomestication Application, the Applicant Company should review a listing of requirements for the state to which it is applying.

Filing Requirements – Redomestications Only

The requirements of this section are only for those Applicant Company’s seeking to redomesticate from one state to another and are in addition to the requirements of Section II, items 1-14 of the Primary Checklist. A Redomestication is defined as the process where any insurer organized under the laws of any other state may become a domestic insurer that transfers its domicile to another state by merger or consolidation or any other lawful method. The Primary Application when used for a redomestication is filed with the Applicant Company’s new state of domicile.

15. Annual Statement with Attachments
   [ ] Submit documentation as listed in Section III Filing Requirements Item 1

16. Quarterly Statements
   [ ] Submit documentation as listed in Section III Filing Requirements Item 2
17. **Risk-Based Capital Report**

Submit documentation as listed in Section III Filing Requirements Item 3
18. Independent CPA Audit Report
   Submit documentation as listed in Section III Filing Requirements Item 4

19. Reports of Examination
   Includes a copy of the most recent Report of Financial Examination from its domiciliary state and a note of all more recent examinations, completed by any state, including market conduct examinations along with a description of each examination.

20. Certificate of Compliance (pursuant to Section III Filing Requirements Item 6
   Original certification of compliance (Form 6) completed by domiciliary state insurance regulatory agency.

Lines of Insurance

Please complete the information below for each state in which the Applicant Company is currently licensed indicating currently authorized, currently transacting and applying for authority to do business. As a result of statutory and regulatory requirements, each state has its own terminology for the lines of insurance. The Lines of Business Matrix was developed to assist the Applicant Company in completing this form. The matrix includes each line of business as it is reported on the NAIC’s annual statement blanks and corresponding state statute or regulation. The matrix is located on the UCAA website under State Charts incorporated into the Form 3, Lines of Business (electronic only).

**Monoline only:**

- Title – Section 1113(a)(18) & Article 64 of the N.Y. Ins. Law
- Mortgage Guaranty - Section 1113(a)(23) & Article 65 of the N.Y. Ins. Law
- Financial Guaranty - Section 1113(a)(25) & Article 69 of the N.Y. Ins. Law

**Note 1:** A company may only apply for the lines of insurance for which it is authorized in its state of domicile.

**Note 2:** The company must have transacted business for a minimum of three (3) years prior to seeking admission. If the company was recently acquired, at least three (3) years of operating experience under the new management is required. An affiliated insurer admitted in New York and operating under the same ownership/management team for at least three (3) years may satisfy this requirement. If the aforementioned situation applies, a written request for approval of a waiver must be submitted with the application.

**Note 1:** A company may only apply for the lines of insurance for which it is authorized in its state of domicile.

**Note 2:** The company must have transacted business for a minimum of one (1) year prior to seeking admission. If the company was recently acquired, at least one (1) year of operating experience under the new management is required. An affiliated insurer admitted in Pennsylvania and operating under the same ownership/management team for at least one year may satisfy this requirement. If the aforementioned situation applies, a written request for approval of a waiver must be submitted with the application.

**Note 3:** The Department of Labor and Industry requires all insurers that are applying to write workers’ compensation to complete and file an Initial Report of Accident and Illness Prevention Services. The Insurance Department will not issue a Certificate of Authority to an insurer to write workers’ compensation insurance until the Department of Labor and Industry has indicated the company has made the necessary filing as required by the Workers’ Compensation Act. The necessary form with instructions can be obtained at: [http://www.insurance.pa.gov/Companies/DoingBusiness/Documents/LIBC_211I.pdf](http://www.insurance.pa.gov/Companies/DoingBusiness/Documents/LIBC_211I.pdf).

When one of the above coverages includes more than one kind or sub-line of insurance, the selection of that coverage authorizes the company to write one or more of the specified kinds of insurance included in that coverage.

(a) Includes, but not limited to, Extended Coverage, Windstorm, Lightning, Hurricane, Hail (except growing crops), Explosion, Riot, Civil Commotion, Smoke, Aircraft, Land Vehicles, Physical Loss Form, Additional Extended Coverage, Vandalism, Malicious Mischief.

(b) Includes Personal Property Floater.

(c) Includes Bodily Injury, Medical Payments, Property Damage, and other Automobile Liability.

(d) Includes Fire, Theft, Collision, Comprehensive and other Automobile Physical Damage.

(e) Includes Bodily Injury, Medical Payments and Property Damage with regards to Comprehensive Personal Liability, Owners, Landlords and Tenants, Manufacturers and Contractors, Product, Contractual, Elevator (including Elevator Collision), Employers' Liability, Professional Liability for Physicians, Podiatrists, Certified Anesthetists, and Hospitals, and other Liability other than Automobile.

(f) Includes Credit Involuntary Unemployment; excludes Mortgage Guaranty.

(g) Mortality.

(h) May be written only by Title insurance companies except those companies transacting title insurance prior to October 1, 1967. Includes Attorney's Title insurance companies as authorized by Texas Insurance Code, Chapter 2551.

(i) May be written only by Mortgage Guaranty insurance companies as authorized by Texas Insurance Code, Chapter 3502.

- Disclaimer IF allowed by State.
Debt-to-Equity Ratio Statement

Members of a holding company system must complete debt-to-equity information. The comprehensive debt-to-equity ratio statement includes the following information.

A. Consolidated outside debt to consolidated equity ratio on a GAAP basis for the holding company. *

<table>
<thead>
<tr>
<th>Debt Duration</th>
<th>Debt Amount ($)</th>
<th>Debt to Consolidated Equity Ratio</th>

<td></td>
</tr>
<tr>
<td>Up to 20 years</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

B. Provide the most recent consolidated holding company financial statement.

C. State if the holding company, on a consolidated basis, has a tangible net worth:
   a) for the past three years;
   b) at present; and
   c) provide projections with assumptions for a three-year period.

D. The Applicant Company must clearly substantiate the sources of repayment of any debt, including, but not limited to, whether the source of repayment is independent from the future income of the insurers.

E. Calculate the debt service (as reported in D above) required of each insurer as a percentage of the Applicant Company’s capital and surplus.

F. List the assets of the holding company, if any, that are pledged to fund the debt service or debt repayment of an affiliate or parent (include the assets or stock of any insurer subsidiaries)

G. List any guarantees (personal or otherwise) from the shareholders for repayment of the debt.

*Some states may require re-statement based upon statutory equity.
Uniform Certificate of Authority Application

QUESTIONNAIRE

Directions: Each "Yes" or "No" question is to be answered by marking an "X" in the appropriate space. All questions should be answered. If the Applicant Company denotes a question as "Not Applicable" (N/A) an explanation must be provided. Other answers and additional explanations or details may be provided in writing attached to the questionnaire. Please complete this form and file it with the Applicant Company's application for a Certificate of Authority.

1. I hold the position(s) of ____________________________ with the Applicant Company.

2. A. Has the Applicant Company transferred or encumbered any portion of its assets or business, or has its outstanding capital stock been directly or indirectly pledged?
   Yes ____ No ____

   B. Has the Applicant Company merged or consolidated with any other company within the last five years?
   Yes ____ No ____

   If the answer to either question is yes, provide the details in writing and attach to the Questionnaire.

3. Is the Applicant Company presently negotiating for or inviting negotiations for any transaction described above?
   Yes ____ No ____

   If yes, provide the details in writing and attach to the Questionnaire.

4. Has the Applicant Company ever changed its name?
   Yes ____ No ____

   If yes, attach copies of the instruments effecting such transaction certified by the Secretary over corporate seal as a true copy of the originals, including any official state regulatory approvals and filing data.

5. A. Has the Applicant Company undergone a change of management or control since the date of its latest annual statement filed in support of this application?
   Yes ____ No ____

   B. Does the Applicant Company contemplate a change in management or any transaction that would normally result in a change of management within the reasonably foreseeable future?
   Yes ____ No ____

   If the answer to either question is yes, provide the details in writing and attach to the Questionnaire.

6. Is the Applicant Company owned or controlled by a holding corporation?
   Yes ____ No ____

   If yes, attach and make a part hereof an affidavit by an executive officer of the Applicant Company who knows the facts listing the principal owners (10% or more of the outstanding shares) of such holding corporation by name and residence address, business occupation and business affiliations.
Applicant Company Name: _____________________________

7. Is the Applicant Company owned, operated or controlled, directly or indirectly, by any other state or province, district, territory or nation or any governmental subdivision or agency?
   Yes ___ No ___
   If yes, provide the details in writing and attach to the Questionnaire

8. A. Has the Applicant Company’s certificate of authority to do business in any state been suspended or revoked within the last ten years?
   Yes ___ No ___

   B. Has the Applicant Company’s application for admission to any state been denied within the last ten years?
   Yes ___ No ___
   If the answer to either question is yes, provide the details in writing and attach to the Questionnaire.

9. Has any person who is presently an officer or director of Applicant Company been convicted on, or pleaded guilty or no contest to, an indictment or information in any jurisdiction charging a felony for theft, larceny or mail fraud or, of violating any corporate securities statute or any insurance statute?
   Yes ___ No ___
   If yes, provide the details in writing and attach to the Questionnaire.

10. Is the Applicant Company presently engaged in a dispute with any state of federal regulatory agency?
    Yes ___ No ___
    If yes, provide the details in writing and attach to the Questionnaire.

11. Is the Applicant Company a plaintiff or defendant in any legal action other than one arising out of policy claims?
    Yes ___ No ___
    If yes, provide a summary of each case and an estimate of the Applicant Company's probable liability, if any, and attach to the Questionnaire.

12. Does the Applicant Company purchase investment securities through any investment banking or brokerage house or firm from whom any of Applicant Company's officers, directors, trustees, investment committee members or controlling stockholders receive a commission on such purchases?
    Yes ___ No ___
    If yes, provide the details in writing and attach to the Questionnaire.

13. Is the Applicant Company a,
    A. Bank
       Yes ___ No ___
    B. Bank holding company, subsidiary or affiliate
       Yes ___ No ___
    C. Financial holding company
       Yes ___ No ___
Applicant Company Name: _____________________________  NAIC No.  __________________________
FEIN:   __________________________

D. Other financial institution
   Yes ____ No ____
   If yes, identify the bank(s), bank holding company(ies) or financial institution and the affiliation of the Applicant Company. Provide the details in writing and attach to the Questionnaire.

14. Has the Applicant Company, within 18 months last preceding the date of this affidavit, done any of the following:

A. Made a loan to an entity owned or controlled directly or through a holding corporation by one or more of Applicant Company’s officers, directors, trustees or investment committee members, or to any such person?
   Yes ____ No ____

B. Sold or transferred any of its assets or property, real or personal, to any such entity or person?
   Yes ____ No ____

C. Had its outstanding capital stock directly or indirectly pledged for the debt of an affiliate?
   Yes _____ No _____

D. Purchased securities, assets or property of any kind from an entity owned or controlled by one or more of the Applicant Company’s officers, directors, trustees, or any persons who have authority in the management of the Applicant Company's funds (including a controlling stockholder)?
   Yes ____ No ____

If the answer to any of the last four questions is affirmative, did any officer, director, trustee or any person who had authority in the management of the Applicant Company's funds (including a controlling stockholder) receive any money or valuable thing for negotiating, procuring, recommending or aiding in such transaction?
   Yes ____ No ____

   If yes, provide the details in writing and attach to the Questionnaire.

15. Attach an organizational depiction (in the format of a flow chart) showing the various executive management, directors and officers and related material functions that require internal control oversight of the Applicant Company, with the name and official title of those responsible for those offices/functions and the portions of the organization they oversee. Material functions should include, but are not limited to, underwriting, claims adjustment/payments, premium accounting, claims accounting, marketing, financial reporting, and investment management. Note any executive or key staff that has access to funds or bank accounts. Submit a map or narrative explaining where offices are geographically located and the approximate number of employees at each location.

A. Designate any common facilities and/or any of the above functions that are shared with affiliates.

B. Designate any of the above office/functions that are delegated to third parties.

C. Attach copies of signed agreements for office functions delegated to either affiliates or third parties.

D. As applicable, attach a separate chart reflecting any other management positions (if different than what was noted above) that exercise control over insurance operations in other jurisdiction where the Applicant Company is seeking admission.

E. Attach any similar information that was submitted to lenders or investment partners.

F. Attach a copy of the Applicant Company’s investment policy (required for primary and redomestication applications only).
16. Provide a detailed description of the Applicant Company’s sales techniques. The description should include:

A. Information regarding recruitment and training of sales representatives.
B. Identification as to whether the Applicant Company will be a direct writer or will use agents, brokers or a combination thereof.
C. Explanation of the compensation and control to be provided by the Applicant Company to its agents, brokers or sales personnel.
D. Sample copies of any agreements entered into between the Applicant Company and its agents or brokers.
E. If the Applicant Company will use a specific agency or managing general agent, identification of the agency or managing general agent and a copy of the agreement for this arrangement.
F. Sample contract forms of all types used and remuneration schedule, including those for general agents, if any.

17. For each state in which the Applicant Company is filing, explain the following:

A. The product lines currently sold or planned by the Applicant Company,
B. Specialty line or lines currently sold and planned,
C. Captive business,
D. The Applicant Company’s marketing plan, including a description of the financial, corporate or other connections productive of insurance,
E. The Applicant Company’s current and expected competition (both regionally and nationally), and
F. How each state in which admission has been requested fits into the marketing plan. General description of the classes to be transacted is not an adequate response. For example, if the Applicant Company plans to market credit life and disability products tailored for use by credit unions, simply stating that it will transact credit life and disability is inadequate.

18. If a parent, subsidiary and/or affiliated insurer is admitted for the classes of insurance requested in the pending application, please differentiate the products and/or markets of the Applicant Company from those of the admitted insurer(s).

19. Provide a detailed description of the advertising that will be used by the Applicant Company to market its products in each state. Include a detailed explanation as to how the Applicant Company will develop, purchase, control and supervise its advertising.

20. For each State, explain in detail the following:

A. How the Applicant Company’s policies will be underwritten, including the issuance of policies and endorsements,
B. How policies will be cancelled,
C. How premiums and other funds will be handled, and
D. How personnel will be trained, supervised, and compensated.
21. Explain in detail how the Applicant Company will adjust and pay claims.
   A. Describe how the Applicant Company will train, supervise and compensate the personnel handling claims adjusting and claims payment.
   B. Provide detailed information as to how and by whom claim reserves will be set and modified.
   C. Does the Applicant Company pay any representative given discretion as to the settlement or adjustment of claims whether in direct negotiation with the claimant or in supervision of the person negotiating, a compensation which is in any way contingent upon the amount of settlement of such claims?
      Yes ____ No ____

22. Is the Applicant Company a member of a group of companies that shares any of the following:
   A. Common facilities with another company or companies
      Yes ____ No ____
   B. Services (e.g. accounting personnel for financial statement preparation)
      Yes ____ No ____
   C. Or, is a party to a tax allocation agreement in common with another company
      Yes ____ No ____

If the answer to any of the above is yes, explain the division of costs between participants. If costs are pro-rated, what is the basis for division? Attach a copy of relevant contracts and include a summary of any attached contract.

23. Does the Applicant Company have any reinsurance contracts which contracts that in effect provide that Applicant Company will reimburse or indemnify the Reinsurer for losses payable there under?
    Yes ____ No ____

    If yes, provide the details in writing and attach to the Questionnaire.

24. Does any salaried employee or officer, exclusive of a director, presently have in force a license as an insurance broker issued by the ________________ Department of Insurance?
    (Name of Application State)
    Yes ____ No ____

    If yes, please identify his/her license and position held with applicant.

25. Does the Applicant Company have outstanding unexercised stock options?
    Yes ____ No ____

    A. If yes, to whom and in what number of shares?
    B. If options are outstanding for a number of shares greater than 10% of the number of shares presently issued and outstanding, a copy of the option form and of the plan pursuant to which they were granted are attached.

26. Are any of the Applicant Company's policies being sold in connection with a mutual fund or investment in securities?
    Yes ____ No ____ Not Applicable ____
If yes, supply details including all sales literature which refers to the insurance and mutual fund or other investment literature that refers to the insurance and mutual fund or other investment plan connection.

27. If the Applicant Company is applying for authority to write Variable Annuities, provide the following:
   A. Copy(ies) of any third-party management or service contracts
   B. Commission schedules
   C. Five-year sales and expense projections
   D. A statement from the Applicant Company's actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract
   E. Statement of the investment policy of the separate account
   F. Copy of the variable annuity prospectus as filed with the SEC unless the separate account is not required to file a registration under the federal securities law
   G. Copies of the variable annuity laws and regulations of the state of domicile
   H. Copy(ies) of the variable annuity contract(s) and application(s)
   I. A description of any investment advisory services contemplated relating to Separate Accounts
   J. Board of Directors resolution authorizing the creation of the separate account

28. If the Applicant Company is applying for authority to write Variable Life Insurance, provide the following:
   A. Copy(ies) of variable life policy(ies) the Applicant Company intends to issue
   B. Name and experience of person(s) or firm(s) proposed to supply consulting, investments, administrative, custodial or distribution services to the Applicant Company
   C. Disclose whether each investment advisor i) is registered under the Investment Advisers Act of 1940, or ii) is an investment manager under the Employee Retirement Income Security Act of 1974, or iii) whether the Applicant Company will annually file required information and statements concerning each investment advisor as required by its domiciliary state
   D. Copy of the variable life prospectus as filed with the SEC unless the separate account is not required to file a registration under the federal securities law
   E. Statement of the investment policy of any separate account, and the procedures for changing such policy
   F. Copies of the variable life insurance laws and regulations of the state of domicile
   G. A statement from the Applicant Company’s actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract
   H. Standards of suitability or conduct regarding sales to policyholders
   I. Statement specifying the standards of conduct with respect to the purchase or sale of investments of separate accounts (i.e. Board resolution)
   J. Board of Directors resolution authorizing the creation of the separate account
29. If the Applicant Company is applying for authority to write Life Insurance, has the Applicant Company at any time in any jurisdiction while operating under its present management, or at any time within the last five years irrespective of changes in management, taught or permitted its agents to sell insurance by using any of the following devices, or representations resembling any of the following:

A. “Centers of influence” and “advisory board,”
   Yes____ No____

B. A charter or founder’s policy,
   Yes____ No____

C. A profit sharing plan,
   Yes____ No____

D. Only a limited number of a certain policies will be sold in any given geographical area;
   Yes____ No____

E. “Profits” will accrue or be derived from mortality savings, lapses and surrenders, investment earnings, savings in administration;
   Yes____ No____

F. A printed list of several large American or Canadian insurers showing the dollar amounts of "savings", "profits" or "earnings" they have made in such categories.
   Yes____ No____

If the answer to any of the above is yes, supply a complete set of all sales material including the sales manual, all Applicant Company instructional material, brochures, illustrations, diagrams, literature, “canned” sales talks, copies of the policies which are no longer in use, list of states where such methods were used and the date (by year) when they were used, the approximate amount of insurance originally written in each state on each policy form thusly sold, the amount currently in force, and the lapse ratio on each form year by year and cumulatively in gross to the present date.

30. Does the Applicant Company pay, directly or indirectly, any commission to any officer, director, actuary, medical director or any other physician charged with the duty of examining risks or applications?
   Yes_____ No _____ Not Applicable____

If yes, provide the details in writing and attach to the Questionnaire.

The following questions are to be completed only if the Applicant Company is redomesticating to another state.

31. Does the Applicant Company have any permitted practices allowed by its current state of domicile?
   Yes____ No _____ Not Applicable____

If yes, provide the details in writing and attach a copy of the state of domicile’s approval to the Questionnaire.

32. Does the Applicant Company’s current state of domicile prescribe any practices of the Applicant Company that are not in accordance with,

A. Laws, regulations or bulletins of proposed state of domicile;
   Yes_____ No _____ Not Applicable____

If yes, provide the details in writing and attach to the Questionnaire.
B. Reserving requirements of proposed state of domicile; or
   Yes_____ No _____ Not Applicable____
   If yes, provide the details in writing and attach to the Questionnaire.

C. NAIC guidelines
   Yes_____ No _____ Not Applicable____
   If yes, provide the details in writing and attach to the Questionnaire.

33. Will the Applicant Company’s investments comply with the investment laws, regulations or bulletins of the proposed state of domicile?
   Yes_____ No _____ Not Applicable____
   If no, provide the details in writing and attach to the Questionnaire.

34. Does the Applicant Company have any outstanding surplus notes?
   Yes_____ No _____ Not Applicable____
   If yes, provide the details in writing and attach to the Questionnaire and attach copy(ies) of the surplus notes reflecting the state of domicile’s approval.
The Primary Redomestication Application to the Uniform Certificate of Authority Application (UCAA) is designed for use in the formation of a new insurer, or for an existing insurer to use in making an application to redomesticate to another state. A Uniform State is one that is committed to using the UCAA review process for company licensing and admissions.

The UCAA Primary Redomestication Application has four three sections designed to guide the Applicant Company through the licensing process:

I. Application Review Process
II. Filing Requirements (New Insurers and Redomestications)
III. Filing Requirements (Redomestications Only)
IV. How to File

The goal of the UCAA is to provide a streamlined approval process. However, some states have state-specific filing requirements based on statutes or internal procedures. The uniform states are working to eliminate non-essential state-specific requirements. All Applicant Companies must be familiar with the insurance laws of the state to which they submit an application. Please see the UCAA charts for information related to obtaining a copy of the laws, regulations and bulletins for the state in which an application is filed.

If the Applicant Company has any questions about the uniform admission process, a list of contact information is provided on the Addresses and Contacts Information for Submission of Application chart. It is highly recommended that the Applicant Company review the state charts, the application instructions and review the Frequently Asked Questions (FAQs) prior to contacting each state with any questions before submitting the application for review.

Primary Redomestication Application Section I
Application Review Process
Processing Goal: 90 Days

It is the goal of each Uniform State to process all Primary Redomestication Applications within 90 calendar days with receipt of a complete application. The 90-day review process includes two weeks to determine if the application is complete and acceptable for filing. A completed application includes all required information detailed in the primary-redomestication application instructions, any state specific requirements and filing fees. During the remaining time-span, the application will receive a financial and operational review. A state may not achieve the 90-day processing goal in instances where the application requires substantial follow-up, or in states with limited resources, or in instances when the Applicant Company files an application during peak business periods such as year-end and annual statement filing periods. Due to varying levels of resources available in each state the review may take longer than 90 days to complete. Anytime the state requests additional information, the state suspends the 90-day goal until it receives the requested information.
Based on the circumstances of a particular application, it may be necessary for the reviewing state to request additional information. Typically, a state will request any additional information it needs within 30 days after the state accepts the application. For more detail regarding the review process, refer to the *Company Licensing Best Practices Handbook*.

**Proprietary Information**

Both regulators and the Applicant Company might deem confidential any communications with insurance regulatory agencies in conjunction with the *Primary Redomestication* Application concerning proprietary information about the Applicant Company. States may only share information determined to be confidential with other persons as authorized by law. By law, the state will not disclose to the public any information determined to be proprietary and trade secret. Each Applicant Company needs to expressly identify all information, in the application and in any subsequent correspondence, that the Applicant Company considers proprietary or trade secret.

The Applicant Company should review the state chart information, and FAQs prior to contacting the appropriate state regulators with any questions before filing any application.

**Step One: Filing An Application**

The Applicant Company may submit *Primary Redomestication* Applications anytime during the year. The state immediately reviews *Primary Redomestication* Applications to ensure that the Applicant Company submitted the application in the required format as outlined in these instructions.

Generally, within two weeks from the date the state receives the application, the state will notify the Applicant Company whether or not the state has accepted the application for filing. If the state accepts the application for filing, it will assign an official filing date.

If the state does not accept the application for filing due to a deficiency in the application’s format, the state will contact the Applicant Company. Depending upon the nature of the deficiency, the state may give the Applicant Company two weeks from the date of receipt of notification from the department reviewing the application to correct the deficiency. Some states may return to the Applicant Company any applications that are deficient and not accepted for filing.

**Step Two: Application Review**

A *Primary Redomestication* Application will undergo a rigorous financial and operational review in the state to which the Applicant Company submitted the application. The purpose of the *Primary Redomestication* Application is to streamline application processing and the state will make every effort to process a *Primary Redomestication* Application as quickly as possible.

At the conclusion of the substantive review by the reviewing state, the state will grant the Applicant Company a Certificate of Authority or Amend its current Certificate of Authority as a domestic company, allow the Applicant Company to withdraw the application, or will deny the application.

If the application is denied, the state will notify the Applicant Company and provide a detailed explanation for the denial. After the denial, if the Applicant Company wishes to re-file a *Primary Redomestication* Application, the state will require a new application and filing fee.
If the application is approved and a Certificate of Authority is granted or reissued, the Applicant Company should complete the Company Code Application form or contact the NAIC of its change in domiciliary state. The form can be submitted via email, fax or mail.

**Primary Redomestication Application Section II**

**Filing Requirements (New Insurers and Redomestications)**

This section provides a guide to understanding the focus of each document of the Primary Redomestication Application. It is important that applications be complete.

All documents submitted in support of the application must be current. However, in certain instances, some states have limited latitude to accept older documents, although generally no more than five (5) years old. Please contact the states individually if there are questions about a specific document.

All forms and instructions required for to complete the Primary Redomestication Application are available under the Primary Redomestication Application tab. The Applicant Company can access the electronic Redomestication for download these documents for printing and submission. The Primary Application cannot be filed electronically via the NAIC/UCAA portal. It must be file directly with the state of domicile. Please contact the state for instructions on the preferred method/format for filing. A redomestication is the process whereby any insurer organized under the laws of any state may become a domestic insurer that transfers its domicile to another state by merger or consolidation or any other lawful method. The Applicant Company files the Primary Application with the Applicant Company’s new state of domicile when used for a redomestication.

**Table of Contents**

1. Application Form and Attachments
2. Filing Fee
3. Minimum Capital and Surplus Requirements
4. Statutory Deposit Requirements
5. Name Approval
6. Plan of Operation
7. Holding Company Act Filings
8. Statutory Membership(s)
9. SEC Filings or Consolidated GAAP Financial Statement
10. Debt-to-Equity Ratio Statement
11. Custody Agreements
12. Public Records Package
13. NAIC Biographical Affidavits
14. State-Specific Information
15. Annual Statements with Attachments
16. Quarterly Financial Statements
17. Risk-Based Capital Report
18. Independent CPA Audit Report
19. Reports of Examination
20. Certificate of Compliance
21. Corporate Governance Annual Disclosure
21. State Specific Information

1. Application Form and Attachments

The application must identify all lines of insurance (Form 3) the Applicant Company is requesting authority to transact, as identified by the Applicant Company’s plan of operation. Only the Applicant Company using this application for a redomestication filing need to complete must identify the lines of business it is requesting authority to transact, and identify the section listing the lines of business that the Applicant Company is currently licensed to transact and is transacting in all jurisdictions. Submit a completed checklist (Form 1PForm 1R) and original executed application form (Form 2PForm 2R) will be automatically generated as Item 1 of the application.
2. **Filing Fee**

The application must include a filing fee for the state in which an application is being submitted. The payee name and the instructions for submitting the filing fee are included in the Filing Fees – Primary, Redomestication and Expansion Applications chart. Submit a copy of the Applicant Company’s check as Item 2 of the application.

3. **Minimum Capital and Surplus Requirements**

The application must show that the Applicant Company meets the state’s statutory minimum capital and surplus requirements. In some states, the minimum capital and surplus requirements are determined by the classes of insurance that the Applicant Company is requesting authority to transact and the classes of insurance the Applicant Company is authorized to transact in all other jurisdictions. The state will determine the level of surplus required after considering the Applicant Company’s product line, operating record and financial condition. Compliance with the statutorily prescribed minimum surplus requirement may not be sufficient for all applicants. Review the chart that identifies the Minimum Capital and Surplus Requirements for each Uniform State. This chart also provides a contact person or a link to a state-specific forms or RBC requirements and instructions. Submit an explanation of the Applicant Company’s compliance with the capital and surplus requirements in the electronic Redomestication portal as Item 3 of the application.

4. **Statutory Deposit Requirements**

The domiciliary state may require a statutory deposit. The Statutory Deposit Requirements chart provides state-specific requirements and identifies those states that require a Statutory Deposit. Submit as Item 4 of the Application. Documentation explaining how the Applicant Company meets or is meeting the statutory deposit requirements is Item 4 of the application. Unless otherwise indicated, the Statutory Deposit is for the benefit of all policyholders.

5. **Name Approval**

Each state has different guidelines and procedures for name approval. The Name Approval Requirements chart is intended to serve as a guide for the various name approval requirements of each Uniform State. The Applicant Company should check with the state to ensure compliance with all applicable name approval requirements. Where applicable, submit evidence of name approval request as Item 5 of the application.

6. **Plan of Operation**

The plan of operation has three components, a brief narrative, proforma financial statements/projections (Form 13) and a completed Questionnaire (Form 8). The narrative should include significant information not captured as part of the Questionnaire that the Applicant Company submits in support of the application, such as the reason for redomestication. The proforma is one of the three (3) components in the Plan of Operation. The proforma is available for Life, Property/Casualty, Health and Title companies. Provide a company-wide, three-year proforma balance sheet and income statement. For the lines requested, provide three-year premium and loss projections by line for the application state. Projections must support all
aspects of the proposed plan of operation, including reinsurance arrangements and any delegated function agreements. Include the assumptions used to arrive at these projections.

The proforma when applied to the primary redomestication application is projected data. The proforma workbook should be the same business type as the financial statement blank filed with the NAIC. As such, the projected amounts need not balance with historical NAIC financial filings. The projected data, however, should be relevant to the Applicant Company’s history of growth and losses as contemplated by the NAIC Accounting Practices and Procedures Manual.

The proforma should be completed by statutory accounting or financial reporting professionals that should be available to answer any questions or concerns from reviewing regulatory staff. The proforma is completed on an annual basis, typically for a three year time period, however, some states may require five years. The proforma should start with the first full year of operation that the Applicant Company anticipates actively writing business in the state(s) receiving the application. The proforma excel workbook is password protected and cannot be modified. When projecting five years, two workbooks will be required. Submit Attach the completed Questionnaire Proforma and all relevant attachments as Item 6 of the application.

7. Holding Company Act Filings

If the Applicant Company is a member of a holding company system, the application must include either the most recent Holding Company Act (HCA) filings, including the Annual Form B Registration Statement and related Form F or a statement substantially similar to the NAIC Insurance Holding Company System Regulatory Act (#440). The filing should include all attachments, exhibits appendices referenced in the HCA filings, and the most recent Corporate Governance Annual Disclosure, include any updates if the disclosure has not been restated, as Item 7 of the application. Include all attachments and any amendments up to the application filing date and include copies of all advisory, management and service agreements.

8. Statutory Memberships

In some states, the Applicant Company is required to join one or more rating, guarantee or other organizations before transacting insurance. Generally, the Applicant Company’s authorized lines of insurance govern statutorily mandated memberships. Review the Statutory Membership Requirements chart prior to contacting the licensure state about any required statutory memberships before transacting insurance. Submit Attach documentation supporting membership application(s) as indicated, in states where required, as Item 8 of the application.

9. SEC Filings or Consolidated GAAP Financial Statement

If the Applicant Company, its parent or its ultimate holding company has made a filing or registration with the U.S. Securities and Exchange Commission (SEC) in connection with a public offering within the last three years, or filed an 8K, 10K or 10Q within the last 12 months, the application must note that the filing, including any supplements or amendments, is available electronically from the SEC. If the Applicant Company, its parent or its ultimate holding company is not publicly traded, the application must include Attach a copy of the Applicant Company’s most recent Consolidated GAAP financial statement. Submit Attach the notice of SEC filings or copy of a Consolidated GAAP statement as Item 9 of the application.
10. **Debt-to-Equity Ratio Statement**

Members of a holding company system must submit complete the debt-to-equity information as Item 10 of the application. The application must include a comprehensive debt-to-equity ratio statement that includes the following information.

A. Provide the consolidated outside debt to consolidated equity ratio on a GAAP basis for the holding company. *

<table>
<thead>
<tr>
<th>Debt Duration</th>
<th>Debt Amount ($)</th>
<th>Debt to Consolidated Equity Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 5 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 10 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Up to 20 years</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

B. Provide the most recent consolidated holding company financial statement.

C. State if the holding company, on a consolidated basis, has a tangible net worth: a) for the past three years; b) at present; and c) provide projections with assumptions for a three-year period.

D. The Applicant Company must clearly substantiate the sources of repayment of any debt, including, but not limited to, whether the source of repayment is independent from the future income of the insurers.

E. Calculate the debt service (as reported in D above) required of each insurer as a percentage of the Applicant Company’s capital and surplus.

F. List the assets of the holding company, if any, that are pledged to fund the debt service or debt repayment of an affiliate or parent (include the assets or stock of any insurer subsidiaries)

G. List any guarantees (personal or otherwise) from the shareholders for repayment of the debt.

*Some states may require re-statement based upon statutory equity.

11. **Custody Agreements**

The Applicant Company should include attach a statement setting forth whether or not any of the Applicant Company’s stocks, bonds, or other physical or book entry securities are in the physical possession of another entity.

If any of the Applicant Company’s stocks, bonds or other securities are not in the Applicant Company’s actual physical possession or in a safe deposit box under the exclusive control of the Applicant Company (except as shown in the Schedule of Special Deposits in the Applicant Company’s Annual Statement), the application must include the written agreement with each entity holding and/or administering these securities. The written agreement should include appropriate safeguards for the handling of the securities, in accordance with those specified in the NAIC *Financial Condition Examiners Handbook* (Handbook).
Some states have additional requirements for these custody agreements, beyond those called for in the Handbook. **Submit Attach** the statement and copies of the custody agreements as Item 11 of the application.

### 12. Public Records Package

Most states have requirements to disclose information to the public under a Public Records Act. To meet these public disclosure requirements certain items must accompany the application. While these documents may or may not be part of the substantive review, please be sure to include the required documents with the application. The [Public Records Package](#) chart contains requirements for financial and operational filings. An Applicant Company seeking to redomesticate should provide both financial and operational documents for the application state. An Applicant Company that is seeking to form a new insurer should include all documents listed in the operational section of the chart for the application state. **Submit Attach** all documents required by the application state as Item 12 of the application.

### 13. NAIC Biographical Affidavit (Biographical Affidavit)

A. The Applicant Company is required to submit an NAIC Biographical Affidavit ([Form 11](#)) in connection with pending or future application(s) for licensure or a permit to organize with a department of insurance in one or more states. The Applicant Company must **submit attach** an NAIC Biographical Affidavit on behalf of all officers, directors and key managerial personnel of the Applicant Company and individuals with a ten percent (10%), or more, beneficial ownership in the Applicant Company and the Applicant Company’s ultimate controlling person (“Affiant”).

B. The UCAA defines “Independent Third-Party” as:

   (i) A consumer reporting agency (“CRA”) overseen by the Federal Trade Commission (“FTC”) and, therefore, subject to the FCRA, which have been vetted and is currently on the approved list;

   (ii) Has the ability to perform international background investigations; and

   (iii) One whose officers and directors have no material affiliation with the Applicant Company other than stock ownership amounting to less than one percent (1%) of total stock outstanding, unless prior approval is given by the department of insurance to which application is being made.

C. The NAIC Biographical Affidavit requests information with respect to the Affiant’s employment history, education, personal information and character. The NAIC Biographical Affidavit also includes the Disclosure and Authorization Concerning Background Reports (the “Disclosure & Authorization Form”). The signature of the Affiant on the Disclosure & Authorization Form permits an Independent Third-Party to conduct an independent third-party verification on the Affiant.

D. The NAIC Biographical Affidavit includes three types of the Disclosure & Authorization Form. There are three different Disclosure & Authorization Forms since certain state laws, regulations and rules require different kinds of disclosures and wording within such...
form. An Affiant must sign the corresponding Disclosure & Authorization Form(s) for the respective state(s) where the Affiant has lived or worked within the last ten (10) years. Refer to the Disclosure & Authorization Forms for further information.

E. The NAIC Biographical Affidavit is used to evaluate the suitability, competency, character and integrity of the Affiant in connection with an Applicant Company’s pending or future application(s) for licensure or a permit to organize with a department of insurance in one or more states.

The Independent Third-Party uses information contained in the NAIC Biographical Affidavit as a tool to perform an independent third-party verification to determine an individual’s fitness and propriety. The independent third-party verification may contain information bearing on the Affiant’s character, general reputation, personal characteristics, mode of living and credit standing (if required by the state). The Independent Third-Party Vendor shall use the independent third-party verification to create a background report (the “Background Report”).

F. The Disclosure & Authorization Form is valid for a maximum of six months. Additionally, an Affiant may revoke the authorization at any time by delivering a written revocation to the Applicant Company. Refer to the Disclosure & Authorization Form for further information.

G. The Background Reports are subject to the Fair Credit Reporting Act (“FCRA”). Pursuant to FCRA, the state departments of insurance and an Applicant Company who is seeking admission are “users” of consumer reports. The FCRA requires that the Applicant Company provide the Affiant with a copy of the “Summary of Your Rights Under the Fair Credit Reporting Act.” The Applicant Company should provide a copy of the “Summary of Your Rights under the Fair Credit Reporting Act” to each Affiant. This summary can be found at the Federal Trade Commission (“FTC”) website. Background Reports are valid for six months from the signature date of the affidavit. Any alteration to the original biographical affidavit or updated signature will require a newly prepared background report.

H. The Applicant Company and state departments of insurance are required to comply with FCRA, especially as it relates to confidentiality of the information contained in such consumer reports. To the extent required by law, the states and Independent Third-Party Vendors should maintain the Background Reports procured under the Disclosure & Authorization Form as confidential. A copy of the FCRA is located here.

I. The department of insurance in the state where an Applicant Company files, or intends to file, an application and the Applicant Company may require the Background Report. An Affiant who desires a copy of their Background Report may request a copy from the Applicant Company or the CRA as indicated on the Disclosure & Authorization Form. Refer to the Disclosure & Authorization Form for further information.

J. Please check state requirements for those states that require additional background information, such as fingerprints, in place of, or in addition to, NAIC Biographical Affidavits. If applying in one of those states, necessary fingerprints and processing fees should be included.
Refer to the list of currently approved Independent Third-Party Vendors for Background Reports.

NAIC Biographical Affidavits must be completed on the most current form [Word | PDF], in effect at the time the affidavit was signed and the Affiant shall not sign the Affidavits more than six months before the date the Applicant Company files the application. Each question on the biographical affidavit must have a response. If an answer is “None”, then so state. Incomplete biographical affidavits could delay the background investigation report and result in a delay of the application review by the state.

Submit original Biographical Affidavits (Form 11 [Word | PDF]) that contain the Disclosure & Authorization Forms to the state department(s) of insurance as Item 13 of the application.

14. State-Specific Information

Some jurisdictions may have additional requirements before a Certificate of Authority is issued. Before completing a UCAA Primary Application, the Applicant Company should review the list of requirements on the State-Specific Requirements for the application state. Submit state-specific requirements as Item 14 of the application.

Primary Application Section III
Filing Requirements – Redomestications Only

The requirements of this section are only for those Applicant Company’s seeking to redomesticate from one state to another and are in addition to the requirements of Section II, Items 1 through 14 of the Primary Application. A redomestication is the process whereby any insurer organized under the laws of any state may become a domestic insurer that transfers its domicile to another state by merger or consolidation or any other lawful method. The Applicant Company files the Primary Application with the Applicant Company’s new state of domicile when used for a redomestication.

Table of Contents

15. Annual Statements with Attachments
16. Quarterly Financial Statements
17. Risk-Based Capital Report
18. Independent CPA Audit Report
19. Reports of Examination
20. Certificate of Compliance
21. Corporate Governance Annual Disclosure

145. Annual Statement with Attachments

Include a copy of the Applicant Company’s most recent annual statement as filed in the current state of domicile including all statements and supplements in accordance with the Annual Statement Instructions, including the Statement of Actuarial Opinion and Management’s Discussion and Analysis. The annual statement should be signed and verified and include an original certification from the state insurance regulatory agency of the Applicant Company’s domiciliary state.
Include one copy of the Applicant Company’s annual statement for the two (2) preceding years in addition to the most recent annual statement.

Property/Casualty insurers must attach the Insurance Expense Exhibit, Accident and Health Policy Experience Exhibit and/or Schedule P to the annual statement.

Life insurers must include a Certificate of Valuation from the domiciliary state insurance regulatory agency.

Members of a holding company system must attach a copy of the most recent consolidated annual statement, if filed with its current state of domicile. Submit the annual statement, with the necessary attachments, as Item 15 of the application.

**1615. Quarterly Statements**

Include one (1) copy of each quarterly statement that follows the most recent annual statement. In addition, the Applicant Company must immediately forward any new quarterly statements that become available while the application is pending to all states in which applications are pending. Submit the quarterly statements as Item 16 of the application.

**1716. Risk-Based Capital Report**

Include a Risk-Based Capital Report, submitted in the level of detail required by the NAIC, as Item 17 of the application. Please note that the states will maintain confidentiality of these reports.

**1817. Independent CPA Audit Report**

Include a CPA Audit Report, performed by a certified public accountant that is not an employee of the Applicant Company. Submit the CPA Audit Report as Item 18 of the application. Some states allow exemptions to this requirement for small insurers. Please contact the states individually regarding exemptions.

**1918. Reports of Examination**

The application must include a copy of the Applicant Company’s most recent Report of Financial Examination from its domiciliary state. The Applicant Company must also note all more recent examinations completed by any state, including market conduct examinations, and provide a description of each examination. Refer to the Reports of Examination Requirements chart for the exam “as of” date. Submit the Report of Financial Examination and a list of more recent examinations with descriptions as Item 19 of the application.

**2019. Certificate of Compliance**

Include a Certificate of Compliance (Form 6) with the application. Please refer to the Certificate of Compliance and Certificate of Deposit Requirements chart for specific requirements for the date of issuance of the Certificate of Compliance (Form 6) from the file date of the application. The current domiciliary state must complete the Certificate of Compliance. Submit as Item 20 of the application.
204. Corporate Governance Annual Disclosure

If applicable, include the most recent Corporate Governance Annual Disclosure, include any updates if the disclosure has not been restated. Submit the Registration Statement and Annual Disclosure as Item 21 of the application.

21. State-Specific Information

Some jurisdictions may have additional requirements before a Certificate of Authority is issued. Before completing a UCAA Redomestication Application, the Applicant Company should review the list of requirements on the State-Specific Requirements for the application state. Submit state-specific requirements as Item 14 of the application.

Primary Redomestication Application Section IIIIV

How to File

To facilitate the prompt review of the Primary Redomestication Application, please ensure that the application adheres to the formatting required instructions provided in this section. States will not accept any applications that fail to meet these formatting requirements. Section IV–III will address the following areas:

1. Communication Between Applicant Company and Agency
2. Questions
3. Application Checklist
4. Application and Supporting Documents
5. Addresses for Submission of Application
6. Updates/Changes
7. Filing Fee
8. Forms
9. State-Specific Information

1. Communication Between Applicant Company and Agency

Once the state accepts a Primary Redomestication Application for filing, the state will notify the Applicant Company of the official filing date via the status date in the electronic application and provide the agency contact person. The state will provide names, addresses, email (if available) and telephone numbers of the individual(s) assigned to the application.

Prior to receiving the name of the agency contact person, an Applicant Company may contact the agency personnel listed on the Addresses and Contacts for Submission of Application chart to obtain information regarding the status of a Primary Redomestication Application.

2. Questions

Section II and Section III–Filing Requirements, provide detailed guidelines regarding both the type and format of information required for the Primary Redomestication Application. In most cases, the state provides an agency contact person for each item in the Filing Requirements
section. For additional information, or clarification, Applicant Company’s may use the contact names provided in the Addresses and Contacts for Submission of Application chart.

3. **Application Checklist**

The application checklist (Form 1PForm 1R) provides a guide for assembling a complete application. Complete the checklist before submitting a Primary Application for review. Attach a completed checklist to the top of each application. A completed checklist is automatically generated as the Applicant Company meets the required items in Section II, Filing Requirements.

4. **Application and Supporting Documents**

Submit one copy of the Checklist, completed application and all supporting documentation to the reviewing state. California, Kentucky and New York require two (2) complete copies. Each item identified in Section II and Section III of the Filing Requirements should have a cover sheet as specified below.

Each cover sheet should be on paper suitable for use as a cover sheet, such as binder divider pages.

A cover letter should be attached detailing specific items that should be brought to the agency’s attention. The cover letter should provide a reason why a particular item was not attach or completed in the application. Below are examples of why the Application Company may not be included in the application.

The Applicant Company needs to tab each cover sheet on the right-hand side of the page with a number corresponding to the document’s item number in the Primary Application checklist.

If a particular item is not included with the cover sheet, the Applicant Company must attach to the cover sheet a written explanation stating the reason the item has not been included. Set forth below are examples of why the Applicant Company may not attach a particular item to the cover sheet.

- “Item not applicable to this application for the following reason ... (state reason).”
- “Item has been attached separately because of size.”

5. **Addresses for Submission of Application Filing Fees**

Submit the application filing fee by mailing it to the appropriate address noted on the Addresses and Contact Information for Submission of Application or Filing Fees chart.

6. **Updates/Changes**

The Applicant Company is responsible for informing states of any significant changes that occur or that the Applicant Company discovers during the application review period. Examples of significant changes include: changes in officers and directors, material acquisition or disposal of assets, changes in reinsurance, acquisition of the insurer, change in proposed shareholders, regulatory actions taken against the insurer, change in current business plan, etc.
The Applicant Company must supply revised forms amend the application promptly if any changes occur that materially affect the accuracy of the forms filed in support of the application. For example, the Applicant Company must forward new quarterly statements as soon as they become available.

7. **Filing Fee**

Please see the [Filing Fees – Primary, Redomestication and Expansion Applications](#) chart to determine the correct fee and filing instructions for the application state.

8. **Forms**

All forms are available under the [Primary–Redomestication Application](#) tab and labeled as **UCAA Forms**. All forms can be downloaded, printed and submitted via the electronic application portal with a completed application. The forms MUST NOT be altered. At this time, the forms cannot be submitted electronically.

9. **State-Specific Information**

Some jurisdictions may have additional requirements that the Applicant Company must meet before a state can issue a Certificate of Authority. Before completing a UCAA [Primary Redomestication Application](#), the Applicant Company should review a listing of requirements for the application state under [State-Specific Requirements](#).

IDENTIFICATION OF SOURCE AND FORM(S)/INSTRUCTIONS TO BE CHANGED
[ ] UCAA Forms [ ] UCAA Instructions [ ] Enhancement to the Electronic Application Process
[ X ] Company Licensing Best Practices HB

Forms:
[ ] Form 1 – Checklist [ ] Form 2 - Application [ ] Form 3 – Lines of Business
[ ] Form 6- Certificate of Compliance [ ] Form 7 – Certificate of Deposit [ ] Form 8 - Questionnaire
[ ] Form 8C- Corporate Amendment Questionnaire [ ] Form 11-Biographical Affidavit [ ] Form 12-Uniform Consent to
Service of Process [ ] Form 13- ProForma [ ] Form 14- Change of Address/Contact Notification
[ ] Form 15 – Affidavit of Lost C of A [ ] Form 16 – Voluntary Dissolution [ ] Form 17 – Statement of Withdrawal

DESCRIPTION OF CHANGE(S)
Include additional guidance to Form A Review item 2f: Carefully scrutinize and understand complex organization and
ownership structures by requesting and reviewing all organizational documents such as Articles of Incorporation, Articles of
Association, Partnership Agreements and Operating Agreements for entities from the proposed immediate parent up to the
proposed ultimate controlling person (UCP). Review and consider who has the voting rights based on these organizational
documents. Verify who should be considered the UCP based upon this review.

REASON OR JUSTIFICATION FOR CHANGE **
States may determine that the Ultimate Controlling Party is a different party (individual or entity), after reviewing the
partnership agreements, operating agreements or articles of incorporation or association, other than what was initially
identified in the Form A application.

Additional Staff Comments:

** This section must be completed on all forms.

NAIC Company Licensing Best Practices Handbook
Appendix D – Form A Review Best Practices

Every Form A review should be tailored to the risks associated with the proposed acquisition, including the target company, acquiring entity, and the complexity of the transaction. The following best practices are presented as a guide for regulatory review and analysis of Form A acquisitions, recognizing that this list may not be comprehensive and not all items will apply to every acquisition. This list is intended to be a regulatory tool. The NAIC Form A database should be updated as applicable throughout the Form A review process.

1. Initial Review
   a) Determine if the filing is complete, note the missing items and promptly send a deficiency letter to the Applicant
   b) Identify attorneys, party contacts, and the other insurance regulator reviewing the Form A, including the lead regulator.
   c) The lead regulator should obtain key contact information from each state reviewing the Form A and consider organizing a regulator to regulator call to discuss concerns with the filing
   d) Assign appropriate analyst, legal and other professional staff to conduct regulatory review
   e) Carefully consider whether regulatory review can be completed by Applicant’s target close date, including any interim deadlines and obtain deemer extension or waiver if appropriate, and
   f) Schedule and notice hearing/consolidated hearing, if applicable, within statutory timeframes

2. Background, Identity and Risk Profile of Acquiring Persons
   a) Identify and review all relevant parties to the proposed acquisition
   b) Assess the feasibility of the acquiring persons holding company structure including location and control (direct/indirect) of the target company post acquisition
   c) Review the lead state’s assessment of the acquiring persons most recent ORSA Summary Report and Form F ERM, if applicable, to better understand the related risks
   d) Determine Ultimate Controlling Person and/or Parent (UCP), cross check with source of funds and consider debt funding sources
   e) Review NAIC and other external sources to gain a better understanding of the acquiring persons, its affiliates, and the UCP.
   f) Carefully scrutinize and understand complex organization and ownership structures by requesting and reviewing all organizational documents such as Articles of Incorporation, Articles of Association, Partnership Agreements and Operating Agreements for entities from the proposed immediate parent up to the proposed ultimate controlling person(s) (UCP). Review and consider who has the voting rights under these organizational documents. Verify who should be considered the UCP based upon the reviewed information and document why the determination was made.
NAIC Company Licensing Best Practices Handbook
Appendix D – Form A Review Best Practices

g) Review Audited Financial Statements (or CPA reviewed financial statements for individuals) of the acquiring persons, its holding company, and the UCP, 10K and 10Qs, and other current financial information for enterprise condition, potential debt service by the UCP and its ability to service such debt. Understand the level of reliance on cash flow/dividends from the target company to service debt and other obligations of the holding company and UCP.

h) Based upon nature of acquiring party, review detailed audited financial statement of all individuals who are source of funds.

a. If not available, consider acceptability of unaudited financial statements, compiled personal financial or net worth statements and/or tax returns.

i) Consider suitability of UCP through background review and regulatory review of the prospective new owners, using UCAA biographical affidavits and third-party background reviews by NAIC listed independent third-party reviewing companies or fingerprinting criminal checks if applicable, and

j) Consider acceptability of SEC disclosures by board members of publicly traded UCPs in suitability review.

3. Communication and Record Maintenance

a) Communicate response to any confidentiality requests in writing as soon as possible

b) Create a contact list of relevant persons and representatives

c) Separate confidential and public documents, information, and communications and maintain as appropriate

d) Contact and collaborate with other reviewing regulators involved in the review process, as appropriate, including the lead state regulator regarding ORSA and ERM reviews

e) As applicable, contact other regulators of noninsurance entities of the acquiring party or target

f) Respond as appropriate to questions from third parties and interested regulators

g) Keep the acquiring party representatives informed as to status of review

h) Receive and consider any information provided by external sources, including possible financial or other incentives or motivation of those commenting on a particular transaction

i) Summarize review, findings, conclusions and action taken on Form A review in final action document, including stipulations, and conditions subsequent, and

j) File and maintain documents under state procedures.

4. Transaction Review
NAIC Company Licensing Best Practices Handbook
Appendix D – Form A Review Best Practices

a) Determine how acquisition will be achieved by carefully reviewing transactional documents, e.g. merger, stock purchase, stock exchange
b) Consider disposition of all classes of target shares, including addressment of any beneficial owners
c) Ascertain propriety of disposition of minority interests and concerns, if applicable
d) Consider any affiliate or employee benefit as appropriate
e) Determine how any ancillary regulatory reviews or other interim procedural steps will be completed, including Form E-Pre-Acquisition Notification Form, for other licensed states
f) Obtain copies of shareholder communications or sole shareholder consent
g) Consider obtaining copies of fairness and other contractually required opinions if available
h) Review relevant portions of board resolutions, power points and related board minutes pertinent to the Form A transaction, use care to keep documents confidential, and
i) Determine whether additional professional transaction review is warranted.

5. Purchase Consideration

a) Determine fairness (equivalency) of total amount to be paid to total value to be received, including derivation of price and value of target under standard valuation methodologies or to book value
b) Consider quality of consideration, giving careful scrutiny to payments other than cash or cash equivalents which are disfavored particularly when any funds are being transferred to the target.
c) Consider fairness opinions and actuarial appraisals, if provided
d) Consider source, type and valuation basis of funds to be used for consideration
i. If funds are from a regulated entity, confirm the existence and valuation of such assets with that entity’s regulator
e) If applicable, consider implications of any debt financing including
i. The mechanics of any debt financing to be used to fund the transaction, whether funds are being borrowed in the ordinary course of business or on terms that are less favorable than generally commercial loans.
ii. The percentage of debt versus non-debt funds to be used
iii. The source of funds or stream of income to be used by parent for repayment and the ability of the acquiring party to repay the debt from sources other than the target
iv. Identity of the creditor(s) and creditors’ financial condition.

v. How will debt be secured; consider prohibiting securing of debt on shares of target or target’s assets if not already prohibited by state statute,

vi. Compare time period of loan commitment with parent’s income stream over the same time period, including the ability of the acquiring party to repay the debt from sources other than the target until loan is repaid/retired, and

vii. Consider the long term impact of parent’s debt service on operations of the target company and group.

viii. Follow-up on Parent’s financial commitment to underlying insurer.

6. Target License Qualification /Insurer Operations

a) Determine whether target insurer meets license qualifications upon change of control

b) Consider operational changes post-acquisition, including business plans and projections

c) Review required statutory deposits and authorized lines of business

d) Consider changes to target management and key employees

e) Consider suitability of changes to target management and key employees through background review and regulatory review of new owners, using UCAA biographical affidavits and third-party background reviews or fingerprinting criminal checks, if applicable

f) Consider plans for technological interfacing with new affiliates and any potential adverse impact on operations including claims

g) Consider suitability of any new affiliated and non-affiliated material agreements, including managing general agents, third party administrators, any professional organizations and reinsurance arrangements

h) Review any ERM analysis of the transaction performed by the acquiring entity, including impacts on risk assessment, risk appetite and tolerances, and prospective solvency (capital and liquidity)

i) Require Form D filings for any affiliated material transactions, post-acquisition; consider including language in the approval order

j) Determine target’s estimated financial condition and stability, post-acquisition, and

k) Consider with disfavor any plans to liquidate the target or sell its assets, consolidate or merge, that may be unfair, unreasonable, or hazardous to policyholders

l) Consider impact of U.S. insurer merging into an international insurer and/or alerting the legal entity structure and regulatory oversight performed by domestic state(s).
NAIC Company Licensing Best Practices Handbook
Appendix D – Form A Review Best Practices

7. Market Impact
   a) Consider anticompetitive impact of acquisition on lines or products, including whether transaction will create a monopoly or lessen competition in insurance in the state; Disapprove transaction if completion will create a monopoly
   b) Consider Form E information and market concentration for combined lines and other appropriate information to assess market impact if warranted by nature of transaction, including coordination with other states where the target is admitted, and
   c) Consider imposing tailored conditions subsequent or undertakings as necessary to address competitive market concerns

8. Post-Approval Considerations, if applicable
   a) Receive notification of changes to effective closing date
   b) Confirm compliance with conditions precedent
   c) Receive waivers for market conduct or financial examination, and
   d) Receive notification if transaction does not close and consider withdrawal of approval.

9. Post-Acquisition Considerations
   a) Receive confirmation of the transaction following the closing, per your state’s statutory requirement timeframe
   b) Request written details of the final purchase price after all adjustments are complete on the transaction
   c) Request confirmation of any capital contribution contemplated in the transaction.
   d) Request the names and titles of those individuals whom will be responsible for the filing of the amended Insurance Holding Company System Annual Registration Statement
   e) Request an amended Insurance Holding Company System Registration statement per your state’s statutory timeframe within each applicable state’s statutory required timeframe after the close of the proposed transaction.
   f) Consider requesting for a period of two years, commencing six months from closing, a semiannual report under oath of its business operations in your state, including but not limited to, integration process; any changes to the business of the Domestic Insurers; changes to employment levels; changes in offices of the Domestic Insurers; any changes in location of its operations in your state; and notice of any statutory compliance or regulatory actions taken by other state regulatory authorities against the acquiring parties or the Domestic Insurers
   g) Consider prior approval of all dividends for a two-year period from the close date
   h) Consider undergoing a target financial and/or market conduct examination following the closing or
NAIC Company Licensing Best Practices Handbook
Appendix D – Form A Review Best Practices

i) In lieu of an examination a meeting, conference call or receipt of certain information can be requested

j) Confirm compliance or satisfaction with any other conditions subsequent or undertakings, and

k) Monitor target’s market performance to projections two years after transaction close date

l) Consider proactive communication with state(s) where the insurer conducts business if changes to the insurer’s corporate structure occurs post-acquisition.
MEMORANDUM

TO: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
Carrie Mears (IA), Vice-Chair, Statutory Accounting Principles (E) Working Group

FROM: Commissioner Scott A. White (VA), Chair, Financial Condition (E) Committee

DATE: July 22, 2021

RE: Terminology Change – Substantive and Nonsubstantive

In response to the discussion on SSAP No. 71—Policy Acquisition Costs and Commissions, it has been highlighted that the statutory accounting terminology of “substantive” and “nonsubstantive” to describe statutory accounting revisions being considered by the Statutory Accounting Principles (E) Working Group to the Accounting Practices and Procedures Manual (AP&P Manual) could be misunderstood by those who are not familiar with the specific definitions and intended application of those terms. To avoid the incorrect perception that these terms may reflect the degree of financial impact to companies based on their common usage, the Financial Condition (E) Committee requests that the Statutory Accounting Principles consider updating these terms to prevent future misunderstandings.

The Financial Condition (E) Committee understands the terms “substantive” and “nonsubstantive” were crafted as part of the statutory accounting principles (SAP) codification, which was finalized in 1998, and were intended to be simple, concise terms to differentiate whether proposed revisions reflect new SAP concepts (substantive) or clarification of existing SAP concepts (nonsubstantive). The source location for the definitions and classification criteria of these terms is the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, but it is noted that the terms and definitions are referred to throughout SAP guidance, other policy statements, issue papers, and agenda items.

Pursuant to this Committee request, the Working Group should consider eliminating “substantive” and “nonsubstantive” and instead refer to the type of revisions in accordance with the general nature in which those terms were intended to reflect. As such, a revision that would have previously been considered “substantive” could be referred to as a “New SAP Concept” and a revision that would have previously been considered as “nonsubstantive” could be referred to as a “SAP Clarification.” The Committee is not proposing that the Working Group reassess the classification criteria but is simply requesting terminology changes to prevent future misinterpretations or assessments by others. As such, unless the Working Group believes further revisions are necessary, statutory revisions that would have been previously classified as “nonsubstantive” are anticipated to continue to fall within that definition and be captured under the new terminology as a “SAP Clarification.”

To illustrate the intent of this request, draft revisions are presented for Working Group consideration. The Working Group should feel welcome to modify these draft revisions as deemed appropriate to best reflect this requested change.

If you have any questions on this request, please contact Commissioner Scott A. White, Chair of the Financial Condition (E) Committee or Dan Daveline, NAIC staff.

c: Julie Gann, Robin Marcotte, Jim Pinegar, Jake Stultz, Fatima Sediqzad
Potential Revisions to the Policy Statement:

NAIC Policy Statement on Maintenance of Statutory Accounting Principles

1. Statutory accounting principles (SAP) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

2. The promulgation of new or revised SAP guidance by the NAIC ultimately requires action of the entire NAIC membership. Responsibility for proposing new or revised SAP guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Statutory Accounting Principles (E) Working Group (Working Group) with the exclusive responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to revise existing SSAPs, and to issue interpretations.

Composition of the Statutory Accounting Principles (E) Working Group

3. The chair of the Task Force shall determine membership of the Working Group subject to approval by the Financial Condition (E) Committee. The Working Group shall be limited in size to no more than 15 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.

Development of New SSAPs or New SAP Concepts in an Existing SSAPSubstantively Revised SSAPs

4. New SSAPs will be developed to address, but will not be limited to: 1) concepts not previously addressed by a SSAP and that do not fit within the scope of an existing SSAP; 2) concepts that fit within the scope of an existing SSAP, but the Working Group elects to supersede existing SSAPs and 3) existing concepts that warrant significant revisions. Substantively revised New SAP concepts to existing SSAPs will be developed to address, but will not be limited to: 1) concepts that fit within the accounting topic of an existing SSAP, but have not been addressed by the Working Group; 2) changes to the valuation and/or measurement of an existing SSAP; and 3) modifications to the overall application of existing SSAPs. The decision to undertake development of a new SSAP or substantially new SAP concept in an existing revised SSAP will rest with the Working Group. New SSAPs or substantially new SAP concept in an existing revised SSAPs will have a specified effective date.

5. Research and drafting of new SSAP or substantially new SAP concept in an existing revised SSAPs will be performed by NAIC staff under the direction and supervision of the Working Group which may enlist the assistance of interested parties and/or consultants with requisite technical expertise as needed or desired. The first step in developing new SSAPs and substantially new SAP concepts in existing revised SSAPs will commonly be the drafting of an issue paper, which will contain a summary of the issue, a summary conclusion, discussion, and a relevant literature section. Public comments will be solicited on an issue paper (at least one exposure period), and at least one public hearing will be held before the issue paper is converted to a SSAP. Upon approval by the Working Group, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue(s). After a hearing of comments, adoption of new SSAPs or new SAP concepts in existing revised SSAPs (including any amendments from exposure) may be made by simple majority. If no comments are received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other non-contested positions after the opportunity is given during the hearing to separately discuss the proposal. All new SSAPs and substantially new SAP concepts in existing SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for
consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

6. The Working Group may, by a super majority vote (7 out of 10 members, 8 out of 11 or 12, 9 out of 13, 10 out of 14, and 11 out of 15) elect to: 1) combine the IP and SSAP process, resulting in concurrent exposure of the two documents; 2) expose and adopt revisions to a SSAP prior to the drafting/adoption of the related IP; and/or 3) forego completion of an IP and only proceed with a new SSAP or new SAP concepts in an existing revisions to a substantively revised SSAP.

7. If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are first developed by other NAIC working groups, task forces, subcommittees, or committees, such proposed guidance, standards or rules shall be presented to the Working Group for consideration. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods and/or public hearings), the Working Group may elect to shorten comment periods and/or eliminate public hearings, and in such cases, will notify the Task Force of these actions.

Development of SAP Clarifications

8. SAP clarifications Nonsubstantive revisions to SSAP will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to Appendix A—Excerpts of NAIC Model Laws to reflect amendments to NAIC adopted model laws and regulations. Research and drafting of SAP clarification nonsubstantive revisions will be performed by NAIC staff under the direction and supervision of the Working Group. Public comment will be solicited on nonsubstantive these revisions, and the item will be included on the agenda for at least one public hearing before the Working Group adopts nonsubstantive revisions. Nonsubstantive-SAP clarification revisions are considered effective immediately after adoption by the Working Group, unless the Working Group incorporates a specific effective date. If comments are not received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other “non-contested” positions after opportunity is given during the hearing to separately discuss the proposal. At its discretion, the Working Group may request that an issue paper be drafted for nonsubstantive-SAP clarification revisions in order to capture historical discussion and adopted revisions. Adoption of nonsubstantive these revisions by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

New Footnote 1: Prior to (adoption date), the term used to describe a new SAP concept was “substantive” and the term used to describe a SAP clarification was “nonsubstantive.” The new terms will be reflected in materials to describe revisions to statutory accounting principles on a prospective basis and historical documents will not be updated to reflect the revised terms.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations Which DO NOT Amend, Supersede or Conflict with Existing SSAPs

9. Interpretations may be developed to address issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The voting requirement to adopt an
interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Account ing Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations Which Amend, Supersede or Conflict with Existing SSAPs

11. In certain circumstances such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). (Examples of time-sensitive issues that have previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as the federal TALF program.) Interpretations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstances requiring immediate guidance. In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11, 9 out of 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

   a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstances where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

   b. These interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

   a. **Interpretation of the new SSAP** - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading "Interpreted by."

   b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).
c. **Incorporation** - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the “affects” section of the SSAP and is not referenced under the “interpreted by” section of the status page of the SSAP.

ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

I. Preamble

Purpose

The revised Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) (collectively, the Credit for Reinsurance Models) require an assuming insurer to be licensed and domiciled in a “Qualified Jurisdiction” in order to be eligible for certification by a state as a certified reinsurer for reinsurance collateral reduction purposes. In 2012, the NAIC Reinsurance (E) Task Force was charged to develop an NAIC process to evaluate the reinsurance supervisory systems of non-U.S. jurisdictions, for the purposes of developing and maintaining a list of jurisdictions recommended for recognition by the states as Qualified Jurisdictions. This charge was extended in 2019 to encompass the recognition of Reciprocal Jurisdictions in accordance with the 2019 amendments to the Credit for Reinsurance Models, including the maintenance of a list of recommended Reciprocal Jurisdictions. The purpose of the Process for Evaluating Qualified and Reciprocal Jurisdictions is to provide a documented evaluation process for creating and maintaining these NAIC lists.

Background

On November 6, 2011, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions serve to reduce reinsurance collateral requirements for certified reinsurers that are licensed and domiciled in Qualified Jurisdictions. Under the previous version of the Credit for Reinsurance Models, in order for U.S. ceding insurers to receive reinsurance credit, the reinsurance was required to be ceded to U.S.-licensed reinsurers or secured by collateral representing 100% of U.S. liabilities for which the credit is recorded. When considering revisions to the Credit for Reinsurance Models, the Reinsurance (E) Task Force contemplated establishing an accreditation-like process, modeled on the current NAIC Financial Regulation Standards and Accreditation Program, to review the reinsurance supervisory systems of non-U.S. jurisdictions. Under the revised Credit for Reinsurance Models, the approval of Qualified Jurisdictions is left to the authority of the states; however, the models provide that a list of Qualified Jurisdictions will be created through the NAIC committee process, and that individual states must consider this list when approving jurisdictions.

The enactment in 2010 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), enacted in 2010, Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into “covered agreements” on behalf of the United States. These are bilateral or multilateral—agreements with foreign governments, authorities or regulators relating to insurance prudential measures, which can preempt contrary state insurance laws or regulatory measures. The Dodd-Frank Act also created the Federal Insurance Office (FIO), which has the following authority: (1) coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters; (2) assist the Secretary of the U.S. Department of the Treasury in negotiating covered agreements (as defined in the Dodd-Frank Act); (3) determine whether the states’ insurance measures are preempted by covered agreements; and (4) consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance. Further, the Dodd-Frank Act authorizes the U.S. Treasury Secretary and the U.S. Trade Representative (USTR), jointly, to negotiate and enter into covered agreements on behalf of the United States. It is the NAIC’s intention to communicate and coordinate with the FIO and related federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
On September 22, 2017, the United States and the European Union (EU) entered into the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance.” A similar agreement with the United Kingdom (UK) was signed on December 18, 2018. Both agreements (collectively referred to as the “Covered Agreements”) will require the states to eliminate reinsurance collateral requirements for reinsurers licensed and domiciled in these jurisdictions within 60 months (five years) after signing or face potential federal preemption by the Federal Insurance Office (FIO) under the Dodd-Frank Act.

**Reciprocal Jurisdictions**

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Models. These revisions were intended to conform the Models to the relevant provisions of the Covered Agreements. The Covered Agreements would eliminate reinsurance collateral requirements for EU and UK reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II, among other conditions. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or UK or post reinsurance collateral. Under the revised Credit for Reinsurance Models, jurisdictions that are subject to in-force Covered Agreements are considered to be Reciprocal Jurisdictions, and reinsurers that have their head office or are domiciled in a Reciprocal Jurisdiction are not required to post reinsurance collateral if they meet all of the requirements of the Credit for Reinsurance Models.

Under the revised Credit for Reinsurance Models, not only are jurisdictions that are subject to Covered Agreements treated as Reciprocal Jurisdictions for reinsurance collateral purposes, but any other Qualified Jurisdictions can also have a pathway to qualify for collateral elimination as Reciprocal Jurisdictions States that meet the requirements of the NAIC Financial Standards and Accreditation Program are also considered to be Reciprocal Jurisdictions.

The NAIC has updated and revised this Process for Evaluating Qualified and Reciprocal Jurisdictions to specify how Qualified Jurisdictions that recognize key NAIC solvency initiatives, including group supervision and group capital standards, and also meet the other requirements under the revised Credit for Reinsurance Models, will be recognized as Reciprocal Jurisdictions and receive similar treatment as that provided under the EU and UK Covered Agreements, including the elimination of reinsurance collateral and local presence requirements by the states.

---

1 The hypothetical possibility that a future covered agreement might not relate to reinsurance is addressed in Section 2F(1)(a)(i) of Model #785, which limits automatic Reciprocal Jurisdiction status to a covered agreement that “addresses the elimination, under specified conditions, of collateral requirements as a condition for entering into any reinsurance agreement with a ceding insurer domiciled in this state or for allowing the ceding insurer to recognize credit for reinsurance.”
II. Principles for the Evaluation of Non-U.S. Jurisdictions

1. The NAIC model revisions applicable to certified reinsurers are intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. To be eligible for certification, a reinsurer must be domiciled and licensed in a Qualified Jurisdiction as determined by the domestic regulator of the ceding insurer. A Qualified Jurisdiction not subject to an in-force Covered Agreement under the Dodd-Frank Act may also be determined to be a Reciprocal Jurisdiction, and reinsurers that have their head office or are domiciled in any such Reciprocal Jurisdiction will not be required to post reinsurance collateral, provided they meet the minimum capital and financial strength requirements and comply with the other requirements of the Credit for Reinsurance Models.

2. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions and Reciprocal Jurisdictions will be conducted in accordance with the provisions of the Credit for Reinsurance Models and any other relevant guidance developed by the NAIC.

3. The evaluation of non-U.S. jurisdictions as Qualified Jurisdictions is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program (Accreditation Program), adherence to international supervisory standards, and relevant international guidance for recognition of reinsurance supervision. It is not intended as a prescriptive comparison to the NAIC Accreditation Program. In order for a Qualified Jurisdiction that is not subject to an in-force Covered Agreement to be evaluated as a Reciprocal Jurisdiction, that Qualified Jurisdiction must agree to recognize the states’ approach to group supervision, including group capital, and other such requirements as provided under the Credit for Reinsurance Models.

4. The states shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the Qualified Jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of Qualified Jurisdiction status is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

5. Each state may evaluate a non-U.S. jurisdiction to determine if it is a Qualified Jurisdiction. A list of Qualified Jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of Qualified Jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Qualified Jurisdictions contained in the Credit for Reinsurance Models. The creation of this list does not constitute a delegation of regulatory authority to the NAIC. The regulatory authority to recognize a Qualified Jurisdiction resides solely in each state and the NAIC List of Qualified Jurisdictions is not binding on the states.

6. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the List of Reciprocal Jurisdictions. A state must consider this list in its determination of Reciprocal Jurisdiction status, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justification for approving this jurisdiction in accordance with the standards for approving Reciprocal Jurisdictions contained in the Credit for Reinsurance Models. Under the
Credit for Reinsurance Model Law (as adopted by a state) the state must recognize the Reciprocal Jurisdiction status of jurisdictions subject to an in-force Covered Agreement.

7. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting,” as discussed more fully below in paragraph 15 of Section III, under which the commissioner has the discretion to defer to another state’s determination that a jurisdiction is a Qualified or Reciprocal Jurisdiction. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings. The NAIC Lists of Qualified and Reciprocal Jurisdictions are intended to facilitate the passporting process.

8. Both Qualified Jurisdictions and Reciprocal Jurisdictions have must agreed to share information and cooperate with the state with respect to all applicable reinsurers domiciled within that jurisdiction, in accordance with the Credit for Reinsurance Models, as adopted by the state. Critical factors in the evaluation process include but are not limited to the history of performance by assuming insurers in the applicant jurisdiction and any documented evidence of substantial problems with the enforcement of final U.S. judgments in the applicant jurisdiction. A jurisdiction will not be a Qualified Jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

9. The determination of Qualified Jurisdiction status can only be made with respect to the reinsurance supervisory system in existence and applied by a non-U.S. jurisdiction at the time of the evaluation.

10. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to the evaluation of the reinsurance supervisory systems of non-U.S. jurisdictions.
III. Procedure for Evaluation of Non-U.S. Jurisdictions

   a. Priority will be given to requests from the states and from those jurisdictions specifically requesting an evaluation by the NAIC.
   b. Formal notification of the NAIC’s intent to initiate the evaluation process will be sent by the NAIC to the reinsurance supervisory authority in the jurisdiction selected, with copies to the FIO and other relevant federal authorities as appropriate. The NAIC will issue public notice on the NAIC website upon confirmation that the jurisdiction is willing to participate in the evaluation process. The NAIC will at this time request public comments with respect to consideration of the jurisdiction as a Qualified Jurisdiction. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document, subject to a preliminary confidentiality and information sharing agreement between the NAIC, relevant states and the applicant jurisdiction.
   c. Relevant U.S. state and federal authorities will be notified of the NAIC’s decision to evaluate a jurisdiction.

2. Evaluation of Jurisdiction
   a. Evaluation Materials. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will initiate evaluation of a jurisdiction’s regulatory system by using the information identified in Section A through Section G of the Evaluation Methodology (Evaluation Materials). The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will begin by undertaking a review of the most recent Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), including the Technical Note on Insurance Sector Supervision, and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will also invite each jurisdiction or its designee to provide information relative to Section A through Section G of the Evaluation Methodology in order to update, complete or supplement publicly available information. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group may also request or accept relevant information from reinsurers domiciled in the jurisdiction under review.
   
   b. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will notify the jurisdiction of any information upon which the Working Group is relying. In that communication, the NAIC will invite the supervisory authority to compare the materials identified by the NAIC to the materials described in Appendix A and Appendix B, and provide information required to update the identified public information or supplement the public information, as required, to address the topics identified in Section A through Section G of the Evaluation Methodology. The use of publicly available information (e.g., the FSAP Report and/or the Insurance Sector Technical Note) is intended to lessen the burden on applicant jurisdictions by requiring the production of information that is readily available, while still addressing substantive areas of inquiry detailed in the Evaluation Methodology. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group’s review at this stage will be focused on how the jurisdiction’s laws, regulations, administrative practices and procedures, and regulatory authorities regulate the financial solvency of its domestic reinsurers in comparison to key
principles underlying the U.S. financial solvency framework\(^2\) and other factors set forth in the Evaluation Methodology.

c. After reviewing the Evaluation Materials, the Qualified Jurisdiction Working Group (E) Working Group may request that the applicant jurisdiction submit supplemental information as necessary to determine whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. The Working Group will address specific questions directly with the jurisdiction related to items detailed in the Evaluation Methodology that are not otherwise addressed in the Evaluation Materials.

d. The NAIC will request that all responses from the jurisdiction being evaluated be provided in English. Any responses submitted with respect to a jurisdiction’s laws and regulations should be provided by a person qualified in that jurisdiction to provide such analyses and, in the case of statutory analysis, qualified to provide such legal interpretations, to ensure that the jurisdiction is providing an accurate description.

e. The NAIC does not intend to review confidential company-specific information in this process, and has focused the procedure on reviewing publicly available information. No confidential company-specific information shall be disclosed or disseminated during the course of the jurisdiction’s evaluation unless specifically requested, subject to appropriate confidentiality safeguards addressed in a preliminary confidentiality and information-sharing agreement. If no such agreement is executed or the jurisdiction is unable to enter into such an agreement under its regulatory authority, the NAIC will not accept any confidential company-specific information.

3. NAIC Review of Evaluation Materials

a. NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise will review the jurisdiction’s Evaluation Materials.

b. Expenses with respect to the evaluations will be absorbed within the NAIC budget. This will be periodically reviewed.

c. Timeline for review. A project management approach will be developed with respect to the overall timeline applicable to each evaluation.

d. Upon completing its review of the Evaluation Materials, the internal reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to FIO and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

4. Discretionary On-site Review

a. The NAIC may ask the jurisdiction under consideration for the opportunity to perform an on-site review of the jurisdiction’s reinsurance supervisory system. Factors that the Qualified Jurisdiction Working Group (E) Working Group will consider in determining whether an on-

\(^2\) The U.S. financial solvency framework is understood to refer to the key elements provided in the NAIC Financial Regulation Standards and Accreditation Program. Appendix A and Appendix B are derived from this framework.
site review is appropriate include the completeness of the information provided by the jurisdiction under review, the general familiarity of the jurisdiction by the NAIC staff or other state regulators participating in the review based on prior conduct or dealings with the jurisdiction, and the results of other evaluations performed by other regulatory or supervisory organizations. If the review is performed, it will be coordinated through the NAIC, utilizing personnel with the appropriate knowledge, experience and expertise. Individual states may also request that representatives from their state be added to the review team.

b. The review team will communicate with the supervisory authority in advance of the on-site visit to clearly identify the objectives, expectations and procedures with respect to the review, as well as any significant issues or concerns identified within the review of the Evaluation Materials. Information to be considered during the on-site review includes, but is not limited to, the following:

i. Interviews with supervisory authority personnel.

ii. Review of organizational and personnel practices.

iii. Any additional information beneficial to gaining an understanding of document and communication flows.

c. Upon completing the on-site review, the reviewer(s) will report initial findings to the Qualified Jurisdiction Working Group Mutually Recognized Jurisdictions (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation.

5. Standard of Review

The evaluation is intended as an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. The standard for qualification of a jurisdiction is that the NAIC must reasonably conclude that the jurisdiction’s reinsurance supervisory system achieves a level of effectiveness in financial solvency regulation that is deemed acceptable for purposes of reinsurance collateral reduction, that the jurisdiction’s demonstrated practices and procedures with respect to reinsurance supervision are consistent with its reinsurance supervisory system, and that the jurisdiction’s laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models.

6. Additional Information to be Considered as Part of Evaluation

The NAIC may also consider information from sources other than the jurisdiction under review. This information includes:

a. Documents, reports and information from appropriate international, U.S. federal and U.S. state authorities.

b. Public comments from interested parties.

c. Rating agency information.

d. Any other relevant information.
7. Preliminary Evaluation Report

a. NAIC staff and/or outside consultants will prepare a Preliminary Evaluation Report for review by the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group. This preliminary report will be private and confidential (i.e., may only be reviewed by Working Group members, designated NAIC staff, consultants, the states, the FIO and other relevant federal authorities that specifically request to be kept apprised of this information, provided that such entities have entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction. Any outside consultants retained by the NAIC will be required to enter into a confidentiality and nondisclosure agreement.).

b. The report will be prepared in a consistent style and format to be developed by NAIC staff. It will contain detailed advisory information and recommendations with respect to the evaluation of the jurisdiction’s reinsurance supervisory system and the documented practices and procedures thereunder. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a Qualified Jurisdiction.

c. All workpapers and reports, including supporting documentation and data, produced as part of the evaluation process are the property of the NAIC and shall be maintained at the NAIC Central Office. In the event that the NAIC shall come into possession of any confidential information, the information shall be held subject to a confidentiality and information-sharing agreement, which will outline the appropriate actions necessary to protect the confidentiality of such information.

a. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group’s review of the Preliminary Evaluation Report will be held in regulator-to-regulator session in accordance with the NAIC Policy Statement on Open Meetings.

b. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will make a preliminary determination as to whether the jurisdiction under consideration satisfies the Standard of Review and is deemed acceptable to be included on the NAIC List of Qualified Jurisdictions. If the preliminary determination is that the jurisdiction should not be included on the NAIC List of Qualified Jurisdictions, the Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will set forth its specific findings and identify those areas of concern with respect to this determination.

c. The results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review.

a. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. This is not intended to be a formal appeals process that would initiate U.S. state administrative due process requirements.

b. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Qualified Jurisdiction Working GroupMutual Recognition of Jurisdictions (E) Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session in accordance with the NAIC Policy Statement on
Open Meetings. This report will be approved upon an affirmative vote of a majority of the members in attendance at this meeting.

c. Upon approval of the Final Evaluation Report, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the summary for public comment. The detailed report will be a confidential, regulator-only document. The report may be shared with any state indicating that it is considering relying on the NAIC List of Qualified Jurisdictions and has entered into a preliminary confidentiality and information-sharing agreement with the foreign jurisdiction.

10. NAIC Determination Regarding List of Qualified Jurisdictions

a. Once the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group has adopted its Final Evaluation Report, it will submit the summary of its findings and its recommendation to the Reinsurance (E) Task Force at an open meeting. Upon approval by the Reinsurance (E) Task Force, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the FIO, USTR and other relevant federal authorities for consultation purposes. Upon approval as a Qualified Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Qualified Jurisdictions. The NAIC will maintain the List of Qualified Jurisdictions on its public website and in other appropriate NAIC publications.

b. In the event that a jurisdiction is not approved as a Qualified Jurisdiction, the supervisory authority will be eligible for reapplication at the discretion of the NAIC.

c. Upon final adoption of the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group’s determination with respect to a jurisdiction, the Final Evaluation Report will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential.

11. Memorandum of Understanding (MOU)

a. A Qualified Jurisdiction must agree to share information and cooperate on a confidential basis with the U.S. state insurance regulatory authority with respect to all certified reinsurers domiciled within that jurisdiction.

b. The International Association of Insurance Supervisors (IAIS) Multilateral Memorandum of Understanding (MMoU) is the recommended method under which a Qualified Jurisdiction will agree to share information and cooperate with U.S. state insurance regulatory authorities. However, until such time as a state has been approved as a signatory to the MMoU by the IAIS, the state may rely on an MOU entered into by a “Lead State” designated by the NAIC. This Lead State will act as a conduit for information between the Qualified Jurisdiction and other states that have certified a reinsurer domiciled in that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the NAIC Master Information Sharing and Confidentiality Agreement, and, as applicable, in the applicable IAIS MMoU, or in a bilateral MOU between the Lead State and the Qualified Jurisdiction and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this Lead State to act as the contact for purposes of obtaining information concerning its certified reinsurers, provided the Lead State share that information with the other states requesting the information only in a manner consistent with the terms
governing the further sharing of information included, as in the applicable, in the IAIS MMoU or bilateral MOU between the Lead State and the Qualified Jurisdiction.

c. If a Qualified Jurisdiction has not been approved by the IAIS as a party to the MMoU, it must enter into an MOU with a Lead State. The MOU must provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions.

d. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.

12. Process for Evaluation after Initial Approval

a. The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review. The Qualified Jurisdiction Working Group will perform a yearly review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Qualified Jurisdiction Working Group to be appropriate. It shall include a review of the jurisdiction’s status as a Reciprocal Jurisdiction if the jurisdiction has been recognized by the NAIC as a Reciprocal Jurisdiction through the process established in paragraph 13.

b. Qualified Jurisdictions must provide the Qualified Jurisdiction Working Group with notice of any material change in the applicable reinsurance supervisory system that may affect the status of the Qualified Jurisdiction. A U.S. jurisdiction should also notify the Qualified Jurisdiction Working Group if it receives notice of any material change in the applicable reinsurance supervisory system, or any adverse developments with respect to enforcement of final U.S. judgments, that may affect the status of the Qualified Jurisdiction. U.S. ceding insurers may also initiate notice to the Qualified Jurisdiction Working Group if they receive notice of any material change in the applicable reinsurance supervisory system or any adverse developments with respect to enforcement of final U.S. judgments. Upon receipt of any such notice, the Qualified Jurisdiction Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction. Any review will be conducted in accordance with the procedure set forth in paragraph 14.

c. If the Qualified Jurisdiction Working Group finds the jurisdiction to be out of compliance at any time with the requirements to be a Qualified Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked.

d. The Qualified Jurisdiction Working Group will consider whether it is necessary to re-evaluate the status of the Qualified Jurisdiction. Any review will be conducted in accordance with the procedure set forth in paragraph 14.

e. The Qualified Jurisdiction Working Group will monitor those jurisdictions that have been approved as Qualified or Reciprocal Jurisdictions by individual states, but are not included on the applicable NAIC List of Qualified Jurisdictions.
13. Review of Qualified Jurisdictions as Potential Reciprocal Jurisdictions

a. In undertaking the evaluation of whether to designate a Qualified Jurisdiction as a Reciprocal Jurisdiction, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group shall utilize such processes and procedures as outlined in the immediately-preceding paragraphs 1 – 12 of Section III. Procedure for Evaluation of Non-U.S. Jurisdictions such as the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group deems is appropriate. Specifically, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will use processes and procedures outlined in paragraph 1 (Initiation of Evaluation of the Reinsurance Supervisory System of an Individual Jurisdiction), paragraph 3 (NAIC Review of Evaluation Materials), paragraph 7 (Preliminary Evaluation Report), paragraph 8 (Review of Preliminary Evaluation Report), paragraph 9 (Opportunity to Respond to Preliminary Evaluation Report), paragraph 10 (NAIC Determination regarding List of Qualified Jurisdictions), paragraph 11 (Memorandum of Understanding) and paragraph 12 (Process for Evaluation after Initial Approval), as modified for use with applicants for Reciprocal Jurisdiction status.

b. A Qualified Jurisdiction may not be reviewed for inclusion on the NAIC List of Reciprocal Jurisdictions, unless it has undergone the Evaluation Methodology outlined in Section IV, and remains in good standing with the NAIC as a Qualified Jurisdiction. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group may, if it determines an extended review period to be appropriate after its initial approval of a new Qualified Jurisdiction, defer consideration of that jurisdiction as a possible Reciprocal Jurisdiction until there has been sufficient United States experience with that jurisdiction and its Certified Insurers that the Working Group believes it is appropriate to progress from collateral reduction to collateral elimination. Nothing in this process requires a finding that a Qualified Jurisdiction meets the standards for recognition as a Reciprocal Jurisdiction, and the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group may base such recommendation its determination on all relevant information, which may include factors not specifically included in this Process for Evaluating Qualified and Reciprocal Jurisdictions.

c. A list of Reciprocal Jurisdictions will be published through the NAIC committee process. Jurisdictions subject to an in-force Covered Agreement and states that meet the requirements of the NAIC Financial Standards and Accreditation Program are automatically included on the NAIC List of Reciprocal Jurisdictions. In making its recommendation with respect to whether a Qualified Jurisdiction that is not automatically designated as a Reciprocal Jurisdiction should be added to the NAIC List of Reciprocal Jurisdictions, the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group shall undertake the following analysis in making its evaluation:

   i. The Qualified Jurisdiction must confirm that an insurer which has its head office or is domiciled in that jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as the same insurer would receive credit for reinsurance assumed by an assuming insurers domiciled in that jurisdiction is received by United States ceding insurers;

   ii. The Qualified Jurisdiction must confirm that it does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by that jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;
iii. The Qualified Jurisdiction must recognize the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by its competent regulatory authority that insurance groups that are domiciled or maintain their worldwide headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision, including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision by the Qualified Jurisdiction at the level of the worldwide parent undertaking of the insurance or reinsurance group by the Qualified Jurisdiction;

iv. The Qualified Jurisdiction must provide written confirmation by its competent regulatory authority that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the Qualified Jurisdiction, including but not limited to the IAIS MMoU or other multilateral memoranda of understanding coordinated by the NAIC. This requirement may be satisfied by an MOU with a Lead State, which shall provide for appropriate confidentiality safeguards with respect to the information shared between the jurisdictions, similar to the MOU requirement outlined in paragraph 11 of this section III; and

v. The Qualified Jurisdiction must confirm that it will provide to the states on an annual basis confirmation that each eligible assuming insurer that is domiciled in the Qualified Jurisdiction continues to comply with the requirements set forth in Section 9C(2) and (3) of Model #786; i.e., must maintain, on an ongoing basis, minimum capital and surplus of no less than $250,000,000, and maintains on an ongoing basis the required minimum solvency or capital ratio, as applicable.

d. In order to satisfy the requirements of subsection (c) above, the chief insurance supervisor of the Qualified Jurisdiction being evaluated as a Reciprocal Jurisdiction may provide the NAIC with a written letter confirming, as follows:

[Jurisdiction] is a Qualified Jurisdiction under the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786), and is currently in good standing on the NAIC List of Qualified Jurisdictions. As the lead insurance regulatory supervisor for [Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- An insurer which has its head office or is domiciled in [Jurisdiction] shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit would be granted for reinsurance assumed by insurers domiciled in [Jurisdiction]-is received by United States ceding insurers. [Jurisdiction] does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by [Jurisdiction] or as a condition to allow the ceding insurer to recognize credit for such reinsurance.
• [Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurance groups that are domiciled or maintain their worldwide headquarters in jurisdictions accredited by the NAIC shall be subject only to their U.S. home jurisdiction’s worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the [Jurisdiction].

• [Jurisdiction] confirms that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the states in accordance with a memorandum of understanding or similar document between a state and the [Jurisdiction].

• [Jurisdiction] will annually provide to the states confirmation that applicable assuming insurers domiciled in [Jurisdiction] maintain minimum capital and surplus of no less than $250,000,000, and maintain on an ongoing basis the required minimum solvency or capital ratio, as applicable.

• Finally, I confirm that [Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

e. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination, the representations in the letter are true and accurate, and will prepare for the review by the Reinsurance Task Force a Summary of Findings and Determination recommending that the Qualified Jurisdiction be recognized as a Reciprocal Jurisdiction. Upon approval by the Task Force, the Summary of Findings and Determination must be adopted by will be submitted for a vote of the NAIC Executive (EX) Committee and Plenary for inclusion on the List of Reciprocal Jurisdictions.

f. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group, working in coordination with the Qualified Jurisdiction and the Reinsurance Financial Analysis (E) Working Group, must make a determination on a minimum solvency or capital ratio under which reinsurers licensed and domiciled in the Qualified Jurisdiction may assume insurance from U.S. ceding companies without posting reinsurance collateral. The applicable minimum solvency or capital ratio must be an effective measure of solvency, comparable to either an NAIC risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, or one hundred percent (100%) of the solvency capital requirement (SCR) as calculated under the Solvency II Directive issued by the European Union, giving due consideration to any applicable equivalency assessment conducted by the European Insurance and Occupational Pensions Authority (EIOPA) on the Qualified Jurisdiction with respect to Solvency II.

14. Termination of Status as Qualified and/or Reciprocal Jurisdiction

a. If the Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group finds the Qualified Jurisdiction to be out of compliance at any time with the requirements to be a Qualified
Jurisdiction, the specific reasons will be documented in a report to the jurisdiction under review. The Mutual Recognition of Jurisdictions (E) Working Group would then report any concerns to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities, and the status as a Qualified Jurisdiction may be placed on probation, suspended or revoked by the NAIC. If a Qualified Jurisdiction is also a Reciprocal Jurisdiction subject to a Covered Agreement, the Mutual Recognition of Jurisdictions (E) Working Group and the NAIC will initiate communications and consult with FIO, USTR and any other relevant federal and/or international authorities before any action is taken with respect to that Qualified Jurisdiction’s status.

b. Except for Reciprocal Jurisdictions entitled to automatic recognition, a jurisdiction’s status as a Reciprocal Jurisdiction may be placed on probation, suspended or revoked for good cause in the same manner as provided for Qualified Jurisdictions under paragraph 12. If cause is found to question the fitness of a Reciprocal Jurisdiction that is subject to an in-force Covered Agreement, or its compliance with applicable requirements of the covered agreement, the Qualified Jurisdiction Working Group would report any concerns to its parent the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities. It is intended that compliance with the covered agreement will be addressed through the Joint Committee process established under the covered agreement, or through termination of the covered agreement by the parties to the covered agreement. The NAIC, individual state regulators and interested parties may raise these issues directly with FIO, USTR or other relevant federal authorities.

c. Both Qualified Jurisdictions and Reciprocal Jurisdictions that are not subject to a covered agreement are obligated to provide notice to the Mutual Recognition of Jurisdictions (E) Working Group of any applicable changes to their reinsurance supervisory system or changes to the assurances provided in the letter set forth in paragraph 13. States and U.S. ceding insurers may also provide notice of such changes to the Working Group. Upon notice of any such material changes, the Working Group will meet in regulator-only session to determine if these changes are in fact material to continuing recognition by the NAIC as either a Qualified or Reciprocal Jurisdiction. The Working Group will work directly with the jurisdiction to address any issues that have been identified. If these issues cannot be resolved through this regulator-only dialogue, then the Working Group will report its recommendation to the Reinsurance Task Force, which will consider a suspension of the jurisdiction’s status as a Qualified or Reciprocal Jurisdiction in open session. The Task Force will then make a recommendation to the NAIC Plenary on the action, if any, to be taken, which may include placing the Qualified or Reciprocal Jurisdiction’s status on probation, or suspending or revoking its status.

d. If a Qualified or Reciprocal Jurisdiction’s status is placed on probation by the NAIC, the material change will be noted in an update to its Summary of Finding and Determination in order to provide notice to the states and U.S. ceding insurers of this material change. If the NAIC decides to suspend or revoke its status, the jurisdiction may be given a reasonable time period, no more than 18 months, to rectify its noncompliance with the standards and return it to good standing. Once the NAIC’s suspension or revocation takes effect, it is expected that the same action will be taken by the respective states that have recognized the jurisdiction as a Qualified or Reciprocal Jurisdiction.
e. There is no administrative right to appeal the decision of the NAIC with respect to the revocation of status as a Qualified or Reciprocal Jurisdiction, but the jurisdiction can apply for reinstatement after a one-year period.

b.f. During the period in which a Qualified or Reciprocal Jurisdiction’s status has been suspended by a state, any new reinsurance assumed by a reinsurer domiciled in that jurisdiction from a ceding insurer domiciled in that state will not be eligible for credit unless the transaction qualifies for credit on the basis of security posted by the ceding insurer or some other basis that does not depend on recognition of the jurisdiction as a Qualified or Reciprocal Jurisdiction. However, suspension does not affect credit for reinsurance that was already in force.

g. If a Qualified or Reciprocal Jurisdiction’s status is revoked by a state, then those Certified Reinsurers and/or Reciprocal Jurisdiction Reinsurers domiciled in that jurisdiction lose no longer qualify for that status, which generally obligates them to post one hundred percent (100%) collateral on all their liabilities assumed from ceding insurers domiciled in that state. The state has the option to suspend a reinsurer’s certification indefinitely, in lieu of revocation, in which case the obligation to post collateral applies prospectively to all new, renewed and amended reinsurance agreements. If the reinsurer’s eligibility is revoked, it must be granted at least three months after the effective date of the revocation to cure any deficiency in collateral, unless exceptional circumstances make a shorter period necessary for policyholder and other consumer protection.

h. The factors used in the evaluation of Reciprocal Jurisdictions are not the same as are utilized in the evaluation of Qualified Jurisdictions. A Qualified Jurisdiction that has been approved by the NAIC as a Reciprocal Jurisdiction may have its status as a Reciprocal Jurisdiction either suspended or revoked but still meet the requirements to be a Qualified Jurisdiction. However, if a Reciprocal Jurisdiction that is not subject to a covered agreement has its status as a Qualified Jurisdiction revoked, it cannot maintain its status as a Reciprocal Jurisdiction, because it must be a Qualified Jurisdiction to meet the requirements of a Reciprocal Jurisdiction.

15. Passorting Process for Certified and Reciprocal Jurisdiction Reinsurers

a. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passorting” under which the commissioner has the discretion to defer to another state’s determination with respect to the requirements for both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers. Passorting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passorting process. States are also encouraged to utilize the passorting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

b. The passorting process is facilitated through the Reinsurance Financial Analysis (E) Working Group (ReFAWG). It is intended that ReFAWG will help facilitate multi-state recognition of Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and address issues of uniformity among the states, both with respect to initial application and subsequent changes in rating or status. The ReFAWG Review Process is set forth in the ReFAWG Procedures Manual.
c. Section 9C(7) of the Credit for Reinsurance Model Regulation (#786) provides that the “assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the requirements set forth in Paragraphs (2) [i.e., minimum capital and surplus of no less than $250 million] and (3) [i.e., minimum solvency or capital ratio] of this subsection.” Section 9E(1) of Model #786 then provides that “The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of the requirements of Subsection C.” A Reciprocal Jurisdiction may satisfy the requirements of Section 9C(7) of Model #786 either by providing the information required by Section 9C(7) itself, or by providing an assuming insurer domiciled in that Reciprocal Jurisdiction with a document confirming the required information, which the assuming insurer would file annually. With either filing method, in lieu of filing the required information directly with the domiciliary states of each of the reinsurer’s U.S. ceding companies, the information may be filed with either its Lead State or the NAIC, which will share this documentation with the other states through the ReFAWG Review Process in satisfaction of their respective filing requirements.
IV. Evaluation Methodology

The Evaluation Methodology was developed to be consistent with the provisions of the NAIC Credit for Reinsurance Models. It is intended to provide an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program, adherence to international supervisory standards and relevant international guidance for recognition of reinsurance supervision. Although the methodology includes a comparison of the jurisdiction’s supervisory system to a number of key elements from the NAIC Accreditation Program, it is not intended as a prescriptive assessment under the NAIC Accreditation Program. Rather, the NAIC Accreditation Program simply provide the framework for the outcomes-based analysis. The NAIC will evaluate the appropriateness and effectiveness of the reinsurance supervisory system within the jurisdiction and consider the rights, benefits and the extent of reciprocal recognition afforded by the jurisdiction to reinsurers licensed and domiciled in the U.S. The determination of a Qualified Jurisdiction is based on the effectiveness of the entire reinsurance supervisory system within the jurisdiction.

The Evaluation Methodology consists of the following:

- Section A: Laws and Regulations
- Section B: Regulatory Practices and Procedures
- Section C: Jurisdiction’s Requirements Applicable to U.S.-Domiciled Reinsurers
- Section D: Regulatory Cooperation and Information Sharing
- Section E: History of Performance of Domestic Reinsurers
- Section F: Enforcement of Final U.S. Judgments
- Section G: Solvent Schemes of Arrangement

This information will be the basis for the Final Evaluation Report and the determination of whether the jurisdiction will be included on the NAIC List of Qualified Jurisdictions.
Section A: Laws and Regulations

The NAIC will review publicly available information, as well as information provided by an applicant jurisdiction with respect to its laws and regulations, in an effort to evaluate whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in an effective manner. This will include a review of elements believed to be basic building blocks for sound insurance/reinsurance regulation. A jurisdiction’s effectiveness under Section A may be demonstrated through law, regulation or established practice that implements the general authority granted to the jurisdiction, or any combination of laws, regulations or practices that meet the objective.

The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will initiate evaluation of a jurisdiction’s regulatory system by gathering and undertaking a review of the most recent FSAP Report, ROSC and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will simultaneously invite each jurisdiction (or its designee) to provide information relative to Section A (and other sections, as relevant) to assist the NAIC in evaluating its laws and regulations. The NAIC will review this information in conjunction with Appendix A, which provides more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation under this section. Appendix A is not intended as a prescriptive checklist of requirements a jurisdiction must meet in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction is requested to address the following information, which the NAIC will consider, at a minimum, in determining whether the outcomes achieved by the jurisdiction’s laws and regulations meet an acceptable level of effectiveness for the jurisdiction to be included on the NAIC List of Qualified Jurisdictions:

1. Confirmation of the jurisdiction’s most recent FSAP Report, including relevant updates with respect to descriptions or elements of the FSAP Report in which changes have occurred since the assessment or where information might otherwise be outdated.

2. Confirmation of the jurisdiction’s ROSC, including relevant updates with respect to descriptions or elements of the ROSC in which changes have occurred since the report was completed or where information might otherwise be outdated.

3. If materials responsive to the topics under review have been provided in response to information exchanges between the jurisdiction under review and the NAIC, such prior responses may be cross-referenced provided updates are submitted, if required to address changes in laws or procedures.

4. Any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s evaluation process in order to address, on an outcomes basis, the key elements described within Appendix A.

---

3 The basic considerations under this section are derived from Model #786, Section 8C(2), which include: (a) the framework under which the assuming reinsurer is regulated; (b) the structure and authority of the jurisdiction’s reinsurance supervisory authority regarding solvency regulation requirements and financial surveillance; (c) the substance of financial and operating standards for reinsurers domiciled in the jurisdiction; and (d) the form and substance of financial reports required to be filed or made publicly available by reinsurers domiciled in the jurisdiction and the accounting principles used.
The NAIC will review the information provided by the applicant jurisdiction and determine whether it is adequate
to reasonably conclude whether the jurisdiction has sufficient authority to regulate the solvency of its reinsurers in
an effective manner. After reviewing the initial submission, the NAIC may request that the applicant jurisdiction
submit supplemental information as necessary in order to make this determination. An applicant jurisdiction is
strongly encouraged to provide thorough, detailed and current information in its initial submission in order to
minimize the number and extent of supplemental information requests from the NAIC with respect to Section A of
this Evaluation Methodology. The NAIC will provide a complete description in the Final Evaluation Report of the
information provided in the Evaluation Materials, and any updates or other information that have been provided by
the applicant jurisdiction.

Section B: Regulatory Practices and Procedures

Section B is intended to facilitate an evaluation of whether the jurisdiction effectively employs baseline regulatory
practices and procedures to supplement and support enforcement of the jurisdiction’s financial solvency laws and
regulations described in Section A. This evaluation methodology recognizes that variation may exist in practices
and procedures across jurisdictions due to the unique situations each jurisdiction faces. Jurisdictions differ with
respect to staff and technology resources that are available, as well as the characteristics of the domestic industry
regulated. A determination of effectiveness may be achieved using various financial solvency oversight practices
and procedures. This evaluation is not intended to be prescriptive in nature.

The NAIC will utilize the information provided by the jurisdiction as outlined under Section A in completing this
section of the evaluation. The NAIC will review this information in conjunction with Appendix B, which provides
more detailed guidance with respect to elements the NAIC intends to consider on an outcomes basis in the evaluation
under this section. Appendix B is not intended as a prescriptive checklist of requirements a jurisdiction must meet
in order to be a Qualified Jurisdiction. Rather, it is provided in an effort to facilitate an outcomes-based comparison
to financial solvency regulation under the NAIC Accreditation Program. An applicant jurisdiction should also
provide any other information, descriptions or responses the jurisdiction believes would be beneficial to the NAIC’s
evaluation process in order to address, on an outcomes basis, the key elements described within Appendix B.

Section C: Jurisdiction’s Requirements Applicable to U.S. Domiciled Reinsurers

The jurisdiction is requested to describe and explain the rights, benefits and the extent of reciprocal recognition
afforded by the non-U.S. supervisory authority to reinsurers licensed and domiciled in the U.S.

Section D: Regulatory Cooperation and Information-Sharing

The Credit for Reinsurance Models require the supervisory authority to share information and cooperate with the
U.S. state insurance regulators with respect to all certified reinsurers domiciled within their jurisdiction. The
jurisdiction is requested to provide an explanation of the supervisory authority’s ability to cooperate, share
information and enter into an MOU with U.S. state insurance regulators and confirm that they are willing to enter
into an MOU. This should include information with respect to any existing MOU with U.S. state and/or federal
authorities that pertain to reinsurance. Both the jurisdiction and the states may rely on the IAIS MMoU to satisfy
this requirement, and any states that have not yet been approved by the IAIS as a signatory to the MMoU may rely
on an MOU entered into by a Lead State with the jurisdiction until such time that the state has been approved as a
signatory to the IAIS MMoU. The NAIC and the states will communicate and coordinate with the FIO, USTR and other relevant federal authorities as appropriate with respect to this process.

**Section E: History of Performance of Domestic Reinsurers**

The jurisdiction is requested to provide a general description with respect to the historical performance of reinsurers domiciled in the jurisdiction. The NAIC does not intend to review confidential company-specific information under this section. Rather, it is intended that any information provided would be publicly available, unless specifically addressed with the jurisdiction under review. This discussion should address, at a minimum, the following information:

a. Number of reinsurers domiciled in the jurisdiction, and a list of any reinsurers domiciled in the jurisdiction that have and maintain, on an ongoing basis, minimum capital and surplus, or its equivalent, of no less than $250,000,000.

b. Up to a 10-year history of any regulatory actions taken against specific reinsurers.

c. Up to a 10-year history listing any reinsurers that have gone through insolvency proceedings, including the size of each insolvency and a description of the related outcomes (e.g., reinsurer rehabilitated or liquidated, payout percentage of claims to priority classes, payout percentage of claims to domestic and foreign claimants).

d. Up to a 10-year history of any significant industry-wide fluctuations in capital or profitability with respect to domestic reinsurers.

**Drafting Note:** The NAIC will determine the appropriate time period for review on a case-by-case basis with respect to this information.

**Section F: Enforcement of Final U.S. Judgments**

The NAIC has previously collected information from a number of jurisdictions with respect to enforcement of final U.S. judgments. The jurisdiction is also requested to provide a current description or explanation of any restrictions with respect to the enforcement of final foreign judgments in the jurisdiction. Based on the foregoing information, the NAIC will make an assessment of the effectiveness of the ability to enforce final U.S. judgments in the jurisdiction. This will include a review of the status, interpretations, application and enforcement of various treaties, conventions and international agreements with respect to final judgments, arbitration and choice of law. The Qualified Jurisdiction Working Group Mutual Recognition of Jurisdictions (E) Working Group will monitor the enforcement of final U.S. judgments and the Qualified Jurisdiction is requested to notify the NAIC of any developments in this area.

**Section G: Solvent Schemes of Arrangement**

The jurisdiction is requested to provide a description of any legal framework that allows reinsurers domiciled in the jurisdiction to propose or participate in any solvent scheme of arrangement or similar procedure. In addition, the jurisdiction is requested to provide a description of any solvent scheme of arrangement or similar procedure that a domestic reinsurer has proposed or participated in and the outcome of such procedure.
V. Appendices: Specific Guidance with Respect to Section A and Section B

It is important to note that Part IV, Section A: Laws and Regulations, and Part IV, Section B: Regulatory Practices and Procedures, are derived from the NAIC Financial Regulation Standards and Accreditation Program, which is intended to establish and maintain standards to promote sound insurance company financial solvency regulation among the U.S. states. As such, the NAIC Accreditation Program requires the states to employ laws, regulations and administrative policies and procedures substantially similar to the NAIC accreditation standards in order to be considered an accredited state.

However, it is not the intent of the Evaluation Methodology to require applicant jurisdictions to meet the standards required by the NAIC for accreditation. Instead, Section A and Section B (and their corresponding appendices) are intended to provide a framework to facilitate an outcomes-based evaluation by the NAIC and state insurance regulators of the effectiveness of the jurisdiction’s supervisory authority. This framework consists of a description of the jurisdiction’s laws, regulations, practices and procedures applicable to the supervision of its domestic reinsurers. The amount of detail provided within these appendices should not be interpreted as specific requirements that must be met by the applicant jurisdiction. Rather, the information is intended to provide direction to the applicant jurisdiction in an effort to facilitate a complete response and increase the efficiency and timeliness of the evaluation process.
Appendix A: Laws and Regulations

1. Examination Authority

Does the jurisdiction have the authority to examine its domestic reinsurers? This description should address the following:

a. Frequency and timing of examinations and reports.

b. Guidelines for examination.

c. Whether the jurisdiction has the authority to examine reinsurers whenever it is deemed necessary.

d. Whether the jurisdiction has the authority to have complete access to the reinsurer’s books and records and, if necessary, the records of any affiliated company.

e. Whether the jurisdiction has the authority to examine officers, employees and agents of the reinsurer when necessary with respect to transactions directly or indirectly related to the reinsurer under examination.

f. Whether the jurisdiction has the authority to share confidential information with U.S. state insurance regulatory authorities, provided that the recipients are required, under their law, to maintain its confidentiality.

2. Capital and Surplus Requirement

Does the jurisdiction have the authority to require domestic reinsurers to maintain a minimum level of capital and surplus to transact business? This description should address the following:

a. Whether the jurisdiction has the authority to require reinsurers to maintain minimum capital and surplus, including a description of such minimum amounts.

b. Whether the jurisdiction has the authority to require additional capital and surplus based on the type, volume and nature of reinsurance business transacted.

c. Capital requirements for reinsurers, including reports and a description of any specific levels of regulatory intervention.

3. Accounting Practices and Procedures

Does the jurisdiction have the authority to require domestic reinsurers to file appropriate financial statements and other financial information? This description should address the following:

a. Description of the accounting and reporting practices and procedures.

b. Description of any standard financial statement blank/reporting template, including description of content/disclosure requirements and corresponding instructions.

4. Corrective Action

Does the jurisdiction have the authority to order a reinsurer to take corrective action or cease and desist certain practices that, if not corrected or terminated, could place the reinsurer in a hazardous financial condition? This description should address the following:

a. Identification of specific standards which may be considered to determine whether the continued operation of the reinsurer might be hazardous to the general public.

b. Whether the jurisdiction has the authority to issue an order requiring the reinsurer to take corrective action when it has been determined to be in hazardous financial condition.
5. Regulation and Valuation of Investments

What authority does the jurisdiction have with respect to regulation and valuation of investments? This description should address the following:

a. Whether the jurisdiction has the authority to require a diversified investment portfolio for all domestic reinsurers as to type, issue and liquidity.

b. Whether the jurisdiction has the authority to establish acceptable practices and procedures under which investments owned by reinsurers must be valued, including standards under which reinsurers are required to value securities/investments.

6. Holding Company Systems

Does the jurisdiction have laws or regulations with respect to supervision of the group holding company systems of reinsurers? This description should address the following:

a. Whether the jurisdiction has access to information via the parent or other regulated group entities about activities or transactions within the group involving other regulated or non-regulated entities that could have a material impact on the operations of the reinsurer.

b. Whether the jurisdiction has access to consolidated financial information of a reinsurer’s ultimate controlling person.

c. Whether the jurisdiction has the authority to review integrity and competency of management.

d. Whether the jurisdiction has approval and intervention powers for material transactions and events involving reinsurers.

e. Whether the jurisdiction has authority to monitor, or has prior approval authority over:
   i. Change in control of domestic reinsurers.
   ii. Dividends and other distributions to shareholders of the reinsurer.
   iii. Material transactions with affiliates.

7. Risk Management

Does the jurisdiction have the authority to require its domestic reinsurers to maintain an effective risk-management function and practices? This description should address the following:

a. Whether the jurisdiction has Own Risk and Solvency Assessment (ORSA) requirements and reporting.

b. Any requirements regarding the maximum net amount of risk to be retained by a reinsurer for an individual risk based on the reinsurer’s capital and surplus.

c. Whether the jurisdiction has authority to monitor enterprise risk, including any activity, circumstance, event (or series of events) involving one or more affiliates of a reinsurer that, if not remedied promptly, is likely to have a material adverse effect on the financial condition or liquidity of the reinsurer or its insurance holding company system as a whole.

d. Whether the jurisdiction has corporate governance requirements for reinsurers.
8. **Liabilities and Reserves**

Does the jurisdiction have standards for the establishment of liabilities and reserves (technical provisions) resulting from reinsurance contracts? This description should address the following:

a. Liabilities incurred under reinsurance contracts for policy reserves, unearned premium, claims and losses unpaid, and incurred but not reported (IBNR) claims (including whether discounting is allowed for reserve calculation/reporting).

b. Liabilities related to catastrophic occurrences.

c. Whether the jurisdiction requires an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist for all domestic reinsurers, and the frequency of such reports.

9. **Reinsurance Ceded**

What are the jurisdiction’s requirements with respect to the financial statement credit allowed for reinsurance retroceded by its domestic reinsurers? This description should address the following:

a. Credit for reinsurance requirements applicable to reinsurance retroceded to domestic and non-domestic reinsurers.

b. Collateral requirements applicable to reinsurance contracts.

c. Whether the jurisdiction requires a reinsurance agreement to provide for insurance risk transfer (i.e., transfer of both underwriting and timing risk).

d. Requirements applicable to special purpose reinsurance vehicles and insurance securitizations.

e. Affiliated reinsurance transactions and concentration risk.

f. Disclosure requirements specific to reinsurance transactions, agreements and counterparties, if such information is not provided under another item.

10. **Independent Audits**

Does the jurisdiction require annual audits of domestic reinsurers by independent certified public accountants or similar accounting/auditing professional recognized in the applicant jurisdiction? This description should address the following:

a. Requirements for the filing of audited financial statements prepared in conformity with accounting practices prescribed or permitted by the supervisory authority.

b. Contents of annual audited financial reports.

c. Requirements for selection of auditor.

d. Allowance of audited consolidated or combined financial statements.

e. Notification of material misstatements of financial condition.

f. Supervisor’s access to auditor’s workpapers.

g. Audit committee requirements.

h. Requirements for reporting of internal control-related matters.

11. **Receivership**

Does the jurisdiction have a receivership scheme for the administration of reinsurers found to be insolvent? This should include a description of any liquidation priority afforded to policyholders and the liquidation priority of
10-384 NAIC Proceedings – Summer 2021

Attachment Ten
Financial Condition (E) Committee
8/14/21

reinsurance obligations to domestic and non-domestic ceding insurers in the context of an insolvency proceeding of a reinsurer.

12. Filings with Supervisory Authority

Does the jurisdiction require the filing of annual and interim financial statements with the supervisory authority? This description should address the following:

a. The use of standardized financial reporting in the financial statements, and the frequency of relevant updates.

b. The use of supplemental data to address concerns with specific companies or issues.

c. Filing format (e.g., electronic data capture).

d. The extent to which financial reports and information are public records.

13. Reinsurance Intermediaries

Does the jurisdiction have a regulatory framework for the regulation of reinsurance intermediaries?

14. Other Regulatory Requirements with respect to Reinsurers

Any other information necessary to adequately describe the effectiveness of the jurisdiction’s laws and regulations with respect to its reinsurance supervisory system.
Appendix B: Regulatory Practices and Procedures

1. Financial Analysis

What are the jurisdiction’s practices and procedures with respect to the financial analysis of its domestic reinsurers? Such description should address the following:

   a. Qualified Staff and Resources
      The resources employed to effectively review the financial condition of all domestic reinsurers, including a description of the educational and experience requirements for staff responsible for financial analysis.

   b. Communication of Relevant Information to/from Financial Analysis Staff
      The process under which relevant information and data received by the supervisory authority are provided to the financial analysis staff and the process under which the findings of the financial analysis staff are communicated to the appropriate person(s).

   c. Supervisory Review
      How the jurisdiction’s internal financial analysis process provides for supervisory review and comment.

   d. Priority-Based Analysis
      How the jurisdiction’s financial analysis procedures are prioritized in order to ensure that potential problem reinsurers are reviewed promptly.

   e. Depth of Review
      How the jurisdiction’s financial analysis procedures ensure that domestic reinsurers receive an appropriate level or depth of review commensurate with their financial strength and position.

   f. Analysis Procedures
      How the jurisdiction has documented its financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic reinsurer.

   g. Reporting of Material Adverse Findings
      The process for reporting material adverse indications, including the determination and implementation of appropriate regulatory action.

   h. Early Warning System/Stress Testing
      Whether the jurisdiction has an early warning system and/or stress testing methodology that is utilized with respect to its domestic reinsurers.
2. **Financial Examinations**

What are the jurisdiction’s practices and procedures with respect to the financial examinations of its domestic reinsurers? Such description should address the following:

a. **Qualified Staff and Resources**
   The resources employed to effectively examine all domestic reinsurers. This should include whether the jurisdiction prioritizes examination scheduling and resource allocation commensurate with the financial strength and position of each reinsurer, and a description of the educational and experience requirements for staff responsible for financial examinations.

b. **Communication of Relevant Information to/from Examination Staff**
   The process under which relevant information and data received by the supervisory authority are provided to the examination staff and the process under which the findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**
   Whether the supervisory authority’s examination staff includes specialists with appropriate training and/or experience or whether the supervisory authority otherwise has available qualified specialists that will permit the supervisory authority to effectively examine any reinsurer.

d. **Supervisory Review**
   Whether the supervisory authority’s procedures for examinations provide for supervisory review.

e. **Examination Guidelines and Procedures**
   Description of the policies and procedures the supervisory authority employs for the conduct of examinations, including whether variations in methods and scope are commensurate with the financial strength and position of the reinsurer.

f. **Risk-Focused Examinations**
   Does the supervisory authority perform and document risk-focused examinations and, if so, what guidance is utilized in conducting the examinations? Are variations in method and scope commensurate with the financial strength and position of the reinsurer?

g. **Scheduling of Examinations**
   Whether the supervisory authority’s procedures provide for the periodic examination of all domestic reinsurers, including how the system prioritizes reinsurers that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**
   Description of the format in which the supervisory authority’s reports of examinations are prepared, and how the reports are shared with other jurisdictions under information-sharing agreements.

i. **Action on Material Adverse Findings**
   What are the jurisdiction’s procedures regarding supervisory action in response to the reporting of any material adverse findings.
3. **Information Sharing**

Does the jurisdiction have a process for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with U.S. state regulatory officials, provided that the recipients are required, under their law, to maintain its confidentiality?

4. **Procedures for Troubled Reinsurers**

What procedures does the jurisdiction follow with respect to troubled reinsurers?

5. **Organization, Licensing and Change of Control of Reinsurers**

What processes does the supervisory authority use to identify unlicensed or fraudulent activities? The description should address the following:

   a. **Licensing Procedure**
      Whether the supervisory authority has documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

   b. **Staff and Resources**
      The educational and experience requirements for staff responsible for evaluating company licensing.

   c. **Change in Control of a Domestic Reinsurer**
      Procedures for the review of key pieces of information included in filings with respect to a change in control of a domestic reinsurer.
To: Commissioner Scott A. White (VA), Financial Condition (E) Committee Chair  
From: Commissioner Marlene Caride (NJ), Financial Stability (E) Task Force Chair  
Date: July 27, 2021  
RE: Repurposing the Liquidity Assessment (E) Subgroup and its charges to an ongoing Macroprudential (E) Working Group

Earlier this year, the Financial Stability Task Force moved from the Executive Committee to the Financial Condition (E) Committee. As part of that move, the Task Force was charged with building out the NAIC macroprudential surveillance system. The current legal entity and group insurance surveillance system has been shaped over the last thirty years or so, while the Task Force is just beginning its work. We will need to assess the ability of the data and tools in that legal entity and group system to satisfy macroprudential surveillance needs. Modifications will likely need to be made, but new data and tools may also be needed in the future. There will be a significant amount of detail work involved in building this macroprudential surveillance system.

The Financial Stability Task Force also has some remaining Macro Prudential Initiative (MPI) work to complete for capital stress testing and counterparty disclosures. The MPI recovery and resolution item was addressed last year. Similarly, with the adoption of the 2020 Liquidity Stress Test (LST) Framework in May of this year, the liquidity risk MPI item has been addressed. However, the LST will be an ongoing activity managed by the Task Force.

To ensure the Financial Stability Task Force has appropriate support for this work, it adopted a motion to repurpose the Liquidity Assessment Subgroup to an ongoing Macroprudential Working Group with modified and expanded charges. The attached document shows the revised name and changes to the 2021 charges in track changes notation.

Blanks (E) Working Group Agenda Item Submission Form 2021-06BWG; Effective Annual 2021; Add Crosschecks Between Form 5 and Form 1 for Columns 2, 3, 4, 6 and 7 of Form 5 (Attachment Two-A6)..........................................................................................10-518

Blanks (E) Working Group Agenda Item Submission Form 2021-07BWG; Effective Annual 2021; Add Additional Line Categories to the Instruction for Column 26 – Collateral Type to Capture Collateral Type Data for all RMBS, CMBS and LBSS Securities Regardless of Reporting Category (Attachment Two-A7)..........................................................................................10-521

Blanks (E) Working Group Agenda Item Submission Form 2021-08BWG Modified; Effective Annual 2021; Add a New Supplement Mortgage Guaranty Insurance Exhibit to Capture More Information from Mortgage Guaranty Insurers (Attachment Two-A8)..................................................................................10-525

Blanks (E) Working Group Editorial Revisions to the Blanks and Instructions Presented at the May 26, 2021, Meeting (Attachment Two-A9)..........................................................................................10-542

Blanks (E) Working Group Agenda Item Submission Form 2021-10BWG; Effective First Quarter 2022; Remove Language in Quarterly General Interrogatories Part 1, Line 4.1 That Requires Filing of a Quarterly Merger/History Form (Attachment Two-B)..................................................................................10-552

Blanks (E) Working Group Editorial Revisions to the Blanks and Instructions Presented at the July 22, 2021, Meeting (Attachment Two-C)..........................................................................................10-554

Memorandum to Jake Garn, Chair, Blanks (E) Working Group, from Marti Hooper, Chair, Health Actuarial (B) Task Force, Dated June 1, 2021, Regarding Health Actuarial Statement of Opinion Guidance for the 2021 Reporting Year (Attachment Two-D)..................................................................................10-556

Accounting Practices and Procedures (E) Task Force 2022 Proposed Charges (Attachment Three)..................................................................................10-557

Appendix G Implementation Guide (Guide) for the Annual Financial Reporting Model Regulation (#205) (Attachment Four)..................................................................................10-558
The Accounting Practices and Procedures (E) Task Force met July 27, 2021. The following Task Force members participated: Doug Slape, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Ryllynn Brown (DE); Lori K. Wing-Heier and David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Evan G. Daniels represented by Kurt Regner (AZ); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by William Arfanis and Kathy Belfi (CT); Karima M. Woods represented by N. Kevin Brown (DC); David Almaier represented by Virginia Christy (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Eric Fletcher (ID); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by John Turchi (MA); Eric A. Cioppa and Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Mike Causey represented by Monique Smith (NC); Jon Godfread represented by Matt Fischer (ND); Dunning represented by Justin Schrader (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Linda A. Lacewell represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowberger (OK); Jessica K. Altman represented by Kimberly Rankin (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Raymond G. Farmer represented by Daniel Morris (SC); Carter Lawrence represented by Hui Wattanaskolpant (TN); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and David Smith (VA); Michael S. Pieciak represented by Karen Ducharme and Dan Petterson (VT); Mike Kreidler represented by Tim Hays (WA); Mark Afable represented by Amy Malin (WI); James A. Dodrill represented by Jamie Taylor (WV); and Jeff Rude represented by Linda Johnson (WY).

1. Adopted its Spring National Meeting Minutes

Mr. Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which conducted e-votes that concluded July 20, July 12, April 20. The Working Group also met May 20.

Mr. Bruggeman stated that during the July 20 e-vote, the Working Group exposed agenda item 2021-10: "Statement of Statutory Accounting Principles (SSAP) No. 32R—Clarification of Effective Call Price for a public comment period ending Aug. 6. He said that during the July 12 e-vote, the Working Group adopted its May 20, April 20, and Spring National Meeting minutes.

Mr. Bruggeman provided the action for the May 20 meeting. Mr. Bruggeman stated that the Working Group adopted the following nonsubstantive revisions to statutory accounting guidance:

A. **SSAP No. 26R—Bonds**: Revisions reject Accounting Standards Update (ASU) 2020-08, Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs for statutory accounting. (Ref #2021-02)

B. **SSAP No. 47—Uninsured Plans**: Revisions reject ASU 2021-02, Franchisors – Revenue from Contracts with Customers for statutory accounting. (Ref #2021-08)

C. **SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities**: Revisions incorporate disclosure elements and a data-capture template for where an entity has transferred assets but retains economic interest within the reporting entity, its related parties, or another member within the holding company group. (Ref #2021-03)

D. Adopted agenda items supporting disaggregated product identifiers to be used for each separate account product reported in the general interrogatories. This adoption does not result in statutory revisions, but it is reflected in the Working Group recommendation to support blanks proposal 2021-03BWG. (Ref #2020-37 and Ref #2020-38)
E. Interpretation (INT) 20-01: ASU 2020-04 – Reference Rate Reform: This interpretation provides optional guidance, allowing for the continuation of certain existing hedge relationships and thus does not require hedge redesignation for derivative instruments affected by changes to interest/reference rates due to reference rate reform. This interpretation is all-encompassing for “any hedging relationships” within the scope of INT 20-01 and captures all hedging transaction types, regardless of if the transaction occurred bilaterally or through a central clearing party. (Ref #2021-01)

F. INT 21-01: Accounting for Cryptocurrencies: This interpretation clarifies that directly held cryptocurrencies neither meet the definition of cash in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments nor when directly held, meet the definition of an admitted asset per SSAP No. 4—Assets and Nonadmitted Assets. (Ref #2021-05)

G. Appendix D—Nonapplicable GAAP Pronouncements: Revisions reject ASU 2020-11, Financial Services – Insurance: Effective Date and Early Application as not applicable for statutory accounting. (Ref #2021-07)

H. Adopted the following editorial revisions (Ref #2021-06EP):

2. SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities: Revisions correct grammatical errors in paragraph 54.

3. SSAP Glossary: Revisions remove the footnote in the Glossary title and replace it as an opening paragraph with updated verbiage.

Mr. Bruggeman stated that the Working Group exposed the substantive proposed bond definition to be used for all securities in determining whether they qualify for reporting on Schedule D, Part 1 – Long-Term Bonds. The definition intends to reflect principal concepts to ensure appropriate consideration on whether a structure qualifies as an issuer credit obligation or an asset-backed security (ABS) prior to reporting as a bond. The public comment period for this agenda item ended July 15. (Ref #2019-21)

Mr. Bruggeman stated that the Working Group exposed nonsubstantive revisions to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and SSAP No. 97 to indicate that the equity method valuation reference in SSAP No. 97 can result in a negative equity valuation and to limit the statutory adjustments match in SSAP No. 97, paragraph 9. The exposure requests public comments on language suggested by interested parties that foreign insurance subsidiary, controlled and affiliated entities (SCAs) shall stop at zero (and thus not be subject to negative equity valuations) when applying paragraph 9 adjustments in cases where the foreign insurance subsidiary is not engaged in providing services to, or holding assets on behalf of, U.S. insurers. The public comment period for this agenda item ended July 15. (Ref #2021-04)

Mr. Bruggeman stated that the Working Group adopted a response to the Life Risk-Based Capital (E) Working Group on its referral request to consider accounting and reporting aspects of an American Council of Life Insurers (ACLI) proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. The adopted response identifies concerns on the reliability and consistency of fair value data to be considered before allowing reporting entities to reduce RBC through the reported fair value of real estate.

Mr. Bruggeman stated that the Working Group received an update on the following projects and referrals:

A. The Working Group directed a referral to be sent to the Life Actuarial (A) Task Force seeking input regarding whether the Task Force would consider changes to the reserve framework of fixed indexed annuity products, as its response will likely directly influence the accounting options for derivatives hedging these products. (Ref #2020-36)

B. SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act: The Working Group directed NAIC staff to develop additional revisions that expand the guidance to address the diversity in state Affordable Care Act (ACA) reinsurance programs identified in the industry comments. (Ref #2021-09)

C. INT 20-10: Reporting Nonconforming Credit Tenant Loans: Contingently exposed nonsubstantive revisions in anticipation of a Valuation of Securities (E) Task Force proposal to revise filing exempt (FE) requirements for credit tenant loans (CTLs). Subsequent to the Working Group meeting, on May 24, the Task Force did not expose the
anticipated revisions. Instead, the Task Force exposed edits to clarify that the reference to mortgage loans in the CTL definition pertains to items in scope of SSAP No. 37—Mortgage Loans and that the Accounting Practices and Procedures Manual (AP&P Manual) determines investment accounting and reporting. With this Task Force action, the revisions to INT 20-10 were not exposed. It is anticipated that the Working Group will review INT 20-10 after the Task Force concludes actions after their exposure.

D. Received a response from the Valuation of Securities (E) Task Force regarding CTLS and information regarding Securities Valuation Office (SVO) filings received.

Mr. Bruggeman stated that during the April 20 e-vote, the Working Group voted to update exposed agenda item 2021-03: SSAP No. 103R – Disclosures to reflect interested parties’ preliminary comments. While minor revisions were proposed to SSAP No. 103R disclosures, the primary changes from the original agenda item were reflected in the data capture template, which include instructions, updated capture fields, and column descriptions.

Mr. Bruggeman made a motion, seconded by Mr. Eft to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

Mr. Garn provided the report of the Blanks (E) Working Group, which met July 22, 2021.

Mr. Garn stated the working Group adopted its May 26 minutes, which included the following action:

A. Mr. Garn stated the Working Group adopted its editorial listing and eight blanks proposals:

1. 2021-01 – add reference to health care receivables line in the Asset page.
2. 2021-02BWG – add questions to the General Interrogatories, Part 1 regarding depository institution holding companies as it pertains to the group capital calculation (GCC).
3. 2021-03BWG – add category lines to the Separate Accounts General Interrogatories for additional granularity.
4. 2021-04BWG – add a General Interrogatory to identify insurers that utilize third parties to pay agent commissions in which the amounts advanced by the third parties are not settled in full within 90 days.
5. 2021-05BWG – modify Note 17B(4) to reflect changes made by the Statutory Accounting Principles (E) Working Group reference number SAPWG 2021-03 regarding transferred assets.
6. 2021-06BWG – add crosschecks to the long-term care (LTC) reporting forms to gain consistency.
7. 2021-07BWG – add additional line categories to capture collateral type data for all residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), and loan-backed and structured securities (LBSS) regardless of reporting category.
8. 2021-08BWG – add a new supplement Mortgage Guaranty Insurance Exhibit to capture more information from mortgage guaranty insurers.

B. Exposed five proposals for public comment.

Mr. Garn stated that the Working Group adopted its editorial listing and 2021-10BWG – remove language in quarterly General Interrogatories Part 1, line 4.1 that requires filing of a quarterly merger/history form. The annual form shall still be required.

Mr. Garn stated that the Working Group adopted Health Actuarial Statement of Opinion Guidance for the 2021 reporting year.

Mr. Garn said the Working Group deferred four proposals for additional discussion for a 90-day public comment period ending Oct. 22.

Mr. Garn made a motion, seconded by Ms. Smith to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.
4. **Adopted its 2022 Proposed Charges**

Ms. Walker directed the Task Force to its 2022 proposed charges, noting that the proposed charges were previously distributed and are unchanged from last year.

Ms. Orth made a motion, seconded by Mr. Bruggeman, to adopt the Task Force’s 2022 proposed charges (Attachment Three). The motion passed unanimously.

5. **Adopted Revisions to the Model Audit Rule Implementation Guide**

Mr. Stolte, chair of the NAIC/American Institute of Certified Public Accountants (AICPA) (E) Working Group, introduced the proposed additions to the NAIC’s Model Audit Rule Implementation Guide. He noted that the revisions, shown as tracked revisions beginning on page 10, were adopted via an e-vote of the NAIC/AICPA (E) Working Group that concluded May 17. He stated that the updated version of the Implementation Guide has been posted to the NAIC website with plans to be included in the 2022 publication of the AP&P Manual. In accordance with the instructions on page 1 of the Model Audit Rule Implementation Guide, the changes are subject to review and adoption by the Task Force.

Mr. Stolte stated that no comments were received during the Working Group’s last exposure of proposed changes. The revisions have been proposed to facilitate the collection of additional information on the external audit firm’s lead engagement partner through the “Communication of Internal Control Related Matters Noted in an Audit” filing provided to each insurer’s domestic regulator/NAIC each year.

Mr. Stolte stated that the purpose of the additional information is to allow for regulatory review and verification of compliance with audit partner rotation and qualification requirements. He said the information is being proposed for collection through the internal control letter as it receives confidential treatment from the NAIC and regulators, which preserves the lead audit partner’s personal information. The changes are proposed to be effective for audits as of Dec. 31, 2021, and thereafter.

Mr. Stolte made a motion, seconded by Mr. Hudson to adopt the revisions to the Model Audit Rule Implementation Guide (Attachment Four). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.
Virtual Meeting

STATUTORY ACCOUNTING PRINCIPLES (E) WORKING GROUP
July 20, 2021 / July 12, 2021 / May 20, 2021 / April 20, 2021

Summary Report

1. During the July 20 e-vote, the Working Group exposed agenda item 2021-10: SSAP No. 32R—Clarification of Effective Call Price for a public comment period ending Aug. 6 (Attachment One-A).

2. During the July 12 e-vote (Attachment One-B), the Working Group adopted its May 20, April 20, and Spring National Meeting minutes.

3. During the May 20 meeting, the Working Group:

   a. Adopted the following nonsubstantive revisions to statutory accounting guidance:

      1. Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds: Revisions reject Accounting Standards Update (ASU) 2020-08, Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs for statutory accounting. (Ref #2021-02)

      2. SSAP No. 47—Uninsured Plans: Revisions reject ASU 2021-02, Franchisors – Revenue from Contracts with Customers for statutory accounting. (Ref #2021-08)

      3. SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities: Revisions incorporate disclosure elements and a data-capture template for where an entity has transferred assets but retains economic interest within the reporting entity, its related parties, or another member within the holding company group. (Ref #2021-03)

4. Adopted agenda items supporting disaggregated product identifiers to be used for each separate account product reported in the general interrogatories. This adoption does not result in statutory revisions, but it is reflected in the Working Group recommendation to support blanks proposal 2021-03BWG. (Ref #2020-37 and Ref #2020-38)

5. Appendix B—Interpretations of Statutory Accounting Principles:

   i. Interpretation (INT) 20-01: ASU 2020-04 – Reference Rate Reform: This interpretation provides optional guidance, allowing for the continuation of certain existing hedge relationships and thus does not require hedge designation for derivative instruments affected by changes to interest/reference rates due to reference rate reform. This interpretation is all-encompassing for “any hedging relationships” within the scope of INT 20-01 and

© 2021 National Association of Insurance Commissioners
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

captures all hedging transaction types, regardless of if the transaction occurred bilaterally or through a central clearing party. (Ref #2021-01)

ii. INT 21-01: Accounting for Cryptocurrencies: This interpretation clarifies that directly held cryptocurrencies neither meet the definition of cash in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments nor when directly held, meet the definition of an admitted asset per SSAP No. 4—Assets and Nonadmitted Assets. (Ref #2021-05)

6. Appendix D—Nonapplicable GAAP Pronouncements: Revisions reject ASU 2020-11, Financial Services – Insurance: Effective Date and Early Application as not applicable for statutory accounting. (Ref #2021-07)

b. Adopted the following editorial revisions (Ref #2021-06EP):

1. SSAP No. 53—Property Casualty Contracts—Premiums: Revisions retitle to SSAP No. 53—Property and Casualty Contracts—Premiums.

2. SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities: Revisions correct grammatical errors in paragraph 54.

3. SSAP Glossary: Revisions remove the footnote in the Glossary title and replace it as an opening paragraph with updated verbiage.

c. Exposed the substantive proposed bond definition to be used for all securities in determining whether they qualify for reporting on Schedule D, Part 1 – Long-Term Bonds. The definition intends to reflect principal concepts to ensure appropriate consideration on whether a structure qualifies as an issuer credit obligation or an asset-backed security (ABS) prior to reporting as a bond. The public comment period for this agenda item ends July 15. (Ref #2019-21)

d. Exposed nonsubstantive revisions to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and SSAP No. 97 to indicate that the equity method valuation reference in SSAP No. 97 can result in a negative equity valuation and to limit the statutory adjustments match in SSAP No. 97, paragraph 9. The exposure requests public comments on language suggested by interested parties that foreign insurance subsidiary, controlled and affiliated entities (SCAs) shall stop at zero (and thus not be subject to negative equity valuations) when applying paragraph 9 adjustments in cases where the foreign insurance subsidiary is not engaged in providing services to, or holding assets on behalf of, U.S. insurers. The public comment period for this agenda item ends July 15. (Ref #2021-04)

e. Adopted a response to the Life Risk-Based Capital (E) Working Group on its referral request to consider accounting and reporting aspects of an American Council of Life Insurers (ACLI) proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. The adopted response identifies concerns on the reliability and consistency of fair value data to be considered before allowing reporting entities to reduce RBC through the reported fair value of real estate.
f. Received an update on the following projects and referrals:

1. The Working Group directed a referral to be sent to the Life Actuarial (A) Task Force seeking input regarding whether the Task Force would consider changes to the reserve framework of fixed indexed annuity products, as its response will likely directly influence the accounting options for derivatives hedging these products. (Ref #2020-36)

2. SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act: The Working Group directed NAIC staff to develop additional revisions that expand the guidance to address the diversity in state Affordable Care Act (ACA) reinsurance programs identified in the industry comments. (Ref #2021-09)

3. INT 20-10: Reporting Nonconforming Credit Tenant Loans: Contingently exposed nonsubstantive revisions in anticipation of a Valuation of Securities (E) Task Force proposal to revise filing exempt (FE) requirements for credit tenant loans (CTLs). Subsequent to the Working Group meeting, on May 24, the Task Force did not expose the anticipated revisions. Instead, the Task Force exposed edits to clarify that the reference to mortgage loans in the CTL definition pertains to items in scope of SSAP No. 37—Mortgage Loans, and that the Accounting Practices and Procedures Manual determines investment accounting and reporting. With this Task Force action, the revisions to INT 20-10 were not exposed. It is anticipated that the Working Group will review INT 20-10 after the Task Force concludes actions after their exposure.

4. Received a response from the Valuation of Securities (E) Task Force regarding CTLs and information regarding Securities Valuation Office (SVO) filings received.

4. During the April 20 e-vote, the Working Group voted to update exposed agenda item 2021-03: SSAP No. 103R – Disclosures to reflect interested parties’ preliminary comments. While minor revisions were proposed to SSAP No. 103R disclosures, the primary changes from the original agenda item were reflected in the data capture template, which include instructions, updated capture fields, and column descriptions.

w:\national meetings\2021\summer\tf\app\sap\minutes_did not meet\att one_sapwg 7.2021 summary.docx
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded July 20, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Kim Hudson (CA); William Arfanis (CT); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Melissa Greiner (PA); David Smith (VA); and Amy Malm (WI).

1. Exposed Agenda Item 2021-10

The Working Group conducted an e-vote to consider exposure of agenda item 2021-10: SSAP No. 32R – Clarification of Effective Call Price. This agenda item proposes revisions to Statement of Statutory Accounting Principles No. 32R—Preferred Stock to clarify that the “effective call price” valuation limitation for all instruments within scope of the standard shall only apply if the call is currently exercisable by the issuer or if the issuer has announced that the instrument will be redeemed or called. This agenda item has an exposure deadline of Aug. 6.

Mr. Guerin made a motion, seconded by Mr. Hudson, to expose agenda item 2021-10. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded July 12, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Kim Hudson (CA); William Arfanis (CT); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner (PA); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. **Adopted its May 20, April 20, and March 15 Minutes**

The Working Group conducted an e-vote to consider adoption of its May 20, April 20, and March 15 minutes. Mr. Clark made a motion, seconded by Ms. Walker, to adopt the Working Group’s May 20 (Attachment One-B1), April 20 (Attachment One-B2), and March 15 (see *NAIC Proceedings – Spring 2021, Accounting Practices and Procedures (E) Task Force, Attachment One*) minutes. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 20, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis and Michael Estabrook (CT); Rylynn Brown and Steve Kinion (DE); Eric Moser and Kevin Fry (IL); Stewart Guerin and Melissa Gibson (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner and Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Adopted Non-Contested Positions

The Working Group held a public hearing to review comments (Attachment One-B1a) on previously exposed items.

Mr. Hudson made a motion, seconded by Ms. Malm, to adopt the statutory accounting revisions detailed below, which were non-contested by commenters. The motion passed unanimously.

a. Agenda Items 2020-37 and 2020-38

Mr. Bruggeman directed the Working Group to agenda item 2020-37: Separate Account Product Mix (Attachment One-B1b) and agenda item 2020-38: Pension Risk Transfer Disclosure (Attachment One-B1c). Jim Pinegar (NAIC) stated that these agenda items were drafted at the request of state insurance regulators due to the recent growth of pension risk transfers (PRTs) and registered index-linked annuities (RILAs). These agenda items initially requested input on the degree of product identifying details in the separate account blanks. Mr. Pinegar stated that because of the prior exposure, interested parties suggested separate general interrogatory reporting of PRTs and RILAs, and state insurance regulators have requested additional reporting granularity in the separate account general interrogatories. He stated that based on these comments, a Blanks (E) Working Group proposal (2021-03BWG) was concurrently exposed. The blanks proposal requires the addition of PRT and RILA reporting categories, and it modified the general interrogatory instructions to require disaggregated product reporting, using unique product identifiers for each product represented. Mr. Pinegar stated that aggregation in reporting can still occur if the products are under the same product filing or policy form; otherwise, the instructions require disaggregation in reporting. He noted that agenda items 2020-37 and 2020-38 do not result in any statutory accounting revisions; however, the Statutory Accounting Principles (E) Working Group can adopt the recommendation detailing the proposed blank template revisions to indicate support for adoption of the blanks revisions by the Blanks (E) Working Group.

b. Agenda Item 2021-02

Mr. Bruggeman directed the Working Group to agenda item 2021-02: ASU 2020-08 – Premium Amortization on Callable Debt Securities (Attachment One-B1d). Mr. Pinegar stated that this nonsubstantive agenda item rejects Accounting Standards Update (ASU) 2020-08 in the Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds for statutory accounting. He stated that ASU 2020-08 clarifies the amortization of premium associated with callable debt securities, and while the guidance closely mimics existing statutory accounting’s yield-to-worst concept in SSAP No. 26R, there may be scenarios where application of the yield-to-worst concept will result in a lower asset value than amortizing callable debt premium in accordance with ASU 2020-08. As such, the revisions detailed in this agenda item recommend rejection of ASU 2020-08.

c. Agenda Item 2021-03

Mr. Bruggeman directed the Working Group to agenda item 2021-03: SSAP No. 103R – Disclosures (Attachment One-B1e). Mr. Pinegar stated that this nonsubstantive agenda item was drafted because of ongoing discussions with industry and state insurance regulators regarding the SSAP No. 43R—Loan-Backed and Structured Securities project. One of the topics discussed was the state insurance regulators’ desire to identify situations in which a reporting entity has entered into a securitization, asset-backed financing, or similar transfer transaction where a significant economic interest in the transferred asset is retained by the reporting entity. Mr. Pinegar stated that one of the primary concerns is when an asset has been self-securitized, but the economic benefits have been retained. This agenda item proposes additional disclosures and the data capturing of certain existing disclosures being required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of
Liabilities. Mr. Pinegar stated that after the Working Group’s initial exposure, interested parties offered several initial comments and questions for clarification. In response to these inquiries, the Working Group exposed a revised recommendation as jointly collaborated with by Iowa, interested parties and NAIC staff. Mr. Pinegar stated that the revised proposal included additional disclosure elements, but it primarily resulted in significant changes to a blanks proposal (2021-05BWG), which included an updated data-capture template combined with supplemental reporting instructions. He stated that the revised disclosures and updated data-capture template will permit state insurance regulators to have the ability to perform system inquiries to identify which reporting entities have such transactions and the extent to which they occur.

d. Agenda Item 2021-06EP

Mr. Bruggeman directed the Working Group to agenda item 2021-06EP: Editorial Updates (Attachment One-B1f). Jake Stultz (NAIC) stated that this agenda item provides nonsubstantive editorial corrections in accordance with the maintenance process. The revisions propose a minor update to the title of SSAP No. 53—Property Casualty Contracts–Premiums, correct grammatical errors in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, and relocate an existing footnote in the Glossary.

e. Agenda Item 2021-07

Mr. Bruggeman directed the Working Group to agenda item 2021-07: ASU 2020-11 – Financial Services – Insurance: Effective Date (Attachment One-B1g). Mr. Stultz stated that this nonsubstantive agenda item rejects ASU 2020-11 as not applicable for statutory accounting, as it updates the effective dates for other ASUs, which have previously been rejected for statutory accounting. Reference to ASU 2020-11 will be reflected in Appendix D—Nonapplicable GAAP Pronouncements.

f. Agenda Item 2021-08

Mr. Bruggeman directed the Working Group to agenda item 2021-08: ASU 2021-02 – Franchisors – Revenue from Contracts with Customers (Attachment One-B1h). Mr. Stultz stated that this nonsubstantive agenda item rejects ASU 2021-02 in SSAP No. 47—Uninsured Plans. Rejection in SSAP No. 47 is consistent with the Working Group’s rejection of several other ASUs related to revenue recognition.

2. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-B1a) on previously exposed items.

a. Agenda Item 2020-36

Mr. Bruggeman directed the Working Group to agenda item 2020-36: Derivatives Hedging Fixed Indexed Products. Julie Gann (NAIC) stated that this agenda item was drafted to address the accounting and reporting of derivatives that effectively hedge the growth in interest credited for fixed indexed products (e.g., fixed indexed annuities [FIAs] and fixed indexed universal life [IUL] products) reported in the general account. She stated that NAIC staff continue to work with interested parties regarding various methods for future Working Group consideration. As one of the possible solutions may require a change in the reserve framework of fixed annuity products, a formal referral to the Life Actuarial (A) Task Force was recommended, as its response will likely influence the accounting options for derivatives hedging these products. After the referral, NAIC staff will continue to work in the interim with interested parties on potential accounting and reporting solutions.

Michael Monahan (American Council of Life Insurers—ACLI) inquired regarding the referral process, asking to whom the referral would be addressed. Mr. Bruggeman responded that the chair of the Life Actuarial (A) Task Force would be the direct recipient, with support staff receiving a copy. Rosemarie Albrizio (Equitable), representing interested parties, agreed with the referral to the Task Force, as some of the approaches being considered would require a change in the reserves; and accordingly, the appetite for a reserve modification will influence options presented for Working Group consideration.

In response to an inquiry from Mr. Bruggeman, the Working Group did not object to sending a formal referral to the Life Actuarial (A) Task Force.
b. Agenda Item 2021-01

Mr. Bruggeman directed the Working Group to agenda item 2021-01: *ASU 2021-01 – Reference Rate Reform*. Mr. Pinegar stated that in March 2020, the Financial Accounting Standards Board (FASB) issued *ASU 2020-04 – Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting*. He stated that the Working Group adopted ASU 2020-04 in its entirety, where applicable, through its adoption of Interpretation (INT) 20-01: *ASU 2020-04 – Reference Rate Reform*. ASU 2020-04 and INT 20-01 provide temporary, optional and expedient relief in that a qualifying contract modification (because of reference rate reform) should not be considered an event that requires contract remeasurement. This exception guidance applies to both general business and derivative contracts. Mr. Pinegar stated that since the issuance of ASU 2020-04, questions have arisen regarding the accounting for changes in reference rates, which do not specifically reference the London Interbank Offered Rate (LIBOR) or another rate that is expected to be discontinued, that are specifically used for margining, discounting, or contract price alignment. He stated that these items are generally referred to as “basis swaps,” and basis swaps were specifically addressed by the Working Group through *INT 20-09: Basis Swaps as a Result of the LIBOR Transition*. However, ASU 2021-01 directs that basis swaps and other derivative instruments affected by changes to the interest rates from reference rate reform are eligible for the optional relief provided for in ASU 2020-04. Mr. Pinegar stated that interested parties also proposed additional clarifying edits to ensure that derivative transactions that do not qualify for hedge accounting and replication (synthetic asset) transactions could be accounted for as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract, which is replaced with a new reference rate reform contract. He stated that interested parties also proposed edits to clarify that in-scope modifications to centrally cleared swap contracts would also be permitted, as these changes will likely result in a new legal form contract. He stated that in response to the edits proposed by interested parties, the revisions slightly differ from U.S. generally accepted accounting principles (GAAP). However, for statutory accounting, the revisions do not change the measurement method, as these items would still be reported at fair value. For the non-highly effective hedges, the proposed edits address a flow of funds issue and prevent gains/losses from being realized through net income because of reference rate reform when the derivative structure has not matured or otherwise been terminated. By ensuring that these items receive the relief provided in INT 20-01, these derivative transactions will remain as outstanding in the financial statements and thus not require redesignation. The changes in fair value will continue as unrealized until the termination/maturity date of the derivative. He stated that NAIC staff recommend that the Working Group adopt the previously exposed edits to INT 20-01 and incorporate the additional edits as proposed by interested parties.

Ms. Albrizio stated that interested parties support adoption of INT 20-01 as recommended by NAIC staff and do not request an exposure. Mr. Monahan stated that the ACLI also supports adoption and does not request an exposure.

Mr. Arfánis made a motion, seconded by Mr. Hudson, to adopt agenda item 2021-01 (Attachment One-B1i) and the exposed revisions to INT 20-01 (Attachment One-B1j), including the edits received from interested parties during the exposure period. The motion passed unanimously.

c. Agenda Item 2021-04

Mr. Bruggeman directed the Working Group to agenda item 2021-04: SSAP No. 97 – Valuation of Foreign Insurance SCAs. Fatima Sediqzad (NAIC) stated that this agenda item originated from comments received during the development of agenda item 2018-26: SCA Loss Tracking – Accounting Guidance, which adopted revisions in SSAP No. 97 to state that reported equity method losses of an investment in a subsidiary, controlled or affiliated entity (SCA) would not create a negative value in an SCA investment; thus, equity method losses would stop at zero. However, the agenda item 2018-26 also clarified that to the extent that there was a financial guarantee or commitment, it would require recognition under SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. In November 2020, the Working Group adopted agenda item 2020-18: SSAP No. 97 Update, which removed a lingering, superseded reference regarding negative equity method loss valuations. Ms. Sediqzad stated that SSAP No. 97 requires a specific limited statutory basis of accounting adjustments to paragraph 8.b ii. (insurance-related SCA) and paragraph 8.b.iv. (foreign insurance SCA) entities. These adjustments are to prevent assets held by an SCA from receiving more favorable accounting treatment than had they been held directly by the insurer. It was during the Working Group’s discussion of agenda item 2020-18 that industry requested consideration of whether paragraph 8.b.iv. entities should continue to be subject to the long-standing SSAP No. 97 provisions, specifically if the limited statutory basis of accounting adjustments should result in a negative SCA valuation. Interested parties’ initial response was that foreign insurance operations are subject to foreign jurisdictions and should be allowed to stand independently of a domestic insurer; thus, in the absence of a guarantee or commitment, equity valuation should not go negative. Industry discussion then expanded to include certain investments in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and whether the limited
statutory adjustments, as required in SSAP No. 97, of certain SSAP No. 48 entities should apply in the absence of a required U.S. GAAP audit.

Ms. Sediqzad stated that in response to comments received, NAIC staff requested state insurance regulator input on the industry comments, particularly regarding whether the limited statutory adjustments should not result in a negative valuation for foreign SCA, specifically in circumstances where the SCA does not provide services or hold assets on behalf of a U.S. insurer. Additionally, NAIC staff have proposed additional clarifying edits to SSAP No. 48, stating that the equity method of accounting remains required in the event of a negative equity valuation, as the equity method of accounting is independent from the limited statutory accounting adjustment requirements.

Angelica Tamayo-Sanchez (New York Life), representing interested parties, stated that the intent of the proposed edits from interested parties is to ensure proper accounting treatment for foreign SCAs while providing adequate safeguards. She stated that interested parties support exposure of agenda item 2021-04, which proposes exceptions to the negative equity valuation of foreign SCAs as a result of limited statutory accounting adjustments required in SSAP No. 97.

Mr. Bruggeman stated that examples provided by interested parties demonstrate anticipated equity diminishment in a rising interest rate environment. The translation between U.S. GAAP and statutory accounting causes potential valuation differences; however, the foreign SCA is subject to the solvency requirements of the local jurisdiction. Mr. Bruggeman asked the Working Group if an exception to the potential negative equity valuation resulting from the limited statutory accounting adjustments should be considered. Mr. Clark stated support for the exposure as an environment of prolonged rising interest rates. Foreign SCAs could experience dramatic decreases in equity valuations, and the exposure will permit multiple options for Working Group consideration.

Mr. Clark made a motion, seconded by Mr. Kasinow, to expose agenda item 2021-04 with proposed language in: 1) SSAP No. 48 to clarify that equity method calculations may result in a negative equity valuation regardless of if the investment is supported by a U.S. GAAP audit; and 2) SSAP No. 97 to detail that the limited statutory basis of accounting adjustments will not result in a negative equity valuation of foreign SCAs under certain, limited circumstances. The motion passed unanimously.

d. Agenda Item 2021-05

Mr. Bruggeman directed the Working Group to agenda item 2021-05: Accounting for Cryptocurrencies. Mr. Stultz stated that this agenda item was drafted in response to inquiries received regarding the statutory accounting treatment for cryptocurrencies, specifically whether Bitcoin is an admitted asset and within the definition of SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments. He stated that the agenda item proposed INT 21-01T: Accounting for Cryptocurrencies to clarify that cryptocurrencies neither meet the definition of cash in SSAP No. 2R, nor meet the definition of an admitted asset per SSAP No. 4—Assets and Nonadmitted Assets. He stated that in response to comments received, NAIC staff updated INT 21-01T to clarify that this nonadmission only refers to directly held cryptocurrencies. Accordingly, as INT 21-01T only directly affects held cryptocurrencies, NAIC staff did not recommend revisions to SSAP No. 30R—Unaffiliated Common Stock, SSAP No. 48, or SSAP No. 97. Mr. Bruggeman stated that while the proposed INT 21-01T addresses cryptocurrencies in a holistic perspective, any state regulation would take precedence over any action taken by the Working Group.

Mr. Kinion stated support for the edits to reflect that only directly held cryptocurrencies are affected by INT 21-01T. Additionally, the captive insurance market currently utilizes indirectly held cryptocurrency investments and believes its acceptance as an investment will expand to other entities. Mr. Kinion stated that Delaware recommends that the Working Group continue to monitor the development and innovation regarding cryptocurrency acceptance.

James Newman (Massachusetts Mutual Life Insurance), on behalf of interested parties, stated that they agree with the edits as proposed by NAIC staff stating that only directly held cryptocurrencies are nonadmitted assets.

Mr. Hudson made a motion, seconded by Ms. Weaver, to adopt agenda item 2021-05 (Attachment One-B1k) and the nonsubstantive interpretive guidance in INT 21-01 (Attachment One-B1l), which clarifies that cryptocurrencies neither meet the definition of cash in SSAP No. 2R, nor when directly held, meet the definition of an admitted asset per SSAP No. 4. The motion passed unanimously.
Mr. Bruggeman directed the Working Group to agenda item 2021-09: State ACA Reinsurance Programs. Robin Marcotte (NAIC) stated that this agenda item proposed revisions to SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act to include state Affordable Care Act (ACA) reinsurance programs using Section 1332 waivers. The intent of the revisions was to ensure that the state programs continue to follow the SSAP No. 107 hybrid approach for state ACA programs. In general, these programs provide funding to insurance plans in the individual market that incur high claims costs for enrollees, and they often require assessments from group insurance plans. Ms. Marcotte stated that the hybrid accounting approach has three categories: 1) individual products that pay a reinsurance funding contribution and are eligible to receive reinsurance distributions would be accounted for in a manner similar to an involuntary reinsurance pool, as described in SSAP No. 62—Underwriting Pools; 2) health products that are not eligible for reinsurance distributions under the terms of the state ACA reinsurance program would treat the amounts as assessments reported in taxes, licenses and fees similar to treatment under SSAP No. 35R—Guaranty Funds and Other Assessments; and 3) liabilities should be recognized when they meet the definition of a liability pursuant to SSAP No. 5R; reimbursement for claims costs should reduce claims incurred; 2) payments should be reflected as assessment if a plan is only based revisions to address the diversity in state programs with the following preliminary recommendations: 1) program reimbursements for claims costs should reduce claims incurred; 2) payments should be reflected as assessment if a plan is only eligible to be a payer; 3) liabilities should be recognized when they meet the definition of a liability pursuant to SSAP No. 5R; 4) the state ACA reinsurance programs admissibility guidance should be similar to the SSAP No. 107 federal receivables guidance.

Tom Finnell (America’s Health Insurance Plans—AHIP) stated support for the continued efforts to address the variations in state plans and offered to assist NAIC staff in developing additional recommendations for Working Group consideration.

In response to an inquiry from Mr. Bruggeman, the Working Group did not object to directing NAIC staff to continue efforts on this topic.

3. Considered Maintenance Agenda – Pending Listing – Exposures
   a. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: SSAP No. 43R. Ms. Gann stated that this agenda item was in part a continuation of the “Investment Classification Project,” which intended to undertake a comprehensive project to review the investment SSAPs. Since the origination of the project, the Working Group has adopted substantive revisions to SSAP No. 26R, SSAP No. 30R, and SSAP No. 32R—Preferred Stock. She stated that in March 2020, the Working Group exposed a preliminary issue paper to present potential options for consideration when assessing investments within the scope of SSAP No. 43R, particularly focusing on different types of investments based on their characteristics. In response to the initial exposure, interested parties commented that the investment characteristics of focus in the SSAP No. 43R exposure overlap with investments in scope of SSAP No. 26R. After this assessment, the Working Group elected to pursue a principles-based approach to define investments that are eligible for reporting on Schedule D-1: Long-Term Bonds to encompass investments within the scope of both SSAP No. 26R and SSAP No. 43R.

Ms. Gann stated that since the Fall 2020 exposure, interested parties, Iowa regulators and NAIC staff have developed a proposed bond definition that intends to reflect principles that focus on substance over form to determine eligibility for reporting on Schedule D-1. In summary, a bond must represent a creditor relationship in substance and can be issued as either a direct issuer obligation or an asset-backed security (ABS). Creditor relationships with equity-linked characteristics or that represent ownership interest in substance are neither bonds, nor investments that rely on equity return cash flows. The proposed guidance includes a rebuttable presumption that investments that rely on equity return cash flows are not bonds; however, the presumption may be overcome through documented analysis supporting the recharacterization of the underlying equity risks into bond risk through the structuring and diversification of collateral.

Ms. Gann stated that issuer obligations are primarily supported by the general creditworthiness of an operating entity, and additional examples of these instruments have been included in the proposed definition. The other investments eligible for Schedule D-1 reporting are ABSs, which are defined as instruments issued by entities that have a primary purpose of raising

© 2021 National Association of Insurance Commissioners
Mr. Clark stated that the summary adequately described the proposed bond definition, and he expressed his appreciation of both NAIC staff and industry for their collaborative efforts. He stated that the definition proposes a set of concepts to define the substance of a bond, and it can be applied to all debt securities that are in substance a bond (regardless of legal form). The agenda item eliminates the opportunity to characterize risks that are not reflective of a bond risk as a bond and thus reduce non-bond items from Schedule D-1.

Michael Reis (Northwestern Mutual), representing interested parties, acknowledged the importance of the project and stated that all parties came to the table with meaningful collaboration, which resulted in the proposed bond definition for exposure. He stated that interested parties will evaluate their investment holdings in the interim to determine what investments may no longer qualify for bond reporting, and they will report back during the comment period. Caleb Brainerd (Athene) stated that Athene appreciates the efforts of state insurance regulators and NAIC staff in the development of this project, and he said he is willing to assist in the development of the standard.

Mr. Clark made a motion, seconded by Mr. Fry, to expose the proposed bond definition for a public comment period ending July 15. The motion passed unanimously.

4. Discussed Other Matters

a. Life Risk-Based Capital (E) Working Group Referral and Draft Response

Ms. Gann stated that the Life Risk-Based Capital (E) Working Group sent a referral to the Statutory Accounting Principles (E) Working Group requesting consideration on the accounting and reporting aspects of an ACLI proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. The proposal included the incorporation of an adjustment to the factor applied based, in part, on the fair value of real estate reported in the annual statements. Ms. Gann stated that NAIC staff drafted a response that noted a number of concerns for property reported on Schedule A – Part 1: Real Estate Owned that included: 1) fair value has historically only been a supplemental disclosure and is not subject to audit or verification procedures; 2) fair value has historically only been used to determine whether an other-than-temporary impairment (OTTI) assessment is required not for the evaluation of unrealized gains; 3) the statutory accounting requirements for five-year appraisals does not include property that is owner-occupied. She highlighted that there were a significant number of instances in which the reported book/adjusted carrying value (BACV) was the same as the fair value, or where the fair value reported was left blank. She stated that additional concerns were noted for investments captured in scope of SSAP No. 48 and reported on Schedule BA: Other Long-Term Invested Asset as having underlying characteristics of real estate that included: 1) the classification of investments reported on BA as having “underlying characteristics of real estate” is subjective. As a result, property reported elsewhere may be reclassified to this category for RBC benefit; 2) SSAP No. 48 investments follow U.S. GAAP, which has options for permissible valuations, and these different valuations could affect the difference in fair value, resulting in the underlying U.S. GAAP option affecting the extent to which RBC is affected; and 3) real estate reported on Schedule BA is not subject to appraisal requirements.
Ms. Gann stated that the memo details two potential recommendations for consideration that include delaying the adjustment factors until at least 2022 to ensure that examiners have adequate time to assess the reported real estate values or restrict fair values used for RBC to the “lesser of” current or prior year reported fair values, or possibly averaging reported fair values across multiple years. The later recommendation will prevent the inflation of fair values in situations where a reporting entity needs RBC relief. Mr. Bruggeman stated that the concerns noted are primarily based on the reliability and consistency of data across all reporting entities. He stated that larger entities likely have the resources to determine fair value; however, the opportunity for benefit should apply equally among all life entities. If implemented, companies will likely have an increased incentive to report inflated fair values, and state insurance regulators do not want situations where fair values are increased solely for RBC benefit.

Mr. Monahan stated his appreciation for the detailed review and that the ACLI does not disagree with the conclusion to defer the implementation of the adjustments based on fair values until there has been a review and possible modification to the accounting requirements, exam and audit procedures. He stated that the ACLI supports submitting the response to the Life Risk-Based Capital (E) Working Group. Mr. Bruggeman noted that his concern was less with the concept and more with using fair value numbers that do not drive surplus.

In response to an inquiry from Mr. Bruggeman, the Working Group did not object to directing NAIC staff to send the response to the Life Risk-Based Capital (E) Working Group (Attachment One-B1m).

b. CTLs – Valuation of Securities (E) Task Force Response

Ms. Gann stated that in January 2021, the Working Group sent a referral to the Valuation of Securities (E) Task Force pursuant to the discussion regarding credit tenant loans (CTLs). The referral posed several inquiries and included a question as to whether it is appropriate to revisit the 5% residual asset risk threshold as a restriction for conforming CTLs. She stated that the Task Force response was recently received (Attachment One-B1n), and NAIC staff will continue to review and assess the response. John Garrison (Lease-Backed Securities Working Group) inquired as to whether the Working Group would receive public comments regarding the referral response. Mr. Bruggeman stated that while comments are generally reserved for exposures, comments may be sent to NAIC staff.

c. INT 20-10

Ms. Gann stated that the Valuation of Securities (E) Task Force is considering edits to the filing exemption (FE) requirements for CTLs. In advance of any potential action by the Task Force, edits have been proposed to INT 20-10: Reporting Nonconforming Credit Tenant Loans to clarify that temporary reporting eligibility permitted in INT 20-10 does not require Securities Valuation Office (SVO)-assigned NAIC designations beyond what is required in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). Ms. Gann stated that as the Working Group is discussing this item prior to the Task Force meeting, it is recommended to expose the edits to INT 20-10 contingently upon anticipated exposure or adoption of the Task Force. If the Task Force takes differing action, a Working Group exposure will not occur. Mr. Fry stated that the subject matter proposed by the Task Force requires exposure, and he said he would support an exposure of INT 20-10, with an exposure period to match that of the Task Force.

In response to an inquiry from Mr. Bruggeman, Charles Therriault (NAIC) stated that the proposed revisions for FE classification with a 50% residual risk threshold do not reflect any mitigants, such as a residual risk insurance policy. He stated that assessment of credit quality can occur for any level of residual risk; however, the determination of an appropriate residual risk threshold is a determination that cannot be made by the SVO.

Mr. Fry made a motion, seconded by Mr. Clark, to expose INT 20-10 dependent on an anticipated corresponding exposure by the Valuation of Securities (E) Task Force. If exposed by the Task Force, the exposure period of INT 20-10 will match that of the Task Force. The motion passed unanimously.

After the Working Group’s May 24 meeting, the Valuation of Securities (E) Task Force did not expose the proposed revisions to modify the residual risk threshold in determining whether a security could be FE. This exposure did not occur, as it was identified that the changes to the residual risk threshold for “filing exemptions” (e.g., permitting credit rating provider (CRP) ratings as equivalents to NAIC designations) would also inadvertently modify the structural requirements in classifying mortgage loans in scope of SSAP No. 37—Mortgage Loans as CTLs permitted to be reported on Schedule D-1. In addition to revising the structural requirements for mortgage loans, the original proposed edits would also alter the requirement for these mortgage loan structures to be assessed by the SVO. After considering these concerns, the Task Force instead exposed minor
edits, that differ from what was anticipated. The revised edits reflect a proposal as sent by the chair and vice chair of the Working Group on May 21 (Attachment One-B1o), to clarify that the definition of CTLs as mortgage loans pertains to investments in scope of SSAP No. 37. This edit clarifies that the Accounting Practices and Procedures Manual (AP&P Manual) determines the investment accounting and reporting schedule, and it reiterates that security structures should be classified in accordance with those provisions. If the exposed edits are adopted, it was identified that INT 20-10 may no longer be needed; therefore the Working Group will subsequently consider INT 20-10 after the Task Force concludes consideration on this issue.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Dale Bruggeman
Chair, Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Re: INT 21-01T: Accounting for Cryptocurrencies; Exposure Ref #2021-05

Dear Chairman Bruggeman:

On behalf of Insurance Commissioner Navarro, please accept this letter as a recommendation that the Statutory Accounting Principles (E) Working Group (SAPWG) expand the scope of Exposure 2021-05 regarding INT 21-01T to consider the investment in cryptocurrency mutual funds by insurers. Thus far, the exposure is limited to insurers directly investing in cryptocurrencies. The exposure should expand to consider investments in mutual and other securities funds that may have cryptocurrencies within their portfolios.

Today there are approximately 4,000 different cryptocurrencies available on about 200 different cryptocurrency exchanges. Cryptocurrencies have seen significant price volatility and have experienced an extreme increase in value over the past year, with the value of total outstanding cryptocurrencies nearing $1 trillion as of February 2021. The Delaware Insurance Department’s captive insurance program already has captive insurers investing in such funds. If captive insurers are doing so, it is very possible that commercial insurers are either already or considering doing the same.

SAPWG determined that if an insurer directly invests in cryptocurrencies, the investment is non-admitted under statutory accounting because cryptocurrencies are not cash under Statement of Statutory Accounting Principles (SSAP) No. 2R. 1 Cryptocurrencies are not cash under this SSAP because cryptocurrencies are not a medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account.

1 National Association of Insurance Commissioners (March 2021), Statutory Statement of Accounting Principles No. 2R – Cash, Cash Equivalents, Drafts, and Short-Term Investments.
The SAPWG’s decision to only consider insurers directly investing in cryptocurrencies and not indirect investments via mutual funds reveals an important distinction between what is an admitted versus non-admitted asset. SSAP No. 30R\(^2\) does not limit an insurer’s investments in mutual funds. Specifically, paragraph 4(c) includes Securities and Exchange Commission (SEC) registered funds regardless of the fund’s mix or type of securities owned. If the mutual fund is not SEC registered, per SSAP No. 48\(^3\) the investment receives treatment as a joint venture. Consequently, an insurer may indirectly invest in cryptocurrencies through a mutual fund and hold the investment as an admitted asset.

The use of cryptocurrencies is evolving. PayPal now allows users to buy, sell and hold some cryptocurrencies, but it is important to note that PayPal is not recognized as a bank. In addition to Bitcoin, some banks have shown interest in stablecoins, which trade like cryptocurrencies but are pegged to existing government-backed currencies, such as the U.S. dollar. Because the Delaware Insurance Department has experience with this evolution via captive insurers investing in cryptocurrency funds, it offers its experience to assist the working group. Captive insurers typically adopt Generally Accepted Accounting Principles (GAAP) as opposed to Statutory Accounting Principles for financial reporting. Accordingly, captive insurers report mutual fund investments at market value under GAAP. Despite this significant accounting difference, there is commonality between captive and commercial insurers for how they may invest in cryptocurrencies.

Thank you for considering this letter and the Delaware Insurance Department looks forward to assisting the SAPWG.

Sincerely,

Steve W. Kinion
Director

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on March 15, 2021 with Comments due April 30, 2021

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

**Ref #2020-36: Derivatives Hedging Fixed Indexed Products**

On November 12, 2020, the Working Group moved this item to the active listing, categorized as substantive, and exposed the agenda item to solicit comment from state insurance regulators and industry on establishing accounting and reporting guidance for derivatives hedging the growth in interest for fixed indexed products. In addition to the two general options presented in the agenda item, the Working Group is open for additional commentary and suggestions, and directed NAIC staff to work with industry throughout the process similar to the collaborative efforts that occurred when developing the guidance in *SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees*. With this exposure, notification to the Life Actuarial (E) Task Force will occur.

On March 15, 2021, the Working Group re-exposed this agenda item to provide additional time for interested parties to develop a proposal. NAIC staff will work with interested parties in the interim to discuss this agenda item and potential options.

Interested parties would like to thank the Working Group for the opportunity to comment on the exposed Ref #2020-36, Derivatives Hedging Fixed Indexed Products.

We continue our work assessing the proposal and evaluating potential variances to the exposure. As noted in 2020-36, “With this exposure, notification to the Life Actuarial (E) Task Force (LATF) will occur”. We would request that a referral be made to LATF, as to whether there is interest in changing the reserve framework to accommodate the derivative approach as this may influence our view on the approach to recommend.
Interested parties are committed to working with NAIC staff and SAPWG on this very complicated and important topic, so far meeting with NAIC staff to share initial views

**Ref #2020-37: Separate Account – Product Identifiers**

On November 12, 2020, the Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding the degree of product identifying details needed to adequately assess the product features and reserve liabilities in the separate account. In particular, feedback was requested on how to obtain increased product identifier reporting granularity in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). Additionally, feedback was requested regarding if a threshold should be established for when aggregate reporting would be permitted.

On March 15, 2021, the Working Group exposed this agenda item with details of a proposed blanks change, which was also concurrently exposed with the Blanks (E) Working Group. With the proposed blanks changes, there were no proposed revisions to statutory accounting principles.

Consideration of this item will occur during an interim call so that the blanks changes may be reflected in the statutory financials for year-end 2021. Pursuant to this agenda item and regulator comments received, the Working Group is sponsoring blanks agenda item (2021-03BWG) to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form be separately identified. For example, if a company has 5 different separate account group annuities, each annuity shall be separately reported. Additionally, the instructions will indicate that companies may eliminate proprietary information (e.g., such as XYZ company Pension Plan), however such elimination will still require the use of a unique reporting identifiers (such as PRT #1). This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

NAIC staff also noted that there is inconsistency in the current reporting of the separate account general interrogatories, as some companies aggregate based on overall product type and other companies already include a disaggregation of all separate account products. With the clarification that “each product” shall be captured, the regulators will have the information necessary to complete assessments and improve consistency in reporting.

Interested parties supports the re-exposure to add pension risk transfer (PRT) and registered indexed linked annuity (RILA) product totals in the interrogatory and with the disaggregation required for each separate account product filing to be separately identified.

**Ref #2020-38: Pension Risk Transfer – Separate Account Disclosure**

Working Group exposed this agenda item with details of a proposed blanks change, which will also be concurrently exposed with the Blanks (E) Working Group. With the proposed blanks changes, there are no proposed revisions to statutory accounting principles.
Consideration of this item will occur during an interim call so that the blanks changes may be reflected in the statutory financials for year-end 2021. Pursuant to this agenda item and regulator comments received, the Working Group is sponsoring blanks agenda item (2021-03BWG) to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form to be separately identified. For example, if a company has 5 different separate account group annuities, each annuity shall be separately reported. Additionally, the instructions will indicate that companies may eliminate proprietary information (e.g., such as XYZ company Pension Plan), however such elimination will still require the use of a unique reporting identifiers (such as PRT #1). This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

NAIC staff also notes that there is inconsistency in the current reporting of the separate account general interrogatories, as some companies aggregate based on overall product type and other companies already include a disaggregation of all separate account products. With the clarification that “each product” shall be captured, the regulators will have the information necessary to complete assessments and improve consistency in reporting.

The blanks proposal includes a distinct disaggregated product identifier to be used for each product and shall be used consistently throughout the interrogatory. Disaggregation of reporting shall be such that each product filing or policy form is separately identified. For example, if a company has 5 different separate group annuities, each annuity shall be separately reported. (Companies may eliminate proprietary information however such elimination will require the use of unique reporting identifiers).

Interested parties supports the re-exposure, noting that it will provide additional detail for pension risk transfer (PRT) products in the General Interrogatories.

**Ref #2021-01: ASU 2021-01, Reference Rate Reform**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed temporary (optional) expedient and exception interpretative guidance, with an expiration date of December 31, 2022. These optional expediens would expand the current exception guidance provided by INT 20-01: ASU 2020-04 – Reference Rate Reform. With this guidance, derivative instruments affected by changes to interest/reference rates because of reference rate reform (regardless of whether they reference LIBOR or another rate that is expected to be is discontinued), in which are used for discounting, margining or contract price alignment would be in scope of the exception guidance afforded in INT 20-01. This exception would allow for continuation of the existing hedge relationship and thus not requiring hedge designdation.

Interested parties agree with the revisions proposed in INT 20-01 to address related FASB guidance in ASU 2021-01 and we believe that it will provide significant relief to all companies that have entered into contracts that reference LIBOR (or another reference rate expected to be discontinued due to reference rate reform).
Other Comments

During the reference rate reform period there has been discussion amongst industry participants related to derivative contract modification market mechanisms and the potential unique impact on statutory accounting. Although the overarching principle of ASU 2020-04 and ASU 2021-01 and thus INT 20-01 is that contracts within scope that are modified due to reference rate reform can be accounted for as a continuation of the existing contract, the guidance only specifically addresses derivatives in the context of qualifying hedging relationships. Neither derivatives used in hedging relationships that do not qualify for hedge accounting (i.e., non-qualifying relationships) nor replication (synthetic asset) transactions (RSAT) are specifically addressed.

Addressing modifications associated with derivatives used in non-qualifying relationships or RSATs is not necessary for generally accepted accounting principles (GAAP) because under GAAP these transactions are always accounted for at market value and both unrealized and realized gains/losses are recorded within the same income statement line. Under SAP, however, gains/losses on these transactions may have different financial statement geography or may not be recognized in the income statement, for example, depending on whether they are unrealized or realized. Further, statutory reporting guidance requires detailed disclosure, through Schedule DB, of each held and terminated derivative transaction.

Exacerbating the need for clarity on this issue is the standard market mechanism for centrally cleared swaps. While bilateral derivative contracts can be amended without termination, it is typical market convention that a cleared derivative contract would be terminated and replaced with an off-market contract in order to amend terms associated with reference rate reform. Without relief, it is standard practice that these amendments would be treated as terminations within statutory accounting and reporting, with resulting impacts on the financial statements.

Although interested parties believe it is the intention of the Working Group and NAIC staff to allow all derivative contract amendments, including non-qualifying relationships and RSATs, associated with reference rate reform to be accounted for and reported as continuations under INT 20-01, we request that clarifying language be included to address the concern of industry participants. We believe this addition will provide statutory accounting and reporting clarity and ensure operational relief for all derivatives as companies plan and begin reference rate modifications.

We believe the most effective way to provide this requested clarity is the addition of the following language as subsection “e” within section 12 of the exposed revision to INT 20-01(changes noted in underline):

For all derivatives (those qualifying for hedge accounting, those that do not qualify for hedge accounting and RSAT’s), allow a reporting entity to account for and report modifications (that are within the scope of INT 20-01) as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract and its replacement with a new reference rate reform contract. This includes in-scope modifications of centrally cleared swap contracts whether they are automatically transitioned at a cessation date or voluntarily executed prior to cessation.
We believe this additional language within INT 20-01 will provide statutory accounting and reporting clarity to companies as they prepare and begin to transition both bilateral and cleared derivatives as part of reference rate reform.

**Ref #2021-02: ASU 2020-08 – Premium Amortization on Callable Debt Securities**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 26R—Bonds* to reject ASU 2020-08, *Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs* for statutory accounting. While ASU 2020-08 closely mirrors existing guidance in SSAP No. 26R (amortizing applicable debt premium to the next effective call price), it does preclude statutory accounting’s yield-to-worst concept, which requires amortizing premiums to the call or the maturity value/date which produces the lowest asset value. There may be scenarios, for statutory accounting, in which premiums amortized to the maturity value/date will yield a lower asset value than simply amortizing applicable premium to the next effective call date (as is required in ASU 2020-08).

Interested parties support the rejection of ASU 2020-08 as insurers are using the yield-to-worst concept for statutory reporting.

**Ref #2021-03: SSAP No. 103R – Disclosures**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* to propose 1) new disclosure elements, and 2) a data-capture template for existing disclosures in SSAP No. 103R to capture disclosures for when a reporting entity has transferred (or sold) assets but still retains a material participation. A blanks proposal is anticipated to be concurrently exposed.

Interested parties thank NAIC staff for working with us in clarifying the purpose of the proposal and the requirements themselves. It was very good collaboration and we support the revised draft.

**Ref #2021-04: SSAP No. 97 – Valuation of Foreign Insurance SCAs**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the intent to move this agenda item to the disposal listing without statutory edits. Industry is requested to submit comments on any prevalent examples of a negative equity valuation in a foreign insurance subsidiary, controlled or affiliated (SCA) investment with detailed information for assessment.

As described in the exposure draft, the Working Group does not believe that any changes to SSAP No. 97 are necessary at this point. As such, the reporting entity should record negative equity in an 8.b.iv foreign insurance subsidiary if negative equity arises from the application of the SSAP No. 97 paragraph 9 adjustments even if there is no financial guarantee or commitment by the reporting entity. This approach applies the same treatment to 8.b.iv foreign insurance subsidiaries and 8.b.ii non-insurance subsidiaries.
As stated in our previous comment letter on this topic dated September 18, 2020, interested parties agree with the current accounting guidance, which requires 8.b.ii entities to report negative equity. This is because 8.b.ii entities are considered an extension of the insurance company and since 8.b.ii entities may own assets that would not be admitted if owned by the insurer, it is reasonable to require the insurer to report negative equity in those subsidiaries if negative equity arises due to the non-admission of certain assets.

Interested parties, however, do not agree that the application of the paragraph 9 adjustments should ever result in the insurer’s investment in a foreign insurance subsidiary being reported at an amount less than zero. Foreign insurance subsidiaries have a true business purpose, independent from the parent insurer and are subject to significant regulations in the foreign jurisdiction in which they operate (including with respect to how they invest, the assets they are allowed to own, and the amount of capital they are required to hold). In this way, foreign insurance subsidiaries operate similarly to domestic insurance subsidiaries, and are subject to comparable levels of oversight. It does not appear reasonable to treat a foreign insurance subsidiary differently from the way a domestic insurance subsidiary is treated whereby losses are floored at zero unless the reporting entity has guaranteed obligations or is otherwise committed to provide further financial support for the domestic insurance subsidiary, as stated in SSAP No. 97, paragraph 14e.

We agree with the comments included in the exposure draft regarding the fact that in the past few years, there probably have not been instances of insurers recording negative equity in their foreign insurance subsidiaries. However, we believe that regardless of whether or not this is a common occurrence, the accounting standards should reflect the appropriate accounting treatment and provide guidance for this circumstance, which might arise in the future. As mentioned in our previous comment letter, negative equity could arise due to the non-allowance of deferred acquisition costs recorded by the foreign insurer. Since GAAP allows the explicit recognition of a DAC asset, the gross GAAP reserves are usually higher than statutory reserves, which have an implicit credit for acquisition expenses. As a result, when applying the SSAP No. 97 adjustments to non-admit DAC, we end up with a reserve that is more conservative than statutory rules. One of the reasons why this has not resulted in negative equity in the past is due to the current interest rate environment, which has caused most insurers’ fixed income portfolios to be in a sustained unrealized gain position. If interest rates rise and these unrealized gains reverse out over time, it will likely result in a negative equity position.

Assuming rates stay as low as they are today, negative equity will also be very likely to occur once a foreign insurer uses the new U.S. GAAP standard on long-duration insurance contracts in the paragraph 8.b.iv valuation, since insurance liabilities will increase due to the required market value adjustment under the new standard. Under this scenario, having to report insurance liabilities at market value will then negate any unrealized gains on an insurer’s bond portfolio. This change will go into effect in 2025 for non-public life insurance companies.

Finally, not all foreign insurance companies receive audited GAAP financial statements. In these situations, the investment in the foreign insurance subsidiary (cost basis) is non-admitted, and no results are reflected in surplus until the foreign insurance company distributes earnings to the parent insurance company. If a parent insurance company decides to obtain an audit of its foreign insurance company, it should not result in an impact to surplus that is worse than non-admitting the investment.
We are able and willing to work with NAIC staff to draft potential amendments to SSAP No. 97 to modify the accounting and reporting requirements of foreign insurers to address the negative equity issue.

**Ref #2021-05: Accounting for Cryptocurrencies**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the interpretative guidance in INT 21-01T: *Statutory Accounting Treatment for Cryptocurrencies* to clarify that cryptocurrencies do not meet the definition of cash in SSAP No. 2R—*Cash, Cash Equivalents, Drafts, and Short-Term Investments* and are nonadmitted assets for statutory accounting. With the exposure, information from industry is requested per the above recommendation.

Interested parties would like to thank the Working Group for the opportunity to comment on Reference No. 2021-05 – *Accounting for Cryptocurrencies* and related INT 21-01T: *Statutory Accounting Treatment for Cryptocurrencies*, (together the “Exposure”).

Interested parties agree that cryptocurrencies (e.g., Bitcoin) currently do not meet the definition of cash under SSAP No. 2R *Cash, Cash Equivalents, Drafts, and Short-Term Investments*. However, based on our understanding of how cryptocurrencies work, we believe that cryptocurrencies do meet the definition of an asset. As stated in SSAP No. 4 *Assets and Non-Admitted Assets*, an asset is defined as “having future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.” Cryptocurrencies certainly have a future economic benefit as this asset can be sold for cash or exchanged for goods and services in markets that accept cryptocurrencies as payment. In addition, to be an admitted asset, an asset needs to be readily marketable. Interested parties note that there is an active market for cryptocurrencies as they can be purchased and/or redeemed in an open market at readily determinable fair values.

Based on interested parties’ understanding, the overall extent of direct and indirect cryptocurrency ownership is unknown. We do not believe that insurers are directly investing in cryptocurrencies, nor are we aware of any companies that are currently transacting with cryptocurrencies for goods or services. However, we are aware of a very small number of insurers that are currently considering whether to directly hold cryptocurrency for purposes of investment. In addition, some companies have indicated they are interested in potentially using cryptocurrencies to transact business in the future.

Most insurers’ involvement in this asset class so far seems to be limited to investments in private funds set up as limited partnerships/limited liability companies, which invest in cryptocurrency. The funds, for U.S. GAAP purposes, are generally classified as investment companies. Therefore, these funds carry their investments at fair value, and the carrying value under the statutory equity method is essentially fair value. Since the reporting entity’s investment is held by a fund, the investment also results in an equity-based capital charge.

The general level of interest for future investment is difficult to gauge, however, based on what’s transpiring in the financial services market and beyond, cryptocurrencies continue to gain mainstream
traction as an investment\(^1\) and accepted medium of exchange\(^2\), with Bitcoin being the predominant cryptocurrency chosen. The level of interest for holding or transacting with cryptocurrencies may increase as blockchain technology applications are developed and deployed in the years to come. Interest may also increase as companies look to diversify their portfolios. Bitcoin can potentially be a good source of diversification as so far bitcoin appears not to have a strong correlation with the performance of other assets that are impacted by interest rate movements and government regulation for example. In addition, bitcoin may act as an inflation hedge. The supply of traditional currencies is set by a central bank or a similar institution that can run the printing presses, which can cause hyperinflation caused by the printing of too much money. In contrast, the supply of Bitcoin is set as strong incentives provide assurances that there will likely be no more than 21 million bitcoin ever created.

Ref #2021-06: NAIC Accounting Practices and Procedures Manual Editorial and Maintenance Update

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed editorial revisions to SSAP No. 53—Property Casualty Contracts, SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities and the SSAP Glossary.

Interested parties have no comment on the revisions.

Ref #2021-07: ASU 2020-11, Financial Services—Insurance: Effective Date and Early Application

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-11, Financial Services – Insurance: Effective Date and Early Application as not applicable for statutory accounting.

Interested parties have no comment on this item.

Ref #2021-08: ASU 2021-02, Franchisors—Revenue from Contracts with Customers (Subtopic 952-606)

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 47—Uninsured Plans to reject ASU 2021-02, Franchisors – Revenue from Contracts with Customers.

Interested parties have no comment on this item.

Ref #2021-09: State ACA Reinsurance Programs

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act. The revisions

---

\(^1\) https://www.cnbc.com/2021/03/31/bitcoin-goldman-is-close-to-offering-bitcoin-to-its-richest-clients.html
include State ACA reinsurance programs which are using Section 1332 waivers in scope of SSAP No. 107 and will provide guidance to follow the hybrid accounting approach for the state ACA programs as they operate in a similar manner.

In summary, the view of interested parties is that the principles underlying the exposure draft are appropriate. However, there are important variances among the state ACA Reinsurance Programs as to how they are funded and operate, much more so than was apparently contemplated in the drafting of the proposed guidance in the exposure draft. The significance of such variances requires additional context and guidance to assure that health plans report activity related to any particular state’s ACA Reinsurance Program in a consistent manner. These points are described below, along with suggestions for such additional context and guidance for Working Group’s consideration.

The proposed guidance suggested by the exposure draft is largely prefaced on the following statement therein (emphasis added):

To date, most of the states that have sought 1332 waivers did so to implement state ACA reinsurance programs which have the goal of using the reinsurance programs to lower individual health insurance premium in the jurisdiction. As these programs seek to operate to cover higher individual health claims in a manner similar to the transitional reinsurance program, the initial recommendation is to provide guidance that such state programs should follow the guidance in SSAP No. 107 to the extent the state program has similar terms.

While interested parties agree that the goal of the various state ACA Reinsurance Programs is to lower individual health insurance premiums, the second sentence in the above passage is based on a faulty premise. In fact, the various state ACA Reinsurance Programs aim to achieve that goal in ways that differ operationally in important ways, not just from the former Federal ACA Reinsurance Program, but also from each other.

As a result of those differences, it would be difficult to apply the guidance as proposed in the exposure draft which largely mirrors the current text in SSAP No. 107 applicable to the former Federal ACA Reinsurance Program to the State ACA Reinsurance Programs. It is likely that different health plans could reach different conclusions on how to report any particular state’s ACA Reinsurance Program activity notwithstanding a common set of facts and circumstances about how that state’s program operates. Likewise, independent auditors and state examiners could also reach different interpretations and conclusions.

This is not to suggest that the principles from SSAP No. 107 which the exposure draft proposes to apply as well to state ACA Reinsurance Programs are necessarily flawed, rather that additional context and guidance is needed to assure that statutory accounting will be more uniformly applied by health plans with respect to the same facts and circumstances involving a particular state’s ACA Reinsurance Program.

For the former Federal ACA Reinsurance Program, SSAP No. 107 recognized that additional guidance was needed, noting that:
“… the term “reinsurance” does not represent actual reinsurance between licensed insurers as defined by SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance. This program is similar to an involuntary pool in SSAP No. 63—Underwriting Pools for the individual insured health products subject to the 2014 ACA market reforms.”

Despite the failure of the former Federal ACA Reinsurance Program to clearly meet all the requirements of SSAP No. 61R or SSAP No. 63, SSAP No. 107 nonetheless included clarifying language to deem certain aspects of the program to be reinsurance and to be accounted for as such for statutory reporting. With subject health plans participating in a single federal program for which No. SSAP No. 107 deemed the activity as reinsurance, uniformity in reporting by health plans was more assured.

However, uniformity in reporting by health plans for their activity with the various state ACA Reinsurance Programs would not be similarly assured under the current text of the exposure draft, as each such state plan differs from the former Federal ACA Reinsurance Program – as well as from each other – in various ways. Some examples of those operational differences follow:

- Unlike the former Federal ACA Reinsurance Program, many of the state ACA Reinsurance Programs charge a single assessment that funds many other elements of healthcare affordability within the state and administration of the program, in addition to funding the reinsurance program itself. Other states may fund their program through use of existing premium taxes and have appropriated certain amounts within the state’s general fund to support the reinsurance program and its administration.
- The foregoing differences in funding sources also result in differences in the amount of funding for a state’s ACA Reinsurance Program that is ultimately paid by the participating health plans. In most cases, participating health plans fund a minority of the total program costs. For some state ACA Reinsurance Programs, none of the cost is borne by participating health plans. An anomalous outcome therefore is where a health plan pays very little if any of the state ACA Reinsurance Program’s cost, includes no provision for such cost in its rates, and therefore does not report any premium that it could “cede” but nonetheless reports ceded claims.
- For some state ACA Reinsurance Programs, the state does not itemize the use of assessments. Application of the current proposed guidance may therefore be operationally onerous for organizations and, in some cases, may not be possible without the state providing a specific itemization of the use of the assessments. This may cause health plans to have to estimate the ceded portion versus the expense portion of payments resulting in unintended diversity in practice in treatment for the assessments, potentially reducing comparability in reporting across health plans with respect to their participation in the same state ACA Reinsurance Program.
- The assessments or fees charged are to fund more than just the reinsurance program (distributions and administration of the program); they may also include amounts related to other affordability initiatives.
- The attachment points, coinsurance, and payment caps may be more favorable to the insurer than that of the federal program particularly in the context where the fees might be lower (because the fee charged pay for more than the reinsurance program, or the fact there may be no fee at all).
SSAP No. 107, as well as the current text of the exposure draft, provides principle-based guidance that is intended to help health plans determine which of the following accounting treatments is appropriate, depending on the facts and circumstances:

- As a reinsurance cession following reinsurance accounting in accordance with SSAP No. 61R, Life, Deposit-Type and Accident and Health Reinsurance
- As an involuntary assessment consistent with SSAP No. 35R, Guaranty Fund and Other Assessments
- As an assessment made on behalf of self-insured plans which are administered by the reporting entity following the guidance of SSAP No. 47—Uninsured Plans

Interested parties support a similar conceptual structure to determine the appropriate statutory accounting treatment for state ACA Reinsurance Programs. However, and as a practical matter based on what is known about such programs currently in effect, reinsurance accounting would not seem to be appropriate in most cases. This is because relatively little of the cost is paid by health plans for most of the state ACA Reinsurance Programs (even zero in some cases).

That would leave as remaining options either accounting pursuant to SSAP No. 35R (assessment) or SSAP No. 47 (uninsured plan). However, for some state ACA Reinsurance Programs, the facts and circumstances may not be sufficiently clear to determine which of those would necessarily be appropriate, e.g., in the case of a state ACA Reinsurance Program for which the funding is used for a variety of health-related initiatives and which would vary by nature and amount each year based on legislative action.

As a result, it may be appropriate for the text in the exposure draft to be amended to include additional context and guidance. AHIP offers the following suggestions for the Working Group’s consideration:

- Additional context to inform readers as to the nature, extent, and significance of the various ways in which state ACA Reinsurance Programs differ from the former Federal ACA Reinsurance Program, as well as from each other.
- Section 1332 Waivers should be reviewed by health plans and their auditors to see if traditional reinsurance under SSAP No. 61R would apply. Again, based on the operational aspects of the state ACA Reinsurance Programs currently in place, reinsurance accounting would not appear to be appropriate in most instances.
- If it is determined that reinsurance accounting criteria is not met, then a determination should be made as to whether the guidance of SSAP No. 47 for uninsured plans (e.g., like that under INT 05-05 for Medicare Part D), or of SSAP No. 35R (assessment reporting) would apply.
- In cases where reinsurance accounting is then not deemed appropriate, and where the facts and circumstances do not clearly indicate which of SSAP No. 35R or SSAP No. 47 should apply, include a default provision as to which of those should then apply (e.g., SSAP No. 35R). The assessments under the state ACA Reinsurance Programs are generally unavoidable if the insurer writes business within the state which is more characteristic of a business tax or similar assessment. Insurers are generally required to reduce their rates if the state reinsurance programs
are in effect, and therefore, recording all of the assessment to expense is unlikely to meaningfully distort any underwriting ratios.

**Timing and recognition of assessments.** The updates in SSAP No. 107 currently do not address the timing of accounting recognition for the assessments. Because state ACA Reinsurance Programs vary operationally as described above, assessments may be charged such that the current year assessment is based on prior year premiums (i.e., a premium-based assessment); this could lead to diversity in practice if health plans operating in the same state have varying views of when to recognize the assessment in the absence of specific guidance.

Additional guidance could be provided to clarify when the assessment should be recognized and recorded, e.g., by referencing within SSAP No. 107 the accounting model in SSAP No. 35R, paragraph 4a-c, and providing clarity as to how to apply the recognition criteria to the State Reinsurance assessments.

**Treatment of receivables from state-based reinsurance plans as admitted assets.** Under the former federal reinsurance program, SSAP No. 107 provided the following guidance:

“All receivables from the transitional reinsurance program are subject to the 90-day non-admission rule beginning from when program receivables are due to be disbursed by the government or a government-sponsored entity. That is, the 90-day rule begins when governmental receivables are due, not from the date of initial accrual. The announced governmental or government-sponsored entity distribution date shall be the contractual due date similar to Appendix A-791, paragraph 2.h., which requires that payments due from the reinsurer are made in cash within ninety (90) days of the settlement date. The receivable is also subject to impairment analysis.”

Since most of the existing state ACA Reinsurance Programs are funded by large measure based on state budgetary authority, similar guidance should apply to receivables from such programs.

1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: New York Life’s Comments on Item 2021-04 SSAP No. 97 – Valuation of Foreign Insurance SCAs

Dear Mr. Bruggeman:

New York Life (“NYL”) appreciates the opportunity to provide comments on Item 2021-04 (the “Exposure”), which was exposed by the Statutory Accounting Principles (E) Working Group (the “SAPWG”) on March 15, 2021. We write to request SAPWG pursue the changes to SSAP No. 97 we detail below. We should note that we recognize amending SSAP No. 97 could bring potential unintended consequences. With that in mind, while we offer some suggested language to address such issues later in this letter, we are committed to working with SAPWG on any additional language changes deemed necessary.

As described in the Exposure, SAPWG does not believe that any changes to SSAP No. 97 are necessary at this point. As such, the reporting entity should record negative equity in an 8.b.iv foreign insurance subsidiary if negative equity arises from the application of the SSAP No. 97 paragraph 9 adjustments even if there is no financial guarantee or commitment by the reporting entity. This approach applies the same treatment to 8.b.iv foreign insurance subsidiaries and 8.b.ii non-insurance subsidiaries.

As stated in our previous comment letter on this topic dated October 27, 2020 (attached), there are significant differences between 8.b.ii and 8.b.iv subsidiaries, which, in our view, warrant different accounting treatment. 8.b.ii entities generally operate as an extension of the insurance company and own assets that for the most part would not be admitted if owned by the insurer. In those circumstances, recording negative equity makes sense. In contrast, foreign insurance subsidiaries have a true business purpose, independent from the parent insurer, and are subject to significant regulations in the foreign jurisdiction in which they operate (including with respect to how they invest and the assets they own). In this way, foreign insurance subsidiaries operate similarly to domestic insurance subsidiaries, and are subject to comparable levels of oversight. It does not appear reasonable to treat a foreign insurance subsidiary differently from the way a domestic insurance subsidiary is treated whereby losses are floored at zero unless the reporting entity has guaranteed obligations or is otherwise committed to provide further financial support for the domestic insurance subsidiary, as stated in SSAP No. 97, paragraph 14e.

Furthermore, if the foreign insurer is solvent and has positive capital on a local statutory basis, recording negative equity only due to the SSAP No. 97 paragraph 9 adjustments does not appear to provide the right accounting result. We agree with the comments included in the Exposure regarding the fact that in the past few years, there probably have not been instances of insurers recording negative equity in their foreign insurance subsidiaries. However, just because it hasn’t happened recently, does not mean it cannot happen in the future under very realistic scenarios. Accordingly, we believe the accounting standards should reflect the appropriate accounting treatment and provide guidance for this likely circumstance.

© 2021 National Association of Insurance Commissioners 16
As mentioned in our previous comment letter, negative equity could arise due to the non-allowance of deferred acquisition costs (“DAC”) recorded by the foreign insurer. Since GAAP allows the explicit recognition of a DAC asset, the gross GAAP reserves are usually higher than statutory reserves, which have an implicit credit for acquisition expenses. As a result, when applying the SSAP No. 97 adjustments to non-admit DAC, we end up with a reserve that is more conservative than statutory rules. One of the reasons why this has not resulted in negative equity in the past is due to the current interest rate environment, which has caused most insurers’ fixed income portfolios to be in a sustained unrealized gain position. If interest rates rise and these unrealized gains reverse out over time, it will likely result in a negative equity position. We have included an example below to illustrate the sensitivity to interest rates of certain foreign insurers’ fixed income portfolios. It is possible that other foreign insurers might have different interest rate sensitivity due to differences in their current GAAP equity and underlying portfolios. This example is based on a sensitivity analysis performed by NYL using certain assumptions regarding asset composition. Based on our analysis, an increase of as little as 50 basis points in the 10-year treasury rate can deplete about $200 million of unrealized gains.

*GAAP equity includes $900 million of unrealized gains on the foreign insurer's bond portfolio at 12/31/20

In light of the fact that negative equity can occur realistically in the near term, we believe that changes are needed to the accounting standards to address this issue. At the same time, we understand the need to protect against potential abuses that could arise if SSAP No. 97 is updated to remove the negative equity concept for a foreign insurance subsidiary. As suggested in our previous comment letter, we have crafted the below underlined language, which we would propose inserting into the last sentence of paragraph 9:

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all 8.b.ii SCA entities. For an 8.b.iv SCA entity, the application of these adjustments will not result in negative equity unless either of the following circumstances arises:

1) The reporting entity has guaranteed obligations of the 8.b.iv SCA entity or is otherwise committed to provide further financial support for the 8.b.iv SCA entity. In this case, accounting for the equity pick-up after application of the paragraph 9 adjustments, should be based on the guidance in SSAP No. 97, paragraph 14e;

2) The 8.b.iv SCA entity provides services to, or holds assets on behalf of, the reporting entity. In this case, negative equity has to be recorded.

Note – if there are any reinsurance transactions between the reporting entity and the foreign insurance subsidiary, the adjustments required in paragraph 8.b.iv of SSAP No. 97 must be followed.
We believe this language addresses the two competing interests described above: (1) reflect the appropriate accounting for an 8.b.iv entity and (2) prevent potential abuses from allowing an 8.b.iv entity’s equity to be floored at zero. However, we are open to any other language SAPWG believes would help distinguish true operating foreign insurance subsidiaries that are independent from the U.S. insurer and have a true business purpose from entities that operate to shield the reporting entity from U.S. statutory accounting rules. Our intent is not to amend SSAP No. 97 in a way that creates loopholes – instead we want to incorporate changes that contain sufficient guardrails while also appropriately accounting for foreign insurance subsidiaries. We will be happy to work with you on re-drafting our proposal to address potential loopholes and prevent any abuses from occurring.

We would also like to take this opportunity to raise another issue related to the accounting and reporting of foreign insurance subsidiaries. Due to the high cost of implementing new U.S. GAAP standards related to credit losses and long duration insurance contracts, NYL has decided to discontinue the preparation of financial statements on a U.S. GAAP basis in 2023, which will include our Mexican subsidiary. Once that occurs, it is unclear to us which accounting basis to use to record our investment in the foreign insurance subsidiary, which would then be non-admitted since there is no U.S. GAAP audit. In that scenario, we would have to record our investment at cost or local statutory equity. To that end, we would appreciate the opportunity to engage in a conversation with you and SAPWG staff regarding the ability to potentially allow for foreign insurance subsidiaries without U.S. GAAP financial statements to be admitted and to be carried at the lower of cost or local audited statutory equity, adjusted for paragraph 9 requirements, but flooring those adjustments at zero if negative equity arises. Our understanding of the current guidance in SSAP No. 97 paragraph 8.b.iv is that we are allowed to use audited foreign statutory basis financial statements of the foreign insurer, but the foreign insurer’s financial statements still need to include a reconciliation to U.S. GAAP, which means that U.S. GAAP books and records still need to be prepared.

Thank you for considering our comments on this topic. If you have any questions in the interim, please do not hesitate to contact us.

Kansas City, MO 64106-2197

RE: New York Life’s Comments on Item 2020-18 SSAP 97 Update

Dear Mr. Bruggeman:

New York Life (“NYL”) appreciates the opportunity to provide comments on Item 2020-18 (the "Exposure"), which was exposed by the Statutory Accounting Principles (E) Working Group (the "Working Group") during the NAIC 2020 Summer National Meeting.

NYL agrees with the comments provided in the September 18, 2020 Interested Party letter. This letter provides additional background on those comments as well as a potential path to resolution by suggesting wording changes that could be incorporated into SSAP No. 97 Investments in Subsidiaries, Controlled and Affiliated Entities to address the issues that have been identified.

NYL has been closely watching SAPWG’s exposure of revisions to SSAP No. 97, including the most recent exposure that makes some updates to the last sentence of paragraph 9. That exposure caused us to re-examine our understanding of the SSAP and the potential for a foreign insurance subsidiary to record negative equity in the future. As expressed in the Interested Parties comment letter, we believe that it makes sense for SSAP No. 97 to differentiate in its treatment of 8.b.iv foreign insurance subsidiaries and 8.b.ii SCAs.

At a high level, 8.b.ii entities generally operate as an extension of the insurance company and own assets that for the most part would not be admitted if owned by the insurer. In those circumstances, recording negative equity makes sense. In contrast, foreign insurance subsidiaries have a true business purpose, independent from the parent insurer, and are subject to significant regulations in the foreign jurisdiction in which they operate. From our perspective, foreign insurance subsidiaries are closer to 8.b.iii subsidiaries in that they are real operating companies that are independent of the domestic insurer.

While the circumstances that could cause an insurer to record negative equity in a foreign insurance subsidiary are probably not very common, they could come to pass in the future. This could be due to the non-allowance of deferred acquisition costs recorded by the foreign insurer, while still requiring the foreign insurer subsidiary to hold the higher gross GAAP reserve that has no implicit credit for acquisition expenses that is inherent in statutory reserves. Therefore, we believe that changes are needed to prevent this situation from occurring in the future.
At the same time, we want to prevent against any potential abuses that could arise if SSAP No. 97 is updated to remove the negative equity concept for a foreign insurance subsidiary. We have therefore crafted the below underlined language, which we would propose inserting into the last sentence of paragraph 9:

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all 8.b.ii SCA entities. For an 8.b.iv SCA entity, recording negative equity depends on whether or not the parent insurer has issued a guarantee to fund losses of the 8.b.iv SCA entity or whether the 8.b.iv entity provides services to the parent or affiliated insurer. If the parent insurer has committed to fund losses of the 8.b.iv SCA entity, the accounting described in paragraph 13e should be followed. If the 8.b.iv SCA entity does not provide services to, or holds assets on behalf of, the parent insurer or affiliate, the valuation of the investment in the SCA would be floored at zero if negative equity arises due to the application of these adjustments. For an 8.b.iv SCA entity that provides services to, or holds assets on behalf of, the parent insurer or affiliate, negative equity has to be recorded due to the application of these adjustments for the total amount of the non-admitted assets used to provide services to, or held on behalf of, the parent insurer or affiliate.

We believe this language addresses the two competing interests described above. Thank you for considering our comments on this topic. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

Robert M. Gardner

Description of Issue:
This agenda item proposes increased product identifier reporting granularity in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). At the request of regulators, primarily in response to the recent growth of pension risk transfer (PRT) transactions and registered indexed linked annuity (RILA) products that are generally held in insulated separate accounts, improved reporting was requested so regulators can more readily identify and review the products captured in the separate account. This agenda item does not anticipate modifications to SSAP No. 56—Separate Accounts, however if supported by the Working Group, would likely result in a proposal to the Blanks (E) Working Group for annual statement instruction modifications.

For example, upon review of the 2019 separate account annual statements filed with the NAIC, it was found that while some reporting entities included reporting details such as “XYZ Company Pension Risk Transfer” (a preferred method of disclosure), most entities grouped their separate account products in 3-4 broad categories. Common categories included variable life, variable annuity, indexed annuity and group variable annuity (the latter of which is likely where PRT’s would be captured).

SSAP No. 56 requires several disclosure elements separated by “product identifier.” These situations include:

- 1.01 – Separate account assets by SEC registration, guarantees, seed money, etc.
- 1.01A – Identification of private placement variable annuities / life insurance (PPVA or PPLI)
- 2.5 – Risk charges
- 4.2 – Investment Process and their treatment (e.g., to policyholder, to GA, or retained in SA)

As detailed in the separate account instructions, “a distinct product identifier shall be used for each product and shall be used consistently throughout the interrogatory.” Even with this direction, most reporting entities appear to be aggregating product types for reporting. This has made it difficult to assess the reserve requirements or guarantees for the specific products. Additionally, regulators have indicated that upon their examination of the product mix general interrogatory in which the assets reflect if they are supported with a guarantee from the general account, due to the broad grouping of products, some products which do not have guarantees were grouped with those that did have guarantees.

Existing Authoritative Literature:

The disclosures for separate account assets are detailed in SSAP No. 56—Separate Accounts:

36. The Separate Account Annual Statement Blank shall include detailed information on the characteristics of the separate account assets, specifically categorizing separate account assets in accordance with the following characteristics:
a. Identification of separate account assets that are legally insulated from the general account and those which are not legally insulated.

b. Aggregation of separate account assets from products registered with the SEC and separate account assets from products excluded from registration. In addition to the overall aggregation, this disclosure shall specifically identify separate account assets from private placement variable annuities (PPVA) and private placement life insurance (PPLI). The disclosures in this paragraph (36.b.) are effective December 31, 2018.

c. Amount of separate account assets that represent seed money, other fees and expenses due to the general account, and additional required surplus amounts. This disclosure shall include the amount of seed money and other fees and expenses currently included in the separate account, as well as the amount of seed money received and repaid to the general account during the current year. This disclosure shall also include information on insulation (if applicable), the time duration for which seed money and other fees and expenses due the general account are retained in the separate account, and information on how whether seed money is invested pursuant to general account directives or in accordance with stated policies and procedures.

d. Identification of the separate account assets in which the investment directive is not determined by a contractholder. (In most instances, having multiple investment choices at the option of a contractholder would be considered a situation in which the investment directive is determined by a contractholder. This is not true for situations in which the asset is invested in a manner that mirrors the investment directives of the general account.) Situations in which the investment directive is not determined by the contractholder (and situations in which the reporting entity is the contractholder) shall include disclosure regarding whether the investments of the respective separate account assets, if included within the general account investments, would have resulted with the reporting entity exceeding any investment limitations imposed on the general account.

e. Identification of the separate account assets in which less than 100% of investment proceeds are attributed to a contractholder. This shall include identification of the separate account investment income attributed to the reporting entity during the reporting period and whether such income was transferred to the general account or reinvested within the separate account. Instances in which such income is reinvested within the separate account shall include disclosure on whether the subsequent investments, if categorized with investments in the general account, would have exceeded investment limitations imposed on the general account.

39. Identify all products reported as a separate account product under statutory accounting principles and identify whether each product was classified differently under GAAP. For products that resulted with different classifications between GAAP and SAP, identify the characteristic(s) of the product that prevented it from receiving a separate account classification under GAAP. This disclosure is applicable for all reporting entities. Thus, if GAAP financial statements were not filed, the reporting entity should complete this disclosure as if GAAP financials had been completed.
The annual statement instructions as well as an example of note 1.01 are below.

As the product identifier is used throughout the interrogatory, examples of other items potentially impacted are as follows:

1.01A For the products (and related assets) that are not registered with the SEC, identify whether the products are considered private placement variable annuity products or private placement life insurance.

<table>
<thead>

</tr>
</tbody>
</table>

Allocation of Investment Proceeds of Separate Account Activity

4.1 Does the reporting entity have separate account assets in which less than 100% of investment proceeds (net of contract fees and assessments) are attributed to a contract holder? (This should identify any situations where there is a ceiling on investment performance results.)

4.2 If yes, provide detail on the net investment proceeds that were attributed to the contract holder, transferred to the general account and reinvested within the separate account:

<table>

</tbody>
</table>

8.3 Identify all separate account products and identify whether each product was classified within a separate account for GAAP reporting purposes. (For non-GAAP filers, this disclosure should reflect whether the GAAP classification would have been the same if GAAP financials had been completed.) For products that were (or would have been) reported differently, identify which SOP 03-1 condition prevented separate account GAAP classification for that particular product.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): N/A

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose the agenda item to solicit comments from state insurance regulators and industry regarding the degree of product identifying details needed to adequately assess the product features and reserve liabilities. Additionally, feedback is requested regarding if a threshold should be established for when aggregate reporting would be permitted.
Staff Review Completed by:
Jim Pinegar - NAIC Staff, October 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding the degree of product identifying details needed to adequately assess the product features and reserve liabilities in the separate account. Particularly, this is requesting feedback on how to obtain increased product identifier reporting granularity in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). Additionally, feedback is requested regarding if a threshold should be established for when aggregate reporting would be permitted.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group exposed this agenda item with details of a proposed blanks change, which will also be concurrently exposed with the Blanks (E) Working Group. With the proposed blanks changes, there are no proposed revisions to statutory accounting principles.

Consideration of this item will occur during an interim call so that the blanks changes may be reflected in the statutory financials for year-end 2021. Pursuant to this agenda item and regulator comments received, the Working Group is sponsoring blanks agenda item (2021-03BWG) to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form be separately identified. For example, if a company has 5 different separate account group annuities, each annuity shall be separately reported. Additionally, the instructions will indicate that companies may eliminate proprietary information (e.g., such as XYZ company Pension Plan), however such elimination will still require the use of a unique reporting identifiers (such as PRT #1). This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

NAIC staff also notes that there is inconsistency in the current reporting of the separate account general interrogatories, as some companies aggregate based on overall product type and other companies already include a disaggregation of all separate account products. With the clarification that “each product” shall be captured, the regulators will have the information necessary to complete assessments and improve consistency in reporting.

An excerpt from the blanks proposal is shown below:

A distinct disaggregated product identifier shall be used for each product and shall be used consistently throughout the interrogatory. Disaggregation of reporting shall be such that each product filing or policy form is separately identified. For example, if a company has 5 different separate group annuities, each annuity shall be separately reported. (Companies may eliminate proprietary information however such elimination will require the use of unique reporting identifiers).

© 2021 National Association of Insurance Commissioners
On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted a recommendation that supports adoption of the corresponding exposure (2021-03BWG) by the Blanks (E) Working Group. This agenda item does not result in statutory accounting revisions.

The blanks agenda item modifies the current General Interrogatory instructions and requires that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form to be separately identified. Additionally, the instructions will indicate that companies may eliminate proprietary information, however, such elimination will still require the use of a unique reporting identifier. This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

Issue: Pension Risk Transfer – Separate Account Disclosure

Check (applicable entity):
- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

Description of Issue:
This agenda item proposes increased product identification and disclosure of pension risk transfer (PRT) transactions in the separate account financial statements. At the request of regulators, in response to the recent growth of PRT, improved reporting is sought so regulators can more readily identify and analyze such transactions. Regulators requested several enhancements, including separated PRT reporting and improved PRT disclosure regarding reserves, associated assets, and general account exposure.

As a brief background, a pension risk transfer is when a defined-benefit pension provider seeks to remove some or all of its obligation to pay guaranteed retirement income to plan participants. In these transactions, the pension providers will generally transfer assets to an insurer, for which the insurer assumes the annuity risk for plan participants. According to AM Best, there were over 500 single premium pension contract buyouts totaling $28 billion in 2019. Due to organizations wanting to alleviate their pension liability, it is expected that PRT transactions will not subside in the near future.

Currently, the most specific details concerning PRT transactions are generally captured/disclosed in question 1.01 (product mix) of the separate account general interrogatories (GI 1.01). For reference, GI 1.01 is shown below:

<table>
<thead>
<tr>

Upon review of the 2019 separate account annual statements filed with the NAIC, it was found that most entities did not individually detail PRT activity, but rather broadly combine this product into other product categories (i.e. group variable annuity).

While other details of the broadly categorized products are captured in various other general interrogatories (as shown below in Existing Authoritative Literature), this agenda item, at the request of regulators, proposes enhanced detailed reporting requirements for pension risk transfer products and transactions in the scope of SSAP No. 56—Separate Accounts.
Existing Authoritative Literature:

There are numerous disclosure elements in SSAP No. 56—Separate Accounts that would be applicable for PRT transactions (the most relevant disclosures have been bolded below). However as described above, PRTs are generally reported in an aggregated manner with other similar products, thus the disclosures below do not currently provide the level of detail sought by regulators.

Disclosures

31. The general account financial statement shall include detailed information on the reporting entity’s separate account activity. These disclosures shall include:
   a. A narrative of the general nature of the reporting entity’s separate account business.
   b. Identification of the separate account assets that are legally insulated from the general account claims.
   c. Identification of the separate account products that have guarantees backed by the general account. This shall include:
      i. Amount of risk charges paid by the separate account to the general account for the past five (5) years as compensation for the risk taken by the general account; and
      ii. Amount paid by the general account due to separate account guarantees during the past five (5) years.
   d. Discussion of securities lending transactions within the separate account, separately including the amount of any loaned securities within the separate account, and if policy and procedures for the separate account differ from the general account.

32. For each grouping (as detailed in paragraph 33), the following shall be disclosed:
   a. Premiums, considerations or deposits received during the year;
   b. Reserves by the valuation basis of the investments supporting the reserves at the financial statement date. List reserves for separate accounts whose assets are carried at fair value separately from those whose assets are carried at amortized cost/book value;
   c. Reserves by withdrawal characteristics, including whether or not the separate account is subject to discretionary withdrawal. For reserves subject to discretionary withdrawal, the below categories are included if applicable:
      i. With market value adjustment;
      ii. at book value without market value adjustment and with surrender charge of 5% or more;
      iii. at fair value;
      iv. at book value without market value adjustment and with surrender charge of less than 5%;
Reserves for asset default risk, as described in paragraph 18.b., that are recorded in lieu of AVR.

33. For the disclosures required in paragraph 32, separate accounts shall be addressed in the following groupings (which are the same as those used for risk-based capital):

a. **Separate Accounts with Guarantees**:

i. Indexed separate accounts, which are invested to mirror an established index which is the basis of the guarantee;

ii. Nonindexed separate accounts, with reserve interest rate at no greater than 4% and/or fund long-term interest guarantee in excess of a year that does not exceed 4%;

iii. Nonindexed separate accounts, with reserve interest rate at greater than 4% and/or fund long-term interest guarantee in excess of a year that exceeds 4%.

b. Nonguaranteed Separate Accounts—Variable separate accounts, where the benefit is determined by the performance and/or fair value of the investments held in the separate account. Include variable accounts with incidental risks, nominal expense, and minimum death benefit guarantees.

34. **Provide a reconciliation of the amount reported as transfers to and from separate accounts in the Summary of Operations of the separate accounts statement and the amount reported as net transfers to or from separate accounts in the Summary of Operations of the general accounts statement.**

35. The disclosures in SSAP No. 51R—Life Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance related to the withdrawal characteristics of products include separate account products and shall be completed in the general account disclosures.

36. The Separate Account Annual Statement Blank shall include detailed information on the characteristics of the separate account assets, specifically categorizing separate account assets in accordance with the following characteristics:

a. **Identification of separate account assets that are legally insulated from the general account and those which are not legally insulated.**

b. **Aggregation of separate account assets from products registered with the SEC and separate account assets from products excluded from registration.** In addition to the overall aggregation, this disclosure shall specifically identify separate account assets from private placement variable annuities (PPVA) and private placement life insurance (PPLI). The disclosures in this paragraph (36.b.) are effective December 31, 2018.

c. Amount of separate account assets that represent seed money, other fees and expenses due to the general account, and additional required surplus amounts. This disclosure shall include the amount of seed money and other fees and expenses currently included in the separate account, as well as the amount of seed money received and repaid to the general account during the current year. This disclosure shall also include information on insulation (if applicable), the time duration for which seed money and other fees and expenses due the general account are retained in the separate account, and information on how whether seed money is invested pursuant to general account directives or in accordance with stated policies and procedures.
d. Identification of the separate account assets in which the investment directive is not determined by a contractholder. (In most instances, having multiple investment choices at the option of a contractholder would be considered a situation in which the investment directive is determined by a contractholder. This is not true for situations in which the asset is invested in a manner that mirrors the investment directives of the general account.) Situations in which the investment directive is not determined by the contractholder (and situations in which the reporting entity is the contractholder) shall include disclosure regarding whether the investments of the respective separate account assets, if included within the general account investments, would have resulted with the reporting entity exceeding any investment limitations imposed on the general account.

e. Identification of the separate account assets in which less than 100% of investment proceeds are attributed to a contractholder. This shall include identification of the separate account investment income attributed to the reporting entity during the reporting period and whether such income was transferred to the general account or reinvested within the separate account. Instances in which such income is reinvested within the separate account shall include disclosure on whether the subsequent investments, if categorized with investments in the general account, would have exceeded investment limitations imposed on the general account.

37. For all separate account assets not reported at fair value, indicate the measurement basis (amortized cost or other method) for each asset (or asset class) and whether the measurement method was grandfathered in under the transition guidance in this SSAP, or whether the measurement method is allowed under a prescribed or permitted practice. This disclosure shall include a comparison of the assets’ reported value to fair value with identification of the resulting unrealized gain/loss that would have been recorded if the assets had been reported at fair value.

38. For all separate accounts that include securities lending transactions, disclose the reporting entity’s use and policy of securities lending within the separate account, including the amount of loaned securities from the separate account at the reporting date, the percentage of separate account assets lent as of that date, a description for which type of accounts (e.g., book value accounts, market value account accounts) are lent, if the separate account policyholder is notified or approves of such practices, the policy for requiring collateral, whether the collateral is restricted and the amount of collateral for transactions that extend beyond one year from the reporting date. This disclosure requires the entity to provide the following information as of the date of the statement of financial position: (1) the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms, (2) the aggregate fair value of all securities acquired from the sale, trade and use of the accepted collateral (reinvested collateral), and (3) information about the sources and uses of that collateral.

39. Identify all products reported as a separate account product under statutory accounting principles and identify whether each product was classified differently under GAAP. For products that resulted with different classifications between GAAP and SAP, identify the characteristic(s) of the product that prevented it from receiving a separate account classification under GAAP. This disclosure is applicable for all reporting entities. Thus, if GAAP financial statements were not filed, the reporting entity should complete this disclosure as if GAAP financials had been completed.
As previously shown, GI 1.01 is the primary interrogatory which capture PRT transactions, however additional details are captured in the following tables.

1.01A For the products (and related assets) that are not registered with the SEC, identify whether the products are considered private placement variable annuity products or private placement life insurance.

<table>
<thead>
<tr>

Allocation of Investment Proceeds of Separate Account Activity

4.1 Does the reporting entity have separate account assets in which less than 100% of investment proceeds (net of contract fees and assessments) are attributed to a contract holder? (This should identify any situations where there is a ceiling on investment performance results.)

4.2 If yes, provide detail on the net investment proceeds that were attributed to the contract holder, transferred to the general account and reinvested within the separate account:

</tr>
</tbody>
</table>

8.3 Identify all separate account products and identify whether each product was classified within a separate account for GAAP reporting purposes. (For non-GAAP filers, this disclosure should reflect whether the GAAP classification would have been the same if GAAP financials had been completed.) For products that were (or would have been) reported differently, identify which SOP 03-1 condition prevented separate account GAAP classification for that particular product.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): N/A

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as non-substantive to solicit comments from state insurance regulators and industry regarding possible modifications to SSAP No. 56—Separate Accounts. Depending upon the feedback received, the Working...
Group would have several options available including, but not limited to, requiring the separate identification of pension risk transfer products (including transactions, guarantees, reserve assumptions, etc.) within existing disclosure requirements or the addition of a new general interrogatory (and perhaps new separate accounting reporting schedules / exhibits) to separate specific product detail that was previously reported in an aggregated format. NAIC staff is open for additional commentary and suggestions, and requests to work with industry and regulators throughout this and any subsequent exposure.

Staff Review Completed by:
Jim Pinegar - NAIC Staff, October 2020

Status:
On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the agenda item to solicit comments from state insurance regulators and industry regarding possible modifications to SSAP No. 56—Separate Accounts specific to pension risk transfer (PRT) products. Depending upon the feedback received, the Working Group would have several options available including, but not limited to, requiring the separate identification of pension risk transfer products (including transactions, guarantees, reserve assumptions, etc.) within existing disclosure requirements or the addition of a new general interrogatory (and perhaps new separate accounting reporting schedules / exhibits) to separate specific product detail that was previously reported in an aggregated format.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group exposed this agenda item with details of a proposed blanks change, which will also be concurrently exposed with the Blanks (E) Working Group. With the proposed blanks changes, there are no proposed revisions to statutory accounting principles.

Consideration of this item will occur during an interim call so that the blanks changes may be reflected in the statutory financials for year-end 2021. Pursuant to this agenda item and regulator comments received, the Working Group is sponsoring blanks agenda item (2021-03BWG) to modify the current General Interrogatory instructions and require that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form be separately identified. For example, if a company has 5 different separate account group annuities, each annuity shall be separately reported. Additionally, the instructions will indicate that companies may eliminate proprietary information (e.g., such as XYZ company Pension Plan), however such elimination will require the use of a unique reporting identifiers (such as PRT #1). This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

NAIC staff also notes that there is inconsistency in the current reporting of the separate account general interrogatories, as some companies aggregate based on overall product type and other companies already include a disaggregation of all separate account products. With the clarification that “each product” shall be captured, the regulators will have the information necessary to complete assessments and improve consistency in reporting.

An excerpt from the blanks proposal is shown below:

A distinct disaggregated product identifier shall be used for each product and shall be used consistently throughout the interrogatory. Disaggregation of reporting shall be such that each product filing or policy form is separately identified. For example, if a company has 5 different separate group annuities, each annuity shall be separately reported. (Companies may eliminate proprietary information however such elimination will require the use of unique reporting identifiers).
On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted a recommendation that supports adoption of the corresponding exposure (2021-03BWG) by the Blanks (E) Working Group. This agenda item does not result in statutory accounting revisions.

The blanks agenda item modifies the current General Interrogatory instructions and requires that a distinct disaggregated product identifier be used for each product represented. The disaggregation will require that each separate account product filing or policy form to be separately identified. Additionally, the instructions will indicate that companies may eliminate proprietary information, however, such elimination will still require the use of a unique reporting identifier. This disaggregation of reporting will be utilized for all applicable General Interrogatories (e.g., 1.01, 2.4, 4.1) and was at the direct request of regulators and will assist in regulator review so that each product, primarily those in which may potentially expose the general account to funding risk, may be independently examined.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

**Issue:** ASU 2020-08 – Premium Amortization on Callable Debt Securities

**Check (applicable entity):**

<table>
<thead>
<tr>
<th>Modification of Existing SSAP</th>
<th>P/C</th>
<th>Life</th>
<th>Health</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Issue or SSAP</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description of Issue:** In October 2020, the Financial Accounting Standards Board (FASB) issued ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs to clarify the amortization of premium associated with callable debt securities. In summary, ASU 2020-08 requires that to the extent the amortized cost basis of a callable debt security exceeds the amount repayable by the issuer, any associated premium (above the call price) is to be amortized to the next effective call price/date. For example, if a reporting entity held a bond at $104 in which could be called at $102 in a year, the $2 excess premium would be amortized over that particular year. Once amortized to $102, the reporting entity would then reassess for any excess premium to the next effective call price/date. If there is no remaining premium or further call dates, the effective yield is reset using the payment terms of the debt security.

**Existing Authoritative Literature:** The amortization of premiums related to debt securities is referenced in SSAP No. 26R—Bonds. While the requirements in ASU 2020-08 are very similar to statutory accounting guidance, SSAP No. 26R also requires the application of a yield-to-worst concept. With this concept, premium is amortized in a manner to produce the lowest asset value. Relevant guidance has been bolded below.

**Amortized Cost**

9. **Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.** Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion), except “make-whole” call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

**Application of Yield-to-Worst**

10. **For callable bonds, the first call date after the lockout period (or the date of acquisition if no lockout period exists) shall be used as the “effective date of maturity” for reporting in Schedule D, Part 1.** Depending on the characteristics of the callable bonds, the yield-to-worst concept in paragraph 9 shall be applied as follows:

   a. **For callable bonds with a lockout period, premium in excess of the next call price (subsequent to acquisition and lockout period) shall be amortized proportionally over the length of the lockout period. After each lockout period (if more than one), remaining premium shall be amortized to the call or maturity value/date which produces the lowest asset value.**

   b. **For callable bonds without a lockout period, the book adjusted carrying value (at the time of acquisition) of the callable bonds shall equal the lesser of the next call price (subsequent...**
remaining premium shall then be amortized to the call or maturity value/date which produces the lowest asset value.

c. For callable bonds that do not have a stated call price, all premiums over par shall be immediately expensed. For callable bonds with a call price at par in advance of the maturity date, all premiums shall be amortized to the call date.

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office (SVO).

a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value.

b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of SSAP No. 30R—Unaffiliated Common Stock, if converted to preferred stock, the security will be in scope of SSAP No. 32R—Preferred Stocks.)

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 26R—Bonds to reject ASU 2020-08 for statutory accounting. While ASU 2020-08 closely mimics existing guidance in SSAP No. 26R (amortizing applicable debt premium to the next effective call price), it does preclude statutory accounting’s yield-to-worst concept, which requires amortizing premiums to the call or the maturity value/date in which produces the lowest asset value. There may be scenarios, for statutory accounting, in which premiums amortized to the maturity value/date will yield a lower asset value than simply amortizing applicable premium to the next effective call date (as is required in ASU 2020-08).
Proposed Revisions to SSAP No. 26R

33. This statement rejects the GAAP guidance for debt securities, which is contained in ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs, ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities, ASU 2017-08, Premium Amortization on Purchased Callable Debt Securities, ASU 2016-01, Financial Instruments—Overall, FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities, FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA, and FASB Emerging Issues Task Force No. 96-10, Impact of Certain Transactions on Held-to-Maturity Classifications Under FASB Statement No. 115.

Staff Review Completed by: Jim Pinegar, NAIC Staff – January 2021

Status:
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds to reject ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs for statutory accounting. While ASU 2020-08 closely mimics existing guidance in SSAP No. 26R (amortizing applicable debt premium to the next effective call price), it does preclude statutory accounting’s yield-to-worst concept, which requires amortizing premiums to the call or the maturity value/date which produces the lowest asset value. There may be scenarios, for statutory accounting, in which premiums amortized to the maturity value/date will yield a lower asset value than simply amortizing applicable premium to the next effective call date (as is required in ASU 2020-08).

On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 26R—Bonds, as illustrated above, to reject ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs for statutory accounting. While ASU 2020-08 closely mimics existing guidance in SSAP No. 26R (amortizing applicable debt premium to the next effective call price), it does preclude statutory accounting’s yield-to-worst concept, which requires amortizing premiums to the call or the maturity value/date which produces the lowest asset value. There may be scenarios, for statutory accounting, in which premiums amortized to the maturity value/date will yield a lower asset value than simply amortizing applicable premium to the next effective call date (as is required in ASU 2020-08).

**Description of Issue:**
This agenda item has been drafted to propose additional disclosures and to data-capture certain existing disclosure elements in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. The additional disclosures proposed herein are in response to the Working Group’s continued deliberation of agenda item 2019-21: SSAP No. 43R – Equity Instruments. Agenda item 2019-21 is a substantive project to consider what investments fall within scope of SSAP No. 43R—Loan-Backed and Structured Securities and on Oct. 13, 2020, this project was expanded to include a review of the investments eligible for reporting on Schedule D-1: Long Term Bonds. During the continued work on this project, regulators expressed a desire to identify situations in which a reporting entity has entered into a securitization, asset-backed financing or similar transfer transaction where a significant economic interest in the transferred assets is retained by the reporting entity, its related parties or another member within the holding company group.

The existing disclosures discussed (and proposed for data-capture) are currently completed in a narrative (pdf) format. With the proposal to data-capture certain disclosures, regulators can utilize system inquiries to determine which reporting entities have a securitization, asset-backed financing arrangement, or other similar transfers that have been accounted for as a sale when the transferor has continued involvement.

Note – the disclosures discussed below are only required in the event a reporting entity as entered into a securitization, asset-backed financing arrangement or other similar transfer in which it also retains a continuing involvement with the transferred financial asset. Due to the numerous circumstances that may require disclosure, data-capture of most of the applicable disclosures would not sufficiently relay the particular characteristics or circumstances of the transaction – as is required in SSAP No. 103R. However, the need for regulators to have the ability to query the global population regarding the nature of these transactions remains a primary reason for this agenda item. Nonetheless, certain consistent numerical disclosures are suitable for data-capture, which will significantly assist with regulator’s ability to identify which reporting entities have such transactions, at which time further analysis of the narrative disclosures can be performed.

**Existing Authoritative Literature:**

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.

28. A reporting entity shall disclose the following:

g. For securitizations, asset-backed financing arrangements, and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary) with the transferred financial assets:

i. For each income statement presented:
(a) The characteristics of the transfer (including a description of the transferor’s continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

1. The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

2. The key inputs and assumptions used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor’s continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses).

(b) Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees, and cash flows received from a transferor’s beneficial interests.

ii. For each statement of financial position presented, regardless of when the transfer occurred:

(a) Qualitative and quantitative information about the transferor’s continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor’s risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

1. The total principal amount outstanding, the amount that has been derecognized, and the amount that continues to be recognized in the statement of financial position.

2. The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

3. Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:

   (i.) The type and amount of support

   (ii.) The primary reasons for providing the support
Information is encouraged about any liquidity arrangements, guarantees, and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor’s exposure to loss or risk of the related transferor’s interest.

(b) The entity’s accounting policies for subsequently measuring assets and liabilities that relate to the continuing involvement with the transferred financial assets;

(c) The key inputs and assumptions used in measuring the fair value of assets or liabilities that relate to the transferor’s continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses);

(d) For the transferor’s interests in the transferred financial assets, a sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests (including any servicing assets or servicing liabilities) of two or more unfavorable variations from the expected levels for each key assumption that is reported under paragraph 28.g.ii.(c) independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test;

(e) Information about the asset quality of transferred financial assets and any other assets that it manages together with them. This information shall be separated between assets that have been derecognized and assets that continue to be recognized in the statement of financial position. This information is intended to provide financial statement users with an understanding of the risks inherent in the transferred financial assets as well as in other assets and liabilities that it manages together with transferred financial assets. For example, information for receivables shall include, but is not limited to:

(i.) Delinquencies at the end of the period; and

(ii.) Credit losses, net of recoveries, during the period.

Current Annual Statement Illustrations for Completing Disclosures:

Note 17: Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

For securitizations, asset-backed financing arrangements and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary of the Accounting Practices and Procedures Manual) with the transferred financial assets:

a. For each income statement presented:

1. The characteristics of the transfer including a description of the transferor’s continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from the sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

(a) The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in
active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2) and significant unobservable inputs (Level 3).

(b) The key inputs and assumptions used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor’s continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates; expected prepayments, including the expected weighted-average life of prepayable financial assets; and anticipated credit losses, including expected static pool losses)

- If an entity has aggregated multiple transfers during a period, it may disclose the range of assumptions.

- The weighted-average life of prepayable assets in periods (for example, months or years) can be calculated by multiplying the principal collections expected in each future period by the number of periods until that future period, summing those products, and dividing the sum by the initial principal balance.

- Expected static pool losses can be calculated by summing the actual and projected future credit losses and dividing the sum by the original balance of the pool of assets.

2. Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees and cash flows received from a transferor’s beneficial interests.

b. For each statement of financial position presented, regardless of when the transfer occurred:

1. Qualitative and quantitative information about the transferor’s continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor’s risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk and other risks), including:

   (a) The total principal amount outstanding, the amount that has been derecognized and the amount that continues to be recognized in the statement of financial position.

   (b) The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

   (c) Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:
The type and amount of support.

The primary reasons for providing the support.

(d) Information is encouraged about any liquidity arrangements, guarantees and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor’s exposure to loss or risk of the related transferor’s interest.

2. The entity’s accounting policies for subsequently measuring assets and liabilities that relate to the continuing involvement with the transferred financial assets.

3. The key inputs and assumptions used in measuring the fair value of assets or liabilities that relate to the transferor’s continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates; expected prepayments, including the expected weighted-average life of pre-payable financial assets; and anticipated credit losses, including expected static pool losses).

4. For the transferor’s interests in the transferred financial assets, a sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests (including any servicing assets or servicing liabilities) of two or more unfavorable variations from the expected levels for each key assumption that is reported per SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities independently from any change in another key assumption, and a description of the objectives, methodology and limitations of the sensitivity analysis or stress test.

5. Information about the asset quality of transferred financial assets and any other assets that it manages together with them. This information shall be separated between assets that have been derecognized and assets that continue to be recognized in the statement of financial position. This information is intended to provide financial statement users with an understanding of the risks inherent in the transferred financial assets, as well as in other assets and liabilities that it manages together with transferred financial assets. For example, information for receivables shall include, but is not limited to:

- Delinquencies at the end of the period.
- Credit losses, net of recoveries, during the period.

Activity to Date (issues previously addressed by the Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): N/A

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS) and U.S. GAAP: N/A

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive to 1) expose new disclosure elements and 2) propose data-capture templates for existing disclosures in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. A blanks proposal exposure is anticipated to occur concurrently with the Working Group’s exposure. With inclusion of the data templates, narrative (pdf) reporting shall still occur to provide additional
information regarding transfers accounted for as a sale when the transferor maintains continuing involvement in the transferred financial assets. The purpose of the data-capture templates is so regulators can perform system inquiries to identify which reporting entities have such transactions, at which time further analysis of the narrative disclosures can be performed.

**Proposed disclosures to SSAP No. 103R**

28. A reporting entity shall disclose the following:

   g. For securitizations, asset-backed financing arrangements, and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary) with the transferred financial assets:

   i. For each income statement presented:

   (a) The characteristics of the transfer (including a description of the transferor’s continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

   (1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

   (2) The key inputs and assumptions used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor’s continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses).

   (b) Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees, and cash flows received from a transferor’s beneficial interests.

   ii. For each statement of financial position presented, regardless of when the transfer occurred:

   (a) Qualitative and quantitative information about the transferor’s continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor’s risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

   (1) The total original principal amount outstanding, the amount that has been derecognized, and the outstanding amount that continues to be
recognized in the statement of financial position. The percentage of original principal held in the company group and the percentage of derecognized principal held by related parties.

(2) The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

(3) Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:

(iii.) The type and amount of support

(iv.) The primary reasons for providing the support

(4) Information is encouraged about any liquidity arrangements, guarantees, and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor’s exposure to loss or risk of the related transferor’s interest.

Proposed Data Capture Template:

This data template includes aspects from SSAP No. 103R paragraphs 28g.i.(a & b), and 28.g.iii(a) as well as the new proposed disclosure elements. (While the entire proposed data capture template was new, only the additional proposed SSAP No. 103R disclosures were shown as tracked changes in the March 15th exposure, as shown immediately below).

Proposed Data Capture Template:

Each Material Transaction Listed Separately:

(Identification of each transaction should be consistent so that the circumstances for each item are adequately associated with the applicable transaction)

<table>
<thead>
<tr>
<th>Identification of Transaction</th>
<th>Original Principal</th>

Staff Review Completed by: Jim Pinegar – January 2021
Status:
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities to propose 1) new disclosure elements, and 2) a data-capture template for existing disclosures in SSAP No. 103R to capture disclosures for when a reporting entity has transferred (or sold) assets but still retains a material participation. A blanks proposal is anticipated to be concurrently exposed.

On April 20, 2021, the Statutory Accounting Principles (E) Working Group exposed updated revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. The updated exposure was drafted after receiving preliminary comments from interested parties and proposes 1) new disclosure elements, and 2) a data-capture template for certain existing disclosures in SSAP No. 103R to detail instances where a reporting entity has transferred (or sold) assets but still retains a material participation. An updated blanks proposal is anticipated to be concurrently exposed.

April 20, 2021 Updated Exposure and Disclosure Template:

Drafting Note: Subsequent to March exposure of this agenda item, Working Group representatives, NAIC staff and interested parties discussed regulator’s desire to identify situations in which a reporting entity has entered into a securitization, asset-backed financing or similar transfer transaction where a significant economic interest in the transferred asset is retained by the reporting entity, its related parties or another member within the holding company group. Through this discussion, refinement and explanatory language which was updated and exposed by the Working Group on April 20, has been collaboratively proposed. The updated SSAP No. 103R disclosure recommendation and the blanks proposal are shown below.

Updated Exposed Revisions to SSAP No. 103R – April 20, 2021:

SSAP No. 103R, paragraph 28.g.ii

ii. For each statement of financial position presented, regardless of when the transfer occurred:

(a) Qualitative and quantitative information about the transferor’s continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor’s risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

(1) The total principal amount outstanding (BACV), the amount that has been derecognized, and the amount that continues to be recognized in the statement of financial position. The amount recognized (allocated fair value) by the reporting entity for the acquired participation in the transferred assets. The reporting schedules of both the transferred and reacquired assets. The percentage of beneficial interests from the reporting entity’s transferred assets acquired by affiliated entities.
Updated Exposed Data Capture Template – April 20, 2021:

Instructions:
The purpose of this table is to provide a data capture template for certain disclosures required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, paragraph 28g. As detailed in paragraph 28.g.ii, disclosure is required for each statement of financial position presented, regardless of when the transfer occurred. Determination of continuing involvement shall be applied in accordance with the definition reflected in SSAP No. 103, Appendix A.

Columns requesting information that results in a null result (i.e., if column 5 results in a zero balance as 100% of the asset was transferred), shall indicate zero (0). In the event a column is not applicable, (i.e., if affiliated entities did not acquire an interest in the transferred asset), the column shall be referenced as zero (0).

In circumstances where an entity has multiple assets associated with a sale (i.e., several limited partnerships are sold as a single transaction), the assets should be aggregated and reported as a single transaction.

<table>
<thead>
<tr>
<th>Identification of Transaction</th>
<th>BACV Prior to Transfer</th>
<th>Original Reporting Schedule of the Transferred Assets</th>
<th>Amount Derecognized from Sale Transaction</th>
<th>Amount that continues to be recognized in the statement of financial position</th>
<th>BACV of acquired interests in transferred assets</th>
<th>Reporting Schedule of Acquired Interests</th>
<th>Percentage of interests of a reporting entity’s transferred assets acquired by affiliated entities</th>
</tr>
</thead>
</table>

Column 1 – Identification of each material transaction. Identification should be consistent across reporting periods so that the circumstances for each item are adequately associated with the applicable transaction.

Column 2 – The aggregate book value, at the time of transfer, of all assets associated with the transaction.

Column 3 – The investment schedule(s) in which the transferred assets were reported, immediately prior to the transfer. If the transferred assets were reported on multiple schedules, all reporting schedules shall be identified.

Column 4 – The aggregate book value derecognized from the investment schedules as a result of the transfer. If the assets were transferred in their entirety, Column 4 will equal Column 2.

Column 5 – The amount that continues to be recognized in the statement of financial position. This should equal Column 2 less Column 4.

Column 6 – The original BACV reported for acquired beneficial interests (or any other interest) in the previously transferred asset. (BACV for these transactions is often the allocated fair value associated with the transaction.)

Column 7 – The reporting schedule of the acquired beneficial interest reported in Column 6.

Column 8 - The percentage of interest of a reporting entity’s transferred assets acquired by an affiliate as defined in SSAP No. 25—Affiliates and Other Related Parties.
On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as illustrated above, to incorporate additional disclosure elements and a data-capture template for certain disclosures in SSAP No. 103R. The disclosures and data-capture template will assist regulators in their assessment of situations where an entity has transferred (or sold) assets but a significant economic interest in the transferred asset is retained by the reporting entity, its related parties or another member within the holding company group.
Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual*, such as editorial corrections, reference changes and formatting.

**Recommendation:**
NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as nonsubstantive, and expose editorial revisions as illustrated below.

**Status:**
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed editorial revisions to *SSAP No. 53—Property Casualty Contracts*, *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* and the SSAP Glossary as detailed below.

On May 20, 2021, the Statutory Accounting Principles adopted, as final, the exposed editorial revisions to *SSAP No. 53—Property Casualty Contracts*, *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* and the SSAP Glossary, as illustrated below.

**SSAP No. 53—Property Casualty Contracts – Premiums**

Retitle to *SSAP No. 53—Property and Casualty Contracts – Premiums*. This minor modification will title SSAP No. 53 in a consistent manner with other SSAPs (i.e., *SSAP No. 62R—Property and Casualty Reinsurance*).

**SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**

54. The purpose of a Sub 1 filing is to gather basic information about the SCA. If the NAIC determines that the reported transaction meets the tests specified, it will complete the filing in the VISION database. If the NAIC determines that the transaction does not meet the tests specified, it shall not complete the filing in the VISION database and instead shall notify the reporting insurance company and the state of domicile in writing of its determination.
SSAP Glossary

1) Remove the footnote in the SSAP Glossary title:
GLOSSARY to the Statements of Statutory Accounting Principles (FN)
FN – Note that some SSAPs may have terminology that is specific to that topic. Refer to the SSAP for clarification. Accordingly, they are not intended to be applied to other topics.

2) Add an opening paragraph:
The terms in this Glossary are common in most SSAPs. Some SSAPs may have terminology that is topic-specific and not intended to be applied to other topics.

**Description of Issue:**

In January 2021, the Financial Accounting Standards Board (FASB) issued *ASU 2021-02, Franchisors—Revenue from Contracts with Customers (Subtopic 952-606)*, slightly amending the guidance which was issued in *ASU 2014-09, Revenue from Contracts with Customers*, as it relates to franchisors. As a reminder, the revenue recognition updates were the result of a joint project between FASB and the International Accounting Standards Board (IASB). This project clarified the principles for recognizing revenue and develop a common revenue standard for U.S. GAAP and IFRS (the IASB issued *IFRS 15 – Revenue from Contracts with Customers*) and FASB created ASC Topic 606 – Revenue from Contracts with Customers.

In 2018, the Working Group rejected the guidance in ASU 2014-09 and several other ASUs related to Revenue Recognition in *SSAP No. 47—Uninsured Plans*. Since 2018, all additional ASUs related to revenue recognition have been reviewed by NAIC staff and have been rejected for statutory accounting. The guidance in ASU 2021-02 provides updates and clarifications to the guidance for franchisors, which include several unique accounting concepts that were not fully covered by ASU 2014-09 and ASC Topic 606.

The updates in ASU 2021-02 apply to entities that are not public business entities that are within the scope of Topic 952, which includes all entities that meet the definition of franchisor, that is, the party who grants business rights (the franchise) to the party (the franchisee) who will operate the franchised business. The amendments in this ASU were intended to reduce the cost and complexity of applying Topic 606 to pre-opening services for franchisors that are not public business entities by providing a practical expedient for applying Topic 606 to pre-opening services.

**Existing Authoritative Literature:**

Premium revenue recognition is detailed throughout the SSAPs, including the following: *SSAP No. 51—Life Contracts; SSAP No. 53—Property Casualty Contracts – Premiums; SSAP No. 54—Individual and Group Accident and Health Contracts and SSAP No. 57—Title Insurance*. The ASUs related to ASC Topic 606 have been rejected in SSAP No. 47.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** Agenda item 2016-19 and 2017-37 address the main ASUs related to ASC Topic 606 and there have been several other agenda items for minor updates to revenue recognition guidance.

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:**

None
Convergence with International Financial Reporting Standards (IFRS): ASC Topic 606 and IFRS 15 are the result of the joint project between the FASB and IASB to improve financial reporting by creating common revenue recognition guidance.

Staff Recommendation:
NAIC staff recommends the Working Group move this agenda item to the active listing, categorized as nonsubstantive and expose revisions to reject ASU 2021-02 in SSAP No. 47—Uninsured Plans. This recommendation is consistent with how the prior ASUs related to Topic 606 have been treated.

Staff Review Completed by: Jake Stultz, February 2021

Proposed Revisions to SSAP No. 47:

15. This statement rejects ASU 2014-09, Revenue from Contracts with Customers; ASU 2015-14, Revenue From Contracts With Customers; ASU 2016-08, Revenue From Contracts with Customers: Principal versus Agent Considerations (Reporting Revenue Gross versus Net); ASU 2016-10, Revenue from Contracts with Customers: Identifying Performance Obligations and Licensing; ASU 2016-12, Revenue from Contracts with Customers: Narrow-Scope Improvements and Practical Expedients; ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers; and ASU 2018-18, Collaborative Arrangements (Topic 808), Clarifying the Interaction between Topic 808 and Topic 606, and ASU 2021-02, Franchisors—Revenue from Contracts with Customers.

Status:
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 47—Uninsured Plans to reject ASU 2021-02, Franchisors – Revenue from Contracts with Customers.

On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 47—Uninsured Plans, as illustrated above, to reject ASU 2021-02, Franchisors—Revenue from Contracts with Customers for statutory accounting.
Issue: **ASU 2021-01, Reference Rate Reform**

**Check (applicable entity):**

- Modification of Existing SSAP: P/C, Life, Health
- New Issue or SSAP: P/C, Life, Health
- Interpretation: P/C, Life, Health

**Description of Issue:**
In March 2020, the Financial Accounting Standards Board (FASB) issued *ASU 2020-04, Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* to ensure the financial reporting of hedging relationships would reflect a continuation of the original contract and hedging relationship during the period of the market-wide transition to alternative reference rates – commonly referred to as “reference rate reform.” Reference rate reform typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it would no longer require banks to continue rate submissions after 2021 – thus, likely sunsetting both the use and publication of LIBOR.

As is often the case with hedge accounting, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a redesignation of the transaction. However, *ASU 2020-04* provides temporary, optional, and expeditious relief in that a qualifying modification (because of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. In essence, when a modification (because of reference rate reform) is made to a hedge’s critical terms, a reporting entity can continue hedge accounting rather than redesignate the hedging relationship. For fair value hedges, a reporting entity may change the hedged risk to another permitted benchmark interest rate without redesignating the relationship; that is if the hedge is expected to remain highly effective in offsetting changes in fair value attributed to the revised hedged risk. For cash flow hedges, a reporting entity may change to another permitted benchmark interest rate without redesignating the relationship if the forecasted hedge transaction remains probable of occurring.

The derivatives market continues to undergo various other transitions due to reference rate reform initiatives, specifically changing the reference rates used for marginging, discounting, or contract price alignment (this change is referred to as a “discounting transition”). While these changes are related to reference rate reform, they are not modifying an interest rate that is expected to be discontinued (e.g., LIBOR). The most prevalent example of a discounting transition occurred in October of 2020 with Central Clearing Parties (CCP). In October of 2020, the CME Group switched to using the Secured Overnight Financing Rate (SOFR) from the Effective Federal Funds Rate (EFFR) to discount, margin and price align most U.S. Dollar based derivative products. A change in the discount rate results in an immediate increase or decrease in a derivative’s fair value, which can affect required variation margin payments. In addition, using SOFR instead of EFFR impacts the amount of interest an entity will pay or receive in the related cumulative variation margin. Questions arose in that if a change in these terms would require hedge redesignation, or if these situations should be afforded the relief offered in *ASU 2020-04*.

In January 2021, FASB issued *ASU 2021-01, Reference Rate Reform* to clarify that all derivative instruments affected by changes to the interest rates used for discounting, marginging or contract price alignment (regardless of whether they reference LIBOR or another rate that is expected to be discontinued as a result of reference rate reform)
are in scope of Topic 848. In short summary, for all derivatives affected by the discounting transition, entities may apply the optional expedients and the continuation of contract exceptions allowed in ASU 2020-04.

ASU 2021-01 expands the scope of ASU 2020-04 by allowing an entity to apply the optional expedients, by stating that a change to the interest rate used for margining, discounting or contract price alignment for a derivative is not considered to be a change to the critical terms of the hedging relationship that requires dedesignation. The entity may apply the contract modification relief provided in ASU 2020-04 and continue to account for the derivative in the same manner that existed prior to the changes resulting from reference rate reform or the discounting transition.

Other Items:
The discounting transition previously discussed was primarily driven by CCPs. In October of 2020, CCPs converted open derivative end-of-day valuation calculations from EFFR to SOFR. The process entailed CCPs conducting a standard end-of-day valuation cycle based on EFFR. Then, CCPs conducted a special valuation cycle on those same positions, however utilizing SOFR as the new, ongoing discounting rate. Based on the differences between EFFR and SOFR, the CCP issued variation margin adjustments to offset the value differences arising from the change in discount rates. In addition to variation margin adjustments, CCPs issued mandatory EFFR/SOFR basis swaps, thus restoring the account holder’s original risk profile. ASU 2021-01 provides guidance for the final settlement of cashflows stating that fair value hedges may adjust the fair value hedge basis while cash flow hedges may adjust accumulated other comprehensive income. The accounting, reporting, and admittance of basis swaps was previously addressed by the Working Group in INT 20-09: Basis Swaps as a Result of the LIBOR Transition and is further discussed in the “Activities to Date” section of this agenda item.

Informal note, feedback received from interested parties indicates that most basis swaps were liquidated prior to year-end 2020.

Finally, the effective date of ASU 2021-01 mimics the effective date of ASU 2020-04 in that the optional, expedient guidance may be applied from the beginning of an interim period that includes or is after March 12, 2020 and terminates December 31, 2022.

Existing Authoritative Literature:

ASU 2021-01 effectively increases the scope of the optional, expedient accounting guidance for derivative instruments in ASU 2020-04. Accordingly, only applicable derivative authoritative literature will be shown below. While detailed in the original agenda item (Ref #2020-12), additional SSAPS impacted by ASU 2020-04 were SSAP No. 15—Debt and Holding Company Obligations and SSAP No. 22R—Leases.

The modifications in ASU 2020-04 address hedge accounting and the allowance for a reporting entity to change the reference rate and other critical terms related to reference rate reform without having to dedesignate the hedging relationship. While alternative benchmark interest rates were previously addressed in agenda item 2018-46 – Benchmark Interest Rate, the accounting for hedged transactions is noted below, with applicable areas bolded for emphasis.

Relevant/Applicable of Overview of existing SAP Accounting – SSAP No. 86—Derivatives

12. “Benchmark Interest Rate” is a widely recognized and quoted rate in an active financial market that is broadly indicative of the overall level of interest rates attributable to high-credit-quality obligors in that market. It is a rate that is widely used in a given financial market as an underlying basis for determining the interest rates of individual financial instruments and commonly referenced in interest-rate-related transactions. In theory, the benchmark interest rate should be a risk-free rate (that is, has no risk of default). In some markets, government borrowing rates may serve as a benchmark. In other markets, the benchmark interest rate may be an interbank offered rate. In the United States, the interest rates on direct Treasury
obligations of the U.S. government, the London Interbank Offered Rate (LIBOR) swap rate, the Fed Funds Effective Rate Overnight Index Swap Rate, the Securities Industry and Financial Markets Association (SIFMA) Municipal Swap Rate, and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap Rate are considered to be benchmark interest rates.

Derivatives Used in Hedging Transactions

20. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

21. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. A change in the counterparty to a derivative instrument that has been designated as the hedging instrument in an existing hedging relationship would not, in and of itself, be considered a termination of the derivative instrument. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

   a. Any criterion in paragraphs 24-36 is no longer met;
   b. The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 22);
   c. The entity removes the designation of the hedge; or
   d. The derivative is deemed to be impaired in accordance with paragraph 17. A permanent decline in a counterparty’s credit quality/rating is one example of impairment required by paragraph 17, for derivatives used in hedging transactions.

22. For those derivatives which qualify for hedge accounting, the change in the carrying value or cash flow of the derivative shall be recorded consistently with how the changes in the carrying value or cash flow of the hedged asset, liability, firm commitment or forecasted transaction are recorded. Upon termination of a derivative that qualified for hedge accounting, the gain or loss shall adjust the basis of the hedged item and be recognized in income in a manner that is consistent with the hedged item (alternatively, if the item being hedged is subject to IMR, the gain or loss on the hedging derivative may be realized and shall be subject to IMR upon termination.) Entities who choose the alternative method shall apply it consistently thereafter.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
The Working Group has taken several actions related to reference rate reform; each are summarized below.

1. Agenda item 2018-46 – Benchmark Interest Rate, incorporated revisions to SSAP No. 86, adding the Securities Industry and Financial Markets (SIFMA) Municipal Swap Rate and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap (OIS) Rate as acceptable benchmark interest rates for hedge accounting. Prior to this change, only LIBOR and the Fed Funds Effective Swap Rate (also referred to as the Overnight Index Swap Rate) were considered acceptable benchmark interest rates.

2. Agenda item 2020-12 reviews ASU 2020-04, the foundation of which this agenda item and related ASU (2021-01) are based. Agenda item 2020-12 resulted in the Working Group adopting INT 20-01.

3. INT 20-01: ASU 2020-04 - Reference Rate Reform, adopted by the Working Group in April 2020, broadly adopted ASU 2020-04 for statutory accounting stating that for statutory accounting:
   - For all contracts within scope of ASU 2020-04, modifications due to reference rate reform are afforded an optional expedient to be accounted for as a continuation of the existing contract.
   - Debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15—Debt and Holding Company Obligations states such liabilities should only be derecognized if extinguished.
   - Lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under SSAP No. 22R—Leases.
   - For derivative transactions within scope of ASU 2020-04, a change to the critical terms of the hedging relationship (due to reference rate reform), shall be afforded similar treatment in that the hedging relationship can continue the original hedge accounting rather than designdate the hedging relationship.

4. INT 20-09: Basis Swaps as a Result of the LIBOR Transition, adopted by the Working Group in July 2020, provided statutory accounting and reporting guidance for basis swaps issued by CCPs. This INT designated that basis swaps, issued by CCPs, in response to reference rate reform (i.e., the discounting transition), shall be classified as a derivative used for hedging. This categorization allowed for the basis swap derivatives to be admitted under SSAP No. 86. Additionally, the INT directed that basis swap derivatives shall not be reported as “effective” unless the instrument qualifies, with the required documentation, as highly effective under SSAP No. 86.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: N/A

Convergence with International Financial Reporting Standards (IFRS): IFRS has taken a similar approach when considering Reference Rate Reform’s impact on IFRS 9 (Financial Instruments), IAS 39 (Recognition and Measurement), and IFRS 7 (Financial Instruments – Disclosures).

NAIC Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose temporary (optional) expedient and exception interpretative guidance, with an expiration date of December 31, 2022. These optional expedients would expand the current exception guidance provided by INT 20-01: ASU 2020-04 - Reference Rate Reform. With this guidance, derivative instruments affected by changes to the interest rates used for discounting, margining or contract price alignment (regardless of whether they reference LIBOR or another rate that is expected to be discontinued
as a result of reference rate reform) would be in scope of INT 20-01. This exception would allow for continuation of the existing hedge relationship and thus not requiring hedge dedesignation.

The proposed modifications to INT 20-01 temporarily override SSAP No. 86 guidance for affected policies, therefore the policy statement in Appendix F requires 2/3rd (two-thirds) of the Working Group members to be present and voting and a supermajority of the Working Group members present to vote in support of the interpretation before it can be finalized.

**Staff Review Completed by:** Jim Pinegar, NAIC Staff – January 2021

**Status:**
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed temporary (optional) expedient and exception interpretative guidance, with an expiration date of December 31, 2022. These optional expedients would expand the current exception guidance provided by *INT 20-01: ASU 2020-04 – Reference Rate Reform*. With this guidance, derivative instruments affected by changes to interest/reference rates because of reference rate reform (regardless of whether they reference LIBOR or another rate that is expected to be discontinued), in which are used for discounting, margining or contract price alignment would be in scope of the exception guidance afforded in INT 20-01. This exception would allow for continuation of the existing hedge relationship and thus not requiring hedge dedesignation.

On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, which incorporated proposed interested party edits, to *INT 20-01: ASU 2020-04 – Reference Rate Reform*. The revisions expand the current exception guidance provided in the INT and provide additional temporary (optional) expedient and exception interpretative guidance, with an expiration date of December 31, 2022. With this guidance, derivative instruments affected by changes to the interest rates used for discounting, margining or contract price alignment (regardless of whether they reference LIBOR or another rate that is expected to be discontinued as a result of reference rate reform) will be in scope of INT 20-01. This exception will allow for continuation of the existing hedge relationship and thus not require hedge dedesignation. This INT is all-encompassing for “any hedging relationships” within the scope of the interpretation and captures all hedging transaction types, regardless of if the transaction occurred bilaterally or through a central clearing party.
Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-01: ASUs 2020-04 & 2021-01 - Reference Rate Reform

INT 20-01 Dates Discussed

March 26, 2020; April 15, 2020; March 15, 2021, May 20, 2021

INT 20-01 References

Current:
- SSAP No. 15—Debt and Holding Company Obligations
- SSAP No. 22R—Leases
- SSAP No. 86—Derivatives

This INT applies to all SSAPs with contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

INT 20-01 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of ASU 2020-04, Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting and ASU 2021-01, Reference Rate Reform (Topic 848) for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued both ASU 2020-04 and ASU 2021-01 in March 2020 to provide as optional, transitional and expedient guidance as a result of reference rate reform.

2. “Reference rate reform” typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it will no longer require banks to continue LIBOR submissions after 2021 – likely sunsetting both the use and publication of LIBOR. An important note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform.

3. With a significant number of financial contracts solely referencing IBORs, their discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a redetermination of the transaction.

4. The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-wide initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB determined that the traditional financial reporting requirements of discontinuing such contracts and treating the
modified contract as an entirely new contract or hedging relationship would 1) not provide decision-useful information to financial statement users and 2) require a reporting entity to incur significant costs in the financial statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

5. Guidance in ASU 2020-04 allows a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or redesignation if certain criteria are met.

5.6. Guidance in ASU 2021-01 expanded the scope of ASU 2020-04 by permitting the optional, transitional, expedient guidance to also include derivative contracts that undergo a similar transition but do not specifically reference a rate that is expected to be discontinued. While these contract modifications do not reference LIBOR (or another reference rate expected to be discontinued), the changes are the direct result of reference rate reform and were deemed to be eligible for similar exception treatment. ASU 2021-01 allows for modifications in interest rates indexes used for margining, discounting or contract price alignment, as a result of reference rate reform initiatives (commonly referred to as a “discounting transition”) to be accounted for as a continuation of the existing contract and hedge accounting.

6.7. The optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04 and ASU 2021-01 are applicable for all entities. However, they are only effective as of March 12, 2020 through December 31, 2022. This is because the amendments in ASU 2020-04 are intended to provide relief related to the accounting requirements in generally accepted accounting principles (GAAP) due to the effects of the market-wide transition away from IBORs. The relief provided by the amendments is temporary in its application in alignment with the expected market transition period. However, the FASB will monitor the market-wide IBOR transition to determine whether future developments warrant any changes, including changes to the end date of the application of the amendments in this ASU. If such an update occurs, the Working Group may also consider similar action. It is not expected that the Working Group will take action prior to or in the absence of a FASB amendment.

7.8. The accounting issues are:

   a. Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?

   b. Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?

   c. Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?

   d. Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?

   d.e. Issue 5: Should the optional, expedient and exception guidance in ASU 2021-01 apply to derivative transactions addressed in SSAP No. 86?

INT 20-01 Discussion

8.9. For Issue 1, the Working Group came to the consensus that ASU 2020-04 shall be adopted, to include the same scope of applicable contracts or transactions for statutory accounting with the only modification related to a concept not utilized by statutory accounting, as noted below. The Working Group agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:
a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.

  i. All contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

b. Allows hedging relationships to continue without redesignation upon a change in certain critical terms.

c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.

d. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.

e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.

f. The only SAP modification to this ASU is related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

For Issue 2, the Working Group came to the consensus that debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized if extinguished. A reference rate modification should not generally require de-recognition and re-recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to the consensus that should an eligible contract be affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

For Issue 3, the Working Group came to the consensus that lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease. These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to a consensus that if an eligible lease affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

For Issue 4, the Working Group came to the consensus that ASU 2020-04 shall be applied to derivative transactions as the following considerations provided in the ASU are appropriate for statutory accounting:

a. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than redesignate the hedging relationship.

b. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.

c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.

d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.
For Issue 5, the Working Group came to a consensus on May 20, 2021, that ASU 2021-01 shall be applied to derivative transactions for statutory accounting. Accordingly, derivative instruments that are modified to change the reference rate used for margining, discounting, or contract price alignment that is a result of reference rate reform (regardless of whether the reference rate that is expected to be discontinued) are eligible for the exception guidance afforded in ASU 2020-04 in that such a modification is not considered a change in the critical terms that would require redesignation of the hedging relationship. In addition, for all derivatives (those qualifying for hedge accounting, those that do not qualify for hedge accounting and replication (synthetic asset) transactions (RSAT)), a reporting entity may account for and report modifications (that are within the scope of INT 20-01) as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract and its replacement with a new reference rate reform contract. This includes in-scope modifications of centrally cleared swap contracts whether they are automatically transitioned at a cessation date or voluntarily executed prior to cessation.

Additionally, for GAAP purposes, if an entity has not adopted the amendments in ASU 2017-12, Derivatives and Hedging, it is precluded from being able to utilize certain expedients for hedge accounting. For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 2017-12, while the remainder of the items are pending statutory accounting review. The Working Group concluded that all allowed expedient methods are permitted as elections for all reporting entities under statutory accounting. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.

**INT 20-01 Status**

No further discussion is planned.

Description of Issue:
NAIC staff have received several inquiries related to the statutory accounting treatment for cryptocurrencies, which are defined as a digital currency in which transactions are verified and records maintained by a decentralized system using cryptography, rather than by a centralized authority, such as the Federal Reserve System. These questions generally inquiry whether Bitcoin is permitted to be admitted, but a recent inquiry asked whether Bitcoin is captured in the cash definition within SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments.

The most valuable cryptocurrency as of February 2021 is Bitcoin, which has been in circulation since 2009. Cryptocurrencies are currently purchased and exchanged using a limited number of unregulated digital currency exchanges. As of February 2021, there are approximately 4,000 different cryptocurrencies available on 200 different cryptocurrency exchanges. Cryptocurrencies have seen significant price volatility and have experienced an extreme increase in value over the past year, with the value of total outstanding cryptocurrencies nearing $1 trillion as of February 2021. The total market value and increased popularity has led to increased interest in the market by traditional financial institutions. Additionally, the recently steep increase in value has attracted speculative investors.

For statutory accounting, cash is defined in SSAP No. 2R as a “medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account.” Cryptocurrencies do not meet this definition because these assets are not able to be deposited or exchanged with most U.S. banks and financial institutions. There have been some recent changes in the market as PayPal now allows users to buy, sell and hold some cryptocurrencies. It is important to note that PayPal is not recognized as a bank. In addition to Bitcoin, some banks have shown interest in stablecoins, which trade like cryptocurrencies but are pegged to existing government-backed currencies, such as the U.S. dollar. NAIC staff are aware that this treatment is evolving and that in the future banks may accept cryptocurrencies in the same manner as true government-backed currencies, which could then meet the statutory accounting definition of cash. However, at this time, NAIC staff note that cryptocurrencies currently do not meet the definitions of cash equivalents, drafts, or short-term investments as they are defined in SSAP No. 2R.

With regards to the inquiry on whether cryptocurrencies are considered admitted assets, pursuant to SSAP No. 4—Assets and Nonadmitted Assets, paragraph 3, assets are not permitted to be admitted unless specifically identified as an admitted asset within the Accounting Practices and Procedures Manual. As such, as cryptocurrencies are not specifically identified as admitted, these are nonadmitted assets.

At this time, no Committees or groups at the NAIC, including the Securities Valuation Office (SVO), have taken any action or established a position on cryptocurrencies. Currently, auditors must rely on guidance provided by the American Institute of Certified Public Accountants through a nonauthoritative practice guide.
Existing Authoritative Literature:
Cash is defined in SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments as a “medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account.” SSAP No. 4—Assets and Nonadmitted Assets provides guidance that assets which are not addressed in the Accounting Practices and Procedures Manual default to nonadmitted status. Nonadmitted assets are detailed in SSAP No. 20—Nonadmitted Assets.

SSAP No. 4
3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:
   a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose the interpretative guidance provided by INT 21-01T: Statutory Accounting Treatment for Cryptocurrencies. This guidance clarifies that cryptocurrencies do not meet the definition of cash in SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments and are nonadmitted assets for statutory accounting. NAIC staff will continue to monitor the evolution of cryptocurrencies and address this topic further, including addressing any statements made by FASB or the AICPA, for any significant changes in the usage and design of cryptocurrencies.

With this exposure, the Working Group requests input from Interested Parties and the insurance company trade groups that follow the Working Group to gather information from their members on current ownership of cryptocurrencies. The Working Group requests information on:

1. Extent to which companies currently hold cryptocurrencies,
2. How the acquisition in cryptocurrency is held (held directly by the insurer or indirectly through and SCA),
3. Which cryptocurrencies they are acquiring in (Bitcoin, Ethereum, Litecoin, etc.), and
4. General level of interest for future investment by both companies that currently do and do not own cryptocurrencies.

**Staff Review Completed by: Jake Stultz, February 2021**

**Status:**
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the interpretative guidance in INT 21-01T: Statutory Accounting Treatment for Cryptocurrencies to clarify that cryptocurrencies do not meet the definition of cash in SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments and are nonadmitted assets for statutory accounting. With the exposure, information from industry is requested per the above recommendation.

On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, INT 21-01: Statutory Accounting Treatment for Cryptocurrencies. The INT clarifies that directly held cryptocurrencies do not meet the definition of cash in SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments nor, when directly held, meet definition of an admitted asset per SSAP No. 4—Assets and Nonadmitted Assets. The adoption included minor edits to the exposure, which added the phrase “directly held.”
Interpretation of the Statutory Accounting Principles Working Group

INT 21-01: Accounting for Cryptocurrencies

INT 21-01 Dates Discussed

March 15, 2021, May 20, 2021

INT 21-01 References

SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments

INT 21-01 Issue

1. This agenda item is to address questions regarding statutory accounting treatment for cryptocurrencies, which are defined as a digital currency in which transactions are verified and records maintained by a decentralized system using cryptography, rather than by a centralized authority. Cryptocurrencies are purchased and exchanged using a limited number of unregulated digital currency exchanges and are not held or offered by major banks.

2. The most valuable cryptocurrency as of February 2021 is Bitcoin, which has been in circulation since 2009, and there are approximately 4,000 different cryptocurrencies available on 200 different cryptocurrency exchanges. Cryptocurrencies have seen significant price volatility and have experienced an extreme increase in value over the past year, with the value of the total outstanding cryptocurrencies nearing $1 trillion as of February 2021. The total market value and increased popularity has led to increased interest in the market by traditional financial institutions and insurance companies.

3. No NAIC Committees or groups have taken any action or established a position on cryptocurrencies. Currently, auditors must rely on guidance provided by the American Institute of Certified Public Accountants through a nonauthoritative practice guide.

4. This Interpretation intends to clarify that directly held cryptocurrencies are nonadmitted assets for statutory accounting.

INT 21-01 Discussion

5. Directly held cryptocurrencies have not been identified in the Accounting Practices and Procedures Manual (AP&P Manual) as an admitted asset, and do not meet the definition of any admitted asset that is defined in the AP&P Manual. Accordingly, by default they are a nonadmitted asset per SSAP No. 4—Assets and Nonadmitted Assets, paragraph 3, as they are not specifically identified in the Accounting Practices and Procedures Manual as an admitted asset.

6. Cash is defined in SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments as a “medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account.” Cryptocurrencies are currently not accepted by major banks and do not operate like a traditional currency, and as such do not meet the definition of cash in SSAP No. 2R.
INT 21-01 Consensus

7. The Statutory Accounting Principles (E) Working Group reached a consensus that directly held cryptocurrencies do not meet the definition of an admitted asset and are therefore considered to be a nonadmitted asset for statutory accounting. The Working Group intends to rely on this interpretation for statutory accounting and will address cryptocurrencies further once FASB has provided definitive guidance.

INT 21-01 Status

8. No further discussion is planned.

9. The Statutory Accounting Principles (E) Working Group will continue to monitor the evolution of cryptocurrencies and subsequently review this interpretation as appropriate.
MEMORANDUM

TO: Philip Barlow (DC), Chair, Life Risk-Based Capital (E) Working Group
FROM: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
Carrie Mears (IA), Vice-Chair, Statutory Accounting Principles (E) Working Group
DATE: May 20, 2021
RE: SAPWG Response to the Life Real Estate Proposal

The Statutory Accounting Principles (E) Working Group appreciates the opportunity to provide comments to the Life Risk-Based Capital (E) Working Group on the American Council of Life Insurers (ACLI) proposal to modify the treatment of real estate in the life risk-based capital (RBC) formula. This proposal would potentially reduce the life RBC charges for real estate based on the fair value reported. The SAPWG understands the Life RBC (E) Working Group has adopted the structure for this change and is now reviewing whether the factors to be used will reduce charges. In summary, with the limited appraisal provisions of SSAP No. 40R—Real Estate and what appears to be inconsistent historical fair value data reported in Schedule A – Part 1: Real Estate Owned, the SAPWG identifies that relying on fair value amounts reported in Schedule A to influence real estate RBC could create a situation that is susceptible to RBC optimization. The following three points further highlight this conclusion for the Schedule A proposal:

1. **Fair Value Supplemental Disclosure** – The fair value reported for real estate captured on Schedule A is only a disclosure element and is not utilized in determining the reported balance sheet amount (book adjusted carrying value - BACV) or a company’s financial condition when exceeding the reported amount. This disclosed fair value is generally considered supplementary information and not subject to audit or verification procedures.

2. **Fair Value only for OTTI** – Other than supplemental information, the intent of fair value appraisals / assessment disclosure is for purposes of determining whether an other-than-temporary impairment (OTTI) assessment is required, not for the evaluation of unrealized gains. There are a number of reporting entities that have historically left the fair value field blank for some properties or reported a fair value amount that equals the reported BACV of the real estate. (These zero values / matching BACV reporting represent 29% of Schedule A properties. Detailed data can be provided to the Life RBC Working Group staff.) This reporting has been noted even when recent appraisals have been obtained. If the appraisal supported the balance sheet reported value, some entities simply reported BACV as the proxy for fair value, presumably because there was no incentive to use resources to calculate a different fair value. This proposal will require additional resources from companies to ensure comparability of RBC, potentially creating a disparate impact in RBC calculation between large and small reporting entities if such resources are not readily available.
3. **5 Year Appraisal** – The statutory accounting “every 5-year appraisal requirements for admittance” only impacts real estate that is income producing or held for sale. There is no ongoing appraisal requirement for property that is occupied by the reporting entity. Furthermore, there is no requirement for a current appraisal prior to revising the fair value reported for any of the real estate categories. From a review of the 2020 investment schedule detail, it was noted that some reporting entities made significant changes to the reported fair value, although the last appraisal (if any) occurred years prior.

In addition to the points raised for the Schedule A proposal, there are additional concerns for this proposal if it is applied to investments captured in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and reported on Schedule BA – Other Long-Term Invested Asset as having underlying characteristics of real estate. These Schedule BA concerns are summarized as points 4-6 as follows:

4. **Subjectivity of Schedule BA classification and transparency of movement within** – Classification of SSAP No. 48 investments on Schedule BA as having “underlying characteristics of real estate” is subjective. The instructions indicate the investments should have “real estate development interest,” and direct that if the requisite details are not available for reporting, then the investment should be reported in the Schedule BA “Other” category. With a potential reduction of RBC based on fair value (particularly as the “Schedule BA Other” category has the highest RBC charge of all asset classes), this change may result with an increase of SSAP No. 48 investments being classified from “Other” to having underlying real estate interests. Under current RBC factors, the variation between these Schedule BA reporting lines (0.23 and 0.30 respectively) does not create a significant motivation for this reclassification. However, if this comparison were to significantly change – and perhaps result with the elimination of RBC based on fair value differentiation – there is a significant motivation for a company to reassess whether an investment could be considered to have characteristics of underlying real estate. Furthermore, movement between reporting lines on the same schedule does not trigger any regulator indicator for assessment. It is only when investments move from one schedule to another are they captured as disposals and reacquisitions and can be identified.

5. **U.S. GAAP valuation of real estate inside holding company** – SSAP No. 48 investments are required to be audited for admittance with the BACV reflecting the reporting entity’s share, calculated using the equity method, of the SSAP No. 48 investment. The equity method begins with cost and is adjusted to reflect gains and losses within the structure not distributed to the investors. Whether those gains / losses reflect fair value changes of the underlying real estate in the SSAP No. 48 structure depends on the measurement method used within the investment structure. Under U.S. GAAP, certain structures may be required to measure holdings at fair value. (If not required, fair value may be an election by the reporting entity.) This could result with significant variation on whether the proposal influences RBC:
a. SSAP No. 48 structures that account for the underlying real estate at historical cost would likely have a lower BACV and a potential higher fair value on Schedule BA. The lower BACV is already incurring a lower RBC impact, and under the proposal, the RBC impact could be further decreased based on the differential between BACV and fair value.

b. SSAP No. 48 structures that account for the underlying real estate at fair value would likely have a higher BACV and a lower differential to the fair value reported on Schedule BA. The higher BACV is already incurring a higher RBC impact and would be less likely to be reduced based on fair value under the proposal.

6. **No appraisal requirement for Schedule BA Real Estate** – There is no requirement for appraisals of the underlying real estate held within a SSAP No. 48 structure. As such, regardless of whether the underlying real estate is held at fair value in the SSAP No. 48 structure, or if the reporting entity is calculating fair value for the entire SSAP No. 48 structure for reporting on Schedule BA, there are no appraisal requirements to validate the fair value calculation of the underlying real estate property. Pursuant to **SSAP No. 100—Fair Value**, these fair value calculations can be entity-determined based on the entity’s own assumptions of what a market participant would assume in pricing the asset. Consistent with the comments for the proposal on Schedule A, the fair value column on Schedule BA is only a disclosure element and is not utilized in determining the reported balance sheet amount (BACV) or a company’s financial condition. Other than supplemental information, the intent of the fair value disclosure is for purposes of determining whether an OTTI assessment is required.

In response to these six points, it is noted that incorporating the ACLI proposal in the current year would likely result in inconsistent application in RBC as well as result with an environment that incentivizes companies to potentially inflate reported fair values to optimize their RBC results. Although the SAPWG notes concerns with the use of fair value to influence real estate RBC, if further consideration is supported, the following initial suggestions are offered:

1. Delay adjusting current factors until at least 2022 to ensure time for examiners to expand procedures to include an assessment of reported fair values on Schedule A and Schedule BA. This would also allow time for companies that have historically not determined fair value beyond the amount needed to support BACV to revise their procedures so that the proposed RBC change will uniformly impact companies. This may not be feasible if Life RBC Working Group decides real estate and bond factors should be updated to start with the same year-end.

2. Establish guidance to restrict fair values used for RBC to the “lesser of” current or prior year reported fair values, or possibly averaging reported fair values across multiple years. Such guidance would prevent reporting entities from increasing fair value in the current year to
optimize RBC results or in response to an expected RBC shortfall. This would also allow regulators time to review updated fair value amounts, particularly if there are significant increases from past reported amounts before the increased fair value is used to reduce RBC.

Summary
After review of the year-end 2020 reported Schedule A and Schedule BA information and the SSAP No. 40R appraisal requirements and SSAP No. 48 reporting requirements, the Statutory Accounting Principles (E) Working Group has concerns on the reliability and consistency of data with the ACLI proposal to allow reporting entities to reduce RBC through their reported fair value of real estate. Additional time and safeguards are needed to ensure consistent treatment across reporting entities, ensure regulators have procedures in place to assess reported fair value information and prevent situations in which reporting entities can utilize this guidance to optimize RBC results or prevent an RBC shortfall that hinders proper assessment of the entity’s financial condition.

If you have any questions on this referral response, please contact Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group, or Julie Gann, NAIC staff.

c: Jane Barr, Dave Fleming, Julie Gann, Robin Marcotte, Jim Pinegar, Jake Stultz, Fatima Sediqzad
In this memorandum and the subsequent responses to the questions from the Working Group in its communication of Jan. 22, 2021, the SVO would like to reflect its continued strong support for this asset class and the re-assessment of the current 5% cap on balloon payments in credit tenant loan (CTL) transactions. We thought it was important to highlight some of the unique characteristics of these investments and the potential risks posed by greater reliance on the residual value of the underlying property and increased reliance on rating agencies.

Credit Tenant Loan Overview

CTLs are a type of commercial real estate financing secured by one or more properties leased to a credit tenant. CTL structures are unique in that the credit risk is based solely upon the lessee's credit worthiness instead of the value of the real estate collateral. Pursuant to the lease terms of a CTL, the credit tenant is obligated to make rent payments regardless of casualty or condemnation and assumes responsibility for all operating, maintenance, and insurance expenses and real estate taxes with no lease "outs" (ways to avoid making lease or associated payments). Any obligations retained by the landlord, such as payment of maintenance, must be addressed though insurance or another acceptable mitigant. Additionally, CTLs are structured so that lease payments are available to timely pay the debt service, including the full amortization of the principal, along with all other costs related to the property. The investors benefit from a security interest in the real estate collateral but this protection only serves to benefit the noteholders if the lessee defaults on rent leading to a default on note payments.

Balloon Payments

The current Purposes and Procedures Manual of the Investment Analysis Office (the P&P) guidance permits balloon payments in CTL transactions of up to 5% of the original loan balance which do not correspond to a lease payment. This balloon amount can be greater so long as the risk is appropriately mitigated through residual value insurance or another mitigant. Since the final lease payment will not cover the balloon payment owed under the note, balloon payments are dependent on the proceeds from...
the landlord’s re-leasing of the property necessary for refinancing the debt or, failing that, its sale. Balloon payments therefore expose the noteholder to the residual value of the property and the risk that it might not be sufficient to cover the remaining balance of the note.

“Dark Value”

The value ascribed to real estate collateral is often called its “dark value.” Dark value is estimated from the possible future re-leasing of the commercial property and includes lump-sum charges for lost rent, re-tenanting costs, brokerage costs, brokerage fees, unreimbursed maintenance, and other holding-period or re-leasing expenses. The existing 5% limit of on balloon payments in the CTL guidelines minimizes the exposure to the real estate collateral’s dark value. However, with each percent increase in balloon payment size there is a lockstep increase in the residual exposure to the property’s dark value and the ability to re-lease the asset at a sufficient rate.

The SVO’s Opinion

The Working Group has asked the SVO whether it thinks it appropriate to revisit the 5% residual threshold in the CTL guidelines and, if so, to recommend an appropriate residual threshold. The SVO thinks the residual threshold should be revisited but we do not have a specific threshold to recommend. The SVO can assess the risk of, and assign NAIC Designations to, transactions with any level of residual exposure that the Working Group and Task Force approves, from 0% to 100%. The debt markets are awash in securities with repayment contingent on the re-leasing or liquidation of an asset and residual exposures at all levels, including greater than 100%. This shift in risk from the lessee's credit worthiness to the collateral asset's value can apply to any security backed by leased assets, whether they be railcars, aircraft, aircraft engines, vessels, shipping containers, etc., if repayment of the loan is dependent in part on the future re-leasing or sale of the asset. The appropriate residual threshold is really a question of what constitutes a bond for financial solvency, regulatory and statutory accounting purposes and, more specifically, what amount of residual exposure (i.e. direct exposure to an underlying asset at the end of an investment) should be permitted in insurance companies' debt investments. The SVO is not well positioned to answer with a specific threshold because its primary responsibility is credit assessment, which can performed on any level of residual risk, but would suggest the Working Group consider the financial effect to the investor of having to rely upon the future re-leasing of the property in order to refinance the debt or the sale of the asset for payment at maturity.

“Asset-Backed Securities” pursuant to Regulation AB

There have been recommendations for a 50% residual threshold based on the definition of “Asset-Backed Security” under the U.S. Securities and Exchange Commission’s (SEC) Regulation AB (17 CFR § 220.1101). Regulation AB dictates the disclosure and reporting requirements for publicly offered asset backed securities which, as defined in the regulation, includes non-auto lease backed securities with residual exposures up to, but not including, 50%, by dollar amount, of the securitized pool balance. The residual threshold drops to 20% if the securities are offered as part of a shelf registration. The regulation was intended to provide for better disclosure of asset level information and, by providing investors with timely and sufficient information, to reduce the likelihood of undue reliance on credit ratings. A security
with greater than 50% residual exposure could also be registered with the SEC but with different disclosure and reporting requirements. Likewise, a security with 49% residual exposure which meets the Regulation AB definition of “Asset-Backed Security” could be privately placed. Neither security would be subject to Regulation AB, but we would assert both are “asset-backed” securities. We make this point to demonstrate that the Regulation AB definition of Asset-Backed Security, while convenient, is not necessarily a compelling basis for determining a level of residual exposure compatible with NAIC’s regulatory objectives. According to the SEC’s 2004 proposing release for Regulation AB (SEC Release Nos. 33-8419; 34-49644) the SEC arrived at the 50% threshold “after reviewing residual value percentages for typical lease-backed securitizations.” The SEC’s disclosure regulations and regulatory objectives should not necessarily influence the NAIC’s regulatory financial solvency objective; one clear lesson from the Great Recession of 2007-2008 was that market convention and acceptance should not drive NAIC regulatory policy.

Rating Agencies

Markets will create any security an investor is willing to buy. Likewise, there is no limitation or restriction on what can be assigned a credit rating and one should never assume that because a security has a credit rating it is an appropriate investment for NAIC regulatory purposes. The SVO staff believes there is substantially less risk to investors when the residual asset exposure is limited. This is true for all securities that may have a residual asset exposure because there is far less transparency and consistency in assessing the risk of the residual asset, especially for small pools of non-commoditized assets like real estate. (We intentionally make the distinction between small pools of non-commoditized assets and large pools of commoditized assets, such as auto lease ABS, because it is possible to more accurately estimate cashflows for traditional asset backed securities, including the proceeds from the sale of the assets at the end of each lease, thereby more accurately mitigating residual asset risk.) The next few examples highlight the increase in variability and inconsistency in assessment of risk, even among rating agencies, for securities with large residual exposures.

The SVO staff has observed very different treatment by rating agencies of the valuation and refinancing or liquidation risk presented by exposure to the residual asset. Some rating agencies notch downward significantly from the rating of the lessee when there is substantial lease renewal and refinancing risk associated with the repayment of principal, while others notch up based on the property valuation. The assumptions and bases for property valuations, the biggest driver of risk when there is a large residual exposure, can vary significantly across the rating agencies. Some using capitalization rates, a key component of the valuation, in the 6.50-16.50% range depending upon the property type and location. Others do not provide stated capitalization rates in their methodology but apply rates in a lower narrower range of 6.00-7.50% in reports that we have seen leading to substantially higher valuations. These methodology difference have led to valuation difference of greater than 30-40% which significantly impact loan-to-values ratios.

One recent publicly rated (Nov. 2020) real estate lease backed transaction had a 76% residual exposure at maturity in 2035 for a facility leased by a U.S. government entity. The rating on the security was
notched downward five times to "A2" from the U.S. government's "AAA" rating and is now under ratings review for possible downgrade (Dec. 2020). Other rating agencies have taken the opposite approach and notched upward above the lessee's credit rating based on the collateral and the loan-to-value ratio, in some cases raising the transaction's credit rating two to five notches above the lessee's credit rating. For example, a non-conforming CTL transaction with a "BBB" rated large international company as tenant and a 37% residual exposure was rated "A+". In another transaction, the lessee was rated "BBB-" but the non-conforming CTL was rated "AA-" despite a 100% residual exposure. While these are only a few examples, they reflect the varied and highly inconsistent treatment of the risk of residual asset exposure and valuation across rating agency methodologies. It is the SVO staff’s opinion that these methodology inconsistencies should be addressed if these securities are to be considered eligible for Filing Exemption. The ratings on other lease-backed securities may have similarly varied and inconsistent treatment but the SVO has not yet reviewed those security types in detail. We note that in the adopting release for revisions to Regulation AB in 2014 (Release Nos. 33-9638; 34-72982), the SEC, in referring to the financial crisis of 2007-2008, wrote, “The failures of credit ratings to accurately measure and account for the risks associated with certain asset-backed securities have been well documented,” and, “The collapse of these ‘investment-grade’ rated securities was a major contributor to the financial crisis, and demonstrated the risks to investors of unduly relying on these securities’ credit ratings without engaging in independent due diligence.”

Specifically, responding to the Working Group's questions, the SVO staff's responses are below:

- **Whether it is appropriate to revisit the 5% residual asset risk threshold as a restriction for conforming CTLS.**

  The Task Force's adoption of the 5% residual asset risk threshold was generous under the CTL guidelines since it permits some exposure to the underlying real estate collateral in transactions assessed based on the credit worthiness of the lessee and allows them to be reported as a bond with comparable accounting and risk-based capital (RBC) treatment. Since the P&P guidance was adopted in the early 1990s, additional investment structures have been created to securitize lease payments for many types of assets well beyond the commercial real estate financing of CTLS and with residual asset exposure far in excess of 5%. In acknowledgment of the changes to the lease backed securities market since the CTL guidelines were adopted, the SVO recommends that the Working Group and Task Force re-consider the current 5% residual exposure threshold for CTLS and possibly for other lease-backed securities. As noted in several industry comments, CTLS have consistently performed well for insurers under the existing standards and the SVO believes that historical performance is directly related to the current structural framework, required mitigants and review process.

- **If applicable, a recommendation of an appropriate residual risk threshold.**
The SVO suggests limiting the residual asset risk exposure for CTLs and, possibly, for other lease-backed securities as well. As mentioned previously, as residual asset exposure increases, the security develops risk characteristics more like that of the underlying asset than that of an investment security making periodic payments of interest and principal. There are also separate reporting, statutory accounting, RBC, and investment limitations that would be applicable to the underlying assets were they to be held directly as an investment. Furthermore, the exposure is residual, meaning only determinable at or near maturity when the asset needs to be either released or sold to satisfy note payment obligations. The P&P defines CTLs as being, "mortgage loans that are made primarily in reliance on the credit standing of a major tenant." Therefore, at a minimum, a “primarily” standard would be appropriate, meaning no residual exposure should be 50% or greater. The SVO staff believes that even 50% is a very high exposure to the underlying collateral asset's re-leasing or salability risk, meaning that at maturity the noteholder’s risk of repayment of the remaining outstanding half of its principal is directly tied to the value of the underlying real estate and the ability to re-lease the asset at a sufficient rate. (If held directly, a mortgage loan on real estate is reported on Schedule B.) A lower residual threshold would lessen that risk. Industry has often pointed to the strong performance of CTLs through times of economic distress. However, until now all CTLs filed with the SVO have been conforming CTLs with minimal residual exposure. We do not know how a CTL with a larger residual exposure would perform should the balloon payment come due and the property need to be re-leased or sold in a year when commercial real estate values are suppressed. Ultimately, the Working Group and the Task Force will need to decide, from a regulatory risk and reporting perspective, how much exposure to any small pools (including single asset pools) of non-commoditized assets is appropriate to still be reported on the bond schedule with an NAIC Designation and receive commensurate RBC treatment. The SVO will be able to assign an NAIC Designation to whatever residual threshold, 0% to 100%, the Working Group and Task Force ultimately decide upon.

- **Whether other mechanisms or compensating controls (beyond a residual risk insurance policy) could be incorporated as a mitigating factor for CTLs that exceed the 5% residual risk threshold (or a threshold as recommended).**

Yes. Residual risk insurance is the most common mitigant to residual risk, but the SVO would accept other mitigants including, but not limited to, non-cancellable guarantees, cash escrows and reserves, excess rent set asides and recourse to the lessee. We would propose that a list of mitigants not be limiting but rather examples, so that we can assess and make a determination on any proposes mitigant.

- **A listing of the nonconforming CTLs that were filed with the SVO in accordance with the direction of Interpretation (INT) 20-10. Please include high level details including outstanding principal and NAIC designation assigned by the SVO.**
The SVO has received 61 CTLs from when the INT 20-10 was issued through Apr. 21, 2021. There were 16 conforming CTLs ($0.406 billion), 27 non-conforming CTLs ($0.789 billion) and 18 transactions still pending documentation and review ($0.414 billion). The typical outstanding documentation included: primary legal agreement, CTL evaluation form, mortgage, residual value insurance, lease agreement, condemnation insurance, appraisal, and assignment of lease and rents. The list of security IDs and descriptions for non-conforming CTLs has been included in a regulator-only addendum. After reviewing the data for existing CTLs filed in 2020, we thought it was important to highlight that there is no universal issue description for these investments, making them difficult to identify. For the 1,018 CTLs filed with the SVO in 2020, 130 were identified as a CTL, 113 were identified as lease related, 326 were trust certificates, 160 were pass-thru certificates, 61 had no security type description, and the remaining 228 were various types of notes or certificates. Without reviewing the actual legal agreements and their terms, it will be very difficult to identify these securities without an insurer providing them to the SVO and the SVO identifying them in NAIC systems for all regulators.

In addition, the Working Group is also requesting information, to the extent possible, using best efforts, on (1) how many CTLs originally exceeded the residual risk threshold but were later deemed “conforming” due to mitigating factors, and (2) the nature of those factors (e.g. a residual risk insurance policy).

To put these numbers into perspective, the SVO staff reviews over 1,000 CTL transactions each year. During the three-year period from 2018 to 2020, the yearly filing average was 1,203 CTL filings comprising: 86 initial filings, 1,112 annual update filings, and 2 material change filings. The SVO has developed extensive experience reviewing CTL transactions.

We hope that the Task Force and Working Group find this report useful as they deliberate this important issue.
TO:    Kevin Fry, Chair, Valuation of Securities (E) Task Force
FROM: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
       Carrie Mears, Vice-Chair of the Statutory Accounting Principles (E) Working Group
RE:    Proposed VOSTF Attachment B – Filing Exemption for CTLs
DATE:  May 21, 2021

After a detailed review of the proposed revisions within Attachment B of the Valuation of Securities (E) Task Force meeting materials for Monday, May 24, it appears that the proposed revisions go beyond providing a filing exemption to allow non-SVO assigned designations. Rather, the edits also appear to modify the structural requirements for credit tenant loans (CTLs), and would thus permit direct mortgage loans, in scope of SSAP No. 37 and reported on Schedule B—Mortgage Loans, to be reclassified from Schedule B to Schedule D-1—Long-Term Bonds with up to 50% residual risk and a CRP rating, without any SVO structural assessments.

From prior review of the history of the CTL provisions, the original intent was to permit mortgage loans, captured on Schedule B, to be reclassified to Schedule D-1 based on the credit standing of a major tenant, but only if there was very limited residual risk (5%). Over time, the structure of these investments has shifted, but not the name used, and it is believed that most designs now meet the definition of a security and not a mortgage loan. Further, since the scope of SSAP No. 37—Mortgage Loans specifically excludes securities, these revised investment designs would not be captured in scope of SSAP No. 37 and not reported on Schedule B. Rather, under the existing guidance in the Accounting Practices and Procedures Manual, securities that reflect a creditor relationship, whereby there is a fixed schedule for one or more future payments, are captured in scope of SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities and reported on Schedule D-1.

Although the process to assess whether securities with underlying real estate risk shall be subject to filing exempt provisions or be submitted to the NAIC SVO for a credit assessment is a decision of the Task Force, as noted above, the current proposed revisions do not appear to be limited to that aspect. To prevent inadvertent application of the proposed revisions to direct mortgage loans, and to clarify that securities (SSAP No. 26R/SSAP No. 43R) shall be reported in accordance with existing AP&P Manual guidance, it is suggested that the Task Force reconsider the proposed exposure of Attachment B. Instead, it is recommended that the Task Force expose proposed edits to the Purposes and Procedures Manual to clarify that in all instances in which a CTL is defined, it is noted to be a mortgage loan “in scope of SSAP No. 37.” It is noted that this limited edit would clarify that the application of the structural assessment of CTLs is limited to direct mortgage loans and relates to the potential reclassification from Schedule B to Schedule D for those investments. Furthermore, it would clarify that securities are not subject to the CTL structural assessments and should continue to be reported in accordance with the scope provisions of the guidance within the AP&P Manual.
Examples of the proposed recommendations are shown below:

P&P Manual, Page 101 – FE Securities:

**Credit Tenant Loan (CTL)** – A CTL is a mortgage loan, in scope of SSAP No. 37, made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien. This Manual identifies four categories of CTLs as eligible for reporting on Schedule D conditioned on an SVO determination that the transaction meets the criteria specified by the VOS/TF for Schedule D treatment. A transaction that purports to be a Credit Tenant Loan, including one that is assigned a credit rating by an NAIC CRP, is not eligible for Schedule D reporting unless the SVO confirms that the transaction is eligible for Schedule D reporting and assigns the transaction an NAIC Designation.

P&P Manual, Page 29 – Credit Tenant Loans:

**CTL Categories**

100. Mortgage loans, in scope of SSAP No. 37, that are made primarily in reliance on the credit standing of a major tenant, structured with an assignment of the rental payments to the lender with real property pledged as collateral in the form of a first lien, are referred to as a Credit Tenant Loan. Four categories of CTLs are recognized as eligible for reporting on Schedule D: Bond Lease Based CTLs; Credit Lease Based CTLs; Acceptable CTL Variants (ACVs); and Multiple Property Transactions (MPTs).

If the limited edits, as shown above, are incorporated, than further revisions to the P&P Manual, particularly to the structural assessment for CTLs and the existing 5% residual risk threshold, are not expected to be needed at this time. It is also believed that this will resolve the current uncertainty and inconsistency with regards to the reporting of securities that have underlying elements of mortgage loan or real estate risk. Although these revisions will clarify the current ability to report securities that represent a creditor relationship under the existing bond definition, it is noted that a current project is underway to establish principles to clarify what should be considered a bond for reporting on Schedule D-1. Once that project is finalized, security structures that do not qualify under those bond principles will be reclassified to a more appropriate schedule.

Thank you for considering this revised proposal. Please contact Dale Bruggeman, or Carrie Mears, SAPWG Chair and Vice Chair, with any questions on this memorandum.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded April 20, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); David Smith (VA); and Amy Malm (WI).

1. **Exposed Agenda Item 2021-03**

The Working Group conducted an e-vote to consider exposure of agenda item 2021-03: SSAP No. 103R – Disclosures. This agenda item was drafted in conjunction with the Working Group’s continued deliberation of agenda item 2019-21: SSAP No. 43R – Equity Instruments, a substantive project to consider which investments fall within scope of *Statement of Statutory Accounting Principles (SSAP) No. 43R—Loan-Backed and Structured Securities*. Agenda item 2021-03 proposes minor disclosure enhancements to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities and a data capture template to identify situations in which a reporting entity has entered into a securitization, asset-backed financing, or similar transfer transaction where a significant economic interest in the transferred asset is retained by the reporting entity, its related parties, or another member within the holding company group. This agenda item had an initial exposure on March 15 and has been updated to reflect preliminary comments received from interested parties.

Mr. Smith made a motion, seconded by Mr. Hudson, to expose agenda item 2021-03. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met July 22, 2021. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Carolyn Morgan (FL); Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Lindsay Crawford (NE); Patricia Gosselin (NH); Mariam Awad and Nakia Reid (NJ); Diane Carter (OK); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Shawn Frederick (TX); Steve Drutz (WA); Randy Milquet (WI); and Jamie Taylor (WV). Also participating: Phil Vigliaturo (MN).

1. **Adopted its May 26 Minutes**

Mr. Garn said the Blanks (E) Working Group met May 26 and took the following action: 1) adopted eight blanks proposals: a) 2021-01BWG, add reference to health care receivables line in the Asset page; b) 2021-02BWG, add questions to the General Interrogatories, Part 1 regarding depository institution holding companies as it pertains to the group capital calculation (GCC); c) 2021-03BWG, add category lines to the Separate Accounts General Interrogatories for additional granularity; d) 2021-04BWG, add a General Interrogatory to identify insurers that use third parties to pay agent commissions in which the amounts advanced by the third parties are not settled in full within 90 days; e) 2021-05BWG, modify Note 17B(4) to reflect changes made by the Statutory Accounting Principles (E) Working Group reference number SAPWG 2021-03 regarding transferred assets; f) 2021-06BWG, add crosschecks to the long-term care (LTC) reporting forms to gain consistency; g) 2021-07BWG, add additional line categories to capture collateral type data for all residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), and loan-backed and structured securities (LBSS) securities regardless of reporting category; and h) 2021-08BWG, add a new supplement Mortgage Guaranty insurance Exhibit to capture more information from mortgage guaranty insurers; 2) adopted its editorial listing; and 3) exposed five proposals for public comment.

Mr. Eft made a motion, seconded by Ms. Reid, to adopt the Working Group’s May 26 minutes (Attachment Two-A). The motion passed unanimously.

2. **Adopted Proposals Previously Exposed**

   a. **Agenda Item 2021-10BWG – Effective Jan.1, 2022**

Mr. Hudson stated that this proposal removes language in the quarterly General Interrogatories Part 1, line 4.1 that requires the filing of a quarterly merger/history form. Proposal 2017-21BWG added language to the General Interrogatories to require filing a merger/history form for annual and quarterly statements. The annual form works as intended. It is used for Insurance Regulatory Information System (IRIS) calculations, as well as validations. He stated that the quarterly form does not function with the database system as currently designed. Therefore, the requirement to file quarterly should be removed. The annual form will still be required. There were no interested party comments received for this proposal.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Two-B). The motion passed unanimously.

3. **Deferred Proposals Previously Exposed**

   a. **Agenda Item 2021-11BWG**

Binry Birnbaum (Center for Economic Justice—CEJ) stated that this proposal adds the data capture elements of direct written exposures and direct earned exposures for the personal lines of business of homeowners and private passenger auto (PPA) to the annual and quarterly statements for the Property and Casualty blank. He stated that this proposal was discussed during a meeting of the Casualty Actuarial and Statistical (C) Task Force. The Task Force asked for a revision to line 4 of the annual statement instructions for homeowners to exclude renters, condominiums and co-ops.

Tip Tipton (Thrivent Financial) stated that interested parties recommend that this proposal be rejected and returned to the Casualty Actuarial and Statistical (C) Task Force because this is statistical data and inconsistent with the responsibilities of the
Mr. Garn stated that this proposal modifies lines on the Analysis of Operations by Lines of Business - Accident and Health for request for more time to review and provide additional comments. He stated that there are some modifications to the proposal that were suggested, as well as a Life/Fraternal to capture health-specific data consistent with that of the health blank. He stated that the Casualty Actuarial and Statistical (C) Task Force’s vote of nine to 17 for rejection of the proposal suggests that some state insurance regulators do not see the need for this data within the annual statement. Mr. Tipton stated that interested parties support the Task Force request to determine the reason the statistical report takes two years to accumulate the information and release.

Rachel Underwood (Cincinnati Insurance Companies) stated that it was suggested that this proposal was aimed at getting average premium per exposure for the Casualty Actuarial and Statistical (C) Task Force reports quicker. She stated that, however, the proposal asks for company-level detail and new statistical data that is not found in those reports today. The current reports contain narrative content regarding things such as data sources, limitations, and exclusion of data factors that affect the cost of insurance. She stated that it is unreasonable to think that all the pertinent and relevant data from these two reports should or could be incorporated into the annual statement. Ms. Underwood stated that companies do not have the written exposure counts readily available. The fastest growing personal automobile insurer does not provide exposure counts on a monthly basis, which she states is proprietary information. She stated that there are also issues related to the COVID-19 pandemic where companies gave relief payments. Some states had moratoriums on lapses due to nonpayment of premium.

Derek Freihaut (Pinnacle Actuarial Resources) stated that there should be a clear definition of “exposure.” Comparisons may not be accurate when looking at average premiums related to the various mixes of exposures over time and comparing against different companies. Another concern he expressed is that this is statistical data, which can be difficult to pull over to the financial data and have a true comparison. He suggests that there be additional work performed to develop clear specifications on the data request and better definitions to minimize distortions. If the proposal did move forward, he suggests it be considered for a 2023 annual implementation.

Mr. Vigliaturo, chair of the Casualty Actuarial and Statistical (C) Task Force, stated that the problem is that this information is based on rate service organizations. With that, there are significant delays in obtaining the information and compiling it for the reports. There are at least four organizations to which companies report this data. With the way things are done currently, it is unrealistic to accelerate the production of these reports.

Mr. Birnbaum stated that the information is typically delayed when comparing premiums and losses in that the losses develop over a period of time. He stated that the information does not come from only statistical agents but from several states as well. He stated that there are delays for the time needed to compile the data. Mr. Birnbaum stated that the request for this data is not for rate making but for financial and market analysis purposes. The annual statement is the best mechanism for collecting this type of data. The Casualty Actuarial and Statistical (C) Task Force does not have the same mechanism to collect this data. He stated that he does not agree with the claims that the data would be misleading as it is just the data elements. It would be whatever analysis the user performs that could potentially be misleading.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) stated that there is a question as to whether there is a regulatory need for this information and how it will be used for solvency monitoring. He indicated that this proposal should be rejected as state insurance regulators are currently able to obtain this information from statistical agents and within Schedule P of the annual statement filing. He agreed, however, with the re-exposure and referral to the financial analysis groups if this proposal does move forward.

Mr. Hudson made a motion, seconded by Mr. Mathis, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Mr. Drutz, to re-expose the modified proposal for a 90-day public comment period ending Oct. 22, send a copy of the proposal to the Casualty Actuarial and Statistical (C) Task Force for review, and send a referral to the Financial Analysis (E) Working Group and Financial Analysis Solvency Tools (E) Working Group for comment. The motion passed unanimously.

b. Agenda Item 2021-12BWG

Mr. Garn stated that this proposal modifies lines on the Analysis of Operations by Lines of Business - Accident and Health for Life/Fraternal to capture health-specific data consistent with that of the health blank Analysis of Operations by Lines of Business, as well as adding crosschecks for the new lines. The change allows for more consistent information to be collected with that of the Health blank. He stated that there are some modifications to the proposal that were suggested, as well as a request for more time to review and provide additional comments.
Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Drutz made a motion, seconded by Mr. Hudson, to defer the modified proposal for a 90-day comment period ending Oct. 22. The motion passed unanimously.

c. Agenda Item 2021-13BWG

Ms. Gosselin stated that this proposal adds a new supplement to capture premium and loss data for annual statement lines 17.1, 17.2 and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability to add more granular lines of business. The purpose is to provide state insurance regulators with greater detail of business reported in the aggregate “other liability” category. She stated that the Casualty Actuarial and Statistical (C) Task Force reviewed this proposal and indicated that it is in favor of the proposal with or without modification. The Casualty Actuarial and Statistical (C) Task Force suggested one modification to change the incurred but not reported (IBNR) to “case reserves” because the IBNR is likely not available at this level of detail. There were four interested party comments related to the proposal, as well as a request by interested parties to have more time to review the proposal and provide additional comments.

Ms. Gosselin made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal, including the Casualty Actuarial and Statistical (C) Task Force request to change IBNR to “case reserves.” The motion passed unanimously. Ms. Gosselin made a motion, seconded by Mr. Milquet, to defer the modified proposal for a 90-day comment period ending Oct. 22. The motion passed unanimously.

d. Agenda Item 2021-14BWG

Mr. Frederick stated that this proposal expands the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. The purpose of the proposal is to bring uniformity in the accident and health (A&H) lines of business used on Schedule H with other schedules and exhibits in the annual statement. Interested parties provided comments asking for additional time to consider the impacts to the Life/Fraternal blank and Property/Casualty blank. He stated that with the effective date of annual 2022, there is time to defer for further consideration if the state insurance regulators want to allow. Mr. Frederick stated that there are minor modifications to the proposal.

Mr. Frederick made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Frederick made a motion, seconded by Mr. Eft, to defer the modified proposal for a 90-day comment period ending Oct. 22. The motion passed unanimously.

4. Adopted the Editorial Listing

Mr. Garn stated that there has been a request to make some additional editorial changes related to the Mortgage Guaranty Supplement. Andy Daleo (NAIC) stated that there are three clarifying modifications needed to the Mortgage Guaranty Supplement that the Working Group adopted during its May 26 meeting, proposal 2021-08BWG. He stated that the changes are clarifying in nature for the users. The proposed editorial changes consist of: 1) removing the word “Total” from column 23, which reads “Total net adjusting and other expenses unpaid.” The true “Total” column is column 24 of Part 1A and Part 1B of the exhibit; 2) change the column 32 heading in Part 1A and Part 1B from “Net Loss and LAE Coverage” to “Net Loss and LAE as a % of Original Risk in Force” to clarify the intended reporting; and 3) remove column 33 “Net Reserves” in Part 1A and Part 1B as it requests duplicative information of that shown in column 24 “Total net losses and LAE unpaid.”

Mr. Hudson made a motion, seconded by Ms. Taylor, to adopt the editorial listing, including the additional changes to the Mortgage Guaranty Supplement requested (Attachment Two-C). The motion passed unanimously.

5. Adopted Health Actuarial Statement of Opinion Guidance for the 2021 Reporting Year

Mr. Eft made a motion, seconded by Mr. Hudson, to adopt the Health Actuarial Statement of Opinion guidance for year-end 2021 reporting and approve the posting to the Blanks (E) Working Group website (Attachment Two-D). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 26, 2021. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Tom Hudson (DE); Virginia Christy (FL); Kevin Clark (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Lindsay Crawford (NE); Patricia Gosselin (NH); Mariam Awad (NJ); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Steve Drutz (WA); Randy Milquet (WI); and Jamie Taylor (WV). Also participating were: Phil Vigliaturo (MN); and Jaakob Sundberg (UT).

1. Adopted its March 16 Minutes

The Working Group met March 16 and took the following action: 1) adopted seven proposals: a) 2020-32BWG, adding a health care receivables supplement to the life/fraternal blank; b) 2020-33BWG, gaining consistency in the annual statement line references; c) 2020-34BWG, adding definitions for consistency with the Property Uniform Product Matrix; d) 2020-35BWG, expanding the line characters in the investment schedules; e) 2020-36BWG, modifying general investment instructions and Schedule DB instructions for publicly traded stock warrant treatment; f) 2020-37BWG, adding a Schedule Y, Part 3 for reporting ownership with greater than 10% capturing the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls; and g) 2020-38BWG, modifying the Accident and Health Policy Experience, including the addition of reinsurance columns, direct premiums written, and net incurred claims; 2) exposed five new proposals with a comment deadline of April 27; 3) adopted its Dec. 16, 2020, minutes; and 4) adopted its editorial listing.

Mr. Hudson made a motion, seconded by Mr. Lathrop, to adopt the Working Group’s March 16 minutes (see NAIC Proceedings – Spring 2021, Accounting Practices and Procedures (E) Task Force, Attachment Two). The motion passed unanimously.

2. Adopted Proposals Previously Exposed

a. Agenda Item 2021-01BWG – Effective Dec. 31, 2021

Mr. Drutz stated that this proposal adds reference to health care receivables to Line 24 – Health Care and Other Amounts Receivable on the Asset Page, changes the description of Line 0699999 to read Other Health Care Receivables on Exhibit 3, and modifies column headers for Exhibit 3A. There were some changes suggested by interested parties that were made to the proposal as modifications. Interested parties also suggested moving the Health Care Receivables instructions paragraph on page 3 of the portable document format (PDF) to the beginning of the “Include” section to be more in alignment with the description of Line 24 – Health Care and Other Amounts Receivable. Mr. Drutz stated that NAIC staff did not make that change, as the line also references “other amounts receivable.”

Mr. Drutz made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Drutz made a motion, seconded by Mr. Eft, to adopt the modified proposal (Attachment Two-A1). The motion passed unanimously.

b. Agenda Item 2021-02BWG – Effective Dec. 31, 2021

Mr. Garn stated that this proposal adds questions to the General Interrogatories, Part 1 regarding depository institution holding companies as it pertains to the group capital calculation (GCC). Additionally, the proposal modifies the terminology in the first two questions for consistency with the new questions, considering that many insurers that are part of a depository institution holding company are savings and loan holding companies, which is picked up with the broader terminology compared to the more specific term of bank holding company. There were some minor changes suggested by interested parties, which were fixed in the modifications.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Mr. Eft, to adopt the modified proposal (Attachment Two-A2). The motion passed unanimously.

© 2021 National Association of Insurance Commissioners
c. **Agenda Item 2021-03BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this agenda item is in response to Statutory Accounting Principles (E) Working Group agenda items #2020-37 and #2020-38, adopted by the Working Group on May 20, regarding pension risk transfer transactions (PRTs) and registered index-linked annuity products (RILAs). These pose some potential risks to the general account. The revisions increase the reporting granularity in the Separate Accounts General Interrogatories, specifically for Interrogatory Questions 1.01, 1.01A, 2.5 and 4.2. Mr. Bruggeman stated that this blanks proposal adds separate and distinct reporting product identifiers for RILAs and PRTs. The instructions to the general interrogatories have been slightly modified to require a disaggregated product identifier for each product represented. Mr. Bruggeman stated that aggregation in reporting can still occur if the products are under the same product filing or policy form; however, to the extent that they are not, it would require disaggregated reporting.

Mr. Bruggeman stated that there are a couple of additional notes: 1) the distinct product identifier requirements have been a long-standing instruction; however, most reporting entities have been grouping or aggregating reporting. This instruction change simply requires further detailed reporting; 2) the blanks proposal also includes instructions so that a company may eliminate proprietary or confidential information, but still require a unique reporting product identifier. This change will be effective for annual 2021 reporting. Mr. Bruggeman stated that no comments were received on this item.

Mr. Bruggeman made a motion, seconded by Ms. Gosselin, to adopt the proposal (Attachment Two-A3). The motion passed unanimously.

d. **Agenda Item 2021-04BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this blanks proposal is related to Statutory Accounting Principles (E) Working Group agenda item #2019-24, which was adopted by the Working Group in March 2021, regarding levelized commission guidance in *Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions.* This proposal was in response to state insurance regulators wanting a more readily available method to identify situations where an insurer utilized a third party to pay commission obligations. The general interrogatory has been written in such a way to not require disclosure if the amounts are settled in full within 90 days, to scope out situations where an insurer uses a third party for typical accounts payable processing. This change will be effective for annual 2021 reporting. Mr. Bruggeman stated that interested parties had minor editorial changes, specifically regarding reference numbers for PDF printing. The proposed edits have been made by NAIC staff.

Mr. Bruggeman made a motion, seconded by Mr. Eft, to adopt the proposal with the friendly amendments (Attachment Two-A4). The motion passed unanimously.

e. **Agenda Item 2021-05BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this blanks proposal is related to Statutory Accounting Principles (E) Working Group agenda item #2021-03, which was derived from the ongoing SSAP No. 43R—Loan-Backed and Structured Securities project. This blanks proposal is primarily to data capture certain existing PDF disclosures required in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, specifically when a reporting entity has entered into a securitization, asset-backed financing or other similar transfer where a significant economic interest in the transferred asset is retained by the reporting entity.

Mr. Bruggeman stated that the agenda item and its corresponding blanks proposal underwent considerable revisions through collaborative efforts with state insurance regulators, NAIC staff, and interested parties. As a result of these efforts, the Statutory Accounting Principles (E) Working Group exposed an updated agenda item on April 20, which can be seen on the Working Group’s web page. This change will be effective for annual 2021 and quarterly 2022 reporting. Mr. Bruggeman stated that there are two minor edits identified during the comment period, which have been made by blanks support staff.

Mr. Bruggeman made a motion, seconded by Ms. Doggett, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Ms. Doggett, to adopt the modified proposal (Attachment Two-A5). The motion passed unanimously.
f. **Agenda Item 2021-06BWG – Effective Dec. 31, 2021**

Mr. Hudson stated that this proposal adds validations to check the consistency between the long-term care (LTC) Form 5 and Form 1 for Columns 2, 3, 4, 6 and 7 of Form 5. There were no interested party comments.

Mr. Hudson made a motion, seconded by Mr. Lathrop, to adopt the proposal (Attachment Two-A6). The motion passed unanimously.

g. **Agenda Item 2021-07BWG – Effective Dec. 31, 2021**

Mr. Bruggeman stated that this blanks agenda item adds additional line categories to the instruction for Column 26 – Collateral Type on Schedule D, Part 1 to capture collateral type data for all residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), and loan-backed and structured securities (LBSS) regardless of reporting category. This change will be effective for annual 2021 reporting. Mr. Bruggeman stated that there were no comments received on this item.

Mr. Bruggeman made a motion, seconded by Ms. Greiner, to adopt the proposal (Attachment Two-A7). The motion passed unanimously.

h. **Agenda Item 2021-08BWG – Effective Dec. 31, 2021**

Kevin Conley (NC), chair of the Mortgage Guaranty Insurance (E) Working Group, stated that this proposal adds a new supplement as the Mortgage Guaranty Insurance Exhibit. This supplement is intended to capture more detailed information from mortgage guaranty insurers, of which there are six in the U.S. The proposed supplement will be primarily used by the domestic regulators of mortgage guaranty insurers. Currently, there is limited data captured on mortgage guaranty insurance within the financial statement. The proposed supplement will provide the means for the state insurance regulators to assess the capital level of the insurer and their overall financial solvency. Mr. Conley stated that this proposal was exposed by the Working Group, and several comments were received by interested parties during the comment period. Those changes have been made and highlighted in the proposal as modifications. There are some minor corrections to be added as a friendly amendment: 1) correct the column reference on the page 6 instructions for Part 1A column 26; 2) the instruction for column 26 should read “Should equal Part 2F, Column 10” not column 9; 3) for the blank, Part 1B, column 25 – Number of delinquencies (direct) should be XXX’d for all lines, as pool business is not reported in Part 2F and would not report in these lines for 1B of this exhibit; 4) for the Part 1 Summary, Parts 1A and 1B, add clarifying instructions indicating that “Number of Claims Closed with Payment (Direct)” should be reported “per claim” and not “per claimant”; and 5) add a question in the Supplemental Exhibits and Schedules Interrogatories for this supplement to appear as the last item under the optional April filings.

Mr. Hudson made a motion, seconded by Mr. Milquet, to adopt the modifications to the proposal, including the friendly amendments. The motion passed unanimously. Mr. Hudson made a motion, seconded by Mr. Milquet, to adopt the modified proposal (Attachment Two-A8). The motion passed unanimously.

i. **Agenda Item 2021-09BWG**

Mr. Garn stated that this proposal adds instructions to Annual Health Statement Blank, Actuarial Opinion, modifying sections 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section). However, some of the aspects of this proposal are still under discussion, so it has been suggested that this proposal be withdrawn and resubmitted once discussions are complete. Mr. Sundberg, co-vice chair of the Health Actuarial (B) Task Force, stated that the Task Force would like to defer the issue until the next annual 2022 filing. He stated that there are clarifications needed to match up the definitions for actuarial assets in the Actuarial Opinion with those of the actuarial standards of practice (ASOPs) definitions. He stated that the Task Force will codify the new language in a proposal for annual 2022. Mr. Hudson stated that since the effective date will be annual 2022, it makes more sense to withdraw this proposal and submit a new proposal when the issue is finalized.

3. **Exposed New Items**

a. **Agenda Item 2021-10BWG**

Mr. Hudson stated that this proposal removes language in quarterly General Interrogatories Part 1, line 4.1 that requires filing of a quarterly merger/history form. The annual form will still be required. Amendment proposal 2017-21BWG added language to the General Interrogatories to require the filing of a merger/history form for annual and quarterly statements. The annual...
form works as intended. It is used for Insurance Regulatory Information System (IRIS) calculations, as well as validations. The quarterly form does not function with the electronic database system as currently designed. Therefore, this proposal is requesting that the requirement to file quarterly be removed.

Hearing no objection from the Working Group, the proposal was exposed for a six-week public comment period ending June 25.

b. Agenda Item 2021-11BWG

Birny Birnbaum (Center for Economic Justice—CEJ) stated that this proposal adds the data capture elements of direct written exposures and direct earned exposures for select personal lines of business, including private flood, homeowners, and private passenger auto (PPA) to the annual and quarterly statements for the Property and Casualty blank. He stated that the state pages of the annual statement and Part 1 and Part 2 of the quarterly statement show earned and written premium by line of business. These data elements allow the state analysts to review changes in premium by line of business from one period to the next and for longer periods of time. By adding written and earned exposures, financial and market analysts will be able to calculate and analyze changes in the number of exposures and the changes in average premium per exposure. Mr. Birnbaum stated that this is useful, not just to better understand changes in premium volume (e.g., is the change a result of increased exposure or higher rates) but also to examine changes in average premium over time. Average premium per policy and exposure is an important metric for state insurance regulators.

Mr. Birnbaum stated that the NAIC publishes two annual reports using these values; i.e., one for PPA and one for residential property insurance. The problem is that these reports are published three years after the beginning of the experience year and two years after the end of the experience year. While these reports contain other valuable data elements than average premium, the premium numbers are not useful because they are so old. The proposal being presented will allow state insurance regulators and interested parties the time to calculate the average premium value for personal lines by state within a few months of the end of the experience year and calculate on a country wide basis using the quarterly data just a few months after the experience quarter.

Mr. Birnbaum stated that the proposal adds a new annual statement supplement to the property/casualty (P/C) annual statement to capture “Direct Exposures Written” and “Direct Exposures Earned.” It adds one column to P/C quarterly statement Part 1 for “Direct Exposures Earned.” It adds one column to P/C quarterly statement Part 2 for “Direct Exposures Written.”

Ralph Blanchard (Travelers) stated that there are concerns with this proposal, and the Casualty Actuarial and Statistical (C) Task Force should provide some feedback on this issue. He stated that private flood is more than just residences; it is also commercial business. He stated that the proposal, as it is currently drafted, needs some changes. The calculation that is described is not an easy task to complete. There are multi-car policies, cars routinely added and removed from policies, as well as mid-term cancellations. The calculation would be a stretch to get a program and utilize it by first quarter 2022. Mr. Blanchard stated that it would be difficult to calculate homeowners accurately, as it includes renters, condos, starter homes and mansions. To add up all of these, makes it questionable as to what information would be reported. Mr. Blanchard suggested that with the calculation and the system programming that would be needed, it would be deferred for implementation until annual 2023 with limitation.

Mr. Birnbaum stated that private flood may be included in commercial, but the identification of the property for the private flood is fairly straightforward. There is still a property to be insured. Mr. Birnbaum stated that the calculation should not be that difficult, as companies do something similar for rating on a routine basis. He stated that he would be happy to work with interested parties to address any issues or concerns.

Tip Tipton (Thrivent Financial) stated that he supports exposure and a concurrent referral to the Casualty Actuarial and Statistical (C) Task Force.

Mr. Vigliaturo, chair of the Casualty Actuarial and Statistical (C) Task Force, stated that the information obtained in this supplement would be of value to the Task Force. It would replace or be an improvement of the information currently published in the dwelling, fire and auto database. The Task Force will receive the referral and provide comment.

Hearing no objection from the Working Group, the proposal was exposed for a six-week public comment period ending June 25.
c. **Agenda Item 2021-12BWG**

Mr. Drutz stated that this proposal adds and deletes lines on the Analysis of Operations by Lines of Business – Accident and Health for Life/Fraternal to capture health specific data captured in the Health Analysis of Operations by Lines of Business but not in the Life/Fraternal Analysis of Operations page. It also adds new crosschecks for the new lines, as well as crosschecks added to the Analysis of Operations by Lines of Business – Summary to map the lines on the accident and health page to the summary.

Hearing no objection from the Working Group, the proposal was exposed for a six-week public comment period ending June 25.

d. **Agenda Item 2021-13BWG**

Ms. Gosselin stated that this proposal adds a new supplement to capture premium and loss data in the Annual Statement Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business. The purpose of this proposal is to provide state insurance regulators with greater detail of the premium and losses of the diverse lines of business reported on Annual Statement Line 17 of the Exhibit of Premiums and Losses (State Page).

Mr. Blanchard stated that this proposal should be referred to the Casualty Actuarial and Statistical (C) Task Force to review the issue of incurred but not reported (IBNR) reserves. IBNR reserves are calculated by actuaries and aggregated. Mr. Blanchard stated that if one other liability line is broken out into 29 separate pieces, the IBNR reserves number loses reliability and meaning. The other issue is that the breakout may not currently be available in companies’ systems. Mr. Vigliaturo, chair of the Task Force, stated that Mr. Blanchard had alerted him to the possibility of a referral of this proposal. He stated that while there is an interest in receiving the additional data referenced in proposal 2021-11BWG, with this proposal, the Task Force does not have any reports that it produces using other liability data. He stated that he does not believe the Task Force would be opposed to this proposed change, but it also has no immediate interest in this data. He stated that at the initial review, he did not see the need for the Task Force to be involved, but he would not object to the Task Force receiving the referral to review the proposal and provide comment.

Hearing no objection from the Working Group, the proposal was exposed for a six-week public comment period ending June 25.

e. **Agenda Item 2021-14BWG**

Mr. Garn stated that this proposal expands the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. It modifies the instructions to be uniform between life/fraternal and property. The purpose of the proposal is to bring uniformity in the accident and health lines of business used on Schedule H with other schedules and exhibits in the annual statement.

Hearing no objection from the Working Group, the proposal was exposed for a six-week public comment period ending June 25.

4. **Adopted the Editorial Listing**

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the editorial listing (Attachment Two-A9). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add reference to health care receivables to Line 24 – Health Care and Other Amounts Receivable on the Asset Page, change description of Line 0699999 to read Other Health Care Receivables on Exhibit 3 and modify column headers for Exhibit 3A.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to add clarifying language to Exhibit 3, Exhibit 3A and Assets page for health care receivables.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

Updates to the Health Care Receivable Guidance would be needed to the headers of Exhibit 3A if the proposal is adopted.

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – HEALTH AND LIFE/FRATERNAL (HEALTH CARE RECEIVABLES SUPPLEMENT)

EXHIBIT 3 – HEALTH CARE RECEIVABLES

Individually list the greater of any account balances greater than $10,000 or those that are 10% of gross health care receivables. Use Lines 0100001 through 0699996, as needed. Report gross amounts for insured plans although these amounts may be offset against corresponding liabilities on the balance sheet. Report the aggregate of amounts not individually listed on Lines 0199998 through 0699998. The subtotal and grand total amounts should be reported on the following lines:

<table>
<thead>
<tr>
<th>Category</th>
<th>Line Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pharmaceutical Rebate Receivables</td>
<td>0199999</td>
</tr>
<tr>
<td>Claim Overpayment Receivables</td>
<td>0299999</td>
</tr>
<tr>
<td>Loans and Advances to Providers</td>
<td>0399999</td>

</tbody>
</table>

Column 7  –  Admitted

Total line should equal the inset amount on Line 24 of the Asset Page.
ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

ASSETS

Detail Eliminated to Conserve Space

Line 24 – Health Care and Other Amounts Receivable

Include:  
Bills Receivable – Report any unsecured amounts due from outside sources or receivables secured by assets that do not qualify as investments.

Amounts due resulting from advances to agents or brokers – Refer to SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers for accounting guidance.

Health Care Receivables – Include pharmaceutical rebate receivables, claim overpayment receivables, loans and advances to providers, capitation arrangement receivables, and risk sharing receivables and other health care receivables from affiliated and non-affiliated entities. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Other amounts receivable that originate from the government under government insured plans, including undisputed amounts over 90 days due that qualify as accident and health contracts are admitted assets. Refer to SSAP No. 84—Health Care and Government Insured Plans Receivables and SSAP No. 50—Classifications of Insurance or Managed Care Contracts for accounting guidance.

Exclude:  
Pharmaceutical rebates relating to uninsured plans that represent an administrative fee and that are retained by the reporting entity and earned in excess of the amounts to be remitted to the uninsured plan. These amounts should be reported on Line 17.

Premiums receivable for government insured plans reported on Lines 15.1, 15.2 or 15.3.
### EXHIBIT 3A – ANALYSIS OF HEALTH CARE RECEIVABLES COLLECTED AND ACCRUED

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Add questions to the General Interrogatories, Part 1 regarding depository institution holding companies as it pertains to the group capital calculation. Additionally, modify the terminology in the first two questions for consistency with the new questions, which has been modified to consider that many insurers that are part of a depository institution holding company are savings and loan holding companies, which is picked up with the broader terminology compared to the more specific term of bank holding company.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

To assist state regulators in identifying depository institution holding companies significantly engaged in insurance activities that would be subject to the Federal Reserve’s Building Block Approach to group capital, thereby prompting the communication necessary to exempt the holding company from the group capital calculation.

**Anticipated Effective Date:** Annual 2021

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Modify the tables for Interrogatory Questions 1.01, 1.01A, 2.5 and 4.2 in the Separate Accounts General Interrogatories by adding category lines to reflect additional granularity in the reporting on those tables.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to modify select tables on the Separate Accounts General Interrogatories to reflect the increased granularity in the product identifiers per by the Statutory Accounting Principles (E) Working Group agenda item (Ref #2020-37 & Ref #2020-38).

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date:  

Other Comments:

**This section must be completed on all forms.**

Revised 7/18/2018

© 2021 National Association of Insurance Commissioners
### Product Mix

1.01 Identify the product types in the separate account, quantify the assets associated with those products, indicate if there are any guarantees associated with those products, quantify seed money and quantify other fees and expenses due to the general account. For the products (and related assets) that are not registered with the SEC, identify whether the products are considered private placement variable annuity products or private placement life insurance.

**Note:** A distinct disaggregated product identifier shall be used for each product and shall be used consistently throughout the interrogatory. Disaggregation of reporting shall be such that each product filing or policy form is separately identified. For example, if a company has 5 defined separate group annuities, each annuity shall be separately reported. Companies may eliminate proprietary information however such elimination will require the use of unique reporting identifiers.

Additional Required Surplus Amounts is defined as additional or permanent surplus that is required to be retained in the separate account in accordance with state law or regulation. These amounts should not include reinvested separate account investment proceeds that have not been allocated to separate account contract holders.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Add interrogatory questions 24.1 and 24.2 to the General Interrogatories, Part 1 and renumber those below them. Renumber the questions and question references in the General Interrogatories, Part 1 to match the renumbering on the blank page.

---

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

During the Statutory Accounting Principles (E) Working Group’s ongoing discussion of agenda item #2019-24: Levelized and Persistency Commissions, regulators expressed the desire for a GI to identify certain scenarios in which an insurer utilizes third parties to pay commission expenses.

INVESTMENT

2425.01 Were all the stocks, bonds and other securities owned December 31 of current year, over which the reporting entity has exclusive control, in the actual possession of the reporting entity on said date? (other than securities lending programs addressed in 2425.03) Yes [ ] No [ ]
2425.02 If no, give full and complete information, relating thereto:......................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................
2425.03 For securities lending programs, provide a description of the program including value for collateral and amount of loaned securities, and whether collateral is carried on or off-balance sheet. (an alternative is to reference Note 17 where this information is also provided)

2425.04 For the reporting entity’s securities lending program, report amount of collateral for conforming programs as outlined in the Risk-Based Capital Instructions. $ ____________________
2425.05 For the reporting entity’s securities lending program, report amount of collateral for other programs. $ ____________________
2425.06 Does your securities lending program require 102% (domestic securities) and 105% (foreign securities) from the counterparty at the outset of the contract? Yes [ ] No [ ] N/A [ ]
2425.07 Does the reporting entity non-admit when the collateral received from the counterparty falls below 100%? Yes [ ] No [ ] N/A [ ]
2425.08 Does the reporting entity or the reporting entity’s securities lending agent utilize the Master Securities Lending Agreement (MSLA) to conduct securities lending? Yes [ ] No [ ] N/A [ ]
GENERAL INTERROGATORIES

2425.09 For the reporting entity’s securities lending program, state the amount of the following as of December 31 of the current year:

2425.091 Total fair value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2

$ ______________________

2425.092 Total book adjusted/carrying value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2

$ ______________________

2425.093 Total payable for securities lending reported on the liability page

$ ______________________

2426.1 Were any of the stocks, bonds or other assets of the reporting entity owned at December 31 of the current year not exclusively under the control of the reporting entity or has the reporting entity sold or transferred any assets subject to a put option contract that is currently in force? (Exclude securities subject to Interrogatory 2422.09). Yes [ ] No [ ]

2426.2 If yes, state the amount thereof at December 31 of the current year:

2426.21 Subject to repurchase agreements

$ ______________________

2426.22 Subject to reverse repurchase agreements

$ ______________________

2426.23 Subject to dollar repurchase agreements

$ ______________________

2426.24 Subject to dollar reverse repurchase agreements

$ ______________________

2426.25 Placed under option agreements

$ ______________________

2426.26 Letter stock or securities restricted as to sale – excluding FHLB Capital Stock

$ ______________________

2426.27 FHLB Capital Stock

$ ______________________

2426.28 On deposit with states

$ ______________________

2426.29 On deposit with other regulatory bodies

$ ______________________

</tbody>
</table>

2427.1 Does the reporting entity have any hedging transactions reported on Schedule DB?

Yes [ ] No [ ]

2427.2 If yes, has a comprehensive description of the hedging program been made available to the domiciliary state?

Yes [ ] No [ ] N/A [ ]

If no, attach a description with this statement.

LINES 2427.3 through 2427.5: FOR LIFE/FRATERNAL REPORTING ENTITIES ONLY:

2427.3 Does the reporting entity utilize derivatives to hedge variable annuity guarantees subject to fluctuations as a result of interest rate changes?

Yes [ ] No [ ]

If the response to 2427.3 is YES, does the reporting entity utilize:

2427.4 Special accounting provision of SSAP No. 108

Yes [ ] No [ ]

2427.5 Permitted accounting practice

Yes [ ] No [ ]

2427.6 Other accounting guidance

Yes [ ] No [ ]

2427.5 By responding YES to 2427.4 regarding utilizing the special accounting provisions of SSAP No. 108, the reporting entity attests to the following:

- The reporting entity has obtained explicit approval from the domiciliary state.
- Hedging strategy subject to the special accounting provisions is consistent with the requirements of VM-21.
- Actuarial certification has been obtained which indicates that the hedging strategy is incorporated within the establishment of VM-21 reserves and provides the impact of the hedging strategy within the Actuarial Guideline Conditional Tail Expectation Amount.
- Financial Officer Certification has been obtained which indicates that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy within VM-21 and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day-to-day risk mitigation efforts.

2428.1 Were any preferred stocks or bonds owned as of December 31 of the current year mandatorily convertible into equity, or, at the option of the issuer, convertible into equity?

Yes [ ] No [ ]

2428.2 If yes, state the amount thereof at December 31 of the current year.

$ ______________________

2429. Excluding items in Schedule E– Part 3 – Special Deposits, real estate, mortgage loans and investments held physically in the reporting entity’s offices, vaults or safety deposit boxes, were all stocks, bonds and other securities, owned throughout the current year held pursuant to a custodial agreement with a qualified bank or trust company in accordance with Section 1, III – General Examination Considerations, F. Outsourcing of Critical Functions, Custodial or Safekeeping Agreements of the NAIC Financial Condition Examiners Handbook?

Yes [ ] No [ ]

2429.01 For agreements that comply with the requirements of the NAIC Financial Condition Examiners Handbook, complete the following:
